HER MOST GRACIOUS MAJESTY

THE QUEEN

## CONTENTS OF VOLUME II.

XI.	Pages
NOTES ON SCULPTURE	1—24
Some practical hints (706—709).—Notes on the casting of the Sforza monument (710—715).—Models for the horse of the Sforza monument (716—718).—Occasional references to the Sforza monument (719—724).—The project of the Trivulzio monument (725).—The mint of Rome (726).—On the coining of medals (727, 728).—On plaster (729, 730).—On bronze casting generally (731—740).	
INTRODUCTORY OBSERVATIONS ON THE ARCHITECTURAL DESIGNS AND WRITINGS ON ARCHITECTURE	25. 26
XII.	27—74
ARCHITECTURAL DESIGNS	
I. Plans for towns (741—744).—II. Plans for canals and streets in a town (745—747).—III. Castles and villas.—A. Castles.—B. Projects for palaces.—C. Plans for small castles or villas (748—752).—IV. Ecclesiastical Architecture.—A. General observations (753—755).—B. The theory of constructing Domes.—1. Churches formed on the plan of a Greek cross.—Group I. Domes rising from a circular base.—Group II. Domes rising from a square base.—Group III. Domes rising from a square base and four pillars.—Group IV. Domes rising above an octagonal base.—Group V. Suggested by S. Lorenzo at Milan (756).—2. Churches formed on the plan of a Latin cross.—A. Studies after existing monuments.—B. Designs or Studies (757).—C. Studies for a form of church most proper for preaching.—D. Design for a mausoleum.—E. Studies for the Central tower or Tiburio of Milan Cathedral (758).—F. The Project for lifting up the Battistero of Florence and setting it on a basement.—G. Description of an unknown temple (759).—V. Palace architecture (760—763).—VI. Studies of architectural details (764—769).	
XIII.	
THEORETICAL WRITINGS ON ARCHITECTURE	75—99
I. On Fissures in walls (770—776).—II. On Fissures in niches (777—778).—III. On the nature of the arch (779—788).—IV. On Foundations, the nature of the ground and supports (789—792).—V. On the resistance of beams (793—795).	

REMARKS ON THE STYLE OF LEONARDO'S ARCHITECTURE	Pages
	100—104

## XIV.

## ANATOMY, ZOOLOGY AND PHYSIOLOGY

105—133

- I. ANATOMY:—A general introduction (796).—Plans and suggestions for the arrangement of materials (797—802).—Plans for the representation of muscles by drawings (803—809).—On corpulence and leanness (809—811).—The divisions of the head (812. 813).—Physiological problems (814. 815).—II. ZOOLOGY AND COMPARATIVE ANATOMY:—The divisions of the animal kingdom (816. 817).—Miscellaneous notes on the study of Zoology (818—821).—Comparative study of the structure of bones and of the action of muscles (822—826).—III. PHYSIOLOGY:—Comparative study of the organs of sense in men and animals (827).—Advantages in the structure of the eye in certain animals (828 to 831).—Remarks on the organs of speech (832. 833).—On the conditions of sight (834. 835).—The seat of the common sense (836).—On the origin of the soul (837).—On the relations of the soul to the organs of sense (838).—On involuntary muscular action (839).—Miscellaneous physiological observations (840—842).—The laws of nutrition and the support of life (843—848).—On the circulation of the blood (848—850).—Some notes on medicine (851—855).

## XV.

## ASTRONOMY

135—172

- I. THE EARTH AS A PLANET:—The earth's place in the universe (857. 858).—The fundamental laws of the solar system (859—864).—How to prove that the earth is a planet (865—867).—The principles of astronomical perspective (868 to 873).—On the luminosity of the earth in the universal space (874—878).—II. THE SUN:—The question of the true and of the apparent size of the sun (879—884).—Of the nature of sunlight (885).—Considerations as to the size of the sun (886—891).—III. THE MOON:—On the luminosity of the moon (892 to 901).—Explanation of the lumen cinereum of the moon (902).—On the spots in the moon (903—907).—On the moon's halo (908).—On instruments for observing the moon (909. 910).—IV. THE STARS:—On the light of the stars (911—913).—Observations on the stars (914).—On the history of astronomy (915).—Of time and its divisions (916—918).

## XVI.

## PHYSICAL GEOGRAPHY

173—221

- INTRODUCTION.—Schemes for the arrangement of the materials (919—928).—General introduction (929).—I. OF THE NATURE OF WATER:—The arrangement of Book I (930).—Definitions (931. 932).—Of the surface of the water in relation to the globe (933—936).—Of the proportion of the mass of water to that of the earth (937. 938).—The theory of Plato (939).—That the flow of rivers proves the slope of the land (940).—Theory of the elevation of water within the mountains (941).—The relative height of the surface of the sea to that of the land (942—945).—II. ON THE OCEAN:—Refutation of Pliny's theory as to the saltiness of the sea (946. 947).—The characteristics of sea water (948. 949).—On the formation of gulfs (950. 951).—On the encroachments of the sea on the land and vice versa (952—954).—The ebb and flow of the tide (955—960).—III. SUBTERRANEAN WATER COURSES:—Theory of the circulation of the waters (961. 962).—Observations in support of the hypothesis (963—969).—IV. OF RIVERS:—On the way in which the sources of rivers are fed (970).—The tide in estuaries (971).—On the alterations caused in the courses of rivers by their confluence (972—974).—Whirlpools (975).—On the alterations in the channels of rivers (976).—The origin of sand in rivers (977. 978).—V. ON MOUNTAINS:—The formation of mountains (979—983).—The authorities for the study

Pages

of the structure of the earth (984).—VI. GEOLOGICAL PROBLEMS:—Programme (985).—Doubts about the Deluge (986).—That marine shells could not go up the mountains (987).—The marine shells were not produced away from the sea (988).—Further researches (989—991).—Other problems (992—994).—VII. On the atmosphere:—Constituents of the atmosphere (995).—On the motion of air (996—999).—The globe an organism (1000).

## XVII.

## TOPOGRAPHICAL NOTES

223—270

I. ITALY:—Canals in connection with the Arno (1001—1008).—Canals in the Milanese (1009—1013).—Estimates and preparatory studies for canals (1014. 1015).—Notes on buildings at Milan (1016—1019).—Remarks on natural phenomena in and near Milan (1021. 1022).—Note on Pavia (1023).—Notes on the Sforzesca near Vigevano (1024—1028).—Notes on the North Italian lakes (1029—1033).—Notes on places in Central Italy, visited in 1502 (1034—1054).—Alessandria in Piedmont (1055. 1056).—The Alps (1057—1062).—The Appenines (1063—1068).—II. FRANCE (1069—1079).—On the Germans (1080. 1081).—The Danube (1082).—III. THE COUNTRIES OF THE WESTERN END OF THE MEDITERRANEAN:—The straits of Gibraltar (1083—1085).—Tunis (1086).—Libya (1087).—Majorca (1088).—The Tyrrhene Sea (1089).—IV. THE LEVANT.—The Levantine Sea (1090).—The Red Sea (1091. 1092).—The Nile (1093—1098).—Customs of Asiatic Nations (1099. 1100).—Rhodes (1101. 1102).—Cyprus (1103. 1104).—The Caspian Sea (1105. 1106).—The sea of Azov (1107).—The Dardanelles (1108).—Constantinople (1109).—The Euphrates (1110).—Central Asia (1111).—On the natives of hot countries (1112).

## XVIII.

## NAVAL WARFARE.—MECHANICAL APPLIANCES.—MUSIC

271—282

The ship's log of Vitruvius, of Alberti and of Leonardo (1113).—Methods of staying and moving in waters (1114).—On naval warfare (1115. 1116).—The use of swimming belts (1117).—On the gravity of water (1118).—Diving apparatus and skating (1119—1121).—On flying-machines (1122—1126).—On mining (1127).—On Greek fire (1128).—On music (1129. 1130).

## XIX.

## PHILOSOPHICAL MAXIMS. MORALS. POLEMICS AND SPECULATIONS

283—311

I. PHILOSOPHICAL MAXIMS:—Prayers to God (1132. 1133).—The powers of Nature (1134—1139).—Psychology (1140—1147).—Science, its principles and rules (1148—1161).—II. MORALS:—What is life? (1162. 1163).—Death (1164).—How to spend life (1165—1179).—On foolishness and ignorance (1180—1182).—On riches (1183—1187).—Rules of life (1188—1202).—Politics (1203. 1204).—III. POLEMICS.—SPECULATION:—Against speculators (1205. 1206).—Against alchemists (1207. 1208).—Against friars (1209).—Against writers of epitomes (1210).—On spirits (1211—1215).—Nonentity (1216).—Reflections on Nature (1217—1219).

## XX.

## HUMOROUS WRITINGS

313—379

I. STUDIES ON THE LIFE AND HABITS OF ANIMALS (1220—1264).—II. FABLES:—Fables on animals (1265—1270).—Fables on lifeless objects (1271—1274).—Fables on plants (1275—1279).—III. JESTS AND TALES (1280—1292).—IV. PROPHECIES (1293—1313).—V. DRAUGHTS AND SCHEMES FOR THE HUMOROUS WRITINGS: Schemes for Fables &c. (1314—1323); Schemes for Prophecies (1324—1329); Irony (1331. 1332).—Tricks (1333—1335).

XXI.	Pages
LETTERS. PERSONAL RECORDS. DATED NOTES	381—417
Draughts of letters and reports referring to Armenia (1336. 1337).—Notes about adventures abroad (1338. 1339).—Draughts of letters to Lodovico il Moro (1340—1345).—Draught of letter to a Commission at Piacenza (1346 to 1347).—Letter to the Cardinal Ippolito d'Este (1348).—Draught of letter to the French Governor of Milan (1349).—Draughts of letters to the Superintendent of canals and to Melzi (1350).—Draughts of letter to Giuliano de' Medici (1351. 1352).—Draught of a letter written at Rome (1353).—A fanciful letter (1354).—Miscellaneous draughts of letters and personal records (1355 to 1368).—Notes bearing dates (1369—1378).	
XXII.	
MISCELLANEOUS NOTES	419—472
Memoranda before the year 1500 (1379—1413).—Memoranda after the year 1500 (1414—1434).—Memoranda of unknown dates (1435—1457).—Notes on pupils and artisans (1458—1468).—Quotations and notes on books and authors (1469—1508).—Inventories and Accounts (1509—1545).—Notes in unknown handwriting among the Manuscripts (1546—1565).—Leonardo's will (1566).	
REFERENCE TABLE TO THE NUMERICAL ORDER OF THE CHAPTERS	473—478
APPENDIX	479—499
History of the Manuscripts. Bibliography.	

## LIST OF ILLUSTRATIONS IN VOLUME II.

	Page
Pl. LXV. Two preparatory Studies for the Sforza Monument; from the Royal Library, Windsor Castle: No. 1 drawn with the pen, No. 2 drawn with the silverpoint on bluish tinted paper . . . . . To face	1
Pl. LXVI. Study for the Sforza Monument; from the Royal Library, Windsor Castle . . . . . To face	3
Fragment of Drawing, representing a walking Horse; from the Ambrosian Library, Milan . . . . .	4
Pl. LXVII. Study for the Sforza Monument, drawn with the silverpoint on bluish tinted paper; from the Royal Library, Windsor Castle . . . . To face	4
Pl. LXVIII. Study for the Sforza Monument; charcoal drawing on brown paper; from the Royal Library, Windsor Castle . . . . To face	6
Pl. LXIX. Study for the Sforza Monument, drawn in charcoal and with the pen and Indian ink; from the Royal Library, Windsor Castle . . . . To face	8
Pl. LXX. Study for the Sforza Monument, drawn with charcoal; from the Royal Library, Windsor Castle . . . . . To face	10
Pl. LXXI. Study for the Sforza Monument, at first drawn with charcoal and afterwards with the pen; from the Royal Library, Windsor Castle . . . . To face	12
Pl. LXXII. Drawing of a walking Horse, and two studies for the Sforza Monument; from the Royal Library, Windsor Castle . . . . . To face	14
Pl. LXXIII. Study for the Sforza Monument, drawn with charcoal; from the Royal Library, Windsor Castle . . . . . To face	16
Pl. LXXIV. Study for the Sforza Monument, at first drawn with red chalk and afterwards with the pen; from the Royal Library, Windsor Castle . . . . To face	18
Pl. LXXV. Study for the Sforza Monument; from the Royal Library, Windsor Castle—see text No. 711 . . . . . To face	20

	Page
Pl. LXXVI. Two Drawings: No. 1 Study for the Sforza Monument; drawn in red chalk,—see text No. 712—(from the Codex Atlanticus, Milan); No. 2 Drawing of instruments for the mint of Rome,—see text No. 726—; from Manuscript G, Institut de France, Paris . . . . . To face	22
Sketch of a walking Horse, and two studies for casting the figure of a horse, from the Royal Library, Windsor Castle . . . . . on page	24

		Page
Pl. CXV.	Sketch Map of the Loire at Amboise; from the Arundel Manuscript, British Museum—see text No. 1074 . . . . .	To face 251
Pl. CXVI.	Sketch of Armenian Mountains; from the Codex Atlanticus, Milan—see text No. 1336 . . . . .	To face 385
Pl. CXVII.	Sketch of Armenian Mountains; from the Codex Atlanticus, Milan,—see text No. 1336 . . . . .	To face 388
Pl. CXVIII.	Sketch of a Peak in Armenia, and Sketch Map of Armenia; from the Codex Atlanticus, Milan—see text No. 1336 . . . . .	To face 391
Pl. CXIX.	Sketch Map of Armenia; from the Codex Atlanticus, Milan—see text No. 1336 . . . . .	To face 392
Pl. CXX.	Drawing of Oriental Heads, in red chalk; from the Royal Library, Turin	To face 394
Pl. CXXI.	Drawing of Musical Instruments &c.; from the Arundel Manuscript, British Museum, London—see text Nos. 1128 and 860 . . .	To face 411
Pl. CXXII.	Drawing of Caricatures; from the Royal Library, Windsor Castle	To face 411

The size of the original drawings has been reduced on Plates LXVI, CVII, CIX, CXI No. 1, CXII, CXIII, CXIV, CXVI, CXVII, CXVIII and CXXII. On Plate CXIX it has been enlarged. The colour and tone of the paper have in every case been faithfully imitated, in order to give to the facsimiles a perfect and complete resemblance to the originals, whether drawn in charcoal, red chalk or pen and ink. It is to be understood that all Drawings here reproduced are in pen-and-ink, unless otherwise stated.

## XI.

### *The notes on Sculpture.*

Compared with the mass of manuscript treating of Painting, a very small number of passages bearing on the practice and methods of Sculpture are to be found scattered through the note books; these are here given at the beginning of this section (Nos. 706—709). There is less cause for surprise at finding that the equestrian statue of Francesco Sforza is only incidentally spoken of; for, although Leonardo must have worked at it for a long succession of years, it is not in the nature of the case that it could have given rise to much writing. We may therefore regard it as particularly fortunate that no fewer than thirteen notes in the master's handwriting can be brought together, which seem to throw light on the mysterious history of this famous work. Until now writers on Leonardo were acquainted only with the passages numbered 712, 719, 720, 722 and 723.

In arranging these notes on sculpture I have given the precedence to those which treat of the casting of the monument, not merely because they are the fullest, but more especially with a view to reconstructing the monument, an achievement which really almost lies within our reach by combining and comparing the whole of the materials now brought to light, alike in notes and in sketches.

A good deal of the first two passages, Nos. 710 and 711, which refer to this subject seems obscure and incomprehensible; still, they supplement each other and one contributes in no small degree to the comprehension of the other. A very interesting and instructive commentary on these passages may be found in the fourth chapter of Vasari's

*Introduzione della Scultura under the title „Come si fanno i modelli per fare di bronzo le figure grandi e picciole, e come le forme per buttarle; come si armino di ferri, e come si gettino di metallo,” &c. Among the drawings of models of the moulds for casting we find only one which seems to represent the horse in the act of galloping—No. 713. All the other designs show the horse as pacing quietly; and as these studies of the horse are accompanied by copious notes as to the method of casting, the question as to the position of the horse in the model finally selected, seems to be decided by preponderating evidence. “Il cavallo dello Sforza”—C. Boito remarks very appositely in the *Saggio* on page 26, “doveva sembrare fratello al cavallo del Colleoni. E si direbbe che questo fosse figlio del cavallo del Gattamelata, il quale pare figlio di uno dei quattro cavalli che stavano forse sull’Arco di Nerone in Roma” (now at Venice). The publication of the *Saggio* also contains the reproduction of a drawing in red chalk, representing a horse walking to the left and supported by a scaffolding, given here on Pl. LXXVI, No. 1. It must remain uncertain whether this represents the model as it stood during the preparations for casting it, or whether—as seems to me highly improbable—this sketch shows the model as it was exhibited in 1493 on the Piazza del Castello in Milan under a triumphal arch, on the occasion of the marriage of the Emperor Maximilian to Bianca Maria Sforza. The only important point here is to prove that strong evidence seems to show that, of the numerous studies for the equestrian statue, only those which represent the horse pacing agree with the schemes of the final plans.*

*The second group of preparatory sketches, representing the horse as galloping, must therefore be considered separately, a distinction which, in recapitulating the history of the origin of the monument seems justified by the note given under No. 720.*

*Galeazzo Maria Sforza was assassinated in 1476 before his scheme for erecting a monument to his father Francesco Sforza could be carried into effect. In the following year Lodovico il Moro the young aspirant to the throne was exiled to Pisa, and only returned to Milan in 1479 when he was Lord (Governatore) of the State of Milan, in 1480 after the minister Cecco Simonetta had been murdered. It may have been soon after this that Lodovico il Moro announced a competition for an equestrian statue, and it is tolerably certain that Antonio del Pollajuolo took part in it, from this passage in Vasari’s Life of this artist: “E si trovò, dopo la morte sua, il disegno e modello che a Lodovico Sforza egli aveva fatto per la statua a cavallo di Francesco Sforza, duca di Milano; il quale disegno è nel nostro Libro, in due modi: in uno egli ha sotto Verona; nell’altro, egli tutto armato, e sopra un basamento pieno di battaglie, fa saltare il cavallo addosso a un armato; ma la cagione perchè non mettesse questi disegni in opera, non ho già potuto sapere.” One of Pollajuolo’s drawings, as here described, has lately been discovered by Senatore Giovanni Morelli in the Munich Pinacothek. Here the profile of the horseman is a portrait of Francesco Duke of Milan, and under the horse, who is galloping to the left, we see a warrior thrown and lying on the ground; precisely the same idea as we find*

in some of Leonardo's designs for the monument, as on Pl. LXVI, LXVII, LXVIII, LXIX and LXXII No. 1; and, as it is impossible to explain this remarkable coincidence by supposing that either artist borrowed it from the other, we can only conclude that in the terms of the competition the subject proposed was the Duke on a horse in full gallop, with a fallen foe under its hoofs.

Leonardo may have been in the competition there and then, but the means for executing the monument do not seem to have been at once forthcoming. It was not perhaps until some years later that Leonardo in a letter to the Duke (No. 719) reminded him of the project for the monument. Then, after he had obeyed a summons to Milan, the plan seems to have been so far modified, perhaps in consequence of a remonstrance on the part of the artist, that a pacing horse was substituted for one galloping, and it may have been at the same time that the colossal dimensions of the statue were first decided on. The designs given on Pl. LXX, LXXI, LXXII, 2 and 3, LXXIII and LIV and on pp. 4 and 24, as well as three sketches on Pl. LXIX may be studied with reference to the project in its new form, though it is hardly possible to believe that in either of these we see the design as it was actually carried out. It is probable that in Milan Leonardo worked less on drawings, than in making small models of wax and clay as preparatory to his larger model. Among the drawings enumerated above, one in black chalk, Pl. LXXIII—the upper sketch on the right hand side, reminds us strongly of the antique statue of Marcus Anrelius. If, as it would seem, Leonardo had not until then visited Rome, he might easily have known this statue from drawings by his former master and friend Verrocchio, for Verrocchio had been in Rome for a long time between 1470 and 1480. In 1473 Pope Sixtus IV had this antique equestrian statue restored and placed on a new pedestal in front of the church of San Giovanni in Laterano. Leonardo, although he was painting independently as early as in 1472 is still spoken of as working in Verrocchio's studio in 1477. Two years later the Venetian senate decided on erecting an equestrian statue to Colleoni; and as Verrocchio, to whom the work was entrusted, did not at once move from Florence to Venice—where he died in 1488 before the casting was completed—but on the contrary remained in Florence for some years, perhaps even till 1485, Leonardo probably had the opportunity of seeing all his designs for the equestrian statue at Venice and the red chalk drawing on Pl. LXXIV may be a reminiscence of it.

The pen and ink drawing on Pl. LXXII, No. 3, reminds us of Donatello's statue of Gattamelata at Padua. However it does not appear that Leonardo was ever at Padua before 1499, but we may conclude that he took a special interest in this early bronze statue and the reports he could procure of it, form an incidental remark which is to be found in C. A. 145<sup>a</sup>; 432<sup>a</sup>, and which will be given in Vol. II under Ricordi or Memoranda.

*Among the studies—in the widest sense of the word—made in preparation for this statue we may include the Anatomy of the Horse which Lomazzo and Vasari both mention; the most important parts of this work still exist in the Queen's Library at*

Windsor. It was beyond a doubt compiled by Leonardo when at Milan; only a few interesting records to be found among these designs are reproduced in Nos. 716 and 717; but it must be pointed out that out of 40 sheets of studies of the movements of the horse belonging to that treatise, a horse in full gallop occurs but once.

Chogard

If we may trust the account given by Paulus Jovius—about 1527—Leonardo's horse was represented as “vehementer incitatus et anhelatus”. Jovius had probably seen the model exhibited at Milan; but, need we, in fact, infer from this description that the horse was galloping? Compare Vasari's description of the Gattamelata monument at Padua: “Egli [Donatello] vi andò ben volentieri, e fece il cavallo di bronzo, che è in sulla piazza di Sant' Antonio, nel quale si dimostra lo sbuffamento ed il fremito del cavallo, ed il grande animo e la fierezza vivacissimamente espressa dall'arte nella figura che lo cavalca”.

These descriptions, it seems to me, would only serve to mark the difference between the work of the middle-ages and that of the renaissance.

We learn from a statement of Sabbà da Castiglione that, when Milan was taken by the French in 1499, the model sustained some injury; and this informant, who, however is not invariably trustworthy, adds that Leonardo had devoted fully sixteen years to this work (la forma del cavallo, intorno a cui Leonardo avea sedici anni continui consumati). This often-quoted passage has given ground for an assumption, which has no other evidence to support it, that Leonardo had lived in Milan ever since 1483. But I believe it is nearer the truth to suppose that this author's statement alludes to the fact that about sixteen years must have past since the competition in which Leonardo had taken part.

I must in these remarks confine myself strictly to the task in hand and give no more of the history of the Sforza monument than is needed to explain the texts and drawings I have been able to reproduce. In the first place, with regard to the drawings, I may observe that they are all, with the following two exceptions, in the Queen's Library at Windsor Castle; the red chalk drawing on Pl. LXXVI No. 1 is in the MS. C. A. (see No. 712) and the fragmentary pen and ink drawing on page 4 is in the Ambrosian Library. The drawings from Windsor on Pl. LXVI have undergone a trifling reduction from the size of the originals.

There can no longer be the slightest doubt that the well-known engraving of several horsemen (Passavant, *Le Peintre-Graveur*, Vol. V, p. 181, No. 3) is only a copy after original drawings by Leonardo, executed by some unknown engraver; we have only to compare the engraving with the facsimiles of drawings on Pl. LXV, No. 2, Pl. LXVII, LXVIII and LXIX which, it is quite evident, have served as models for the engraver.

On Pl. LXV No. 1, in the larger sketch to the right hand, only the base is distinctly visible, the figure of the horseman is effaced. Leonardo evidently found it unsatisfactory and therefore rubbed it out.

The base of the monument—the pedestal for the equestrian statue—is repeatedly sketched on a magnificent plan. In the sketch just mentioned it has the character of a shrine or aedicula to contain a sarcophagus. Captives in chains are here represented on the entablature with their backs turned to that portion of the monument which more

strictly constitutes the pedestal of the horse. The lower portion of the aedicula is surrounded by columns. In the pen and ink drawing Pl. LXVI—the lower drawing on the right hand side—the sarcophagus is shown between the columns, and above the entablature is a plinth on which the horse stands. But this arrangement perhaps seemed to Leonardo to lack solidity, and in the little sketch on the left hand, below, the sarcophagus is shown as lying under an arched canopy. In this the trophies and the captive warriors are detached from the angles. In the first of these two sketches the place for the trophies is merely indicated by a few strokes; in the third sketch on the left the base is altogether broader, buttresses and pinnacles having been added so as to form three niches. The black chalk drawing on Pl. LXVIII shows a base in which the angles are formed by niches with pilasters. In the little sketch to the extreme left on Pl. LXV, No. 1, the equestrian statue serves to crown a circular temple somewhat resembling Bramante's tempietto of San Pietro in Montorio at Rome, while the sketch above to the right displays an arrangement faintly reminding us of the tomb of the Scaligers in Verona. The base is thus constructed of two platforms or slabs, the upper one considerably smaller than the lower one which is supported on flying buttresses with pinnacles.

On looking over the numerous studies in which the horse is not galloping but merely walking forward, we find only one drawing for the pedestal, and this, to accord with the altered character of the statue, is quieter and simpler in style (Pl. LXXIV). It rises almost vertically from the ground and is exactly as long as the pacing horse. The whole base is here arranged either as an independent baldaquin or else as a projecting canopy over a recess in which the figure of the deceased Duke is seen lying on his sarcophagus; in the latter case it was probably intended as a tomb inside a church. Here, too, it was intended to fill the angles with trophies or captive warriors. Probably only No. 724 in the text refers to the work for the base of the monument.

If we compare the last mentioned sketch with the description of a plan for an equestrian monument to Gian Giacomo Trivulzio (No. 725) it seems by no means impossible that this drawing is a preparatory study for the very monument concerning which the manuscript gives us detailed information. We have no historical record regarding this sketch nor do the archives in the Trivulzio Palace give us any information. The simple monument to the great general in San Nazaro Maggiore in Milan consists merely of a sarcophagus placed in recess high on the wall of an octagonal chapel. The figure of the warrior is lying on the sarcophagus, on which his name is inscribed; a piece of sculpture which is certainly not Leonardo's work. Gian Giacomo Trivulzio died at Chartres in 1518, only five months before Leonardo, and it seems to me highly improbable that this should have been the date of this sketch; under these circumstances it would have been done under the auspices of Francis I, but the Italian general was certainly not in favour with the French monarch at the time. Gian Giacomo Trivulzio was a sworn foe to Ludovico il Moro, whom he strove for years to overthrow. On the 6<sup>th</sup> September 1499 he marched victorious into Milan at the head

of a French army. In a short time, however, he was forced to quit Milan again when Ludovico il Moro bore down upon the city with a force of Swiss troops. On the 15<sup>th</sup> of April following, after defeating Lodovico at Novara, Trivulzio once more entered Milan as a Conqueror, but his hopes of becoming Governatore of the place were soon wrecked by intrigue. This victory and triumph, historians tell us, were signalled by acts of vengeance against the dethroned Sforza, and it might have been particularly flattering to him that the casting and construction of the Sforza monument were suspended for the time.

It must have been at this moment—as it seems to me—that he commissioned the artist to prepare designs for his own monument, which he probably intended should find a place in the Cathedral or in some other church. He, the husband of Margherita di Nicolino Colleoni, would have thought that he had a claim to the same distinction and public homage as his less illustrious connection had received at the hands of the Venetian republic. It was at this very time that Trivulzio had a medal struck with a bust portrait of himself and the following remarkable inscription on the reverse: **DEO FAVENTE · 1499 · DICTVS · IO · IA · EXPVLIT · LVDOVICV · SF · (Sfortiam) DVC · (ducem) MLI (Mediolani) · NOīE (nomine) · REGIS · FRANCORVM · EODEM · ANN · (anno) RED'T (redit) · LVS (Ludovicus) · SVPERATVS ET CAPTVS · EST · AB · EO.** In the Library of the Palazzo Trivulzio there is a MS. of Callimachus Siculus written at the end of the XV<sup>th</sup> or beginning of the XVI<sup>th</sup> century. At the beginning of this MS. there is an exquisite illuminated miniature of an equestrian statue with the name of the general on the base; it is however very doubtful whether this has any connection with Leonardo's design.

Nos. 731—740, which treat of casting bronze, have probably a very indirect bearing on the arrangements made for casting the equestrian statue of Francesco Sforza. Some portions evidently relate to the casting of cannon. Still, in our researches about Leonardo's work on the monument, we may refer to them as giving us some clue to the process of bronze casting at that period.

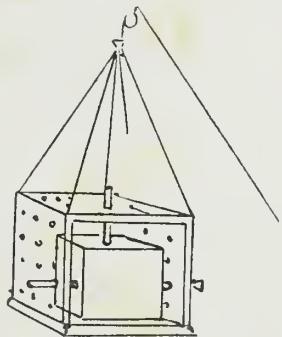

## DE STATUA.

<sup>2</sup>Se vuoi · fare · vna · figura · di marmo · fa ne · prima vna <sup>3</sup>di terra ·, la quale, finita che l' ài, secca e mettila in vna <sup>4</sup>cassa · che sia · ancora capace ·, dopo la figura tratta <sup>5</sup>d'esso · loco ·, a ricieuere il marmo · che vuoi scoprir<sup>6</sup>vi dentro la figura · alla · similitudine · di quella · di terra ·; di poi <sup>7</sup>messala figura di terra in detta cassa · abbi bacchette ch'ètrino <sup>8</sup>apùto · per i sua · busi ·, e spingile · dentro · tāto · per ciascuno <sup>9</sup>buso · che ciascuna bacchetta biāca · tocca · la figura · in <sup>10</sup>diuersi lochi, e la parte d'esse bacchette, che resta · fori della <sup>11</sup>cassa, tigni di nero, e fa il cōtrassegno · alla · bacchetta e al <sup>12</sup>suo · buso · in modo · che a tua · posta · si scōtri; <sup>13</sup>e trai d'essa · cassa · la figura · di terra · e mettivi il tuo <sup>14</sup>pezzo · di marmo, e tāto leua del marmo ·, che tutte le <sup>15</sup>tue · bacchette · si nascondino · sino al loro segnio in detti busi, <sup>16</sup>e per potere questo · meglio fare · fa che tutta · la cassa si po<sup>17</sup>ssa · leuare in alto, e'l fondo · d'essa cassa resti sēpre · sotto <sup>18</sup>il marmo ed a questo modo ne potrai · leuare coi ferri <sup>19</sup>con grā facilità.

If you wish to make a figure in marble, Some practical hints (706-709).

first make one of clay, and when you have finished it, let it dry and place it in a case which should be large enough, after the figure is taken out of it, to receive also the marble, from which you intend to reveal the figure in imitation of the one in clay. After you have put the clay figure into this said case, have little rods which will exactly slip in to the holes in it, and thrust them so far in at each hole that each white rod may touch the figure in different parts of it. And colour the portion of the rod that remains outside black, and mark each rod and each hole with a countersign so that each may fit into its place. Then take the clay figure out of this case and put in your piece of marble, taking off so much of the marble that all your rods may be hidden in the holes as far as their marks; and to be the better able to do this, make the case so that it can be lifted up; but the bottom of it will always remain under the marble and in this way it can be lifted with tools with great ease.

709. *figure di rilievo.* Leonardo applies this term exclusively to wholly detached figures, especially to those standing free. This note apparently refers to some particular case, though we have no knowledge of what that may have been. If we suppose it to refer to the first model of the equestrian statue of Francesco Sforza (see the introduction to the notes on Sculpture) this observation may be regarded

707.

Some have erred in teaching sculptors to measure the limbs of their figures with threads as if they thought that these limbs were equally round in every part where these threads were wound about them.

708.

## MEASUREMENT AND DIVISION OF A STATUE.

Divide the head into 12 degrees, and each degree divide into 12 points, and each point into 12 minutes, and the minutes into minims and the minims into semi minims.

Degree—point—minute—minim.

709.

Sculptured figures which appear in motion, will, in their standing position, actually look as if they were falling forward.

710.

Three braces which bind the mould. [If you want to make simple casts quickly, make them in a box of river sand wetted with vinegar.]

as one of his arguments for abandoning the first scheme of the Sforza Monument, in which the horse was to be galloping (see page 2). It is also in favour of this theory that the note is written in a manuscript volume already completed in 1492. Leonardo's opinions as to the shortcomings of plastic works when compared with paintings are given under No. 655 and 656.

<sup>6</sup>[Quando tu avrai fatto la <sup>7</sup> forma sopra il cauallo e tu <sup>8</sup>farai la grossezza del metallo <sup>9</sup>di terra.]

710. The importance of the notes included under this number is not diminished by the fact that they have been lightly crossed out with red chalk. Possibly they were the first scheme for some fuller observations which no longer exist; or per-

haps they were crossed out when Leonardo found himself obliged to give up the idea of casting the equestrian statue. In the original the first two sketches are above l. 1, and the third below l. 9.

la forma, e poi fa la <sup>7</sup>groszezza, e poi riēpi la forma a mezza a mezza, <sup>8</sup>e quella integra, poi con sua ferri cierchiala e <sup>9</sup>cignie la riuoci di dētro dove à a toccare il brō<sup>10</sup>zo.

#### DEL FAR LA FORMA DI PEZZI.

<sup>12</sup> Segnia sopra il cavallo finito tutti li pezzi della for<sup>13</sup>ma, di che tu voi vestire tal cavallo, e nello interrare <sup>14</sup>li taglia in ogni interratura, acciochè quādo si è fini<sup>15</sup>ta la forma che tu la possi cavare e poi ricomettere <sup>16</sup>al primo loco colli sua scōtri dellī cōtrassegni.

<sup>17a</sup> b quadretto · starà infra la cappa e'l maschio, cioè <sup>18</sup>nel uacuo dove à a stare il brōzo liquefatto e questi <sup>19</sup>tali quadretti di brōzo manterrāno li spati della for<sup>20</sup>ma alla cappa con equal distātia, e per questo tali <sup>21</sup>quadretti sō di grāde importantia.

<sup>22</sup> ¶ La terra sia mista <sup>23</sup>cō rena;

<sup>24</sup> tollicera, a rēde<sup>25</sup>re, e pagare la cō-<sup>26</sup>sumata. ¶

<sup>27</sup> Secca la <sup>28</sup>a suoli. <sup>29</sup>Fa la forma di fori <sup>30</sup>di giesso per fugire <sup>31</sup>il tēpo del seccare, <sup>32</sup>e la spesa di legnie, e cō <sup>33</sup>tal giesso ferma <sup>34</sup>li ferri di fori e di <sup>35</sup>dentro cō due dita di <sup>36</sup>groszezza, fa terra <sup>37</sup>cotta.

<sup>38</sup>E questa tal forma <sup>39</sup>farai in un dl; vna mez<sup>40</sup>za navata di giesso <sup>41</sup>ti serue.

<sup>42</sup>Bono.

<sup>43</sup>Ritasa cō <sup>44</sup>colla e terra <sup>45</sup>over chiara d'ovo <sup>46</sup>e mattone e ro<sup>47</sup>sume.

iron as may be necessary. Moreover take off the mould and then make the thickness. Then fill the mould by degrees and make it good throughout; encircle and bind it with its irons and bake it inside where it has to touch the bronze.

#### OF MAKING THE MOULD IN PIECES.

Draw upon the horse, when finished, all the pieces of the mould with which you wish to cover the horse, and in laying on the clay cut it in every piece, so that when the mould is finished you can take it off, and then recompose it in its former position with its joins, by the countersigns.

The square blocks *a* *b* will be between the cover and the core, that is in the hollow where the melted bronze is to be; and these square blocks of bronze will support the intervals between the mould and the cover at an equal distance, and for this reason these squares are of great importance.

The clay should be mixed with sand.

Take wax, to return [what is not used] and to pay for what is used.

[27] Dry it in layers [28].

Make the outside mould of plaster, to save time in drying and the expense in wood; and with this plaster enclose the irons [props] both outside and inside to a thickness of two fingers; make terra cotta.

And this mould can be made in one day; half a boat load of plaster will serve you.

[42] Good.

Dam it up again with glue and clay, or white of egg, and bricks and rubbish.

C. A. 213<sup>b</sup>; 628<sup>b</sup>

Tutti i capi de<sup>2</sup>lle chiavarde.

712. 1—2 R. 1, tucti i chapì.

711. See Pl. LXXV. The figure "40," close to the sketch in the middle of the page between lines 16 and 17 has been added by a collector's hand.

In the original, below line 21, a square piece of the page has been cut out about 9 centimètres by 7 and a blank piece has been gummed into the place.

Lines 22—24 are written on the margin. 1. 27 and 28 are close to the second marginal sketch. 1. 42 is a note written above the third marginal sketch and on

the back of this sheet is the text given as No. 642. Compare also No. 802.

712. See Pl. LXXVI, No. 1. This drawing has already been published in the "Saggio delle Opere di L. da Vinci." Milano 1872, Pl. XXIV, No. 1. But, for various reasons I cannot regard the editor's suggestions as satisfactory. He says: "Veggansi le armature di legname colle quali forse venne sostenuto il modello, quando per le nozze di Bianca Maria Sforza con Massiniliano imperatore, esso fu collocato sotto un arco trionfale davanti al Castello."

Le cheval et le jardin

714.

Sale fatto di sterco vmano  
bruciato e calcinato e fatto  
ne liscia e quella distesa al  
lēto foco, e tutti li sterchi  
in simile modo fanno sale, e  
quelli sali destillati sono molto  
penetrati.

Salt may be made from human excrements, burnt and calcined, made into lees and dried slowly at a fire, and all the excrements produce salt in a similar way and these salts when distilled, are very strong.

714. 1. sterco. 2. calcinato effatto nel siccio ecque. 3. disecha allēto focho et tutti lisster. 4. quali. 5. desstilati.

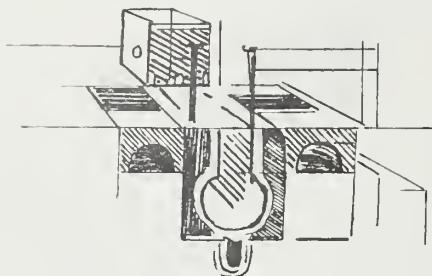

714. VASARI repeatedly states, in the fourth chapter of his *Introduzione della Scultura*, that in preparing to cast bronze statues horse-dung was frequently used by sculptors. If, notwithstanding

this, it remains doubtful whether I am justified in having introduced here this text of but little interest, no such doubt can be attached to the sketch which accompanies it.

715.

## METHOD OF FOUNDED AGAIN.

This may be done when the furnace is

made [4] strong and bruised.

716.

## Messer Galeazzo's big genet.

717.

## Messer Galeazzo's Sicilian horse.

718.

Measurement of the Sicilian horse the leg  
from behind, seen in front, lifted and extended.

719.

Again, the bronze horse may be taken in  
hand, which is to be to the immortal glory and  
eternal honour of the happy memory of the  
prince your father, and of the illustrious  
house of Sforza.

720.

On the 23<sup>rd</sup> of April 1490 I began this  
book, and recommenced the horse.

715. This note in l. 4 is written below the sketches.

716. 717. These notes are by the side of a  
drawing of a horse with figured measurements.718. There is no sketch belonging to this pas-  
sage. Galcazzo here probably means Galeazzo diSan Severino, the famous captain who married Bianca  
the daughter of Ludovico il Moro.719. The letter from which this passage is here  
extracted will be found complete in section XXI.  
(see the explanation of it, on page 2).

Leic. 9 δ]

Vedesi in nelle montagnie di Parma e Piacētia la multitudine di nichi e coralli <sup>2</sup> intarlati ancora appiccati allisassi, de' quali, quand'io facevo il grā <sup>3</sup>cavallo di Milano, me ne fu portato vn grā sacco nell'a mia fabrica da cierti villani che in tal loco trovati.

C. A. 316α; 958α]

Credetelo a me, Leonardo fiorētino che fa il cauallo del duca Francesco di brōzo che non ne bisognia fare stima, <sup>2</sup>perchè à che fare il tempo di sua vita; e dubito che per l'essere si grāde opera, che non la finirà mai.

C. A. 328δ; 983α]

Del cauallo nō dirò niente perchè cognoscó i tēpi.

C. A. 272δ; 833α]

Del marmo operasi dieci añi; io nō vo' aspettare che 'l mio pa<sup>3</sup>gamēto passi il termine del <sup>4</sup>fine della opera mia.

C. A. 176δ; 533α]

#### SEPULCRO DI MESSER GIOVĀNI JACOMO DA TREVULZO.

<sup>2</sup> Spesa della <sup>3</sup>manifattura e materiā del cauallo.

721.

There is to be seen, in the mountains of Parma and Piacenza, a multitude of shells and corals full of holes, still sticking to the rocks, and when I was at work on the great horse for Milan, a large sackful of them, which were found thereabout, was brought to me into my workshop, by certain peasants.

722.

Believe me, Leonardo the Florentine, who has to do the equestrian bronze statue of the Duke Francesco that he does not need to care about it, because he has work for all his life time, and, being so great a work, I doubt whether he can ever finish it.

723.

Of the horse I will say nothing because I know the times.

724.

During ten years the works on the marbles have been going on I will not wait for my payment beyond the time, when my works are finished.

725.

#### THE MONUMENT TO MESSER GIOVANNI JACOMO DA TREVULZO.

[2] Cost of the making and materials for the horse [5].

721. 1. in nelle . . multitudine. 2. apichati . . sachō. 3. fabricha.

722. 1. me saluo [quel] | "lonar fiorētino" chessa il chauallo . . franc<sup>o</sup>" "di brōzo" chēnone. 2. lesere . . nella.

724. 1. marmoperassi. 2. inōvo. 3. ghamēto. 4. dela.

725. 1. giovāni iacomo da trevls. 3. manifatu. 7. intel . . ellegrame ella. 11. soma. 15. pezo. 16. lungha br 4 ellargho br.

722. This passage is quoted from a letter to a committee at Piacenza for whom Leonardo seems to have undertaken to execute some work. The letter is given entire in section XXI.; in it Leonardo remonstrates as to some unreasonable demands.

723. This passage occurs in a rough copy of a letter to Ludovico il Moro, without date (see below among the letters).

724. This possibly refers to the works for the pedestal of the equestrian statue concerning which we have no farther information in the MSS. See p. 6.

725. In the original, lines 2—5, 12—14, 33—35, are written on the margin. This passage has been

recently published by G. Govi in Vol. V, Ser. 3<sup>a</sup>, of *Transunti, Reale Accademia dei Lincei, sed. del 5 Giugno, 1881*, with the following introductory note: "Desidero intanto che siano stampati questi pochi frammenti perchè so che sono stati trascritti ultimamente, e verranno messi in luce tra poco fuori d'Italia. Li ripubbliché pure chi vuole, ma si sappia almeno che anche tra noi si conoscevano, e s'eran raccolti da anni per comporne, quando che fosse, una edizione ordinata degli scritti di Leonardo."

The learned editor has left out line 22 and has written 3 piè for 8 piedi in line 25. There are other deviations of less importance from the original.

<sup>6</sup> Vno corsiero grāde al naturale coll'omo sopra vuole per la spesa del metallo . . . . .	duc. 500.	A courser, as large as life, with the rider requires for the cost of the metal, duc. 500.

ducati l'una . . . . . duc.

<sup>52</sup>Per isquadrare la pietra dove si  
posa il morto e sua incorniciatura  
duc. 20.

<sup>53</sup>In somma duc. 1075.

<sup>54</sup>In somma ogni cosa insieme  
giūta sō . . . . . duc. 3046.

[33]Cost of the work in marble[35].

Round the base on which the horse  
stands there are 8 figures at 25 ducats  
each . . . . . duc. 200.

And on the same base there are 8  
festoons with some other ornaments,  
and of these there are 4 at the price  
of 15 ducats each, and 4 at the price  
of 8 ducats each . . . . . duc. 92.

And for squaring the stones duc. 6.

Again, for the large cornice which  
goes below the base on which the  
horse stands, which is 13 br. and 6 in.,  
at 2 duc. per br. . . . . duc. 27.

And for 12 br. of frieze at 5 duc.  
per br. . . . . duc. 60.

And for 12 br. of architrave at  
1  $\frac{1}{2}$  duc. per br. . . . . duc. 18.

And for 3 rosettes which will be  
the soffit of the monument, at 20 du-  
cats each . . . . . duc. 60.

And for 8 fluted columns at 8  
ducats each . . . . . duc. 64.

And for 8 bases at 1 ducat each,  
duc. 8.

And for 8 pedestals, of which 4 are  
at 10 duc. each, which go above the  
angles; and 4 at 6 duc. each . . duc. 64.

And for squaring and carving the  
moulding of the pedestals at 2 duc.  
each, and there are 8 . . . . duc. 16.

And for 6 square blocks with figures  
and trophies, at 25 duc. each . . duc. 150.

And for carving the moulding of  
the stone under the figure of the  
deceased . . . . . duc. 40.

For the statue of the deceased, to  
do it well . . . . . duc. 100.

For 6 harpies with candelabra, at 25  
ducats each . . . . . duc. 150.

For squaring the stone on which  
the statue lies, and carving the moul-  
ding . . . . . duc. 20.

in all . . duc. 1075.

The sum total of every thing added  
together amount to . . . . . duc. 3046.

### ZECCA DI ROMA.

used in Rome.

### MINT AT ROME.

It can also be made without a spring. The mint of  
But the screw above must always be joined  
to the part of the movable sheath:

<sup>6</sup>Tutte le monete che <sup>7</sup>non àno jl cierchio <sup>8</sup>intero, non sieno accigettate per buone, e a <sup>10</sup>fare la perfectione del lor <sup>11</sup>cierchio è neciessario <sup>12</sup>che in prima le mone<sup>13</sup>te siē tutte di perfetto cir<sup>14</sup>colo, e a fare questo <sup>15</sup>e' si debbe in prima fare vna <sup>16</sup>moneta perfetta in peso <sup>17</sup>e in larghezza e grossez<sup>18</sup>za, e di questa tal lar<sup>19</sup>ghezza e grossezza siē fat<sup>20</sup>te molte lamine, tira<sup>21</sup>te per una medesima tra<sup>22</sup>fila, le quali resterā<sup>23</sup>no a modo di righe, e <sup>24</sup>di queste tali righe si <sup>25</sup>stanpi fuori le monete <sup>26</sup>tōde, a modo che si fā<sup>27</sup>no i criueli da castag<sup>28</sup>gne, e queste mone<sup>29</sup>te poi si stampino nel <sup>30</sup>modo sopra detto ecc.

<sup>31</sup>Il vacuo della stampa <sup>32</sup>sia più largo da alto <sup>33</sup>che da basso vni<sup>34</sup>formemente, <sup>35</sup>e insēibile.

<sup>36</sup>Questo taglia le monete di perfetta ro<sup>37</sup>tondità e grossezza e peso e ris<sup>38</sup>parmia l'omo che taglia e pesa, e <sup>39</sup>rispiarmia l'omo che fa le monete <sup>40</sup>tonde; adūque sol passa per li mani <sup>41</sup>del trafiletore e dello stampato<sup>42</sup>re e fa monete bellissime.

All coins which do not have the rim complete, are not to be accepted as good; and to secure the perfection of their rim it is requisite that, in the first place, all the coins should be a perfect circle; and to do this a coin must before all be made perfect in weight, and size, and thickness. Therefore have several plates of metal made of the same size and thickness, all drawn through the same gauge so as to come out in strips. And out of [24]these strips you will stamp the coins, quite round, as sieves are made for sorting chestnuts[27]; and these coins can then be stamped in the way indicated above; &c.

[31]The hollow of the die must be uniformly wider than the lower, but imperceptibly[35].

This cuts the coins perfectly round and of the exact thickness, and weight; and saves the man who cuts and weighs, and the man who makes the coins round. Hence it passes only through the hands of the gauger and of the stamper, and the coins are very superior.

<sup>726.</sup> See Pl. LXXVI No. 2. The text of lines 31—35 stands parallel l. 24—27.

Farther evidence of Leonardo's occupations and engagements at Rome under Pope Leo X. may be gathered from some rough copies of letters which

will be found in this volume. Hitherto nothing has been known of his work in Rome beyond some doubtful, and perhaps mythical, statements in Vasari.

<sup>727.</sup> The meaning of *scagliuolo* in this passage is doubtful.

<sup>4</sup>Il diametro si presta inuolto in nel piōbo, è battuto con martello <sup>5</sup>e disteso piv volte; tal piōbo è raddoppiato e si tiene involto nel la carta, acciochè tal poluere nō si versi, e poi fondi il piōbo e la pol'vere vi è di sopra al pionbo fonduto, la qual poi sia fregata infra due <sup>8</sup>piastre d'acciaio tanto si poluerizi bene, di poi lauala coll' acqua da partire <sup>9</sup>e risoluerassi la negrezza del ferro, e lascierà la poluere netta;

<sup>10</sup>Lo smeriglio in pezzi grossi si ro pe col metterlo sopra vn panno in mol<sup>11</sup>ti doppi, e si percuote per fianco col martello, e così se ne va; poi mischia lì <sup>12</sup>a poco a poco, e poi si pesta cō facilità, e se tu lo tenessi sopra l'ancu<sup>13</sup>dine, mai lo rōperesti, essendo cosl grossio.

<sup>14</sup>Chi macina li smalти debbe fare tale esercitio sopra le pias<sup>15</sup>tre d'acciaio, temperato col macinatojo da conio, e poi metter<sup>16</sup>lo nell' acqva forte, la qual risolute tutto esso acciaio che si è <sup>17</sup>cōsumiato e misto con esso smalto e lo fece nero, onde poi <sup>18</sup>rimā purificato e netto, e se tu lo macini sul porfido, esso <sup>19</sup>porfido si consuma e si mischia collo smalto e lo guasta, <sup>20</sup>e l'acqua da partire mai lo lieva da dosso, perchè nō può <sup>21</sup>risoluere tale porfido.

<sup>22</sup>Se volli fare colore bello azzurro risolui lo smalto, fatto <sup>23</sup>col tartaro, e po' li leva il sal da dosso.

<sup>24</sup>L'ottone vetrificato fa bello rosso.

G. 75δ]

729.

## Stucco.

<sup>2</sup>Fa stucco sopra il gobbo del . . . . . di giesso, <sup>3</sup>il quale sia cōposto di venere e <sup>4</sup>mercurio, e impasta bene sopra esso gobbo <sup>5</sup>con equal grossezza di costa di col-tello fatta colla <sup>6</sup>sagoma, e questa copri cō coperchio di canpa<sup>7</sup>na da stillare, e riavrai il tuo vmido cō <sup>8</sup>che inpastasti, el rimanēte . . . asciugga bene e poi i<sup>9</sup>foca e batti over

The diameter is given in the lead enclosed; it is beaten with a hammer and several times extended; the lead is folded and kept wrapped up in parchment so that the powder may not be spilt; then melt the lead, and the powder will be on the top of the melted lead, which must then be rubbed between two plates of steel till it is thoroughly pulverised; then wash it with aqua fortis, and the blackness of the iron will be dissolved leaving the powder clean.

Emery in large grains may be broken by putting it on a cloth many times doubled, and hit it sideways with the hammer, when it will break up; then mix it little by little and it can be founded with ease; but if you hold it on the anvil you will never break it, when it is large.

Any one who grinds smalt should do it on plates of tempered steel with a cone shaped grinder; then put it in aqua fortis, which melts away the steel that may have been worked up and mixed with the smalt, and which makes it black; it then remains purified and clean; and if you grind it on porphyry the porphyry will work up and mix with the smalt and spoil it, and aqua fortis will never remove it because it cannot dissolve the porphyry.

If you want a fine blue colour dissolve the smalt made with tartar, and then remove the salt.

Vitrified brass makes a fine red.

729. 1. stucco. 2. fasstucco . . . ghobb del . a engui di giesso. 3. cōposso di erenev e. 4. oirucrem e inpassa . ghobbo. 5. grosseza . . . cholla. 6. saghoma ecquessta . . . choperchio. 7. dasstillare erriarai. 8. inpasstassiti . . . assciungha. 9. focha

<sup>729.</sup> In this passage a few words have been written in a sort of cipher—that is to say backwards; as in l. 3 *erenev* for *Venere*, l. 4 *oirucrem* for *Mercurio*, l. 12 *il orreve cō earob* for *il everro (?) cō borace*. The meaning of the word before “di giesso”

in l. 1 is unknown; and the sense, in which *sagoma* is used here and in other passages is obscure.—*Venere* and *Mercurio* may mean ‘marble’ and ‘lime’, of which stucco is composed.

12. The meaning of *orreve* is unknown.

On stucco  
(729. 730).

brunisci cō buon brunitoio e fa <sup>10</sup> grossò inverso la costa.

## STUCCO.

<sup>12</sup> Poluerizza il . . . . cō borace e acqua, in<sup>13</sup> pasta e fa stucco, e poi scalda in modo si sec<sup>14</sup>chi, e poi vernica con foco in modo che lustri.

C. A. 313a; 951a]

## STUCCO DA FORMARE.

<sup>2</sup> Togli butiro parti 6, ciera parti 2, <sup>3</sup>e tāta farina volatilē che, messa sopra <sup>4</sup> le cose strutte, le facci sode a modo <sup>5</sup> di cera o di terra da formare.

## COLLA.

<sup>7</sup> Togli mastice tremētina stillata <sup>8</sup> e biacca.

S. K. M. III 50a]

## DA GITTARE.

<sup>2</sup> Il tartaro bruciato e pol<sup>3</sup>verizzato col giesso e gitta<sup>4</sup>to fā che esso giesso si <sup>5</sup>tiene insieme poi, ch'è ricot<sup>6</sup>to, e poi nell' acqua si disfa.

S. K. M. III. 53a]

## PER GITTARE BRÓZO IN GIESSO.

<sup>2</sup> Togli per ogni 2 scodelle di giesso una di <sup>3</sup>corno di bo bruciato e mischia insieme <sup>4</sup>e gitta.

S. K. M. II. I 95a]

Quādo voi gittare di ciera, abbrucia la sciuma <sup>2</sup>con una candela, e'l gietto verrà senza busi.

S. K. M. III. 55b]

<sup>2</sup> ōcie di giesso da libbra <sup>2</sup>di metallo; <sup>3</sup>noce che fa simile alla <sup>4</sup>curva.

... brunissci cō biō brunitoio effa. <sup>10</sup> chossta. <sup>11</sup> stucco. <sup>12</sup> il orreve cō ecarob e acq<sup>"a</sup> in. <sup>13</sup> passta effa stucco eppoi scal<sup>"d</sup>a. <sup>14</sup> eppoi vernicha con vocho . . lusstri.

733. 1. abrucia. 2. chandela.

734. 1. libra.

well; afterwards fire it, and beat it or burnish it with a good burnisher, and make it thick towards the side.

## STUCCO.

Powder . . . with borax and water to a paste, and make stucco of it, and then heat it so that it may dry, and then varnish it, with fire, so that it shines well.

## 730.

## STUCCO FOR MOULDING.

Take of butter 6 parts, of wax 2 parts, and as much fine flour as when put with these 2 things melted, will make them as firm as wax or modelling clay.

## GLUE.

Take mastic, distilled turpentine and white lead.

## 731.

## TO CAST.

Tartar burnt and powdered with plaster and cast cause the plaster to hold together when it is mixed up again; and then it will dissolve in water.

## 732.

## TO CAST BRONZE IN PLASTER.

Take to every 2 cups of plaster 1 of ox-horns burnt, mix them together and make your cast with it.

## 733.

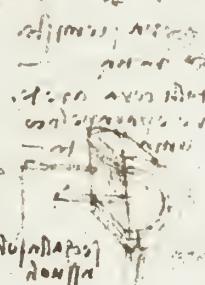

When you want to take a cast in wax, burn the scum with a candle, and the cast will come out without bubbles.

## 734.

2 ounces of plaster to a pound of metal;— walnut, which makes it like the curve.

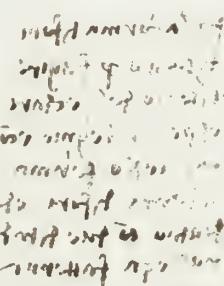

734. The second part of this is quite obscure.

order which is more or less identical with that of the  
- 2nd stage apparatus. The apparatus consists of a  
large cylindrical vessel containing a number of small  
cylinders which are suspended from a horizontal  
rod. The cylinders are arranged in two rows, one  
above the other. The top row consists of four  
cylinders, and the bottom row consists of three.  
The apparatus is mounted on a stand.

### 13th stage apparatus

This stage is similar to the previous ones, but  
the cylinders are arranged in a different pattern.  
The top row consists of five cylinders, and the  
bottom row consists of four. The apparatus is  
mounted on a stand.

This stage is similar to the previous ones, but

## 735.

[Dried earth 16 pounds, 100 pounds of metal wet clay 20,—of wet 100,—half,—which increases 4 lbs. of water,—1 of wax, 1 lb. of metal, a little less,—the scrapings of linen with earth, measure for measure.]

## 736.

Such as the mould is, so will the cast be.

## 737.

## HOW CASTS OUGHT TO BE POLISHED.

Make a bunch of iron wire as thick as thread, and scrub them with [this and] water; hold a bowl underneath that it may not make a mud below.

## HOW TO REMOVE THE ROUGH EDGES FROM BRONZE.

Make an iron rod, after the manner of a large chisel, and with this rub over those seams on the bronze which remain on the casts of the guns, and which are caused by the joins in the mould; but make the tool heavy enough, and let the strokes be long and broad.

## TO FACILITATE MELTING.

First alloy part of the metal in the crucible, then put it in the furnace, and this being in a molten state will assist in beginning to melt the copper.

## TO PREVENT THE COPPER COOLING IN THE FURNACE.

When the copper cools in the furnace, be ready, as soon as you perceive it, to cut it with a long stick while it is still in a paste; or if it is quite cold cut it as lead is cut with broad and large chisels.

735. The translation is given literally, but the meaning is quite obscure.

## SE AVESSI A FARE VNO GRĀ GIETTO.

<sup>19</sup>Se avessi a fare uno gietto di cento mila · libbre, falo cō · 2 · fornelli con 2000 libbre <sup>20</sup>per ciascuno · o īsino . in 3000 libbre il piv.

Tr. 53]

## ¶COME FARE BENE A RÖPERE VNA GRĀ MASSA DI BRÖZO.¶

<sup>2</sup>Se volli röpere · una · grā · massa · di brözo · sospēdilo · prima, <sup>3</sup>poi · li fa da 4 · lati · uno muro · a vso di truogo · di mattoni, e fa lì grā foco , <sup>4</sup>e quādo è bē rosso, dali · uno colpo con vno <sup>5</sup>grā peso levato · in alto cō grā forza.

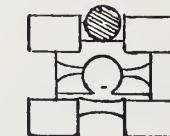

Tr. 54]

## ¶DEL FARE VNIRE IL PIÖBO CON ALTRO METALLO.¶

<sup>2</sup>Se volessi per masseritia · mettere · il piöbo · nel metallo · e per sopire · alla soma <sup>3</sup>dello stagnio · che si · richiede · nel metallo ·, allega · prima · il piöbo · collo <sup>4</sup>stagnio · e poi metti sopra · il rame fôduto.

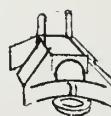

## ¶COME SI DEBE · FONDERE IN UNO FORNELLO.¶

<sup>6</sup>Il fornello · de' essere · ifra 4 · pilastri bē fôdati.

## ¶DELLA GROSSEZZA DELLA CAPPÀ.¶

<sup>8</sup>La cappa nō debe · prevalicare · la grossezza · di 2 · dita ·, e debesi interrare · <sup>9</sup>in quattro volte · sopra · la terra · sottile · e poi bene armare, <sup>10</sup>e sia · sola · mête · ricotta · di détro · e dato · poi · sottilmête · di cenere · e bouina.

## DELLA GROSSEZZA DELLA BÖBARDÀ.

<sup>12</sup>La bóbarda · de'essere da 600 libbre di ballotta · ī su, cō questa regola; <sup>13</sup>farai la misura del diametro della · ballotta · e quel-

## IF YOU HAVE TO MAKE A LARGE CAST.

If you have to make a cast of a hundred thousand pounds do it with two furnaces and with 2000 pounds in each, or as much as 3000 pounds at most.

738.

## HOW TO PROCEED TO BREAK A LARGE MASS OF BRONZE.

If you want to break up a large mass of bronze, first suspend it, and then make round it a wall on the four sides, like a trough of bricks, and make a great fire therein. When it is quite red hot give it a blow with a heavy weight raised above it, and with great force.

739.

## TO COMBINE LEAD WITH OTHER METAL.

If you wish for economy in combining lead with the metal in order to lessen the amount of tin which is necessary in the metal, first alloy the lead with the tin and then add the molten copper.

## HOW TO MELT [METAL] IN A FURNACE.

The furnace should be between four well founded pillars.

## OF THE THICKNESS OF THE COATING.

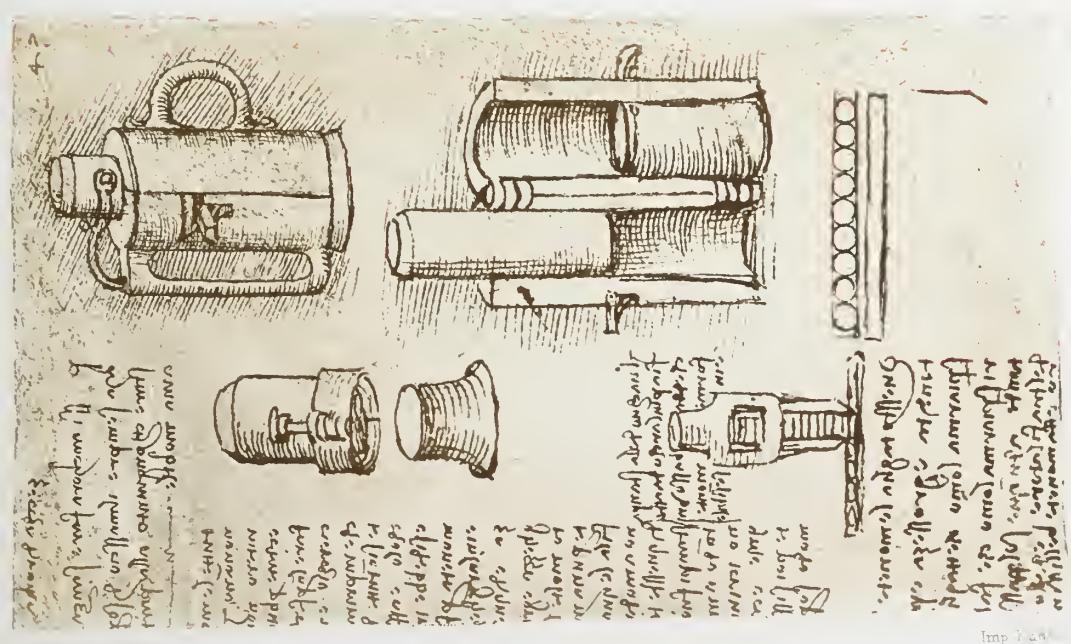

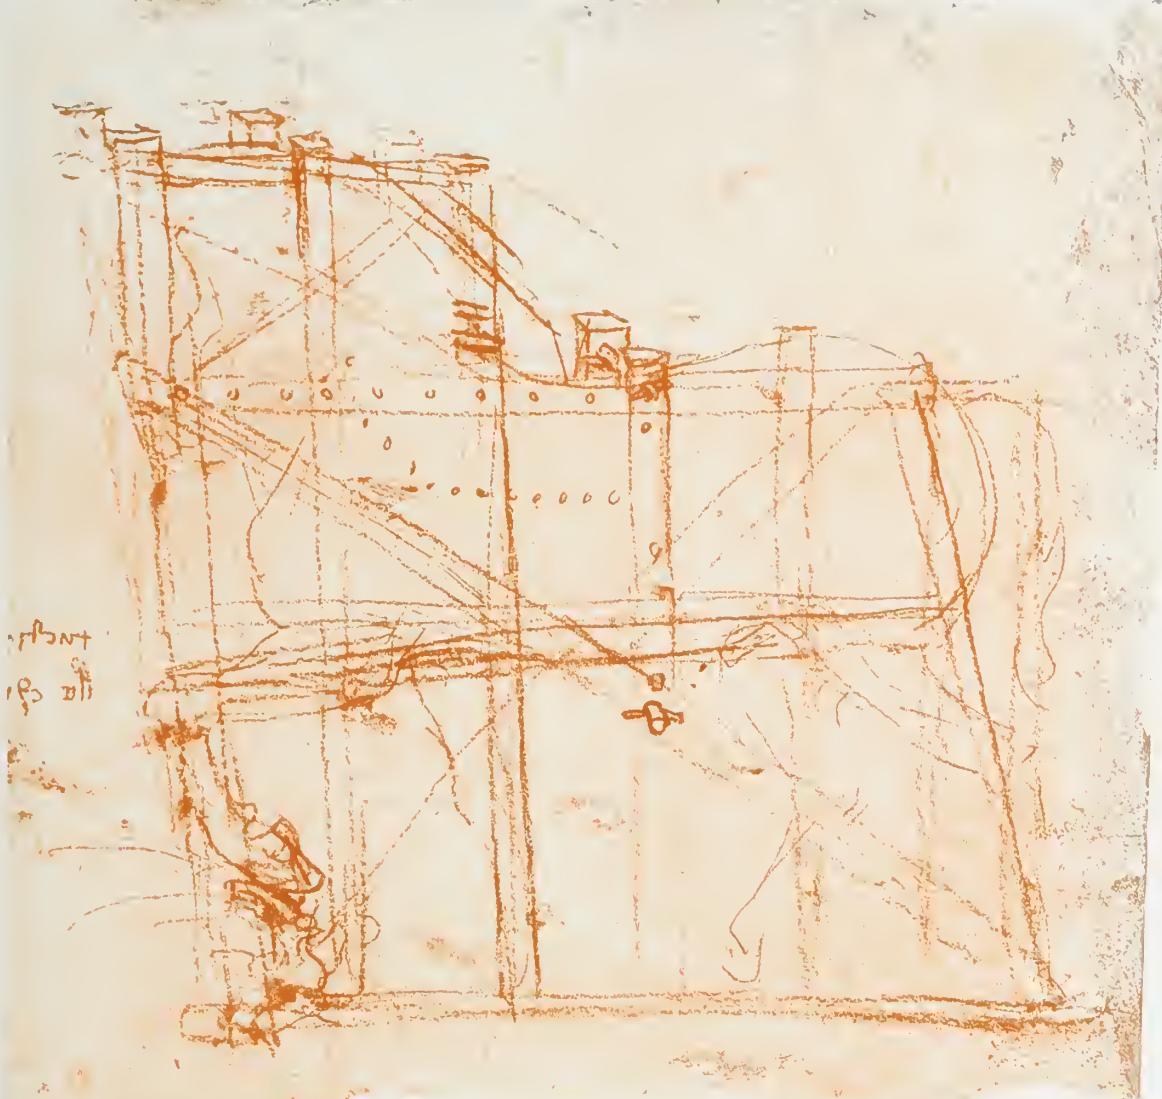

The coating should not be more than two fingers thick, it should be laid on in four thicknesses over fine clay and then well fixed, and it should be fired only on the inside and then carefully covered with ashes and cow's dung.

## OF THE THICKNESS OF THE GUN.

The gun being made to carry 600 lbs. of ball and more, by this rule you will take the measure of the diameter of the ball and

738. 1. be a . . ī grā. 2. ī grā. 3. ī muro . . effa . . focho. 4. ecquādo . . dalli ī colpi chon.

la · diundi · i 6 · parti, <sup>14</sup>e una d'esse partia la grossezza · dināzi e la metà sēpre · piv rieto, <sup>15</sup>e se la ballotta fia di libbre 700, <sup>1/7</sup> del · diametro della ballotta fia la sua <sup>16</sup>grossezza · dināzi ·, e se la ballotta · fia 800 ·, l'ottavo del suo diametro <sup>17</sup>dināzi, e se 900 · <sup>1/8</sup> e <sup>1/2</sup> | e se 1000 <sup>1/9</sup>.

#### DELLA LÜGHEZZA DELLA TRÖBA DELLA BÖBARDA.

<sup>19</sup>Se voi · ch'ella · gitti · una ballotta · di pietra · fa la lüghezza della tröba <sup>20</sup>in 6 · o insino i 7 ballotte ·, e se la · ballotta · fusse di ferro ·, fa <sup>21</sup>detta tröba · isino in · 12 ballotte ·, e se la ballotta · fusse di <sup>22</sup>piōbo · farai la insino · in diciotto · ballotte, dico quādo la bōbarda <sup>23</sup>avesse · la bocca · atta · a ricieuere · in se da 600 libr · di ballotta di pietra i su.

#### DELLA GROSSEZZA DE' PASSA-VOLANTI.

<sup>25</sup>La grossezza dināzi de' passavolanti · nō deve passare dalla · metà <sup>26</sup>isino · al terzo del diametro della ballotta, E la lüghezza da 30 isino i 36 <sup>27</sup>ballotte.

Tr. 55]

740.

#### ¶DELLO · ILLOTARE · IL FORNELLO DI DÉTRO.¶

<sup>2</sup>Il fornello · debbe ināzi · che tu · iforni il metallo · essere · illotato di terra di Valenza, <sup>3</sup>e sopra quella · cienere. .

#### ¶DEL RISTORARE · IL METALLO, QUÂDO · RIVOLESSE FREDDARE.¶

<sup>5</sup>Quâdo · tu · vedi il brōzo volersi cōgielare · tolli legnie di salice, schiappate <sup>6</sup>sotilmēte, e cō quelle · fa · foco.

#### ¶LA CAGIONE DEL CÔGIELARSI.¶

<sup>8</sup>Dico · la cagione · d'essa cōgielatione derivar · spesse volte · da troppo foco <sup>9</sup>e ancora da legnie · mal secche.

#### ¶A CONOSCIERE LA DISPOSIZIONE DEL FOCO.¶

<sup>11</sup>Il foco · conoscierai, quâdo fia bono e vtile ·, alle fiamme · chiare, e se uedrai <sup>12</sup>le

divide it into 6 parts and one of these parts will be its thickness at the muzzle; but at the breech it must always be half. And if the ball is to be 700 lbs., <sup>1/7</sup>th of the diameter of the ball must be its thickness in front; and if the ball is to be 800, the eighth of its diameter in front; and if 900, <sup>1/8</sup>th and <sup>1/2</sup> [<sup>3/16</sup>], and if 1000, <sup>1/9</sup>th.

#### OF THE LENGTH OF THE BODY OF THE GUN.

If you want it to throw a ball of stone, make the length of the gun to be 6, or as much as 7 diameters of the ball; and if the ball is to be of iron make it as much as 12 balls, and if the ball is to be of lead, make it as much as 18 balls. I mean when the gun is to have the mouth fitted to receive 600 lbs. of stone ball, and more.

#### OF THE THICKNESS OF SMALL GUNS.

The thickness at the muzzle of small guns should be from a half to one third of the diameter of the ball, and the length from 30 to 36 balls.

Tr. 55]

#### OF LUTING THE FURNACE WITHIN.

The furnace must be luted before you put the metal in it, with earth from Valenza, and over that with ashes.

#### OF RESTORING THE METAL WHEN IT IS BECOMING COOL.

When you see that the bronze is congealing take some willow-wood cut in small chips and make up the fire with it.

#### THE CAUSE OF ITS CURDLING.

I say that the cause of this congealing often proceeds from too much fire, or from ill-dried wood.

#### TO KNOW THE CONDITION OF THE FIRE.

You may know when the fire is good and fit for your purpose by a clear flame,

¶ COME SI DEBE AVMĒTARE IL FONDERE. ¶

<sup>21</sup> Il fondere fia da te avmētato · quādo sarà cōdotto il rame in  $\frac{2}{3}$  <sup>22</sup>in acqua ·, allora · con v legnio di castagnio ispesso rimaneggerai il rima<sup>23</sup>nēte del rame ancora itero · ifra la · parte · fondata.

and if you see the tips of the flames dull and ending in much smoke do not trust it, and particularly when the flux metal is almost fluid.

OF ALLOYING THE METAL.

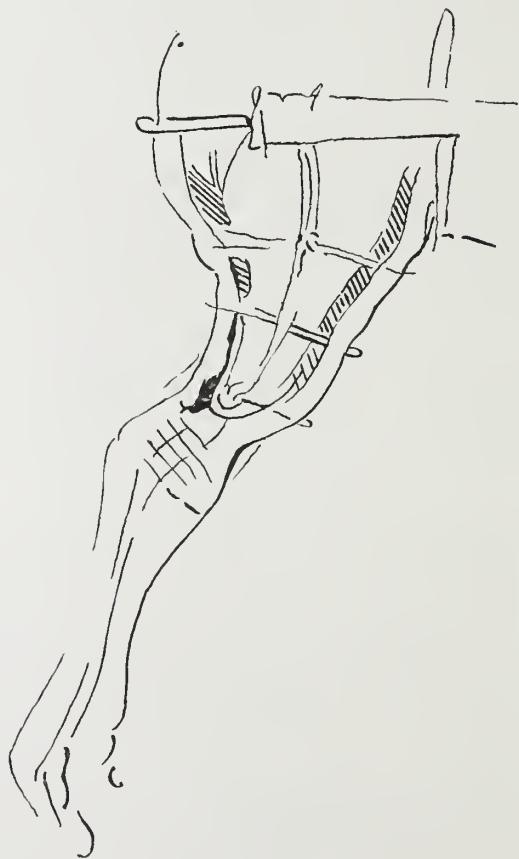

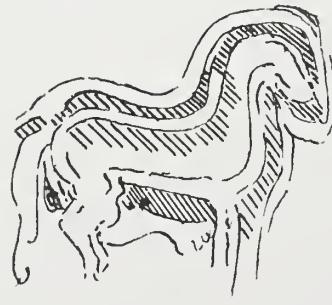

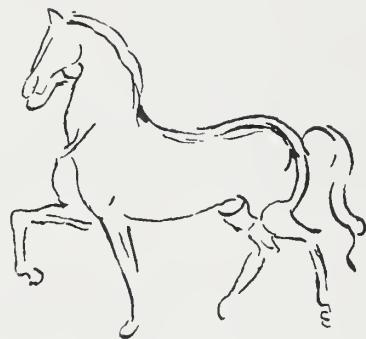

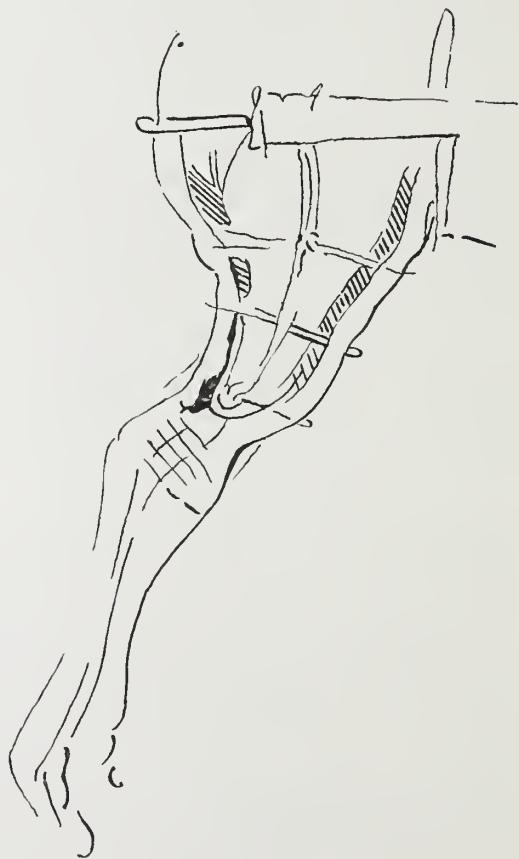

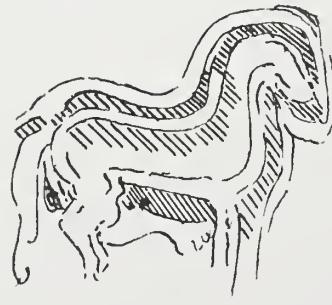

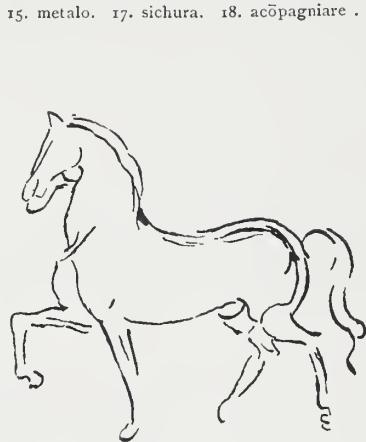

Metal for guns must invariably be made with 6 or even 8 per cent, that is 6 of tin to one hundred of copper, for the less you put in, the stronger will the gun be.

WHEN THE TIN SHOULD BE ADDED TO THE COPPER.

The tin should be put in with the copper when the copper is reduced to a fluid.

HOW TO HASTEN THE MELTING.

You can hasten the melting when  $\frac{2}{3}$ ds of the copper is fluid; you can then, with a stick of chestnut-wood, repeatedly stir what of copper remains entire amidst what is melted.

## *Introductory Observations on the Architectural Designs (XII), and Writings on Architecture (XIII).*

Until now very little has been known regarding Leonardo's labours in the domain of Architecture. No building is known to have been planned and executed by him, though by some contemporary writers incidental allusion is made to his occupying himself with architecture, and his famous letter to Lodovico il Moro,—which has long been a well-known document,—in which he offers his service as an architect to that prince, tends to confirm the belief that he was something more than an amateur of the art. This hypothesis has lately been confirmed by the publication of certain documents, preserved at Milan, showing that Leonardo was not only employed in preparing plans but that he took an active part, with much credit, as member of a commission on public buildings; his name remains linked with the history of the building of the Cathedral at Pavia and that of the Cathedral at Milan.

Leonardo's writings on Architecture are dispersed among a large number of MSS., and it would be scarcely possible to master their contents without the opportunity of arranging, sorting and comparing the whole mass of materials, so as to have some comprehensive idea of the whole. The sketches, when isolated and considered by themselves, might appear to be of but little value; it is not till we understand their general purport, from comparing them with each other, that we can form any just estimate of their true worth.

Leonardo seems to have had a project for writing a complete and separate treatise on Architecture, such as his predecessors and contemporaries had composed—Leon Battista Alberti, Filarete, Francesco di Giorgio and perhaps also Bramante. But, on the other hand, it cannot be denied that possibly no such scheme was connected with the isolated notes and researches, treating on special questions, which are given in this work; that he was merely working at problems in which, for some reason or other he took a special interest.

A great number of important buildings were constructed in Lombardy during the period between 1472 and 1499, and among them there are several by unknown architects,

of so high an artistic merit, that it is certainly not improbable that either Bramante or Leonardo da Vinci may have been, directly or indirectly, concerned in their erection.

Having been engaged, for now nearly twenty years, in a thorough study of Bramante's life and labours, I have taken a particular interest in detecting the distinguishing marks of his style as compared with Leonardo's. In 1869 I made researches about the architectural drawings of the latter in the Codex Atlanticus at Milan, for the purpose of finding out, if possible the original plans and sketches of the churches of Santa Maria delle Grazie at Milan, and of the Cathedral at Pavia, which buildings have been supposed to be the work both of Bramante and of Leonardo. Since 1876 I have repeatedly examined Leonardo's architectural studies in the collection of his manuscripts in the Institut de France, and some of these I have already given to the public in my work on "Les Projets Primitifs pour la Basilique de St. Pierre de Rome", Pl. 43. In 1879 I had the opportunity of examining the manuscript in the Palazzo Trivulzio at Milan, and in 1880 Dr Richter showed me in London the manuscripts in the possession of Lord Ashburnham, and those in the British Museum. I have thus had opportunities of seeing most of Leonardo's architectural drawings in the original, but of the manuscripts themselves I have deciphered only the notes which accompany the sketches. It is to Dr Richter's exactions that we owe the collected texts on Architecture which are now published, and while he has undertaken to be responsible for the correct reading of the original texts, he has also made it his task to extract the whole of the materials from the various MSS. It has been my task to arrange and elucidate the texts under the heads which have been adopted in this work. MS. B. at Paris and the Codex Atlanticus at Milan are the chief sources of our knowledge of Leonardo as an architect, and I have recently subjected these to a thorough re-investigation expressly with a view to this work.

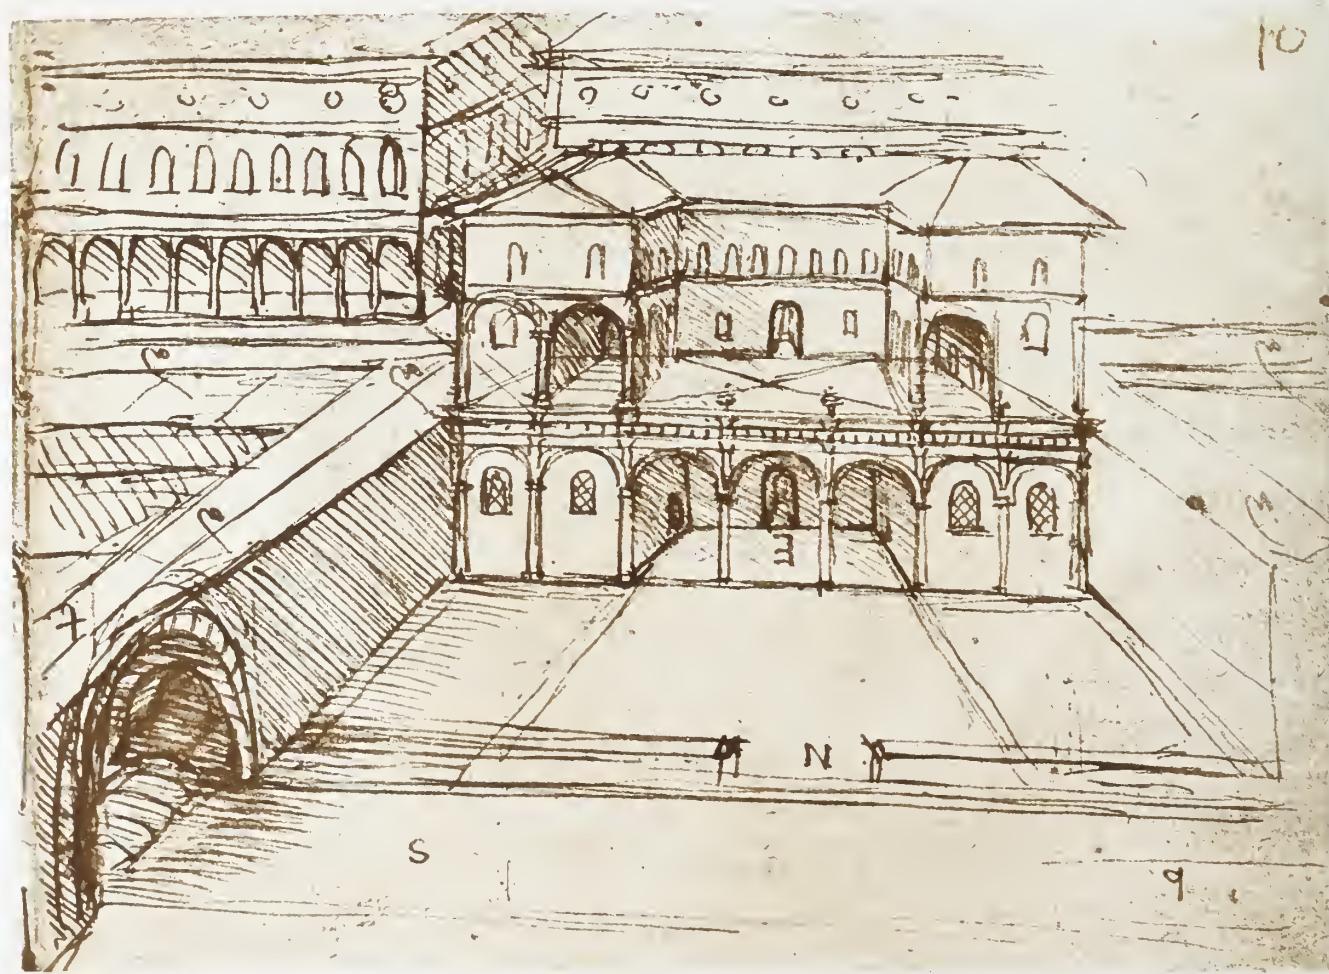

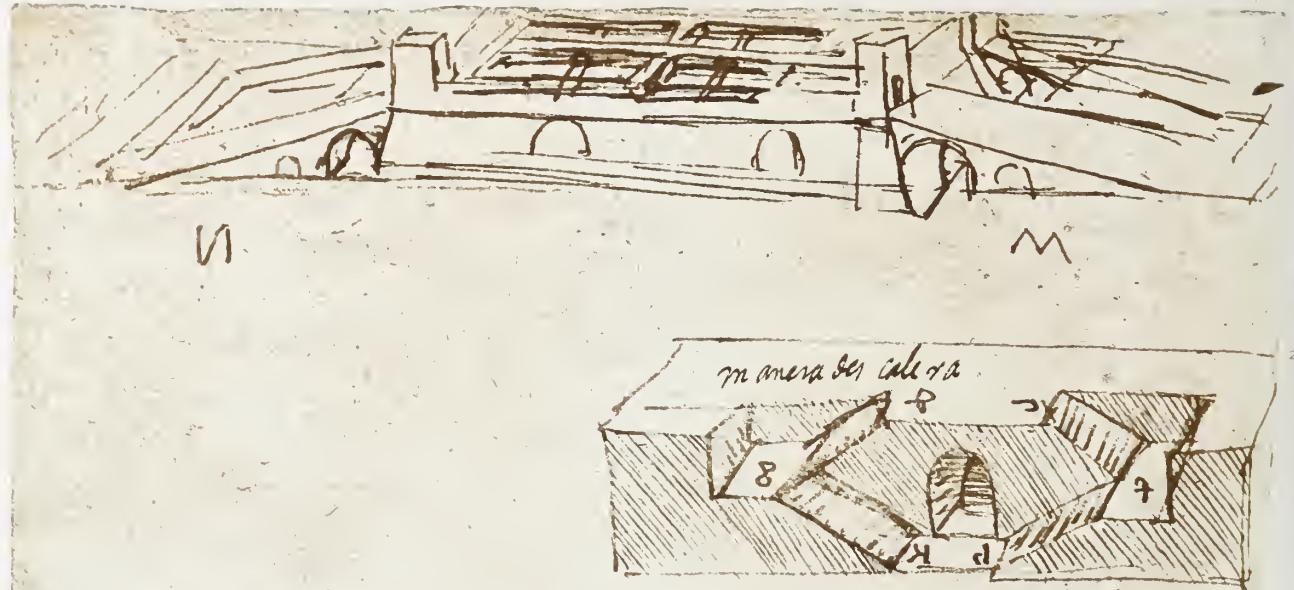

A complete reproduction of all Leonardo's architectural sketches has not, indeed, been possible, but as far as the necessarily restricted limits of the work have allowed, the utmost completeness has been aimed at, and no efforts have been spared to include every thing that can contribute to a knowledge of Leonardo's style. It would have been very interesting, if it had been possible, to give some general account at least of Leonardo's work and studies in engineering, fortification, canal-making and the like, and it is only on mature reflection that we have reluctantly abandoned this idea. Leonardo's occupations in these departments have by no means so close a relation to literary work, in the strict sense of the word as we are fairly justified in attributing to his numerous notes on Architecture.

Leonardo's architectural studies fall naturally under two heads:

I. Those drawings and sketches, often accompanied by short remarks and explanations, which may be regarded as designs for buildings or monuments intended to be built. With these there are occasionally explanatory texts.

II. Theoretical investigations and treatises. A special interest attaches to these because they discuss a variety of questions which are of practical importance to this day. Leonardo's theory as to the origin and progress of cracks in buildings is perhaps to be considered as unique in its way in the literature of Architecture.

## XII.

### *Architectural Designs.*

#### *I. Plans for towns.*

*A. Sketches for laying out a new town with a double system of high-level and low-level road-ways.*

*Pl. LXXVII, No. 1 (MS. B, 15<sup>b</sup>). A general view of a town, with the roads outside it sloping up to the high-level ways within.*

*Pl. LXXVII, No. 3 (MS. B, 16<sup>b</sup>, see No. 741; and MS. B, 15<sup>b</sup>, see No. 742) gives a partial view of the town, with its streets and houses, with explanatory references.*

*Pl. LXXVII, No. 2 (MS. B, 15<sup>b</sup>; see No. 743). View of a double staircaise with two opposite flights of steps.*

*Pl. LXXVIII, Nos. 2 and 3 (MS. B, 37<sup>a</sup>). Sketches illustrating the connection of the two levels of roads by means of steps. The lower galleries are lighted by openings in the upper road way.*

*B. Notes on removing houses (MS. Br. M., 270<sup>b</sup>, see No. 744).*

B. 16a]

741.

Le strade *m* sono · piv · alte · che le strade  
· *p s* · braccia 6., e ciascuna <sup>2</sup>strada · de' es-  
sere larga braccia 20, e avere  $\frac{1}{2}$  braccio  
di calo dalle stremità <sup>3</sup>al mezzo, e in esso  
mezzo sia a ogni braccio uno braccio di  
<sup>4</sup>fessura, largo uno dito, dove l'acqua che

The roads *m* are 6 braccia higher than  
the roads *p s*, and each road must be 20  
braccia wide and have  $\frac{1}{2}$  braccio slope from  
the sides towards the middle; and in the  
middle let there be at every braccio an  
opening, one braccio long and one finger  
wide, where the rain water may run off into

piove debba scolare nelle casse fatte al medesimo piano di p.s., e da ogni stremità della larghezza di detta strada sia uno portico di larghezza di braccia 6 i sulle colonne, e sappi che, chi volesse andare per tutta la terra per le strade alte, potrà a suo acconcio usarle, e chi volesse andare per le basse, ancora il simile; per le strade alte non devono andare carri, nè altre simili cose, anzi siano solamente per li giëteli o mini; per le basse deono andare i carri e altre some al uso e commodità del popolo; l'una casa de' volgieri le schiene all'altra; lasciando la strada bassa in mezzo, ed agli usci n si mettano le vettovaglie, come legnie, vino e simili cose; per le vie sotterrane si d' votare destri, stalle e simili cose fetide dall'uno arco all'altro

hollows made on the same level as p.s. And on each side at the extremity of the width of the said road let there be an arcade, 6 braccia broad, on columns; and understand that he who would go through the whole place by the high level streets can use them for this purpose, and he who would go by the low level can do the same. By the high streets no vehicles and similar objects should circulate, but they are exclusively for the use of gentlemen. The carts and burdens for the use and convenience of the inhabitants have to go by the low ones. One house must turn its back to the other, leaving the lower streets between them. Provisions, such as wood, wine and such things are carried in by the doors n, and privies, stables and other fetid matter must be emptied away underground. From one arch to the next

B. 53]

de' essere braccia 300, cioè ciascuna via che riceve il lume dalle fessure delle strade di sopra, e a ogni arco de' essere una scala a lumaca tonda, perchè ne' catoni delle quadre si piscia, e larga, e nella prima uolta sia vn uscio ch'entri i destri e piscatoi comuni, e per scalza si discièda dalla strada alta alla bassa, e le strade alte si comincino fori delle porte, e givnte a esse porte abbia no conposto l'altezza di braccia 6; Fia fatta detta terra o presso a mare o altro fiume grosso, acciocchè le brutture della città, menate dall'acqua sieno portate via.

742.

must be 300 braccia, each street receiving its light through the openings of the upper streets, and at each arch must be a winding stair on a circular plan because the corners of square ones are always fouled; they must be wide, and at the first vault there must be a door entering into public privies and the said stairs lead from the upper to the lower streets and the high level streets begin outside the city gates and slope up till at these gates they have attained the height of 6 braccia. Let such a city be built near the sea or a large river in order that the dirt of the city may be carried off by the water.

B. 158]

Modo di scale | le scale . c . d . discendono j f . g ., e similmente f . g . disciède j . h . k .

743.

The construction of the stairs: The stairs c d go down to f g , and in the same way f g goes down to h k .

 742. 1. br . 300 . . ciaschuna . . ilume. 2. i schala. 3. cato dele . . pisia a e. 4. piscatoi. 5. schala . . elle . . 6. abbi. 7. chonposte latzea . . facta decta tera. 8. mere . . acioche le bructure. 9. cicta.  
 743. 1. discièdano . . essimilemète.  
 744. 1. chase. 2. chase. 3. ecquesto co' facilita (?). 5. eppoi. 6. cōmettanò. 11. chase . . novela.

chè tali case son prima fatte <sup>5</sup>di pezzi sopra le piazze, e poi <sup>6</sup>si cōmettono insieme colli lor <sup>7</sup>legnami nel sito dove si debbono <sup>8</sup>stabilire.

because such houses are at first made in pieces on the open places, and can then be fitted together with their timbers in the site where they are to be permanent.

<sup>9</sup>Li omini del paese abitino le nuove case in parte, <sup>10</sup>quando nō v'è la cor<sup>11</sup>te.

[9] Let the men of the country [or the village] partly inhabit the new houses when the court is absent[12].

744. On the same page we find notes referring to Romolontino and Villafranca with a sketch-map of the course of the "Sodro" and the "(Lo)era" (both are given in the text farther on). There can hardly be a doubt that the last sentence of the passage

given above, refers to the court of Francis I. King of France.—L.9—13 are written inside the larger sketch, which, in the original, is on the right hand side of the page by the side of lines 1—8. The three smaller sketches are below.  
J. P. R.

## II. Plans for canals and streets in a town.

Pl. LXXIX, 1. and 2, (MS. B, 37<sup>b</sup>, see No. 745, and MS. B. 36<sup>a</sup>, see No. 746). A Plan for streets and canals inside a town, by which the cellars of the houses are made accessible in boats.

The third text given under No. 747 refers to works executed by Leonardo in France.

B. 37<sup>b</sup>]

745.

La faccia  $a^2m$  darà il lume  $\beta$  alle stā-  
 $^4ze$ ;  $^5a \cdot e$  sarà braccia 6.,  $a \cdot b$  fia braccia.  
8.,  $b \cdot e$  fia braccia 30; acciochè le stanze  
sotto i portici siano  $^6luminose$ .,  $c \cdot d \cdot f$ .  
fia il loco donde se vadi a scaricare le navi  
in nel $^7le$  case; A volere che questa cosa  
abbia effetto bisogna che la inondatione  
 $^8de'$  fiumi non mādasse l' acqua alle ca-  
nove; è necessario elegiere sito accom-  
modato,  $^9$ come porsi uicino a vno fiume, il  
quale ti dia i canali, che nō si possino nè  
per  $^{10}$ inōdatione o secchezza delle acque  
dare mutatione alle altezze d'esse acque,  
 $^{11}e$  il modo è qui di sotto figurato, e fac-  
ciasi elezione di bel fiume che nō intorbidi,  
nè  $^{12}$ per pioggia, come Tesino Adda e  
molti altri; il modo che l'acque senpre

The front  $a m$  will give light to the  
rooms;  $a e$  will be 6 braccia— $a b$  8 braccia  
— $b e$  30 braccia, in order that the rooms  
under the porticoes may be lighted;  $c d f$   
is the place where the boats come to the  
houses to be unloaded. In order to render  
this arrangement practicable, and in order  
that the inundation of the rivers may not  
penetrate into the cellars, it is necessary to  
choose an appropriate situation, such as a spot  
near a river which can be diverted into  
canals in which the level of the water will  
not vary either by inundations or drought.  
The construction is shown below; and make  
choice of a fine river, which the rains do  
not render muddy, such as the Ticino, the  
Adda and many others. [12]The construction

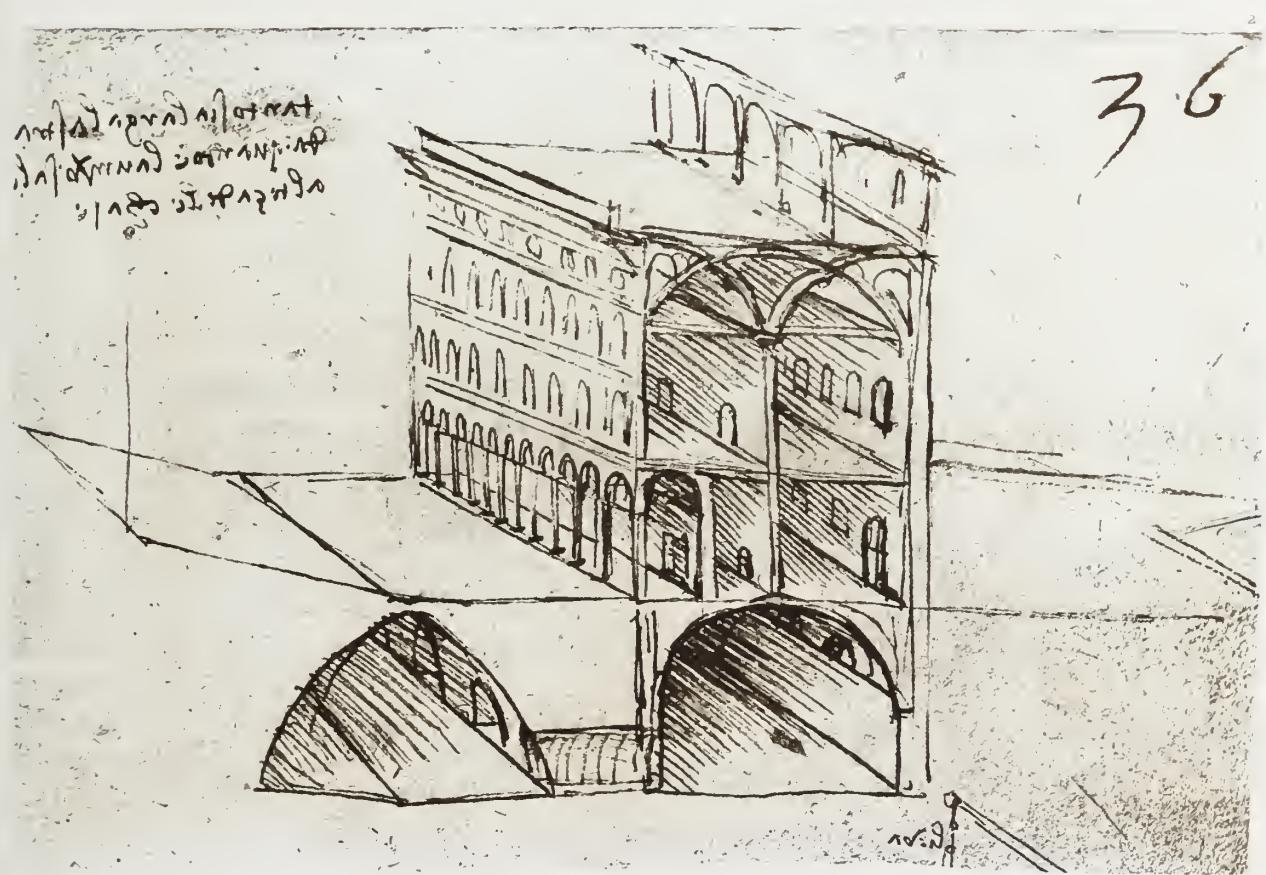

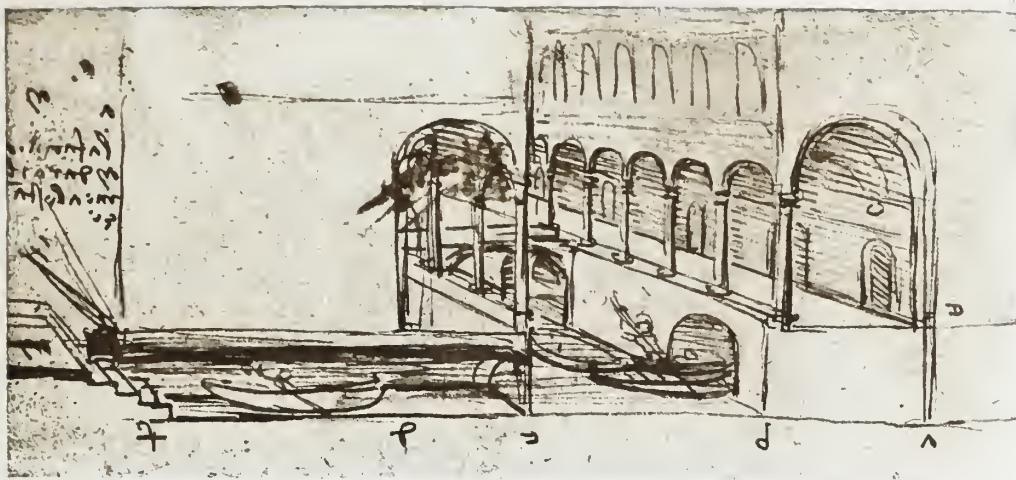

745. 2. ilume. 5. br . 6 . . br . 8 . . chelle . . socto. 6. donde [si dia lum] se . . asscharicare . . ine. 7. chuesta . . abbi

745. L. 1—4 are on the left hand side and within  
the sketch given on Pl. LXXIX, No. 1. Then follows  
after line 14, the drawing of a sluicegate—conca—of  
which the use is explained in the text below it.

12 *Tesino, Adda e molti altri, i.e. rivers coming  
from the mountains and flowing through lakes.*

On the page 38<sup>a</sup>, which comes next in the original  
MS. is the sketch of an oval plan of a town over  
which is written “*modo di canali per la città*” and  
through the longer axis of it “*canale magior*” is written  
with “*Tesino*” on the prolongation of the canal.

J. P. R.

stieno <sup>13</sup>a un altezza sarà una cōca, come qui disotto, la quale fia all' entrare della <sup>14</sup>terra, e meglio alquāto dētro aciochè nimici nō la disfacciessino.

to oblige the waters to keep constantly at the same level will be a sort of dock, as shown below, situated at the entrance of the town; or better still, some way within, in order that the enemy may not destroy it[14].

B. 36a]

Tanto sia larga la stra<sup>2</sup>da, quanto è la universale <sup>3</sup>altezza delle case.

## 746.

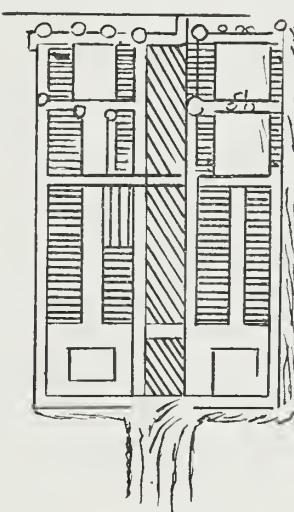

Let the width of the streets be equal to the average height of the houses.

Br. M. 270δ]

## 747.

Il fiume di mezzo <sup>2</sup>nō  
ricieva acqua <sup>3</sup>turbida, ma tale  
acqua vada per li fossi <sup>5</sup>di fori  
della terra <sup>6</sup>con 4 molina  
nell'ē<sup>7</sup>trata e 4 nella u<sup>8</sup>scita,  
e questo si fa<sup>9</sup>rà col ringorgare  
l'acqua <sup>10</sup>di sopra a Romolontino;

<sup>11</sup>Facciāsi fonti <sup>12</sup>in cias-  
<sup>13</sup>cuna piazza.

The main underground channel does not receive turbid water, but that water runs in the ditches outside the town with four mills at the entrance and four at the outlet; and this may be done by damming the water above Romorantin.

[11]There should be fountains made in each piazza[13].

746. 3. alteza . . chase.

747. 1. el . . mezo. 3. mattale. 7. nella vs. 8. ecuesto. 9. ringhorhare. 12. [chome] in cias: 13. plaza.

747. In the original this text comes immediately after the passage given as No. 744. The remainder of the writing on the same page refers to the construction of canals and is given later, in the "Topographical Notes".

10. *Romolontino* is Romorantin, South of Orleans in France.

Lines 1—11 are written to the right of the plan lines 11—13 underneath it. J. P. R.

### III. Castles and Villas.

#### A. Castles.

*Pl. LXXX, No. 1 (P. V. fol. 39<sup>b</sup>; No. d'ordre 2282).* The fortified place here represented is said by Vallardi to be the "castello" at Milan, but without any satisfactory reason. The high tower behind the "rivellino" ravelin—seems to be intended as a watch-tower.

*Pl. LXXX, No. 2 (MS. B, 23<sup>b</sup>).* A similarly constructed tower probably intended for the same use.

*Pl. LXXX, No. 3 (MS. B).* Sketches for corner towers with steps for a citadel.

*Pl. LXXX, No. 4 (W. XVI).* A cupola crowning a corner tower; an interesting example of decorative fortification. In this reproduction of the original pen and ink drawing it appears reversed.

#### B. Projects for Palaces.

*Pl. LXXXI, No. 2 (MS. C. A, 75<sup>b</sup>; 221<sup>a</sup>, see No. 748).* Project for a royal residence at Amboise in France.

*Pl. LXXXII, No. 1 (C. A, 308<sup>a</sup>; 939<sup>a</sup>).* A plan for a somewhat extensive residence, and various details; but there is no text to elucidate it; in courts are written the three names:

Sām (St. Mark)    cosi (Cosmo)    giovā (John),  
arch                mo                nino

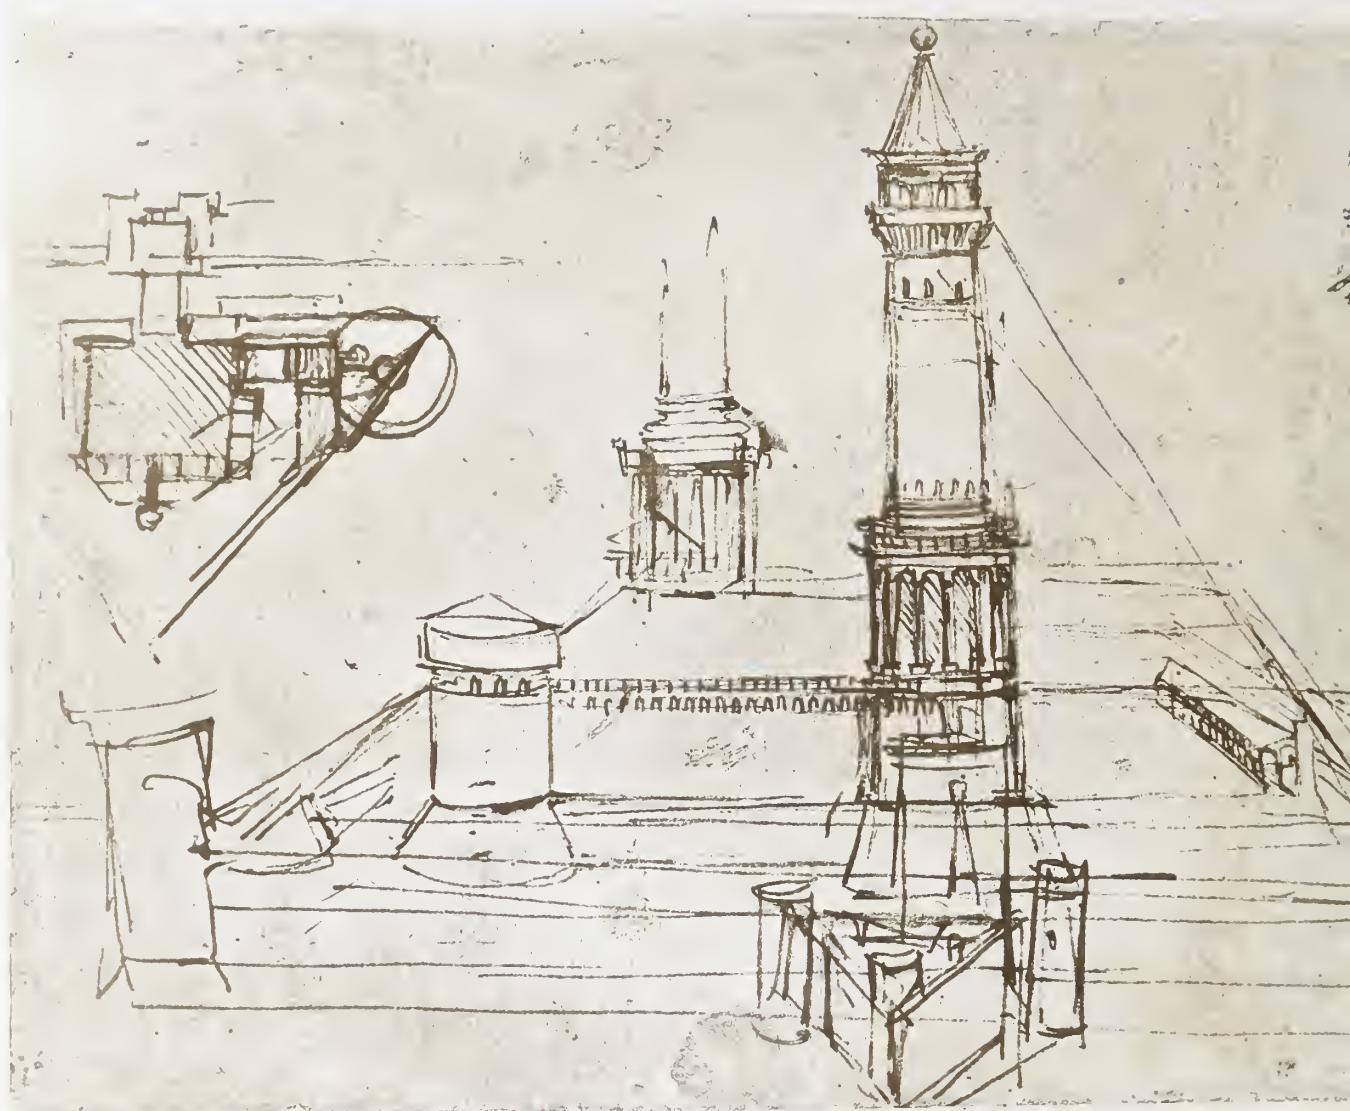

o

#### C. Plans for small castles or Villas.

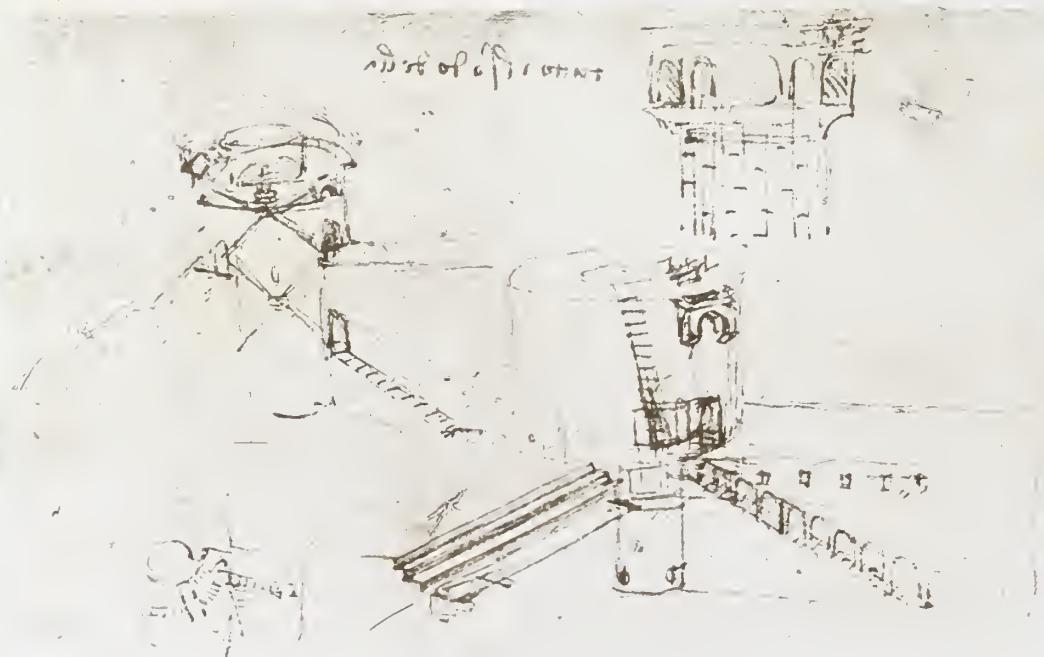

The three following sketches greatly resemble each other.

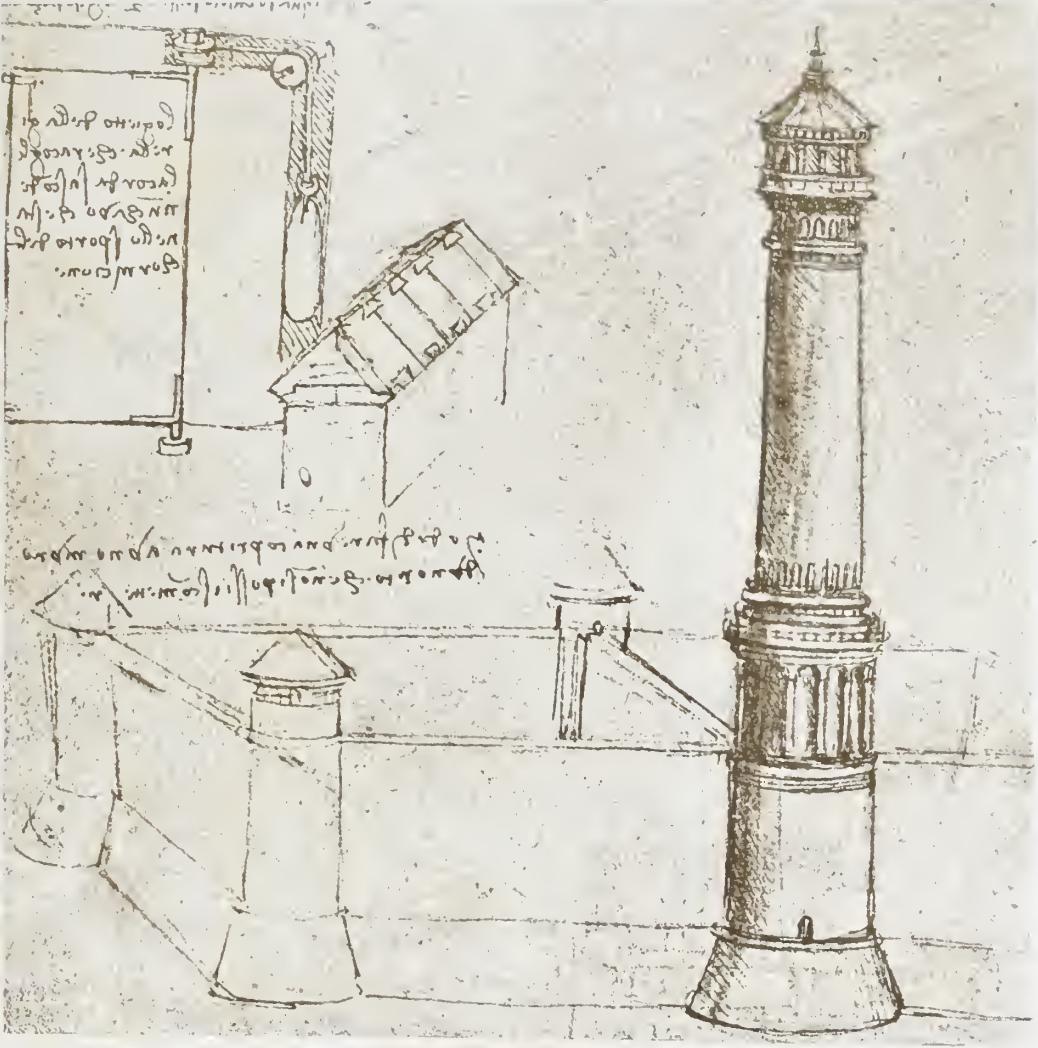

*Pl. LXXXII, No. 2 (MS. K3 36<sup>b</sup>; see No. 749).*

parescere all' modo: quod  
parescere aperit aperit

*Pl. LXXXII, No. 3 (MS. B. 60<sup>a</sup>; see No. 750).*

*Pl. LXXXIII (W. XVII).* The text on this sheet refers to Cyprus (see Topographical Notes No. 1103), but seems to have no direct connection with the sketches inserted between.

*Pl. LXXXVIII, Nos. 6 and 7 (MS. B. 12<sup>a</sup>; see No. 751).* A section of a circular pavilion with the plan of a similar building by the side of it. These two drawings have a special historical interest because the text written below mentions the Duke and Duchess of Milan.

The sketch of a villa on a terrace at the end of a garden occurs in C. A. 150; and in C. A. 77<sup>b</sup>; 225<sup>b</sup> is another sketch of a villa somewhat resembling the Belvedere of Pope Innocent VIII, at Rome. In C. A. 62<sup>b</sup>; 193<sup>b</sup> there is a Loggia.

*Pl. LXXXII, No. 4 (C. A. 387<sup>a</sup>; 1198<sup>a</sup>)* is a tower-shaped Loggia above a fountain. The machinery is very ingeniously screened from view.

C. A. 75<sup>b</sup>; 221<sup>a</sup>

## 748.

[Il palazzo del principe de' auere dināti  
vna piazza.]

<sup>2</sup>Le abitationi doue s'abbia a ballare o fare diuersi <sup>3</sup>salti o uari movimēti con moltitudine di gente sieno ter<sup>4</sup>rene, perchè già n'ò veduto ruinare colla morte di <sup>5</sup>molti; E sopra tutto fa che ogni muro, per sottile che <sup>6</sup>sia, abbia fondamēto in terra o sopra archi bene <sup>7</sup>fondati.

<sup>8</sup>Sieno li mezzanelli dellli abitacoli <sup>9</sup>diuisi da muri fatti di stretti mat<sup>10</sup>toni e sanza legnami per ri<sup>11</sup>spetto del fuoco.

<sup>12</sup>Tutti li necessari abbino esalatio<sup>13</sup>ne per le grossezze de' muri, e in <sup>14</sup>modo che spirino per li tetti.

<sup>15</sup>Li mezzanelli sieno in volta, le quali <sup>16</sup>sarā tanto più forti quāto e' sarā mi<sup>17</sup>nori.

<sup>18</sup>Le catene di quercia siē rinchiuso<sup>19</sup>use per li muri acciò nō siē offese <sup>20</sup>da foco.

The Palace of the prince must have a piazza in front of it.

Houses intended for dancing or any kind of jumping or any other movements with a multitude of people, must be on the ground-floor; for I have already witnessed the destruction of some, causing death to many persons, and above all let every wall, be it ever so thin, rest on the ground or on arches with a good foundation.

Let the mezzanines of the dwellings be divided by walls made of very thin bricks, and without wood on account of fire.

Let all the privies have ventilation [by shafts] in the thickness of the walls, so as to exhale by the roofs.

The mezzanines should be vaulted, and the vaults will be stronger in proportion as they are of small size.

The ties of oak must be enclosed in the walls in order to be protected from fire.

748. 1. palazo. 2. abitationini . . abballare offare. 3. chomoltitudine. 4. rrone . . cholla. 5. 751. 1. zardino. 3. del [z]. 4. mezo.

749. On each side of the castle, Pl. LXXXII, No. 2 there are drawings of details, to the left "Camino" a chimney, to the right the central lantern, sketched in red "8 lat" i. e. an octagon.

751. This passage was first published by AMORETTI in *Memorie Storiche Cap. X: Una sua opera da riportarsi a ques' anno fu il bagno fatto per la duchessa Beatrice nel parco o giardino del Castello. Leonardo non solo ne disegnò il piccolo edifizio a foggia di padiglione, nel cod. segnato Q. 3, dandone anche separatamente la pianta; ma sotto vi scrisse: Padiglione del giardino della duchessa; e sotto la pianta: Fondamento del padiglione ch'è nel mezzo del labirinto del duca di Milano; nessuna data è presso il padiglione, disegnato nella pagina 12, ma poco sopra fra molti circoli intrecciati vedesi = 10 Luglio 1492 = e nella pagina 2 presso ad alcuni disegni di legumi qualcheduno ha letto Settembre 1482 in vece di 1492, come dovea scriverevi, e probabilmente scrisse Leonardo.*

The original text however hardly bears the interpretation put upon it by AMORETTI. He is mis-

The privies must be numerous and going one into the other in order that the stench may not penetrate into the dwellings, and all their doors must shut off themselves with counterpoises.

The main division of the façade of this palace is into two portions; that is to say the width of the court-yard must be half the whole façade; the 2<sup>nd</sup> . . .

749.

30 braccia wide on each side; the lower entrance leads into a hall 10 braccia wide and 30 braccia long with 4 recesses each with a chimney.

750.

The firststorey [or terrace] must be entirely solid.

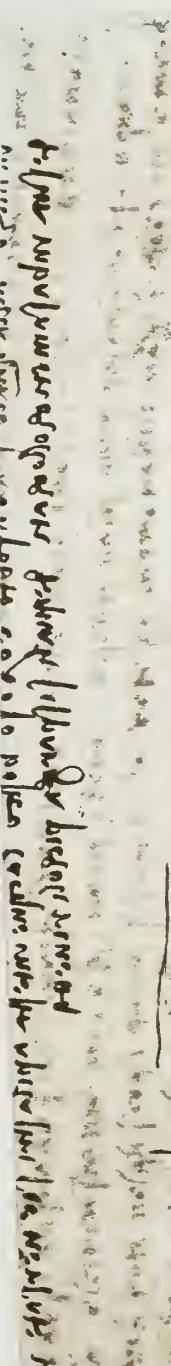

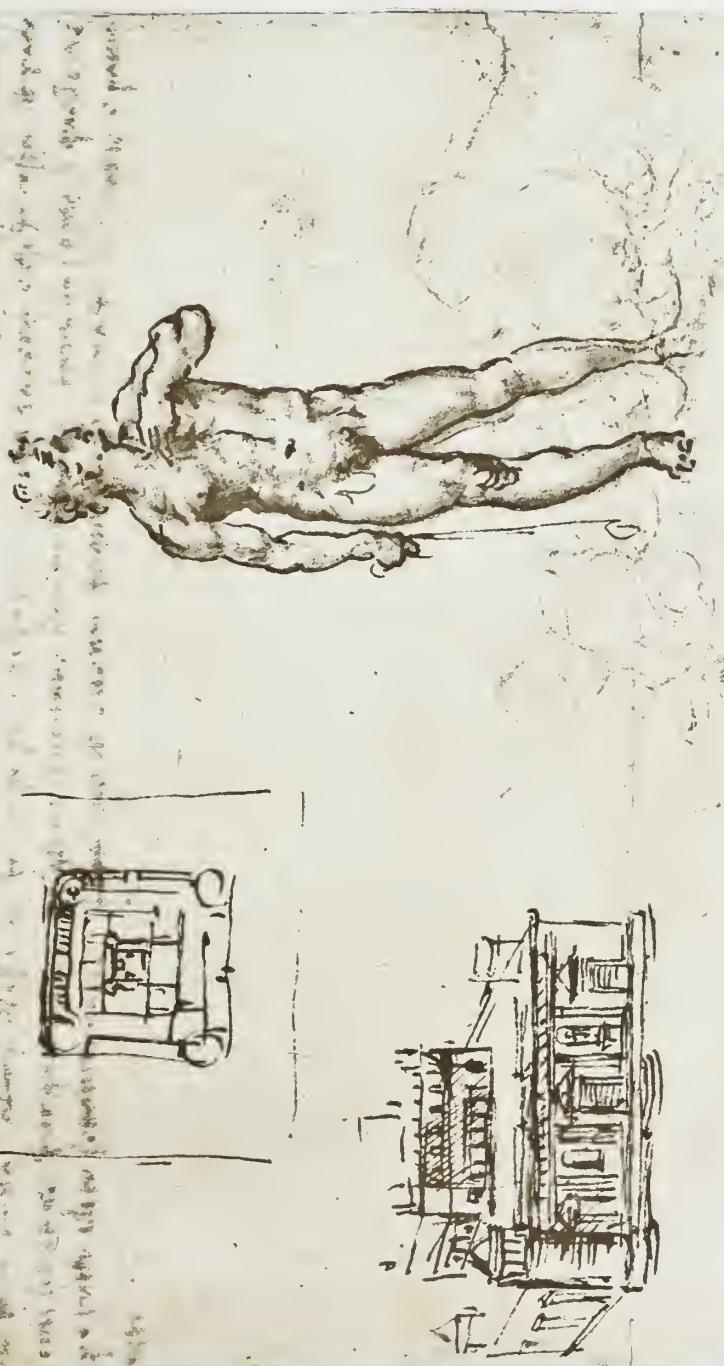

751.

The pavilion in the garden of the Duchess of Milan.

The plan of the pavilion which is in the middle of the labyrinth of the Duke of Milan.

taken as to the mark on the MS. as well as in his statements as to the date, for the MS. in question has no date; the date he gives occurs, on the contrary, in another note-book. Finally, it appears to me quite an open question whether Leonardo was the architect who carried out the construction of the dome-like Pavilion here shown in section, or of the ground plan of the Pavilion drawn by the side of it. Must we, in fact, suppose that "il duca di Milano" here mentioned was, as has been generally assumed, Ludovico il Moro? He did not hold this title from the Emperor before 1494; till that date he was only called *Governatore* and Leonardo in speaking of him, mentions him generally as "il Moro" even after 1494. On January 18, 1491, he married Beatrice d'Este the daughter of Ercole I, Duke of Ferrara. She died on the 2<sup>nd</sup> January 1497, and for the reasons I have given it seems improbable that it should be this princess who is here spoken of as the "Duchessa di Milano". From the style of the handwriting it appears to me to be beyond

all doubt that the MS. B, from which this passage is taken, is older than the dated MSS. of 1492 and 1493. In that case the Duke of Milan here mentioned would be Gian Galeazzo (1469—1494) and

The earth that is dug out from the cellars must be raised on one side so high as to make a terrace garden as high as the level of the hall; but between the earth of the terrace and the wall of the house, leave an interval in order that the damp may not spoil the principal walls.

the Duchess would be his wife Isabella of Aragon, to whom he was married on the second February 1489.

J. P. R.

## IV. Ecclesiastical Architecture.

### A. General Observations.

B. 396]

753.

Senpre vno edifitio vole · essere <sup>2</sup> spicato dintorno a volere dimostra<sup>re</sup> la sua vera forma.

Ash. II. 85]

Qui nō si può nè si debe fare <sup>2</sup>cāpanile, anzi debe <sup>3</sup>stare separato come à il do<sup>mo</sup> e Sā Giovanni di Firēze, <sup>5</sup>e così il domo di Pisa · che mo<sup>6</sup>stra il cāpanile per se dispicca<sup>7</sup>to ī circa e così il domo, e o<sup>8</sup>gni vno per se può mostrare la sua <sup>9</sup>perfet<sup>tione</sup>, e chi lo uolesse pure <sup>10</sup>fare colla chiesa, faccia la lā<sup>11</sup>terna scusare cāpanile <sup>12</sup>come è la chiesa di Chiaravalle.

A building should always be detached on all sides so that its form may be seen.

754.

Here there cannot and ought not to be any *campanile*; on the contrary it must stand apart like that of the Cathedral and of San Giovanni at Florence, and of the Cathedral at Pisa, where the campanile is quite detached as well as the dome. Thus each can display its own perfection. If however you wish to join it to the church, make the lantern serve for the campanile as in the church at Chiaravalle.

753. 2. ispichato.

754. 1. po nessi. 2. chāpanile. 3. chome. 4. essāgiovani. 6. chāpanile . . displichia. 7. circho e chosi. 8. po. 9. perfectione. 10. colla. 11. schusare chāpanile.

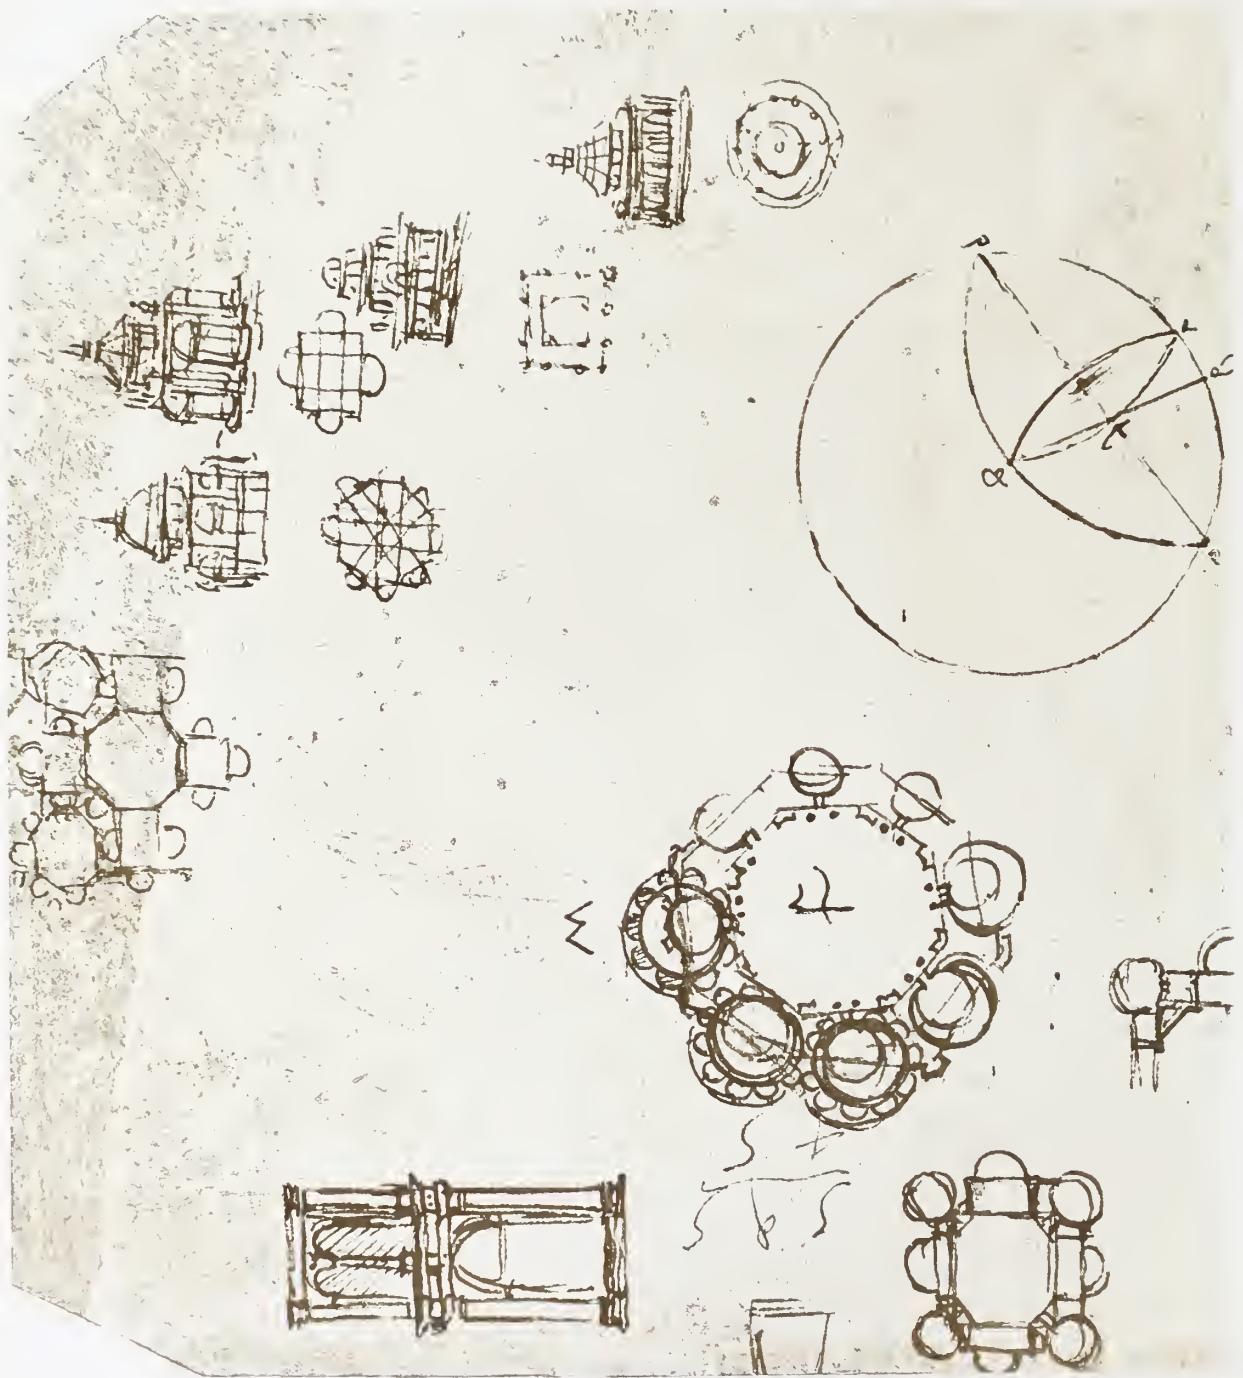

753. The original text is reproduced on Pl. XCII, No. 1 to the left hand at the bottom.

754. This text is written by the side of the plan given on Pl. XCI, No. 2.

12. The Abbey of Chiaravalle, a few miles from Milan, has a central tower on the intersection of the

cross in the style of that of the Certosa of Pavia, but the style is mediaeval (A. D. 1330). Leonardo seems here to mean, that in a building, in which the circular form is strongly conspicuous, the campanile must either be separated, or rise from the centre of the building and therefore take the form of a lantern.

B. 185]

A nessuna chiesa sta<sup>2</sup> bene vedere tetti,  
āzi<sup>3</sup> sia rappianato e per ca<sup>4</sup>nali l'acqua  
discē<sup>5</sup>da ai condotti fatti nel<sup>6</sup> fregiō.

755-

It never looks well to see the roofs of a church; they should rather be flat and the water should run off by gutters made in the frieze.

755. 3. rappianato . . cha. 4. la ch . gua dissie. 5. chondotti.

755. This text is to the left of the domed church reproduced on Pl. LXXXVII, No. 2.

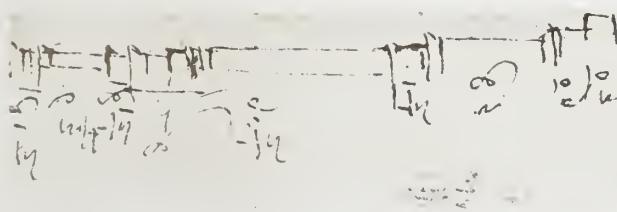

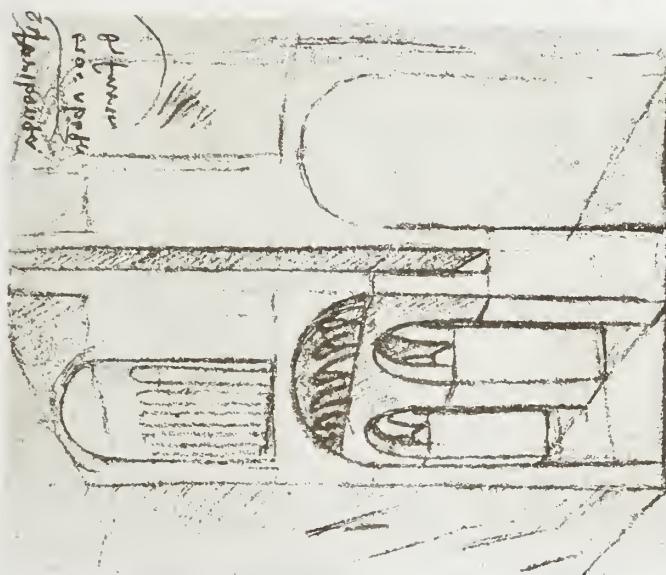

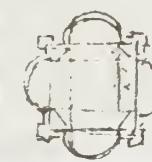

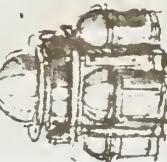

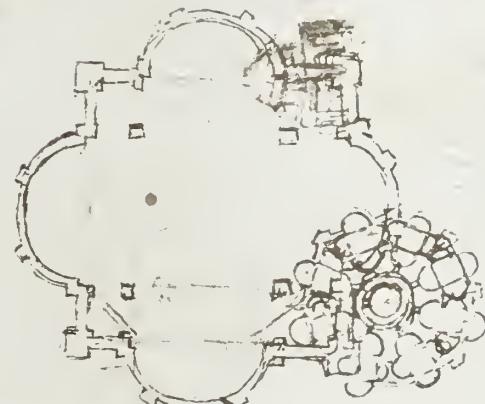

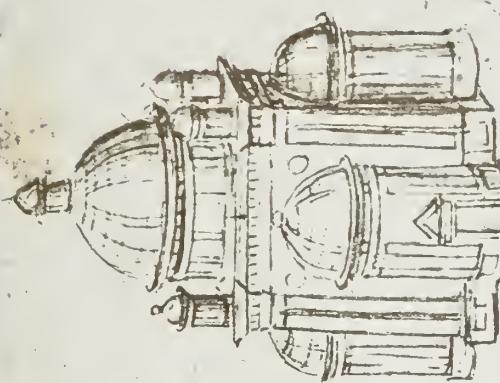

### B. *The theory of Dome Architecture.*

This subject has been more extensively treated by Leonardo in drawings than in writing. Still we may fairly assume that it was his purpose; ultimately to embody the results of his investigation in a "Trattato delle Cupole." The amount of materials is remarkably extensive. MS. B is particularly rich in plans and elevations of churches with one or more domes—from the simplest form to the most complicated that can be imagined. Considering the evident connexion between a great number of these sketches, as well as the impossibility of seeing in them designs or preparatory sketches for any building intended to be erected, the conclusion is obvious that they were not designed for any particular monument, but were theoretical and ideal researches, made in order to obtain a clear understanding of the laws which must govern the construction of a great central dome, with smaller ones grouped round it; and with or without the addition of spires, so that each of these parts by itself and in its juxtaposition to the other parts should produce the grandest possible effect.

In these sketches Leonardo seems to have exhausted every imaginable combination.<sup>1</sup> The results of some of these problems are perhaps not quite satisfactory; still they cannot be considered to give evidence of a want of taste or of any other defect in Leonardo's architectural capacity. They were no doubt intended exclusively for his own instruction, and, before all, as it seems, to illustrate the features or consequences resulting from a given principle.

<sup>1</sup> In MS. B, 32<sup>b</sup> (see Pl. C III, No. 2) we find eight geometrical patterns, each drawn in a square; and in MS. C.A., fol. 87 to 98 form a whole series of patterns done with the same intention.

I have already, in another place,<sup>1</sup> pointed out the law of construction for buildings crowned by a large dome: namely, that such a dome, to produce the greatest effect possible, should rise either from the centre of a Greek cross, or from the centre of a structure of which the plan has some symmetrical affinity to a circle, this circle being at the same time the centre of the whole plan of the building.

Leonardo's sketches show that he was fully aware, as was to be expected, of this truth. Few of them exhibit the form of a Latin cross, and when this is met with, it generally gives evidence of the determination to assign as prominent a part as possible to the dome in the general effect of the building.

While it is evident, on the one hand, that the greater number of these domes had no particular purpose, not being designed for execution, on the other hand several reasons may be found for Leonardo's perseverance in his studies of the subject.

Besides the theoretical interest of the question for Leonardo and his Trattato and besides the taste for domes prevailing at that time, it seems likely that the intended erection of some building of the first importance like the Duomas of Pavia and Como, the church of Sta. Maria delle Grazie at Milan, and the construction of a Dome or central Tower (Tiburio) on the cathedral of Milan, may have stimulated Leonardo to undertake a general and thorough investigation of the subject; whilst Leonardo's intercourse with Bramante for ten years or more, can hardly have remained without influence in this matter. In fact, now that some of this great Architect's studies for S. Peter's at Rome have at last become known, he must be considered henceforth as the greatest master of Dome-Architecture that ever existed. His influence, direct or indirect even on a genius like Leonardo seems the more likely, since Leonardo's sketches reveal a style most similar to that of Bramante, whose name indeed, occurs twice in Leonardo's manuscript notes. It must not be forgotten that Leonardo was a Florentine; the characteristic form of the two principal domes of Florence, Sta. Maria del Fiore and the Battisterio, constantly appear as leading features in his sketches.

The church of San Lorenzo at Milan, was at that time still intact. The dome is to this day one of the most wonderful cupolas ever constructed, and with its two smaller domes might well attract the attention and study

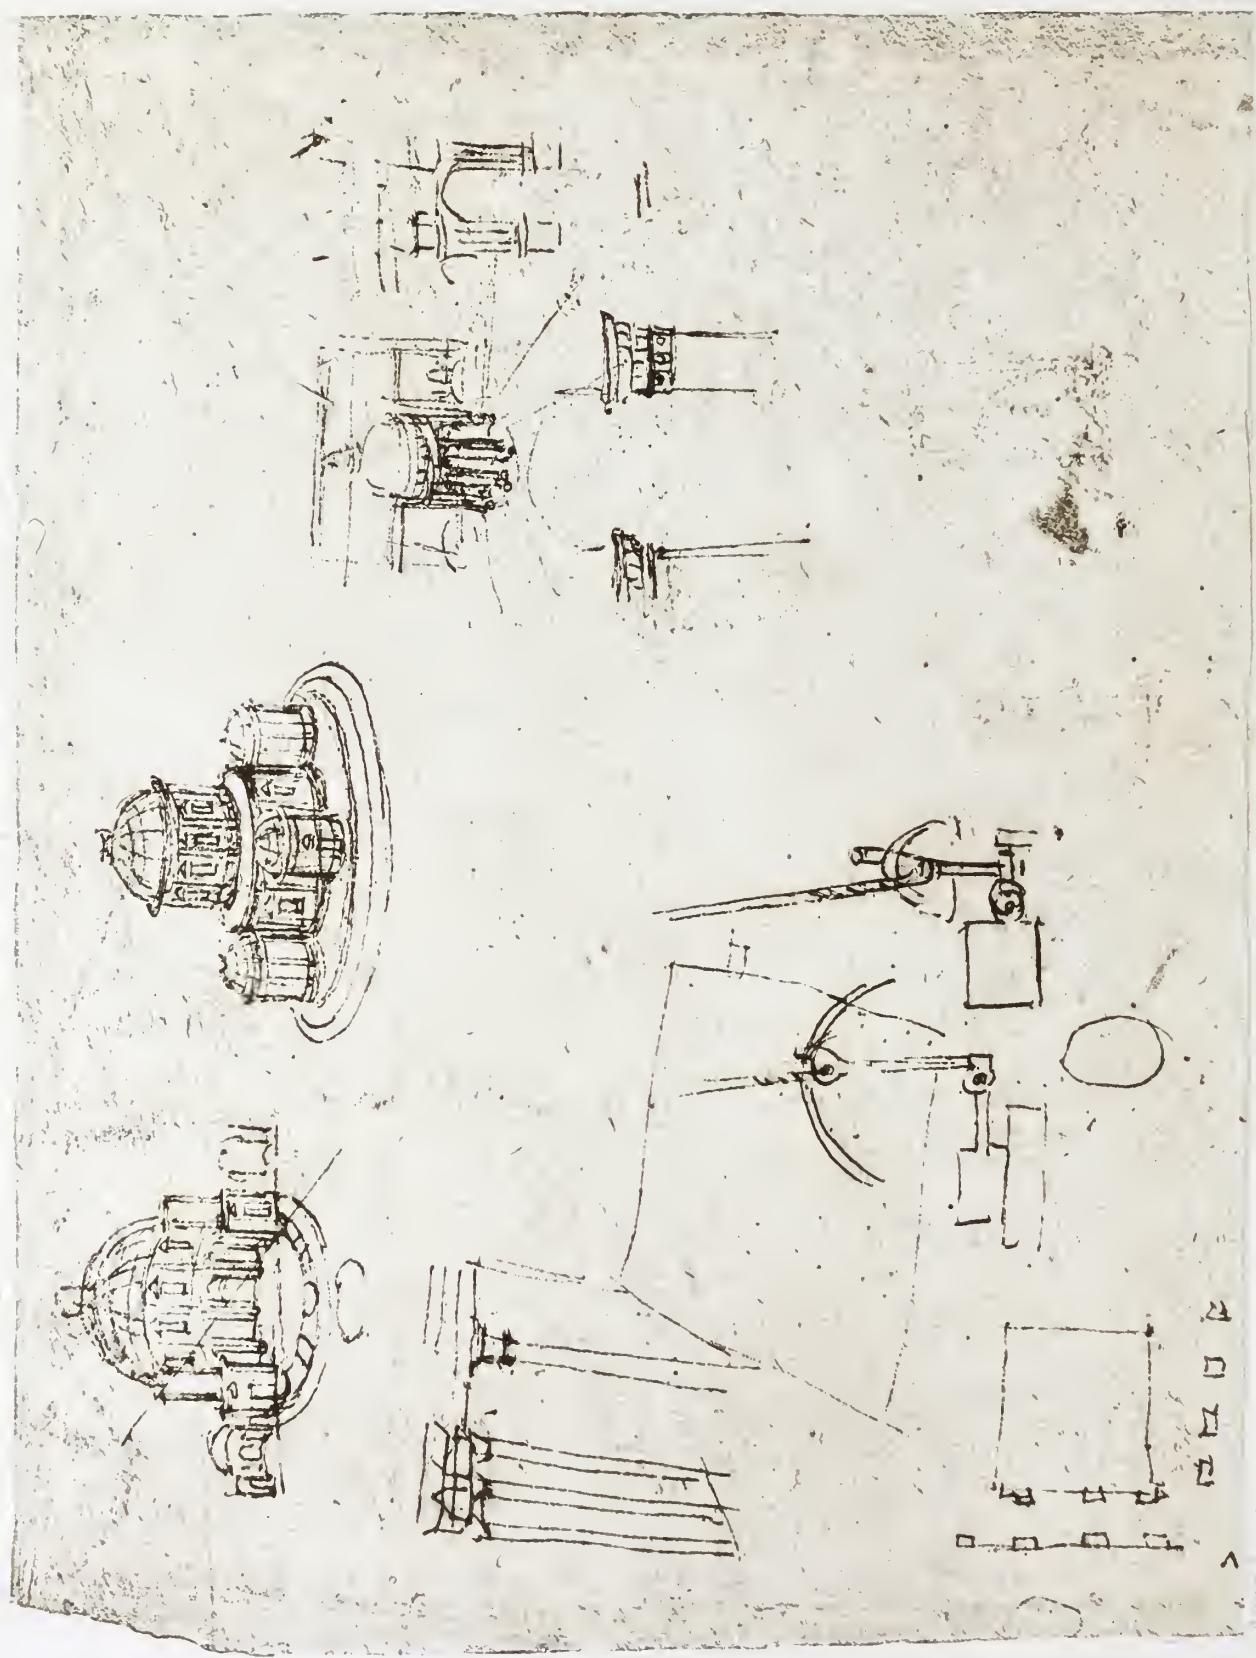

<sup>1</sup> Les Projets Primitifs pour la Basilique de St. Pierre de Rome, par Bramante, Raphael etc., Vol. I, p. 2.

of a never resting genius such as Leonardo. A whole class of these sketches betray in fact the direct influence of the church of S. Lorenzo, and this also seems to have suggested the plan of Bramante's dome of St. Peter's at Rome.

In the following pages the various sketches for the construction of domes have been classified and discussed from a general point of view. On two sheets: *Pl. LXXXIV* (*C. A.* 354<sup>b</sup>; 118<sup>a</sup>) and *Pl. LXXXV*, Nos. 1—11 (*Ash. II*, 6<sup>b</sup>) we see various dissimilar types, grouped together; thus these two sheets may be regarded as a sort of nomenclature of the different types, on which we shall now have to treat.

## 1. *Churches formed on the plan of a Greek cross.*

### *Group I.*

*Domes rising from a circular base.*

*The simplest type of central building is a circular edifice.*

*Pl. LXXXIV, No. 9. Plan of a circular building surrounded by a colonnade.*

*Pl. LXXXIV, No. 8. Elevation of the former, with a conical roof.*

*Pl. XC. No. 5. A dodecagon, as most nearly approaching the circle.*

*Pl. LXXXVI, No. 1, 2, 3. Four round chapels are added at the extremities of the two principal axes;—compare this plan with fig. 1 on p. 44 and fig. 3 on p. 47 (W. P. 5<sup>b</sup>) where the outer wall is octagonal.*

### *Group II.*

*Domes rising from a square base.*

*The plan is a square surrounded by a colonnade, and the dome seems to be octagonal.*

*Pl. LXXXIV. The square plan below the circular building No. 8, and its elevation to the left, above the plan: here the ground-plan is square, the upper storey octagonal. A further development of this type is shown in two sketches C. A. 3<sup>a</sup> (not reproduced here), and in*

*Pl. LXXXVI, No. 5 (which possibly belongs to No. 7 on Pl. LXXXIV).*

*Pl. LXXXV, No. 4, and p. 45, Fig. 3, a Greek cross, repeated p. 45, Fig. 3, is another development of the square central plan.*

*The remainder of these studies show two different systems; in the first the dome rises from a square plan,—in the second from an octagonal base.*

### *Group III.*

*Domes rising from a square base and four pillars.<sup>1</sup>*

**a) First type.** *A Dome resting on four pillars in the centre of a square edifice, with an apse in the middle, of each of the four sides. We have eleven variations of this type.*

- aa) *Pl. LXXVIII, No. 3.*
- bb) *Pl. LXXX, No. 5.*
- cc) *Pl. LXXXV, Nos. 2, 3, 5.*
- dd) *Pl. LXXXIV, No. 1 and 4 beneath.*
- ee) *Pl. LXXXV, Nos. 1, 7, 10, 11.*

**b) Second type.** *This consists in adding aisles to the whole plan of the first type; columns are placed between the apses and the aisles; the plan thus obtained is very nearly identical with that of S. Lorenzo at Milan.*

*Fig. 1 on p. 56. (MS. B, 75<sup>a</sup>) shows the result of this treatment adapted to a peculiar purpose about which we shall have to say a few words later on.*

*Pl. XCV, No. 1, shows the same plan but with the addition of a short nave. This plan seems to have been suggested by the general arrangement of S. Sepolcro at Milan.*

*MS. B. 57<sup>b</sup> (see the sketch reproduced on p. 51). By adding towers in the four outer angles to the last named plan, we obtain a plan which bears the general features of Bramante's plans for S. Peter's at Rome.<sup>2</sup> (See p. 51 Fig. 1.)*

### *Group IV.*

*Domes rising from an octagonal base.*

*This system, developed according to two different schemes, has given rise to two classes with many varieties.*

*In a) On each side of the octagon chapels of equal form are added.*

*In b) The chapels are dissimilar; those which terminate the principal axes being different in form from those which are added on the diagonal sides of the octagon.*

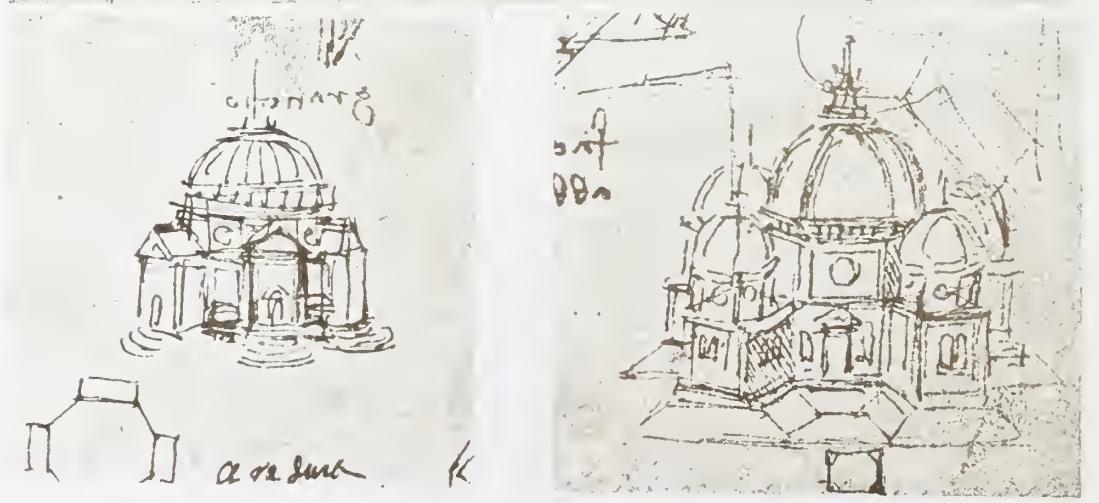

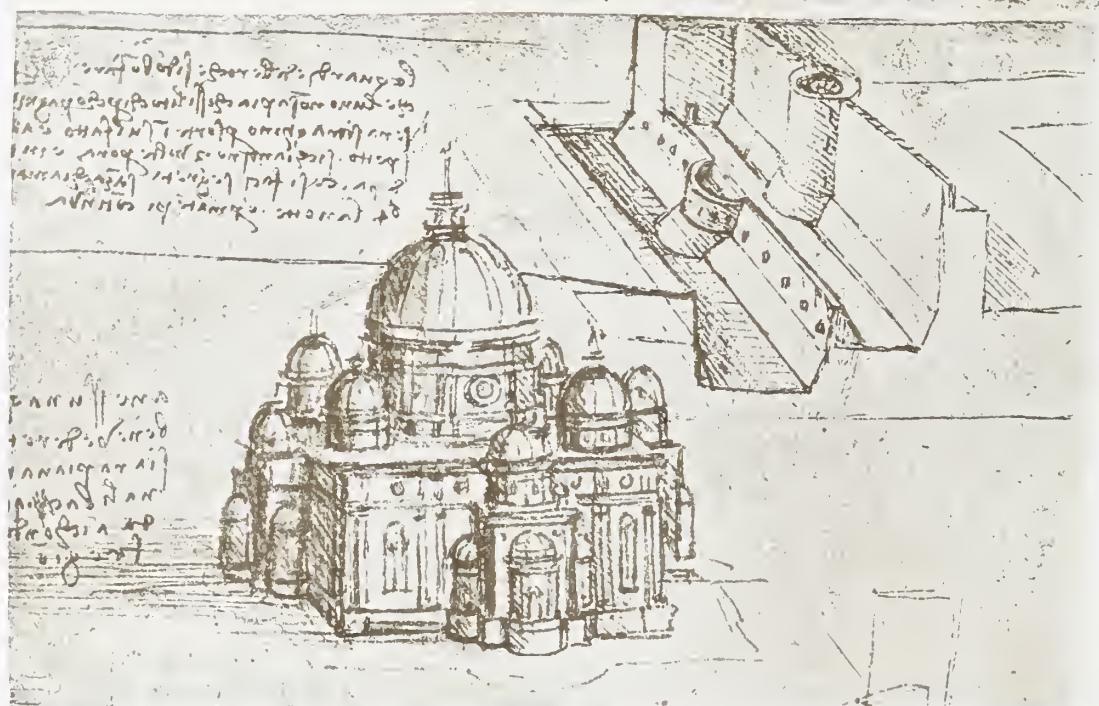

#### *a. First Class.*

*The Chapel "degli Angeli," at Florence, built only to a height of about 20 feet by Brunellesco, may be considered as the prototype of this group; and, indeed it probably suggested it. The fact that we see in MS. B. 11<sup>b</sup>*

<sup>1</sup> *The ancient chapel San Satiro, via del Falcone, Milan, is a specimen of this type.*

<sup>2</sup> *See Les projets primitifs etc., Pl. 9—12.*

(*Pl. XCIV*, No. 3) by the side of Brunellesco's plan for the Basilica of Sto. Spirito at Florence, a plan almost identical with that of the Capella degli Angeli, confirms this supposition. Only two small differences, or we may say improvements, have been introduced by Leonardo. Firstly the back of the chapels contains a third niche, and each angle of the Octagon a folded pilaster like those in Bramante's Sagrestia di S. M. presso San Satiro at Milan, instead of an interval between the two pilasters as seen in the Battistero at Florence and in the Sacristy of Sto. Spirito in the same town and also in the above named chapel by Brunellesco.

The first set of sketches which come under consideration have at first sight the appearance of mere geometrical studies. They seem to have been suggested by the plan given on page 44 Fig. 2 (MS. B, 55<sup>a</sup>) in the centre of which is written "Santa Maria in perticha da Pavia", at the place marked A on the reproduction.

a) (MS. B, 34<sup>b</sup>, page 44 Fig. 3). In the middle of each side a column is added, and in the axes of the intercolumnar spaces a second row of columns forms an aisle round the octagon. These are placed at the intersection of a system of semicircles, of which the sixteen columns on the sides of the octagon are the centres.

b) The preceding diagram is completed and becomes more monumental in style in the sketch next to it (MS. B, 35<sup>a</sup>, see p. 45 Fig. 1). An outer aisle is added by circles, having for radius the distance between the columns in the middle sides of the octagon.

c) (MS. B, 96<sup>b</sup>, see p. 45 Fig. 2). Octagon with an aisle round it; the angles of both are formed by columns. The outer sides are formed by 8 niches forming chapels. The exterior is likewise octagonal, with the angles corresponding to the centre of each of the interior chapels.

*Pl. XCII*, No. 2 (MS. B. 96<sup>b</sup>). Detail and modification of the preceding plan—half columns against piers—an arrangement by which the chapels of the aisle have the same width of opening as the inner arches between the half columns. Underneath this sketch the following note occurs: questo vole · avere 12 facce · cō 12 tabernaculi · come · a · b. (This will have twelve sides with twelve tabernacles as a b.) In the remaining sketches of this class the octagon is not formed by columns at the angles.

The simplest type shows a niche in the middle of each side and is repeated on several sheets, viz: MS. B 3; MS. C.A. 354<sup>b</sup> (see *Pl. LXXXIV*, No. 11), and MS. Ash II 6<sup>b</sup>; (see *Pl. LXXXV*, No. 9 and the elevations No. 8; *Pl. XCII*, No. 3; MS. B. 4<sup>b</sup> [not reproduced here] and *Pl. LXXXIV*, No. 2).

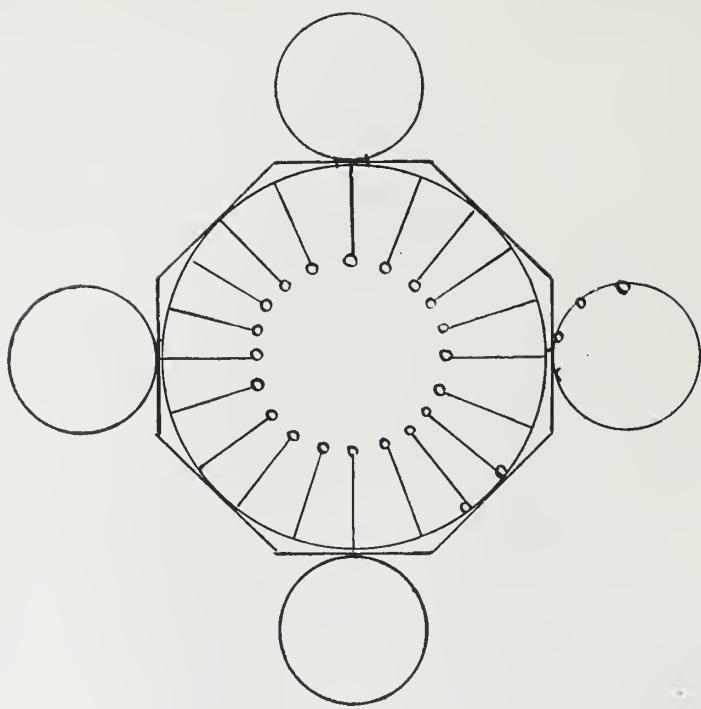

Fig. 1.

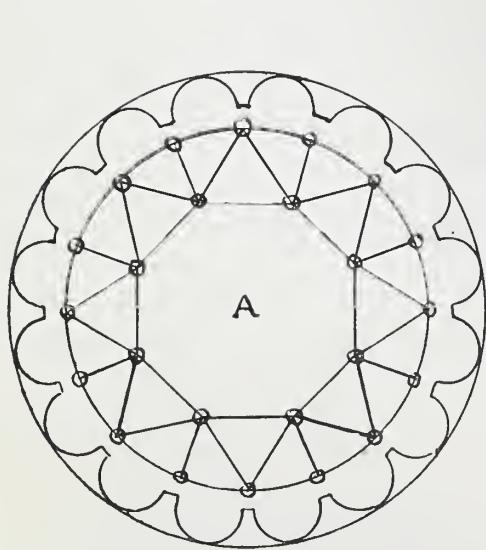

Fig. 2.

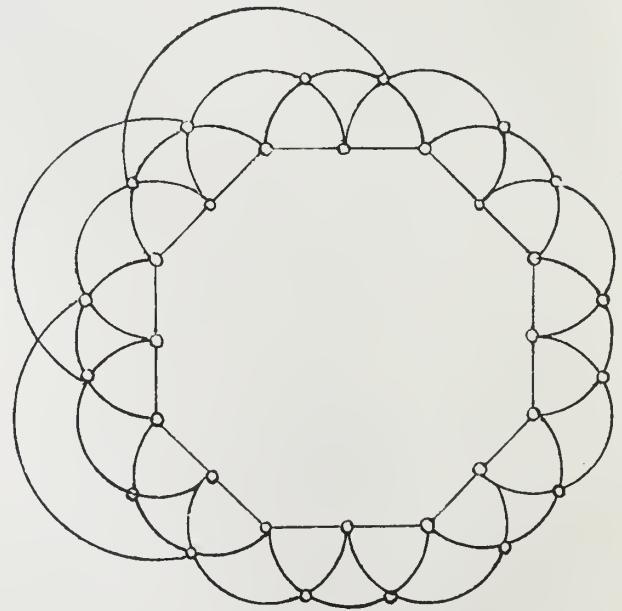

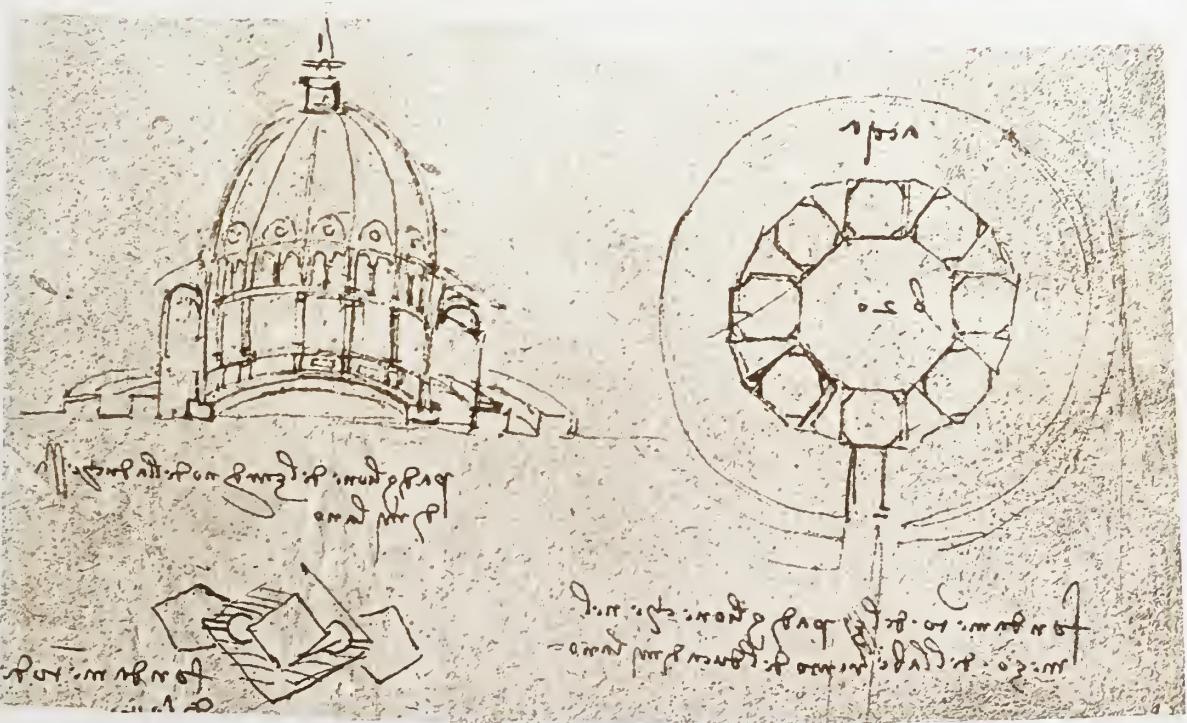

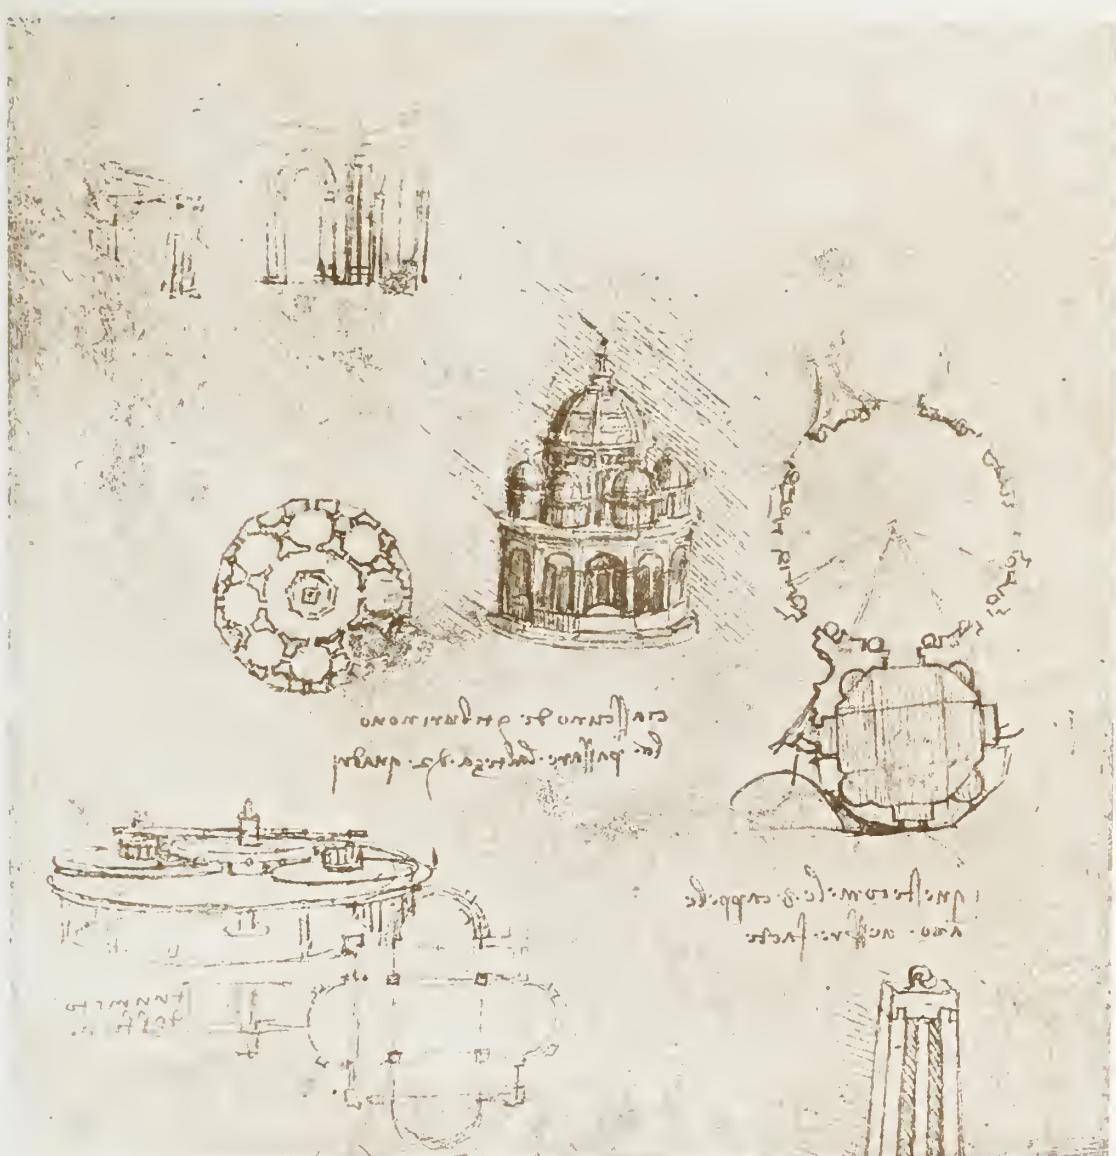

Fig. 3.

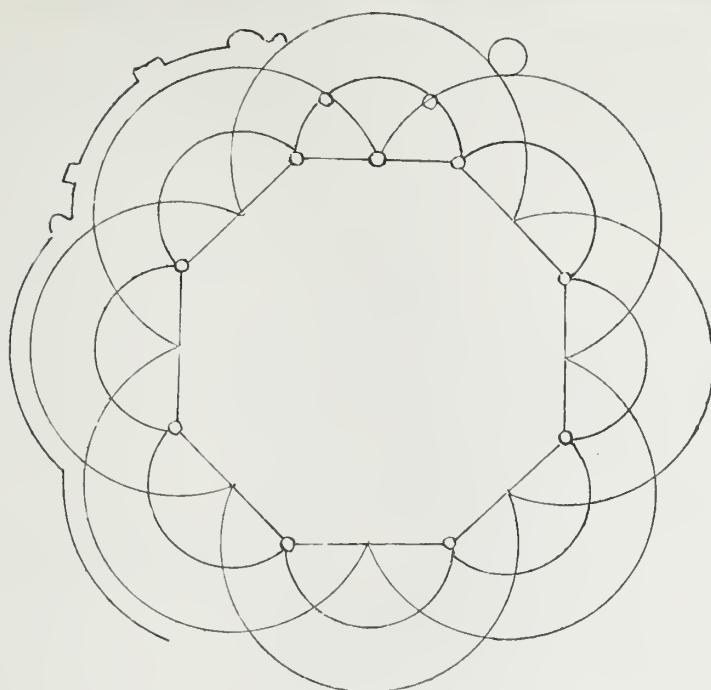

Fig. 1.

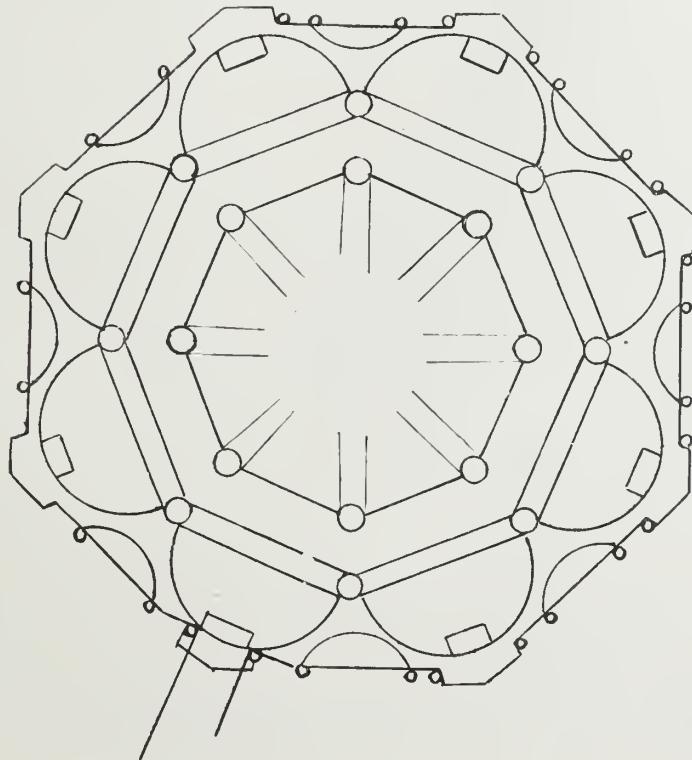

Fig. 2.

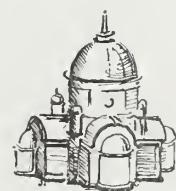

Fig. 3.

*Pl. XCII, 3 (MS. B, 56<sup>b</sup>) corresponds to a plan like the one in MS. B 35<sup>a</sup>, in which the niches would be visible outside or, as in the following sketch, with the addition of a niche in the middle of each chapel.*

*Pl. XC, No. 6. The niches themselves are surrounded by smaller niches (see also No. 1 on the same plate).*

*Octagon expanded on each side.*

*A. by a square chapel:*

*MS. B. 34<sup>b</sup> (not reproduced here).*

*B. by a square with 3 niches:*

*MS. B. 11<sup>b</sup> (see Pl. XCIV, No. 3).*

*C. by octagonal chapels:*

*a) MS. B, 21<sup>a</sup>; Pl. LXXXVIII, No. 14.*

*b) No. 2 on the same plate. Underneath there is the remark: "quest'è come le 8 cappele àno a essere facte" (this is how the eight chapels are to be executed).*

*c) Pl. LXXXVIII, No. 5. Elevation to the plans on the same sheet, it is accompanied by the note: "ciasscuno de' 9 tiburi no' uole · passare l'alteza · di · 2 · quadri" (neither of the 9 domes must exceed the height of two squares).*

*d) Pl. LXXXVIII, No. 1, Inside of the same octagon.*

*MS. B, 30<sup>a</sup>, and 34<sup>b</sup>; these are three repetitions of parts of the same plan with very slight variations.*

*D. by a circular chapel:*

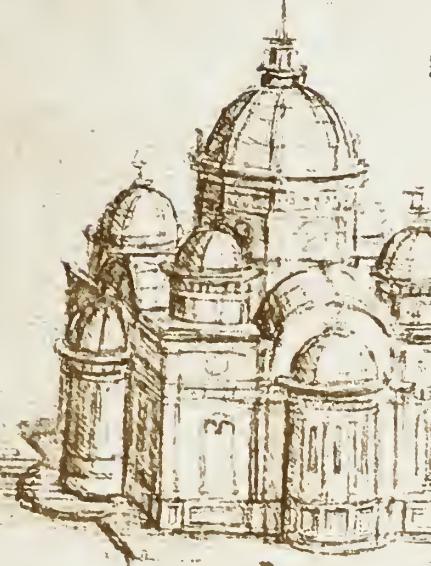

*MS. B, 18<sup>a</sup> (see Fig. 1 on page 47) gives the plan of this arrangement in which the exterior is square on the ground floor with only four of the chapels projecting, as is explained in the next sketch.*

*Pl. LXXXIX, MS. B, 17<sup>b</sup>. Elevation to the preceding plan sketched on the opposite side of the sheet, and also marked A. It is accompanied by the following remark, indicating the theoretical character of these studies: questo · edifitio · anchora · starebbe · bene affarlo dalla linea · a · b · c · d · insù. ("This edifice would also produce a good effect if only the part above the lines a b, c d, were executed").*

*Pl. LXXXIV, No. 11. The exterior has the form of an octagon, but the chapels project partly beyond it. On the left side of the sketch they appear larger than on the right side.*

*Pl. XC, No. 1, (MS. B, 25<sup>b</sup>); Repetition of Pl. LXXXIV, No. 11.*

*Pl. XC, No. 2. Elevation to the plan No. 1, and also to No. 6 of the same sheet.*

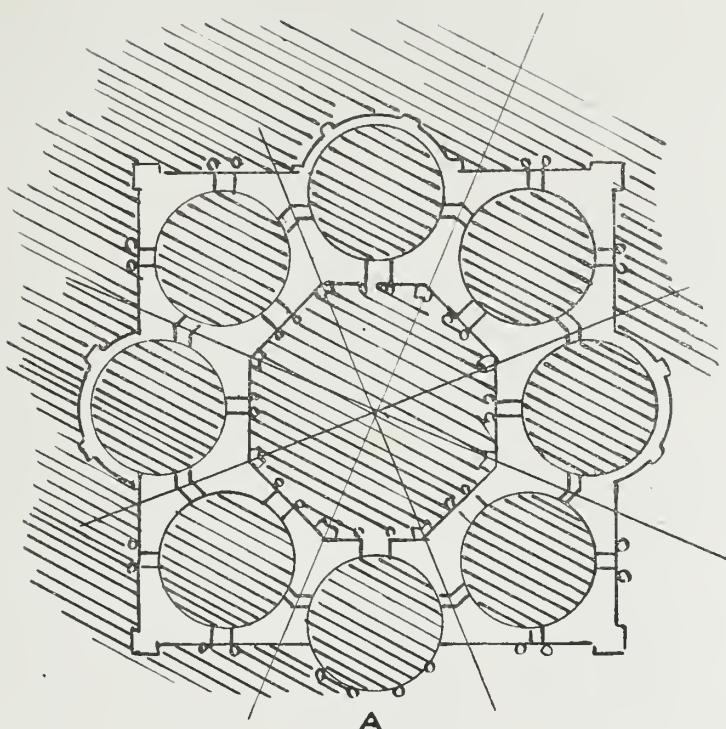

Fig. 1.

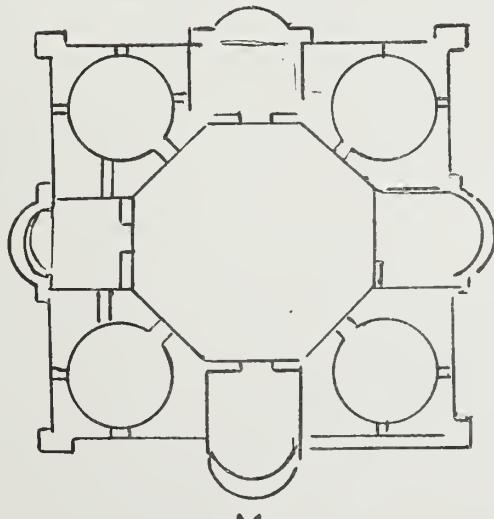

Fig. 2.

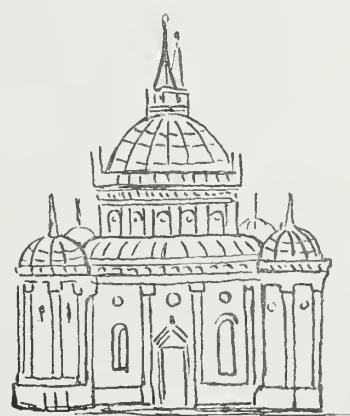

Fig. 3.

*E. By chapels formed by four niches:*

*Pl. LXXXIV, No. 7 (the circular plan on the left below) shows this arrangement in which the central dome has become circular inside and might therefore be classed after this group.<sup>1</sup>*

*The sketch on the right hand side gives most likely the elevation for the last named plan.*

*F. By chapels of still richer combinations, which necessitate an octagon of larger dimensions:*

*Pl. XCI, No. 2 (MS. Ash. II. 8<sup>b</sup>)<sup>2</sup>; on this plan the chapels themselves appear to be central buildings formed like the first type of the third group. Pl. LXXXVIII, No. 3.*

*Pl. XCI, No. 2 above; the exterior of the preceding figure, particularly interesting on account of the alternation of apses and niches, the latter containing statues of a gigantic size, in proportion to the dimension of the niches.*

*b. Second Class.*

*Composite plans of this class are generally obtained by combining two types of the first class—the one worked out on the principal axes, the other on the diagonal ones.*

*MS. B. 22 shows an elementary combination, without any additions on the diagonal axes, but with the dimensions of the squares on the two principal axes exceeding those of the sides of the octagon.*

*In the drawing W. P. 5<sup>b</sup> (see page 44 Fig. 1) the exterior only of the edifice is octagonal, the interior being formed by a circular colonnade; round chapels are placed against the four sides of the principal axes.*

*The elevation, drawn on the same sheet (see page 47 Fig. 3), shows the whole arrangement which is closely related with the one on Pl. LXXXVI No. 1, 2.*

*MS. B. 21<sup>a</sup> shows:*

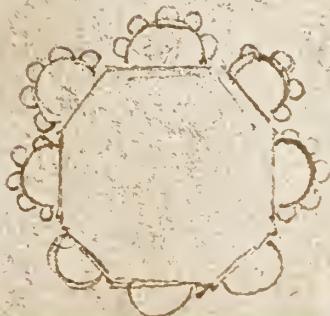

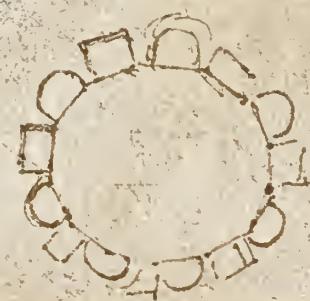

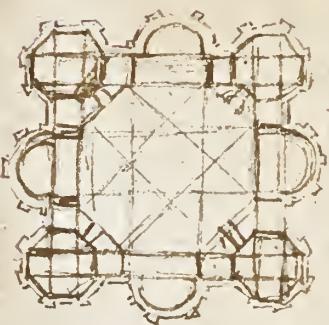

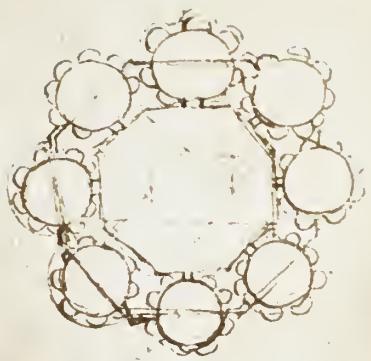

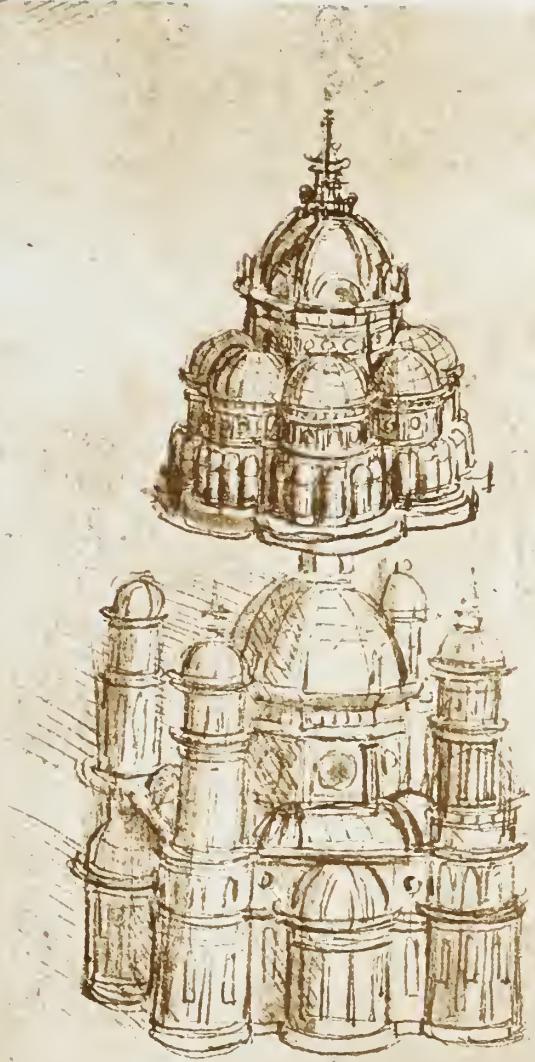

*a) four sides with rectangular chapels crowned by pediments  
Pl. LXXXVII No. 3 (plan and elevation);*

*b) four sides with square chapels crowned by octagonal domes.  
Pl. LXXXVII No. 4; the plan underneath.*

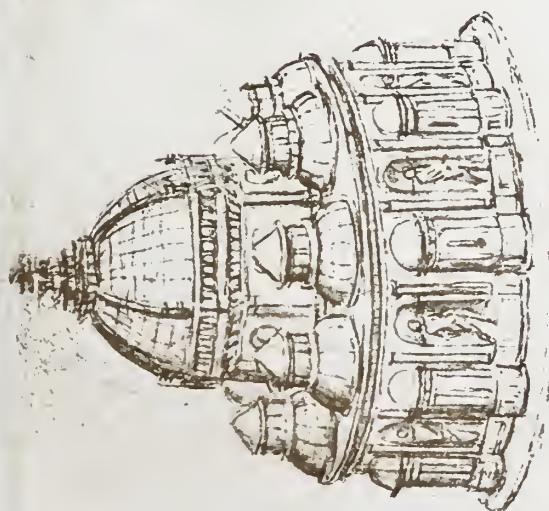

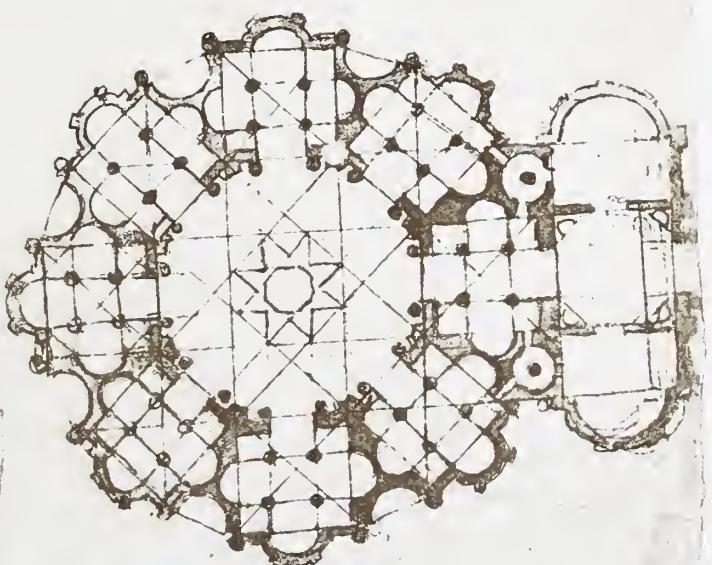

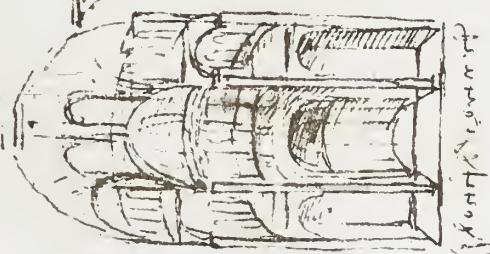

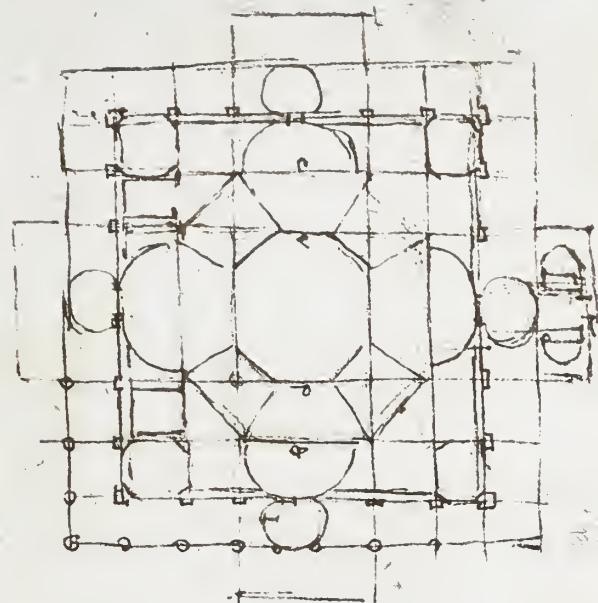

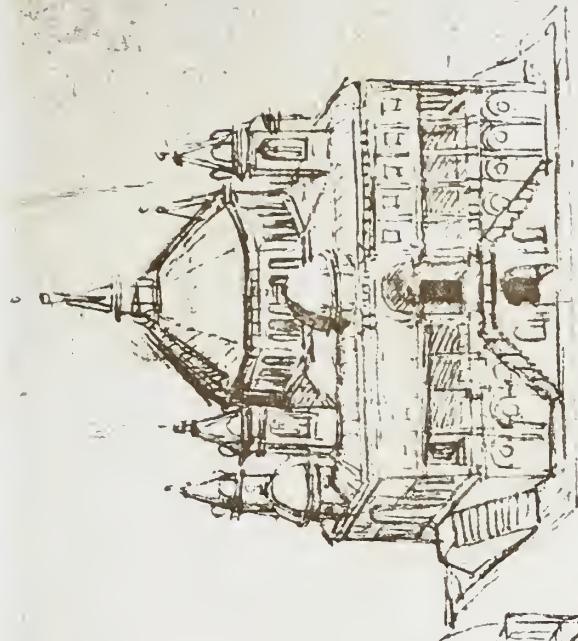

*MS. B. 18<sup>a</sup> shows a variation obtained by replacing the round chapels in the principal axes of the sketch MS. B. 18<sup>a</sup> by square ones, with an*

<sup>1</sup> This plan and some others of this class remind us of the plan of the Mausoleum of Augustus as it is represented for instance by Durand. See Cab. des Estampes, Bibliothèque Nationale, Paris, Topographie de Rome, V, 6, 82.

<sup>2</sup> The note accompanying this plan is given under No. 754.

apse. Leonardo repeated both ideas for better comparison side by side, see page 47. Fig. 2.

*Pl. LXXXIX (MS. B. 17<sup>b</sup>).* Elevation for the preceding figure. The comparison of the drawing marked *M* with the plan on page 47 Fig. 2, bearing the same mark, and of the elevation on *Pl. LXXXIX* below (marked *A*) with the corresponding plan on page 47 is highly instructive, as illustrating the spirit in which Leonardo pursued these studies.

*Pl. LXXXIV No. 12* shows the design *Pl. LXXXVII No. 3* combined with apses, with the addition of round chapels on the diagonal sides.

*Pl. LXXXIV No. 13* is a variation of the preceding sketch.

*Pl. XC No. 3.* MS. B. 25<sup>b</sup>. The round chapels of the preceding sketch are replaced by octagonal chapels, above which rise campaniles.

*Pl. XC No. 4* is the elevation for the preceding plan.

*Pl. XCII No. 1.* (MS. B. 39<sup>b</sup>); the plan below. On the principal as well as on the diagonal axes are diagonal chapels, but the latter are separated from the dome by semicircular recesses. The communication between these eight chapels forms a square aisle round the central dome.

Above this figure is the elevation, showing four campaniles on the angles.<sup>1</sup>

*Pl. CXXXIV No. 3.* On the principal axes are square chapels with three niches; on the diagonals octagonal chapels with niches. Cod. Atl. 340<sup>b</sup> gives a somewhat similar arrangement.

*MS. B. 30.* The principal development is thrown on the diagonal axes by square chapels with three niches; on the principal axes are inner recesses communicating with outer ones.

The plan *Pl. XCIII No. 2* (MS. B. 22) differs from this only in so far as the outer semicircles have become circular chapels, projecting from the external square as apses; one of them serves as the entrance by a semicircular portico.

The elevation is drawn on the left side of the plan.

*MS. B. 19.* A further development of *MS. B. 18*, by employing for the four principal chapels the type *Pl. LXXXVIII No. 3*, as we have already seen in *Pl. XCI No. 2*; the exterior presents two varieties.

a) The outer contour follows the inner.<sup>2</sup>

b) It is semicircular.

*Pl. LXXXVII No. 2 (MS. B. 18<sup>b</sup>).* Elevation to the first variation *MS. B. 19.* If we were not certain that this sketch was by Leonardo, we might feel tempted to take it as a study by Bramante for St. Peter's at Rome.<sup>3</sup>

<sup>1</sup> The note accompanying this drawing is reproduced under No. 753.

<sup>2</sup> These chapels are here sketched in two different sizes; it is the smaller type which is thus formed.

<sup>3</sup> See *Les projets primitifs* Pl. 43.

*MS. P. V. 39<sup>b</sup>. In the principal axes the chapels of MS. B. 19, and semicircular niches on the diagonals. The exterior of the whole edifice is also an octagon, concealing the form of the interior chapels, but with its angles on their axes.*

### *Group V.*

*Suggested by San Lorenzo at Milan.*

*In MS. C. A. 266 II<sup>b</sup>, 812<sup>b</sup> there is a plan almost identical with that of San Lorenzo.—The diagonal sides of the irregular octagon are not indicated. If it could be proved that the arches which, in the actual church, exist on these sides in the first story, were added in 1574 by Martimo Bassi, then this plan and the following section would be still nearer the original state of San Lorenzo than at present. A reproduction of this slightly sketched plan has not been possible. It may however be understood from Pl. LXXXVIII No. 3, by suppressing the four pillars corresponding to the apses.*

*Pl. LXXXVII No. 1 shows the section in elevation corresponding with the above-named plan. The recessed chapels are decorated with large shells in the halfdomes like the arrangement in San Lorenzo, but with proportions like those of Bramante's Sacristy of Santa Maria presso S. Satiro.*

*MS. C. A. 266; a sheet containing three views of exteriors of Domes. On the same sheet there is a plan similar to the one above-named but with uninterrupted aisles and with the addition of round chapels in the axes (compare Pl. XCVII No. 3 and page 44 Fig. 1), perhaps a reminiscence of the two chapels annexed to San Lorenzo.—Leonardo has here sketched the way of transforming this plan into a Latin cross by means of a nave with side aisles.*

*Pl. XCI No. 1. Plan showing a type deprived of aisles and comprised in a square building which is surrounded by a portico. It is accompanied by the following text:*

Ash. II. 7a]

756.

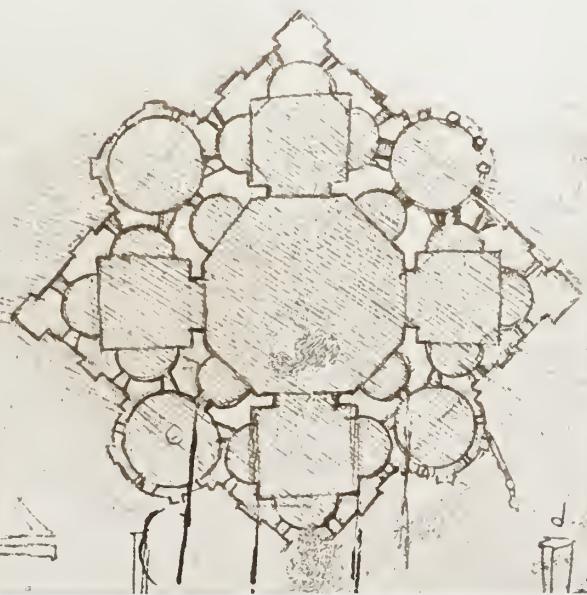

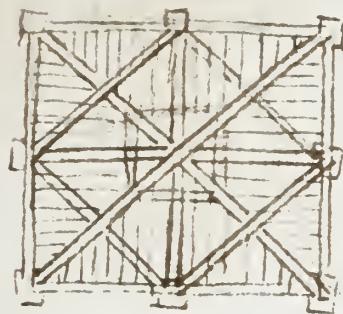

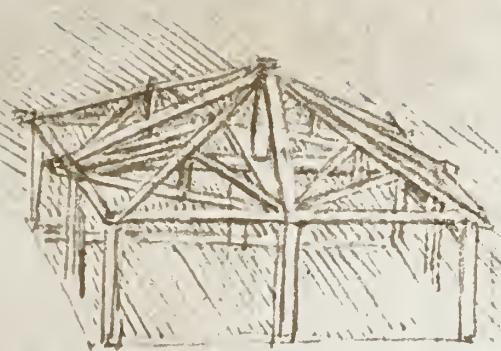

Questo edifitio è abitato di sotto e di sopra come è san Sepulcro, <sup>2</sup>ed è sopra come sotto, salvo che 'l di sopra al tiburio <sup>c</sup>· d · e'l di sotto <sup>3</sup>al tiburio <sup>a · b</sup> e quādo

This edifice is inhabited [accessible] below and above, like San Sepolcro, and it is the same above as below, except that the upper story has the dome <sup>c d</sup>; and the

756. 1. socto . . chome . . sansepulchro. 2. chome. 3. a . b . e ecquādo. 4. nela . . socto. 4. chali ro schalini. 5. schalini . .

756. The church of San Sepolcro at Milan, founded in 1030 and repeatedly rebuilt after the middle

of the XVI<sup>th</sup> century, still stands over the crypt of the original structure.

entri nella chiesa di sotto, <sup>4</sup>tu cali 10 scalini, e quādo mōti in quello di sopra tu sali 20 <sup>5</sup>scalini, che a  $\frac{1}{3}$  l'uno fano 10 braccia, e questo è lo spatio ch'è <sup>6</sup>infra i piani dell'una e l'altra chiesa.

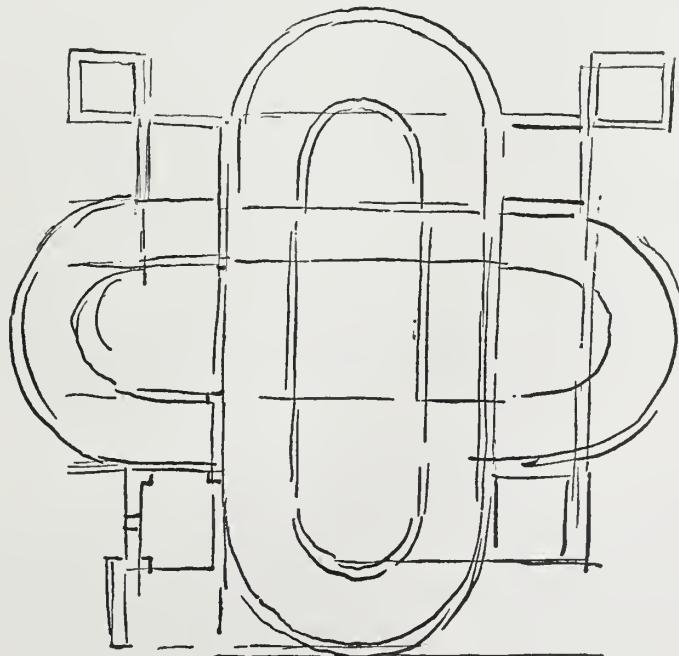

10. br . e. 11. ellaltra.

*Above the plan on the same sheet is a view of the exterior. By the aid of these two figures and the description, sections of the edifice may easily be reconstructed. But the section drawn on the left side of the building seems not to be in keeping with the same plan, notwithstanding the explanatory note written underneath it: "dentro il disitio di sopra" (interior of the edifice above)<sup>1</sup>.*

*Before leaving this group, it is well to remark that the germ of it seems already indicated by the diagonal lines in the plans Pl. LXXXV No. 11 and No. 7. We shall find another application of the same type to the Latin cross in Pl. XCVII No. 3.*

<sup>1</sup> The small inner dome corresponds to a b on the plan —it rises from the lower church into the upper—, above, and larger, rises the dome c d. The aisles above and below thus correspond (è di sopra come di sotto, salvoche etc.). The only difference is, that in the section Leonardo has not taken the trouble to make the form octagonal, but has merely sketched circular lines in perspective.

J. P. R.

lower has the dome *a b*, and when you enter into the crypt, you descend 10 steps, and when you mount into the upper, you ascend 20 steps, which, with  $\frac{1}{3}$  braccio for each, make 10 braccia, and this is the height between one floor of the church and the other.

## 2. Churches formed on the plan of a Latin cross.

We find among Leonardo's studies several sketches for churches on the plan of the Latin cross; we shall begin by describing them, and shall add a few observations.

### A. Studies after existing Monuments.

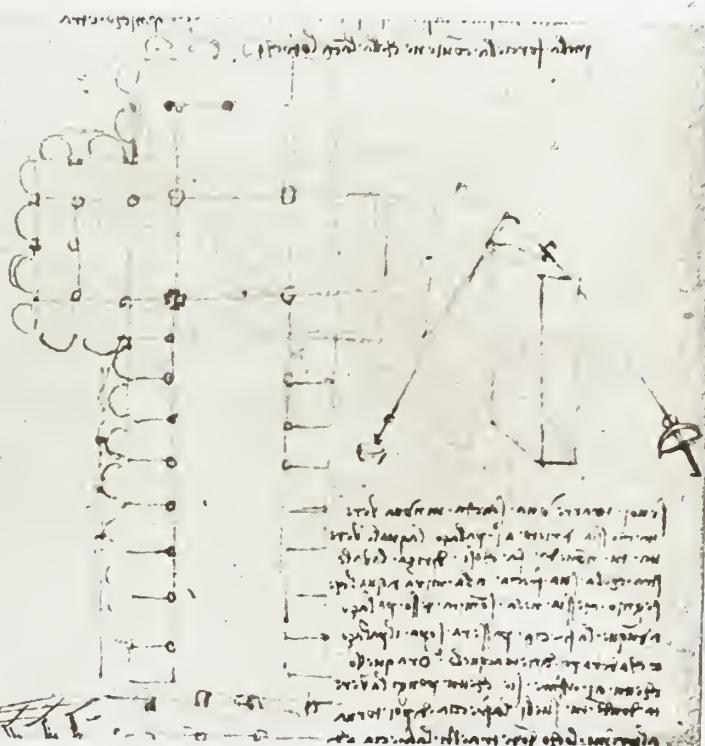

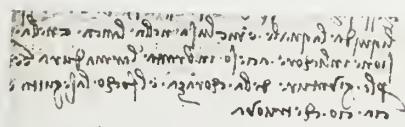

Pl. XCIV No. 2. (MS. B. 11<sup>b</sup>.) Plan of Santo Spirito at Florence, a basilica built after the designs of Brunellesco.—Leonardo has added the indication of a portico in front, either his own invention or the reproduction of a now lost design.

Pl. XCV No. 2. Plan accompanied by the words: "A è santo sepolcro di milano di sopra" (A is the upper church of S. Sepolcro at Milan); although since Leonardo's time considerably spoilt, it is still the same in plan.

The second plan with its note: "B è la sua parte socta tera" (B is its subterranean part [the crypt]) still corresponds with the present state of this part of the church as I have ascertained by visiting the crypt with this plan. Excepting the addition of a few insignificant walls, the state of this interesting part of the church still conforms to Leonardo's sketch; but in the Vestibolo the two columns near the entrance of the winding stairs are absent.

### B. Designs or Studies.

Pl. XCV No. 1. Plan of a church evidently suggested by that of San Sepolcro at Milan. The central part has been added to on the principle of the second type of Group III. Leonardo has placed the "coro" (choir) in the centre.

*Pl. XCVI No. 2.* In the plan the dome, as regards its interior, belongs to the First Class of Group IV, and may be grouped with the one in MS. B. 35<sup>a</sup>. The nave seems to be a development of the type represented in *Pl. XCV No. 2*, B. by adding towers and two lateral porticos<sup>1</sup>.

On the left is a view of the exterior of the preceding plan. It is accompanied by the following note:

B. 24<sup>a]</sup>

757.

Questo edifitio è abitato di sopra e di sotto; <sup>2</sup>di sopra si va per li campanili e uassi sù per lo piano <sup>3</sup>dove sono fondati i <sup>4</sup>tiburi, e detto piano <sup>4</sup>à uno parapetto dinäzi, e di detti tiburi nessuno <sup>5</sup>ne riesce in chiesa, anzi sono separati in tutto.

757. 4. a <sup>1</sup> parapecto. 5. neriessie . . tucto.

*Pl. XCVI No. 1* (MS. C. A. 16<sup>b</sup>; 65<sup>a</sup>). Perspective view of a church seen from behind; this recalls the Duomo at Florence, but with two campaniles<sup>2</sup>.

*Pl. XCVII No. 3* (MS. B. 52<sup>a</sup>). The central part is a development of S. Lorenzo at Milan, such as was executed at the Duomo of Pavia. There is sufficient analogy between the building actually executed and this sketch to suggest a direct connection between them. Leonardo accompanied Francesco di Giorgio<sup>3</sup> when the latter was consulted on June 21<sup>st</sup>, 1490 as to this church; the fact that the only word accompanying the plan is: "sagrestia", seems to confirm our supposition, for the sacristies were added only in 1492, i. e. four years after the beginning of the Cathedral, which at that time was most likely still sufficiently unfinished to be capable of receiving the form of the present sketch.

*Pl. XCVII No. 2* shows the exterior of this design. Below is the note: edifitio al proposito del fòdameto figurato di socto (edifice proper for the ground plan figured below).

Here we may also mention the plan of a Latin cross drawn in MS. C. A. fol. 266 (see p. 50).

*Pl. XCIV No. 1* (MS. L. 15<sup>b</sup>). External side view of Brunellesco's Florentine basilica San Lorenzo, seen from the North.

*Pl. XCIV No. 4* (V. A. V, 1). Principal front of a nave, most likely of a church on the plan of a Latin cross. We notice here not only the

This building is inhabited below and above; the way up is by the campaniles, and in going up one has to use the platform, where the drums of the four domes are, and this platform has a parapet in front, and none of these domes communicate with the church, but they are quite separate.

<sup>1</sup> Already published in Les projets primitifs *Pl. IX.*

<sup>2</sup> Already published in the Saggio *Pl. IX.*

<sup>3</sup> See MALASPINA, il Duomo di Pavia. Documents.

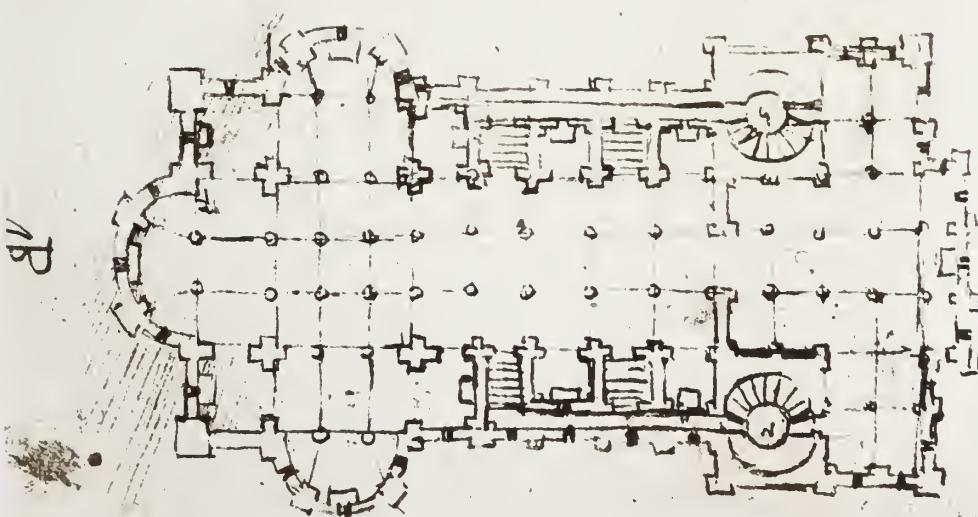

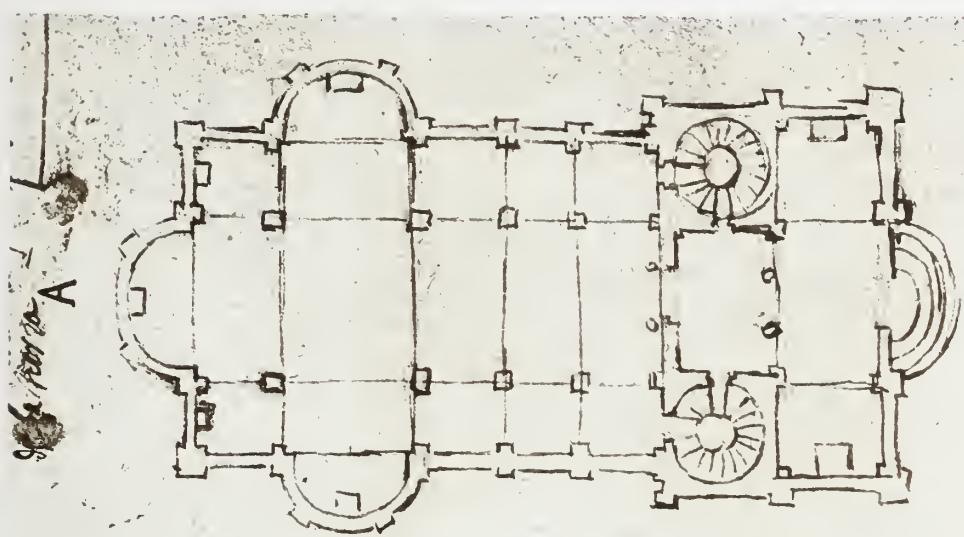

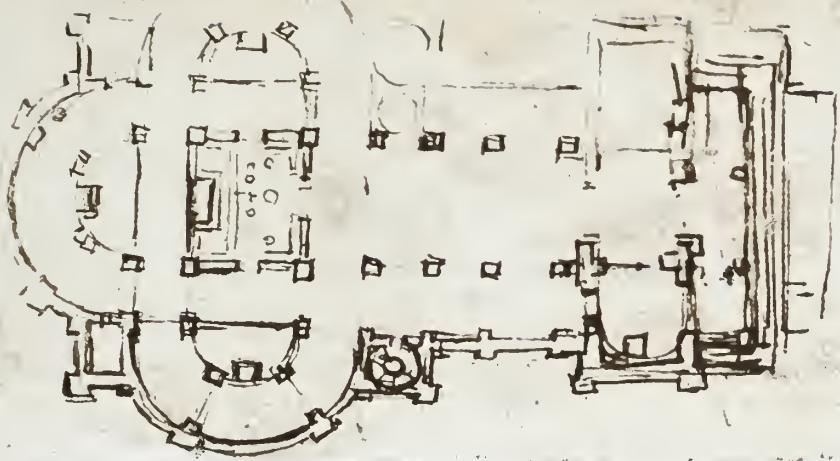

principal features which were employed afterwards in Alberti's front of S. Maria Novella, but even details of a more advanced style, such as we are accustomed to meet with only after the year 1520.

In the background of Leonardo's unfinished picture of St. Jerome (Vatican Gallery) a somewhat similar church front is indicated (see the accompanying sketch).

The view of the front of a temple, apparently a dome in the centre of four Corinthian porticos bearing pediments (published by Amoretti Tav. II. B as being by Leonardo), is taken from a drawing, now at the Ambrosian Gallery. We cannot consider this to be by the hand of the master.

A. Plan de la nef et des deux bas-côtés de l'église de Langres. B. Plan de la nef et des deux bas-côtés de l'église de Langres. C. Plan de la nef et des deux bas-côtés de l'église de Langres.

### C. Studies for a form of a Church most proper for preaching.

The problem as to what form of church might answer the requirements of acoustics seems to have engaged Leonardo's very particular attention. The designation of "teatro" given to some of these sketches, clearly shows which plan seemed to him most favourable for hearing the preacher's voice.

Pl. XCVII, No. 1 (MS. B, 52). Rectangular edifice divided into three naves with an apse on either side, terminated by a semicircular theatre with rising seats, as in antique buildings. The pulpit is in the centre. Leonardo has written on the left side of the sketch: "teatro da predicare" (Theatre for preaching).

MS. B, 55<sup>a</sup> (see page 56, Fig. 1). A domed church after the type of Pl. XCV, No. 1, shows four theatres occupying the apses and facing the square "coro" (choir), which is in the centre between the four pillars of the dome.<sup>1</sup> The rising arrangement of the seats is shown in the sketch above. At the place marked B Leonardo wrote teatri per uldire messa (rows of seats to hear mass), at T teatri, and at C coro (choir).

In MS. C.A. 260, are slight sketches of two plans for rectangular choirs and two elevations of the altar and pulpit which seem to be in connection with these plans.

In MS. Ash II, 8<sup>a</sup> (see p. 56 and 57. Fig. 2 and 3). "Locho dove si predica". (Place for preaching). A most singular plan for a building. The interior is a portion of a sphere, the centre of which is the summit of a column destined to serve as the preacher's pulpit. The inside is somewhat

<sup>1</sup> The note teatro de predicar, on the right side is, I believe, in the handwriting of Pompeo Leoni. J. P. R.

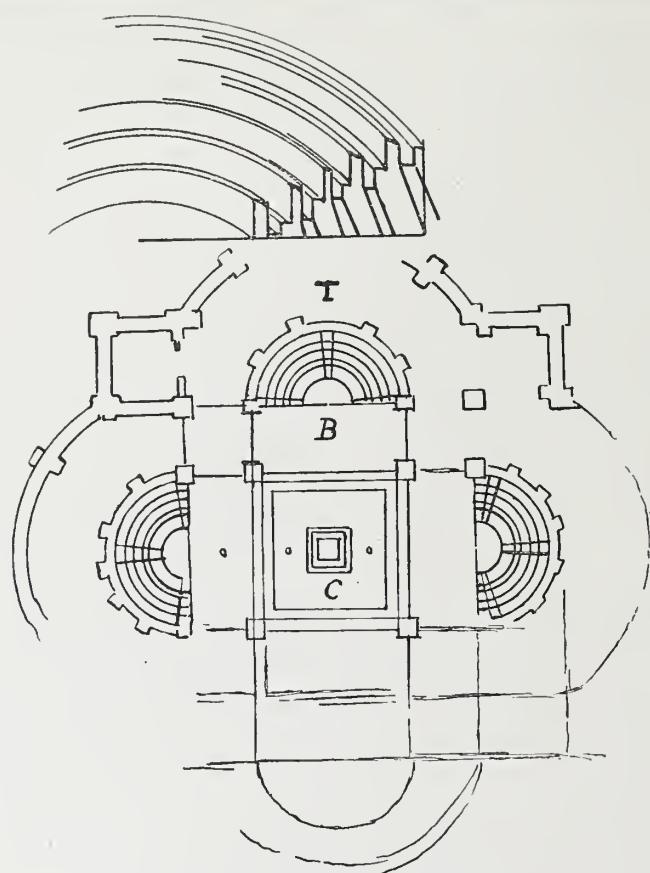

Fig. 1.

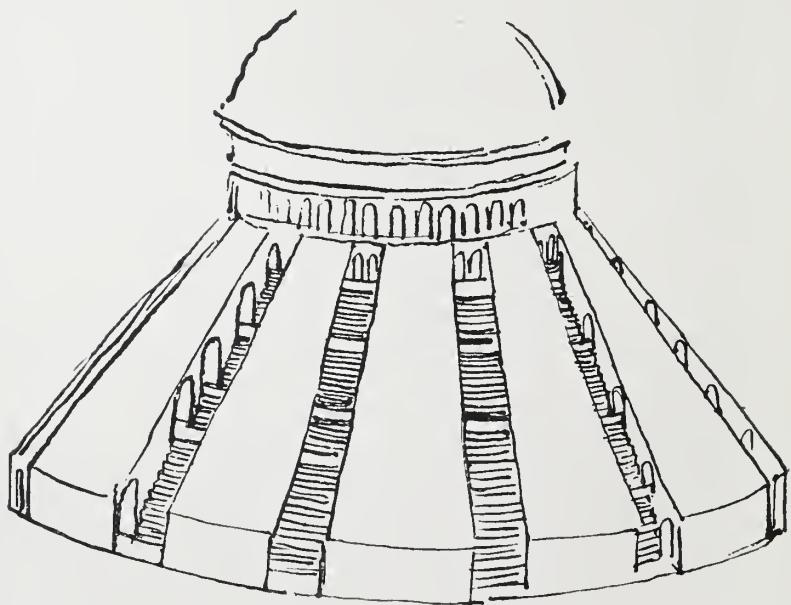

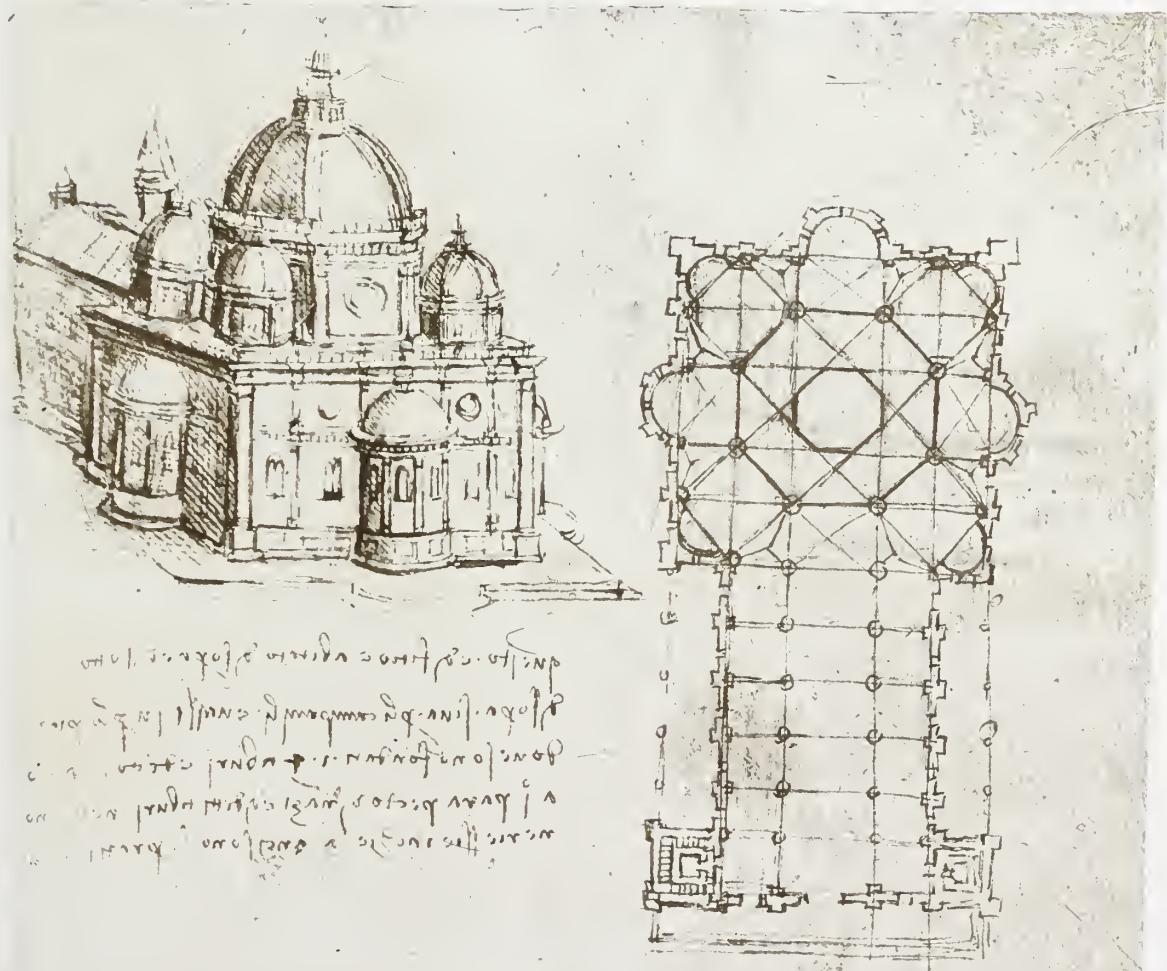

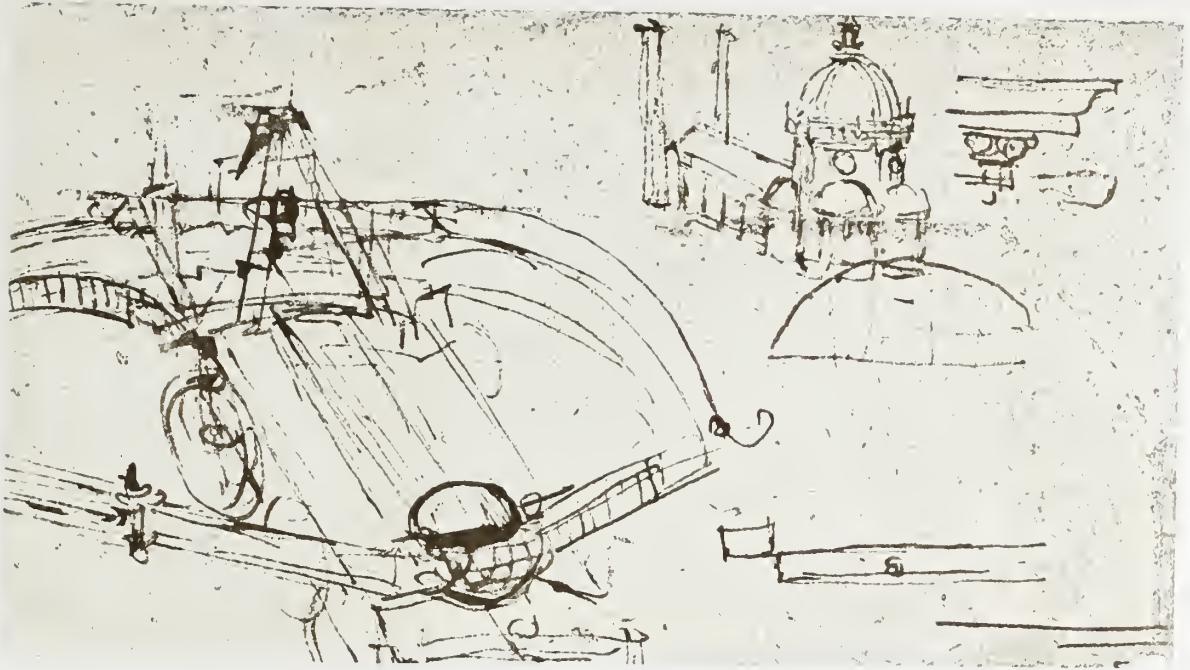

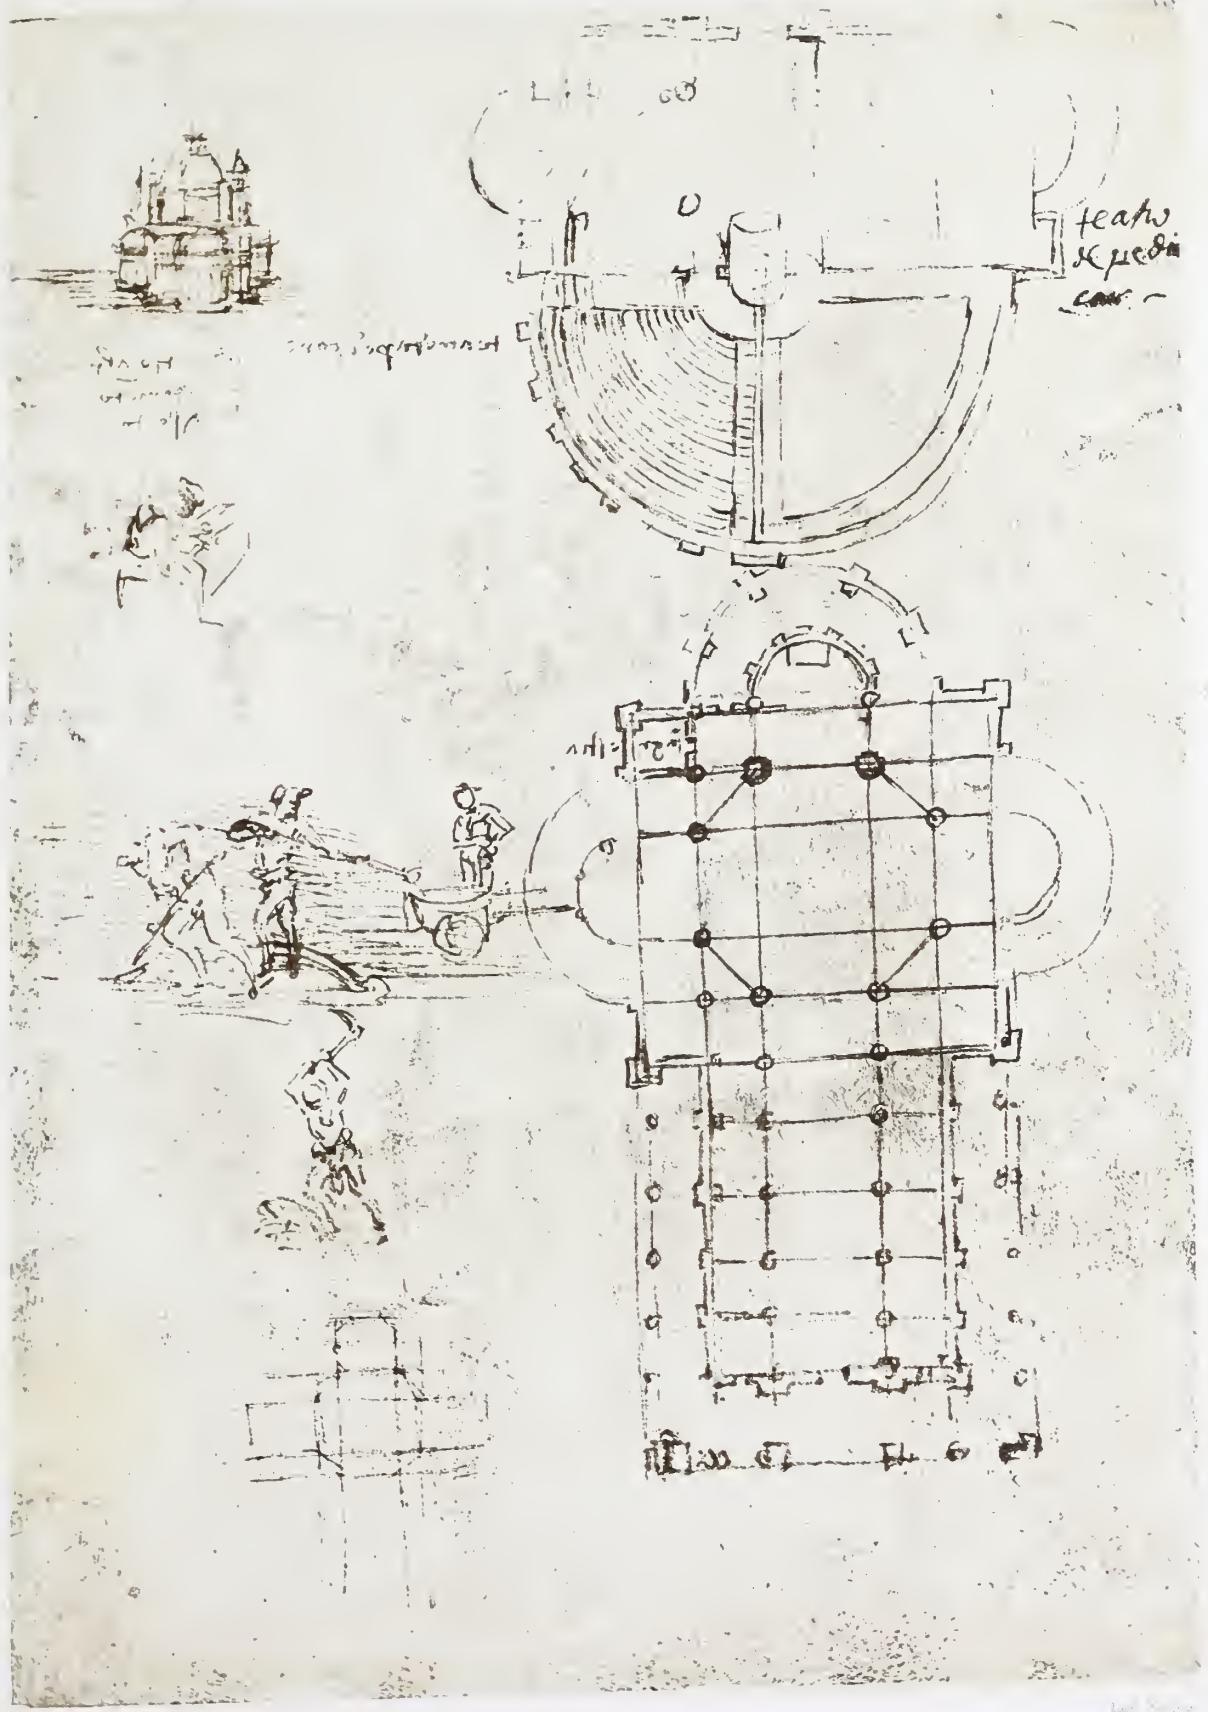

Fig. 2.

Digitized by srujanika@gmail.com

like a modern theatre, whilst the exterior and the galleries and stairs recall the ancient amphitheatres.

*Page 57, Fig. 4. A plan accompanying the two preceding drawings. If this gives the complete form Leonardo intended for the edifice, it would*

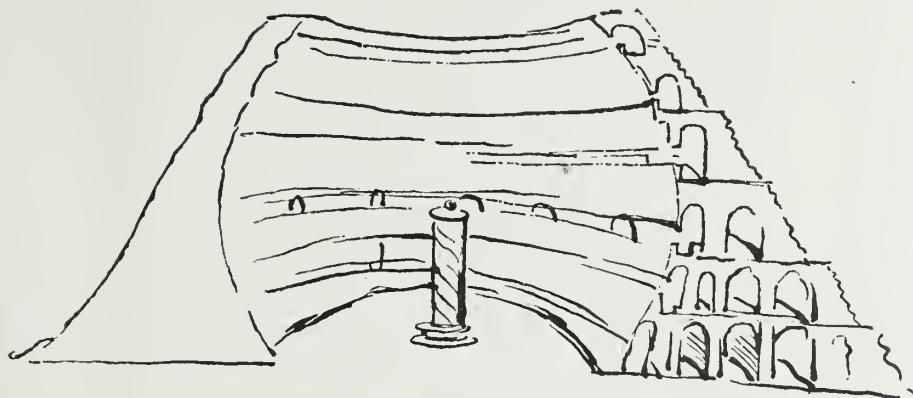

Fig. 3.

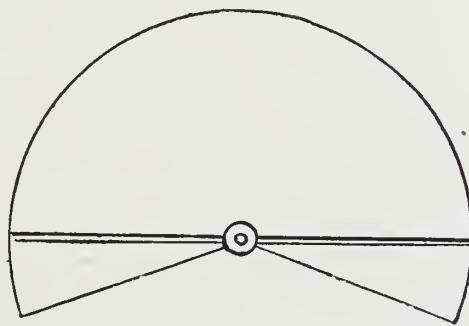

Fig. 4.

have comprised only about two thirds of the circle. Leonardo wrote in the centre "fondamento", a word he often employed for plans, and on the left side of the view of the exterior: locho dove si predicha (*a place for preaching in*).

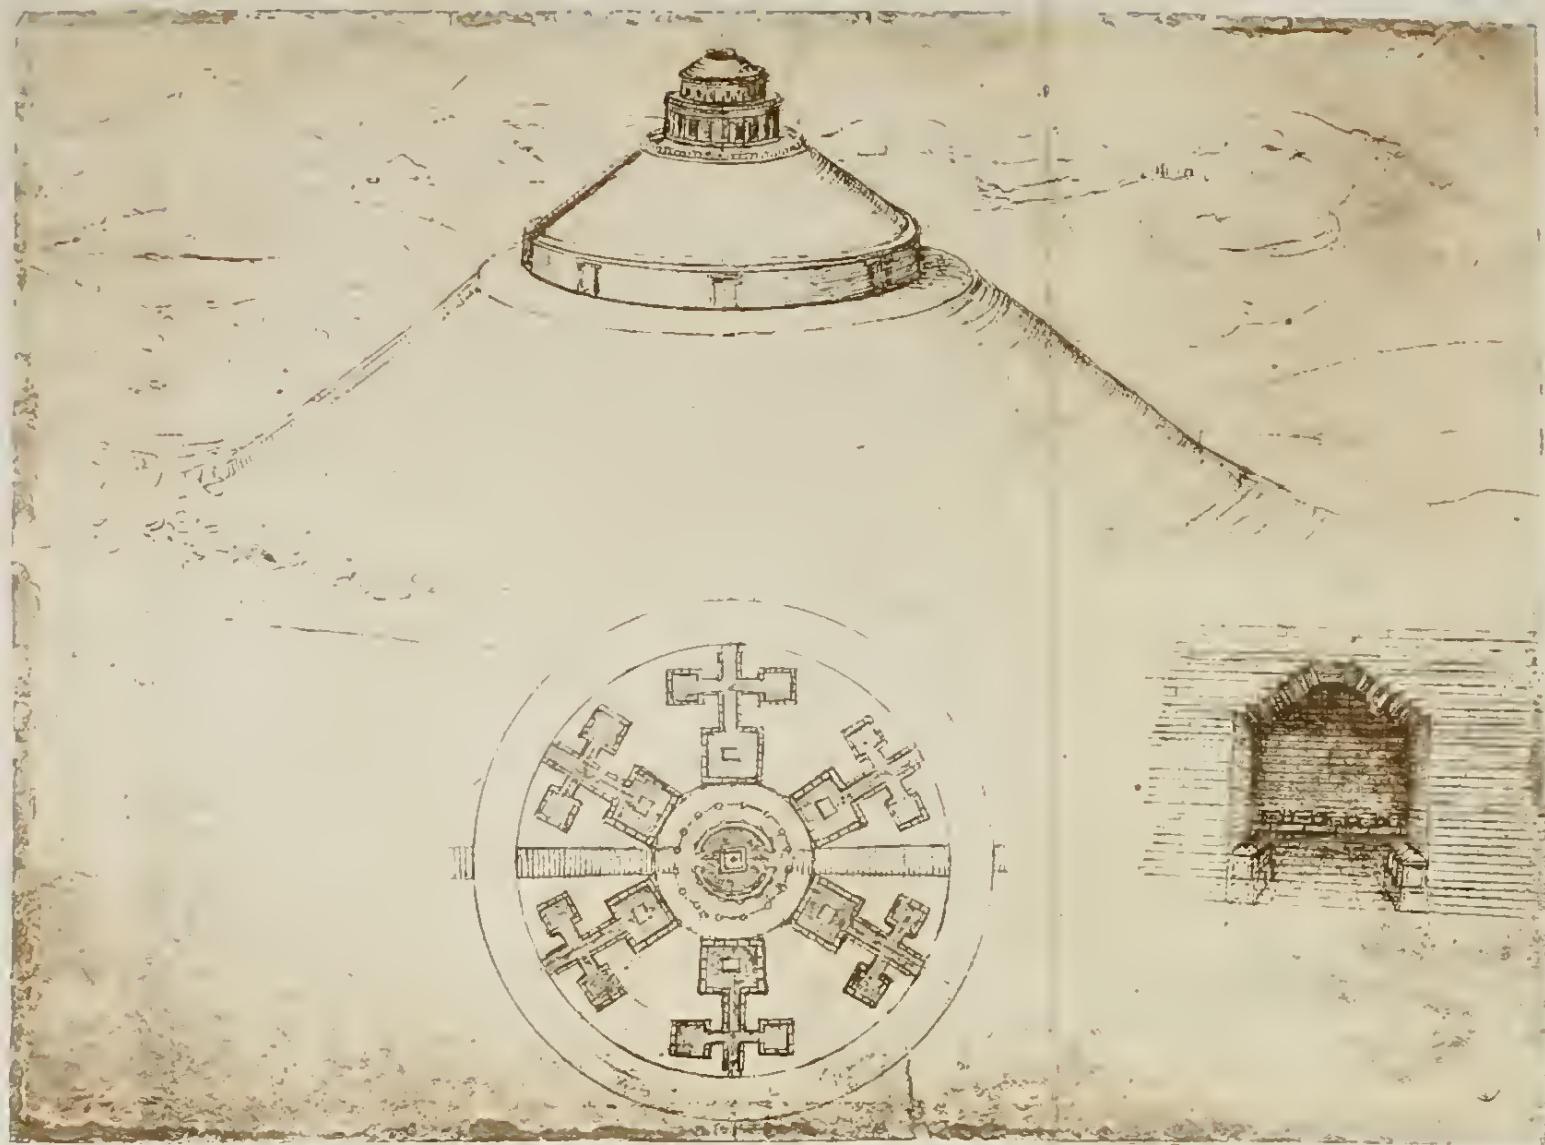

#### *D. Design for a Mausoleum.*

*Pl. XCVIII (P. V., 182. No. d'ordre 2386).* In the midst of a hilly landscape rises an artificial mountain in the form of a gigantic cone, crowned by an imposing temple. At two thirds of the height a terrace is cut out with six doorways forming entrances to galleries, each leading to three sepulchral halls, so constructed as to contain about five hundred funeral urns, disposed in the customary antique style. From two opposite sides steps ascend to the terrace in a single flight and beyond it to the temple above. A large circular opening, like that in the Pantheon, is in the dome above what may be the altar, or perhaps the central monument on the level of the terrace below.

The section of a gallery given in the sketch to the right below shows the roof to be constructed on the principle of superimposed horizontal layers, projecting one beyond the other, and each furnished with a sort of heel, which appears to be undercut, so as to give the appearance of a beam from within. Granite alone would be adequate to the dimensions here given to the key stone, as the thickness of the layers can hardly be considered to be less than a foot. In taking this as the basis of our calculation for the dimensions of the whole construction, the width of the chamber would be about 25 feet but, judging from the number of urns it contains—and there is no reason to suppose that these urns were larger than usual—it would seem to be no more than about 8 or 10 feet.

The construction of the vaults resembles those in the galleries of some Etruscan tumuli, for instance the Regolini-Galeassi tomb at Cervetri ( lately discovered) and also that of the chamber and passages of the pyramid of Cheops and of the treasury of Atreus at Mycenae.

The upper cone displays not only analogies with the monuments mentioned in the note, but also with Etruscan tumuli, such as the Cocumella

tomb at Vulci, and the Regolini Galassi tomb<sup>1</sup>. The whole scheme is one of the most magnificent in the history of Architecture.

It would be difficult to decide as to whether any monument he had seen suggested this idea to Leonardo, but it is worth while to enquire, if any monument, or group of monuments of an earlier date may be supposed to have done so.<sup>2</sup>

<sup>1</sup> See FERGUSON, *Handbook of Architecture*, I, 291.

<sup>2</sup> There are, in Algiers, two Monuments, commonly called "Le Madracen" and "Le tombeau de la Chrétienne," which somewhat resemble Leonardo's design. They are known to have served as the Mausolea of the Kings of Mauritania. Pomponius Mela, the geographer of the time of the Emperor Claudius, describes them as having been "Monumentum commune regiae gentis." See Le Madracen, Rapport fait par M. le Grand Rabbin AB. CAHEN, Constantine 1873—Mémoire sur les fouilles exécutées au Madras'en . . . par le Colonel BRUNON, Constantine 1873.—Deux Mausolées Africains, le Madracen et le tombeau de la Chrétienne par M. J. DE LAURIÈRE, Tours 1874.—Le tombeau de la Chrétienne, Mausolée des rois Mauritanis par M. BERBRUGGER, Alger 1867.—I am indebted to M. LE BLANC, of the Institut, and M. LUD. LALANNE, Bibliothécaire of the Institut for having first pointed out to me the resemblance between these monuments; while M. ANT. HÉRON DE VILLEFOSSE of the Louvre was kind enough to place the abovementioned rare works at my disposal. Leonardo's observations on the coast of Africa are given later in this work. The Herodium near Bethlehem in Palestine (Jebel el Fureidis, the Frank Mountain) was, according to the latest researches, constructed on a very similar plan. See Der Frankenberg, von Baurath C. SCHICK in Jerusalem, Zeitschrift des Deutschen Palästina-Vereins, Leipzig 1880, Vol. III, pages 88—99 and Plates IV and V.

J. P. R.

### *E. Studies for the Central Tower, or Tiburio of Milan Cathedral.*

Towards the end of the fifteenth century the Fabbricceria del Duomo had to settle on the choice of a model for the crowning and central part of this vast building. We learn from a notice published by G. L. Calvi<sup>1</sup> that among the artists who presented models in the year 1488 were: Bramante, Pietro da Gorgonzola, Luca Paperio (Fancelli), and Leonardo da Vinci.—

Several sketches by Leonardo refer to this important project:

Pl. CXIX, No. 2 (MS. S. K. III, No. 36<sup>a</sup>) a small plan of the whole edifice.—The projecting chapels in the middle of the transept are wanting here. The nave appears to be shortened and seems to be approached by an inner “vestibolo”.—

Pl. C, No. 2 (Tr. 21). Plan of the octagon tower, giving the disposition of the buttresses; starting from the eight pillars adjoining the four principal piers and intended to support the eight angles of the Tiburio. These buttresses correspond exactly with those described by Bramante as existing in the model presented by Omodeo.<sup>2</sup>

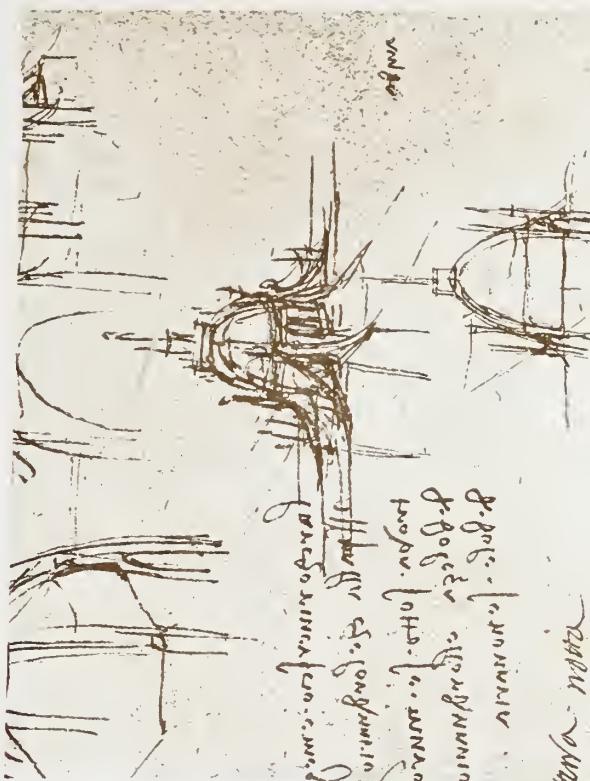

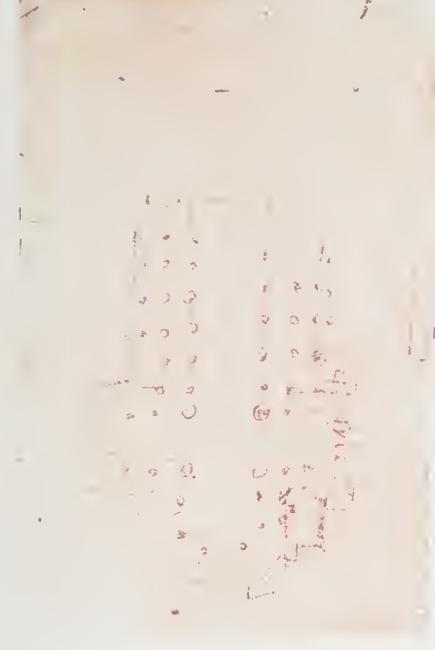

Pl. C, 3 (MS. Tr. 16). Two plans showing different arrangements of the buttresses, which seem to be formed partly by the intersection of a system of pointed arches such as that seen in

Pl. C, No. 5 (MS. B, 27<sup>a</sup>) destined to give a broader base to the drum. The text underneath is given under No. 788.

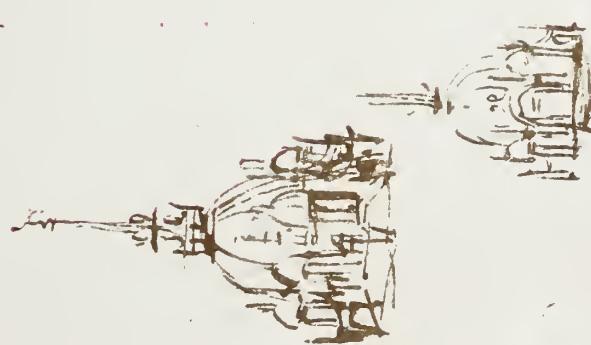

MS. B, 3—three slight sketches of plans in connexion with the preceding ones.

<sup>1</sup> G. L. CALVI, Notizie sulla vita e sulle opere dei principali architetti scultori e pittori che fiornirono in Milano, Part III, 20. See also: H. DE GEYMÜLLER, Les projets primitifs etc. I, 37 and 116—119.—The Fabbricceria of the Duomo has lately begun the publication of the archives, which may possibly tell us more about the part taken by Leonardo, than has hitherto been known.

<sup>2</sup> Bramante's opinion was first published by G. MONGERI, Arch. stor. Lomb. V, fasc. 3 and afterwards by me in the publication mentioned in the preceding note.

centro - norte

*Pl. XCIX, No. 1 (MS. Tr. 15)* contains several small sketches of sections and exterior views of the Dome; some of them show buttress-walls shaped as inverted arches. Respecting these Leonardo notes:

Tr. 15]

L'arco rivescio è migliore per fare  
spalla che l'ordinario, perchè il rovescio  
trova sotto se muro resistente alla sua  
debolezza, e l'ordinario nō trova nel suo  
debole se non aria.

758. 1. larcho. 2. isspalla . . . riverscio. 4. deboleza ellordinario.

758.

The inverted arch is better for giving a shoulder than the ordinary one, because the former finds below it a wall resisting its weakness, whilst the latter finds in its weak part nothing but air.

Three slight sketches of sections on the same leaf—above those reproduced here—are more closely connected with the large drawing in the centre of *Pl. C, No. 4 (MS. Tr. 41)* which shows a section of a very elevated dome, with double vaults, connected by ribs and buttresses ingeniously disposed, so as to bring the weight of the lantern to bear on the base of the dome.

A sketch underneath it shows a round pillar on which is indicated which part of its summit is to bear the weight: "il pilastro sarà charicho in a b." (The column will bear the weight at a b.) Another note is above on the right side: Larcho regierà tanto sotto asse chome di sopra se (The arch supports as much below it [i. e. a hanging weight] as above it).

*Pl. C, No. 1 (C. A. 303<sup>a</sup>)*. Larger sketch of half section of the Dome, with a very complicated system of arches, and a double vault. Each stone is shaped so as to be knit or dovetailed to its neighbours. Thus the inside of the Dome cannot be seen from below.

*MS. C. A. 303<sup>b</sup>*. A repetition of the preceding sketch with very slight modifications.

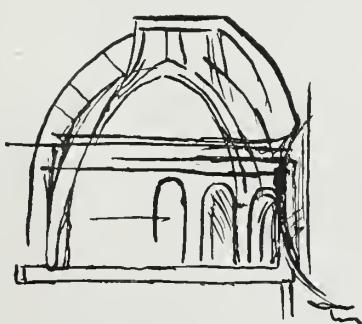

Fig. 1.

Fig. 2.

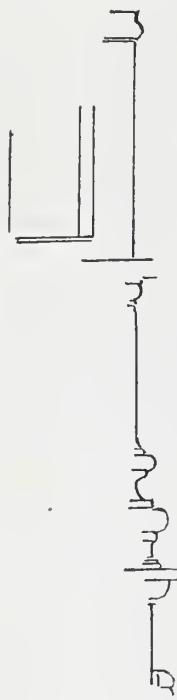

*MS. Tr. 9* (see Fig. 1 and 2). Section of the Dome with reverted buttresses between the windows, above which iron anchors or chains seem to be intended. Below is the sketch of the outside.

*Pl. XCIX, No. 3 (C. A., 262<sup>a</sup>) four sketches of the exterior of the Dome.*

*C. A. 12. Section, showing the points of rupture of a gothic vault, in evident connection with the sketches described above.*

It deserves to be noticed how easily and apparently without effort, Leonardo manages to combine gothic details and structure with the more modern shape of the Dome.

The following notes are on the same leaf, oni cosa pōderosa, and oni cosa pōderosa desidera de(scendere); farther below, several multiplications

most likely intended to calculate the weight of some parts of the Dome, thus  $16 \times 47 = 720$ ;  $720 \times 800 = 176000$ , next to which is written: peso del pilastro di 9 teste (weight of the pillar 9 diameters high).

Below:  $176000 \times 8 = 1408000$ ; and below:

Semjlio e se cē 80 (?) il peso del tiburio  
(six millions six hundred (?) 80 the weight of the Dome),

Bossi hazarded the theory that Leonardo might have been the architect who built the church of Sta. Maria delle Grazie, but there is no evidence to support this, either in documents

or in the materials supplied by Leonardo's manuscripts and drawings. The sketch given at the side shows the arrangement of the second and third socle on the apses of the choir of that church; and it is remarkable that those sketches, in MS. S. K. M. II<sup>2</sup>, 2<sup>a</sup> and 1<sup>b</sup>, occur with the passage given in Volume I as No. 665 and 666 referring to the composition of the Last Supper in the Refectory of that church.

#### *F. The Project for lifting up the Battistero of Florence and setting it on a basement.*

*Among the very few details Vasari gives as to the architectural studies of Leonardo, we read: "And among these models and designs there was one by way of which he showed several times to many ingenious citizens who then governed Florence, his readiness to lift up without ruining it, the church of San Giovanni in Florence (the Battistero, opposite the Duomo) in order to place under it the missing basement with steps; he supported his assertions with reasons so persuasive, that while he spoke the undertaking seemed feasible, although every one of his hearers, when he had departed, could see by himself the impossibility of so vast an undertaking."<sup>1</sup>*

*In the MS. C. A. fol. 293, there are two sketches which possibly might have a bearing on this bold enterprise. We find there a plan of a circular or polygonal edifice surrounded by semicircular arches in an oblique position. These may be taken for the foundation of the steps and of the new platform. In the perspective elevation the same edifice, forming a polygon, is shown as lifted up and resting on a circle of inverted arches which rest on an other circle of arches in the ordinary position, but so placed that the inverted arches above rest on the spandrels of the lower range.*

*What seems to confirm the supposition that the lifting up of a building is here in question, is the indication of engines for winding up, such as jacks, and a rack and wheel. As the lifting apparatus represented on this sheet does not seem particularly applicable to an undertaking of such magnitude, we may consider it to be a first sketch or scheme for the engines to be used.*

<sup>1</sup> This latter statement of Vasari's must be considered to be exaggerated. I may refer here to some data given by LIBRI, Histoire des sciences mathématiques en Italie (II, 216, 217): "On a cru dans ces derniers temps faire un miracle en mécanique en effectuant ce transport, et cependant dès l'année 1455, Gaspard Nadi et Aristote de Fioravantio avaient transporté, à une distance considérable, la tour de la Magione de Bologne, avec ses fondements, qui avait presque quatre-vingts pieds de haut. Le continuateur de la chronique de Pugliola dit que le trajet fut de 35 pieds et que durant le transport auquel le chroniqueur affirme avoir assisté, il arriva un accident grave qui fit pencher de trois pieds la tour pendant qu'elle était suspendue, mais que cet accident fut promptement réparé (Muratori, Scriptores rer. ital. Tom. XVIII, col. 717, 718). Alidosi a rapporté une note où Nadi rend compte de ce transport avec une rare simplicité. D'après cette note, on voit que les opérations de ce genre n'étaient pas nouvelles. Celle-ci ne coûta que 150 livres (monnaie d'alors) y compris le cadeau que le Légat fit aux deux mécaniciens. Dans la même année, Aristote redressa le clocher de Cento, qui penchait de plus de cinq pieds (Alidosi, instruzione p. 188 — Muratori, Scriptores rer. ital., tom. XXIII, col. 888. — Bossii, chronica Mediol., 1492, in-fol. ad ann. 1455). On ne conçoit pas comment les historiens des beaux-arts ont pu négliger de tels hommes." J. P. R.

### G. Description of an unknown Temple.

C. A. 280<sup>a</sup>; 852<sup>a</sup>

Per dodici gradi di scale al magno tempio si saliva, il quale otto cento braccia circundava, e con ottangolare <sup>2</sup>figura era fabricato, e sopra li otto anguli otto gran base si posauano a un braccio e mezzo, e grosse 3, <sup>3</sup>e lunghe 6 nel suo sodo, coll'angolo in mezzo, sopra delle quali si fondaiano 8 grā pilastri: sopra del sodo della basa si le<sup>4</sup>vava per ispatio di 24 braccia, e nel suo termine erano stabiliti 8 capitelli di 3 braccia l'uno, e largo 6, sopra di questi se<sup>5</sup>guiva architraue fregio e cornice con altezza di 4 braccia e  $\frac{1}{2}$ , il quale per retta linia <sup>6</sup>dall'un pilastro all'altro s'astendea, e così con circuito d'otto cento braccia il tempio circundava infra l'ū <sup>7</sup>pilastro e l'altro; per sostentacolo di tal mēbro erano stabiliti dieci gran colōne dell'altezza de' pilastri e cō <sup>8</sup>grossezza di 3 braccia sopra le base, le quali erā alte vn braccio e  $\frac{1}{2}$ .

<sup>9</sup>Salivasi a questo tempio per 12 gradi di scale, il quale tempio era sopra il dodecimo grado fondato in figura ottangolare, e sopra ciascuno angulo nasceva vn gran pilastro; e infra li pilastri erano inframessi <sup>11</sup>dieci

759.

Twelve flights of steps led up to the great temple, which was eight hundred braccia in circumference and built on an octagonal plan. At the eight corners were eight large plinths, one braccia and a half high, and three wide, and six long at the bottom, with an angle in the middle; on these were eight great pillars, standing on the plinths as a foundation, and twenty four braccia high. And on the top of these were eight capitals three braccia long and six wide, above which were the architrave frieze and cornice, four braccia and a half high, and this was carried on in a straight line from one pillar to the next and so, continuing for eight hundred braccia, surrounded the whole temple, from pillar to pillar. To support this entablature there were ten large columns of the same height as the pillars, three braccia thick above their bases which were one braccia and a half high.

The ascent to this temple was by twelve flights of steps, and the temple was on the twelfth, of an octagonal form, and at each angle rose a large pillar; and between the pillars were placed ten columns of the

## *V. Palace architecture.*

*But a small number of Leonardo's drawings refer to the architecture of palaces, and our knowledge is small as to what style Leonardo might have adopted for such buildings.*

*Pl. CII No. 1 (W. XVIII). A small portion of a façade of a palace in two stories, somewhat resembling Alberti's Palazzo Rucellai.—Compare with this Bramante's painted front of the Casa Silvestri, and a painting by Montorfano in San Pietro in Gessate at Milan, third chapel on the left hand side and also with Bramante's palaces at Rome. The pilasters with arabesques, the rustica between them, and the figures over the window may be painted or in sgraffito. The original is drawn in red chalk.*

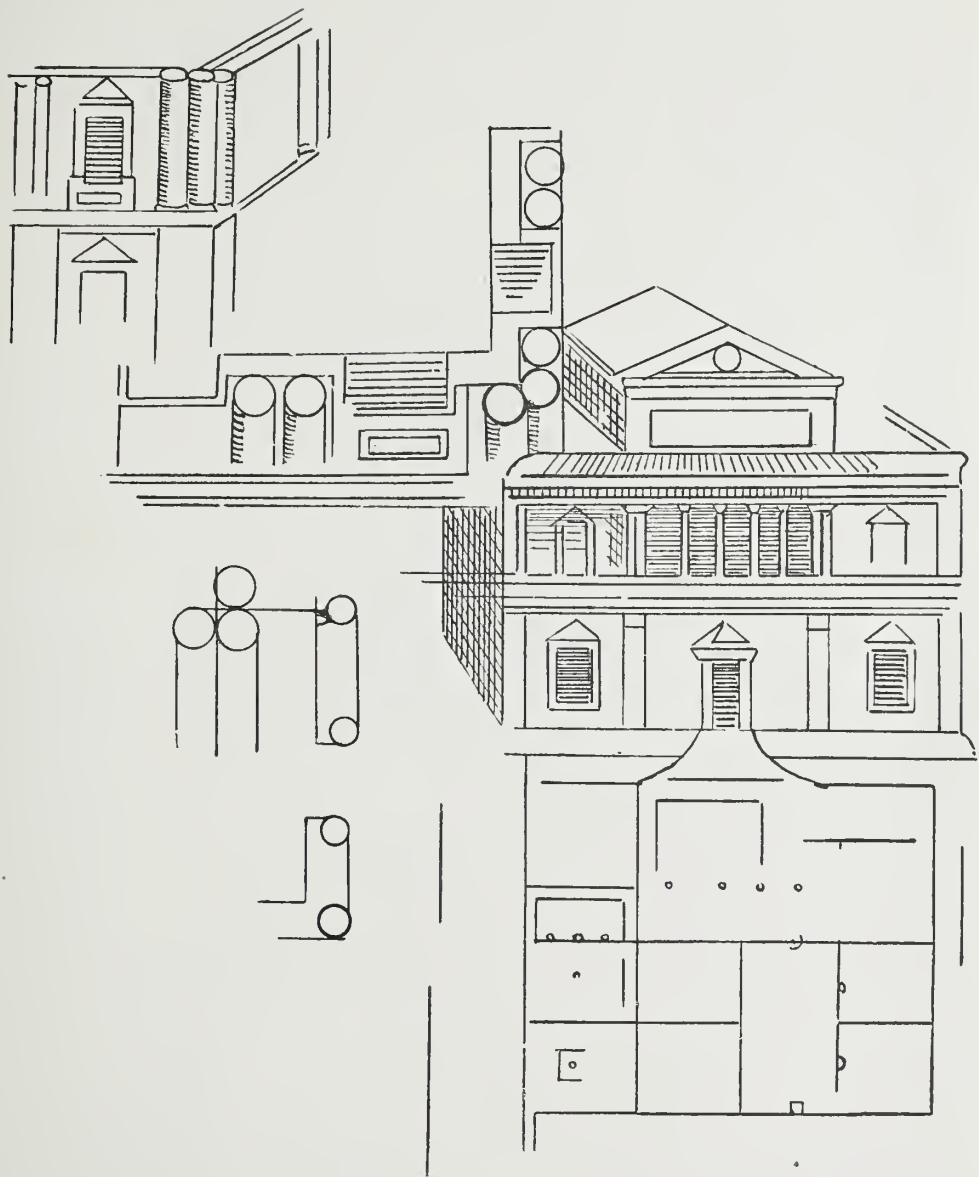

*Pl. LXXXI No. 1 (MS. Tr. 42). Sketch of a palace with battlements and decorations, most likely graffiti; the details remind us of those in the Castello at Vigevano.<sup>1</sup>*

*MS. Mz. o<sup>o</sup>, contains a design for a palace or house with a loggia in the middle of the first story, over which rises an attic with a Pediment reproduced on page 67. The details drawn close by on the left seem to indicate an arrangement of coupled columns against the wall of a first story.*

*Pl. LXXXV No. 14 (MS. S. K. M. III 79<sup>a</sup>) contains a very slight*

<sup>1</sup> Count GIULIO PORRO, in his valuable contribution to the Archivio Storico Lombardo, Anno VIII, Fasc. IV (31 Dec. 1881): Leonardo da Vinci, Libro di Annottazioni e Memorie, refers to this in the following note: "Alla pag. 41 vi è uno schizzo di volta ed accanto scrisse: 'il pilastro sarà chiaro in su 6' e potrebbe darsi che si riferisse alla cupola della chiesa delle Grazie tanto più che a pag. 42 vi è un disegno che rassomiglia assai al basamento che oggi si vede nella parte esterna del coro di quella chiesa." This may however be doubted. The drawing, here referred to, on page 41 of the same manuscript, is reproduced on Pl. C No. 4 and described on page 61 as being a study for the cupola of the Duomo of Milan.

sketch in red chalk, which most probably is intended to represent the façade of a palace. Inside is the short note *7 he 7 (7 and 7)*.

MS. J<sup>2</sup> 8<sup>a</sup> (see pages 68 Fig. 1 and 2) contains a view of an unknown palace. Its plan is indicated at the side.

In MS. Br. M. 126<sup>a</sup> (see Fig. 3 on page 68) there is a sketch of a house, on which Leonardo notes: *casa con tre terrazi* (*house with three terraces*).

*Pl. CX, No. 4 (MS. L. 36<sup>b</sup>) represents the front of a fortified building drawn at Cesena in 1502 (see No. 1040).*

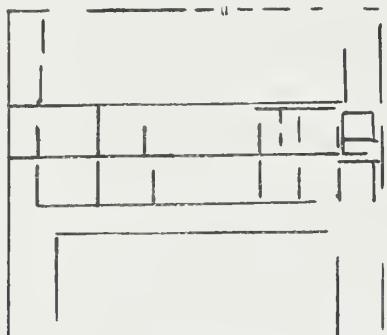

Fig. 2.

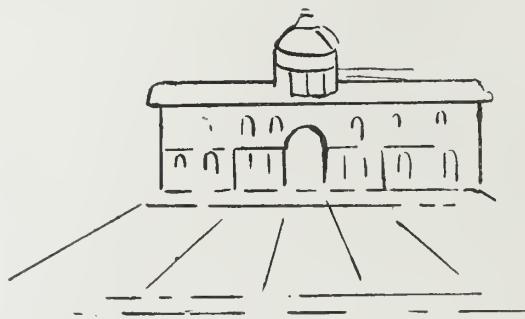

Fig. 1.

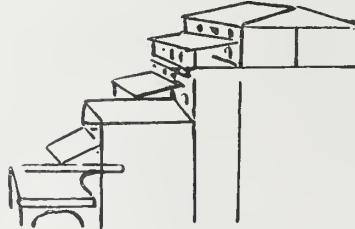

Fig. 3.

Here we may also mention the singular building in the allegorical composition represented on *Pl. LVIII* in Vol. I. In front of it appears the head of a sphinx or of a dragon which seems to be carrying the palace away.

The following texts refer to the construction of palaces and other buildings destined for private use:

La corte de' auere le parieti <sup>2</sup>per l'altezza la metà della sua <sup>3</sup>larghezza, cioè se la corte <sup>4</sup>sarà braccia 40, la casa deve essere <sup>5</sup>alta 20 nelle parieti di tal <sup>6</sup>corte, e tal corte vol essere <sup>7</sup>larga per la metà di tutta la <sup>8</sup>facciata.

On the proportions of a court yard,

In the courtyard the walls must be half the height of its width, that is if the court be 40 braccia, the house must be 20 high as regards the walls of the said courtyard; and this courtyard must be half as wide as the whole front.

760. 1. pariete. 2. alteza. 3. largezza coe sella. 4. br 40 . la casa e essere. 5. alte . . pariete. 6. volerssere. 7. faccata.

760. See Pl. CI, no. 1, and compare the dimensions here given, with No. 748 lines 26—29; and the drawing belonging to it Pl. LXXXI, no. 2.

## PER FARE VNA POLITA STALLA.

<sup>2</sup> Modo · come · si de' · componere · vna · stalla: Dividerai in prima la sua larghezza · in parti · 3 · e la sua lunghezza è libera · , e le · 3 · dette divisioni <sup>4</sup>sieno equali e di larghezza di braccia 6 per ciascuna, e alte 10, e la parte di mezzo <sup>5</sup>sia in uso · de' maestri di stalla · , le 2 da cato per i cavagli, de' quali ciascuno ne de' <sup>6</sup>pigliare per larghezza braccia 6 · , lunghezza braccia 6, e alte piv dinanti · che dirieto ·  $\frac{1}{2}$  · braccio; <sup>7</sup>la mangiatoia sia alta da terra braccia 2, il principio della rastrelliera <sup>8</sup>braccia · 3 · e l'ultimo · braccia 4 · ; Ora · a volere atenere · quello ch'io prometto, cioè di <sup>9</sup>fare detto sito cōtro allo universale vso · pulito e netto · inquāto al · di sopra <sup>10</sup>della stalla · , cioè dove sta il fieno · , debe detto loco avere nella sua testa di fori vna <sup>11</sup>finestra alta 6 · e larga 6, donde con vn facil modo si cōduca il fieno su detto <sup>12</sup>solaro, come appare nello strumēto E · , e sia collocata ī un sito di larghezza <sup>13</sup>di braccia 6, e lungo quāto la stalla, come appare in · k · p · e l'altre 2 parti <sup>14</sup>che mettano in mezzo · questa, ciascuna sia diuisa in 2 parti, le due diverso il fieno sia <sup>15</sup>no braccia 4 · , p · s · , solo allo ofitio e andamento de' ministri d'essa stalla, l'altre <sup>16</sup>2 che confinano colle parieti murali · sieno di braccia 2, come appare in s · k · , <sup>17</sup>e queste sieno allo ofitio di dare · il feno alle māgiatoie · per condotti stretti nel <sup>18</sup>principio e larghi sulle magia'oe, acciò che'l feno nō si fermi infra via, sieno <sup>19</sup>bene itonicati e politi, figurati dov'è segnato 4 · . f · s · ; in quanto al dare <sup>20</sup>bere siano le māgiatoie di pietra, sopra le quali sia l'acqua, si chè si possino <sup>21</sup>scoprire le māgiatoie come si scoprono le casse, alzādo i coperchi loro.

## FOR MAKING A CLEAN STABLE.

The manner in which one must arrange <sup>On the</sup> a stable. You must first divide its width in <sup>of the</sup> dispositions of a stable. 3 parts, its depth matters not; and let these 3 divisions be equal and 6 braccia broad for each part and 10 high, and the middle part shall be for the use of the stablemasters; the 2 side ones for the horses, each of which must be 6 braccia in width and 6 in length, and be half a braccio higher at the head than behind. Let the manger be at 2 braccia from the ground, to the bottom of the rack, 3 braccia, and the top of it 4 braccia. Now, in order to attain to what I promise, that is to make this place, contrary to the general custom, clean and neat: as to the upper part of the stable, i. e. where the hay is, that part must have at its outer end a window 6 braccia high and 6 broad, through which by simple means the hay is brought up to the loft, as is shown by the machine E; and let this be erected in a place 6 braccia wide, and as long as the stable, as seen at k p. The other two parts, which are on either side of this, are again divided; those nearest to the hay-loft are 4 braccia, p s, and only for the use and circulation of the servants belonging to the stable; the other two which reach to the outer walls are 2 braccia, as seen at s k, and these are made for the purpose of giving hay to the mangers, by means of funnels, narrow at the top and wide over the manger, in order that the hay should not choke them. They must be well plastered and clean and are represented at 4 f s. As to the giving the horses water, the troughs must be of stone and above them [cisterns of] water. The mangers may be opened as boxes are uncovered by raising the lids.

B. 286]

MODO COME SI FANNO <sup>2</sup>L'ARMATURE PER FARE  
<sup>3</sup>ORNAMÉTO <sup>4</sup>DI EDIFITI.

<sup>5</sup>Modo come si debbono <sup>6</sup>mettere le pertiche <sup>7</sup>per legare i mazzuoli <sup>8</sup>de' ginepri sopra esse <sup>9</sup>pertiche, le quali sono <sup>10</sup>confitte sopra l'ar<sup>11</sup>matura della vol<sup>12</sup>ta e lega essi ma<sup>13</sup>zzuoli con salci e <sup>14</sup>sù per fare cimerosa <sup>15</sup>colle forbici e la<sup>16</sup>vora le cō salci;

<sup>17</sup>Sia da l'u<sup>18</sup>no all' altro <sup>19</sup>cerchio uno <sup>20</sup>1/2 braccio e 'l gi<sup>21</sup>nepro si de' <sup>22</sup>regiere col<sup>23</sup>le cime in giv <sup>24</sup>cōnciādo <sup>25</sup>di sotto;

<sup>26</sup>A questa colonna si lega <sup>27</sup>d'intorno 4 pertiche, dintor<sup>28</sup>no alle quali s'inchioda <sup>29</sup>vinchi grossi uno dito e poi <sup>30</sup>si fa da pié e vassi in alto legā<sup>31</sup>do mazzuoli di cime di <sup>32</sup>ginepro colle cime j ba<sup>33</sup>sso cioè sotto sopra.

Decorations for feasts.

## 762.

## THE WAY TO CONSTRUCT A FRAME-WORK FOR DECORATING BUILDINGS.

The way in which the poles ought to be placed for tying bunches of juniper on to them. These poles must lie close to the framework of the vaulting and tie the bunches on with osier withes, so as to clip them even afterwards with shears.

Let the distance from one circle to another be half a braccia; and the juniper [sprigs] must lie top downwards, beginning from below.

Round this column tie four poles to which willows about as thick as a finger must be nailed and then begin from the bottom and work upwards with bunches of juniper sprigs, the tops downwards, that is upside down.

Br. M. 192 a]

## 763.

Sia lasciata cadere l'acqua <sup>2</sup>in tutto il cerchio di  $\alpha \cdot b$ .

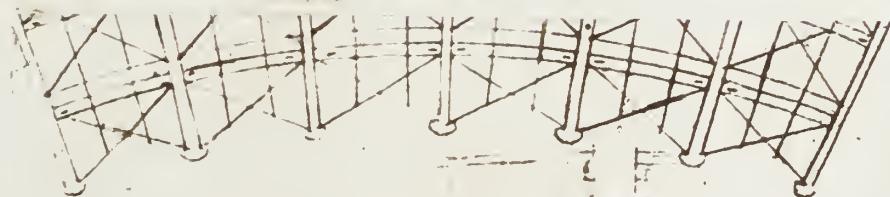

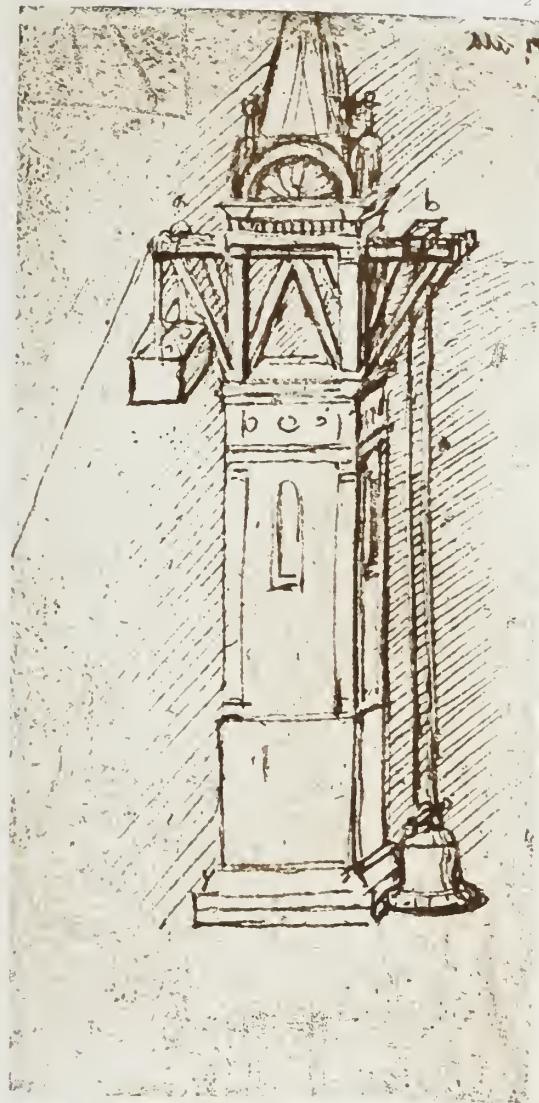

The water should be allowed to fall from the whole circle  $\alpha \cdot b$ .

763. Other drawings of fountains are given on Pl. CI (W.XX); the original is a pen and ink drawing on blue paper; on Pl. CIII (MS. B.) and Pl. LXXXII.

## VI. Studies of architectural details.

. Several of Leonardo's drawings of architectural details prove that, like other great masters of that period, he had devoted his attention to the study of the proportion of such details. As every organic being in nature has its law of construction and growth, these masters endeavoured, each in his way, to discover and prove a law of proportion in architecture. The following notes in Leonardo's manuscripts refer to this subject.

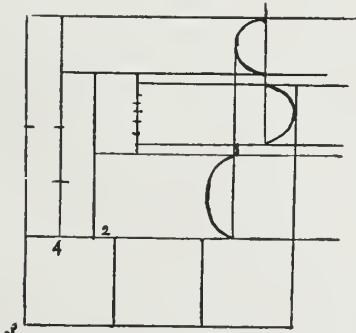

Fig. 1.

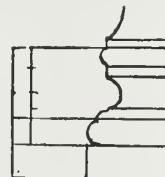

Fig. 2.

## SCALE D' URBINO.

<sup>3</sup>Il latastro deve <sup>4</sup>essere largo quā<sup>5</sup>to la grossezza di qua<sup>6</sup>lūque muro dove <sup>7</sup>tale latastro s'ap<sup>8</sup>poggia.

C. A. 318a; 961a]

I nostri antichi architetti . . . . . cominciando in prima dagli Egitti, i quali seccōdo che descrive Diodoro Siculo <sup>2</sup>furō i primi edificatori e componitori di città grandissime e di castelli ed edifizi publici e privati di forma, grandezza <sup>3</sup>e qualità per le quali i loro antecedēti riguardevoli con stupefazione e maraviglia <sup>4</sup>le eleuate e grandissime macchine parēdo loro . . . . .

<sup>5</sup>La colonna ch'la sua grossezza nel terzo . . . <sup>6</sup>quella che fusse sottile nel mezzo ronperassi nelle . . . ; <sup>7</sup>quella ch'è di pari grossezza e di pari fortezza è migliore per l'edifizio, <sup>8</sup>seconda di bontà sarà quella ch'ā la maggior grossezza dov' ella si cōgivgnie colla <sup>9</sup>basa.

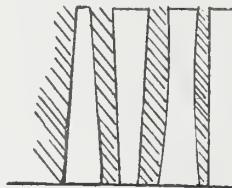

765.

## STEPS OF URBINO.

The plinth must be as broad as the thickness of the wall against which the plinth is built.

766.

The ancient architects . . . . . beginning with the Egyptians (?) who, as Diodorus Siculus writes, were the first to build and construct large cities and castles, public and private buildings of fine form, large and well proportioned . . . . .

The column, which has its thickness at the third part . . . . The one which would be thinnest in the middle, would break . . . ; the one which is of equal thickness and of equal strength, is better for the edifice. The second best as to usefulness will be the one whose greatest thickness is where it joins with the base.

764. 1. toro superio . . super. 2. nestroli. 3. torclea. 5. inferior . . iferi. 6. [plato] plinto.

765. 2. [il muro]. 3. illatastro debbe. 4. [g] largo. 5. grossezza di quā'a'. 7. lata-tro. 8. pogga.

766. 1—.. written from left to right. 1. nostri . . otalecine chomīciori . . daglitii . . sechōdo . . desscriue . . sicholo. 2. edif. ficatori e componitori di cita . . chassella. 4. grandeza . . anticidēti [gest pessani che] righuardevoli chonnistupefazione . . loro; here the text breaks off. 5. cholonna . . grosez terzo qui . ve ana aroper se (?) 6. . . mezo . . nelle 2 ipsisia.

764. No explanation can be offered of the meaning of the letter B, which precedes each name. It may be meant for *basa* (base). Perhaps it refers to some author on architecture or an architect (Bramante?) who employed the designations, thus marked for the mouldings.

3. *troclea*. Philander: *Trochlea size trochalia aut rechanum*.

6. *Laterculus* or *latastrum* is the Latin name for *Plinthus* ( $\pi\lambda\tau\theta\omega\sigma$ ), but Vitruvius adopted this Greek name and "latastro" seems to have been little

in use. It is to be found besides the text given above, as far as I am aware, only on two drawings of the Uffizi Collection, where, in one instance, it indicates the *abacus* of a Doric capital.

765. See Pl. CX No. 3. The hasty sketch on the right hand side illustrates the unsatisfactory effect produced when the plinth is narrower than the wall.

766. See Pl. CIII, No. 3, where the sketches belonging to lines 10—16 are reproduced, but reversed. The sketch of columns, here reproduced by a wood cut, stands in the original close to lines 5—8.

<sup>10</sup> Il capitello à a essere j questo formato, dividi la sua grossezza da capo j 8 d' u piè .... <sup>11</sup>e fa che sia alto  $\frac{5}{7}$ , e verrà a essere quadro, dipoi dividi l'altezza j 8, come facesti la colonna, di poi poni  $\frac{1}{8}$  l'uovo <sup>12</sup>e un altro ottavo la grossezza della tavola che sta di sopra al capitello; <sup>13</sup>i corni della tavola del capitello àno a sportare fuori dalla maggior larghezza della cappa <sup>2/7</sup>, cioè settimi del di sopra della cappa che tocca a ciascù corno di sporto  $\frac{1}{7}$ . <sup>14</sup>e la mozzatura de' corni vuole essere largha quāt' è alta, cioè  $\frac{1}{8}$ ; jl resto degli ornamenti lascio <sup>16</sup>jn libertà degli scultori; <sup>17</sup>ma per tornare alle colonne, e provare la ragione secondo la forma di lor fortezza <sup>18</sup>o debolezza, dico così, che quādo le linie si partiranno dalla sommità della <sup>19</sup>colonna e termineranno nel suo nascimēto e la lor uia e lūghezza sia di pari <sup>20</sup>distanzia o latitudine, dico che questa colonna ....

The capital must be formed in this way. Divide its thickness at the top into 8; at the foot make it  $\frac{5}{7}$ , and let it be  $\frac{5}{7}$  high and you will have a square; afterwards divide the height into 8 parts as you did for the column, and then take  $\frac{1}{8}$  for the echinus and another eighth for the thickness of the abacus on the top of the capital. The horns of the abacus of the capital have to project beyond the greatest width of the bell  $\frac{2}{7}$ , i.e. sevenths of the top of the bell, so  $\frac{1}{7}$  falls to the projection of each horn. The truncated part of the horns must be as broad as it is high. I leave the rest, that is the ornaments, to the taste of the sculptors. But to return to the columns and in order to prove the reason of their strength or weakness according to their shape, I say that when the lines starting from the summit of the column and ending at its base and their direction and length ..., their distance apart or width may be equal; I say that this column ....

<sup>768.</sup> 1-8 R. 6. labaco he. 7. hovo. 8. fesaiolo.

<sup>767.</sup> Leonardo wrote these lines on the margin of a page of the Trattato di Francesco di Giorgio, where there are several drawings of columns, as well as a head drawn in profile inside an outline sketch of a capital.

<sup>768.</sup> See Pl. LXXXV, No. 16. In the original the drawing and writing are both in red chalk.

*Pl. LXXXV No. 6 (MS. Ash. II 6<sup>b</sup>) contains a small sketch of a capital with the following note, written in three lines: I chorni del capitolo deono essere la quarta parte d'uno quadro (The horns of a capital must measure the fourth part of a square).*

*MS. S. K. M. III 72<sup>b</sup> contains two sketches of ornamentations of windows.*

*In MS. C. A. 308<sup>a</sup>; 938<sup>a</sup> (see Pl. LXXXII No. 1) there are several sketches of columns. One of the two columns on the right is similar to those employed by Bramante at the Canonica di S. Ambrogio. The same columns appear in the sketch underneath the plan of a castle. There they appear coupled, and in two stories one above the other. The archivolts which seem to spring out of the columns, are shaped like twisted cords, meant perhaps to be twisted branches. The walls between the columns seem to be formed out of blocks of wood, the pedestals are ornamented with a reticulated pattern. From all this we may suppose that Leonardo here had in mind either some festive decoration, or perhaps a pavilion for some hunting place or park. The sketch of columns marked "35" gives an example of columns shaped like candelabra, a form often employed at that time, particularly in Milan, and the surrounding districts for instance in the Cortile di Casa Castiglione now Silvestre, in the cathedral of Como, at Porta della Rana &c.*

G. 52a]

DELLI ARCHITRAVI DI UNO <sup>2</sup>E DI PIÙ  
PEZZI.

<sup>3</sup>L'architrave di più pezzi è più potete che quel d'ū <sup>4</sup>sol pezzo, essendo essi pezzi colle lor lunghezze situati <sup>5</sup>per inverso il cetro del mōdo; pruovasi perchè <sup>6</sup>le pietre ànno il neruo overo tiglio gienerato per il tra<sup>7</sup>verso, cioè per il uerso dell' orizzonti opposti d'un mede<sup>8</sup>simo emisperio, e questo è contrario al tiglio delle <sup>9</sup>piate le quali ànno . . .

769.

CONCERNING ARCHITRAVES OF ONE OR SEVERAL  
PIECES.

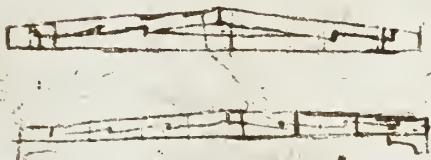

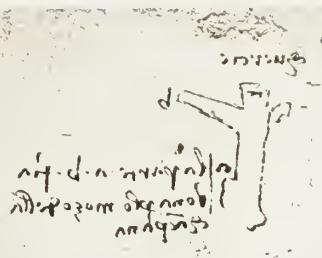

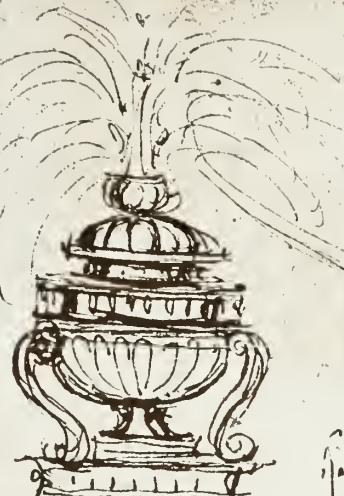

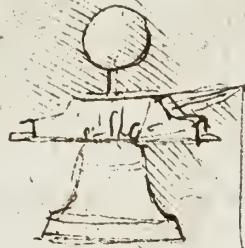

An architrave of several pieces is stronger than that of one single piece, if those pieces are placed with their length in the direction of the centre of the world. This is proved because stones have their grain or fibre generated in the contrary direction *i.e.* in the direction of the opposite horizons of the hemisphere, and this is contrary to fibres of the plants which have . . .

### XIII.

#### *Theoretical writings on Architecture.*

Leonardo's original writings on the theory of Architecture have come down to us only in a fragmentary state; still, there seems to be no doubt that he himself did not complete them. It would seem that Leonardo entertained the idea of writing a large and connected book on Architecture; and it is quite evident that the materials we possess, which can be proved to have been written at different periods, were noted down with a more or less definite aim and purpose. They might all be collected under the one title: "Studies on the Strength of Materials". Among them the investigations on the subject of fissures in walls are particularly thorough, and very fully reported; these passages are also especially interesting, because Leonardo was certainly the first writer on architecture who ever treated the subject at all. Here, as in all other cases Leonardo carefully avoids all abstract argument. His data are not derived from the principles of algebra, but from the laws of mechanics, and his method throughout is strictly experimental.

Though the conclusions drawn from his investigations may not have that precision which we are accustomed to find in Leonardo's scientific labours, their interest is not lessened. They prove at any rate his deep sagacity and wonderfully clear mind. No one perhaps, who has studied these questions since Leonardo, has combined with a scientific mind anything like the artistic delicacy of perception which gives interest and lucidity to his observations.

I do not assert that the arrangement here adopted for the passages in question is that originally intended by Leonardo; but their distribution into five groups was suggested by the titles, or headings, which Leonardo himself prefixed to most of these notes. Some of the longer sections perhaps should not, to be in strict agreement with this divi-

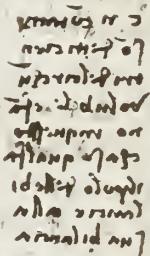

sion, have been reproduced in their entirety in the place where they occur. But the comparatively small amount of the materials we possess will render them, even so, sufficiently intelligible to the reader; it did not therefore seem necessary or desirable to subdivide the passages merely for the sake of strict classification.

The small number of chapters given under the fifth class, treating on the centre of gravity in roof-beams, bears no proportion to the number of drawings and studies which refer to the same subject. Only a small selection of these are reproduced in this work since the majority have no explanatory text.

• *Deinde sicut in unius eiusdem operis libro*

## I.

## ON FISSURES IN WALLS.

Br. M. 157a]

770.

Fa prima il trattato delle cause gieneratrici del' le rotture de' muri, e poi il trattato de' rimedi separato.

<sup>3</sup> Li fessi parallelli sono vniversalmente gienerati <sup>4</sup>in quelli edifiti che si edificano in lochi montuosi, li <sup>5</sup>quali sien cōposti di pietre faldate con obliquo <sup>6</sup>faldamēto, e perchè in tale obbliguità spesso penetra <sup>7</sup>acqua e altra vmidità portatrice di cierta terra <sup>8</sup>vntuosa e sdrucciolante ; e perchè tali falde nō sono <sup>9</sup>continuate insino al fondo delle valli, <sup>10</sup>tali pietre si muovono per la loro obli<sup>11</sup>quità e mai termiñao il moto insin <sup>12</sup>che discendono al fondo della valle, <sup>13</sup>portando con seco a vso di barca <sup>14</sup>quella parte dello edifitio che per lo<sup>15</sup>ro si separa dal suddetto rimanēte;

<sup>16</sup> Il rimedio di questo è il fondare spes-  
<sup>17</sup>si pilastri sotto il muro che si move,  
<sup>18</sup> e con archi dall'uno all'altro e be<sup>19</sup>ne abbarbicati, e questi tali <sup>20</sup>pilastri sieno fundati e fermi <sup>22</sup>nelle falde le quali non sieno rotte;

<sup>23</sup> Per trovare la parte stabile delle sopra dette falde è neciessario fare vn <sup>24</sup>pozzo sotto il piè del muro cō grā profondità infra esse falde <sup>25</sup>e di tal pozzo pulirne cō piana superficie la larghezza d'un palmo

First write the treatise on the causes of the giving way of walls and then, separately, treat of the remedies.

Parallel fissures constantly occur in buildings which are erected on a hill side, when the hill is composed of stratified rocks with an oblique stratification, because water and other moisture often penetrates these oblique seams carrying in greasy and slippery soil; and as the strata are not continuous down to the bottom of the valley, the rocks slide in the direction of the slope, and the motion does not cease till they have reached the bottom of the valley, carrying with them, as though in a boat, that portion of the building which is separated by them from the rest. The remedy for this is always to build thick piers under the wall which is slipping, with arches from one to another, and with a good scarp and let the piers have a firm foundation in the strata so that they may not break away from them.

In order to find the solid part of these strata, it is necessary to make a shaft at the foot of the wall of great depth through the strata; and in this shaft, on the side from which the hill slopes, smooth and flatten a

[I] Quella . . nō [si move] "disciēde". 28. bechatello copritorio dello. 29. delei discesa. 31. locho sō chavsa. 32. largha. 33. chella. 34. alla chausa. 35. dichulare.

771. Lines 1—5 refer to Pl. CV, No. 2.

Line 9 alle due anteciedēte, see on the same page.  
 Lines 16—18. The translation of this is doubt-

space one palm wide from the top to the bottom; and after some time this smooth portion made on the side of the shaft, will show plainly which part of the hill is moving.

771.

The cracks in walls will never be parallel unless the part of the wall that separates from the remainder does not slip down.

WHAT IS THE LAW BY WHICH BUILDINGS HAVE STABILITY.

The stability of buildings is the result of the contrary law to the two former cases. That is to say that the walls must be all built up equally, and by degrees, to equal heights all round the building, and the whole thickness at once, whatever kind of walls they may be. And although a thin wall dries more quickly than a thick one it will not necessarily give way under the added weight day by day and thus, [16] although a thin wall dries more quickly than a thick one, it will not give way under the weight which the latter may acquire from day to day. Because if double the amount of it dries in one day, one of double the thickness will dry in two days or thereabouts; thus the small addition of weight will be balanced by the smaller difference of time [18].

The adversary says that *a* which projects, slips down.

And here the adversary says that *r* slips and not *e*.

HOW TO PROGNOSTICATE THE CAUSES OF CRACKS IN ANY SORT OF WALL.

The part of the wall which does not slip is that in which the obliquity projects and overhangs the portion which has parted from it and slipped down.

ON THE SITUATION OF FOUNDATIONS AND IN WHAT PLACES THEY ARE A CAUSE OF RUIN.

When the crevice in the wall is wider at the top than at the bottom, it is a manifest sign, that the cause of the fissure in the wall is remote from the perpendicular line through the crevice.

ful, and the meaning in any case very obscure.

Lines 19—23 are on the right hand margin close to the two sketches on Pl. CII, No. 3.

Br. M. 138a]

DELL'E FESSURE DE' MURI, LE QUALI  
SÖ<sup>2</sup> LARGHE DA PIÈ E STRETTE DA CA<sup>3</sup>PO E  
LOR CAUSA.

<sup>4</sup> Quel muro senpre si fende che <sup>5</sup> non si secca vniformemēte <sup>6</sup> con equal tēpo;

<sup>7</sup> E quel muro d'uniforme gros<sup>8</sup>sezza nō si secca con equal <sup>9</sup>tēpo, il quale non è in cōtatto<sup>10</sup>to d'equal mezzo; come se <sup>11</sup>vna parte d'un muro fusse edi<sup>12</sup>ficata in cōtatto d'ū monte <sup>13</sup>vmido e l' rimanente restasse <sup>14</sup>in contatto dell'aria, che allo<sup>15</sup>ra il rimanēte si ristrigne per <sup>16</sup>ciascun verso e l'umido si man<sup>17</sup>tiene nella sua prima grādezza, <sup>18</sup>e allora quel che s'asciuga <sup>19</sup>nell'aria, restrignie e diminui<sup>20</sup>scesi, e quel che è inumidito nō <sup>21</sup>si asciuga e volentieri si rō<sup>22</sup>pe al secco dall'umido perchè es<sup>23</sup>so vmido non à tenacità da <sup>24</sup>seguitare il moto di quel che al cō<sup>25</sup>tinuo si secca.

DELLI FESSI ARCATI LARGHI DI SOPRA  
27 E STRETTI DI SOTTO.

<sup>28</sup> Quelli fessi arcati larghi di sopra <sup>29</sup>e stretti di sotto nascono nelle <sup>30</sup>porte rimurate che cala più ne<sup>31</sup>l'altezza che nella larghezza loro <sup>32</sup>per tanto quāto l'altezza è maggiore <sup>33</sup>che nella larghezza e per quāto le com<sup>34</sup>mesure della calcina son piv numerosi <sup>35</sup>in nell'altezza che nella larghezza.

<sup>36</sup> Il fesso diminuisce <sup>37</sup>tanto meno in *r o* <sup>38</sup>che in *m n*, quāto <sup>39</sup>infra *r o* è mē ma<sup>40</sup>teria che in *n m*.

<sup>41</sup> Ogni fessura fatta <sup>42</sup>ī loco cōcavo è larga <sup>43</sup>di sotto, e stretta di sopra, <sup>44</sup>e questo nascie, come <sup>45</sup>mostra *b c d* da lato figu<sup>46</sup>rato.

772.

OF CRACKS IN WALLS, WHICH ARE WIDE AT THE BOTTOM AND NARROW AT THE TOP AND OF THEIR CAUSES.

That wall which does not dry uniformly in an equal time, always cracks.

A wall though of equal thickness will not dry with equal quickness if it is not everywhere in contact with the same medium. Thus, if one side of a wall were in contact with a damp slope and the other were in contact with the air, then this latter side would remain of the same size as before; that side which dries in the air will shrink or diminish and the side which is kept damp will not dry. And the dry portion will break away readily from the damp portion because the damp part not shrinking in the same proportion does not cohere and follow the movement of the part which dries continuously.

OF ARCHED CRACKS, WIDE AT THE TOP, AND NARROW BELOW.

Arched cracks, wide at the top and narrow below are found in walled-up doors, which shrink more in their height than in their breadth, and in proportion as their height is greater than their width, and as the joints of the mortar are more numerous in the height than in the width.

The crack diminishes less in *r o* than in *m n*, in proportion as there is less material between *r* and *o* than between *n* and *m*.

Any crack made in a concave wall is wide below and narrow at the top; and this originates, as is here shown at *b c d*, in the side figure.

1. That which gets wet increases in proportion to the moisture it imbibes.

2. And a wet object shrinks, while drying, in proportion to the amount of moisture which evaporates from it.

772. The text of this passage is reproduced in facsimile on Pl. CVI to the left. L. 36—40 are written inside the sketch No. 2. L. 41—46 are partly written over the sketch No. 3 to which they refer.

OF THE CAUSES OF FISSURES IN [THE WALLS  
OF] PUBLIC AND PRIVATE BUILDINGS.

The walls give way in cracks, some of which are more or less vertical and others are oblique. The cracks which are in a vertical direction are caused by the joining of new walls, with old walls, whether straight or with indentations fitting on to those of the old wall; for, as these indentations cannot bear the too great weight of the wall added on to them, it is inevitable that they should break, and give way to the settling of the new wall, which will shrink one braccia in every ten, more or less, according to the greater or smaller quantity of mortar used between the stones of the masonry, and whether this mortar is more or less liquid. And observe, that the walls should always be built first and then faced with the stones intended to face them. For, if you do not proceed thus, since the wall settles more than the stone facing, the projections left on the sides of the wall must inevitably give way; because the stones used for facing the wall being larger than those over which they are laid, they will necessarily have less mortar laid between the joints, and consequently they settle less; and this cannot happen if the facing is added after the wall is dry.

a b the new wall, c the old wall, which has already settled; and the part a b settles afterwards, although a, being founded on c, the old wall, cannot possibly break, having a stable foundation on the old wall. But only the remainder b of the new wall will break away, because it is built from top to bottom of the building; and the remainder of the new wall will overhang the gap above the wall that has sunk.

DELLE PIETRE CHE SI DIS<sup>2</sup>GIÙGONO DALLA LOR CALCINA.

<sup>3</sup>Le pietre d'equal numero nella loro altezza, mu<sup>4</sup>rate con equal quātitā di calcina, fāno equal <sup>5</sup>calo nella partita dell'umido che mollifi<sup>6</sup>cò essa calcina.

<sup>7</sup>Per lo passato si prvova che la poca quātitā <sup>8</sup>del muro nuovo interposta infra *A*. *n* farà po<sup>9</sup>co calo rispetto alla quātitā del medesimo mu<sup>10</sup>ro che s'interpone infra *c* *d*, e tal fia la pro<sup>11</sup>portione che ànno infra loro le raretā delle <sup>12</sup>dette calcine qual' è la proportiōe dellí <sup>13</sup>nvmeri over delle quātitā delle calcine interpo<sup>14</sup>ste nelle cōmesure delle pietre murate so<sup>15</sup>pra le varie altezze dellí muri vecchi.

OF STONES WHICH DISJOIN THEMSELVES FROM THEIR MORTAR.

Stones laid in regular courses from bottom to top and built up with an equal quantity of mortar settle equally throughout, when the moisture that made the mortar soft evaporates.

By what is said above it is proved that the small extent of the new wall between *A* and *n* will settle but little, in proportion to the extent of the same wall between *c* and *d*. The proportion will in fact be that of the thinness of the mortar in relation to the number of courses or to the quantity of mortar laid between the stones above the different levels of the old wall.

A. 53 a]

776.

Questo muro si rōperà sotto l'arco *e* *f* perchè i sette quadrelli <sup>2</sup>integri nō sono soffittiēti a sostenere il piè dell'arco sopra postoli <sup>3</sup>e rōperannosi questi *7* quadrelli nel mezzo apūto come appare in *a*. *b*; <sup>4</sup>la ragione si è che il quadrello *a* à solamēte sopra se il peso *a*. *k* se l'ultimo quadrello sotto l'arco à sopra se il peso *c*. *d*, *x*. *a*; <sup>5</sup>*c*. *d* pare che facci fare for-

This wall will break under the arch *e f*, because the seven whole square bricks are not sufficient to sustain the spring of the arch placed on them. And these seven bricks will give way in their middle exactly as appears in *a b*. The reason is, that the brick *a* has above it only the weight *a k*, whilst the last brick under the arch has above it the weight *c d x a*.

777.

#### DELLE ROTTURE DELLI NICHI.

<sup>2</sup> L'arco fatto del semicircolo, il quale fia carico nelli <sup>3</sup>due oppisiti terzi della sua curvità, rōperà in <sup>4</sup>cinque lochi della sua curvità; provasi e sieno li pesi *n m*, li quali rompono esso arco *a b f*, dico per lo <sup>6</sup>passato come *c a* stremi sono equalmēte aggravati dal peso *n*, <sup>7</sup>seguita per la <sup>5</sup>a che l'arco ronperà nella parte più remota dalle <sup>8</sup>due potenie che lo premono, il quale è il mezzo *e*, e altre<sup>9</sup>tanto intēdo aver detto dell'arco opposto *d g b*; adū<sup>10</sup>que *n m* pesi vēgono a discēdere, e discēder nō posso<sup>11</sup>no per la <sup>7</sup>a che non si faccī più vicini, e avicinar nō si pos<sup>12</sup>sono, se l'arco che infra lor s'interpone non avicini<sup>13</sup>li sua <sup>13</sup>stremi, li quali nō si possono accostare sanza rottura del <sup>14</sup>suo mezzo; adūque l'arco si ronperà in <sup>2</sup>lochi come fu primo <sup>15</sup>posto ecc.

<sup>16</sup> Domāda del peso dato in *a*, che parte ne risponde *i n*. <sup>17</sup> linia, e cō che peso s'ā a vinciere il peso posto in *f*.

#### ON FISSURES IN NICHES.

An arch constructed on a semicircle and bearing weights on the two opposite thirds of its curve will give way at five points of the curve. To prove this let the weights be at *n m* which will break the arch *a*, *b*, *f*. I say that, by the foregoing, as the extremities *c* and *a* are equally pressed upon by the thrust *n*, it follows, by the 5<sup>th</sup>, that the arch will give way at the point which is furthest from the two forces acting on them and that is the middle *e*. The same is to be understood of the opposite curve, *d g b*; hence the weights *n m* must sink, but they cannot sink by the 7<sup>th</sup>, without coming closer together, and they cannot come together unless the extremities of the arch between them come closer, and if these draw together the crown of the arch must break; and thus the arch will give way in two places as was at first said &c.

I ask, given a weight at *a* what counteracts it in the direction *n f* and by what weight must the weight at *f* be counteracted.

DELLA DIMINUTIONE DE' CORPI VMIDI<sup>2</sup> DI  
GROSSEZZA O LARGHEZZA DIFFORME.

<sup>3</sup> La finestra *a* è causa della rottura del *b* e questa tal rotta è aumentata dal peso *n m*, il quale più si ficca ovvero penetra intra la terza che riceve il suo fondamento, che nō fa la levità del *b*, e ancora il fô<sup>6</sup>damêto vechio che sta sotto *b* à fatto il calo, il che fatto non aveâ li pi<sup>7</sup>lastri *n m*. e la parte *b* non disciède perpendiculare, anzi si gitta info<sup>8</sup>ri per obliquo e non si può per l'avversario gittare in dêtro, perchè tal parte disunita dal tutto è più larga di fori che di dentro e li labri del rimanente <sup>10</sup>e della medesima figura, e se tal parte disunita avesse a êtrare in dentro, <sup>11</sup>il maggiore entrebbe nel minore, il che sarebbe impossibile; adunque <sup>12</sup>è cõcluso che per necessità la parte di tale emiciclo si disunisce dal tutto col <sup>13</sup>gittarsi colla parte inferiore infori e non indêtro come vole <sup>14</sup>l'auersario ecc.

<sup>15</sup> Quando le tribune intere o mezze <sup>16</sup>sarà di sopra vinte da superchio peso, al<sup>17</sup>lora le sue volte si aprirâno <sup>18</sup>cô apertura diminuitiva <sup>19</sup>dalla parte di sopra e larga di sot<sup>20</sup>to e stretta dalla parte di dentro e <sup>21</sup>larga di fuori, a similitudine della <sup>22</sup>scorza del pomo ovvero molaracia <sup>23</sup>divisa in molte parti per la sua lugheza<sup>24</sup>za, chè quâto ella sarà premuta dal<sup>25</sup>le opposite parti della sua lughezza, <sup>26</sup>quella parte delle giûture più si a<sup>27</sup>prirà, che fia più distâta alla causa <sup>28</sup>che la prieme, e per questo mai si <sup>29</sup>debbono caricare li archi delle volte <sup>30</sup>di qualche emiciclo dalli archi dello <sup>31</sup>suo edifitio massimo, perchè quel che <sup>32</sup>più pesa più prieme sopra ciò che li è di<sup>33</sup>sotto, e più disciende sopra li sua fon<sup>34</sup>dameti, il che interuenire nō può <sup>35</sup>alle cose più lieui come sono li emi<sup>36</sup>cicli predetti.

778.

ON THE SHRINKING OF DAMP BODIES OF  
DIFFERENT THICKNESS AND WIDTH.

The window *a* is the cause of the crack at *b*; and this crack is increased by the pressure of *n* and *m* which sink or penetrate into the soil in which foundations are built more than the lighter portion at *b*. Besides, the old foundation under *b* has already settled, and this the piers *n* and *m* have not yet done. Hence the part *b* does not settle down perpendicularly; on the contrary, it is thrown outwards obliquely, and it cannot on the contrary be thrown inwards, because a portion like this, separated from the main wall, is larger outside than inside and the main wall, where it is broken, is of the same shape and is also larger outside than inside; therefore, if this separate portion were to fall inwards the larger would have to pass through the smaller—which is impossible. Hence it is evident that the portion of the semicircular wall when disunited from the main wall will be thrust outwards, and not inwards as the adversary says.

When a dome or a half-dome is crushed from above by an excess of weight the vault will give way, forming a crack which diminishes towards the top and is wide below, narrow on the inner side and wide outside; as is the case with the outer husk of a pomegranate, divided into many parts lengthwise; for the more it is pressed in the direction of its length, that part of the joints will open most, which is most distant from the cause of the pressure; and for that reason the arches of the vaults of any apse should never be more loaded than the arches of the principal building. Because that which weighs most, presses most on the parts below, and they sink into the foundations; but this cannot happen to lighter structures like the said apses.

<sup>37</sup> Qual di questi due cubi dimis<sup>38</sup>uirà più vuniformemēte, o <sup>39</sup>il cvbo *A* posato sopra il pavimēto, o'l cubo *b* sospeso <sup>41</sup>infra l'aria, essēdo l'uno <sup>42</sup>e l'altro cubo equali in peso <sup>43</sup>e in quantità e di terra mista <sup>44</sup>con equale vmidità? —

<sup>45</sup> Quel cubo che si posa sopra <sup>46</sup>il pavimēto più diminui<sup>47</sup>scie della sua altezza che per la <sup>48</sup>sua larghezza, il che <sup>49</sup>far nō può il cubo ch'è di <sup>50</sup>sopra e sospeso infra l'aria; <sup>51</sup>pruovasi così; il cubo pos<sup>52</sup>sato sopra questa medesima <sup>53</sup>sta meglio qui di sotto.

<sup>54</sup> Il fine delli dua cilindri di <sup>55</sup>terra fresca cioè *a* *b* sa<sup>56</sup>rā le figure piramidali di <sup>57</sup>sotto *c d* provasi cos<sup>58</sup>si: il cilindro *a*, posato <sup>59</sup>sopra il suo pavimēto per esse<sup>60</sup>re lui di terra assai mista <sup>61</sup>coll'umido, va calādo me<sup>62</sup>diantre il suo peso che da di se <sup>63</sup>alla sua basa, e tāto più ca<sup>64</sup>lerà e ingrosserà, quāto e'sa<sup>65</sup>rà colle sua parti più presso <sup>66</sup>alla sua basa, perchè lì si cari<sup>67</sup>ca il suo tutto ecc; E si<sup>68</sup>mile farà il peso *b*, il quale pi<sup>69</sup>ù s'astēderà, quāto elli à maggi<sup>70</sup>or peso sotto se, la qual maggiorità <sup>71</sup>è ne' cōfini del suo sostētaculo.

Which of these two cubes will shrink the more uniformly: the cube *A* resting on the pavement, or the cube *b* suspended in the air, when both cubes are equal in weight and bulk, and of clay mixed with equal quantities of water?

The cube placed on the pavement diminishes more in height than in breadth, which the cube above, hanging in the air, cannot do. Thus it is proved. The cube shown above is better shown here below.

The final result of the two cylinders of damp clay that is *a* and *b* will be the pyramidal figures below *c* and *d*. This is proved thus: The cylinder *a* resting on block of stone being made of clay mixed with a great deal of water will sink by its weight, which presses on its base, and in proportion as it settles and spreads all the parts will be somewhat nearer to the base because that is charged with the whole weight, &c.; and the case will be the same with the weight of *b* which will stretch lengthwise in proportion as the weight at the bottom is increased and the greatest tension will be the neighbourhood of the weight which is suspended by it.

### III.

## ON THE NATURE OF THE ARCH.

A. 50a]

779.

### CHE COSA È ARCO.

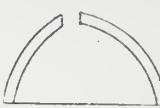

<sup>2</sup> Arco non è altro che una fortezza cavata da due debolezze, iperò chè l'arco negli edifiti è cōposto di 2 quarti di circulo, i quali <sup>4</sup> quarti circuli, ciascuno debolissimo per se, desiderā cadere, e opponēsdi alla ruina l'uno dell'altro de' due debolezze, si cōvertono in vni<sup>6</sup>ca fortezza.

The arch is nothing else than a force originated by two weaknesses, for the arch in buildings is composed of two segments of a circle, each of which being very weak in itself tends to fall; but as each opposes this tendency in the other, the two weaknesses combine to form one strength.

### DELLA QUALITÀ DEL PESO DELL'ARCHI.

<sup>8</sup>Poichè l'arco fia cōposto, quello rimane in equilibrio, iperò chè tāto spīgie l'uno l'altro quanto l'altro l'uno, e se pesa più l'uno <sup>10</sup>quarto circulo che l'altro, quivi fia leuata e negata la permanēza, <sup>11</sup>imperochè 'l maggiore vīcerà il minore peso.

### OF THE KIND OF PRESSURE IN ARCHES.

As the arch is a composite force it remains in equilibrium because the thrust is equal from both sides; and if one of the segments weighs more than the other the stability is lost, because the greater pressure will outweigh the lesser.

### DEL CARICO DATO AGLI ARCHI.

<sup>13</sup>Dopo il peso equale de' quarti circuli è necessario dare loro equale <sup>14</sup>peso di sopra, altremēti si correrebbe nel sopra detto errore.

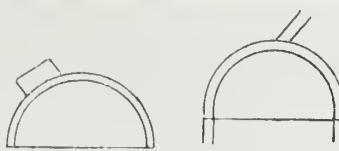

### OF DISTRIBUTING THE PRESSURE ABOVE AN ARCH.

Next to giving the segments of the circle equal weight it is necessary to load them equally, or you will fall into the same defect as before.

## DELLA POTĒTIA DELL'ARCO NELL'ARCHITETTURA.

<sup>2</sup> La permanēza dell'arco fabbricato dallo architetto con siste nella corda e nelle spalle sue.

## DELLA SITUATIONE DELLA CORDA NEL SOPRA DETTO ARCO.

<sup>5</sup> La situatione della corda à equale necessità nel principio dell'archo, e nel fine della rectitudine del pilastro <sup>7</sup> dove si posa; pruovasi per la <sup>2<sup>a</sup></sup> delli sostētaculi che dicie: <sup>8</sup> Quella parte del sostentaculo manco resiste che è più remota dal fer<sup>m</sup>amēto del suo tutto; adunque essendo la <sup>1</sup> somitā del pilastro vltima remotione d.l suo fermamēto, e l si<sup>11</sup>mile accadēdo nelli oppositi stremi dell'arco, che sono vltima distantia dal mezzo, suo vero fermamēto, noi abbiā con<sup>13</sup>cluso, che tal corda *a b* di neciessità richiede la situatione dell'i <sup>14</sup>sua oppositi stremi infra li 4 oppositi stremi predetti;

<sup>15</sup> Dicie l'auersario che tale arco voile essere più che mezzo <sup>16</sup>tondo, e allora non avrà bisognio di corda perchè tali stremi <sup>17</sup>nō spignerāno infuori, ma indentro, come si dimostra nello eccieso *a c b d*; Qui si risponde, tale <sup>19</sup>inventione essere trista per 5 cause, e la prima è in quanto <sup>20</sup>alla fortezza, perchè è provato jl paralello cir<sup>21</sup>culare, essendo cōposto di due semicirculi, sol rōpersi dove <sup>22</sup>tali semicirculi insieme si congiugono, come mo<sup>23</sup>stra la figura *n m*; oltre a di questo seguita, ch'egli è mag<sup>24</sup>giore spatio infra li stremi del semicirculo che infra le pa<sup>25</sup>rieti dell'i muri; terza è che l peso posto per cōtro alla fortezza <sup>26</sup>dell'arco diminuiscie tanto di peso, quāto le poste dell'arco <sup>27</sup>sono più larghe che detto spatio interposto infra li pilastri, 4<sup>a</sup> è <sup>28</sup>che li pilastri indeboliscono per tāto quāto la parte loro

785.

## ON THE STRENGTH OF THE ARCH IN ARCHITECTURE.

The stability of the arch built by an architect resides in the tie and in the flanks.

## ON THE POSITION OF THE TIE IN THE ABOVE NAMED ARCH.

The position of the tie is of the same importance at the beginning of the arch and at the top of the perpendicular pier on which it rests. This is proved by the <sup>2<sup>nd</sup></sup> "of supports" which says: that part of a support has least resistance which is farthest from its solid attachment; hence, as the top of the pier is farthest from the middle of its true foundation and the same being the case at the opposite extremities of the arch which are the points farthest from the middle, which is really its [upper] attachment, we have concluded that the tie *a b* requires to be in such a position as that its opposite ends are between the four above-mentioned extremes.

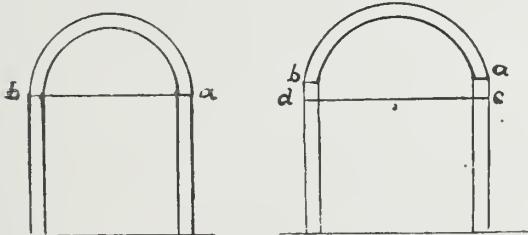

The adversary says that this arch must be more than half a circle, and that then it will not need a tie, because then the ends will not thrust outwards but inwards, as is seen in the excess at *a c*, *b d*. To this it must be answered that this would be a very poor device, for three reasons. The first refers to the strength of the arch, since it is proved that the circular parallel being composed of two semicircles will only break where these semicircles cross each other, as is seen in the figure *n m*; besides this it follows that there is a wider space between the extremes of the semicircle than between the plane of the walls; the third reason is that the weight placed to counterbalance the strength of the arch diminishes in proportion as the piers of the arch are wider than the space between the piers. Fourthly in proportion as the parts at *c a b d* turn outwards, the piers are weaker to support the arch above them. The 5<sup>th</sup> is that all the material and weight of the

arch which are in excess of the semicircle are useless and indeed mischievous; and here it is to be noted that the weight placed above the arch will be more likely to break the arch at *a b*, where the curve of the excess begins that is added to the semicircle, than if the pier were straight up to its junction with the semicircle [spring of the arch].

AN ARCH LOADED OVER THE CROWN WILL GIVE WAY AT THE LEFT HAND AND RIGHT HAND QUARTERS.

This is proved by the *7<sup>th</sup>* of this which says: The opposite ends of the support are equally pressed upon by the weight suspended to them; hence the weight shown at *f* is felt at *b c*, that is half at each extremity; and by the third which says: in a support of equal strength [throughout] that portion will give way soonest which is farthest from its attachment; whence it follows that *d* being equally distant from *f*, *e* . . . .

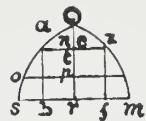

If the centering of the arch does not settle as the arch settles, the mortar, as it dries, will shrink and detach itself from the bricks between which it was laid to keep them together; and as it thus leaves them disjoined the vault will remain loosely built, and the rains will soon destroy it.

786.

ON THE STRENGTH AND NATURE OF ARCHES,  
AND WHERE THEY ARE STRONG OR WEAK; AND  
THE SAME AS TO COLUMNS.

That part of the arch which is nearer to the horizontal offers least resistance to the weight placed on it.

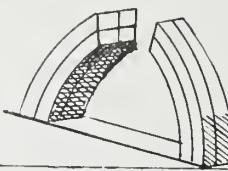

<sup>5</sup> Quando . jl triāgolo . a z n <sup>6</sup> calando caccia indiretto .

<sup>11</sup> Ciascuno <sup>1/2</sup> arco , sendo vinto · dal superchio · peso ·, si ronperà ne <sup>2/3</sup> della <sup>12</sup>sua · altezza ·, la quale · parte · risponde · per perpēculare · linia · sopra · il mezzo della sua <sup>13</sup>basa · come · appare · in · a · b; E questo accade chè'l pe o · desidera cadere <sup>14</sup>e passare pel · pūto · r; E s'egli desiderasse cōtra sua · natura cader<sup>15</sup>re dal pūto · s ·, l'arco · n · s · si rōperebbe · nel suo · mezzo · appūto <sup>16</sup>e se l'arco · n · s · fusse d'ū solo legnio, il peso posto in · n · desidereb<sup>17</sup>be cadere in · m · e ronperebbesi in mezzo <sup>1/2</sup> all'arco e · m ·; altremēti si rōperà nel terzo <sup>18</sup>di sopra nel pūto <sup>19</sup>a ·, perchè da · a · n · <sup>20</sup>è l'arco · piv pia<sup>21</sup>no, che non è da <sup>22</sup>a · o e che no<sup>23</sup>n è da o · s; <sup>24</sup>e tanto · quāto <sup>25</sup>p · t · è maggio<sup>26</sup>re che t · n · <sup>27</sup>tanto fia piv for<sup>28</sup>te · a · o · che <sup>29</sup>non è a · n ·; <sup>30</sup>e similmente <sup>31</sup>tanto fia piv <sup>32</sup>forte · s · o · che <sup>33</sup>o · a · quāto · <sup>34</sup>r · p · fia maggi<sup>35</sup>ore · che p · t.

<sup>36</sup> Quel arco · che fia · raddoppiato · nella quadratura della sua · grossezza <sup>37</sup>regierà · quattro · tanti · peso quanto · regieva · lo scēpio ·, tanto · piv · <sup>38</sup>quanto · il diamitro della · sua · grossezza · entra · mē numero · di uolte nella <sup>39</sup>sua · lunghezza, Cioè · se la · grossezza dell'arco sciēpio entra · <sup>40</sup>volte nella sua · lūghezza, la grossezza · del arco duplificato · ētrerà 5 volte <sup>41</sup>nella · sua · lūghezza ·; Adūque entrado la metà meno la grossezza de <sup>42</sup>l'arco · duplificato · nella sua · lunghezza · che nō fa quella de<sup>43</sup>l'arco · sciēpio · nella · sua ·, è ragionevol cosa che regga la metà piv <sup>44</sup>peso che nō gli toccherebbe, se fusse alla propiorezione dell'ar<sup>45</sup>co · sciēpio; Onde essendo quest'arco duplificato per 4 volte la quā<sup>46</sup>tità del arco sciēpio, parrebbe che dovesse regiere<sup>47</sup> 4 tāti piv peso, <sup>47</sup>e la sopra detta regola dimostra che ne sostiene · 8 co-tāti appūto.

When the triangle a z n, by settling, drives backwards the <sup>2/3</sup> of each <sup>1/2</sup> circle that is a s and in the same way z m, the reason is that a is perpendicularly over b and so likewise z is above f.

Either half of an arch, if overweighted, will break at <sup>2/3</sup> of its height, the point which corresponds to the perpendicular line above the middle of its bases, as is seen at a b; and this happens because the weight tends to fall past the point r.—And if, against its nature it should tend to fall towards the point s the arch n s would break precisely in its middle. If the arch n s were of a single piece of timber, if the weight placed at n should tend to fall in the line n m, the arch would break in the middle of the arch e m, otherwise it will break at one third from the top at the point a because from a to n the arch is nearer to the horizontal than from a to o and from o to s, in proportion as p t is greater than t n, a o will be stronger than a n and likewise in proportion as s o is stronger than o a, r p will be greater than p t.

The arch which is doubled to four times of its thickness will bear four times the weight that the single arch could carry, and more in proportion as the diameter of its thickness goes a smaller number of times into its length. That is to say that if the thickness of the single arch goes ten times into its length, the thickness of the doubled arch will go five times into its length. Hence as the thickness of the double arch goes only half as many times into its length as that of the single arch does, it is reasonable that it should carry half as much more weight as it would have to carry if it were in direct proportion to the single arch. Hence as this double arch has 4 times the thickness of the single arch, it would seem that it ought to bear 4 times the weight; but by the above rule it is shown that it will bear exactly 8 times as much.

QUEL PILASTRO CHE FIA CARICO DI PIV DISSEGUALE <sup>49</sup>PESO VERRÀ PIV PRESTO AL MĀCO.

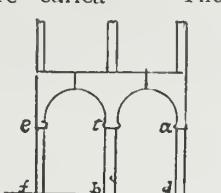

<sup>50</sup>La colonna *c b* · per l'essere carica d'equale · somma fia · piv · permanēte, <sup>51</sup>e l'altre · 2 di fori · àno bisogno di tāto peso dal loro ciētro infori <sup>52</sup>quāt'è · dal loro ciētro indētro · cioè dal ciētro della colonna insino a mezzo l'arco.

<sup>53</sup>Li archi che stano per forza di catene nō fieno permanēti.

L'ARCO · FIA DI PIV LŪGA PERPETUITÀ ·, IL  
QUALE AVRÀ BONO CONTRARIO AL SUO  
SPIGIERE.

<sup>55</sup>L'arco per se desidera cadere, e se l'arco fia 30 braccia e lo iteruallo ch'è infra i mvri <sup>56</sup>che lo sostegnono sia · 20 ·, noi sappiamo che 30 nō passerà per 20, se 20 nō si <sup>57</sup>fa ancora lui · 30 ·; onde sendo vinto l'arco dal superchio · peso · si dirizza e i mvri <sup>58</sup>male resistēti l'aprano e dāno l'entrata infra loro spatio alla ruina dell'arco; <sup>59</sup>Ma se tu nō uolessi mettere all'arco la sua corda di ferro, li debbi fare tali <sup>60</sup>spalle che facciano · resistētia al suo spingiere, la qual cosa · farai così : carica <sup>61</sup>li angoli *m n* · di pietre che le linie delle loro givnture se dirizzino al ciento <sup>62</sup>del circulo del'arco, E la ragione, che sarà l'arco permanēte, fia questa, Noi <sup>63</sup>sappiamo chiaro che chi carica · l'arco nel quarto suo · *a b* · di superchio peso che'l <sup>64</sup>muro *f g* · fia sospinto, perchè l'arco si uorrà dirizzare; E chi caricasse l'altro quarto <sup>65</sup>*b c* · ch'eli tirerebbe il mvro *f g* · indētro, se nō fusse la linia delle pietre <sup>66</sup>*x y* che fa sostegnio.

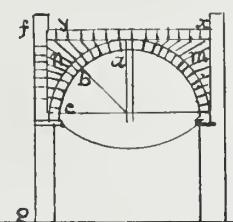

THAT PIER, WHICH IS CHARGED MOST UNEQUALLY, WILL SOONEST GIVE WAY.

The column *c b*, being charged with an equal weight, [on each side] will be most durable, and the other two outward columns require on the part outside of their centre as much pressure as there is inside of their centre, that is, from the centre of the column, towards the middle of the arch.

Arches which depend on chains for their support will not be very durable.

THAT ARCH WILL BE OF LONGER DURATION WHICH HAS A GOOD ABUTMENT OPPOSED TO ITS THRUST.

The arch itself tends to fall. If the arch be 30 braccia and the interval between the walls which carry it be 20, we know that 30 cannot pass through the 20 unless 20 becomes likewise 30. Hence the arch being crushed by the excess of weight, and the walls offering insufficient resistance, part, and afford room between them, for the fall of the arch.

But if you do not wish to strengthen the arch with an iron tie you must give it such abutments as can resist the thrust; and you can do this thus: fill up the spandrels *m n* with stones, and direct the lines of the joints between them to the centre of the circle of the arch, and the reason why this makes the arch durable is this. We know very well that if the arch is loaded with an excess of weight above its quarter as *a b*, the wall *f g* will be thrust outwards because the arch would yield in that direction; if the other quarter *b c* were loaded, the wall *f g* would be thrust inwards, if it were not for the line of stones *x y* which resists this.

## FONDAMĒTO.

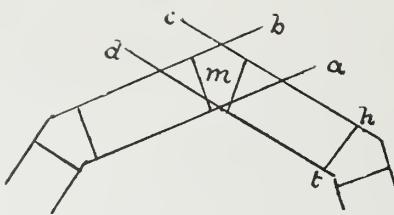

<sup>2</sup>Qui si dimostra · come li archi <sup>3</sup>fatti ne' lati dell'ottāgolo spingo<sup>4</sup>no i pilastri delli

La speriēza · che vn peso posto sopra vno arco nō si carica tutto sopra alle sua colon<sup>n</sup>e, anzi quāto è maggior peso fraposto sopra l'archi · tanto mē pesa <sup>3</sup>l'arco il peso alle colōne; la sperienza siè questa: sia messo vn omo <sup>4</sup>sopra le stadere in mezzo la trōba d'uno pozzo; fa dipoi che questo allarghi le mani <sup>5</sup>e piedi infra le parieti di detto pozzo · vedrai questo pesare alla stadere mol<sup>6</sup>to meno · da li vno peso alle spalle, uedrai per speriēza quāto maggior <sup>7</sup>peso ti darà, maggiore forza farà in aprire le braccia e ganbe, e piv pō<sup>8</sup>dare nelle parieti, e piv mācare il pōdo alle stadere.

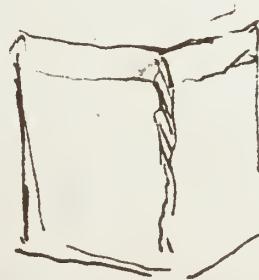

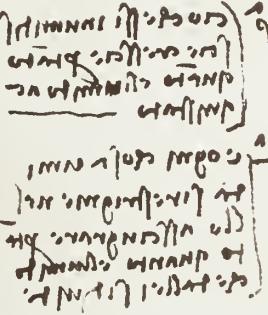

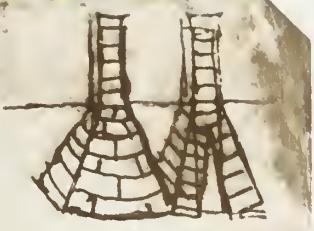

## 788.

An Experiment to show that a weight placed on an arch does not discharge itself entirely on its columns; on the contrary the greater the weight placed on the arches, the less the arch transmits the weight to the columns. The experiment is the following. Let a man be placed on a steel yard in the middle of the shaft of a well, then let him spread out his hands and feet between the walls of the well, and you will see him weigh much less on the steel yard; give him a weight on the shoulders, you will see by experiment, that the greater the weight you give him the greater effort he will make in spreading his arms and legs, and in pressing against the wall and the less weight will be thrown on the steel yard.

### ON FOUNDATIONS, THE NATURE OF THE GROUND AND SUPPORTS.

Br. M. 138a]

789.

La prima parte necissarissima è la loro permanetia.

<sup>2</sup>Delli fondamēti che ànno le mēbrificazioni componi<sup>3</sup>trici delli tépli e altri edifti publici, tal proporti<sup>4</sup>one deve essere da profondità a profondità quale <sup>5</sup>è da peso a peso che scaricare si deve sopra essi mē<sup>6</sup>bri.

<sup>7</sup>Ogni parte della pro<sup>8</sup>fondità, che à la terra <sup>9</sup>per alquāto spatio, è <sup>10</sup>fatta a suoli, e o<sup>11</sup>gni suolo è cōposto di <sup>12</sup>parti, più grave <sup>13</sup>e piv leue l'una chel'al<sup>14</sup>tra; nel profondarsi è più grave, e questo si prova, <sup>15</sup>perchè questi tali soli sō cō<sup>17</sup>posti dalle turbulentie <sup>16</sup>delle acque scaricate i <sup>18</sup>mare dal corso de' fiumi, <sup>19</sup>che in quello versano, <sup>20</sup>delle quali turbulentie <sup>21</sup>la parte più grave fu <sup>22</sup>quella che prima <sup>23</sup>si scaricò successiva<sup>24</sup>mēte, e questo fa l'ac<sup>25</sup>qua, dov' ella si ferma, le<sup>26</sup>vādo prima dove es<sup>27</sup>sa si move; E di que<sup>28</sup>sti tali soli di terra <sup>29</sup>si manifesta nelli lati <sup>30</sup>di fiumi che coi lor con<sup>31</sup>tinui corsi ànno secati <sup>32</sup>e partiti con grā pro<sup>33</sup>fondità di tagli l'ū mō<sup>34</sup>te dall'altro, doue per li <sup>35</sup>ghiajosi soli l'acque so<sup>36</sup>no scolate e per questo <sup>37</sup>la materia si è sec-

The first and most important thing is stability.

As to the foundations of the component parts of temples and other public buildings, the depths of the foundations must bear the same proportions to each other as the weight of material which is to be placed upon them.

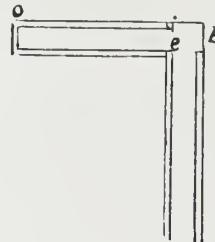

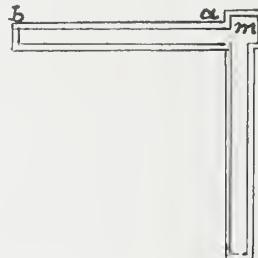

Every part of the depth of earth in a given space is composed of layers, and each layer is composed of heavier or lighter materials, the lowest being the heaviest. And this can be proved, because these layers have been formed by the sediment from water carried down to the sea, by the current of rivers which flow into it. The heaviest part of this sediment was that which was first thrown down, and so on by degrees; and this is the action of water when it becomes stagnant, having first brought down the mud whence it first flowed. And such layers of soil are seen in the banks of rivers, where their constant flow has cut through them and divided one slope from the other to a great depth; where in gravelly strata the waters have run off, the ma-

terials have, in consequence, dried and been converted into hard stone, and this happened most in what was the finest mud; whence we conclude that every portion of the surface of the earth was once at the centre of the earth, and *vice versa* &c.

790.

The heaviest part of the foundations of buildings settles most, and leaves the lighter part above it separated from it.

And the soil which is most pressed, if it be porous yields most.

You should always make the foundations project equally beyond the weight of the walls and piers, as shown at *m a b*. If you do as many do, that is to say if you make a foundation of equal width from the bottom up to the surface of the ground, and charge

791.

The window *a* is well placed under the window *c*, and the window *b* is badly placed under the pier *d*, because this latter is without support and foundation; mind therefore never to make a break under the piers between the windows.

A. 48 b]

792.

## DEL SOSTĒTACULO.

<sup>2</sup> Il pilastro moltiplicato per grossezza crescerà tanto piv che la sua debita potetia <sup>3</sup>quāto e' māca della ragionevole altezza.

## ESENPLIO.

<sup>5</sup> Se uno pilastro · debe · essere · alto · 9 · grosseze · cioè · che s'egli · sarà · grosso · uno braccio, la regola <sup>6</sup>lo pone di · 9 · braccia ·; se ne collegherai · 100 · insieme · per grossezza · fia grosso braccia 10 e alto · 9, <sup>7</sup>e se il primo pilastro regieva 1000 libbre, perchè questo secōdo non è alto se non è circa <sup>8</sup>a una grossezza, e mācadoli · 8 parti della lunghezza · e' regierà · piv otto volte, cioè ogni · pilastro collegato · li toccerà a regire piv 8 volte che dislegato, cioè <sup>10</sup>che se prima regieva dieci mila libbre ·, adesso ne sosterrà 90 mila.

## OF THE SUPPORTS.

A pillar of which the thickness is increased will gain more than its due strength, in direct proportion to what it loses in relative height.

## EXAMPLE.

If a pillar should be nine times as high as it is broad—that is to say, if it is one braccio thick, according to rule it should be nine braccia high—then, if you place 100 such pillars together in a mass this will be ten braccia broad and 9 high; and if the first pillar could carry 1000 pounds the second being only about as high as it is wide, and thus lacking 8 parts of its proper length, it, that is to say, each pillar thus united, will bear eight times more than when disconnected; that is to say, that if at first it would carry ten thousand pounds, it would now carry 90 thousand.

The word propositione written on the margin near line 19 has apparently nothing to do with this text, but M. Ravaïsson, in his edition of MS. A. has been misled by it to take j solari (line 18) for the beginning of a new paragraph.

795. 19. M. RAVAÏSSON, in his edition of MS. A gives a very different rendering of this passage translating it thus: *Les planchers qui sont soutenus par deux différentes natures de supports paraissent avec le temps faits en voûte [a choll].*

remember, that the part built into the wall should be steeped in hot pitch and filleted with oak boards likewise so steeped. Each beam must pass through its walls and be secured beyond the walls with sufficient chaining, because in consequence of earthquakes the beams are often seen to come out of the walls and bring down the walls

and floors; whilst if they are chained they will hold the walls strongly together and the walls will hold the floors. Again I remind you never to put plaster over timber. Since by expansion and shrinking of the timber produced by damp and dryness such floors often crack, and once cracked their divisions gradually produce dust and an ugly effect. Again remember not to lay a floor on beams supported on arches; for, in time the floor which is made on beams settles somewhat in the middle while that part of the floor which rests on the arches remains in its place; hence, floors laid over two kinds of supports look, in time, as if they were made in hills [19].

## *Remarks on the style of Leonardo's architecture.*

*A few remarks may here be added on the style of Leonardo's architectural studies. However incomplete, however small in scale, they allow us to establish a certain number of facts and probabilities, well worthy of consideration.*

*When Leonardo began his studies the great name of Brunellesco was still the inspiration of all Florence, and we cannot doubt that Leonardo was open to it, since we find among his sketches the plan of the church of Santo Spirito<sup>1</sup> and a lateral view of San Lorenzo (Pl. XCIV No. 1), a plan almost identical with the chapel Degli Angeli, only begun by him (Pl. XCIV, No. 3) while among Leonardo's designs for domes several clearly betray the influence of Brunellesco's Cupola and the lantern of Santa Maria del Fiore<sup>2</sup>.*

*The beginning of the second period of modern Italian architecture falls during the first twenty years of Leonardo's life. However the new impetus given by Leon Battista Alberti either was not generally understood by his contemporaries, or those who appreciated it, had no opportunity of showing that they did so. It was only when taken up by Bramante and developed by him to the highest rank of modern architecture that this new influence was generally felt. Now the peculiar feature of Leonardo's sketches is that, like the works of Bramante, they appear to be the development and continuation of Alberti's.*

<sup>1</sup> See Pl. XCIV, No. 2. Then only in course of erection after the designs of Brunellesco, though he was already dead; finished in 1481.

<sup>2</sup> A small sketch of the tower of the Palazzo della Signoria (MS. C. A. 309) proves that he also studied mediaeval monuments.

But a question here occurs which is difficult to answer. Did Leonardo, till he quitted Florence, follow the direction given by the dominant school of Brunellesco, which would then have given rise to his "First manner", or had he, even before he left Florence, felt Alberti's influence—either through his works (*Palazzo Ruccellai*, and the front of *Santa Maria Novella*) or through personal intercourse? Or was it not till he went to Milan that Alberti's work began to impress him through Bramante, who probably had known Alberti at Mantua about 1470 and who not only carried out Alberti's views and ideas, but, by his designs for St. Peter's at Rome, proved himself the greatest of modern architects. When Leonardo went to Milan Bramante had already been living there for many years. One of his earliest works in Milan was the church of *Santa Maria presso San Satiro*, *Via del Falcone*<sup>1</sup>.

Now we find among Leonardo's studies of Cupolas on Plates LXXXIV and LXXXV and in Pl. LXXX several sketches which seem to me to have been suggested by Bramante's dome of this church.

The MSS. B and Ash. II contain the plans of *S. Sepolcro*, the pavilion in the garden of the duke of Milan, and two churches, evidently inspired by the church of *San Lorenzo* at Milan.

MS. B. contains besides two notes relating to Pavia, one of them a design for the sacristy of the Cathedral at Pavia, which cannot be supposed to be dated later than 1492, and it has probably some relation to Leonardo's call to Pavia June 21, 1490<sup>2</sup>. These and other considerations justify us in concluding, that Leonardo made his studies of cupolas at Milan, probably between the years 1487 and 1492 in anticipation of the erection of one of the grandest churches of Italy, the Cathedral of Pavia. This may explain the decidedly Lombardo-Bramantesque tendency in the style of these studies, among which only a few remind us of the forms of the cupolas of *S. Maria del Fiore* and of the Baptistry of Florence. Thus, although when compared with Bramante's work, several of these sketches plainly reveal that master's influence, we find, among the sketches of domes, some, which show already Bramante's classic style, of which the *Tempietto* of *San Pietro in Montorio*, his first building executed at Rome, is the foremost example<sup>3</sup>.

On Plate LXXXIV is a sketch of the plan of a similar circular building; and the Mausoleum on Pl. XC VIII, no less than one of the pedestals for the statue of Francesco Sforza (Pl. LXV), is of the same type.

<sup>1</sup> Evidence of this I intend to give later on in a Life of Bramante, which I have in preparation.

<sup>2</sup> The sketch of the plan of Brunellesco's church of *Santo Spirito* at Florence, which occurs in the same Manuscript, may have been done from memory.

<sup>3</sup> It may be mentioned here, that in 1494 Bramante made a similar design for the lantern of the Cupola of the Church of *Santa Maria delle Grazie*.

The drawings *Pl. LXXXIV No. 2*, *Pl. LXXXVI No. 1 and 2* and the ground flour of the building in the drawing *Pl. XCI No. 2*, with the interesting decoration by gigantic statues in large niches, are also, I believe, more in the style Bramante adopted at Rome, than in the Lombard style. Are we to conclude from this that Leonardo on his part influenced Bramante in the sense of simplifying his style and rendering it more congenial to antique art? The answer to this important question seems at first difficult to give, for we are here in presence of Bramante, the greatest of modern architects, and with Leonardo, the man comparable with no other. We have no knowledge of any buildings erected by Leonardo, and unless we admit personal intercourse—which seems probable, but of which there is no proof—, it would be difficult to understand how Leonardo could have affected Bramante's style. The converse is more easily to be admitted, since Bramante, as we have proved elsewhere, drew and built simultaneously in different manners, and though in Lombardy there is no building by him in his classic style, the use of brick for building, in that part of Italy, may easily account for it.

Bramante's name is incidentally mentioned in Leonardo's manuscripts in two passages (*Nos. 1414 and 1448*). On each occasion it is only a slight passing allusion, and the nature of the context gives us no due information as to any close connection between the two artists.

It might be supposed, on the ground of Leonardo's relations with the East given in sections XVII and XXI of this volume, that some evidence of oriental influence might be detected in his architectural drawings. I do not however think that any such traces can be pointed out with certainty unless perhaps the drawing for a Mausoleum, *Pl. XCIII*.

Among several studies for the construction of cupolas above a Greek cross there are some in which the forms are decidedly monotonous. These, it is clear, were not designed as models of taste; they must be regarded as the results of certain investigations into the laws of proportion, harmony and contrast.

The designs for churches, on the plan of a Latin cross are evidently intended to depart as little as possible from the form of a Greek cross; and they also show a preference for a nave surrounded with outer porticos.

The architectural forms preferred by Leonardo are pilasters coupled (*Pl. LXXXII No. 1*) or grouped (*Pl. LXXX No. 5 and XCIV No. 4*), often combined with niches. We often meet with orders superposed, one in each story, or two small orders on one story, in combination with one great order (*Pl. XCIV No. 2*).

The drum (*tamburo*) of these cupolas is generally octagonal, as in the cathedral of Florence, and with similar round windows in its sides. In Pl. LXXXVII No. 2 it is circular like the model actually carried out by Michael Angelo at St. Peter's.

The cupola itself is either hidden under a pyramidal roof, as in the Baptistry of Florence, San Lorenzo of Milan and most of the Lombard churches (Pl. XCI No. 1 and Pl. XCII No. 1); but it more generally suggests the curve of *Sta Maria del Fiore* (Pl. LXXXVIII No. 5; Pl. XL No. 2; Pl. LXXXIX, M; Pl. XL No. 4, Pl. XCVI No. 2). In other cases (Pl. LXXX No. 4; Pl. LXXXIX; Pl. XC No. 2) it shows the sides of the octagon crowned by semicircular pediments, as in Brunellesco's lantern of the Cathedral and in the model for the Cathedral of Pavia.

Finally, in some sketches the cupola is either semicircular, or as in Pl. LXXXVII No. 2, shows the beautiful line, adopted sixty years later by Michael Angelo for the existing dome of St. Peter's.

It is worth noticing that for all these domes Leonardo is not satisfied to decorate the exterior merely with ascending ribs or mouldings, but employs also a system of horizontal parallels to complete the architectural system. Not the least interesting are the designs for the *tiburio* (cupola) of the Milan Cathedral. They show some of the forms, just mentioned, adapted to the peculiar gothic style of that monument.

The few examples of interiors of churches recall the style employed in Lombardy by Bramante, for instance in *S. Maria di Canepanova* at Pavia, or by Dolcebuono in the *Monastero Maggiore* at Milan (see Pl. CI No. 1 [C. A. 181<sup>b</sup>; 546<sup>b</sup>]; Pl. LXXXIV No. 10).

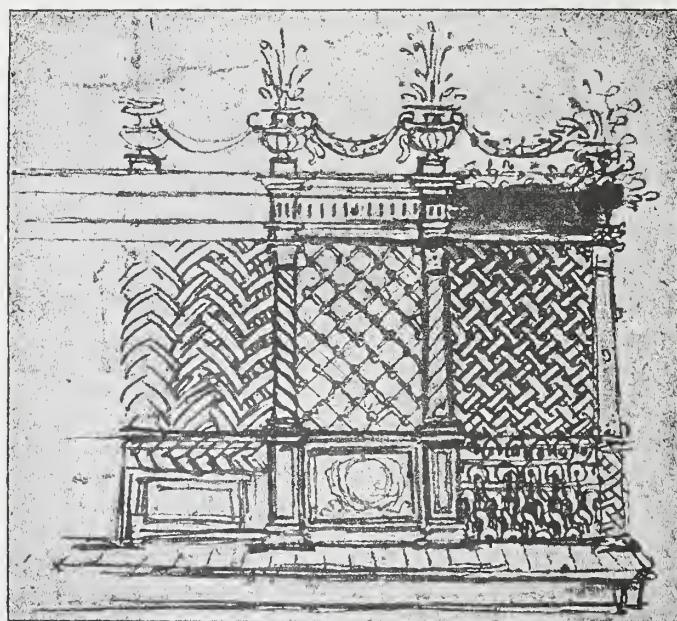

The few indications concerning palaces seem to prove that Leonardo followed Alberti's example of decorating the walls with pilasters and a flat *rustica*, either in stone or by graffitti (Pl. CII No. 1 and Pl. LXXXV No. 14).

By pointing out the analogies between Leonardo's architecture and that of other masters we in no way pretend to depreciate his individual and original inventive power. These are at all events beyond dispute. The project for the *Mausoleum* (Pl. XCIII) would alone suffice to rank him among the greatest architects who ever lived. The peculiar shape of the tower (Pl. LXXX), of the churches for preaching (Pl. XCII No. 1 and pages 56 and 57, Fig. 1—4), his curious plan for a city with high and low level streets (Pl. LXXVII and LXXVIII No. 2 and No. 3), his *Loggia* with fountains (Pl. LXXXII No. 4) reveal an originality, a power and facility of invention for almost any given problem, which are quite wonderful.

*In addition to all these qualities he probably stood alone in his day in one department of architectural study,—his investigations, namely, as to the resistance of vaults, foundations, walls and arches.*

*As an application of these studies the plan of a semicircular vault (Pl. CIII No. 2) may be mentioned here, disposed so as to produce no thrust on the columns on which it rests: volta ī botte e non ispignie ifori le colonne. Above the geometrical patterns on the same sheet, close to a circle inscribed in a square is the note: la ragiō d'una volta cioè il terzo del diamitro della sua . . . del tedesco in domo.*

There are few data by which to judge of Leonardo's style in the treatment of detail. On Pl. LXXXV No. 10 and Pl. CIII No. 3, we find some details of pillars; on Pl. CI No. 3 slender pillars designed for a fountain and on Pl. CIII No. 1 M.S. B, is a pen and ink drawing of a vase which also seems intended for a fountain. Three handles seem to have been intended to connect the upper parts with the base. There can be no doubt that Leonardo, like Bramante, but unlike Michael Angelo, brought infinite delicacy of motive and execution to bear on the details of his work.

## XIV.

### *Anatomy, Zoology and Physiology.*

Leonardo's eminent place in the history of medicine, as a pioneer in the sciences of Anatomy and Physiology, will never be appreciated till it is possible to publish the mass of manuscripts in which he largely treated of these two branches of learning. In the present work I must necessarily limit myself to giving the reader a general view of these labours, by publishing his introductory notes to the various books on anatomical subjects. I have added some extracts, and such observations as are scattered incidentally through these treatises, as serving to throw a light on Leonardo's scientific attitude, besides having an interest for a wider circle than that of specialists only.

VASARI expressly mentions Leonardo's anatomical studies, having had occasion to examine the manuscript books which refer to them. According to him Leonardo studied Anatomy in the companionship of Marc Antonio della Torre "aiutato e scambievolmente aiutando."—This learned Anatomist taught the science in the universities first of Padua and then of Pavia, and at Pavia he and Leonardo may have worked and studied together. We have no clue to any exact dates, but in the year 1506 Marc Antonio della Torre seems to have not yet left Padua. He was scarcely thirty years old when he died in 1512, and his writings on anatomy have not only never been published, but no manuscript copy of them is known to exist.

This is not the place to enlarge on the connection between Leonardo and Marc Antonio della Torre. I may however observe that I have not been able to discover in Leonardo's manuscripts on anatomy any mention of his younger contemporary. The few quotations which occur from writers on medicine—either of antiquity or of the middle ages are printed in Section XXII. Here and there in the manuscripts mention is made of an anonymous "adversary" (avversario) whose views are opposed and refuted by Leonardo, but there is no ground for supposing that Marc Antonio della Torre should have been this "adversary".

Only a very small selection from the mass of anatomical drawings left by Leonardo have been published here in facsimile, but to form any adequate idea of their scientific

merit they should be compared with the coarse and inadequate figures given in the published books of the early part of the XVI. century.

William Hunter, the great surgeon—a competent judge—who had an opportunity in the time of George III. of seeing the originals in the King's Library, has thus recorded his opinion: "I expected to see little more than such designs in Anatomy as might be useful to a painter in his own profession. But I saw, and indeed with astonishment, that Leonardo had been a general and deep student. When I consider what pains he has taken upon every part of the body, the superiority of his universal genius, his particular excellence in mechanics and hydraulics, and the attention with which such a man would examine and see objects which he has to draw, I am fully persuaded that Leonardo was the best Anatomist, at that time, in the world . . . Leonardo was certainly the first man, we know of, who introduced the practice of making anatomical drawings" (*Two introductory letters. London 1784, pages 37 and 39*).

The illustrious German Naturalist Johan Friedrich Blumenbach esteemed them no less highly; he was one of the privileged few who, after Hunter, had the chance of seeing these Manuscripts. He writes: *Der Scharfsblick dieses grossen Forschers und Darstellers der Natur hat schon auf Dinge geachtet, die noch Jahrhunderte nachher unbemerkt geblieben sind*" (see Blumenbach's medicinische Bibliothek, Vol. 3, St. 4, 1795, page 728).

These opinions were founded on the drawings alone. Up to the present day hardly anything has been made known of the text, and, for the reasons I have given, it is my intention to reproduce here no more than a selection of extracts which I have made from the originals at Windsor Castle and elsewhere. In the Bibliography of the Manuscripts, at the end of this volume a short review is given of the valuable contents of these Anatomical note books which are at present almost all in the possession of her Majesty the Queen of England. It is, I believe, possible to assign the date with approximate accuracy to almost all the fragments, and I am thus led to conclude that the greater part of Leonardo's anatomical investigations were carried out after the death of della Torre.

Merely in reading the introductory notes to his various books on Anatomy which are here printed it is impossible to resist the impression that the Master's anatomical studies bear to a very great extent the stamp of originality and independent thought.

I wish to work miracles;—it may be <sup>A general introduction</sup> that I shall possess less than other men of more peaceful lives, or than those who want to grow rich in a day. I may live for a long time in great poverty, as always happens, and to all eternity will happen, to alchemists, the would-be creators of gold and silver, and to engineers who would have dead water stir itself into life and perpetual motion, and to those supreme fools, the necromancer and the enchanter.

[23]And you, who say that it would be better to watch an anatomist at work than to see these drawings, you would be right, if it were possible to observe all the things which are demonstrated in such drawings in a single figure, in which you, with all your cleverness, will not see nor obtain knowledge of more than some few veins, to obtain a true and perfect knowledge of which I have dissected more than ten human bodies, destroying

796. 3. quieti ecq. 4. voliano a. 5. richire nūdi. 6. lungho. 9. intervera. 10. archimisti. 14. voglia. 15. cq“a” morta. 17. asse. 20. somo. 23. “e” ettu che di. 27. fusi. 31. mosstrano. 35. e non arai. 37. vene de. 43. destrugendo.

796. Lines 1—59 and 60—89 are written in two parallel columns. When we here find Leonardo putting himself in the same category as the Alchemists and Necromancers, whom he elsewhere mocks at so bitterly, it is evidently meant ironically. In the same way Leonardo, in the introduction to the

Books on Perspective sets himself with transparent satire on a level with other writers on the subject.

Line 23 and the following seem to be directed against students of painting and young artists rather than against medical men and anatomists.

struggendo ogni <sup>44</sup> altri mēbri, consu<sup>45</sup>mando con minutis<sup>46</sup>sime particule <sup>47</sup>tutta la carne che <sup>48</sup>d'intorno a esse <sup>49</sup>vene si troava, <sup>50</sup>sanza insanguin<sup>51</sup>narle, se non <sup>d'i</sup><sup>52</sup>sensibile insan<sup>53</sup>guinamēto delle vene capillari; <sup>54</sup>e vn sol corpo nō <sup>55</sup>bastava a tanto tēpo, che biso<sup>56</sup>gnava procedere di mano in mano <sup>57</sup>in tanti corpi, che si finisca la intes<sup>58</sup>ra cognitione; le qual repli<sup>59</sup>ca<sup>i</sup> 2 volte per vedere le differentie.

<sup>60</sup>E se tu avrai l'amore a tal cosa, <sup>61</sup>tu sarai forse impedito dallo <sup>62</sup>stomaco, e se questo nō ti impedi<sup>63</sup>sce, tu sarai forse impedito dal<sup>64</sup>la paura coll'abitare nelli tē<sup>65</sup>pi notturni in cōpagnia di tali <sup>66</sup>morti squadrati e scorticati e <sup>67</sup>spaventevoli a vederli; e se que<sup>68</sup>sto nō t'ipedisce, forse ti māche<sup>69</sup>rā il disegnio bono, il quale s'appa<sup>70</sup>rtiene a tal figurazione; E <sup>71</sup>se tu avrai il disegnio e' nō sarà <sup>72</sup>accōpagnato dalla prospettiva, <sup>73</sup>e se sarà accōpagnato <sup>74</sup>ti mācherà l'ordine <sup>75</sup>delle dimostratiō <sup>76</sup>geometriche e l'ordine <sup>77</sup>delle calculatione delle <sup>78</sup>forze e valimēto de' <sup>79</sup>muscoli; e forse ti <sup>80</sup>mācherà la patiētia che <sup>81</sup>tu nō sarai diligēte; Delle <sup>82</sup>quali se in me tutte queste <sup>83</sup>cose sono state o no, <sup>84</sup>i cēto 20 libri da me <sup>85</sup>composti ne darā sentē<sup>86</sup>tia del sì o del no, nelli <sup>87</sup>quali nō sono stato impedi<sup>88</sup>to nè d'auritia o negligētia, <sup>89</sup>ma sol dal tempo | vale.

W. A. II. 36 a (21)]

## DELL'ORDINE DEL LIBRO.

<sup>2</sup>Questa opera si deve prīcipiare alla cōciettione dell'omo, e devi descrivere il modo della matrice, <sup>3</sup>e come il putto l'abitata, e in che grado lui risegga i quella, e 'l modo dello vivificarsi e cibarsi, <sup>4</sup>e 'l suo accrescimēto, e che interuallo sia.

84. Leonardo frequently, and perhaps habitually, wrote in note books of a very small size and only moderately thick; in most of those which have been preserved undivided, each contains less than fifty leaves. Thus a considerable number of such volumes must have gone to make up a volume of the bulk of the '*Codex Atlanticus*' which now contains nearly 1200 detached leaves. In the passage under consideration, which was evidently written at a late

all the other members, and removing the very minutest particles of the flesh by which these veins are surrounded, without causing them to bleed, excepting the insensible bleeding of the capillary veins; and as one single body would not last so long, since it was necessary to proceed with several bodies by degrees, until I came to an end and had a complete knowledge; this I repeated twice, to learn the differences [59].

And if you should have a love for such things you might be prevented by loathing, and if that did not prevent you, you might be deterred by the fear of living in the night hours in the company of those corpses, quartered and flayed and horrible to see. And if this did not prevent you, perhaps you might not be able to draw so well as is necessary for such a demonstration; or, if you had the skill in drawing, it might not be combined with knowledge of perspective; and if it were so, you might not understand the methods of geometrical demonstration and the method of the calculation of forces and of the strength of the muscles; patience also may be wanting, so that you lack perseverance. As to whether all these things were found in me or not[84], the hundred and twenty books composed by me will give verdict Yes or No. In these I have been hindered neither by avarice nor negligence, but simply by want of time. Farewell [89].

## 797.

## OF THE ORDER OF THE BOOK.

This work must begin with the conception of man, and describe the nature of the womb and how the foetus lives in it, up to what stage it resides there, and in what way it quickens into life and feeds. Also its growth and what interval there is between

period of his life, Leonardo speaks of his Manuscript note-books as numbering 120; but we should hardly be justified in concluding from this passage that the greater part of his Manuscripts were now missing (see *Prolegomena*, Vol. I, pp. 5-7).

797. The meaning of the word *nervo* varies in different passages, being sometimes used for *muscolo* (muscle).

da · uno grado d'accrescimēto · a · uno · altro, e che cosa lo spigna fori · del corpo · della madre ·, e per che · cagione qualche · uolta · lui · uēga fori · dal uētro di sua madre ināti al debito <sup>6</sup>tēpo.

<sup>7</sup>Poi discriuerai quali mēbra sieno · quelle · che crescono · poi · che'l putto è nato · piv che l'altre, <sup>8</sup>e da la misura d'ū putto · d'un anno.

<sup>9</sup>Poi discrivi l'omo cresciuto e la fēmina · e sue · misure · e nature di complessione colore <sup>10</sup>e fisonomie.

<sup>11</sup>Di poi descrivi com'egli è cōposto · di uene ·, nerui ·, muscoli e ossa; Questo farai nell'ultimo del libro; <sup>12</sup>di poi figura · in · 4 storie · quattro vñiversalí casi dellí omuni ·, cioè letitia con uari atti di ridere, <sup>13</sup>e figura · la cagio · del riso ·; piāto in vari modi colla · sua · cagione ·; cōtētione cō uari movi<sup>14</sup>mēti d'uccisione ·, fughe ·, pavre ·, ferocità ·, ardimentí, micidi · e tutte cose appartenēti a simil casi; <sup>15</sup>di poi figura · vna fatica cō tirare, spiegniere · portare, fermare, sostenere e similí <sup>16</sup>cose;

<sup>17</sup>Di poi discriui attitudine · e movimēto; <sup>18</sup>di poi prospettiva · per l'ostio e effetti dell'ochio e dell' udito,—dirai di mvsicha—e descrivi dellí altri sēsi.

<sup>19</sup>Di poi discrivi la natura · de' sensi.

<sup>20</sup>Questa figura strumētale dell'omo dimostreremo in .. figure, delle <sup>21</sup>quali le 3 prime saranno la ramificatione delle ossa, cioè vna dināzi · che <sup>22</sup>dimostrî l'altitudine de' siti e figure dellí ossi, la seconda sarà veduta in <sup>23</sup>proffilo e mostrerà la profondità del tutto e delle parti e loro sito; La 3<sup>a</sup> <sup>24</sup>figura fia dimostratrice delle ossa dalla parte dirieto; Di poi faremo <sup>25</sup>3 altre figure ne' simili aspetti colle ossa segate, nelle quali si vedranno le lor <sup>26</sup>grossezze e uacuità; 3 altre figure faremo dell' ossa intere e de' nerui che na<sup>27</sup>scono dalla nuca, e in che mēbra ramificano; E 3 altre de' ossa e vene e do<sup>28</sup>ve ramificano, poi 3 con muscoli e 3 con pelle, e figure proporzionate, e 3 della femina per dimostrare matrice e vene mestruali, <sup>30</sup>che vanno alle poppe.

one stage of growth and another. What it is that forces it out from the body of the mother, and for what reasons it sometimes comes out of the mother's womb before the due time.

Then I will describe which are the members, which, after the boy is born, grow more than the others, and determine the proportions of a boy of one year.

Then describe the fully grown man and woman, with their proportions, and the nature of their complexions, colour, and physiognomy.

Then how they are composed of veins, tendons, muscles and bones. This I shall do at the end of the book. Then, in four drawings, represent four universal conditions of men. That is, Mirth, with various acts of laughter, and describe the cause of laughter. Weeping in various aspects with its causes. Contention, with various acts of killing; flight, fear, ferocity, boldness, murder and every thing pertaining to such cases. Then represent Labour, with pulling, thrusting, carrying, stopping, supporting and such like things.

Further I would describe attitudes and movements. Then perspective, concerning the functions and effects of the eye; and of hearing—here I will speak of music—, and treat of the other senses.

And then describe the nature of the senses.

This mechanism of man we will demonstrate in ... figures; of which the three first will show the ramification of the bones; that is: first one to show their height and position and shape: the second will be seen in profile and will show the depth of the whole and of the parts, and their position. The third figure will be a demonstration of the bones of the backparts. Then I will make three other figures from the same point of view, with the bones sawn across, in which will be shown their thickness and hollowness. Three other figures of the bones complete, and of the nerves which rise from the nape of the neck, and in what limbs they ramify. And three others of the bones and veins, and where they ramify. Then three figures with the muscles and three with the skin, and their proper proportions; and three of woman, to illustrate the womb and the menstrual veins which go to the breasts.

midolloso, quale è spugno<sup>22</sup>so, e quale è  
grosso dal fori al dentro, e quale è sottile,  
e alcuno à in al<sup>23</sup>cuna parte grā sottigliezza,  
e in alcuna è grosso, e in alcuna busa, o

## THE ORDER OF THE BOOK.

This depicting of mine of the human body will be as clear to you as if you had the natural man before you; and the reason is that if you wish thoroughly to know the parts of man, anatomically, you—or your eye—require to see it from different aspects, considering it from below and from above and from its sides, turning it about and seeking the origin of each member; and in this way the natural anatomy is sufficient for your comprehension. But you must understand that this amount of knowledge will not continue to satisfy you; seeing the very great confusion that must result from the combination of tissues, with veins, arteries, nerves, sinews, muscles, bones, and blood which, of itself, tinges every part the same colour. And the veins, which discharge this blood, are not discerned by reason of their smallness. Moreover integrity of the tissues, in the process of the investigating the parts within them, is inevitably destroyed, and their transparent substance being tinged with blood does not allow you to recognise the parts covered by them, from the similarity of their blood-stained hue; and you cannot know everything of the one without confusing and destroying the other. Hence, some further anatomy drawings become necessary. Of which you want three to give full knowledge of the veins and arteries, everything else being destroyed with the greatest care. And three others to display the tissues; and three for the sinews and muscles and ligaments; and three for the bones and cartilages; and three for the anatomy of the bones, which have to be sawn to show which are hollow and which are not, which have marrow and which are spongy, and which are thick from the outside inwards, and which are thin. And some are extremely thin in some parts and thick in others, and in some parts hollow or filled up with bone, or full of marrow, or spongy. And all these conditions are sometimes found

piena <sup>24</sup>d'osso, o midollosa, o spugnosa; e così tutte queste cose saranno alcuna volta tro<sup>25</sup>vate in un medesimo osso, e alcuno osso fia che non à nessuna; e 3 te ne bisog<sup>26</sup>na fare per la donna, nella quale è grā misterio, mediante la · matrice e suo feto; <sup>27</sup>a-dunque per il mio disegno ti fia noto ogni parte e ogni tutto mediante la di<sup>28</sup>mostratione di 3 diuersi aspetti di ciascuna parte, perchè quando tu avrai vedu<sup>29</sup>to alcun mēbro dalla parte dinanzi con qualche neruo, corda, o vena che <sup>30</sup>nasca dalla opposita parte, ti fia dimostro il medesimo mēbro volto per lato <sup>31</sup>o dirieto; non altremēti che se tu auessi in mano il medesimo mēbro e andas<sup>32</sup>si lo voltādo di parte in parte insino a tanto che tu auessi piena notitia di quel<sup>33</sup>lo che tu desideri sapere, e così similmente ti fia posto inanti in tre o <sup>34</sup>4 dimostrationi di ciascū mēbro per diuersi aspetti in modo che tu resterai con<sup>35</sup>vera e piena notitia di quello che tu vuoi sapere della figura dell'omo.

<sup>36</sup>Adunque qui con 12 figure intere ti sarà mostrata la cosmografia del minor <sup>37</sup>mōdo col medesimo ordine che ināzi a me fu fatto da Tolomeo nella sua cosmo-<sup>38</sup>grafia, e così diuidero poi quelle in mēbra, come lui diuise il tutto in provincie; <sup>39</sup>e 'poi dirò l'ufitio delle parti per ciascū verso, mettēdoti dināti alli ochi la notitia <sup>40</sup>di tutta la figura e valitudine dell'omo inquāto a moto locale mediante le sue parti, <sup>41</sup>E così piacesse al nostro autore che io potessi dimostrare la natura delli omīni e lo<sup>42</sup>ro costumi nel modo che io descrivo la sua figura.

<sup>43</sup>E ricordoti che la notomia delli nerui non ti darà la situazione della loro ramificatione, nè in quali muscoli essi si ramificano · mediante li corpi disfatti in acqua <sup>45</sup>corrēte, o in acqua di calcina, perchè, ancorachè ti rimāga la origine de'lor nascenti <sup>46</sup>sanza tale acqua come coll' acqua, le ramifications loro pel corso dell'acqua si <sup>47</sup>vengono a vnire, non altremēti che si fascia il lino o canapa pettinata per filare, <sup>48</sup>tutto in vn fascio in modo che impossibile è a ritrovare in quali muscoli o cō quale <sup>49</sup>o cō quāte ramifications li nerui s'infondino ne' predetti muscoli.

in one and the same bone, and in some bones none of them. And three you must have for the woman, in which there is much that is mysterious by reason of the womb and the foetus. Therefore by my drawings every part will be known to you, and all by means of demonstrations from three different points of view of each part; for when you have seen a limb from the front, with any muscles, sinews, or veins which take their rise from the opposite side, the same limb will be shown to you in a side view or from behind, exactly as if you had that same limb in your hand and were turning it from side to side until you had acquired a full comprehension of all you wished to know. In the same way there will be put before you three or four demonstrations of each limb, from various points of view, so that you will be left with a true and complete knowledge of all you wish to learn of the human figure[35].

Thus, in twelve entire figures, you will have set before you the cosmography of this lesser world on the same plan as, before me, was adopted by Ptolemy in his cosmography; and so I will afterwards divide them into limbs as he divided the whole world into provinces; then I will speak of the function of each part in every direction, putting before your eyes a description of the whole form and substance of man, as regards his movements from place to place, by means of his different parts. And thus, if it please our great Author, I may demonstrate the nature of men, and their customs in the way I describe his figure.

And remember that the anatomy of the nerves will not give the position of their ramifications, nor show you which muscles they branch into, by means of bodies dissected in running water or in lime water; though indeed their origin and starting point may be seen without such water as well as with it. But their ramifications, when under running water, cling and unite—just like flat or hemp carded for spinning—all into a skein, in a way which makes it impossible to trace in which muscles or by what ramification the nerves are distributed among those muscles.

801. 1. homini. 2. chon. 3. ssenplici. 6. tiere.

799.

## THE ARRANGEMENT OF ANATOMY.

First draw the bones, let us say, of the arm, and put in the motor muscle from the shoulder to the elbow with all its lines. Then proceed in the same way from the elbow to the wrist. Then from the wrist to the hand and from the hand to the fingers.

And in the arm you will put the motors of the fingers which open, and these you will show separately in their demonstration. In the second demonstration you will clothe these muscles with the secondary motors of the fingers and so proceed by degrees to avoid confusion. But first lay on the bones those muscles which lie close to the said bones, without confusion of other muscles; and with these you may put the nerves and veins which supply their nourishment, after having first drawn the tree of veins and nerves over the simple bones.

800.

Begin the anatomy at the head and finish at the sole of the foot.

801.

<sup>3</sup> men complete, <sup>3</sup> with bones and nerves, <sup>3</sup> with the bones only. Here we have 12 demonstrations of entire figures.

802.

When you have finished building up the man, you will make the statue with all its superficial measurements.

802. 2. crescere . . ettu. 3. lasstatua . chō.

**802. Crescere l'omo.** The meaning of this expression appears to be different here and in the passage C. A. 157<sup>a</sup>, 468<sup>a</sup> (see No. 526, Note 1. 2). Here it can hardly mean anything else than modelling, since the sculptor forms the figure by degrees, by adding wet clay and the figure consequently increases or grows. *Tu farai la statua* would

then mean, you must work out the figure in marble. If this interpretation is the correct one, this passage would have no right to find a place in the series on anatomical studies. I may say that it was originally inserted in this connection under the impression that *di crescere* should be read *descrivere*.

W. An. III, XXII]

Farai tutti li moti dell' ossa <sup>2</sup>colle giunture loro dopo <sup>3</sup>la dimostratione delle pri<sup>me</sup> tre figure dell' ossa, e<sup>5</sup> questo si deve fare nel primo <sup>6</sup>libro.

W. XXIII]

Ricordoti che per farti certo del nascimento di qualunque muscolo, che tu tiri <sup>2</sup>la corda, partorita da esso muscolo, in modo che tu veda movere esso <sup>3</sup>muscolo e 'l suo nascimēto sopra delle legature delli ossi.

## NOTANDO.

<sup>5</sup>Tu non farai mai se nō confusione nella di<sup>6</sup>mostratione de' muscoli e lor siti, nascimēti <sup>7</sup>e fini, se prima non fai vna dimostratione di <sup>8</sup>muscoli sottili a uso di fila di refe, e così potrai <sup>9</sup>figurare l'un. sopra dell' altro, come li a situati la <sup>10</sup>natura, e così li potrai nominare secōdo il mēbro <sup>11</sup>al quale lor seruono, cioè il motore della pū<sup>12</sup>ta del dito grosso e del suo osso di mezzo o del primo ecc; <sup>13</sup>e dato che tu ài tale notitia, figurerai al lato a <sup>14</sup>questa la uera forma e quātità e sito di ciascū muscolo; <sup>15</sup>ma ricordati di fare li fili, che insegnano li muscoli, neg<sup>16</sup>li medesimi siti che son le linie centrali di ciascū mu<sup>17</sup>scolo, e così tali fili dimostraranno la figura della ganba <sup>18</sup>e la loro distantia spedita e nota.

<sup>19</sup>Ho spogliato di pelle vno il quale per una mala<sup>20</sup>tia s'era tanto diminuito che li muscoli erā <sup>21</sup>consumati e restati a uso di pellicola sottile, <sup>22</sup>in modo che le corde in scābio del conuertirsi <sup>23</sup>in muscolo si convertivano in larga pelle, <sup>24</sup>e quādo l'ossa erā uestite di pelle, poco acqui<sup>25</sup>stauā della lor naturale grossezza.

## 803.

You must show all the motions of the bones with their joints to follow the demonstration of the first three figures of the bones, and this should be done in the first book. (803—809). Plans for the representation of muscles by drawings (803—809).

## 804.

Remember that to be certain of the point of origin of any muscle, you must pull the sinew from which the muscle springs in such a way as to see that muscle move, and where it is attached to the ligaments of the bones.

## NOTE.

You will never get any thing but confusion in demonstrating the muscles and their positions, origin, and termination, unless you first make a demonstration of thin muscles after the manner of linen threads; and thus you can represent them, one over another as nature has placed them; and thus, too, you can name them according to the limb they serve; for instance the motor of the point of the great toe, of its middle bone, of its first bone, &c. And when you have the knowledge you will draw, by the side of this, the true form and size and position of each muscle. But remember to give the threads which explain the situation of the muscles in the position which corresponds to the central line of each muscle; and so these threads will demonstrate the form of the leg and their distance in a plain and clear manner.

I have removed the skin from a man who was so shrunk by illness that the muscles were worn down and remained in a state like thin membrane, in such a way that the sinews instead of merging in muscles ended in wide membrane; and where the bones were covered by the skin they had very little over their natural size.

## 805.

Which nerve causes the motion of the eye so that the motion of one eye moves the other?

Of frowning the brows, of raising the brows, of lowering the brows,—of closing the eyes, of opening the eyes,—of raising the nostrils, of opening the lips, with the teeth shut, of pouting with the lips, of smiling, of astonishment.—

Describe the beginning of man when it is caused in the womb and why an eight months child does not live. What sneezing is. What yawning is. Falling sickness, spasms, paralysis, shivering with cold, sweating, fatigue, hunger, sleepiness, thirst, lust.

Of the nerve which is the cause of movement from the shoulder to the elbow, of the movement from the elbow to the hand, from the joint of the hand to the springing of the fingers. From the springing of the fingers to the middle joints, and from the middle joints to the last.

Of the nerve which causes the movement of the thigh, and from the knee to the foot, and from the joint of the foot to the toes, and then to the middle of the toes and of the rotary motion of the leg.

## 806.

## ANATOMY.

Which nerves or sinews of the hand are those which close and part the fingers and toes latteraly?

## 807.

Remove by degrees all the parts of the front of a man in making your dissection, till you come to the bones. Description of the parts of the bust and of their motions.

## 808.

Give the anatomy of the leg up to the hip, in all views and in every action and in

tutte le spoglie, <sup>5</sup>vene, arterie, nerui, <sup>6</sup>corde e mvscoli, pelle e ossa, e poi dell'ossa <sup>8</sup>segate per uedere la gros<sup>9</sup>sezza dell'ossa.

W. A. II. 768]

Farai regola e misura di ciascun muscolo, <sup>2</sup>e renderai ragione di tutti li loro vfiti, e in che modo s'adoperano e che li muove ecc.

<sup>4</sup>Farai prima la spina del dosso, di poi va vestendo <sup>5</sup>a gradi l'un sopra dell'altro di ciascū di questi musco<sup>6</sup>li, e poni li nervi all'arterie e vene a ciascun <sup>7</sup>muscolo per se, e oltre a di questo nota a quā<sup>8</sup>ti spondili si congiūgono, e che intestini sono <sup>9</sup>loro a riscōtro e che ossi e altri strumēti organici ecc.

<sup>11</sup>Le parti più alte de' magri son più alte nelli mu<sup>12</sup>scolosi, e similmente ne' grassi; Ma la differētia, che è <sup>13</sup>dalla figura de'muscoli che ànno li grossi a rispetto <sup>14</sup>delli muscolosi, sarà qui di sotto descritta.

W. An IV. 7 (A. A)]

Descriui quali mu<sup>2</sup>scoli si perdono nello <sup>13</sup>grossare, e nel dimagra<sup>4</sup>re quali muscoli si sco<sup>5</sup>prono.

<sup>6</sup>E nota che quel loco dell'a superficie del grasso <sup>8</sup>che sarà più cōcauata, <sup>9</sup>quādo si disgrassa fia <sup>10</sup>più eleuato.

<sup>11</sup>Doue li muscoli <sup>12</sup>si separano l'ū dal <sup>13</sup>l'altro, farai p<sup>14</sup>roffili, e doue s'<sup>15</sup>appiccano insieme . . .

W. 239 (= W. L. 131)]

## DE FIGURA VMANA.

<sup>2</sup>Qual parte è quella nell'omo che nel suo ingrassare mai cresce carne?

<sup>4</sup>Quale è quella parte che nel dimagrare dell'omo <sup>5</sup>mai nō dimagra con dimagratiō troppo sēsibile? <sup>6</sup>infra le parti che ingrassano qual'è quella che più <sup>7</sup>ingrassa?

every state; veins, arteries, nerves, sinews and muscles, skin and bones; then the bones in sections to show the thickness of the bones.

## 809.

Make the rule and give the measurement of each muscle, and give the reasons of all their functions, and in which way they work and what makes them work &c.

[4] First draw the spine of the back; then clothe it by degrees, one after the other, with each of its muscles and put in the nerves and arteries and veins to each muscle by itself; and besides these note the vertebrae to which they are attached; which of the intestines come in contact with them; and which bones and other organs &c.

The most prominent parts of lean people are most prominent in the muscular, and equally so in fat persons. But concerning the difference in the forms of the muscles in fat persons as compared with muscular persons, it shall be described below.

On corpulence and leanness  
(809—811).

## 810.

Describe which muscles disappear in growing fat, and which become visible in growing lean.

And observe that that part which on the surface of a fat person is most concave, when he grows lean becomes more prominent.

Where the muscles separate one from another you must give profiles and where they coalesce . . .

## 811.

## OF THE HUMAN FIGURE.

Which is the part in man, which, as he grows fatter, never gains flesh?

Or what part which as a man grows lean never falls away with a too perceptible diminution? And among the parts which grow fat which is that which grows fattest?

exists in the collection of drawings belonging to Christ's College Oxford, where it is attributed to Leonardo.

<sup>8</sup>Infra le parti che dimagrano qual'è quella che si fa <sup>9</sup>più magra?

<sup>10</sup>Degli omini poteti in forze quali muscoli son di mag<sup>11</sup>giore grossezza e più eleuati?

<sup>12</sup>Tu ài a figurare nella tua anatomia tutti li gradi <sup>13</sup>delle mēbra dalla creatiō dell'omo insino alla sua <sup>14</sup>morte, e insino alla morte dell'osso, e qual parte d'esso <sup>15</sup>prima si cōsumia e qual più si cōserua.

<sup>16</sup>E similmente dall'ultima magrezza all'ultima grassezza.

S. K. M. III. 66<sup>a</sup>]

813. See Pl. CVIII, No. 3.

Among those which grow lean which is that which grows leanest?

In very strong men which are the muscles which are thickest and most prominent?

In your anatomy you must represent all the stages of the limbs from man's creation to his death, and then till the death of the bone; and which part of him is first decayed and which is preserved the longest.

And in the same way of extreme leanness and extreme fatness.

### 812.

### ANATOMY.

There are eleven elementary tissues:— Cartilage, bones, nerves, veins, arteries, fascia, ligament and sinews, skin, muscle and fat.

### OF THE HEAD.

The divisions of the head are 10, viz. 5 external and 5 internal, the external are the hair, skin, muscle, fascia and the skull; the internal are the dura mater, the pia mater, [which enclose] the brain. The pia mater and the dura mater come again underneath and enclose the brain; then the rete mirabile, and the occipital bone, which supports the brain from which the nerves spring.

## PHYSIOLOGY.

W. An. IV. 173 a]

827.

Ho trovato nella compositione del corpo vmano che, come in tutte <sup>2</sup>le compositioni delli animali, esso è di piv ottusi e grossi sentimēti; <sup>3</sup>così è composto di strumēto manco ingegnoso e di lochi māco <sup>4</sup>capaci a ricevere la uirtù de' sensi; ò veduto nella spetie leonina il senso dell'odorato auere parte della sustantia del celabro, e discēdere li narici, capace ricettaculo contro al senso dello odorato, <sup>7</sup>il quale entra infra grā nvmero di saccoli cartilaginosi con assai <sup>8</sup>vie contro all'avemiento del predetto celabro.

<sup>9</sup>Li ochi della spetie leonina àanno gran parte della lor testa per lor <sup>10</sup>ricettacolo, e li nerui ottici inmediate congiugnersi col celabro; il che al<sup>11</sup>li omini si uede in contrario, perchè le casse delli ochi sono vna picco<sup>12</sup>la parte del capo, e li nerui ottici sono sottili e lunghi e deboli, e per debo<sup>13</sup>le operatione si uede di loro il dī, e peggio la notte, e li predetti animali <sup>14</sup>vedono in nella notte che 'l giorno; <sup>15</sup>e 'l segno se ne vede; perchè predano di notte <sup>16</sup>e dormono il giorno come fāno ancora li uccelli notturni.

I have found that in the composition of Comparative study of the human body as compared with the bodies organs of animals the organs of sense are duller, sense in men and coarser. Thus it is composed of less ingenious instruments, and of spaces less capacious for receiving the faculties of sense. I have seen in the Lion tribe that the sense of smell is connected with part of the substance of the brain which comes down the nostrils, which form a spacious receptacle for the sense of smell, which enters by a great number of cartilaginous vesicles with several passages leading up to where the brain, as before said, comes down.

The eyes in the Lion tribe have a large part of the head for their sockets and the optic nerves communicate at once with the brain; but the contrary is to be seen in man, for the sockets of the eyes are but a small part of the head, and the optic nerves are very fine and long and weak, and by the weakness of their action we see by day but badly at night, while these animals can see as well at night as by day. The proof that they can see is that they prowl for prey at night and sleep by day, as nocturnal birds do also.

H. 2. 38 a]

Tutte le cose vedute parranno <sup>2</sup> magiori di mezza notte, che di <sup>3</sup> mezzo di maggiori di mattina che <sup>4</sup> di mezzodì. <sup>5</sup> Questo accade perchè la pupilla <sup>6</sup> dell'occhio è minore assai di mezzo <sup>7</sup> dì che di nessuno altro tempo.

Tanto quanto è maggiore l'occhio <sup>9</sup> over pupilla del gufo a proporzione <sup>10</sup> dello animale, che non è quella dell'omo, tanto più lume vede di notte che <sup>12</sup> nō fa l'omo; òde di mezzo dì nō vede ni<sup>13</sup> ente, selvi nō diminisce sua pupill<sup>14</sup>la, e similmente vede di notte le cose mag<sup>15</sup>giori che di dì.

G. 44 a]

## DELLI OCHI DELL' ANIMALI.

Li occhi di tutti li animali àno le <sup>3</sup> lor popille, le quali per loro medesime crescono e diminuiscono secôdo il mag<sup>5</sup>giore e minore lume del sole o altro chiarore; Ma nelli uccelli fa maggio<sup>7</sup>re differetia, e massima nelli notturni, come gufi, barbagianni, e all'ochi <sup>9</sup>che son di spetie di civetta; a questi cresce <sup>10</sup>la popilla in modo che quasi occupa tutt'ito l'occhio, e diminuisce insino alla grā<sup>12</sup>dezza d'ū grā di miglio e sempre osser<sup>13</sup>va figura circulare; Ma la spe<sup>14</sup>tie leonina come pâtere, pardi, leōze, tigri, lupi, cierueri, gatti di Spagnia e altri simili diminuiscono <sup>17</sup>la lucie dal perfetto circulo <sup>18</sup>alla figura biāgolare, cioè questa <sup>19</sup>è come si dimostra in margine; Ma l'uomo <sup>20</sup>per avere più debole vista che nessuno altro animale, meno è offeso dalla superchia luce, <sup>22</sup> e mē s'avmēta nelli lochi tenebrosi; ma <sup>23</sup> alli occhi detti animali notturni,—al gufo veciello cornuto, il quale è l'<sup>25</sup>massimo nella spetie dell' vecelli notturni: a questo s'aumenta tanto la uirtù vi<sup>27</sup>siva, che nel minimo

828.

Every object we see will appear larger at midnight than at midday, and larger in the morning than at midday.

This happens because the pupil of the eye is much smaller at midday than at any other time.

In proportion as the eye or the pupil of the owl is larger in proportion to the animal than that of man, so much the more light can it see at night than man can; hence at midday it can see nothing if its pupil does not diminish; and, in the same way, at night things look larger to it than by day.

829.

## OF THE EYES IN ANIMALS.

The eyes of all animals have their pupils adapted to dilate and diminish of their own accord in proportion to the greater or less light of the sun or other luminary. But in birds the variation is much greater; and particularly in nocturnal birds, such as horned owls, and in the eyes of one species of owl; in these the pupil dilates in such a way as to occupy nearly the whole eye, or diminishes to the size of a grain of millet, and always preserves the circular form. But in the Lion tribe, as panthers, pard, ounces, tigers, lynxes, spanish cats and other similar animals the pupil diminishes from the perfect circle to the figure of a pointed oval such as is shown in the margin. But man having a weaker sight than any other animal is less hurt by a very strong light and his pupil increases but little in dark places; but in the eyes of these nocturnal animals, the horned owl—a bird which is the largest of all nocturnal birds—the power of vision increases so much that in the faintest nocturnal light (which we call darkness) it sees

## 830.

a b n is the membrane which closes the eye from below, upwards, with an opaque film, c n b encloses the eye in front and behind with a transparent membrane.

**a** It closes from below, upwards, because it [the eye] comes downwards.

When the eye of a bird closes with its two lids, the first to close is the nictitating membrane which closes from the lacrymal duct over to the outer corner of the eye; and the outer lid closes from below upwards, and these two intersecting motions begin first from the lacrymatory duct, because we have already seen that in front and below birds are protected and use only the upper portion of the eye from fear of birds of prey which come down from above and behind; and they uncover first the membrane from the outer corner, because if the enemy comes from behind, they have the power of escaping to the front; and again the muscle called the nictitating membrane is transparent, because, if the eye had not such a screen, they could not keep it open against the wind which strikes against the eye in the rush of their rapid flight. And the pupil of the eye dilates and contracts as it sees a less or greater light, that is to say intense brilliancy.

## 831.

If at night your eye is placed between the light and the eye of a cat, it will see the eye look like fire.

W. An. IV. 184<sup>a</sup> (7)

The tongue is found to have muscles which correspond to the six muscles which compose the portion of the tongue which moves in the mouth.

And when *a o u* are spoken with a clear and rapid pronunciation, it is necessary, in order to pronounce continuously, without any pause between, that the opening of the lips should close by degrees; that is, they are wide apart in saying *a*, closer in saying *o*, and much closer still to pronounce *u*.

It may be shown how all the vowels are pronounced with the farthest portion of the false palate which is above the epiglottis.

## 833.

If you draw in breath by the nose and send it out by the mouth you will hear the sound made by the division that is the membrane in[5] ...

## 834.

## OF THE NATURE OF SIGHT.

I say that sight is exercised by all animals, by the medium of light; and if any one adduces, as against this, the sight of nocturnal animals, I must say that this in the same way is subject to the very same natural laws. For it will easily be understood that the senses which receive the images of things do not project from themselves any visual virtue[4]. On the contrary the atmospheric medium which exists between the object and the sense incorporates in itself the figure of things, and by its contact with the sense transmits the object to it. If the object—whether by sound or by odour—presents its spiritual force to the ear or the nose, then light is not required and does not act. The forms of objects do not send their images into

PERCHÈ NELLI OMINI ATTÉPATI <sup>2</sup> IL UEDERE È MEGLIO DISCOSTO.

Il uedere è meglio discosto che da preso in quelli omni, li quali s'attēpano, perché vna medesima cosa <sup>6</sup>māda di se minore impressione nell'occhio, essendo remota che quādo li è vi<sup>8</sup>cina.

C. At. 89a; 258a]

Il sēso comnune è quello che giudica le cose a lui date dalli altri sensi; <sup>2</sup> Li antichi speculatori àno cōcluso che quella parte del giuditio che è data all'omo, sia causata <sup>3</sup> da uno strumento, al quale referiscono li altri <sup>5</sup> mediāte la ipressiva, e a detto strumento àno posto nome sēso comvne, <sup>4</sup> e dicono questo sēso essere situato in mezzo il capo jfra la ipressiva e la memoria; E questo nome di sēso <sup>5</sup> comvne dicono solamente, perchè è

the air if they are not illuminated[8]; and the eye being thus constituted cannot receive that from the air, which the air does not possess, although it touches its surface. If you choose to say that there are many animals that prey at night, I answer that when the little light which suffices the nature of their eyes is wanting, they direct themselves by their strong sense of hearing and of smell, which are not impeded by the darkness, and in which they are very far superior to man. If you make a cat leap, by daylight, among a quantity of jars and crocks you will see them remain unbroken, but if you do the same at night, many will be broken. Night birds do not fly about unless the moon shines full or in part; rather do they feed between sun-down and the total darkness of the night.

No body can be apprehended without light and shade, and light and shade are caused by light.

WHY MEN ADVANCED IN AGE SEE BETTER AT A DISTANCE.

Sight is better from a distance than near in those men who are advancing in age, because the same object transmits a smaller impression of itself to the eye when it is distant than when it is near.

## 836.

The Common Sense, is that which judges <sup>the seat of</sup> things offered to it by the other senses. <sup>the common sense.</sup> The ancient speculators have concluded that that part of man which constitutes his judgment is caused by a central organ to which the other five senses refer everything by means of impressibility; and to this centre they have given the name Common Sense. And they say that this Sense is situated in the centre of the head between Sensation and Memory. And this name of Common Sense

is given to it solely because it is the common judge of all the other five senses *i.e.* Seeing, Hearing, Touch, Taste and Smell. This Common Sense is acted upon by means of Sensation which is placed as a medium between it and the senses. Sensation is acted upon by means of the images of things presented to it by the external instruments, that is to say the senses which are the medium between external things and Sensation. In the same way the senses are acted upon by objects. Surrounding things transmit their images to the senses and the senses transfer them to the Sensation. Sensation sends them to the Common Sense, and by it they are stamped upon the memory and are there more or less retained according to the importance or force of the impression. That sense is most rapid in its function which is nearest to the sensitive medium and the eye, being the highest is the chief of the others. Of this then only we will speak, and the others we will leave in order not to make our matter too long. Experience tells us that the eye apprehends ten different natures of things, that is: Light and Darkness, one being the cause of the perception of the nine others, and the other its absence:—Colour and substance, form and place, distance and nearness, motion and stillness [15].

Though human ingenuity may make various inventions which, by the help of various machines answering the same end, it will never devise any inventions more beautiful, nor more simple, nor more to the purpose than Nature does; because in her inventions nothing is wanting, and nothing is superfluous, and she needs no counterpoise when she makes limbs proper for motion in the bodies of animals. But she puts into them the soul of the body, which forms them that is the soul of the mother which first constructs in the womb the form of the man and in due time awakens the soul that is to inhabit it. And this at first lies dormant

and under the tutelage of the soul of the mother, who nourishes and vivifies it by the umbilical vein, with all its spiritual parts, and this happens because this umbilicus is joined to the placenta and the cotyledons, by which the child is attached to the mother. And these are the reason why a wish, a strong craving or a fright or any other mental suffering in the mother, has more influence on the child than on the mother; for there are many cases when the child loses its life from them, &c.

This discourse is not in its place here, but will be wanted for the one on the composition of animated bodies—and the rest of the definition of the soul I leave to the imaginations of friars, those fathers of the people who know all secrets by inspiration.

[57]I leave alone the sacred books; for they are supreme truth.

### 838.

#### HOW THE FIVE SENSES ARE THE MINISTERS OF THE SOUL.

The soul seems to reside in the judgment, and the judgment would seem to be seated in that part where all the senses meet; and this is called the Common Sense and is not all-pervading throughout the body, as many have thought. Rather is it entirely in one part. Because, if it were all-pervading and the same in every part, there would have been no need to make the instruments of the senses meet in one centre and in one single spot; on the contrary it would have sufficed that the eye should fulfil the function of its sensation on its surface only, and not transmit the image of the things seen, to the sense, by means of the optic nerves, so that the soul—for the reason given above—may perceive it in the surface of the eye. In the same way as to the sense of hearing, it would have sufficed if the voice had mere-

838. The peculiar use of the words *nervo*, *muscolo*, *corda*, *senso comune*, which are here literally ren-

ly sounded in the porous cavity of the indurated portion of the temporal bone which lies within the ear, without making any farther transit from this bone to the common sense, where the voice confers with and discourses to the common judgment. The sense of smell, again, is compelled by necessity to refer itself to that same judgment. Feeling passes through the perforated cords and is conveyed to this common sense. These cords diverge with infinite ramifications into the skin which encloses the members of the body and the viscera. The perforated cords convey volition and sensation to the subordinate limbs. These cords and the nerves direct the motions of the muscles and sinews, between which they are placed; these obey, and this obedience takes effect by reducing their thickness; for in swelling, their length is reduced, and the nerves shrink which are interwoven among the particles of the limbs; being extended to the tips of the fingers, they transmit to the sense the object which they touch.

The nerves with their muscles obey the tendons as soldiers obey the officers, and the tendons obey the Common [central] Sense as the officers obey the general. [27] Thus the joint of the bones obeys the nerve, and the nerve the muscle, and the muscle the tendon and the tendon the Common Sense. And the Common Sense is the seat of the soul[28], and memory is its ammunition, and the impressibility is its referendary since the sense waits on the soul and not the soul on the sense. And where the sense that ministers to the soul is not at the service of the soul, all the functions of that sense are also wanting in that man's life, as is seen in those born mute and blind.

### 839.

HOW THE NERVES SOMETIMES ACT OF THEMSELVES WITHOUT ANY COMMANDS FROM THE OTHER FUNCTIONS OF THE SOUL.

This is most plainly seen; for you will see palsied and shivering persons move,

dered by nerve, muscle cord or tendon and Common Sense may be understood from lines 27 and 28.

freddolosi, <sup>4</sup>e assiderati · le loro · tremāti · mēbra come · testa · e mani · sanza · liciēza · dell' anima ·, la quale <sup>5</sup>anima cō tutte · sue · forze nō potrà · vietare a essi · membri · che nō tremino; Questo medesimo <sup>6</sup>accade nel malcaduco e ne' mēbra tagliati come code di lucierte; <sup>7</sup>la idea · over imaginatiua · è · timone e briglia de'sensi ·, imperochè la cosa iñaginata <sup>8</sup>move il sēso; <sup>9</sup>preimaginare · è lo imaginare le cose che saranno; <sup>10</sup>post-imaginare è imaginare · le cose passate.

and their trembling limbs, as their head and hands , quake without leave from their soul and their soul with all its power cannot prevent their members from trembling. The same thing happens in falling sickness, or in parts that have been cut off, as in the tails of lizards. The idea or imagination is the helm and guiding-rein of the senses, because the thing conceived of moves the sense. Pre-imagining, is imagining the things that are to be. Post-imagining, is imagining the things that are past.

Tr. 14.

## 840.

4 sono le potentie : memoria · e intelletto, lascibili · e cōcupiscibili, <sup>2</sup>le 2 prime son ragionevoli e l'altre sēnsuali; <sup>3</sup>I <sup>3</sup>sensi vedere, udire, odorato sono di poca proibitione ·, tato e gusto<sup>4</sup>no; l'odorato · mena · con seco · il gusto · nel cane e altri · golosi animali.

There are four Powers: memory and intellect, desire and covetousness. The two first are mental and the others sensual. The three senses: sight, hearing and smell cannot well be prevented; touch and taste not at all. Smell is connected with taste in dogs and other glutinous animals.

W. A. IV. 151δ]

## 844.

¶ Come tu ài descritto il rè delle animali — ma io meglio direi dicēdo <sup>2</sup>rè delle bestie · essendo tu la maggiore — perchè non li ài uccisi, acciò che possino poi darti <sup>3</sup>li lor figlioli in benifitio della tua gola colla quale tu ài tētato farti sepultura di tutti li animali, e più oltre direi, se'l <sup>5</sup>dire il uero mi fusse integramente lecito; Ma non usciamo <sup>6</sup>delle cose vmane, dicendo vna somma scelerata<sup>gine</sup>, la qual non accade nelli animali terrestri, <sup>8</sup>inperochè in quelli nō si trovano animali che māgino della loro <sup>9</sup>spetie se nō per mācamēto di celabro (in poche infra loro, e de'ma<sup>to</sup>dri come infra li omini, bēchè nō sieno in tāto numero); <sup>11</sup>e questo non accade se nō nel<sup>12</sup>li

which is gone, life will fail in vigour, and if you take away this nourishment, the life is entirely destroyed. But if you restore as much as is destroyed day by day, then as much of the life is renewed as is consumed, just as the flame of the candle is fed by the nourishment afforded by the liquid of this candle, which flame continually with a rapid supply restores to it from below as much as is consumed in dying above: and from a brilliant light is converted in dying into murky smoke; and this death is continuous, as the smoke is continuous; and the continuance of the smoke is equal to the continuance of the nourishment, and in the same instant all the flame is dead and all regenerated, simultaneously with the movement of its own nourishment.

King of the animals—as thou hast described him—I should rather say king of the beasts, thou being the greatest—because thou hast spared slaying them, in order that they may give thee their children for the benefit of the gullet, of which thou hast attempted to make a sepulchre for all animals; and I would say still more, if it were allowed me to speak the entire truth[5]. But we do not go outside human matters in telling of one supreme wickedness, which does not happen among the animals of the earth, inasmuch as among them are found none who eat their own kind, unless through want of sense (few indeed among them, and those being mothers, as with men, albeit they be not many in number); and this happens only among the rapacious animals, as with the leonine species, and leo-

844. We are led to believe that Leonardo himself was a vegetarian from the following interesting passage in the first of Andrea Corsali's letters to Giuliano de'Medie: *Alcuni gentili chiamati Guzzarati non si cibano di cosa alcuna che tenga sangue, nè fressi loro consentono che si noccia ad alcuna cosa animata, come il nostro Leonardo da Vinci.*

5—18. Amerigo Vespucci, with whom Leonardo was personally acquainted, writes in his second letter to Pietro Soderini, about the inhabitants of

the Canary Islands after having stayed there in 1503: "Hanno una scelerata libertà di vivere; . . . si cibano di carne humana, di maniera che il padre māgia il figliuolo, et all'incontro il figliuolo il padre secondo che a caso e per sorte auiene. Io viddi vn certo huomo sceleratissimo che si vantaua, et si teneua a non piccola gloria di hauer mangiato più di trecen'o huomini. Viddi anche vna certa città, nella quale io dimorai forse ventisette giorni, dove le carni humane, hauendole salate, eran appicate alli traui, si come noi alli traui di cucina

animali rapaci, come nella spetie leonina  
<sup>13</sup>e pardi, pardere, cervieri, gatte e simili,  
<sup>14</sup>li quali alcuna volta si māgiano i figlioli;  
ma tu oltre <sup>15</sup>alli figlioli ti māgi il padre,  
madre, fratelli e amici, e nō <sup>16</sup>ti basta questo,  
chè tu vai a caccia per le altrui isole, pi-  
<sup>17</sup>gliando li altri omini e questi mezzo nudi  
il mēbro e li testi<sup>18</sup>culi fai ingassare e te  
li cacci giù per la tua gola; or <sup>19</sup>non pro-  
duce la natura tāti semplici, che tu ti possa  
satia<sup>20</sup>re? e se nō ti cōtenti de' semplici,  
non puoi tu cō la mistiō <sup>21</sup>di quelli fare  
infiniti composti, come scrisse il Platina <sup>22</sup>e  
li altri autori di gola?<sup>¶</sup>

pards, panthers lynxes, cats and the like, who sometimes eat their children; but thou, besides thy children devourest father, mother, brothers and friends; nor is this enough for thee, but thou goest to the chase on the islands of others, taking other men and these half-naked, the . . . and the . . . thou fattenest, and chasest them down thy own throat[18]; now does not nature produce enough simples, for thee to satisfy thyself? and if thou art not content with simples, canst thou not by the mixture of them make infinite compounds, as Platina wrote[21], and other authors on feeding?

849. From this passage it is quite plain that Leonardo had not merely a general suspicion of the circulation of the blood but a very clear conception of it. Leonardo's studies on the muscles of the heart are to be found in the MS. W. An. III. but no information about them has hitherto been made public. The limits of my plan in this work exclude all purely anatomical writings, therefore

Death in old men, when not from fever, is caused by the veins which go from the spleen to the valve of the liver, and which thicken so much in the walls that they become closed up and leave no passage for the blood that nourishes it.

[6] The incessant current of the blood through the veins makes these veins thicken and become callous, so that at last they close up and prevent the passage of the blood.

849.

The waters return with constant motion from the lowest depths of the sea to the utmost height of the mountains, not obeying the nature of heavier bodies; and in this they resemble the blood of animated beings which always moves from the sea of the heart and flows towards the top of the head; and here it may burst a vein, as may be seen when a vein bursts in the nose; all the blood rises from below to the level of the burst vein. When the water rushes out from the burst vein in the earth, it obeys the law of other bodies that are heavier than the air since it always seeks low places.

850.

That the blood which returns when the heart opens again is not the same as that which closes the valves of the heart.

851.

Make them give you the definition and remedies for the case . . . and you will see that men are selected to be doctors for diseases they do not know.

only a very brief excerpt from this note book can be given here. WILLIAM HARVEY (born 1578 and Professor of Anatomy at Cambridge from 1615) is always considered to have been the discoverer of the circulation of the blood. He studied medicine at Padua in 1598, and in 1628 brought out his memorable and important work: *De motu cordis et sanguinis*.

## 853.

A remedy for scratches taught me by the Herald to the King of France. 4 ounces of virgin wax, 4 ounces of colophony, 2 ounces of incense. Keep each thing separate; and melt the wax, and then put in the incense and then the colophony, make a mixture of it and put it on the sore place.

## 854.

Medicine is the restoration of discordant elements; sickness is the discord of the elements infused into the living body.

## 855.

To keep in health, this rule is wise: Eat only when you want and relish food. Chew thoroughly that it may do you good. Have it well cooked, unspiced and undisguised. He who takes medicine is ill advised.

## 856.

I teach you to preserve your health; and in this you will succed better in proportion as you shun physicians, because their medicines are the work of alchemists.

853. 1. ripareggiamēto. 2. dischordanza.

## XV.

### *Astronomy.*

Ever since the publication by Venturi in 1797 and Libri in 1840 of some few passages of Leonardo's astronomical notes, scientific astronomers have frequently expressed the opinion, that they must have been based on very important discoveries, and that the great painter also deserved a conspicuous place in the history of this science. In the passages here printed, a connected view is given of his astronomical studies as they lie scattered through the manuscripts, which have come down to us. Unlike his other purely scientific labours, Leonardo devotes here a good deal of attention to the opinions of the ancients, though he does not follow the practice universal in his day of relying on them as authorities; he only quotes them, as we shall see, in order to refute their arguments. His researches throughout have the stamp of independent thought. There is nothing in these writings to lead us to suppose that they were merely an epitome of the general learning common to the astronomers of the period. As early as in the XIV<sup>th</sup> century there were chairs of astronomy in the universities of Padua and Bologna, but so late as during the entire XVI<sup>th</sup> century Astronomy and Astrology were still closely allied.

It is impossible now to decide whether Leonardo, when living in Florence, became acquainted in his youth with the doctrines of Paolo Toscanelli the great astronomer and mathematician (died 1482), of whose influence and teaching but little is now known, beyond the fact that he advised and encouraged Columbus to carry out his project of sailing round the world. His name is nowhere mentioned by Leonardo, and from the dates of the manuscripts from which the texts on astronomy are taken, it seems highly probable that Leonardo devoted his attention to astronomical studies less in his youth than in his later years. It was evidently his purpose to treat of Astronomy in a connected form and in a separate work (see the beginning of Nos. 866 and 892; compare also No. 1167). It is quite in accordance with his general scientific thoroughness that he should propose to write a special treatise on Optics as an introduction to Astronomy (see Nos. 867 and 877). Some of the chapters belonging to this Section bear the title

"Prospettiva" (see Nos. 869 and 870), this being the term universally applied at the time to Optics as well as Perspective (see Vol. I, p. 10, note to No. 13, l. 10).

At the beginning of the XVI<sup>th</sup> century the Ptolemaic theory of the universe was still universally accepted as the true one, and Leonardo conceives of the earth as fixed, with the moon and sun revolving round it, as they are represented in the diagram to No. 897. He does not go into any theory of the motions of the planets; with regard to these and the fixed stars he only investigates the phenomena of their luminosity. The spherical form of the earth he takes for granted as an axiom from the first, and he anticipates Newton by pointing out the universality of Gravitation not merely in the earth, but even in the moon. Although his acute research into the nature of the moon's light and the spots on the moon did not bring to light many results of lasting importance beyond making it evident that they were a refutation of the errors of his contemporaries, they contain various explanations of facts which modern science need not modify in any essential point, and discoveries which history has hitherto assigned to a very much later date.

The ingenious theory by which he tries to explain the nature of what is known as earth shine, the reflection of the sun's rays by the earth towards the moon, saying that it is a peculiar refraction, originating in the innumerable curved surfaces of the waves of the sea may be regarded as absurd; but it must not be forgotten that he had no means of detecting the fundamental error on which he based it, namely: the assumption that the moon was at a relatively short distance from the earth. So long as the motion of the earth round the sun remained unknown, it was of course impossible to form any estimate of the moon's distance from the earth by a calculation of its parallax.

Before the discovery of the telescope accurate astronomical observations were only possible to a very limited extent. It would appear however from certain passages in the notes here printed for the first time, that Leonardo was in a position to study the spots in the moon more closely than he could have done with the unaided eye. So far as can be gathered from the mysterious language in which the description of his instrument is wrapped, he made use of magnifying glasses; these do not however seem to have been constructed like a telescope—telescopes were first made about 1600. As LIBRI pointed out (*Histoire des Sciences mathématiques III*, 101) Fracastoro of Verona (1473—1553) succeeded in magnifying the moon's face by an arrangement of lenses (compare No. 910, note), and this gives probability to Leonardo's invention at a not much earlier date.

859. Only part of this passage belongs, strictly speaking, to this section. The principle laid down in

the second paragraph is more directly connected with the notes given in the preceding section on Physiology.

forza è infinita, perchè con essa infiniti modi si mouerebbero, se strumenti farsi potessero, due essa forza gienerare si potesse.

<sup>8</sup> La forza col moto materiale e 'l peso colla percussione <sup>9</sup>son le quattro accidentali potestie, colle quali tutte l'opere <sup>10</sup>de' mortali anno loro essere e lor morte;

<sup>11</sup> La forza dal moto spirituale à origine; il quale moto, <sup>12</sup>scorrèdo per le membra degli animali sensibili, ingrossa <sup>13</sup>i muscoli di quelli, onde ingrossati essi muscoli si uogono a raccortare e trarsi dirieto i nervi che con essi <sup>15</sup>sò cõgiunti, e di qui si causa la forza per le membra umane.

<sup>16</sup> La qualità e quâità delle forze d'uno uomo potrà <sup>17</sup>partorire altra forza, la quale sarà proporcionalmente tanto maggiore quâto essa sarà di più <sup>19</sup>lugo moto, l'una che l'altra.

Br. M. 175a]

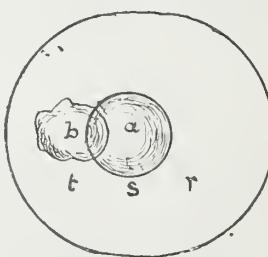

Il peso o perchè non resta nel suo sito? non resta perchè non à resistentia; e dônde si moverà? Moverassi inverso il centro; e perchè nō per altre linie? perchè il peso, che non à resistentia, discenderà in basso per la uia più brieva, e il più basso sito è il cietro del mondo; e perchè lo sa così tal peso trovarlo con tanta breuità? perchè non va come insensibile prima vagando per diverse linie.

F. 22d]

Movasi la terra da che parte voglia, ma la superficie dell'acqua uscirà fori della sua spera, ma sempre sarà equidistante al centro del mondo;

<sup>5</sup> Dato che la terra si rimovessi dal centro del mondo, che farebbe l'acqua?

<sup>7</sup> Resterebbe intorno a esso centro con equal grossezza, ma minore diametro, che quando ella avea la terra in corpo.

... potessi. 9. quattro. 10. ellor. 12. scorèdo. 13. musscoli di quelle ... musscoli. 14. gano aracortare. 16. ecquâità  
... homo. 18. maggiore. 19. luna cellaltra.

860. 4. ciento he. 8. chon. 9. perche nonva come [in gi] insensibile prima. 10. vagando per diuerse linie.  
861. 2. acq'a' vsscirà. 5. chella. 6. cheffarebbe.

860. This text and the sketch belonging to it, are reproduced on Pl. CXXI.

earth; but this force is unlimited, and by it infinite worlds might be moved if instruments could be made by which the force could be generated.

Force, with physical motion, and gravity, with resistance are the four external powers on which all actions of mortals depend.

Force has its origin in spiritual motion; and this motion, flowing through the limbs of sentient animals, enlarges their muscles. Being enlarged by this current the muscles are shrunk in length and contract the tendons which are connected with them, and this is the cause of the force of the limbs in man.

The quality and quantity of the force of a man are able to give birth to other forces, which will be proportionally greater as the motions produced by them last longer.

## 860.

Why does not the weight o remain in its place? It does not remain because it has no resistance. Where will it move to? It will move towards the centre [of gravity]. And why by no other line? Because a weight which has no support falls by the shortest road to the lowest point which is the centre of the world. And why does the weight know how to find it by so short a line? Because it is not independant and does not move about in various directions.

## 861.

Let the earth turn on which side it may the surface of the waters will never move from its spherical form, but will always remain equidistant from the centre of the globe.

Granting that the earth might be removed from the centre of the globe, what would happen to the water?

It would remain in a sphere round that centre equally thick, but the sphere would have a smaller diameter than when it enclosed the earth.

861. Compare No. 896, lines 48—64; and No. 936.

F. 118]

Se la terra delli antipodi che sostiene  
2 l'oceano s'inalzasse, e si scoprissse assai  
3 fori d'esso mare, essendo quasi pia<sup>na</sup>, in  
che modo sarebbe poi col tēpo <sup>5</sup>a creare  
li mōti e le valli.

<sup>6</sup>E li sassi di diuerse falde?

## 862.

Supposing the earth at our antipodes which supports the ocean were to rise and stand uncovered, far out of the sea, but remaining almost level, by what means afterwards, in the course of time, would mountains and vallies be formed?

And the rocks with their various strata?

Tr. 28]

Ogni omo senpre si troua nel mezzo del mōdo e sotto il mezzo <sup>2</sup>del suo emisperio, e sopra il ciētro d'esso mōdo.

## 863.

Each man is always in the middle of the surface of the earth and under the zenith of his own hemisphere, and over the centre of the earth.

Leic. 1a]

Ricordo come io ho in prima a dimostrare la distantia del sole dalla terra, <sup>3</sup>e con ū de' sua razzi passati per ispi<sup>4</sup>racolo in loco oscuro ritrovare <sup>5</sup>la sua quātitā vera, e oltre a <sup>6</sup>di questo per lo mezzo della spera del <sup>7</sup>l'acqua ritrovare la grādezza della terra.<sup>¶</sup>

<sup>8</sup>Qui si dimostra come, quā<sup>9</sup>do il sole è nel mezzo del nostro <sup>10</sup>emisperio, che li antipodi <sup>11</sup>orientali cogli occidentali ue<sup>12</sup>dono in un medesimo tempo ciascun per se specchiare il sole nelle <sup>14</sup>loro acque, e 'l simile quelli del po<sup>15</sup>lo artico col antartico, se abi<sup>16</sup>tatori ui sono.

## 864.

Mem.: That I must first show the distance of the sun from the earth; and, by means of a ray passing through a small hole into a dark chamber, detect its real size; and besides this, by means of the aqueous sphere calculate the size of the globe . . .

Here it will be shown, that when the sun is in the meridian of our hemisphere[10], the antipodes to the East and to the West, alike, and at the same time, see the sun mirrored in their waters; and the same is equally true of the arctic and antarctic poles, if indeed they are inhabited.

C. A. 1118; 3458]

Come la terra è una stella.

## 865.

That the earth is a star.

F. 56a]

Tu nel tuo discorso ài a cōcludere <sup>2</sup>la terra essere vna stella quasi si<sup>3</sup>mile alla luna, <sup>4</sup>e la nobiltà del nostro mōdo;

<sup>5</sup>E così farai vn discorso delle grādezzze di molte stelle, secōdo li autori.

How to prove that the earth is a planet (865—867).

## 866.

In your discourse you must prove that the earth is a star much like the moon, and the glory of our universe; and then you must treat of the size of various stars, according to the authours.

862. 1. sella. 2. sinalzassi . . scoprissi essi. 5. elle. 6. ellī.

864. 1. chome . . in p“a” a dimō. 2. disstantia. 3. razi. 4. rachulo illocho oscuro. 6. mezo. 7. grādeza. 8. dimosstra chome. 9. mezo . . nosstro. 10. emissperio chelli antipodi di. 11. horientali. 12. gano nun. 13. scan. 14. acque . . quelgli. 15. artichō chol antarticho.

865. R. 866. 1. tutto tuo discorsa a cō cludere. 3. luna [e così proverra]. 6. altori.

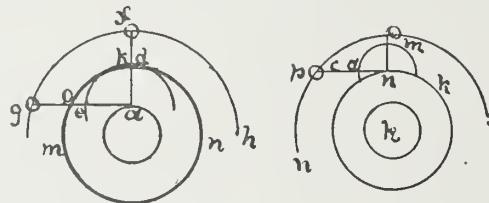

864. 10. 11. *Antipodi orientali cogli occidentali.* The word *Antipodes* does not here bear its literal sense, but—as we may infer from the simultaneous reference to inhabitants of the North and South—

is used as meaning men living at a distance of 90 degrees from the zenith of the rational horizon of each observer.

F. 25 δ]

ORDINE DEL PROVARE LA TERRA ESSERE  
2 VNA STELLA.

In prima definisci l'occhio, poi mostra come il battere d'alcuna stella viene dall'occhio, e perchè il battere d'esse stelle è più nell'una che nell'altra, e come li razzi delle stelle nascono dall'occhio, e dì, che se l' batte re delle stelle fusse come pare nelle stelle, che tal bat timeto mostra d'essere di tanta dilatatione, quāt'è il corpo di tale stella; essendo adūque maggiore della terra che tal moto fatto in istante sarebbe troppo veloce a raddoppiare la grādezza di tale stella; Di poi prova come la superficie dell'aria ne' cōfini del foco, e la superficie del foco nel suo termine è quel la, nella qual penetrādo li razzi solari portano la similitudine di corpi celesti grāde nel lor leua're, e però è piccola, essendo esse nel mezzo del celo; sia la terra  $a | n d m$  sia la superficie dell'aria che confina colla spera del foco;  $h f g$  sia il corso della luna o vuoi del sole; dico che quando il sole apparisce al orizzonte  $g$ , che lì sono ueduti li sua razzi passare per la superficie dell'aria infra angoli inequali cioè  $o m$ , il che non è in  $d k$ , e ancora passa per maggiore grossezza d'aria; tutto  $e m$  è aria più spessa.

W. XXVI]

Infra l' sole e noi è tenebre, e però l'aria pare azzurra.

The principles of astronomical perspective  
(868—873).

THE METHOD OF PROVING THAT THE EARTH IS A STAR.

First describe the eye; then show how the twinkling of a star is really in the eye and why one star should twinkle more than another, and how the rays from the stars originate in the eye; and add, that if the twinkling of the stars were really in the stars—as it seems to be—that this twinkling appears to be an extension as great as the diameter of the body of the star; therefore, the star being larger than the earth, this motion effected in an instant would be a rapid doubling of the size of the star. Then prove that the surface of the air where it lies contiguous to fire, and the surface of the fire where it ends are those into which the solar rays penetrate, and transmit the images of the heavenly bodies, large when

they rise, and small, when they are on the meridian. Let  $a$  be the earth and  $n d m$  the surface of the air in contact with the sphere of fire;  $h f g$  is the orbit of the moon or, if you please, of the sun; then I say that when the sun appears on the horizon  $g$ , its rays are seen passing through the surface of the air at a slanting angle, that is  $o m$ ; this is not the case at  $d k$ . And so it passes through a greater mass of air; all of  $e m$  is a denser atmosphere.

868.

Beyond the sun and us there is darkness and so the air appears blue.

869.

## PERSPECTIVE.

It is possible to find means by which the eye shall not see remote objects as much

<sup>4</sup> la prospettiva naturale, le quali <sup>5</sup> diminuiscono mediante la curuità del' ochio, che è costretto a tagliare sopra di <sup>7</sup> se le piramidi di qualunque spetie che viene al <sup>8</sup> ochio infra angoli retti sperici; Ma <sup>9</sup> l'arte, che io insegnio qui in margine, ta<sup>10</sup>glia esse piramidi con angoli rettuti vicino alla superficie di tal popilla; Ma <sup>12</sup> la convessa popilla dell'occhio piglia sopra <sup>13</sup> di se tutto il nostro emisperio, e que<sup>14</sup>sta mostrerà solo una stella; ma doue <sup>15</sup> molte piccole stelle si ricevono per similitu<sup>16</sup>dine nella superficie della popilla, <sup>17</sup> le quali stelle son minime, questa di <sup>18</sup> mostrerà vna sola stella, ma fia grāde; <sup>19</sup> E così la luna di maggiore grādezza, e le su<sup>20</sup>e macule di più nota figura; A questo <sup>21</sup> nostro ochio si debbe fare v uetro pieno di <sup>22</sup> quell'acqua di che si fa mētione <sup>23</sup> nel 4 del libro 113 delle cose naturali, <sup>24</sup> la quale acqua fa parere spogliate di <sup>25</sup> vetro quelle cose che son congiatele nel<sup>26</sup> le palle del uetro cristallino.

#### DELL' OCCHIO.

<sup>28</sup> Infra li corpi miñori della popilla dell' occhio <sup>29</sup> quella fia manco nota a essa popilla, <sup>30</sup> la quale le sarà più vicina || E con questa <sup>31</sup> speriētia ci si è fatto noto che la virtù visiva nō <sup>32</sup> si riducie in pūto perchè se la ecc.;

<sup>33</sup> Leggi i margini.

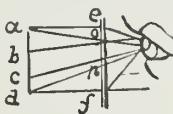

<sup>34</sup> Quella cosa si <sup>35</sup> dimostra maggi<sup>36</sup> ore, che uiene <sup>37</sup> all' occhio cō più <sup>38</sup> grosso angolo.

<sup>39</sup> Ma le spetie dell' ob<sup>40</sup>bietti, che cō-  
cor<sup>41</sup>rono alla popilla <sup>42</sup> dell' occhio, si con-  
par<sup>43</sup>tono sopra tal popi<sup>44</sup>lla nel medesimo  
<sup>45</sup> modo, ch' elle son cō<sup>46</sup>partite infra l' aria;  
<sup>47</sup> e la prova di ques<sup>48</sup>to è in se<sup>49</sup>guito; quādo noi <sup>50</sup> riguardiamo il <sup>51</sup> cielo stellato  
<sup>52</sup> sanza por la ui<sup>53</sup>sta più a una stel<sup>54</sup>la che all' altra, <sup>55</sup> che allora ci si mo<sup>56</sup>stra il cielo seminato<sup>57</sup>to di stelle, e sō pro<sup>58</sup>portionate nell' occhio <sup>59</sup> siccome lo sono in <sup>60</sup> cielo, e così li loro <sup>61</sup> spati fanno il simile.

20 and fol. Telescopes were not in use till a century later. Compare No. 910 and page 136.

diminished as in natural perspective, which diminishes them by reason of the convexity of the eye which necessarily intersects, at its surface, the pyramid of every image conveyed to the eye at a right angle on its spherical surface. But by the method I here teach in the margin[9] these pyramids are intersected at right angles close to the surface of the pupil. The convex pupil of the eye can take in the whole of our hemisphere, while this will show only a single star; but where many small stars transmit their images to the surface of the pupil those stars are extremely small; here only one star is seen but it will be large. And so the moon will be seen larger and its spots of a more defined form[20]. You must place close to the eye a glass filled with the water of which mention is made in number 4 of Book 113 "On natural substances"[23]; for this water makes objects which are enclosed in balls of crystalline glass appear free from the glass.

#### OF THE EYE.

Among the smaller objects presented to the pupil of the eye, that which is closest to it, will be least appreciable to the eye. And at the same time, the experiments here made with the power of sight, show that it is not reduced to speck if the &c.[32].

Read in the margin.

[34] Those objects are seen largest which come to the eye at the largest angles.

But the images of the objects conveyed to the pupil of the eye are distributed to the pupil exactly as they are distributed in the air: and the proof of this is in what follows; that when we look at the starry sky, without gazing more fixedly at one star than another, the sky appears all strewn with stars; and their proportions to the eye are the same as in the sky and likewise the spaces between them[61].

23. libro 113. This is perhaps the number of a book in some library catalogue. But it may refer, on the other hand, to one of the 120 Books mentioned in No. 796. 1. 84.

32. Compare with this the passage in Vol. I, No. 52, written about twenty years earlier.

## PERSPECTIVE.

Among objects moved from the eye at equal distance, that undergoes least diminution which at first was most remote.

When various objects are removed at equal distances farther from their original position, that which was at first the farthest from the eye will diminish least. And the proportion of the diminution will be in proportion to the relative distance of the objects from the eye before they were removed.

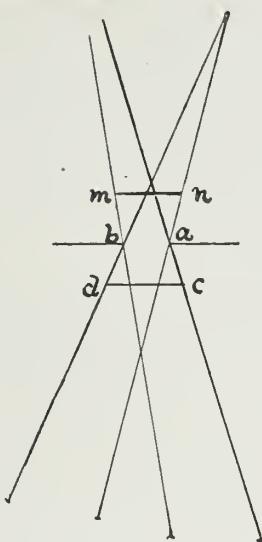

That isto say in the object *t* and the object *e* the proportion of their distances from the eye *a* is quintuple. I remove each from its place and set it farther from the eye by one of the 5 parts

into which the proposition is divided. Hence it happens that the nearest to the eye has doubled the distance and according to the last proposition but one of this, is diminished by the half of its whole size; and the body *e*, by the same motion, is diminished <sup>1/5</sup> of its whole size. Therefore, by that same last proposition but one, that which is said in this last proposition is true; and this I say of the motions of the celestial bodies which are more distant by 3500 miles when setting than when overhead, and yet do not increase or diminish in any sensible degree.

VOL. II.

“Perspective”) [9] and it will cover more of the water in proportion as the reflected image is remote from the eye [10].

The image of the sun will be more brightly shown in small waves than in large ones—and this is because the reflections or images of the sun are more numerous in the small waves than in large ones, and the more numerous reflections of its radiance give a larger light than the fewer.

Waves which intersect like the scales of a fir cone reflect the image of the sun with the greatest splendour; and this is the case because the images are as many as the ridges of the waves on which the sun

shines, and the shadows between these waves are small and not very dark; and the radiance of so many reflections together becomes united in the image which is transmitted to the eye, so that these shadows are imperceptible.

That reflection of the sun will cover most space on the surface of the water which is most remote from the eye which sees it.

Let  $a$  be the sun,  $\rho q$  the reflection of the sun;  $a b$  is the surface of the water, in which the sun is mirrored, and  $r$  the eye which sees this reflection on the surface of the water occupying the space  $o m$ .  $c$  is the eye at a greater distance from the surface of the water and also from the reflection; hence this reflection covers a larger space of water, by the distance between  $n$  and  $o$ .

must be meant. It is the lowest and actually the fifth, but he would have called it the fourth, for the text here given is preceded on the same page of the manuscript by a passage on whirlpools, with

<sup>19</sup>Qui si concluderà che ciò che della luna <sup>20</sup>splende è acqua simile a quella degl<sup>21</sup>li nostri mari, e così inōdata, ciò <sup>22</sup>che di lei non splende sone isole e ter<sup>23</sup>ra ferma.

## 876.

It is impossible that the side of a spherical mirror, illuminated by the sun, should reflect its radiance unless this mirror were undulating or filled with bubbles.

You see here the sun which lights up the moon, a spherical mirror, and all of its surface, which faces the sun is rendered radiant.

Whence it may be concluded that what shines in the moon is water like that of our seas, and in waves as that is; and that portion which does not shine consists of islands and terra firma.

<sup>24</sup>Questa dimostrazione di tanti corpi sperici interposti infra l'occhio <sup>25</sup>e 'l sole è fatta per mostrare che, siccome in ciascuno d'essi <sup>26</sup>corpi si uede il simulacro del sole, così si può vedere esso simulacro in ciascuna globosità dell'onde del mare; come in molti di questi sperici si <sup>28</sup>uedono molti soli, così in molte onde si uedono molti lustri, li quali in molta <sup>29</sup>distanzia, ciascū lustro per se, si fanno grādi all' occhio e, così faciēdo ciascu<sup>30</sup>na onda, si uengono a con-

This diagram, of several spherical bodies interposed between the eye and the sun, is given to show that, just as the reflection of the sun is seen in each of these bodies, in the same way that image may be seen in each curve of the waves of the sea; and as in these many spheres many reflections of the sun are seen, so in many waves there are many images, each of which at a great distance is much magnified to the eye. And, as this happens with each wave, the spaces

879.

## LAUDE DEL SOLE.

The question of the true size of the sun (879-884).  
Si fa a veder<sup>3</sup>le per un piccolo foro fatto colla strema puta da<sup>4</sup>la sottile aguglia, e questo posto quasi a toccare l'occhio), tu uedrai esse stelle essere tanto minimie che nul<sup>o</sup>la cosa pare essere minore, e ueramente la lūga di<sup>7</sup>tātia le fa ragionevolmente diminuire, ancorachè<sup>8</sup> molte vi sono che son moltissime volte maggiori che la <sup>9</sup>stella cioè la terra coll'acqua; ora pensa quel che par<sup>10</sup>rebbe essa nostra stella in tata distantia, e conside<sup>11</sup>ra poi, quāte stelle si metterebbero e per longitudine e latitudine infra esse stelle, le quali sono seminata per esso spatio tenebroso; mai nō posso fare <sup>14</sup>ch'io non biasimi molti di quelli antichi, li quali disse<sup>15</sup>ro che 'l sole non avea altra grādezza che quella che <sup>16</sup>mostra, ifra quali fu Epicuro, e credo che caua<sup>17</sup>si tale ragione da vn lume posto in questa nostra a<sup>18</sup>ria, equidistāte al cētro; chi lo uede, non lo uede mai di<sup>19</sup>minuito di grādezza in nessuna distātia; e le ragi-

## IN PRAISE OF THE SUN.

If you look at the stars, cutting off the rays (as may be done by looking through a very small hole made with the extreme point of a very fine needle, placed so as almost to touch the eye), you will see those stars so minute that it would seem as though nothing could be smaller; it is in fact their great distance which is the reason of their diminution, for many of them are very many times larger than the star which is the earth with water. Now reflect what this our star must look like at such a distance, and then consider how many stars might be added—both in longitude and latitude—between those stars which are scattered over the darkened sky. But I cannot forbear to condemn many of the ancients, who said that the sun was no larger than it appears; among these was Epicurus, and I believe that he founded his reason on the effects of a light placed in our atmosphere equidistant from the centre of the earth. Any one looking at it never sees it diminished in size at whatever distance; and the rea-

**880. 2.** *Socrates*; I have little light to throw on this reference. Plato's Socrates himself declares on more than one occasion that in his youth he had turned his mind to the study of celestial phenomena (*Mētēwpa*) but not in his later years (see G. C. LEWIS, *The Astronomy of the ancients*, page 109; MÄDLER, *Geschichte der Himmelskunde*, page 41). Here and there in Plato's writings we find incidental notes on the sun and other heavenly bodies. Leonardo may very well have known of these, since the Latin version by Ficinus was printed as early as 1491; indeed an undated edition exists which may very likely have appeared between 1480—90.

There is but one passage in Plato, *Epinomis* (p. 983) where he speaks of the physical properties of the sun and says that it is larger than the earth.

## 880.

sons of its size and power I shall reserve for Book 4. But I wonder greatly that Socrates[2] should have depreciated that solar body, saying that it was of the nature of incandescent stone, and the one who opposed him as to that error was not far wrong. But I only wish I had words to serve me to blame those who are fain to extol the worship of men more than that of the sun; for in the whole universe there is nowhere to be seen a body of greater magnitude and power than the sun. Its light gives light to all the celestial bodies which are distributed throughout the universe; and from it descends all vital force, for the heat that is in living beings comes from the soul [vital spark]; and there is no other centre of heat and light in the universe as will be shown in Book 4; and certainly those who have chosen to worship men as gods—as Jove, Saturn, Mars and the like—have fallen into the gravest error, seeing that even if a man were as large as our earth, he would look no bigger than a little star which appears but as a speck in the universe; and seeing again that these men are mortal, and putrid and corrupt in their sepulchres.

Marcellus[23] and many others praise the sun.

## 881.

Epicurus perhaps saw the shadows cast by columns on the walls in front of them equal in diameter to the columns from which the

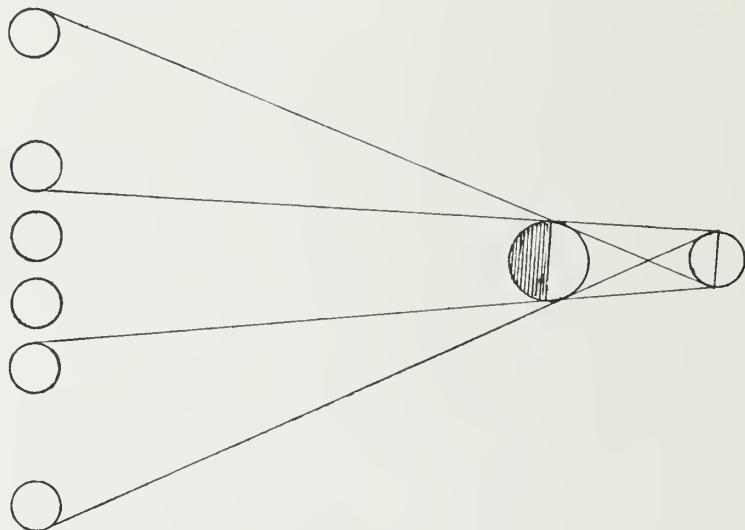

Aristotle who goes very fully into the subject says the same. A complete edition of Aristotle's works was first printed in Venice 1495—98, but a Latin version of the Books *De Coelo et Mundo* and *De Physica* had been printed in Venice as early as in 1483 (H. MÜLLER-STRÜBING).

23. I have no means of identifying *Marcello* who is named in the margin. It may be Nonius Marcellus, an obscure Roman Grammarian of uncertain date (between the II<sup>nd</sup> and V<sup>th</sup> centuries A. C.) the author of the treatise *De compendiosa doctrina per litteras ad filium* in which he treats *de rebus omnibus et quibusdam aliis*. This was much read in the middle ages. The *editio princeps* is dated 1470 (H. MÜLLER-STRÜBING).

881. In the original the writing is across the diagram.

talē ūbra; essendo adunque il cōcōrso dell' ūbre paralello dall'suo nascimēto al suo fine, <sup>3</sup>li parue da giudicare che 'l sole an̄cora lui fusse frōte di tal paralello, e per cōsegūēza non essere piv grosso di tal colonna, e nō s'avvide che tal diminuitione

shadows were cast; and the breadth of the shadows being parallel from beginning to end, he thought he might infer that the sun also was directly opposite to this parallel and that consequently its breadth was not greater than that of the column; not perceiving that the diminution in the shadow was

d' ūbra era insēibile <sup>10</sup>per la lunga distan̄ia del sole; <sup>11</sup>se 'l sole fusse minore della terra, le stelle <sup>12</sup>di grā parte del nostro emisferio sarebbero sa<sup>13</sup>za lume; cōtro a Epicuro che dice, tāto è <sup>14</sup>grāde il sole, quāto e' pare.

insensibly slight by reason of the remoteness of the sun. If the sun were smaller than the earth, the stars on a great portion of our hemisphere would have no light, which is evidence against Epicurus who says the sun is only as large as it appears.

F. 85]

## 882.

Dice Epicuro il sole essere tāto quāto esso si dimostra; a<sup>2</sup>dunque e'pare essere vn piē, e così l'abbiamo a tenere; <sup>3</sup>seguirebbe che la luna quād'ella fa oscurare il sole, il so<sup>4</sup>le non l'avāzerebbe di grādezza come e'fa, onde, sendo <sup>5</sup>la luna minor del sole, essa luna sarebbe meno d'un piede, <sup>6</sup>e per conseguēza quando il nostro mōdo fa oscurare la lu<sup>7</sup>na, sarebbe minore a un dito del piedi, conciò sia se 'l so<sup>8</sup>le è un piede, e la nostra terra fa onbra piramidale in<sup>9</sup>verso la luna, egli è necessario che sia maggiore il lumi<sup>10</sup>noso, causa della piramide ūbrosa, che l'opaco, causa d'essa <sup>11</sup>piramide.

Epicurus says the sun is the size it looks. Hence as it looks about a foot across we must consider that to be its size; it would follow that when the moon eclipses the sun, the sun ought not to appear the larger, as it does. Then, the moon being smaller than the sun, the moon must be less than a foot, and consequently when our world eclipses the moon, it must be less than a foot by a finger's breadth; inasmuch as if the sun is a foot across, and our earth casts a conical shadow on the moon, it is inevitable that the luminous cause of the cone of shadow must be larger than the opaque body which casts the cone of shadow.

882. 2. labia no attenere. 3. seguirebbe chella. 4. nollauāzerebbe . . grādeza chome. 5. medun piedi. 6. chonsequēza . . osscurar. 7. concosia. 8. piedi ella. 9. luna "la" egli . . magore. 10. caua della.

884. Poseidonius of Apamea, commonly called the Rhodian, because he taught in Rhodes, was a Stoic philosopher, a contemporary and friend of Cicero's, and the author of numerous works on natural science, among them: Φυσικὸς λόγος, περὶ κόσμου, περὶ μετεώρων.

Strabo quotes no doubt from one of his works, when he says that Poseidonius explained how it was that the sun looked larger when it was rising or setting than during the rest of its course (III, p. 135).

883.

To measure how many times the diameter of the sun will go into its course in 24 hours.

Make a circle and place it to face the south, after the manner of a sundial, and place a rod in the middle in such a way as that its length points to the centre of this circle, and mark the shadow cast in the sunshine by this rod on the circumference of the circle, and this shadow will be—let us say—as broad as from *a* to *n*. Now measure how many times this shadow will go into this circumference of a circle, and that will give you the number of times that the solar body will go into its orbit in 24 hours. Thus you may see whether Epicurus was [right in] saying that the sun was only as large as it looked; for, as the apparent diameter of the sun is about a foot, and as that sun would go a thousand times into the length of its course in 24 hours, it would have gone a thousand feet, that is 300 braccia, which is the sixth of a mile. Whence it would follow that the course of the sun during the day would be the sixth part of a mile and that this venerable snail, the sun will have travelled 25 braccia an hour.

884.

Posidonius composed books on the size of the sun.

885.

OF THE PROOF THAT THE SUN IS HOT BY NATURE AND NOT BY VIRTUE.

That the heat of the sun resides in its nature and not in its virtue [or mode of Sunlight].

Kleomedes, a later Greek Naturalist also mentions this observation of Poseidonius' without naming the title of his work; however, as Kleomedes' Cyclia Theorica was not printed till 1535, Leonardo must have derived his quotation from Strabo. He probably wrote this note in 1508, and as the original Greek was first printed in Venice in 1516, we must suppose him to quote here from the translation by Guarinus Veronensis, which was printed as early as 1471, also at Venice (H. MÜLLER-STRÜBING).

per solo splendore del corpo solare, nel qual nō si può fermare l'occhio vmano, e oltre a di questo manifestissima<sup>8</sup>mēte lo dimostrano li sua razzi refle<sup>9</sup>ssi dalli specchi concavi, li quali, quā<sup>10</sup>do la lor percussione sarà di tāto sp<sup>11</sup>lendore, che l'occhio non lo possa soppo<sup>12</sup>rtare, allora essa percussione<sup>13</sup>avrà splendore simile al sole nel<sup>14</sup>suo proprio sito; e che sia vero, pro<sup>15</sup>yo che se tale specchio à la sua<sup>16</sup>cōcavità tal qual si richiede alla<sup>17</sup>generazione di tale razzo, allora<sup>18</sup>nessuna cosa creata reggerà<sup>19</sup>alla caldezza di tale percussione<sup>20</sup>di razzo reflesso d'alcuno specchio; <sup>21</sup>e se tu dirai che lo specchio anco<sup>22</sup>ra lui è freddo e gitta i razzi caldi, io<sup>23</sup>ti rispondo, che 'l razzo viē dal sole ed è<sup>24</sup>il razzo<sup>25</sup>dello specchio concava<sup>27</sup>vo, passa<sup>28</sup>to<sup>29</sup>a traverso della<sup>31</sup>finestra.

PRUOVA · COME QUĀTO PIV · SARAI PRESSO ALLA CAGIONE · DE' RAZZI DEL SOLE ·, PIV TI PARRÀ MAGGIORE IL SOLE<sup>3</sup> SPECHIATO SUL MARE.

<sup>4</sup>Se il sole adopera il suo splendore col suo ciētro<sup>5</sup>a fortificare la potētia di tutto il corpo, è ne<sup>6</sup>cessario · che i sua razzi, quāto piv · s' alontanano da lui, piv si uadino<sup>7</sup>aprēdo: se così è, tu che sei col occhio presso all'acqua · che specchia il sole,<sup>8</sup>vedi una minima parte de' razzi del sole portate sulla superficie<sup>9</sup>del acqua la forma d'esso sole specchiat<sup>·</sup>, e se tu sarai presso al sole,<sup>10</sup>come sarebbe quādo il sole è i mezzodì e 'l mare sia per ponēte, vedrai il sole spechiarsi sù detto mare di grādis-

action] is abundantly proved by the radiance of the solar body on which the human eye cannot dwell and besides this no less manifestly by the rays reflected from a concave mirror, which—when they strike the eye with such splendour that the eye cannot bear them—have a brilliancy equal to the sun in its own place. And that this is true I prove by the fact that if the mirror has its concavity formed exactly as is requisite for the collecting and reflecting of these rays, no created being could endure the heat that strikes from the reflected rays of such a mirror. And if you argue that the mirror itself is cold and yet send forth hot rays, I should reply that those rays come really from the sun and that it is the ray of the concave mirror after having passed through the window.

## 886.

The sun does not move.

<sup>14</sup> 1<sup>a</sup> ¶ Nessū lievissimo <sup>15</sup>è opaco; ¶

<sup>16</sup> 2<sup>a</sup> ¶ Nessū più lieve sta <sup>17</sup>sotto al mē lieve; ¶

<sup>18</sup> 3<sup>a</sup> ¶ Se la luna à sito <sup>19</sup>in mezzo ai sua elemē<sup>20</sup>mēti o no;

<sup>21</sup> e s'ella non à sito <sup>22</sup>particulare co-  
<sup>23</sup>me la terra nelli sua <sup>24</sup>elemēti, per-  
chè nō ca<sup>25</sup>de al centro de' nostri <sup>26</sup>elemēti?

<sup>27</sup> E se la luna non è <sup>28</sup>in mezzo alli  
sua elemē<sup>29</sup>ti e nō discēde, <sup>30</sup>adūque ella  
è più <sup>31</sup>lieve che altro elemē<sup>32</sup>to;

<sup>33</sup> E se la luna è più lieve che altro  
elemēto, per<sup>35</sup>chè è solida e nō traspare.

<sup>36</sup> ¶ Delle cose di varie grādezzze che,  
poste in varie distātiae, <sup>37</sup>si mostrano e-  
quali, tal proporzione fia da distātia a  
distātia, qual fia da magnitudine a mag-  
nitudine. ¶

width at the angle nearest to the eye, as at the highest line of the waves on the horizon; but notwithstanding this the solar rays reflected from the waves of the sea assume the pyramidal form and consequently, at each degree of distance increase proportionally in size, although to our sight, they appear as parallel.

1<sup>st</sup>. Nothing that has very little weight is opaque.

2<sup>dly</sup>. Nothing that is excessively weight can remain beneath that which is heavier.

3<sup>dly</sup>. As to whether the moon is situated in the centre of its elements or not.

And, if it has no proper place of its own, like the earth, in the midst of its elements, why does it not fall to the centre of our elements [26]?

And, if the moon is not in the centre of its own elements and yet does not fall, it must then be lighter than any other element.

And, if the moon is lighter than the other elements why is it opaque and not transparent?

When objects of various sizes, being placed at various distances, look of equal size, there must be the same relative proportion in the distances as in the magnitudes of the objects.

## DELLA LUNA E SE ELLA È PULITA E SPERICA.

## OF THE MOON AND WHETHER IT IS POLISHED AND SPHERICAL.

<sup>2</sup> Il simulacro del sole in lei è potētemen-  
te luminoso ed è in piccola parte della  
su<sup>4</sup>a superficie; E la prova vedrai a torsre  
vna palla d'oro brunito, posta nel'e tene-  
bre, con vn lume da lei remoto, <sup>7</sup>il quale  
ancorachē esso allumini circa <sup>8</sup>la metà d'essa  
palla, l'ochio non lo uede, se nō <sup>9</sup>in piccola  
parte della sua superficie, e tut<sup>10</sup>to il resto  
di tal superficie specchia le tenebre <sup>11</sup>che  
la circūdano, e per questo in lei soloappa-  
<sup>12</sup>risce il simulacro del lume e tutto il re<sup>13</sup>sto  
rimane invisibile, stando l'ochio remo<sup>14</sup>to  
da tal palla; Questo medesimo interue-  
<sup>15</sup>rrebbe nella superficie della luna, essendo  
po<sup>16</sup>lita, lustra e densa, come son corpi  
che spe<sup>17</sup>chiano;

The image of the sun in the moon is powerfully luminous, and is only on a small portion of its surface. And the proof may be seen by taking a ball of burnished gold and placing it in the dark with a light at some distance from it; and then, although it will illuminate about half of the ball, the eye will perceive its reflection only in a small part of its surface, and all the rest of the surface reflects the darkness which surrounds it; so that it is only in that spot that the image of the light is seen, and all the rest remains invisible, the eye being at a distance from the ball. The same thing would happen on the surface of the moon if it were polished, lustrous and opaque, like all bodies with a reflecting surface.

895. 13. At A, in the diagram, Leonardo wrote "sole" (the sun), and at B "luna o noi terra" (the moon or our earth). Compare also the text of No. 876.

## 894.

How shadows are lost at great distances, as is shown by the shadow side of the moon which is never seen.

## 895.

Either the moon has intrinsic luminosity or not. If it has, why does it not shine without the aid of the sun?

But if it has not any light in itself it must of necessity be a spherical mirror; and if it is a mirror, is it not proved in Perspective that the image of a luminous object will never be equal to the extent of surface of the reflecting body that it illuminates? And if it be thus [13], as is here shown at *r s* in the figure, whence comes so great an extent of radiance as that of the full moon as we see it, at the fifteenth day of the moon?

Br. M. 948]

## DELLA LUNA.

<sup>2</sup>La luna non à lume da se, se nò  
quâto ne vede il sole tanto l'allumina,  
<sup>3</sup>della qual luminosità tanto ne vediamo  
quâto è quella che vede noi; <sup>4</sup>E la sua  
notte ricieva tanto di spléodore, quâto è  
quello che li pre<sup>s</sup>tano le nostre acque nel  
refletterli il simulacro del sole, che in  
<sup>6</sup>tutte quelle che vedono il sole e la luna,  
si specchia; <sup>7</sup>La pelle over superficie dell'  
acqua, di che si cōpone il mare della luna  
e il <sup>8</sup>mare della nostra terra, è senpre  
rugoso, <sup>9</sup>o poco o assai, o più, o meno, e  
tale rugosità è cavsa di dila<sup>10</sup>tare l'innu-  
merabili simulacri del sole, che nei colli e  
cōcavità e la<sup>11</sup>ti e frōti delle innumerabili  
rughe si specchiano, cioè in tāti vari siti di  
ciascuna <sup>12</sup>ruja quâto son vari li siti che  
ànno li ochi che le vedono, jl che ac<sup>13</sup>cader-  
re nō potrebbe, se la spera dell' acqua,  
che i grā parte di se veste la <sup>14</sup>luna fusse  
d'uniforme spericità, perchè allora il simu-  
lacro del <sup>15</sup>sole sarebbe uno a ciascuno  
occhio, e la sua reflessione sarebbe particu-  
<sup>16</sup>lare e senpre sarebbe spléodore sperico,  
come manifestamē<sup>17</sup>te ci assegnano le palle  
dorate, poste nelle sommità delli alti edi-  
fiti; Ma <sup>18</sup>se tali palle dorate fussino rugose  
o globulēti come son le mo<sup>19</sup>re, frutti neri  
composti di minute globosità rotonde, allora  
ciascuna delle parti d'essa <sup>20</sup>globosità, ve-  
dute dal sole e dall'ochio, mostrerà a esso  
ochio il lustro <sup>21</sup>gienerato dal simulacro  
d'esso sole, e così in ū medesimo corpo si  
ue<sup>22</sup>drebbro molti minimi soli, li quali  
spesse sō le volte che per lunga distâtia  
<sup>23</sup>si uniscono e paiono cōtinuati; E 'l lustro  
della luna nuova è più lucido e più <sup>24</sup>potête  
che quâdo è in plénilunio, e questo si ca-  
<sup>25</sup>vsra perchè l'angolo della incidētia è molto  
più ottuso nella luna nuo<sup>26</sup>va che nella  
vecchia, doue tali angoli sono acutissimi;  
e l'onde della <sup>27</sup>luna specchiano il sole così  
nelle lor ualli come nelli colli, e li lati  
<sup>28</sup>restano oscuri; ma ne' lati della luna li  
fondi dell'onde non <sup>29</sup>vedono il sole, ma

## 896.

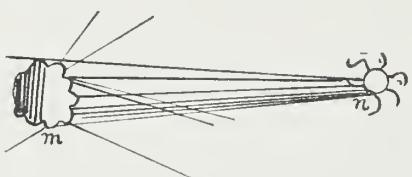

## OF THE MOON.

The moon has no light in itself; but so much of it as faces the sun is illuminated, and of that illumined portion we see so much as faces the earth. And the moon's night receives just as much light as is lent it by our waters as they reflect the image of the sun, which is mirrored in all those waters which are on the side towards the sun. The outside or surface of the waters forming the seas of the moon and of the seas of our globe is always ruffled little or much, or more or less—and this roughness causes an extension of the numberless images of the sun which are repeated in the ridges and hollows, the sides and fronts of the innumerable waves; that is to say in as many different spots on each wave as our eyes find different positions to view them from. This could not happen, if the aqueous sphere which covers a great part of the moon were uniformly spherical, for then the images of the sun would be one to each spectator, and its reflections would be separate and independent and its radiance would always appear circular; as is plainly to be seen in the gilt balls placed on the tops of high buildings. But if those gilt balls were rugged or composed of several little balls, like mulberries, which are a black fruit composed of minute round globules, then each portion of these little balls, when seen in the sun, would display to the eye the lustre resulting from the reflection of the sun, and thus, in one and the same body many tiny suns would be seen; and these often combine at a long distance and appear as one. The lustre of the new moon is brighter and stronger, than when the moon is full; and the reason of this is that the angle of incidence is more obtuse in the new than in the full moon, in which the angles [of incidence and reflection] are highly acute. The waves of the moon therefore mirror the sun in the hollows of the waves as well as on the ridges, and the sides remain in shadow. But at the sides

solo uedono le cime d'esse òde, e per questo li simu<sup>30</sup>lacri son più rari e più misti coll'onbre delle valli, e tal mistione <sup>31</sup>delle spetie òbrose e luminose, così insieme infuse, vengono all'o<sup>32</sup>chio cō poco spléodore, e nelli stremi sarā piv oscure per essere <sup>33</sup>la curuità de' lati di tale òde insuffitiēte a riflettere all'ochio li ri<sup>34</sup>cievuti razzi; La luna nova per natura riflette li <sup>35</sup>razzi solari più inverso l'ochio per tali

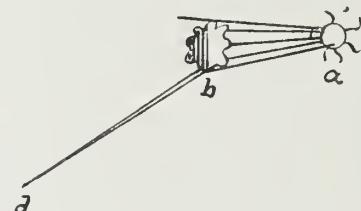

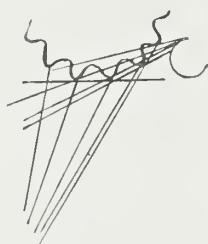

of the moon the hollows of the waves do not catch the sunlight, but only their crests; and thus the images are fewer and more mixed up with the shadows in the hollows; and this intermingling of the shaded and illuminated spots comes to the eye with a mitigated splendour, so that the edges will be darker, because the curves of the sides of the waves are insufficient to reflect to the eye the rays that fall upon them. Now the new moon naturally reflects the solar rays more directly towards the eye from the

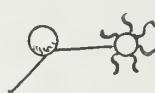

òde streme, <sup>36</sup>che per nessuno altro loco, come mostra la figura della luna che <sup>37</sup>percuotēdo con razzi *a* nell'onda *b* riflette in *b d*, dou' è situa<sup>38</sup>to l'ochio *d*; E questo accadere nō può nel plenilunio dove <sup>39</sup>il razzo solare, stando all'occidēte, percuote l'onde streme della <sup>40</sup>luna all'oriēte dal *n* in *m*, e non riflette inverso l'oc<sup>41</sup>chio occidētale, ma risalta all'oriēte, poco piegādo la rettitudine d'esso razzo solare, e così l'angolo della incidētia è grossissimo.

<sup>43</sup>La luna è corpo opa<sup>44</sup>co e solido, e se per lo a<sup>45</sup>versario ella fusse trāspa<sup>46</sup>rente, ella nō riceverebbe <sup>47</sup>il lume del sole.

<sup>48</sup>Il rossume over tutt'oro dell'o<sup>49</sup>vo sta <sup>50</sup>in mezzo al suo al<sup>51</sup>bumo sanza discēdere <sup>52</sup>d'alcuna parte, ed è pi<sup>53</sup>v lieve o più grave o equale d'esso <sup>54</sup>albume; e s'elli è più li<sup>55</sup>eve egli doverebbe surgie<sup>56</sup>re sopra tutto l'albume e <sup>57</sup>fermarsi in cōtatto del-

crests of the waves than from any other part, as is shown by the form of the moon, whose rays *a* strike the waves *b* and are reflected in the line *b d*, the eye being situated at *d*. This cannot happen at the full moon, when the solar rays, being in the west, fall on the extreme waters of the moon to the East from *n* to *m*, and are not reflected to the eye in the West, but are thrown back eastwards, with but slight deflection from the straight course of the solar ray; and thus the angle of incidence is very wide indeed.

The moon is an opaque and solid body and if, on the contrary, it were transparent, it would not receive the light of the sun.

The yellow or yolk of an egg remains in the middle of the albumen, without moving on either side; now it is either lighter or heavier than this albumen, or equal to it; if it is lighter, it ought to rise above all the albumen and stop in contact with the shell

<sup>32.</sup> chō pocho .. osschure. <sup>33.</sup> churuita .. arefrettare. <sup>34.</sup> razza da qual chosa la luna .. refrette. <sup>35.</sup> razi .. tale. <sup>36.</sup> locho .. mosstra la fighura. <sup>37.</sup> percho tendo cho razi b e rēfrette. <sup>38.</sup> Ecquesto achadere .. dove || o. <sup>39.</sup> razo solare [que] perchote stando allocidēte perchote lonte. <sup>40.</sup> refrette. <sup>41.</sup> pocho pieghādo. <sup>42.</sup> chosi langholo. <sup>43.</sup> chorpo. <sup>44.</sup> cho essolido esse. <sup>45.</sup> e fussi. <sup>46.</sup> enō. <sup>49.</sup> sta [in in al piu delle]. <sup>50.</sup> [volte] in. <sup>51.</sup> dissciēdere. <sup>52.</sup> dalchuna. <sup>53.</sup> greve "o equale" desso. <sup>54.</sup> eselli. <sup>55.</sup> eve edovere vesurgie. <sup>57.</sup> chōtratto. <sup>58.</sup> la [sua scho] schorza. <sup>59.</sup> hovo

38. This refers to the small diagram placed between B and B. — 39. See the diagram below the one referred to in the preceding note.

in such a way as that so much of its surface as is illuminated by the sun, should reflect the sun unless the moon had a surface adapted to reflect it—in waves and ridges, like the surface of the sea when its surface is moved by the wind.

The waves in water multiply the image of the object reflected in it.

These waves reflect light, each by its own line, as the surface of the fir cone does [14].

These are 2 figures one different from the other; one with undulating water and the other with smooth water.

It is impossible that at any distance the image of the sun cast on the surface of a spherical body should occupy the half of the sphere.

Here you must prove that the earth produces all the same effects with regard to the moon, as the moon with regard to the earth.

The moon, with its reflected light, does not shine like the sun, because the light of the moon is not a continuous reflection of that of the sun on its whole surface, but only on the crests and hollows of the waves of its waters; and thus the sun being confusedly reflected, from the admixture of the shadows that lie between the lustrous waves, its light is not pure and clear as the sun is.

[38]The earth between the moon on the fifteenth day and the sun. [39]Here the sun is in the East and the moon on the fifteenth day in the West. [40]The moon on the fifteenth [day] between the earth and the sun. [41]Here it is the moon which has the sun to the West and the earth to the East.

#### 898.

#### WHAT SORT OF THING THE MOON IS.

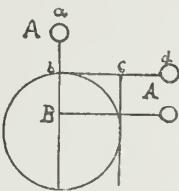

The moon is not of itself luminous, but is highly fitted to assimilate the character of light after the manner of a mirror, or of water, or of any other reflecting body; and it grows larger in the East and in the West, like the sun and the other planets. And the reason is that every luminous body looks

40. 41. Refers to the diagram below the others.

898. This text has already been published by LIBRI: *Histoire des Sciences*, III, pp. 224, 225.

· luminoso · quāto piv . s'allontana · piv cresce ·; Chiaro · si può · cōprēdere · che · ogni pianeta e stel<sup>la</sup> · è piv lontano · da noi nel ponēte che quādo · ci è · sopra · capo ·, circa · 3500, per la pruova se<sup>g</sup>nata · da parte ·, e se uedi specchiare · il sole o la luna nell'acqua che ti sia · vicina, ·<sup>8</sup>paratti in detta acqua della grādezza che ti · pare · in cielo; E se t'allontanerai vno ·<sup>9</sup> miglio · parrà maggiore 100 volte, e se lo vedrai specchiare · i mare

<sup>10</sup>nel tramōtare · il sole · specchiato · ti · parrà grāde · piv di · 10 · miglia, per<sup>11</sup>chè occuperà · in detta specchiatione · piv · di 10 miglia · di marina ·, e se tu füssi <sup>12</sup>dov'è la luna · parrebbe ti · esso · sole specchiarsi · in tāto · mare · quāto egli<sup>13</sup>n'allumina · alla giornata ·, e la terra · parrebbe infra detta · aqua come pajono · le <sup>14</sup>macchie scure che sono · in nella · luna ·, la quale stādo in terra · si dimostra ta<sup>15</sup>le agli omini, qual farebbe agli omini che abitassino · nella luna il nostro <sup>16</sup>mondo · appūto.

larger in proportion as it is remote. It is easy to understand that every planet and star is farther from us when in the West than when it is overhead, by about 3500 miles, as is proved on the margin[7], and if you see the sun or moon mirrored in the water near to you, it looks

to you of the same size in the water as in the sky. But if you recede to the distance of a mile, it will look 100 times larger; and if you see the sun reflected in the sea

at sunset, its image would look to you more than 10 miles long; because that reflected image extends over more than 10 miles of sea. And if you could stand where the moon is, the sun would look to you, as if it were reflected from all the sea that it illuminates by day; and the land amid the water would appear just like the dark spots that are on the moon, which, when looked at from our earth, appears to men the same as our earth would appear to any men who might dwell in the moon.

#### DELLA QUALITÀ · DELLA · LUNA.

<sup>18</sup>La luna quādo · è tutta · lumina · al nostro vedere, noi vediamo tutto il suo <sup>19</sup>giorno, e allora per riflessione de' razzi del sole, percossi in lei e risal-tati a noi, <sup>20</sup>l'oceano · suo · ci gitta · meno vmidità, e quāto mē è luce piv noce.

Leic. 30a]

899.

#### DELLA LUNA.

<sup>2</sup>Dico che non avendo la luna lume da se, essendo lumino-sa, egli<sup>l</sup> è necessario che tale lume <sup>3</sup>sia causato da altri.

#### OF THE NATURE OF THE MOON.

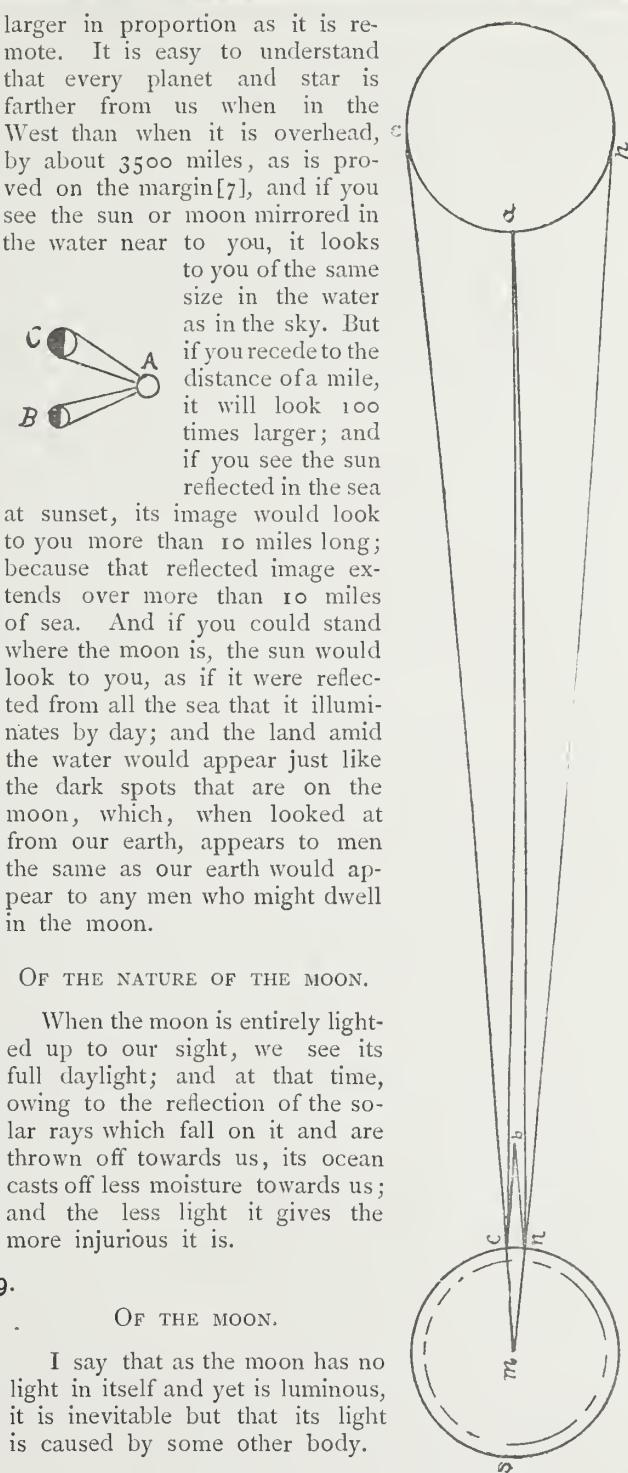

When the moon is entirely lighted up to our sight, we see its full daylight; and at that time, owing to the reflection of the solar rays which fall on it and are thrown off towards us, its ocean casts off less moisture towards us; and the less light it gives the more injurious it is.

#### OF THE MOON.

I say that as the moon has no light in itself and yet is luminous, it is inevitable but that its light is caused by some other body.

901. The large diagram on the margin of page 161 belongs to this chapter.

900.

## OF THE MOON.

All my opponent's arguments to say that there is no water in the moon.

901.

Answer to Maestro Andrea da Imola, who said that the solar rays reflected from a convex mirror are mingled and lost at a short distance; whereby it is altogether denied that the luminous side of the moon is of the nature of a mirror, and that consequently the light is not produced by the innumerable multitude of the waves of that sea, which I declared to be the portion of the moon which is illuminated by the solar rays.

Let *o p* be the body of the sun, *c n s* the moon, and *b* the eye which, above the base *c n* of the cathetus *c n m*, sees the body of the sun reflected at equal angles *c n*; and the same again on moving the eye from *b* to *a*.

902.

## OF THE MOON.

No solid body is less heavy than the atmosphere.

Having proved that the part of the moon that shines consists of water, which mirrors the body of the sun and reflects the radiance it receives from it; and that, if these waters were devoid of waves, it would appear small, but of a radiance almost like the sun; —[5] It must now be shown whether the moon is a heavy or a light body: for, if it were a heavy body—admitting that at every grade of distance from the earth greater levity must prevail, so that water is lighter than the earth, and air than water, and fire than air and so on successively—it would seem that if the moon had density as it really has, it would have weight, and having weight, that it could not be sustained in the space

spatio, ove essa si troua, non la potesse sostenere, e per conseguēza avessea discendere <sup>10</sup>inverso il centro dell' universo, e congiugnersi colla terra, e se nō lei, al māco le sue acque aues<sup>11</sup>sino a cadere e spogliarla di se e cadere inverso il cētro e lasciar di se la luna spogliata e sanza lūstro; òde, nō seguitando quel che di lei la ragione ci promette, egli è manifesto segno che tal luna è vestita de'sua <sup>13</sup>elemēti, cioè acqua, aria e foco, e così in se, per se si sostenga in quello spatio come fa la nostra ter<sup>14</sup>ra coi sua elemēti in quest' altro spatio, e che tale ofitio faccino le cose gravi ne' sua elemēti, qual fanno l'altre cose gravi nelli elemēti nostri.

<sup>16</sup> Quando l'ochio in oriēte vede la luna in occidente vicina al tramōtato sole, esso la vede <sup>17</sup>colla sua parte onbrosa circundata da parte lumīnosa, del quale lume la parte laterale <sup>18</sup>e superiore deriuia dal sole, e la parte inferiore deriva dallo oceano occidentale, il qual <sup>19</sup>ancora lui riceue li razzi solari e li riflette nelli inferiori mari della luna, e ancora per <sup>20</sup>tutta la parte obrosa della luna dà tanto di splendore, qual'è quel che dà la luna alla terra nella mez<sup>21</sup>zanotte, e perciò nō resta integralmēte scura, e di qui à alcuno creduto, che la <sup>22</sup>luna abbia in parte lume da se oltre a quel che gli è dato dal sole, il quale lume diriuia dalla ati<sup>23</sup>detta causa delli nostri mari alluminati dal sole.

<sup>24</sup> Ancora si potrebbe dire che'l cerchio dello splendore

where it is, and consequently that it would fall towards the centre of the universe and become united to the earth; or if not the moon itself, at least its waters would fall away and be lost from it, and descend towards the centre, leaving the moon without any and so devoid of lustre. But as this does not happen, as might in reason be expected, it is a manifest sign that the moon is surrounded by its own elements: that is to say water, air and fire; and thus is, of itself and by itself, suspended in that part of space, as our earth with its element is in this part of space; and that heavy bodies act in the midst of its elements just as other heavy bodies do in ours[15].

When the eye is in the East and sees the moon in the West near to the setting sun, it sees it with its shaded portion surrounded by luminous portions; and the lateral and upper portion of this light is derived from the sun, and the lower portion from the ocean in the West, which receives the solar rays and reflects them on the lower waters of the moon, and indeed affords the part of the moon that is in shadow as much radiance as the moon gives the earth at midnight. Therefore it is not totally dark, and hence some have believed that the moon must in parts have a light of its own besides that which is given it by the sun; and this light is due, as has been said, to the above-mentioned cause,—that our seas are illuminated by the sun.

Again, it might be said that the circle of radiance

however, having hitherto remained unknown to astronomers, Moestlin and Kepler have been credited with the discoveries which they made independently a century later.

Some disconnected notes treat of the same subject in MS. C. A. 239<sup>b</sup>; 718<sup>b</sup> and 719<sup>b</sup>: "Perchè la luna cinta della parte alluminata dal sole in ponente, tra maggior splendore in mezzo a tal cerchio, che quando essa eclissava il sole. Questo accade perchè nell' eclissare il sole ella ombrava il nostro oceano, il qual caso non accade essendo in ponente, quando il sole alluma esso oceano." The editors of the "Saggio" who first published this passage (page 12) add another short

shown by the moon when it and the sun are both in the West is wholly borrowed from the sun, when it, and the sun, and the eye are situated as is shown above.

Some might say that the air surrounding the moon as an element, catches the light of the sun as our atmosphere does, and that it is this which completes the luminous circle on the body of the moon.

Some have thought that the moon has a light of its own, but this opinion is false, because they have founded it on that dim light seen between the horns of the new moon, which looks dark where it is close to the bright part, while against the darkness of the background it looks so light that many have taken it to be a ring of new radiance completing the circle where the tips of the horns illuminated by the sun cease to shine [34]. And this difference of background arises from the fact that the portion of that background which is conterminous with the bright part of the moon, by comparison with that brightness looks darker than it is; while at the upper part, where a portion of the luminous circle is to be seen of uniform width, the result is that the moon, being brighter there than the medium or background on which it is seen by comparison with that darkness it looks more luminous at that edge than it is. And that brightness at such a time itself is derived from our ocean and other inland-seas. These are, at that time, illuminated by the sun which is already setting in such a way as that the sea then fulfils the same function to the dark side of the moon as the moon at its fifteenth day does to us when the

one about the seasons in the moon which I confess not to have seen in the original manuscript: "La luna ha ogni mese un verno e una state, e ha maggiori freddi e maggiori caldi, e i suoi equinozii son più freddi de' nostri."

23. 24. The larger of the two diagrams reproduced above stands between these two lines, and the smaller one is sketched in the margin. At the spot marked *A* Leonardo wrote *corpo solare* (solar body) in the larger diagram and *Sole* (sun) in the smaller one. At *C* *luna* (moon) is written and at *B* *terra* (the earth).

34. See Pl. CVIII, No. 5.

quando il sol'è tramōtato, e tal proporzione è da quel poco lume che à la parte oscura della luna alla chiarezza della parte alluminata, qual è dalla . . .

<sup>43</sup>Se uoi vedere <sup>44</sup>quanto la parte <sup>45</sup>onbrossa della luna <sup>46</sup>sia più chiara che'l <sup>47</sup>campo, ove tal luna si <sup>48</sup>trouva, occupa col<sup>49</sup>la mano, o con altro <sup>50</sup>obietto più distāte <sup>51</sup>all'occhio, la parte lu<sup>52</sup>minosa della luna.

F. 84a]

## MACULE DELLA LUNA.

<sup>2</sup>Alcuni dissero leuarsi da essa vapori a modo di <sup>3</sup>nugoli e interporri si infra la luna e li ochi no<sup>istri</sup>; il che, se così fusse, mai tali macule sarebbero stabili nè di siti nè di figura, e vedendo la <sup>6</sup>luna in diuersi aspetti, ancor che tal macule <sup>7</sup>no fossero variate, esse muterebbero figura come <sup>8</sup>fa quella cosa che si vede per più versi.

903.

## THE SPOTS ON THE MOON.

Some have said that vapours rise from the moon, after the manner of clouds and in the moon <sup>(903-907)</sup>, are interposed between the moon and our eyes. But, if this were the case, these spots would never be permanent, either as to position or form; and, seeing the moon from various aspects, even if these spots did not move they would change in form, as objects do which are seen from different sides.

F. 84b]

904.

## DELLE MACHIE DELLA LUNA.

<sup>2</sup>Altri dissero che la luna era composta di parti più <sup>3</sup>o mē transparenti, come se una parte fusse a modo <sup>4</sup>d'alabastro, e alcuna altra a modo di cristallo o vetro, <sup>5</sup>che ne seguirebbe che 'l sole, ferēdo colli sua razzi <sup>6</sup>nella parte mē transparēte, il lume rimarrebbe in <sup>7</sup>superficie, e così la parte più densa resterebbe allu<sup>8</sup>minata, e la parte transparēte mostrerebbe le <sup>9</sup>onbre delle profondità sue oscure, e così si cōpo-<sup>10</sup>ne la qualità della luna; e questa opinione è <sup>11</sup>piaciuta a molti filosofi, e massime a Aristotele, e <sup>12</sup>pure ella è falsa opinione, perchè ne' di<sup>13</sup>versi aspetti, che si trovano spesso la luna e il so<sup>14</sup>le alli nostri occhi, noi vedremmo variare tal ma<sup>15</sup>cule, e quando

## OF THE SPOTS ON THE MOON.

Others say that the moon is composed of more or less transparent parts; as though one part were something like alabaster and others like crystal or glass. It would follow from this that the sun casting its rays on the less transparent portions, the light would remain on the surface, and so the denser part would be illuminated, and the transparent portions would display the shadow of their darker depths; and this is their account of the structure and nature of the moon. And this opinion has found favour with many philosophers, and particularly with Aristotle, and yet it is a false view—for, in the various phases and frequent changes of the moon and sun to our eyes, we should see these spots vary, at one time looking dark and at another light: they would be dark when the sun is in the West and the

si farebbono oscure, e quādo chi<sup>16</sup>are; scure si farebbono, quādo il sole è in oc<sup>17</sup>cidēte e la luna nel mezzo del celo, chè allora le cōcauità transparēti piglierebbono l'onbre in<sup>18</sup>sino alle sommità de' labbri di tal cōcauità trās<sup>20</sup>parēti, perchè il sole nō potrebbe penetrare li<sup>21</sup>sua razzi dentro alle boche di tali cōcauità, <sup>22</sup>le quali parrebbono chiare nel plenilunio, <sup>23</sup>doue là luna in oriēte guarda il sole all'occidē<sup>24</sup>te; allora il sole alluminerebbe insino ne' fō<sup>25</sup>di di tali transparētie, e così, nō generādosi <sup>26</sup>onbre, la luna non ci mostrerebbe in tal tempo <sup>27</sup>le predette machie, e così ora piv ora meno, <sup>28</sup>secondo le mutatiō del sol dalla luna e della lu<sup>29</sup>na dai lochi nostri, come di sopra dissì.

F. 85 a]

## DELLE MACULE DELLA LUNA.

<sup>2</sup>Si è detto che le macule della luna son create in essa luna, <sup>3</sup>da essere in se di uaria rarità e dēsità, il che se così fusse, <sup>4</sup>nell'eclissi della luna i razzi solari pene- trebbono per <sup>5</sup>alcuna parte della predetta rarità, e, nō si ueden<sup>6</sup>do tale effetto, detta opinione è falsa;

<sup>7</sup>Altri dicono che la superficie della luna, essendo tersa <sup>8</sup>e pulita, che essa, a similitudine di specchio, riceue in <sup>9</sup>se la similitudine della terra; Questa openione <sup>10</sup>è falsa, conciosiachè la terra, scoperta dall'acqua, per diuer<sup>11</sup>si aspetti à diuerse figure; adunque, quando la luna <sup>12</sup>è all'oriēte, essa specchierebbe altre machie, che quā<sup>13</sup>do essa ci è di sopra, o quādo essa è in occidēte; però <sup>14</sup>le machie della luna, come si uede nel plenilunio, <sup>15</sup>mai si uariano nel moto da lei fatto nel nostro emi<sup>16</sup>sperio; <sup>2</sup>a ragione è, che la cosa specchia<sup>17</sup>ta nella convessità piglia piccola parte d' es<sup>18</sup>so specchio, com'è provato in prospettiva; <sup>3</sup>a ragione <sup>19</sup>li è, che nel plenilunio la luna vede solo il mezzo <sup>20</sup>della

moon in the middle of the sky; for then the transparent hollows would be in shadow as far as the tops of the edges of those transparent hollows, because the sun could not then fling his rays into the mouth of the hollows, which however, at full moon, would be seen in bright light, at which time the moon is in the East and faces the sun in the West; then the sun would illuminate even the lowest depths of these transparent places and thus, as there would be no shadows cast, the moon at these times would not show us the spots in question; and so it would be, now more and now less, according to the changes in the position of the sun to the moon, and of the moon to our eyes, as I have said above.

## 905.

## OF THE SPOTS ON THE MOON.

It has been asserted, that the spots on the moon result from the moon being of varying thinness or density; but if this were so, when there is an eclipse of the moon the solar rays would pierce through the portions which were thin as is alleged[5]. But as we do not see this effect the opinion must be false.

Others say that the surface of the moon is smooth and polished and that, like a mirror, it reflects in itself the image of our earth. This view is also false, inasmuch as the land, where it is not covered with water, presents various aspects and forms. Hence when the moon is in the East it would reflect different spots from those it would show when it is above us or in the West; now the spots on the moon, as they are seen at full moon, never vary in the course of its motion over our hemisphere. A second reason is that an object reflected in a convex body takes up but a small portion of that body, as is proved in perspective[18]. The third reason is that when the moon is full, it only faces half the hemisphere of the

piglierebono. <sup>10</sup> somita delabri. <sup>21</sup> razi. <sup>22</sup> parebono. <sup>23</sup> occidē. <sup>24</sup> alora. <sup>25</sup> mosterebbe. <sup>26</sup> ella lu.

tween the sun and the earth must appear as if pierced,—we may say like a sieve.

<sup>18</sup> come è provato. This alludes to the accompanying diagram.

905. 3—5. *Eclissi.* This word, as it seems to me, here means eclipses of the sun; and the sense of the passage, as I understand it, is that by the foregoing hypothesis the moon, when it comes be-

spera della terra alluminata, nella quale <sup>21</sup>l'oceano colle altre acque risplendono, e la terra <sup>22</sup>fa macule in esso splendore, e così si uedrebbe <sup>23</sup>la metà della nostra terra cinta dallo splendo<sup>24</sup>re del mare alluminato dal sole, e nella luna tal <sup>25</sup>similitudine sarebbe minima parte d'essa luna; <sup>26</sup>4<sup>a</sup> è che la cosa splendida non si specchia nell'<sup>27</sup>tra splendida; adunque il mare, pigliando splendo<sup>28</sup>re dal sole, siccome fa la luna, e' nō si potrebbe in lei spe<sup>29</sup>chiare tal terra, che ancora specchiar non vi si vedesse <sup>30</sup>particularmēte il corpo del sole e di ciascuna stel<sup>31</sup>la a lei opposta.

illuminated earth, on which only the ocean and other waters reflect bright light, while the land makes spots on that brightness; thus half of our earth would be seen girt round with the brightness of the sea lighted up by the sun, and in the moon this reflection would be the smallest part of that moon. Fourthly, a radiant body cannot be reflected from another equally radiant; therefore the sea, since it borrows its brightness from the sun,—as the moon does,—could not cause the earth to be reflected in it, nor indeed could the body of the sun be seen reflected in it, nor indeed any star opposite to it.

## 906.

Se terrai osservate le particule delle machie della luna, <sup>2</sup>tu troverai in quelle spesse uolte gran varietà, e di questo <sup>3</sup>ò fatto pruova io medesimo disegnādole; E questo nasce da nuvo<sup>4</sup>li che si leuano dall'acque d'essa luna, li quali s'interpongono <sup>5</sup>no infra 'l sole e essa acqua, e colla loro onbra tolgo<sup>6</sup>no i razzi del sole a tale acqua, onde essa acqua viene a ri<sup>7</sup>manere oscura, per non potere specchiare il corpo solare.

If you keep the details of the spots of the moon under observation you will often find great variation in them, and this I myself have proved by drawing them. And this is caused by the clouds that rise from the waters in the moon, which come between the sun and those waters, and by their shadow deprive these waters of the sun's rays. Thus those waters remain dark, not being able to reflect the solar body.

## 907.

Come le mac<sup>2</sup>chie della luna <sup>3</sup>son variate da <sup>4</sup>quel che già fu<sup>5</sup>rō, per causa del <sup>6</sup>corso delle sue <sup>7</sup>acque.

How the spots on the moon must have varied from what they formerly were, by reason of the course of its waters.

*quaedam specilla ocularia fiunt tantae densitatis, ut si per ea quis aut lunam, aut aliud siderum spectet, adeo propinqua illa iudicet, ut ne turres ipsas excedant*" (sect. II c. 8 and sect. III, c. 23).

## VI.

### THE STARS.

F. 58]

Veggonsi le stelle di notte e nō di dñ, per esser noi sotto <sup>2</sup>la grossezza dell'aria, la quale è piena d'infinte particule d'umidità, le quali, ciascuna per se quādo è percossa <sup>4</sup>dalli razzi del sole, rendono splendore, e così l'in<sup>5</sup>numerabili splēdori occupano esse stelle, e se <sup>6</sup>tale aria nō fusse, il celo senpre ci mostrerebbe <sup>7</sup>le stelle nelle sua tenebre.

911.

The stars are visible by night and not by day, because we are beneath the dense atmosphere, which is full of innumerable particles of moisture, each of which independently, when the rays of the sun fall upon it, reflects a radiance, and so these numberless bright particles conceal the stars; and if it were not for this atmosphere the sky would always display the stars against its darkness.

F. 57a]

SE LE STELLE ÀNNO LUME DAL SOLE O  
DA SE.

912.

WHETHER THE STARS HAVE THEIR LIGHT FROM  
THE SUN OR IN THEMSELVES.

<sup>2</sup>Dicono di auere il lume da se, allegando <sup>3</sup>che se Venere e Mercurio non avessino <sup>4</sup>il lume da se, quādo essa s'interpone infra <sup>5</sup>l'ochio nostro e 'l sole, esse oscurerebbero tan<sup>6</sup>to d'esso sole, quāto esse ne coprono al ochio <sup>7</sup>nostro; E quest'è falso, perch'è prouato <sup>8</sup>come l'onbroso, posto nel luminoso, è cinto e coper<sup>9</sup>to tutto da razzi laterali del rimanēte di tal lu<sup>10</sup>minoso, e così resta inuisibile, come si

Some say that they shine of themselves, alledging that if Venus and Mercury had not a light of their own, when they come between our eye and the sun they would darken so much of the sun as they could cover from our eye. But this is false, for it is proved that a dark object against a luminous body is enveloped and entirely concealed by the lateral rays of the rest of that luminous body and so remains invisible. As may be seen

911. 1. vegāsi lesselle. 2. grosseza. 3. ciascuna.. rende. 4. cossi. 5. ochupano .. esse. 6. fusi .. mosterrebbe. 7. lesstelle.  
912. 1. à lume. 2. dicano di havere .. dasse. 3. uenere e merchurio nōn auessi. 4. illume dasse .. infrai. 5. oscurerebō.

6. coprano. 9. razi. 12. ilūga. 13. ochupano. 15. acade. 16. esieno .. non o. 18. nosstro. Lines 19 and 20 are written

911. See Vol. I, No. 296, which also refers to starlight.

I. 34 &c.) it is clear that Leonardo was familiar with the phenomena of Irradiation.

912. From this and other remarks (see No. 902,  
VOL. II.

di<sup>11</sup>mostra: quando il sole è veduto per la ra<sup>12</sup>mificatione delle piāte sanza foglie in lūga di<sup>13</sup>stantia, essi rami non occupano parte al<sup>14</sup>cuna d'esso sole alli ochi nostri; j'l simile <sup>15</sup>accade a' predetti pianeti, li quali ancora <sup>16</sup>che da se sieno sanza luce, eglino non oc<sup>17</sup>cupano, com'è detto, parte alcuna del sole <sup>18</sup>all'occhio nostro.

#### SECONDA <sup>20</sup>PROVA.

<sup>21</sup>Dicono le stelle nella notte parere lucidissime <sup>22</sup>quāto più ci sō superiori, e che, se esse nō auessino lume <sup>23</sup>da se, che l'onbra che fa la terra, che s'interpone <sup>24</sup>fra loro e 'l sole, verrebbe a scurarle, non vedē<sup>25</sup>do esse, nè sēdo vedute dal corpo solare; Ma <sup>26</sup>questi non ànno considerato, che l'onbra piramidale de<sup>27</sup>lla terra non aggiugne infra troppe stelle, e in <sup>28</sup>quelle ch'ella aggiugne, la piramide è tanto dimi<sup>29</sup>nuita, che poco occupa del corpo della stella; e 'l ri<sup>30</sup>manēte è alluminato dal sole.

F. 60a]

Perchè li pianeti appariscono maggiori <sup>2</sup>in oriēte che sopra di noi, che dovrebbe <sup>3</sup>essere il contrario, essendo <sup>4</sup>3500 miglia pù vicini a noi, essendo <sup>5</sup>nel mezzo del celo, che essendo al<sup>6</sup>orizzōte.

<sup>7</sup>Tutti li gradi dell'i elemēti, donde passa<sup>8</sup>no le spetie de' corpi celesti, <sup>9</sup>che vengono all'occhio, sono <sup>10</sup>equali, e li angoli, <sup>11</sup>donde li penetra <sup>12</sup>la linia cētrale di tali spetie, so<sup>13</sup>no inequali, e la distantia è <sup>14</sup>maggior, come mostra l'eccesso  $a\ b$  so<sup>15</sup>pra  $a\ d$ , e per la <sup>9</sup>a del <sup>7</sup>° la grandeza <sup>16</sup>d'essi corpi celesti nell'orizzonte è provata.

when the sun is seen through the boughs of trees bare of their leaves, at some distance the branches do not conceal any portion of the sun from our eye. The same thing happens with the above mentioned planets which, though they have no light of their own, do not—as has been said—conceal any part of the sun from our eye [18].

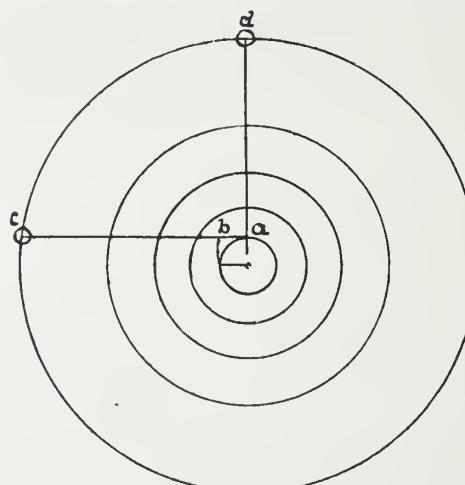

#### SECOND ARGUMENT.

Some say that the stars appear most brilliant at night in proportion as they are higher up; and that if they had no light of their own, the shadow of the earth which comes between them and the sun, would darken them, since they would not face nor be faced by the solar body. But those persons have not considered that the conical shadow of the earth cannot reach many of the stars; and even as to those it does reach, the cone is so much diminished that it covers very little of the star's mass, and all the rest is illuminated by the sun..

913.

Why the planets appear larger in the East than they do overhead, whereas the contrary should be the case, as they are 3500 miles nearer to us when in mid sky than when on the horizon.

All the degrees of the elements, through which the images of the celestial bodies pass to reach the eye, are equal curves and the angles by which the central line of those images passes through them, are unequal angles [13]; and the distance is greater, as is shown by the excess of  $a\ b$  beyond  $a\ d$ ; and the enlargement of these celestial bodies on the horizon is shown by the 9<sup>th</sup> of the 7<sup>th</sup>.

on the margin. 20. pruoua. 21. Dicano. 22. superiore e chesselle nō auesino. 23. che obra cheffa .. chessinterpone. 24. le verebe assurare. 25. nessēdo. 26. nōnā .. chellonbra. 27. nōnagugne .. stelle ege. 28. chellagugnie .. ettanto. 29. ochupa. 30. aluminato.  
913. 1. apariscā magori. 2. douerebbe. 5. mezo. 6. rizōte. 7. gradi | "delli elemēti". 9. vengano. 10. cului ellī angoli [della luna]. 11. [contra le dij] donde li. 12. tale. 13. nequali ella. 14. magore .. ecesso. 15. grandeza. 16. orizonte.

913. l. 13. *inequali*, here and elsewhere does not mean unequal in the sense of not being equal to each other, but angles which are not right angles.

Br. M. 279<sup>b</sup>]

Per uedere la natura dell'i pianeti apri il tetto e mo<sup>3</sup>stra alla basa vn sol pia<sup>4</sup>neta, e l' moto reflesso da <sup>5</sup>tale basa dirà la complessione del predetto pianeta, <sup>7</sup>ma fa che tal basa nō ne <sup>8</sup>veda più d'uno per uolta.

914.

To see the real nature of the planets Observations open the covering and note at the base [4] one on the stars. single planet, and the reflected movement of this base will show the nature of the said planet; but arrange that the base may face only one at the time.

E. o']

Tullius de Diuinatione <sup>2</sup>ait Astrologiam fuisse <sup>3</sup>adinuentā ante trojanum <sup>4</sup>bellū Quingentis septua<sup>5</sup>ginta milibus añorum.

57000.

915.

Cicero says in [his book] *De Divinatione* On history of astrology that Astrology has been practised five hundred seventy thousand years before the Trojan war.

57000.

Br. M. 173<sup>b</sup> (190<sup>b</sup>)]

Benchè il tempo sia annumerato infra le continue <sup>2</sup>quātità, esso, per essere inuisibile e sanza corpo, non cade integralmēte sotto la <sup>3</sup>geometrica potentia, la quale lo diuide per figure e corpi d'infinita varietà, <sup>4</sup>come continuo nelle cose uisibili e corporee far si uede; Ma sol co' sua primi <sup>5</sup>principi si cōuiene, cioè col punto e colla linia.; jl punto nel tempo è da <sup>6</sup>essere equiparato al suo instante, e la linia à similitudine colla lūghez'za d'una quantità d'un tempo, e siccome i pūti sō principio e fine della predet<sup>8</sup>ta linia., così li instanti

916.

Although time is included in the class of Of time and Continuous Quantities, being indivisible and its divisions immaterial, it does not come entirely under the head of Geometry, which represents its divisions by means of figures and bodies of infinite variety, such as are seen to be continuous in their visible and material properties. But only with its first principles does it agree, that is with the Point and the Line; the point may be compared to an instant of time, and the line may be likened to the length of a certain quantity of time, and just as a line begins and terminates in a point, so such a space of time.

914. 4. reflesso. 5. compless. 8. duna.

**914. 4. basa.** This probably alludes to some instrument, perhaps the Camera obscura.

**915.** The statement that CICERO, *De Divin.* ascribes the discovery of astrology to a period 57000 years before the Trojan war I believe to be quite erroneous. According to ERNESTI, *Clavis Ciceriana*, CH. G. SCHULZ (*Lexic. Cicer.*) and the edition of *De Divin.* by GIESE the word Astrologia occurs only twice in CICERO: *De Divin. II, 42. Ad Chaldaeorum monstra veniamus, de quibus Eudoxus, Platonis auditor, in astrologia judicio doctissimorum hominum facile princeps, sic opinatur (id quod scriptum reliquit): Chaldaeis in predictione et in notatione cuiusque vite*

*ex natali die minime esse credendum.*" He then quotes the condemnatory verdict of other philosophers as to the teaching of the Chaldaeans but says nothing as to the antiquity and origin of astronomy. CICERO further notes *De oratore I, 16* that Aratus was "*ignarus astrologie*" but that is all. So far as I know the word occurs nowhere else in CICERO; and the word *Astronomia* he does not seem to have used at all. (H. MÜLLER-STRÜBING.)

**916.** This passage is repeated word for word on page 190<sup>b</sup> of the same manuscript and this is accounted for by the text in Vol. I, No. 4. Compare also No. 1216.

sō termine e principio di qualūche dato spatio di tempo;—e se <sup>9</sup>la linia è diuisibile in īfinito, lo spatio d'ū tempo di tal diuisione non è alieno, <sup>10</sup>e se le parti diuise della linia sono proportionabili infra se, ancora le parti del tempo <sup>11</sup>saraño proportionabili infra loro.

Br. M. 176a]

Scriui la qualità del <sup>2</sup>tempo, separata dalla <sup>3</sup>geometrica.

Br. M. 191a]

Fa che vn ora sia diuisa in 3000 parti, e <sup>3</sup>questo farai coll'oriolo <sup>4</sup>alleggerēdo o aggravādo <sup>5</sup>il cōtrapeso.

<sup>10.</sup> esselle parte. <sup>11.</sup> infralloro.

917. 2. seperata. 3. geometrica.

begins and terminates in an instant. And whereas a line is infinitely divisible, the divisibility of a space of time is of the same nature; and as the divisions of the line may bear a certain proportion to each other, so may the divisions of time.

917.

Describe the nature of Time as distinguished from the Geometrical definitions.

918.

Divide an hour into 3000 parts, and this you can do with a clock by making the pendulum lighter or heavier.

## XVI.

### *Physical Geography.*

Leonardo's researches as to the structure of the earth and sea were made at a time, when the extended voyages of the Spaniards and Portuguese had also excited a special interest in geographical questions in Italy, and particularly in Tuscany. Still, it need scarcely surprise us to find that in deeper questions, as to the structure of the globe, the primitive state of the earth's surface, and the like, he was far in advance of his time.

The number of passages which treat of such matters is relatively considerable; like almost all Leonardo's scientific notes they deal partly with theoretical and partly with practical questions. Some of his theoretical views of the motion of water were collected in a copied manuscript volume by an early transcriber, but without any acknowledgment of the source whence they were derived. This copy is now in the Library of the Barberini palace at Rome and was published under the title: "De moto e misura dell'acqua," by FRANCESCO CARDINALI, Bologna 1828. In this work the texts are arranged under the following titles: Libr. I. Della spera dell'acqua; Libr. II. Del moto dell'acqua; Libr. III. Dell'onda dell'acqua; Libr. IV. Dei retrosi d'acqua; Libr. V. Dell'acqua cadente; Libr. VI. Delle rotture fatte dall'acqua; Libr. VII Delle cose portate dall'acqua; Libr. VIII. Dell'uncia dell'acqua e delle canne; Libr. IX. De molini e d'altri ordigni d'acqua.

The large number of isolated observations scattered through the manuscripts, accounts for our so frequently finding notes of new schemes for the arrangement of those relating to water and its motions, particularly in the Codex Atlanticus: I have printed several of these plans as an introduction to the Physical Geography, and I have actually arranged the texts in accordance with the clue afforded by one of them which is undoubtedly one of the latest notes referring to the subject (No. 920). The text given as No. 930 which is also taken from a late note-book of Leonardo's, served as a basis for the arrangement of the first of the seven books—or sections—, bearing the title: *Of the Nature of Water* (Dell'acque in se).

As I have not made it any part of this undertaking to print the passages which refer to purely physical principles, it has also been necessary to exclude those practical researches which, in accordance with indications given in 920, ought to come in as Books 13, 14 and 15. I can only incidentally mention here that Leonardo—as it seems to me, especially in his youth—devoted a great deal of attention to the construction of mills. This is proved by a number of drawings of very careful and minute execution, which are to be found in the *Codex Atlanticus*. Nor was it possible to include his considerations on the regulation of rivers, the making of canals and so forth (No. 920, Books 10, 11 and 12); but those passages in which the structure of a canal is directly connected with notices of particular places will be found duly inserted under section XVII (*Topographical notes*). In Vol. I, No. 5 the text refers to canal-making in general.

On one point only can the collection of passages included under the general heading of Physical Geography claim to be complete. When comparing and sorting the materials for this work I took particular care not to exclude or omit any text in which a geographical name was mentioned even incidentally, since in all such researches the chief interest, as it appeared to me, attached to the question whether these acute observations on the various local characteristics of mountains, rivers or seas, had been made by Leonardo himself, and on the spot. It is self-evident that the few general and somewhat superficial observations on the Rhine and the Danube, on England and Flanders, must have been obtained from maps or from some informants, and in the case of Flanders Leonardo himself acknowledges this (see No. 1008). But that most of the other and more exact observations were made, on the spot, by Leonardo himself, may be safely assumed from their method and the style in which he writes of them; and we should bear it in mind that in all investigations, of whatever kind, experience is always spoken of as the only basis on which he relies. Incidentally, as in No. 984, he thinks it necessary to allude to the total absence of all recorded observations.

## I.

## INTRODUCTION.

Leic. 5a]

919.

Questi libri contēgono in ne' primi <sup>2</sup> della natura dell'acqua in se ne' <sup>3</sup>sua moti, li altri contēgono delle <sup>4</sup>cose fatte dai sua corsi, <sup>5</sup>che mv<sup>6</sup>tano il mondo di centro e di figura.

Leic. 15δ]

920.

## DIVISIŌ DEL LIBRO.

Libro p<sup>o</sup> dell'acque in se,  
libro 2<sup>o</sup> del mare,  
libro 3<sup>o</sup> delle uene,  
<sup>5</sup> libro 4<sup>o</sup> de' fiumi;  
libro 5<sup>o</sup> delle nature de' fōdi,  
libro 6 delli obbietti,  
libro 7 delle ghiaje,  
libro 8<sup>o</sup> della superficie del'acqua,  
<sup>10</sup> libro 9 delle cose che in quella  
son messe;  
libro 10<sup>o</sup> de' ripari de' fiumi,  
libro 11<sup>o</sup> delli condotti,  
libro 12 de' canali,  
libro 13 delli strumēti volti dall'acqua,  
<sup>15</sup> libro 14 del far mōtare l'acque,  
libro 15 delle cose cōsumate dall'acque.

These books contain in the beginning: Schemes for Of the nature of water itself in its motions; the arrangement of the others treat of the effects of its currents, materials which change the world in its centre and its shape. (919—928).

## DIVISIONS OF THE BOOK.

Book 1 of water in itself.  
Book 2 of the sea.  
Book 3 of subterranean rivers.  
Book 4 of rivers.  
Book 5 of the nature of the abyss.  
Book 6 of the obstacles.  
Book 7 of gravels.  
Book 8 of the surface of water.  
Book 9 of the things placed therein.  
Book 10 of the repairing of rivers.  
Book 11 of conduits.  
Book 12 of canals.  
Book 13 of machines turned by water.  
Book 14 of raising water.  
Book 15 of matters worn away by water.

919. 1. cōtēgano. 3. cōtēgano. 4. dae sua.

920. 8. giare. 9. delle . . acq<sup>“a”</sup>. 10. quella. 16. dell cose . . acq<sup>“e”</sup>.

Leic. 9<sup>a</sup>]

Farai prima un libro <sup>2</sup>che tratti de' lochi <sup>3</sup>occupati dall'acque <sup>4</sup>dolci, e 'l <sup>2</sup>o dals'l'acque salse, e 'l <sup>6</sup><sup>3</sup><sup>o</sup> come, per la partita di quelle, queste <sup>8</sup>nostre parti son <sup>9</sup>fatte piv lieui, e <sup>10</sup>per consequēza piv <sup>11</sup>remosse dal cen<sup>12</sup>tro del mōdo.

F. 87<sup>b</sup>]

Descriui in prima tutta l'acqua in ciascuno suo moto, di poi <sup>2</sup>descriui tutti li sua fondi e le lor materie, sempre allegando le propositioni delle predette acque, e fia bu'ono ordine, che altrimēti l'opera sarebbe cōfusa.

<sup>5</sup> Descriui tutte le figure che fa l'acqua dalla sua <sup>6</sup>maggiora alla sua minore onda e le lor cause.

F. 88<sup>a</sup>]

Libro 9 de' surgimenti accidentali dell'acqua.

F. 90<sup>b</sup>]

## ORDINE DEL LIBRO.

<sup>2</sup>Poni nel principio ciò che può fare vn fiume.

Br. M. 35<sup>a</sup>]

Libro d'abbattere li eserciti col'impeto de' diluui fatti dall'acque disgorgate,

<sup>2</sup>Libro che l'acque cōducino a saluamento li legnami tagliati ne' mōti,

<sup>3</sup>Libro delle barche condotte contro all'impeto de' fiumi,

<sup>4</sup>Libro dell'alzare li gran ponti col senplice accrescimēto dell'acque,

<sup>5</sup>Libro del riparare all'inpeto de' fiumi che le città da quelli nō siē percossi.

921.

First you shall make a book treating of places occupied by fresh waters, and the second by salt waters, and the third, how by the disappearance of these, our parts of the world were made lighter and in consequence more remote from the centre of the world.

922.

First write of all water, in each of its motions; then describe all its bottoms and their various materials, always referring to the propositions concerning the said waters; and let the order be good, for otherwise the work will be confused.

Describe all the forms taken by water from its greatest to its smallest wave, and their causes.

923.

Book 9, of accidental risings of water.

924.

## THE ORDER OF THE BOOK.

Place at the beginning what a river can effect.

925.

A book of driving back armies by the force of a flood made by releasing waters.

A book showing how the waters safely bring down timber cut in the mountains.

A book of boats driven against the impetus of rivers.

A book of raising large bridges higher. Simply by the swelling of the waters.

A book of guarding against the impetus of rivers so that towns may not be damaged by them.

921. 1. p<sup>“a”</sup> vn libr. 3. ochupati. 7. quele. 8. parte.

922. 1. scriui in p<sup>“a”</sup> . . lacq<sup>“a”</sup> . . ciasscuno. 2. desscriui . . elle. 4. altermēti. 5. cheffa lacq<sup>“a”</sup>. 6. magore . . elle.

923. acq<sup>“a”</sup>.

924. 2. co che po.

925. The head of each line is marked by the letter d which is crossed out. 1. dabatter . . chol inpito . . dilumi . . dellacq<sup>“a”</sup> . . discorghate. 2. chellacque . . assaluamento. 4. acresscimēto. 5. chelle cita dacquelli . . percossi.

Br. M. 358]

## 926.

Libro della dispositiō de' fiumi a cōseruatiō dell'argine sue,

<sup>2</sup>Libro delli monti, che si spiccherāno, e fiā la terra sotto il nostro emisperio scoperta dall'acqua,

<sup>3</sup>Libro del terreno portato dal'acqua a riēpiere la grā profondità de' pelaghi,

<sup>4</sup>Libro de' modi che la fortuna per se netti li riēpiuti porti del mare,

<sup>5</sup>Libro dell'argine de' fiumi e lor permanentia,

<sup>6</sup>Libro del fare che li fumi con lor corso tēgin netti li fondi loro per le città dōde passano,

<sup>7</sup>Libro del fare o rifondare li ponti sopra li fumi,

<sup>8</sup>Libro di ripari che farsi debbō alli muri e argini de' fumi percossi dall'acqua,

<sup>9</sup>Libro del generare li colli dall'arena o ghiaja sopra le gran profondità dell'acque.

A book of the ordering of rivers so as to preserve their banks.

A book of the mountains, which would stand forth and become land, if our hemisphere were to be uncovered by the water.

A book of the earth carried down by the waters to fill up the great abyss of the seas.

A book of the ways in which a tempest may of itself clear out filled up sea-ports.

A book of the shores of rivers and of their permanency.

A book of how to deal with rivers, so that they may keep their bottom scoured by their own flow near the cities they pass.

A book of how to make or to repair the foundations for bridges over the rivers.

A book of the repairs which ought to be made in walls and banks of rivers where the water strikes them.

A book of the formation of hills of sand or gravel at great depths in water.

Br. M. 122 a]

## 927.

L'acqua dà principio al moto suo,

<sup>2</sup>Libro liuellamenti d'acque per diuersi modi,

<sup>3</sup>Libro del discostare li fumi dai lochi da loro offesi,

<sup>4</sup>Libro del dirizzar li fumi che occupano superchio terreno,

<sup>5</sup>Libro del diuidere li fumi in molti rami e farli guadabili,

<sup>6</sup>Libro dell'acque che cō diuersi moti passā pe' pelaghi loro,

<sup>7</sup>Libro del profondare li letti alli fumi cō uari corsi d'acque,

<sup>8</sup>Libro di disporre li fumi ī modo che li piccoli p̄cipj de' sua danni non accrescino,

<sup>9</sup>Libro de' uari moti dell'acque che passan per diuerse figure di canali,

<sup>10</sup>Libro del fare che li piccoli fumi non pieghino il maggiore percocco dalle loro acque,

<sup>11</sup>Libro della maggior bassezza che trouar si possa nella corrēte della superficie de' fumi,

Water gives the first impetus to its motion.

A book of the levelling of waters by various means.

A book of diverting rivers from places where they do mischief.

A book of guiding rivers which occupy too much ground.

A book of parting rivers into several branches and making them fordable.

A book of the waters which with various currents pass through seas.

A book of deepening the beds of rivers by means of currents of water.

A book of controlling rivers so that the little beginnings of mischief, caused by them, may not increase.

A book of the various movements of waters passing through channels of different forms.

A book of preventing small rivers from diverting the larger one into which their waters run.

A book of the lowest level which can be found in the current of the surface of rivers.

926. 2. chessi spich[a] erāno effia la terra "sotto il nostro emisperio" scoperta dell'acqua. 3. terē. 4. perse nettili riēpiuti porta del mare. 5. ellor permanentia. 6. chelli . . collor . . tēginetti . . fondi "lor". 7. orifondare. 8. cheffarsi. 9. ghiara . . acq[e].

## THE BEGINNING OF THE TREATISE ON WATER.

By the ancients man has been called the General in-world in miniature; and certainly this name is well bestowed, because, inasmuch as man is composed of earth, water, air and fire, his body resembles that of the earth; and as man has in him bones the supports and framework of his flesh, the world has its rocks the supports of the earth; as man has in him a pool of blood in which the lungs rise and fall in breathing, so the body of the earth has its ocean tide which likewise rises and falls every six hours, as if the world breathed; as in that pool of blood veins have their origin, which ramify all over the human body, so likewise the ocean sea fills the body of the earth with infinite springs of water. The body of the earth lacks sinews and this is, because the sinews are made expressly for movements and, the world being perpetually stable, no movement takes place, and no movement taking place, muscles are not necessary.—But in all other points they are much alike.

930.

## ORDINE DEL PRIMO LIBRO DELLE ACQUE.

## THE ORDER OF THE FIRST BOOK ON WATER.

The arrangement of Book I.      2 Difinisci prima che cosa è altezza e bassezza | anzi come sō situati 3 li elemēti l'ū dentro all'altro; Di poi che cosa è gravità dē<sup>4</sup>sa e che è gravità liquida, ma prima che cosa è in se graviſtā e leuità ; Di poi descrivi perchè l'acqua si move e perchè ter<sup>5</sup>mina il moto suo, poi perchè si fa più tarda o velociæ, oltre 7 a questo come ella senpre disciède, essendo in cōfine d'aria più bassa di lei | E come l'acqua si leua in aria mediante 9 il calore del sole e poi ricade in pioggia ; ancora perchè l'acqua 10 surgie dalle cime de' monti e se l'acqua di nessuna vena più alta 11 che l'oceanò mare può uersare acqua più alta che la superficie 12 d'esso oceano ; E come tutta l'acqua che torna all'oceanò è più alta 13 della spera dell'acqua | e come l'acqua delli mari equinotiali è più alta 14 che le acque settētrionali, ed è più alta sotto il corpo del sole 15 che in nessuna parte del circulo equinotiale come si sper<sup>16</sup>mēta sotto il calore dello stizzo infocato, l'acqua che mediā<sup>17</sup>te tale stizzo bolle e l'acqua circustāte al ciētro di tal bol<sup>18</sup>lore sempre

Define first what is meant by height and depth; also how the elements are situated one inside another. Then, what is meant by solid weight and by liquid weight; but first what weight and lightness are in themselves. Then describe why water moves, and why its motion ceases; then why it becomes slower or more rapid; besides this, how it always falls, being in contact with the air but lower than the air. And how water rises in the air by means of the heat of the sun, and then falls again in rain; again, why water springs forth from the tops of mountains; and if the water of any spring higher than the ocean can pour forth water higher than the surface of that ocean. And how all the water that returns to the ocean is higher than the sphere of waters. And how the waters of the equatorial seas are higher than the waters of the North, and higher beneath the body of the sun than in any part of the equatorial circle; for experiment shows that under the heat of a burning brand the water near the brand boils, and the water surrounding this ebullition always sinks with

## CHE COSA È ACQUA.

<sup>2</sup> Acqua è infra i quattro elemēti il se-  
codo mē grave e di seconda volubilità.

931.

## OF WHAT IS WATER.

Among the four elements water is the <sup>Definitions</sup> (931. 932). second both in weight and in instability.

I. <sup>2</sup> 24a and δ]

932.

## PRINCIPIO DEL LIBRO DELL'ACQUE.

<sup>2</sup> Pelago è detto quello, il quale à figura larga <sup>3</sup>e profoda; <sup>4</sup>nel quale l'acque stanno con poco moto.

Leic. 34δ]

933.

Li centri della spericità dell'acqua sono due: l'uno è della vniuersale acqua, l'altro è particolare; <sup>2</sup> l'universale è quello, il quale serue a tutte l'acque sanza moto, che sono in se in grā quātitā, <sup>3</sup>come canali, fossi, viuai, fonti, pozzi, fiumi morti, laghi, paduli, stagni e mari, li quali, ancorachè sieno di uarie altezze ciascuno per se, àno li termini delle lor superficie equidistanti al centro del mondo, come sono i laghi posti nelle cime delli alti móti come sopra <sup>5</sup>Pietra Pana e Lago della Sibilla a Norcia, e tutti li laghi che dā principio a grandi fumi, come Tesino <sup>6</sup>dal Lago Maggiore, Adda dal lago di Como, Mincio dal lago di Garda e Reno dal lago di Costantia e di Coira e dal lago di Lucerne, e come Tigrone, il quale passa per la Minore Asia, il quale ne porta <sup>8</sup>con seco l'acqua di 3 paduli, l'un dopo l'altro, di uarie altezze, de' quali il piv alto è Munace, el mezzano è Pallas <sup>9</sup>e l'più basso è Triton; ancora el Nilo diriuia da 3 altissimi paduli in Etiopia.

The centres of the sphere of water are of the two, one universal and common to all water, <sup>face of the water in relation to the</sup> the other particular. The universal one is <sup>tion to the globe</sup> that which is common to all waters not in motion, which exist in great quantities. As canals, ditches, ponds, fountains, wells, dead rivers, lakes, stagnant pools and seas, which, although they are at various levels, have each in itself the limits of their superficies equally distant from the centre of the earth, such as lakes placed at the tops of high mountains; as the lake near Pietra Pana and the lake of the Sybil near Norcia; and all the lakes that give rise to great rivers, as the Ticino from Lago Maggiore, the Adda from the lake of Como, the Mincio from the lake of Garda, the Rhine from the lakes of Constance and of Chur, and from the lake of Lucerne, like the Tigris which passes through Asia Minor carrying with it the waters of three lakes, one above the other at different heights of which the highest is Munace, the middle one Pallas, and the lowest Triton; the Nile again flows from three very high lakes in Ethiopia.

<sup>19</sup>. chelli . . ettāto. <sup>20</sup>. chessi chonvertano in diaccio.

932. Only the beginning of this passage is here given, the remainder consists of definitions which have no direct bearing on the subject.

933. 5. *Pietra Pana*, a mountain near Florence. If for Norcia, we may read Norchia, the remains of

the Etruscan city near Viterbo, there can be no doubt that by ‘*Lago della Sibilla*’—a name not known elsewhere, so far as I can learn—Leonardo meant *Lago di Vico* (*Lacus Ciminus*, Aen. 7).

A. 585]

## DEL CIËTRO DELL OCIEANO · MARE.

Il ciëtro della spera · dell'acqua · è il centro · vero · della rotòdita del nostro mōdo, · il quale si cōpone <sup>3</sup>infra · acqua e terra · in forma · rotòda ·; Ma se tu · volessi trovare · il ciëtro dello · elemēto della <sup>4</sup>terra ·, questo · è cōtenuto · per equidistāte · spatio · dalla superficie · dell'oceano · mare ·, e nō dalla <sup>5</sup>equidistante · superficie · della · terra ·, perchè chiaro · si comprende · questa palla · della · terra non <sup>6</sup>avere · niente · di perfetta · rotòditā ·, se non è · in quella · parte dou'è mare · o paduli o altre acque mor'te ·, e qualunque · parte · d'essa · terra che escie · fori · d'esso mare, s'allontana · dal suo · ciëtro.

E. 48]

DEL MARE CHE MUTA <sup>2</sup>IL PESO DELLA TERRA.

Li nichi, ostrighe e altri simili animali, che nascono nelli fanghi marini, ci testifiscano la mutatiō della terra intorno al ciëtro de' nostri elemēti; prouasi così: Li fumi reali senpre corrono con tòrbidume, tinto dalla terra, che per lor si leua mediāte la cōfregatiō delle sue acque sopra il fondo e nelle sue <sup>10</sup>riue, e tal cōsumatiōne scopre le fronti de' gradi <sup>11</sup>fatti a' suoli di quelli nichi, che stan nella superficie <sup>12</sup>del fango marino, li quali in tal sito nascierono, quā<sup>13</sup>do l'acque salse li coprivano, e questi tali gradi erano <sup>14</sup>coperti di tempo in tempo dalli fanghi di uarie grossezze o condotti al mare dalli fumi cō diluvi di diverse grā<sup>16</sup>dezze; e così tali faghi furono composti in tāta altezza, che dal fondo si <sup>17</sup>scopriua all'aria; Ora questi tali fondi sono in tāta <sup>18</sup>altezza che son fatti colli, o alti mōti, e li fumi, <sup>19</sup>consumati de' lati <sup>21</sup>d'essi monti, <sup>22</sup>scoprono <sup>23</sup>li gradi d'es<sup>24</sup>si nichi, e co<sup>25</sup>sì il lenj<sup>26</sup>ficato lato <sup>27</sup>della terra <sup>28</sup>al cōtinuo <sup>29</sup>s'inalza, e <sup>30</sup>li antipo<sup>31</sup>di s'accosta<sup>32</sup>no più al <sup>33</sup>ciëtro del <sup>34</sup>mondo, <sup>35</sup>e li anti<sup>36</sup>chi fondi del <sup>37</sup>mare son fatti <sup>38</sup>gioghi di monti.

934.

## 934. OF THE CENTRE OF THE OCEAN.

The centre of the sphere of waters is the true centre of the globe of our world, which is composed of water and earth, having the shape of a sphere. But, if you want to find the centre of the element of the earth, this is placed at a point equidistant from the surface of the ocean, and not equidistant from the surface of the earth; for it is evident that this globe of earth has nowhere any perfect rotundity, excepting in places where the sea is, or marshes or other still waters. And every part of the earth that rises above the water is farther from the centre.

935.

## OF THE SEA WHICH CHANGES THE WEIGHT OF THE EARTH.

The shells, oysters, and other similar animals, which originate in sea-mud, bear witness to the changes of the earth round the centre of our elements. This is proved thus: Great rivers always run turbid, being coloured by the earth, which is stirred by the friction of their waters at the bottom and on their shores; and this wearing disturbs the face of the strata made by the layers of shells, which lie on the surface of the marine mud, and which were produced there when the salt waters covered them; and these strata were covered over again from time to time, with mud of various thickness, or carried down to the sea by the rivers and floods of more or less extent; and thus these layers of mud became raised to such a height, that they came up from the bottom to the air. At the present time these bottoms are so high that they form hills or high mountains, and the rivers, which wear away the sides of these mountains, uncover the strata of these shells, and thus the softened side of the earth continually rises and the antipodes sink closer to the centre of the earth, and the ancient bottoms of the seas have become mountain ridges.

Leic. 10δ]

## 936.

Faccia mutatiō la terra colla sua gravezza, quāte farsi <sup>2</sup>voglia, che mai la superficie della spera dell'acqua nō si partirà dalla sua equidistātia col centro del mōdo.

Leic. 35δ]

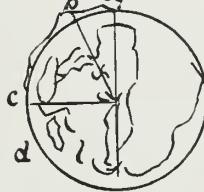

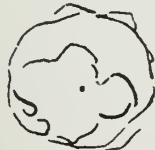

## SE LA TERRA È MĒ CHE L'ACQUA.

<sup>2</sup>Dicono alcuni esser vero, che la terra, ch'è scoperta dalle acque, sia molto minore che quella che da esse acqu'è coperta; <sup>3</sup>Ma che considerando la grossezza di 7000 miglia di diametro, che à · essa terra, e' si può concludere l'acqua essere di <sup>4</sup>poca profondità.

Leic. 36α]

## DELLA TERRA IN SE.

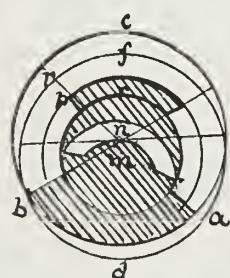

<sup>2</sup>L'alzarsi tanto le cime de' monti sopra la spera dell'acqua può esser diriuato, perchè il loco grandissimo <sup>3</sup>della terra, il quale

era ripieno d'acqua, cioè la grandissima cauerna, douette cadere <sup>4</sup>assai della sua volta inuerso il centro del mondo, trovandosi ispiccata mediante il corso delle uene che al continuo consumano il loco donde passano.

<sup>6</sup>Profondamēto di paesi <sup>7</sup>come nel Mare Morto di So<sup>8</sup>ria cioè Sodoma e Gomorra.

<sup>9</sup>È necessario che l'acqua sia più che la terra, e la parte scoperta del mare nō

large portion of the earth which was filled with water that is to say the vast cavern inside the earth may have fallen in a vast part of its vault towards the centre of the earth, being pierced by means of the course of the springs which continually wear away the place where they pass.

Sinking in of countries like the Dead Sea in Syria, that is Sodom and Gomorrah.

It is of necessity that there should be more water than land, and the visible portion of

938. The small sketch below on the left, is placed in the original close to the text referring to the Dead Sea.

## 936.

Let the earth make whatever changes it may in its weight, the surface of the sphere of waters can never vary in its equal distance from the centre of the world.

## 937.

## WHETHER THE EARTH IS LESS THAN THE WATER.

Some assert that it is true that the earth, which is not covered by water is much less than that covered by water. But considering the size of 7000 miles in diameter which is that of this earth, we may conclude the water to be of small depth.

Of the proportion of the mass of water to that of the earth.  
(937. 938).

## 938.

## OF THE EARTH.

The great elevations of the peaks of the mountains above the sphere of the water may have resulted from this that: a very

lo dimostra, onde bisogna che <sup>10</sup>molta acqua sia dentro alla terra, sanza quella ch'è infusa nella bassa aria e che scorre <sup>11</sup>per li fiumi e uene.

F. 27a]

## FIGURA D'ELEMĒTI.

<sup>2</sup>Della figura delli elemēti, e prima The theory of Plato. contro a chi nega <sup>3</sup>l'opinione di Platone, che dicono che se essi elemēti vestisero l'un l'altro, colle figure che mette Platone, che si ca<sup>5</sup>vserebbe vacuo infra l'uno e l'altro; e non è vero, e <sup>6</sup>qui lo provo, ma prima bisogna proporre alcuna cō<sup>7</sup>clusione: Non è neciessario che nessuno ele<sup>8</sup>mento, che veste l'ū l'altro, sia d'equ<sup>9</sup>la grossezza in tu<sup>10</sup>ta la sua quantità infra la parte che ueste e quel<sup>11</sup>la ch'è uestita; Noi uediamo la spera dell'acqua ma<sup>12</sup>nifestamēte essere di varie grossezze dalla sua <sup>12</sup>superficie al fondo, e che, nō che essa vestisse <sup>13</sup>la terra quando fusse di figura cuba cioè di 8 angoli come <sup>14</sup>vole Platone, essa veste la terra che à innumerabili <sup>15</sup>angoli di scogli coperti dall'acqua e varie globosità e cō<sup>16</sup>cavità, e non si genera vacuo infra l'acqua e la terra; Ancora l'aria veste la spera dell'acqua <sup>17</sup>insieme colli monti e valli che superano essa spera, e nō <sup>18</sup>rimane vacuo infra la terra e l'aria, sicchè, chi disse <sup>19</sup>generarsi vacuo, ebbe tristo discorso.

<sup>20</sup>A Platō si rispōde che la superficie delle figure che avrebbero li elemēti, <sup>21</sup>che lui pone, non potrebbero sta<sup>23</sup>re.

A. 58δ]

PRUOVA · COME · LA TERRA · NON È · TÔDA, <sup>2</sup>E,  
NON ESSENDÒ TÔDA, NÔ PUÒ AVER COMUNE ·  
CETRO.

<sup>3</sup>Noi vediāmo il Nilo partīrsi dalle meridiane regioni e rigare diuerse provincie, corrēdo <sup>4</sup>inverso settentrione per

the sea does not show this; so that there must be a great deal of water inside the earth, besides that which rises into the lower air and which flows through rivers and springs.

939.

## THE FIGURES OF THE ELEMENTS.

Of the figures of the elements; and first as against those who deny the opinions of Plato, and who say that if the elements include one another in the forms attributed to them by Plato they would cause a vacuum one within the other. I say it is not true, and I here prove it, but first I desire to propound some conclusions. It is not necessary that the elements which include each other should be of corresponding magnitude in all the parts, of that which includes and of that which is included. We see that the sphere of the waters varies conspicuously in mass from the surface to the bottom, and that, far

from investing the earth when that was in the form of a cube that is of 8 angles as Plato will have it, that it invests the earth which has innumerable angles of rock covered by the water and various prominences and concavities, and yet no vacuum is generated between the earth and water; again, the air invests the sphere of waters together with the mountains and valleys, which rise above that sphere, and no vacuum remains between the earth and the air, so that any one who says a vacuum is generated, speaks foolishly.

But to Plato I would reply that the surface of the figures which according to him the elements would have, could not exist.

940.

PROVES HOW THE EARTH IS NOT GLOBULAR AND NOT BEING GLOBULAR CANNOT HAVE A COMMON CENTRE.

We see the Nile come from Southern regions and traverse various provinces, running towards the North for a distance of

That the flow of rivers proves the slope of the land.

VOL. II.

3000 miles and flow into the Mediterranean by the shores of Egypt; and if we will give to this a fall of ten braccia a mile, as is usually allowed to the course of rivers in general, we shall find that the Nile must have its mouth ten miles lower than its source. Again, we see the Rhine, the Rhone and the Danube starting from the German parts, almost the centre of Europe, and having a course one to the East, the other to the North, and the last to Southern seas. And if you consider all this you will see that the plains of Europe in their aggregate are much higher than the high peaks of the maritime mountains; think then how much their tops must be above the sea shores.

941.

## OF THE HEAT THAT IS IN THE WORLD.

Where there is life there is heat, and where <sup>Theory of</sup> <sub>the elevation</sub> <sub>of water</sub> <sub>within the</sub> <sub>mountains.</sub> vital heat is, there is movement of vapour. This is proved, inasmuch as we see that the element of fire by its heat always draws to itself damp vapours and thick mists as opaque clouds, which it raises from seas as well as lakes and rivers and damp valleys; and these being drawn by degrees as far as the cold region, the first portion stops, because heat and moisture cannot exist with cold and dryness; and where the first portion stops the rest settle, and thus one portion after another being added, thick and dark clouds are formed. They are often wafted about and borne by the winds from one region to another, where by their density they become so heavy that they fall in thick rain; and if the heat of the sun is added to the power of the element of fire, the clouds are drawn up higher still and find a greater degree of cold, in which they form ice and fall in storms of hail. Now the same heat which holds up so great a weight of water as is seen to rain from the clouds, draws them from below upwards, from the foot of the mountains, and leads and holds them within the summits of the mountains, and these, finding some fissure, issue continuously and cause rivers.

942.

OF THE SEA, WHICH TO MANY FOOLS APPEARS  
TO BE HIGHER THAN THE EARTH WHICH FORMS  
ITS SHORE.

*b d* is a plain through which a river flows to the sea; this plain ends at the sea, and since in fact the dry land that is uncovered is not perfectly level—for, if it were, the river would have no motion—as the river does move, this place is a slope rather than a plain; hence this plain *d b* so ends where the sphere of water begins that if it were extended in a continuous line to *b a* it would go down beneath the sea, whence it follows that the sea *a c b* looks higher than the dry land.

Obviously no portions of dry land left uncovered by water can ever be lower than the surface of the watery sphere.

943.

OF CERTAIN PERSONS WHO SAY THE WATERS WERE  
HIGHER THAN THE DRY LAND.

Certainly I wonder not a little at the common opinion which is contrary to truth, but held by the universal consent of the judgment of men. And this is that all are agreed that the surface of the sea is higher than the highest peaks of the mountains; and they allege many vain and childish reasons, against which I will allege only one simple and short reason: We see plainly that if we could remove the shores of the sea, it would invest the whole earth and make it a perfect sphere. Now, consider how much earth would be carried away to enable the waves of the sea to cover the world; therefore that which would be carried away must be higher than the sea-shore.

have flowed from the summits of the mountains of Armenia, it must be believed that all the water of the ocean has passed very many times through these mouths. And do you not believe that the Nile must have sent more water into the sea than at present exists of all the element of water? Undoubtedly, yes. And if all this water had fallen away from this body of the earth, this terrestrial machine would long since have been without water. Whence we may conclude that the water goes from the rivers to the sea, and from the sea to the rivers, thus constantly circulating and returning, and that all the sea and the rivers have passed through the mouth of the Nile an infinite number of times.

Leonardo always writes Ermini, Erminia, for Armeni, Armenia (Arabic:

*Irmiah*). M. RAVAISSEON also deviates from the original in his translation of the following passage: “Or tu ne crois pas que le Nil ait mis plus d'eau dans la mer qu'il n'y en a à présent dans tout l'élément de l'eau. Il est certain que si cette eau était tombée” &c.

## II.

## ON THE OCEAN.

G. 48 δ]

946.

## PERCHÉ L'ACQUA È SALSA.

Dicie Plinio nel 2º suo libro, al 103  
ca'pitolo, che l'acqua del mare è salata per-  
chè 4 l'ardore del sole secca l'umi'do e  
the saltiness of the sea  
quello succia, e questo al mare, che 6 molto  
(946. 917). s'allarga, dà sapore di sale; 7 Ma questo  
nō si cōciede, perchè se la salsedine 8 del  
mare avesse cavsa dallo ardore del sole,  
9 e' non è dubbio che tanto maggiormente li  
laghi, stagni e paduli 10 sarebbono più insalati,  
quāto 11 le loro acque son manco mobili e  
di 12 minore profondità, e la esperiēzia ci  
mostra il contrario; tali paduli ci mostrā  
14 le loro acque essere al tutto private di  
sal'sedine; Ancora s'assegnia da Plinio  
nel medesimo 16 capitulo che tal salsedine

## WHY WATER IS SALT.

Pliny says in his second book, chapter 103, that the water of the sea is salt because the heat of the sun dries up the moisture and drinks it up; and this gives to the wide stretching sea the savour of salt. But this cannot be admitted, because if the saltiness of the sea were caused by the heat of the sun, there can be no doubt that lakes, pools and marshes would be so much the more salt, as their waters have less motion and are of less depth; but experience shows us, on the contrary, that these lakes have their waters quite free from salt. Again it is stated by Pliny in the same chapter that this saltiness might originate,

946. See PLINY, Hist. Nat. II, CIII [C]. *Itaque Solis ardore siccatur liquor: et hoc esse masculum sidus accepimus, torrens cuncta sorbensque.* (ep. CIV.) Sic mari late patenti saforem incoqui salis, aut quia exhausto inde dulci tenueque, quod facilime trahat vis ignea, omne asperius crassiusque linquatur: ideo summa aequorum aqua dulcioram profundam; hanc esse verioram causam, quam quod mare terrae sudor sit aeternus: aut quia plurimum ex arido misceatur illi vapore: aut quia terrae natura sicut medicitas aquas inficiat . . (ep. CV): altis-

simum mare XV. stadiorum Fabianus tradit. Alii n Ponto coadverso Coraxorum gentis (vocant Br̄ē Ponti) trecentis fire a continentis stadiis immensam altitudinem maris tradunt, vallis nunquam repertis. (ep. CVI [CIII]) Mirabilis id faciunt aquae dulces, juxta mare, ut fistulis emicantes. Nam nec aquarum natura a miraculis cessat. Dulces mari invehuntur, leviores haud dubie. Ideo et marinæ, quarum natura gravior, magis invecta sustinent. Quaedam vero et dulces inter se supermeant alias.

<sup>17</sup> potrebbe nasciere, perchè, leuatone ogni  
<sup>18</sup> dolce e sottile <sup>19</sup> parte, la qual facilmente  
il caldo a se ti<sup>20</sup>ra, rimane la parte più  
aspra e più <sup>21</sup> grossa, e per questo l'acqua,  
che è nella su<sup>22</sup> perficie, è più dolce che  
nel fôdo; <sup>23</sup>a questa si cōtradice colle me-  
desime <sup>24</sup>sopradette ragioni, cioè che il  
medesimo ac<sup>25</sup>caderebbe alli paduli e altre  
acque che per il cal<sup>26</sup>do s'asciugano; Acora  
fu detto che <sup>27</sup>la salsedine del mare è  
sudore della terra; <sup>28</sup>a questo si risponde  
che tutte le uene dell'acque <sup>29</sup>che pene-  
trano la terra, sarebbono insalate; Ma <sup>30</sup> si  
cōclude la salsedine del mare esser nata  
dalle molte vene d'acqua le quali nel  
penetrare la ter<sup>35</sup>ra trovano <sup>36</sup>le mini-  
ere del sale, e <sup>38</sup>quelle in parte <sup>39</sup>si sol-  
uono e por<sup>40</sup>ta seco all' o<sup>41</sup>cieano e li altri  
mari, d' o<sup>43</sup>de mai ¶li nuvo<sup>44</sup>li, seminatori  
d' elli fiumi ¶ <sup>45</sup>lo leuano; ed e' sarebbe  
più salato il ma<sup>48</sup>re alli nostri tē<sup>49</sup>pi che  
mai per <sup>50</sup>alcun altro tē<sup>51</sup>po fusse, e se  
per <sup>52</sup>l' auersario si di<sup>53</sup>cesse, che il tempo  
infinito seccherebbe over cōgielerebbe  
il mare in sa<sup>57</sup>le, a questo <sup>58</sup>si risponde,  
che <sup>59</sup>tal sale si rē<sup>60</sup>de alla terra <sup>61</sup>colla  
liberatione <sup>62</sup>d'essa terra, che <sup>63</sup>s'inalza col  
suo <sup>64</sup>acquistato sale, <sup>65</sup>e li fiumi lo rendo-  
no alla sōmersa terra.

because all the sweet and subtle portions which the heat attracts easily being taken away, the more bitter and coarser part will remain, and thus the water on the surface is fresher than at the bottom [22]; but this is contradicted by the same reason given above, which is, that the same thing would happen in marshes and other waters, which are dried up by the heat. Again, it has been said that the saltiness of the sea is the sweat of the earth; to this it may be answered that all the springs of water which penetrate through the earth, would then be salt. But the conclusion is, that the saltiness of the sea must proceed from the many springs of water which, as they penetrate into the earth, find mines of salt and these they dissolve in part, and carry with them to the ocean and the other seas, whence the clouds, the begetters of rivers, never carry it up. And the sea would be salter in our times than ever it was at any time; and if the adversary were to say that in infinite time the sea would dry up or congeal into salt, to this I answer that this salt is restored to the earth by the setting free of that part of the earth which rises out of the sea with the salt it has acquired, and the rivers return it to the earth under the sea.

Terza e vltima ragione di remo, il sale  
essere in tutte <sup>5</sup>le cose create <sup>6</sup>e questo  
c' i<sup>7</sup>segnano <sup>8</sup>le acque passate per tutte  
le ci<sup>10</sup>neri e calcin<sup>11</sup>i delle cose <sup>12</sup>bruciate,  
e le <sup>13</sup>orine di qua<sup>14</sup>luche anima<sup>15</sup>le e le  
super<sup>16</sup>fluità usci<sup>17</sup>te de' lor cor<sup>18</sup>pi e le  
terre, <sup>19</sup>nelle quali si <sup>20</sup>cōuertono <sup>21</sup>le cor-  
ruptioni <sup>22</sup>di tutte le cose.

<sup>23</sup>Ma a dire meglio, essendo dato il  
môdo eterno, egli è necissario <sup>24</sup>che li  
sua popoli sieno ancora loro eterni; òde  
eternalmente fu e sarebbe la spetie vmana  
cōsu<sup>26</sup>matricie del sale; e se tutta la massa

For the third and last reason we will  
say that salt is in all created things; and  
this we learn from water passed over the  
ashes and cinders of burnt things; and the  
urine of every animal, and the superfluities  
issuing from their bodies, and the earth into  
which all things are converted by corruption.

But,—to put it better,—given that the  
world is everlasting, it must be admitted that  
its population will also be eternal; hence the  
human species has eternally been and would  
be consumers of salt; and if all the mass  
of the earth were to be turned into salt, it

947. l. 27. That is, on the supposition that salt, once consumed, disappears for ever.

would not suffice for all human food [27]; whence we are forced to admit, either that the species of salt must be everlasting like the world, or that it dies and is born again like the men who devour it. But as experience teaches us that it does not die, as is evident by fire, which does not consume it, and by water which becomes salt in proportion to the quantity dissolved in it,—and when it is evaporated the salt always remains in the original quantity—it must pass through the bodies of men either in the urine or the sweat or other excretions where it is found again; and as much salt is thus got rid of as is carried every year into towns; therefore salt is dug in places where there is urine.—Sea hogs and sea winds are salt.

We will say that the rains which penetrate the earth are what is under the foundations of cities with their inhabitants, and are what restore through the internal passages of the earth the saltiness taken from the sea; and that the change in the place of the sea, which has been over all the mountains, caused it to be left it there in the mines found in those mountains, &c.

948.

The waters of the salt sea are fresh at the greatest depths.

949.

#### THAT THE OCEAN DOES NOT PENETRATE UNDER THE EARTH.

The ocean does not penetrate under the earth, and this we learn from the many and various springs of fresh water which, in many parts of the ocean make their way up from the bottom to the surface. The same thing is farther proved by wells dug beyond the distance of a mile from the said ocean, which fill with fresh water; and this happens because the fresh water is lighter than salt water and consequently more penetrating.

Which weighs most, water when frozen or when not frozen?

Più penetra l'acqua dolce cōtro <sup>18</sup>al-l'acqua salsa, che la salsa cōtro al<sup>19</sup>la dolcie.

<sup>20</sup>Che l'acqua dolcie penetri più cōtro all'ac<sup>21</sup>qua salsa, che essa salsa cōtro alla dolcie, ci <sup>22</sup>lo manifesta vna sottile tela asciutta e <sup>23</sup>vechia, pendente con equal bassezza <sup>24</sup>colli sua oppositi stremi nelle due varie <sup>25</sup>acque, delle quali le lor superficie siē <sup>26</sup>d'equal bassezza, e allor si vedrà elevar<sup>29</sup>si in alto infra essa pezza tanto più l'acqua <sup>28</sup>dolcie, che la salsa, quanto la dolcie è più <sup>29</sup>lieve che essa salsa.

C. A. 157b; 466a]

Tutti li mari mediterrani e li <sup>2</sup>golfi d'essi mari sō fatti da fi<sup>3</sup>vni che versano in mare.

C. A. 83b; 240b]

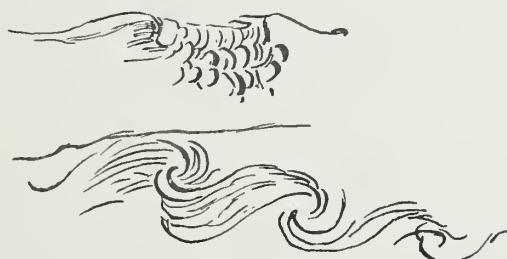

QUI SI RENDE RAGIONE DELLI EFFETTI FATTI DALLE ACQUE NEL PROPOSITO SITO.

<sup>2</sup>Tutti li laghi e tutti li golfi del mare e tutti li mari mediterrani nascono dalli fiumi, che in quelli spā<sup>3</sup>dono le loro acque, e dalli impedimenti della loro declinazione <sup>4</sup>nel Mare Mediterraneo, diuisore d'Africa dall'Europa, e dell'Europa dall'Asia, mediante il Nilo e Tanai che in <sup>5</sup>lui versano le loro acque; Si domāda, quale impedimento è maggiore a proibire il corso delle sue acque, che nō si renda all' oceano.

Ash. III. 25a]

956. 1. Allusion may here be made to the mythological explanation of the ebb and flow given in the Edda. Utgardloki says to Thor (Gylfaginning 48): "When thou wert drinking out of the horn, and it seemed to thee that it was slow in emptying a wonder befell, which I should not have believed possible: the other end of the horn lay in

953.

That the shores of the sea constantly acquire more soil towards the middle of the sea; that the rocks and promontories of the sea are constantly being ruined and worn away; that the Mediterranean seas will in time discover their bottom to the air, and all that will be left will be the channel of the greatest river that enters it; and this will run to the ocean and pour its waters into that with those of all the rivers that are its tributaries.

954.

How the river Po, in a short time might dry up the Adriatic sea in the same way as it has dried up a large part of Lombardy.

955.

Where there is a larger quantity of water, there is a greater flow and ebb, but the contrary in narrow waters.

Look whether the sea is at its greatest flow when the moon is half way over our hemisphere [on the meridian].

956.

Whether the flow and ebb are caused by the moon or the sun, or are the breathing of this terrestrial machine. That the flow and ebb are different in different countries and seas.

957.

Book 9 of the meeting of rivers and their flow and ebb. The cause is the same in the sea, where it is caused by the straits of Gibraltar. And again it is caused by whirlpools.

the sea, which thou sawest not; but when thou shalt go to the sea, thou shalt see how much thou hast drunk out of it. And that men now call the ebb tide."

Several passages in various manuscripts treat of the ebb and flow. In collecting them I have been guided by the rule only to transcribe those which named some particular spot.

Leic. 65]

958.

## DEL FLUSSO E RIFLUSSO.

<sup>2</sup> Tutti li mari ànno il lor flusso e riflusso in v̄ medesimo tempo, ma pare variarsi, perchè li giorni nō co<sup>3</sup>mincano in vn medesimo tempo in tutto l'universo, cōciosiachè, quādo nel nostro emisperio è mezzo <sup>4</sup>giorno, nell'opposito emisperio è mezzanotte <sup>5</sup>, e nelle congiuntioni oriētali dell'uno e del'altro emispe<sup>6</sup>rio comincia la notte che corre dirieto al giorno, e nelle congiūzioni occidentali d'essi emisperi comincia <sup>6</sup>il giorno che seguita la notte dalla sua opposita parte <sup>7</sup>; adunque è concluso che, ancora che 'l <sup>7</sup>detto accrescimēto e diminvitione delle altezze de' mari sien fatte in vn <sup>8</sup>medesimo tempo, essi mostrano variarsi per le già dette cagioni; sono adunque sōmerse le acque <sup>9</sup>nelle uene partite dai fondi de' mari, le quali ramificano dentro al corpo della terra, e rispondono <sup>10</sup>al nascimento de' fiumi <sup>11</sup>, i quali al contyno tolgonon dal fondo il mare al mare andato; è tolto innvme<sup>12</sup>rabilis volte nella superficie un mare al mare; E se tu volessi, che la luna, apparendo all'orientale parte <sup>12</sup>del Mare Mediterrano, comiciasse ad attrarre a se l'acque del mare, ne seguirebbe che immediate <sup>13</sup>se ne vedrebbe la speriēza al fine oriētale di tal mare predetto; Ancora essendo il Mar Medi<sup>14</sup>terrano circa alla ottava parte della circūferenza della spera dell'acqua, per essere lui <sup>15</sup>lungo 3 mila miglia, e 'l flusso e riflusso nō fa se nō 4 volte in 24 ore, e' nō s'accorderebbe tale <sup>16</sup>effetto col tempo d'esse 24 ore, se esso Mare Mediterrā nō fusse lungo semila miglia, perchè <sup>17</sup>se lo spogliamēto di tanto mare avesse a passare per lo stretto di Gibiltar nel correr dietro <sup>18</sup>alla luna, e' sarebbe si grāde il corso delle acque per tale stretto, e s'alzerebbe in tāta altezza, <sup>19</sup>che dopo esso stretto farebbe tal corso, che per molte miglia infra l'oceano farebbe inōdatione e bollimenti grandissimi, per la qual cosa sarebbe impossibile passarui, e dopo questo subito l'ocea<sup>20</sup>no rederebbe colla medesima furia l'acque ricevute, donde esso le riceve;

## OF THE FLOW AND EBB.

All seas have their flow and ebb in the same period, but they seem to vary because the days do not begin at the same time throughout the universe; in such wise as that when it is midday in our hemisphere, it is midnight in the opposite hemisphere; and at the Eastern boundary of the two hemispheres the night begins which follows on the day, and at the Western boundary of these hemispheres begins the day, which follows the night from the opposite side. Hence it is to be inferred that the above mentioned swelling and diminution in the height of the seas, although they take place in one and the same space of time, are seen to vary from the above mentioned causes. The waters are then withdrawn into the fissures which start from the depths of the sea and which ramify inside the body of the earth, corresponding to the sources of rivers, which are constantly taking from the bottom of the sea the water which has flowed into it. A sea of water is incessantly being drawn off from the surface of the sea. And if you should think that the moon, rising at the Eastern end of the Mediterranean sea must there begin to attract to herself the waters of the sea, it would follow that we must at once see the effect of it at the Eastern end of that sea. Again, as the Mediterranean sea is about the eighth part of the circumference of the aqueous sphere, being 3000 miles long, while the flow and ebb only occur 4 times in 24 hours, these results would not agree with the time of 24 hours, unless this Mediterranean sea were six thousand miles in length; because if such a superabundance of water had to pass through the straits of Gibraltar in running behind the moon, the rush of the water through that strait would be so great, and would rise to such a height, that beyond the straits it would for many miles rush so violently into the ocean as to cause floods and tremendous seething, so that it would be impossible to pass through. This agitated ocean would afterwards return the waters it

ecco che adūque mai si <sup>22</sup> passerebbe per tale stretto, e la speriēza mostra che d'ogni ora vi si passa, saluo che quādo il uento <sup>23</sup> viē per la linia della corrēte, allora il riflusso forte s'aumēta.; Il mare non alza l'acqua nelli <sup>24</sup> strettī che ànno vscita ma ben s'ingorga e si ritarda dināti a quelli, onde con furioso moto <sup>25</sup> poi ristora il tempo del suo ritardamēto insino al fin del suo moto riflesso.

Leic. 13<sup>a]</sup>

Come jl flusso e riflusso non è generale, perchè <sup>2</sup> in riuiera di Genova non fa niête, a Vinegia due braccia, tra la Inghilterra e Fiandra fa 18 braccia; <sup>3</sup> Come per lo stretto di Sicilia la corrēte è grādissima, perchè di lì passā tutte l'acque de' fiumi che uersā <sup>4</sup> nel Mare Adriatico.

Leic. 35<sup>a]</sup>

Nelle parti occidentali, appresso alla Fiandra, il mare cresce e māca ogni 6 ore circa 20 braccia, <sup>2</sup>e 22 quādo la luna è in suo fauore, ma le 20 braccia è il suo ordinario, il quale ordinario manifestamēte si uede <sup>3</sup> non essere per cavsa della luna; Questa varietà del crescere e discrescere del mare ogni 6 ore può <sup>4</sup> accadere per le ringorgationi delle acque, le quali son condotte nel Mare Mediterrano da quella quantità de' fiumi dell'Africa Asia ed Evropa, che in esso mare versano le loro acque, le quali per lo stretto di Giblitar infra Abila

958. 23. In attempting to get out of the Mediterranean, vessels are sometimes detained for a considerable time; not merely by the causes mentioned by Leonardo but by the constant current flowing eastwards through the middle of the straits of Gibraltar.

959. A few more recent data may be given here to facilitate comparison. In the Adriatic the tide rises 2 and  $\frac{1}{2}$  feet, at Terracina  $1\frac{1}{4}$ . In the English channel between Calais and Kent it rises from 18 to 20 feet. In the straits of Messina it rises no more than  $2\frac{1}{2}$  feet, and that only in stormy weather, but the current is all the stronger. When Leo-

had received with equal fury to the place they had come from, so that no one ever could pass through those straits. Now experience shows that at every hour they are passed in safety, but when the wind sets in the same direction as the current, the strong ebb increases [23]. The sea does not raise the water that has issued from the straits, but it checks them and this retards the tide; then it makes up with furious haste for the time it has lost until the end of the ebb movement.

959.

That the flow and ebb are not general; for on the shore at Genoa there is none, at Venice two braccia, between England and Flanders 18 braccia. That in the straits of Sicily the current is very strong because all the waters from the rivers that flow into the Adriatic pass there.

960.

In the West, near to Flanders, the sea rises and decreases every 6 hours about 20 braccia, and 22 when the moon is in its favour; but 20 braccia is the general rule, and this rule, as it is evident, cannot have the moon for its cause. This variation in the increase and decrease of the sea every 6 hours may arise from the damming up of the waters, which are poured into the Mediterranean by the quantity of rivers from Africa, Asia and Europe, which flow into that sea, and the waters which are given to it by those rivers; it pours them to the ocean

nardo accounts for this by the southward flow of all the Italian rivers along the coasts, the explanation is at least based on a correct observation; namely that a steady current flows southwards along the coast of Calabria and another northwards, along the shores of Sicily; he seems to infer, from the direction of the first, that the tide in the Adriatic is caused by it.

960. 5. *Abila*, Lat. *Abyla*, Gr. *Ἄβυλη*, now *Sierra Ximera* near Ceuta; *Calpe*, Lat. *Calpe*, Gr. *Κάλπη*, now Gibraltar. Leonardo here uses the ancient names of the rocks, which were known as the Pillars of Hercules.

e Calpe <sup>6</sup> promōtori rende all'oceano le acque che da essi fiumi li son date, jl quale oceano, astendendosi <sup>7</sup>infra le isole d'Inghilterra e l'altre più settētrionali, si uiene a ringorgare e tenere in collo per diuersi golfi, <sup>8</sup>li quali, essendo tali mari discostatisi colla lor superficie dal centro del mōdo, anno acquistato peso, il quale, <sup>9</sup>poichè supera la potentia dell'avenimēto delle acque che lo cavauano, essa acqua ripiglia im<sup>10</sup>peto in contrario al suo avenimēto, e fa impeto contro alli stretti, che li davano l'acque e massime fa <sup>11</sup>contra lo stretto di Gibiltar, il quale per alquāto spatio di tempo rimā ringorgato e viene a riseruarsi tut<sup>12</sup>te l'acque che di novo in tal tempo li sō date dalli già detti fumi, e questa mi pare una delle ragioni che <sup>13</sup>si potrebbe assegnare della causa d'esso flusso e riflusso, come nella 21<sup>a</sup> del 4<sup>a</sup> della mia teori<sup>14</sup>ca è provato.

6. asslendendosi. 7. infralle isola digilterra ellaltre . . settētrionali . . ettenere. 8. cholla . . del mō . . ano. 9. chello . . ripiglia ē. 10. peto . . inpito . . chelli. 12. ta lacq“a” . . ga detti . . ecquesti . . chausa . . frusso e refrusso comi. 14. cha e.

through the straits of Gibraltar, between Abila and Calpe[5]. That ocean extends to the island of England and others farther North, and it becomes dammed up and kept high in various gulfs. These, being seas of which the surface is remote from the centre of the earth, have acquired a weight, which as it is greater than the force of the incoming waters which cause it, gives this water an impetus in the contrary direction to that in which it came and it is borne back to meet the waters coming out of the straits; and this it does most against the straits of Gibraltar; these, so long as this goes on, remain dammed up and all the water which is poured out meanwhile by the aforementioned rivers, is pent up [in the Mediterranean]; and this might be assigned as the cause of its flow and ebb, as is shown in the 21<sup>st</sup> of the 4<sup>th</sup> of my theory.

alla altezza della rotta vena; <sup>5</sup> Quando l'acqua escie della rotta vena della terra, essa osserua la natura dell'altre cose piv gravi <sup>6</sup>che l'aria, onde senpre cerca i lochi bassi. <sup>7</sup>Vaño <sup>8</sup>le uene scorredò con ifinita ramificatione pel corpo della terra.

from below rises to the level of the burst vein. When the water rushes out of a burst vein in the earth it obeys the nature of other things heavier than the air, whence it always seeks the lowest places. [7] These waters traverse the body of the earth with infinite ramifications.

Br. M. 233δ]

## 964.

Quella cavsa, che move li umori in tutte le spetie de' corpi animati e che cō quelle soccorre a ogni lesione, <sup>2</sup>move l'acqua dall'infima profodità del mare alla soña altezza de' mōti, <sup>3</sup>e come l'acqua si leua dalle <sup>4</sup>inferiori parti della vite all'alte tagliature.

The same cause which stirs the humours in every species of animal body and by which every injury is repaired, also moves the waters from the utmost depth of the sea to the greatest heights.

Br. M. 236δ]

## 965.

L'acqua è proprio quella che per vitale umore <sup>2</sup>di questa arida terra è dedicata, e <sup>3</sup>quella cavsa che la move per le sue ramicificate vene cōtro al natural corso delle cose gravi, è proprio quella che mo<sup>6</sup>ve li umori in tutte le spetie de' corpi <sup>7</sup>animati; Ma quella, con sōma āmi<sup>8</sup>ratio de' sua contemplanti, dall'infima profondità del mare all'altissime sōmità <sup>10</sup>de' mōti si leua, e per le rotte vene ver<sup>11</sup>sando al basso mare ritorna, e di novo <sup>12</sup>con celerità sormōta, e all'ātiddetto de<sup>13</sup>sceso ritorna, così dalle parti intrī<sup>14</sup>siche all'esteriori, così dalle infime alle <sup>15</sup>superiori, voltādo quādo con naturale cor<sup>16</sup>so ruina, così insieme cōgiunta, cō <sup>17</sup>cōtinua revolutione, <sup>18</sup>per li terrestri meati si ua raggirādo.

It is the property of water that it constitutes the vital human of this arid earth; and the cause which moves it through its ramified veins, against the natural course of heavy matters, is the same property which moves the humours in every species of animal body. But that which crowns our wonder in contemplating it is, that it rises from the utmost depths of the sea to the highest tops of the mountains, and flowing from the opened veins returns to the low seas; then once more, and with extreme swiftness, it mounts again and returns by the same descent, thus rising from the inside to the outside, and going round from the lowest to the highest, from whence it rushes down in a natural course. Thus by these two movements combined in a constant circulation, it travels through the veins of the earth.

G. 70a]

966. 11, 17. Cicognola, Syphon. See Vol. I, Pl. XXIV, No. 1.

967. 968. This conception of the rising of the

which bound it, but only so much rises as  
the dryness of the mountain attracts. And if,  
on the contrary, the rain, which pen-  
etrates from the summit of the mountain to  
the base, which is the boundary of the sea,  
descends and softens the slope opposite to  
the said mountain and constantly draws the  
water, like a syphon[11] which pours through  
its longest side, it must be this which  
draws up the water of the sea; thus if *s n* were  
the surface of the sea, and the rain descends

from the top of the mountain *a* to *n*  
on one side, and on the other sides  
it descends from *a* to *m*, without a  
doubt this would occur after the  
manner of distilling through felt, or  
as happens through the tubes called  
syphons[17]. And at all times the  
water which has softened the mountain, by  
the great rain which runs down the two  
opposite sides, would constantly attract the  
rain *a n*, on its longest side together with the  
water from the sea, if that side of the  
mountain *a m* were longer than the other *a n*; but this cannot be, because no part of the  
earth which is not submerged by the ocean  
can be lower than that ocean.

## 967.

#### OF SPRINGS OF WATER ON THE TOPS OF MOUNTAINS.

It is quite evident that the whole surface  
of the ocean—when there is no storm—is at  
an equal distance from the centre of the  
earth, and that the tops of the mountains  
are farther from this centre in proportion as  
they rise above the surface of that sea;  
therefore if the body of the earth were  
not like that of man, it would be impossible  
that the waters of the sea—being so much  
lower than the mountains—could by their  
nature rise up to the summits of these  
mountains. Hence it is to be believed that  
the same cause which keeps the blood at  
the top of the head in man keeps the water  
at the summits of the mountains.

blood, which has given rise to the comparison,  
was recognised as erroneous by Leonardo him-  
self at a later period. It must be remembered that

## 968.

IN CONFIRMATION OF WHY THE WATER GOES  
TO THE TOPS OF MOUNTAINS.

I say that just as the natural heat of the blood in the veins keeps it in the head of man,—for when the man is dead the cold blood sinks to the lower parts—and when the sun is hot on the head of a man the blood increases and rises so much, with other humours, that by pressure in the veins pains in the head are often caused; in the same way veins ramify through the body of the earth, and by the natural heat which is distributed throughout the containing body, the water is raised through the veins to the tops of mountains. And this water, which passes through a closed conduit inside the body of the mountain like a dead thing, cannot come forth from its low place unless it is warmed by the vital heat of the spring time. Again, the heat of the element of fire and, by day, the heat of the sun, have power to draw forth the moisture of the low parts of the mountains and to draw them up, in the same way as it draws the clouds and collects their moisture from the bed of the sea.

Leic. 11a]

## 969.

Come molte vene d'acqua salata si trovano fortemête distanti dal <sup>2</sup>mare, e questo potrebbe accadere, perchè tal uena passasse per qualche miniera di sale come quella d'Ungheria, che si caua <sup>3</sup>il sale per le grandissime cave, come quasi cavano le pietre.

That many springs of salt water are found at great distances from the sea; this might happen because such springs pass through some mine of salt, like that in Hungary where salt is hewn out of vast caverns, just as stone is hewn.

970.

#### DELLE DIRIUATIONI DE' FIUMI.

#### OF THE ORIGIN OF RIVERS.

Il corpo della terra, a similitudine de' corpi deli animali, è tessuto di ramificationi di uene, le quali son tutte insieme cōgiunte, e son constituite a nvtrimento e viuificazione d'essa terra e de' sua creati; partono dalle profondità del mare, e a quelle dopo molta revolutio<sup>n</sup>e ànno a tornare per li fumi creati dalle alte rotture d'esse uene; e se tu volessi dire, le pio<sup>ve</sup> il uerno o la resolutione della neue l'estate essere causa del nascimento de' fumi, e' si ti potrebbe allegare<sup>6</sup> li fumi, che ànno origine ne' paesi focosi dell'Africa, nella quale non piove e meno nevica, perchè il superchio caldo senpre risolue in aria tutti li nuvoli, che da ueti in là son sospinti; e se tu diciessi che tali fumi, che uē<sup>8</sup>gono grossi il Luglio e'l Agosto, son delle nevi che si risoluo il Maggio e'l Giugnio per l'appressamēto del sole alle neui delle montagnie di Scitia, e che tali resolutioni si riducono in certe valli e fanno laghi, doue poi entrano per le <sup>10</sup>vene e caue sotterane, le

The body of the earth, like the bodies of animals, is intersected with ramifications of waters which are all in connection and are constituted to give nutriment and life to the earth and to its creatures. These come from the depth of the sea and, after many revolutions, have to return to it by the rivers created by the bursting of these springs; and if you chose to say that the rains of the winter or the melting of the snows in summer were the cause of the birth of rivers, I could mention the rivers which originate in the torrid countries of Africa, where it never rains—and still less snows—because the intense heat always melts into air all the clouds which are borne thither by the winds. And if you chose to say that such rivers, as increase in July and August, come from the snows which melt in May and June from the sun's approach to the snows on the mountains of Scythia[9], and that such meltings come down into certain valleys and form lakes, into which they enter by springs and subter-

971. The first two lines of this passage have already been given as No. 957. In the margin, near line 3 of this passage, the text given as No. 919 is written.

ranean caves to issue forth again at the sources of the Nile, this is false; because Scythia is lower than the sources of the Nile, and, besides, Scythia is only 400 miles from the Black sea and the sources of the Nile are 3000 miles distant from the sea of Egypt into which its waters flow.

971.

Book 9, of the meeting of rivers and of the tide in their ebb and flow. The cause is the same in the sea, where it is caused by the straits of Gibraltar; and again it is caused by whirlpools.

[3] If two rivers meet together to form a straight line, and then below two right angles take their course together, the flow and ebb will happen now in one river and now in the other above their confluence, and principally if the outlet for their united volume is no swifter than when they were separate. Here occur 4 instances.

972.

When a smaller river pours its waters into a larger one, and that larger one flows in the opposite direction, the course of the smaller river will bend up against the approach of the larger river; and this happens because, when the larger river fills up all its bed with water, it makes an eddy in front of the mouth of the other river,

On the alterations, caused by the courses of rivers by their confluence (972—974).

and so carries the water poured in by the smaller river with its own. When the smaller river pours its waters into the larger one, which runs across the current

at the mouth of the smaller river, its waters will bend with the downward movement of the larger river.

972. In the original sketches the word Arno is written at the spot here marked A, at R. Risredi, and at M. Mugnone.

Leic. 168]

Quando le piene de' fiumi sō<sup>2</sup> diminuite, allor li angoli acuti, che si generā nelle congiuntioni de' sua rami, si fanno piv cor̄ti nelli lor lati e più grossi nelle lor punte, come sia la corrente *a n*, e la corrente *d n*, le quali si congiunghino insieme in *n*, quando il fiume è nelle sue gran piene; dico che, quando sia nella predetta dispositione, che se *d n* avanti la piena era piv basso che *a n*, che nel tempo della piena *d n* sarà piē di rena e fango, il quale nel calare delle acque *d n* porterà uia il fango e rimarrà col fondo basso, e l' canale *a n*, trovandosi alto, scolerà le sue acque nel basso *d n* e consumerà tutta <sup>8</sup>la punta del renajo *b c n*, e così rimarrà l'angolo *a c d* piv grosso che l'angolo *a n d*, e di lati più corti, come <sup>9</sup>prima dissi.

G. 48a]

## AQUA.

DEL MOTO D'Ū SUBITO ENPITO FATTO <sup>3</sup>DA UN FIUME SOPRA IL SUO LETTO ASCIUTTO.

<sup>4</sup>Tanto è più tardo o velocie il corso dell'acqua, <sup>5</sup>data dallo isboccato lago al secco fivme, quā<sup>6</sup>to esso fiume fia più largo o piv stretto, over <sup>7</sup>più piano o cupo in un loco che in un altro, <sup>8</sup>per quel che è proposto: il flusso e riſflusso del mare che dallo oceano entra nel Metoditerraneo Mare e de' fiumi, che giostrano <sup>11</sup>con lui, alzano tanto più o meno le loro acque, <sup>12</sup>quanto tal mare è piv o meno stretto.

C. A. 362δ; 1134δ]

973.

When the fulness of rivers is diminished, then the acute angles formed at the junction of their branches become shorter at the sides and wider at the point; like the current *a n* and the current *d n*, which unite in *n* when the river is at its greatest fulness. I say, that when it is in this condition if, before the fullest time, *d n* was lower than *a n*, at the time of fulness *d n* will be full of sand and mud. When the water *d n* falls, it will carry away the mud and remain with a lower bottom, and the channel *a n* finding itself the higher, will fling its waters into the lower, *d n*, and will wash away all the point of the sand-spit *b n c*, and thus the angle *a c d* will remain larger than the angle *a n d* and the sides shorter, as I said before.

974.

## WATER.

OF THE MOVEMENT OF A SUDDEN RUSH MADE BY A RIVER IN ITS BED PREVIOUSLY DRY.

In proportion as the current of the water given forth by the draining of the lake is slow or rapid in the dry river bed, so will this river be wider or narrower, or shallower or deeper in one place than another, according to this proposition: the flow and ebb of the sea which enters the Mediterranean from the ocean, and of the rivers which meet and struggle with it, will raise their waters more or less in proportion as the sea is wider or narrower.

975.

Whirlpools, that is to say caverns; that is to say places left by precipitated waters.

973. Above the first sketch we find, in the original, this note: “Sopra il pōte rubaconte alla torrilla”; and by the second, which represents a pier of a bridge, “Sotto l'ospedal del ceppo.”

974. In the margin is a sketch of a river which winds so as to form islands.

G. 496]

## DELLA VIBRATIONE DELLA TERRA.

<sup>2</sup>Li corsi sotterranei <sup>3</sup>delle acque, sicome quelli che son fatti infra <sup>4</sup>l'aria e la terra, son <sup>4</sup>quelli che al continuo <sup>5</sup>cōsumano e profondano li letti dell'i lor corsi.

Leic. 68]

Il fiume che esce de' mōti pone gran quātità di sassi grossi in nel suo ghiareto, i quali fatti sono ancora <sup>2</sup>con parte de' sua angoli e lati, e nel processo del corso conduce pietre minori con angoli piv cōsumati, cioè le grā <sup>3</sup>pietre fa minori, e piv oltre pō ghaiia grossa, e poi minvta, e seguita rena grossa, e poi minvta, dipoi procede <sup>4</sup>litta grossa, e poi piv sottile, e così seguēdo giugne al mare l'acqua turba di rena e di litta; la rena scarica sopra de' <sup>5</sup>liti marini per il rigurgitamēto dell'ōde salse, e segue la litta di tanta sottilità che par di natura d'acqua, la qual non si ferma sopra de' marī liti, ma ritorna indietro coll'acqua per la sua leuità, perch'è nata di foglie marcie e d'altre cose leuissime, si <sup>7</sup>che, essendo quasi, com'è detto, di natura d'acqua, essa poi in tempo di bonaccia si scarica e si ferma sopra del <sup>8</sup>fondo del mare, ove per la sua sottilità si condensa e resiste all'onde che sopra vi passano per la sua lubricità, e <sup>9</sup>qui stanno i nichi e quest'è terra bianca da far boccali.

Leic. 318]

Tutte l'uscite dell'acque dal monte nel mare portā cō seco li sassi del monte in es<sup>2</sup>so mare, e per la inōdatione dell'acque marine contro alli sua monti, esse pietre erā ributta<sup>3</sup>te inverso il mōte, e nell'ādere e nel ritornare indietro delle acque al mare, le pietre insieme cō quel<sup>4</sup>la tornavano, e nel ritornare li angoli loro insieme si percuoteano, e come parte men <sup>5</sup>resistente alle percosse si cōsumavano e facean le pietre sanza angoli, in figu<sup>6</sup>ra rotonda, come ne' liti dell'Elsa si dimostra, e quelle rimanevā piv grosse, che manco sarà remosse <sup>7</sup>dal lor

976.

## OF THE VIBRATION OF THE EARTH.

The subterranean channels of waters, like those which exist between the air and the earth, are those which unceasingly wear away and deepen the beds of their currents.

977.

A river that flows from mountains deposits a great quantity of large stones in its bed, which still have some of their angles and sides, and in the course of its flow it carries down smaller stones with the angles more worn; that is to say the large stones become smaller. And farther on it deposits coarse gravel and then smaller, and as it proceeds this becomes coarse sand and then finer, and going on thus the water, turbid with sand and gravel, joins the sea; and the sand settles on the sea-shores, being cast up by the salt waves; and there results the sand of so fine a nature as to seem almost like water, and it will not stop on the shores of the sea but returns by reason of its lightness, because it was originally formed of rotten leaves and other very light things. Still, being almost—as was said—of the nature of water itself, it afterwards, when the weather is calm, settles and becomes solid at the bottom of the sea, where by its fineness it becomes compact and by its smoothness resists the waves which glide over it; and in this shells are found; and this is white earth, fit for pottery.

978.

All the torrents of water flowing from the mountains to the sea carry with them the stones from the hills to the sea, and by the influx of the sea-water towards the mountains; these stones were thrown back towards the mountains, and as the waters rose and retired, the stones were tossed about by it and in rolling, their angles hit together; then as the parts, which least resisted the blows, were worn off, the stones ceased to be angular and became round in form, as may be seen on the banks of the Elsa. And those remained larger which were less removed

### ON MOUNTAINS.

C. A. 157<sup>b</sup>; 466<sup>a</sup>]

¶Li mōti son fatti dalli cor<sup>2</sup>si de' fiumi; ¶

3¶Li mōti son disfatti dalli cor<sup>4</sup>si de' fiumi. ¶

979.

Mountains are made by the currents of rivers. The formation of mountains

Mountains are destroyed by the currents of rivers. (979—983).

Leic. 10<sup>a</sup>]

980.

Come le <sup>2</sup>radici settentrionali dì qualche alpe non sono ancora petrificate; e questo si vede ma<sup>3</sup>nifestamente doue i fumi, che le taglano, corrano inverso settentrione, li quali tagliā <sup>4</sup>nell'altezze de' mōti le falde delle pietre viue, e nell'congiugniersi colle pianure le predette falde <sup>5</sup>son tutte di terra da fare boccali, come si dimostra in Val di Lamona al fiume Lamona nel<sup>9</sup>l'uscire del Mōte Appenino fargli le predette cose nelle sue rive;

Come li fumi ànno tutti segati <sup>7</sup>e diuisi li menbri delle grand'alpi l'uno dall'altro, e questo si manifesta per lo ordine delle <sup>8</sup>pietre faldate, chè dalla sommità del monte insino al fume si vedono le corrispōdenze delle falde essere <sup>9</sup>così da l'un de' lati del fume come dall'altro; Come

That the Northern bases of some Alps are not yet petrified. And this is plainly to be seen where the rivers, which cut through them, flow towards the North; where they cut through the strata in the living stone in the higher parts of the mountains; and, where they join the plains, these strata are all of potter's clay; as is to be seen in the valley of Lamona where the river Lamona, as it issues from the Appenines, does these things on its banks.

That the rivers have all cut and divided the mountains of the great Alps one from the other. This is visible in the order of the stratified rocks, because from the summits of the banks, down to the river the correspondence of the strata in the rocks is visible on either side of the river. That the

981.

The summits of mountains for a long time rise constantly.

The opposite sides of the mountains always approach each other below; the depths of the valleys which are above the sphere of the waters are in the course of time constantly getting nearer to the centre of the world.

In an equal period, the valleys sink much more than the mountains rise.

The bases of the mountains always come closer together.

In proportion as the valleys become deeper, the more quickly are their sides worn away.

Br. M. 30δ]

In ogni concavità delle  
 cime de' monti senpre si tro-  
 veranno li piegamēti delle  
 falde delle pietre.

982.

In every concavity at the summit of the mountains we shall always find the divisions of the strata in the rocks.

## GEOLOGICAL PROBLEMS.

Leic. 3<sup>a</sup>]

In questa tua opera tu ài in prima a provare, come li nichi in mille braccia d'altura nō ui furò <sup>2</sup>portati dal diluuiio, perchè si uedono a ù medesimo liuello, e si vedono auâzare assai mōti sopra <sup>3</sup>esso liuello, e a dimādere se 'l diluvio fù per pioggia o per ringorgamēto di mare, e poi ai <sup>4</sup>a mostrare, che nè per pioggia che ingrossi i fiumi, nè per rigonfiamēto d'esso mare; li nichi, come cosa <sup>5</sup>grave, non sono sospinti dal mare alli mōti, nè tirati a se dalli fiumi cōtro al corso delle <sup>6</sup>loro acque.

C. A. 152<sup>a</sup>; 452<sup>a</sup>]

## DUBITATIONE.

<sup>2</sup> Mouesi qui vn dubbio e questo è, se <sup>Doubts about the deluge.</sup> 'l <sup>3</sup>diluvio, venuto al tempo di Noè, fù vni- <sup>4</sup>versale o no; E qui parrà di no, per le

## 985.

In this work you have first to prove that the shells at a thousand braccia of elevation were not carried there by the deluge, because they are seen to be all at one level, and many mountains are seen to be above that level; and to inquire whether the deluge was caused by rain or by the swelling of the sea; and then you must show how, neither by rain nor by swelling of the rivers, nor by the overflow of this sea, could the shells—being heavy objects—be floated up the mountains by the sea, nor have carried there by the rivers against the course of their waters.

## 986.

## A DOUBTFUL POINT.

Here a doubt arises, and that is: whether the deluge, which happened at the time of Noah, was universal or not. And it would

985. The passages, here given from the MS. Leic., have hitherto remained unknown. Some preliminary notes on the subject are to be found in MS. F 80<sup>a</sup> and 80<sup>b</sup>; but as compared with the fuller treatment here given, they are, it seems to me, of secondary interest. They contain nothing

that is not repeated here more clearly and fully. LIBRI, *Histoire des Sciences mathématiques III*, pages 218—221, has printed the text of F 80<sup>a</sup> and 80<sup>b</sup>, therefore it seemed desirable to give my reasons for not inserting it in this work.

ragioni che si assegneranno; Noi abbiamo nella bibbia, <sup>6</sup>che il predetto diluvio fù composto di 40 <sup>7</sup>dì e 40 notti di continua e unversa pioggia, e che tal pioggia alzò dieci <sup>8</sup>gomiti sopra al più alto móte dell'univer<sup>10</sup>so; E se così fù, che la pioggia fusse univer<sup>11</sup>sale, ella vestì di se la nostra ter<sup>12</sup>ra di figura sperica; È la superficie sperica in ogni sua parte equalmente distante dal ciéto della sva spe<sup>15</sup>ra, onde la spera del'acqua, trovandosi <sup>16</sup>nel modo della detta condizione, ellì è <sup>17</sup>impossibile, che l'acqua sopra di lei si move, <sup>18</sup>perchè l'acqua in se non si move, s'ella non <sup>19</sup>disciède; addunque l'acqua di tanto dilu<sup>20</sup>vio come si partì, se qui è provato, non a<sup>21</sup>ver moto? e s'ella si partì, come si mosse, <sup>22</sup>se ella non adava allo insù? e qui ne mācano<sup>23</sup> le ragiō naturali, òde bisogna per soccor<sup>24</sup>so di tal dvbitatione chiamare il mira<sup>25</sup>colo per aiuto, o dire che <sup>26</sup>tale acqua fu vaporata dal calore del sole.

seem not, for the reasons now to be given: We have it in the Bible that this deluge lasted 40 days and 40 nights of incessant and universal rain, and that this rain rose to ten cubits above the highest mountains in the world. And if it had been that the rain was universal, it would have covered our globe which is spherical in form. And this spherical surface is equally distant in every part, from the centre of its sphere; hence the sphere of the waters being under the same conditions, it is impossible that the water upon it should move, because water, in itself, does not move unless it falls; therefore how could the waters of such a deluge depart, if it is proved that it has no motion? and if it departed how could it move unless it went upwards? Here, then, natural reasons are wanting; hence to remove this doubt it is necessary to call in a miracle to aid us, or else to say that all this water was evaporated by the heat of the sun.

## DEL DILUUIO E DE'NICHÌ MARINI.

<sup>2</sup>Se tu dirai che li nichì, che per li confini d'Italia lontano dalli mari in tāta altezza si ueggono <sup>3</sup>alli nostri tempi, siano stati per causa del diluuiio che lì li lasciò, io ti rispōdo che, credendo tu che <sup>4</sup>tal diluvio superasse il piv alto monte 7 cubiti, conne scrisse chi li misurò, tali nichì che senpre <sup>5</sup>stanno vicini ai liti del mare, e' doueano restare sopra tali mótagnie, e nō si poco sopra le radi<sup>6</sup>ci de' monti per tutto a vna medesima altezza a suoli a suoli; E se tu dirai che, essendo tali <sup>7</sup>nichi vaghi di stare vicini alli liti marini e che, crescēdo in tāta altezza, che li nichì si <sup>8</sup>partirono da esso lor primo sito e seguirarono l'accrescimēto delle acque insino alla lor <sup>9</sup>soñia altezza; Qui si risponde che, sendo il nichio anima-

## OF THE DELUGE AND OF MARINE SHELLS.

If you were to say that the shells which are to be seen within the confines of Italy now, in our days, far from the sea and at such heights, had been brought there by the deluge which left them there, I should answer that if you believe that this deluge rose 7 cubits above the highest mountains—as he who measured it has written—these shells, which always live near the sea-shore, should have been left on the mountains; and not such a little way from the foot of the mountains; nor all at one level, nor in layers upon layers. And if you were to say that these shells are desirous of remaining near to the margin of the sea, and that, as it rose in height, the shells quitted their first home, and followed the increase of the waters up to their highest level; to this I answer, that the cockle is an animal of not more rapid movement than the snail is out of water, or even somewhat

987. 13. *Monferrato di Lombardia.* The range of hills of Monferrato is in Piedmont, and Casale di Monferrato belonged, in Leonardo's time, to the Marchese di Mantova.

16. *Lago di Lario.* Lacus Larius was the name given by the Romans to the lake of Como. It is evident that it is here a slip of the pen since the

slower; because it does not swim, on the contrary it makes a furrow in the sand by means of its sides, and in this furrow it will travel each day from 3 to 4 braccia; therefore this creature, with so slow a motion, could not have travelled from the Adriatic sea as far as Monferrato in Lombardy[13], which is 250 miles distance, in 40 days; which he has said who took account of the time. And if you say that the waves carried them there, by their gravity they could not move, excepting at the bottom. And if you will not grant me this, confess at least that they would have to stay at the summits of the highest mountains, in the lakes which are enclosed among the mountains, like the lakes of Lario, or of Como and il Maggiore[16] and of Fiesole, and of Perugia, and others.

And if you should say that the shells were carried by the waves, being empty and dead, I say that where the dead went they were not far removed from the living; for in these mountains living ones are found, which are recognisable by the shells being in pairs; and they are in a layer where there are no dead ones; and a little higher up they are found, where they were thrown by the waves, all the dead ones with their shells separated, near to where the rivers fell into the sea, to a great depth; like the Arno which fell from the Gonfolina near to Monte Lupo[23], where it left a deposit of gravel which may still be seen, and which has agglomerated; and of stones of various districts, natures, and colours and hardness, making one single conglomerate. And a little beyond the sand-stone conglomerate a tufa has been formed, where it turned towards Castel Florentino; farther on, the mud was deposited in which the shells lived, and which rose in layers according to the levels at which the turbid Arno flowed into that sea. And from time to time the bottom of the sea was raised, depositing these shells in layers, as may be seen in the cutting at Colle Gonzoli, laid open by

the words in the MS. are: "Come Lago di Lario o 'l Magore e di Como." In the MS. after line 16 we come upon a digression treating of the weight of water; this has here been omitted. It is 11 lines long.

23. *Monte Lupo,* compare 970, 13; it is between Empoli and Florence.

uedono manifestamente li predetti gradi de' nichi in <sup>30</sup> fango azzureggiante, e ui si trova di uarie cose marine; E si è alzata la terra del nostro <sup>31</sup> emisperio per tanto più che nō solea, per quanto ella si fece più lieue delle acque, che le manca<sup>32</sup>rono per il taglio di Calpe e d'Abila, e altrettanto piv s'è alzata, perchè il peso dell'acque, che di qui mā<sup>33</sup>carono, s'aggiunsero alla terra volta all'altro emisperio, E se li nichi fusero stati <sup>34</sup>portati dal Torbido diluuiio, essi si sarebbero misti, separatamente l'un dal'altro, infra 'l fango e non <sup>35</sup>con ordinati gradi a suoli, come alli nostri tempi si vede.

the Arno which is wearing away the base of it; in which cutting the said layers of shells are very plainly to be seen in clay of a bluish colour, and various marine objects are found there. And if the earth of our hemisphere is indeed raised by so much higher than it used to be, it must have become by so much lighter by the waters which it lost through the rift between Gibraltar and Ceuta; and all the more the higher it rose, because the weight of the waters which were thus lost would be added to the earth in the other hemisphere. And if the shells had been carried by the muddy deluge they would have been mixed up, and separated from each other amidst the mud, and not in regular steps and layers—as we see them now in our time.

Leic. 9a]

## 988.

Di quelli che dicono che i nichi sono per molto spatio e nati remoti dalli mari · per la natura del sito e de' cieli, <sup>2</sup>che dispone e influisce tal loco a simile creatione d'animali · a costor si risponderà che, se tale influētia <sup>3</sup>d'animali nō potrebbe accadere in vna sola linia, se nō animali di medesima sorte e età, e non il uechio col gio<sup>4</sup>vane, e nō alcun col coperchio e l'altro essere senza sua copritura, e nō l'uno esser rotto e l'altro intero, <sup>5</sup>e nō l'uno ripieno di rena marina e rottame minyto e grosso d'altri nichi dentro alli nichi <sup>6</sup>interi, che lì son rimasti aperti, e nō le boche de' granchi sanza il rimanete del suo tutto, e non li ni<sup>7</sup>chi d'altre spetie appiccati con loro in forma d'animale che sopra di quelli si mouesse, perchè ancora resta <sup>8</sup>il uestigio del suo andamento sopra la scorza che lui già, a uso di tarlo sopra il legname, andò cōsumādo; <sup>9</sup>nō si troverebbero infra loro ossa e denti di pescie, li quali alcuni dimandano saette e altri lingue di ser<sup>10</sup>penti,

As to those who say that shells existed for a long time and were born at a distance from the sea, from the nature of the place and of the cycles, which can influence a place to produce such creatures—to them it may be answered: such an influence could not place the animals all on one line, except those of the same sort and age; and not the old with the young, nor some with an operculum and others without their operculum, nor some broken and others whole, nor some filled with sea-sand and large and small fragments of other shells inside the whole shells which remained open; nor the claws of crabs without the rest of their bodies; nor the shells of other species stuck on to them like animals which have moved about on them; since the traces of their track still remain, on the outside, after the manner of worms in the wood which they ate into. Nor would there be found among them the bones and teeth of fish which some call arrows and others serpents' tongues, nor would so many

e nō si troverebbero tanti mēbri di diuersi animali insieme vnti se lì da liti marini gittati nō fussino, <sup>11</sup>e 'l diluuo lì nō gli avrebbe portati, perchè le cose gravi più del'acqua nō stanno a galla sopra l'acqua, e le cose pre<sup>12</sup>dette nō sariano in tanta altezza, se già a nuoto ivi sopra dell'acque portate non furono, la qual cosa è impossibile per la lor gravezza; Dove le uallate non ricevono le acque salse del mare, quiui i nichi mai non si <sup>14</sup>vedono, come manifesto si uede nella gran valle d'Arno di sopra alla Gonfolina, sasso per antico vnto <sup>15</sup>con Monte Albano in forma d'altissimo argine, il quale tenea ringorgato tal fiume in modo che prima che versasse nel mare, <sup>16</sup>il quale era dopo ai piedi di tal sasso, componea 2 grandi laghi, de' quali il primo è, dove oggi si uede fiorire la città di Fiorē<sup>17</sup>ze insieme con Prato e Pistoia, e Monte Albano seguiva il resto dell'argine insin doue oggi è posto Serravalle.; dal Vai d'Arno <sup>18</sup>di sopra insino Arezzo si creava vno secondo lago, il quale nell'ātiddetto lago versaua le sue acque, <sup>19</sup>chiuso circa dove oggi si uede Girone, e occupaua tutta la detta valle di sopra per ispatio di 40 miglia <sup>20</sup>di lūgezza; questa valle riceue sopra il suo fondo tutta la terra portata dall'acqua da quella intorbidata, la quale <sup>21</sup>ancora si uede a' piedi di Prato Magno restare altissima, doue li fiumi nō l'anno consumata, e infra essa terra si uedono le pro<sup>22</sup>fonde segature de' fiumi che quiui son passati, li quali discēdono dal grā mōte di Prato Magno, nelle quali <sup>23</sup>segature nō si uede vestigio alcuno di nichi e di terra marina; questo lago si congiugnea col lago di Perugia;

<sup>24</sup>Gran somma di nichi si uede doue li fiumi versano in mare, perchè in tali siti l'acque non so<sup>25</sup>nō tante salse per la mistion dell'acque dolci che con quelle s'uniscono, e 'l segnio di ciò si vede doue per antico li Mo<sup>26</sup>nti Appenini versauano li lor fiumi nel mare Adriano, li quali in gran parte mostrano infra li mōti grā <sup>27</sup>somma di nichi insieme coll azzurigno terreno di mare,

portions of various animals be found all together if they had not been thrown on the sea shore. And the deluge cannot have carried them there, because things that are heavier than water do not float on the water. But these things could not be at so great a height if they had not been carried there by the water, such a thing being impossible from their weight. In places where the valleys have not been filled with salt sea water shells are never to be seen; as is plainly visible in the great valley of the Arno above Gonfolina; a rock formerly united to Monte Albano, in the form of a very high bank which kept the river pent up, in such a way that before it could flow into the sea, which was afterwards at its foot, it formed two great lakes; of which the first was where we now see the city of Florence together with Prato and Pistoia, and Monte Albano. It followed the rest of its bank as far as where Serravalle now stands. From the Val d'Arno upwards, as far as Arezzo, another lake was formed, which discharged its waters into the former lake. It was closed at about the spot where now we see Girone, and occupied the whole of that valley above for a distance of 40 miles in length. This valley received on its bottom all the soil brought down by the turbid waters. And this is still to be seen at the foot of Prato Magno; it there lies very high where the rivers have not worn it away. Across this land are to be seen the deep cuts of the rivers that have passed there, falling from the great mountain of Prato Magno; in these cuts there are no vestiges of any shells or of marine soil. This lake was joined with that of Perugia[23].

A great quantity of shells are to be seen where the rivers flow into the sea, because on such shores the waters are not so salt owing to the admixture of the fresh water, which is poured into it. Evidence of this is to be seen where, of old, the Appenines poured their rivers into the Adriatic sea; for there in most places great quantities of shells are to be found, among the mountains, together

e tutti li sassi, che di tal loco si cauano, son pieni di nichi;<sup>28</sup> Il medesimo si conosce auere fatto Arno, quando cadea dal sasso della Gonfolina nel mare,<sup>29</sup> che dopo quella non troppo basso si troava, perchè a quelli tempi superaua laltezza di San Miniato al Tedesco,<sup>30</sup> perchè nelle somme altezze di quello si uedono le ripe piene di nichi e ostriche dentro alle sue mura; non si distesero li ni<sup>n</sup>chi inverso Val di Nievole, perchè l'acque dolci d'Arno in là non si astendeano;

Come li nichi nō si <sup>32</sup>partirono dal mare per diluui, perchè l'acque, che di uerso la terra veniuano, ancora che esse tirassino il mare <sup>33</sup>inverso la terra, esse erā quelle che percuoteano il suo fondo, perchè l'acqua, che viene diuerso la terra, à <sup>34</sup>più corso che quella del mare, e per cōseguenza è piv potente, entra sotto l'altra acqua del mare <sup>35</sup>e rimove il fondo e accompagna con seco tutte le cose mobili che in quella trova, come son i predetti <sup>36</sup>nichi e altre simili cose, e quanto l'acqua, che viē di terra, è piv torbida che quella del mare, tā<sup>37</sup>to piv si fa potente e grave che quella; adunque io nō ci vedo modo di tirare i predetti nichi tanto in <sup>38</sup>fra terra, se quiui nati nō fussino; se tu mi dicesse, il fiume Loira, che passa per la Francia, <sup>39</sup>nell'accrescimēto del mare si copre piv di ottanta miglia di paese, perchè è loco di grā pia<sup>40</sup>ngra, e 'l mare s'alza circa braccia 20, e nichi si uengono a trovare in tal pianvra, disco<sup>41</sup>sta dal mare essa 80 miglia, qui si rispōde che 'l flusso e refluxo ne' nostri mediterrani <sup>42</sup>mari nō fanno tanta varietà, perchè in Genovese nō uaria nvlla, a Vinegia poco, in A<sup>43</sup>ffrica poco, e dove poco varia, poco occupa di paese;

Senpre la corrēte dell'acqua de' fiumi <sup>44</sup>s'inōda sopra del loco doue li è impedito il corso; ancora doue essa si ristrignie per passare sotto <sup>45</sup>li archi de' ponti.

with bluish marine clay; and all the rocks which are torn off in such places are full of shells. The same may be observed to have been done by the Arno when it fell from the rock of Gonfolina into the sea, which was not so very far below; for at that time it was higher than the top of San Miniato al Tedesco, since at the highest summit of this the shores may be seen full of shells and oysters within its flanks. The shells did not extend towards Val di Nievole, because the fresh waters of the Arno did not extend so far.

That the shells were not carried away from the sea by the deluge, because the waters which came from the earth although they drew the sea towards the earth, were those which struck its depths; because the water which goes down from the earth, has a stronger current than that of the sea, and in consequence is more powerful, and it enters beneath the sea water and stirs the depths and carries with it all sorts of movable objects which are to be found in the earth, such as the above-mentioned shells and other similar things. And in proportion as the water which comes from the land is muddier than sea water it is stronger and heavier than this; therefore I see no way of getting the said shells so far in land, unless they had been born there. If you were to tell me that the river Loire[38], which traverses France, covers when the sea rises more than eighty miles of country, because it is a district of vast plains, and the sea rises about 20 braccia, and shells are found in this plain at the distance of 80 miles from the sea; here I answer that the flow and ebb in our Mediterranean Sea does not vary so much; for at Genoa it does not rise at all, and at Venice but little, and very little in Africa; and where it varies little it covers but little of the country.

The course of the water of a river always rises higher in a place where the current is impeded; it behaves as it does where it is reduced in width to pass under the arches of a bridge.

L.cic. 9 δ]

CONFUTATIONE CH'È CONTRO COLOR CHE DICONO, I NICHI ESSER PORTATI PER MOLTE GIORNATE DISTANTI DALLI MARI PER CAUSA DEL DILUUIO <sup>2</sup>TANT' ALTO CHE SUPERASSE TALE ALTEZZA.

Further  
researches  
(987—991).

<sup>3</sup>Dico che il diluuiio non potè portare le cose nate dal mare alli mōti, se già il mare gonfiando nō creasse inōdazione <sup>4</sup>in-sino alli lochi sopradetti, la qual gonfia-tione accadere nō può, perchè si darebbe vacuo, e se tu diciessi l'aria quiui <sup>5</sup>riempierebbe, noi abbiamo concluso il grave non si sostenere sopra il lieue, onde per neciessità si cō<sup>6</sup>clude, esso diluuiio essere cavato dall'acque piovane, e se così è, tutte esse acque corrono al mare, <sup>7</sup>e nō corre il mare alle montagnie, e se elle corrono al mare, esse spingono li nichi dal lito del mare, e nō le <sup>8</sup>tirano a se; E se tu diciessi, poichè lmare alzò per l'acque piovane, portò essi nichi a tale altezza, <sup>9</sup>già abbiamo detto che le cose piv gravi dell'acqua nō notā sopra di lei, ma stāno nei fondi, dalle quali nō si <sup>10</sup>rimovono, se nō per cavsa di percussiō d'onda; E se tu dirai che londe le portassino in tali lochi alti, noi abbiamo <sup>11</sup>prouato che londe nelle grā profondità tornano in contrario nel fondo al moto di sopra, la qual cosa <sup>12</sup>si manifesta per lo intorbidare del mare dal terreno tolto vicino alli liti; Muovesi la cosa piv lieue che l'<sup>13</sup>acqua insieme colla sua onda, ed è lasciata nel piv alto sito della riva dalla piv alta onda; Muovesi la cosa <sup>14</sup>più grave che l'acqua, sospinta dalla sua oda nella superficie e dal fondo suo e per queste due conclusioni, che ai lochi <sup>15</sup>sua sarà provate a pieno, noi concludiamo che l'onda superfittiale nō può portare nichi, per essere più grieve che <sup>16</sup>l'acqua;

<sup>17</sup>Quando il diluuiio auesse avto a por-tare li nichi trecento e quattro cento mi-<sup>18</sup>glia distanti dalli mari, esso li avrebbe portati misti con diuerse nature insieme ammontati, e noi vediamo in <sup>19</sup>tal distante l'ostriche tutte insieme, e le conchilie, e li pesci calamai, e tutti li altri nichi, che stanno insieme a congre<sup>20</sup>gatione, essere

989.

A CONFUTATION OF THOSE WHO SAY THAT SHELLS MAY HAVE BEEN CARRIED TO A DISTANCE OF MANY DAYS' JOURNEY FROM THE SEA BY THE DELUGE, WHICH WAS SO HIGH AS TO BE ABOVE THOSE HEIGHTS.

I say that the deluge could not carry objects, native to the sea, up to the mountains, unless the sea had already increased so as to create inundations as high up as those places; and this increase could not have occurred because it would cause a vacuum; and if you were to say that the air would rush in there, we have already concluded that what is heavy cannot remain above what is light, whence of necessity we must conclude that this deluge was caused by rain water, so that all these waters ran to the sea, and the sea did not run up the mountains; and as they ran to the sea, they thrust the shells from the shore of the sea and did not draw them towards themselves. And if you were then to say that the sea, raised by the rain water, had carried these shells to such a height, we have already said that things heavier than water cannot rise upon it, but remain at the bottom of it, and do not move unless by the impact of the waves. And if you were to say that the waves had carried them to such high spots, we have proved that the waves in a great depth move in a contrary direction at the bottom to the motion at the top, and this is shown by the turbidity of the sea from the earth washed down near its shores. Anything which is lighter than the water moves with the waves, and is left on the highest level of the highest margin of the waves. Anything which is heavier than the water moves, suspended in it, between the surface and the bottom; and from these two conclusions, which will be amply proved in their place, we infer that the waves of the surface cannot convey shells, since they are heavier than water.

If the deluge had to carry shells three hundred and four hundred miles from the sea, it would have carried them mixed with various other natural objects heaped together; and we see at such distances oysters all together, and sea-snails, and cuttlefish, and all the other shells which congregate together,

trovati tutti insieme morti, e li nichi sole-tari trovarsi distanti l'uno dall'altro, come ne' liti marittimi <sup>21</sup>tutto il giorno vediamo; E se noi troviamo l'ostriche insieme appa-rete grādissime, infra le quali assai vedi quelle <sup>22</sup>che ànno ancora il coperchio con-giunto, a significare che qui furono lasciate dal mare, che ancor viveano quando fù <sup>23</sup>tagliato lo stretto di Gibilterra; Vedesi in nelle montagnie di Parma e Piacētia le moltitudini di nichi e coralli <sup>24</sup>intarlati, an-cora appiccati alli sassi, de' quali, quand'io facevo il grā cavallo di Milano, me ne fù portato vn grā sacco ne<sup>25</sup>lla mia fabbrica da certi villani, che in tal loco furō trovati, fralli quali ve n'era assai delli conseruati nella prima bōtā;

<sup>26</sup>Trovāsi sotto terra e sotto li pro-fondi cavamenti de' lastroni li legniami delle traui lauorati, fatti già neri, li qua<sup>27</sup>ll furō trovati a mio tempo in quel di Castel Fiorētino, e questi in tal loco profondo v'erano prima che la litta gittata <sup>28</sup>dall'Arno nel mare, che quiui copriva, fusse abban-donata in tant' altezza, e che le pianvre del Casentino füssi tanto abbassate <sup>29</sup>dal terre che ànno al continuo di lì sgonberato;

<sup>30</sup>E se tu dicessi, tali <sup>31</sup>nichi essere crea<sup>32</sup>ti e creano a cō<sup>3</sup>tinvo in simili lochi per la natura del <sup>34</sup>sito e de' cieli, che qui<sup>36</sup>vi influisce, questa <sup>37</sup>tale openione non <sup>38</sup>sta in cervelli di trop<sup>39</sup>po discorso, perchè qui<sup>40</sup>vi s'envmerā li anni <sup>41</sup>del loro acre-escimento <sup>42</sup>sulle loro scorze, e se ne <sup>43</sup>ve-dono piccoli e grādi, <sup>44</sup>i quali sanza cibo nō cre<sup>45</sup>scerebbero e non si cibarebbero sā<sup>46</sup>za moto, e quivi mouere nō si po<sup>47</sup>teano.

all to be found together and dead; and the solitary shells are found wide apart from each other, as we may see them on sea-shores every day. And if we find oysters of very large shells joined together and among them very many which still have the covering attached, indicating that they were left here by the sea, and still living when the strait of Gibraltar was cut through; there are to be seen, in the mountains of Parma and Piacenza, a multitude of shells and corals, full of holes, and still sticking to the rocks there. When I was making the great horse for Milan, a large sack full was brought to me in my workshop by certain peasants; these were found in that place and among them were many preserved in their first freshness.

Under ground, and under the foundations of buildings, timbers are found of wrought beams and already black. Such were found in my time in those diggings at Castel Fiorentino. And these had been in that deep place before the sand carried by the Arno into the sea, then covering the plain, had been raised to such a height; and before the plains of Casen-tino had been so much lowered, by the earth being constantly carried down from them.

[30]And if you were to say that these shells were created, and were continually being created in such places by the nature of the spot, and of the heavens which might have some influence there, such an opinion cannot exist in a brain of much reason; because here are the years of their growth, numbered on their shells, and there are large and small ones to be seen which could not have grown without food, and could not have fed without motion—and here they could not move[47].

Come <sup>2</sup>nelle falde, infra l'una e l'altra si trovano ancora li andamēti delli lonbrici, che caminavano infra esse <sup>3</sup>quādo non erano ancora asciutte; Come tutti li fanghi marini ritengono ancora de' nichi <sup>4</sup>ed è petri-ficato il nichio insieme col fango; della

stoltitia e senplicità di quelli, che uogliono che taſli animali fussino alli lochi distanti dai mari portati dal diluvio; Come altra setta d'ignoranti <sup>6</sup>affermano la natura, o i celi auerli in tali lochi creati per iſflussi celesti, come in quelli <sup>7</sup>nō si trovassino l'ossa de' pesci cresciuti cō lūgezza di tempo, come nelle scorze de' nichi e lumache nō si potesse <sup>8</sup>annvmerare li anni o i mesi della lor uita, come nelle corna de' buoi e de' caſtroni e nella ramificatione de'le piante, che nō furō mai tagliate in alcuna parte; E auendo con tali segni dimoſtrato e la lunghezza della lor uita <sup>10</sup>eſſere manifesta, ecco bisognio confessare, che tali animali nō uiuino ſanza moto per cercare <sup>11</sup>il loro cibo e in loro non si uede ſtrumēto da penetrare la terra e 'l ſasso, ove ſi trovano rinchiuiſi; <sup>12</sup> Ma in che modo ſi potrebbe trovare in vna grā lumaca i rottami e parte di molt' altre ſorti di nichi di uarie na<sup>13</sup>ture, ſe ad essa, ſopra de' litri marini già morta, non li fuſſino ſtate gitte dalle onde del mare, come dell'al<sup>14</sup>tre coſe lieui, che eſſo gitta a terra? Perchè ſi truova tanto rottame e nichi interi fra falda e falda di pie<sup>15</sup>tra, ſe già quella ſo‐pra del lito nō fuſſe ſtata ricoperta da una terra rigittata dal mare, la qual poi ſi uenne pe<sup>16</sup>trificando? E ſe 'l diluvio predeſto li auuiffe in tali ſiti dal mare portato, tu troverei eſſi nichi in nel termi<sup>17</sup>ne d'una ſola falda, e non al termine di molte; deuoniti poi annvmerare le uernate delli <sup>18</sup>ni, che 'l mare mvltiplicaua le falde dell'arena e fango, portatoli da fiumi vicini, e ch'elli ſcaricava in ſui litri ſua, e ſe <sup>19</sup>tu voleſſi dire, che piv diluui fuſſino ſtati a produrre tali falde e nichi infra loro, e' bisognierebbe, <sup>20</sup>che ancora tu affermasti ogni año eſſere vn tal diluui accaduto; Ancora infra li rottami di tal nichi ſi proume in tal ſito eſſere ſpiaggia di mare, dove tutti i nichi ſon gittati rotti e diuisi e nō <sup>22</sup>mai appaiati, come infra 'l mare viui ſi trovano con due gusci, che fan coperchio l'uno all'altro; E infra <sup>23</sup>le falde della riuiera e de' litri marittimi ſon trovati de' rottami; E dentro alli termini delle pietre ſon trovati <sup>24</sup>rari e appaiati de' gusci, come quelli che furō laſciati dal mare ſotterrati viui dentro al fango, il qual <sup>25</sup>poi ſi ſeccò e col tempo petrificò.

places remote from the sea by the deluge. Another ſect of ignorant persons declare that Nature or Heaven created them in these places by celestial influences, as if in these places we did not also find the bones of fishes which have taken a long time to grow; and as if, we could not count, in the ſhells of cockles and ſnails, the years and months of their life, as we do in the horns of bulls and oxen, and in the branches of plants that have never been cut in any part. Besides, having proved by these ſigns the length of their lives, it is evident, and it must be admitted, that these animals could not live without moving to fetch their food; and we find in them no instrument for penetrating the earth or the rock where we find them enclosed. But how could we find in a large ſnail ſhell the fragments and portions of many other ſorts of ſhells, of various ſorts, if they had not been thrown there, when dead, by the waves of the ſea like the other light objects which it throws on the earth? Why do we find ſo many fragments and whole ſhells between layer and layer of ſtone, if this had not formerly been covered on the ſhore by a layer of earth thrown up by the ſea, and which was afterwards petrified? And if the deluge before mentioned had carried them to these parts of the ſea, you might find these ſhells at the boundary of one drift but not at the boundary between many drifts. We must also account for the winters of the years during which the ſea multiplied the drifts of ſand and mud brought down by the neighbouring rivers, by washing down the ſhores; and if you chose to say that there were several deluges to produce these rifts and the ſhells among them, you would also have to affirm that ſuch a deluge took place every year. Again, among the fragments of these ſhells, it must be presumed that in those places there were ſea coaſts, where all the ſhells were thrown up, broken, and divided, and never in pairs, ſince they are found alive in the ſea, with two valves, each ſerving as a lid to the other; and in the drifts of rivers and on the ſhores of the ſea they are found in fragments. And within the limits of the ſeparate ſtrata of rocks they are found, few in number and in pairs like those which were left by the ſea, buried alive in the mud, which ſubsequently dried up and, in time, was petrified.

Leic. 10δ]

E se tu vuoi dire che tale diluuiio fu quello che portò tali nichi fuor de' mari cētinaia di miglia , questo nō può acca<sup>d</sup>ere, essendo stato esso diluuiio per cause di pioggie, perchè naturalmente le pioggie spingono i fiumi insieme colle cose da loro portate inuerso il mare, e nō tirano inuerso de' mōti le cose morte dai liti maritti<sup>m</sup> , e se tu dicesse che'l diluvio poi s'alzò colle sue acque sopra de' mōti, il moto del mare fù si tardo col camino suo contro al corso de' fiumi, che non avrebbe <sup>s</sup>sopra di se tenvto a noto le cose piv gravi di lui, e se pur l'auesse sostenute, esso nel ca-lare l'avrebbe lasciate in diversi <sup>6</sup>lochi seminate; Ma come accomoderemo noi li coralli, li quali inverso Mōte Ferrato di Lombardia esser si tutto<sup>d</sup>ì trovati intarlati appiccati alli scogli, scoperti dalle corrēti de' fiumi? e li detti scogli sono tutti coperti di parentadi <sup>8</sup>e famiglie d'ostriche, le quali noi sappiamo che nō si movono, ma stā sempre appicate col' ū de' gusci al sasso, e l'altro apro<sup>o</sup>no per cibarsi d'animaluzzi, che notā per l'acque, li quali, credendo trovar bona pastura, diuentano cibo del predetto nichio; non si <sup>10</sup>trova l'arena mista coll'aliga marina essersi petrificata, poichè l'aliga, che la ramezzaua, venne meno; e di questo <sup>11</sup>scopre tutto il giorno il Po nelle ruine delle sue ripe.

## 991.

And if you choose to say that it was the deluge which carried these shells away from the sea for hundreds of miles, this cannot have happened, since that deluge was caused by rain; because rain naturally forces the rivers to rush towards the sea with all the things they carry with them, and not to bear the dead things of the sea shores to the mountains. And if you choose to say that the deluge afterwards rose with its waters above the mountains, the movement of the sea must have been so sluggish in its rise against the currents of the rivers, that it could not have carried, floating upon it, things heavier than itself; and even if it had supported them, in its receding it would have left them strewn about, in various spots. But how are we to account for the corals which are found every day towards Monte Ferrato in Lombardy, with the holes of the worms in them, sticking to rocks left uncovered by the currents of rivers? These rocks are all covered with stocks and families of oysters, which as we know, never move, but always remain with one of their halves stuck to a rock, and the other they open to feed themselves on the animalcules that swim in the water, which, hoping to find good feeding ground, become the food of these shells. We do not find that the sand mixed with seaweed has been petrified, because the weed which was mingled with it has shrunk away, and this the Po shows us every day in the debris of its banks.

Leic. 20α]

Perchè sono trovate l'ossa <sup>2</sup>de' grā pesci e le ostriche e coralli e altri diuersi nichi e chiocciole sopra lalte cime de' mōti marittimi nel medesimo modo che si trovā ne' bassi mari?

## 992.

Why do we find the bones of great fishes Other problems and oysters and corals and various other shells and sea-snails on the high summits of mountains by the sea, just as we find them in low seas?

Leic. 36α]

Tu ài ora a provare come li nichi nō nascono, se nō in acque salse, quasi tutte le sorte, e che <sup>2</sup>li nichi di Lombardia àanno

## 993.

You now have to prove that the shells cannot have originated if not in salt water, almost all being of that sort; and that the shells in Lombardy are at four levels,

and thus it is everywhere, having been made at various times. And they all occur in valleys that open towards the seas.

Br. M. 1568]

Per le 2 linie de' nicchi bisogna dire che la terra per sdegno <sup>2</sup>s'attufasse sotto il mare, e fece il primo suolo, poi il diluicio <sup>3</sup>fece il secondo.

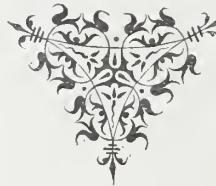

994.

From the two lines of shells we are forced to say that the earth indignantly submerged under the sea and so the first layer was made; and then the deluge made the second.

994. 1. nicch . . chellatera. 2. sattu fassi sottolimare effe. 3. fe il sechondo.

994. This note is in the early writing of about 1470—1480. On the same sheet are the passages No. 1217 and 1219. Compare also No. 1339. All the

foregoing chapters are from Manuscripts of about 1510. This explains the want of connection and the contradiction between this and the foregoing texts.

## VII.

### ON THE ATMOSPHERE.

Leic. 20a]

995.

Come la chiarezza dell' aria na<sup>2</sup>scie dall'acqua che in quella s'è resoluta e fattasi in isésibili graniculi, li quali, preso il lume del sole dall' op<sup>3</sup>posita parte, rēdono la chiarezza che in essa aria si dimonstra, e l'azzurro, che in quella apparisce, nascie dalle tenebre, che dopo essa aria si nascondono.

That the brightness of the air is occasioned by the water which has dissolved itself in it into imperceptible molecules. These, being lighted by the sun from the opposite side, reflect the brightness which is visible in the air; and the azure which is seen in it is caused by the darkness that is hidden beyond the air.[4]

Leic. 22δ]

996.

Come i retrosi de' uēti a certe <sup>2</sup>bochie di ualli percuotino sopra delle acque e quelle concauino cō grā cauamēto, e portino <sup>3</sup>l'acqua in aria in forma columnale in color di nugola, e il medesimo vid'io già fare sopra <sup>4</sup>vn arenaio d' Arno, nel quale fu concauato l'arena più d' una statura d'uomo, e <sup>5</sup>di quella fu remossa la ghiaja e gittata in disparte per lūgo spatio, e parea per l'aria in forma <sup>6</sup>di grādissimo canpanile, e cresceva la sommità come i rami di gran pino, e si piegaua <sup>7</sup>poi nel contatto del retto uēto che passaua sopra li mōti.

That the return eddies of wind at the mouth of certain valleys strike upon the waters and scoop them out in a great hollow, whirl the water into the air in the form of a column, and of the colour of a cloud. And I saw this thing happen on a sand bank in the Arno, where the sand was hollowed out to a greater depth than the stature of a man; and with it the gravel was whirled round and flung about for a great space; it appeared in the air in the form of a great bell-tower; and the top spread like the branches of a pine tree, and then it bent at the contact of the direct wind, which passed over from the mountains.

## *Topographical Notes.*

A large part of the texts published in this section might perhaps have found their proper place in connection with the foregoing chapters on Physical Geography. But these observations on Physical Geography, of whatever kind they may be, as soon as they are localised acquire a special interest and importance and particularly as bearing on the question whether Leonardo himself made the observations recorded at the places mentioned or merely noted the statements from hearsay. In a few instances he himself tells us that he writes at second hand. In some cases again, although the style and expressions used make it seem highly probable that he has derived his information from others—though, as it seems to me, these cases are not very numerous—we find, on the other hand, among these topographical notes a great number of observations, about which it is extremely difficult to form a decided opinion. Of what the Master's life and travels may have been throughout his sixty-seven years of life we know comparatively little; for a long course of time, and particularly from about 1482 to 1486, we do not even know with certainty that he was living in Italy. Thus, from a biographical point of view a very great interest attaches to some of the topographical notes, and for this reason it seemed that it would add to their value to arrange them in a group by themselves. Leonardo's intimate knowledge with places, some of which were certainly remote from his native home, are of importance as contributing to decide the still open question as to the extent of Leonardo's travels. We shall find in these notes a confirmation of the view, that the MSS. in which the Topographical Notes occur are in only a very few instances such diaries as may have been in use during a journey. These notes are mostly found in the MSS. books of his later and quieter years, and it is certainly remarkable that Leonardo is very reticent as to the authorities from whom he quotes his facts and observations: For instance, as to the Straits of Gibraltar, the Nile, the Taurus Mountains and the Tigris and Euphrates. Is it likely that he, who declared that in all scientific research, his own experience should be the foundation of his statements (see XIX Philosophy No. 987—991) should here have made an exception to this rule without mentioning it?

As for instance in the discussion as to the equilibrium of the mass of water in the Mediterranean Sea—a subject which, it may be observed, had at that time attracted the interest and study of hardly any other observer. The acute remarks, in Nos. 985—993, on the presence of shells at the tops of mountains, suffice to prove—as it seems to me—that it was not in his nature to allow himself to be betrayed into wide generalisations, extending beyond the limits of his own investigations, even by such brilliant results of personal study.

Most of these Topographical Notes, though suggesting very careful and thorough research, do not however, as has been said, afford necessarily indisputable evidence that that research was Leonardo's own. But it must be granted that in more than one instance probability is in favour of this idea.

Among the passages which treat somewhat fully of the topography of Eastern places by far the most interesting is a description of the Taurus Mountains; but as this text is written in the style of a formal report and, in the original, is associated with certain letters which give us the history of its origin, I have thought it best not to sever it from that connection. It will be found under No. XXI (Letters).

That Florence, and its neighbourhood, where Leonardo spent his early years, should be nowhere mentioned except in connection with the projects for canals, which occupied his attention for some short time during the first ten years of the XVI<sup>th</sup> century, need not surprise us. The various passages relating to the construction of canals in Tuscany, which are put together at the beginning, are immediately followed by those which deal with schemes for canals in Lombardy; and after these come notes on the city and vicinity of Milan as well as on the lakes of North Italy.

The notes on some towns of Central Italy which Leonardo visited in 1502, when in the service of Cesare Borgia, are reproduced here in the same order as in the note book used during these travels (MS. L., Institut de France). These notes have but little interest in themselves excepting as suggesting his itinerary. The maps of the districts drawn by Leonardo at the time are more valuable (see No. 1054 note). The names on these maps are not written from right to left, but in the usual manner, and we are permitted to infer that they were made in obedience to some command, possibly for the use of Cesare Borgia himself; the fact that they remained nevertheless in Leonardo's hands is not surprising when we remember the sudden political changes and warlike events of the period. There can be no doubt that these maps, which are here published for the first time, are original in the strictest sense of the word, that is to say drawn from observations of the places themselves; this is proved by the fact—among others—that we find among his manuscripts not only the finished maps themselves but the rough sketches and studies for them. And it would perhaps be difficult to point out among the abundant contributions to geographical knowledge published during the XVI<sup>th</sup> century, any maps at all approaching these in accuracy and finish.

The interesting map of the world, so far as it was then known, which is among the Leonardo MSS. at Windsor (published in the 'Archaeologia' Vol. XI) cannot be attributed to the Master, as the Marchese Girolamo d'Adda has sufficiently proved; it has not therefore been reproduced here.

Such of Leonardo's observations on places in Italy as were made before or after his official travels as military engineer to Cesare Borgia, have been arranged in alphabetical order, under Nos. 1034—1054. The most interesting are those which relate to the Alps and the Apennines, Nos. 1057—1068.

Most of the passages in which France is mentioned have hitherto remained unknown, as well as those which treat of the countries bordering on the Mediterranean, which come at the end of this section. Though these may be regarded as of a more questionable importance in their bearing on the biography of the Master than those which mention places in France, it must be allowed that they are interesting as showing the prominent place which the countries of the East held in his geographical studies. He never once alludes to the discovery of America.

from West to East: Pisa, Luccha, Lago, Seravalle, Pistoja, Prato, Firenze.

solamente 2 banchi, cioè vno dal fondo del fosso alla superficie de' labri del fosso, e l'altro da essi labri "alla sommità del mòte della terra che d'in sulla riva dell'argine si leua; e se fusse di doppia profondità, esso argine cresce solo uno banco, cioè braccia 4, che crescie la metà della prima spesa, cioè che, dove prima in 2 banchi si da<sup>13</sup>va 4 dinari 4 in 3, si viene a dare sei a 2 dinari per banco, essendo il fosso in fondo braccia 16; ancora se'l fosso fusse largo braccia 16<sup>14</sup>e profondo 4, venendo a 4 L. per opera, dinari 4 Milanesi il braccio quadro; il fosso che in fondo sarà braccia 15<sup>32</sup>, verrà a stare dinari 8 il braccio quadro.

and there are but 2 banks; that is to say one from the bottom of the trench to the surface of the edges of it, and the other from these edges to the top of the ridge of earth which will be raised on the margin of the bank. And if this bank were of double the depth only the first bank will be increased, that is 4 braccia increased by half the first cost; that is to say that if at first 4 dinari were paid for 2 banks, for 3 it would come to 6, at 2 dinari the bank, if the trench measured 16 braccia at the bottom; again, if the trench were 16 braccia wide and 4 deep, coming to 4 lire for the work, 4 Milan dinari the square braccio; a trench which was 32 braccia at the bottom would come to 8 dinari the square braccio.

L. 1a]

## 1002.

Dal muro d'Arno della Giustitia all'argine d'Arno di Sardigna, dove sono i muri alle mulina, è braccia 57400, cioè miglia 2<sup>6</sup>e braccia 1400, e'1 di là d'Arno è braccia 5500.

From the wall of the Arno at [the gate of] la Giustizia to the bank of the Arno at Sardigna where the walls are, to the mills, is 7400 braccia, that is 2 miles and 1400 braccia and beyond the Arno is 5500 braccia.

C. A. 284a; 865a]

## 1003.

Dirizzare Arno di sotto e di sopra; s'auanzerà vn tesoro, a tanto per stajoro a chi lo vole.

By guiding the Arno above and below a treasure will be found in each acre of ground by whomsoever will.

Br. M. 273δ]

## 1004.

Il muro dalle Casaccie si dirizza alla porta di san Niccolò.

The wall of the old houses runs towards the gate of San Nicolo.

... bancho "essendo il fosso in fondo braccia 16" anchora . . fusi largo. 14. [e al] e profondo. 15. veria dinari.  
 1002. 2. gusstitia. 4. e br. 5. [8000] 7400 coe. 6. br. 7. br.  
 1003. 1. dirizare arnno. 4. attanto perisstaioro. 1004. 1. mro d lle. 2. casace [con]. 3. diriza. 4. nicolo.

1002. 2. *Giustitia*. By this the Porta della Giustitia seems to be meant; from the XV<sup>th</sup> to the XVI<sup>th</sup> centuries it was also commonly known as Porta Guelfa, Porta San Francesco del Renaio, Porta Nuova, and Porta Reale. It was close to the Arno opposite to the Porta San Niccolò, which still exists.

1004. By the side of this text there is an indistinct sketch, resembling that given under No. 973. On the bank is written the word *Casace*. There then follows in the original a passage of 12 lines in which the consequences of the windings of the river are discussed. A larger but equally hasty diagram on the same page represents the shores of

the Arno inside Florence as in two parallel lines. Four horizontal lines indicate the bridges. By the side these measures are stated in figures: 1. (at the Ponte alla Carraja): 230—*largo br. 12 e 2 di spade e 14 di pile e a 4 pilastri*; 2. (at the Ponte S. Trinità): 188—*largo br. 15 e 2 di spade he 28 di pilastri for delle spade e pilastri sō 2*; 3. (at the Ponte vecchio); *pōte lung br. 152 e largo*; 4. (at the Ponte alle Grazie): 290 *ellargo 12 e 2 di spade e 6 di pili*.

There is, in MS. W. L. 212<sup>b</sup>, a sketched plan of Florence, with the following names of gates: *Nicholo—Saminiato—Giorgo—Ghanolini—Porta San Frediano—Prato—Faenza—Ghallo—Pinti—Giustitia*.

Br. M. 274a]

640 braccia è il muro rotto, <sup>2</sup>e 130 è il muro rimanete, <sup>3</sup>col mulino <sup>4</sup>300 braccia à rotto dal Bisarno in 4 anni.

W. L. 226a]

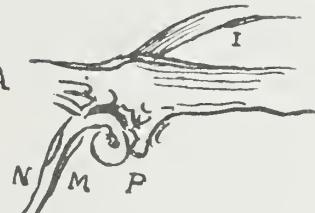

Nō sanno, perchè Arno <sup>2</sup>non starà mai in ca<sup>3</sup>nale; perchè <sup>4</sup>i fiumi che vi mettono, <sup>5</sup>nella loro entrata pō<sup>6</sup>gono terreno, e dalla oppo<sup>7</sup>sita parte leuano e <sup>8</sup>pieganvi il fiume; <sup>9</sup>6 miglia si fa per Ar<sup>10</sup>no dalla Caprona a Li<sup>11</sup>vorno, e 12 si fa per li <sup>12</sup>stagni che s'avāzano <sup>13</sup>32 miglia, e 16 dalla Caprona <sup>14</sup>in sù, che fā <sup>15</sup>48 per Arno da Firenze, <sup>16</sup>avanzasi 16 miglia; a Vico miglia 16, <sup>17</sup>e'l canale à 5; <sup>18</sup>da Firenze a Fucechio miglia 40 per <sup>19</sup>acqua d'Arno.

<sup>20</sup>Miglia 56 per Arno <sup>21</sup>da Firēze a Vico, <sup>22</sup>e pel canale di Pistoia <sup>23</sup>è miglia 44 adū<sup>24</sup>que è piv corta 12 <sup>25</sup>miglia per canale che per Arno.

Leic. 18b]

Cōcauità fatta da Mēsola, quādo Arno è basso e Mēsola grossa.

1005. 1. 6400 bre. 2. moro.

1006. 2. nōnistara. 4. mettano. 6. gā terreno e dallopo. 10. caprona alli. 12. savāza. 17. ecanale. 19. acq“a”. 24. chorta.

1006. This passage is written by the side of a map washed in Indian ink, of the course of the Arno; it is evidently a sketch for a completer map.

These investigations may possibly be connected with the following documents. Francesco Guiducci alla *Balia di Firenze. Dal Campo contro Pisa 24 Luglio 1503* (*Archivio di Stato, Firenze, Lettere alla Balia*; published by J. GAYE, *Carteggio inedito d'Artisti*, Firenze 1840, Tom. II, p. 62); *Ez Castris, Franciscus Ghuiduccius, 24. Jul. 1503. Appresso fu qui hieri con una di V. Signoria Alexandro degli Albizi insieme con Leonardo da Vinci et certi altri, et veduto el disegno insieme con el governatore, dopo molte discussioni et dubii concluse si che l'opera füssi molto al proposito, o si veramente Arno volgersi qui, o restarvi con un canale, che almeno vieterebbe che le colline da nemici non potrebbono essere offese; come tucto referiranno loro a bocha V. S.*

And, *Archivio di Stato, Firenze, Libro d'Entrata e Uscita di cassa de' Magnifici Signori di luglio e agosto*

1005.

The ruined wall is 640 braccia; 130 is the wall remaining with the mill; 300 braccia were broken in 4 years by Bisarno.

1006.

They do not know why the Arno will never remain in a channel. It is because the rivers which flow into it deposit earth where they enter, and wear it away on the opposite side, bending the river in that direction. The Arno flows for 6 miles between la Caprona and Leghorn; and for 12 through the marshes, which extend 32 miles, and 16 from La Caprona up the river, which makes 48; by the Arno from Florence beyond 16 miles; to Vico 16 miles, and the canal is 5; from Florence to Fucechio it is 40 miles by the river Arno.

56 miles by the Arno from Florence to Vico; by the Pistoia canal it is 44 miles. Thus it is 12 miles shorter by the canal than by the Arno.

The eddy made by the Mensola, when the Arno is low and the Mensola full.

1503 a 51 T.: *Andata di Leonardo al Campo sotto Pisa. Spese extraordinarie dicono dare a di XXVI di luglio L. LVI sol. XIII per loro a Giovanni Piffaro; e sono per tanti, asegnia avere spesi in vetture di sei cavalli a spese di vitto per andare chon Leonardo da Vinci a levellare Arno in quello di Pisa per levallo del lito suo.* (Published by MILANESI, *Archivio Storico Italiano, Serie III, Tom. XVI*) VASARI asserts: (*Leonardo*) fu il primo ancora, che giovanetto discorresse sopra il fiume d'Arno per metterlo in canale da Pisa a Firenze (ed. SANSONI, IV, 20).

The passage above is in some degree illustrated by the map on Pl. CXII, where the course of the Arno westward from Empoli is shown.

1007. Mensola is a mountain stream which falls into the Arno about a mile and a half above Florence.

A=Arno, I=Isola, M=Mvgone, P=Pesa, N=Mesola.

[cic. 15<sup>a</sup>]

Come il fiume, che s'a à piegare d'uno in altro loco, debbe essere lusin<sup>gato</sup> e nō con uiolenza aspreggiato, e a questo fare si de' cauare infra'l fiume alquāto <sup>3</sup>di pessaia, e poi di sotto gittarne vna piv ināti, e così si faccia colla <sup>3<sup>a</sup></sup> <sup>4<sup>a</sup></sup> e <sup>5<sup>a</sup></sup>, in modo che'l <sup>4</sup>fiume inbocchi col canale datoli, o che per tal mezzo si scosti dal loco da lui danneggiato, come <sup>5</sup>fu fatto in Fiādra, dettomni da Niccolò di Forzore;

Come si de' vestire di riparo vn argine percosso <sup>6</sup>dal'acqua, come sotto l'isola de' Cocomeri.

1010. 1. martigana. 2. martigana . . diminuisse. 3. imol. 4. Ecc. 5. ecquesto . . checq. 6. beuta datta terra. 8. nessono

1008. The course of the river Arno is also discussed in Nos. 987 and 988.

1009. This observation is written above a washed pen and ink drawing which has been published as Tav. VI in the „Saggio.” The editors of that work explain the drawing as “uno Studio di bocche per estrazione d’acqua.”

1010. “el navilio di Martagano” is also mentioned

in a note written in red chalk, MS. H<sup>2</sup> 17<sup>a</sup> Leonardo has, as it seems, little to do with Lodovico il Moro's scheme to render this canal navigable. The canal had been made in 1460 by Bertronino da Novara. Il Moro issued his decree in 1493, but Leonardo's notes about this canal were, with the exception of one (No. 1343), written about sixteen years later.

1008.

That the river which is to be turned from one place to another must be coaxed and not treated roughly or with violence; and to do this a sort of floodgate should be made in the river, and then lower down one in front of it and in like manner a third, fourth and fifth, so that the river may discharge itself into the channel given to it, or that by this means it may be diverted from the place it has damaged, as was done in Flanders—as I was told by Niccolò di Forsore.

How to protect and repair the banks washed by the water, as below the island of Cocomeri.

Fig. 3.

Fig. 4.

fontanili, chè q<sup>6</sup>uell'acqua, che è bevuta dalla terra nō fa seruitio a nessuno, nè ancora danno, perchè a <sup>8</sup>nessuno è tolta, e facēdo tali fontanili, l'acqua, <sup>9</sup>che prima era perduta, ritorna di nouo a rifa<sup>10</sup>re seruitio e vtile alli omni.

would be to make several little channels, since the water drunk up by the earth is of no more use to any one, nor mischief neither, because it is taken from no one; and by making these channels the water which before was lost returns again and is once more serviceable and useful to men.

Leic. 18a]

Nessuno canale, che esca fori de' fiumi, sarà durabile, se l'acqua del fiume, donde <sup>2</sup>nascie, non è integralmēte rinchiusa come il canal di Martisana e quel ch'escie di Tesino.

C. A. 139δ; 421δ]

Dal principio del navilio al mo<sup>2</sup>lino.

<sup>3</sup>Dal prīcipio del navilio di Briuio al <sup>4</sup>molino del Travaglia è trabochi 2794, <sup>5</sup>cioè braccia 11176, che son più di 3 miglia <sup>6</sup>e due terzi, e quiui troovo più alto il <sup>7</sup>navilio che la pelle dell'acqua di

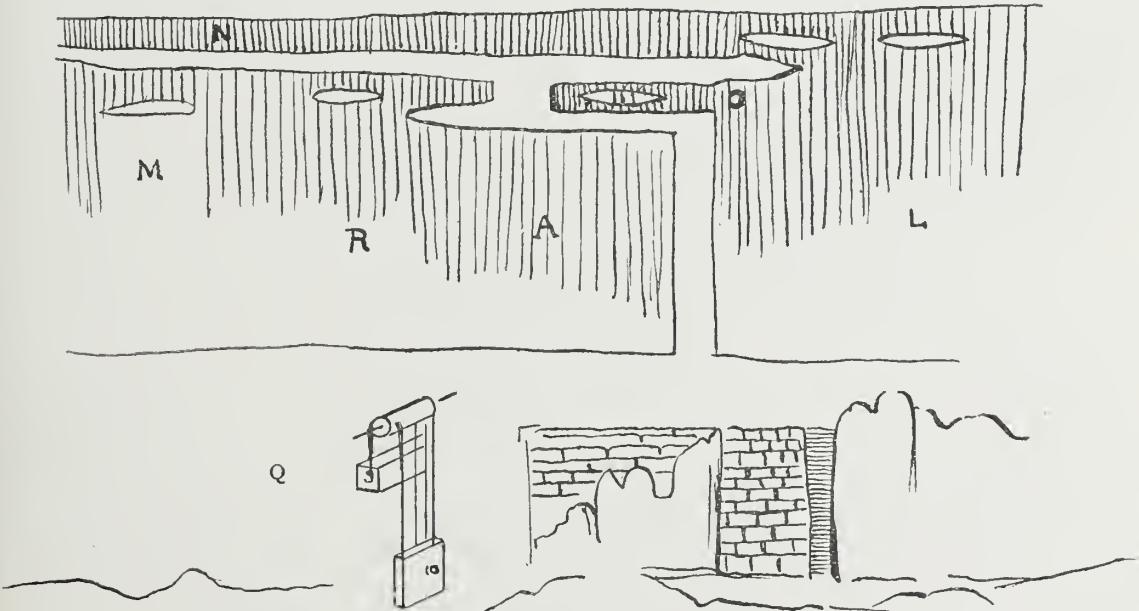

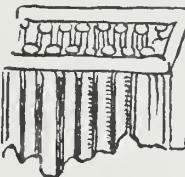

## 1011.

No canal which is fed by a river can be permanent if the river whence it originates is not wholly closed up, like the canal of Martesana which is fed by the Ticino.

## 1012.

From the beginning of the canal to the mill.

From the beginning of the canal of Brivio to the mill of Travaglia is 2794 trabochi, that is 11176 braccia, which is more than 3 miles and two thirds; and here the canal is 57 braccia higher than the surface

at that spot we propose to take the opening of our canal.

#### 1013.

If it be not reported there that this is to be a public canal, it will be necessary to pay for the land; and the king will pay it by remitting the taxes for a year.

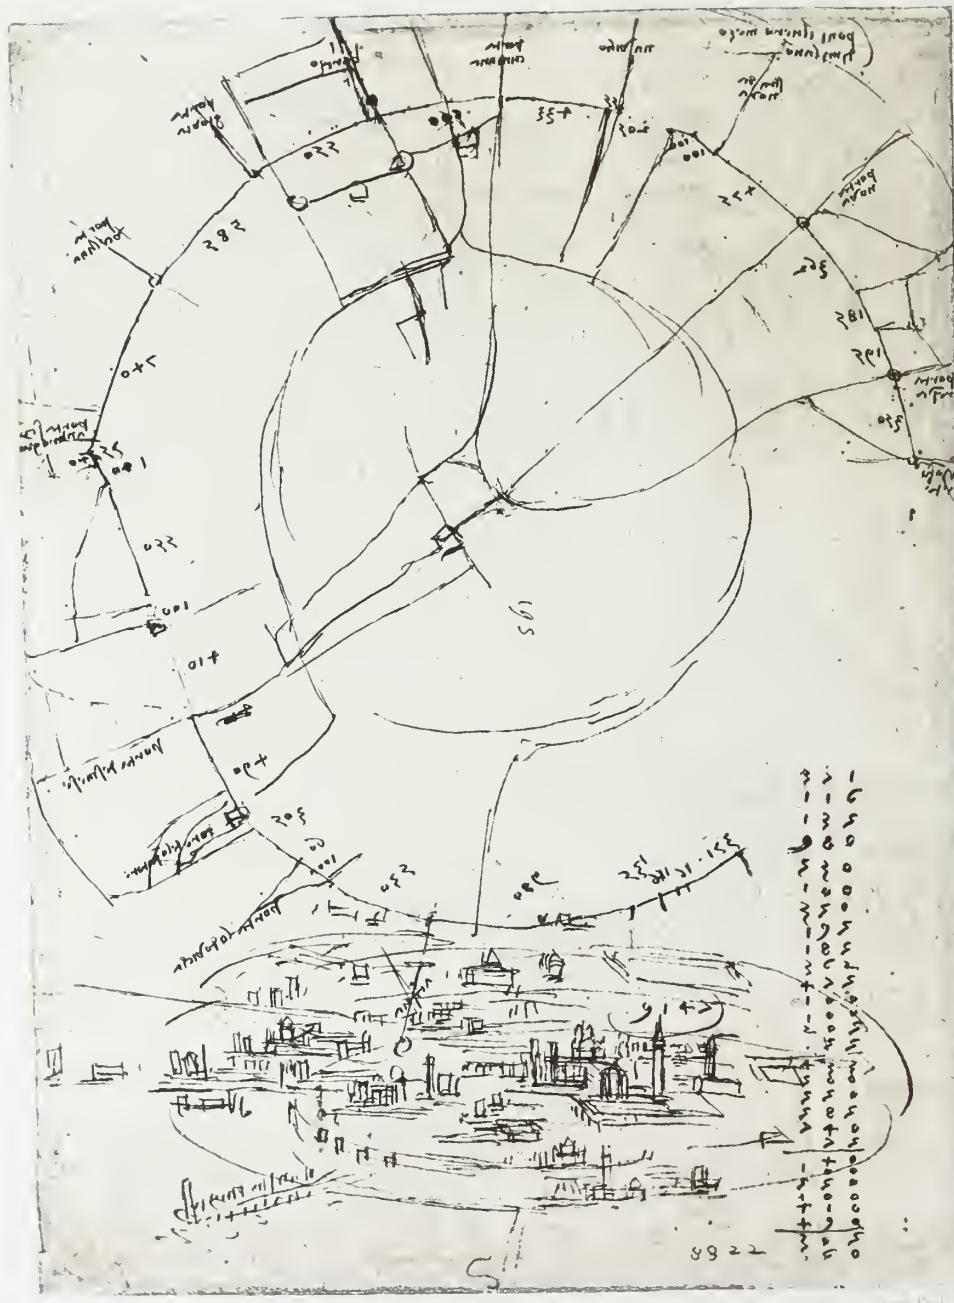

#### 1014.

#### CANAL.

The canal which may be 16 braccia wide at the bottom and 20 at the top, we may say is on the average 18 braccia wide, and if it is 4 braccia deep, at 4 dinari the square braccia; it will only cost 900 ducats, to excavate by the mile, if the square braccia is calculated in ordinary braccia; but if the braccia are those used in measuring land, of which every 4 are equal to 4<sup>1</sup>/<sub>2</sub>, and if by the mile we understand three thousand ordinary braccia; turned into land braccia, these 3000 braccia will lack <sup>1</sup>/<sub>4</sub>; there remain 2250 braccia, which at 4 dinari the braccio will amount to 675 ducats a mile. At 3 dinari the square braccia, the mile will amount to 506 <sup>1</sup>/<sub>4</sub> ducats so that the excavation of 30 miles of the canal will amount to 15187 <sup>1</sup>/<sub>2</sub> ducats.

1013. 3. *il rē*. Louis XII or Francis I of France. It is hardly possible to doubt that the canals here spoken of were intended to be in the Milanese. Compare with this passage the rough copy of a letter by Leonardo, to the "Presidente dell' Ufficio regolatore dell' acqua" on No. 1350. See also the note to No. 745, l. 12.

1019. On this passage AMORETTI remarks (*Memorie Storiche* chap. IX): *Nell'anno stesso lo veggiamo formare un congegno di carucole e di corde, con cui trasportare in più venerabile e più sicuro luogo, cioè nell'ultima areata della nave di mezzo della metropolitana, la sacra reliqua del Santo Chiodo, che ivi ancor si venera.*  
*Al fol. 15 del codice segnato Q. R. in 16, egli ci ha lasciata di tal congegno una doppia figura, cioè una di quattro carucole, e una di tre colle rispettive corde, soggiungandovi: in Domo alla carucole del Chiodo della Croce.*

AMORETTI's views as to the mark on the MS. and the date when it was written are, it may be

1020.

OF THE FORCE OF THE VACUUM FORMED IN  
A MOMENT.

I saw, at Milan, a thunderbolt fall on the tower della Credenza on its Northern side, and it descended with a slow motion down that side, and then at once parted from that tower and carried with it and tore away from that wall a space of 3 braccia wide and two deep; and this wall was 4 braccia thick and was built of thin and small old bricks; and this was dragged out by the vacuum which the flame of the thunderbolt had caused, &c.

1021.

I have already been to see a great variety (of atmospheric effects). And lately over Milan towards Lago Maggiore I saw a

observed, wholly unfounded. The MS. I, in which it occurs, is of the year 1502, and it is very unlikely that Leonardo was in Milan at that time; this however would not prevent the remark, which is somewhat obscure, from applying to the Cathedral at Milan.

1020. With reference to buildings at Milan see also Nos. 751 and 756, and Pl. XCV, No. 2 (explained on p. 52), Pl. C (explained on pages 60—62). See also pages 25, 39 and 40.

1021. *di arie* is wanting in the original but may safely be inserted in the context, as the formation of clouds is under discussion before this text.

forma di grandissima mōtagnia, piena di scogli <sup>3</sup>infocati, perchè li razzi del sole, che già era all'orizzonte che rosseggjava, la tigneano del suo colore, e questa tal nugola <sup>4</sup>attraeva a se tutti li nvgoli piccoli che intorno li stavano, e la nugola grāde nō si mouea di suo loco, anzi riſserò nella sua sommità il lume del sole insino a una ora e mezzo di notte, tant'era la sua immēsa grādezza; <sup>6</sup>e infra due ore di notte gienerò si gran vēto che fu cosa stupēda e inavdita.

cloud in the form of an immense mountain full of rifts of glowing light, because the rays of the sun, which was already close to the horizon and red, tinged the cloud with its own hue. And this cloud attracted to it all the little clouds that were near while the large one did not move from its place; thus it retained on its summit the reflection of the sunlight till an hour and a half after sunset, so immensely large was it; and about two hours after sunset such a violent wind arose, that it was really tremendous and unheard of.

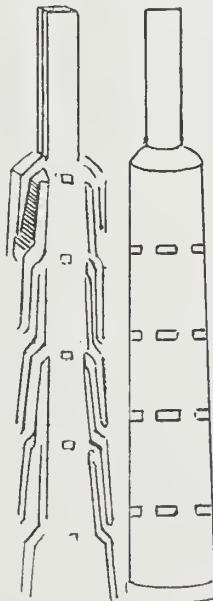

A dì 10 di dicembre a ore 15 <sup>2</sup>fu appicato il fuoco;

<sup>3</sup>A dì 18 di dicembre 1511 a ore 15 fu fatto questo <sup>4</sup>secondo incendio da Suizzeri a Milano <sup>5</sup>al luogo detto DCXC.

On the 10<sup>th</sup> day of December at 9 o'clock a. m. fire was set to the place.

On the 18<sup>th</sup> day of December 1511 at 9 o'clock a. m. this second fire was kindled by the Swiss at Milan at the place called DCXC.

Camini del castello di Pavia,

Again if the lowest part of the bank  
which lies across the current of the waters  
is made in deep and wide steps, after the  
manner of stairs, the waters which, in their  
course usually fall perpendicularly from the  
top of such a place to the bottom, and wear  
away the foundations of this bank can no  
longer descend with a blow of too great a  
force; and I find the example of this in the  
stairs down which the water falls in the  
fields at Sforzesca at Vigevano over which  
the running water falls for a height of 50  
braccia.

## 1028.

Stair of Vigevano below La Sforzesca,  
130 steps, <sup>1/4</sup> braccio high and <sup>1/2</sup> braccio wide,  
down which the water falls, so as  
not to wear away anything at the  
end of its fall; by these steps  
so much soil has come down  
that it has dried up a pool;  
that is to say it has filled it up  
and a pool of great depth has  
been turned into meadows.

1029. 2. 3. The fountain is known by this name to this day: it is near Torno, on the Eastern shore of Como. The waters still rise and fall with the flow and ebb of the tide as Pliny described it (Epist. IV, 30; Hist. Nat. II, 206).

1030. 1031. From the character of the handwriting we may conclude that these observations

In many places there are streams of <sup>Notes on the</sup> North water which swell for six hours and ebb <sup>Italian lakes</sup> for six hours; and I, for my part, have seen one above the lake of Como called Fonte Pliniana, which increases and ebbs, as I have said, in such a way as to turn the stones of two mills; and when it fails it falls so low that it is like looking at water in a deep pit.

## LAKE OF COMO. VALLEY OF CHIAVENNA.

Above the lake of Como towards Germany is the valley of Chiavenna where the river Mera flows into this lake. Here are barren and very high mountains, with huge rocks. Among these mountains are to be found the water-birds called gulls. Here grow fir trees, larches and pines. Deer, wild-goats, chamois, and terrible bears. It is impossible to climb them without using hands and feet. The peasants go there at the time of the snows with great snares to make the bears fall down these rocks. These mountains which very closely approach each other are parted by the river. They are to the right and left for the distance of 20 miles throughout of the same nature. From mile to mile there are good inns. Above on the said river there are waterfalls of 400 braccia in height, which are fine to see; and there is good living at 4 soldi the reckoning. This river brings down a great deal of timber.

## VAL SASINA.

Val Sasina runs down towards Italy; this is almost the same form and character. There grow here many *mappello* and there are great ruins and falls of water[14].

were made in Leonardo's youth; and I should infer from their contents, that they were notes made in anticipation of a visit to the places here described, and derived from some person (unknown to us) who had given him an account of them.

14. The meaning of *mappello* is unknown.

## VALLE D'INTROZZO.

<sup>16</sup> Questa valle produce assai abeti pini e larici, è doue Ambrogio Fereri fa <sup>17</sup> venire il suo legniame; in testa della Valtellina sono le montagne di Bormio, <sup>18</sup> terribili e piene sempre di neve; qui nascono ermellini.

## A BELLAGGIO.

<sup>20</sup> A riscontro a Bellaggio castello è il fiume Latte, el quale cade da alto <sup>21</sup> piv che braccia 100 dalla vena, donde nascie, a piombo nel lago cō inestimabile strepito <sup>22</sup> e romore; questa vena versa solamente agosto e settembre.

## VALTELLINA.

<sup>24</sup> Valtellina, com'è detto, valle circūdata d'alti e terribili mōti, fa <sup>25</sup> vini potenti e assai, e fa tanto bestiame che da paesani è concluso nascierui <sup>25</sup> piv latte che uino; questa è la valle doue passa Adda, la quale prima corre <sup>27</sup> piv che 40 miglia per la Magnia; questo fiume fa il pescie temolo, il quale <sup>28</sup> vive d'argiēto, del quale se ne trova assai per la sua rena; <sup>29</sup> ĵ questo paese ognivno può vedere pane. e vino, e'l uino vale al piv uno soldo <sup>30</sup> il bocciale e la libra della uitella uno soldo, e'l sale 10 dinari, e'l simile il burro, <sup>31</sup> ed è la loro libbra 30 ozie e l'oua uno soldo la soldata.

C. A. 211b; 619d]

1031.

## A BORMIO.

<sup>2</sup> A Bormio sono i bagni;—sopra Como otto miglia è la Pliniana, <sup>3</sup> la quale cresce e discresce ogni 6 ore, e'l suo crescere fa <sup>4</sup> acqua per 2 mila e n'avanza, e'l suo calare fa asciugare la fonte; <sup>5</sup> più su 2 miglia è Nesso terra, dove cade uno fiume cō grande <sup>6</sup> empito per una gradissima fessura di mōte; Queste gite sō da <sup>7</sup> fare nel mese di maggio; E i maggior sassi scoperti che si trovano <sup>8</sup> in questi paesi sono le montagne di Mādello, vicine alle montagne di Lecco e di Gravidona inverso Bellin-

## VALLEY OF INTROZZO.

This valley produces a great quantity of firs, pines and larches; and from here Ambrogio Fereri has his timber brought down; at the head of the Valtellina are the mountains of Bormio, terrible and always covered with snow; marmots (?) are found there.

## BELLAGGIO.

Opposite the castle Bellaggio there is the river Latte, which falls from a height of more than 100 braccia from the source whence it springs, perpendicularly, into the lake with an inconceivable roar and noise. This spring flows only in August and September.

## VALTELLINA.

Valtellina, as it is called, is a valley enclosed in high and terrible mountains; it produces much strong wine, and there is so much cattle that the natives conclude that more milk than wine grows there. This is the valley through which the Adda passes, which first runs more than 40 miles through Germany; this river breeds the fish temolo which live on silver, of which much is to be found in its sands. In this country every one can sell bread and wine, and the wine is worth at most one soldo the bottle and a pound of veal one soldo, and salt ten dinari and butter the same and their pound is 30 ounces, and eggs are one soldo the lot.

AT BORMIO.

At Bormio are the baths;—About eight miles above Como is the Pliniana, which increases and ebbs every six hours, and its swell supplies water for two mills; and its ebbing makes the spring dry up; two miles higher up there is Nesso, a place where a river falls with great violence into a vast rift in the mountain. These excursions are to be made in the month of May. And the largest bare rocks that are to be found in this part of the country are the mountains of Mandello near to those of Lecco, and

1032. This text has in the original a slight sketch to illustrate it.—3. The statement about the lake Segrino is incorrect; it is situated in the Valle Assina, above the lake of Pusiano.

of Gravidona towards Bellinzona, 30 miles from Lecco, and those of the valley of Chiavenna; but the greatest of all is that of Mandello, which has at its base an opening towards the lake, which goes down 200 steps, and there at all times is ice and wind.

## IN VAL SASINA.

In Val Sasina, between Vimognio and Introbbio, to the right hand, going in by the road to Lecco, is the river Troggia which falls from a very high rock, and as it falls it goes underground and the river ends there. 3 miles farther we find the buildings of the mines of copper and silver near a place called Pra' Santo Pietro, and mines of iron and curious things. La Grigna is the highest mountain there is in this part, and it is quite bare.

## 1032.

The lake of Pusiano flows into the lake of Segrino [3] and of Annone and of Sala. The lake of Annone is 22 braccia higher at the surface of its water than the surface of the water of the lake of Lecco, and the lake of Pusiano is 20 braccia higher than the lake of Annone, which added to the afore said 22 braccia make 42 braccia and this is the greatest height of the surface of the lake of Pusiano above the surface of the lake of Lecco.

## 1033.

At Santa Maria in the Valley of Ravagnate in the mountains of Brianza are the rods of chestnuts of 9 braccia and one out of an average of 100 will be 14 braccia.

At Varallo di Ponbia near to Sesto on the Ticino the quinces are white, large and hard.

1033. 2. *Ravagnate* (Leonardo writes *Ravagnā*) in the Brianza is between Oggiono and Brivio, South of the lake of Como. M. Ravaïsson avails himself of this note to prove his hypothesis

1051. Leonardo inserted this passage on the margin of the circular plan, in water colour, of Imola—see Pl. CXI No. 1.—In the original the fields surrounding the town are light green; the moat, which surrounds the fortifications and the windings of the river Santerno, are light blue. The parts, which have come out blackish close to the river are yellow ochre in the original. The dark groups of houses inside the town are red. At the four points of the compass drawn in the middle of the town Leonardo has written (from right to left): *Mezzodi* (South) at the top; to the left *Scirocco* (South east), *levante* (East), *Greco* (North East), *Septentrione* (North), *Messstro* (North West), *ponente* (West) *Libecco* (South West). The arch in which the plan is drawn is, in the original, 42 centimètres across.

At the beginning of October 1502 Cesare Borgia was shut up in Imola by a sudden revolt of the Condottieri, and it was some weeks before he could release himself from this state of siege (see Gregorovius, *Geschichte der Stadt Rom im Mittelalter*, Vol. VII, Book XIII, 5, 5).

Besides this incident Imola plays no important part in the history of the time. I therefore think myself fully justified in connecting this map, which is at Windsor, with the siege of 1502 and with Leonardo's engagements in the service of Cesare Borgia, because a comparison of these texts, Nos. 1050 and 1051, raise, I believe, the hypothesis to a certainty.

1052. Most of the places here described lie within the district shown in the maps on Pl. CXII.

Leic. 98]

## 1055.

In Candia di Lombardia · presso Alessandria della Paglia, facendosi per <sup>2</sup>messer Gualtieri di Candia vno pozzo, fu trovato vno principio di navilio grandissimo sotto terra, circa a braccia 10, e perchè <sup>3</sup>il legname era nero e bello, parue a esso messer Gualtieri di fare allungare tal bocca di pozzo in forma che i termini <sup>4</sup>di tal navilio si scoprissino.

Alessandria in Piedmont (1055, 1056).

At Candia in Lombardy, near Alessandria della Paglia, in making a well for Messer Gualtieri of Candia, the skeleton of a very large boat was found about 10 braccia underground; and as the timber was black and fine, it seemed good to the said Messer Gualtieri to have the mouth of the well lengthened in such a way as that the ends of the boat should be uncovered.

1054. 3. essere. 4. atte. 5. falle.

1055. 2. pozo . . circha a br. 3. ebrello . . meser . . bocha di pozo. 4. navili si scoprissi.

1054. This passage evidently refers to the making of maps, such as Pl. CXII, CXIII, and CXIV. There is no mention of such works, it is true, excepting in this one passage of MS. L. But this can scarcely be taken as evidence against my view that Leonardo busied himself very extensively at that time in the construction of maps; and all the less since the foregoing chapters clearly prove that at a time so full of events Leonardo would only now and then commit his observations to paper, in the MS. L.

By the side of this text we find, in the original, a very indistinct sketch, perhaps a plan of a position. Instead of this drawing I have here inserted a much clearer sketch of a position from the same MS., L. 82b and 83a. They are the only drawings of landscape, it may be noted, which occur at all in that MS.

1055. 2. *Messer Gualtieri*, the same probably as is mentioned in Nos. 672 and 1344.

Amoretti had published this passage, and M. Ravaisson who gave a French translation of it in the *Gazette des Beaux Arts* (1881, pag. 528), remarks as follows: *Le maître sculpteur que Léonard appelle son "comparé" ne serait-il pas Benedetto da Majano, un de ceux qui jugèrent avec lui de la place à donner au David de Michel-Ange, et de qui le Louvre a acquis récemment un buste d'après Philippe Strozzi?*

## 1056.

At Alessandria della Paglia in Lombardy there are no stones for making lime of, but such as are mixed up with an infinite variety of things native to the sea, which is now more than 200 miles away.

## 1057.

At Monbracco, above Saluzzo,—a mile <sup>The Alps</sup> above the Certosa, at the foot of Monte <sup>(1057—1062)</sup> Viso, there is a quarry of flakey stone, which is as white as Carrara marble, without a spot, and as hard as porphyry or even harder; of which my worthy gossip, Master Benedetto the sculptor, has promised to give me a small slab, for the colours, the second day of January 1511.

## 1058.

That there are springs which suddenly break forth in earthquakes or other convulsions and suddenly fail; and this happened in a mountain in Savoy where certain forests sank in and left a very deep gap, and about four miles from here the earth opened itself like a gulf in the mountain, and threw out a sudden and immense flood of water which scoured the whole of a little valley of the tilled soil, vineyards and houses, and did the greatest mischief, wherever it overflowed.

## 1059.

The river Arve, a quarter of a mile from Geneva in Savoy, where the fair is held on midsummerday in the village of Saint Gervais.

To this it may be objected that Benedetto da Majano had already lain in his grave fourteen years, in the year 1511, when he is supposed to have given the promise to Leonardo. The colours may have been given to the sculptor Benedetto and the stone may have been in payment for them. From the description of the stone here given we may conclude that it is repeated from hearsay of the sculptor's account of it. I do not understand how, from this observation, it is possible to conclude that Leonardo was on the spot.

1059. An indistinct sketch is to be seen by the text.

Leic. 4a]

E questo vedrà come vid'io, chi ādrà so pra Mōboso, giogo dell'Alpi che diuidono la Francia dalla Italia, la qual montagnia à la sua basa che parturisce li 4 fiumi che rigā per 4 aspetti contrari tutta l'Europa, e nessuna montagnia à le sue base in simile altezza; questa si leua in tanta altura che quasi passa tutti li nuvoli e rare volte vi cade neve, ma sol grādissime d'estate quando li nvvoli sono nella maggiore altezza, e questa grandine vi si cōserua in modo, che se nō fusse la retā del caderui e del montarui nvvoli, che non accade 2 volte in vna età, egli ui sarebbe altissima quātità di ghiaccio inalzato dali gradi della grādine, il quale di mezzo luglio vi trouai grossissimo, e vidi l'aria sopra di me tenebrosa e 'l sole che percotea la mōta<sup>8</sup>gnia essere piv luminoso quiui assai che nelle basse pianure, perchè minor grossezza d'aria s'interpone in<sup>9</sup>fra la cima d'esso monte e 'l sole.

Leic. 98]

Truovasi nelle montagnie di Verona la sua pietra rossa mista tutta di nichi convertiti <sup>2</sup>in essa pietra, dalli quali, per la loro bocca, era gommata la materia d'essa pietra, ed erano in alcuna parte restati separati dall'altra massa del sasso che li circundava; perchè la scorza del nichio s'era interposta, e nō li avea <sup>4</sup>lasciati congiugniere; E in alcun altra parte tal gomma avea petrificate le invecchiate e quasi la scorza.

C. A. 231b; 696a]

Ponte di Goritia <sup>2</sup>Vilpago.

1060. 1. ecuesto. 2. gogo . . diuitano la franca . . alla . . parturisse. 3. alle. 4. nvvoli . . chade. 5. magore . . ecuesta . . imodo chesse. 6. fusi "la retā del caderui e del montarui nvvoli" che non achade [del s] . . etā e. 7. mezo . . grossissimo . . tenenebrosa ellsole. 8. luminosi . . grosseza.  
 1061. 2. delli . . era gornata . . edera. 3. masa . . chelli circhundava . . lasscorza. 4. lassciati congiugniere . . goma . . petrificata le inveciate e quasi scorzo.  
 1062. vilphago.

1060. I have vainly enquired of every available authority for a solution of the mystery as to what mountain is intended by the name Mom boso (Comp. Vol. I Nos. 300 and 301). It seems most obvious to refer it to Monte Rosa. *Rosa* is derived from the Keltic *ros* which survives in Breton and in Gaelic, meaning, in its first sense, a mountain spur, but which also—like *Horn*—means a very high peak; thus Monte Rosa would mean literally the High Peak.

## 1060.

And this may be seen, as I saw it, by any one going up[5] Monbroso, a peak of the Alps which divide France from Italy. The base of this mountain gives birth to the 4 rivers which flow in four different directions through the whole of Europe. And no mountain has its base at so great a height as this, which lifts itself above almost all the clouds; and snow seldom falls there, but only hail in the summer, when the clouds are highest. And this hail lies [unmelted] there, so that if it were not for the absorption of the rising and falling clouds, which does not happen more than twice in an age, an enormous mass of ice would be piled up there by the layers of hail, and in the middle of July I found it very considerable; and I saw the sky above me quite dark, and the sun as it fell on the mountain was far brighter here than in the plains below, because a smaller extent of atmosphere lay between the summit of the mountain and the sun.

## 1061.

In the mountains of Verona the red marble is found all mixed with cockle shells turned into stone; some of them have been filled at the mouth with the cement which is the substance of the stone; and in some parts they have remained separate from the mass of the rock which enclosed them, because the outer covering of the shell had interposed and had not allowed them to unite with it; while in other places this cement had petrified those which were old and almost stripped the outer skin.

## 1062.

Bridge of Goertz—Wilbach (?).

6. *in una etā*. This is perhaps a slip of the pen on Leonardo's part and should be read *estate* (summer).

1062. There is a slight sketch with this text, Leonardo seems to have intended to suggest, with a few pen-strokes, the course of the Isonzo and of the Wipbach in the vicinity of Gorizia (Goerz). He himself says in another place that he had been in Friuli (see No. 1077 l. 19).

Leic. 10a]

## 1063.

Quella parte della terra s'è piv alienata dal centro <sup>2</sup> del mōdo, la qual s'è fatta piv lieve; E quella parte della terra s'è fatta piv lieve, per la quale <sup>3</sup> è passato maggior concorso d'acque, E si è adūque fatta piv lieue quella parte, donde sco<sup>4</sup>la piv numero di fiumi, come l'alpi, che diuidono la Magnia e la Francia dalla Italia, delle quali <sup>5</sup> escie il Rodano a mezzodi, e il Reno a tramōtana ., jl Danubio over Danoia a greco, e 'l Po a leuā<sup>6</sup>te con invmerabili fumi che con loro s'accōpagnano, i quali senpre corrono torbidi, dalla terra <sup>7</sup>da loro portata, al mare;

Mouōsi al continvo i liti marittimi inverso il mezzo del mare e lo <sup>8</sup>scacciā dal suo primo sito; Riseruerassi la piv bassa parte del Mediterrano per letto e corso del Nilo, fiume massimo, che versa in esso mare, E con lui s'accompagnieranno tutti li fiumi sua <sup>10</sup>aderēti, che prima in esso mare le loro acque versar soleano, come far si uede al Po colli aderēti <sup>11</sup>sua, li quali prima ver sauā nel mare che infra l'Appennino e le Germaniche alpi si era vnitio <sup>12</sup>col Mare Adriatico;

Come le alpi galliche son la piv alta parte dell' Evropa.

1064. 1. quessti. 2. trovati. 7. nia.

1064. 6. Sasso della Vernia. The frowning rock between the sources of the Arno and the Tiber, as Dante describes this mountain, which is 1269 mètres in height.

This note is written by the side of that given

as No. 1020; but their connection does not make it clear what Leonardo's purpose was in writing it.

1065. 2. Cāpana, an Inn.

A note on the petrifications, or fossils near Parma will be found under No. 989.

That part of the earth which was lightest <sup>The Appenines</sup> remained farthest from the centre of the world; and that part of the earth became the lightest over which the greatest quantity of water flowed. And therefore that part became lightest where the greatest number of rivers flow; like the Alps which divide Germany and France from Italy; whence issue the Rhone flowing Southwards, and the Rhine to the North. The Danube or Tanoia towards the North East, and the Po to the East, with innumerable rivers which join them, and which always run turbid with the soil carried by them to the sea.

The shores of the sea are constantly moving towards the middle of the sea and displace it from its original position. The lowest portion of the Mediterranean will be reserved for the bed and current of the Nile, the largest river that flows into that sea. And with it are grouped all its tributaries, which at first fell into the sea; as may be seen with the Po and its tributaries, which first fell into that sea, which between the Appenines and the German Alps was united to the Adriatic sea.

That the Gallic Alps are the highest part of Europe.

## 1066.

A method for drying the marsh of  
Piombino.

## 1067.

The shepherds in the Romagna at the  
foot of the Apennines make peculiar large  
cavities in the mountains in the form of  
a horn, and on one side they fasten a horn.  
This little horn becomes one and the same  
with the said cavity and thus they produce  
by blowing into it a very loud noise.

## 1068.

A spring may be seen to rise in Sicily  
which at certain times of the year throws  
out chesnut leaves in quantities; but in  
Sicily chesnuts do not grow, hence it is  
evident that that spring must issue from some  
abyss in Italy and then flow beneath the sea  
to break forth in Sicily.

1067. As to the Romagna see also No. 1046.

1046. The chesnut tree is very common in Si-  
cily. In writing *cicilia* Leonardo meant perhaps  
Cilicia.

1071. 2. This is obviously an exaggeration founded on inaccurate information. Half of 150 miles would be nearer the mark.

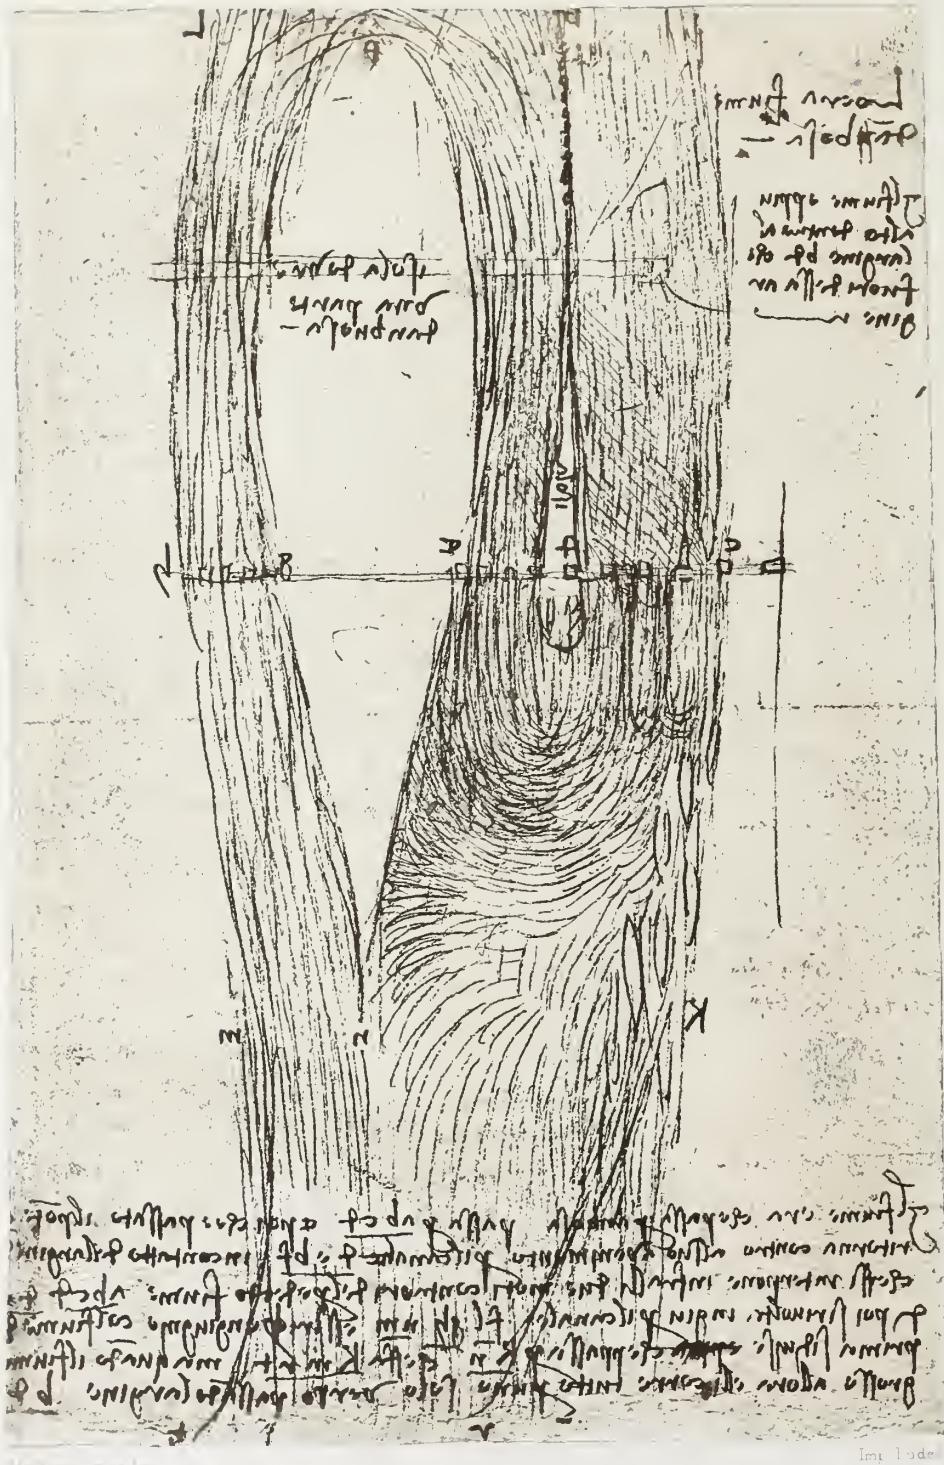

1073. The tenor of this note (see lines 2 and 3) seems to me to indicate that this passage was not written in France, but was written from oral information. We have no evidence as to when this note may have been written beyond the circumstance that Fra Giocondo the Veronesc Architect left France not before the year 1505. The greater part of the magnificent Château of Blois has now disappeared. Whether this note was made for a special purpose is uncertain. The original form and extent of the Château is shown in Androvet, *Les plus excellents Bastiments de France*, Paris MDCVII, and it may be observed that there is in the middle of the garden a Pavilion somewhat similar to that shown on Pl. LXXXVIII No. 7.

See S. DE LA SAUSSAYE, *Histoire du Château de Blois* 4<sup>ème</sup> édition Blois et Paris p. 175: En mariant sa

filie ainée à François, comte d'Angoulême, Louis XII lui avait constitué en dot les comtés de Blois, d'Asti, de Coucy, de Montfort, d'Etampes et de Vertus. Une ordonnance de François I. lui laissa en 1516 l'administration du comté de Blois.

Le roi fit commencer, dans la même année, les travaux de cette belle partie du château, connue sous le nom d'aile de François I, et dont nous avons donné la description au commencement de ce livre. Nous trouvons en effet, dans les archives du Baron de Joursanvault, une pièce qui en fixe parfaitement la date. On y lit: "Je, Baymon Philippeaux, commis par le Roy à tenir le compte et faire le payement des bastiments, edifices et reparacions que le dit seigneur fait faire en son chastel de Blois, confesse avoir eu et reçeu . . . la somme de trois mille livres tournois . . . le cinquième jour de juillet, l'an mil cinq cent et seize. P. 24: Les jardins avaient été décorés avec beaucoup de luxe par les différents possesseurs du château. Il ne reste de tous les bâtiments qu'ils y élevèrent que ceux des officiers chargés de l'ad-

ministration et de la culture des jardins, et un pavillon carré en pierre et en brique flanqué de terrasses à chacun de ses angles. Quoique défiguré par des mesures élevées sur les terrasses, cet édifice est très-digne d'intérêt par l'originalité du plan, la décoration architecturale et le souvenir d'Anne de Bretagne qui le fit construire. Félibien describes the garden as follows: Le jardin haut était fort bien dressé par grands compartimens de toutes sortes de figures, avec des allées de meuriers blancs et des palissades de coudriers. Deux grands berceaux de charpenterie séparaient toute la longueur et la largeur du jardin, et dans les quatres angles des allées, où ces berceaux se croissoient, il y auoit 4 cabinets, de mesme charpenterie . . Il y a pas longtemps qu'il y auoit dans ce mesme jardin, à l'endroit où se croissoient les allées du milieu, un édifice de figure octogone, de plus de 7 thoises de diamètre et de plus de neuf thoises de haut; avec 4 enfoncements en forme de niches dans les 4 angles des allées. Ce bastiment . . estoit de charpente nus d'un extraordinairement bien travaillé. On y voyait particulièrement la cordillière qui regnait tout autour en forme de cordon. Car la Reyne affectait de la mettre non-seulement à ses armes et a ses chiffres mais de la faire représenter en divers manières dans tous les ouvrages qu'on lui faisait pour elle . . le bastiment estoit couvert en forme de dôme qui dans son milieu avait encore un plus petit dôme, ou lanterne vitrée au-dessus de laquelle estoit une figure dorée représentant Saint Michel. Les

1074.

The river Loire at Amboise.

The river is higher within the bank *b d* than outside that bank.

The island where there is a part of Amboise.

This is the river that passes through Amboise; it passes at *a b c d*, and when it has passed the bridge it turns back, against the original current, by the channel *d e, b f* in contact with the bank which lies between the two contrary currents of the said river, *a b, c d*, and *d e, b f*. It then turns down again by the channel *f l, g h, n m*, and reunites with the river from which it was at first separated, which passes by *k n*, which makes *k m, r t*. But when the river is very full it flows all in one channel passing over the bank *b d*.

1075.

The water may be dammed up above the level of Romorantin to such a height, that in its fall it may be used for numerous mills.

deux dômes estoient proprement couvert d'ardoise et de plomb doré par dehors; par dedans ils estoient lambrissés d'une menuiserie très delicate. Au milieu de ce Salon il y avait un grand bassin octogone de marbre blanc, dont toutes les faces estoient enrichies de différentes sculptures, avec les armes et les chiffres du Roy Louis XII et de la Reine Anne. Dans ce bassin il y en avait un autre posé sur un piédestal lequel auoit sept piedz de diamètre. Il estoit de figure ronde à godrons, avec des masques et d'autres ornements très sgauamment tailllez. Du milieu de ce deuxiesme bassin s'y levoit un autre petit piédestal qui portoit un troisième bassin de trois pieds de diamètre, aussy parfaitemen bien taillé; c'estoit de ce dernier bassin que jallissoit l'eau qui se r'ependoit en suite dans les deux autres bassins. Les beaux ouvrages faits d'un marbre esgalemant blanc et poli, furent brisés par la pesanteur de tout l'édifice, que les injures de l'air renver-  
 sèrent de fond en comble.

1074. See Pl. CXV. Lines 1—7 are above, lines 8—10 in the middle of the large island and the word *Isola* is written above *d* in the smaller island; *a* is written on the margin on the bank of the river above l. 1; in the reproduction it is not visible. As may be seen from the last sentence, the observation was made after long study of the river's course, when Leonardo had resided for some time at, or near, Amboise.

<sup>9</sup> Il fiume di Villa<sup>10</sup>franca sia cō<sup>11</sup>dotto a Romorō<sup>12</sup>tino, e sia fatto dal suo <sup>13</sup>popolo, e li legni<sup>14</sup>ami, che conpō<sup>15</sup>gono le lor case, <sup>16</sup>sie per barche cō<sup>17</sup>dotte a Romorō<sup>18</sup>tino; e l' fiume <sup>19</sup>sia ringorga<sup>20</sup>to in tāta altez<sup>21</sup>za, che l'acqua <sup>22</sup>si possa cō co<sup>23</sup>modo discie<sup>24</sup>so riduciere <sup>25</sup>a Romorōtino.

Br. M. 269δ]

S'elli è meglio che l'acqua <sup>2</sup>vada tutta in alto in una so<sup>3</sup>la volta, o veramēte in due?

<sup>4</sup> Rispōdesi che in vna sola volta la rota nō potreb<sup>6</sup>be sostener tutta l'acqua <sup>7</sup>ch'ella leua in due volte, per<sup>8</sup>chè nella mezza volta della <sup>9</sup>rota leverebbe 100 libbre, <sup>10</sup>e nō più, e s'ell' auesse a leua<sup>11</sup>re le 200 libbre la uolta inter<sup>12</sup>re, non le leverebbe, se <sup>13</sup>tal rota nō raddoppiasse il dia<sup>14</sup>metro, e raddoppiando tal <sup>15</sup>diametro raddoppiereb<sup>16</sup>be il tempo; adūque è meglio <sup>17</sup>e più comodità di spesa a fare <sup>18</sup>tal rota sub <sup>2</sup>a che <sup>2</sup>la ecc.

<sup>19</sup>Il descīeo del mozzo non s'ab<sup>20</sup>bassa insino alla pelle dell'acqua, <sup>21</sup>perchè toccādo l'acqua diminuireb<sup>22</sup>be il peso suo.

<sup>23</sup>E se per l'avversario <sup>24</sup>s'ingrossasse il <sup>25</sup>fugatore dell'ac<sup>26</sup>qua dieci tan<sup>27</sup>ti più, che la <sup>28</sup>canna dell'<sup>29</sup>acqua fuggiē<sup>30</sup>te d'essi, se li <sup>31</sup>dieci tanti <sup>32</sup>men moto <sup>33</sup>che a questo, <sup>34</sup>che vfitio sareb<sup>35</sup>be il suo? Rij<sup>36</sup>spōdesi per la <sup>37</sup>9<sup>a</sup> di questo <sup>38</sup>che dice, che l'acqua <sup>39</sup>s'alzerebbe <sup>40</sup>la decima parte di quel che prima s'alzava <sup>41</sup>nell'altezza di quella canna donde prima sur<sup>42</sup>gieua.

Br. M. 270δ]

Se l' fiume *m n*, ramo del fiume Loira, si manda nel <sup>2</sup>fiume di Romorontino colle sua acque torbide, esso i<sup>3</sup>grasserà le can-

The river at Villefranche may be conducted to Romorantin which may be done by the inhabitants; and the timber of which their houses are built may be carried in boats to Romorantin [18]. The river may be dammed up at such a height that the waters may be brought back to Romorantin with a convenient fall.

## 1076.

As to whether it is better that the water should all be raised in a single turn or in two?

The answer is that in one single turn the wheel could not support all the water that it can raise in two turns, because at the half turn of the wheel it would be raising 100 pounds and no more; and if it had to raise the whole, 200 pounds in one turn, it could not raise them unless the wheel were of double the diameter and if the diameter were doubled, the time of its revolution would be doubled; therefore it is better and a greater advantage in expense to make such a wheel of half the size (?) &c.

The going down of the nave of the wheel must not be so low as to touch the surface of the water, because by touching the water its momentum will be lessened.

And if on the contrary the conduit for the water were ten times the size of the pipe for the water escaping from it, and if it had ten times less motion, what would be its office? This is answered by the 9<sup>th</sup> of this which says that the water would rise in the pipe whence it first flow, to a tenth part of its original height.

## 1077.

If the river *m n*, an affluant of the river Loire, were turned with its muddy waters, into the river of Romorantin, this would fatten

the land which it would water and would render the country fertile to supply food to the inhabitants, and would make navigable canals for mercantile purposes.

The way in which the river in its flow should scour its own channel.

By the ninth of the third; the more rapid it is, the more it wears away its channel; and, by the converse proposition, the slower the water the more it deposits that which renders it turbid.

And let the sluice be movable like the one I arranged in Friuli [19], where when one sluice was opened the water which passed through it dug out the bottom. Therefore when the rivers are flooded, the sluices of the mills ought to be opened in order that the whole course of the river may pass through falls to each mill; there should be many in order to give a greater impetus, and so all the river will be scoured. And below the site of each of the two mills there may be one of the said sluice falls; one of them may be placed below each mill.

C. A. 329b; 993a]

1078.

Vno trabocco è quattro braccia e vno miglio è tre mila d'esse braccia; E 'l braccio si diuide in 12 ōcie; <sup>2</sup>e l'acqua de' canali à di calo in ogni cēto trabocchi 2 delle dette oncie; adūque 14 oncie <sup>3</sup>di calo son necessarie a due mila ottocēto braccia di moto ne'detti canali; seguita che 15 oncie <sup>4</sup>di calo danno debito moto alli corsi dell'acque dei predetti canali, cioè uno braccio e  $\frac{1}{2}$  <sup>5</sup>per miglio; E per questo cōcluderemo che l'acqua che si toglie dal fiume di Villa-

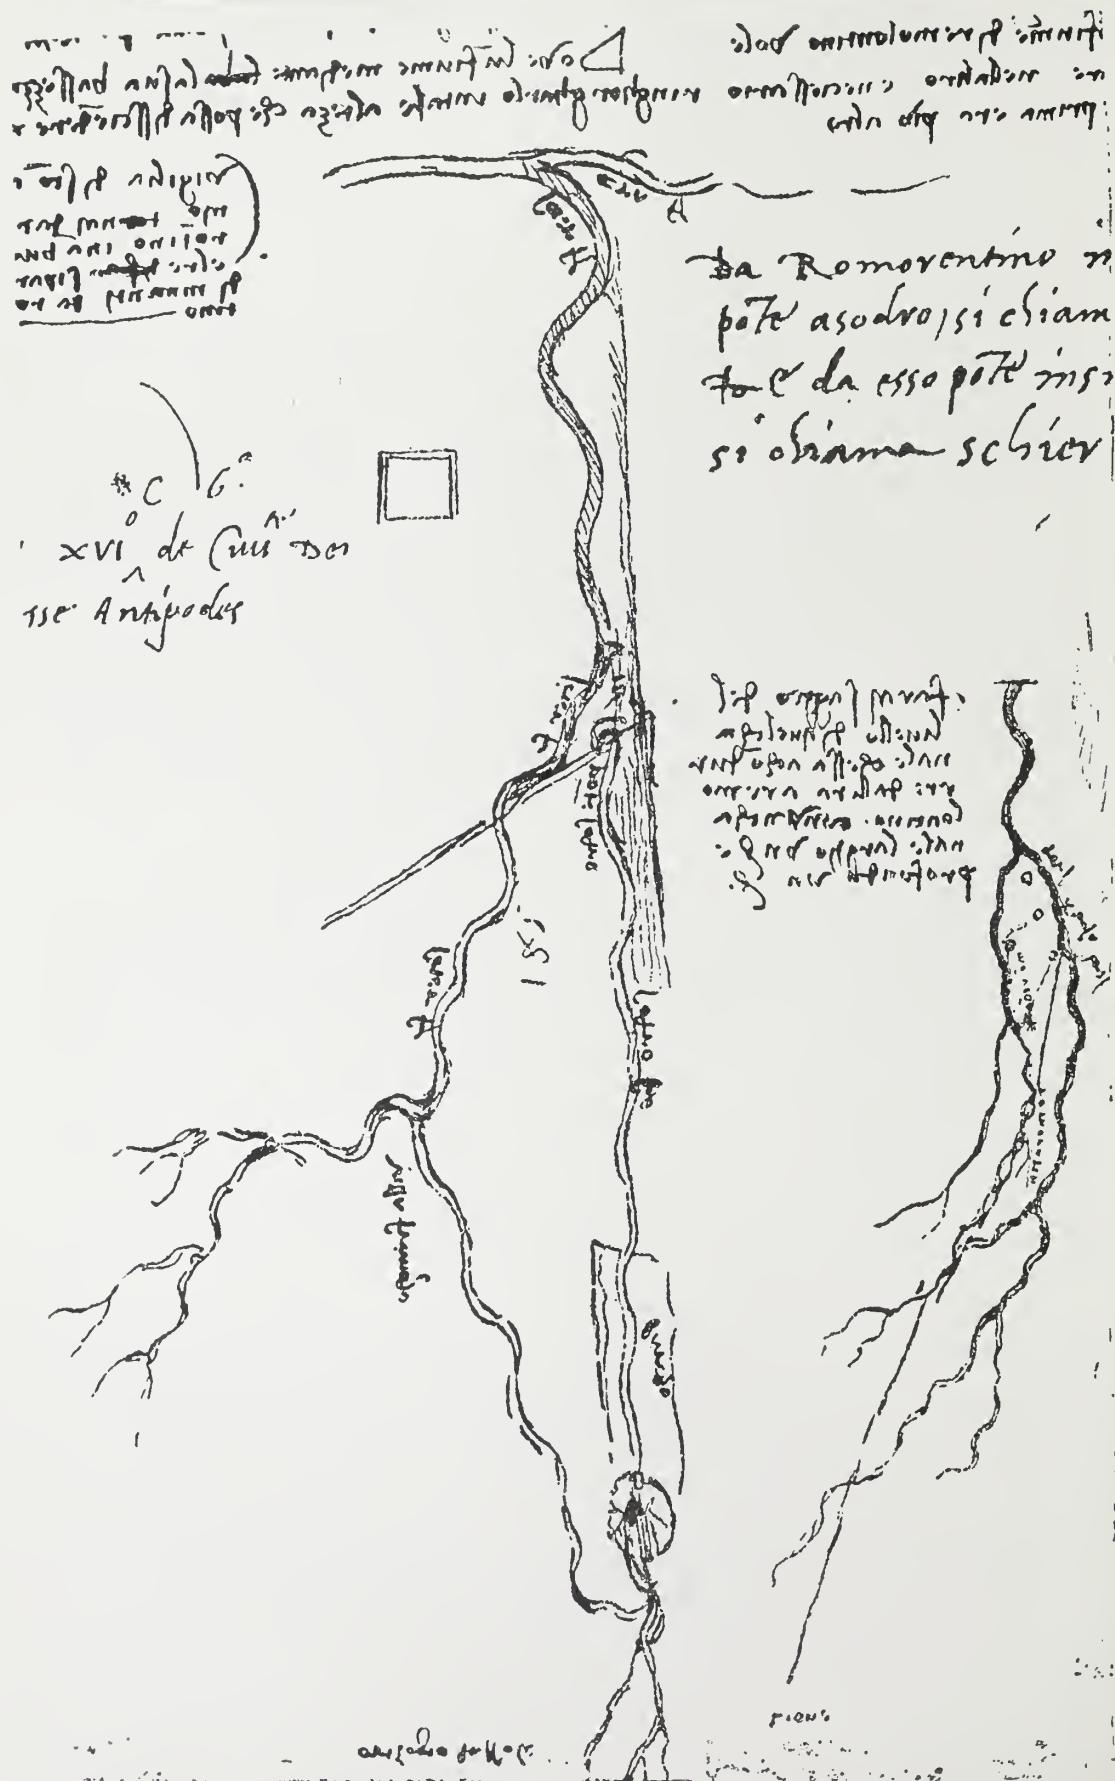

A trabocco is four braccia, and one mile is three thousand of the said braccia. Each braccio is divided into 12 inches; and the water in the canals has a fall in every hundred trabocchi of two of these inches; therefore 14 inches of fall are necessary in two thousand eight hundred braccia of flow in these canals; it follows that 15 inches of fall give the required momentum to the currents of the waters in the said canals, that is one braccio and a half in the mile. And from this it may be concluded that the water taken from the river of Ville-

The following names are written along the rivers on the larger sketch. *era f* (the Loire) *scier f* (the Cher) three times. *Pōte Sodro* (bridge of the Soudre). *Villa franca* (Villefranche) *banco* (sandbank) *Sodro* (Soudre). The circle below shows the position of Romorantin. The words ‘*orologio del sole*’ written below do not belong to the map of the rivers. The following names are written by the side of the smaller sketch-map:—*tors* (Tours), *Abosa* (Amboise) *bres*—for *Bles* (Blois) *mō rica* ||| (Montrichard). *Lione* (Lyons). This map was also published in the ‘*Saggio*’ (Milano, 1872) Pl. XXII, and the editors remark: *Forse la linia retta che va da Amboise a Romorantin segna l'andamento proposto d'un Canale, che poi sembra prolungarsi in giù fin dove sta scritto Lione.*

M. Ravaïsson has enlarged on this idea in the *Gazette des Beaux Arts* (1881 p. 530): *Les traces de Léonard permettent d'entrevoir que le canal commençant soit après de Tours, soit auprès de Blois et passant par Romorantin, avec port d'embarquement à Villefranche, devait, au delà de Bourges, traverser l'Allier au-dessous des affluents de la Dore et de la Sioule, aller par Moulins jusqu'à Digoin; enfin, sur l'autre rive de la Loire, dépasser les monts du Charolais et rejoindre la Saône auprès de Mâcon.* It seems to me rash, however, to found so elaborate an hypothesis on these sketches of rivers. The slight stroke going to *Lione* is perhaps only an indication of the direction. — With regard to the Loire compare also No. 988. l. 38.

1079. The meaning is obscure; a more important passage referring to France is to be found under No. 744.

B. 61a]

On the Germans  
(1080. 1081.) Modo come i Tedeschi ingarbugliano e tessano, serādosi īsieme, <sup>2</sup>le loro targhe lunghe cōtro a nemici·, abassandosi e mettēdo <sup>3</sup>vna delle teste a terra, tenēdo il resto · in mano.

## 1080.

The way in which the Germans closing up together cross and interweave their broad leather shields against the enemy, stooping down and putting one of the ends on the ground while they hold the rest in their hand.

B. 63δ]

Vsano i Germani · annegare · castellani cō fumo di pivma, solfo <sup>2</sup>e risagalio ·, e fanno durare detti fumi 7 e 8 ore; ácora la <sup>3</sup>pula del frumēto fa assai e durabil fumo; e letame secco ancor lui, <sup>4</sup>ma fa sia mischiato colla sāsa, cioè vliue tratte nel' olio, o vuoi morchia <sup>5</sup>d'olio.

## 1081.

The Germans are wont to annoy a garrison with the smoke of feathers, sulphur and realgar, and they make this smoke last 7 or 8 hours. Likewise the husks of wheat make a great and lasting smoke; and also dry dung; but this must be mixed with olive husks, that is olives pressed for oil and from which the oil has been extracted.

Leic. 18]

1082. 4. *Emus*, the Balkan; *Dardania*, now Servia.

Adula, <sup>8</sup>doue nascie il Danubio, il quale s'astende a leuante con corso di 1500 miglia, e la sua linia breuissima è circa <sup>9</sup>mille miglia, e altrettanto o circa è'l ramo del Monte Adula mutato ne' predetti nomi di mōti; sta a tramontana il monte Carpatus, il quale termina la larghezza della valle del Danubio, la qual, come dissi, s'astende <sup>11</sup>a leuāte cō lunghezza di circa mille miglia, ed è larga doue 200 e doue 300 miglia; questa si mette pel <sup>12</sup>mezzo il Danvbio, primo fiume d'Europa per magnitudine, il qual Danvbio si lascia per mezzo di <sup>13</sup>Austria e Albania e per tramontana Bauaria, Polonia, Ungheria, Valachia e Bosnia; versaua adunque il Danubio | over | Da<sup>14</sup>nōia nel mare di Ponto, il quale s'astendea insino vicino all'Austria e occupaua tutta la pianvra che oggi <sup>15</sup>discorre esso Danvbio, e'l segno dico ne mostrano l'ostriche e li nichi e bovoli e cappe e ossa di grā pesci, che an<sup>16</sup>cora in molti lochi si trouano nell'alte coste de' predetti mōti; ed era tale mare fatto per la ringorgatione dell'i <sup>17</sup>mi del Monte Adula, che s'astendeano a leuante e si congiugneano colli rami del Mōte Tauro, che s'astendono a po<sup>18</sup>nēte, e circa alla Bitinia versauā l'acque d'esso Mare di Poto nel Propontico, caddendo nel Mare Egeo cioè <sup>19</sup>Mar Mediter-rano, doue poi il lungo corso spiccò li rami del Mōte Adula dalli rami del Mōte Tauro; li Mare <sup>20</sup>di Poto s'abassò e scoperse la Val di Danubio colle prenominate provincie, e tutta l'Asia Minore di là dal monte Ta<sup>21</sup>vro per tramontana e la pianvra ch'è da Mōte Caucasso al mare di Ponto per ponete, e la pianura del Ta<sup>22</sup>nai dentro alli monti Rifei cioè a' piedi loro; Ecco che 'l mare di Ponto abbassò circa a braccia 1000 <sup>23</sup>nello scoprire di tanta pianura.

course of 1500 miles; its shortest line is about 1000 miles, and the same or about the same is that branch of the Adula mountains changed as to their name, as before mentioned. To the North are the Carpathians, closing in the breadth of the valley of the Danube, which, as I have said extends eastward, a length of about 1000 miles, and is sometimes 200 and in some places 300 miles wide; and in the midst flows the Danube, the principal river of Europe as to size. The said Danube runs through the middle of Austria and Albania and northwards through Bavaria, Poland, Hungary, Wallachia and Bosnia and then the Danube or Donau flows into the Black Sea, which formerly extended almost to Austria and occupied the plains through which the Danube now courses; and the evidence of this is in the oysters and cockle shells and scallops and bones of great fishes which are still to be found in many places on the sides of those mountains; and this sea was formed by the filling up of the spurs of the Adula mountains which then extended to the East joining the spurs of the Taurus which extend to the West. And near Bithynia the waters of this Black Sea poured into the Propontis [Marmora] falling into the Ægean Sea, that is the Mediterranean, where, after a long course, the spurs of the Adula mountains became separated from those of the Taurus. The Black Sea sank lower and laid bare the valley of the Danube with the above named countries, and the whole of Asia Minor beyond the Taurus range to the North, and the plains from mount Caucasus to the Black Sea to the West, and the plains of the Don this side—that is to say, at the foot of the Ural mountains. And thus the Black Sea must have sunk about 1000 braccia to uncover such vast plains.

1083.

WHY THE SEA MAKES A STRONGER CURRENT IN THE STRAITS OF SPAIN THAN ELSEWHERE.

A river of equal depth runs with greater speed in a narrow space than in a wide one, in proportion to the difference between the wider and the narrower one.

This proposition is clearly proved by reason confirmed by experiment. Supposing that through a channel one mile wide there flows one mile in length of water; where the river is five miles wide each of the 5 square miles will require  $\frac{1}{5}$  of itself to be equal to the square mile of water required in the sea, and where the river is 3 miles wide each of these square miles will require the third of its volume to make up the amount of the square mile of the narrow part; as is demonstrated in f g h at the mile marked n.

the original. And at B, *stretto di Spagna* (straits of Spain, i.e. Gibraltar). Compare No. 960.

WHY THE CURRENT OF GIBRALTAR IS ALWAYS GREATER TO THE WEST THAN TO THE EAST.

The reason is that if you put together the mouths of the rivers which discharge into the Mediterranean sea, you would find the sum of water to be larger than that which this sea pours through the straits into the ocean. You see Africa discharging its rivers that run northwards into this sea, and among them the Nile which runs through 3000 miles of Africa; there is also the Bagrada river and the Schelif and others. Likewise Europe pours into it the Don and the Danube, the Po, the Rhone, the Arno, and the Tiber, so that evidently these rivers, with an infinite number of others of less fame, make its great breadth and depth and current; and the sea is not wider than 18 miles at the most westerly point of land where it divides Europe from Africa.

## 1085.

The gulf of the Mediterranean, as an inland sea, received the principal waters of Africa, Asia and Europe that flowed towards it; and its waters came up to the foot of the mountains that surrounded it and made its shores. And the summits of the Apennines stood up out of this sea like islands, surrounded by salt water. Africa again, behind its Atlas mountains did not expose uncovered to the sky the surface of its vast plains about 3000 miles in length, and Memphis[6] was on the shores of this sea, and above the plains of Italy, where now birds fly in flocks, fish were wont to wander in large shoals.

## 1086.

The greatest ebb made anywhere by the Tunis. Mediterranean is above Tunis, being about two and a half braccia and at Venice it falls two braccia. In all the rest of the Mediterranean sea the fall is little or none.

The  
Tyrrhenic  
Sea.  
Alcuni nel Mare Tirreno . vsarano questo  
modo, cioè <sup>2</sup>appicauano vn ācora a l'una  
delle stremità dell'āteña, <sup>3</sup>e dall'altra vna ·  
corda che ī basso s'appiccava a vn ācora,  
<sup>4</sup>e nel pugniare attacavano detta · ācora ai  
remeggi dell'o<sup>5</sup>posito navilio, e per forza  
d'argano quello mādavano alla bāda <sup>6</sup>e  
gittavano sapon tenero e stoppa ipeciata  
īfocata sulla <sup>7</sup>prima bāda dou'era l'ācora  
attaccata, acciochè, per fugir detto <sup>8</sup>foco, i  
difenditori d'esso navilio avessino a fugire  
da l'op<sup>9</sup>posita bāda, e faciēdo così facievano  
avmēto · allo spugnia<sup>10</sup>tore, perchè la galera  
piv facilmente per lo cōtrapeso <sup>11</sup>andava  
alla bāda.

## 1089.

Some at the Tyrrhenic sea employ this  
method; that is to say they fastened an anchor  
to one end of the yard, and to the other a  
cord, of which the lower end was fastened to  
an anchor; and in battle they flung this anchor  
on to the oars of the opponent's boat and by  
the use of a capstan drew it to the side;  
and threw soft soap and tow, daubed with  
pitch and set ablaze, on to that side  
where the anchor hung; so that in order  
to escape that fire, the defenders of that ship  
had to fly to the opposite side; and in doing  
this they aided to the attack, because the  
galley was more easily drawn to the side  
by reason of the counterpoise.

## IV.

### THE LEVANT.

Leic. 31 a]

1090.

Truovāsi nelle riue del Mare Mediterano versare fiumi 300, <sup>2</sup>e porti 40 mila 200, e esso mare è di lunghezza miglia 3000; Molte volte s'è accozzato l'accrescimēto de'mari del riflusso suo e'l soffiare dell'i venti occidētali al diluuo del Nilo, ed alli fiumi che uersā dal mare di Pōto, ed auere alzato tanto li mari che sō <sup>5</sup>cō grādissimi diluvi discorsi per molti paesi, e questi diluui accadono nel tempo, che 'l sole <sup>6</sup>distrugie le neui delli alti mōti d'Etiopia che si leuano alla fredda regiō dell'aria, e si <sup>7</sup>milmente fa l'appressamēto del sole alli mōti della Sarmatia Asiatica e quella d'Europa, <sup>8</sup>in modo che l'accozzamēto di queste 3 dette cose sono, e sono state cagione di grādissimi diluui, cioè il riflusso del mare, e li uenti occidentali, e la distrutio delle nevi; è ogni cosa <sup>10</sup>ringorgata nella Siria, Samaria, la Giudea infra Sinai e il Libano, e 'l resto della Siria infra <sup>11</sup>il Libano e Mōte

On the shores of the Mediterranean 300 <sup>The Lavan-</sup> rivers flow, and 40, 200 ports. And this sea <sup>tine Sea</sup> is 3000 miles long. Many times has the increase of its waters, heaped up by their backward flow and the blowing of the West winds, caused the overflow of the Nile and of the rivers which flow out through the Black Sea, and have so much raised the seas that they have spread with vast floods over many countries. And these floods take place at the time when the sun melts the snows on the high mountains of Ethiopia that rise up into the cold regions of the air; and in the same way the approach of the sun acts on the mountains of Sarmatia in Asia and on those in Europe; so that the gathering together of these three things are, and always have been, the cause of tremendous floods: that is, the return flow of the sea with the West wind and the melting of the snows. So every river will overflow in Syria, in Samaria, in Judea between Sinai and the Lebanon, and in the rest of Syria between the Lebanon and the Taurus mountains, and in Cilicia, in the Armenian mountains, and in Pamphilia and in Lycia within the hills,

**1091.** 9. Leonardo seems here to mention Hercules half jestingly and only in order to suggest

and in Egypt as far as the Atlas mountains. The gulf of Persia which was formerly a vast lake of the Tigris and discharged into the Indian Sea, has now worn away the mountains which formed its banks and laid them even with the level of the Indian ocean. And if the Mediterranean had continued its flow through the gulf of Arabia, it would have done the same, that is to say, would have reduced the level of the Mediterranean to that of the Indian Sea.

## 1091.

For a long time the water of the Mediterranean flowed out through the Red Sea, which is 100 miles wide and 1500 long, and full of reefs; and it has worn away the sides of Mount Sinai, a fact which testifies, not to an inundation from the Indian sea beating on these coasts, but to a deluge of water which carried with it all the rivers which abound round the Mediterranean, and besides this there is the reflux of the sea; and then, a cutting being made to the West 3000 miles away from this place, Gibraltar was separated from Ceuta, which had been joined to it. And this passage was cut very low down, in the plains between Gibraltar and the ocean at the foot of the mountain, in the low part, aided by the hollowing out of some valleys made by certain rivers, which might have flowed here. Hercules came to open the sea to the westward and then the sea waters began to pour into the Western Ocean; and in consequence of this great fall, the Red Sea remained the higher; whence the water, abandoning its course here, ever after poured away through the Straits of Spain.

## 1092.

The surface of the Red Sea is on a level with the ocean.

to the reader an allusion to the legend of the pillars of Hercules.

<sup>2</sup>Può esser caduta vna mōtagnia e, serrato la bocca <sup>3</sup>del Mare Rosso, e proibito l'esito al Mediterrano, e co<sup>4</sup>sì rigorgato tal mare abbia per esito il trāsito <sup>5</sup>fra li gioghi Gadetani, perchè similmente abbiā <sup>6</sup>veduti alli nostri tēpi cadere v̄ monte di sette <sup>7</sup>miglia e serrare vna valle e farne lago, e così sō <sup>8</sup>fatti la maggior parte de' laghi da mōti come Lago di <sup>9</sup>Garda di Como e Lugano, e 'l lago Maggiore; <sup>10</sup>il Mediterrano poco s'abbassò per il taglio Gaditano ne<sup>11</sup>li cōfini della Siria e assai in esso taglio, perchè pri<sup>12</sup>ma che tal taglio si creasse, esso mare versaua per scirocco, <sup>13</sup>e poi s'ebbe a fare la calata, che corresse a tal Gaditano.

<sup>14</sup>In *a* cadea l'acqua <sup>15</sup>del Mediterrano nel oce<sup>16</sup>ano.

<sup>17</sup>Tutte le pianure che son <sup>18</sup>dalli mari · alli mōti, sono <sup>19</sup>già state coperte dall'acque salse; ¶

<sup>20</sup>Ogni valle è fatta dal suo fiu<sup>21</sup>me e tal propotione è da valle a val<sup>22</sup>le, quale è da fiume a fiume; ¶

<sup>23</sup>Il massimo fiume del nostro mōdo è <sup>24</sup>il Mediterrano fiume, ¶

<sup>25</sup>che si move dal principio <sup>26</sup>del Nilo all'Oceano occidē<sup>27</sup>tale, ¶

<sup>28</sup>e la sua suprema altezza <sup>29</sup>è nella Mavretania este<sup>30</sup>riore, e à di corso 10 mila <sup>31</sup>miglia, prima che si ripatrii <sup>32</sup>col suo Oceano, padre del<sup>33</sup>le acque,

<sup>34</sup>Cioè 3000 il Mediterrano, 3000 <sup>35</sup>il Nilo scoperto, e 3000 il Nilo <sup>36</sup>che corre a oriēte ecc.

A mountain may have fallen and closed the mouth of the Red Sea and prevented the outlet of the Mediterranean, and the Mediterranean Sea thus overfilled had for outlet the passage below the mountains of Gades; for, in our own times a similar thing has been seen[6]; a mountain fell seven miles across a valley and closed it up and made a lake. And thus most lakes have been made by mountains, as the lake of Garda, the lakes of Como and Lugano, and the Lago Maggiore. The Mediterranean fell but little on the confines of Syria, in consequence of the Gaditanian passage, but a great deal in this passage, because before this cutting was made the Mediterranean sea flowed to the South East, and then the fall had to be made by its run through the Straits of Gades.

At *a* the water of the Mediterranean fell into the ocean.

All the plains which lie between the sea and mountains were formerly covered with salt water.

Every valley has been made by its own river; and the proportion between valleys is the same as that between river and river.

The greatest river in our world is the Mediterranean river,

which moves from the sources of the Nile to the Western ocean.

And its greatest height is in Outer Mauritania and it has a course of ten thousand miles before it reunites with its ocean, the father of the waters.

That is 3000 miles for the Mediterranean, 3000 for the Nile, as far as discovered and 3000 for the Nile which flows to the East, &c.

Therefore we must conclude those moun-  
tains to be of the greatest height, above  
which the clouds falling in snow give rise  
to the Nile.

1094.

The Egyptians, the Ethiopians, and the Arabs,  
in crossing the Nile with camels, are accustomed  
to attach two bags on the sides of the camel's bo-  
dies that is skins in the form shown underneath.

In these four meshes of the net the camels  
for baggage place their feet.

1095.

The Tigris passes through Asia Minor  
and brings with it the water of three lakes,  
one after the other of various elevations;  
the first being Munace and the middle  
Pallas and the lowest Triton. And the Nile  
again springs from three very high lakes in  
Ethiopia, and runs northwards towards the  
sea of Egypt with a course of 4000 miles,  
and by the shortest and straightest line it is  
3000 miles. It is said that it issues from  
the Mountains of the Moon, and has various  
unknown sources. The said lakes are about  
4000 braccia above the surface of the sphere  
of water, that is 1 mile and  $\frac{1}{3}$ , giving to  
the Nile a fall of 1 braccia in every mile.

1096.

Very many times the Nile and other very  
large rivers have poured out their whole ele-  
ment of water and restored it to the sea.

shows four camels with riders swimming through  
a river.

1095. 5. *Incogniti principio*. The affluents of the  
lakes are probably here intended. Compare, as  
to the Nile, Nos. 970, 1063 and 1084.

Leic. 22a]

Navigat oceanu, sic cum tenet omnia Nilus,  
Conseritur bibula Memphis cymbo papyro.*

VOL. II.

## 1097.

Why does the inundation of the Nile occur in the summer, coming from torrid countries?

## 1098.

It is not denied that the Nile is constantly muddy in entering the Egyptian sea and that its turbidity is caused by soil that this river is continually bringing from the places it passes; which soil never returns in the sea which receives it, unless it throws it on its shores. You see the sandy desert beyond Mount Atlas where formerly it was covered with salt water.

## 1099.

The Assyrians and the people of Euboea <sup>Customs of Asiatic Nations</sup> accustom their horses to carry sacks which they can at pleasure fill with air, and which (1099. 1100). in case of need they carry instead of the girth of the saddle above and at the side, and they are well covered with plates of cuir bouilli, in order that they may not be perforated by flights of arrows. Thus they have not on their minds their security in flight, when the victory is uncertain; a horse thus equipped enables four or five men to cross over at need.

## SMALL BOATS.

The small boats used by the Assyrians were made of thin laths of willow plaited over rods also of willow, and bent into the form of a boat. They were daubed with fine mud soaked with oil or with turpentine, and reduced to a kind of mud which resisted the water and because pine would split; and always remained fresh; and they covered this sort of boats with the skins of oxen in safely crossing the river Sicuris of Spain, as is reported by Lucan[7].

*His ratibus transiecta manus festinat utrimque  
Succisam cavare nemus &c.*

Caesar (de bello civ. I, 54) has the same remark about the Britanni (confirmed by Pliny, hist. nat. IV, 15) which Leonardo here makes about the Assyrians.—This and the foregoing text are illustrated by slight sketches.

1101. Nello ottanto 9. It is scarcely likely that Leonardo should here mean 89 A.D. Dr. H. MÜLLER-STRÜBING writes to me as follows on this subject: "With reference to Rhodes Ross says (*Reise auf den Griechischen Inseln*, III 70 ff. 1840), that ancient history affords instances of severe earthquakes at Rhodes, among others one in the second year of the 138<sup>th</sup> Olympiad=270 B. C.; a remarkably violent one under Antoninus Pius (A. D. 138—161) and again under Constantine and later. But Leonardo expressly speaks of an earthquake "nel mar di Atalia presso a Rodi", which is singular. The town of Attalia, founded by Attalus, which is what he no doubt means, was in Pamphylia and more than 150 English miles East of Rhodes in a straight line. Leake and most other geographers identify it with the present town of Adalia. Attalia is rarely mentioned by the ancients, indeed only by Strabo and Pliny and no earthquake is spoken of. I think therefore you are justified in assuming that Leonardo means 1489?" In the elaborate catalogue of earthquakes in the East by Selale Dshelal eddin Sayouthy

The Spaniards, the Scythians and the Arabs, when they want to make a bridge in haste, fix hurdlework made of willows on bags of ox-hide, and so cross in safety.

## 1101.

In [fourteen hundred and] eighty nine there was an earthquake in the sea of Atalia near Rhodes, which opened the sea—that is its bottom—and into this opening such a torrent of water poured that for more than three hours the bottom of the sea was uncovered by reason of the water which was lost in it, and then it closed to the former level.

## 1102.

Rhodes has in it 5000 houses.

## 1103.

## SITE FOR [A TEMPLE OF] VENUS.

You must make steps on four sides, by which to mount to a meadow formed by nature at the top of a rock which may be hollowed out and supported in front by pilasters and open underneath in a large portico,

(an unpublished Arabic MS. in the possession of Prof. SCHEFER, (Membre de l'Institut, Paris) mention is made of a terrible earthquake in the year 867 of the Mohamedan Era corresponding to the year 1489, and it is there stated that a hundred persons were killed by it in the fortress of Kerak. There are three places of this name, Kerak on the sea of Tiberias, Kerak near Tahle on the Libanon, which I visited in the summer of 1876—but neither of these is the place alluded to. Possibly it may be the strongly fortified town of Kerak=Kir Moab, to the West of the Dead Sea. There is no notice about this in ALEXIS PERCY, *Mémoire sur les tremblements de terres ressentis dans la péninsule turco-hellenique et en Syrie* (*Mémoires couronnés et mémoires des savants étrangers*, Académie Royale de Belgique, Tome XXIII).

1103. See Pl. LXXXIII. Compare also p. 33 of this Vol. The standing male figure at the side is evidently suggested by Michael Angelo's David. On the same place a slight sketch of horses seems to have been drawn first; there is no reason for

Rhodes  
1101. 1102.

l'acqua in diuersi vasi di graniti porfidi e serpētini, dentro a emicicli, e spa<sup>s</sup>da l'acqua in se medesimi, e dintorno a tal portico inverso tramōtana sia un lago . con vna isoletta <sup>6</sup>in mezzo, nella quale sia vn folto e ōbroso bosco; l'acque in testa ai pilastri siē uersate in uasi ai piē <sup>7</sup>de' sua inbasamēti, de' quali si spargano piccoli riuetti;

<sup>8</sup>Partendosi dalla <sup>9</sup>riviera di Cilitia inverso meridio si scopre <sup>10</sup>la bellezza dell'isola di Cipri.

*Sito di Venere.* By this heading Leonardo appears to mean Cyprus, which was always considered by

in which the water may fall into various vases of granite, porphyry and serpentine, within semi-circular recesses; and the water may overflow from these. And round this portico towards the North there should be a lake with a little island in the midst of which should be a thick and shady wood; the waters at the top of the pillars should pour into vases at their base, from whence they should flow in little channels.

Starting from the shore of Cilicia towards the South you discover the beauties of the island of Cyprus.

**1104.**

From the shore of the Southern coast of The Caspian Sea <sup>1105. 1106.</sup> Cilicia may be seen to the South the beautiful island of Cyprus, which was the realm of the goddess Venus, and many navigators being attracted by her beauty, had their ships and rigging broken amidst the reefs, surrounded by the whirling waters. Here the beauty of delightful hills tempts wandering mariners to refresh themselves amidst their flowery verdure, where the winds are tempered and fill the island and the surrounding seas with fragrant odours. Ah! how many a ship has here been sunk. Ah! how many a vessel broken on these rocks. Here might be seen barks without number, some wrecked and half covered by the sand; others showing the poop and another the prow, here a keel and there the ribs; and it seems like a day of judgment when there should be a resurrection of dead ships, so great is the number of them covering all the Northern shore; and while the North gale makes various and fearful noises there.

**1105.**

Write to Bartolomeo the Turk as to the flow and ebb of the Black sea, and whether he is aware if there be such a flow and ebb in the Hyrcanean or Caspian sea.

the ancients to be the home and birth place of Aphrodite (*Κύπρις* in Homer).

**1105.** The handwriting of this note points to a late date.

F. 50a]

## PERCHÈ L'ACQUA È IN SU MÖTI.

<sup>4</sup>Dallo stretto di Gibilterra al Tanai è miglia 3500, ed è alto vn miglio e  $\frac{1}{6}$ , dando vn braccio <sup>6</sup>per miglio di cala a ogni acqua che si move me<sup>7</sup>diocremête, e il Mar Caspio è assai più al<sup>8</sup>to; e nessū de' mōti d'Europa si leua vn <sup>9</sup>miglio sopra la pelle dell'i nostri mari; adū<sup>10</sup>que si potrebbe dire, che l'acqua ch'è nelle <sup>11</sup>cime de' nostri mōti, venisse dall'altezza d'essi <sup>12</sup>mari e de' fiumi che vi versano, che sō più alti.

## 1106.

## WHY WATER IS FOUND AT THE TOP OF MOUNTAINS.

From the straits of Gibraltar to the Don is 3500 miles, that is one mile and  $\frac{1}{6}$ , giving a fall of one braccio in a mile to any water that moves gently. The Caspian sea is a great deal higher; and none of the mountains of Europe rise a mile above the surface of our seas; therefore it might be said that the water which is on the summits of our mountains might come from the height of those seas, and of the rivers which flow into them, and which are still higher.

F. 68a]

<sup>The sea of Azov.</sup> Qui seguita che 'l Mare della Tana, che <sup>2</sup>confina col Tanai, è la più alta parte <sup>3</sup>che abbia il Mare Mediterraneo, il quale è remoto dallo Stretto di Gibilterra <sup>5</sup>3500 miglia, come mostra la carta da <sup>6</sup>navicare; e à di calo 3500 braccia, cioè uno <sup>7</sup>miglio e  $\frac{1}{6}$ ; e è più alto adunque que<sup>8</sup>sto mare che mōte che abbia l'occidēte.

## 1107.

Hence it follows that the sea of Azov is the highest part of the Mediterranean sea, being at a distance of 3500 miles from the Straits of Gibraltar, as is shown by the map for navigation; and it has 3500 braccia of descent, that is, one mile and  $\frac{1}{6}$ ; therefore it is higher than any mountains which exist in the West.

Leic. 31δ]

<sup>The Dardanelles.</sup> In nello stretto di Tratia il Mare di Pōto senpre versa nel Mare Egeo, e mai l'Egeo in lui, e questo diriua, che 'l Mare Caspio, che cō 400 miglia sta per leuāte colli <sup>3</sup>fiumi che i lui versano, senpre versa per cave sotterrane in esso Mar di Pōto, e 'l simile fa il Tanai <sup>4</sup>col Danvbio, in modo che senpre esse acque Pōtiche son piv alte che quelle dello Egeo, <sup>5</sup>e per ciò le piv alte senpre discendono nelle basse, e nō mai le basse nelle alte.

## 1108.

In the Bosphorus the Black Sea flows always into the Egean sea, and the Egean sea never flows into it. And this is because the Caspian, which is 400 miles to the East, with the rivers which pour into it, always flows through subterranean caves into this sea of Pontus; and the Don does the same as well as the Danube, so that the waters of Pontus are always higher than those of the Egean; for the higher always fall towards the lower, and never the lower towards the higher.

1109. See Pl. CX No. 1. In 1453 by order of Sultan Mohamed II. the Golden Horn was crossed by a pontoon bridge laid on barrels (see Joh. Dukas' History of the Byzantine Empire XXXVIII p. 279). —The biographers of Michelangelo, Vasari as well as Condivi, relate that at the time when Michelangelo suddenly left Rome, in 1506, he entertained some intention of going to Constantinople, there to serve the Sultan, who sought to engage him, by means of certain Franciscan Monks, for the purpose of constructing a bridge to connect Constantinople with Pera. See VASARI, *Vite* (ed. Sansoni VII, 168); Michelangelo, veduto questa furia del papa, dubitando di lui, ebbe, secondo che si dice, voglia di andarsene in Costantinopoli a servire il Turco, per mezzo di certi frati

di San Francesco, che desiderava averlo per fare un ponte  
che passassi da Costantinopoli a Pera. And CONDIVI,  
*Vita di M. Buonaroti chap. 30:* Michelangelo allora  
vedendosi condotto a questo, temendo dell'ira del papa,  
pensò d'andarsene in Levante; massimamente essendo  
stato dal Turco ricercato con grandissime promesse per  
mezzo di certi frati di San Francesco, per volersene servire  
in fare un ponte da Costantinopoli a Pera ed in altri  
affari. Leonardo's plan for this bridge was made  
in 1502. We may therefore conclude that at about  
that time the Sultan Bajazet II. had either announced  
a competition in this matter, or that through his  
agents Leonardo had first been called upon to carry  
out the scheme.

dia doue per sette · rami · in quello si sommerge.

### *Naval Warfare.—Mechanical Appliances.—Music.*

Such theoretical questions, as have been laid before the reader in Sections XVI and XVII, though they were the chief subjects of Leonardo's studies of the sea, did not exclusively claim his attention. A few passages have been collected at the beginning of this section, which prove that he had turned his mind to the practical problems of navigation, and more especially of naval warfare. What we know for certain of his life gives us no data, it is true, as to when or where these matters came under his consideration; but the fact remains certain both from these notes in his manuscripts, and from the well known letter to Ludovico il Moro (No. 1340), in which he expressly states that he is as capable as any man, in this very department.

The numerous notes as to the laws and rationale of the flight of birds, are scattered through several note-books. An account of these is given in the Bibliography of the manuscripts at the end of this work. It seems probable that the idea which led him to these investigations was his desire to construct a flying or aerial machine for man. At the same time it must be admitted that the notes on the two subjects are quite unconnected in the manuscripts, and that those on the flight of birds are by far the most numerous and extensive. The two most important passages that treat of the construction of a flying machine are those already published as Tav. XVI, No. 1 and Tav. XVIII in the "Saggio delle opere di Leonardo da Vinci" (Milan 1872). The passages—Nos. 1120—1125—here printed for the first time and hitherto unknown—refer to the same subject and, with the exception of one already published in the Saggio—No. 1126—they are, so far as I know, the only notes, among the numerous observations on the flight of birds, in which the phenomena are incidentally and expressly connected with the idea of a flying machine.

. The notes on machines of war, the construction of fortifications, and similar matters which fall within the department of the Engineer, have not been included in this work, for the reasons given on page 26 of this Vol. An exception has been made in favour of the passages Nos. 1127 and 1128, because they have a more general interest, as bearing on

*the important question: whence the Master derived his knowledge of these matters. Though it would be rash to assert that Leonardo was the first to introduce the science of mining into Italy, it may be confidently said that he is one of the earliest writers who can be proved to have known and understood it; while, on the other hand, it is almost beyond doubt that in the East at that time, the whole science of besieging towns and mining in particular, was far more advanced than in Europe. This gives a peculiar value to the expressions used in No. 1127.*

*I have been unable to find in the manuscripts any passage whatever which throws any light on Leonardo's great reputation as a musician. Nothing therein illustrates VASARI'S well-known statement: Avvenne che morto Giovan Galeazzo duca di Milano, e creato Lodovico Sforza nel grado medesimo anno 1494, fu condotto a Milano con gran riputazione Lionardo al duca, il quale molto si dilettava del suono della lira, perchè sonasse; e Lionardo portò quello strumento ch' egli aveva di sua mano fabbricato d'argento gran parte, in forma d'un teschio di cavallo, cosa bizzarra e nuova, acciocchè l'armonia fosse con maggior tuba e più sonora di voce; laonde superò tutti i musici che quivi erano concorsi a sonare.*

*The only notes on musical matters are those given as Nos. 1129 and 1130, which explain certain arrangements in instruments.*

DEL MOTO DEL MOBILE,—<sup>2</sup> DEL COGNOSCERE  
QUÂTO <sup>3</sup> IL NAVILIO SI MOVE PER ORA.

<sup>4</sup> Anno li nostri antichi vsato diuersi ingiegni per vedere che viaggio faccia v navilio per ci<sup>6</sup>ascuna ora, infra li quali Vitruvio ne po<sup>7</sup>ne uno nella sua opera d'Architettura, il qua<sup>8</sup>le modo è fallace insieme cogli altri; e que<sup>9</sup>sto è vna rota da mulino tocca dall'onde <sup>10</sup>marine nelle sue stremità, e mediante le <sup>11</sup>intere sue revolutioni si descrive vna linia <sup>12</sup>retta che rappresenta la linia circuferē<sup>13</sup>tiale di tal rota ridotta in rettitudine; <sup>14</sup>Ma questa tale inventione non è valida, <sup>15</sup>se nō nelle superficie piane e immobili de' <sup>16</sup>laghi; Ma se l'acqua si move insieme col <sup>17</sup>navilio con equal moto, allora tal rota re<sup>18</sup>sta immobile, e se l'acqua è di moto più o mē <sup>19</sup>velocie che 'l moto del nauilio, ancora tal ro<sup>20</sup>ta non à moto equale a quel del navilio, in <sup>21</sup>modo che tale inventione è di poca valitudine; <sup>22</sup>Ecco vn altro modo fatto colla speriētia d'uno <sup>23</sup>spatio noto da una isola a vn altra, e questo si <sup>24</sup>fa con un asse o lieua percossa dal uēto, che la percuote o più o <sup>25</sup>men velocie, e questo è in Battista Alberti;

ON MOVEMENTS;—TO KNOW HOW MUCH A  
SHIP ADVANCES IN AN HOUR.

The ancients used various devices to ascertain the distance gone by a ship each hour, among which Vitruvius [6] gives one in his work on Architecture which is just as fallacious as all the others; and this is a mill wheel which touches the waves of the sea at one end and in each complete revolution describes a straight line which represents the circumference of the wheel extended to a straightness. But this invention is of no worth excepting on the smooth and motionless surface of lakes. But if the water moves together with the ship at an equal rate, then the wheel remains motionless; and if the motion of the water is more or less rapid than that of the ship, then neither has the wheel the same motion as the ship so that this invention is of but little use. There is another method tried by experiment with a known distance between one island and another; and this is done by a board or under the pressure of wind which strikes on it with more or less swiftness. This is in Battista Alberti [25].

25. LEON BATTISTA ALBERTI, *De Architectura lib. V.*, c. 12 treats 'de le navi e parti loro', but there is no vol. II.

reference to the machine, mentioned by Leonardo. Alberti says here: *Noi abbiamo trattato lungamente in altro luogo de' modi de le navi, ma in questo luogo ne abbiamo detto quel tanto che si bisogna.* To this the following note is added in the most recent Italian edition: *Questo libro è tuttora inedito e porta il titolo, secondo Gesnero di 'Liber navis'.*

<sup>26</sup> Il modo di Battista <sup>27</sup> Alberti è fat<sup>28</sup>to sopra la speri<sup>29</sup>entia d'uno spa<sup>30</sup>tio noto da vn<sup>31</sup>a isola a un'altra; <sup>32</sup> Ma tale inventi<sup>33</sup>one nō riesce, <sup>34</sup> se nō a vn navilio simile a quel <sup>36</sup>dove è fatto tale <sup>37</sup>speci<sup>38</sup>etia, ma <sup>39</sup>bisognia che sia <sup>39</sup>col medesimo <sup>40</sup>carico, e me<sup>41</sup>desima vela, <sup>42</sup>e medesima situ<sup>43</sup>atio di vela, e <sup>44</sup>medesime grā<sup>45</sup>dezze d'onde; ma <sup>46</sup>il mio modo ser<sup>47</sup>ve a ogni navi<sup>48</sup>lio, si di remi co<sup>49</sup>me vela, e sia pi<sup>50</sup>cocolo o grāde, <sup>51</sup>o lūgo e alto, <sup>52</sup>o basso, sépre serve.

Leic. 228]

Come con otricoli l'esercito debbe passare i fiumi a noto; . . . Del modo del notare de' pesci; del modo <sup>3</sup>del lor saltare fori delle acque, come far si uede a delfini, che par cosa marauigliosa for<sup>4</sup>mare salto sopra la cosa che non aspetta, anzi si fugge; Del notare delli animali di lū<sup>5</sup>ga figura, come anguille e simili; Del modo del notar contro alle coréti e grā<sup>6</sup>cadute de' fiumi; Del modo come notino li pesci di retōda figura; Come li animali <sup>7</sup>che non ànno lunga fessa non sā notare; Come tutti li altri animali naturalmente sā<sup>8</sup>no notare, auendo li piedi colle dita, saluo che l'omo; In che modo l'omo debbe inpara<sup>9</sup>re a notare; Del modo del riposarsi sopra delle acque; Come l'omo si debbe difen<sup>10</sup>dere dalle revertigini over retrosi delle acque che lo tirano in fondo; Come l'omo ti<sup>11</sup>rato in fondo abbia a cercare del moto riflesso, che lo gitti fori della profondità; Co<sup>12</sup>me si debe passeggiare colle braccia; come si debbe notare riverascio; Come, e come non <sup>13</sup>si può star sotto l'acque, se non quando si può ritenere lo alitare; Come molti stie<sup>14</sup>no con istrumēto alquāto sotto l'acque; Come e perchè io non scrivo il mio modo di <sup>15</sup>star sotto l'acqua, quāto io posso star sanza mangiare, e questo nō publico o diuolgo per le ma<sup>16</sup>le nature dell'i omuni, li quali vserebbero li assasinamēti ne' fondi de' mari

Battista Alberti's method which is made by experiment on a known distance between one island and another. But such an invention does not succeed excepting on a ship like the one on which the experiment was made, and it must be of the same burden and have the same sails, and the sails in the same places, and the size of the waves must be the same. But my method will serve for any ship, whether with oars or sails; and whether it be small or large, broad or long, or high or low, it always serves [52].

### III4.

How an army ought to cross rivers by swimming with air-bags . . . How fishes swim[2]; of the way in which they jump out of the water, as may be seen with dolphins; and it seems a wonderful thing to make a leap from a thing which does not resist but slips away. Of the swimming of animals of a long form, such as eels and the like. Of the mode of swimming against currents and in the rapid falls of rivers. Of the mode of swimming of fishes of a round form. How it is that animals which have not long hind quartres cannot swim. How it is that all other animals which have feet with toes, know by nature how to swim, excepting man. In what way man ought to learn to swim. Of the way in which man may rest on the water. How man may protect himself against whirlpools or eddies in the water, which drag him down. How a man dragged to the bottom must seek the reflux which will throw him up from the depths. How he ought to move his arms. How to swim on his back. How he can and how he cannot stay under water unless he can hold his breath[13]. How by means of a certain machine many people may stay some time under water. How and why I do not describe my method of remaining under water, or how long I can stay without eating; and I do not publish nor divulge these by reason of the evil nature of men who would use them as

Mz. 9δ (13)

## PER FUGIRE IL PERICOLO DELLA RUINA.

<sup>2</sup>Può accadere la ruina di tali strumenti per <sup>2</sup>modi, de' quali <sup>3</sup>il primo è del ronpersi lo strumento, secondario fia quā<sup>4</sup>do lo strumento si uoltasse per taglio o vicino a esso taglio, <sup>5</sup>perchè senpre debbe discendere per grande obbliquità e quasi <sup>6</sup>per la linia dell'equalità; In quanto al primo, <sup>7</sup>del ronpersi lo strumento, si riparerà col farlo di somma for<sup>8</sup>tezza, per qualunque linia esso si potesse voltare, e assai distante l'un centro dall'altro, cioè nel<sup>9</sup>lo strumento di 30 braccia di lunghezza essi centri sieno distanti 4 braccia l'un dall'altro.

1124.

## TO ESCAPE THE PERIL OF DESTRUCTION.

Destruction to such a machine may occur in two ways; of which the first is the breaking of the machine. The second would be when the machine should turn on its edge or nearly on its edge, because it ought always to descend in a highly oblique direction, and almost exactly balanced on its centre. As regards the first—the breaking of the machine—that may be prevented by making it as strong as possible; and in whichever direction it may tend to turn over, one centre must be very far from the other; that is, in a machine 30 braccia long the centres must be 4 braccia one from the other.

Mz. 13α]

Baghe dove l'omo in 6 braccia <sup>2</sup>d'altezza cadendo nō si faccia male, <sup>3</sup>cadendo così in acqua come <sup>4</sup>in terra; e queste baghe leggate a vso di paternostri s'avvolgino altrui addosso.

1125.

Bags by which a man falling from a height of 6 braccia may avoid hurting himself, by a fall whether into water or on the ground; and these bags, strung together like a rosary, are to be fixed on one's back.

C. A. 372b; 1158b]

Tāta forza si fa colla cosa īcōtro all'aria, quāto l'aria alla cosa; <sup>2</sup>Vedi l'alie percosse cōtro all'aria fanno sostenere la pesante aquila sulla suprema sottile aria <sup>3</sup>vicina all'elemēto del fuoco; Ancora vedi la mossa aria sopr'al mare ripercossa <sup>4</sup>nelle gōfiate vele far correr la carica e pesāte nave; sichè per queste demostrative e assegnate ragioni potrai conoscere l'uomo colle sua cōgiegnate e grādi ale, <sup>6</sup>facciēdo forza cōtro alla resistēte aria, vincēdo poterla soggiogare a le<sup>7</sup>varsi sopra di lei.

1126.

An object offers as much resistance to the air as the air does to the object. You may see that the beating of its wings against the air supports a heavy eagle in the highest and rarest atmosphere, close to the sphere of elemental fire. Again you may see the air in motion over the sea, fill the swelling sails and drive heavily laden ships. From these instances, and the reasons given, a man with wings large enough and duly connected might learn to overcome the resistance of the air, and by conquering it, succeed in subjugating it and rising above it.

**1128.** Venturi has given another short text about the Greek fire in a French translation (*Essai § XIV*). He adds that the original text is to be found in MS. B. 30 (?). Libri speaks of it in a note as follows (*Histoire des sciences mathématiques en Italie Vol. II* p. 129): *La composition du feu grégeois est une des choses qui ont été les plus cherchées et qui sont encore les plus douteuses. On dit qu'il fut inventé au septième siècle de l'ère chrétienne par l'architecte Callinique (Constantini Porphyrogenetae opera, Lugd. Batav. 1617, — in-8<sup>vo</sup>; p. 172, de admin. imper. exp. 48), et il se trouve souvent mentionné par les Historiens Byzantins. Tantôt on le lançait avec des machines, comme on lancerait une bouche, tantôt on le soufflait avec de longs tubes, comme on soufflerait un gaz ou un liquide enflammé (Annae Comnenae Alexias, p. 335, lib. XI.—Adiani et Leonis, imperatoris tactica, Lugd.-Bat. 1613, in-4, part. 2<sup>a</sup>, p. 322, Leonis tact. cap. 19.—Joinville, histoire du Saint Louis collect. Petitot tom. II, p. 235). Les écrivains contemporains disent que l'eau ne pouvait pas éteindre ce feu, mais qu'avec du vinaigre et du sable on y parvenait.*

VOL. II.

fire is so ready to burn that it clings to the timbers even under water. And add to this composition liquid varnish, and bituminous oil, and turpentine and strong vinegar, and mix all together and dry it in the sun, or in an oven when the bread is taken out; and then stick it round hempen or other tow, moulding it into a round form, and studding it all over with very sharp nails. You must leave in this ball an opening to serve as a fusee, and cover it with rosin and sulphur.

Again, this fire, stuck at the top of a long plank which has one braccio length of the end pointed with iron that it may not be burnt by the said fire, is good for avoiding and keeping off the ships, so as not to be overwhelmed by their onset.

Again throw vessels of glass full of pitch on to the enemy's ships when the men in them are intent on the battle; and then by throwing similar burning balls upon them you have it in your power to burn all their ships.

A drum with cogs working by wheels with springs [2].

Of Music  
(1129. 1130).

*Suivant quelques historiens le feu grégeois était composé de soufre et de résine. Marcus Græcius (Liber ignium, Paris, 1804, in-4<sup>o</sup>) donne plusieurs manières de le faire qui ne sont pas très intelligibles, mais parmi lesquelles on trouve la composition de la poudre à canon. Léonard de Vinci (MSS. de Léonard de Vinci, vol. B. f. 30) dit qu'on le faisait avec du charbon de saule, du salpêtre, de l'eau de vie, de la résine, du soufre, de la poix et du camphre. Mais il est probable que nous ne savons pas qu'elle était sa composition, surtout à cause du secret qu'en faisaient les Grecs. En effet, l'empereur Constantin Porphyrogénète recommande à son fils de ne jamais en donner aux Barbares, et de leur répondre, s'ils en demandaient, qu'il avait été apporté du ciel par un ange et que le secret en avait été confié aux Chrétiens (Constantini Porphyrogenetae opera, p. 26—27, de admin. imper., cap. 12).*

**1129.** This chapter consists of explanations of the sketches shown on Pl. CXXI. Lines 1 and 2 of the text are to be seen at the top at the left hand side of the first sketch of a drum. Lines 3—5 refer to the

NN.

<sup>3</sup>Tanburo quadro, del quale <sup>4</sup>si tira e allenta la sua carsta colla lieua *a b*;

<sup>6</sup>Tanburo a cōsonāza;

<sup>7</sup>Vna tabella a cōsonāza, cioè 3 tabelle insieme;

<sup>9</sup>Siccome vn medesimo <sup>10</sup>tamburo fa voci <sup>11</sup>graui e acute, <sup>12</sup>secondo le carte più o mē <sup>13</sup>tirate, così queste carte, <sup>14</sup>variamente tirate sopra <sup>15</sup>vn medesimo corpo di tā-<sup>16</sup>buro, farā uarie uoci;

<sup>17</sup>Tasti stretti e serrano; bicchi di grā distatīe infra loro, <sup>18</sup>e sono al proposito della tronba prossima di sopra;

<sup>19</sup>*a* entri in loco dell'ordinarie posite <sup>20</sup>che ànno i partici ne' lor busi de' zufoli.

A square drum of which the parchment may be drawn tight or slackened by the lever *a b*[5].

A drum for harmony[6].

[7]A clapper for harmony; that is, three clappers together.

[9]Just as one and the same drum makes a deep or acute sound according as the parchments are more or less tightened, so these parchments variously tightened on one and the same drum will make various sounds[16].

Keys narrow and close together; (bicchi) far apart; these will be right for the trumpet shown above.

*a* must enter in the place of the ordinary keys which have the . . . . in the openings of a flute.

Br. M. 136a]

Tanpani sona<sup>2</sup>ti come il monacordo <sup>4</sup>o voi dolze<sup>5</sup>mele;

<sup>6</sup>Qui si fa una rota di canne a vso <sup>7</sup>di tabelle con vn circulo mvsicale det<sup>8</sup>to canone, che si canta a quattro e <sup>9</sup>ciascū cantore canta tutta la rota, e però <sup>10</sup>fo io qui vna rota cō 4 denti che ogni <sup>11</sup>dente per se fa l'ofitio d'un cantore.

Tymbals to be played like the monochord, or the soft flute.

[6]Here there is to be a cylinder of cane after the manner of clappers with a musical round called a Canon, which is sung in four parts; each singer singing the whole round.

Therefore I here make a wheel with 4 teeth so that each tooth takes by itself the part of a singer.

sketch immediately below this. Line 6 is written as the side of the seventh sketch, and lines 7 and 8 at the side of the eighth. Lines 9—16 are at the bottom in the middle. The remainder of the text is at the side of the drawing at the bottom.

<sup>1130.</sup> In the original there are some more sketches, to which the text, from line 6, refers. They are studies for a contrivance exactly like the cylinder in our musical boxes.

## XIX.

### *Philosophical Maxims. Morals. Polemics and Speculations.*

Vasari indulges in severe strictures on Leonardo's religious views. He speaks, among other things, of his "capricci nel filosofar delle cose naturali" and says on this point: "Per il che fece nell'animo un concetto si eretico che e' non si accostava a qualsi voglia religione, stimando per avventura assai più lo esser filosofo che cristiano" (see the first edition of 'Le Vite'). But this accusation on the part of a writer in the days of the Inquisition is not a very serious one—and the less so, since, throughout the manuscripts, we find nothing to support it.

Under the heading of "Philosophical Maxims" I have collected all the passages which can give us a clear comprehension of Leonardo's ideas of the world at large. It is scarcely necessary to observe that there is absolutely nothing in them to lead to the inference that he was an atheist. His views of nature and its laws are no doubt very unlike those of his contemporaries, and have a much closer affinity to those which find general acceptance at the present day. On the other hand, it is obvious from Leonardo's will (see No. 1566) that, in the year before his death, he had professed to adhere to the fundamental doctrines of the Roman Catholic faith, and this evidently from his own personal desire and impulse.

The incredible and demonstrably fictitious legend of Leonardo's death in the arms of Francis the First, is given, with others, by Vasari and further embellished by this odious comment: "Mostrava tuttavia quanto avea offeso Dio e gli uomini del mondo, non avendo operato nell'arte come si conveniva." This last accusation, it may be remarked, is above all evidence of the superficial character of the information which Vasari was in a position to give about Leonardo. It seems to imply that Leonardo was disdainful of diligent labour. With regard to the second, referring to Leonardo's morality and dealings with his fellow men, Vasari himself nullifies it by asserting the very contrary in several passages. A further refutation may be found in the following sentence from

*the letter in which Melzi, the young Milanese nobleman, announces the Master's death to Leonardo's brothers: Credo siate certificati della morte di Maestro Leonardo fratello vostro, e mio quanto optimo padre, per la cui morte sarebbe impossibile che io potesse esprimere il dolore che io ho preso; e in mentre che queste mia membra si sosterranno insieme, io possederò una perpetua infelicità, e meritamente perchè sviscerato et ardentissimo amore mi portava giornalmente. È dolto ad ognuno la perdita di tal uomo, quale non è più in podestà della natura, ecc.*

*It is true that, in April 1476, we find the names of Leonardo and Verrocchio entered in the "Libro degli Uffiziali di notte e de' Monasteri" as breaking the laws; but we immediately after find the note "Absoluti cum condizione ut retamburentur" (Tamburini was the name given to the warrant cases of the night police). The acquittal therefore did not exclude the possibility of a repetition of the charge. It was in fact repeated, two months later, and on this occasion the Master and his pupil were again fully acquitted. Verrocchio was at this time forty and Leonardo four-and-twenty. The documents referring to this affair are in the State Archives of Florence; they have been withheld from publication, but it seemed to me desirable to give the reader this brief account of the leading facts of the story, as the vague hints of it, which have recently been made public, may have given to the incident an aspect which it had not in reality, and which it does not deserve.*

*The passages here classed under the head "Morals" reveal Leonardo to us as a man whose life and conduct were unfailingly governed by lofty principles and aims. He could scarcely have recorded his stern reprobation and unmeasured contempt for men who do nothing useful and strive only for riches, if his own life and ambitions had been such as they have so often been misrepresented.*

*At a period like that, when superstition still exercised unlimited dominion over the minds not merely of the illiterate crowd, but of the cultivated and learned classes, it was very natural that Leonardo's views as to Alchemy, Ghosts, Magicians, and the like should be met with stern reprobation whenever and wherever he may have expressed them; this accounts for the argumentative tone of all his utterances on such subjects which I have collected in Subdivision III of this section. To these I have added some passages which throw light on Leonardo's personal views on the Universe. They are, without exception, characterised by a broad spirit of naturalism of which the principles are more strictly applied in his essays on Astronomy, and still more on Physical Geography.*

*To avoid repetition, only such notes on Philosophy, Morals and Polemics, have been included in this section as occur as independent texts in the original MSS. Several moral reflections have already been given in Vol. I, in section "Allegorical representations, Mottoes and Emblems". Others will be found in the following section. Nos. 9 to 12, Vol. I, are also passages of an argumentative character. It did not seem requisite to repeat here these and similar passages, since their direct connection with the context is far closer in places where they have appeared already, than it would be here.*

I.

PHILOSOPHICAL MAXIMS.

S. K. M. III. 64<sup>b</sup>]

II32.

Io t'ubidisco, Signore, prima per l'amore che ragionevolmente portare <sup>3</sup>ti debo, secōdariamente chè tu sai <sup>4</sup>abbreviare o prolungare le uite <sup>5</sup>sali omini.

I obey Thee Lord, first for the love I Prayers to God ought, in all reason to bear Thee; secondly (1132. 1133), for that Thou canst shorten or prolong the lives of men.

W. An. IV. 172<sup>a</sup>]

II33.

¶ORATIO.

<sup>2</sup>Tu o Iddio ci vendi <sup>3</sup>tutti li beni per prez<sup>4</sup>zo di fatica. ¶

Thou, O God, dost sell us all good things at the price of labour.

A. 24<sup>a</sup>]

II34.

O mirabile givstitia di te, primo motore, tu non ài voluto mācare a nessuna potētia l'ordine e qualità de' sua necies- sari effetti.

O admirable impartiality of Thine, Thou The powers of Nature first Mover; Thou hast not permitted that (1134—1139). any force should fail of the order or quality of its necessary results.

S. K. M. III. 49<sup>a</sup>]

II35.

La neciessità è maestra <sup>2</sup>e tutrice della natura;

Necessity is the mistress and guide of nature.

<sup>3</sup>La neciessità è tema e inventrice della natura <sup>5</sup>e freno e regola eterna.

Necessity is the theme and the inventress, the eternal curb and law of nature.

1132. 3. sechondaria. 4. abrieviere.

1133. 2. "tu" | o idio [che] ci vende. 3. per pre. 4. faticha.

1134. 1. mācare a nessuna [creata cosa]. 2. "equalita" de sua.

1135. 1. he maesstra. 2. ettutrice. 3. ettema. 5. effrno.

Tr. 75]

Molte volte una medesima cosa · è tirata da 2 violëtie, <sup>2</sup>cioè · necessità · e potentia ·; l'acqua piove, la terra l'assorbisce, <sup>3</sup>per necessità d'omore ·, e 'l sole la sveglie nō per necessità, ma per potëtia.

## 1136.

In many cases one and the same thing is attracted by two strong forces, namely Necessity and Potency. Water falls in rain; the earth absorbs it from the necessity for moisture; and the sun evaporates it, not from necessity, but by its power.

S. K. M. 11.2 43<sup>a</sup>]

La gravità, la forza · e'l moto · accidentale · insieme col<sup>2</sup>la percussione · son · le quattro · accidentali · potentie, <sup>3</sup>colle · qualittute · l'evidenti · opere de' mortali <sup>4</sup>anno · loro · essere · e loro morte.

## 1137.

Weight, force and casual impulse, together with resistance, are the four external powers in which all the visible actions of mortals have their being and their end.

Tr. 70]

¶Il corpo nostro è sottoposto al cielo,  
e lo cielo è sottoposto allo spirito.¶

Our body is dependant on heaven and heaven on the Spirit.

H.3 93<sup>a</sup>]

Il moto è causa d'ogni vita.

## 1138.

The motive power is the cause of all life.

W. XXIX]

E tu uomo, che consideri in questa Psychology <sup>2</sup>mia fatica l'opere mirabili della <sup>3</sup>natura, <sub>(1140—1147)</sub> se giudicherai essere cosa <sup>4</sup>nefanda il distruggerla, or pësa <sup>5</sup>essere cosa nefandissima il torre la <sup>6</sup>vita all' omo, del quale, se questa <sup>7</sup>sua cōpositione ti pare di marruiglio<sup>8</sup>so artifitio, pensa questa essere <sup>9</sup>nulla rispetto all' anima che in <sup>10</sup>tale architettura abita, e vera<sup>11</sup>mente, quale · essa si sia, ella è <sup>12</sup>cosa diuina, sicchè lascia <sup>13</sup>la abitare nella sua opera a suo be<sup>14</sup>neplacito, e nō volere che la tua <sup>15</sup>ira o malignità distrugga <sup>16</sup>una tāta vita, chè ve<sup>17</sup>ramete, chi non la <sup>18</sup>stima, non la <sup>19</sup>merita.

## 1139.

And you, O Man, who will discern in this work of mine the wonderful works of Nature, if you think it would be a criminal thing to destroy it, reflect how much more criminal it is to take the life of a man; and if this, his external form, appears to thee marvellously constructed, remember that it is nothing as compared with the soul that dwells in that structure; for that indeed, be it what it may, is a thing divine. Leave it then to dwell in His work at His good will and pleasure, and let not your rage or malice destroy a life—for indeed, he who does not value it, does not himself deserve it[19].

1136. 1. volte va medesima chosa ettrata. 2. losorbisse. 3. sole lassuale.

1137. 1. chol. 3. cholli . . tucte. 4. elloro.

1138. 1. essottoposto. 2. ello . . essottoposto.

1139. R. chausa.

1140. 1. questa. 3. giudicherai. 4. desstruggerla. 7. sua cō [sa] positione. 12. diuina [sig] che [si] lasscia. 13. assuo. 14. chella. 15. distrugha. 17. chi nolla. *The last seven lines are very indistinct.* 20. si pa<sup>r</sup>'te dal. 21. corpo e ben. 22. reto chol su. 23. o pianto e ch. 24. ore nō sia. 25. anza [g] ca. 26. oue.

1140. This text is on the back of the drawings reproduced on Pl. CVII. Compare No. 798, 35 note on p. III. Compare also No. 837 and 838.

19. In MS. I<sup>1</sup> 15<sup>a</sup> is the note: *chi nō stima la vita, non la merita.*

Tr. 78]

## II41.

L'anima mai si può corrōpere · nella corruttio del corpo, ma fa nel corpo <sup>2</sup>a similitudine del uēto che cavsa il suono del organo, <sup>3</sup>chè guastādosi vna canna, nō risultava per quella del uēto <sup>4</sup>buono effetto.

C. A. 58a; 180a]

## II42.

Ogni parte à inclinatiō <sup>2</sup>di ricōgiungnersi al suo <sup>3</sup>tutto per fugire dalla <sup>4</sup>sua imperfettione ;

<sup>5</sup>L'anima desidera stare <sup>6</sup>col suo corpo, perchè sanza <sup>7</sup>li strumēti organici di tal <sup>8</sup>corpo nulla può operare <sup>9</sup>nè sētire.

The soul can never be corrupted with the corruption of the body, but is in the body as it were the air which causes the sound of the organ, where when a pipe bursts, the wind would cease to have any good effect.

C. A. 75a; 219a]

## II43.

Chi vuole vedere come l'anima abita nel suo <sup>2</sup>corpo, guardi come esso corpo vsa la <sup>3</sup>sua cotidiana abitazione, cioè se quella <sup>4</sup>è sanza ordine e confusa, disordinato e cōfuso fia il corpo tenuto dalla sua anima.

If any one wishes to see how the soul dwells in its body, let him observe how this body uses its daily habitation; that is to say, if this is devoid of order and confused, the body will be kept in disorder and confusion by its soul.

Br. M. 278δ]

## II44.

Perchè vede piv certa la cosa l'ochio ne' sogni <sup>2</sup>che colla imaginatione, stando desto?

Why does the eye see a thing more clearly in dreams than with the imagination being awake?

Tr. 65]

## II45.

I sensi sono terrestri, la ragione sta <sup>2</sup>fuer di quelli, quādo, cōtenpla.

The senses are of the earth; Reason, stands apart in contemplation.

Tr. 70]

## II46.

Ogni attione bisogna che s'esercita <sup>2</sup>per moto;

<sup>3</sup>¶ Cognoscere e volere sō <sup>2</sup>operationi <sup>4</sup>vmane; ¶

<sup>5</sup> Discernere, givdicare, cōsigliare <sup>6</sup>sono atti vmani.

Every action needs to be prompted by a motive.

To know and to will are two operations of the human mind.

Discerning, judging, deliberating are acts of the human mind.

1141. 1. chorrōpere . . curuttio . . maffa. 2. assimilitudine . . chavsa del sono. 3. guastādosi . . chana.

1142. 3. tutto [fa] per. 4. imperfettione. 6. chol. 7. organici.

1143. 1. vole . . chome. 2. chorpo . . chome esso chorpo. 3. chotidiana . . secquella. 4. chonfusa. 5. chōfuso . . chorpo.

1144. 2. destso.

1146. 1. chessesercita. 3. cognoscere . . operatione. 5. dissciernere . . chōsigliare.

1141. Compare No. 845.

1145. Compare No. 842.

Tr. 45]

Ogni nostra cognitione p̄cipia da sentimēti.

## 1147.

All our knowledge has its origin in our preceptions.

Tr. 51]

Sciētia—notitia delle cose che sono possibili, presēti e preterite; <sup>2</sup> presciētia—notitia delle cose che possī uenire, <sup>3</sup> però lento.  
Science, its principles and rules (1148—1151).

## 1148.

Science is the observation of things possible, whether present or past; prescience is the knowledge of things which may come to pass, though but slowly.

C. A. 85a; 247a]

La speriēza, <sup>2</sup>interprete infra <sup>3</sup>l'artifitiosa natu<sup>4</sup>ra e la umana spe<sup>5</sup>tie, ne insegnia ciò <sup>6</sup>che essa natura infra <sup>7</sup>mortalì adopera, <sup>8</sup>da necessità co<sup>9</sup>stretta non altri <sup>10</sup>mēti operarsi po<sup>11</sup>ssa · che la ragiō, suo timone, <sup>12</sup>operare le asse<sup>13</sup>gni.

## 1149.

Experience, the interpreter between formative nature and the human race, teaches how that nature acts among mortals; and being constrained by necessity cannot act otherwise than as reason, which is its helm, requires her to act.

S. K. M. III. 80δ]

La sapiētia è figliola della <sup>2</sup>speriētia.

## 1150.

Wisdom is the daughter of experience.

I. I. 18a]

La natura è piena d'infinite ragioni <sup>2</sup>che nō furō mai in isperiētia.

## 1151.

Nature is full of infinite causes that have never occurred in experience.

M. 58δ]

¶ La verità fu sola figliola del tempo. ¶

## 1152.

Truth was the only daughter of Time.

C. A. 151a; 449a]

La speriēza nō falla mai, ma sol fallano i vostri giuditi, promettendosi di quella <sup>2</sup>efetti · tali che ne' uostri esperimenti causati nō sono;

<sup>3</sup>La speriēza nō falla ·, ma sol fallano i vostri giuditi, promettendosi di lei cose, che nō <sup>4</sup>sono in sua potestà; <sup>5</sup>a torto si lamentano li omini della speriēza, cō somme rampogne quella <sup>6</sup>accusano esser fallace,

## 1153.

Experience never errs; it is only your judgments that err by promising themselves effects such as are not caused by your experiments.

Experience does not err; only your judgments err by expecting from her what is not in her power. Men wrongly complain of Experience; with great abuse they accuse her of leading them astray but they set

1155. 1. dela mechanicha. 2. mechanichia. 3. perchche chō . . matema<sup>ticho</sup>.

1156. 1. ciasscuno. 2. cholla essperiēza.

1157. 1. certezza delle. 2. matematiche si passce. 3. [e mati] e mai.

1158. 1. certezza "dele sciētie" e do. 2. po applicharie.

1155. Compare No. 660, II. 19—22 (Vol. I., p. 332).

VOL. II.

Experience aside, turning from it with complaints as to our ignorance causing us to be carried away by vain and foolish desires to promise ourselves, in her name, things that are not in her power; saying that she is fallacious. Men are unjust in complaining of innocent Experience, constantly accusing her of error and of false evidence.

## II54.

Instrumental or mechanical science is of all the noblest and the most useful, seeing that by means of this all animated bodies that have movement perform all their actions; and these movements are based on the centre of gravity which is placed in the middle deviding unequal weights, and it has dearth and wealth of muscles and also lever and counter-lever.

## II55.

## OF MECHANICS.

Mechanics are the Paradise of mathematical science, because here we come to the fruits of mathematics.

## II56.

Every instrument requires to be made by experience.

## II57.

The man who blames the supreme certainty of mathematics feeds on confusion, and can never silence the contradictions of sophistical sciences which lead to an eternal quackery.

## II58.

There is no certainty in sciences where one of the mathematical sciences cannot be applied, or which are not in relation with these mathematics.

C. A. 75a; 219a]

Chi disputa allegādo l'autorità, non adopera lo ingegno, ma pīvostō la memoria; <sup>3</sup>le buone lettere son nate da vn bono naturale, <sup>4</sup>e perchè si de' piv laudare la cagiō che l'effetto, <sup>5</sup>piv lauderai vn buon naturale sanza lettere, <sup>6</sup>che vn bon letterato sanza naturale.

## 1159.

Any one who in discussion relies upon authority uses, not his understanding, but rather his memory. Good culture is born of a good disposition; and since the cause is more to be praised than the effect, I will rather praise a good disposition without culture, than good culture without the disposition.

I. 2 82a]

La sciētia è il capitano, e la pratica sono i soldati.

## 1160.

Science is the captain, and practice the soldiers.

G. 8a]

DELL'ERRORE DI QUELLI CHE VSANO <sup>2</sup>LA PRACTICA SANZA SCIĒTIA.

<sup>3</sup>Quelli che s'inamorā di pratica <sup>4</sup>sāza sciētia sō come 'l nocchiere che ē<sup>5</sup>tra navilio sanza timone e bussola, <sup>6</sup>chè mai à certezza dove si vada.

## 1161.

OF THE ERRORS OF THOSE WHO DEPEND ON PRACTICE WITHOUT SCIENCE.

Those who fall in love with practice without science are like a sailor who enters a ship without a helm or a compass, and who never can be certain whither he is going.

1159. 1. laturita. 2. longiegno. 3. sonate. 4. laudare la chagiō chelle fetto. 5. lauderai vn bo. 6. literato.  
1160. 1. ella pratica.

1161. 1—6 R. 1. erore. 2. praticha. 3. chessinnamorā di praticha. 4. nochieri. 5. ebbussola. 6. cierteza.

## II.

### M O R A L S.

Br. M. 156 b]

Or vedi la sperāza e'l desiderio del ripatriarsi <sup>2</sup>e ritornare nel primo caso fa a similitudine della farfalla al lume, e l'uomo <sup>3</sup>che cō cōtinvi desideri sēpre cō festa aspetta la nvova <sup>4</sup>primavera, sempre la nvova state, sempre e nvovi mesi, <sup>5</sup>e nvovi anni, parēdogli che le desiderate cose, venēdo, <sup>6</sup>sieno troppe tarde, E' non s'avede che desidera la sua disfaziōne; ma questo desiderio è la quītessenza, spirito degli ele<sup>m</sup>enti, che trovādosi rīchivsa per l'anima dallo vmano corpo <sup>9</sup>desidera sempre ritornare al suo mandatario; <sup>10</sup>E uo'che sappi che questo medesimo desiderio è quella quītessēza, <sup>11</sup>cōpagnia della natura, e l'uomo è modello dello mōdo.

C. A. 70 a; 207 a]

O tēpo, consumatore delle cose, <sup>2</sup>e o invidiosa antichità, tu distruggi tutte le cose, <sup>3</sup>e consumi tutte le cose da duri dēti <sup>4</sup>della vecchiezza a poco a poco cō lēta <sup>5</sup>morte! Elena quando si specchiaua, vedēdo <sup>6</sup>le vizze grinze del suo viso, fatte per la vecchiēzza, piagnie e pēsa seco, perchè fu rapita <sup>8</sup>due volte.

### 1162.

Now you see that the hope and the desire What is life? of returning home and to one's former state (1162. 1163). is like the moth to the light, and that the man who with constant longing awaits with joy each new spring time, each new summer, each new month and new year—deeming that the things he longs for are ever too late in coming—does not perceive that he is longing for his own destruction. But this desire is the very quintessence, the spirit of the elements, which finding itself imprisoned with the soul is ever longing to return from the human body to its giver. And you must know that this same longing is that quintessence, inseparable from nature, and that man is the image of the world.

### 1163.

O Time! consumer of all things; O envious age! thou dost destroy all things and devour all things with the relentless teeth of years, little by little in a slow death. Helen, when she looked in her mirror, seeing the withered wrinkles made in her face by old age, wept and wondered why she had twice been carried away.

1162. 1. lofty discourses; because in our minds, even if lying should be their fifth element, this does not prevent that the truth of things is the chief nutriment of superior intellects, though not of wandering wits.

But you who live in dreams are better pleased by the sophistical reasons and frauds of wits in great and uncertain things, than by those reasons which are certain and natural and not so far above us.

Avoid studies of which the result dies with the worker.

Men are in error when they lament the flight of time, accusing it of being too swift, and not perceiving that it is sufficient as it passes; but good memory, with which nature has endowed us, causes things long past to seem present.

## 1171.

Learning acquired in youth arrests the evil of old age; and if you understand that old age has wisdom for its food, you will so conduct yourself in youth that your old age will not lack for nourishment.

The acquisition of any knowledge is always of use to the intellect, because it may thus drive out useless things and retain the good.

For nothing can be loved or hated unless it is first known.

As a day well spent procures a happy sleep, so a life well employed procures a happy death.

Tr. 68]

L'acqua che tochi de' fiumi, è l'ultima  
di quella che adò, e la prima <sup>3</sup> di quelle  
che viene; così il tempo <sup>4</sup> presente;

<sup>5</sup> La vita bene spesa lunga è.

W. XII.]

Siccome mangiare · senza voglia si cōuerte

1177. 1. 2. There is no clue to explain this strange sentence.

1174.

The water you touch in a river is the last  
of that which has passed, and the first of that  
which is coming. Thus it is with time present.  
Life if well spent, is long.

1175.

Just as food eaten without caring for it  
is turned into loathsome nourishment, so  
study without a taste for it spoils memory,  
by retaining nothing which it has taken in.

1176.

Just as eating against one's will is inju-  
rious to health, so study without a liking for  
it spoils the memory, and it retains nothing  
it takes in.

1177.

On Mount Etna the words freeze in  
your mouth and you may make ice of  
them[2].

Just as iron rusts unless it is used, and  
water purifies or, in cold, turns to ice, so  
our intellect spoils unless it is kept in use.

You do ill if you praise, and still  
worse if you reprove in a matter you do  
not understand.

When Fortune comes, seize her in front  
with a sure hand, because behind she is bald.

1178.

It seems to me that men of coarse and  
clumsy habits and of small knowledge do not  
deserve such fine instruments nor so great a  
variety of natural mechanism as men of spe-  
culation and of great knowledge; but merely a

ceua il cibo, e donde esso <sup>5</sup>esca, chè in vero altro che un transito di cibo non sō da essere giudicati, <sup>6</sup>perchè niente mi pare che essi participino di spetie vmana altro, che la voce <sup>7</sup>e la figvra, e tutto il resto è assai manco che bestia.

sack in which their food may be stowed and whence it may issue, since they cannot be judged to be any thing else than vehicles for food; for it seems to me they have nothing about them of the human species but the voice and the figure, and for all the rest are much below beasts.

S. K. M. III. 17a]

## 1179.

Ecco alcuni che non altramente che trā<sup>2</sup>sito di cibo e avnētatori di ster<sup>3</sup>co e riempitori di destri chiamarsi debono, perchè per <sup>4</sup>loro non altro nel mōdo o pure alcuna virtù in opera si <sup>5</sup>mette, perchè di oro altro <sup>6</sup>che pieni destri non resta.

Some there are who are nothing else than a passage for food and augmentors of excrement and fillers of privies, because through them no other things in the world, nor any good effects are produced, since nothing but full privies results from them.

C. A. 153b; 455b]

## 1180.

Il massimo ingāno dell' omni <sup>2</sup>è nelle loro oppinioni.

The greatest deception men suffer is <sup>On foolishness and ignorance</sup> from their own opinions. (1180—1182).

Tr. 56]

## 1181.

La stoltitia è scudo della vergognia, come la imprōtitudine <sup>2</sup>della povertà glorificata.

Folly is the shield of shame, as unreadiness is that of poverty glorified.

Tur. 17b]

## 1182.

La ciecca igniorāza così ci cōduce <sup>2</sup>cō effetto de' lascivi sollazzi  
<sup>3</sup>{per nō conoscere la uera luce.  
<sup>4</sup>{per nō conoscere qual sia la uera luce.  
<sup>5</sup>E'l uano splendor ci toglie l'esser  
<sup>6</sup>....; <sup>7</sup>vedi che per lo splendor nel fuoco  
andiamo, <sup>8</sup>come ciecca jgnorāza ci cō-  
duce.  
<sup>10</sup>O miseri mortali aprite li occhi.

Blind ignorance misleads us thus and delights with the results of lascivious joys.  
Because it does not know the true light.  
Because it does not know what is the true light.

Vain splendour takes from us the power of being .... behold! for its vain splendour we go into the fire, thus blind ignorance does mislead us. That is, blind ignorance so misleads us that . . .

O! wretched mortals, open your eyes.

Ash. I. 1a]

## 1183.

Nō si dimāda · richezza · quello · che si può perdere; <sup>2</sup>la uirtù · è vero · nostro · bene ed è vero premio <sup>3</sup>del suo · possessore ·; lei nō si può · perdere ·, lei <sup>4</sup>nō ci abbandona ·,

That is not riches, which may be lost; <sup>On riches</sup> virtue is our true good and the true reward of its possessor. That cannot be lost; that never deserts us, but when life leaves us. As

he" piētimēto. 5. chade . . chamina. 6. laldi e pegino . . chosa dichio . . tu nolla. 7. laldi e pegino is tu . . tu nollatēdi.

1198. 2. The rest of this passage may be rendered in various ways, but none of them give a satisfactory meaning.

<sup>6</sup>¶ Mal'è se laudi e peggio se riprèdi la cosa, dico se bene tu non la intèdi;

<sup>7</sup>¶ Mal fai se laudi e peggio se tu riprèdi | la cosa quādo bene tu non la intendi.

G. 49a]

Senpre le parole che nō soddisfaño all'orechio dello <sup>2</sup>auditore, li danno tedio over rincrescimēto, e'l segnio di <sup>3</sup>cò vedrai, spesse uolte tali auditori essere <sup>4</sup>copiosi di sbadigli; addiùque tu, che parli dināti a omni <sup>5</sup>di chi tu . cierchi benivolētia, quādo tu vedi . tali pro<sup>6</sup>digi di rincrescimēto, abreuiā il tuo parlare, o tu mu<sup>7</sup>ta ragionamēto, e se tu altramēti farai, allora in lo<sup>8</sup>co della desiderata gratia tu acquisterai odio <sup>9</sup>e nimicitia;

<sup>10</sup>E se vuoi vedere di quel che vn si diletta senza u<sup>11</sup>dirlo parlare, parla a lui mutādo diuersi ragio<sup>12</sup>namēti, e quel dove tu lo vedi stare intēto sanza <sup>13</sup>sbadiglia-mēti o storcimēti di ciglia o altre varie <sup>14</sup>azione, sia cierto che quella cosa, di che si parla, <sup>15</sup>è quella di che lui si diletta, ecc.

Tr. 11]

Mvouesi l'amante per la cosa amata come il senso . e lo sensibile, e cō seco s'unisce <sup>2</sup>e fassi vna cosa medesima; <sup>3</sup>l'opera è la prima cosa che nasce dall'unione; <sup>4</sup>se la cosa amata è vile , l'amāte si fa vile;

<sup>5</sup>Quando . la cosa vnta è cōueniēte al suo <sup>6</sup>vnitore , li seguita . dilettatione . e piacere e soddisfatione;

<sup>7</sup>Quādo l'amāte è giōto all' amato, lì si riposa; <sup>8</sup>quādo . il peso . è posato . lì si riposa.

C. A. 64b; 197b]

La prima fama si fa eterna insieme colli abitatori <sup>2</sup>della città da lui edificata o accresciuta;

## 1201.

It is bad if you praise, and worse if you reprove a thing, I mean, if you do not understand the matter well.

It is ill to praise, and worse to reprimand in matters that you do not understand.

## 1202.

The lover is moved by the beloved object as the senses are by sensible objects; and they unite and become one and the same thing. The work is the first thing born of this union; if the thing loved is base the lover becomes base.

When the thing taken into union is perfectly adapted to that which receives it, the result is delight and pleasure and satisfaction.

When that which loves is united to the thing beloved it can rest there; when the burden is laid down it finds rest there.

## 1203.

There will be eternal fame also for the inhabitants of that town, constructed and enlarged by him. (1203. 1204.)

1201. 1. saddisfano. 2. alditore . . rincrescimēto. 3. uolte [allii] ttali vlditore. 4. chopiosi di sbavigli. 6. rincrescimēto . . ottu. 7. esettu altramēti . . allora illo. 8. cho. 9. ennemicitia. 10. Esse voi . . sanza vl. 11. allui. 12. ecquel . . tullo.

13. sbadigliamēti osstorcimet. 14. azione . . di chessi. 15. ecquella . . lui si di che lui si diletta.

### III.

#### POLEMICS.—SPECULATION.

G. 47a]

1205.

O speculatore del'le cose, nō ti laudare  
di conoscere le cose che ordinariamente per se medesima la natura conduce; Ma rallegrati di co'noscere il fine di quelle cose che son disegniate dalla mēte tua.

Oh! speculators on things, boast not of knowing the things that nature ordinarily brings about; but rejoice if you know the end of those things which you yourself devise.

S. K. M. II.2 67a].

1206.

O speculatori dello continuo moto, quāti vani disegni in simile cerca avete creati! accōpagniatevi colli cercatori dell'oro.

Oh! speculators on perpetual motion how many vain projects of the like character you have created! Go and be the companions of the searchers for gold.

C. A. 75b; 219d]

1207.

I bugiardi interpreti di natura affermano l'argiēto viuo essere comvne semēza a tutti i metalli, nō si ricordādo che la natura varia le semiēze secōdo la diuersità delle cose che essa vole produrre al mōdo.

The false interpreters of nature declare that quicksilver is the common seed of every metal, not remembering that nature varies the seed according to the variety of the things she desires to produce in the world.

1205. 1. hosspechulatori. 2. chose . . laudare. 3. conossciere. 6. per sua [natu] "[ordine]". 7. [ralmēte] chonducie. 8. dicho. 9. nossciere. 10. chose.

1206. 1. speculatori. 2. ciercha ave creati. 3. acōpagniatevi . . cierchator.

1207. 1. interpetri . . chomvne . . attutti . . richordādo chella. 2. sechōdo . . chose . . produre.

1206. Another short passage in MS. I, referring also to speculators, is given by LIBRI (*Hist. des Sciences math.* III, 228): *Sicchè voi speculatori non vi fidate degli autori che ànno sol col immaginazione voluto farsi inter-*

*preti tra la natura e l'omo, ma sol di quelli che non coi cienni della natura, ma cogli effetti delle sue esperienze ànno esercitati i loro ingegni.*

F. 58]

¶ Farisei ·, frati · santi vol dire. ¶

W. An. III. 241]

I abbreviatori delle opere · fanno ingiu-  
ria <sup>2</sup>alla cognitione e allo amore, <sup>3</sup>con-  
ciosiachè l'amore di qualüche cosa è figli-  
uolo <sup>4</sup>d'essa cognitione; l'amore <sup>5</sup>è tanto  
più feruête, quanto la <sup>6</sup>cognitione è più  
certa, la qual <sup>7</sup>certezza nascie dalla cogni-  
tione <sup>8</sup>integrale di tutte quelle par<sup>9</sup>ti le  
quali, essendo insieme vnite, <sup>10</sup>conpongono  
il tutto di quelle co<sup>11</sup>se che debbono essere  
amate; <sup>12</sup>che vale a quel, che per abbre-  
uiare <sup>13</sup>le parti di quelle cose che lui fa  
<sup>14</sup>professione di darne integral no<sup>15</sup>titia,  
che lui lascia indietro la <sup>16</sup>maggior parte  
delle cose, di che il tutto <sup>17</sup>è cōposto?  
egli è vero che la inpa<sup>18</sup>tientia, madre della  
stoltitia, è que<sup>19</sup>lla che lauda la breuità;  
come se <sup>20</sup>questi tali non avessino tāto di  
uita, <sup>21</sup>ch'elli seruisse a potere avere vna  
<sup>22</sup>intera notitia d'un sol particolare co<sup>23</sup>me  
è vn corpo vmano! e poi vogli<sup>24</sup>ono ab-  
bracciare la mēte di dio nella <sup>25</sup>quale s'in-  
clude l'universo cara<sup>26</sup>tando e minuzzando  
quella in iñfinite <sup>27</sup>parti, come se l'avessino a  
anatomizzare;

<sup>28</sup>O stoltitia vmana nō <sup>29</sup>t'avedi tu che  
tu sei stato con teco <sup>30</sup>tutta la tua età, e  
non ài ancora <sup>31</sup>notitia di quella cosa che  
tu più possie<sup>32</sup>di, cioè della tua pazzia? e  
vuoi po<sup>33</sup>i colla moltitudine de'soffistichi  
ingannare <sup>34</sup>te e altri, sprezzando le mate-  
matiche sciē<sup>35</sup>zie, nelle qual si contiene la  
uerità, no<sup>36</sup>titia delle cose che in lor si cōtē-  
gono; e vuoi <sup>37</sup>poi scorrere ne' miracoli e  
scrivere ch'ài <sup>38</sup>notitia di quelle cose, di  
che la mēte vmana <sup>39</sup>non è capace, e non  
si possono dimostrare per ne<sup>40</sup>ssuno esenplo  
naturale, e ti pare avere <sup>41</sup>fatto miraculi,

1208.

And many have made a trade of [de-  
lusions and false miracles, deceiving the stupid  
multitude.

1209.

Pharisees—that is to say, friars.

1210.

Abbreviators do harm to knowledge  
and to love, seeing that the love of any  
thing is the offspring of this knowledge,  
the love being the more fervent in proportion  
as the knowledge is more certain.  
And this certainty is born of a complete  
knowledge of all the parts, which, when com-  
bined, compose the totality of the thing which  
ought to be loved. Of what use then is he who  
abridges the details of those matters of which he  
professes to give thorough information, while  
he leaves behind the chief part of the things  
of which the whole is composed? It is true  
that impatience, the mother of stupidity,  
praises brevity, as if such persons had not  
life long enough to serve them to acquire  
a complete knowledge of one single subject,  
such as the human body; and then they want  
to comprehend the mind of God in which  
the universe is included, weighing it minutely  
and mincing it into infinite parts, as if they  
had to dissect it!

Oh! human stupidity, do you not per-  
ceive that, though you have been with yourself  
all your life, you are not yet aware of  
the thing you possess most of, that is of  
your folly? and then, with the crowd of so-  
phists, you deceive yourselves and others,  
despising the mathematical sciences, in which  
truth dwells and the knowledge of the things  
included in them. And then you occupy  
yourself with miracles, and write that you  
possess information of those things of  
which the human mind is incapable and  
which cannot be proved by any instance from  
nature. And you fancy you have wrought  
miracles when you spoil a work of some

quādo tu ài quastato vna <sup>42</sup>opera d'alcuno ingegnicio. speculativo, e nō <sup>43</sup>t'avedi che tu cadi nel medesimo errore, <sup>44</sup>che fa quello che denuda la piāta dell'ornamento de' sua rami, pieni di fronde, miste co<sup>46</sup>li odoriferi fiori o frutti, . . . . <sup>48</sup>come fece Giv<sup>49</sup>stino, abbreviatore delle storie scritte da Trog<sup>50</sup> Pōpeo, il quale scrisse ornatamente tutti <sup>51</sup>li eccellēti fatti dell'i sua antichi, li quali e<sup>52</sup>rā pieni di mirabilissimi ornamēti; e così <sup>53</sup>compose vna cosa ignuda, ma sol degna d'in<sup>54</sup>gegni inpatiēti, li quali pare lor perder <sup>55</sup>tanto di tempo, quāto quello è che è adoperato vtil<sup>56</sup>mēte, cioè nelli studi delle opere di nature e delle <sup>57</sup>cose vmane; Ma stieno questi tali in compa<sup>58</sup>gnia delle bestie; Nelli lor cortigiani sieno cani e <sup>59</sup>i altri animali piē di rapina e accompagniansi <sup>60</sup>con loro correndo sempre dietro . . . . , e seguita<sup>61</sup>no l' inocēti animali che cō la fame alli tem<sup>62</sup>pi delle grā nevi ti uengono alle case, dimanda<sup>63</sup>tori limosina come lor tute.

C. A. 1878; 562δ]

## 1211.

O matematici fate lume a tale er<sup>2</sup>rore!  
Lo spirito non à voce, perchè dov'è voce <sup>4</sup>è corpo, e dove è corpo è occupatiō di loco, il quale impedisce all'ochio il ue<sup>6</sup>dere delle cose poste dopo tale loco; <sup>7</sup>adunque tal corpo empie di se tutta <sup>8</sup>la circustante aria, cioè colle sua s<sup>9</sup>petie.

B. 4δ]

Nō può essere voce, dove non è movimēto e percussione d'aria; <sup>2</sup>nō può essere percussione d'essa aria, doue non è strumēto; <sup>3</sup>nō può essere strumēto incorporeo; essēdo così, vno spirito nō può avere né voce né forma né forza, <sup>5</sup>e se piglierà corpo, non potrà penetrare né <sup>6</sup>entrare doue li usci sono serrati; <sup>7</sup>e se alcuno diciasse: per aria cōgregata <sup>8</sup>e ristretta īsieme lo spirito piglia i corpi <sup>9</sup>di uarie forme, e

speculative mind, and do not perceive that you are falling into the same error as that of a man who strips a tree of the ornament of its branches covered with leaves mingled with the scented blossoms or fruit . . . . [48] as Justinus did, in abridging the histories written by Trogus Pompeius, who had written in an ornate style all the worthy deeds of his forefathers, full of the most admirable and ornamental passages; and so composed a bald work worthy only of those impatient spirits, who fancy they are losing as much time as that which they employ usefully in studying the works of nature and the deeds of men. But these may remain in company of beasts; among their associates should be dogs and other animals full of rapine and they may hunt with them after . . . . , and then follow helpless beasts, which in time of great snows come near to your houses 'asking' alms as from their master . . . .

## 1211.

O māthematicians shed light on this error. (On spirits 1211-1213).  
The spirit has no voice, because where there is a voice there is a body, and where there is a body space is occupied, and this prevents the eye from seeing what is placed behind that space; hence the surrounding air is filled by the body, that is by its image.

## 1212.

There can be no voice where there is no motion or percussion of the air; there can be no percussion of the air where there is no instrument, there can be no instrument without a body; and this being so, a spirit can have neither voice, nor form, nor strength. And if it were to assume a body it could not penetrate nor enter where the passages are closed. And if any one should say that by air, compressed and compacted

by Trogus Pompeius, who lived in the time of Augustus. The work of the latter writer no longer exist.

per quello strumento parla <sup>10</sup>e move co' forza, a questa parte dico, <sup>11</sup>che doue non sono nerui e ossa, non può esse<sup>12</sup>re forza. operata in nessuno movimento <sup>13</sup>fatto dagl' imaginati spiriti;

<sup>14</sup>fuggi i precetti di quelli speculatori, chè le loro <sup>15</sup>ragioni nō son confermate dalla speriēza.

W. An. II. 242 b (N.)]

together, a spirit may take bodies of various forms and by this means speak and move with strength—to him I reply that when there are neither nerves nor bones there can be no force exercised in any kind of movement made by such imaginary spirits.

Beware of the teaching of these speculators, because their reasoning is not confirmed by experience.

### 1213.

Delli discorsi vmani stoltissimo è da essere reputato quello, il qual s'astende al la credulità della negromatia, sorella della alchimia, partoritricie delle cose semplici e naturali; Ma è tanto più degnia di riprensione che l'alchimia, quanto ella non partorisce alcuna cosa se nō simile a se, cioè bugia; il che non interviene nella alchimia, la quale è ministra<sup>6</sup>trice de' semplici prodotti della natura, il quale vfitio fatto esser nō può <sup>7</sup>da essa natura, perchè in lei non sono strumenti organici colli quali essa possa operare quel <sup>8</sup>che adopera l'uomo mediante le mani, che in tale vfitio <sup>9</sup>à fatti i vetri ecc.; ma essa negromatia, standardo ovvero bandiera <sup>10</sup>volante, mossa dal uento, è guidatrice della stolta moltitudine, la quale <sup>11</sup>al continuo testimonia collo abbaiameto d'infiniti effetti di tale <sup>12</sup>arte; e uano epiti i libri, affermando che l'incati e spiriti adoperino <sup>13</sup>e sanza lingua parlino, e sanza strumenti organici, saza i quali <sup>14</sup>parlar nō si può, parlino, e portino gravissimi pesi, facino tēpestare <sup>15</sup>e piovere, e che li omini si cōvertino il gatte, lupi e altre bestie, <sup>16</sup>benchè in bestia prima ètrā quelli che tal cosa affermano;

<sup>17</sup>E cierto, se tale negromatia fusse in essere, come dalli bassi ingegni è creduto, <sup>18</sup>nessuna cosa è sopra la terra che al danno e seruitio dell'omo fusse di tanta valitudine, perchè se fusse vero, che in tale arte si avesse potetia di far turbare la trāquilla serenità dell'ari<sup>20</sup>a, convertendo quella in notturn aspetto, e far le corruscationi o venti con spa<sup>21</sup>vētevoli toni e folgori scorrēti infra le tenebre, e con ipetuosi venti ruinare

Of all huinan opinions that is to be reputed the most foolish which deals with the belief in Necromancy, the sister of Alchemy, which gives birth to simple and natural things. But it is all the more worthy of reprehension than alchemy, because it brings forth nothing but what is like itself, that is, lies; this does not happen in Alchemy which deals with simple products of nature and whose function cannot be exercised by nature itself, because it has no organic instruments with which it can work, as men do by means of their hands, who have produced, for instance, glass &c. but this Necromancy the flag and flying banner, blown by the winds, is the guide of the stupid crowd which is constantly witness to the dazzling and endless effects of this art; and there are books full, declaring that enchantments and spirits can work and speak without tongues and without organic instruments — without which it is impossible to speak — and can carry heaviest weights and raise storms and rain; and that men can be turned into cats and wolves and other beasts, although indeed it is those who affirm these things who first became beasts.

And surely if this Necromancy did exist, as is believed by small wits, there is nothing on the earth that would be of so much importance alike for the detriment and service of men, if it were true that there were in such an art a power to disturb the calm serenity of the air, converting it into darkness and making coruscations or winds, with terrific thunder and lightnings rushing through the darkness, and with violent

storms overthrowing high buildings and rooting up forests; and thus to oppose armies, crushing and annihilating them; and, besides these frightful storms may deprive the peasants of the reward of their labours. — Now what kind of warfare is there to hurt the enemy so much as to deprive him of the harvest? What naval warfare could be compared with this? I say, the man who has power to command the winds and to make ruinous gales by which any fleet may be submerged,—surely a man who could command such violent forces would be lord of the nations, and no human ingenuity could resist his crushing force. The hidden treasures and gems reposing in the body of the earth would all be made manifest to him. No lock nor fortress, though impregnable, would be able to save any one against the will of the necromancer. He would have himself carried through the air from East to West and through all the opposite sides of the universe. But why should I enlarge further upon this? What is there that could not be done by such a craftsman? Almost nothing, except to escape death. Hereby I have explained in part the mischief and the usefulness, contained in this art, if it is real; and if it is real why has it not remained among men who desire it so much, having nothing to do with any deity? For I know that there are numberless people who would, to satisfy a whim, destroy God and all the universe; and if this necromancy, being, as it were, so necessary to men, has not been left among them, it can never have existed, nor will it ever exist according to the definition of the spirit, which is invisible in substance; for within the elements there are no incorporate things, because where there is no body, there is a vacuum; and no vacuum can exist in the elements because it would be immediately filled up. Turn over.

VOL. II. QQ

medesimo <sup>5</sup> reggiere nō si può, nè pigliare alcuna sorte di moto locale, <sup>6</sup>e se tu dirai che per se si regga, questo essere non può <sup>7</sup>dentro alli elemēti, perchè se lo spirito è quātità incor<sup>8</sup>porea, questa tal quātità è detta vacuo, e il ua<sup>9</sup>cuo non si da in natura; e dato che si desse, subito sa<sup>10</sup>rebbe riempiuto dalla ruina di quello elemento nel <sup>11</sup>qual il uacuo si gienerasse; adunque per la difinition del pe<sup>12</sup>so che dicie, la grauità è vna potētia accidentale creata <sup>13</sup>d'alcuno elemento tirato o sospinto nell'altro, seguita, che <sup>14</sup>nessuno elemēto, non pesando nel medesimo elemēto, e' pe<sup>15</sup>sa nell'elemēto superiore ch'è più lieve di lui; come si uede <sup>16</sup>la parte dell'acqua non à gravità o leuità più che l'altra <sup>17</sup>acqua, ma se tu la tirerai nell'aria, allora ella acqui<sup>18</sup>sterà gravezza, e se tu tirerai l'aria <sup>19</sup>sotto l'acqua, allora l'acqua, che si trova sopra tale <sup>20</sup>aria, acquista gravezza, la qual gravezza per se sostener <sup>21</sup>non si può, onde lì è neciessario la ruina, e così cade infra <sup>22</sup>l'acqua in quel loco ch'è vacuo d'essa acqua; tale ac<sup>23</sup>caderebbe nello spirito, stando infra li elemēti, chè al <sup>24</sup>continuo gienererebbe vacuo in quel tale elemēto, dove <sup>25</sup>lui si trovasse, per la qual cosa lì sarebbe neciessario la con<sup>26</sup>tinua fuga in verso il cielo, insinche vscito fusse di tali <sup>27</sup>elemēti.

#### SE LO SPIRITO TIENE CORPO INFRA LI <sup>29</sup>ELEMĒTI.

<sup>30</sup> Abbiā provato, come lo spirito non può per se stare infra li <sup>31</sup>elementi sanza corpo, nè per se si può mouere per moto vo<sup>32</sup>lontario, se non è allo in sū; Ma al presente diremo co<sup>33</sup>me, pigliando corpo d'aria tale spirito, è necies<sup>34</sup>sario che s'infonda infra essa aria, perchè, s'elli stesse vnito, <sup>35</sup>e' sarebbe separato e caderebbe alla gieneratiō del uacuo, <sup>36</sup>come di sopra è detto; addunque è neciessario che, a volere <sup>37</sup>restare infra l'aria, che esso s'infonda in una quātità d'aria; e <sup>38</sup>se si mista coll'aria, elli seguita due inconvenienti, cioè <sup>39</sup>che elli leuifica quella quātità dell'aria dove esso si mista, e <sup>40</sup>per la qual cosa l'aria leuificata per se uola in alto,

move of its own accord, nor can it have any kind of motion in space; and if you were to say that it moves itself, this cannot be within the elements. For, if the spirit is an incorporeal quantity, this quantity is called a vacuum, and a vacuum does not exist in nature; and granting that one were formed, it would be immediately filled up by the rushing in of the element in which the vacuum had been generated. Therefore, from the definition of weight, which is this—Gravity is an accidental power, created by one element being drawn to or suspended in another—it follows that an element, not weighing anything compared with itself, has weight in the element above it and lighter than it; as we see that the parts of water have no gravity or levity compared with other water, but if you draw it up into the air, then it would acquire weight, and if you were to draw the air beneath the water then the water which remains above this air would acquire weight, which weight could not sustain itself by itself, whence collapse is inevitable. And this happens in water; wherever the vacuum may be in this water it will fall in; and this would happen with a spirit amid the elements, where it would continuously generate a vacuum in whatever element it might find itself, whence it would be inevitable that it should be constantly flying towards the sky until it had quitted these elements.

#### AS TO WHETHER A SPIRIT HAS A BODY AMID THE ELEMENTS.

We have proved that a spirit cannot exist of itself amid the elements without a body, nor can it move of itself by voluntary motion unless it be to rise upwards. But now we will say how such a spirit taking an aerial body would be inevitably melt into air; because if it remained united, it would be separated and fall to form a vacuum, as is said above; therefore it is inevitable, if it is to be able to remain suspended in the air, that it should absorb a certain quantity of air; and if it were mingled with the air, two difficulties arise; that is to say: It must rarefy that portion of the air with which it mingles; and for this cause the rarefied air must fly up of itself and will not

e non resta <sup>41</sup>infra l'aria più grossa di lei; e oltre a questo tal uirtù <sup>42</sup>spirituale sparsa si disunisce e altera sua natura, per la qual <sup>43</sup>cosa esso māca della prima virtù; aggiugnesi vn <sup>3°</sup> incō<sup>44</sup>veniente, e questo è, che tal corpo d'aria, preso dallo spirito, è <sup>45</sup>sottoposto alla penetratiō de' venti, li quali al continuo disu<sup>46</sup>niscono e stracciano le parti vnite dell'aria, quelle rivolgiē<sup>47</sup>do e raggiirando infra l'altra aria; adunque lo spirito, in tale

remain among the air that is heavier than itself; and besides this the subtle spiritual essence disunites itself, and its nature is modified, by which that nature loses some of its first virtue. Added to these there is a third difficulty, and this is that such a body formed of air assumed by the spirits is exposed to the penetrating winds, which are incessantly sundering and dispersing the united portions of the air, revolving and whirling amidst the rest of the atmosphere; therefore the spirit which is infused in this

W. An. II. 201δ (M)]

## 1215.

aria infuso, sarebbe smēbrato overo sbranato e <sup>2</sup>rotto insieme collo sbranamēto dell'aria, nella qual s'infuse.

SE LO SPIRITO, AVĒDO PRESO CORPO <sup>4</sup>D'ARIA,  
SI PUÒ PER SE MOVERE O NO.

<sup>5</sup>Inpossibile è che lo spirito, infuso a una quātità d'aria, <sup>6</sup>possa movere essa aria; e questo si manifesta per la passa<sup>7</sup>ta dove dice <sup>8</sup>lo spirito leuifica quella quātità dell'aria, <sup>8</sup>nella quale esso s'infonde; adunque tale aria <sup>9</sup>si leuerà in alto sopra l'altra aria, e sarà moto fatto dell'aria per la sua leuità e nō per moto volontario dello spirito, e <sup>11</sup>se tale aria si scontra nel uēto per la 3<sup>a</sup> di questo, essa <sup>12</sup>aria sarà mossa dal uēto e nō dallo spirito in lei infuso.

SE LO SPIRITO PUÒ PARLARE O NO.

<sup>14</sup>Volendo mostrare, se lo spirito può parlare o no, è necies<sup>15</sup>sario in prima difinire che cosa è uocie, e come si gienie<sup>16</sup>ra; e diremo in questo modo: la vocie è movimē<sup>17</sup>to d'aria confricata in corpo denso, e'l corpo denso <sup>18</sup>confriato nell'aria che è il medesimo, la qual cō<sup>19</sup>fricatione di denso con raro condensa il raro e fassi resis<sup>20</sup>tētia, e ancora il uelocie raro nel tardo raro si condensa<sup>21</sup>no l'uno e l'altro ne' contatti, e fanno suono e grandissimo <sup>22</sup>strepito; è il suono ovvero mormorio fatto dal raro <sup>23</sup>che si move nel raro cō medi-

air would be dismembered or rent and broken up with the rending of the air into which it was incorporated.

AS TO WHETHER THE SPIRIT, HAVING TAKEN THIS BODY OF AIR, CAN MOVE OF ITSELF OR NOT.

It is impossible that the spirit infused into a certain quantity of air, should move this air; and this is proved by the above passage where it is said: the spirit rarefies that portion of the air in which it incorporates itself; therefore this air will rise high above the other air and there will be a motion of the air caused by its lightness and not by a voluntary movement of the spirit, and if this air is encountered by the wind, according to the 3<sup>rd</sup> of this, the air will be moved by the wind and not by the spirit incorporated in it.

AS TO WHETHER THE SPIRIT CAN SPEAK OR NOT.

In order to prove whether the spirit can speak or not, it is necessary in the first place to define what a voice is and how it is generated; and we will say that the voice is, as it were, the movement of air in friction against a dense body, or a dense body in friction against the air,—which is the same thing. And this friction of the dense and the rare condenses the rare and causes resistance; again, the rare, when in swift motion, and the rare in slow motion condense each other when they come in contact and make a noise and very great uproar;

ocre movimēto, come <sup>24</sup>la grā fiamma gie-  
neratricie di suoni infra l'aria; è l'grandissi-  
<sup>25</sup>mo strepito fatto di raro cō raro, e quando  
il uelocie ra<sup>26</sup>ro penetra in mobile raro,  
come la fiaña del foco vsci<sup>27</sup>ta dalla bō-  
barda, e percossa infra l'aria, e ancora la  
fiamma <sup>28</sup>vscita dal nuvolo percuote l'aria  
nella gieneratiō delle saette; <sup>29</sup>Addunque  
diremo che lo spirito non possa gienear  
vocie sanza <sup>30</sup>movimento d'aria, e aria in  
lui non è, nè la può cacciare da se <sup>31</sup>se ellī  
nō l'à, e se uol movere quella, nella quale  
lui è infuso, <sup>32</sup>egli è necessario che lo spi-  
rito multiplichi, e multiplicar nō <sup>33</sup>pvò se  
lui non à quātità; e per la 4<sup>a</sup> che dicie:  
nessuno raro <sup>34</sup>si move se non à loco sta-  
bile, donde lui pigli il movimēto, e <sup>35</sup>mas-  
simamēte auendosi a mouere lo elemento  
nello elemēto <sup>36</sup>il quale nō si move da se,  
se nō per vaporacione vniforme al ciētro  
della <sup>37</sup>cosa vaporata, come accade nella  
spugnia ristretta <sup>38</sup>in nella mano che sta  
sotto l'acqua, dalla qual l'acqua fuggie per  
qua<sup>39</sup>lunque verso con equal movimēto per  
le fessure interposte infra <sup>40</sup>le dita della  
man che dentro a se la strīgnie;

<sup>41</sup> Se lo spirito à vocie articulata, <sup>42</sup>e se  
lo spirito può essere audito, <sup>43</sup>e che cosa  
è audire e vedere; <sup>44</sup>l'ōda della vocie va  
<sup>45</sup>per l'aria come le spetie delli <sup>46</sup>obbietti  
vanno all'ochio.

and the sound or murmur made by the rare moving through the rare with only moderate swiftness, like a great flame generating noises in the air; and the tremendous uproar made by the rare mingling with the rare, and when that air which is both swift and rare rushes into that which is itself rare and in motion, it is like the flame of fire which issues from a big gun and striking against the air; and again when a flame issues from the cloud, there is a concussion in the air as the bolt is generated. Therefore we may say that the spirit cannot produce a voice without movement of the air, and air in it there is none, nor can it emit what it has not; and if desires to move that air in which it is incorporated, it is necessary that the spirit should multiply itself, and that cannot multiply which has no quantity. And in the 4<sup>th</sup> place it is said that no rare body can move, if it has not a stable spot, whence it may take its motion; much more is it so when an element has to move within its own element, which does not move of itself, excepting by uniform evaporation at the centre of the thing evaporated; as occurs in a sponge squeezed in the hand held under water; the water escapes in every direction with equal movement through the openings between the fingers of the hand in which it is squeezed.

As to whether the spirit has an articulate voice, and whether the spirit can be heard, and what hearing is, and seeing; the wave of the voice passes through the air as the images of objects pass to the eye.

its essence, as regards time, lies precisely between the past and the future, and has nothing in the present. This nothingness has the part equal to the whole, and the whole to the part, the divisible to the indivisible; and the product of the sum is the same whether we divide or multiply, and in addition as in subtraction; as is proved by arithmeticians by their tenth figure which represents zero; and its power has not extension among the things of Nature.]

[What is called Nothingness is to be found only in time and in speech. In time it stands between the past and future and has no existence in the present; and thus in speech it is one of the things of which we say: They are not, or they are impossible.]

With regard to time, nothingness lies between the past and the future, and has nothing to do with the present, and as to its nature it is to be classed among things impossible: hence, from what has been said, it has no existence; because where there is nothing there would necessarily be a vacuum.

## ESEMPIO DELLA SAETTA FRA NUOGLI.

<sup>2</sup>[O potente e già animato strumento  
 dell'artificiosa natura, <sup>3</sup>a te nō valēdo le  
 tue grā forze ti cōuiene abbādonare la  
 trāquila vita e obbedire alla legie, <sup>4</sup>che Iddio  
 e l tēpo diede alla gienitrice natura.]

1217. 1218. Compare No. 1339, written on the same sheet.

O time, swift robber of all created things, how many kings, how many nations hast thou undone, and how many changes of states and of various events have happened since the wondrous forms of this fish perished here in this cavernous and winding recess. Now destroyed by time thou liest patiently in this confined space with bones stripped and bare; serving as a support and prop for the superimposed mountain.

## 1218.

The watery element was left enclosed between the raised banks of the rivers, and the sea was seen between the uplifted earth and the surrounding air which has to envelope and enclose the complicated machine of the earth, and whose mass, standing between the water and the element of fire, remained much restricted and deprived of its indispensable moisture; the rivers will be deprived of their waters, the fruitful earth will put forth no more her light verdure; the fields will no more be decked with waving corn; all the animals, finding no fresh grass for pasture, will die and food will then be lacking to the lions and wolves and other beasts of prey, and to men who after many efforts will be compelled to abandon their life, and the human race will die out. In this way the fertile and fruitful earth will remain deserted, arid and sterile from the water being shut up in its interior, and from the activity of nature it will continue a little time to increase until the cold and subtle air being gone, it will be forced to end with the element of fire; and then its surface will be left burnt up to cinder and this will be the end of all terrestrial nature.

## 1219.

Why did nature not ordain that one animal should not live by the death of another? Nature, being inconstant and

del creare e fare cōtin<sup>ue</sup> vite e forme, perchè cognoscie che sono accrescimēto della sua terrestre materia, <sup>6</sup> è volonterosa e più presta col suo creare che l' tēpo col cōsumare; e però à ordinato che molti animali sieno cibo l'uno dell' altro; e nō soddisfaciēdo questo a simile desiderio, e' spesso māda fuora certi avelenati e pestilēti vapori sopra le grā moltiplicazioni e cōgregazioni d'animali, e massime sopra gli uomini, che fanno <sup>11</sup>grāde accrescimēto, perchè altri animali <sup>12</sup>nō si cibano di loro, e tolte via le cagioni mācherārno li effetti; <sup>13</sup>adūque questa terra cierca di mācare di sua vita, desiderādo <sup>14</sup>la continua moltiplicazione; per la tua assegnata e demonstrata <sup>15</sup>ragione spesso li effetti sommiglano le loro cagioni; gli animali so<sup>16</sup>nō esēplo della vita mōdiale.

taking pleasure in creating and making constantly new lives and forms, because she knows that her terrestrial materials become thereby augmented, is more ready and more swift in her creating, than time in his destruction; and so she has ordained that many animals shall be food for others. Nay, this not satisfying her desire, to the same end she frequently sends forth certain poisonous and pestilential vapours upon the vast increase and congregation of animals; and most of all upon men, who increase vastly because other animals do not feed upon them; and, the causes being removed, the effects would not follow. This earth therefore seeks to lose its life, desiring only continual reproduction; and as, by the argument you bring forward and demonstrate, like effects always follow like causes, animals are the image of the world.

*Humorous Writings.*

Just as Michaelangelo's occasional poems reflect his private life as well as the general disposition of his mind, we may find in the writings collected in this section, the transcript of Leonardo's fanciful nature, and we should probably not be far wrong in assuming, that he himself had recited these fables in the company of his friends or at the court festivals of princes and patrons. Era tanto piacevole nella conversazione — so relates Vasari — che tirava a sè gli animi delle genti. And Paulus Jovius says in his short biography of the artist: Fuit ingenio valde comi, nitido, liberali, vultu autem longe venustissimo, et cum elegantiae omnis deliciarumque maxime theatralium mirificus inventor ac arbiter esset, ad lyramque scito caneret, cunctis per omnem aetatem principibus mire placuit. There can be no doubt that the fables are the original offspring of Leonardo's brain, and not borrowed from any foreign source; indeed the schemes and plans for the composition of fables collected in division V seem to afford an external proof of this, if the fables themselves did not render it self-evident. Several of them—for instance No. 1279—are so strikingly characteristic of Leonardo's views of natural science that we cannot do them justice till we are acquainted with his theories on such subjects; and this is equally true of the 'Prophecies'.

I have prefixed to these quaint writings the 'Studies on the life and habits of animals' which are singular from their peculiar aphoristic style, and I have transcribed them in exactly the order in which they are written in MS. H. This is one of the very rare instances in which one subject is treated in a consecutive series of notes, all in one MS., and Leonardo has also departed from his ordinary habits, by occasionally not completing the text on the page it is begun. These brief notes of a somewhat mysterious bearing have been placed here, simply because they may possibly have been intended to serve as hints for fables or allegories. They can scarcely be regarded as preparatory for a natural history; rather they would seem to be extracts. On the one hand the names

of some of the animals seem to prove that Leonardo could not here be recording observations of his own; on the other hand the notes on their habits and life appear to me to dwell precisely on what must have interested him most—so far as it is possible to form any complete estimate of his nature and tastes.

In No. 1293 lines 1—10, we have a sketch of a scheme for grouping the Prophecies. I have not however availed myself of it as a clue to their arrangement here because, in the first place, the texts are not so numerous as to render the suggested classification useful to the reader, and, also, because in reading the long series, as they occur in the original, we may follow the author's mind; and here and there it is not difficult to see how one theme suggested another. I have however regarded Leonardo's scheme for the classification of the Prophecies as available for that of the Fables and Fests, and have adhered to it as far as possible.

Among the humorous writings I might perhaps have included the 'Rebusse', of which there are several in the collection of Leonardo's drawings at Windsor; it seems to me not likely that many or all of them could be solved at the present day and the MSS. throw no light on them. Nor should I be justified if I intended to include in the literary works the well-known caricatures of human faces attributed to Leonardo—of which, however, it may be incidentally observed, the greater number are in my opinion undoubtedly spurious. Two only have necessarily been given owing to their presence in text, which it was desired to reproduce: Vol. I page 326, and Pl. CXXII. It can scarcely be doubted that some satirical intention is conveyed by the drawing on Pl. LXIV (text No. 688).

My reason for not presenting Leonardo to the reader as a poet is the fact that the maxims and morals in verse which have been ascribed to him, are not to be found in the manuscripts, and Prof. Uzielli has already proved that they cannot be by him. Hence it would seem that only a few short verses can be attributed to him with any certainty.

# I.

## STUDIES ON THE LIFE AND HABITS OF ANIMALS.

H. I 5a]

1220.

### AMORE DI UIRTÙ.

<sup>2</sup> Cardellino · è · vno · vecciello · j1 quale  
<sup>3</sup> si dice · che, essendo · esso · portato · di-  
nanzi <sup>4</sup>a vno · infermo · che, se <sup>5</sup>detto · in-  
fermo · de<sup>6</sup>be morire, questo · ucciello · li-  
uolta · la te<sup>7</sup>sta per lo · cōtrario · e mai · lo  
riguarda ·, e se <sup>8</sup>esso infermo · debe · scam-  
pare ·, questo <sup>8</sup>vcciello · mai · l'abbandona · di  
uista, anzi <sup>9</sup>è causa · di leuarli · ogni · malattia ·;

<sup>10</sup> Similmēte è · l'amore · di uirtù ·; nō  
guar<sup>11</sup>da · mai · cosa · vile ·, nè trista; anzi  
di<sup>12</sup>mora · senpre · in cose oneste · e uirtuo-  
<sup>13</sup>se ·, e rimpatria in cor giētile a si<sup>14</sup>mili-  
tudine degli uccielli nelle uerdi selue <sup>15</sup>sopra  
· i fioriti rami ·; e si dimostra piv <sup>16</sup>esso  
amore nelle auersità che nelle prosperit<sup>17</sup>tà,  
faciēdo come il lume che piv risplēde <sup>18</sup>doue  
truova piv tenebroso · sito.

### THE LOVE OF VIRTUE.

The gold-finch is a bird of which it is related that, when it is carried into the presence of a sick person, if the sick man is going to die, the bird turns away its head and never looks at him; but if the sick man is to be saved the bird never loses sight of him but is the cause of curing him of all his sickness.

Like unto this is the love of virtue. It never looks at any vile or base thing, but rather clings always to pure and virtuous things and takes up its abode in a noble heart; as the birds do in green woods on flowery branches. And this Love shows itself more in adversity than in prosperity; as light does, which shines most where the place is darkest.

H. I 5b]

1221.

### INVIDIA.

<sup>2</sup> Del nibbio · si legie ·, che quādo esso  
uede <sup>3</sup>i sua figlioli nel nido esser di troppa  
gra<sup>4</sup>ssezza, che per invidia egli becca loro  
le coste e tiēgli sanza māgiare.

### ENVY.

We read of the kite that, when it sees its young ones growing too big in the nest, out of envy it pecks their sides, and keeps them without food.

1220. 2. callendrino e uno. 4. chessel. 5. quessto. 6. esse. 7. isschanpare quessto. 9. chausa .. hogni. 11. trissta. 12. hones-  
ste he. 13. ripatria [senpre] in .. assi. 15. essi .. prossperi. 17. comelumie .. rissplēde.

1221. 2. nibio si legie. 4. ssezza che "per inuidia" egli gli beccha .. cosste ettiē. 6. allegreza. 7. lalgreza e apropiata.

## ALLEGREZZA.

<sup>7</sup>L'allegrezza · è appropriata · al gallo · che <sup>8</sup>d'ogni piccola · cosa · si rallegra e cā · <sup>9</sup>ta · con vari e scherzati mouimenti.

## TRISTEZZA.

<sup>11</sup>La tristezza · s'assomiglia al corbo, il quale, <sup>12</sup>quādo uede i sua nati figlioli esser biā<sup>13</sup>chi, che per lo grāde dolore si parte cō tristo <sup>14</sup>rammarichio, gl'abādona e nō gli pascie. <sup>15</sup>isino che non gli vede alquāte poche pēne <sup>16</sup>nere.

H. I 6a]

## PACE.

<sup>2</sup>Del castoro si legge che, quādo è perse<sup>3</sup>guitato ·, cōnosciēdo · essere · per la virtù <sup>4</sup>de' sua medicinali · testiculi, esso nō po<sup>5</sup>tēdo piv fuggire, si ferma, e per auere <sup>6</sup>pace coi cacciatori coi sua tagliēti <sup>7</sup>dēti si spicca i testiculi e li lascia a sua <sup>8</sup>nimici.

## IRA.

<sup>10</sup>Dell'orso si dice che · quādo va alle case <sup>11</sup>delle api per torre loro il mele, esse <sup>12</sup>api co<sup>13</sup>inciando a pūgierlo, che lui lasci<sup>14</sup>a il mele e corre alla vendetta, e volē<sup>15</sup>dosi cō tutte quelle che lo mordono vē<sup>16</sup>dicare, cō nessuna si uēdica, in modo che la <sup>17</sup>sua ira si cōuerte in rabbia, e gittatosi <sup>18</sup>in terra colle mani e coi piedi inasprādo <sup>19</sup>indarno da quelle si difende.

H. I 6b]

## GRATITUDINE.

<sup>2</sup>La virtù · della gratitudine si dice <sup>3</sup>essere piv nelli uccielli detti upupa, <sup>4</sup>i quali, conosciēdo il benificio della <sup>5</sup>ricievuta vita e nvtrimēto dal pa<sup>6</sup>dre e dalla lor madre, quādo li uedo<sup>7</sup>no vecchi fanno loro vno nido e li <sup>8</sup>covano e li nutriscono, e cavā loro <sup>9</sup>col becco le vecchie e triste penne, e <sup>10</sup>cō cierte erbe li rēdano la uista, <sup>11</sup>in modo che ritornano in prosperità.

<sup>8</sup>. pichola chosa . . echā. <sup>9</sup>. coūari esscerzati. <sup>10</sup>. tristeza. <sup>11</sup>. tristeza sasomiglia al corb. <sup>14</sup>. rammarichio. <sup>15</sup>. nogli . . poce.

<sup>1222.</sup> 2. he. 3. cōnosciēdo. 5. fugire. 7. sisspicha . . ellī lasscia assua. <sup>11</sup>. ave. <sup>12</sup>. ave lo co<sup>13</sup>inciato a pūgiere o di lui lasci. <sup>13</sup>. core. <sup>14</sup>. chello mordano. <sup>15</sup>. imodo chella. <sup>17</sup>. tero cholle mani eco . . inaspādo. <sup>18</sup>. dacquelle.

<sup>1223.</sup> 1. [misericordia] over graditudine. 3. detti upica. 4. conosciēdo . . nvtrimēdo. 6. ueda. 7. fano . . ellī. 8. ellī notrisscano. 9. becho . . triste. <sup>10</sup>. chō . . rēdano. <sup>11</sup>. imodo. <sup>13</sup>. rosspo si passie . . essenpre.

## CHEERFULNESS.

Cheerfulness is proper to the cock, which rejoices over every little thing, and crows with varied and lively movements.

## SADNESS.

Sadness resembles the raven, which, when it sees its young ones born white, departs in great grief, and abandons them with doleful lamentations, and does not feed them until it sees in them some few black feathers.

I222.

## PEACE.

We read of the beaver that when it is pursued, knowing that it is for the virtue [contained] in its medicinal testicles and not being able to escape, it stops; and to be at peace with its pursuers, it bites off its testicles with its sharp teeth, and leaves them to its enemies.

## RAGE.

It is said of the bear that when it goes to the haunts of bees to take their honey, the bees having begun to sting him he leaves the honey and rushes to revenge himself. And as he seeks to be revenged on all those that sting him, he is revenged on none; in such wise that his rage is turned to madness, and he flings himself on the ground, vainly exasperating, by his hands and feet, the foes against which he is defending himself.

I223.

## GRATITUDE.

The virtue of gratitude is said to be more [developed] in the birds called hoopoes which, knowing the benefits of life and food, they have received from their father and their mother, when they see them grow old, make a nest for them and brood over them and feed them, and with their beaks pull out their old and shabby feathers; and then, with a certain herb restore their sight so that they return to a prosperous state.

## AVARITIA.

<sup>13</sup> Il rospo si pascie di terra e senpre  
<sup>14</sup> sta macro, perchè nō si satia; tant'è <sup>15</sup> il  
timore che essa terra nō li manchi.

H. I. 7a]

1224.

## INGRATITUDINE.

<sup>2</sup> I colonbi sono assimigliati alla <sup>3</sup> ingratitudine, inperochè quādo <sup>4</sup> sono in età che non abbino piv bisogno d'essere cibati, cominciano a <sup>6</sup> cōbattere col padre; e nō finisce <sup>7</sup> essa pugnia insino a tāto che <sup>8</sup> caccia il padre e togli la moglie <sup>9</sup> faciendose la sua.

## CRUDELTÀ.

<sup>11</sup> Il basilisco è di tanta crudeltà che, <sup>12</sup> quādo colla sua venenosa vista nō può <sup>13</sup> occidere li animali, si volta all'erbe <sup>14</sup> c le piāte, e fermādo in quelle la sua <sup>15</sup> vista le fa seccare.

H. I. 7b]

1225.

## LIBERALIT'.

<sup>2</sup> Dell'aquila si dice che non à mai si grā <sup>3</sup>fame, che non lasci parte della sua <sup>4</sup> preda a quelli veciegli che gli son <sup>5</sup> dintorno, i quali, nō potēdosi per se <sup>6</sup> pasciere, è neciesario che sieno cor<sup>7</sup>teggiatori d'essa aquila, perchè in tal <sup>8</sup> modo si cibano.

## CORETTIONE.

<sup>10</sup> Quādo il lupo va asentito intorno <sup>11</sup> a qualche stallo di bestiame, e che per caso <sup>12</sup> esso pōga il piede in fallo in modo facci <sup>13</sup> strepito, egli si morde il piè per correg<sup>14</sup>giere se da tale errore.

H. I. 8a]

1226.

## LUSINGHE OVER SIRENE.

<sup>2</sup> La sirena si dolcemēte cāta <sup>3</sup> che ador-mēta i marinari, e essa <sup>4</sup> mōta sopra i na-vili e occide li a<sup>5</sup>dormētati marinari.

## AVARICE.

The toad feeds on earth and always remains lean; because it never eats enough:—it is so afraid lest it should want for earth.

## INGRATITUDE.

Pigeons are a symbol of ingratitude; for when they are old enough no longer to need to be fed, they begin to fight with their father, and this struggle does not end until the young one drives the father out and takes the hen and makes her his own.

## CRUELTY.

The basilisk is so utterly cruel that when it cannot kill animals by its baleful gaze, it turns upon herbs and plants, and fixing its gaze on them withers them up.

## GENEROSITY.

It is said of the eagle that it is never so hungry but that it will leave a part of its prey for the birds that are round it, which, being unable to provide their own food, are necessarily dependent on the eagle, since it is thus that they obtain food.

## DISCIPLINE.

When the wolf goes cunningly round some stable of cattle, and by accident puts his foot in a trap, so that he makes a noise, he bites his foot off to punish himself for his folly.

## FLATTERERS OR SYRENS.

The syren sings so sweetly that she lulls the mariners to sleep; then she climbs upon the ships and kills the sleeping mariners.

1224. 4. abino. 5. comiciano. 6. finissce. 7. attāto. 8. cacia . . toli. 9. rafaciendosela. 11. basaliuccio. 12. vissta nōpo.  
11. elle . . effermādo . . lassua. 15. sechare.

1225. 3. nollassci. 4. acquelli . chelle. 6. passiere . . chessieno. 7. tegiatori. 9. corettione. 10. assentito. 11. acqualche.

12. imodo faci. 13. strepido . . percore. 14. tatale.

1226. 1. lusingover s |||||e. 8. vcidē. 9. semēza. 10. pascano. 13. caciatori vesta. 14. core. 15. cho gra . . viciodale cordi.

## PRUDÉTIA.

<sup>7</sup> La formica per naturale cōsiglio <sup>8</sup>pro-  
vede la state per lo uerno, uccidēdo le  
racolte semēze, perchē nō ri<sup>10</sup>nascino, e di  
quelle al tempo si pascono.

## PAZZIA.

<sup>12</sup> Il bo saluatico avēdo in odio il co-  
<sup>13</sup>lore rosso, i cacciatori vestono di rosso  
<sup>14</sup>il pedal d'una piāta, e esso bo corre a  
<sup>15</sup>quella e cō gran furia v'inchioda le corti-  
<sup>16</sup>ne, ođe i cacciatori l'uccidono.

11.<sup>1</sup> 8<sup>a</sup>

## GIVSTITIA.

<sup>2</sup>E' si può assimigliare la uirtù della  
giustitia allo rè delle api, il quale ordina  
<sup>4</sup>e dispone ogni cosa cō ragione, impero-  
<sup>5</sup>chè alcune api sono ordinate anda<sup>6</sup>re per  
fiori, altre ordinate a lavora<sup>7</sup>re, altre a cō-  
battere colle vespe, <sup>8</sup>altre a leuare le spor-  
citie, altre <sup>9</sup>a accōpagniare e corteggiare il  
loro rè; e quā<sup>10</sup>do è vecchio e sāza ali, esse  
lo portano, <sup>11</sup>e se ui vna māca di suo ofi-  
tio, sāza <sup>12</sup>alcuna remissione è punita.

## VERITÀ.

<sup>11</sup>Benchè le pernici rubino l'ova l'una  
all'al<sup>15</sup>tra, nōdimeno i figlioli nati d'esse  
ova <sup>16</sup>senpre ritornano alla lor uera madre.

11.<sup>1</sup> 9<sup>a</sup>

## FEDELTA` OVER LEALTÀ.

<sup>2</sup>Le grù son tanto fedeli e leali al loro  
rè <sup>3</sup>che la notte, quādo lui dorme, alcune  
vā<sup>4</sup>no dintorno al prato per guardare da  
lū<sup>5</sup>ga.; altre ne stanno dapresso e tengono  
<sup>6</sup>vno sasso ciascuna in piè, che se 'l son<sup>7</sup>no  
le uincesse, essa pietra caderebbe e fa<sup>8</sup>rebbe  
tal romore, ch'essi ridesterebbero; e <sup>9</sup>altri  
vi sono che insieme intorno al rè dor<sup>10</sup>mono,  
e ciò fanno ogni notte scābiādosi, <sup>11</sup>accio  
chè loro rè nō uogliono mācare.

16. iccacciatori loccidano.

1227. 2. delagusti. 3. ave. 4. chosa . . ipero. 5. alchuna ave. 6. allauora. 7. chōbottere cholle vesspe. 8. spurcitie. 9. acō-  
pagnare e corteggiare loree. 10. essāza. 11. esse . . mācha. 14. benchelle.1228. 1. lialta. 2. allorere. 3. chella. 5. ettengano. 6. sasso [per] ciascuna . . chesselso. 7. vinciessi . . chaderebe effa. 8. rebe  
. . ridesterebono. 9. chensieme . . are. 10. mano . . fano. 11. acio chollorore nō nē gli a māchare. 13. forma dissga.

## PRUDENCE.

The ant, by her natural foresight pro-  
vides in the summer for the winter, killing  
the seeds she harvests that they may not ger-  
minate, and on them, in due time she feeds.

## FOLLY.

The wild bull having a horror of a red  
colour, the hunters dress up the trunk of a  
tree with red and the bull runs at this with  
great frenzy, thus fixing his horns, and forth-  
with the hunters kill him there.

1227.

## JUSTICE.

We may liken the virtue of Justice to  
the king of the bees which orders and  
arranges every thing with judgment. For  
some bees are ordered to go to the flowers,  
others are ordered to labour, others to fight  
with the wasps, others to clear away all dirt,  
others to accompany and escort the king;  
and when he is old and has no wings they  
carry him. And if one of them fails in his  
duty, he is punished without reprieve.

## TRUTH.

Although partridges steal each other's eggs,  
nevertheless the young born of these eggs  
always return to their true mother.

1228.

## FIDELITY, OR LOYALTY.

The cranes are so faithful and loyal to  
their king, that at night, when he is sleeping,  
some of them go round the field to keep  
watch at a distance; others remain near,  
each holding a stone in his foot, so that if  
sleep should overcome them, this stone  
would fall and make so much noise that  
they would wake up again. And there are  
others which sleep together round the king;  
and this they do every night, changing in  
turn so that their king may never find them  
wanting.

## FALSITÀ.

<sup>13</sup> La uolpe quādo vede alcuna torma di sgar<sup>14</sup>ze o taccole o simili uccielli, subito si gitta in ter<sup>15</sup>ra in modo colla bocca aperta che par morta, <sup>16</sup>e essi uccielli le uogliono beccare la lingua, e essa <sup>17</sup>gli piglia la testa.

H. 1 94]

## BUGIA.

<sup>2</sup> La talpa · à li ochi molto · piccoli ·, e senpre <sup>3</sup>sta · sotto · terra · e tanto · viue ·, quanto essa <sup>4</sup>sta occulta ·, e come · viene alla luce <sup>5</sup>subito · more · perchè si fa nota; così la bugia.

## FORTEZZA.

<sup>7</sup> Il lione · mai · teme ·, anzi · cō forte animo <sup>8</sup>pugna cō fiera battaglia contra la mol·titudine de' cacciatori ·, senpre ciercādo <sup>10</sup>offendere · il primo · che l'offese.

## TIMORE OVER UILTÀ.

<sup>12</sup> La lepre senpre teme ·, e le foglie che ca<sup>13</sup>dono dalle piāte · per autunno senpre la tē<sup>14</sup>gono in timore, e 'l piv delle volte in fuga.

H. 1 10a]

## MAGNANIMITÀ.

<sup>2</sup> Il falcone nō preda · mai ·, sc non uccielli <sup>3</sup>grossi ·, e prima si lascierebbe morire che <sup>4</sup>si cibasse de' piccoli, o che mangiasse car<sup>5</sup>ne fetida.

## VANA GLORIA.

<sup>7</sup> In questo vitio si legge del pavone es-<sup>8</sup>serli più che altro animale sottoposto, <sup>9</sup>perchè senpre contempla in nella bellezza <sup>10</sup>della sua coda, quella allargādo in for<sup>11</sup>ma di rota e col suo grido trae a se <sup>12</sup>la uista de' circustāti animali;

<sup>13</sup> E questo · è l'ultimo vitio che si possa <sup>14</sup>vinciere.

## FALSITÀ.

## FALSEHOOD.

The fox when it sees a flock of herons or magpies or birds of that kind, suddenly flings himself on the ground with his mouth open to look as he were dead; and these birds want to peck at his tongue, and he bites off their heads.

I229.

## LIES.

The mole has very small eyes and it always lives under ground; and it lives as long as it is in the dark but when it comes into the light it dies immediately, because it becomes known;—and so it is with lies.

## VALOUR.

The lion is never afraid, but rather fights with a bold spirit and savage onslaught against a multitude of hunters, always seeking to injure the first that injures him.

## FEAR OR COWARDICE.

The hare is always frightened; and the leaves that fall from the trees in autumn always keep him in terror and generally put him to flight.

I230.

## MAGNANIMITY.

The falcon never preys but on large birds; and it will let itself die rather than feed on little ones, or eat stinking meat.

## VAIN GLORY.

As regards this vice, we read that the peacock is more guilty of it than any other animal. For it is always contemplating the beauty of its tail, which it spreads in the form of a wheel, and by its cries attracts to itself the gaze of the creatures that surround it.

And this is the last vice to be conquered.

## CONSTANTIA.

<sup>2</sup>Alla costantia · s'assimiglia · la fenice,  
<sup>3</sup>la quale intēdēdo per natura la sua re-  
<sup>4</sup>novatione ·, è costante a sostenere le cuo-  
<sup>5</sup>centi fiamme · le quali la cōsumano, e poi  
<sup>6</sup>di novo rinascie.

## INCOSTANTIA.

<sup>8</sup>Il rondone si mette per la incostantia,  
<sup>9</sup>il quale senpre sta in moto · per nō sop-  
portare alcuno minimo disagio.

## TÉPERÁZA.

<sup>12</sup>Il camello è il piv · lussurioso animale  
<sup>13</sup>che sia, e andrebbe mille miglia dirieto a  
vna <sup>14</sup>camella ·, e se vsasse cōtinvo cō la  
madre o so<sup>15</sup>relle, mai le tocca; tāto si sa  
bē tēperare.

II. I 11 a]

## INTÉPERANZA.

<sup>2</sup>Il liocorno overo vnicorno · per la sua  
intēperáza e nō sapersi uiciere per lo di-  
letto che à <sup>4</sup>delle donzelle · dimētica la sua  
ferocità <sup>5</sup>e saluatichezza; ponēdo da cāto  
ogni sospetto <sup>6</sup>va alla sedente donzella e  
se le adormēta · in grēbo ·, e i cacciatori  
in tal modo <sup>8</sup>lo pigliano.

## VMILITÀ.

<sup>10</sup>Dell'umilità si uede somma speriētia  
nello <sup>11</sup>agnello, il quale si sottomette a  
ogni ani<sup>12</sup>male; e quādo per cibo son dati  
ai incarcerati <sup>13</sup>leoni ·, a quelli si sottomet-  
tono come alla <sup>14</sup>propria madre, in modo  
che spesse volte <sup>15</sup>si è visto i lions non li  
volere occidere.

II. I 11 b]

## SUPERBIA.

<sup>2</sup>Il falcone per la sua altergia e super-  
bia <sup>3</sup>vole signioreggiare · e soprafare tutti  
li al<sup>4</sup>tri vccielli · che sono di rapina, e sempre  
<sup>5</sup>desidera · essere solo, e spesse volte si è  
<sup>6</sup>veduto il falcone assaltare l'aquila, <sup>7</sup>regina  
delli vccielli.

I231.

## CONSTANCY.

Constancy may be symbolised by the phoenix which, knowing that by nature it must be resuscitated, has the constancy to endure the burning flames which consume it, and then it rises anew.

## INCONSTANCY.

The swallow may serve for Inconstancy, for it is always in movement, since it cannot endure the smallest discomfort.

## CONTINENCE.

The camel is the most lustful animal there is, and will follow the female for a thousand miles. But if you keep it constantly with its mother or sister it will leave them alone, so temperate is its nature.

I232.

## INCONTINENCE.

The unicorn, through its intemperance and not knowing how to control itself, for the love it bears to fair maidens forgets its ferocity and wildness; and laying aside all fear it will go up to a seated damsel and go to sleep in her lap, and thus the hunters take it.

## HUMILITY.

We see the most striking example of humility in the lamb which will submit to any animal; and when they are given for food to imprisoned lions they are as gentle to them as to their own mother, so that very often it has been seen that the lions forbear to kill them.

I233.

## PRIDE.

The falcon, by reason of its haughtiness and pride, is fain to lord it and rule over all the other birds of prey, and longs to be sole and supreme; and very often the falcon has been seen to assault the eagle, the Queen of birds.

## ASTINENTIA.

<sup>9</sup>Il saluatico · asino · quādo · va alla <sup>10</sup>fonte · per bere · e trova · l'acqua intor<sup>11</sup>bidata, non avrà mai si grā sete, che nō <sup>12</sup>s'astēga di bere, e aspetti ch'essa acqua <sup>13</sup>si richiari.

## GOLA.

<sup>15</sup>Il vulture · è tanto sottoposto alla gola <sup>16</sup>che andrebbe mille miglia per māgiare <sup>17</sup>d'una carognia, e per questo seguita li eserciti.

H. I 12a]

1234.

## CASTITÀ.

<sup>2</sup>La tortora nō fa mai fallo al suo cōpagnio, <sup>3</sup>e se l'uno more, l'altro osserua perpetua ca<sup>4</sup>stità e non si posa mai su ramo verde e nō <sup>5</sup>beue mai acqua chiara.

## LUSSURIA.

<sup>7</sup>Il pipistrello per la sua sfrenata lussuria non osserua alcuno vniuersale mo<sup>9</sup>do di lussuria, anzi maschio cō maschio, <sup>10</sup>femina cō femina, siccome a caso si tro<sup>11</sup>vano insieme, vsano il lor coito.

## MODERANZA.

<sup>13</sup>L'ermellino per la sua moderatia nō māgia <sup>14</sup>se non vna sola volta il dì, e prima si lascia pi<sup>15</sup>gliare dai cacciatori che volere fugire <sup>16</sup>nella infangata tana, <sup>17</sup>per nō maculare la sua giētilezza.

H. I 12b]

1235.

## AQUILA.

<sup>2</sup>L'aquila, quādo è vechia, vola tāto <sup>3</sup>in alto, che abbrucia le sue penne, e na<sup>4</sup>tura cōsentie che si rinoui in giovētù, <sup>5</sup>cadendo nella poca acqua;

<sup>6</sup>E se i sua nati nō possono tenere la uista <sup>7</sup>nel sole—; nō li pascie di nessuno uccello, <sup>8</sup>che nō uole morire; non s'accostano

## ABSTINENCE.

The wild ass, when it goes to the well to drink, and finds the water troubled, is never so thirsty but that it will abstain from drinking, and wait till the water is clear again.

## GLUTTONY.

The vulture is so addicted to gluttony that it will go a thousand miles to eat a carrion [carcase]; therefore is it that it follows armies.

H. I 12a]

1234.

## CHASTITY.

The turtle-dove is never false to its mate; and if one dies the other preserves perpetual chastity, and never again sits on a green bough, nor ever again drinks of clear water.

## UNCHASTITY.

The bat, owing to unbridled lust, observes no universal rule in pairing, but males with males and females with females pair promiscuously, as it may happen.

## MODERATION.

The ermine out of moderation never eats but once in the day; it will rather let itself be taken by the hunters than take refuge in a dirty lair, in order not to stain its purity.

H. I 12b]

1235.

## THE EAGLE.

The eagle when it is old flies so high that it scorches its feathers, and Nature allowing that it should renew its youth, it falls into shallow water [5]. And if its young ones cannot bear to gaze on the sun [6]—; it does not feed them with any bird, that does not wish to die. Animals which much fear

al suo <sup>9</sup>nido gli animali che forte la temano,  
ma essa a lor nō noce, senpre <sup>11</sup>lascia ri-  
manēte della sua preda.

#### LUMERPA,—FAMA.

<sup>13</sup>Questa nascie nell'Asia Maggiore, e  
splē<sup>14</sup>de si forte che toglie le sue ôbre, e  
morendo <sup>15</sup>nō perde esso lume, e mai li  
cadono giù le <sup>16</sup>penne, e la penna che si  
spicca piv nō <sup>17</sup>luce.

H.1 13a]

1236.

#### PELICANO.

<sup>2</sup>Questo porta grāde amore a sua nati,  
<sup>3</sup>e trouādo quelli nel nido morti dal <sup>4</sup>ser-  
pēte, si pūgie a riscōtro al core e, col <sup>5</sup>suo  
piovente sangue bagniādoli, li tor<sup>6</sup>na in  
vita.

#### SALAMĀDRA.

<sup>8</sup>Questo non à mēbra passive, e nō si  
<sup>9</sup>cura d'altro cibo che di foco, e spesso in  
<sup>10</sup>quella rinova la sua scorza.

<sup>11</sup>La salamādra nel foco <sup>12</sup>rinova la sua  
scorza; — <sup>13</sup>per la <sup>14</sup>vir<sup>15</sup>tū.

#### CAMELEO.

<sup>16</sup>Questo viue d'aria, e ī quella sta su-  
<sup>17</sup>bietto a tutti li uccielli, e per stare piv  
<sup>18</sup>saluo vola sopra le nvole; e truova <sup>19</sup>aria  
tāto sottile, che nō può sostenere <sup>20</sup>vccielo  
che lo seguiti.

<sup>21</sup>A questa altezza nō va, se nō a chi  
da cieli <sup>22</sup>è dato, cioè dove vola il came-  
leone.

H.1 13b]

1237.

#### ALEPO PESCI.

<sup>2</sup>Alepo nō uive fori dell'acqua.

#### STRUZZO.

<sup>4</sup>Questo cōuerte il ferro in suo <sup>5</sup>nutri-  
mēto; cova l'uova colla vista; <sup>6</sup>per l'arme  
<sup>7</sup>de' capitani.¶

leone. Lines 11—15 are written on the margin near the title-line.  
1237. <sup>1</sup>alep[ο] pesscie. <sup>4</sup>suo "nutrimēto". <sup>5</sup>cova lava. Lines 6 and 7 are written on the margin near the title-line.

it do not approach its nest, although it does not hurt them. It always leaves part of its prey uneaten.

#### LUMERPA,—FAME.

This is found in Asia Major, and shines so brightly that it absorbs its own shadow, and when it dies it does not lose this light, and its feathers never fall out, but a feather pulled out shines no longer.

#### THE PELICAN.

This bird has a great love for its young; and when it finds them in its nest dead from a serpent's bite, it pierces itself to the heart, and with its blood it bathes them till they return to life.

#### THE SALAMANDER.

This has no digestive organs, and gets no food but from the fire, in which it constantly renews its scaly skin.

The salamander, which renews its scaly skin in the fire,—for virtue.

#### THE CAMELEON.

This lives on air, and there it is the prey of all the birds; so in order to be safer it flies above the clouds and finds an air so rarefied that it cannot support the bird that follows it.

At that height nothing can go unless it has a gift from Heaven, and that is where the chameleon flies.

#### THE ALEPO, A FISH.

The fish alepo does not live out of water.

#### THE OSTRICH.

This bird converts iron into nourishment, and hatches its eggs by its gaze;—Armies under commanders.

## CIGNO.

<sup>9</sup>Cignio è candido sanza alcuna <sup>10</sup>macchia, e dolcemēte canta nel morire, il qual cāto termina la uita.

## CICOGNIA.

<sup>13</sup>Questa, beuēdo la salsa acqua, <sup>14</sup>caccia da se il male; se truova la cō<sup>15</sup>pagnia in fallo, l'abbandona; e quādo <sup>16</sup>è vechia, i sua figlioli la covano e pa<sup>17</sup>scono, infinchē more.

H. I 14α]

1238.

## CICALA.

<sup>2</sup>Questa col suo canto fa tacere <sup>3</sup>il cuocco, more nell'olio, e resucita <sup>4</sup>nello aceto, cāta per li ardēti caldi.

## PIPISTRELLO.

<sup>6</sup>Questo dov'è piv luce piv si fa <sup>7</sup>orbo, e come piv guarda il sole <sup>8</sup>più s'acciecca; <sup>9</sup>pel uitio che nō può <sup>10</sup>stare do<sup>11</sup>v'è la vir<sup>12</sup>tù.

## PERNICE.

<sup>14</sup>Questa si trasmuta di femina i maschio, <sup>15</sup>e dimētica il primo sesso, e fura per iuidia <sup>16</sup>l'oua al'altre, e le coua, ma i nati segui<sup>17</sup>tano la uera madre.

## RÖDINE.

<sup>19</sup>Questa colla celidonia lumina i sua <sup>20</sup>ciechi nati.

H. I 14δ]

1239.

## OSTRIGA.—PEL TRADIMĒTO.

<sup>2</sup>Questa, quādo la luna è piena, s'apre tutta, <sup>3</sup>e quādo il grācio la vede, dētro le gietta <sup>4</sup>qualche sasso o festuca, e questa nō si <sup>5</sup>può riserrare, òde è cibo d'esso grāchio; <sup>6</sup>così fa, chi apre la bocca a dire il suo segreto, <sup>7</sup>chè si fa preda dello indiscreto auditore.

## THE SWAN.

The swan is white without any spot, and it sings sweetly as it dies, its life ending with that song.

## THE STORK.

This bird, by drinking saltwater purges itself of distempers. If the male finds his mate unfaithful, he abandons her; and when it grows old its young ones brood over it, and feed it till it dies.

1238.

## THE GRASSHOPPER.

This silences the cuckoo with its song. It dies in oil and revives in vinegar. It sings in the greatest heats

## THE BAT.

The more light there is the blinder this creature becomes; as those who gaze most at the sun become most dazzled.—For Vice, that cannot remain where Virtue appears.

## THE PARTRIDGE.

This bird changes from the female into the male and forgets its former sex; and out of envy it steals the eggs from others and hatches them, but the young ones follow the true mother.

## THE SWALLOW.

This bird gives sight to its blind young ones by means of celandine.

## THE OYSTER.—FOR TREACHERY.

This creature, when the moon is full opens itself wide, and when the crab looks in he throws in a piece of rock or seaweed and the oyster cannot close again, whereby it serves for food to that crab. This is what happens to him who opens his mouth to tell his secret. He becomes the prey of the treacherous hearer.

## BASILISCO.—CRUDELTÀ.

<sup>9</sup>Questo è fugito da tutti i serpēti; la don<sup>10</sup>nola per lo mezzo della ruta cōbatte con essi <sup>11</sup>e si l'uccide.

## L' ASPIDO.

<sup>14</sup>Questo porta ne' dēti la subita morte <sup>15</sup>e per nō sentire l'incāti, colla coda si <sup>16</sup>stoppa li orechi.

H. I 15<sup>a</sup>]

## DRAGO.

<sup>2</sup>Questo lega le gābe al liofante <sup>3</sup>e quel li cade adosso, e l'uno e l'al<sup>4</sup>tro more, e morēdo fa sua vēdetta.

## VIPERA.

<sup>6</sup>Questa nel suo accoppiare apre la bocca, e nel fine <sup>7</sup>strignie dēti e amazza il marito, poi <sup>8</sup>i figlioli in corpo cresciuti straccia<sup>9</sup>no il uêtre e occidono la madre.

## SCORPIONE.

<sup>11</sup>La saliuia sputa a digivno sopra dello scor<sup>12</sup>pione e l'occide; à similitudine dell'a<sup>13</sup>stinētia della gola, che togle via e cura <sup>14</sup>le malatie che da essa gola dipēdon, e a<sup>15</sup>pre la strada alle virtu.

H. I 17<sup>a</sup>]

## COCCODRILLO. IPOCRESIA.

<sup>2</sup>Questo animale piglia l'o<sup>3</sup>mo e subito l'uccide poichè l'à morso <sup>4</sup>con lamētevole voce e molte lacrime <sup>5</sup>lo piāge, e finito il lamēto crudel<sup>6</sup>mēte lo diuora; così fa l'ipocrito <sup>7</sup>che per ogni lieue cosa s'empie il uiso <sup>8</sup>di lagrime; mostrādo un cor di tigro e' ral<sup>9</sup>legrasi nel core dell'altrui male cō <sup>10</sup>piātoso volto.

## BOTTA.

<sup>12</sup>La botta fugie la luce del sole, e se pure <sup>13</sup>per forza v'è tenuta, si gōfia tāta, che s'ascon<sup>14</sup>de la testa in basso, e privasi d'essi razzi; <sup>15</sup>così fa chi è nimico della chiara e luciē<sup>16</sup>te virtù, che nō può se nō con gōfiato <sup>17</sup>animo forzatamēte starle davāti.

<sup>16.</sup> stopa.

## THE BASILISK.—CRUELTY.

All snakes flee from this creature; but the weasel attacks it by means of rue and kills it.

## THE ASP.

This carries instantaneous death in its fangs; and, that it may not hear the charmer it stops its ears with its tail.

I240.

## THE DRAGON.

This creature entangles itself in the legs of the elephant which falls upon it, and so both die, and in its death it is avenged.

## THE VIPER.

She, in pairing opens her mouth and at last clenches her teeth and kills her husband. Then the young ones, growing within her body rend her open and kill their mother.

## THE SCORPION.

Saliva, spit out when fasting will kill a scorpion. This may be likened to abstinence from greediness, which removes and heals the ills which result from that gluttony, and opens the path of virtue.

I241.

## THE CROCODILE. HYPOCRISY.

This animal catches a man and straightway kills him; after he is dead, it weeps for him with a lamentable voice and many tears. Then, having done lamenting, it cruelly devours him. It is thus with the hypocrite, who, for the smallest matter, has his face bathed with tears, but shows the heart of a tiger and rejoices in his heart at the woes of others, while wearing a pitiful face.

## THE TOAD.

The toad flies from the light of the sun, and if it is held there by force it puffs itself out to much as to hide its head below and shield itself from the rays. Thus does the foe of clear and radiant virtue, who can only be constraintedly brought to face it with puffed up courage.

H. I 17δ]

## BRUCO.—DELLA VIRTÙ IN GIENERALE.

<sup>3</sup> Il bruco, che mediante l'esercitato studio <sup>4</sup> di tessere con mirabile artifizio e sottile lauoro <sup>5</sup> intorno a se fa la nova abitatione, escie <sup>6</sup> poi fori di quella colle dipinte e belle <sup>7</sup> ali, cō quelle leuādosi inverso il cielo.

## RAGNIO.

<sup>9</sup> Il ragnio partoriscie fori di se l'ar<sup>10</sup>titiosa e maestrevole tela, la quale <sup>11</sup> gli rēde per beneficio la presa preda.

H. I 18α]

## LIONE.

<sup>2</sup> Questo animale col suo tonāte grido <sup>3</sup> destà i sua figlioli dopo il terzo giorno <sup>4</sup> nati, aprēdo a quelli tutti li adormētaſti ſēsi, e tutte le fiere, che <sup>6</sup> nella selua sono, fuggono.

<sup>7</sup> Puossi assimigliare a figlioli della <sup>8</sup> virtù, che mediāte il grido delle lode <sup>9</sup> si suegliano e crescono per li studi onorevoli <sup>10</sup> che ſempre piv gli inalza, e tutti i tristi <sup>11</sup> a eſſo grido fuggono ciessādosi dai <sup>12</sup> ver-tuosi.

<sup>13</sup> Ancora il leone copre le ſue pedate, <sup>14</sup> perché nō ſ'intenda il ſuo viaggio <sup>15</sup> per i nimici; queſto ſta bene al capitano <sup>16</sup> a cielare i ſegreti del ſuo animo, acciochè <sup>17</sup> il nimico nō cognioſca i ſua tratti.

H. I 18δ]

## TARĀTA.

<sup>2</sup> Il morſo della tarāta mātiene l'omo <sup>3</sup> nel ſuo proponimēto, cioè quello che <sup>4</sup> penſano quādo fu morſo.

## DUGO E CIVETTA.

<sup>6</sup> Queſti gaſtigano i loro ſchernitorii <sup>7</sup> pri-vādoli di uista, chè coſì à ordina<sup>8</sup>to la na-tura, perché ſi cibino.

## 1242.

## THE CATERPILLAR.—FOR VIRTUE IN GENERAL.

The caterpillar, which by means of aſdiuous care is able to weave round itſelf a new dwelling place with marvellous artifice and fine workmanship, comes out of it afterwards with painted and lovely wings, with which it rises towards Heaven.

## THE SPIDER.

The spider brings forth out of herſelf the delicate and ingenious web, which makes her a return by the prey it takes.

## 1243.

## THE LION.

This animal, with his thundering roar, rouses his young the third day after they are born, teaching them the use of all their dormant ſenses and all the wild things which are in the wood flee away.

This may be compared to the children of Virtue who are roused by the ſound of praise and grow up in honourable ſtudies, by which they are more and more elevated; while all that is base flies at the ſound, ſhunning those who are virtuous.

Again, the lion covers over its foot tracks, ſo that the way it has gone may not be known to its enemies. Thus it beſeems a captain to conceal the ſecrets of his mind ſo that the enemy may not know his purpose.

## 1244.

## THE TARANTULA.

The bite of the tarantula fixes a man's mind on one idea; that is on the thing he was thinking of when he was bitten.

## THE SCREECH-OWL AND THE OWL.

These puniſh thoſe who are ſcoffing at them by pecking out their eyes; for nature has ſo ordered it, that they may thus be fed.

The ſecond: *fatica fugga cholla fama in braccio* *quasi ochultata e* is written in red chalk and is evidently an incomplete ſentence.

H. I 19a]

1245.

## LEOFANTE.

Il grāde elefante à per natura quel  
 che raro negli omni si truova, cioè <sup>4</sup>pro-  
 bità, prudētia, equità e osservatia e reli-  
 gione, inperochè, quādo <sup>6</sup>la luna si rnova,  
 questi vanno ai fiūmi e qui vi purgādosi  
 solennemēte <sup>8</sup>si lauano, e così salutato il  
 pianeta ritornano alle selue; E quādo <sup>10</sup>sono  
 ammalati, stando supini, gitta<sup>11</sup>no l'erbe  
 verso il cielo, quasi com'esse <sup>12</sup>sacrificare  
 volessino; ¶ sotterrano li dē<sup>13</sup>ti quādo per  
 vecchiezza gli cadono; ¶ de' <sup>14</sup>sua due dēti  
 l'uno adopera a cauare <sup>15</sup>le radici per ci-  
 barsi; all'altro cōserua <sup>16</sup>la pūta per cō-  
 battere; Quādo sono <sup>17</sup>superati da cacciatori,  
 e chè la stāchezza <sup>18</sup>gli uīcie per  
 cotali dēti l'elefanti, quelle trattesi, con esse  
 si ricomprano.

H. I 19b]

1246.

Sono di leni menti e conoscono i peri-  
 coli; <sup>2</sup>le se esso trova l'omo solo e smarito,  
 piacievolmēte lo rimette nella perduta  
 strada, se truova le pedate dell'omo <sup>5</sup>prima  
 che veda l'omo; <sup>6</sup>esso teme tradimēto,  
 òde si ferma <sup>7</sup>e soffia, mostrādolo ali altri  
 elefanti, <sup>8</sup>e fanno schiera e vanno assentita-  
 mēte.

<sup>9</sup>Questi vanno sempre a schiere, e l'più  
 vechio va ināzi, e l secōdo d'età resta  
 l'ultimo, e così chiudono la schiera; <sup>12</sup>te-  
 mono vergognia, non vsano il co<sup>13</sup>ito se nō  
 di notte di nascosto, e nō tor<sup>14</sup>nano dopo  
 il coito alli armēti, se prima <sup>15</sup>nō si lauano  
 nel fiume; nō cōbattono <sup>16</sup>le femine, come  
 gli altri animali; <sup>17</sup>¶ ed è tāto clemēte, che  
 mal uolōtieri per na<sup>18</sup>tura nō noce ai mē  
 potenti di se, e scō<sup>19</sup>trādosi nella sua via  
 e greggi delle pecore

H. I 20a]

1247.

colla sua mano le pone da parte <sup>2</sup>per  
 non le pestare, coi piedi, nè mai noce <sup>3</sup>se  
 nō sono provocati; quādo son ca<sup>4</sup>duti nella  
 fossa, gli altri cō rami, <sup>5</sup>terra e sassi riē-  
 piono la fossa, <sup>6</sup>in modo che alzano il fondo,

The huge elephant has by nature what  
 is rarely found in man; that is Honesty,  
 Prudence, Justice, and the Observance of  
 Religion; inasmuch as when the moon is  
 new, these beasts go down to the rivers, and  
 there, solemnly cleansing themselves, they  
 bathe, and so, having saluted the planet, return  
 to the woods. And when they are ill, being  
 laid down, they fling up plants towards  
 Heaven as though they would offer sacri-  
 fice.—They bury their tusks when they fall  
 out from old age.—Of these two tusks they  
 use one to dig up roots for food; but they  
 save the point of the other for fighting with;  
 when they are taken by hunters and when  
 worn out by fatigue, they dig up these buried  
 tusks and ransom themselves.

1246.

They are merciful, and know the dangers,  
 and if one finds a man alone and lost, he  
 kindly puts him back in the road he has  
 missed, if he finds the footprints of the man  
 before the man himself. It dreads betrayal,  
 so it stops and blows, pointing it out to  
 the other elephants who form in a troop and  
 go warily.

These beasts always go in troops, and the  
 oldest goes in front and the second in age  
 remains the last, and thus they enclose the  
 troop. Out of shame they pair only at night  
 and secretly, nor do they then rejoin the herd  
 but first bathe in the river. The females do  
 not fight as with other animals; and it is  
 so merciful that it is most unwilling by nature  
 ever to hurt those weaker than itself. And  
 if it meets in the middle of its way a flock  
 of sheep

1247.

it puts them aside with its trunk, so as  
 not to trample them under foot; and it never  
 hurts any thing unless when provoked. When  
 one has fallen into a pit the others fill up  
 the pit with branches, earth and stones, thus

1245. 2. ellefante. 4. he equita e osser. 6. questi vano. 9. Ecquādo. 10. amalati . . suppini. 12. volessino (sotterali). 13. ue-

che esso facilmente rimoti; temono forte lo stridore de' porci e fugono indirieto; e non fa manco danno poi coi piedi a sua che a nimici; dilettasi de' fiumi, e sempre vagabundi intorno quelli, Te per lo grā peso non posso notare; diuorano le pietre, e trochi dell'alberi sono loro gratissimo cibo; anno in odio i ratti; le mosche si diletano del suo odore e posadosi li adosso, quello arrasta la pelle, e fa le pieghe strette, e l'uccide.

H. I 208]

Quando passano i fiumi, madano i figlioli diuerso il calar dell'acqua, se stando loro inverso l'erta ronpono il rapido corso dell'acqua, acioch'e'l corso non le menasse via; il drago se li gitta sotto il corpo, colla coda l'annoda le gäbe, coll'alie e colle braccia anche li tignie le coste e coi denti lo scanna, el liofante li cade adosso o il drago scoppia, e così colla sua morte del nemico si uédica.

## IL DRAGONE.

Questi s'accopagnano insieme e si tessano a uso di radici, e colla testa leuata passano i paduli, e notano dove trouano migliore pastura, e se così non si vnissero,

H. I 21a]

annegherebbero; così fa la unitione.

## SERPÈTE.

Il serpète, grädissimo animale, quando vede alcuno ucciello per l'aria, tira a se si forte il fiato, che si tira gli uccielli in bocca; Marco, Regulo, consule dello esercito Roma no, fu col suo esercito da un simile animale assalito e quasi rotto, il quale animale, essendo morto per una machina mvrale, fu misurato 123 piedi, cioè 64 braccia e  $\frac{1}{2}$ ; avazava colla testa tutte le piante d'una selua.

raising the bottom that he may easily get out. They greatly dread the noise of swine and fly in confusion, doing no less harm then, with their feet, to their own kind than to the enemy. They delight in rivers and are always wandering about near them, though on account of their great weight they cannot swim. They devour stones, and the trunks of trees are their favourite food. They have a horror of rats. Flies delight in their smell and settle on their back, and the beast scrapes its skin making its folds even and kills them.

## 1248.

When they cross rivers they send their young ones up against the stream of the water; thus, being set towards the fall, they break the united current of the water so that the current does not carry them away. The dragon flings itself under the elephant's body, and with its tail it ties its legs; with its wings and with its arms it also clings round its ribs and cuts its throat with its teeth, and the elephant falls upon it and the dragon is burst. Thus, in its death it is revenged on its foe.

## THE DRAGON.

These go in companies together, and they twine themselves after the manner of roots, and with their heads raised they cross lakes, and swim to where they find better pasture; and if they did not thus combine

## 1249.

they would be drowned, therefore they combine.

## THE SERPENT.

The serpent is a very large animal. When it sees a bird in the air it draws in its breath so strongly that it draws the birds into its mouth too. Marcus Regulus, the consul of the Roman army was attacked, with his army, by such an animal and almost defeated. And this animal, being killed by a catapult, measured 123 feet, that is  $64\frac{1}{2}$  braccia and its head was high above all the trees in a wood.

## BOIE.

<sup>15</sup> Questa è grā biscia, la quale cō se mede<sup>10</sup>sima si aggrappa alle ganbe della vacca in mo<sup>17</sup>do nō si move, poi la tetta in modo che quasi <sup>18</sup>la dissecca; di questa spezie a tēpo di Claudio <sup>19</sup>íperatore nel mōte Vaticano ne fu morta

H.I 21 8]

vna che avea vno putto intero in corpo <sup>2</sup>il quale avea trāghiotto

## MACLI. ¶PEL SONNO È GIŪTO.

<sup>4</sup> Questa bestia nascie in Scādinavia isola; sà forma di grā cavallo, se nō che la <sup>6</sup>grā lūghezza dello collo e delli orechi lo vari-<sup>7</sup>ano; pascie l'erba allo indietro, perchè à si <sup>8</sup>lugo il labro di sopra che pasciēdo inā<sup>9</sup>zi coprirebbe l'erba; à le gābe d'ū pezzo; <sup>10</sup>per questo, quādo vuol dormire s'appoggia <sup>11</sup>a vno albero, e i cacciatori, átivedēdo <sup>12</sup>il loco vsato a dormire, segā quasi tutta <sup>13</sup>la piāta, e quādo questo poi vi s'appoggia <sup>14</sup>nel dormire, per lo sonno cade, e i cac-<sup>ciato<sup>15</sup>ri</sup> così lo piglano, e ogni altro modi di pi<sup>16</sup>glarlo è vano, perchè è d'incredibile velocità <sup>17</sup>nel correre.

H.I 22 a)

## BONASO NOCE COLLA FUGA.

<sup>2</sup> Questo nascie in Peonia; à collo <sup>3</sup>cō crini simile al cauallo, in tutte <sup>4</sup>l'altre parti è simile al toro, saluo <sup>5</sup>che le sue corna sono in modo piegate <sup>6</sup>indētro, che nō può cozzare, e per questo <sup>7</sup>non à altro scampo che la fuga, nella <sup>8</sup>quale getta sterco per spatio di 400 <sup>9</sup>braccia del suo corso, il quale, dove to<sup>10</sup>cca, abbrucia come foco.

## LEONI, PARDI, PATERE, TIGRI.

<sup>12</sup> Questi tēgono l'úgie nella guaina, e mai <sup>13</sup>le sfoderanno, se non è adosso alla preda o ne<sup>14</sup>mico.

## THE BOA(?)

This is a very large snake which entangles itself round the legs of the cow so that it cannot move and then sucks it, in such wise that it almost dries it up. In the time of Claudius the Emperor, there was killed, on the Vatican Hill,

## 1250.

one which had inside it a boy, entire, that it had swallowed.

## THE MACLI.—CAUGHT WHEN ASLEEP.

This beast is born in Scandinavia. It has the shape of a great horse, excepting that the great length of its neck and of its ears make a difference. It feeds on grass, going backwards, for it has so long an upper lip that if it went forwards it would cover up the grass. Its legs are all in one piece; for this reason when it wants to sleep it leans against a tree, and the hunters, spying out the place where it is wont to sleep, saw the tree almost through, and then, when it leans against it to sleep, in its sleep it falls, and thus the hunters take it. And every other mode of taking it is in vain, because it is incredibly swift in running.

## 1251.

## THE BISON WHICH DOES INJURY IN ITS FLIGHT.

This beast is a native of Paeonia and has a neck with a mane like a horse. In all its other parts it is like a bull, excepting that its horns are in a way bent inwards so that it cannot butt; hence it has no safety but in flight, in which it flings out its excrement to a distance of 400 braccia in its course, and this burns like fire wherever it touches.

## LIONS, PARDS, PANTHERS, TIGERS.

These keep their claws in the sheath, and never put them out unless they are on the back of their prey or their enemy.

<sup>12</sup>. e 64 bre  $\frac{1}{2}$ . <sup>15</sup>. bisscie. <sup>16</sup>. sagluppa . . della vecha imo. <sup>17</sup>. imodo. <sup>18</sup>. ladiseza. <sup>19</sup>. íperadore . . morta.

## LEONESSA.

<sup>16</sup>Quādo la leonessa difēde i figli<sup>17</sup>oli dalle mā de' cacciatori, per nō si spauē<sup>18</sup>tare dalli spiedi, abbassa li ochi a terra <sup>19</sup>acciochē, per la sua fuga i figli nō sieno <sup>20</sup>pri-gioni.

H. I 228]

## LEONE.

<sup>2</sup>Questo si terribile animale niēte teme <sup>3</sup>piv che lo strepido delle vuote carrette <sup>4</sup>e simile il cāto de' galli, e teme a<sup>5</sup>ssai nel uederli e con pauroso a<sup>6</sup>spetto riguarda la sua cresta; <sup>7</sup>e forte invilisce, quādo à coper<sup>8</sup>to il uolto.

## PĀTERE IN AFRICA.

<sup>10</sup>Questo à forma di leonessa, ma è <sup>11</sup>piv alta di gābe, e piv sottile, e lūga; <sup>12</sup>è tutta biāca e punteggiata di ma<sup>13</sup>chie nere a modo di rosette, e di que<sup>14</sup>sta si diletano tutti li animali di <sup>15</sup>vedere, e senpre le starebbero dintorno, <sup>16</sup>se nō fusse la terribilità del suo viso,

H. I 23a]

onde essa, questo conosciēdo, ascō<sup>2</sup>de il uiso, e li animali circūstāti <sup>3</sup>s'assicurano e fannosi vicini per me<sup>4</sup>glio potere fruire tāta bellezza, ò<sup>5</sup>de questa subito piglia il piv uici-<sup>6</sup>no e subito lo diuora.

## CAMELLI.

<sup>8</sup>Quegli Battriani ànno 2 gobbi, <sup>9</sup>gli Arabi uno solo; sono veloci in battaglia <sup>10</sup>e vtilissimi a portare le some; <sup>11</sup>questo animale à regoli e misura <sup>12</sup>oseruātissima, perchè nō si move se à <sup>13</sup>piv carico che l'usato, e se fa piv <sup>14</sup>uiaggio fa il simile, subito si ferma, <sup>15</sup>òde li bisognia a mercatāti allog-<sup>16</sup>giare.

H. I 23b]

## TIGRO.

<sup>2</sup>Questa nascie in Ircania, la quale è simile alquāto alla pātera per le <sup>4</sup>diuerse machie della sua pelle, ed è anismale di

1252.

## THE LIONESS.

When the lioness defends her young from the hand of the hunter, in order not to be frightened by the spears she keeps her eyes on the ground, to the end that she may not by her flight leave her young ones prisoners.

1252.

## THE LION.

This animal, which is so terrible, fears nothing more than the noise of empty carts, and likewise the crowing of cocks. And it is much terrified at the sight of one, and looks at its comb with a frightened aspect, and is strangely alarmed when its face is covered.

## THE PANTHER IN AFRICA.

This has the form of the lioness but it is taller on its legs and slimmer and long bo-died; and it is all white and marked with black spots after the manner of rosettes, and all animals delight to look upon these rosettes, and they would always be standing round it if it were not for the terror of its face;

1253.

therefore knowing this, it hides its face, and the surrounding animals grow bold and come close, the better to enjoy the sight of so much beauty; when suddenly it seizes the nearest and at once devours it.

## CAMELS.

The Bactrian have two humps; the Arabian one only. They are swift in battle and most useful to carry burdens. This animal is extremely observant of rule and measure, for it will not move if it has a greater weight than it is used to, and if it is taken too far it does the same, and suddenly stops and so the merchants are obliged to lodge there.

1254.

## THE TIGER.

This beast is a native of Hyrcania, and it is something like the panther from the various spots on its skin. It is an animal

1252. 2. teribile. 3. chello . . vote carette. 4. essimile . . etteme. 6. cressta. 7. efforte invilisce. 11. ellūga. 12. etuttua biācha e punegiata. 15. starebō ditorno. 16. fusi . . teribilita.

**1255.** Leonardo undoubtedly derived these remarks as to the Catoblepas from Pliny, Hist. Nat. VIII. 21 (al. 32): *Ajud Hesperios Aethiopas fons est Nigris* (different readings), *ut plerique existimavere, Nili caput — — — Juxta hunc fera appellatur catoblepas, modica alioquin, ceterisque membris iners, caput tantum praegrave aegre ferens; alias internicio humani generis, omnibus*

of terrible swiftness; the hunter when he finds its young ones carries them off hastily, placing mirrors in the place whence he takes them, and at once escapes on a swift horse. The panther returning finds the mirrors fixed on the ground and looking into them believes it sees its young; then scratching with its paws it discovers the cheat. Forthwith, by means of the scent of its young, it follows the hunter, and when this hunter sees the tigress he drops one of the young ones and she takes it, and having carried it to the den she immediately returns to the hunter and does

1255.

the same till he gets into his boat.

## CATOBLEPAS.

It is found in Ethiopia near to the source Nigricapo. It is not a very large animal, is sluggish in all its parts, and its head is so large that it carries it with difficulty, in such wise that it always droops towards the ground; otherwise it would be a great pest to man, for any one on whom it fixes its eyes dies immediately.

## THE BASILISK.

This is found in the province of Cyrenaica and is not more than 12 fingers long. It has on its head a white spot after the fashion of a diadem. It scares all serpents with its whistling. It resembles a snake, but does not move by wriggling but from the centre forwards to the right. It is said that one

1256.

of these, being killed with a spear by one who was on horse-back, and its venom flowing on the spear, not only the man but the horse also died. It spoils the wheat and not only that which it touches, but where it breathes the grass dries and the stones are split.

*qui oculos ejus videre, confestim morientibus.* Aelian, *Hist. An.* gives a far more minute description of the creature (*τὸ κατύβλεπτον*), but he says that it poisons beasts not by its gaze, but by its venomous breath. Athenaeus 221 B, mentions both. If Leonardo had known of these two passages, he would scarcely have omitted the poisonous breath. (H. MÜLLER-STRÜBING.)

## DONNOLA OVER BELLULA.

<sup>8</sup> Questa · trovādo · la tana · del basilisco, coll' o<sup>9</sup>dore della · sua · sparsa · orina l'uccide; l'o<sup>10</sup>dore della quale orina · ácora spesse volte <sup>11</sup>essa donola occide.

## CERASTE.

<sup>13</sup> Queste · ànno quattro · piccoli corni mobili; <sup>14</sup>onde quâdo si uogliono · cibare, nascôda<sup>15</sup>no sotto · le foglie tutta la persona, sal<sup>16</sup>vo · esse cornicina ·, le quali movêdo pare<sup>17</sup>agli ucielli quelli essere piccoli uermini <sup>18</sup>che scherzino, òde subito si calano per beccar<sup>19</sup>li; e questa subito s'avviluppa loro in cier<sup>20</sup>chio, e esse lì diuora.

H. I 25a]

## AMPHEBENE.

<sup>2</sup> Questa · à · due teste ·, l'una nel suo loco, l'al<sup>3</sup>tra nella · coda ·, come se nō bastasse che <sup>4</sup>da uno solo loco gittasse il ueneno. ·

## IACULO.

<sup>6</sup> Questa · sta sopra · le piâte ·, e si lancia · come <sup>7</sup>dardo; e passa a trauerso le fere, e l'uccide.

## ASPIDO.

<sup>9</sup> Il morso · di questo · animale · non à · ri-medio, <sup>10</sup>se nō di subito · tagliare · le parti morsse; Questo <sup>11</sup>si pestifero · animale · à tale affetione nella <sup>12</sup>sua còpagnia · che sempre vanno accòpagnati, <sup>13</sup>chè se per disgratia · l'uno di loro è morto ·, l'al<sup>14</sup>tro con incredibile velocità seguita l'ucci<sup>15</sup>ditore, ed è tâto attêto e sollecito alla vêdetta, <sup>16</sup>che vîcie · ogni difficoltà ·; passando ogni eser<sup>17</sup>cito, solo il suo nemico cierca · offendere; <sup>18</sup>e passa ogni spatio, e nō si può schifarlo, se nō <sup>19</sup>col passare l'acque · e cō velocissima fuga; <sup>20</sup>à li ochi idêtro e grâdi orechi, e piv lo move l'uditio che 'l uedere.

## THE WEASEL.

This beast finding the lair of the basilisk kills it with the smell of its urine, and this smell, indeed, often kills the weasel itself.

## THE CERASTES.

This has four movable little horns; so, when it wants to feed, it hides under leaves all of its body except these little horns which, as they move, seem to the birds to be some small worms at play. Then they immediately swoop down to pick them and the Cerastes suddenly twines round them and encircles and devours them.

1257.

## THE AMPHISBOENA.

This has two heads, one in its proper place the other at the tail; as if one place were not enough from which to fling its venom.

## THE IACULUS.

This lies on trees, and flings itself down like a dart, and pierces through the wild beast and kills them.

## THE ASP.

The bite of this animal cannot be cured unless by immediately cutting out the bitten part. This pestilential animal has such a love for its mate that they always go in company. And if, by mishap, one of them is killed the other, with incredible swiftness, follows him who has killed it; and it is so determined and eager for vengeance that it overcomes every difficulty, and passing by every troop it seeks to hurt none but its enemy. And it will travel any distance, and it is impossible to avoid it unless by crossing water and by very swift flight. It has its eyes turned inwards, and large ears and it hears better than it sees.

1258.

## THE ICNEUMON.

This animal is the mortal enemy of the asp. It is a native of Egypt and when it sees an asp near its place, it runs at once to the bed or mud of the Nile and with this makes itself muddy all over, then it dries

sole, di no<sup>7</sup>vo di fango s'inbratta; e così seguitando l'ù do<sup>8</sup>po l'altro si fa tre o 4 veste a similitudine <sup>9</sup>di corazza, e dipoi assalta l'asrido, e bē cō<sup>10</sup>testa co quello in modo che, tolto il tēpo, <sup>11</sup>se li caccia in gola e l'annega.

#### CROCODILLO.

<sup>13</sup>Questo nascie nel Nilo, à 4 piedi, vi<sup>14</sup>ve in terra e in acqua, nè altro terrestre <sup>15</sup>animale si trova senza lingua che questo; <sup>16</sup>e solo morde movēdo la mascella di sopra; <sup>17</sup>crescie insino in 40 piedi, è unghiatto, <sup>18</sup>armato di corame, atto a ogni colpo; el dì <sup>19</sup>sta in terra, e la notte in acqua; questo, <sup>20</sup>cibato di pesci, s'adormēta sulla riua del <sup>21</sup>Nilo colla bocca aperta e l'uccielo detto

H. I. 26a]

trochilo, piccolissimo uccielo, subito li <sup>2</sup>corre alla bocca e, saltatoli fra denti <sup>3</sup>dentro, e' fora leva beccando il rimaso <sup>4</sup>cibo; e così stuzzicādolo cō dilettevole <sup>5</sup>voluttà lo inuita aprire tutta la bocca, <sup>6</sup>e così s'adormēta; questo veduto <sup>7</sup>dal icneumone subito si li slācia in bocca, <sup>8</sup>e foratoli lo stomaco e le budelle finalmēte <sup>9</sup>l'uccide.

#### DELFINI.

<sup>11</sup>La natura à dato tal cognitione alli ani <sup>12</sup>mali che, oltre allo conoscere la lor comodità, conoscono la incomodità del nimirico; onde intède il delfino quāto <sup>15</sup>valglia il taglio delle sue penne, posteli <sup>16</sup>sulla schiena, e quāto sia tenera la pācia <sup>17</sup>del cocodrillo; onde nel lor cōbattere se li <sup>18</sup>caccia sotto e tagliali la pācia, e così <sup>19</sup>l'uccide.

<sup>20</sup>Il cocodrillo è terribile a chi fuggie, e vilis<sup>21</sup>simo a chi lo caccia.

H. I. 26b]

1259.

#### IPPOPOTAMO.

<sup>2</sup>Questo quando si sente aggravato va ciercando le spine, o dove siā i rimaneati de tagliati canneti, e li tāto frega vna

lasspido, <sup>10</sup>tasta . . imodo chettolto, <sup>11</sup>cacia . . ella niega, <sup>13</sup>nasscie . . piedi nvc vi, <sup>14</sup>ce in terra e in acq<sup>"a</sup>" [e sua] ne . . tereste, <sup>15</sup>checquesto, <sup>16</sup>massciella, <sup>17</sup>cresscie . . vngliato, <sup>18</sup>[vestito] "armato" di . . atto ogni, <sup>19</sup>ella notte, <sup>20</sup>pessci, <sup>20</sup>bocha . . elluciello.  
<sup>1259.</sup> <sup>1</sup>troculo piccholissimo uccielo, <sup>2</sup>bocha essaltatoli, <sup>3</sup>effora liva bechando, <sup>4</sup>cibo e e così stuzzicādolo, <sup>5</sup>lonuita . . bocha, <sup>7</sup>daleleumone . . si linācia in bocca, <sup>8</sup>elle, <sup>9</sup>luccide [essimile al ramarro vergezzo], <sup>12</sup>alo nassciere, <sup>13</sup>cognioscano, <sup>15</sup>pene, <sup>16</sup>sula sciena . . pāca, <sup>17</sup>nellar, <sup>18</sup>ettagliali, <sup>20</sup>etteribile acci fuggie e vili accilo.  
<sup>1260.</sup> <sup>1</sup>hippotamo, <sup>2</sup>aggravato, <sup>3</sup>cierchando . . sia, <sup>4</sup>caneti elli, <sup>5</sup>chauato . . chelli . . cola lita, <sup>6</sup>risaldala, <sup>7</sup>lūgia, <sup>8</sup>ciglare

itself in the sun, smears itself again with mud, and thus, drying one after the other, it makes itself three or four coatings like a coat of-mail. Then it attacks the asp, and fights well with him, so that, taking its time it catches him in the throat and destroys him.

#### THE CROCODILE.

This is found in the Nile, it has four feet and lives on land and in water. No other terrestrial creature but this is found to have no tongue, and it only bites by moving its upper jaw. It grows to a length of forty feet and has claws and is armed with a hide that will take any blow. By day it is on land and at night in the water. It feeds on fishes, and going to sleep on the bank of the Nile with its mouth open, a bird called

1259.

trochilus, a very small bird, runs at once to its mouth and hops among its teeth and goes pecking out the remains of the food, and so inciting it with voluptuous delight tempts it to open the whole of its mouth, and so it sleeps. This being observed by the ichneumon it flings itself into its mouth and perforates its stomach and bowels, and finally kills it.

#### THE DOLPHIN.

Nature has given such knowledge to animals, that besides the consciousness of their own advantages they know the disadvantages of their foes. Thus the dolphin understands what strength lies in a cut from the fins placed on his chine, and how tender is the belly of the crocodile; hence in fighting with him it thrusts at him from beneath and rips up his belly and so kills him.

The crocodile is a terror to those that flee, and a base coward to those that pursue him.

1260.

#### THE HIPPOPOTAMUS.

This beast when it feels itself over-full goes about seeking thorns, or where there may be the remains of canes that have been

veſna che la taglia, e cauato il sangue, che li <sup>6</sup>bisognia, colla litta s'infanga, e risalta alla <sup>7</sup>piaggia; à forma quasi come cavallo; l'ūghia, <sup>8</sup>fessa, coda torta, e dēti di cīghiale; collo cō <sup>9</sup>criñi la pelle; nō si può passare, se nō si ba<sup>10</sup>gnia.; pasciesi di piāte ne'cāpi, entravi <sup>11</sup>allo dirieto, acciochè pare ne sia uscito.

## IBIS.

<sup>13</sup>Questo à similitudine colla cicognia, e quan<sup>14</sup>do si sente ammalato, épie il gozzo d'acqua, <sup>15</sup>e col becco si fa vn clistero.

## CIERUI.

<sup>17</sup>Questo quando si sente morso dal ragno <sup>18</sup>detto falangio māgia de' grāchi, e si libera <sup>19</sup>di tale veneno.

H. I. 27a]

## 1261.

## LUCERTE.

<sup>2</sup>Questa quādo cōbatte colle serpi <sup>3</sup>mangia la cicierbita; e sō libere.

## RONDINE.

<sup>5</sup>Questa rende il uedere alli orbiti <sup>6</sup>figlioli col sugo della celidonia.

## BELLULA.

<sup>8</sup>Questa quando caccia ai ratti, māgia <sup>9</sup>prima della ruta.

## CINGHIALE.

<sup>11</sup>Questo medica i sua mali mangiādo <sup>12</sup>della edera.

## SERPE.

<sup>14</sup>Questa quādo si uol renovare, gitta il <sup>15</sup>vechio scoglio, comicidāsio dalla testa; <sup>16</sup>mviasi in vn dì e vna notte.

## PARTERA.

<sup>18</sup>Questa, poichè le sono uscite l'interiora, <sup>19</sup>ancora combatte coi cani e cacciatori.

split, and it rubs against them till a vein is opened; then when the blood has flowed as much as he needs, he plasters himself with mud and heals the wound. In form he is something like a horse with long haunches, a twisted tail and the teeth of a wild boar, his neck has a mane; the skin cannot be pierced, unless when he is bathing; he feeds on plants in the fields and goes into them backwards so that it may seem, as though he had come out.

## THE IBIS.

This bird resembles a crane, and when it feels itself ill it fills its craw with water, and with its beak makes an injection of it.

## THE STAG.

These creatures when they feel themselves bitten by the spider called father-long-legs, eat crabs and free themselves of the venom.

## 1261.

## THE LIZARD.

This, when fighting with serpents eats the sow-thistle and is free.

## THE SWALLOW.

This [bird] gives sight to its blind young ones, with the juice of the celandine.

## THE WEASEL.

This, when chasing rats first eats of rue.

## THE WILD BOAR.

This beast cures its sickness by eating of ivy.

## THE SNAKE.

This creature when it wants to renew itself casts its old skin, beginning with the head, and changing in one day and one night.

## THE PANTHER.

This beast after its bowels have fallen out will still fight with the dogs and hunters.

9. si po passare. 10. passiesi . . biāde. 11. vsscito. 13. assimilitudine . . ciguognia ecq"ā". 14. amalato . . il cozo dacque. 15. e chol becho . . cristero. 18. falange . . grāci essi.

## 1262.

## CAMELEONTE.

<sup>2</sup>Questo piglia senpre il colore della cosa <sup>3</sup>dove si posa; onde insieme colle frōdi <sup>4</sup>dove si posano, spesso dali elefanti sō diuorati.

## CORBO.

<sup>6</sup>Questo quando à ucciso el cameleonte <sup>7</sup>si purga coll'alloro.

H. I 48 δ]

## 1263.

¶Moderanza raffrena tutti i vitj.

<sup>2</sup>L'ermelino prima morire che imbrat-<sup>3</sup>tarsi.

## DELL'ANTIUEDERE.

<sup>5</sup>Il gallo nō cāta, se prima <sup>3</sup>volte nō batte <sup>6</sup>l'alie; il papagalo nel mutarsi pe'rami <sup>7</sup>nō mette i piē, doue non à prima <sup>8</sup>messo il becco; <sup>9</sup>¶il uoto nascie quādo la sperāza more.

<sup>10</sup>Il moto seguita il ciētro del peso.

H. 3 53 α]

## 1264.

## MAGNANIMITA.

Il falcone nō pi<sup>2</sup>glia se nō vcelli grossi, e prima <sup>3</sup>more che māgiare carne di nō bono odore.

1262. 6. questo . . cameleont.

1263. 2. cheēbra. 8. becho. 9. nasscie. 10. mot seguita.

## THE CHAMELEON.

This creature always takes the colour of the thing on which it is resting, whence it is often devoured together with the leaves on which the elephant feeds.

## THE RAVEN.

When it has killed the Chameleon it takes laurel as a purge.

Moderation checks all the vices.

The ermine will die rather than besmirch itself.

## OF FORESIGHT.

The cock does not crow till it has thrice flapped its wings; the parrot in moving among boughs never puts its feet excepting where it has first put its beak. Vows are not made till Hope is dead.

Motion tends towards the centre of gravity.

## MAGNANIMITY.

The falcon never seizes any but large birds and will sooner die than eat [tainted] meat of bad savour.

1264. 2. vcelli. 3. chare.

#### 1265.

##### FAVOLA.

<sup>2</sup>Sendo l'ostrica insieme colli altri <sup>3</sup>pepsi in casa del pescatore scaricata vicino al mare, priega il ratto, <sup>5</sup>che al mare la cōduca; il ratto fatto <sup>6</sup>disegnio di māgiarla la fa aprire, <sup>7</sup>e mordēdola questa li serra la testa <sup>8</sup>e si lo ferma; viene la gatta e l'uccide.

C. A. 115a; 357a]

##### FAVOLA.

<sup>2</sup>I tordi si rallegraron forte, vedēdo che l'omo prese la ciuetta <sup>3</sup>e le tolse la libertà, quella legando con forti legami ai sua piedi; la <sup>4</sup>qual ciuetta fu poi mediante il uischio causa nō di far perdere <sup>5</sup>la libertà ai tordi, ma la loro propia vita.; detta per quelle <sup>6</sup>terre che si rallegrā di uedere perdere la libertà ai loro maggio<sup>7</sup>ri, mediante i quali poi perdonò il soccorso, e rimāgono legati in potētia del loro nemico, lasciando la libertà e spesse volte la uita.

##### A FABLE.

An oyster being turned out together with other fish in the house of a fisherman near the sea, he entreated a rat to take him to the sea. The rat purposing to eat him bid him open; but as he bit him the oyster squeezed his head and closed; and the cat came and killed him.

#### 1266.

##### A FABLE.

The thrushes rejoiced greatly at seeing a man take the owl and deprive her of liberty, tying her feet with strong bonds. But this owl was afterwards by means of bird-lime the cause of the thrushes losing not only their liberty, but their life. This is said for those countries which rejoice in seeing their governors lose their liberty, when by that means they themselves lose all succour, and remain in bondage in the power of their enemies, losing their liberty and often their life.

1267.

## A FABLE.

A dog, lying asleep on the fur of a sheep, one of his fleas, perceiving the odour of the greasy wool, judged that this must be a land of better living, and also more secure from the teeth and nails of the dog than where he fed on the dog; and without farther reflection he left the dog and went into the thick wool. There he began with great labour to try to pass among the roots of the hairs; but after much sweating had to give up the task as vain, because these hairs were so close that they almost touched each other, and there was no space where fleas could taste the skin. Hence, after much labour and fatigue, he began to wish to return to his dog, who however had already departed; so he was constrained after long repentance and bitter tears, to die of hunger.

1268.

## A FABLE.

The vain and wandering butterfly, not content with being able to fly at its ease through the air, overcome by the tempting flame of the candle, decided to fly into it; but its sportive impulse was the cause of a sudden fall, for its delicate wings were burnt in the flame. And the hapless butterfly having dropped, all scorched, at the foot of the candlestick, after much lamentation and repentance, dried the tears from its swimming eyes, and raising its face exclaimed: O false light! how many must thou have miserably deceived in the past, like me; or if I must indeed see light so near, ought I not to have known the sun from the false glare of dirty tallow?

## A FABLE.

The monkey, finding a nest of small birds, went up to it greatly delighted. But they, being already fledged, he could only succeed in taking the smallest; greatly delighted he took it in his hand and went to his abode; and having begun to look at the

little bird he took to kissing it, and from excess of love he kissed it so much and turned it about and squeezed it till he killed it. This is said for those who by not punishing their children let them come to mischief.

1269.

## A FABLE.

A rat was besieged in his little dwelling by a weasel, which with unwearied vigilance awaited his surrender, while watching his imminent peril through a little hole. Meanwhile the cat came by and suddenly seized the weasel and forthwith devoured it. Then the rat offered up a sacrifice to Jove of some of his store of nuts, humbly thanking His providence, and came out of his hole to enjoy his lately lost liberty. But he was instantly deprived of it, together with his life, by the cruel claws and teeth of the lurking cat.

1270.

## A FABLE.

The ant found a grain of millet. The seed feeling itself taken prisoner cried out to her: "If you will do me the kindness to allow me accomplish my function of reproduction, I will give you a hundred such as I am." And so it was.

A Spider found a bunch of grapes which for its sweetness was much resorted to by bees and divers kinds of flies. It seemed to her that she had found a most convenient spot to spread her snare, and having settled herself on it with her delicate web, and entered into her new habitation, there, every day placing herself in the openings made by the spaces between the grapes, she fell like a thief on the wretched creatures which were not aware of her. But, after a few days had passed, the vintager came, and cut away the bunch of grapes and put it with others, with which it was trodden; and thus the grapes were a snare and pitfall both for the treacherous spider and the betrayed flies.

An ass having gone to sleep on the ice over a deep lake, his heat dissolved the ice and the ass awoke under water to his great grief, and was forthwith drowned.

<sup>26</sup> Il falcone ; nō potendo sopportare cō patiēta <sup>27</sup> il nascōdere che fa l'anitra, fu-giēdo se le dināzi <sup>28</sup> e entrādo sotto . acqua ; volle, come quelle, sott'acqua <sup>29</sup> seguitare, e bagniatosi le penne rimase in essa <sup>30</sup> acqua ; e l'anitra, leuatasi in aria , scherne <sup>31</sup> il falcone che annegava.

<sup>32</sup> Il ragnio , volendo · pigliare · la mosca cō sue <sup>33</sup> false · reti , fu · sopra · quelle · dal calabrone <sup>34</sup> crudelmēte morto.

<sup>35</sup> Volendo · l'aquila · schernire · il gufo, rimase <sup>36</sup> coll'alie · inpaniata , e fu dall'omo · presa e morta.

#### FAUOLA.

<sup>2</sup>Vsciendo vn giorno il rasojo · di quel manico, col quale si fa gvaina a se mede-simo, <sup>3</sup>e postosi al sole , vide il sole spe-chiarsi nel suo corpo; della qual cosa prese somma gloria, <sup>4</sup>e rivolto col pensiero · in-dirieto · cominciò cō seco medesimo · a dire: Or tornerò io <sup>5</sup>piv a quella bottega della quale novamēte uscito · sono <sup>6</sup> cierto · no · ; nō piaccia alli Dei che <sup>6</sup>si splendida bellezza caggia in tāta viltà d'animo! che pazzia sarebbe quella, la qual mi cōdus-cesse a radere le insaponate barbe de' ru-stici villani · e fare mecaniche operationi! <sup>8</sup>è questo corpo da simili eserciti? cierto

1271.

A falcon, unable to endure with patience the disappearance of a duck, which, flying before him had plunged under water, wished to follow it under water, and having soaked his feathers had to remain in the water while the duck rising to the air mocked at the falcon as he drowned.

The spider wishing to take flies in her treacherous net, was cruelly killed in it by the hornet.

An eagle wanting to mock at the owl was caught by the wings in bird-lime and was taken and killed by a man.

1271.

The water finding that its element was the lordly ocean, was seized with a desire to rise above the air, and being encouraged by the element of fire and rising as a very subtle vapour, it seemed as though it were really as thin as air. But having risen very high, it reached the air that was still more rare and cold, where the fire forsook it, and the minute particles, being brought together, united and became heavy; whence its haughtiness deserting it, it betook itself to flight and it fell from the sky, and was drunk up by the dry earth, where, being imprisoned for a long time, it did penance for its sin.

1272.

#### A FABLE.

The razor having one day come forth from the handle which serves as its sheath and having placed himself in the sun, saw the sun reflected in his body, which filled him with great pride. And turning it over in his thoughts he began to say to himself: "And shall I return again to that shop from which I have just come? Certainly not; such splendid beauty shall not, please God, be turned to such base uses. What folly it would be that could lead me to shave the lathered beards of rustic peasants and perform such menial service! Is this body destined for such work? Certainly not. I will hide myself in some retired spot and

there pass my life in tranquil repose." And having thus remained hidden for some months, one day he came out into the air, and issuing from his sheath, saw himself turned to the similitude of a rusty saw while his surface no longer reflected the resplendent sun. With useless repentance he vainly deplored the irreparable mischief saying to himself: "Oh! how far better was it to employ at the barbers my lost edge of such exquisite keenness! Where is that lustrous surface? It has been consumed by this vexatious and unsightly rust."

The same thing happens to those minds which instead of exercise give themselves up to sloth. They are like the razor here spoken of, and lose the keenness of their edge, while the rust of ignorance spoils their form.

## A FABLE.

A stone of some size recently uncovered by the water lay on a certain spot somewhat raised, and just where a delightful grove ended by a stony road; here it was surrounded by plants decorated by various flowers of divers colours. And as it saw the great quantity of stones collected together in the roadway below, it began to wish it could let itself fall down there, saying to itself: "What have I to do here with these plants? I want to live in the company of those, my sisters." And letting itself fall, its rapid course ended among these longed for companions. When it had been there sometime it began to find itself constantly toiling under the wheels of the carts the iron-shod feet of horses and of travellers. This one rolled it over, that one trod upon it; sometimes it lifted itself a little and then it was covered with mud or the dung of some animal, and it was in vain that it looked at the spot whence it had come as a place of solitude and tranquil place.

Thus it happens to those who choose to leave a life of solitary contemplation, and come to live in cities among people full of infinite evil.

1273.

Some flames had already lasted in the furnace of a glass-blower, when they saw a candle approaching in a beautiful and glittering candlestick. With ardent longing they strove to reach it; and one of them, quitting its natural course, writhed up to an unburnt brand on which it fed and passed at the opposite end out by a narrow chink to the candle which was near. It flung itself upon it, and with fierce jealousy and greediness it devoured it, having reduced it almost to death, and, wishing to procure the prolongation of its life, it tried to return to the furnace whence it had come. But in vain, for it was compelled to die, the wood perishing together with the candle, being at last converted, with lamentation and repentance, into foul smoke, while leaving all its sisters in brilliant and enduring life and beauty.

1274.

A small patch of snow finding itself clinging to the top of a rock which was lying on the topmost height of a very high mountain and being left to its own imaginings, it began to reflect in this way, saying to itself: "Now, shall not I be thought vain and proud for having placed myself—such a small patch of snow—in so lofty a spot, and for allowing that so large a quantity of snow as I have seen here around me, should take a place lower than mine? Certainly my small dimensions by no means merit this elevation. How easily may I, in proof of my insignificance, experience the same fate as that which the sun brought about yesterday to my companions, who were all, in a few hours, destroyed by the sun. And this happened from their having placed themselves higher than became them. I will flee from the wrath of the sun, and humble myself and find a place befitting my small importance." Thus, flinging itself down, it began to descend, hurrying from its high home on to the other snow; but the more it sought a low place

the more its bulk increased, so that when at last its course was ended on a hill, it found itself no less in size than the hill which supported it; and it was the last of the snow which was destroyed that summer by the sun. This is said for those who, humbling themselves, become exalted.

## 1275.

The cedar, being desirous of producing a fine and noble fruit at its summit, set to work to form it with all the strength of its sap. But this fruit, when grown, was the cause of the tall and upright tree-top being bent over.

The peach, being envious of the vast quantity of fruit which she saw borne on the nut-tree, her neighbour, determined to do the same, and loaded herself with her own in such a way that the weight of the fruit pulled her up by the roots and broke her down to the ground.

## A FABLE.

A nut, having been carried by a crow to the top of a tall campanile and released by falling into a chink from the mortal grip of its beak, it prayed the wall by the grace bestowed on it by God in allowing it to be so high and thick, and to own such fine bells and of so noble a tone, that it would succour it, and that, as it had not been able to fall under the verdurous boughs of its venerable father and lie in the fat earth covered up by his fallen leaves it would not abandon it; because, finding itself in the beak of the cruel crow, it had there made a vow that if it escaped from her it would end its life in a little hole. At these words the wall, moved to compassion, was content to shelter it in the spot where it had fallen; and after a short time the nut began to split open and put forth roots between the rifts of the stones and push them apart, and to throw out shoots from its hollow shell; and, to be brief, these rose above the building and the twisted roots, growing thicker, began to thrust the walls apart, and tear out the ancient stones from their old places. Then the wall too late and in vain bewailed the cause of its destruction and in a short time, it wrought the ruin of a great part of it.

## FAVOLA.

<sup>2</sup> Il rovistico , sendo stimolato nelli sua sottili · rami ripieni di novelli <sup>3</sup>frutti dai pugnici artigli e becco · delle importune merle, si do<sup>4</sup>leva cō pietoso · rammarichio · iuerso essa · merla, pregando quella <sup>5</sup>che, poichè lei li toglieva · e sua diletti · frutti, il merlo non le privasse <sup>6</sup>delle foglie, le quali lo difendevano · dai cocîeti · razzi del sole, e che coll'a<sup>7</sup>cute vnglie non la scorticasse e suestisse della · sua tenera · pelle; <sup>8</sup>Alla quale la merla con vilani râpognie rispose: o taci salua<sup>9</sup>tico · sterpo ! nō sai che la natura t'â fatto produrre · questi frutti <sup>10</sup>per mio notrimêto? nō uedi che sei al môdo per servirmi di tale cibo? <sup>11</sup>nō sai, vilano ·, che tu · farai in nella prossima iuernata notri- <sup>12</sup>mêto e cibo del fuoco ·? le quali parole ascoltate dal albero <sup>13</sup>patiêtemête, nō senza lacrime ·, jnfra poco tempo il merlo preso <sup>14</sup>dalla ragnia, e colti de' rami per fare gabbia per icarcerare esso merlo <sup>15</sup>toccò infra l'altri rami al sottile rovistico a fare legni minimi <sup>16</sup>della gabbia, le quali vedêdo essere causa della persa libertà del merlo, <sup>17</sup>rallegratasì mosse tale parole: O merlo · io sono qui non âcora <sup>18</sup>consumata, come dicievi, dal foco; prima vedrò te prigione, che tu me brugiata.

## FAVOLA.

<sup>20</sup>Veduto · il lavro · e mirto · tagliare il pero ·, con alta voce <sup>21</sup>gridarono: O pero ·, ove vai · tu? ov'è la superbia che aveui quâdo <sup>22</sup>avevi · i tua · maturi · frutti? ora nō ci farai · tu ôbra <sup>23</sup>colle tue · folte chiome ·; Allora · il pero · rispose: io ne ve<sup>24</sup>do l'agricola che mi taglia e mi porterà alla bottega d'ottimo <sup>25</sup>scultore, il quale mi farà con su' arte pigliare la forma <sup>26</sup>di Giove · Idio ·, e sarò dedicato nel tempio · e dagli omini <sup>27</sup>adorato · invece di Giove; e tu ti metti i pûto a rimanere <sup>28</sup>spesso storpiata · e pelata de' tua rami, i quali mi sieno <sup>29</sup>dali omini per onorarmi poste d'intorno.

## A FABLE.

The privet feeling its tender boughs loaded with young fruit, pricked by the sharp claws and beak of the insolent blackbird, complained to the blackbird with pitious remonstrance entreating her that since she stole its delicious fruits she should not deprive it of the leaves with which it preserved them from the burning rays of the sun, and that she should not divest it of its tender bark by scratching it with her sharp claws. To which the blackbird replied with angry upbraiding: "O, be silent, uncultured shrub! Do you not know that Nature made you produce these fruits for my nourishment; do you not see that you are in the world [only] to serve me as food; do you not know, base creature, that next winter you will be food and prey for the Fire?" To which words the tree listened patiently, and not without tears. After a short time the blackbird was taken in a net and boughs were cut to make a cage, in which to imprison her. Branches were cut, among others from the pliant privet, to serve for the small rods of the cage; and seeing herself to be the cause of the Blackbird's loss of liberty it rejoiced and spoke as follows: "O Blackbird, I am here, and not yet burnt by fire as you said. I shall see you in prison before you see me burnt."

## A FABLE.

The laurel and the myrtle seeing the pear tree cut down cried out with a loud voice: "O pear-tree! whither are you going? Where is the pride you had when you were covered with ripe fruits? Now you will no longer shade us with your mass of leaves." Then the pear-tree replied: "I am going with the husbandman who has cut me down and who will take me to the workshop of a good sculptor who by his art will make me take the form of Jove the god; and I shall be dedicated in a temple and adored by men in the place of Jove, while you are bound always to remain maimed and stripped of your boughs, which will be placed round me to do me honour.

The chesnut, seeing a man upon the fig-tree, bending its boughs down and pulling off the ripe fruits, which he put into his open mouth destroying and crushing them with his hard teeth, it tossed its long boughs and with a noisy rustle exclaimed: "O fig! how much less are you protected by nature than I. See how in me my sweet offspring are set in close array; first clothed in soft wrappers over which is the hard but softly lined husk; and not content with taking this care of me, and having given them so strong a shelter, on this she has placed sharp and close-set spines so that the hand of man cannot hurt me." Then the fig-tree and her offspring began to laugh and having laughed she said: "I know man to be of such ingenuity that with rods and stones and stakes flung up among your branches he will bereave you of your fruits; and when they are fallen, he will trample them with his feet or with stones, so that your offspring will come out of their armour, crushed and maimed; while I am touched carefully by their hands, and not like you with sticks and stones."

1279.

The hapless willow, finding that she could not enjoy the pleasure of seeing her slender branches grow or attain to the height she wished, or point to the sky, by reason of the vine and whatever other trees that grew near, but was always maimed and lopped and spoiled, brought all her spirits together and gave and devoted itself entirely to imagination, standing plunged in long meditation and seeking, in all the world of plants, with which of them she might ally herself and which could not need the help of her withes. Having stood for some time in this prolific imagination, with a sudden flash the gourd presented itself to her thoughts and tossing all her branches with extreme delight, it seemed to her that she had found the companion suited to her purpose, because the gourd is more apt to bind others than to need binding; having come to this conclusion

she awaited eagerly some friendly bird who should be the mediator of her wishes. Presently seeing near her the magpie she said to him: "O gentle bird! by the memory of the refuge which you found this morning among my branches, when the hungry cruel, and rapacious falcon wanted to devour you, and by that repose which you have always found in me when your wings craved rest, and by the pleasure you have enjoyed among my boughs, when playing with your companions or making love—I entreat you find the gourd and obtain from her some of her seeds, and tell her that those that are born of them I will treat exactly as though they were my own flesh and blood; and in this way use all the words you can think of, which are of the same persuasive purport; though, indeed, since you are a master of language, I need not teach you. And if you will do me this service I shall be happy to have your nest in the fork of my boughs, and all your family without payment of any rent." Then the magpie, having made and confirmed certain new stipulations with the willow,—and principally that she should never admit upon her any snake or polecat, cocked his tail, and put down his head, and flung himself from the bough, throwing his weight upon his wings; and these, beating the fleeting air, now here, now there, bearing about inquisitively, while his tail served as a rudder to steer him, he came to a gourd; then with a handsome bow and a few polite words, he obtained the required seeds, and carried them to the willow, who received him with a cheerful face. And when he had scraped away with his foot a small quantity of the earth near the willow, describing a circle, with his beak he planted the grains, which in a short time began to grow, and by their growth and the branches to take up all the boughs of the willow, while their broad leaves deprived it of the beauty of the sun and sky. And not content with so much evil, the gourds next began, by their rude hold, to drag the ends of the tender shoots down towards the earth, with strange twisting and distortion.

<sup>52</sup>Allora scontēdosi, e indarno crollandosi per fare da se esse zuche cadere, e indarno <sup>53</sup>vaneggiando alquāti giorni in simile inganno, perchè la bona e forte collegatione tal <sup>54</sup>pēsiero negava, vedēdo passare il uēto, a quello racomādādosi, e quello soffrì forte; allora s'a<sup>55</sup>perse il uechio e voto gābo del salice in 2 parti insino <sup>56</sup>alle sue radici; e caduto in 2 parti indarno pianse se me<sup>57</sup>desimo, e conobbe che era nato per non aver mai bene.

Then, being much annoyed, it shook itself in vain to throw off the gourd. After raving for some days in such plans vainly, because the firm union forbade it, seeing the wind come by it commended itself to him. The wind flew hard and opened the old and hollow stem of the willow in two down to the roots, so that it fell into two parts. In vain did it bewail itself recognising that it was born to no good end.

### FACIETIA.

<sup>2</sup> Andādo vn prete per la sua parrochia il sabato santo, dādo <sup>3</sup>come vsanza l'acqua benedetta per le case, capitò nella stāza <sup>4</sup>d'ū pittore, doue spargiēdo essa acqua sopra alcuna sua pittuſra esso pittore voltosi indirieto, alquāto crucciato; dis<sup>6</sup>se perchè faciesse tale spargimēto sopra le sue pitture? allora <sup>7</sup>il prete disse, essere così vsanza, e ch'era suo debito il fare <sup>8</sup>così, e che facieva bene, e chi fa bene debbe aspettare be<sup>9</sup>ne e meglio, chè così promettea Dio, e che d'ogni bene, che si <sup>10</sup>facieva in terra, se n'avrebbe di sopra per ogni vn 100; allora <sup>11</sup>il pittore, aspettato ch'egli uscisse fori, se li fecie di sopra <sup>12</sup>alla finestra, e gittò vn grā sechione d'acqua adosso a esso <sup>13</sup>prete, diciēdo: ecco che di sopra ti uiene per ogni v 100, come <sup>14</sup>tu diciesti, che accaderebbe del bene che mi facievi colla <sup>15</sup>tua acqua santa, colla quale m'āi guasto mezze le mie <sup>16</sup>pitture.

### A JEST.

A priest, making the rounds of his parish on Easter Eve, and sprinkling holy water in the houses as is customary, came to a painter's room, where he sprinkled the water on some of his pictures. The painter turned round, somewhat angered, and asked him why this sprinkling had been bestowed on his pictures; then said the priest, that it was the custom and his duty to do so, and that he was doing good; and that he who did good might look for good in return, and, indeed, for better, since God had promised that every good deed that was done on earth should be rewarded a hundred-fold from above. Then the painter, waiting till he went out, went to an upper window and flung a large pail of water on the priest's back, saying: "Here is the reward a hundred-fold from above, which you said would come from the good you had done me with your holy water, by which you have damaged my pictures."

1282.

Wine, the divine juice of the grape, finding itself in a golden and richly wrought cup, on the table of Mahomet, was puffed up with pride at so much honour; when suddenly it was struck by a contrary reflection, saying to itself: "What am I about, that I should rejoice, and not perceive that I am now near to my death and shall leave my golden abode in this cup to enter into the foul and fetid caverns of the human body, and to be transmuted from a fragrant and delicious liquor into a foul and base one. Nay, and as though so much evil as this were not enough, I must for a long time lie in hideous receptacles, together with other fetid and corrupt matter, cast out from human intestines." And it cried to Heaven, imploring vengeance for so much insult, and that an end might henceforth be put to such contempt; and that, since that country produced the finest and best grapes in the whole world, at least they should not be turned into wine. Then Jove made that wine drunk by Mahomet to rise in spirit to his brain; and that in so deleterious a manner that it made him mad, and gave birth to so many follies that when he had recovered himself, he made a law that no Asiatic should drink wine, and henceforth the vine and its fruit were left free.

As soon as wine has entered the stomach it begins to ferment and swell; then the spirit of that man begins to abandon his body, rising as it were skywards, and the brain finds itself parting from the body. Then it begins to degrade him, and make him rave like a madman, and then he does irreparable evil, killing his friends.

1283.

An artizan often going to visit a great gentleman without any definite purpose, the gentleman asked him what he did this for. The other said that he came there to have a pleasure which his lordship could not have;

Vsano i frati minori a certi tempi alcune loro quaresime, nelle quali essi non māgiano carne ne' lor cōuēti, <sup>2</sup>ma in viaggio, perchè essi viuono di limosine ·, ànno licietia di māgiare · ciò che è posto loro innazi; òde abattēdosi in detti viaggi una copia d'essi frati a vn osteria · in cōpagnia d'ū cierto · mecantucolo ·, il quale essendo <sup>4</sup>a vna medesima mēsa, alla quale · nō fu portato per la pouertà dell'ostiero altro che vn pvllastro cotto; òde esso mercatucolo, vedendo questo essere poco per lui, si uolse a essi frati e disse: se io ho bē <sup>6</sup>di ricordo ·, voi nō māgiate in tali dì ne' vostri cōuēti · d'alcuna manicra di carne; alle quali parole i fra<sup>7</sup>ti furono costretti per la regola sanza altre cavillationi · a dirc ciò essere la uerità ·; òde il mercatello <sup>8</sup>cbbe il suo desiderio, e così māgiò essa polastron, e i frati fecero il meglio poterono ·; ove dopo tale desinare <sup>9</sup>questi cōmēsari si partirono tutti e 3 di compagnia ·, e dopo alquanto di uiagio, trovati vn fiume di bona <sup>10</sup>larghezza e profondità ·, essendo tutti 3 a piedi, i frati per pouertà e l'altro per auaritia ·, fu necissario per l'uso <sup>11</sup>della cōpagnia che vno de' frati, essendo scalzi ·, passasse sopra i sua omeri esso mercatucolo ·; onde datoli <sup>12</sup>il frate al servo i zoccoli, si caricò di tale uomo; onde accade, che trovandosi esso frate in mczzo del <sup>13</sup>fiume ·, esso ancora si ricordò della sua · regola ·, e fermatosi a vso di San Cristoforo alzò la testa <sup>14</sup>inverso quello chc l'aggravava, e disse: diñi vn poco ·, ài tu nessū dinari adosso? bē sai, rispose que<sup>15</sup>sto; come credete voi ch' a mia pari mercatâtē andasse altramēti attorno ·? oimè, disse il frate, la nostra <sup>16</sup>regola vieta che noi nō possiamo portare danari adosso ·! e subito lo gittò nell'acqua; la qual cosa conosciuta <sup>17</sup>dal mercatâtē facetamēte la già fatta ingivria essere vēdicata ·, cō piacievole uso pacificamēte, <sup>18</sup>mezzo arossito per vergognia, la uēdetta sopportò.

since to him it was a satisfaction to see men greater than himself, as is the way with the populace; while the gentleman could only see men of less consequence than himself; and so lords and great men were deprived of that pleasure.

### 1284.

Franciscan begging Friars are wont, at certain times, to keep fasts, when they do not eat meat in their convents. But on journeys, as they live on charity, they have license to eat whatever is set before them. Now a couple of these friars on their travels, stopped at an inn, in company with a certain merchant, and sat down with him at the same table, where, from the poverty of the inn, nothing was served to them but a small roast chicken. The merchant, seeing this to be but little even for himself, turned to the friars and said: "If my memory serves me, you do not eat any kind of flesh in your convents at this season." At these words the friars were compelled by their rule to admit, without cavil, that this was the truth; so the merchant had his wish, and eat the chicken and the friars did the best they could. After dinner the messmates departed, all three together, and after travelling some distance they came to a river of some width and depth. All three being on foot—the friars by reason of their poverty, and the other from avarice—it was necessary by the custom of company that one of the friars, being barefoot, should carry the merchant on his shoulders: so having given his wooden shoes into his keeping, he took up his man. But it so happened that when the friar had got to the middle of the river, he again remembered a rule of his order, and stopping short, he looked up, like Saint Christopher, to the burden on his back and said: "Tell me, have you any money about you?"—"You know I have", answered the other, "How do you suppose that a Merchant like me should go about otherwise?" "Alack!" cried the friar, "our rules forbid as to carry any money on our persons," and forthwith he dropped him into the water, which the merchant perceived was a facetious way of being revenged on the indignity he had done them; so, with a smiling face, and blushing somewhat with shame, he peaceably endured the revenge.

## 1285.

## FACETIA.

<sup>2</sup>Vno volendo provare colla autorità <sup>3</sup>di Pitagora, come altre volte lui era <sup>4</sup>stato al mōdo, e vno nō li lasciava <sup>5</sup>finire il suo ragionamēto, allor costui <sup>6</sup>disse a questo tale: è per tale segniale che <sup>7</sup>io altre volte ci füssi stato, io mi ricor<sup>8</sup>do che tu eri mylinaro; allora costui <sup>9</sup>sentēdosi mordere colle parole gli <sup>10</sup>confermò essere vero, che per questo cō<sup>11</sup>trassegno lui si ricordava che questo <sup>12</sup>tale era stato l'asino che gli portava la <sup>13</sup>farina.

## FACETIA.

<sup>15</sup>Fu dimādato vn pittore perchè, facciēdo <sup>16</sup>lui de' figure sì belle che erā cose morte, <sup>17</sup>per che causa esso avesse fatti i figlioli <sup>18</sup>sì brutti; allora il pittore rispose che le <sup>19</sup>pitture le fecie di dì, e i figlioli di notte.

C. A. 12a; 42a]

Vno · vede vna grāde · spada al lato · a vn altro, e' dice: o poverello ell'è grā tēpo ch'io <sup>2</sup>t'ò veduto · legato a questa · arme ·, perchè · nō ti disleghi, avēdo le māni discolte, <sup>3</sup>e possiedi libertà? al qual · costui rispose: questa è cosa · nō tua, anzi · è vecchia; <sup>4</sup>questo sentēdosi mordere · rispose: io · ti conosco · sapere si poche cose in questo <sup>5</sup>mōdo · ch'io credevo · che ogni di ualgata · cosa · a te · fusse · per nova.

C. A. 300b; 914a]

Vno lasciò lo usare con uno · suo · amico, <sup>2</sup>perchè · quello · spesso · li dicieva · male · dell'i <sup>3</sup>amici · sua ·; Il quale · lasciato · amico · <sup>4</sup>vn dì dolendosi collo amico e dopo il molto <sup>5</sup>dolersi lo · pregò, ch'elli · dicesse quale fusse <sup>6</sup>la cagione, che lo auesse · fatto dimēticare · <sup>7</sup>tanta amicitia; al quale esso · rispose: jo <sup>8</sup>non voglio più usare · con teco

## HUMOROUS WRITINGS.

## A JEST.

A man wishing to prove, by the authority of Pythagoras, that he had formerly been in the world, while another would not let him finish his argument, the first speaker said to the second: "It is by this token that I was formerly here, I remember that you were a miller." The other one, feeling himself stung by these words, agreed that it was true, and that by the same token he remembered that the speaker had been the ass that carried the flour.

## A JEST.

It was asked of a painter why, since he made such beautiful figures, which were but dead things, his children were so ugly; to which the painter replied that he made his pictures by 'day, and his children by night.

## 1286.

A man saw a large sword which another one wore at his side. Said he "Poor fellow, for a long time I have seen you tied to that weapon; why do you not release yourself as your hands are untied, and set yourself free?" To which the other replied: "This is none of yours, on the contrary it is an old story." The former speaker, feeling stung, replied: "I know that you are acquainted with so few things in this world, that I thought anything I could tell you would be new to you."

## 1287.

A man gave up his intimacy with one of his friends because he often spoke ill of his other friends. The neglected friend one day lamenting to this former friend, after much complaining, entreated him to say what might be the cause that had made him forget so much friendship. To which he answered: "I will · no longer be in-

timate with you because I love you, and I do not choose that you, by speaking ill of me, your friend, to others, should produce in others, as in me, a bad impression of yourself, by speaking evil to them of me, your friend. Therefore, being no longer intimate together, it will seem as though we had become enemies; and in speaking evil of me, as is your wont, you will not be blamed so much as if we continued intimate.

## 1288.

A man was arguing and boasting that he knew many and various tricks. Another among the bystanders said: "I know how to play a trick which will make whomsoever I like pull off his breeches." The first man—the boaster—said: "You won't make me pull off mine, and I bet you a pair of hose on it." He who proposed the game, having accepted the offer, produced breeches and drew them across the face of him who bet the pair of hose and won the bet [4].

A man said to an acquaintance: "Your eyes are changed to a strange colour." The other replied: "it often happens, but you have not noticed it." "When does it happen?" said the former. "Every time that my eyes see your ugly face, from the shock of so unpleasing a sight they suddenly turn pale and change to a strange colour."

A man said to another: "Your eyes are changed to a strange colour." The other replied: "It is because my eyes behold your strange ugly face."

A man said that in his country were the strangest things in the world. Another answered: "You, who were born there, confirm this as true, by the strangeness of your ugly face."

## 1289.

An old man was publicly casting contempt on a young one, and boldly showing that he did not fear him; on which the young man replied that his advanced age served him better as a shield than either his tongue or his strength.

<sup>1288.</sup> The joke turns, it appears, on two meanings of *trarre* and is not easily translated.

S. K. M. II.<sup>2</sup> 44 a]

## 1290.

## FACIETIA.

<sup>2</sup>Sendo uno inferno in articulo <sup>3</sup> di morte, esso sentì battere la porta, <sup>4</sup>e domādato vno de' sua serui chi era <sup>5</sup>che batteva l'uscio, esso seruo rispose <sup>6</sup>esser vna che si chiamava madoña <sup>7</sup>Bona; allora l'inferno alzato le <sup>8</sup>braccia al cielo ringraziò Dio con al̄ta voce; poi disse ai serui che lasci<sup>10</sup>assino venire presto questa, accio-<sup>11</sup>chè potesse vedere vna donna <sup>12</sup>bona iñazi che esso morisse, <sup>13</sup>imperochè in sua vita mai ne vide nessuna.

S. K. M. II.<sup>2</sup> 43 b]

## 1291.

## FACIETIA.

<sup>2</sup>Fu detto a vno che si levasse <sup>3</sup>dal letto, perchè già era leva<sup>4</sup>to il sole; E lui rispose: se <sup>5</sup>io avessi a fare tanto viaggio <sup>6</sup>e facende quanto lui, ancora io sarei <sup>7</sup>già levato, e però avendo a fa<sup>8</sup>re si poco cammino, ancora non <sup>9</sup>mi voglio levare.

Fo'

Vno vedendo vna femina parata a tener ta<sup>2</sup>vola in giostra guardò il tavolaccio e gridò <sup>3</sup>vedendo la sua lancia: oimè quest'è troppo pic<sup>4</sup>col lavorante a si grā bottega.

A sick man finding himself in *articulo mortis* heard a knock at the door, and asking one of his servants who was knocking, the servant went out, and answered that it was a woman calling herself Madonna Bona. Then the sick man lifting his arms to Heaven thanked God with a loud voice, and told the servants that they were to let her come in at once, so that he might see one good woman before he died, since in all his life he had never yet seen one.

## A JEST.

## A JEST.

A man was desired to rise from bed, because the sun was already risen. To which he replied: "If I had as far to go, and as much to do as he has, I should be risen by now; but having but a little way to go, I shall not rise yet."

## 1292.

A man, seeing a woman ready to hold up the target for a jousting match, exclaimed, looking at the shield, and considering his spear: "Alack! this is too small a workman for so great a business."

### PROPHETIES.

C. A. 143<sup>a</sup>; 426<sup>a</sup>]

1293.

#### DIVISIONE DELLA PROFETIA.

<sup>2</sup> Prima delle cose degli animali; secōda dell'i<sup>3</sup>rrationali; <sup>3</sup><sup>a</sup> delle piāte, quarta delle ceremonie; <sup>4</sup>quita de' costumi; sesta dell'i casi overo editti, over qui<sup>5</sup>stioni; settima de' casi che nō possono stare <sup>6</sup>in natura, come dire di quella cosa, quāto piv ne le<sup>7</sup>vi piv crescie; e riserua i grādi casi <sup>8</sup>inverso il fine, e deboli dà dal principio, <sup>9</sup>e mostra prima i mali, e poi le punitioni <sup>10</sup>delle cose filosofiche.

#### ¶ Delle formiche. ¶

<sup>12</sup> Molti popoli fien quelli che nascōderā se <sup>13</sup>i figlioli e le sue vettovaglie dentro alle oscure caverne, <sup>14</sup>e li nelli lochi tenebrosi ciberā se e sua <sup>15</sup>famiglia per molti mesi sanza altro lume accidentale o naturale.

#### THE DIVISION OF THE PROPHECIES.

First, of things relating to animals; secondly, of irrational creatures; thirdly of plants; fourthly, of ceremonies; fifthly, of manners; sixthly, of cases or edicts or quarrels; seventhly, of cases that are impossible in nature [paradoxes], as, for instance, of those things which, the more is taken from them, the more they grow. And reserve the great matters till the end, and the small matters give at the beginning. And first show the evils and then the punishment of philosophical things.

#### ¶ Of Ants. ¶

These creatures will form many communities, which will hide themselves and their young ones and victuals in dark caverns, and they will feed themselves and their families in dark places for many months without any light, artificial or natural.

1293. 3. i<sup>n</sup>rrationali . . . cirmonie. 4. sessta. 5. chasi. 6. inatura. 7. cresscie . . . chasi. 9. emali. 12. queili . . . nasscōderā. 13. e sue | "figloli" e . . . dēntro alle "oscure" caverne. 14. elli nelli. 15. famiglia "per molti mesi" sanza . . . accidentale.

1293. Lines 1—51 are in the original written in one column, beginning with the text of line 11. At the end of the column is the programme for the arrangement of the prophecies, placed here at the head: Lines 56—79 form a second column,

lines 80—97 a third one (see the reproduction of the text on the facsimile Pl. CXVIII).

Another suggestion for the arrangement of the prophecies is to be found among the notes 55—57 on page 357.

## ¶Dell'api.¶

<sup>17</sup>E a molti altri sarā tolte le mvnitioni e lor cibi, <sup>18</sup>e crudelmente da giēte sanza ragione saranno <sup>19</sup>sommersse e annegate; o giustitia di Dio <sup>20</sup>perchè nō ti desti a vedere così malmenare e tua <sup>21</sup>creati?

¶Delle pecore vacche <sup>22</sup>e capre e simili.¶

<sup>24</sup>A innumerabili saran tolti i loro piccoli figlio<sup>25</sup>li e quelli scarnati <sup>26</sup>e crudelissimamente squartati.

¶Delle noci e vliue e ghiā<sup>28</sup>de e castagnie e simili.¶

<sup>29</sup>Molti figlioli da spietate bastonate fieno tolti dalle propie braccia delle lor <sup>31</sup>madri e gittati in terra e poi lacerati.

¶De'fanciulli che stanno <sup>33</sup>legati nelle fascie.¶

<sup>34</sup>O città marine, io vedo in uoi i uostri città<sup>35</sup>dini così femine come maschi strettamente dai forti legami colle braccia e ganbe esser legati da gente che non itenderanno i uostri li<sup>38</sup>guaggi, e sol ui potrete sfogare li vostri dolori e per<sup>39</sup>duta libertà mediante i lagrimosi piā<sup>40</sup>ti e li sospiri e lamentatione infra uoi medesimi, chè chi vi lega, non v'intenderà, nè voi loro in<sup>42</sup>tenderete.

## ¶Delle gatte che māgiano i topi.¶

<sup>44</sup>A voi città dell'Africa si uedrà i uostri nati essere <sup>45</sup>squarciati nelle propie case de' crudelissimi e rapaci animali del paese vostro.

## ¶Delli asini bastonati.¶

<sup>48</sup>O natura, perchè ti sei fatto <sup>49</sup>partiale, facciēdoti ai tua figli d'alcuna pietosa <sup>50</sup>e benignia madre, ad'altri crudelissima e spietata matrignia? io vedo i tua figlioli esser dati in al<sup>52</sup>tru seruitù sanza mai beneficio alcuno, e in lo<sup>53</sup>co di remunerazione de' fatti benifitj esser pagati <sup>54</sup>di grādissimi martiri, e spēdere sempre la lo<sup>55</sup>r vita in beneficio del suo mal fattore.

## ¶Of Bees.¶

And many others will be deprived of their store and their food, and will be cruelly submerged and drowned by folks devoid of reason. Oh Justice of God! Why dost thou not wake and behold thy creatures thus ill used?

## ¶Of Sheep, Cows, Goats and the like.¶

Endless multitudes of these will have their little children taken from them ripped open and flayed and most barbarously quartered.

## ¶Of Nuts, and Olives, and Acorns, and Chesnuts, and such like.¶

Many offspring shall be snatched by cruel thrashing from the very arms of their mothers, and flung on the ground, and crushed.

## ¶Of Children bound in Bundles.¶

O cities of the Sea! In you I see your citizens—both females and males—tightly bound, arms and legs, with strong withes by folks who will not understand your language. And you will only be able to assuage your sorrows and lost liberty by means of tearful complaints and sighing and lamentation among yourselves; for those who will bind you will not understand you, nor will you understand them.

## ¶Of Cats that eat Rats.¶

In you, O cities of Africa your children will be seen quartered in their own houses by most cruel and rapacious beasts of your own country.

## ¶Of Asses that are beaten.¶

[48] O Nature! Wherefore art thou so partial; being to some of thy children a tender and benign mother, and to others a most cruel and pitiless stepmother? I see children of thine given up to slavery to others, without any sort of advantage, and instead of remuneration for the good they do, they are paid with the severest suffering, and spend their whole life in benefitting those who ill treat them.

16. ape. 17. e amolti i "era" altri . . toltole la. 18. ragone sarano. 19. gustiūa. 20. dessti. 22. vache. 23. essimili. 24. invmerabili . . elloro picholi. 25. ecquelli [crudelissimamente] scannati [essqua]. 28. essimili. 29. disspietate. 30. fietoli delle. 32. fanculli chestano. 33. fasscie. 34. veggho . . uosstri. 35. dini [esse] cossi . . massci essere isstre. 36. dei . . cole br. 38. essol . . issfogare li uosstri "dolori c" eper. 39. mediante [i gran pian] i lagrimosi. 40. elle i sossipi ellamentatione. 43. māgano e topi. 44. uosstri. 46. vosstro. 47. basstonati. 48. ## 〔Delli omini che dormono nell'asse d'alberi.〕

<sup>57</sup> Li omini dormiranno e māgieranno e abiterāno <sup>58</sup> infra li alberi nelli selue e cāpagnie.

## 〔Del sogniare.〕

<sup>60</sup> Alli omini parrà vedere nel cielo nove rui<sup>61</sup>ne; parrà in quello leuarsi a uolo, e di quello fuggi<sup>62</sup>re cō penvra le fiamme che di lui disce<sup>63</sup>dono; sentirā parlare li animali di qua<sup>64</sup>lūche sorte in linguaggio vmano; scorre<sup>65</sup>ranno innmediate colla lor persona <sup>66</sup>in diverse parti del mōdo sanza mo<sup>67</sup>to; vedrāno nelle tenebre grādissimi <sup>68</sup>splēdori; o maraviglia della vmano <sup>69</sup>spetie qual frenesia t'ā si condotto! <sup>70</sup> parlerai cogli animali di qualūche spetie, <sup>71</sup>e quelli cō teco in linguaggio vmano, <sup>72</sup>vedrāti cadere di grande alteure san<sup>73</sup>za tuo danno; i torrēti t'accompa<sup>74</sup>gnneranno e mischieranno col lor rapido corso . . .

## 〔De' cristiani.〕

<sup>81</sup> Molti che tengono la fede del figlio-<sup>82</sup>lo e sol fan tempi nel nome <sup>83</sup>della madre.

## 〔Del cibo stato animato.〕

<sup>84</sup> Gran parte de' corpi animati <sup>85</sup>passerà pe' corpi degli altri animali, <sup>86</sup>cioè le case disabitate passerā <sup>87</sup>in pezzi per le case abitate, dan<sup>88</sup>do a quella vtile, e portā<sup>89</sup>do cō seco i sua danni; <sup>90</sup>cioè la uita dell'omo si fa dalle cose <sup>91</sup>māgiate, le quali portā con se<sup>92</sup>co la parte dell'omo ch'è morta . . .

C. A. 143<sup>b</sup>; 426<sup>b</sup>]

1294.

〔Delli uftj funerali <sup>2</sup>e processioni e lumi <sup>3</sup>e cāpane e cōpagnia.〕

<sup>4</sup> Agli omini saran fatti grandissimi <sup>5</sup>onorì e ponre sanza lor saputa.

## 〔Of Men who sleep on boards of Trees.〕

Men shall sleep, and eat, and dwell among trees, in the forests and open country.

## 〔Of Dreaming.〕

Men will seem to see new destructions in the sky. The flames that fall from it will seem to rise in it and to fly from it with terror. They will hear every kind of animals speak in human language. They will instantaneously run in person in various parts of the world, without motion. They will see the greatest splendour in the midst of darkness. O! marvel of the human race! What madness has led you thus! You will speak with animals of every species and they with you in human speech. You will see yourself fall from great heights without any harm and torrents will accompany you, and will mingle with their rapid course.

## 〔Of Christians.〕

Many who hold the faith of the Son only build temples in the name of the Mother.

## 〔Of Food which has been alive.〕

[84] A great portion of bodies that have been alive will pass into the bodies of other animals; which is as much as to say, that the deserted tenements will pass piecemeal into the inhabited ones, furnishing them with good things, and carrying with them their evils. That is to say the life of man is formed from things eaten, and these carry with them that part of man which dies . . .

1294. A facsimile of this text is on Pl. CXVI below on the right, but the writing is larger than

the other notes on the same sheet and of a somewhat different style. The ink is also of a different hue, as may be seen on the original sheet at Milan.

C. A. 362<sup>a</sup>; 1143<sup>a</sup>

## 〔Dell auaro.〕

<sup>2</sup>Molti fieno quelli che con ogni studio e sollecitudine seguiranno <sup>3</sup>con furia quella cosa che senpre li à spauētati, nō conoscendo la sua <sup>4</sup>malignità.

〔Delli omini che, quāto piv inuechiano, piv <sup>6</sup>si fanno avari, chè auēdosì a star poco dovrebbero farsi liberali.〕

<sup>7</sup>Vedansi a quelli, che son giudicati di piv speriētia e giuditio, quanto <sup>8</sup>egli' ànno mē bisogno delle cose, cō piv auidità cer-carle e riseruarle.

## 〔Della fossa.〕

<sup>11</sup>Starā molti occupati in esercito a leuare di quella cosa che tanto crescerà, quan<sup>12</sup>to se ne leuò.

## 〔Del peso posto sul piumacco.〕

<sup>14</sup>E a molti corpi nel vedere da lor leuar la testa, si uedrà manifestamente crescere, e rendendo loro la leuata testa immediatamente <sup>16</sup>diminviscono la grādezza.

## 〔Del pigliare de' pidochi.〕

<sup>18</sup>E saran molti cacciatori d'animali che, quanto piv ne piglierāno <sup>19</sup>māco n'avranno, e così de conuerso piv n'avrà, quāto men ne piglie<sup>20</sup>ranno.

〔Dello tignere l'acqua colle <sup>2</sup>sechie a vna sola corda.〕

<sup>22</sup>E rimaranno occupati molti che quāto piv <sup>23</sup>tireraño in giù la cosa, essa piv se ne fugirà in contrario <sup>24</sup>modo.

## 〔Le lingue de' porci e vitelli nelle budelle.〕

<sup>28</sup>O cosa spurca, che si vedrà l'uno animale aver la lingua <sup>29</sup>in culo all'altro.

## 〔De' crivelli fatti di pelle d'animali.〕

<sup>31</sup>Vedrassi il cibo degli animali passar dentro alle <sup>32</sup>lor pelli per ogni parte salvo che per la bocca, e penetra<sup>33</sup>re dall'opposita parte insino alla piana terra.

1295.

## 〔 Of the Avaricious.〕

There will be many who will eagerly and with great care and solicitude follow up a thing, which, if they only knew its malignity, would always terrify them.

〔Of those men, who, the older they grow, the more avaricious they become, whereas, having but little time to stay, they should become more liberal.〕

We see those who are regarded as being most experienced and judicious, when they least need a thing, seek and cherish it with most avidity.

## 〔Of the Ditch.〕

Many will be busied in taking away from a thing, which will grow in proportion as it is diminished.

## 〔Of a Weight placed on a Feather-pillow.〕

And it will be seen in many bodies that by raising the head they swell visibly; and by laying the raised head down again, their size will immediately be diminished.

## 〔Of catching Lice.〕

And many will be hunters of animals, which, the fewer there are the more will be taken; and conversely, the more there are, the fewer will be taken.

## 〔Of Drawing Water in two Buckets with a single Rope.〕

And many will be busily occupied, though the more of the thing they draw up, the more will escape at the other end.

## 〔Of the Tongues of Pigs and Calves in Sausage-skins.〕

Oh! how foul a thing, that we should see the tongue of one animal in the guts of another.

## 〔Of Sieves made of the Hair of Animals.〕

We shall see the food of animals pass through their skin everyway excepting through their mouths, and penetrate from the outside downwards to the ground.

¶ Of Lanterns. □

[35] The cruel horns of powerful bulls will screen the lights of night against the wild fury of the winds.

¶ Of Feather-beds. □

Flying creatures will give their very feathers to support men.

¶ Of Animals which walk on Trees—wearing wooden Shoes. □

The mire will be so great that men will walk on the trees of their country.

¶ Of the Soles of Shoes, which are made from the Ox. □

And in many parts of the country men will be seen walking on the skins of large beasts.

¶ Of Sailing in Ships. □

There will be great winds by reason of which things of the East will become things of the West; and those of the South, being involved in the course of the winds, will follow them to distant lands.

¶ Of Worshipping the Pictures of Saints. □

Men will speak to men who hear not; having their eyes open, they will not see; they will speak to these, and they will not be answered. They will implore favours of those who have ears and hear not; they will make light for the blind.

¶ Of Sawyers. □

There will be many men who will move one against another, holding in their hands a cutting tool. But these will not do each other any injury beyond tiring each other; for, when one pushes forward the other will draw back. But woe to him who comes between them! For he will end by being cut in pieces.

¶ Of Silk-spinning. □

Dismal cries will be heard loud, shrieking with anguish, and the hoarse and smothered tones of those who will be despoiled, and at last left naked and motionless; and this by reason of the mover, which makes every thing turn round.

¶ Del mettere e trarre il pan dalla bocca del forno. ¶

<sup>70</sup> Per tutte le città e terre e castelli e case si uedrà, per desiderio di mangiare, trarre il <sup>71</sup> proprio cibo di bocca l'uno all'altro senza poter fare difesa alcuna.

¶ Le terre lauorate. ¶

<sup>73</sup> Vedrassi voltare la terra sotto sopra e risguardare l'oppositi <sup>74</sup> emisperii e scoprire le spelonche a ferocissimi animali.

¶ Del seminare. ¶

<sup>76</sup> Allora in grā parte dell'i omini, che resterà uiui, gitterà <sup>77</sup> fori delle lor case le serbate vettovaglie in libera preda dell'i <sup>78</sup> vcelli e animali terrestri sanza curarsi d'essi in parte alcuna.

¶ Delle pioggie che fanno che fiumi intorbidati <sup>80</sup> portan via le terre. ¶

<sup>81</sup> Verrà diuerso il cielo chi trasmuterà gran parte dell'Africa <sup>82</sup> che si mostra a esso cielo inverso l'Europa, e quella di Europa <sup>83</sup> pa inverso l'Africa, e quelle delle provincie Scitiche si mischieranno in <sup>84</sup> sieme con grā revolutione.

¶ De legniami che bruciano. ¶

<sup>85</sup> Li alberi e arbusti delle grā selue si convertiranno in cenere.

¶ Delle fornaci di mattoni e calcina. ¶

<sup>87</sup> Al fine la terra si farà rossa per lo infocamēto di molti giorni, <sup>90</sup> e le pietre si convertiranno in cenere.

¶ I pesci lessi. ¶

<sup>92</sup> Li animali d'acqua moriranno nelle bellonti acque.

¶ L'ulive che cadono dagli ulivi dannoci l'olio che fa lume. ¶

<sup>94</sup> Discenderà con furia diuerso la terra, chi ci darà notrimēto e luce.

¶ Of putting Bread into the Mouth of the Oven and taking it out again. ¶

In every city, land, castle and house, men shall be seen, who for want of food will take it out of the mouths of others, who will not be able to resist in any way.

¶ Of tilled Land. ¶

The Earth will be seen turned up side down and facing the opposite hemispheres, uncovering the lurking holes of the fiercest animals.

¶ Of Sowing Seed. ¶

Then many of the men who will remain alive, will throw the victuals they have preserved out of their houses, a free prey to the birds and beasts of the earth, without taking any care of them at all.

¶ Of the Rains, which, by making the Rivers muddy, wash away the Land. ¶

[81] Something will fall from the sky which will transport a large part of Africa which lies under that sky towards Europe, and that of Europe towards Africa, and that of the Scythian countries will meet with tremendous revolutions [84].

¶ Of Wood that burns. ¶

The trees and shrubs in the great forests will be converted into cinder.

¶ Of Kilns for Bricks and Lime. ¶

Finally the earth will turn red from a conflagration of many days and the stones will be turned to cinders.

¶ Of boiled Fish. ¶

The natives of the waters will die in the boiling flood.

¶ Of the Olives which fall from the Olive trees, shedding oil which makes light. ¶

And things will fall with great force from above, which will give us nourishment and light.

¶ Delle ciuette e gufi; ciò che succhiella alla parra. ¶

<sup>96</sup> Molti periranno di fracassamento di testa e salteranno loro li ochi in grā par-<sup>97</sup>te della testa per causa d'animali pav-rosi vsciti dalle tenebre.

¶ Del lino che fa la cura de' giēti. ¶

<sup>99</sup> Sarā reveriti e onorati e cō reuerētia e amore ascoltati, li sua precetti <sup>100</sup> di chi prima fusse legato, stratiato o martorizzato da molte e diuerse battitoje.

¶ De' libri che insegnano precetti. ¶

<sup>102</sup> I corpi sanz'anima ci daranno con lor sententie precetti vtili al ben morire.

¶ De' battuti e scoreggiati. ¶

<sup>104</sup> Li omni si nasconderanno sotto le scorse delle scorticate erbe, e quiui gri-<sup>105</sup>dando si darā martiri con battimēti di menbra a se medesimi.

¶ Delle maniche de' coltegli fatte di corna <sup>111</sup> di castrone. ¶

<sup>112</sup> Nelle corna dell'i animali si vedranno taglieti <sup>113</sup> ferri colli quali si torna la uita a molti della loro <sup>114</sup> spetie.

¶ Della notte che nō si conosce <sup>116</sup> alcun colore. ¶

<sup>117</sup> Verrà a tanto che non si conoscerà differenza infra <sup>118</sup> colori, anzi si faran tutti di nera qualità.

¶ Delle spade e lance che per se <sup>120</sup> mai nuocono a nessuno. ¶

<sup>121</sup> Chi per se è māsuetto e sanza alcuna offensione, si farà <sup>122</sup> spaumentevole e feroce mediante le triste cōpa<sup>123</sup>gnie, e torrà la vita crudelissimamēte <sup>124</sup> a molte genti; e piv n'ucciderebbe, se corpi sā<sup>125</sup>z'anima e usciti dalle spelonche non li difendessino, <sup>126</sup> cioè le corazze di ferro.

¶ De' laccioli e trappole. ¶

<sup>128</sup> Molti morti si moverā con furia e piglierāno e legheranno <sup>129</sup> i vivi, e serviranno gli a lor nemici circa <sup>130</sup> la lor morte e distruzione.

¶ Of Owls and screech owls and what will happen to certain birds. ¶

Many will perish of dashing their heads in pieces, and the eyes of many will jump out of their heads by reason of fearful creatures come out of the darkness.

¶ Of flax which works the cure of men. ¶

That which was at first bound, cast out and rent by many and various beaters will be respected and honoured, and its precepts will be listened to with reverence and love.

¶ Of Books which teach Precepts. ¶

Bodies without souls will, by their contents give us precepts by which to die well.

¶ Of Flagellants. ¶

Men will hide themselves under the bark of trees, and, screaming, they will make themselves martyrs, by striking their own limbs.

¶ Of the Handles of Knives made of the Horns of Sheep. ¶

We shall see the horns of certain beasts fitted to iron tools, which will take the lives of many of their kind.

¶ Of Night when no Colour can be discerned. ¶

There will come a time when no difference can be discerned between colours, on the contrary, everything will be black alike.

¶ Of Swords and Spears which by themselves never hurt any one. ¶

One who by himself is mild enough and void of all offence will become terrible and fierce by being in bad company, and will most cruelly take the life of many men, and would kill many more if they were not hindered by bodies having no soul, that have come out of caverns—that is, breastplates of iron.

¶ Of Snares and Traps. ¶

Many dead things will move furiously, and will take and bind the living, and will ensnare them for the enemies who seek their death and destruction.

## ¶ De' metalli. ¶

<sup>132</sup> Uscirà dalle oscure e tenebrose <sup>133</sup> spelonche che metterà tutta l'umana spe<sup>134</sup>tie in grandi affanni, pericoli e morte<sup>135</sup>; a molti segu<sup>136</sup>ci lor, dopo molti affanni, darà <sup>137</sup>diletto; ma chi nō fia suo partigiano morrà <sup>138</sup>con stento e calamità; questo commette<sup>139</sup>rà infiniti tradimenti, questo avmēte<sup>140</sup>rà e persuaderà li omini tristi alli assassinamenti <sup>141</sup>e latrocini e le perfidie; questa darà <sup>142</sup>sospetto a i sua partigiani; questo torrà <sup>143</sup>lo stato alle città libere; questo torrà <sup>144</sup>la uita a molti; questo travaglierà <sup>145</sup>li omini infra loro con molte arti, <sup>146</sup>inganni e tradimenti; o animal mo<sup>147</sup>struoso! quāto sarebbe meglio agli omini <sup>148</sup>che tutti tornassero nell'inferno! per costui <sup>149</sup>rimarrā diserte le grā selue delle lor <sup>150</sup>piāte; per costui infiniti animali perderanno la ui<sup>151</sup>ta.

## ¶ Del fuoco. ¶

<sup>153</sup> Nascierà di piccolo principio, <sup>154</sup>chi si farà cō prestezza grande; que<sup>155</sup>sto non stimerà alcuna creata <sup>156</sup>cosa, anzi colla sua potētia <sup>157</sup>quasi il tutto avrà in potentia <sup>158</sup>di transformare di suo essere <sup>159</sup>in vn altro.

## ¶ De' navili che annegano. ¶

<sup>161</sup> Vedrannosi grandissimi <sup>162</sup>corpi sanza vita por<sup>163</sup>tare con furia moltitu<sup>164</sup>dine d'omini alla distrutti<sup>165</sup>one di lor uita.

## ¶ De' boi che si māgiano. ¶

<sup>167</sup> Māgieranno i padrō delle posses-<sup>168</sup>sioni i lor propri lauoratori.

## ¶ De' battere il letto per rifarlo. ¶

<sup>170</sup> Veranno li omini in tanta ingratitudine, <sup>171</sup>che, chi darà loro albergo sanza alcū prezzo, <sup>172</sup>sarà carico di bastonate, in modo che <sup>173</sup>gran parte delle interiora si spignerā<sup>174</sup>no dal loco loro e s'andranno rivoltando pel <sup>175</sup>suo corpo.

¶ Delle cose che si māgiano <sup>177</sup>che prima s'uccidono. ¶

<sup>178</sup> Sarà morto da loro il loro nutritore e flag<sup>179</sup>giellato cō spietata morte.

## ¶ Of Metals. ¶

That shall be brought forth out of dark and obscure caves, which will put the whole human race in great anxiety, peril and death. To many that seek them, after many sorrows they will give delight, and to those who are not in their company, death with want and misfortune. This will lead to the commission of endless crimes; this will increase and persuade bad men to assassinations, robberies and treachery, and by reason of it each will be suspicious of his partner. This will deprive free cities of their happy condition; this will take away the lives of many; this will make men torment each other with many artifices deceptions and treasons. O monstrous creature! How much better would it be for men that every thing should return to Hell! For this the vast forests will be devastated of their trees; for this endless animals will lose their lives.

## ¶ Of Fire. ¶

One shall be born from small beginnings which will rapidly become vast. This will respect no created thing, rather will it, by its power, transform almost every thing from its own nature into another.

## ¶ Of Ships which sink. ¶

Huge bodies will be seen, devoid of life, carrying, in fierce haste, a multitude of men to the destruction of their lives.

## ¶ Of Oxen, which are eaten. ¶

The masters of estates will eat their own labourers.

## ¶ Of beating Beds to renew them. ¶

Men will be seen so deeply ungrateful that they will turn upon that which has harboured them, for nothing at all; they will so load it with blows that a great part of its inside will come out of its place, and will be turned over and over in its body.

## ¶ Of Things which are eaten and which first are killed. ¶

Those who nourish them will be killed by them and afflicted by merciless deaths.

¶ Dello specchiare le mura <sup>181</sup>delle città nel-  
l'acqua de' lor fossi. □

<sup>182</sup> Vedrannosi lalte mvra delle grā città  
sotto sopra ne' lo<sup>183</sup>ro fossi.

¶ Dell'acqua che corre torbida <sup>185</sup>e mista  
cō terra, e della poluer<sup>186</sup>re e nebbia mista  
coll'aria, e del <sup>187</sup>foco misto col suo e altri  
cō ciascūo. □

<sup>188</sup> Vedrassi tutti li elementi insieme  
misti con grā re<sup>189</sup>volutione trascorrere ora  
inverso il centro del mō<sup>190</sup>do, ora inverso  
il celo, e quādo dalle parti meri<sup>191</sup>dionali  
scorrere cō furia inverso il fred<sup>192</sup>do set-  
tentrione, qualche volta dall'oriēte inverso  
<sup>193</sup>l'occidente, e così di questo in quell'al-  
tro emisperio.

¶ In ogni punto si può fare diuisio<sup>195</sup>ne de'  
2 emisperi. □

<sup>196</sup> Li omini tutti scābieranno emisperio  
immediate.

¶ In ogni pūto è diuisione da o<sup>198</sup>riente a  
occidente. □

<sup>199</sup> Moverannosi tutti li animali da oriēte  
a occidente, e così <sup>200</sup>da aquilone a meriggio  
scambievolmēte, e così de' cōuerso.

¶ Del moto dell'acque che portano <sup>202</sup>i  
legnami che son morti. □

<sup>203</sup> Corpi sanz'anima per se medesimi  
si moveranno e porterā <sup>204</sup>cō seco innumer-  
abile generatione di morti, toglien<sup>205</sup>do le  
richezze a circūstanti viuēti.

¶ Dell'oua che sendo māgiate nō possono  
<sup>207</sup>fare e pulcini. □

<sup>208</sup> O quanti fiē quegli, ai quali sarà pro-  
ibito il nascere!

¶ De' pesci che si māgiano non nati. □

<sup>210</sup> Infinita gieneratione si perderà per  
la morte delle grauide.

¶ Del piāto fatto il venerdì santo. □

<sup>220</sup> In tutte le parti d'Europa sarà piāto  
da grā popoli per la morte d'ū <sup>221</sup>solo omo  
morto in oriēte.

¶ Of the Reflection of Walls of Cities in the  
Water of their Ditches. □

The high walls of great cities will be  
seen up side down in their ditches.

¶ Of Water, which flows turbid and mixed  
with Soil and Dust; and of Mist, which is  
mixed with the Air; and of Fire which is  
mixed with its own, and each with each. □

All the elements will be seen mixed to-  
gether in a great whirling mass, now borne  
towards the centre of the world, now to-  
wards the sky; and now furiously rushing  
from the South towards the frozen North,  
and sometimes from the East towards the  
West, and then again from this hemisphere  
to the other.

¶ The World may be divided into two Hemis-  
pheres at any Point. □

All men will suddenly be transferred into  
opposite hemispheres.

¶ The division of the East from the West  
may be made at any point. □

All living creatures will be moved from  
the East to the West; and in the same way  
from North to South, and vice versa.

¶ Of the Motion of Water which carries  
wood, which is dead. □

Bodies devoid of life will move by them-  
selves and carry with them endless genera-  
tions of the dead, taking the jwealth from  
the bystanders.

¶ Of Eggs which being eaten cannot form  
Chickens. □

Oh! how many will they be that never  
come to the birth!

¶ Of Fishes which are eaten unborn. □

Endless generations will be lost by the  
death of the pregnant.

¶ Of the Lamentation on Good Friday. □

Throughout Europe there will be a lamenta-  
tion of great nations over the death of  
one man who died in the East.

## ¶Del sogniare.¶

<sup>223</sup> Andranno li omini e nō si moveranno,  
<sup>224</sup> parleranno cō chi nō si trova, senti<sup>225</sup>rāo  
 chi nō parla.

## ¶Dell'onbra che si move coll'uomo.¶

<sup>227</sup> Vedrannosi forme e figure d'uomini  
<sup>228</sup> e d'animali, che seguiranno essi ani<sup>229</sup>mali  
 e omini dovunque fugiranno; <sup>230</sup>e tal fia il  
 moto di lui qual è del<sup>231</sup>l'altro, ma parrà  
 cosa mirabile delle <sup>232</sup>varie grandezze in  
 che essi si tras<sup>233</sup>mutano.

¶Dell'ombra del sole e dello spechiarsi  
<sup>235</sup>nell'acqua in un medesimo tēpo.¶

<sup>236</sup> Vedrassi molte volte l'uno uomo  
<sup>237</sup> diuentare 3, e tutti lo seguo<sup>238</sup>no, e spesso  
 l'uno, il piv certo, l'abbandona.

¶Delle casse che riseruano <sup>240</sup>molti  
 tesori.¶

<sup>241</sup> Troverrassi dentro a de' noci e deli  
 alberi <sup>242</sup>e altre piante tesori grādissimi, i  
 quali <sup>243</sup>lì stanno occulti e ben guardati.

¶Dello spegnere el lume a chi <sup>245</sup>va al  
 letto.¶

<sup>246</sup> Molti per mandare fori il fato <sup>247</sup>con  
 troppa prestezza perderanno il ue<sup>248</sup>dere e  
 in brieue tutti i sentimēti.

¶Delle canpanelle de' muli <sup>250</sup>che stanno  
 presso ai loro orechi.¶

<sup>251</sup> Sentirassi in molte parti dell'Europa ·  
 stru<sup>252</sup>mēti di uarie magnitudini far diuersc  
<sup>253</sup>armonie con grandissime fatiche di chi  
<sup>254</sup>piv presso l'ode.

## ¶Delli asini.¶

<sup>256</sup> Le molte fatiche saran remvnerate di  
<sup>257</sup>fame, di sete, di disagio, e di mazzate, e  
 di pū<sup>258</sup>ture, e bestemie, e grā uillanie.

## ¶De' soldati a cauallo.¶

<sup>260</sup> Molti sarā veduti portati da grādi  
 ani<sup>261</sup>mali con veloce corso alla ruina della  
 sua <sup>262</sup>vita e prestissima morte.

<sup>263</sup> Per l'aria e per la terra saranno ve-  
 duti ani<sup>264</sup>mali di diuersi colori portarne cō  
 fu<sup>265</sup>rore li omini alla destructione di lor vita.

## ¶Delle stelle delli sproni.¶

<sup>267</sup> Per causa delle stelle · si uedranno li  
 omini <sup>268</sup>esser velocissimi al pari di qua-  
 lüche <sup>269</sup>animal ueloce.

## ¶Of Dreaming.¶

Men will walk and not stir, they will  
 talk to those who are not present, and hear  
 those who do not speak.

## ¶Of a Man's Shadow which moves with him.¶

Shapes and figures of men and animals  
 will be seen following these animals and men  
 wherever they flee. And exactly as the one  
 moves the other moves; but what seems so  
 wonderful is the variety of height they  
 assume.

¶Of our Shadow cast by the Sun, and our Reflec-  
 tion in the Water at one and the same time.¶

Many a time will one man be seen as  
 three and all three move together, and  
 often the most real one quits him.

¶Of wooden Chests which contain great  
 Treasures.¶

Within walnuts and trees and other plants  
 vast treasures will be found, which lie hidden  
 there and well guarded.

¶Of putting out the Light when going  
 to Bed.¶

Many persons puffing out a breath with  
 too much haste, will thereby lose their sight,  
 and soon after all consciousness.

¶Of the Bells of Mules, which are close to  
 their Ears.¶

In many parts of Europe instruments of  
 various sizes will be heard making divers har-  
 monies, with great labour to those who hear  
 them most closely.

## ¶Of Asses.¶

The severest labour will be repaid with  
 hunger and thirst, and discomfort, and blows,  
 and goadings, and curses, and great abuse.

## ¶Of Soldiers on horseback.¶

Many men will be seen carried by large  
 animals, swift of pace, to the loss of their  
 lives and immediate death.

In the air and on earth animals will be  
 seen of divers colours furiously carrying men  
 to the destruction of their lives.

## ¶Of the Stars of Spurs.¶

By the aid of the stars men will be seen  
 who will be as swift as any swift animal.

## ¶ Il bastone ch'è morto. ¶

<sup>271</sup> Il movimēto de' morti farà fugire  
<sup>272</sup> cō dolore e piāto e cō grida molti  
viui.

## ¶ Dell' esca. ¶

<sup>274</sup> Cō pietra e con ferro si rende<sup>275</sup>ranno  
visibili le cose che prima nō<sup>276</sup> si vedeano.

C. A. 362 b; 1134 b]

1296.

## ¶ Del navicare. ¶

<sup>2</sup>Vedrassi li alberi delle grā selue  
di Tavrus, <sup>3</sup>e di Sinai, Apenino, e Atlante  
scorrere per l'aria <sup>4</sup>da oriēte a occidēte, da  
aquilone a meridiē, e porteranno per l'aria  
grā multitudine <sup>6</sup>d'omini; o quāti voti! o  
quāti mor̄ti! o quanta seperatiō d'amici e di  
parēti! o quāti fiē quelli che nō rivedranno  
più le lor pro<sup>9</sup>vincie nè le lor patrie, e che  
moriranno sanza se<sup>10</sup>poltura colle lor ossa  
sparse in diuersi <sup>11</sup>siti del mōdo!

## ¶ Dello sgomberare l'ogni santi. ¶

<sup>13</sup>Molti abbandoneranno le propie abita-  
zioni, e por<sup>14</sup>terā cō seco tutti e sua valsenti,  
e andran<sup>15</sup>no abitare in altri paesi.

## ¶ Del di de' morti. ¶

<sup>17</sup>E quāti fiē quelli che piāgeranno i  
lor <sup>18</sup>antichi morti portādo lumi a quelli.

¶ De' frati che spēdendo parole; <sup>20</sup>riceuono  
di grā ricchezze e danno <sup>21</sup>il paradiso. ¶

<sup>24</sup>¶ Le invisibili monete farā triōfare  
molti spē<sup>25</sup>ditori di quelle. ¶

¶ Degli archi fatti <sup>27</sup>colli corni de' boi. ¶

<sup>28</sup>Molti fiē quelli che per causa delle  
bouine cor<sup>29</sup>na moriranno di dolente morte.

¶ Dello scriver lettere da vn <sup>31</sup>paese a vn  
altro. ¶

<sup>32</sup>Parleransi li uonini di remotissimi paesi  
l'uno all'altro e rispōderāsi.

¶ Degli emisperi che sono infiniti <sup>34</sup>e da  
infinite linie son diuisi, in mo<sup>35</sup>do che senpre  
ciascuno uomo n'à <sup>36</sup>vna d'esse linie infra  
l'ū de' piedi e l'altro. ¶

<sup>37</sup>Parleransi e coccheransi e abbraccierani  
si li omni stanti da l'uno al<sup>38</sup>altro emisperio,  
e tenderansi i loro linguaggi.

## ¶ Of a Stick, which is dead. ¶

The motions of a dead thing will make  
many living ones flee with pain and lamenta-  
tion and cries.

## ¶ Of Tinder. ¶

With a stone and with iron things will  
be made visible which before were not seen.

## ¶ Of going in Ships. ¶

Whe shall see the trees of the great forests  
of Taurus and of Sinai and of the Appenines  
and others, rush by means of the air, from  
East to West and from North to South; and  
carry, by means of the air, great multitudes  
of men. Oh! how many vows!  
Oh! how many deaths! Oh! how many  
partings of friends and relations! Oh! how  
many will those be who will never again  
see their own country nor their native land,  
and who will die unburied, with their bones  
strewn in various parts of the world!

## ¶ Of moving on All Saints' Day. ¶

Many will forsake their own dwellings  
and carry with them all their belongings and  
will go to live in other parts.

## ¶ Of All Souls' Day. ¶

How many will they be who will bewail  
their deceased forefathers, carrying lights  
to them.

¶ Of Friars, who spending nothing but words,  
receive great gifts and bestow Paradise. ¶

Invisible money will procure the triumph  
of many who will spend it.

## ¶ Of Bows made of the Horns of Oxen. ¶

Many will there be who will die a painful  
death by means of the horns of cattle.

¶ Of writing Letters from one Country to  
another. ¶

Men will speak with each other from  
the most remote countries, and reply.

¶ Of Hemispheres, which are infinite; and  
which are divided by an infinite number of  
Lines, so that every Man always has one of  
these Lines between his Feet. ¶

Men standing in opposite hemispheres will  
converse and deride each other and embrace each  
other, and understand each other's language.

**¶ De' preti che dicono messe. ¶**

40 Molti fien quelli che per esercitare la lor arte si uestirā richissimamente e questo parrà esser fatto secōdo l'uso de grēbiali.

**¶ De' frati confessori. ¶**

43 Le suēturate donne di propia volontà 44 andranno a palesare agli omini 45 tutti le loro lussurie e opere 46 vergognose e segretissime.

**¶ Delle chiese e abitatō de' frati. ¶**

53 Assai saranno che lascieranno 54 li eserciti e le fatiche 55 e povertà di uita e di roba, e andranno abitare nelle 56 richezze e triofanti edifiti mostrando questo esser 57 il mezzo di farsi amico a Dio.

**¶ Del uendere il paradiso. ¶**

61 Infinita moltitudine venderanno pubblicamente e pacificamēte 62 cose di grandissimo prezzo sanza licenza del padrone di quelle, 63 e che mai nō furō loro nè in lor potestà, e a questo nō prove<sup>64</sup>drà la giustitia vmana.

**¶ De' morti che si uanno a sotterrare. ¶**

66 I semplici popoli porterā gran quantità di lumi per far lumi 67 ne' viaggi a tutti quelli che integralmente ànno perso la uirtù 68 visiua.

**¶ Delle doti delle fanciulle. ¶**

71 E doue prima la gioventù feminina nō si potea difendere dal<sup>72</sup>la lussuria e rapina de' maschi, nè per guardie di parenti né fortezze di mvra, 73 verrà tempo che bisognierà che padri e parēti d'esse fanciulle 74 le paghino di grā prezzi chi voglia dormire con loro, ancorachè es<sup>75</sup>se sien ricche, nobili, e bellissime; cierto è, par qui che la 76 natura voglia spegniere la umana spetie come cosa invtile al mondo, 77 e guastatrice di tutte le cose create.

**¶ Della crudeltà dell'omo. ¶**

79 Vedrannosi animali sopra della terra, i quali senpre combatteranno infra 80 loro e

**¶ Of Priests who say Mass. ¶**

There will be many men who, when they go to their labour will put on the richest clothes, and these will be made after the fashion of aprons [petticoats].

**¶ Of Friars who are Confessors. ¶**

And unhappy women will, of their own free will, reveal to men all their sins and shameful and most secret deeds.

**¶ Of Churches and the Habitations of Friars. ¶**

Many will there be who will give up work and labour and poverty of life and goods, and will go to live among wealth in splendid buildings, declaring that this is the way to make themselves acceptable to God.

**¶ Of Selling Paradise. ¶**

An infinite number of men will sell publicly and unhindered things of the very highest price, without leave from the Master of it; while it never was theirs nor in their power; and human justice will not prevent it.

**¶ Of the Dead which are carried to be buried. ¶**

The simple folks will carry vast quantities of lights to light up the road for those who have entirely lost the power of sight.

**¶ Of Dowries for Maidens. ¶**

And whereas, at first, maidens could not be protected against the violence of Men, neither by the watchfulness of parents nor by strong walls, the time will come when the fathers and parents of those girls will pay a large price to a man who wants to marry them, even if they are rich, noble and most handsome. Certainly this seems as though nature wished to eradicate the human race as being useless to the world, and as spoiling all created things.

**¶ Of the Cruelty of Man. ¶**

Animals will be seen on the earth who will always be fighting against each other

con danni grandissimi e spesso morte di ciascuna delle <sup>81</sup>parti; questi non avrà termine nelle lor malignità; per le fiere mē-<sup>82</sup>bra di questi uerranno a terra grā parte delli alberi delle gran selue dell'u<sup>83</sup>niverso, e poi ch'essi avranno pasciuto, il nutrimento de' loro desideri sa<sup>84</sup>rà, di dar morte e affanno e fatiche e guerre e furie a qualūche cosa animata; e per la loro smisurata superbia questi si vor<sup>85</sup>ranno leuare inverso il cielo, ma la superchia gravezza delle lor membra gli porrà <sup>86</sup>in basso; nulla cosa resterà sopra la terra o sotto la terra e l'acqua che nō <sup>87</sup>sia perseguitata, remossa o guasta, e quella dell'ū paese remossa nell'altro; <sup>88</sup>e 'l corpo di questi si farà sepultura e transito di tutti i già da lor morti cor<sup>89</sup>pi animati; o mōdo, come è che nō t'apri a precipitarlo nell'alte fessure de' tua <sup>90</sup>grā baratri e spelonche, e non mostrare più al cielo si crudele e spie<sup>91</sup>tato mōstro !

with the greatest loss and frequent deaths on each side. And there will be no end to their malignity; by their strong limbs we shall see a great portion of the trees of the vast forests laid low throughout the universe; and, when they are filled with food the satisfaction of their desires will be to deal death and grief and labour and wars and fury to every living thing; and from their immoderate pride they will desire to rise towards heaven, but the too great weight of their limbs will keep them down. Nothing will remain on earth, or under the earth or in the waters which will not be persecuted, disturbed and spoiled, and those of one country removed into another. And their bodies will become the sepulture and means of transit of all they have killed.

O Earth! why dost thou not open and engulf them in the fissures of thy vast abyss and caverns, and no longer display in the sight of heaven such a cruel and horrible monster.

Br. M. 42 b]

1297.

## PROFETIE.

<sup>2</sup>Molte fien quelle che cresce<sup>3</sup>rā nelle lor ruine.

¶ La palla della neue <sup>5</sup>rotolādo sopra la <sup>6</sup>neue. □

<sup>7</sup>Molta turba fie quella <sup>8</sup>che, dimēticate loro esse<sup>9</sup>re e nome, staran come <sup>10</sup>morti sopra le spoglie <sup>11</sup>deli altri morti.

¶ Il dormire sopra <sup>13</sup>le piume dell'uccielli. □

<sup>14</sup>Vedrannosi le parti oriēta<sup>15</sup>li discorrere <sup>16</sup>nell'occidentali e le me<sup>17</sup>ridionali in settentri<sup>18</sup>one, avviluppando<sup>19</sup>si per l'universo con grande <sup>20</sup>strepito e tremore o furore.

¶ Il uento d'oriēte che <sup>22</sup>scorreua in ponente. □

<sup>23</sup>I razzi solari accende<sup>24</sup>rāno il foco in te<sup>25</sup>rra coll' quale s'in<sup>26</sup>focherà ciò ch'è sotto <sup>27</sup>il cielo, e ripercossi <sup>28</sup>nel suo impedimē-<sup>29</sup>to ritorneranno <sup>30</sup>in basso.

¶ Lo specchio cavo <sup>32</sup>acciēde il foco, col <sup>33</sup>quale si scalda il <sup>34</sup>forno che à il fō<sup>35</sup>do che sta sotto il suo <sup>36</sup>cielo. □

## PROPHECIES.

There will be many which will increase in their destruction.

¶ The Ball of Snow rolling over Snow. □

There will be many who, forgetting their existence and their name, will lie as dead on the spoils of other dead creatures.

¶ Sleeping on the Feathers of Birds. □

The East will be seen to rush to the West and the South to the North in confusion round and about the universe, with great noise and trembling or fury.

¶ In the East wind which rushes to the West. □

The solar rays will kindle fire on the earth, by which a thing that is under the sky will be set on fire, and, being reflected by some obstacle, it will bend downwards.

¶ The Concave Mirror kindles a Fire, with which we heat the oven, and this has its foundation beneath its roof. □

¶ Vedrassi ai padri donare le lor figliole <sup>5</sup>a lussuria delli omuni e premiare e abbādonare ogni <sup>6</sup>passata guardia (quādo si maritano le putte. D) ¶

¶ Uscirāno li omuni dalle sepulture cō-<sup>7</sup>uertiti <sup>8</sup>in vcelli · e assaliranno li altri omuni togliendo <sup>9</sup>loro il cibo dalle propie mani e mēse | (le mosche. D) ¶

1298.

The Lion tribe will be seen tearing open the earth with their clawed paws and in the caves thus made, burying themselves together with the other animals that are beneath them.

Animals will come forth from the earth in gloomy vesture, which will attack the human species with astonishing assaults, and which by their ferocious bites will make confusion of blood among those they devour.

Again the air will be filled with a mischievous winged race which will assail men and beasts and feed upon them with much noise—filling themselves with scarlet blood.

1299.

Blood will be seen issuing from the torn flesh of men, and trickling down the surface.

Men will have such cruel maladies that they will tear their flesh with their own nails. (The Itch.)

Plants will be seen left without leaves, and the rivers standing still in their channels.

The waters of the sea will rise above the high peaks of the mountains towards heaven and fall again on to the dwellings of men. (That is, in Clouds.)

The largest trees of the forest will be seen carried by the fury of the winds from East to West. (That is across the Sea.)

Men will cast away their own victuals. (That is, in Sowing.)

1300.

Human beings will be seen who will not understand each other's speech; that is, a German with a Turk.

Fathers will be seen giving their daughters into the power of man and giving up all their former care in guarding them. (When Girls are married.)

Men will come out thei grāves turned into flying creatures; and they will attack other men, taking their food from their very hand or table. (As Flies.)

## ¶ Of Walnut trees, that are beaten. ¶

Those which have done best will be most beaten, and their offspring taken and flayed or peeled, and their bones broken or crushed.

## ¶ Of Sculpture. ¶

Alas! what do I see? The Saviour crucified anew.

## ¶ Of the Mouth of Man, which is a Sepulchre. ¶

Great noise will issue from the sepulchres of those who died evil and violent deaths.

## ¶ Of the Skins of Animals which have the sense of feeling what is in the things written. ¶

The more you converse with skins covered with sentiments, the more wisdom will you acquire.

## ¶ Of Priests who bear the Host in their body. ¶

Then almost all the tabernacles in which dwells the Corpus Domini, will be plainly seen walking about of themselves on the various roads of the world.

And those who feed on grass will turn night into day ¶ Tallow. ¶

And many creatures of land and water will go up among the stars ¶ that is Planets. ¶

The dead will be seen carrying the living ¶ in Carts and Ships in various places. ¶

Food shall be taken out of the mouth of many ¶ the oven's mouth. ¶

And those which will have their food in their mouth will be deprived of it by the hands of others ¶ the oven. ¶

## ¶ Of Crucifixes which are sold. ¶

I see Christ sold and crucified afresh, and his Saints suffering Martyrdom.

## ¶ Of Physicians, who live by sickness. ¶

Men will come into so wretched a plight that they will be glad that others will derive profit from their sufferings or from the loss of their real wealth, that is health.

¶ Della religione de' frati <sup>9</sup>che vivono per li loro sā<sup>10</sup>ti, morti per assai tēpo. ¶

<sup>11</sup> Quelli che saranno morti dopo mille anni <sup>12</sup>fien quelli che daranno le spese a molti <sup>13</sup>vivi.

¶ De' sassi cōvertiti in calcina, <sup>15</sup>de' quali si murano le prigioni. ¶

<sup>16</sup> Molti che fieno disfatti dal fuoco <sup>17</sup>ināzi a questo tempo, torrāno la libertà a mol<sup>18</sup>ti uomini.

I.2 19a]

¶ De' putti che tettano. ¶

<sup>2</sup> Molti Francescani, Domenicani, e Benedettini mangieranno quel che da altri <sup>4</sup>altri volte vicinamēte è stato māgiasto, che staranno molti mesi avanti <sup>6</sup>che possino parlare.

¶ De' nichi e chiocciole che sono rebuttati <sup>8</sup>dal mare che marciscono dētro ai lor gusci. ¶

<sup>9</sup> O quanti fien quelli che, poichè fiē morti, mar<sup>10</sup>ciranno nelle lor propie case, ēpiēdo le <sup>11</sup>circūstāte parti piene di fetulēte puzzo!

L. 91a]

¶ De' mvli che portano le ricche some <sup>2</sup>dell'argiēto e oro. ¶

<sup>3</sup> Molti tesori e grā ricchezze saranno appre<sup>4</sup>sso alli animali di 4 piedi, i quali le porsteranno in diversi lochi.

K.2 12]

¶ Dell'onbra che fa l'omo di not<sup>2</sup>te col lume. ¶

<sup>3</sup> Appariranno grandissime figure in forma <sup>4</sup>vmmana, le quali quanto piv le ti fasrai vicine, più diminuiranno la <sup>6</sup>loro immensa magnitudine.

1307. It seems to me probable that this note, which occurs in the note book used in 1502, when Leonardo, in the service of Cesare Borgia, visited Urbino, was suggested by the famous pillage of the

¶ Of the Religion of Friars, who live by the Saints who have been dead a great while. ¶

Those who are dead will, after a thousand years be those who will give a livelihood to many who are living.

¶ Of Stones converted into Lime, with which prison walls are made. ¶

Many things that have been before that time destroyed by fire will deprive many men of liberty.

1306.

¶ Of Children who are suckled. ¶

Many Franciscans, Dominicans and Benedictines will eat that which at other times was eaten by others, who for some months to come will not be able to speak.

¶ Of Cockles and Sea Snails which are thrown up by the sea and which rot inside their shells. ¶

How many will there be who, after they are dead, will putrefy inside their own houses, filling all the surrounding air with a fetid smell.

1307.

¶ Of Mules which have on them rich burdens of silver and gold. ¶

Much treasure and great riches will be laid upon four-footed beasts, which will convey them to divers places.

1308.

¶ Of the Shadow cast by a man at night with a light. ¶

Huge figures will appear in human shape, and the nearer you get to them, the more will their immense size diminish.

riches of the palace of Guidobaldo, whose treasures Cesare Borgia at once had carried to Cesena (see GREGOROVIUS, *Geschichte der Stadt Rom im Mittelalter*, XIII, 5, 4).

C. A. 127b; 390a]

## 1309.

¶ Delle boscie portate dalle cicognie. ¶

² Vedrannosi in grandissima altezza dell'aria lughissimi serpenti ³ combattere colli uccielli.

¶ Delle bōarde ch'escono dalla fossa e dalla forma. ¶

⁵ Uscirà di sotto terra chi con spauētvoli grida stordirà ⁶ i cirstanti vicini e col suo fiato farà morire li omini ⁷ e ruinare le città e castella.

¶ Of Snakes, carried by Storks. ¶

Serpents of great length will be seen at a great height in the air, fighting with birds.

¶ Of great guns, which come out of a pit and a mould. ¶

Creatures will come from underground which with their terrific noise will stun all who are near; and with their breath will kill men and destroy cities and castles.

Br. M. 212b]

## 1310.

¶ Del grāo e altre semēze. ¶

² Gitteranno li omini fori delle lor proprie case quelle uettovalglie, le quali ³ erā dedicate a sostētare la lor uita.

¶ Delli alberi che nutriscono i nesti. ¶

⁵ Vedrannosi i padri e le madri fare molto piv giovamento ai figliastri che ai lor ueri ⁶ figlioli.

¶ Del turibolo dell'incēso. ¶

⁸ Quelli che cō uestimēti bianchi andranno con arrogante movimēto minacciādo con metallo e fuoco, che nō facieva lor detrimēto alcuno.

¶ Of Grain and other Seeds. ¶

Men will fling out of their houses those victuals which were intended to sustain their life.

¶ Of Trees, which nourish grafted shoots. ¶

Fathers and mothers will be seen to take much more delight in their step-children than in their own children.

¶ Of the Censer. ¶

Some will go about in white garments with arrogant gestures threatening others with metal and fire which will do no harm at all to them.

S. K. M. II.2; 35b]

## 1311.

¶ Del segare dell'erbe. ¶

² Spegnieransi innumerabili viti ³ e farassi sopra la terra innumera⁹ibili buchi.

¶ Della vita delli omini ⁶ che ogni año si mv⁹tan⁹ano di carne. ¶

⁸ Li omini passerā morti per le ⁹ sue proprie budelle.

¶ Of drying Fodder. ¶

Innumerable lives will be destroyed and innumerable vacant spaces will be made on the earth.

¶ Of the Life of Men, who every year change their bodily substance. ¶

Men, when dead, will pass through their own bowels.

F. 47<sup>a</sup>]PERCHÈ LI CANI ODORÀ VOLENTIERI IL CULO  
L'UNO AL<sup>2</sup>L'ALTRO.

Questo animale à in odio i po<sup>7</sup>veri, perchè e' māgiano tristi cibi, e ama li richi, <sup>4</sup>perchè essi àn' bone vivāde e massime di car<sup>5</sup>ne; E lo sterco delli animali senpre ri<sup>6</sup>tiene della virtù della sua origine, come mo<sup>7</sup>strano le feccie . . . .

<sup>10</sup>Ora i cani ànno si sottilissimo odo<sup>11</sup>rato che col naso sentono la uirtù rima<sup>12</sup>sta in tali feccie; e che sie uero, se le trovā <sup>13</sup>per le strade odorano, e se vi sentono dentro <sup>14</sup>vi<sup>15</sup>rtù di carne o d'altro, essi le piglian, e <sup>15</sup>se nō, le lasciano; e per tornare al quesito di<sup>16</sup>co, che se conoscono il cane mediante tali <sup>17</sup>odori essere ben passiuto, essi lo riguar<sup>18</sup>dano, perchè stimano quello avere potēte e ricco pa<sup>19</sup>drone, e se nō sentono tale odore cō uirtù, essi sti<sup>20</sup>mano tal cane essere da poco, e avere povero <sup>21</sup>e tristo padrone, e però mordono tali cani come fare<sup>22</sup>bbero il suo padrone.

## WHY DOGS TAKE PLEASURE IN SMELLING AT EACH OTHER.

This animal has a horror of the poor, because they eat poor food, and it loves the rich, because they have good living and especially meat. And the excrement of animals always retains some virtue of its origin as is shown by the faeces. . . .

Now dogs have so keen a smell, that they can discern by their nose the virtue remaining in these faeces, and if they find them in the streets, smell them and if they smell in them the virtue of meat or of other things, they take them, and if not, they leave them: And to return to the question, I say that if by means of this smell they know that dog to be well fed, they respect him, because they judge that he has a powerful and rich master; and if they discover no such smell with the virtue of meet, they judge that dog to be of small account and to have a poor and humble master, and therefore they bite that dog as they would his master.

C. A. 68<sup>b</sup>; 203<sup>b</sup>]

Sono li moti della terra <sup>2</sup>circulari assai vtili, <sup>3</sup>cōciosiachè' mai li o<sup>4</sup>mini si fermano; e fas<sup>5</sup>si in piv modi, de' qua<sup>6</sup>li nell'uno li omini por<sup>7</sup>tano la terra in spal<sup>8</sup>la, l'altro, colli bau<sup>9</sup>li, e altri col carret<sup>10</sup>to; Quel che la porta <sup>11</sup>in spalla si fa prima <sup>12</sup>enpiere il uassoio in ter<sup>13</sup>ra., e perde tēpo a metterselo <sup>14</sup>in spalla; Quel dello bau<sup>15</sup>le non perde tempo.

## 1331.

The circular plans of carrying earth are very useful, inasmuch as men never stop in their work; and it is done in many ways. By one of these ways men carry the earth on their shoulders, by another in chests and others on wheelbarrows. The man who carries it on his shoulders first fills the tub on the ground, and he loses time in hoisting it on to his shoulders. He with the chests loses no time.

## *XXI.*

### *Letters. Personal Records. Dated Notes.*

When we consider how superficial and imperfect are the accounts of Leonardo's life written some time after his death by Vasari and others, any notes or letters which can throw more light on his personal circumstances cannot fail to be in the highest degree interesting. The texts here given as Nos. 1351—1353, set his residence in Rome in quite a new aspect; nay, the picture which irresistibly dwells in our minds after reading these details of his life in the Vatican, forms a striking contrast to the contemporary life of Raphael at Rome.

I have placed foremost of these documents the very remarkable letters to the Defterdar of Syria. In these Leonardo speaks of himself as having staid among the mountains of Armenia, and as the biographies of the master tell nothing of any such distant journeys, it would seem most obvious to treat this passage as fiction, and so spare ourselves the onus of proof and discussion. But on close examination no one can doubt that these documents, with the accompanying sketches, are the work of Leonardo's own hand. Not merely is the character of the handwriting his, but the spelling and the language are his also. In one respect only does the writing betray any marked deviation from the rest of the notes, especially those treating on scientific questions; namely, in these observations he seems to have taken particular pains to give the most distinct and best form of expression to all he had to say; we find erasures and emendations in almost every line. He proceeded, as we shall see, in the same way in the sketches for letters to Giuliano de' Medici, and what can be more natural, I may ask, than to find the draft of a letter thus altered and improved when it is to contain an account of a definite subject, and when personal interests are in the scale? The finished copies as sent off are not known to exist; if we had these instead of the rough drafts, we might unhesi-

tatingly have declared that some unknown Italian engineer must have been, at that time, engaged in Armenia in the service of the Egyptian Sultan, and that Leonardo had copied his documents. Under this hypothesis however we should have to state that this unknown writer must have been so far one in mind with Leonardo as to use the same style of language and even the same lines of thought. This explanation might—as I say—have been possible, if only we had the finished letters. But why should these rough drafts of letters be regarded as anything else than what they actually and obviously are? If Leonardo had been a man of our own time, we might perhaps have attempted to account for the facts by saying that Leonardo, without having been in the East himself, might have undertaken to write a Romance of which the scene was laid in Armenia, and at the desire of his publisher had made sketches of landscape to illustrate the text.

I feel bound to mention this singular hypothesis as it has actually been put forward (see No. 1336 note 5); and it would certainly seem as though there were no other possible way of evading the conclusion to which these letters point, and their bearing on the life of the master,—absurd as the alternative is. But, if, on a question of such importance, we are justified in suggesting theories that have no foundation in probability, I could suggest another which, as compared with that of a Fiction by Leonardo, would be neither more nor less plausible; it is, moreover the only other hypothesis, perhaps, which can be devised to account for these passages, if it were possible to prove that the interpretation that the documents themselves suggest, must be rejected *a priori*; viz may not Leonardo have written them with the intention of mystifying those who, after his death, should try to decipher these manuscripts with a view to publishing them? But if, in fact, no objection that will stand the test of criticism can be brought against the simple and direct interpretation of the words as they stand, we are bound to regard Leonardo's travels in the East as an established fact. There is, I believe nothing in what we know of his biography to negative such a fact, especially as the details of his life for some few years are wholly unknown; nor need we be at a loss for evidence which may serve to explain—at any rate to some extent—the strangeness of his undertaking such a journey. We have no information as to Leonardo's history between 1482 and 1486; it cannot be proved that he was either in Milan or in Florence. On the other hand the tenor of this letter does not require us to assume a longer absence than a year or two. For, even if his appointment (*offitio*) as Engineer in Syria had been a permanent one, it might have become untenable—by the death perhaps of the *Defterdar*, his patron, or by his removal from office—, and Leonardo on his return home may have kept silence on the subject of an episode which probably had ended in failure and disappointment.

From the text of No. 1379 we can hardly doubt that Leonardo intended to make an excursion secretly from Rome to Naples, although so far as has hitherto been known, his biographers never allude to it. In another place (No. 1077) he says that he had worked as an Engineer in Friuli. Are we to doubt this statement too, merely because no biographer has hitherto given us any information on the matter? In the geographical notes Leonardo frequently speaks of the East, and though such passages

afford no direct proof of his having been there, they show beyond a doubt that, next to the Nile, the Euphrates, the Tigris and the Taurus mountains had a special interest in his eyes. As a still further proof of the futility of the argument that there is nothing in his drawings to show that he had travelled in the East, we find on Pl. CXIX a study of oriental heads of Armenian type,—though of course this may have been made in Italy.

If the style of these letters were less sober, and the expressions less strictly to the point throughout, it might be possible to regard them as a romantic fiction instead of a narrative of fact. Nay, we have only to compare them with such obviously fanciful passages as No. 1354, Nos. 670—673, and the Fables and Prophecies. It is unnecessary to discuss the subject any further here; such explanations as the letter needs are given in the foot notes.

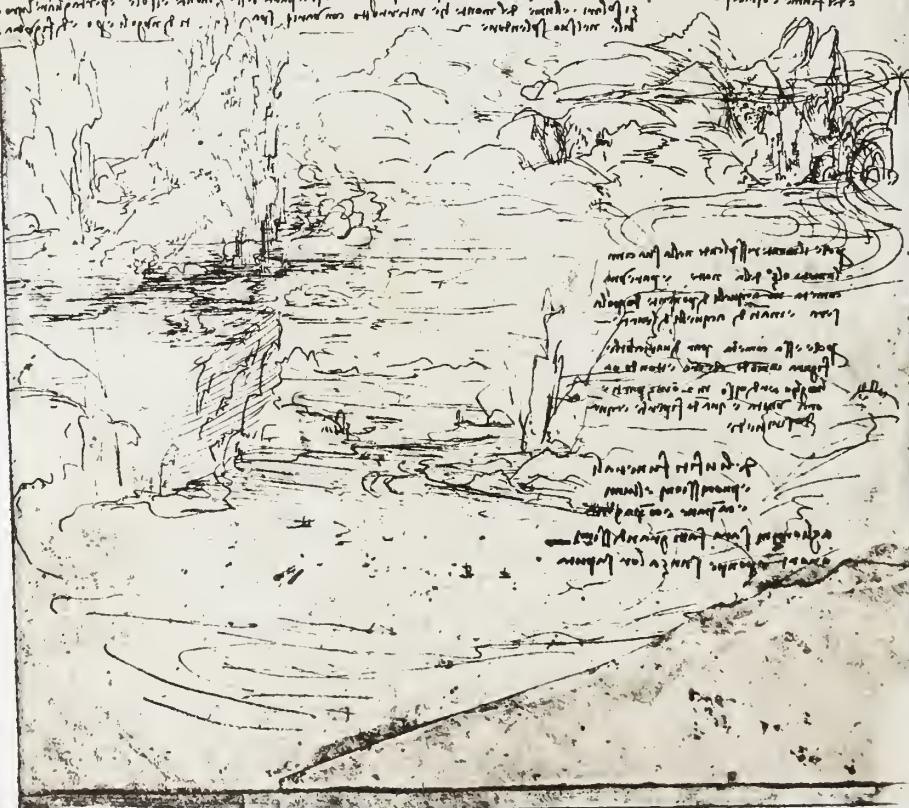

The drafts of letters to Lodovico il Moro are very remarkable. Leonardo and this prince were certainly far less closely connected, than has hitherto been supposed. It is impossible that Leonardo can have remained so long in the service of this prince, because the salary was good, as is commonly stated. On the contrary, it would seem, that what kept him there, in spite of his sore need of the money owed him by the prince, was the hope of some day being able to carry out the project of casting the 'gran cavallo'.

*unusquisque te etiam quod excepit aliusque non  
appellat.*

C. A. 1336; 4266]

1336.

AL DIODARIO DI SIRIA LOCOTENÈTE DEL  
SACRO SOLTANO <sup>2</sup>DI BABILONIA.

TO THE DEVATDAR OF SYRIA, LIEUTENANT OF  
THE SACRED SULTAN OF BABYLON.

Il nvouo accidēte accaduto in queste  
nostre parti settentrionali, il quale sō certo  
che nō solamēte a te ma a tutto l'universo

[3]The recent disaster in our Northern parts which I am certain will terrify not you alone but the whole world, which referring to Armenia (1336. 1337).

1336. 1. sorio. 3. [eaca n] "duto" [vono] "il nvouo" accidēte | "achaduto" in queste . . parte settentrionali [le quali so] "il

1336. Lines 1—52 are reproduced in facsimile on Pl. CXVI.

1. *Diodario*. This word is not to be found in any Italian dictionary, and for a long time I vainly sought an explanation of it. The youthful reminiscences of my wife afforded the desired clue. The chief town of each Turkish Villayet, or province—such as Broussa, for instance, in Asia Minor, is the residence of a Defterdar, who presides over the financial affairs of the province. *Defterdar hane* was, in former times, the name given to the Ministry of Finance at Constantinople; the Minister of Finance to the Porte is now known as the *Mallîè-Nazî* and the *Defterdars* are his subordinates. A *Defterdar*, at the present day is merely the head of the finance department in each Provincial district. With regard to my suggestion that Leonardo's *Diodario* might be identical with the Defterdar of former times, the late M. C. DEFRÉMERIE, Arabic Professor, and Membre de l'Institut de France wrote to me as follows: *Votre conjecture est parfaitement fondée; diodario est l'équivalent de dévadar ou plus exactement dévâtdâr, titre d'une importante dignité en Egypte, sous les Mamlouks.*

The word however is not of Turkish, but of Perso-Arabic derivation. دفتر دار, دواة دار literally *Defter* (Arabic) meaning *folio*; for *dar* (Persian) Book-keeper or holder is the English equivalent; and the idea is that of a deputy in command. During

the Mamelook supremacy over Syria, which corresponded in date with Leonardo's time, the office of Defterdar was the third in importance in the State.

*Soltano di Babilonia*. The name of Babylon was commonly applied to Cairo in the middle ages. For instance BREIDENBACH, *Itinerarium Hierosolyma* p. 218 says: "At last we reached Babylon. But this is not that Babylon which stood on the further shore of the river Chober, but that which is called the Egyptian Babylon. It is close by Cairo and the twain are but one and not two towns; one half is called Cairo and the other Babylon, whence they are called together Cairo-Babylon; originally the town is said to have been named Memphis and then Babylon, but now it is called Cairo." Compare No. 1085, 6.

Egypt was governed from 1382 till 1517 by the Borgite or Tcherkessian dynasty of the Mamelook Sultans. One of the most famous of these, Sultan Kaït Bey, ruled from 1468—1496 during whose reign the Gama (or Mosque) of Kaït Bey and tomb of Kaït Bey near the Okella Kaït Bey were erected in Cairo, which preserve his name to this day. Under the rule of this great and wise prince many foreigners, particularly Italians, found occupation in Egypt, as may be seen in the 'Viaggio di Josaphat Barbaro', among other travellers. "Next to Leonardo (so I learn from Prof. Jac. Burckhardt of Bâle) Kaït Bey's most helpful engineer was a German

farà <sup>4</sup>terrore; il quale successivamente ti sarà detto per ordine mostrando primo l'effetto e poi la causa ..

5 Ritrovandomi io in queste parti d'Erminia · a dare con amore e sollecitudine opera a quello vfitio, pel quale tu mi mādasti, e nel <sup>6</sup>dare principio in quelle parti che a me pareano esser · piv al proposito

quale [ere] sō cierto" che . . atte mattutto.. dara. 4. terrore [e ca] il . . causa [e du]. 5. dare | "con amore esollecitudine" opera acquello [pe] vfitio . . mādassti. 6. parte [chontingne ne a noi] che . . pareano | "eser" piv . . nosstro. 7. cita

who in about 1487 superintended the construction of the Mole at Alexandria. Felix Fabii knew him and mentions him in his *Historia Suevorum*, written in 1488."

3. *Il nuovo accidente accaduto*, or as Leonardo first wrote and then erased, *è accaduto un nuovo accidente*. From the sequel this must refer to an earthquake, and indeed these were frequent at that period, particularly in Asia Minor, where they caused immense mischief. See No. 1101 note.

4. The text here breaks off. The following lines are a fresh beginning of a letter, evidently addressed to the same person, but, as it would seem, written at a later date than the previous text. The numerous corrections and amendments amply prove that it is not a copy from any account of a journey by some unknown person; but, on the contrary, that Leonardo was particularly anxious to choose such words and phrases as might best express his own ideas.

5. *Parti d'Erminia*. See No. 945, note. The extent of Armenia in Leonardo's time is only approximately known. In the XV<sup>th</sup> century the Persians governed the Eastern, and the Arabs the Southern portions. Arabic authors—as, for instance Abulfeda—include Cilicia and a part of Cappadocia in Armenia, and Greater Armenia was the tract of that country known later as Turcomania, while Armenia Minor was the territory between Cappadocia and the Euphrates. It was not till 1522, or even 1574 that the whole country came under the dominion of the Ottoman Turks, in the reign of Selim I.

The Mamelook Sultans of Egypt seem to have taken a particular interest in this, the most Northern province of their empire, which was even then in danger of being conquered by the Turks. In the autumn of 1477 Sultan Kaït Bey made a journey of inspection, visiting Antioch and the valleys of the Tigris and Euphrates with a numerous and brilliant escort. This tour is briefly alluded to by Moodshireddin p. 561; and by WEIL, *Geschichte der Abbasiden* V, p. 358. An anonymous member of the suite wrote a diary of the expedition in Arabic, which has been published by R. V. LONZONE ('Viaggio in Palestina e Soria di Kaid Ba XVIII sultano della II dinastia

shall be related to you in due order, showing first the effect and then the cause[4]..

Finding myself in this part of Armenia[5] to carry into effect with due love and care the task for which you sent me[6]; and to make a beginning in a place which seemed to me to be most to our purpose, I entered into

*mamelueca, fatto nel 1477. Testo arabo. Torino 1878*, without notes or commentary). Compare the critique on this edition, by J. GILDEMEISTER in *Zeitschrift des Deutschen Palaestina Vereins* (Vol. III p. 246—249). Lanzone's edition seems to be no more than an abridged copy of the original. I owe to Professor Schéfer, Membre de l'Institut, the information that he is in possession of a manuscript in which the text is fuller, and more correctly given. The Mamelook dynasty was, as is well known, of Circassian origin, and a large proportion of the Egyptian Army was recruited in Circassia even so late as in the XV<sup>th</sup> century. That was a period of political storms in Syria and Asia Minor and it is easy to suppose that the Sultan's minister, to whom Leonardo addresses his report as his superior, had a special interest in the welfare of those frontier provinces. Only to mention a few historical events of Sultan Kaït Bey's reign, we find that in 1488 he assisted the Circassians to resist the encroachments of Aladeddoulet, an Asiatic prince who had allied himself with the Osmanli to threaten the province; the consequence was a war in Cilicia by sea and land, which broke out in the following year between the contending powers. Only a few years earlier the same province had been the scene of the so-called Caramenian war in which the united Venetian, Neapolitan and Slavonic fleets had been engaged. (See CORIALANO CIPPICO, *Della guerra dei Veneziani nell'Asia dal 1469—1474. Venezia 1796*, p. 54) and we learn incidentally that a certain Leonardo Boldo, Governor of Scutari under Sultan Mahmoud,—as his name would indicate, one of the numerous renegades of Italian birth—played an important part in the negotiations for peace.

*Tu mi mandasti*. The address *tu* to a personage so high in office is singular and suggests personal intimacy; Leonardo seems to have been a favourite with the Diodario. Compare lines 54 and 55.

I have endeavoured to show, and I believe that I am also in a position to prove with regard to these texts, that they are draughts of letters actually written by Leonardo; at the same time I must not omit to mention that shortly after I had discovered

nostro, entrai nella <sup>7</sup> città di Calindra, vicina ai nostri confini; questa città è posta nelle spiagge di quel<sup>8</sup> la parte del mōte Tavro, che è diuisa dall' Eufrates e riguarda i corni del grā Mōte Tav<sup>9</sup>ro per ponēte.; Questi corni son di tanta altura che par che tocchino il cielo, chè nell' universo non è parte terre<sup>10</sup>stre piv alta della sua cima.; e senpre 4 ore inanzi dì è per-

the city of Calindra[7], near to our frontiers. This city is situated at the base of that part of the Taurus mountains which is divided from the Euphrates and looks towards the peaks of the great Mount Taurus[8] to the West[9]. These peaks are of such a height that they seem to touch the sky, and in all the world there is no part of the earth, higher than its summit[10], and the rays of

di chalindra . . confini [e] questa . . ispiegge {del m} di quel. 8. diuisa [dal lago] dalleufrates [essa per le] e riguarda i [grā] corni del "grā". 9.altura [che lo per me non credo] "che par chetochino il celo" che nell universo [sia] "none" parte, 10. ste piv al della . . essenzre . . di [allu] e perchossa . . sole [che allei si mostra]. 11. lesere . . petra biāchissima

these texts in the Codex Atlanticus and published a paper on the subject in the *Zeitschrift für bildende Kunst* (*Vol. XVI*), Prof. Govi put forward this hypothesis to account for their origin:

*"Quanto alle notizie sul monte Tauro, sull'Armenia e sull'Asia minore che si contengono negli altri frammenti, esse vennero prese da qualche geografo o viaggiatore contemporaneo. Dall'indice imperfetto che accompagna quei frammenti, si potrebbe dedurre che Leonardo volesse farne un libro, che poi non venne compiuto. A ogni modo, non è possibile di trovare in questi brani nessun indizio di un viaggio di Leonardo in oriente, nè della sua conversione alla religione di Maometto, come qualcuno pretenderebbe. Leonardo amava con passione gli studi geografici, e ne' suoi scritti s'incontran spesso itinerari, indicazioni, o descrizioni di luoghi, schizzi di carte e abbozzi topografici di varie regioni, non è quindi strano che egli, abile narratore com'era, si fosse proposto di scrivere una specie di Romanzo in forma epistolare svolgendone l'intreccio nell'Asia Minore, intorno alla quale i libri d'allora, e forse qualche viaggiatore amico suo, gli avevano somministrato alcuni elementi più o meno fantastici. (See Transulti della Reale Accademia dei Lincei Vol. V Ser. 3).*

It is hardly necessary to point out that Prof. Govi omits to name the sources from which Leonardo could be supposed to have drawn his information, and I may leave it to the reader to pronounce judgment on the anomaly which is involved in the hypothesis that we have here a fragment of a Romance, cast in the form of a correspondence. At the same time, I cannot but admit that the solution of the difficulties proposed by Prof. Govi is, under the circumstances, certainly the easiest way of dealing with the question. But we should then be equally justified in supposing some more of Leonardo's letters to be fragments of such romances; particularly those of which the addresses can no longer be named. Still, as regards these drafts of letters to the *Diodario*, if we accept the Romance theory, as proposed by Prof. Govi, we are also compelled to assume that Leonardo purposed from the first to illustrate his tale; for it needs only a glance at the

sketches on Pl. CXVI to CXIX to perceive that they are connected with the texts; and of course the rest of Leonardo's numerous notes on matters pertaining to the East, the greater part of which are here published for the first time, may also be somehow connected with this strange romance.

*7. Città de Calindra (Chalindra).* The position of this city is so exactly determined, between the valley of the Euphrates and the Taurus range that it ought to be possible to identify it. But it can hardly be the same as the sea port of Cilicia with a somewhat similar name Celenderis, Kelandria, Celendria, Kilindria, now the Turkish Gulnar. In two Catalonian Portulans in the Bibliothèque Nationale in Paris—one dating from the XV<sup>th</sup> century, by Wilhelm von Soler, the other by Olivez de Majorca, in 1584—I find this place called Calandra. But Leonardo's Calindra must certainly have lain more to the North West, probably somewhere in Kurdistan. The fact that the geographical position is so carefully determined by Leonardo seems to prove that it was a place of no great importance and little known. It is singular that the words first written in l. 8 were *divisa dal lago* (Lake Van?), altered afterwards to *dall'Eufrates*.

*Nostri confini*, and in l. 6 *proposito nostro*. These refer to the frontier and to the affairs of the Mamelook Sultan. Lines 65 and 66 throw some light on the purpose of Leonardo's mission.

*8. I corni del grā mōte Tauro.* Compare the sketches Pl. CXVI—CXVIII. So long as it is impossible to identify the situation of Calindra it is most difficult to decide with any certainty which peak of the Taurus is here meant; and I greatly regret that I had no foreknowledge of this puzzling topographical question when, in 1876, I was pursuing archaeological enquiries in the Provinces of Aleppo and Cilicia, and had to travel for some time in view of the imposing snow-peaks of Bulghar Dagh and Ala Tepessi.

*9—10.* The opinion here expressed as to the height of the mountain would be unmeaning, unless it had been written before Leonardo moved to Milan, where Monte Rosa is so conspicuous an

cossa dai razzi del sole<sup>11</sup> in oriēte; e per esscre lei di pietra biāchissima, essa forte risplende, e fa l'ufitio a questi Ermini come farebbe vn bel lume<sup>12</sup> di luna nel mezzo delle tenebre; e per la sua grande altura essa passa la somma altezza de' nuvoli per spatio di 4 miglia; e per linia retta<sup>13</sup> questa cima è ueduta di grā parte dell'occidente alluminata dal sole dopo il suo tramontare<sup>14</sup> insino alla 3<sup>a</sup> parte della notte; ed è quella che appresso di voi ne' tempi sereni abbiamo già giudicato essere vna cometa, e pare a noi nelle<sup>15</sup> tenebre della notte mytarsi in varie figure, e quādo diuidersi in due o in 3 parti, e quādo lūga e quādo corta; e questo nascie per li<sup>16</sup> nuvoli che nel orizzonte del cielo s'interpongono infra parte d'esso monte e il sole, e per tagliare l'uno essi raz<sup>17</sup>zi solari, il lume del monte è interrotto con vari spati di nvvoli, e però è di figvra uaria<sup>18</sup>bile nel suo splendore.

object in the landscape. 4 ore inanzi seems to mean, four hours before the sun's rays penetrate to the bottom of the valleys.

11. *Pietra bianchissima*. The Taurus Mountains consist in great part of limestone.

14. *Appresso di voi*. Leonardo had at first written *noi* as though his meaning had been: This peak appeared to us to be a comet when you and I observed it in North Syria (at Aleppo? at Aintas?). The description of the curious reflection in the evening, resembling the "Alpine-glow" is certainly not an invented fiction, for in the next lines an explanation of the phenomenon is offered, or at least attempted.

19. The next 33 lines are evidently the contents of a connected Report or Book, but not of one

the sun always fall upon it on its East side, four hours before day-time, and being of the whitest stone[11] it shines resplendently and fulfils the function to these Armenians which a bright moon-light would in the midst of the darkness; and by its great height it out-reaches the utmost level of the clouds by a space of four miles in a straight line. This peak is seen in many places towards the West, illuminated by the sun after its setting the third part of the night. This it is, which with you[14] we formerly in calm weather had supposed to be a comet, and appears to us in the darkness of night, to change its form, being sometimes divided in two or three parts, and sometimes long and sometimes short. And this is caused by the clouds on the horizon of the sky which interpose between part of this mountain and the sun, and by cutting off some of the solar rays the light on the mountain is intercepted by various intervals of clouds, and therefore varies in the form of its brightness.

## THE DIVISIONS OF THE BOOK[19].

- The praise and confession of the faith[20].
- The sudden inundation, to its end.
- [23]The destruction of the city.
- [24]The death of the people and their despair.
- The preacher's search, his release and benevolence[28].
- Description of the cause of this fall of the mountain[30].
- The mischief it did.

which he had at hand; more probably, indeed, of one he purposed writing.

20. *Persuasione di fede*, of the Christian or the Mohammedan faith? We must suppose the latter, at the beginning of a document addressed to so high a Mohammedan official. *Predica* probably stands as an abbreviation for *predicazione* (lat. *praedicatio*) in the sense of praise or glorification; very probably it may mean some such initial doxology as we find in Mohammedan works. (Comp. l. 40.)

26. 28. The phraseology of this is too general for any conjecture as to its meaning to be worth hazarding.

30. *Ruina del monte*. Of course by an earthquake. In a catalogue of earthquakes, entitled *kechf aussal-ssalèb an auasf ezzel-zelèh*, and written by Djelal eddin

<sup>32</sup>¶ Ruina di neve;

<sup>33</sup>¶ Trovata del profeta;

<sup>34</sup>¶ La profetia sua;

col quale credo rimarrai satisfatto;

[32] Fall of snow.

The finding of the prophet [33].

His prophesy.

[35] The inundation of the lower portion  
of Eastern Armenia, the draining of which  
was effected by the cutting through the Tau-  
rus Mountains.

How the new prophet showed [40] that this  
destruction would happen as he had foretold.

Description of the Taurus Mountains [43]  
and the river Euphrates.

Why the mountain shines at the top, from  
half to a third of the night, and looks like a  
comet to the inhabitants of the West after the  
sunset, and before day to those of the East,

Why this comet appears of variable forms,  
so that it is now round and now long, and now  
again divided into two or three parts, and now  
in one piece, and when it is to be seen again,

#### OF THE SHAPE OF THE TAURUS MOUNTAINS [53].

I am not to be accused, Oh Devatdar, of  
idleness, as your chidings seem to hint; but  
your excessive love for me, which gave rise  
to the benefits you have conferred on me[55]  
is that which has also compelled me to the  
utmost painstaking in seeking out and dili-  
gently investigating the cause of so great  
and stupendous an effect. And this could  
not be done without time; now, in order to  
satisfy you fully as to the cause of so great  
an effect, it is requisite that I should explain  
to you the form of the place, and then I  
will proceed to the effect, by which I believe  
you will be amply satisfied.

41. [disc] questa . . effatta. 45. rissplende. 47. cometa [in] acquelli di. 48. acquelli. 50. ettondo. 51. lungho . . diuiso.

40. *Novo profeta*, l. 33, *profeta*. Mohammed. Leonardo here refers to the Koran:

*In the name of the most merciful God.—When the earth shall be shaken by an earthquake; and the earth shall cast forth her burdens; and a man shall say, what aileth her? On that day the earth shall declare her tidings, for that thy Lord will inspire her. On that day men shall go forward in distinct classes, that they may behold their works. And whoever shall have wrought good of the weight of an ant, shall behold the same. And whoever shall have wrought evil of the weight of an ant, shall behold the same.* (The Koran, trans-  
lated by G. Sale, Chapter XCIX, p. 452).

53—94. The faesimile of this passage is given on  
Pl. CXVII.

54. The foregoing sketch of a letter, lines  
5. 18, appears to have remained a fragment when  
Leonardo received pressing orders which caused

Syouthy, the following statement occurs: "In the year 889 (1484 A.D.) there were six shocks of earthquake at Aleppo. They were excessively violent and threw the inhabitants into consternation." I owe this communication to the kindness of Prof. Ch. Schéfer, Membre de l'Institut, to whom this unpublished Arabic MS. belongs. The foregoing entries refer to two earthquakes in Cairo, in 1476 and 1481: the following ones indicate a time at which Leonardo was, eertainly, living in Milan.

36. *Tagliata di Monte Tauro*. The Euphrates flows through the Taurus range near the influx of the Kura Shai; it rushes through a rift in the wildest cliffs from 2000 to 3000 feet high and runs on for 90 miles in 300 falls or rapids till it reaches Telek, near which at a spot called Gleikash, or the Hart's leap, it measures only 35 paces across. Compare the map on Pl. CXIX and the explanation fo it on p. 391.

<sup>59</sup>Nō ti dolere, o Diodario, del mio tardare a dar risposta alla tua desiderosa richiesta, perchè queste cose, di che tu mi richie<sup>60</sup>desti, son di natura che nō sanza processo di tempo si possono bene esprimere, e massime perchè, a voler mostrare la causa di <sup>61</sup>si grande effetto, bisogna descrivere cō bona forma la natura del sito, e mediante quella tu potrai poi cō <sup>62</sup>facilità satisfarti della predetta richiesta;

<sup>63</sup>Jo lascierò indietro la descritione della forma dell'Asia Minore, e che mari o terre sien quelle che terminono <sup>64</sup>la figura della sua quātità, perchè so che la diligentia e sollecitudine de'tua studi non t'anno di tal notitia <sup>65</sup>privato; e verrò a denotare la vera figura di Tavrus Mōte, il quale è quello ch'è cavsatore di si stupenda e dannosa maraviglia, la quale serue alla spedizione del nostro pro<sup>66</sup>posito; Questo monte Tavro è quello che appresso di molti è detto essere il giogo del Monte Cavcaso, ma, avēdo <sup>67</sup>volutu ben chiarirmi, ò voluto parlare con alquanti di quelli che abitano sopra del Mar Caspio, i quali mostrano che <sup>68</sup>quel sia il uero Mōte Caucaso, che, benchè i mōti loro abbino il medesimo nome, questi son di maggiore altura, e però cōfermano, perchè Caucaso in lingua Scitica vuol dire somma altezza; e in vero non ci è noti<sup>69</sup>tia che l'oriēte nè l' occidente abbia monte di si grande altura; e la pruova, che così sia, è che li abitatori de' pae<sup>70</sup>si, che gli stanno per ponēte, vedono i razzi del sole che allumina insino alla 4<sup>a</sup> parte delle maggior notti grā <sup>71</sup>parte della sua cima, e'l simile fa a quelli paesi che gli stanno per oriēte.

#### QUALITÀ E QUĀTITÀ DEL MŌTE TAVRO.

<sup>72</sup>L'onbra di questo giogo del Tauro è di tanta altura che, quādo di mezzo giugno il sole è a mezzo giorno, la sua óbra s'a-

tua . . "desiderosa" richiessta queste [son cho] chose di che. 60. possano. him to write immediately and fully on the subject mentioned in line 43.

59—62. This passage was evidently intended as an improvement on that immediately preceding it. The purport of both is essentially the same, but the first is pitched in a key of ill-disguised annoyance

[59]Do not be aggrieved, O Devatdar, by my delay in responding to your pressing request, for those things which you require of me are of such a nature that they cannot be well expressed without some lapse of time; particularly because, in order to explain the cause of so great an effect, it is necessary to describe with accuracy the nature of the place; and by this means I can afterwards easily satisfy your above-mentioned request[62].

I will pass over any description of the form of Asia Minor, or as to what seas or lands form the limits of its outline and extent, because I know that by your own diligence and carefulness in your studies you have not remained in ignorance of these matters[65]; and I will go on to describe the true form of the Taurus Mountain which is the cause of this stupendous and harmful marvel, and which will serve to advance us in our purpose[66]. This Taurus is that mountain which, with many others is said to be the ridge of Mount Caucasus; but wishing to be very clear about it, I desired to speak to some of the inhabitants of the shores of the Caspian sea, who give evidence that this must be the true Caucasus, and that though their mountains bear the same name, yet these are higher; and to confirm this in the Scythian tongue Caucasus means a very high[68] peak, and in fact we have no information of there being, in the East or in the West, any mountain so high. And the proof of this is that the inhabitants of the countries to the West see the rays of the sun illuminating a great part of its summit for as much as a quarter of the longest night. And in the same way, in those countries which lie to the East.

#### OF THE STRUCTURE AND SIZE OF MOUNT TAURUS.

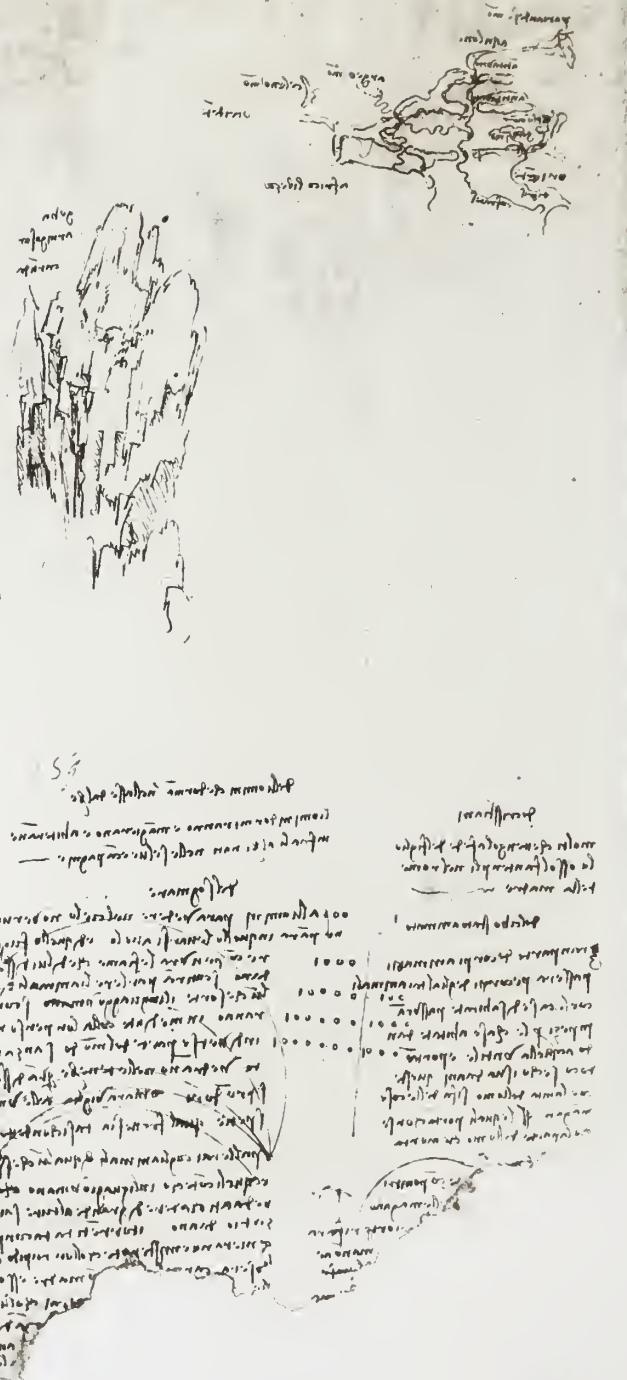

<sup>73</sup>The shadow of this ridge of the Taurus is of such a height that when, in the middle of June, the Sun is at its meridian, its

which is absent from the second. I do not see how these two versions can be reconciled with the romance-theory held by Prof. Govi.

68. Caucasus; Herodot Καύκασις; Armen. Kaukaz.

73—75. The statements are of course founded on those of the 'inhabitants' spoken of in l. 67.

<sup>74</sup> stende insino al principio della Sarmatia, che sō giornate <sup>12</sup>, e a mezzo dicembre s'astē<sup>75</sup>de insino ai mōti Iperborei, che è viaggio d'un mese inverso tramontana; E senpre la sua parte opposta al uē<sup>76</sup>to che soffia è priva di nuvoli e nebbie, perchè il uento, che s'apre nella percussione del sasso, dopo esso sasso si uiene a richi-<sup>77</sup>vdere, e in tal moto porta con seco i nvvoli da ognī parte, e lasciali nella lor percussione; e senpre è piena di percussione di saette per la grā moltitudine di nvvoli che lì sō ricettati, onde il sasso è tutto fracassato e pien di grā ruine; Questo nelle <sup>78</sup>sua radici è abitato da richissimi popoli, ed è pieno di bellissimi fonti e fiumi; è fer<sup>79</sup>tile e abondante d'ogni bene e massime nelle parti che riguardano a mezzo giorno; — <sup>80</sup>ma quando se n'è montato circa 3 miglia, si comīcia a trovare le selue de' grā<sup>81</sup>di abeti, pini e faggi e altri simili alberi; dopo questi per spatio di 3 al<sup>82</sup>tre miglia si trovano praterie e grādissime pasture, e tutto il resto, insino <sup>83</sup>al nascimēto del Monte Tavro, sono nevi

shadow extends as far as the borders of Sarmatia, twelve days off; and in the middle of December it extends as far as the Hyperborean mountains, which are at a month's journey to the North[75]. And the side which faces the wind is always free from clouds and mists, because the wind which is parted in beating on the rock, closes again on the further side of that rock, and in its motion carries with it the clouds from all quarters and leaves them where it strikes. And it is always full of thunderbolts from the great quantity of clouds which accumulate there, whence the rock is all riven and full of huge débris[77]. This mountain, at its base, is inhabited by a very rich population and is full of most beautiful springs and rivers, and is fertile and abounding in all good produce, particularly in those parts which face to the South. But after mounting about three miles we begin to find forests of great fir trees, and beech and other similar trees; after this, for a space of three more miles, there are meadows and vast pastures; and all the rest, as far as the beginning of the Taurus, is eternal snows

77. Sudden storms are equally common on the heights of Ararat. It is hardly necessary to observe that Ararat cannot be meant here. Its summit is formed like the crater of Vesuvius. The peaks sketched on Pl. CXVI—CXVIII are probably views of the same mountain, taken from different sides. Near the solitary peak, Pl. CXVIII these three names are written *goba*, *arnigasar*, *carūda*, names most likely of different peaks. Pl. CXVI and CXVII are in the original on a single sheet folded down the middle, 30 centimètres high and  $43\frac{1}{2}$  wide. On the reverse of one half of the sheet are notes on *peso* and *bilancia* (weight and balance), on the other are the 'prophecies' printed under Nos. 1293 and 1294. It is evident from the arrangement that these were written subsequently, on the space which had been left blank. These pages are facsimiled on Pl. CXVIII. In Pl. CXVI—CXVIII the size is smaller than in the original; the map of Armenia, Pl. CXVIII, is on Pl. CXIX slightly enlarged. On this map we find the following names, beginning from the right hand at the top: *pariades mō* (for Paryadres Mons, Arm. Parchar, now Barchal or Kolai Dagh; Trebizond is on its slope).

*Aquilone*—North, *Antitaurus Antitaurus* ||| *psis mō* (probably meant for Thospitis = Lake Van, Arm. Dgov Vanai, Tospoi, and the Mountain range to the South); *Gordis mō* (Mountains of Gordyaea), the birth place of the Tigris; *Oriente*—East; *Tigris*, and then, to the left, *Eusrates*. Then, above to the left *Argeo mō* (now Erdshigas, an extinct volcano, 12000 feet high); *Celeno mō* (no doubt Sultan Dagh in Pisidia). Celeno is the Greek town of *Kelataval*—see Arian 1, 29, 1—now the ruins of Dineir); *oriente*—East; *africo libezco* (for libeccio—South West). In the middle of the Euphrates river on this small map we see a shaded portion surrounded by mountains, perhaps to indicate the inundation mentioned in 1. 35. The affluent to the Euphrates shown as coming with many windings from the high land of 'Argeo' on the West, is the Tochma Su, which joins the main river at Malatie. I have not been able to discover any map of Armenia of the XV<sup>th</sup> or XVI<sup>th</sup> century in which the course of the Euphrates is laid down with any thing like the correctness displayed in this sketch. The best I have seen is the Catalonian Portulan of Olivez de Majorca, executed in 1584, and it is far behind Leonardo's.

cternc che mai per alcū tempo si par<sup>84</sup>tono, che s'astendono all'altezza di circa 14 miglia in tutto; da questo na<sup>85</sup>scimēto del Tavro insino all'altezza d'vn miglio non passano mai i nuvoli; <sup>86</sup>che qui abbiamo 15 miglia, che sono circa a 5 · miglia d'altezza per linia retta, <sup>87</sup>e altrettanto o circa troviamo essere la cima dell'i corni del Tauro, <sup>88</sup>ne' quali dal mezzo in su si comincia a trovare aria che riscalda e nō <sup>89</sup>vi si sente soffiamēti de' uēti, ma nessuna cosa ci può troppo vivere; <sup>90</sup>quiui nō nasce cosa alcuna, saluo alcūni vcelli rapaci che <sup>91</sup>covano nell'alte fessure del Tavro, e disciēdon poi sotto i nuvoli <sup>92</sup>a fare le lor prede sopra i monti erbosi; Questo è tutto sasso senplice, <sup>93</sup>cioè da' nuvoli insù, ed è sasso candidissimo · e in sulla alta cima nō <sup>94</sup>si può andare per l'aspra e pericolosa sua salita.

which never disappear at any time, and extend to a height of about fourteen miles in all. From this beginning of the Taurus up to the height of a mile the clouds never pass away; thus we have fifteen miles, that is, a height of about five miles in a straight line; and the summit of the peaks of the Taurus are as much, or about that. There, half way up, we begin to find a scorching air and never feel a breath of wind; but nothing can live long there; there nothing is brought forth save a few birds of prey which breed in the high fissures of Taurus and descend below the clouds to seek their prey. Above the wooded hills all is bare rock, that is, from the clouds upwards; and the rock is the purest white. And it is impossible to walk to the high summit on account of the rough and perilous ascent.

Having often made you, by my letters, acquainted with the things which have happened, I think I ought not to be silent as to the events of the last few days, which—[2]...

Having several times—

Having many times rejoiced with you by letters over your prosperous fortunes, I know now that, as a friend you will be sad with me over the miserable state in which I find myself; and this is, that during the last few days I have been in so much trouble, fear, peril and loss, besides the miseries of the people here, that we have been envious of the dead; and certainly I do not believe that since the elements by their separation reduced the vast chaos to order, they have ever combined their force and fury to do so much mischief to man. As far as regards

1337. On comparing this commencement of a letter l. 1—2 with that in l. 3 and 4 of No. 1336 it is quite evident that both refer to the same event. (Compare also No. 1337 l. 10—12 and 17 with No. 1336 l. 23, 24 and 32.) But the text No. 1336, including the fragment l. 3—4, was obviously

written later than the draft here reproduced. The *Diodario* is not directly addressed—the person addressed indeed is not known—and it seems to me highly probable that it was written to some other patron and friend whose name and position are not mentioned.

a fare tanto nocimēto alli omini <sup>8</sup>quāto al presente da noi · s'è veduto · e provato, in modo ch'io nō posso imaginare · che cosa si possin <sup>9</sup>piv accresciere a tanto male, il quale noi provammo in spatio di dieci ore; In prima summo assaliti e comba<sup>10</sup>ttuti dall'impeto · e furore de' vēti e a questo s'aggiunsero le ruine dellī grā mōti di neve, i quali ànno ripieno tutte questi valli <sup>11</sup>e cōquassato grā parte della nostra città; E nō si cōtentādo di questo, la fortuna <sup>12</sup>cō subiti diluvi d'acque ebbe a sommergere tutta la parte bassa di questa città; oltre di questo s'aggiunse vna subita piog<sup>13</sup>gia · anzi ruinosa tēpesta piena d'acqua, sabbia, fango e pietre, insieme avviluppati cō radici sterpi e ciocchi di uarie piāte; <sup>14</sup>e ogni cosa scorrendo per l'aria discēdea sopra di noi ·; e in vltimo vno inciēdio di fuoco parea cōdotto nō che da vēti ma da 10 milia diavoli, chel portassino, il quale à abbruciato e disfatto tutto questo <sup>15</sup>paese, e ancora non vi è cessato; E que' pochi, che siamo restati, siamo rimasti · cō tanto sbigottimēto <sup>16</sup>e tāta pavra che appena come balordi abbiamo ardire di parlare · l'uno coll'altro ·; avēdo · abbandonato ogni · nostra cura, ci stiamo insieme vnti <sup>17</sup>jn cierte ruine di chiese insieme misti maschi e femine, piccoli e grādi, a modo di <sup>18</sup>torme di capre; <sup>18</sup>i vicini per pietà ci ànno soccorso di uettovaglie, i quali erā prima nostri

us here, what we have seen and gone through is such that I could not imagine that things could ever rise to such an amount of mischief, as we experienced in the space of ten hours. In the first place we were assailed and attacked by the violence and fury of the winds[10]; to this was added the falling of great mountains of snow which filled up all this valley, thus destroying a great part of our city[11]. And not content with this the tempest sent a sudden flood of water to submerge all the low part of this city[12]; added to which there came a sudden rain, or rather a ruinous torrent and flood of water, sand, mud, and stones, entangled with roots, and stems and fragments of various trees; and every kind of thing flying through the air fell upon us; finally a great fire broke out, not brought by the wind, but carried as it would seem, by ten thousand devils, which completely burnt up all this neighbourhood and it has not yet ceased. And those few who remain unhurt are in such dejection and such terror that they hardly have courage to speak to each other, as if they were stunned. Having abandoned all our business, we stay here together in the ruins of some churches, men and women mingled together, small and great[17], just like herds of goats. The neighbours out of pity succoured us with victuals, and they had previously been our enemies. And if

11. *Della nostra città* (Leonardo first wrote *di questa città*). From this we may infer that he had at some time lived in the place in question wherever it might be.

17. *Certe ruine di chiese.* Either of Armenian churches or of Mosques, which it was not unusual to speak of as churches.

*Maschi e femini insieme unite*, implies an infringement of the usually strict rule of the separation of the sexes.

18. *I vicini, nostri nimici.* The town must then have stood quite close to the frontier of the country. Compare 1336. L. 7. *vicini ai nostriconfini*. Dr. M. JORDAN has already published lines 4–13 (see *Das Malerbuch, Leipzig*, 1873, p. 90:—his reading differs from mine)

VOL. II.

under the title of "Description of a landscape near Lake Como". We do in fact find, among other loose sheets in the Codex Atlanticus, certain texts referring to valleys of the Alps (see Nos. 1030, 1031 and note p. 237) and in the arrangement of the loose sheets, of which the Codex Atlanticus has been formed; these happen to be placed close to this text. The compiler stuck both on the same folio sheet; and if this is not the reason for Dr. JORDAN's choosing such a title (Description &c.) I cannot imagine what it can have been. It is, at any rate, a merely hypothetical statement. The designation of the population of the country round a city as "the enemy" (*nemici*) is hardly appropriate to Italy in the time of Leonardo.

1338. The first sixteen lines of this passage which treat of the subject as indicated on the title-line have no place in this connexion and have been omitted.

2. *Ho veduto* movimenti &c. Nothing of the kind happened in Italy during Leonardo's lifetime, and it is therefore extremely probable that this refers to the natural phenomena which are so fully described in the foregoing passage. (Compare too, No. 1021.) There can be no doubt that the descriptions of the Deluge in the Libro di Pittura (Vol. I, No. 607—611), and that of the fall of a mountain No. 610, l. 17—30 were written from the vivid impressions derived from personal experience. Compare also Pl. XXXIV—XL.

it had not been for certain people who succoured us with victuals, all would have died of hunger. Now you see the state we are in. And all these evils are as nothing compared with those which are promised to us shortly.

I know that as a friend you will grieve for my misfortunes, as I, in former letters have shown my joy at your prosperity . . .

## 1338.

BOOK 43. OF THE MOVEMENT OF AIR ENCLOSED IN WATER.

I have seen motions of the air so furious that they have carried, mixed up in their course, the largest trees of the forest and whole roofs of great palaces, and I have seen the same fury bore a hole with a whirling movement digging out a gravel pit, and carrying gravel, sand and water more than half a mile through the air.

## 1339.

Like a whirling wind which rushes down a sandy and hollow valley, and which, in its hasty course, drives to its centre every thing that opposes its furious course . . . .

No otherwise does the Northern blast whirl round in its tempestuous progress . . . .

1339. It may be inferred from the character of the writing, which is in the style of the note in facsimile Vol. I, p. 297, that this passage was written between 1470 and 1480. As the figure 6 at the end of the text indicates, it was continued on another page, but I have searched in vain for it. The reverse of this leaf is coloured red for drawing in silver point, but has not been used for that purpose but for writing on, and at about the same date. The passages are given as Nos. 1217, 1218, 1219, 1162 and No. 994 (see note page 218). The text given above is obviously not a fragment of a letter, but a record of some personal experience. No. 1379 also seems to refer to Leonardo's journeys in Southern Italy.

<sup>7</sup>Nō fa si grā muggchio il tēpestoso mare, <sup>8</sup>quādo il settētrionale aquilone <sup>9</sup>lo ripercuote colle scivmose onde fra Scilla e Cariddi, nè Stronboli o Mō<sup>10</sup>gibello, quando le solfuree fiañe, essendo r̄chiuse, <sup>11</sup>per forza ronpēdo e aprēdo il grā mōte, fulminādo <sup>12</sup>per l'aria pietre terra īsieme col'uscita e vomitata fiañā . . .

<sup>13</sup>Nè quādo le infocate caverne di Mōgibello rivomitādo il male tenuto elemēto, spigniendolo <sup>14</sup>alla sua regione, cō furia cacciādo īnāzi qualūche ostacolo <sup>15</sup>s'interpone alla sua īpetuosa furia . . .

<sup>16</sup>E tirato dalla mia bramosa voglia, vago di uedere la gran cō . . . <sup>17</sup>delle varie e strane forme fatte dalla artifiziosa natura, ragiratomi <sup>18</sup>alquāto jſra gli ḥōrosi scogli pervenni all'ētrata d'una <sup>19</sup>grā caverna dinanzi alla quale restato alquāto <sup>20</sup>stupefatto,—e jgniorante di tal cosa piegato le mie rene <sup>21</sup>in arco e ferma la stāca mano sopra il ginocchio e colla destra mi feci tenebra <sup>22</sup>alle abbassate e chivse ciglia; e spesso piegādomi in qua e in là per ve<sup>23</sup>dere dētro vi discernessi alcuna cosa, e questo vietatomi per <sup>24</sup>la grāde oscurità, che là entro era, e stato alquāto, subito si destarono <sup>25</sup>in me 2 cose, pavra e desiderio; paura per la minaccio<sup>26</sup>sa oscura spilonca, desidero per vedere se là ētro fusse alcuna <sup>27</sup>miracolosa cosa . . .

Nor does the tempestuous sea bellow so loud, when the Northern blast dashes it, with its foaming waves between Scylla and Charybdis; nor Stromboli, nor Mount Etna, when their sulphurous flames, having been forcibly confined, rend, and burst open the mountain, fulminating stones and earth through the air together with the flames they vomit.

Nor when the inflamed caverns of Mount Etna, rejecting the ill-restrained element vomit it forth, back to its own region, driving furiously before it every obstacle that comes in the way of its impetuous rage . . .

Unable to resist my eager desire and wanting to see the great . . . of the various and strange shapes made by formative nature, and having wandered some distance among gloomy rocks, I came to the entrance of a great cavern, in front of which I stood some time, astonished and unaware of such a thing. Bending my back into an arch I rested my left hand on my knee and held my right hand over my down-cast and contracted eye brows: often bending first one way and then the other, to see whether I could discover anything inside, and this being forbidden by the deep darkness within, and after having remained there some time, two contrary emotions arose in me, fear and desire—fear of the threatening dark cavern, desire to see whether there were any marvellous thing within it . . . .

C. A. 382a; 1182a]

couronnées et Mémoires des savants étrangers. Académie Royale de Belgique).

A literal interpretation of the passage would not, however, indicate an allusion to any great eruption; particularly in the connection with Stromboli, where the periodical outbreaks in very short intervals are very striking to any observer, especially at night time, when passing the island on the way from Naples to Messina.

1340. The numerous corrections, the alterations in the figures (l. 18) and the absence of any signature prove that this is merely the rough draft of a

13. Mongibello is a name commonly given in Sicily to Mount Etna (from Djebel, Arab.=mountain). Fr. FERRARA, *Descrizione dell'Etna con la storia delle eruzioni* (Palermo, 1818, p. 88) tells us, on the authority of the *Cronaca del Monastero Benedettino di Licordia*, of an eruption of the Volcano with a great flow of lava on Sept. 21, 1447. The next records of the mountain are from the years 1533 and 1536. A. Percy neither does mention any eruptions of Etna during the years to which this note must probably refer (*Mémoire des tremblements de terre de la péninsule italique*, Vol. XXII des Mémoires

letter to Lodovico il Moro. It is one of the very few manuscripts which are written from left to right—see the facsimile of the beginning as here reproduced. This is probably the final sketch of a document the clean of which copy was written in the usual manner. Leonardo no doubt very rarely wrote so, and this is probably the reason of the conspicuous dissimilarity in the handwriting, when he did. (Compare Pl. XXXVIII.) It is noteworthy too that here the orthography and abbreviations are also exceptional. But such superficial peculiarities are not enough to stamp the document as altogether spurious. It is neither a forgery nor the production of any artist but Leonardo himself. As to this point the contents leave us no doubt as to its authenticity, particularly l. 32 (see No. 719,

where this passage is repeated). But whether the fragment, as we here see it, was written from Leonardo's dictation—a theory favoured by the orthography, the crasures and corrections—or whether it may be a copy made for or by Melzi or Mazenta is comparatively unimportant. There are in the Codex Atlanticus a few other documents not written by Leonardo himself, but the notes in his own hand found on the reverse pages of these leaves amply prove that they were certainly in Leonardo's possession. This mark of ownership is wanting to the text in question, but the compilers of the Codex Atlanticus, at any rate, accepted it as a genuine document.

With regard to the probable date of this projected letter see Vol. II, p. 3.

1. <sup>7</sup>Ho modi di ponti leggierissimi e forti, e atti ad portare facilissimamente, et co' quelli seguire <sup>8</sup>e alcuna uolta fuggire li inimici, e altri securi e ioffensibile da foco <sup>9</sup>e battaglia, facili e coñodi [da leuare e ponere]; Et modi di ardere e disfare quelli del'inimico.

<sup>10</sup>2. So i la ossidione di una terra togliere uia l'acqua de' fossi; e fare infiniti potti: gatti e scale <sup>11</sup>e altri istrumenti pertinenti a detta speditione.

<sup>12</sup>3. Itē se per altezza di argine o per fortezza di loco e di sito nō si potesse i la ossidione di <sup>13</sup>vna terra usare l'officio delle bombarde: ho modi di ruinare omni rocca o altra fortezza, <sup>14</sup>se già nō fusse fondata i su el sasso ecc.

<sup>15</sup>4. Ho ancora modi di bombarde cōmodissime e facili a portare: Et con quelle buttare minuti sassi <sup>16</sup>a similitudine quasi di tempesta; E con il fumo di quella dando grāde spauēto al'inimico <sup>17</sup>con graue suo danno e confusione ecc.

<sup>18</sup>5. Et quādo accadesse essere i mare, ho modi di molti istrumenti attissimi da offendere e difendere: <sup>19</sup>et nauili che faranno resistentia al trarre di omni grossissima bōbarda: e poluere e fumi.

<sup>20</sup>5. Itē ho modi: per caue e uie secrete distorte fatte senza alcuno strepito per ue-  
nire disegnato <sup>21</sup>... ancora che bisogniasse passare sotto fossi o alcuno fume.

<sup>22</sup>6. Item farò carri coperti e securi ioffensibili, i quali ētrādo itra li inimici con sue artiglierie; nō è si grāde multi<sup>23</sup>tudine di gente d'arme che nō rompessino: E dietro a questi potranno seguire faterie assai illesi e sēza <sup>24</sup>alcuno ipedimēto.

<sup>25</sup>7. Item occorrendo di bisogno, farò bōbarde, mortari et passauolanti di bellissime e utili forme fuori del comune uso;

<sup>26</sup>8. Doue mācasce la operatione delle bōbarde comporrò briccole, māgani | trabuchi e altri istrumenti di mirabile <sup>27</sup>efficacia e fuori del' usato: Et i somā secondo la uarietà de' casi cōporrò uarie e i infinite cose da offēdere e di ...

1) I have a sort of extremely light and strong bridges, adapted to be most easily carried, and with them you may pursue, and at any time flee from the enemy; and others, secure and indestructible by fire and battle, easy and convenient to lift and place. Also methods of burning and destroying those of the enemy.

2) I know how, when a place is besieged, to take the water out of the trenches, and make endless variety of bridges, and covered ways and ladders, and other machines pertaining to such expeditions.

3) Item. If, by reason of the height of the banks, or the strength of the place and its position, it is impossible, when besieging a place, to avail oneself of the plan of bombardment, I have methods for destroying every rock or other fortress, even if it were founded on a rock, &c.

4) Again I have kinds of mortars; most convenient and easy to carry; and with these can fling small stones almost resembling a storm; and with the smoke of these causing great terror to the enemy, to his great detriment and confusion.

9) [8]And when the fight should be at sea I have kinds of many machines most efficient for offence and defence; and vessels which will resist the attack of the largest guns and powder and fumes.

5) Item I have means by secret and tortuous mines and ways, made without noise to reach a designated [spot], even if it were needed to pass under a trench or a river.

6) Item. I will make covered chariots, safe and unattackable which, entering among the enemy with their artillery, there is no body of men so great but they would break them. And behind these, infantry could follow quite unhurt and without any hindrance.

7) Item. In case of need I will make big guns, mortars and light ordnance of fine and useful forms, out of the common type.

8) Where the operation of bombardment should fail, I would contrive catapults, mangonels, *trabocchi* and other machines of marvellous efficacy and not in common use. And in short, according to the variety of cases, I can contrive various and endless means of offence and defence.

<sup>28</sup> 10. In tempo di pace credo di soddisfare benissimo al paragone di ogni altro in architettura, i compositione di edifitii e pubblici <sup>29</sup>e privati: e i cōdurre acqua da uno loco ad uno altro.

<sup>30</sup> Jtē cōdurrò i scultura, di marmore, di bronzo e di terra: simile i pictura ciò che si possa fare <sup>31</sup>a paragone di ogni altro e sia chi vuole.

<sup>32</sup> Ancora si potrà dare opera al cauallo di bronzo, che sarà gloria īmortale e eterno onore della <sup>33</sup>felice memoria del signore vostro padre e dela īclyta casa Sforzesca;

<sup>34</sup> E se alcuna delle sopradette cose a alcuno paressino īpossibili e īfattibili, mi offro <sup>35</sup>paratissimo a farne esperimento i parco uostro, o i qual loco piacerà a vostra Ecelenza, al<sup>36</sup>la quale umilmente quanto più posso, mi raccomando ecc.

10) In time of peace I believe I can give perfect satisfaction and to the equal of any other in architecture and the composition of buildings public and private; and in guiding water from one place to another.

Item: I can carry out sculpture in marble, bronze or clay, and also in painting whatever may be done, and as well as any other, be he whom he may.

[32] Again, the bronze horse may be taken in hand, which is to be to the immortal glory and eternal honour of the prince your father of happy memory, and of the illustrious house of Sforza.

And if any one of the above-named things seem to any one to be impossible or not feasible, I am most ready to make the experiment in your park, or in whatever place may please your Excellency—to whom I commend myself with the utmost humility &c.

S. K. M. III. 285]

1341.

Al mio Illustrissimo Signore Lodouico,  
Duca di Bari'.  
Leonardo Da Vinci  
Fiorentino.  
<sup>5</sup> Leonardo.

To my illustrious Lord, Lodovico,  
Duke of Bari,  
Leonardo da Vinci  
of Florence—  
Leonardo.

S. K. M. III. 238]

1342.

Vi piace vedere uno · modello · del quale  
risulterà · vtile · a uoi e a me ·, e vtilità  
· a quelli che fieno · cagione · di no<sup>4</sup>stra  
vtilità.

You would like to see a model which will prove useful to you and to me, also it will be of use to those who will be the cause of our usefulness.

cōducē aqua . . alto [acto ad offendē e difendē. 30. cōducero. 31. ad . . deōni . . nole. 32. Anchora si potera . . honore dela. 33. s<sup>4</sup>r "vost<sup>4</sup>o" patre e dela. 34. Et sealchuno dele sop<sup>4</sup>r" dictē . . alchuno . . īpossibile e infactibile me offer.

1341. Written from left to right. 1. III<sup>mo</sup> Sig<sup>4</sup>re". 2. bari.

1342. 1. vedere i modello. 2. aiñe. 3. acquelli cheffieno chagione.

1341. Evidently a note of the superscription of a letter to the Duke, and written, like the foregoing from left to right. The manuscript containing it is of the year 1493. Lodovico was not proclaimed and styled Duke of Milan till September 1494. The Dukedom of Bari belonged to the Sforza family till 1499.

1342. 1343. These two notes occur in the same

not very voluminous MS. as the former one and it is possible that they are fragments of the same letter. By the *Modello*, the equestrian statue is probably meant, particularly as the model of this statue was publicly exhibited in this very year, 1493, on the occasion of the marriage of the Emperor Maximilian with Bianca Maria Sforza.

S. K. M. III. 796]

Ecco · signor · molti · giētil om̄ini <sup>2</sup>che faranno infra loro · questa · spesa, <sup>3</sup>lasciādo loro · godere l'entrata dell'acque, <sup>4</sup>mvlina e passaggio di navili, e quādo <sup>5</sup>e' sarà vēduto · loro il prezzo loro rēderā<sup>6</sup>no il navilio di Martigiana . . .

C. A. 3086; 939a]

Assai mi rincrescie d'essere ī neciessità ·, ma piv mi dole <sup>2</sup>che quella · sia causa · dello interrōpere il desiderio mio, il <sup>3</sup>quale · è sempre disposto a vbidir uostra Eccellenzia; <sup>4</sup>forse che uostra Eccellenzia <sup>5</sup>nō commise altro a messer Gualtieri, credēdo che io avessi dina<sup>7</sup>ri . . .

<sup>8</sup>E mi rincrescie assai che tu m'abbi ritrovato in neciessità, e che l'auere io <sup>10</sup>a guadagniare il uitto, -m'abbi <sup>11</sup>a interronpere . . .

<sup>12</sup>Assai mi rincresce che l'auere a guadagnia<sup>13</sup>re il uitto · m'abbia forzato interrōpere l'opera e di soddisfare ad alcunipiccoli, del seguitare l'o<sup>14</sup>spera che già vostra Signoria mi commisse; Ma spero in bre<sup>15</sup>ue avere guadagniato · tanto che potrò · soddisfare <sup>17</sup>ad animo riposato · a vostra Eccielenza, alla quale <sup>18</sup>mi raccomādo, e se uostra Signoria credesse ch'io <sup>19</sup>avessi · dinari, quella s'inganerebbe; ò tenvto · 6 · boche 56 mesi, e ò avuto 50 ducati.

C. A. 3286; 9836]

<sup>2</sup>del premio del mio serutio ·, perchè nō sō da essere da . . .  
<sup>3</sup>cose assegnationi, perchè loro ànno intante di pe . . .  
<sup>4</sup>tie che bene possono assettare piv di me . . .  
<sup>5</sup>nō la mia arte, la quale voglio mvtare ed . . .  
<sup>6</sup>dato qualche vestimēto si oso vna somma . . .

## 1343.

There are here, my Lord, many gentlemen who will undertake this expense among them, if they are allowed to enjoy the use of admission to the waters, the mills, and the passage of vessels and when it is sold to them the price will be repaid to them by the canal of Martesana.

## 1344.

I am greatly vexed to be in necessity, but I still more regret that this should be the cause of the hindrance of my wish which is always disposed to obey your Excellency.

Perhaps your Excellency did not give further orders to Messer Gaultieri, believing that I had money enough.

I am greatly annoyed that you should have found me in necessity, and that my having to earn my living should have hindered me . . .

[12]It vexes me greatly that having to earn my living has forced me to interrupt the work and to attend to small matters, instead of following up the work which your Lordship entrusted to me. But I hope in a short time to have earned so much that I may carry it out quietly to the satisfaction of your Excellency, to whom I commend myself; and if your Lordship thought that I had money, your Lordship was deceived. I had to feed 6 men for 56 months, and have had 50 ducats.

## 1345.

17. See No. 1344 l. 12.

19. In April, 1498, Leonardo was engaged in painting the Saletta Nigra of the Castello at Milan. (See G. MONGERI, *L'Arte in Milano*, 1872, p. 417.)

1346. 1347. Piacenza belonged to Milan. The Lord spoken of in this letter, is no doubt Lodovico

My Lord, I knowing your Excellency's mind to be occupied . . . to remind your Lordship of my small matters and the arts put to silence that my silence might be the cause of making your Lordship scorn . . . my life in your service. I hold myself ever in readiness to obey . . . [11] Of the horse I will say nothing because I know the times [are bad] to your Lordship how I had still to receive two years' salary of the . . . with the two skilled workmen who are constantly in my pay and at my cost that at last I found myself advanced the said sum about 15 lire . . . works of fame by which I could show to those who shall see it that I have been everywhere, but I do not know where I could bestow my work [more] . . .

[17] I, having been working to gain my living . . .

I not having been informed what it is, I find myself . . . [19] remember the commission to paint the rooms . . . I conveyed to your Lordship only requesting you . . .

## 1346.

Magnificent Commissioners of Buildings I, understanding that your Magnificencies have made up your minds to make certain great works in bronze, will remind you of certain things: first that you should not be so hasty or so quick to give the commission, lest by this haste it should become impossible to select a good model and a good master; and some man of small merit may be chosen, who by his insufficiency may cause you to

il Moro. One may infer from the concluding sentence (No. 1346, l. 33-34 and No. 1347), that Leonardo, who no doubt compiled this letter, did not forward it to Piacenza himself, but gave it to some influential patron, under whose name and signature a copy of it was sent to the Commission.

stra · età . . . . givdicādo che questa · età fusse mal fornita d'omini <sup>6</sup>di bon givditio · e di boni · maestri, vedendo le altre città, e massime la città de' Fiorentini, · quasi ne' medesimi tēpi, essere <sup>7</sup>dotata di si belle e magnie opere di bronzo, intra le quali le porte del loro Battisterio ·; la qual Fiorētia, <sup>8</sup>è terra di passo · doue cōcorrono assai forestieri ·, i quali vedendo le opere belle o bone, belle fanno a se <sup>9</sup>medesimi impressioni: quella città · essere fornita di degni abitatori, vedendo l'opere testimonie d'essa opinione; e per lo contrario di <sup>10</sup>co, vedendo · tanta spesa di metallo operata si tristamēte, che mē uergognia alla città <sup>11</sup>sarebbe che esse porte fussino di semplice legniame ·, perchè la poca spesa della materia <sup>12</sup>nō parebbe meriteuole di grāde · spesa di magisterio ·, òde che ..

<sup>13</sup>La principale parte che per le città · si ricierchi · si sono · i domi, ai quali appresatisi, le prime · cose, <sup>14</sup>che all'ochio appariscono, · sono · le porte donde in esse chiese passare si possa.

<sup>15</sup>Guardate ·, signiori · fabbricieri ·, che la · troppa celerità del uolere voi con tāta <sup>16</sup>prestezza · dare · speditione alla locatione · di tanta magnia opera, quanto io sento che per uoi <sup>17</sup>s'è ordinata, non sia cagione che quello ·, che per onore · di dio · e dell'i omni si fa ·, non torni in grā <sup>18</sup>disonore de' uostri giuditi e della vostra città, doue, per essere terra degnia e di passo, è concorso · d'innumerabili forestieri ·; e questo disonore accaderebbe ·, quādo per le · uostre · indiligiētie <sup>20</sup>voi · prestasti · fede · a qualche vantatore che per le · sue frasche o per fauore ·, che di qua · dato li fusse, <sup>21</sup>da uoi auessse a inpetrare · simile opera ·, per la quale · a se e a uoi auesse a partorire lunga <sup>22</sup>e grādissima infamia ·; Chè non posso · fare · che io non mi crucci · a ripensare quali omni <sup>23</sup>sieno quelli che abbino · conferito · volere · in simile impresa ētra<sup>24</sup>re senza pen- · sare alla loro soficiēzia, senza dirne altro ·; chi è maestro · di boccali ·, chi di corazze

be abused by your descendants, judging that this age was but ill supplied with men of good counsel and with good masters; seeing that other cities, and chiefly the city of the Florentines, has been as it were in these very days, endowed with beautiful and grand works in bronze; among which are the doors of their Baptistry. And this town of Florence, like Piacenza, is a place of intercourse, through which many foreigners pass; who, seeing that the works are fine and of good quality, carry away a good impression, and will say that that city is well filled with worthy inhabitants, seeing the works which bear witness to their opinion; and on the other hand, I say seeing so much metal expended and so badly wrought, it were less shame to the city if the doors had been of plain wood; because, the material, costing so little, would not seem to merit any great outlay of skill . . .

Now the principal parts which are sought for in cities are their cathedrals, and of these the first things which strike the eye are the doors, by which one passes into these churches.

Beware, gentlemen of the Commission, lest too great speed in your determination, and so much haste to expedite the entrusting of so great a work as that which I hear you have ordered, be the cause that that which was intended for the honour of God and of men should be turned to great dishonour of your judgments, and of your city, which, being a place of mark, is the resort and gathering-place of innumerable foreigners. And this dishonour would result if by your lack of diligence you were to put your trust in some vaunter, who by his tricks or by favour shown to him here should obtain such work from you, by which lasting and very great shame would result to him and to you. Thus I cannot help being angry when I consider what men those are who have conferred with you as wishing to undertake this great work without thinking of their sufficiency for it, not to say more. This one is a potter, that one a maker of cuirasses, this one is a

<sup>35</sup>I miseri<sup>36</sup> studiosi . . . .<sup>41</sup> con che spe-  
<sup>42</sup>ranza e' posso<sup>43</sup>no aspettare pre<sup>44</sup>mio di  
lor virtù?

C. A. 316a; 958a]

Ecco vno il quale il signiore ·, per fare questa sua opera à tratto di Firenze<sup>2</sup> che è degnio maestro, ma à tāta faciēda che non la finirà mai;<sup>3</sup> e credete voi che differētia · sia a vedere vna cosa bella da una brutta;<sup>4</sup> allega Plinio.

bell-founder, another a bell ringer, and one is even a bombardier; and among them one in his Lordship's service, who boasted that he was the gossip of Messer Ambrosio Ferrere [26], who has some power and who has made him some promises; and if this were not enough he would mount on horseback, and go to his Lord and obtain such letters that you could never refuse [to give] him the work. But consider where masters of real talent and fit for such work are brought when they have to compete with such men as these. Open your eyes and look carefully lest your money should be spent in buying your own disgrace. I can declare to you that from that place you will procure none but average works of inferior and coarse masters. There is no capable man,—[33] and you may believe me,—except Leonardo the Florentine, who is making the equestrian statue in bronze of the Duke Francesco and who has no need to bring himself into notice, because he has work for all his life time; and I doubt, whether being so great a work, he will ever finish it [34].

The miserable painstakers . . . with what hope may they expect a reward of their merit?

## 1347.

There is one whom his Lordship invited from Florence to do this work and who is a worthy master, but with so very much business he will never finish it; and you may imagine that a difference there is to be seen between a beautiful object and an ugly one. Quote Pliny.

S.<sup>or</sup> Humil.

Leonardus Vincius pictor.

carry into effect a will, made three years ago when my father died—as also, and no less, because I would not fail in a matter I esteem most important—I cannot forbear to crave of your most Reverend Highness a letter of recommendation and favour to Ser Raphaello Hieronymo, at present one of the illustrious members of the Signoria before whom my cause is being argued; and more particularly it has been laid by his Excellency the Gonfaloniere into the hands of the said Ser Raphaello, that his Worship may have to decide and end it before the festival of All Saints. And therefore, my Lord, I entreat you, as urgently as I know how and am able, that your Highness will write a letter to the said Ser Raphaello in that admirable and pressing manner which your Highness can use, recommending to him Leonardo Vincio, your most humble servant as I am, and shall always be; requesting him and pressing him not only to do me justice but to do so with despatch; and I have not the least doubt, from many things that I hear, that Ser Raphaello, being most affectionately devoted to your Highness, the matter will issue *ad votum*. And this I shall attribute to your most Reverend Highness' letter, to whom I once more humbly command myself. *Et bene valeat.*

Florence XVIII<sup>a</sup> 7bris 1507.

E. V. R. D.

your humble servant

Leonardus Vincius, pictor.

*menesi, Vol. III.* It is the only text throughout this work which I have not myself examined and copied from the original. The learned discoverer of this letter—the only letter from Leonardo hitherto known as having been sent—adds these interesting remarks: *Cardinale nato ad Ercole I. nel 1470, arcivescovo di Strigonia a sette anni, poi d'Agra, aveva conseguito nel 1497 la pingue ed ambita cattedra di Milano, là dove avrà conosciuto il Vinci, sebbene il poco amore ch'ei professava alle arti lasci credere che le proteste di servitù di Leonardo più che a gratitudine per favori ricevuti e per opere a lui allegate, accennino a speranza per un favore che si aspetta. Notabile è ancora in questo prezioso documento la ripetuta signature del grande artista che si scrive Vincio e Vincius, non da Vinci come si tiene comunemente, sebbene l'una e l'altra possano valere*

*a significare così il casato come il paese; restando a sapere se il nome del paese di Vinci fosse assunto a cognome della famiglia di Leonardo nel qual supposto più propriamente avrebbe a chiamarsi Leonardo Vinci, o Vincio (latinamente Vincius) com'egli stesso amò segnarsi in questa lettera, e come scrissero parecchi contemporanei di lui, il Casio, il Cesariano, Goffroy Tory, il Gaurico, il Bandello, Raffaele Maffei, il Puciolo. Per ultimo non lascerò d'avvertire come la lettera del Vinci è assai ben conservata, di nitida e larga scrittura in forma pienamente corrispondente a quella dei suoi manoscritti, vergata all'uso comune da sinistra a destra, anzichè contrariamente come fu suo costume; ma indubbiamente autentica e fornita della menzione e del suggello che fresca ancora conserva l'impronta di una testa di profilo da un picciolo antico cammeo. (Compare No. 1368, note.)*

quāto fatto sdegniare con meco, e questo è che da tante lettere che io ho scritte a uostra <sup>3</sup>Signoria io non ò mai avuto risposta; hora io mando costi Salai per fare intendere a uostra Signoria <sup>4</sup>come io sono quasi al fine del mio letigio che io ho co' mia fratelli, come io credo trouarmi costi in questa <sup>5</sup>pasqua e portare con meco due quadri di due nostre donne di uarie grandezze, Le quali son fatte <sup>6</sup>pel cristianissimo nostro rè, e perchè a uostra Signoria piacerà, jo avrei ben caro di sapere alla mia <sup>7</sup>tornata di costa, doue io auessi a stare per stanza, perchè non uorrei dare più noia a uostra Signoria, e <sup>8</sup>ancora, auendo io lauorato pel cristianissimo rè, se la mia prouisione è per correre o no; jo scriuo <sup>9</sup>al presidente di quella acqua che mi donò il. rè., della quale non fui messo in posses-sione, perchè in quel tēpo u'era <sup>10</sup>carestia nel nauilio per causa de' gran secchi, e perchè i sua bocchelli non erano moderati; ma bē mi promise che, <sup>11</sup>fatta tal moderatione, io ne sarei messo in possessione; sicchè io prego uostra Signoria che non le incresca, <sup>12</sup>che ora che tali bochelli son moderati, di fare ricordare al presidente la mia spedizione cioè di darmi la <sup>13</sup>possessione d'essa acqua, perchè alla uenuta mia spero farui su strumēti e cose che sarā di grā piacere al <sup>14</sup>nōstro cristianissimo rè; Altro non mi accade; sono senpre a uostri comandi.

1349. Charles d'Amboise, Maréchal de Chaumont, was Governor of Milan under Louis XII. Leonardo was in personal communication with him so early as in 1503. He was absent from Milan in the autumn of 1506 and from October 1510—when he besieged Pope Julius II. in Bologna—till his death, which took place at Correggio, February 11. 1511. Francesco Vinci, Leonardo's uncle, died—as Amoretti tells us—in the winter of 1510—11 (or according to Uzielli in 1506?), and Leonardo remained in Florence for business connected with his estate. The letter written with reference to this affair, No. 1348, is undoubtedly earlier than the letters Nos. 1349 and 1350. Amoretti tells us, *Memorie*

somewhat angry with me, and that this is why to so many letters which I have written to your Lordship I have never had an answer. I now send Salai to explain to your Lordship that I am almost at an end of the litigation I had with my brother; that I hope to find myself with you this Easter, and to carry with me two pictures of two Madonnas of different sizes. These were done for our most Christian King, or for whomsoever your Lordship may please. I should be very glad to know on my return thence where I may have to reside, for I would not give any more trouble to your Lordship. Also, as I have worked for the most Christian King, whether my salary is to continue or not. I wrote to the President as to that water which the king granted me, and which I was not put in possession of because at that time there was a dearth in the canal by reason of the great droughts and because [10]its outlets were not regulated; but he certainly promised me that when this was done I should be put in possession. Thus I pray your Lordship that you will take so much trouble, now that these outlets are regulated, as to remind the President of my matter; that is, to give me possession of this water, because on my return I hope to make there instruments and other things which will greatly please our most Christian King. Nothing else occurs to me. I am always yours to command.

1350.

Magnificent President, I am sending thither Salai, my pupil, who is the bearer of this, and from him you will hear by word of mouth the cause of my . . .

*Storiche*, ch. II, that the following note existed on the same leaf in MS. C. A. I have not however succeeded in finding it. The passage runs thus: *Io sono quasi al fine del mio letigio che io ò con mie fratelgli . . . . Ancora ricordo a V. Excia la facenda che ò cum Ser Juliano mio Fratello capo dell'altri fratelli ricordandoli come se offerse di conciar le cose nostre fra noi fratelli del comune della eredità de mio Zio, e quelli costringa alla expeditione, quale conteneva la lettera che lui me mandò.*

10. Compare Nos. 1009 and 1010.

Leonardo has noted the payment of the pension from the king in 1505.

<sup>3</sup>Magnifico presidēte io.

<sup>4</sup>Magnifico presidente, essendomi io piv volte ricordato delle proferte fattemi da uostra Eccellētia più volte, ò preso sicurtà <sup>5</sup>di scriuere e di ricordare a questa la promessa fattami à l'ultima partita, cioè la possessione di quel<sup>6</sup>le 12 once d'acqua donatemi dal cristianissimo rè; vostra Signoria sa che io non étrai in essa possessione, perchè in quel <sup>7</sup>tempo, ch'ela mi fu donata, era carestia d'acqua nel navilio, si pel grā secco come pel non essere ancora moderati li sua bochelli; ma <sup>8</sup>mi fu promesso da uostra Eccellentia che fatta tal moderatione io avrei l'intento mio; di poi, intendendo essere acconcio il navilio, io scrisse più volte a vo<sup>stra</sup> signoria e a Messer Girolamo da Cusano, che à apresso di se la carta di tal donazione, e così scrisse al Corigero, e <sup>10</sup>mai ebbi risposta; Ora io mādo costi Salai, mio discepolo, aportatore di questa, al quale vostra Signoria potrà <sup>11</sup>dire a bocca tutto quel ch'è seguito, della qual cosa io prego vostra Eccellenza; <sup>12</sup>Jo credo esser costi in questa pasqua per esser presso al fine del mio piateggiare, e porterò cō meco due quadri di nostra <sup>13</sup>donna che io ò commūciate, e ò le ne'tempi, che mi sono avāzzati, condotte in assai bō porto; Altro nō mi accade.

<sup>14</sup>Magnifico Signore mio, l'amore che uostra Eccellētia m'à sempre dimostro, e' benefici ch'io ò riceuuti da quella al continuo <sup>15</sup>mi sō dināzi . . .

<sup>16</sup>Io ò sospetto che la poca remuneratiō de'grā benifiti ch'io ho riceuuto da uostra Eccellentia non l'abbi<sup>17</sup>no fatto alquato turbare con meco, e questo è che di piv lettere che io ò scritte a vostra Eccellentia io non ò mai <sup>18</sup>avuta risposta . , ora io mando costi Salai per fare intendere a vostra signoria, come io son quasi al fine del mio <sup>19</sup>letigio coi mia fratelli, e come io credo essere costi in questa pasqua e portare con meco due quadri dove sono <sup>20</sup>due Nostre donne di varie grādezzze, le quali io ò comīciato pel cristianissimo rè, o per chi a uoi piacerà; avrei ben caro di sa<sup>21</sup>pere

Magnificent President, I . . .

Magnificent President:— Having ofttimes remembered the proposals made many times to me by your Excellency, I take the liberty of writing to remind your Lordship of the promise made to me at my last departure, that is the possession of the twelve inches of water granted to me by the most Christian King. Your Lordship knows that I did not enter into possession, because at that time when it was given to me there was a dearth of water in the canal, as well by reason of the great drought as also because the outlets were not regulated; but your Excellency promised me that as soon as this was done, I should have my rights. Afterwards hearing that the canal was complete I wrote several times to your Lordship and to Messer Girolamo da Cusano, who has in his keeping the deed of this gift; and so also I wrote to Corigero and never had a reply. I now send thither Salai, my pupil, the bearer of this, to whom your Lordship may tell by word of mouth all that happened in the matter about which I petition your Excellency. I expect to go thither this Easter since I am nearly at the end of my lawsuit, and I will take with me two pictures of our Lady which I have begun, and at the present time have brought them on to a very good end; nothing else occurs to me.

My Lord the love which your Excellency has always shown me and the benefits that I have constantly received from you I have hitherto . . .

I am fearful lest the small return I have made for the great benefits I have received from your Excellency may not have made you somewhat annoyed with me. And this is why, to many letters which I have written to your Excellency I have never had an answer. I now send to you Salai to explain to your Excellency that I am almost at the end of my litigation with my brothers, and that I hope to be with you this Easter and carry with me two pictures on which are two Madonnas of different sizes which I began for the most Christian King, or for whomsoever you please. I should be very glad to

<sup>28</sup>Buō dì, messer Francesco, può lo fare Iddio che di tante lettere ch'io v'ò scritte· che mai voi non m'abbiate risposto; Or aspettate<sup>29</sup> ch'io venga costà, per Dio, ch'io vi farò tanto scrivere che forse vi rin· crescerà.

<sup>30</sup>Caro mio, messer Francesco, io mādo costi Salai per intendere dalla magnificentia del presidente che fine à avuta quella<sup>31</sup> moderatione dell'acque che alla mia partita fu ordinata per li bochelli del navilio, perchè el magnifico presidēte mi promisi<sup>32</sup>se che subito fatta tal moderatione, io sarei spedito; Ora egli è più tempo che io intesi che il nauilio s'accō<sup>33</sup>ciaua, e similmente i sua bochelli, e inmediate scrissi al presidente e a uoi, e poi replicai, e mai ebbi<sup>34</sup> risposta; adūque voi degnerete di rispōdermi quel ch'è seguito, e non essendo per spedirsi nō u'īcresca per mio a<sup>35</sup>more di sollecitarne vn poco il presidente e così messer Girolamo da Cusano, al quale uoi mi racomādere<sup>36</sup>te e offerireteni a sua magnificētia.

know where, on my return from this place, I shall have to reside, because I do not wish to give more trouble to your Lordship; and then, having worked for the most Christian King, whether my salary is to be continued or not. I write to the President as to the water that the king granted me of which I had not been put in possession by reason of the dearth in the canal, caused by the great drought and because its outlets were not regulated; but he promised me certainly that as soon as the regulation was made, I should be put in possession of it; I therefore pray you that, if you should meet the said President, you would be good enough, now that the outlets are regulated, to remind the said President to cause me to be put in possession of that water, since I understand it is in great measure in his power. Nothing else occurs to me; always yours to command.

Good day to you Messer Francesco. Why, in God's name, of all the letters I have written to you, have you never answered one. Now wait till I come, by God, and I shall make you write so much that perhaps you will become sick of it.

Dear Messer Francesco. I am sending thither Salai to learn from His Magnificence the President to what end the regulation of the water has come since, at my departure this regulation of the outlets of the canal had been ordered, because His Magnificence the President promised me that as soon as this was done I should be satisfied. It is now some time since I heard that the canal was in order, as also its outlets, and I immediately wrote to the President and to you, and then I repeated it, and never had an answer. So you will have the goodness to answer me as to that which happened, and as I am not to hurry the matter, would you take the trouble, for the love of me, to urge the President a little, and also Messer Girolamo Cusano, to whom you will commend me and offer my duty to his Magnificence.

1350. 28—36. Draft of a letter to Francesco Melzi, born 1493—a youth therefore of about 17 in 1510. Leonardo addresses his young friend as "Messer", as being the son of a noble house.

Melzi practised art under Leonardo as a dilettante and not as a pupil, like Cesare da Sesto and others (See LERMOLIEFF, *Die Galerien &c.*, p. 476).

Drafts of a  
letter to  
Giuliano de'  
Medici  
(1351. 1352).

I was so greatly rejoiced, most illustrious Lord, by the desired restoration of your health, that it almost had the effect that [my own health recovered]—[I have got through my illness]—my own illness left me—of your Excellency's almost restored health. But I am extremely vexed that I have not been able completely to satisfy the wishes of your Excellency, by reason of the wickedness of that deceiver, for whom I left nothing undone which could be done for him by me and by which I might be of use to him; and in the first place his allowances were paid to him before the time, which I believe he would willingly deny, if I had not the writing signed by myself and the interpreter. And I, seeing that he did not work for me unless he had no work to do for others, which he was very careful in soliciting, invited him to dine with me, and to work afterwards near me, because, besides the saving of expense, he

1351. 1353. It is clear from the contents of this notes that they refer to Leonardo's residence in Rome in 1513—1515. Nor can there be any doubt that they were addressed to Leonardo's patron at the time: Giuliano de' Medici, third son of Lorenzo the Magnificent and brother of Pope Leo X (born 1478). In 1512 he became the head of the Florentine Republic. The Pope invited him to Rome, where he settled; in 1513 he was named patrician with much splendid ceremonial. The medal struck in honour of the event bears the words MAG. IVLIAN. MEDICES. Leonardo too uses the style "Magnifico", in his letter. Compare also No. 1377.

GINO CAPONI (*Storia della Repubblica di Firenze*, Vol. III, p. 139) thus describes the character of Giuliano de' Medici, who died in 1516: *Era il migliore della famiglia, di vita placida, grande spenditore, tenendo intorno a sè uomini ingegnosi, ed ogni nuova cosa voleva provare.*

See too GREGOROVIUS, *Geschichte der Stadt Rom*, VIII (book XIV. III, 2): *Die Luftschlösser fürstlicher Grösse, wozu ihn der Papst hatte erheben wollen zerfielen.*

Julian war der edelste aller damaligen Medici, ein Mensch von innerlicher Richtung, unbefriedigt durch das Leben, mitten im Sonnenglanz der Herrlichkeit Leo's X. eine dunkle Gestalt die wie ein Schatten vorüberzog. Giuliano lived in the Vatican, and it may be safely inferred from No. 1352 l. 2, and No. 1353 l. 4, that Leonardo did the same.

From the following unpublished notice in the Vatican archives, which M. Eug. Müntz, librarian of the Ecole des Beaux arts, Paris, has done me the favour to communicate to me, we get a more accurate view of Leonardo's relation to the often named GIORGIO TEDESCO:

*Nota delle provisione (sic) a da pagare per me in nome del nostro ill. S. Bernardo Bini e chompa di Roma, e prima della illma sua chonsorte ogni mese d. 800.*

*A Ldo da Vinci per sua provisione d. XXXIII, e più d. VII al detto per la provisione di Giorgio tedesco, che sono in tutto d. 40.*

From this we learn, that seven ducats formed the German's monthly wages, but according to No. 1353 l. 7 he pretended that eight ducats had been agreed upon.

presso di me, perchè oltre al conto elli acquisterebbe il linguaggio italiano; [lui sempre lo promise e mai lo volle fare]; E questo facievo ancora, perchè quel Giovā tedesco che fa li specchi ogni dì lì era in bottega, e volleua vedere e intendere ciò che si facieva e publicava per la... forte biasimando; e perchè lui māgiava cō quelli <sup>10</sup> della guardia del papa, e poi se nādava in compagnia colli scoppietti, amazādo vecchelli per queste anticaglie e così seguitava da dopo desinare a sera; E se io mandavo Lorēzo <sup>11</sup>a sollecitarli il lavoro lui si cruciava e diceva che nō volea tanti maestri sopra capo, e che il lauorar suo era <sup>12</sup>per la guardaroba di vostra Eccielētia, e passò dua mesi e così seguitava e indi, trovādo Giannicolo della <sup>13</sup>guardaroba, domādailo s'el Tedesco avea finito l'opere del magnifico, e lui mi disse non esser vero, ma che so<sup>14</sup>lamēte li avea dato a nettar dua scoppiette; di poi faciēdolo io sollecitare lui lasciò la bettega, e cominciò a lavorare ī came<sup>15</sup>ra, e perde assai tēpo nel fare vn altra morsa e lime e altri strumēti a vite; e qui ui lavorava mulinelli da torcere seta, <sup>16</sup>li quali nascōdeva, quādo un de' mia vētrava, e con mille bestemic e rimbotti, in modo che nessū de mia voleva piv entrare.

<sup>17</sup>Tanto mi sō rallegrato, jllustrissimo mio Signore, del desiderato acquisto di vostra sanità che quasi il male mio da me <sup>18</sup>s'è fugito; Ma assai mi rincrescie il non avere io potuto integralmēte satisfare alli desideri di uostra Eccellenza <sup>19</sup>mediante la malignità di cotesto ingānatore tedesco, per il quale non ò lasciato indireto cosa alcuna, <sup>20</sup>colla quale io abbia creduto farli piaciere; e secondariamente invitarlo ad abitare e vivere con meco, per la qual cosa io ve<sup>21</sup>drei al continuo l'opera che lui faciesse, e cō facilità ricorreggierei li errori ; e oltre di ques:o inparerebbe la lingua italiana, <sup>22</sup>mediante la quale lui cō facilità potrebbe parlare sanza interprete; e li sua danari li

would acquire the Italian language. He always promised, but would never do so. And this I did also, because that Giovanni, the German who makes the mirrors, was there always in the workshop, and wanted to see and to know all that was being done there and made it known outside... strongly criticising it; and because he dined with those of the Pope's guard, and then they went out with guns killing birds among the ruins; and this went on from after dinner till the evening; and when I sent Lorenzo to urge him to work he said that he would not have so many masters over him, and that his work was for your Excellency's Wardrobe; and thus two months passed and so it went on; and one day finding Gian Niccolò of the Wardrobe and asking whether the German had finished the work for your Magnificence, he told me this was not true, but only that he had given him two guns to clean. Afterwards, when I had urged him farther, he left the workshop and began to work in his room, and lost much time in making another pair of pincers and files and other tools with screws; and there he worked at mills for twisting silk which he hid when any one of my people went in, and with a thousand oaths and mutterings, so that none of them would go there any more.

I was so greatly rejoiced, most Illustrious Lord, by the desired restoration of your health, that my own illness almost left me. But I am greatly vexed at not having been able to completely satisfy your Excellency's wishes by reason of the wickedness of that German deceiver, for whom I left nothing undone by which I could have hope to please him; and secondly I invited him to lodge and board with me, by which means I should constantly see the work he was doing and with greater ease correct his errors while, besides this, he would learn the Italian tongue, by means of which he could with more ease talk without an interpreter; his moneys were always given him in advance of the

Tanto mi son rallegrato, illustrissimo mio signiore, del desiderato acquisto di uostra sanità, che quasi il male mio da me <sup>2's</sup>è fuggito; dico iddio ne sia laudato, Ma assai mi rincresce il non avere io potuto integralmēte satisfare alli desideri di uostra Eccellenza <sup>3</sup>mediante la malignità di contesto ingānatore tedesco, per il quale non ò lasciato indirieto cosa alcuna, <sup>4</sup>colla quale io abbia creduto farli piacere, e secondariamente invitarlo ad abitare e vivere con meco, per la qual cosa <sup>5</sup>io farei piantare

time when due. Afterwards he wanted to have the models finished in wood, just as they were to be in iron, and wished to carry them away to his own country. But this I refused him, telling him that I would give him, in drawing, the breadth, length, height and form of what he had to do; and so we remained in ill-will.

The next thing was that he made himself another workshop and pincers and tools in his room where he slept, and there he worked for others; afterwards he went to dine with the Swiss of the guard, where there are idle fellows, in which he beat them all; and most times they went two or three together with guns, to shoot birds among the ruins, and this went on till evening.

At last I found how this master Giovanni the mirror-maker was he who had done it all, for two reasons; the first because he had said that my coming here had deprived him of the countenance and favour of your Lordship which always . . . The other is that he said that his iron-workers' rooms suited him for working at his mirrors, and of this he gave proof; for besides making him my enemy, he made him sell all he had and leave his workshop to him, where he works with a number of workmen making numerous mirrors to send to the fairs.

### I352.

I was so greatly rejoiced, most Illustrious Lord, by the wished for recovery of your health, that my own ills have almost left me; and I say God be praised for it. But it vexes me greatly that I have not been able completely to satisfy your Excellency's wishes by reason of the wickedness of that German deceiver, for whom I left nothing undone by which I could hope to please him; and secondly I invited him to lodge and board with me, by which means I should see constantly the work he was doing,

1354. A puzzling passage, meant, as it would seem, for a jest. Compare the description of Giants in Dante, *Inf.* XXI and XXII. Perhaps Leonardo had the Giant Antaeus in his mind. Of him the myth relates that he was a son of Gē, that he fed on lions; that he hunted in Libya and killed the inhabitants. He enjoyed the peculiarity of

for which purpose I would have a table fixed at the foot of one of these windows, where he could work with the file and finish the things made below; and so I should constantly see the work he might do, and it could be corrected with greater ease.

1353.

This other hindered me in anatomy, blaming it before the Pope; and likewise at the hospital; and he has filled [4]this whole Belvedere with workshops for mirrors; and he did the same thing in Maestro Giorgio's room. He said that he had been promised [7]eight ducats every month, beginning with the first day, when he set out, or at latest when he spoke with you; and that you agreed.

Seeing that he seldom stayed in the workshop, and that he ate a great deal, I sent him word that, if he liked I could deal with him separately for each thing that he might make, and would give him what we might agree to be a fair valuation. He took counsel with his neighbour and gave up his room, selling every thing, and went to find . . .

1354.

Dear Benedetto de' Pertarti. When the proud giant fell because of the bloody and miry state of the ground it was as though a mountain had fallen so that the country shook as with an earthquake, and terror fell on Pluto in hell. From the violence of the shock he lay as stunned on the level ground. Suddenly the people, seeing him as one killed by a thunderbolt, turned back; like ants running wildly over the body of the fallen oak, so these rushing over his ample limbs . . . . . them with

renewing his strength whenever he fell and came in contact with his mother earth; but that Hercules lifted him up and so conquered and strangled him. Lucan gives a full account of the struggle. *Pharsalia* IV, 617. The reading of this passage, which is very indistinctly written, is in many places doubtful.

Imp. Eudes

risentito jl gigāte e sētēdosi <sup>12</sup> quasi coperto dalla moltitudine, subito sentesi cuo<sup>13</sup>cere per le pūture; mise un muggchio che parve <sup>14</sup>fusse vno spavētoso tono, e posto le sue mani in <sup>15</sup>terra, e levatosi il pavroso volto, e postosi <sup>16</sup>vna delle mani j capo trovò selo <sup>17</sup> pieno <sup>18</sup>d'uomini appiccati e cannā<sup>19</sup>glia a similitudine de' mi<sup>20</sup>ntvi animali, che fra que <sup>21</sup>gli sogliono nascere; <sup>22</sup>onde scutotendo jl capo gli o<sup>23</sup>mini lācia non altramēti per l'aria che si facia <sup>24</sup>la grādine, quādo va cō furor di vēti, e trovossi molti <sup>25</sup>di questi uomini esser morti da quegli che gli stavano so<sup>26</sup>pra ritti; coi piedi calpestādo . . .

<sup>27</sup>E tenēdosi a capegli ēgiegniādosi na-  
scōdere tra quegli, facievano <sup>28</sup>a similitudine  
de' marinai quādo è fortuna, che corrono

1355. This passage, very difficult to decipher, is on the reverse of a drawing at Windsor, Pl. CXXII, which possibly has some connection with

frequent wounds; by which, the giant being roused and feeling himself almost covered by the multitude, he suddenly perceives the smarting of the stabs, and sent forth a roar which sounded like a terrific clap of thunder; and placing his hands on the ground he raised his terrible face: and having lifted one hand to his head he found it full of men and rabble sticking to it like the minute creatures which not unfrequently are found there; wherefore with a shake of his head he sends the men flying through the air just as hail does when driven by the fury of the winds. Many of these men were found to be dead; stamping with his feet.

And clinging to his hair, and striving to hide in it, they behaved like sailors in a storm, who run up the ropes to lessen the force of the wind [by taking in sail].

News of things from the East.

Be it known to you that in the month of June there appeared a Giant, who came from the Lybian desert . . . mad with rage like ants . . . struck down by the rude.

This great Giant was born in Mount Atlas and was a hero . . . . and had to fight against the Egyptians and Arabs, Medes and Persians. He lived in the sea on whales, grampus and ships.

Mars fearing for his life took refuge under the . . . of Jove.

And at the great fall it seemed as though the whole province quaked.

1355.

This spirit returns to the brain whence it had departed, with a loud voice and with these words, it moved . . .

And if any man thought he may have wisdom or goodness . . . . .

it. The drawing is slightly reduced in this reproduction; the original being 25 cm. high by 19 cm. wide.

<sup>4</sup>O felice; o avēturato spirito, dōde partisti! jo ho questo uomo a male mio grado bē conoſcivto; Questo è ricietto di villania, questo è proprio ammonitione di somma ingratitudine, <sup>6</sup>in cōpagnia di tutti i viti; ma che mi vo io cō parole indarno affaticādomi? la somma de' peccati <sup>7</sup>solo in lui trovati sono; E se alcuno infra loro si trova, che alcuna bontà possegga, non altri<sup>8</sup>mēti come che me dalli altri uomini trattati sono, e in effetto io ho questa cōclusione ch'è <sup>9</sup>male s'eli sono nimici e peggio s'eli son amici.

1358. Below this text we read *gusstino* = Giustino and in another passage on the same page Justin is

O blessed and happy spirit whence comest thou? Well have I known this man, much against my will. This one is a receptacle of villainy; he is a perfect heap of the utmost ingratitudine combined with every vice. But of what use is it to fatigue myself with vain words? Nothing is to be found in them but every form of sin . . And if there should be found among them any that possesses any good, they will not be treated differently to myself by other men; and in fine, I come to the conclusion that it is bad if they are hostile, and worse if they are friendly.

## 1356.

All the ills that are or ever were, if they could be set to work by him, would not satisfy the desires of his iniquitous soul; and I could not in any length of time describe his nature to you, but I conclude . .

## 1357.

I know one who, having promised me much, less than my due, being disappointed of his presumptuous desires, has tried to deprive me of all my friends; and as he has found them wise and not pliable to his will, he has menaced me that, having found means of denouncing me, he would deprive me of my benefactors. Hence I have informed your Lordship of this, to the end [that this man who wishes to sow the usual scandals, may find no soil fit for sowing the thoughts and deeds of his evil nature] so that he, trying to make your Lordship, the instrument of his iniquitous and maliceous nature may be disappointed of his desire.

## 1358.

And in this case I know that I shall make few enemies seeing that no one will believe what I can say of him; for they are but

quoted (No. 1210, l. 48). The two have however no real connection.

son quelli <sup>3</sup>a chi i sua viti dispiacino; anzi solamente a quelli omini li dispiaciō<sup>4</sup>no che son di natura cōtraria a tali uitj; e molti odiano li <sup>5</sup>padri e guastan le amicitie, reprēsori de' sua viti e non <sup>6</sup>vogliono esenpli contrari a essi, nè nessuno vma consiglio.

<sup>7</sup>E se alcuno si ne trova virtuoso e bono, non lo scacciate <sup>8</sup>da voi; fatteli onore, acciò che non abbia a fugirsi da <sup>9</sup>voi e ridursi neli eremi, o spelonche, o altri lochi soleta<sup>10</sup>ri, per fugirsi dalle vostre insidie, e se alcun di questi <sup>11</sup>tali si trova, fatteli onore, perchè questi sono li uostri Iddei <sup>12</sup>terrestri, questi meritā da uoi le statue e li simulacri; ma <sup>13</sup>bē ui ricordo che li lor simulacri nō sīc̄ da uoi mā<sup>14</sup>giati come ācora in alcuna regione del India; <sup>15</sup>chē quādo li simulacri operano alcuno mir<sup>16</sup>raculo secondo loro, li sacerdoti li tagliano in pezzi, essen<sup>17</sup>do di legno, e ne danno a tutti quelli del paese nō <sup>18</sup>sanza premio, e ciascū raspa sotilmēte la sua parte <sup>19</sup>e mette sopra la prima vivanda che māgiano; e così tē<sup>20</sup>gono per fede aversi māgiato il suo santo, e credono che lui li <sup>21</sup>guardi poi da tutti li pericoli che ti pare, uomo, qui della <sup>22</sup>tua spetie? sei tu così saui, come tu ti tieni? son <sup>23</sup>queste cose da esser fatte da omini?

few whom his vices have disgusted, and he only dislikes those men whose natures are contrary to those vices. And many hate their fathers, and break off friendship with those who reprove their vices; and he will not permit any examples against them, nor any advice.

If you meet with any one who is virtuous do not drive him from you; do him honour, so that he may not have to flee from you and be reduced to hiding in hermitages, or caves or other solitary places to escape from your treachery; if there is such an one among you do him honour, for these are our Saints upon earth; these are they who deserve statues from us, and images; but remember that their images are not to be eaten by you, as is still done in some parts of India[15], where, when the images have according to them, performed some miracle, the priests cut them in pieces, being of wood, and give them to all the people of the country, not without payment; and each one grates his portion very fine, and puts it upon the first food he eats; and thus believes that by faith he has eaten his saint who then preserves him from all perils. What do you think here, Man, of your own species? Are you so wise as you believe yourselves to be? Are these things to be done by men?

Come io vi dissi nc' di passati, voi sapete <sup>2</sup>che io sono sanza alcuno . . .

L. 15. In explanation of this passage I have received the following communication from Dr. G. W. LEITNER of Lahore: "So far as Indian customs are known to us, this practice spoken of by Leonardo as 'still existing in some parts of India' is perfectly unknown; and it is equally opposed to the spirit of Hinduism, Mohammedanism and Sikhism. In central Thibet the ashes of the dead,

when burnt, are mixed with dough, and small figures—usually of Buddha—are stamped out of them and some are laid in the grave while others are distributed among the relations. The custom spoken of by Leonardo may have prevailed there but I never heard of it." Possibly Leonardo refers here to customs of nations of America.

**1368.** So Leonardo writes his name on a sheet with sundry short notes, evidently to try a pen. Compare the signature with those in Nos. 1341, 1348 and 1374 (see also No. 1346, l. 33). The form "Leonardo" does not occur in the autographs. The Portrait of the Master in the Royal Library at Turin, which is reproduced—slightly diminished—on Pl. I, has in the original two lines of writing underneath; one in red chalk of two or three words is partly effaced: *lionardo it...lm* (or *lai?*); the second written in pencil is as follows: *fatto da lui stesso assai vecchio*. In both of these the writing is very like the Master's, but is certainly only an imitation.

**1369.** This date is on a drawing of a rocky landscape. See *Chronique des Arts* 1881 no. 23: *Léonard de Vinci a-t-il été au Righi le 5 août 1473?* letter by H. de Geymüller. The next following date in the MSS. is 1478 (see No. 663).

**1370.** While the letters in the MS. notes of 1473 and 1478 are very ornate, this note and the texts on anatomy on the same sheet (for instance No. 805) are in the same simple hand as we see on Pl. CXVI and CXIX. No 1370 is the only dated note of the years between 1480 and 1489, and the characters are in all essential points identical with those that we see in the latest manuscripts written in France (compare the facsimiles on Pl. CXV and

p. 254), so that it is hardly possible to determine exactly the date of a manuscript from the style of the handwriting, if it does not betray the peculiarities of style as displayed in the few notes dated previous to 1480.—Compare the facsimile of the manuscripts 1479 on Pl. LXII, No. 2; No. 664, note, Vol. I p. 346. This shows already a marked simplicity as compared with the calligraphy of 1478.

The text No. 720 belongs to the year 1490; No. 1510 to the year 1492; No. 1459, No. 1384 and No. 1460 to the year 1493; No. 1463, No. 1517, No. 1024, 1025 and 1461 to the year 1494; Nos. 1523 and 1524 to the year 1497.

**1371.** *Scrissi qui.* Leonardo does not say where; still we may assume that it was not in Milan. Amoretti writes, *Memorie Storiche*, chap. XIX: *Sembra pertanto che non nel 1499 ma nel 1500, dopo il ritorno e la prigionia del duca, sia da qui partito Leonardo per andare a Firenze; ed è quindi probabile, che i mesi di governo nuovo e incerto abbia passati coll' amico suo Francesco Melzi a Vaprio, ove meglio che altrove studiar poteva la natura, e soprattutto le acque, e l'Adda specialmente, che già era stato l'oggetto delle sue idrostatiche ricerche.* At that time Melzi was only six years of age. The next date is 1502; to this year belong No. 1034, 1040, 1042, 1048 and 1053. The note No. 1525 belongs to the year 1503.

Br. M. 272 a]

A dì 9 di luglio 1504, mercoledì a ore 7 morì Ser <sup>2</sup>Piero da Vinci, notaio al Palazzo del Podestà, mio padre, a ore 7, era d'età d'anni 80, lasciò 10 figlioli maschi e 2 femmine.

*1376. addi.*

**1372.** This statement of Ser Piero's age contradicts that of the *Riassunto della portata di Antonio da Vinci* (Leonardo's grandfather), who speaks of Ser Piero as being thirty years old in 1457; and that of the *Riassunto della portata di Ser Piero e Francesco*, sons of Antonia da Vinci, where Ser Piero is mentioned as being forty in 1469. These documents were published by G. UZIELLI, *Ricerche intorno a L. da Vinci, Firenze*, 1872, pp. 144 and 146. Leonardo was, as is well known, a natural son. His mother 'La Catarina' was married in 1457 to Acchattabriga di Piero del Vaccha da Vinci. She died in 1519. Leonardo never mentions her in the Manuscripts. In the year of Leonardo's birth Ser Piero married Albiera di Giovanni Amadoci, and after her death at the age of thirty eight he again married, Francesca, daughter of Ser Giovanni Lanfredi, then only fifteen. Their children were Leonardo's half-brothers, Antonio (b. 1476), Ser Giuliano (b. 1479), Lorenzo (b. 1484), a girl, Violante (b. 1485), and another boy Domenico (b. 1486); Domenico's descendants still exist as a family. Ser Piero married for the third time Lucrezia di Guglielmo Cortigiani

**1372.**

On the 9<sup>th</sup> of July 1504, Wednesday, at seven o'clock, died Ser Piero da Vinci, notary at the Palazzo del Podestà, my father,—at seven o'clock, being eighty years old, leaving behind ten sons and two daughters.

**1373.**

On Wednesday at seven o'clock died Ser Piero da Vinci on the 9<sup>th</sup> of July 1504.

**1374.**

Begun by me, Leonardo da Vinci, on the 12<sup>th</sup> of July 1505.

**1375.**

Begun at Milan on the 12<sup>th</sup> of September 1508.

**1376.**

On the 9<sup>th</sup> of January 1513.

by whom he had six children: Margherita (b. 1491), Benedetto (b. 1492), Pandolfo (b. 1494), Guglielmo (b. 1496), Bartolomeo (b. 1497), and Giovanni) date of birth unknown). Pierino da Vinci the sculptor (about 1520—1554) was the son of Bartolomeo, the fifth of these children. The dates of their deaths are not known, but we may infer from the above passage that they were all still living in 1505.

**1373.** This and the previous text it may be remarked are the only mention made by Leonardo of his father; Nos. 1526, 1527 and No. 1463 are of the year 1504.

**1374.** Thus he writes on the first page of the MS. The title is on the foregoing coversheet as follows: *Libro titolato disstrafformatione coe (cioè) d'un corpo non (in nm) altro sanza diminuizione e acrescemento di materia.*

**1375.** No. 1528 and No. 1529 belong to the same year. The text Vol. I, No. 4 belongs to the following year 1509 (1508 old style); so also does No. 1009.—Nos. 1022, 1057 and 1464 belong to 1511.

**1376.** No. 1465 belongs to the same year. No. 1065 has the next date 1514.

G. o']

Partissi il magnifico Giuliano de' <sup>2</sup>Medici a dì 9 di giennaio 1515 <sup>3</sup>in sull'aurora da Roma per <sup>4</sup>adare <sup>4</sup>a sposare la moglie in Sovoia; <sup>5</sup>e in tal dì ci fu la morte del rè di Francia.

1377. 1. magnifico. 2. addi. 3. darroma. 4. assposare. 5. dere.

1378. 1. a 24 digugnio. 2. palazzo dell clli.

1377. Giuliano de Medici, brother to Pope Leo X.; see note to Nos. 1351—1353. In February, 1515, he was married to Filiberta, daughter of Filippo, Duke of Savoy, and aunt to Francis I, Louis XII's successor on the throne of France. Louis XII died

on Jan. 1<sup>st</sup>, and not on Jan. 9<sup>th</sup> as is here stated.—This addition is written in paler ink and evidently at a later date.

1378. *Castello del clli.* The meaning of this word is obscure; it is perhaps not written at full length.

## XXII.

### *Miscellaneous Notes.*

The incidental memoranda scattered here and there throughout the MSS. can have been for the most part intelligible to the writer only; in many cases their meaning and connection are all the more obscure because we are in ignorance about the persons with whom Leonardo used to converse nor can we say what part he may have played in the various events of his time. Vasari and other early biographers give us a very superficial and far from accurate picture of Leonardo's private life. Though his own memoranda, referring for the most part to incidents of no permanent interest, do not go far towards supplying this deficiency, they are nevertheless of some importance and interest as helping us to solve the numerous mysteries in which the history of Leonardo's long life remains involved. We may at any rate assume, from Leonardo's having committed to paper notes on more or less trivial matters on his pupils, on his house-keeping, on various known and unknown personages, and a hundred other trifles—that at the time they must have been in some way important to him.

I have endeavoured to make these 'Miscellaneous Notes' as complete as possible, for in many cases an incidental memorandum will help to explain the meaning of some other note of a similar kind. The first portion of these notes (Nos. 1379—1457), as well as those referring to his pupils and to other artists and artificers who lived in his house (1458—1468) are arranged in chronological order. A considerable proportion of these notes belong to the period between 1490 and 1500, when Leonardo was living at Milan under the patronage of Lodovico il Moro, a time concerning which we have otherwise only very scanty information. If Leonardo did really—as has always been supposed,—spend also the greater part of the preceding decade in Milan, it seems hardly likely that we should not find a single note indicative of the fact, or referring to any event of that period, on the numerous loose leaves in his writing that exist. Leonardo's life in Milan between 1489 and 1500 must have been comparatively uneventful. The MSS. and memoranda of those years seem to prove that it was a tranquil period of intellectual and artistic labour rather than of bustling court life. Whatever may

have been the fate of the MSS. and note books of the foregoing years—whether they were destroyed by Leonardo himself or have been lost—it is certainly strange that nothing whatever exists to inform us as to his life and doings in Milan earlier than the consecutive series of manuscripts which begin in the year 1489.

There is nothing surprising in the fact that the notes regarding his pupils are few and meagre. Excepting for the record of money transactions only very exceptional circumstances would have prompted him to make any written observations on the persons with whom he was in daily intercourse, among whom, of course, were his pupils. Of them all none is so frequently mentioned as Salai, but the character of the notes does not—as it seems to me—justify us in supposing that he was any thing more than a sort of factotum of Leonardo's (see 1519, note).

Leonardo's quotations from books and his lists of titles supply nothing more than a hint as to his occasional literary studies or recreations. It was evidently no part of his ambition to be deeply read (see Nrs. 10, 11, 1159) and he more than once expressly states (in various passages which will be found in the foregoing sections) that he did not recognise the authority of the Ancients, on scientific questions, which in his day was held paramount. Archimedes is the sole exception, and Leonardo frankly owns his admiration for the illustrious Greek to whose genius his own was so much akin (see No. 1476). All his notes on various authors, excepting those which have already been inserted in the previous section, have been arranged alphabetically for the sake of convenience (1469—1508).

The passages next in order contain accounts and inventories principally of household property. The publication of these—often very trivial entries—is only justifiable as proving that the wealth, the splendid mode of life and lavish expenditure which have been attributed to Leonardo are altogether mythical; unless we put forward the very improbable hypothesis that these notes as to money in hand, outlay and receipts, refer throughout to an exceptional state of his affairs, viz. when he was short of money.

The memoranda collected at the end (No. 1505—1565) are, in the original, in the usual writing, from left to right. Besides, the style of the handwriting is at variance with what we should expect it to be, if really Leonardo himself had written these notes. Most of them are to be found in juxtaposition with undoubtedly authentic writing of his. But this may be easily explained, if we take into account the fact, that Leonardo frequently wrote on loose sheets. He may therefore have occasionally used paper on which others had made short memoranda, for the most part as it would seem, for his use. At the end of all I have given Leonardo's will from the copy of it preserved in the Melzi Library. It has already been printed by Amoretti and by Uzielli. It is not known what has become of the original document.

1379. The mysterious looking words, quite distinctly written, in line 1: *ingol, amor a, ilopan a* and on line 2: *enoiganod al* are obviously in cipher and the solution is a simple one; by reading them backwards we find for *ingol*: *longi*—probably *longi*, evidently the name of a person; for *amor a*: *a Roma*, for *ilopan a*: *a Napoli*. Leonardo has done the same in two passages treating on some secrets of his art Nos. 641 and 729, the only other places in which we find this cipher employed; we may therefore conclude that it was for the sake of secrecy that he used it.

There can be no doubt, from the tenor of this passage, that Leonardo projected a secret excursion to Naples. Nothing has hitherto been known of this journey, but the significance of the passage will be easily understood by a reference to the following notes, from which we may infer that Leonardo really

had at the time plans for travelling further than Naples. From lines 3, 4 and 7 it is evident that he purposed, after selling every thing that was not easily portable, to leave a chest in the care of his relations at Vinci. His luggage was to be packed into two trunks especially adapted for transport by mules. The exact meaning of many sentences in the following notes must necessarily remain obscure. These brief remarks on small and irrelevant affairs and so forth are however of no historical value. The notes referring to the preparations for his journey are more intelligible.

2. *Libro di Vitolone* see No. 1506 note.

7 and fol. It would seem from the text that Leonardo intended to have instructions in painting on paper. It is hardly necessary to point out that the Art of illuminating was quite separate from that of painting.

events in Milan at the time of the overthrow of Ludovico il Moro. Amoretti published it in the ‘Memorie Storiche’ and added copious notes.

6. Visconti. *Chi fosse quel Visconte non sapremmo indovinare fra tanti di questo nome. Arluno narra che allora attestate furono le case de' Visconti, de' Castiglioni, de' Sanseverini, e de' Botta e non è improbabile che ne fossero insultati e morti i padroni. Molti Visconti annovera lo stesso Cronista che per essersi rallegrati del ritorno del duca in Milano furono da' Francesi arrestati, e strascinati in Francia come prigionieri di stato; e fra questi Messer Francesco Visconti, e suo figliuolo Battista.* (AMORETTI, Mem. Stor. XIX.)

8. Borgonzo o Brugonzo Botta fu regolatore delle ducale entrate sotto il Moro, alla cui fuga la casa sua fu pur messa a sacco da' partitanti francesi. (AMORETTI, l. c.)

1413. This note is written between lines 23 and 24 of the text No. 710. Corduso, Cordusio (*curia ducis*) = Cordus in the Milanese dialect, is the name of a Piazza between the Via del Broletto and the Piazza de' Mercanti at Milan. In the time of il Moro it was the centre of the town. The persons here named were members of the noble Milanese family de'Fossani; Ambrogio da Fossano, the contemporary painter, had no connection with them.

1414. l. 4—10. This passage evidently refers to

the universe with wonders; filling all writings  
with his fame and bringing eternal glory to  
his birthplace.

## 1429.

This stratagem was used by the Gauls against the Romans, and so great a mortality ensued that all Rome was dressed in mourning.

1427. The sketch on the same page as this text represents two poles one across the other. At the ends of the longest are the letter *c* and *d*. The sense of the passage is not rendered any clearer.

1428. This seems to be a speculation about the flying machine (compare p. 271).

1429. Leonardo perhaps alludes to the Gauls under Brennus, who laid his sword in the scale when the tribute was weighed.

1443. Alessandro Farnese, afterwards Pope Paul III  
 was created in 1493 Cardinal di San Cosimo e San  
 Damiano, by Alexander VI.

1444. 1. Pandolfino, Agnolo, of Florence. It is to  
 this day doubtful whether he or L. B. Alberti was  
 the author of the famous work '*Del Governo della  
 Famiglia*'. It is the more probable that Leonardo  
 should have meant this work by the words *il libro*,  
 because no other book is known to have been  
 written by Pandolfino. This being the case this al-  
 lusion of Leonardo's is an important evidence in

VOL. II.

favour of Pandolfino's authorship (compare No. 1454,  
 line 3).

7. The works of Lactantius were published  
 very often in Italy during Leonardo's lifetime. The  
 first edition published in 1465 "*in monastero  
 sublacensi*" was also the first book printed in  
 Italy.

15. Sansovino, Andrea—the sculptor; 1460—1529.

25. Leonardo here probably alludes to the map,  
 not executed by him (See p. 224), which is with the  
 collection of his MSS. at Windsor, and was publi-  
 shed in the *Archaeologia* Vol. XI (see p. 224).

1445. *Quel di Pavia*. Pavia is possibly a clerical error for *Padua*, and if so the meaning of the passage is easily arrived at: *Quel di Padua* would be the bronze equestrian statue of Gattamelata, on the Piazza del Santo at Padua executed by Donatello in 1443 (see pp. 2 and 3).

## 1445.

In that at Pavia the movement is more  
to be admired than any thing else.

The imitation of antique work is better  
than that of the modern things.

Beauty and utility cannot exist together,  
as seen in fortresses and in men.

The trot is almost the nature of the free  
horse.

Where natural vivacity is lacking it must  
be supplied by art.

1450. 1. *Giuliano Gondi*. Ser Piero da Vinci, Leonardo's father, lived till 1480, in a house belonging to Giuliano Gondi. In 1498 this was pulled down to make room for the fine Palazzo built on the Piazza San Firenze by Giuliano di San Gallo, which still exists. In the *Riassunto del Catasto di Ser Piero da Vinci*, 1480, Leonardo is not mentioned; it is evident therefore that he was living elsewhere. It may be noticed incidentally that in the *Catasto di Giuliano Gondi* of the same year the following mention is made of his four eldest sons:

*Leonardo mio figliuolo d'età d'anni 29, non fa nulla,  
 Giovambatista d'età d'anni 28 in Ghostantinopoli,  
 Billichozo d'età d'anni 24 a Napoli,  
 Simone d'età d'anni 23 in Ungheria.*

He himself was a merchant of gold filigree (*facciamo lavorare una bottega d'arte di seta . . . facciamo un pocho di trafico a Napoli*). As he was 59 years old in 1480, he certainly would not have been alive at the time of Leonardo's death. But Leonardo must have been on intimate terms with the family till the end of his life, for in a letter dated June 1. 1519, in which Fr. Melzi, writing from Amboise, announces

16. Pier di Cosimo the well known Florentine painter 1462—1521. See VASARI, *Vite* (Vol. IV, p. 134 ed. Sansoni 1880) about Leonardo's influence on Piero di Cosimo's style of painting.

17. Filippo e Lorenzo; probably the painters Filippino Lippi and Lorenzo di Credi. L. di Credi's pictures and Vasari's history of that painter bear ample evidence to his intimate relations with Leonardo.

37. Lorenzo di Pier Francesco and his brother Giovanni were a lateral branch of the Medici family and changed their name for that of Popolani.

41. Possibly this refers to the clock on the tower of the Palazzo Vecchio at Florence. In February 1512 it had been repaired, and so arranged as to indicate the hours after the French manner (twelve hours a. m. and as many p. m.).

1456. This fragmentary note is written on the margin of a drawing of two legs.

1457. This note occurs on a pen and ink drawing made by Leonardo as a sketch for the celebrated large cartoon in the possession of the Royal Academy of Arts, in London. This cartoon is commonly supposed to be identical with that described and lauded by Vasari, which was exhibited in Florence at the time and which now seems to be lost. Mr. Alfred Marks, of Long Ditton, in his valuable paper (read before the Royal Soc. of Literature, June 28, 1882) "On the St. Anne of Leonardo da Vinci", has adduced proof that the cartoon now in the Royal Academy was executed earlier at Milan. The note here given, which is written on the sheet containing the study for the said cartoon, has evidently no

the German stones.

1458.

Giacomo came to live with me on St.-Mary Magdalén's[1] day, 1490, aged 10 years. The second day I had two shirts cut out for him, a pair of hose, and a jerkin, and when I put aside some money to pay for these things he stole *4 lire*  
the money out of the purse; and I could never make him confess, though I was quite certain of the fact.—Thief, liar, obstinate, glutton.

The day after, I went to sup with Giacomo Andrea, and the said Giacomo supped for two and did mischief for four; for he brake 3 cruets, spilled the wine, and after this came to sup where I . . .

Item: on the 7<sup>th</sup> day of September he stole a silver point of the value of 22 soldi from Marco[6] who was living with me, *4 lire* this being of silver; and he took it from his studio, and when the said Marco had searched for it a long while he found it hidden in the said Giacomo's box *4 lire.*

reference to the drawing on which it is written but is obviously of the same date. Though I have not any opening here for discussing this question of the cartoon, it seemed to me important to point out that the character of the writing in this note does not confirm the opinion hitherto held that the Royal Academy cartoon was the one described by Vasari, but, on the contrary, supports the hypothesis put forward by Mr. Marks.

1458. *Il dì della Maddalena.* July 22.

6. *Marco*, probably Leonardo's pupil Marco d'Oggiorno; 1470 is supposed to be the date of his birth and 1540 of his death.

*Che stava con meco.* We may infer from this that he left the master shortly after this, his term of study having perhaps expired.

Notes on  
pupils  
(1458-1468.)

II.3 58*b*]

1493.

<sup>2</sup>A di primo di novēbre facemmo <sup>3</sup>cōto; Giulio restava a rimettere mesi <sup>4</sup> e maestro Tommaso mesi <sup>9</sup>; <sup>5</sup>maestro Tommaso fece di poi <sup>6</sup> cādellie<sup>6</sup>ri, dì <sup>10</sup>; Giulio in cierte molli <sup>7</sup>dì <sup>15</sup>; lavorò poi per se in <sup>8</sup>sino a dì <sup>27</sup> di maggio, e lavorò <sup>9</sup>per me uno martinello insino a dì <sup>18</sup> <sup>10</sup>dì luglio, poi per se insino a dì <sup>7</sup> <sup>11</sup>d'agosto, e questo uno mezzo dì per una donna; <sup>12</sup>di poi per me in 2 serrature <sup>13</sup>insino a dì <sup>20</sup> d'agosto.

1460.

1493.

On the 1<sup>st</sup> day of November we settled accounts. Giulio had to pay 4 months; and Maestro Tommaso 9 months; Maestro Tommaso afterwards made 6 candlesticks, 10 days' work; Giulio some fire-tongs 15 days work. Then he worked for himself till the 27<sup>th</sup> May, and worked for me at a lever till the 18<sup>th</sup> July; then for himself till the 7<sup>th</sup> of August, and for one day, on the fifteenth, for a lady. Then again for me at 2 locks until the 20<sup>th</sup> of August.

II.1 41*a*]

<sup>¶</sup>A di 23 d'agosto lire 12 da Pulisona; <sup>¶</sup>a dì 14 di marzo 1494 <sup>3</sup>venie Galeazzo a stare con meco <sup>4</sup>cō patto di dare 5 lire il mese <sup>5</sup>per le sue spese, pagādo ogni 14 <sup>6</sup>dì de' mesi.

<sup>7</sup>Dettemi suo padre fiorini 2 di Reno;

<sup>8</sup>A di 14 di luglio ebbi da Galeazzo fiorini 2 di Reno.

1461.

On the 23<sup>rd</sup> day of August, 12 lire from Pulisona. On the 14<sup>th</sup> of March 1494, Galeazzo came to live with me, agreeing to pay 5 lire a month for his cost paying on the 14<sup>th</sup> day of each month.

His father gave me 2 Rhenish florins.

On the 14<sup>th</sup> of July, I had from Galeazzo 2 Rhenish florins.

II.3 57*a*]

A di 15 di <sup>2</sup>settēbre Giulio comīciò la serratura del mio <sup>6</sup>studiolo 14<sup>7</sup>94.

1462.

On the 15<sup>th</sup> day of September Giulio began the lock of my studio 1494.

Br. M. 271*b*]

Sabato mattina a dì 3 d'agosto 1504 venne Iacopo <sup>2</sup>tedesco a stare con meco in casa; convennese con meco che io li facessi le spese per uno carlino <sup>4</sup>il dì.

1463.

Saturday morning the 3<sup>rd</sup> of August 1504 Jacopo the German came to live with me in the house, and agreed with me that I should charge him a carlino a day.

1467. 1. |||||uco. 2. |||||iberdo. 5. gian petro.

1465. 2. *Giovan*; it is not likely that Leonardo should have called Giovan' Antonio Beltraffio at one time Giovanni, as in this note and another time Antonio, as in No. 1464 while in No. 1458 l. 16 we find *Giovani' Antonio*, and in No. 1436, l. 6 *Beltraffio*. Possibly the Giovanni here spoken of is Leonardo's less known pupil Giovan Pictrino (see No. 1467, 5).

2. 3. *Francesco de' Melzi* is often mentioned, see Nos. 1350.

3. *Salai*. See No. 1519 note. .

4. *Lorenzo*. See No. 1351, l. 10 (p. 408). Amoretti gives the following note in *Mem. Stor. XXIII*: 1505. Martedī—sera a dì 14 d'aprile. Venne Lorenzo a stare con mecho: disse essere d'età d'anni 17 . . a dì 15 del detto aprile ebbi scudi 25 d'oro dal chamerlingo di Santa Maria nuova. This, he asserts is derived from a MS. marked S, in quarto. This MS. seems to have vanished and left no trace behind; Amoretti himself had not seen it, but copied from a selection of

extracts made by Oltrocchi before the Leonardo MSS. were conveyed to Paris on the responsibility of the first French Republic. Lorenzo, by this, must have been born in 1487. The sculptor Lorenzetto was born in 1490. Amoretti has been led by the above passage to make the following absurd observations:

*Cotesto Lorenzo, che poi gli fu sempre compagno, almeno sin che stette in Italia, sarebb'egli Lorenzo Lotto bergamasco? Sappiamo essere stato questo valente dipintore uno d'ebravi scolari del Vinci?*

*Il Fāfoia*, perhaps a nickname. Cesare da Sesto, Leonardo's pupil, seems to have been in Rome in these years, as we learn from a drawing by him in the Louvre.

1466. This seems to be an account for two assistants. The name of the second is scarcely legible. The year is not given. The note is nevertheless of chronological value. The first line tells us the date when the note was registered, January 3<sup>d</sup>, and the

observations that follow refer to events of the previous month 'of last year' (*dell'anno passato*). Leonardo cannot therefore have written thus in Florence where the year was, at that period, calculated as beginning in the month of March (see Vol. I, No. 4, note 2). He must then have been in Milan. What is more important is that we thus learn how to date the beginning of the year in all the notes written at Milan. This clears up Uzielli's doubts: *A Milano facevasi cominciar l'anno ab incarnatione, cioè il 25 Marzo e a natività, cioè il 25 Decembre. Ci sembra probabile che Leonardo dovesse prescogliere lo stile che era in uso a Firenze.* (Ricerche, p. 84, note.)

1467. 5. See No. 1465, 2.

1469. The late Marchese Girolamo d'Adda published a highly valuable and interesting disquisition on this passage under the title: *Leonardo da Vinci e la sua Libreria, note di un bibliofilo* (Milano 1873. Ed. di soli 75 esemplari; privately printed). In the autumn of 1880 the Marchese d'Adda showed me a considerable mass of additional notes prepared for a second edition. This, as he then intended, was to come out after the publication of this work of mine. After the much regretted death of the elder Marchese, his son, the Marchese Gioachino d'Adda was so liberal as to place these MS. materials at my disposal for the present work, through the kind intervention of Signor Gustavo Frizzoni. The following passages, with the initials G. d'A. are prints from the valuable notes in that publication, the MS. additions I have marked\*. I did not however think myself justified in reproducing here the acute and interesting observations on the contents of most of the rare books here enumerated.

1. "La nobel opera de arithmetiche ne la qual se tracta tute cose amercantia pertinente facta & compilata per Piero borgi da Venesia", in-40. In fine: "Nela inclita citta di Venetia a giorni. 2 augusto. 1484. fu imposto fine alla presente opera." Segn. a-p. quaderni. V'ha per-

un'altra opera simile di Filippo Calandro, 1491. È da consultarsi su quest'ultimo, Federici: *Memorie Trevigiane, Fiore di virtù*: pag. 73. "Libricciuolo composto di bello stile verso il 1320 e più volte impresso nel secolo XV (ristampato poi anche più tardi). Gli accademici della Crusca lo ammettono nella serie dei testi di lingua. Vedasi Gamba, Razzo'lini, Panzer, Brunel, Lechi, ecc. (G. d'A.).

2. "Historia naturale di C. Plinio Secondo, tradotta di lingua latina in fiorentina per Christophoro Laudino & Opus Nicolai Jansonis gallici imp. anno salutis M. CCCC. LXXVI. Venetii" in-fol.—Diogene Laertio. Incomincia: "El libro de la vita de philosophi etc.: Impressum Venetiis per Bernardinum Celerium de Luere, 1480", in-40 (G. d'A.).

3. "La Bibbia volgare historiata (per Nicolò di Malermi) Venecia . . . M. CCCC. LXXI in kalende di Augusto (per Vindelino de Spirai)" 2 vol. in-fol. a 2 col. di 50 lin.; od altra ediz. della stessa versione del Malermi, Venetia 1471, e sempre: "Venecia per Gabriel de Piero 1477," in-fol.; 2 vol.; Ottavio Scotto da Modoetia 1481," "Venetia 1487 per Joan Rosso Vercellese," "1490 Giovanni Ragazzo di Monteferato a instantia di Luchanthonio di Giunta, ecc."—Lapidario Teofrasto? Mandebille: "Le grand lapidaire," versione italiana ms.? . . . Giorgio Agricola non può essere, perchè nato nel 1494, forse Alberto Magno: de mineralibus. \* Potrebbe essere una traduzione del poema latino (*Liber lapidum seu de gemmis*) di Marbordio Veterio di Rennes (morto nel 1123) da lui stesso tradotto in francese dal greco di Evaro rè d'Arabia celebre medico che l'aveva composto per l'imperatore Tiberio. Marbordio scrisse il suo prima per Filippo Augusto rè di Francia. Vi sono anche traduzioni in prosa. "Il lapidario o la forza e la virtù delle pietre preziose, delle Erbe e degli Animali." (G. d'A.)

4. Il Vegezio? . . . Il Frontino? . . . Il Cornazzano? . . . Noi crediamo piuttosto il Valturio. Questo libro doveva essere uno de' favoriti di Leonardo poichè libro di scienza e d'arte nel tempo stesso.

Le edizioni a stampa sono le seguenti: *La prima: Roberti Valturii de re militari, libri XII ad Sigismundum Pandulfum Malatestam . . . Johannes ex Verona oriundus: Nicolai cyrugiae medici filius: Artis impressorie magister: hunc de re militari librum elegantissimum; litteris, & figuratis signis sua in patria primus impressit. An. M. CCCCLXXII.*" in-fol. senza numerazione.

La seconda edizione è di Bologna, 1483, ristampata a Parigi nel 1532, e poi nuovamente nel 1533. Paolo Ramusio la volgeva in italiano e la pubblicava di nuovo in Verona coi tipi del Paganino, sempre in-fol., 1483 (le stampe di formato più piccolo), e Luigi Meigret la traduceva in lingua francese nel 1555 a Parigi.

"Mediolani per Leon. Pachel & Ulric. Scinzenzeler 1484" in-4°—.

5—7. Abbiamo varie versione delle Dcche di Tito Livio, impresse nel secolo XV. Il "Tito Livio volgarizzato (da Ruggiero Ferario) Roma Uldarico Gallo nel 1476," un tom. in 3 vol. in-fol. "Bologna per maestro Antonio da Bologna 1478," piccolo in-fol. "Venetia Octaviano Scoto 1481," pic. in-fol. Venetia Bartholomeo de Alexandria & Andrea de Asula 1485. Bartholomeo de Zanis, 1490, ecc." Vedasi il Manuel del Brunet o meglio il Repertorium dell'Hain ed il Panzer. (G. d'A.)

5. "Arnaldi de Villanova & Johannis Mediolanensis Regimen sanitatis Salernitanum, 1480," in-4° ovvero "Tractato utilissimo circa la conservatione de la sanitade, ecc. composto per il clarissimo ed excellente philosopho & doctore di medicina messer Ugo Benzo di Siena, ecc.", in-4°, caratteri gotici senza numeri e senza nome di tipografo. In fine: "Exactum est hoc opus Mli (Mediolani) cura & diligentia Petri de Corneno Mediolanensis, 1481. pridie kalendas Junias. Johanne Galeatio Sforcia Vicecomite principe nostro invictissimo dominante." V. Sassi Argelati. Parte I, vol. I, p. DLXV. (G. d'A.)

6. L'Acerba (da acervus, cumulo), il noto poema di Francesco Stabili, astrologo nemico dell'Alighieri. Numerose edizioni del secolo XV e XVI. È una vera encyclopedie in versi, ripiena di idee arditissime e che valsero all'infelice pensatore il rogo nel 1347. In questo poema trovansi delineate le origini di molti trovati moderni, ed in particolare della circolazione del sangue, due secoli prima del Michele Serveto. Della prima edizione di Brescia Ferrandus s. a. in-fol. non si conosce che un solo esemplare nella Spenceriana. V. Dibdin. (G. d'A.)

7. "Incomenza el libro chiamato della vita ecc., cōposto per Alberto magno filosofo excellentissimo ecc. Neapoli

Bernardini de gerardinis de Amelia, 1478," in-4°. Altra edizione di "Bologna per Basalino di Basaliero, 1493," in-4° got. (G. d'A.)

8. Forse "Guido dalle Colonne" detto anche "da Cauliaco." "Guidonis de Cauliaco Cyrurgia. Turra de Castello recepta atque balni de Porecta ecc. Venetius mandato & expensis Octaviani Scotti eura & arte Boneti Locatelli, 1498" in-fol. got.: rarissimo trattato di chirurgia. Ebbe traduzioni francesi parecchie e nel secolo XV anche una versione italiana s. l. n. a. ed un'altra in lingua castigliana nel 1498. Vedi: Brunet, Panzer, Ilain e Mendez. —L. Guil. de Saona rhetorica nova, S. Albano, in-4° 1480 (Laurentius Guilelmus). È libro d'più rari (Brunet, Tomo V, col. 137). S. Albans, Albani Villa, Verulanum, Borgo inglese nella contea di Hertfordshire, la patria di Bacone Francesco. (G. d'A.)

9. De agricultura. "Il libro della agricultura di Pietro Cresciētio," prima edizione di questa versione italiana scritta nel trecento e testo di lingua citato dall'Accademia della Crusca. "Florentie per me Nicholaum Laurentii alemanum diocesis uratislavensis anno M.CCCC.L.XXVIII." in-fol.—Cibdone: Le materie trattate in questo singolarissimo libretto sono: dei frutti, delle erbe, della flebotomia, della medicina, della luxuria, del bagno, ecc. Almansor-ebn-Isahck fu governatore del Chorassan ed al suo nome intitolava Raze i suoi dodici libri di medicina, che in compendio contengono tutto il sistema medico degli Arabi. Quest'ultima edizione in-4°. Brescia per d. Bapt. de Farsengo, si compone di sei carte s. n. 2. o seg. caratteri semigotici a 2 col. (G. d'A.)

10. Quadrirēgio (libro chiamato il) di Federigo Frezzi domenicano. È poema religioso-morale-scientifico in terzine. Fra gli imitatori della Divina Comedia è dei migliori "non indegno di gir dietro a Dante" dice il Quadrio. Questo poema è in oggi ingiustamente negletto e quasi sconosciuto, ancorchè in tempi da noi lontani fosse stato nobilmente stampato più volte. Ebbe almeno sette edizioni dal 1481 al 1515, e contiene bellezze di primo ordine. \*L'edizione che con molta probabilità era fra i libri di Leonardo riteniamo quello di Milano 1488 Zaroto. Un esemplare all'Ambrosiana fra i quattrocentisti donati da G. Porro; — forse più rara che molte altre.

"Fabulae de Esopo historiate," in-4° fig. senza nota di tempo e di luogo; o l'edizione di Venezia per Manfredo da Monferrato, in-4° fig. 1481 e 1490; od anche: "Brescia per Boninum de Boninis 1487," in-4° con 67 belle figure silografiche; "Roma, Silber 1483," Venetia Manfredo Bo-

<sup>11</sup> Donato,	Salmi,	Donato, [11]	Psalms,

<sup>22</sup> Spera,		Sphere, [22]	

nello da Streno, 1497, in-4°, ecc., o più probabilmente: "Aesopii vita & fabulae latine cum versione italica & allegoriam Ir. Tuppi impressae, Napoli, 1483," in-fol., rara edizione ornata di belle vignette incise in legno. Questo Esofo è anche libro di novelle. Nel Catalogo Cicagnara abbiamo una minuta descrizione di questo rarissimo volume. (G. d'A.)

11. "Donatus latine & italice: Impressum Venetiis imensis Johannis Baptista de Sessa anno 1499, in-4°." —

"El Psalterio de David in lingua volgare (da Malermi Venetia nel M.CCCC.LXXVI)," in-fol. s. n. (G. d'A.)

12. Compare No. 1210, 48.—La versione di Girolamo Squarzafico: "Il libro di Justino posto diligentemente in materna lingua. Venetia ale spesse (sic) di Johāne de Colonia & Johāne Gheretē... 1477," in-fol.—"Marsili Ficini, Theologia platonica, sive de animarum immortalitate, Florentine, per Ant. Misonimum 1482," in-fol., ovvero qualche versione italiana di questo stesso libro, ms. (G. d'A.)

13. Forse "la Historia Trojana Guidonis," od il "manipulus" di "Guido da Monterocherii," ma più probabilmente "Guido d'Arezzo," il di cui libro: "Micrologus, seu disciplina artis musicalis" poteva da Leonardo aversi ms.; di questi ne esistono in molte biblioteche, e fu poi impresso nel 1784 dal Gerbert.

Molte sono le edizione dei sonetti di Burchiello Fiorentino, impresse nel secolo XV. La prima e più rara e cercata: "Incominciano li sonetti, ecc. (per Christoforo Arnaldo)," in-4° senza numeri, richiami o segnature, del 1475, e fors' anche del 1472, secondo Morelli e Dibdin, ecc. (G. d'A.)

14. Versione italiana del "Doctrinal de Sapience" di Guy de Roy, e fors' anche l'originale in lingua francese.—

Di Pulci Luigi, benchè nell'edizione: "Florentiae 1479" in-4° si dica: "Il Driadeo composto in rima octava per Lucio Pulcro," Altre ediz. del secolo XV, "Florentie Miscomini 1481, in-4°, Firenze, apud S. Jacob. de Ripoli, 1483," in-4° e "Antoni de Francesco, 1487," in-4° e Francesco di Jacopo 1489," in-4° ed altre ancora di Venezia e senza alcuna nota ecc. (G. d'A.)

15. Una delle edizioni del Morgante impresso nel secolo XV, ecc.—

Quale delle opere di Francesco Petrarca, sarebbe malagevole l'indovinare, ma probabilmente il Canzoniere. (G. d'A.)

16. Sono i viaggi del cavaliere "Mandeville," gentiluomo inglese. Scrisse il suo libro in lingua francese. Fu stampato replicatamente nel secolo XV in francese, in inglese ed in italiano,\* ed in tedesco; del secolo XV ne annoverano forse più di 27 edizioni, di cui ne conosciamo 8 in francese, quattro in latino, sei in tedesco e molte altre in volgare. (G. d'A.)

17. Il Platina (Bartolomeo Sacchi) la versione italiana "de la honesta voluptate, & valetudine (& de li obsonni) Venetia (senza nome di tipografo) 1487," piccolo in-4° gotico. (G. d'A.)—Compare No. 844, 21.

18. Il Manganello: Satira eccessivamente vivace contro le donne ad imitazione della Sesta di Giovenale. Manganello non è soltanto il titolo del libricino, sua ben anche il nome dell'autore ch'era un "milanese". Di questo libricolo rarissimo, che sembra impresso a Venezia dallo Zoppino (Nicolò d'Aristotile detto il), senza data, ma dei primissimi anni del secolo XVI, e forse più antico, come vedremo in appresso, non se ne conoscono fra biblioteche pubbliche e private che due soli esemplari in Europa. (G. d'A.)

19. "Cronica desidero", sembra si deggia leggere piuttosto "cronico disidoro"; ed in questo caso s'intenderebbe la "cronica d'Isidoro" tanto in voga a quel tempo "Comenza la Cronica di Sancto Isidoro menore con alcunie additione cavate del testo & istorie de la Bibbia & del libro di Paulo Orosio . . . . Impreso in Ascoli in casa del reverendo misser Pascale . . . . per mano di Guglielmo de Linis de Alamanie M.CCCC.LXXVII" in-4° di 157 ff. È il primo libro impresso ad Ascoli e l'edizione principe di questa cronica in oggi assai rara. Non lo è meno l'edizione di Cividal del Friuli, 1480, e quella ben anche di Aquila, 1482, sempre in-4°. Vedasi Panzer, Hain, Brunet e P. Dechamps. (G. d'A.)

20. "Le pistole di Ovidio tradotte in prosa. Napoli Sixt. Riessinger," in-4°, oppure: "Epistole volgarizzate 1489," in-4° a due col. "impresse ne la citta (sic) di Bressa per pre: Baptista de Farfengo," (in ottave) o: "El libro delle Epistole di Ovidio in rima volgare per messere Dominico de Monticelli toscano. Brescia Farfengo," in-4° got. (in rima volgare), 1491, ed anche la versione di Luca Pulci. Firenze, Miscomini, 1481, in-4°. (G. d'A.)

21. See 1. 4.

22. "Jo: de Sacrobusto," o "Goro Dati," o "Tolosano da Collo" di cui molteplici edizioni del secolo XV. (G. d'A.)

23. Tre edizioni delle facezie del Poggio abbiamo in lingua italiana della fine del secolo XV, tutte senza data. "Facetie de Poggio fiorentino traducte de latino in vulgare ornatisimo," in-40, segn. a—e in caratteri romani; l'altra: "Facetie traducte de latino in vulgare," in-40, caratteri gotici, ecc. (G. d'A.)

24. \*“Die Kunst Cyromantia etc. in tedesco. 26 ff. di testo e figure il tutte eseguito sù tavole di legno verso la fine del secolo XV da Giorgio Schaff”. Dibdin, Heinecken, Sotheby e Chatto ne diedero una lunga descrizione; i primi tre accompagnati da fac-simili. La data 1448 che si legge alla fine del titolo si riferisce al periodo della composizione del testo, non a quello della stampa del volume benché tabellario. Altri molti libri di Chiromanzia si conoscono di quel tempo e sarebbe opera vana il citarli tutti. (G. d'A.)

25. Miniatore Bartolomeo. "Formulario de epistole vulgare missive e responsive, & altri florilegi de ornati parlamenzi al principe Hercule d'Este ecc. composto ecc. Bologna per Ugo di Rugerii;" in-40, del secolo XV. Altra edizione di "Venetia Bernardino di Novara, 1487" e "Milano per Joanne Angelo Scinzenzeler 1500," in-40. (G. d'A.)

Five books out of this list are noted by Leonardo in another MS. (Tr. 3): donato, — lapidario, — plinio, — abacho, — morgante.

1470. Nonius Marcellus and Sextus Pompeius Festus were Roman grammarians of about the fourth century A. D. Early publications of the works of Marcellus are: *De proprietate sermonis, Romae* (about 1470), and 1471 (place of publication unknown). *Compendiosa doctrina, ad filium, de proprietate sermonum*. Venice, 1476. BRUNET, *Manuel du libraire* (IV, p. 97) notes: *Le texte de cet ancien grammairien a été réimprimé plusieurs fois à la fin du XV<sup>e</sup> siècle, avec ceux de Pomponius Festus et de Terentius Varro. La plus ancienne édition qui réunisse ces trois auteurs est celle de Parme, 1480 . . . Celles de Venise, 1483, 1490, 1498, et de Milan, 1500, toutes in-fol., ont peu de valeur.*

1472. <sup>1</sup>. Compare No. 1113, 25.

2. Vitruvius de Arch., et Frontinus de Aqueductibus. Florence, 1513.—This is the earliest edition of Frontinus.—The note referring to this author thus suggests a solution of the problem of the date of the Leicester Manuscript.

1476. Where Leonardo found the statement that Cato had found and restored the tomb of Archimedes, I do not know. It is a merit that Cicero claims as his own (Tusc. V, 23) and certainly with a full right to it. None of Archimedes' biographers—not even the diligent Mazzucchelli, mentions any version in which Cato is named. It is evidently a

1474.

The Archimedes belonging to the Bishop of Padua.

1475.

Archimedes gave the quadrature of a polygonal figure, but not of the circle. Hence Archimedes never squared any figure with curved sides. He squared the circle minus the smallest portion that the intellect can conceive, that is the smallest point visible.

1476.

If any man could have discovered the utmost powers of the cannon, in all its various forms and have given such a secret to the Romans, with what rapidity would they have conquered every country and have vanquished every army, and what reward could have been great enough for such a service! Archimedes indeed, although he had greatly damaged the Romans in the siege of Syracuse, nevertheless did not fail of being offered great rewards from these very Romans; and when Syracuse was taken, diligent search was made for Archimedes; and he being found dead greater lamentation was made for him by the Senate and people of Rome than if they had lost all their army; and they did not fail to honour him with burial and with a statue. At their head was Marcus Marcellus. And after the second destruction of Syracuse, the sepulchre of Archimedes was found again by Cato [25], in the ruins of a temple. So Cato had the temple restored and the sepulchre he so highly honoured . . . Whence it is written that Cato said that he was not so proud of any thing he had done as of having paid such honour to Archimedes.

slip of the memory on Leonardo's part. Besides, according to the passage in Cicero, the grave was not found 'nelle ruine d'un tempio'—which is highly improbable as relating to a Greek—but in an open spot (H. MÜLLER-STRÜBING).—See too, as to Archimedes, No. 1417.

Leonardo says somewhere in MS. C.A.: *Architronito è una macchina di fino rame, invenzion d'Archimede* (see 'Saggio', p. 20).

CORNELIO CELSO.

<sup>2</sup> Il somo · bene · è la sapiēza ; il somo male · è il dolore · del corpo; jmperochè, essēdo <sup>3</sup>noi composti · di 2 cose, cioè · d'anima · e di corpo, <sup>4</sup>delle quali la prima · è migliore ·, la peggiore · è il corpo; la sapiēzia è <sup>5</sup>della miglior parte ·; il sommo male è della peggior parte e pessima; Ottima cosa è nell'animo la sapiēza, così è pessima <sup>6</sup>cosa nel corpo il dolore; <sup>7</sup>adunque, sicome il sommo male è 'l corporal dolore, così la sapiēzia è dell'animo <sup>8</sup>il somo bene, cioè dell'uomo sagio, e nissvna altra cosa è da cōparare a questa.

CORNELIUS CELSUS.

The highest good is wisdom, the chief evil is suffering in the body. Because, as we are composed of two things, that is soul and body, of which the first is the better, the body is the inferior; wisdom belongs to the better part, and the chief evil belongs to the worse part and is the worst of all. As the best thing of all in the soul is wisdom, so the worst in the body is suffering. Therefore just as bodily pain is the chief evil, wisdom is the chief good of the soul, that is with the wise man; and nothing else can be compared with it.

Tr. 57]

## 1487.

Demetrio solea dire non essere differētia · dalle parole e voci dell'iperiti igniorati, <sup>2</sup>che sia da suoni e strepiti · cavssati dal ventre ripieno di superfluo vēto; <sup>3</sup>e questo nō senza cagiō dicea, iperochè lui nō reputava esser differētia da qual parte <sup>4</sup>costoro mādassino · fuora la voce, o dalle parti iſeriori o dalla bocca, <sup>5</sup>che l'una e l'altra era di pari valimēto e sustātia.

Demetrius was wont to say that there was no difference between the speech and words of the foolish and ignorant, and the noises and rumblings of the wind in an inflated stomach. Nor did he say so without reason, for he saw no difference between the parts whence the noise issued; whether their lower parts or their mouth, since one and the other were of equal use and importance.

## 1498.

Ò ritrovato nele Storie delli Spagnioli  
· come · nelle guerre da loro <sup>2</sup>avute colli  
Inglezi fu Archimede Siracusano, il quale  
· in quel tēpo <sup>3</sup>dimmorava in cōpagnia di Ecli-  
derides, rē de' Cirodastri; Il quale nella  
<sup>4</sup>pugnia marittima ordinò · che i navili fus-  
sino con lunghi arborei, <sup>5</sup>e sopra le lor  
gaggie <sup>6</sup>collocò · vna · antennetta di lūghezza  
di 40 piē, e <sup>1/3</sup> <sup>7</sup>piē di grossezza; nel'  
una strenuità era vna ancora picciola, nel'  
al'atra · vn contrapeso; al' ancora era appic-  
cato 12 piedi <sup>9</sup>di catena · e dopo essa  
catena tāta corda <sup>10</sup>che perveniuva dalla  
catena al nascimēto della gaggia ch'era  
attaccata con una cordella; <sup>11</sup>da esso na-  
scimēto mādaua in basso ī sino al nascimēto  
dell'arbore, <sup>12</sup>dou'era collocato vn argano  
fortissimo, e li era fermo <sup>13</sup>il nascimēto  
d'essa corda; Ma per tornare all'usitio  
d'essa machina <sup>14</sup>dico che sotto a detta  
ācora era vno foco, il quale con sommo  
stre<sup>15</sup>pito gittava in basso i sua razzi e pi-  
oggia di pegola ifocata, li qua<sup>16</sup>li piovēdo  
sopra alla gaggia costrignievano li omni,  
che li erano, a <sup>17</sup>abbādonare detta gaggia,  
ōde calato l'ancora colle acut . . . . <sup>18</sup>quella  
cauava ai labri della gaggia; e subito era  
tagliata la corda posta <sup>19</sup>al nascimēto della  
gaggia a sostenere quella corda ch'ādava  
<sup>20</sup>dal'ācora al'argano, e tirādo il navilio . . .

I have found in a history of the Spaniards that in their wars with the English Archimedes of Syracuse who at that time was living at the court of Ecliderides, King of the Cirodastri. And in maritime warfare he ordered that the ships should have tall masts, and that on their tops there should be a spar fixed[6] of 40 feet long and one third of a foot thick. At one end of this was a small grappling iron and at the other a counterpoise; and there was also attached 12 feet of chain; and, at the end of this chain, as much rope as would reach from the chain to the base of the top, where it was fixed with a small rope; from this base it ran down to the bottom of the mast where a very strong spar was attached and to this was fastened the end of the rope. But to go on to the use of his machine; I say that below this grappling iron was a fire[14] which, with tremendous noise, threw down its rays and a shower of burning pitch; which, pouring down on the [enemy's] top, compelled the men who were in it to abandon the top to which the grappling-iron had clung. This was hooked on to the edges of the top and then suddenly the cord attached at the base of the top to support the cord which went from the grappling iron, was cut, giving way and drawing in the enemy's ship; and if the anchor—was cast . . .

L. 53 b]

Dice Vetruiuo che i modelli piccoli <sup>2</sup> non sono in nessuna operatione confor<sup>3</sup>mi all'effetto de' grandi; la qual co<sup>4</sup>sa qui disotto intendo dimostra<sup>5</sup>re tale conclusione · essere falsa, <sup>6</sup>e massimamente allegando quelli me<sup>7</sup>desimi termini, coi quali lui cō<sup>8</sup>clude tale · sententia, cioè colla <sup>9</sup>sperimentia · della triuella, per la qua le <sup>10</sup>lui mostra essere fatto dalla po<sup>11</sup>tentia dell'omo uno buso di cier-<sup>12</sup>ta quantità di diametro, e che poi <sup>13</sup>vn buso di dupplicato diametro nō <sup>14</sup>sarà fatto da dupplicata potentia <sup>15</sup>di detto uomo, ma da molto piv; all<sup>16</sup>a qual cosa si può molto ben rispo<sup>17</sup>dere, allegando che il trivello

## 1502.

Vitruius says that small models are of no avail for ascertaining the effects of large ones; and I here propose to prove that this conclusion is a false one. And chiefly by bringing forward the very same argument which led him to this conclusion; that is, by an experiment with an auger. For he proves that if a man, by a certain exertion of strength, makes a hole of a given diameter, and afterwards another hole of double the diameter, this cannot be made with only double the exertion of the man's strength, but needs much more. To this it may very well be answered that an auger

L. 53 a]

di dupplicata figura non può <sup>2</sup>essere mosso da dupplicata po<sup>3</sup>tentia, conciosiachè la superficie <sup>4</sup>d'ogni corpo di figura simile è di dup<sup>5</sup>plicata quantità alla superficie, di <sup>6</sup>quadruplicata qualità l'una <sup>7</sup>all'altra, come mostrano le due <sup>8</sup>figure · a · e · n.

## 1503.

of double the diameter cannot be moved by double the exertion, because the superficies of a body of the same form but twice as large has four times the extent of the superficies of the smaller, as is shown in the two figures *a* and *n*.

1506. (*Witelo*, *Vitellion*, *Vitellion*) Vitellione. È da vedersi su questo ottico prospettico del secolo XIII Luca Pacioli, Paolo Lomazzo, Leonardo da Vinci, ecc. e fra i moderni il Graesse, il Libri, il Brunet, e le Memorie pubblicate dal principe Boncompagni, e 'Sur l'orthographie du nom et sur la patrie de Witelo (Vitellion)' note de Maximilien Curtze, professore à Thorn', ove sono descritti i molti codici esistenti nelle biblioteche d'Europa. Bernardino Baldi nelle sue 'Vite de' matematici', manoscritto presso il principe Boncompagni, ha una biografia del Vitellione. Questo scritto del Baldi reca la data 25 agosto 1588. Discorsero poi di lui Federigo Risnerio e Giovanni di Montegio nella prefazione dell'*Altagrano*, Giovanni Botzone, Girolamo Cardano, 'De subtilitate', che nota gli errori di Vitellione. Visse, secondo il Baldi, intorno all'anno 1269, ma secondo il Reinoldo fioriva nel 1299, avendo dedicata la sua opera ad un frate Guglielmo di Monteca, che visse di que' tempi.

Intorno ad un manoscritto dell'ottica di Vitellione, citato da Luca Pacioli v'ha un secondo esemplare del Kurtz,

1504.

OF SQUARING THE CIRCLE, AND WHO IT WAS THAT FIRST DISCOVERED IT BY ACCIDENT.

Vitruvius, measuring miles by means of the repeated revolutions of the wheels which move vehicles, extended over many Stadia the lines of the circumferences of the circles of these wheels. He became aware of them by the animals that moved the vehicles. But he did not discern that this was a means of finding a square equal to a circle. This was first done by Archimedes of Syracuse, who by multiplying the second diameter of a circle by half its circumference produced a rectangular quadrilateral equal figure to the circle[10].

1505.

Virgil says that a blank shield is devoid of merit because among the people of Athens the true recognition confirmed by testimonies . . .

1506.

In Vitolone there are 805 conclusions [problems] in perspective.

1519. This note, of about the year 1494, is the earliest mention of Salai, and the last is of the year 1513 (see No. 1465, 3). From the various notes in the MSS. he seems to have been Leonardo's assistant and keeper only, and scarcely himself a painter. At any rate no signed or otherwise authenticated picture by him is known to exist. Vasari speaks somewhat doubtfully on this point.

1520. This note enables us to fix the date of the Manuscript, in which it is to be found. In 1495 the 4th of September fell on a Friday; the contents of the Manuscript do not permit us to assign it to a much earlier or later date (Compare No. 1522, and Note).

1522. See Nos. 1384 and 1517.

Br. M. 229<sup>b</sup>]

Ricordo come a dì 8 d'aprile 1503 io Leonardo da Vinci prestai a Vante miniatore ducati 4 d'oro in oro; portògli Salai e li dette in sua propria <sup>3</sup> mano; disse rendermille infra lo spatio di 40 giorni;

<sup>4</sup> Ricordo come nel sopradetto giorno io rēdei a Salai ducati 3 d'oro, i quali <sup>5</sup> disse volersene fare vn paio di calze rossate co' sua fornimenti, e li restai a dare <sup>6</sup> ducati 9 ·, posto che lui ne de' dare a me ducati 20, cioè 17 prestai li a Milano e 3 a Venezia;

<sup>7</sup> Ricordo come io diedi a Salai braccia 21 di tela da fare camicie, a S. 10 il braccio, <sup>8</sup> le quali li diedi a dì 20 d'aprile 1503.

## 1525.

Memorandum. That on the 8<sup>th</sup> day of April 1503, I, Leonardo da Vinci, lent to Vante, miniature painter 4 gold ducats, in gold. Salai carried them to him and gave them into his own hand, and he said he would repay within the space of 40 days.

Memorandum. That on the same day I paid to Salai 3 gold ducats which he said he wanted for a pair of rose-coloured hose with their trimming; and there remain 9 ducats due to him—excepting that he owes me 20 ducats, that is 17 I lent him at Milan, and 3 at Venice.

Memorandum. That I gave Salai 21 braccia of cloth to make a shirt, at 10 soldi the braccio, which I gave him on the 20<sup>th</sup> day of April 1503.

C. A. 70<sup>b</sup>; 208<sup>b</sup>]

La mattina di Sco Pietro a dì 29 di giugno 1504 <sup>2</sup> tolsi ducati 10, de' quali ne diedi uno a Tomaso, mio <sup>3</sup> famiglio, per spēdere;

## 1526.

On the morning of San Peter's day, June 29<sup>th</sup>, 1504, I took 10 ducats, of which I gave one to Tommaso my servant to spend.

1525. With regard to Vante or Attavante, the miniature painter (not Nanni as I formerly deciphered this name, which is difficult to read; see *Zeitschrift für Bild. Kunst*, 1879, p. 155), and Vasari, Lives of Frate Giovanni da Fiesole, of Bartolommeo della Gatta, and of Gherardo, *miniatore*. He, like Leonardo, was

one of the committee of artists who, in 1503, considered the erection and placing of Michel Angelo's David. The date of his death is not known; he was of the same age as Leonardo. Further details will be found in 'Notizie di Attavante miniatore, e di alcuni suoi lavori' (Milanese's ed. of Vasari, III, 231—235).

<sup>4</sup>lunedì mattina fiorino uno a Salai per spendere in casa,

1527. Written from left to right. 3. anne dato [addi] venerdi . . coe. 4. m||||| dato ame fri doro addi 12 d'agosto. 5. an||||| to addi . . 3(?) atto maso. 6. addi . . assalai. 8. isspendere coe. 9. addi. 10. attomaso indomenicha.

1527. In the original, the passage given as No. 1463 is written between lines 2 and 3 of this text, and it is possible that the entries in lines 3 and 4 refer to the payments of Jacopo Tedesco, who is there mentioned. The first words of these lines are very illegible.

7. Al fattore. Il Fattore, was, as is well known,

the nick-name of Giovanni Francesco Penni, born in Florence in 1486, and subsequently a pupil of Raphael's. According to Vasari he was known by it even as a boy. Whether he is spoken of in this passage, or whether the word Fattore should be translated literally, I will not undertake to decide. The latter seems to me more probably right.

F. o<sup>o</sup>]

A dì d'ottobre 1508 ebbi scudi 30;  
<sup>2</sup> 13 ne prestai a Salai per cōpiere la dota  
 alla <sup>3</sup>sorella, e 17 ne restò a me.

## 1528.

On the day of October, 1508, I had  
 30 scudi; 13 I lent to Salai to make up his  
 sister's dowry, and 17 I have left.

C. A. 189a; 565a]

Ricordo de' danari che io ho avuto dal  
 rē per mia prouisione dal luglio 1508 insino  
<sup>2</sup> aprile prossimo 1509: prima scudi 100,  
 poi 70, e poi 50, e poi 320, e poi 200  
 fiorini a 48 S. per l'uno.

## 1529.

Memorandum of the money I have had  
 from the King as my salary from July 1508  
 till April next 1509. First 100 scudi, then  
 70, then 50, then 20 and then 200 florins at  
 48 soldi the florin.

C. A. 76a; 223a]

Sabato a dì 2 di marzo <sup>2</sup>ebbi da Scā  
 Maria Nova <sup>3</sup>ducati 5 d'oro, restò <sup>4</sup>ve ne  
 450, de' quali 2 ne <sup>5</sup>detti il medesimo dì  
 a Salai, <sup>6</sup>che me li avea prestati.

## 1530.

Saturday the 2<sup>nd</sup> day of March I had from  
 Santa Maria Novella 5 gold ducats, leaving  
 450. Of these I gave 2 the same day to  
 Salai, who had lent them to me.

lasschiuma.

1546. The meaning of this document, which is very difficult to decipher, and is written in unintelligible Latin, is, that Leonardo di Mansuetis recommends the Rev. Mair of Nusdorf, chaplain at Vienna, to some third person; and says also that something, which had to be proved, has been proved. The rest of the passages on the same leaf are undoubtedly

in Leonardo's hand. (Nos. 483, 661, 519, 578, 392, 582, 887 and 894.)

1547. From the last sentence we may infer that this text is by the hand of a pupil of Leonardo's.—On the same sheet are the notes Nos. 1175 and 715 in Leonardo's own handwriting.

## 1560.

Melzi. I have not succeeded in deciphering completely the 13 lines of this text. Amoretti reads at the beginning *Canonica di Vaprio*, but *Vaprio* seems to me a very doubtful reading.

1560. These three epigrams on the portrait of Lucrezia Crivelli, a picture by Leonardo which must have been lost at a very early date, seem to have been dedicated to Leonardo by the poet. Leonardo used the reverse of the sheet for notes on geometry.

Hujus quam cernis nomen Lucretia, Divi  
 Omnia cui larga contribuere manu.  
 Rara huic forma data est; pinxit Leonardus, amavit  
 Maurus, pictorum primus hic, ille ducum.

Naturam, ac superas hac laesit imagine Divas  
 Pictor: tantum hominis posse manum haec doluit,  
 Illae longa dari tam magnae tempora formae,  
 Quae spatio fuerat deperitura brevi.

1561. 1. informatione, 2. des cheuaux a(?), 3. de l'escuyeres(?). 5. peintre(?) du Roi P. 6. Amboise Amboise. 7. Amboise Amboise.

1563. 1. a m "r o" Lio ardo dihavere p'sto la nolo stato.

1564. 1. vra ELL"tia". 2. Manini [porte] conduse . . . som 1. 3. cristallo inporse (?) altre.

1561. 1. *Liber magistri Egidii de pulsibus matrice compositus (cum commentario Gentilis de Fulgineo)* published in 1484 at Padova, in 1494 and in 1514 at Venice, and in 1505 at Lyons.

2. This text appears to be in a handwriting different from that in the note, l. 1. Here the reading is not so simple as AMORETTI gave it, *Mem. Stor. XXXV: A Monsieur Lyonard Peintre du Roy pour Amboise*. He says too that this address is of the year 1509, and Mr. Ravaïsson remarks: "De cette suscription il semble qu'on peut inférer que Léonard était alors en France, à la cour de Louis XII . . . Pour conclure je crois qu'il n'est pas prouvé que Léonard de Vinci n'aît pas fait un voyage de quelques mois en France sous Louis XII, entre le printemps de 1509 et l'automne de 1510."—I must

confess that I myself have not succeeded in deciphering completely this French writing of which two words remain to me doubtful. But so much seems to be quite evident that this is not an address of a letter at all, but a certificate or note. *Amboise*[l. 6] I believe to be the signature of Charles d'Amboise the Governor of Milan. If this explanation is the right one, it can be easily explained by the contents of Nos. 1350 and 1529. The note, line 1, was perhaps added later by another hand; and Leonardo himself wrote afterwards on the same sheet some geometrical explanations. I must also point out that the statement that this sheet belongs to the year 1509 has absolutely no foundation in fact. There is no clue whatever for giving a precise date to this note.

Bibl. Melzi]

Sia manifesto ad ciaschaduna persona  
 Leonardo's Will. presente et aduenere, che nella corte del Re nostro signore in Amboysia avanti de noy personalmente constituito messer Leonardo de Vince pictore del Re, al presente comorante nello locho dicto du Cloux appresso de Amboysia, el qual considerando la certezza dela morte e l'incertezza del hora di quella, ha cognosciuto et confessato nela dicta corte nanzi de noy nela quale s'è somesso e somette circa ciò havere facto et ordinato per tenore dela presente il suo testamento et ordinanza de ultima volontà nel modo qual se seguita. Primeramente el racomanda l'anima sua ad nostro Signore Messer Domine Dio, alla gloriosa Virgine Maria, a Monsignore Sancto Michele, e a tutti li beati Angeli Santi e Sante del Paradiso.

Item el dicto Testatore vole essere sepelito drento la giesia de sancto Florentino de Amboysia et suo corpo essere portato li per li capellani di quella.

Item che il suo corpo sia accompagnato dal dicto locho fin nela dicta giesia de sancto Florentino per il collegio de dicta giesia cioè dal Rectore et Priore, o vero dali Vicarii soy et Capellani della giesia di sancto Dionisio d'Amboysia, etiam li Fratri Minori del dicto locho, et avante de essere portato il suo corpo nela dicta chiesia, esso Testatore, vole siano celebrate ne la dicta chiesia di sancto Florentino tre grandi messe con diacono et sottodiacono, et il dì che se diranno dicte tre grandi messe che se dicano anchora trenta messe basse de Sancto Gregorio.

Item nella dicta chiesia de Sancto Dionisio simil servitio sia celebrato come di sopra.

Item nella chiesia de dicti Fratri et religiosi minori simile servitio.

Item el prefato Testatore dona et concede ad Messer Francesco da Melzo, Gentilomo da Milano, per remunerazione de' servitii ad epso grati a lui facti per il pas-

1566.

Be it known to all persons, present and to come that at the court of our Lord the King at Amboise before ourselves in person, Messer Leonardo da Vinci painter to the King, at present staying at the place known as Cloux near Amboise, duly considering the certainty of death and the uncertainty of its time, has acknowledged and declared in the said court and before us that he has made, according to the tenor of these presents, his testament and the declaration of his last will, as follows. And first he commends his soul to our Lord, Almighty God, and to the Glorious Virgin Mary, and to our lord Saint Michael, to all the blessed Angels and Saints male and female in Paradise.

Item. The said Testator desires to be buried within the church of Saint Florentin at Amboise, and that his body shall be borne thither by the chaplains of the church.

Item. That his body may be followed from the said place to the said church of Saint Florentin by the *collegium* of the said church, that is to say by the rector and the prior, or by their vicars and chaplains of the church of Saint Denis of Amboise, also the lesser friars of the place, and before his body shall be carried to the said church this Testator desires, that in the said church of Saint Florentin three grand masses shall be celebrated by the deacon and sub-deacon and that on the day when these three high masses are celebrated, thirty low masses shall also be performed at Saint Gregoire.

Item. That in the said church of Saint Denis similar services shall be performed, as above.

Item. That the same shall be done in the church of the said friars and lesser brethren.

Item. The aforesaid Testator gives and bequeaths to Messer Francesco da Melzo, nobleman, of Milan, in remuneration for services and favours done to him in the past, each

1565. 1. XVI<sup>o</sup> "60" de Ciuitate Dei. 2. esse.

1565. A facsimile of this note, which refers to a well known book by St. Augustin, is given on page 254.

sato, tutti et ciaschaduno li libri, che il dicto Testatore ha de presente et altri Instrumenti et Portracti circa l'arte sua et industria de Pictori.

Item epso Testatore dona et concede a sempre mai perpetuamente a Battista de Vilanis suo servitore la metà zoè medietà de uno iardino, che ha fora a le mura de Milano et l'altra metà de epso iardino ad Salay suo servitore nel qual iardino il prefato Salay ha edificata et constructa una casa, la qual sarà e resterà similmente a sempremai perpetudine al dicto Salai, suoi heredi et successori, et ciò in remuneratione di boni et grati servitii, che dicti de Vilanis et Salay dicti suoi servitorii lui han fatto de qui inanzi.

Item epso Testatore dona a Maturina sua fantescha una veste de bon pan negro foderata de pelle, una socha de panno et doy ducati per una volta solamente pagati: et ciò in remuneratione similmente de boni servitii a lui facti epsa Maturina de qui inanzi.

Item vole che ale sue exequie siano sexanta torchie, le quali seranno portate per sexanta poveri, ali quali seranno dati danari per portarle a discretione del dicto Melzo le quali torzi seranno divise nelle quattro chiesie sopradicte.

Item el dicto Testatore dona ad ciascheduna de dicte chiesie sopradicte diece libre cera in candele grosse che saranno messe nelle dicte chiesie per servire al di che se celebreranno dicti servitii.

Item che sia dato ali poveri del ospedale di Dio alli poveri de Sancto Lazaro de Amboysia, e per ciò fare sia dato et pagato alli Tesorieri d'epsa confraternità la summa et quantità de soysante dece soldi tornesi.

Item epso Testatore dona et concede al dicto Messer Francesco Melce presente et acceptante il resto della sua pensione et summa de' danari qual a lui sono debiti del passato fino al di della sua morte per il recevoir, ovvero, Tesaurario general M. Johan Sapin, et tutte et ciaschaduna summe de' danari che ha receputo dal p.<sup>o</sup> Sapin de la dicta sua pensione, e in caxo chel decede inanzi al prefato Melzo, e non altamente li quali danari sono al presente nella possessione del dicto Testatore nel dicto loco de Cloux como el dice. Et similmente el dona et concede al dicto de Melze tucti et ciaschaduni suoi vestimenti quali ha al presente ne lo dicto loco de Cloux tam per remuneratione de boni et

and all of the books the Testator is at present possessed of, and the instruments and portraits appertaining to his art and calling as a painter.

Item, The same Testator gives and bequeaths henceforth for ever to Battista de Vilanis his servant one half, that is the moiety, of his garden which is outside the walls of Milan, and the other half of the same garden to Salai his servant; in which garden aforesaid Salai has built and constructed a house which shall be and remain henceforth in all perpetuity the property of the said Salai, his heirs and successors; and this is in remuneration for the good and kind services which the said de Vilanis and Salai, his servants have done him in past times until now.

Item. The said Testator gives to Maturina his waiting woman a cloak of good black cloth lined with fur, a . . . . . of cloth and two ducats paid once only; and this likewise is in remuneration for good service rendered to him in past times by the said Maturina.

Item. He desires that at his funeral sixty tapers shall be carried which shall be borne by sixty poor men, to whom shall be given money for carrying them; at the discretion of the said Melzo, and these tapers shall be distributed among the four above mentioned churches.

Item. The said Testator gives to each of the said churches ten lbs. of wax in thick tapers, which shall be placed in the said churches to be used on the day when those said services are celebrated.

Item. That alms shall be given to the poor of the Hotel-Dieu, to the poor of Saint Lazare d'Amboise and, to that end, there shall be given and paid to the treasurers of that same fraternity the sum and amount of seventy soldi of Tours.

Item. The said Testator gives and bequeaths to the said Messer Francesco Melzo, being present and agreeing, the remainder of his pension and the sums of money which are owing to him from the past time till the day of his death by the receiver or treasurer-general M. Johan Sapin, and each and every sum of money that he has already received from the aforesaid Sapin of his said pension, and in case he should die before the said Melzo and not otherwise; which moneys are at present in the possession of the said Testator in the said place called Cloux, as he says. And he likewise gives and bequeaths to the said Melzo all and each of his clothes which he at present possesses at the said place of Cloux, and all in

grati servitii, a lui facti da qui inanzi, che per li suoi salarii vacationi et fatiche chel potrà avere circa la executione del presente Testamento, il tutto però ale spese del dicto Testatore.

Ordina et vole, che la summa de quattrocento scudi del sole che ha in deposito in man del Camarlingo de Sancta Maria de Nova nela città de Fiorenza, siano dati ali soy fratelli carnali residenti in Fiorenza con el profitto et emolumento che ne po essere debito fino al presente da prefati Camarlinghi al prefato Testatore per casone de dicti scudi quattrocento da poi el dì che furono per el prefato Testatore dati et consignati alli dicti Camarlinghi.

Item vole et ordina dicto Testatore che dicto Messer Francisco de Melzo sia et remana solo et in sol per il tutto executore del Testamento del prefato Testatore, et che questo dicto Testamento sortisca suo pleno et integro effecto, et circa ciò che è narrato et decto havere tenere guardare et observare epso Messer Leonardo de Vince Testatore constituto ha obbligato et obbliga per le presente epsi soy heredi et successori con ogni soy beni mobili et immobili presenti et advenire et ha renunciato et renuncia per la presente expressamente ad tucte et ciaschaduna le cose ad ciò contrarie. Datum nelo dicto loco de Cloux ne la presencia de magistro Spirito Fleri Vicario nela chiesia de Sancto Dionisio de Amboysia, M. Guglielmo Croysant prete et capellani, magistro Cipriane Fulchin, Fratre Francesco de Corton et Francesco da Milano religioso del convento de fratri minori de Amboysia, testimonii ad ciò ciamati et vocati ad tenire per il iudicio de la dicta Corte in presentia del prefato M. Francesco de Melze acceptante et consentiente il quale ha promesso per fede et sacramento del corpo suo per lui dati corporalmente ne le mane nostre di non mai fare venire, dire, ne andare in contrario. Et sigillato a sua requesta dal sigillo regale statuito a li contracti legali d'Amboysia, et in segno de verita.

Dat a dì XXIII de Aprile MDXVIII  
avanti la Pasqua.

Et a dì XXIII d'epso mese de Aprile MDXVIII ne la presentia di M. Guglielmo Borian notario regio ne la corte de Baliagio d'Amboysia il prefato M. Leonardo de Vince ha donato et concesso per il suo testamento et ordinanza de ultima voluntà supradicta al dicto M. Baptista de Vilanis presente et acceptante il dritto de laqua

remuneration for the good and kind services done by him in past times till now, as well as in payment for the trouble and annoyance he may incur with regard to the execution of this present testament, which however, shall all be at the expense of the said Testator.

And he orders and desires that the sum of four hundred scudi del Sole, which he has deposited in the hands of the treasurer of Santa Maria Nuova in the city of Florence, may be given to his brothers now living in Florence with all the interest and usufruct that may have accrued up to the present time, and be due from the aforesaid treasurer to the aforesaid Testator on account of the said four hundred crowns, since they were given and consigned by the Testator to the said treasurers.

Item. He desires and orders that the said Messer Francesco de Melzo shall be and remain the sole and only executor of the said will of the said Testator; and that the said testament shall be executed in its full and complete meaning and according to that which is here narrated and said, to have, hold, keep and observe, the said Messer Leonardo da Vinci, constituted Testator, has obliged and obliges by these presents the said his heirs and successors with all his goods moveable and immoveable present and to come, and has renounced and expressly renounces by these presents all and each of the things which to that are contrary. Given at the said place of Cloux in the presence of Magister Spirito Fleri vicar, of the church of Saint Denis at Amboise, of M. Guglielmo Croysant priest and chaplain, of Magister Cipriane Fulchin, Brother Francesco de Corton, and of Francesco da Milano, a brother of the Convent of the Minorites at Amboise, witnesses summoned and required to that end by the indictment of the said court in the presence of the aforesaid M. Francesco de Melze who accepting and agreeing to the same has promised by his faith and his oath which he has administered to us personally and has sworn to us never to do nor say nor act in any way to the contrary. And it is sealed by his request with the royal seal apposed to legal contracts at Amboise, and in token of good faith.

Given on the XXIII<sup>rd</sup> day of April MDXVIII, before Easter.

And on the XXIII<sup>rd</sup> day of this month of April MDXVIII, in the presence of M. Guglielmo Borian, Royal notary in the court of the bailiwick of Amboise, the aforesaid M. Leonardo de Vinci gave and bequeathed, by his last will and testament, as aforesaid, to the said M. Baptista de Vilanis, being present and agreeing, the right of water which

che qdam bone memorie Re Ludovico XII ultimo defuncto ha alias dato a epso de Vince suxo il fiume del naviglio di Sancto Cristoforo ne lo Ducato de Milano per gauderlo per epso De Vilanis a sempre mai in tal modo et forma che dicto Signore ne ha facto dono in presentia di M. Francesco da Melzo Gentilhomo de Milano et io.

Et a dì prefato nel dicto mese de Aprile ne lo dicto anno MDXVIII epso M. Leonardo de Vinci per il suo testamento et ordinanza de ultima volunta sopradecta ha donato al prefato M. Baptista de Vilanis presente et acceptante tutti et ciaschaduni mobili et utensili de caxa soy de presente ne lo dicto loco du Cloux, in caxo però che el dicto de Vilanis surviva al prefato M. Leonardo de Vince, in presentia del prefato M. Francesco da Melzo et io Notario etc. Borean.

the King Louis XII, of pious memory lately deceased gave to this same de Vinci, the stream of the canal of Santo Cristoforo in the duchy of Milan, to belong to the said Vilanis for ever in such wise and manner that the said gentleman made him this gift in the presence of M. Francesco da Melzo, gentleman, of Milan and in mine.

And on the aforesaid day in the said month of April in the said year MDXVIII the same M. Leonardo de Vinci by his last will and testament gave to the aforesaid M. Baptista de Vilanis, being present and agreeing, each and all of the articles of furniture and utensils of his house at present at the said place of Cloux, in the event of the said de Vilanis surviving the aforesaid M. Leonardo de Vinci, in the presence of the said M. Francesco Melzo and of me Notary &c. Borean.

## APPENDIX

### I.

#### THE HISTORY OF THE MANUSCRIPTS.

1. Leonardo by his will expressly devised all his MSS. and drawings to his younger friend Francesco Melzi, who carried them back to Milan. Four years after Leonardo's death Alberto Bendedeò wrote from Milan to Alfonso d'Este, Duke of Ferrara: "Et perchè ho fatto mentione de la casa dc Melzi, aviso a V. Ex. che un fratello di questo che ha giostrato fu creato de Lionardo da Vinci, et herede et ha molti d' suoi secreti, et tutte le sue opinioni . . . Credo ch'egli habbia quelli libriccini de Lionardo de la Notomia, et de molte altre belle cose." See G. Camponi, *Nuovi Documenti*.

When Vasari visited Milan—probably in 1566—he saw Leonardo's MSS. in Francesco Melzi's possession, and wrote as follows: *Lionardo . . . di brutti caratteri scrisse lettere, che sono fatte con la mano mancina a rovescio; e chi non ha pratica a leggere, non l'intende, perchè non si leggono se non con lo specchio. Di queste carte della notomia degli uomini n'è gran parte nelle mani di messer Francesco da Melzo gentiluomo milanese, che nel tempo di Lionardo era bellissimo fanciullo e molto amato da lui, così come oggi è bello e gentile vecchio, che le ha care e tiene come per reliquie tal carte, insieme con il ritratto della felice memoria di Lionardo: e chi legge quegli scritti, par impossibile che quel divino spirito abbi così ben ragionato dell'arte e de' muscoli e nervi e vene, e con tanta diligenza d'ogni cosa. Come anche sono nelle mani di . . . , pittor milanese, alcuni scritti di Lionardo, pur di caratteri scritti con la mancina a rovescio, che trattano della pittura e de' modi del disegno e*

*colorire. Costui non è molto che venne a Fiorenza a vedermi, desiderando stampar questa opera, e la condusse a Roma per dargli esito; nè so poi che di ciò sia seguito.* (Ed. Sansoni, IV. 37).

In another place Vasari mentions that he himself possessed some drawings by Leonardo.

Lomazzo, the Milanese painter, writes, in 1590 (*Idea del Tempio della pittura*, 2<sup>nd</sup> Ed., p. 15):

*Ma sopra a tutti questi scrittori è degno di memoria Lionardo Vinci, il qual insegnò l'Anatomia dei corpi umani, e dei cavalli, ch'io ho veduta appresso a Francesco Melzi, designata divinamente di sua mano. Dimostrò anco in figura tutte le proporzioni dei membri del corpo umano; scrisse della prospettiva dei lumi, del modo di tirare le figure maggior del naturale, e molti altri libri . . . Ma di tante cose niuna se ne ritrova in stampa; ma solamente di mano di lui, che in buona parte sono pervenute nelle mani di Pompeo Leoni, statovaro del Cattolico Rè di Spagna, che gli ebbe dal figliuolo di Francesco Melzi, e n'è venuto di questi libri ancora nelle mani del Sig. Guido Mazenta, Dottore virtuosissimo, il quale gli tiene molto cari.*

2. In the short anonymous biography of Leonardo which, as it seems to me, must have been written somewhat earlier than Vasari's *Vite* (published by Milanesi, *Arch. Stor. Ital.* XVI) the MSS. are mentioned in these terms: (*Lionardo*) tornossene a Milano et dipoi in Francia al servizio del rè Francesco, dove portò assai de' sua disegni, dc quali ancora nc lasciò in Firenze nello Spedale di S. Maria Nuova con altre mas-

*serzie et la maggior parte del cartone della sala del Consiglio, del quale è il disegno del gruppo d' cavalli che oggi in opera si vede rimaso in Palazzo . . . et lasciò per testamento a messer Francesco da Melzio, gentile hom milanese, tutti i danari contanti, panni, libri, scritture, disegni e instrumenti et ritratti circa la pittura et arte et industria sua che quivi si trovava, et fecelo esecutore del suo testamento.*

These references to them, which are the oldest known, may be supplemented by some information which I owe to the kindness of Signor Enrico Stevenson, Scrittore in the Library of the Vatican. MS. 71 Boncompagni (previously Albani 511), XVI<sup>th</sup> century, contains the catalogue of MSS. belonging to 'Sangallo'. In this catalogue a MS. volume, Tome XXXIX, is thus described: *Ope-nione di Leonardo da Vinci nel dipigniere prospettive, ombre, lontananze, altezze, bassezze d' appresso o da lontano, et altro.*

It seems therefore doubtful whether after the death of Francesco Melzi, about 1570, the Melzi family still possessed Leonardo's literary bequest intact, or at any rate, were the sole possessors of it. We have fuller information at the beginning of the XVII<sup>th</sup> century, for Leonardo's MSS. had by that time become famous and were sought after as relics and curiosities. Guido Mazenta, who is mentioned by Lomazzo as possessing MSS. by Leonardo, was the brother of the author of an interesting memoir entitled: *Alcune memorie de' fatti da Leonardo da Vinci a Milano e de' suoi libri del P. D. Gio. Amb<sup>o</sup> Mazzenta, Milanese, Cherico Reg<sup>e</sup> minore di S. Paolo a' trim<sup>ti</sup> detti Barnabiti.*<sup>1</sup> An exact translation of this into French has been given by M. Eugène Piot in the Cabinet de l'Amateur (1863, p. 61—63). I quote from it the following passage relating to the history of the MSS.

*A la mort de Melzi . . . les manuscrits restèrent dans sa villa de Vaprio, où ses héritiers, qui avaient des goûts et des occupations bien différents,*

<sup>1</sup> The Italian MS. by Mazenta was until 1882 in the possession of the firm of booksellers A. Firmin-Didot, of Paris; but I was constantly forbidden to examine its contents. It has lately passed into the possession of an antiquary in Paris. The following interesting passage is again taken from M. Piot's translation, which adequately takes the place of the original: *Ses observations s'étendent même jusqu'aux choses historiques; il y met sous nos yeux les antiques cataractes dont les Ptolomées se servaient en Egypte pour répartir et distribuer les eaux bienfaisantes du Nil; les belles inventions relatives à la navigation de la mer de Nicomédie, au moyen des lacs et des fleuves, dont il est question dans les lettres de Trajan et de Pliné; mais je crois que ce curieux génie prenait plaisir à déguiser sous ces noms ceux de Milan et de Nuovocomo (?).*

négligèrent à ce point ces trésors qu'il fut facile à Lelio Gavardì, qui enseignait les humanités dans cette famille, d'en prendre tout ce qu'il voulut et de porter treize de ces volumes à Florence, dans le dessin de les offrir au grand-duc. Mais ce prince tomba malade et mourut à son arrivée, et il vint à Pise chez Manuce. Je lui fis honte de son bien mal acquis, et il en convint. Mes études étaient finies, je devais partir: il me pria de reporter les volumes à Milan, ce dont je m'acquittai de bonne foi en consignant le tout au chef de la famille, le Dr Oratio Melzi, qui fut très-étonné de l'embarras que j'avais voulu prendre, et qui m'en fit don en me disant qu'il avait du même peintre beaucoup d'autres dessins qui demouraient abandonnés dans des caisses sous les toits de sa villa. Ces livres restèrent donc entre mes mains, et, plus tard, entre celles de mes frères. Ceux-ci en firent un étalage un peu trop grand, racontèrent à ceux qui les voyaient avec quelle facilité je les avais obtenus, de sorte que beaucoup de personnes retournèrent chez le docteur Oratio et en tirèrent des dessins, des modèles anatomiques, et beaucoup de précieuses rdiques de l'atelier de Léonard. Pompeo Leoni fut un de ses chasseurs; son père avait été élève de Michel Ange Buonarotti, et lui-même était au service du roi d'Espagne, pour qui il a fait tous les bronzes de l'Escorial. Pompeo promit au Dr Melzi offices, magistratures, siège dans le sénat de Milan, s'il pouvait reprendre les treize volumes et les lui donner pour les envoyer au roi Philippe, grand amateur de ces sortes de curiosités. Excité par de telles espérances, Melzi vole chez mon frère, le prie à genoux de lui rendre les manuscrits qu'ils m'avait donnés; c'était son collègue au collège de Milan, bien digne de sa compassion et de son amitié; sept volumes lui furent rendus. Des six qui restaient à la maison, un fut offert au cardinal Frédéric Borromée; il est aujourd'hui conservé dans la bibliothèque Ambrosienne; c'est un in-folio, couvert de velours rouge, qui traite très philosophiquement de la lumière et des ombres, au point de vue de la peinture, de la perspective et de l'optique. Un autre fut donné à Ambroise Figini, noble peintre de cette époque, qui le laissa à Hercule Bianchi avec le reste de son cabinet. Pressé par le duc Charles-Emanuel de Savoie qui désirait en posséder, j'en obtins de l'amitié de mon frère un troisième que j'envoyai à cette Altesse. Après la mort de mon frère, les trois autres sont parvenus entre les mains de Pompeo Aretino, qui, avec ceux qu'il avait recueillis, en sépara les feuillets pour en former un gros volume qui passa à son héritier Polidore Calchi, et fut vendu ensuite à Galéaz Arconati pour trois cents ducats. Cet homme généreux le conserve dans sa galerie remplie de mille choses précieuses; il a dû plusieurs fois rési-

ster aux prieurs du duc de Savoie et d'autres princes qui le lui demandaient: il en a refusé plus de six cents ducats.

3. The MSS. in the possession of the brothers Mazenta, had, it would seem, been gradually reduced to three. Guido Mazenta whose name is to be seen in the MS. given by him to Cardinal Borromeo (see Bibl. No. 2), died in 1613.

In 1636, Count Galeazzo Arconati—who is named in Mazenta's report—presented twelve MS. volumes by Leonardo to the Ambrosian Library at Milan. The explicit deed of gift may be seen, translated into French in the *Cabinet de l'Amateur*, 1861, pp. 53—59. In the catalogue of these MSS. the binding is more particularly described than the contents. The following twelve MSS. were included in this gift. 1. the Codex Atlanticus (Bibl. 38), 2. a MS. now lost, but described as follows:

*Le deuxième est un livre in-folio ordinaire, de la grandeur du papier coupé ordinaire. Il est relié en bois couvert de cuir rouge, orné de frises et de fleurs d'or. Le volume est entièrement composé de feuillets de vélin et commence par ces paroles, écrites en rouge: TAVOLA DELLA PRESENTE. Suivent huit feuillets sans pagination. Elle commence au suivant, qui a un ornement en tête qui dit: Eccentris s. principe, etc., et la pagination suit jusqu'au cent vingtième feuillet, quatre-vingt-sept pour le texte, trois blancs et le reste des dessins divers coloriés, le premier desquels est intitulé: Sfera solida, et le dernier: Piramis laterata exagona vacua; au fond du feuillet est un texte grec qui exprime la même chose.*

3. *Le troisième est un livre in-quarto, relié en vélin, sur le dos duquel on lit les paroles suivantes: DI LEONARDO DA VINCI; il est de cent feuillets juste, mais le premier manque; sur le second il y a quelques cerises noires, feuilles et fruits coloriés. Dans l'intérieur du volume, au feuillet 49, on a inséré cinq feuillets de dessins variés, armes de hast pour la plupart, et à la fin un autre petit volume (volumetto) de diverses figures de mathématiques et d'oiseaux, de dix-huit feuillets, qui a été cousu dans la même reliure en vélin.*

Bibl. 3, 4. Ash. II and B. The appendix (*volumetto*) is now lost; the last mention of it occurs in Venturi's *Essai* (1796). Compare No. 1465, Note 4.

4. MS. of 114 leaves (see Bibl. 5, 6, Ash. I and A).

5. *Le cinquième est un autre livre semblable, in-quarto, couvert, comme le précédent, de cinquante-quatre feuillets. Sur le premier sont dessinées diverses têtes bouffonnes, et sur le dernier quatre colonnes de texte, écrites à rebours. Il est marqué sur le dos LEONARDO DA VINCI.*

This description corresponds with the MS., Bibl. 28 Tr. 6.

6. MS. see Bibl. 25, E.

7. MS. see Bibl. 22, F.

8. MS. see Bibl. 26, G.

9. Three MSS. bound in one vol.; see Bibl. 8—10, H<sup>1</sup>, H<sup>2</sup>, H<sup>3</sup>.

10. Two small MSS. bound in one, see Bibl. 13, 14.

11. MS. see Bibl. 18, L.

12. MS. see Bibl. 27, M.

In 1674 Count Orazio Archinti presented to the same Library a MS. by Leonardo, consisting of three small note-books in one Vol.; Bibl. 32—34.

In 1790, Stefano Bonsignori made a short catalogue of the MSS. in the Ambrosian Library at Milan. It includes 1. MS. C. A, see Bibl. 28; 2. MS. B and Ash. II, see Bibl. 3, 4; 3. MS. Ash. I and A, Bibl. 5, 6; 4. MS. D, Bibl. 31; 5. MS. E, Bibl. 25; 7. MS. G, Bibl. 26; 8. MSS. H<sup>1</sup>, H<sup>2</sup>, H<sup>3</sup>, Bibl. 8—10.

The descriptions of the others are too vague and slight to admit of our identifying by them any MSS. now existing: 6. *Miscellanea; idrostatica, etc.* È in-8 piccolo, in cartone rustico. 9. *Miscellanea. Moto, macchine, macchinette da forar cristalli, etc.* È in-16, legato in pergamena. 10. *Miscellanea in-16, in cartone rustico,* 11. *Miscellanea. Abbozzi informi, moto ecc.* È in-16, pergamena (see *Dozio, degli scritti . . . di Leonardo da Vinci. Milano 1871, pp. 21—24*). It will be observed that one MS. fewer is here named than in the deed of gift from Count Arconati; on the other hand a MS. D, not previously mentioned, is now included. The fifth MS. of Arconati's list is evidently wanting in this list. The volume given to the Ambrosian Library by Cardinal Borromeo in 1603 (Bibl. 2, C) seem also to have been omitted. It is evident then that we cannot exactly determine how many of these MSS. were to be found in the Ambrosian Library in the year 1796. At the suggestion of Bonaparte the Directory of the French Republic conveyed many works of art from Italy into France. So much as this is, at any rate certain: in August 1796 the Codex Atlanticus was in the Bibliothèque Nationale: and "*Douze petits MSS. de Leonardo de Vinci, sur les sciences*" were in the Institut National (Institut de France). The authors of the catalogue of the pictures and MSS. removed from the Ambrosian Library—Peignon, commissaire de guerre and *le Citoyen Tinet, agent des Arts* (dated Milan, May 24, 1796) either do not mention Leonardo's MSS. at all, or—which is more probable—include them under the following somewhat vague designation "*Le Carton des ouvrages de Leonardo d'avinci*". It is certain, on the other hand, that in 1815 the commissary of the

Austrian governement demanded the restoration to the Ambrosian Library of thirteen (or fourteen?) MSS., being the number stated in Venturi's Essay written in 1796. (Venturi says in his essay: *Les Manuscrits sent au nombre de quatorze, parccque le Volume B contient un appendice de dix-huit feuillets qu'on peut séparer et considérer comme le quatorzième volume.*)

However, only the Codex Atlanticus found its way back again; the other twelve MSS. remain in the possession of the Institut de France. These facts cover all that is known of the history and fate of the volumes now on the continent, that is to say in France and Italy.

I am unfortunately not in a position to give so full an account of the vicissitudes of such of Leonardo's MSS. as are now in England. Of the MS. volume at Windsor, W. L. (Bibl. 36) Chamberlain tells us (Original Designs, London, 1812): *It was one of the three volumes, which became the property of Pompeo Leoni that is now in his Majesty's possession. It is rather probable than certain that this great curiosity was acquired for King Charles I. by the Earl of Arundel, when he went an Ambassador to the Emperor Ferdinand II. in 1636, as may indeed be inferred from an instructive inscription over the place, where the volumes are kept, which sets forth that James King of England offered three thousand pistoles for one of the volumes of Leonardo's works. And some documents in the Ambrosian Library give colour to this conjecture. This volume was happily preserved, during the civil wars of the last century, among other specimens of the fine arts, which the munificence of Charles I. had amassed with a diligence equal to his taste. And it was discovered soon after his present Majesty's accession, in the same cabinet, where Queen Caroline found the fine portraits of the court of Henry VIII. by Hans Holbein, which the King's liberality permitted me lately to lay before publick.*

Chamberlain, apparently misled by the well-known inscription<sup>1</sup> in the Ambrosian Library seems to assume that Lord Arundel must

<sup>1</sup> The following inscription is on the staircase of the Ambrosian Library

have derived the Leonardo MSS. in his possession from Arconati, and not from Spain; but Mr. Alfred Marks of Long Ditton, has lately disproved this clearly in two contributions to the Athenaeum, Nos. 2626 and 2645. John Evelyn in his Memoirs (Vol. I, p. 213 ed. 1818) tells us that when travelling in Italy in 1646 he received from Lord Arundel, then sick at Padua, where he died in the course of this year, advice as to what he should try to see. Afterwards, visiting the Ambrosian Library, Evelyn writes:—

*"In this room stands the glorious (boasting) inscription of Cavaliero Galeazzo Arconati, valucing his gift to the librarie of severall drawings by Da Vinci, but these we could not see, the keeper of them being out of towne and he always carrying the keys with him, but my Lord Martial, who had scene them, told me all but one booke are small, that an huge folio contain'd 400 leaves full of scratchcs of Indians [sketches of engines?] &c., but whereas the inscription pretcnds that our King Charles had offer'd 1,000l. for them, my Lord himselfe told me that it was he who treated with Galcazzo for himselfe in the name and by permission of the King, and that the Duke of Feria, who was then Governor, should make the bargain: but my Lord having seen them since did not think them of so much worth."*

The leaves of the Codex Atlanticus are numbered up to 393; hence it is probable that in giving this description Lord Arundel had this single MS. in his mind. The MS. W. L. at Windsor which, with the MS. C. A. formerly belonged to Pompeo Leoni now consists of only 234 folio leaves. Arconati (see above) mentions, it is true, one collection only of MSS. i. e. MS. C. A. as being in the hands of Pompeo Leoni; but it can hardly be doubted that the MSS. and drawings W. L. were also in his possession, since Leoni's name is given in the inscription on the old binding of the two volumes in the same way.

"Pompeo Leoni of Arezzo, Court sculptor to King Philip II. of Spain, died in Madrid A. D. 1610, as we learn from Carducho 'Dialogos de la Pintura' (1633). Part of his property was publicly sold at Madrid; some works which had belonged to it being afterwards purchased by Charles the First when, as Prince of Wales, he visited Spain in 1623.

From the Spanish portion of Pompeo's collection thus sold came, in all probability, the two volumes of Leonardo's of which Carducho speaks as being then in the possession of Don Juan de Espina: "Allí vi dos libros dibujados y manoscritos de mano del gran Leonardo de Vinci, de particular curiosidad y doctrina" ("two

books," may we say? "one of sketches, one manuscript"), which the Prince of Wales had in vain sought to purchase. The contents of these volumes Carducho unfortunately describes only in very general terms. In Mr. Sainsbury's 'Original Unpublished Papers illustrative of the Life of Rubens,' we find evidence that Lord Arundel was subsequently in treaty for these very books, or, perhaps, for one of them only. On p. 294 will be found a note of Endymion Porter's "of such things as my Lord Ambassador Sr Francis Cottington is to send owt of Spaine for my Lord of Arondell; and not to forget the booke of drawings of Leonardo de Vinze w<sup>ch</sup> is in Don Juan de Espinas hands." This is of the date 1629, when Sir Francis was for the third time setting out for Spain as ambassador. His negotiations for the book were unsuccessful, for on January 19<sup>th</sup>, 1636—37, we find (p. 299) Lord Arundel writing from Hampton Court to Lord Aston, then Ambassador to Spain,—"I beseech y<sup>u</sup> be mindfull of D. Jhon. de Spinas booke, if his foolish humor change." There can, I think, be little doubt that, on the change of Don Juan's "foolish humor," a priceless treasure, the object of so many fruitless attempts, at last rewarded the persistence of the great English collector" (A. MARKS).

Here, beyond a doubt, only the MS. W. L. is meant, for this, as being a collection of Leonardo's most important drawings, must be regarded as exceptionally precious. But did Lord Arundel ultimately get this Manuscript. We cannot say more than that this seems probable; and for this reason: Hollar engraved drawings of Leonardo's which are now in Windsor and inscribed them "W. Hollar fecit 1646 ex collectione Arundeliana"—drawings which *most probably* were included in this W. L. collection before it was divided.

On the other hand it can be positively shown that Lord Arundel possessed the MS. Br. M., Bibl. 23, which was no doubt purchased by him for a relatively small sum in consideration of the smaller artistic interest of the drawings, and for the same reason it is quite intelligible that no mention should be made of it in the correspondence at the time. But whether the MS. W. L. was purchased by Charles II. when Lord Arundel's collections were sold in Holland, or whether Charles I. had previously acquired it after his journey to Spain as Prince of Wales in 1623—when he, in person, purchased some works of art from among Leoni's collection, is not known. So much as this alone is certain, that it has now for a very long period belonged to the Royal collections.

Though Chamberlain's statement as to the

acquisition of Leonardo's MSS. and drawings in the Windsor Library is, as we have seen, probably inaccurate, we may still give credit to his information as to the finding of them by Queen Caroline in Kensington Palace, for he—as Royal Librarian at the time—must certainly have been acquainted with the facts. His statement is moreover confirmed by Walpole (*Anecdotes of painting I*, 84: *Soon after the accession of the late King, Queen Caroline found in a bureau at Kensington, a noble collection of Holbein's original drawings for the portraits of some of the chief personages of the court of Henry VIII.*)

This, however, is by no means the earliest information we possess regarding Leonardo's MSS. and drawings in the possession of Royalty. In the MS. Department of the British Museum I found an old inventory from which I give the following extracts: *List of the draw<sup>gs</sup> in ye Cabinet in His Maj<sup>ts</sup> Lower Apartment in this is marked what has been Deliver'd for her Maj<sup>ts</sup> use Page 28. A list of the Books of drawings and Prints in the burse in His Majesty's great Closet at Kensington.*

No. 3. *By Hans Holbein those fram'd & hang at Richmond.*

No. 5. *Prints by Hollar; delivered to her Maj<sup>ty</sup> Aug. 1735 and by her lent to Lady Burlington, since put in Volumes and laid in y<sup>e</sup> Library at Kensington.*

No. 6. *Drawings by Leonardo de Vinci.*

No. 13. *Drawings by Leonardo di Vinci;—these mark'd with a cross were delivered for her Maj<sup>ts</sup> use in y<sup>e</sup> year 1728.*

The oldest inventory in Windsor Castle—is only of the beginning of the present century. On p. 23 we find: "*Leonardo da Vinci, Tom. I*" and a list follows of the drawings, comprised on 41 pages. For instance: *page 1 His own portrait, profile, red chalk* (a well known drawing in the present collection). Only a few can be identified, for the descriptions are very brief. On p. 26 we come to "*Leonardo da Vinci, Tom. II*" which is also a list of drawings comprised on 40 pages. It begins: *page 1, the last Supper, the Architecture is varied in the painting at Millan where an open door is represented behind our Saviour, black chalk. NB. This Drawing was not in the Vol. compiled by Pompeo Leoni, but in one of the Volumes in the Buonfiliuolo Collection bought at Venice.* (By the way I mention that the drawing in question, still at Windsor, is not an original drawing, but an old copy). This gives us an incidental clue to a second source whence the treasures of the Windsor collection have been derived. Nothing more, however, is known concerning the Buonfiliuolo collection.

On p. 29 of the Inventory we come to a catalogue of the contents of a third Vol. of 205 sheets, in which 549 drawings are named and shortly described, for instance:

- No. 22 { 2 Heads, of Judas and one of the Apostles for the last supper at Milan.  
41 { 1 Mechanical Powers  
{ 1 Anatomy.  
*NB. All the Leaves from 41 to 142, except those few marked otherwise, are full of very copious and accurate studys in Anatomy which were done with the assistancee of Marc Antonio della Torre &c.*  
143 { 1 { Manuscript—Here ends the Anatomical study.

As the reader will have observed, the number of leaves in the MS. W. L. does not correspond to that in either of these three Volumes. There can be no doubt that, at that time most of the drawings had been taken out of it. Recently most of the finest drawings in the Royal collection have been mounted on card-board and arranged in four portfolios, while some

of the MS. leaves remain in the folio W. L. (Bibl. 36), and others are mounted on old thin card board, more particularly the texts W. P., Bibl. 15, and W. An. I, Bibl. 1; others again are not mounted nor even—at the present date—arranged. Their large number rendered it necessary that they should be classified according to their contents and the probable date of their being written, with a view to this present publication. I therefore sorted them under the following heads: W. H., Bibl. 16; W. An. II., Bibl. 17; W. M., Bibl. 19; W. An. III., Bibl. 24; W. An. IV., Bibl. 35; W., Bibl. 37. The loose leaves in the Windsor collection are numbered consecutively (from 1—249) without any reference to their connection, while the Roman numbers refer to those sheets which are mounted. By this means reference to the originals is facilitated.

It will be noticed that Anatomical writings preponderate greatly, and they are the portion which Vasari most admired, when he had the opportunity of seeing Leonardo's MSS. in Melzi's house.

## II.

### BIBLIOGRAPHY.

The Manuscripts are arranged here in the same chronological order as shown in Vol. I. pp. 5—7. The numbers of the sheets are generally not by the author, but in a more modern handwriting. The few instances when these numbers

A = Acqua (Water).

Ar = Architecture.

F = Forza (Force).

Fo = Fortezza (Fortress).

Ge = Geometry.

M = Moto, colpo (on movement &c.).

Ma = Mathematics.

are by Leonardo will be found mentioned in the lists. The bindings are in parchment, if not otherwise stated. The following abbreviations have been introduced in the description of the contents (the Italian words are headings used by Leonardo):

Mn = Machines.

O = Optics.

P = Peso (Weight).

Ph = Physics.

V = Volatili (Flight of Birds).

+= blank pages.

8. H.<sup>3</sup>

The three small Note books H<sup>3</sup> H<sup>2</sup> H<sup>1</sup> are bound in one Volume. From the dirty state of the sheets at the beginning and at the end of each division it becomes apparent that Leonardo had used them separately. The cover is in parchment and is twice marked H on the outside and once inside, and Q on the back of the first sheet. Inside the back cover is the mark Q<sup>a</sup>, and on the last sheet but one N N 48, meaning probably the number of sheets originally belonging to H.<sup>3</sup> MSS H<sup>2</sup> and H<sup>3</sup> are numbered throughout. The sheets of H<sup>3</sup> are also numbered 1—47, below the text and in a reversed position. The numbers here given are above the text | 47<sup>a</sup> A | 47<sup>b</sup> 1389 | 48<sup>a</sup> Ma | 48<sup>b</sup> dimmi semai, *sketch of a man's head in profile* | 49<sup>a</sup>, 49<sup>b</sup> Mn | 50<sup>a</sup> 670 | 50<sup>b</sup>, 51<sup>a</sup> notes | 51<sup>b</sup> 689 | 52<sup>a</sup> 999  
 52<sup>b</sup> 736 | 53<sup>a</sup> 1264, 690 | 53<sup>b</sup>—55<sup>a</sup> Mn | 55<sup>b</sup>

**Sketch reproduced with No. 1112** | 56<sup>a</sup>, 56<sup>b</sup> P | 57<sup>a</sup> P, 1462 | 57<sup>b</sup> M. *sketch of a horse* | 58<sup>a</sup> *sketch of horses and oxen drawing a car* | 58<sup>b</sup> 1460 | 59<sup>a</sup>—60<sup>b</sup> Mn | 61<sup>a</sup> 831 Mn | 61<sup>b</sup>—69<sup>b</sup> Mn | 70<sup>a</sup> 691 | 70<sup>b</sup> 1191 | 71<sup>a</sup> 1192 | 71<sup>b</sup>—73<sup>a</sup> Mn | 73<sup>b</sup> Pl. ### II. S. K. M. II.<sup>2</sup>

The two MSS. S. K. M. II<sup>2</sup> and S. K. M. II<sup>1</sup> are bound in one volume; the sheets are separately numbered on the top of each front sheet, but the two volumes are placed in the binding in reversed position, so that the two parts begin at the opposite ends of the volume. 1<sup>a</sup> Vol. II, p. 62 sketch | 1<sup>b</sup> 666, 697 | 2<sup>a</sup> 665 | 3<sup>a</sup> 1312, Ma | 3<sup>b</sup> Ma | 4<sup>a</sup> 1519 | 4<sup>b</sup> + | 5<sup>a</sup> M | 5<sup>b</sup>, 6<sup>a</sup> + | 6<sup>b</sup> M | 7<sup>a</sup> 1392, M | 7<sup>b</sup> M, 1393 | 8<sup>a</sup> Mn | 8<sup>b</sup> + | 9<sup>a</sup> Ge | 9<sup>b</sup> Mn | 10<sup>a</sup> sketch of a flower | 10<sup>b</sup> O | 11<sup>a</sup> P | 11<sup>b</sup> Pl. The thin cards, on which these sheets are mounted have a broad ornamental border in water colours.

## 16. W. H.

With regard to these studies see Vol. II, p. 4. The sheets are numbered 46—68, differing in size, and many not mounted are coloured in various tints: Compare also Lomazzo, Trattato dell'arte

della pittura I chap. 20, IV, 23 and Idea del tempio della pittura chap. 16. — Vasari also mentions these studies. 64. 716 | IV. 717.

## 17. W. An. II.

The sheets forming this treatise are all of the same size and originally formed a small book. At present the sheets are separated. The old numbers and marks which are to be found on most of the sheets are here given in brackets after the new numbers: 36 (21) 797 | 36<sup>b</sup> muscles of the leg | 37<sup>a</sup> 814, Pl. CVIII, No. 4 | 37<sup>b</sup> the veins on the head &c. | 38<sup>a</sup> (o) 38<sup>b</sup> veins of the leg | 39<sup>b</sup> veins on the leg and on the spine | 39<sup>b</sup> 801 | 40<sup>a</sup> nervi, matrice | 40<sup>b</sup> + | 41<sup>a</sup> (7) Delli musscholi che movā li labri della bocha | 41<sup>b</sup> nervi, matrice | 42<sup>a</sup> (10) nervi 42<sup>b</sup> veins of the leg | 43<sup>a</sup> (8) Delli musscholi che movā la lingha | 43<sup>b</sup> muscles of the foot, 843 | 44<sup>a</sup> (3) veins of the arm | 44<sup>b</sup> veins | 74<sup>a</sup> (12) veins of the womb | 74<sup>b</sup> muscles on the arm of the ape (scimmia) and of man (omo) | 75<sup>a</sup> (2), 75<sup>b</sup> muscles of the leg | 76<sup>a</sup> dello vfitio de mesoplevri | 76<sup>b</sup> Pl. ## 19. W. M.

See Vol. II, p. 224 and No. 1051 Note. As to the Maps in MS. W. L. see No. 36. The following maps are on separate sheets 1. Pl. CXIII, The original is somewhat larger (19  $\times$  13 $\frac{1}{4}$  in) ; the whole is executed in water colours. The rivers are in blue 2. Pl. CXIV, (15 $\frac{3}{4}$  XII, in) | 3. Part of the Arno, in water-colours (39  $\times$  22) Pl. CXII. 4. Map of a part of

Tuscany, in water colours (40  $\times$  27 Cm), including Livorno, Pisa, Luccha, Volterra. 5. Central Italy (45  $\times$  23 Cm) within the limits of Corneto, Rimini, Pesaro, washed in Indian ink. 6. Study for the Map Pl. CXIII, washed in Indian ink; the names are written in Leonardo's ordinary writing (28  $\times$  21 Cm).

20. S. K. M. I.<sup>1</sup>

This small MS. is bound in one Volume with MS. S. K. M. I<sup>2</sup>. On the first sheet is the note, written in German: Leonardo da Vinci der grōste Maler aus der italienischen Schule 1452 zu Vinci geboren, trat 1502 als Strieggbaumeister in die Dienste Herzogs Valentino Borgia, und starb 1519. — This volume and the two others now in the Forster Library of the South Kensington Museum, London, were given to Mr Forster by Lord Lytton, who is said

to have bought them at Vienna for a low sum. The title of the treatise on sheet 1<sup>a</sup> is given in 1374, Note; no other subject is discussed on the 38 sheets which form this MS. 1<sup>b</sup> 1374 jo voglio abbassare la grossezza d'una tavola a data grossezza sanza mytatione di sua largheza domādo quāto cressce in sua lūgezza &c. | 4<sup>a</sup>, 6<sup>a</sup>, 8<sup>b</sup>, 11<sup>a</sup>, 12<sup>a</sup>, 16<sup>b</sup> are blank. — On the last sheet 39<sup>a</sup> is the mark 46.

21. S. K. M. I.<sup>2</sup>

See introductory note to No. 20. — At the end of this Note book is the mark B B 14. This MS. has the pages numbered 1—28. — 1—4 Mn | 5 635, 649 | 6 Mn | 7 385 | 8 650,

## 24. W. An. III.

Among the numerous anatomical drawings in the Windsor Collection there is one set which appears to have formed originally a Volume by itself. Here the paper is of a thin greyish blue colour and of a rather rough surface. Leonardo seems to have made use of it exclusively for this particular treatise. All the sheets are of the same size. Each of them is marked by a Roman capital letter, as shown here in brackets. Sheet 217 bears the date 1513.—115 a (B) on veins | 115 b the heart | 116 a (K) blood-vessels | 116 b + | 117 a (E) spine and shoulders | 117 b + | 118 a (H) blood-vessels | 118 b + | 161 a (O) blood-vessels |

| 161 b + | 192 a (T) the arms, A | 192 b +  
 193 a (V) vento | 193 b + | 196 a (P) muscles

 158, 1424: The sheet IV. L. 136 (X) originally  
 belonged to this series of sheets.

## 25. E.

The cover of thin grey card is the original binding. The outside bears the mark E. B is twice written inside the cover. The compiler of the treatise on painting in the Vatican library (Urbinas 1270) which was published by Manzi in 1817, and by Ludwig in 1882 gives a few passages from this MS, of which he correctly notes the corresponding number of pages, to which the mark B is added. o' 915, 479 + | 1 a 1465,

## 28. Tr.

Marked S inside the cover and on the first sheet. At the beginning of the Volume is the following note: 1783·5·Gennaro·Questo Codicetto di Leonardo da Vinci era del Signor Don Gaetano Caccia Cavaliere Nouarese, ma domiciliato in Milano, morto l'anno 1752 alli 9 di Gennaro sotto la Parrocchia di S. Damiano La Scala. Jo Carlo Triuulzio l'acquistai dal detto Caualiere intorno l'anno 1750 unitamente a un quinario d'oro di Giulio Maporianeo e a qualche altra cosa che non più mi ricordo dandoli in cambio un orologio d'argento di ripetizione che io due anni avanti aveva comperto usato per sedici gigliati mache in verità era ottimissimo, che però questo codicetto mi viene a costare sei in sette gigliati. In the MS. the pages are numbered, not the sheets. 2 1493, caricatures, 1332, 1189 | 3 1469 Note, ships 4 1486 | 5 Mn | 6 P Mn | 7 853 Ar Mn | 8, 9 list of words | 10 + | 11 1202 | 12 891 | 13 Fo | 14 840 | 15 Pl.  Lombardo VIII, IV. There is also a facsimile  
 of p. 59.

## 29. Leic.

*Bound volume in leather cover. On the first five sheets before the beginning of the original MS are the following Notes. On 1<sup>a</sup> marked in pencil 596: This treatise on the nature, weight and motion of water... has never been printed. On the reverse of the modern title may be found an extract from the life of Leonardo da Vinci, by Dufresne, in which this volume is particularly mentioned. It appears from the title page (although the name of the possessor has been obliterated) that it has belonged to Giuseppe Ghezzi, an eminent painter at Rome. — W. Roscoe.*  
*1<sup>b</sup> + | 2<sup>a</sup> + | 3<sup>a</sup> Libro Originale || Della Natura, peso, e moto delle Acque, || Composto, scritto, e figurato di proprio || Carattere alla mancina || Dall' Insigne Pittore e Geometra || Leonardo da Vinci || In tempo di Ludouico il Moro, nel condur || che fece le Acque del Nauilio della || Martesana dall' Adda a Milano. || Si autentica con la precisa Mensione che ne fà Raffaelle du fresne nella Vita di detto Leonardo, descritta nel suo Libro stampato in Parigi da Giacomo Longlois l' Anno 1651 intitolato || Trattato || Della Pittura || Acquistato 'conla gran forza dell' Oro' (these words cover an erasure), per sublimare || le fatigose raccolte del suo studio || da || Giuseppe Ghezzi Pittore in Roma || 3<sup>b</sup> (in another handwriting) Soleua il Vinci scrivere Alla mancina, secondo l' uso degli Ebrei, nella qual maniera erano scritti quei sedici Volumi de quali di già abiamo fatto menzione, et esendo il carattere buono, si legeua assai facilmente mediante un specchio grande, è probabile ch' egli facesse questo, accio tutti non legessero così facilmente i suoi scritti. L' impresa dell nauiglio di Martesana gli diede occasione di scriuere un libro della natura, peso e moto delle Aque pieno di gran numero di disegni di varie rote, Machine per molini, a regolar il corso dell' aque, e leuarle in Alto | 4 + | 4<sup>a</sup> (in an earlier handwriting) Libro scritto da Leonardo Vinci che tratta del sole, della luna del corso dell' acqua dei ponti e dei moti | 4<sup>b</sup> + | The arrangements of this MS. are somewhat unusual. On the head of many pages there are title lines here placed between " giving the numbers of 'cases' (casi)*

or subjects treated on the page. Most of these cases are introduced by 'Come' (How, or that).

## 30. Mz.

The grey card cover is original. The sheets are twice numbered, in Leonardo's handwriting and by a more recent hand. The original numbers are here given in brackets, because they are not consecutive, subsequently they have been altered: 0<sup>a</sup> 728 | 1<sup>a</sup> (3) 1154, P | 1<sup>b</sup> Ge P | 2<sup>a</sup> (4) P | 2<sup>b</sup> V | 3<sup>a</sup> (6) 1122, V | 3<sup>b</sup> V | 4<sup>a</sup> (6?), 4<sup>b</sup> V | 5<sup>a</sup> (8 altered in 7) | 5<sup>b</sup> V | 6<sup>a</sup> (9 altered in 8) | 6<sup>b</sup>, 7<sup>a</sup> (10 altered in 9) | 7<sup>b</sup> V | 8<sup>a</sup> (12 altered in 11) 1168, V, Ge | 8<sup>b</sup>, 9<sup>a</sup> (13 altered in 12) V | 9<sup>b</sup> 1124 | 10<sup>a</sup> (14 altered in 13) 705 | 10<sup>b</sup>, 11<sup>a</sup> (15 altered in 14) | 11<sup>b</sup> V | 12<sup>a</sup> (16 altered in 15) 1123 | 12<sup>b</sup> V | 13<sup>a</sup> (17 altered in 16) V, 1125, 381 | 13<sup>b</sup> baga, V | 0<sup>a</sup> 1428, and the architectural drawing reproduced Vol. II, p. 67.

## 31. D.

Marked D inside and outside the cover of grey card, S inside the back cover. Four blank sheets are at the beginning. This MS. treats of the eye. The following texts are a selection of the headings. 1<sup>a</sup> Perchè la natura non fece equal virtu e potentia nella virtu visiva | 1<sup>b</sup> perchè li razzi de' corpi luminosi si fan tāto maggiori quanto son più remoti dal lor nascimēto | 2<sup>a</sup> se l'idolo over simulacro à terminato sito sopra dell'occhio o no . . . come la rettitudine del concorso delle spetie si piega nello entrare nell'occhio | 2<sup>b</sup> come le spetie di qualūche corpo che per alcuno spiraculo passano all'occhio s'impresan sotto sopra nella sua popilla e'l senso le vede diritte | 3<sup>a</sup> come le cose destre nō pajono destre alla virtù visiva, se le sue spetie non passan per due interse-gationi | 3<sup>b</sup> come le spetie si danno alla virtù visiva con due interse-gationi per neciesità | 4<sup>a</sup> perchè lo specchio scambia alli simulaci delli obbietti li lati destri ne' sinistri e li sinistri ne' destri | 4<sup>b</sup> che sia vero che ogni parte della popilla abbia uirtù visiva | 5<sup>a</sup> dell'occhio

delli animali nocturni | 5<sup>b</sup> La popilla dell'occhio si muta in tante varie grandezze quante son le varietà delle chiarezze o securità delli obbietti che dināti se li rappresentano | 6<sup>a</sup> Il simulacro del sole è vnico in tutta la spera dell'acqua che vede ed è veduta da esso sole ma pare diuiso in tante parti quanti son li occhi delli animali che in diversi siti vedono la superficie dell'acqua | 6<sup>b</sup> La popilla dell'occhio à virtù visiva tutta per tutto e tutta in ogni sua parte | 7<sup>a</sup> come la popilla piglia li simulaci delle cose antiposte all'occhio solamente dalla luce e non dallo obbietto | 7<sup>b</sup> perchè la cosa destra non pare sinistra nell'occhio | 8<sup>a</sup> 71 | 8<sup>b</sup> dimostrazione perchè l'occhio vede adietro a se cose poste nelli spati laterati | 9<sup>a</sup> dell'occhio vmano | 9<sup>b</sup> perchè li corpi luminosi mostrano li lor termini pieni di diritti razzi luminosi | 10<sup>a</sup> delle spetie delli obbietti che passano per stretti spiracoli in loco oscuro | 10<sup>b</sup> delle spetie delli obbietti infuse per l'aria. — At the end four blank sheets, two bearing the mark S.

32. K.<sup>1</sup>

The three MSS K<sup>1</sup> K<sup>2</sup> K<sup>3</sup> are bound in one Volume with a leather cover inscribed LEO-NARDI || VINCI || in golden letters. The sheets of each MS. are separately numbered. Inside the cover are the marks K and 13. On the first sheet is the inscription: Commentarii auto-graphi || Leonardi Vinci || Pictoris Architecti || cerissimi || quos dono dedit || Bibliothecae Ambros. || Comes Horatius Archintus ||

Ingenuarum Artium || studiosissimus || Anno MDCLXXIV || Then follow four blank sheets. 1<sup>a</sup> A, and the mark 44 | 1<sup>b</sup> Ma | 2<sup>a</sup> 1067 | 2<sup>b</sup> Ge | 3<sup>a</sup> Dividi il trattato delli vecelli in 4 libri &c. | 3<sup>b</sup>—14<sup>a</sup> V | 14<sup>b</sup> sketch of a male figure | 15<sup>a</sup> + | 15<sup>b</sup>, 31<sup>a</sup> Ge ma in black chalk | 31<sup>b</sup>—48<sup>a</sup> in ink | 47<sup>b</sup> has the mark O O 47 | 48<sup>b</sup> + |

## 36. W. L.

The history of this Volume is given on pp. 482, 483. Here as in the MS. C. A. the original sheets were fixed on the sheets of the volume, but most of them have been taken out again. The following references are exclusively to such sheets as are still to be found undetached in this celebrated volume. The size varies greatly. On the folio No. 124 (containing no drawing at present) is the Spanish note: ogn falsaua esta y nosecuēta. The back of some sheets is covered by the mounting. 132<sup>a</sup> 886, Ma | 136<sup>a</sup> Mn | 141<sup>a</sup> 1436 | 141<sup>b</sup> 1435 | 145<sup>a</sup> A 597, Pl. CXXII | XXXII 1532, Vol. II p. 24 the sketch on the right.

The Arabic numbers of sheets not given among the foregoing references will be found inserted in the notices of the various treatises at Windsor Castle, given previously under separate headings.

## 38. C. A.

This best known and most voluminous Volume is composed of loose sheets of various size, each folio containing one or more sheets of original MS. The mounting is the same as in the Volume W. L. Such sheets as have notes on both sides are not fixed by their back to the folio sheets, but set into a paper frame. The numbering of sheets refers only to the folios. In the interest of identification and in order to facilitate a comparison of the writing on the opposite sides of one

and the same sheet, I have introduced here, in addition to the numbers of Leoni's folio sheets, second numbers which refer to the separate original sheets.—In the following description it seemed to me desirable to refrain from giving detailed accounts of the contents of such sheets, as do not bear upon the various subjects of the present publication, the more so, as the order of the sheets, being quite accidental, throws no light whatever on the connection of the various stu-

dies extending over about thirty years. Outside the cover is the inscription in golden letters: DISEGNI . DI MACCHINE . || DELLE . ARTI . SECRETE || ET . ALTRE . COSE || DI . LEO-NARDO DAVINCI . RACCOLTI DA || POMPEO LEO || NI || On the back of the cover is the No. 248. 1<sup>a</sup>, 1<sup>a</sup>and 1<sup>b</sup>, 1<sup>b</sup> 95 | 2<sup>a</sup> 2<sup>a</sup>—4<sup>a</sup> 10<sup>a</sup> Mn | 4<sup>a</sup> 11<sup>a</sup> 1553 | 4<sup>b</sup> 11<sup>b</sup> 631, 1359. ## 39—55.

39. *The drawings and MSS. by Leonardo in the Royal Library, Turin, are mounted on card. Card 7 319, Pl. XII | 7<sup>b</sup> Mn | 25 Mn | 17 1182 | 11 320 | 1 1369 Note, Pl. I | 5 Pl. XLII | 6 Pl. CXX.*

40. Florence, *Uffizi Collection of drawings Frame 115 No. 446 663, 1383. A drawing of a machine is on the back.—Drawing of Landscape (28 × 19½ Cm) in a portfolio, not exhibited, not mounted nor numbered. 1369.*

41. Venice, *Academy of Fine Arts, Room VIII, Frame IV, 16, 315, Pl. IX, Frame V | 1<sup>a</sup> Notes on P | 1<sup>b</sup> Pl. XCIV, No. 4, Frame V | 4<sup>a</sup> Pl. LV | 4<sup>b</sup> Notes on P, Frame V | 9<sup>a</sup> Pl. LIV | 9<sup>b</sup> Motori de' corpi, notes | Frame VI 3 Pl. XVIII, 343 Frame X, 8, Pl. XLVI, 668.—The drawing Pl. LIII is in a portfolio in the library of the Academy (exhibited in 1883).*

42. *Among the drawings by Leonardo in the Gallery of the Ambrosian Library there is only one with a MS. note: 1456.*

43. *Collection of drawings, made by P. Resta, a large bound volume in the Ambrosian Library contains an anatomical drawing with notes by Leonardo.*

44. Munich, Pinacoteca, *a drawing with notes on warfare.*

45. *The collection of drawings made by Vallardi, a large volume in the Library of the Louvre contains a sheet with notes on arms and several drawings by Leonardo, but only two out of these bear on the subjects of this publication: Pl. LXXX and Pl. LXXX, No. 1.*

46. Louvre, *Collection of drawings, mounted on card (not exhibited) see Vol. I p. 297 and No. 594 Note.*

47. Paris, *Collection of drawings in the possession of M. Armand; a drawing with MS. note similar to that at Munich and to that in the Collection of A. Morrison, Esq. London.*

48. British Museum, Printroom. *Several drawings by Leonardo: 1457 and Pl. LII, No. 2 and a drawing with MS. notes on warfare.*

49. *A mounted sheet Pl. LXII, No. 1 664, in possession of A. W. Thibaudeau, Esq. London.*

50. *Collection of A. Morrison, Esq. (see No. 47).*

51. *Collection of the late Prince Henry of the Netherlands; one sheet containing notes and a diagram, referring to Perspective.*

52. *The five Manuscript sheets formerly in the possession of Libri (described in his catalogue of the reserved portion), were bought in 1862 by the Marquis of Breadalbane. After his death they came into the possession of the Hon. Mr. Baillie Hamilton, Langton, Berkshire. Here they seem to have mysteriously disappeared, and I have not been able to trace them any further.*

53. *In the Library of Christ Church Oxford; two mounted drawings preserved in portfolios. The first is marked 4 and has notes on machines, on weight and a sketch of a horseman fighting. The second is reproduced in parts in Vol. I Pl. LIX, Pl. LX, No. 1, Pl. LXI 676, 677.*

54. Modena, Archivio Palatino: No. 1348.

55. *Treatise of Francesco di Giorgio, MS. in possession of Lord Ashburton, with notes in Leonardo's handwriting written on the margin, on Fol. 13<sup>b</sup> 767, on Fol. 25<sup>a</sup> 952, on Fol. 27<sup>b</sup> 44.*

*Others on mechanics &c. on Fol. 15<sup>b</sup>, 32<sup>a</sup>, 41<sup>a</sup> and 44<sup>b</sup>.*
