Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

- Coloured covers/
Couverture de couleur
- Covers damaged/
Couverture endommagée
- Covers restored and/or laminated/
Couverture restaurée et/ou pelliculée
- Cover title missing/
Le titre de couverture manque
- Coloured maps/
Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black)/
Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations/
Planches et/ou illustrations en couleur
- Bound with other material/
Relié avec d'autres documents
- Tight binding may cause shadows or distortion
along interior margin/
La reliure serrée peut causer de l'ombre ou de la
distortion le long de la marge intérieure
- Blank leaves added during restoration may
appear within the text. Whenever possible, these
have been omitted from filming/
Il se peut que certaines pages blanches ajoutées
lors d'une restauration apparaissent dans le texte,
mais, lorsque cela était possible, ces pages n'ont
pas été filmées.
- Additional comments:/
Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

required. Th
method:

The copy filmed here has been reproduced thanks to the generosity of:

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

There will be four Eclipses this year; two of the SUN, near
 the MOON, in the following order, viz:—

1. On the 21st of April, The Moon will be totally and invisibly Eclipsed
 in the morning.

2. On the 22nd of June, The Sun will be partially and visibly Eclipsed—
 Beginning at 5h. 43m.)
 Greatest Obscuration at 6h. 30m. Apparent time in 6h.)
 Ending at 7h. 36m. (morning
 18m.)

3. On the 19th of September, The Sun will be eclipsed invisibly.

at 9h. 5m. in long 5 signs 25° 42' 1/2
 Moon's lat. 1° 24' 1/2

4. On the 30th of October, The Moon will be totally and invisibly eclipsed
 at 10h. 55m. morning.

The Names and Characters of the Twelve SIGNS of the ZODIAC.

♈ Aries, head.	♎ Libra, reins.
♉ Taurus, neck.	♏ Scorpio, secrets.
♊ Gemini, arms.	♐ Sagittarius, thighs.
♋ Cancer, breast.	♑ Capricornus, knees.
♌ Leo, heart.	♒ Aquarius, legs.
♍ Virgo, belly.	♓ Pisces, feet.

The Names and Characters of the PLANETS.

☉ The Sun.	♂ Mars.
☾ The Moon.	♃ Jupiter.
☿ Mercury.	♄ Saturn.

24th do. Saint John.	Easter Monday.
12th August, Prince of Wales'	Easter Tuesday.
birth day.	Whit Monday.
22d Sept. Geo. III crowned.	Whit Tuesday.

Time of going through the Falls.

THE Falls are level (or still water) about three hours and an half on the Flood, and about two hours on the Ebb, which makes it passable four times in 24 hours, about 10 or 15 minutes each time.—No other rule can be given as much depends on the floods in the River St. John, and the time of high water or full sea, which is often hastened by winds, and in the proportion to the height of them.

“ Behold, condensing clouds the sky obscure,
 “ Emitting storms terrific to endure :
 “ Obdurate frost congeals the solid earth,
 “ Yet fire-side converse gives the evening mirth.

First Quarter 3d, at 16 minutes after 4 morning.
 Full Moon 11th, 52 minutes after 6 morning.
 Last Quarter 19th, 19 minutes after 5 morning.
 New Moon 25th, 46 minutes after 8 afternoon.

Cure for the Tooth Ache.

Wash your teeth night and morning, and rinse the mouth after every meal; masticate your food well, keep the head cool, and bathe your face in the morning, and before going to bed, in cool water.

A Golden Rule in Agriculture.

A practical husbandman of the highest authority assures us, that the golden rule of agriculture—to use such manures as will make heavy land lighter, and light land heavier, cold land hotter, and hot land colder—must never be lost sight of. He who knows and follows this rule, and he only is a farmer.

It is but little known, but it is nevertheless a fact, that a little tar rubbed on the necks of young lambs, or geese, will prevent the depredations of Foxes upon them, those animals having an unconquerable aversion to the smell of tar.—So says the Greenock Advertiser.

SIGNALS

Made at PARTWIDGE ISLAND, and repeated at FORT-HOWE, when
Vessels are coming into the Harbour.

- One ball close for one square rigged vessel,
- One ball half hoisted for two do.
- Two balls close, for three do.
- Two balls separated for four do.
- A pendant of any colour, for five do.
- A do. under a ball, for six do.
- A do. over a ball half hoisted, for seven do.
- A do. under two balls close, for eight do.
- A do. between two balls separated, for nine do.
- A flag of any colour, for ten or more do.

[The above are hoisted at the east or west yard arm, according to the quarter the vessel first appears in, with the addition of a ball at the centre of the yard until the vessels can be seen, when one or more of the following descriptive colours will be hoisted at the mast head.]

- An Union for a Flag Ship, with or without a Squadron,
- Do. with a Red Pendant over it, for a Two-decker,
- Do. with a Blue Pendant over it, for a Frigate,
- Do. with a white do. over it, for a small armed Vessel,
- A red Flag pierced white for a Packet,
- A blue Pendant for a Merchant ship,
- A red Pendant for a Merchant brig,
- A white Pendant for a topsail schooner or sloop,
- A Foreign Vessel, a blue and white snake Pendant.

When a Vessel requires a Pilot, her descriptive Pendant will be shewn at a yard arm, instead of the ball.

After a Vessel has been described, and passes the Harbour, her descriptive Pendant will be lowered, half staff, for an hour, and the ball taken down.

A ball at the mast head—vessel is on shore or in distress.—

Should immediate aid be necessary, guns to be fired.

A red Flag pierced white, for the Digby Packet.

A blue Flag pierced white, for the St. Andrew's Packet.

PRIVATE SIGNALS

OF THE PRINCIPAL SHIP OWNERS OF THIS PORT.

William Pagan, & Co. No. 1. Hugh Johnston & Co. Red Bur-
Flag blue and white, vertical.— pec over a blue and white Flag
No. 2. Flag blue and white, dia- diagonally quartered.
onal.

- William Black* - Flag red and white, horizontal.
- Thomas Hanford* - Flag white, with a blue star in the centre.
- Ezekiel Barlow & Sons* - A Ball at the main.
- Thomas Millidge* - St. Helena, with "St. Helena" and x at head. Mungo Park, white Flag with Negro.—Lord Hill & Phœbe, Flag blue and white, diagonal.
- Merritt & Vanhorne* - Flag white and blue, vertical.
- Henry Gilbert* - Sophia, Flag yellow, red and yellow, horizontal. Angerona, Flag red with white cross.
- Crookshank and Johnston* - Flag blue and yellow, quartered.
- David Hatfield* - Ocean, blue Burgee with "Ocean."—Eliza, Flag red white red, horizontal.—Cornwallis, Flag white with two balls in the centre.
- Samuel Wiggins* - Flag blue, pierced white.
- John Ward & Son* - White Burgee, with "Waterloo."
- Caleb & Charles Ward* - Leopard, white Burgee with red border.—Francos, blue Flag with "F" in the centre.
- Craven Calverley* - Flag white with a red cross.
- Fraser & Donaldson* - Flag blue and white, diagonal.
- D. & F. Leavitt* - White Flag, with blue square in the centre.
- Stephen Humbert* - Flag white & red, diagonal.
- Alexander Johnston* - Blue Burgee, over a Flag red and white diagonally quartered.
- Robert Robertson* - Dutch Flag or blue white red, horizontal, main.
- Halsall & Peters* - Flag blue and white, diagonal quartered, with stripe at the head and foot.
- W. Barr, Jun. & Co.* - Flag white with red cross, at the main.
- James Ewing & Co.* - U. Jack at Starboard main-top-fail yard arm.
- G. & C. Raymond* - A Ball at the main-top-gallant yard arm.
- Isaac Woodward* - A Red Burgee.
- Hamilton, Sons, & Co.*—White Flag at the fore-top gallant mast head.
- John M. Wilmot*, Blue Burgee, pierced with a red ball at the fly.
- Peters & Wiggins* - U. Jack at Starboard main-top-gallant yard arm.
- Alexander M'Leod* - An Ensign over a U. Jack, at the main.
- J. D. Seely* - Ball at Starboard fore top-sail-yard arm.
- N. De Veber* - White Burgee, pierced with one large and several small balls, and red stripe at the top and bottom.
- Joshua Hughson* - Flag blue white and red, vertical.
- Thomas P. Williams* - Red, white and red, horizontal.
- Caleb Tonge* - Flag white with two balls and "T" in the centre.

☞ *Such Merchants as will supply their Private Colours to the Signal Post, at Fort Howe, may have them hoisted (instead of the usual distinguishing Pendant) when the Vessels appear in the Offing.*

RATS.—For their destruction, cut a piece of sponge into small pieces; damp them in a little anniseed; then dip them in some melted dripping or fat. Lay them in the places infested, and it will be found equal to the most expensive or troublesome preparation.

Solutions of three Charades in our last
 FIRST.

The faithful *cur* his humble master
 guards,
 How few are those whom happiness
 rewards!
 "The *curfew* tolls the knell of
 parting day,"
 A harmless relic of oppression's
 sway.

SECOND.

This golden *ring* can firmer bind
 than chains,
 Ah, hapless those who struggle
 to be free!
 The tender *dove* shall still an
 emblem be,
 Of nuptial love, which softens all
 our pains,
 Go, gentle *ringdove*, 'midst the
 groves and bowers,
 Thy plaintive notes shall guile
 the tedious hours.

THIRD.

A *pill* is small and spherical,
 And *grim's* my ugly second,
 My whole, in times most clerical,
 A holy *pilgrim* reckoned.

SOLUTION TO THE GENEALOGICAL
 PUZZLE, IN OUR LAST.

A. and B. two neighbours, had
 each a Daughter, after which they
 became widowers.

A married B's. Daughter, and
 B. married A's. Daughter.

A. by his wife had a Son.
 B. by his wife had a Daughter.
 The last parties married each
 other and had a child, which alto-
 gether consist of seven.

QUERIES.

If a woman were to change her
 sex, what religion would she be of?
 What thing is that which is
 lengthened by being cut at both
 ends?
 What is majesty deprived of its
 externals?
 What was yesterday, and will be
 to-morrow?
 What has most legs, a horse or
 no horse?
 What is most like a horse's shoe?
 Why is a glass-blower likely to
 teach the alphabet a pace?
 What is the longest and the
 shortest thing in the world? the
 swiftest and slowest? the most indi-
 visible and the most extended? the
 least valued and the most regretted?
 without which nothing can be
 done? which devours all that is
 small, yet gives life and spirit to
 all that is great?

ENIGMA.

A word there is five syllables con-
 tains,
 Take one away no syllable remains.

ENIGMA.

When Delia thro' the mazy dance
 With me is seen to move,
 You will most certainly confess,
 I all her charms improve.
 Strike off a letter from my name,
 And we shall then accord,
 That many a seed has flown like
 wind,
 To win me for his Lord.
 A letter more struck off, you'll see;
 That e'en a King must bow to me.

EXTRACT.

Lorenzo! does the *beggär sleep*,
 when his buisy fancy is rearing a
 royal edifice? Does the *prisoner*
dream, when he imagines himself
 sauntering in the open fields, or
 wandering in flowery groves? And
 canst thou think thy immortal soul
awake whilst thou art pursuing the

empty shadows and glittering bub-
 bles of worldly happiness? Happy
 as all the wealth and glory of the
 world can make thee—all is but
sleeping—dreaming; and what is
 still more to be lamented, it is sleep
 in a *sinking ship*, when thou shouldst
 vigorously ply the pump—It is
dreaming thou art a *prince*, when
 thou shouldst seek redemption from
vilest slavery.

The case altered.

Tom Case (some do report) was
 lately haltered.
 If this be true, why then the case is
 altered.

Catharine, who was a shrew and fit
 for no man:
 With beating soon became a *gentle*
 woman.

A FABLE TO THE LADIES:

The fair sex once sent a petition to Jove,
 And the bearer was Cupid, the fly god of love,
 Entreating and praying, with might and with main;
 That all might be handsome, instead of some plain.
 The thundering god, turning round to dame Juno,
 "Decide this affair, as 'tis certain that you know
 Best to deal with the sex."—The goddess thus press'd
 Bade vanity dwell in each feminine breast,
 Whose magical power, approaching to woman,
 Has produced the effect you will find written under—
 "The beauteous are more so (as gospel receive it,)
 And those who are ugly will never believe it."

Good Advice.

"Quit your pillow and go about your business, if you have any—is
 its first injunction; if not, seek some. Let the sun's first beams shine on
 your head in the morning and you shall not want a good hat to defend
 you against its scorching rays at noon. Earn your breakfast before you
 eat it, and the sheriff shall not deprive you of your supper. Pursue your
 calling with diligence, and your creditor shall not interrupt you. Be
 temperate, and the physician shall look in vain for your name on his day
 book.—If you have a small farm, or trade that will support your family,
 and add a hundred dollars a year to your capital, be contented and never
 go to *Niagara* to buy land that is to be made on the eighth day of the
 creation."

 Contributions to this department will be peculiarly accepta-
 ble, if in time for our next.

Seasonable Hints to Farmers.

It is presumed you are fully aware of the importance of having good seed selected for planting. This ought to be carefully attended to as it regards the several sorts of vegetables and pulse; but as it regards the different kinds of grain, more particularly wheat, it is of the greatest consequence. By paying suitable attention to the selection of seed wheat, and by having it well prepared before sowing, the crops throughout the country would probably be increased one fourth in quantity. Old experienced Farmers generally prefer the seed of their own raising, or getting a supply from their neighbours, provided it be good. When it is brought from a distance, we cannot ascertain its quality with any degree of certainty. The seeds of many noxious and injurious weeds may be intermixed therewith, which cannot be discerned—besides, it may be questioned whether wheat and other sorts of grain will not depreciate by being sown in a soil different from that on which it was raised. To the several modes of preparing wheat for sowing, we add the following which it seems has been practised by some of the Farmers in Connecticut.—Soak the seed in strong brine from seven to ten days, say a bushel and a half to the acre, skim off the filth that rises on the top, and at the end of not less than seven days, pour off the pickle, mix with it slacked lime and sow it the same day. Several farmers who have prepared their wheat in this manner from five to eight years, and the average crop has been about twenty bushels per acre, free from smut or blast. We repeat that, though these maladies may be guarded against with a degree of certainty in wheat if the seed be good, yet we are confident, that these diseases cannot be eradicated from grain affected therewith, and if sown, they will increase until the crop is run out. This we have learned by experience.

To increase a Barley Crop.

Dissolve three pounds of copperas in a pail-full of boiling water, add to this as much dung puddle water as will cover three or four bushels of barley, stir it and let it steep for four and twenty hours; when the seed is spread and drained, sift on fine lime which fits it for sowing. Barley grows well on almost all kinds of soil, if properly managed but that which is moderately light is perhaps the most suitable. The land should be well subdued by previous tillage, and well heated with dung, lime, ashes or other hot manures, if you would have an abundant crop.

As a necessary preparation of *Rye*, for sowing, observe the following directions: Salt is to be dissolved in water until an egg will swim, then half as much more is to be added and the seed put to steeping; after twelve hours, an ounce of alum to every gallon is to put in, and the whole stand twelve hours longer, the liquor must be drawn off and the rye spread on the floor and covered thick with slacked lime sifted on it, and stirred until the whole is impregnated therewith, after which it is to be immediately sown. It is said there is not much danger of rye's blasting if managed in this manner, except only from local causes, such as barberry bushes which ought to be eradicated from the borders of fields as they will assuredly bring a blast.

We have read of a Farmer, who for some reason being obliged to be early, sowed oats at break of day, and harrowed all in before sunrising. He observed that the oats sown thus early, outstripped the other oats sown on the same day after the day was come on, grew taller, had a larger head, and appeared every way better, although that part of the land which was sowed early, if there was any difference was the poorest side. Our author continues, it is agreeable to reason that it should do good. For the dews are impregnated with nitrous salts and is the principal thing which enrich the ground when it lies fallow; this dew being harrowed in with the seed may promote its growth. If the seed were sown in the evening so as to lie all night to be soaked and softened by the dew, and then harrowed in the morning *thou knowest not whether shall prosper, this or that*; it may therefore be best to make trial of both ways.

While upon the subject of the culture of grain, we would add the following statement, published in the papers some months since: I Daniel Hussey, of Fairfax, do testify and declare, that in the summer of 1816, I put out a piece of wheat to be reaped by the word to Samuel Rollins; after reaping we measured the land with line, and it contained an acre and twenty rods and no more. In January, Perrin Read, of Fairfax, helped me thresh the same wheat and it measured sixty-four bushels and a half. The land was ploughed once in July, the year before, and cross ploughed in the fall. In the spring of 1816, it was ploughed twice before sowing, and two bushels and a half of seed were sown on said piece. The land was a yard for my cattle for two summers before and was not otherwise manured.

Hints suggested to Farmers when the latter Harvest is coming to maturity.

Do not be in haste to cut your stalks—you will lose very little by letting them stand till they lose their deep green colour, begin to turn yellow, and become dry at the extremities: And till this stage, they are needed to nourish the ear. The sap of the upper stalk is absorbed, and is necessary to the perfection of the grain as the lower stalk. If you cut your stalks before they begin to lose their deep green colour, some of the ears will be in the milk. These, by being deprived of the nourishment of the upper stalk, will shrink and blast. Other ears, which are more forward, will blast an inch or two at the end. By cutting your stalks early, you will lose more in the grain than you will save in fodder.

Corn ripens sooner when the stalks are not cut. When the corn is completely ripe, the ear falls, and hangs by a withy stem difficult to be broken. The ear falls much sooner when the stalks are suffered to stand, than when they are cut. This may be seen in a field where part of the rows are cut. Where they are not cut, the picking will be a little more difficult, as the ears are not so easily broken off; but where the stalks are cut, the stems remain green and brittle. This proves that the early cutting of the stalks retards the ripening.

The stalk is thought to be a security against frost.

If the frost comes early before your stalks are cut, the best practice undoubtedly is, to cut the corn immediately up, at the roots, and put it up in small stacks. This prevents the corn from being frozen by frost, after frost, and the soft corn will be preserved from all injury after the first.

It is well known that corn will save perfectly well, when cut up in the milk, and some farmers have resolved to cut up their corn by the end of September, whether frost comes or not. Perhaps they risk less by letting it stand.

Potatoes.

A French agriculturist, for the Potatoes that he intends to keep for the Spring consumption, adopts this method.—He immerses them once or twice in boiling water, to destroy the vegetable life, dries them in a cool oven, and puts them in sacks, he keeps without difficulty and loss this precious root, until new potatoes come in. M. Pollard, of St. Genevieve aux Bois, in France, plants in sandy soils his potatoes in the autumn, from which he has found the crops much more abundant than spring planting; he has made the experiment for several years, and on the last year on a grand scale; the potatoes are much larger, more numerous, and of a better quality than from spring sowing.

Cows.

Is there any room to doubt, that the profits of our dairies may be greatly augmented by a proper attention to the breed of milch cows? There is said good keeping makes good cows, yet those who say it are in their own cowyards frequently a single cow, not bigger or better fed than others, giving double the quantity of milk. It is very careless and stupid to go on rearing the calves from poor cows, in preference to those

from good cows, yet this is pretty generally done, because the excellent cows bring excellent fat calves for the market. Their good or bad qualities are undoubtedly, as well as their color and size—at least in a very considerable degree. Why should we scruple this, any more than the improvement of the breed of horses? The bull is to be chosen with no less care than the cow. The best cows for milk may be reared as certainly as horses for race or draught—and in a dairy country, the total neglect of this important care is shameful and unaccountable.

Fattening of Hogs.

The disuse into which the cultivation of Maize or Indian Corn is rapidly falling, may be considered very advantageous to the agricultural prosperity of this Country. The very great expence of labor bestowed upon this culture, the neglect of wheat, rye, barley and oats, in consequence of an attention to it, the uncertainty of the crop, arising from the sudden transitions of its climate—and above all, a mistaken estimate of its value, are circumstances which contribute to render the raising of Indian Corn, the very worst sort of husbandry for the northern climates. An idea is entertained among the common farmers, that swine cannot be fattened without it: this we apprehend is an error. One would suppose there never was any good pork or bacon in Great-Britain or France, where Indian Corn is seldom or never seen.

Let us inquire how hogs are fattened in England. It may be beneficial to us, if it only eradicates our prejudices in favor of Indian corn.

Coarsely ground oats, barley-meal, pea-meal or peas unground, beans either whole or broken, are commonly used. Beans contain a greater quantity of nutrition in the same bulk, than almost any sort of grain.—A Winchester bushel of peas may add about nine or ten pounds to the weight of a good hog of twenty score, or perhaps something more upon a large or considerable less upon one of smaller size. A hog, when put up to fatten in good condition, (and they should never be put up in a contrary state) which, when fat will weigh twenty score, will consume in the proportion of six or seven bushels of peas or other similar materials.

A practice has recently found its way into Essex and the other parts of England, of fattening swine, which has been found extremely beneficial, viz. that of feeding large hogs in separate stalls, so constructed that the animal can at his pleasure conveniently get up, or lay down, but cannot turn round. The stalls are upon an inclined plane, from the head to the tail of the animal, and are cleaned out every day. Barley meal mixed with water is the food; and a pig forward in flesh, weighing seventy pounds, shall in twenty-three days increase its weight to an hundred and forty pounds: the gain of seventy pounds live weight may be called forty five pounds dead, which at 8d per pound is 7s. 6d sterling per week.—The quietness of these styes causes them to fatten more quickly, as they have only to eat and sleep.

The most profitable method of converting grain of any kind into food for hogs, is to grind it into meal and mix this with water in the proportion of five bushels to one hundred gallons, stirring it thoroughly several

times a day for three weeks in cold weather, or for a fortnight in a warmer season, by which it will have fomented well, and become acid; till which time it is not ready to give. This mixture must always be stirred immediately before feeding, and two or three cisterns should be kept for fomenting in succession. The difference between feeding in this manner and giving the grain whole, or partially ground, is so profitable, that whoever tries it once will not be apt to change it. Pea soup given in winter, milk warm, is an excellent food, nearly if not quite equal to the above. The food, of which ever kind, must be given to animals in such sufficiently short intervals as to keep them in a state of rest; since on this principle it is that they become fat in an expeditious manner.

Rearing Calves,

Boil half a pint of flaxseed in two quarts of water, ten minutes, to a jelly; then add skim milk enough for three calves, and the same proportion of seed for any number of calves. This food given to them twice or thrice a-day when quite young, makes them healthy and vigorous; and is prepared with less trouble than either broth or hay tea. This method is now practised by a Farmer in this vicinity, with good effect, who took the plan from *The Farmer's Assistant*, page 151, which also says, that flaxseed jelly with hay tea is good without milk—*Stock-bridge paper.*

Method of expeditiously fattening Chickens.

Take, for that purpose, a quantity of rice, and grind or pound it into a fine flour; mix sufficient for present use with milk and a little coarse sugar; stir the whole well over the fire, till it makes a thick paste; and feed the chickens, in the daytime only, by putting as much of it as they can eat, but no more, into the troughs belonging to their coops. It must be eaten while warm; and, if they have also beer to drink, they will soon grow very fat. A mixture of oatmeal and treacle, combined till it crumbles, is said to form a food for chickens, of which they are so fond, and with which they thrive so rapidly, that at the end of two months they become as large as the generality of full grown fowls fed in the common way.

Young Turkeys.

It is well known that young Turkeys are very tender animals, and that exposure to cold and wet is almost certain death to them. An experienced friend assures us, that a certain way to avoid this, is to take from the nest all the first eggs; the consequence will be, that the young brood comes forward later in the season, when the weather is milder, and better suited to their tender constitutions, and thus nearly all of them may grow up to maturity. The person who communicates this hint, has for several seasons put it in practice, and always found it completely successful.

Rules for Plucking Geese.

Geese destined for breeding in farm-yards, and which are what are called old geese, may indeed be plucked thrice a year without inconvenience, at an interval of seven weeks; but young ones, before they are subjected to this operation, must have attained to the age of thirteen or fourteen weeks, and especially those soon destined for the table, because they would become meagre, and lose their quality.

Shearing of Sheep.

The following method has been found effectual. Immediately after the Sheep are shorn soak the roots of the wool that remain, all over with oil or butter and brimstone; and three or four days afterwards, wash them with salt and water, and the wool of the next season will not only be much finer and softer; but the quantity will be much enlarged; and it may be depended on that the Sheep will neither be troubled with the scab or vermin that year.

Lima and Frost Beans.

It often happens that early frosts destroy the vines of these beans before they are sufficiently ripe for seed. When a good number of pods are set on each hill; cut off the ends of all the vines with a sharp knife. This operation must be repeated several times during the season.—The whole nourishment will then go to the pods that are set, and they will ripen early.

Manure.

Every farm contains waste corners, and borders of fields, banks of brooks or ponds, &c. at this season of the year are covered with a luxurious growth of weeds. When the hay and grain are secured; let the farmer mow them down and cast them into the barn-yard or hog-stye. By the next spring he will have on hand a supply of good manure, which would otherwise have been seeding his land with noxious weeds.

Receipt for making Cider, and preserving it sound for years.

All apples fit to be eaten will make good cider. The grand secret is in cleansing it from the filth and drags as early as possible. Each sort of apples are to be beaten and pressed by themselves.—Two kinds of juice, both good, would if mixed often make bad cider.—Throw out all imperfect sorry, and sun burnt apples, as well dust and trash.—Beat your

Apples before much mellowed, as they lose their strength, roundness and spirit; if too mellow—Let them stand half a day after being beaten before put into the press; then press them slowly; discontinue it as soon as the juice discharged appears to grow thin and watery. The advantage of a slow pressure is in making the liquor run pure. Let your casks, previously well cleansed, be filled quite full to permit the froth and pumice to discharge itself at the bung. When the fermentation abates, cover the bung closely with something that may be lifted by the fixed air that escapes during the future fermentation—In a week rack off the cider carefully, ceasing the moment you observe it to run muddy. Now stop the cask more firmly. In ten days rack it off a second time, and in fifteen days the third time. In every instance the casks are to be clean and perfectly filled, and when filled for the last time to be bunged close: placed in a deep dry cellar, never to be moved until drawn for use. Late cider need not be racked until March, and then one racking, or at most two, will be sufficient. Be very careful that no water, not even the little that will adhere after rinsing the cask, is mixed with the cider. The smallest quantity of rain water will render cider unfit to keep. The addition of any quantity of distilled spirits is not only useless but injurious.

This plan is the result of long experience and is known to keep for years.

Various plans for clarifying cider to prevent its pouring by means of milk, Isinglass, scalding and scumming, filtering through sand, &c. &c. are found all useful, but frequent racking or drawing is far preferable to any other method.

To preserve Eggs for a Length of Time.

Put an Egg for one minute in water just about to boil (it will not in that time be hard) and it will afterwards keep well for a month. Steep one a little while in sweet oil, and it will keep for half a year.

Receipt for White Paint.

Take Plaster of Paris, very finely ground put it into a common pot or kettle, and hang it over a moderate fire to boil or dry it; stir it continually, to prevent it from burning, until it boils like baby pudding. When it is loiled enough, mix it with other paint; for the first coat, half plaster, and half whiting; for the second coat, plaster with a small quantity of white lead; and for the third, which will be light, about half plaster and half lead. This makes an excellent paint, far preferable to that made of white lead for duration. A less quantity of lead would answer, but the paint would not be so smooth and nice.

Domestic Economy

The following proportions of sugar salt
famed Hambro pickle, which was kept for
usually is hot as well as cold climates

- Six pounds of Salt,
- Eight ounces of Brown Sugar,
- Six ounces of Salt-petre.

Dissolve these by boiling them in four gallons
of water, when perfectly cold, keep the bottles
stopped close.
