## TABULATION OF PUBLISHED DATA ON SOVIET ELECTRON DEVICES

CHARLES P. MARSDEN

---

U. S. DEPARTMENT OF COMMERCE  
NATIONAL BUREAU OF STANDARDS

## THE NATIONAL BUREAU OF STANDARDS

### Functions and Activities

The functions of the National Bureau of Standards are set forth in the Act of Congress, March 3, 1901, as amended by Congress in Public Law 619, 1950. These include the development and maintenance of the national standards of measurement and the provision of means and methods for making measurements consistent with these standards; the determination of physical constants and properties of materials; the development of methods and instruments for testing materials, devices, and structures; advisory services to government agencies on scientific and technical problems; invention and development of devices to serve special needs of the Government; and the development of standard practices, codes, and specifications. The work includes basic and applied research, development, engineering, instrumentation, testing, evaluation, calibration services, and various consultation and information services. Research projects are also performed for other government agencies when the work relates to and supplements the basic program of the Bureau or when the Bureau's unique competence is required. The scope of activities is suggested by the listing of divisions and sections on the inside of the back cover.

### Publications

The results of the Bureau's research are published either in the Bureau's own series of publications or in the journals of professional and scientific societies. The Bureau publishes three periodicals available from the Government Printing Office: The Journal of Research, published in four separate sections, presents complete scientific and technical papers; the Technical News Bulletin presents summary and preliminary reports on work in progress; and the Central Radio Propagation Laboratory Ionospheric Predictions provides data for determining the best frequencies to use for radio communications throughout the world. There are also five series of nonperiodical publications: Monographs, Applied Mathematics Series, Handbooks, Miscellaneous Publications, and Technical Notes.

A complete listing of the Bureau's publications can be found in National Bureau of Standards Circular 460, Publications of the National Bureau of Standards, 1901 to June 1947 (\$1.25), and the Supplement to National Bureau of Standards Circular 460, July 1947 to June 1957 (\$1.50), and Miscellaneous Publication 240, July 1957 to June 1960 (includes Titles of Papers Published in Outside Journals 1950 to 1959) (\$2.25); available from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

## TABULATION OF PUBLISHED DATA ON SOVIET ELECTRON DEVICES

Charles P. Marsden

NBS Technical Notes are designed to supplement the Bureau's regular publications program. They provide a means for making available scientific data that are of transient or limited interest. Technical Notes may be listed or referred to in the open literature.

## Foreword

This tabulation of published data on Soviet electron devices has been prepared as part of the National Bureau of Standards Electron Devices Data Service. Established in 1948 to provide technical data on radio tubes to members of the Bureau staff, the service has since been extended to other scientists and engineers in government and industry. In the course of the program, a large volume of information on tubes, transistors, diodes, and other electron devices has been accumulated on punched cards. To make this information more readily available, a system has been worked out for automatically tabulating the data in handbook form. Previous tabulations include Tabulation of Data on Receiving Tubes, NBS Handbook 68 (1959); Tabulation of Data on Microwave Tubes, NBS Handbook 70 (1961); and Diode Source Book (published by Semiconductor Products magazine, (1961).

The present tabulation is the result of compilation efforts extending over the past four years. All the included information was taken from published specifications, and every effort has been made to ensure accuracy and completeness. However, the Bureau cannot assume responsibility for omissions nor for results obtained with these data.

A. V. Astin, Director.

# Tabulation of Published Data on Soviet Electron Devices

Charles P. Marsden

This tabulation includes published data on Soviet electron devices as collected from various publications, mostly handbooks published by the various ministries and institutes of the USSR. Information is given on all active devices ranging from receiving to microwave devices, semiconductor devices, and various miscellaneous devices such as, for example, photographic flash tubes and thermistors.

## 1. Introduction

The increased circulation of published literature from the USSR and the importation of Soviet equipment has created a need for factual information on Soviet electron devices. To satisfy this need, the National Bureau of Standards Electron Devices Data Service has prepared the present tabulation in a format that could be reproduced directly from punched cards. The advantages of the use of these cards include the elimination of errors possible with other methods of reproduction, flexibility in adding or deleting information, and uniform columnar presentation.

The sources of the data are the various publications produced in the USSR and include books published by the various ministries, and technical magazines. This information has been intercompared and correlated to eliminate errors and thus assure that this tabulation is as accurate as possible. Because of this intercomparison, references for the data are not given, as data for any one type of device may have been derived from several sources.

## 2. Description of the Tabulation

In each group the type numbers are arranged in alpha-numerical order in which the first numerical part of the type number is the prime sorting means. Alphabetical prefixes are the secondary sorting means and alphabetical postfixes are the tertiary means. For example in the numerical list, these type numbers will be found in the following order:

V1-0.1/40	SG2S
VT1	TO-2
1A2P	2A1

Alphabetical sorting is performed according to the English alphabet rather than the Russian which was transliterated according to the recommended practice of the Library of Congress as shown below:

A	A	K	K	T	T
Б	B	Л	L	Ү	U
В	V	М	M	Ф	F
Г	G	Н	N	Х	Kh
Д	D	О	O	Ц	Ts
Е	Ye	П	P	Ш	Sh
Ж	Zh	Р	R	Ә	E
И	I	С	S		

This transliteration was necessary to put the information on punched cards and it is believed that it will cause little difficulty in use.

### 3. Organization of the Tabulation

The tabulation is divided into 24 groups, each with a different format and different columnar headings so that the maximum pertinent data may be included. These groups and their column headings are shown in Figure 1.

Group I is a numerical listing of all type numbers in the complete tabulation and also includes discontinued and obsolete types. All these types are defined by the same three-letter code to indicate the kind and type of tube. Furthermore, under the heading "Group No.", Roman numerals are used to show the group number under which the data for a type will be found. In the last column, the GOST (State National Standard) Specification Number (followed by the year of publication of the specification) is shown for the type number. These specifications include the information in and follow the format of the domestic military specifications.

This group is also an interchangeability list and known similar types are shown. Further, by means of the following symbol code, the manufacturing area and the obsolescence of the type are indicated.

- \* Domestic manufacture
- # European "
- ¤ Russian "
- @ Obsolete or inactive

The above definitions of these symbols are pertinent only to their use in Group I. Due to the limitation of available symbols on listing equipment, these same symbols are used in the other groups but are then defined as shown at the end of the definitions under the paragraph entitled "Code" (p. 4).

The other groups have titles describing the particular class of

devices listed therein. As mentioned previously, the individual type numbers are arranged in the same alpha-numerical order.

Under each heading of the group format, the unit of measurement most common for the characteristic is shown. For example under the heading of Maximum Plate Current ( $I_p$ ), the unit in the heading is ma (milliamperes). However, where the data are in amperes, the value will be tabulated with the number followed by the letter "A", e.g., 15A. All these changes of units are included in the list of alphabetical symbols under code on pages 3 to 5.

A blank in any column indicates that no value was given in the available data.

Group XXIV, "Bases", lists the basing connections for the particular "Base No." of the previous groups by a system compatible with punched cards.

Instead of the usual base diagram or line drawing, the number of each base pin is given in the column under the symbol of the electrode. This system was developed because many of the Soviet types have base connections which do not conform to the standard base designations of the Electronic Industries Association. In those instances where an electrode is connected to more than one base pin, only the lowest numbered pin is shown in the tabulation.

Outline drawings are shown for the semiconductor diodes and transistors. Similarly photographic outlines are included for counter tubes.

#### 4. Terminology used in the Tabulation

##### 4.1 Column Headings

The headings used in the various formats are the standard symbols as defined by the Institute of Radio Engineers or descriptive words for the characteristics. They are not further defined due either to the difficulties of translation or lack of definite information.

##### 4.2 Bulb Size

This column heading, which is used in the Receiving, Power, Rectifier, etc. Groups, uses a special code to describe the bulb shape and size. The numerical part of the code indicates the diameter of the glass bulb or metal anode (power tubes) in eighths of an inch according to the American standard. The alphabetical part of the code is explained on the following page.

PREFIX	POSTFIX
A - Air-cooled anode	B - Button glass stem
C - Ceramic construction	F - Flat press glass stem
G - Globe-shaped bulb	
F - Flat top of Soviet design	
H - Helix-shaped flash tube	
M - Metal tube	
P - Spiral	
R - Ring-shaped	
S - ST design, i.e., the domed conical shaped glass bulb	
T - Cylindrical shape	
U - U-shape flash tube	
W - Water-cooled anode	

For example, a "T3F" would be a cylindrical bulb with a flat press and having a diameter of 3/8 inch.

#### 4.3 Code

Due to the limitations of available columns in the punched card, one- to three-letter codes have been liberally developed and used in the tabulation. These have been chosen to be readily understood. The following table lists the definitions of this code for all groups in alphabetical order.

Code	
A Change of unit to amperes	AR Argon gas-filled
ACO Acorn tube	ARC Arc rectifier - Mercury pool
AF { Audio frequency Forced air cooling	BA Barium (metal) cathode
AHE Argon-helium gas-filled	BAG Beta and gamma radiation
AHN Argon-helium-neon gas-filled	BAL Ballast or current regulator
AKN Argon-krypton gas-filled	BAO Barium oxide cathode
AMK Aluminum-Magnesium alloy with potassium surface	BEA { Beam pentode With beam pentode, e.g., triode beam pentode
AN Natural air cooling	BET Beta radiation
AO Argon-oxygen gas-filled	BL Blue luminescence

## CODE

C	Circular dynode arrangement Common collector operation Cold cathode Continuous wave operation	ELM Electromagnetic focus or deflection
CAM	Copper-aluminum-magnesium	ELS Electrostatic focus or deflection
CN	Converter	F Filamentary cathode
COM	Comutator tubes Compensation of temperature thermistors	FE Iron cathode - counter tube
CON	Temperature control	FLS Flash tube (photographic)
COU	Counter tube	G Giga ( $10^9$ )
CP	Cap, external in tabulation of bases	GAM Gamma radiation
CS	Cesium photo surface	GAN Germanium alloy, n-type
CSB	Cesium antimony photo surface	GAP Germanium alloy, p-type
CU	Copper cathode - counter tube	GDP Germanium diffused junction, p-type
CYL	Cylindrical shape (Thermistors)	GE Germanium
DBA	Double anode beam pentode	GEA Germanium alloy junction
DEC	Decatron	GEP Germanium point-contact
DET	Detector operation	GPP Germanium point-contact, p-type
DIO	Diode With diode, e.g., triode diode	GR { Green luminescence Graphite cathode-counter tube
DSC	Disc shape	GS Gas-filled
DUO	Double, e.g., double diode with separate cathodes	GSP Germanium surface-barrier, p-type
DWD	Duo diode (single cathode) With duodiode, e.g., triode duodiode	GTB Gated beam pentode
E	Common emitter operation	H { Heater type cathode Hecto ( $10^2$ )
EL	Electrometer tube	HE Helium gas-filled
		HG Mercury vapor-filled

## CODE

HH	Mercury-argon-hydrogen gas-filled	MOD	Modulator
HK	Hydrogen-krypton gas-filled	N	Nano ( $10^{-9}$ )
HY	Hydrogen gas-filled	NA	Neon-argon gas-filled
IC	Iconoscope	NE	Neon gas-filled
ID	Indicator tube	NEH	Neon-helium gas-filled
IF	Intermediate frequency	NI	Nickel cathode
IGN	Ignitron tube	NK	Neon-krypton gas-filled
IM	Image orthicon	NSP	Nuclear Spectrometry
J	Joules	OD	Double beam oscilloscope
K	{Kilo ( $10^3$ ) Potassium	OS	Oscilloscope
KLY	Klystron	P	Pulse operation
KX	Krypton-xenon gas-filled	PA	Power amplifier
L	Linear dynode arrangement	PB	Purple-blue luminescence
LAM	Light	PEN	Pencil tube
LIT	Lighthouse	PHC	Photoconductive diode
LO	Long persistence screen	PHM	Photomultiplier
M	{Mega ( $10^6$ ) Milli ( $10^{-3}$ )	PHO	Phototube
MAG	Magnetron	POW	{Pentode With pentode e.g., triode-pentode
MD	Medium persistence screen	PTG	Pentagrid
MEA	Temperature measurement	REC	Rectifier
MG	Magnesium cathode	REG	Regulator (voltage)
MX	{Mixer	RD	Red luminescence
MIX		RF	Radio frequency
MO	Molybdenum cathode	ROC	Rocket tube

## CODE

S1-S7	Spectral sensitivity of photo surface	TV	Television tube
S	Max. dimension of cathode ray tube face	TWN	Twin with separate cathodes, e.g., twin triode
SM	Secondary emission pentode	TWT	Traveling-wave tube
SAN	Silicon alloy, n-type	U	{Micro ( $10^{-6}$ ) U-shaped
SAP	Silicon alloy, p-type	UF	Ultra high frequency
SCC	Scintillation Counters	V	Venetian-blind dynode arrangement
SDN	Silicon diffused junction, n-type	VC	Vacuum
SH	Short persistence screen	VB	Violet-blue luminescence
SI	Silicon	VI	Vidicon
SIA	Silicon alloy junction	VID	Video detector
SIN	Single e.g., single triode	W	{Change of units to watts Tungsten cathode Water-cooled
SIP	Silicon, point contact	WG	Wave guide coupling
SM	Secondary emission pentode	WH	White luminescence
SN	Tin cathode-counter tube	X	Smallest dimension-rectangular photocathode
SQ	Self-quenching type of counter tube	XE	Xenon gas-filled
T	Thoriated tungsten cathode	YO	Yellow-orange luminescence
TET	Tetrode	3C	Three color screen for television
THM	Thermocouple tube	*}	The meaning of these symbols
THY	Thyatron	#}	indicated in the column heading
TMS	Thermistor	□	Less than (before digits)
TRD	With triple diode	@	Obsolete type
TRI	{Triode With triode e.g., pentode-triode

U. S. DEPARTMENT OF COMMERCE  
Luther H. Hodges, Secretary

NATIONAL BUREAU OF STANDARDS  
A. V. Astin, Director

## THE NATIONAL BUREAU OF STANDARDS

The scope of activities of the National Bureau of Standards at its major laboratories in Washington, D.C., and Boulder, Colorado, is suggested in the following listing of the divisions and sections engaged in technical work. In general, each section carries out specialized research, development, and engineering in the field indicated by its title. A brief description of the activities, and of the resultant publications, appears on the inside of the front cover.

### WASHINGTON, D. C.

**Electricity.** Resistance and Reactance. Electrochemistry. Electrical Instruments. Magnetic Measurements. Dielectrics. High Voltage.

**Metrology.** Photometry and Colorimetry. Refractometry. Photographic Research. Length. Engineering Metrology. Mass and Scale. Volumetry and Densimetry.

**Heat.** Temperature Physics. Heat Measurements. Cryogenic Physics. Equation of State. Statistical Physics. **Radiation Physics.** X-ray. Radioactivity. Radiation Theory. High Energy Radiation. Radiological Equipment. Nucleonic Instrumentation. Neutron Physics.

**Analytical and Inorganic Chemistry.** Pure Substances. Spectrochemistry. Solution Chemistry. Standard Reference Materials. Applied Analytical Research. Crystal Chemistry.

**Mechanics.** Sound. Pressure and Vacuum. Fluid Mechanics. Engineering Mechanics. Rheology. Combustion Controls.

**Polymers.** Macromolecules: Synthesis and Structure. Polymer Chemistry. Polymer Physics. Polymer Characterization. Polymer Evaluation and Testing. Applied Polymer Standards and Research. Dental Research.

**Metallurgy.** Engineering Metallurgy. Microscopy and Diffraction. Metal Reactions. Metal Physics. Electrolysis and Metal Deposition.

**Inorganic Solids.** Engineering Ceramics. Glass. Solid State Chemistry. Crystal Growth. Physical Properties. Crystallography.

**Building Research.** Structural Engineering. Fire Research. Mechanical Systems. Organic Building Materials. Codes and Safety Standards. Heat Transfer. Inorganic Building Materials. Metallic Building Materials.

**Applied Mathematics.** Numerical Analysis. Computation. Statistical Engineering. Mathematical Physics. Operations Research.

**Data Processing Systems.** Components and Techniques. Computer Technology. Measurements Automation. Engineering Applications. Systems Analysis.

**Atomic Physics.** Spectroscopy. Infrared Spectroscopy. Far Ultraviolet Physics. Solid State Physics. Electron Physics. Atomic Physics. Plasma Spectroscopy.

**Instrumentation.** Engineering Electronics. Electron Devices. Electronic Instrumentation. Mechanical Instruments. Basic Instrumentation.

**Physical Chemistry.** Thermochemistry. Surface Chemistry. Organic Chemistry. Molecular Spectroscopy. Elementary Processes. Mass Spectrometry. Photochemistry and Radiation Chemistry.

**Office of Weights and Measures.**

### BOULDER, COLO.

**Cryogenic Engineering Laboratory.** Cryogenic Equipment. Cryogenic Processes. Properties of Materials. Cryogenic Technical Services.

### CENTRAL RADIO PROPAGATION LABORATORY

**Ionosphere Research and Propagation.** Low Frequency and Very Low Frequency Research. Ionosphere Research. Prediction Services. Sun-Earth Relationships. Field Engineering. Radio Warning Services. Vertical Soundings Research.

**Radio Propagation Engineering.** Data Reduction Instrumentation. Radio Noise. Tropospheric Measurements. Tropospheric Analysis. Propagation-Terrain Effects. Radio-Meteorology. Lower Atmosphere Physics.

**Radio Systems.** Applied Electromagnetic Theory. High Frequency and Very High Frequency Research. Frequency Utilization. Modulation Research. Antenna Research. Radiodetermination.

**Upper Atmosphere and Space Physics.** Upper Atmosphere and Plasma Physics. High Latitude Ionosphere Physics. Ionosphere and Exosphere Scatter. Airglow and Aurora. Ionospheric Radio Astronomy.

### RADIO STANDARDS LABORATORY

**Radio Physics.** Radio Broadcast Service. Radio and Microwave Materials. Atomic Frequency and Time-Interval Standards. Radio Plasma. Millimeter-Wave Research.

**Circuit Standards.** High Frequency Electrical Standards. High Frequency Calibration Services. High Frequency Impedance Standards. Microwave Calibration Services. Microwave Circuit Standards. Low Frequency Calibration Services.
