PREFATORY NOTE

THE present exhibition of Ancient Egyptian Art has been gathered together and arranged by a joint committee of the Club and of members of the Egyptian Exploration Society.

The interval of five-and-twenty years that has passed since the Club held an exhibition of the kind, has not only seen great changes in the condition of such studies, but is also long enough to produce a new generation of collectors and of others interested in the earlier phases of man's culture. The tendency of to-day towards the primitive, whether in the absolute or relative sense, is, like every popular phase, capable of dangerous exaggeration, and the danger is the greatest where the apostles of new cults are as limited in knowledge as in other directions, except that of vocal expression. The truly primitive in Egyptian art holds but a small place in the present exhibition, and in its presentments and methods seems so remote from the later and accepted styles that some authorities even suggest an independent origin. But whether the two are connected by the processes of evolution or not, they have at least the bond of country.

The later and normal art of Egypt doubtless seems to the more casual observer to have remained for centuries in a crystallized state. Careful study shows that this is by no means the case. Nothing, in fact, is so remarkable in any country, except perhaps in China, as the strength

ANCIENT EGYPTIAN ART

and virility of the productions of the earlier dynasties as compared with later work. In China, however, art eventually fell to a lower degree of mere prettiness than is ever found in Egypt.

It is unquestionable that no true idea of the real grandeur of the art of ancient Egypt can be formed except by visiting the country. But, short of that, the present exhibition may claim to be a very comprehensive exposition of what her long-dead artists and craftsmen could do in the minor arts; of a few pieces in the gallery even more might be said.

The Exhibition Committee desire to put on record their indebtedness to Mr. Percy E. Newberry and Dr. H. R. Hall for the admirable work they have done in cataloguing the exhibition.

INTRODUCTION

IT has been a dogma of writers on art that a “work which can be proved to serve any utilitarian, non-aesthetic object must not be considered as a genuine work of art.” If this test were applied to the productions of the Ancient Egyptian studios or workshops, then it would have to be confessed at once that no “genuine” works of art were produced by the dwellers on the banks of the Nile. The Egyptians were an eminently practical people, and their art was the outcome of the practical business of life. Possessing in a high degree the decorative instinct, they delighted to ornament the objects of everyday life—the weapons with which they fought, the vessels from which they drank, the houses in which they dwelt. But they were not idealists like the Greeks, they did not seek to generalize and to idealize the human figure. They endeavoured to copy nature, to transcribe it; they were realists. In some features the art was also fantastic, for the artist produced hybrid creatures that existed only in his imagination. Some of the gods were originally animals, and in course of time they became anthropomorphic; they were conceived as animal-headed with human bodies, and are so represented in the paintings and sculptures. But the result was in a sense realistic, for both the animal head and the human body were direct transcripts from nature. It is the same with the sphinxes, only in these fantastic creatures the process

ANCIENT EGYPTIAN ART

was reversed, a human head on the body of an animal, but both were equally faithful copies from nature.

Apart from the decorative instinct that is common to all the people of the world, two main motives appear to have underlain the work of Egyptian artists. The first was the desire to convey information. This motive is most clearly shown in the paintings and sculptures in low relief. Nearly all the paintings and sculptured reliefs on the walls of the temples are accompanied by hieroglyphic legends, which are explanatory of the scenes. Above or at the side of a figure of a man is written his name and titles. If some action is represented, then this action is described. If the Pharaoh is depicted smiting an enemy, then the name of the Pharaoh and the name of his foe will be given. It is curious to see how picture-signs are used to explain the larger pictures. The hieroglyphic signs themselves are small conventionally drawn pictures of natural or artificial objects; the hieroglyphic system of writing is itself a picture system. Writing originated in drawing. The Egyptian artist was necessarily a draughtsman before he became a scribe. The picture-sign denoting "painter"—a palette with colours and brushes—means also a "scribe." That the main purpose of the paintings and sculptures in low relief was to convey information, not simply to portray what is beautiful, is very clearly shown by this intermingling of the descriptive legends among the figures and scenes.

The second motive underlying Egyptian Art was a religious one, based on the belief that when a man died his spirit, the counterpart of the body, lived on in a spirit world, a world conceived to be similar in all respects to that from which the dead man had departed. As the spirit could have no existence without some kind of body to reside in, and as the earthly body would decay and fall into dust, a substitute had to be provided for it. This substitute was the statue—"Spirit-statue" it was called in Egyptian—which was carved and painted so as to resemble the dead man. The sculptor was named the "Vivifier," and

INTRODUCTION

the word denoting the act of carving a statue meant also "to give birth," to create. This materialistic conception of the after-life gave rise to the elaborate burial ceremonies which are so often represented on the monuments. The spirit statue had naturally to be provided with a spirit residence, hence the house modelled on the earthly dwelling that was erected over the pit in which the dead man's body was interred. The spirit house had to be furnished, hence the furniture that was buried in the tomb. The dead man had to be provided with a staff of attendants, hence the statuettes of the servants engaged in their several occupations that are found in the tombs of the Pyramid Age and Middle Kingdom. The paintings and sculptured reliefs in the tombs were due to the same belief; they were spirit pictures, and the dead man could by the help of magical formulae enjoy the life that is depicted in the scenes. It was by this means that the spirit could engage in the hunting of wild animals, play games, watch his artificers at work, inspect his fields, and employ himself in the various occupations of daily life. This was the idea that underlay all the paintings in the tombs; the arts of painting and sculpture were thus partly the product of man's early religious beliefs.

When the last Exhibition of the Art of Ancient Egypt was organized by this Club nothing was known of Egyptian Art prior to the beginning of the Pyramid Age. To-day its history can be traced back to the beginning of the Dynastic Period, but the skill displayed in the execution of the monuments of this early time shows that in most cases the secret of the origins and earliest development still evades us. It is sometimes said that the Dynastic Art is only a development of that of Prehistoric Egypt. In a certain sense this is doubtless true, but it is not true in the sense in which it is usually understood. Prehistoric Egypt is as yet only known to us from monuments that have been found on sites south of the apex of the Delta, and a comparison of these monuments with those of the Ist Dynasty discovered at Hierakonpolis, Abydos, and elsewhere in Upper

ANCIENT EGYPTIAN ART

Egypt, clearly shows that there is no relationship whatever between the earlier and the later art. If we compare the drawing of the men and women on the Pre-dynastic vases shown in Case B, Nos. 27 and 31, with the drawing of the King and his captive on the ivory label of the Ist Dynasty in Case T, No. 8, we see how differently the human figure is treated by the artists of the two periods, and that a wide gulf separates the prehistoric from the historic art. The series of carvings in the round in ivory and in stone, discovered at Hierakonpolis and at Abydos, many of which are now in the Ashmolean Museum at Oxford, are masterpieces of the art of sculpture, and there is nothing wherewith to compare them from prehistoric sites. The cutting of the hieroglyphs in the Ist Dynasty is as fine as any that succeeded it. In the art of glazing pottery and tiles (Case B, No. 17) the Egyptians had also attained a high proficiency as early as the beginning of the historic age.

The truth is that Egyptian Art, that is to say the art of Dynastic Egypt, suddenly makes its appearance in Upper Egypt thoroughly formed, and no trace has been found of its origins or early development on Upper Egyptian soil. It is the same with the hieroglyphic writing. No trace has been found of it in Upper Egypt prior to the beginning of the Ist Dynasty, and yet when it first appears it is fully fledged. It may be even questioned whether the hieroglyphic system originated in Egypt, but whether it did so or not, there can be no doubt that its earliest use was in the Delta; the personal names and titles that occur on the monuments found at Abydos and Naqada point to the North-western Delta. It is this part of Egypt that we know so little about, but there are certain indications in the art products of the beginning of the Ist Dynasty which tend to show that the Delta people were far more cultured than the southerners who conquered them. Sir Gaston Maspero called this earliest Dynastic art "Thinite," but it is much more probable that the "Thinite" artisans derived their processes and their inspiration, not from preceding generations of Upper Egyptians, but from Delta

INTRODUCTION

schools. In studying the history of Egyptian Art this fact must always be borne in mind: scarcely anything is really known about the conditions in, or the civilization of, the North-western Delta in early times. It is known that Menes conquered this part of Egypt; there are references to the cult of Neith of Sais, and to the country round about that famous city at the beginning of the Ist Dynasty. In the IIIrd Dynasty there are records of administrative posts being held by officials in the nomes of the North-western Delta. There are inscriptions of the reign of Sahure that relate to the wealth and prosperity of this region. Neb-hatep-re Mentuhotep and Amenemhet I found it necessary to subjugate its people. A single XIIth Dynasty tomb has recently been found at Kom el Hisn (the ancient *Amu*, capital of the Libyan nome), but this is the earliest known monument that has as yet been brought to light from the North-western Delta. After the Middle Kingdom no references are found to any part of this side of the Delta until the XXIInd Dynasty, and then with the XXVIth Dynasty Sais becomes the capital of the whole country and the centre of a great school of art. Whether the population here was Egyptian in the ordinary sense of the word cannot be determined, but there are indications that throughout Egyptian history the people were highly skilled in several of the arts, and that there radiated from this source from time to time streams of new influences of very high quality, especially in ornamental motives, architecture, and sculpture, in ceramics and glass-making, in jewellery, in weaving, and probably also in painting.

That this Delta art was not entirely of Delta origin is certain, some features of it were borrowed from a foreign source. There is a remarkable resemblance between some of the monuments of early Egypt and early Babylonia, but as yet we have no clear evidence that these two civilizations of the East were actually in touch with one another in the fourth millennium B.C. It is much more probable that there was a common source from which both Babylonia and Egypt drew their inspiration. One fact is very significant in this connection. The palaces of the early kings

ANCIENT EGYPTIAN ART

of the Delta were built of coniferous wood hung with tapestry-woven mats; this is a style of architecture that could not have originated in Egypt, but must have arisen in a country where the necessary timber was ready at hand. We know that in the Pyramid Age, and later, the Egyptians drew their supplies of timber from the Lebanon region, and it was probably here that the particular style of architecture referred to originated. It is a style quite unsuited to a hot and windy climate such as Egypt; as early as the reign of King Den the palaces of this type were beginning to be built of wattle and daub in combination with wood, and by the end of the Pyramid Age the style disappears entirely, though the memory of it was preserved in the False Doors of the tombs and stelae. The royal tomb at Naqada, which is not later than the reign of Aha, the second king of the Ist Dynasty, is built of brick in imitation of one of these wooden palaces, and smaller tombs of the same kind are known from the IInd and IIIrd Dynasties, but not later. Brick buildings similar to those of the palace style of Egypt are also known from early Babylonia, and were at one time regarded as peculiarly characteristic of Sumerian architecture. These obviously must have been copied, like the Egyptian, from earlier timber forms. In Babylonia, as in Egypt, timber was scarce, and there are records that it was sometimes obtained from the coast of Syria. It is not improbable, therefore, that the Sumerians borrowed this style of architecture from the Lebanon. At Tarkhan, some thirty-seven miles south of Cairo, were found pieces of house timbers dating from the IIIrd Dynasty; these have holes pierced through their sides which show that the planks were sewn together and not nailed or pinned. On the Slate Palette of Narmer (Menes) reference is made to a "Great Port," *lit.* "Great Door," which was somewhere near the Canopic mouth of the Nile. A port implies shipping and trade relations with people dwelling along the coast or across the sea. If the Egyptians themselves did not send out ships to the Syrian coast they were certainly visited by Syrian sailors. The earliest sea-going vessels of which we have any record were

INTRODUCTION

named *kbnyt* from *kbn* Byblos, the port of the Lebanon where they were built and from whence they sailed. These ships were constructed of planks of coniferous wood sewn together in precisely the same way as the timber constructed houses. We may, therefore, not unreasonably look to Syria as having had some influence on the earliest Dynastic Art of Egypt.

Turning to the objects exhibited in the gallery, we have a remarkable series of masterpieces illustrating the art of the sculptor from the Ist Dynasty down to Ptolemaic times. In Case B, No. 11, there is the portrait of a King of the Ist Dynasty, which is the oldest portrait head in the world. In Case Q, No. 35, there is a portrait of Khafre, the builder of the Second Pyramid at Gizeh. On the chimney-piece is the bust of an Egyptian lady of the IVth Dynasty. In Case G, No. 24, is the famous portrait of Amenemhet III, cut in obsidian with a skill little short of marvellous. Other portraits of the same King are exhibited on the chimney-piece and in Case O, No. 19. The head of Senusret III; Case O, No. 41, in red quartzite sandstone, is another masterpiece of the sculptor's art of the XIIth Dynasty. Of the XVIIIth Dynasty there are several portrait heads, the fragment of the face of Queen Nofretete in yellow jasper, Case O, No. 40, being especially noteworthy. The Sebenyete head in Case Q, No. 37, is of interest for the style of its period. Of the statuettes grouped in Case S the student should particularly note the gold figure of the god Amon in the likeness of Thutmose III (No. 11), the small electrum figure of a boy (No. 2), and the little negress in ebony (No. 3). For sculpture in bas-relief the visitor should observe the portraits of Thutmose III and Queen Tiy on the right-hand side of the East Wall, and the extraordinarily delicate carving of the panels of an ivory casket in Case T, No. 13.

In specimens of Ceramic Art this Exhibition is very rich; no such collection of superb objects has ever before been gathered together in one room. The characteristic blue of Egyptian faience is well represented. In Case B, No. 17, is shown a blue faience tile of the Ist Dynasty.

ANCIENT EGYPTIAN ART

Case P are four examples (Nos. 4, 6, 11, and 48) of the XIIth and XIIIth Dynasties; in Case J is a large bowl (No. 10) of the late XVIIth Dynasty, and other specimens in the same case date from the XVIIIth to the XXIst Dynasties. For brilliancy of colour the two fragments in Case P, Nos. 32 and 37, are unparalleled, and for the deeper blues note the shawabti figures in Case H. The chalices in Case S are of exquisite quality and workmanship. For specimens of blue faience of the later periods down to Roman times the student should refer to Cases H and D. Polychrome faience of the late XVIIIth Dynasty is well represented in Case F, and in Case U is exhibited a series of hieroglyphs in vitreous paste that is unequalled in any museum of the world.

Egypt is the parent of glass, and the examples shown in Case G demonstrate how successful the glassmakers were in obtaining the most brilliant colours. The intricate handling of this material may be well seen in the mosaics arranged on the lower shelf.

On the left-hand side of the East Wall is hung a piece of linen fabric woven in various coloured threads. It is remarkable that this is the most ancient piece of such fabric known. Specimens of linen of the finest texture have come down to us from the Old Kingdom and later periods, but all the pieces, except this one, are self-coloured, not dyed. To show the extraordinary skill of the weavers of the XVIIIth Dynasty, a coloured photograph of a fragment of a tapestry-woven corselet, bearing the pre-nomen of Amenhotep II, is hung below. This specimen is preserved in the Cairo Museum, and with it were found three smaller fragments of the same date. It is the very finest piece of tapestry weaving, yet there is no record of any earlier example. Nothing whatever is known of the early history of this craft. It is remarkable how many *lacunae* there are in the history of art in Ancient Egypt. The prototypes of the faience chalices shown in Cases J and S were clearly made of metal, but no trace has been found of them, although we know from paintings in the temples and tombs that such existed. Again, among

INTRODUCTION

the jewellery of the princesses of the late XIIth Dynasty found at Dahshûr (some examples of which are exhibited in Case E), there occur two ornamental finger rings which are now preserved in the Cairo Museum. One of these has ornaments of granulated gold work on the bezel, the other is decorated with coiled wire-work soldered on to a gold plate. These are the two earliest ornamental finger rings that have yet been discovered. Nothing comparable with them has been found in Egypt; it is only many hundreds of years later that we find similar rings in Greece and in Etruria. Where were these rings of the princesses of the XIIth Dynasty made? To answer this and many similar questions in the history of the art of Ancient Egypt it is necessary to carry out excavations in those parts of the country—particularly in the Delta—which have so far remained untouched by the spade of the archaeologist.

 early king, coarse white limestone, with traces of black paint(?). On
 the head is the lower part of the crown; the beard is broken off.
 Archaic period (beginning of the Ist dynasty).
 H., 5 inches. *Lent by the Senate of the University of London.*
- 12 VASE, in the form of a tortoise; black and white igneous stone.
 The lip is moulded outwards, and behind it is a ring-handle for
 suspension. The eyes of the tortoise are hollowed out for inlay
 (missing).
 Pre-dynastic period.
 L., $5\frac{1}{4}$ inches.
Lent by the Musées Royaux du Cinquantenaire, Brussels.

- PLATE XXXIV. 13 CUP, red polished ware; on the outside are painted in white two bands of cross-hatched triangles counterchanged imitating basket-work; on the inside of the lip are dashes of white in groups of four, five, and six.
Early pre-dynastic period.
H., $4\frac{1}{2}$ inches; D., $5\frac{3}{4}$ inches. *Lent by Howard Carter, Esq.*
- PLATE XXXIV. 14 VASE, red polished ware; of modified cylindrical form, swelling below, with splayed mouth; decoration in white slip-paint representing two animals, parallel zigzags, and plants.
Early pre-dynastic period.
Publ. PETRIE, *Prehistoric Egypt*, Pl. XVII, 68.
H., $11\frac{1}{4}$ inches. *Lent by the Senate of the University of London.*
- PLATE XXV. 15 VASE, globular, buff pottery, speckled with red paint to imitate red breccia; with flat lip and two large curved horizontal tubular handles. This vase is interesting as a fine specimen of a type directly imitated from stone vases of the type in Case P, No. 2.
Pre-dynastic period.
H., $6\frac{1}{2}$ inches. *Lent by the Rev. Randolph Berens.*
- 16 FLASK, polished red ware, with flat ovoid body and lip moulded outwards.
Pre-dynastic period.
H., 10 inches. *Lent by the Rev. Randolph Berens.*

 of birds and animals arranged in three rows in low relief. Reverse, flat, with a central boss in the form of a six-petalled rosette with animals in low relief in the field around.
 Pre-dynastic period.
 Publ. G. BÉNÉDITE, *Journal of Egyptian Archaeology*, v, pp. 1-15, Pl. I and II.
 L., $4\frac{1}{8}$ inches. *Lent by the Earl of Carnarvon.*
- 21 VASE, of elongated ovoid form, carved to resemble a squatting toad; PLATE XXIV.
 black and white speckled breccia. The two horizontal tubular handles are sheathed with gold, and in each of them is a golden hook in the form of a snake. A double golden chain of circular links is attached to these hooks, and suspends the vase from a golden horizontal ring above.
 Late pre-dynastic period.
 H., $2\frac{3}{4}$ inches. *Lent by the Rev. William MacGregor.*
- 22 LION COUCHANT, black, white, and yellow igneous stone.
 Summary style; the mouth grinning and the legs roughly indicated. A gaming piece. Found at Naqada.
 Ist dynasty.
 From the Hilton Price collection (No. 4297).
 L., $2\frac{1}{2}$ inches. *Lent by Messrs. Ricketts and Shannon.*
- 23 POT IN THE FORM OF A SQUATTING FROG, red breccia;
 with flat lip and two horizontal tubular handles at the sides. The eyes and mouth are boldly cut. At the back is a rudimentary tail.
 Pre-dynastic period.
 H., $1\frac{1}{2}$ inches. *Lent by the Rev. Randolph Berens.*

24 BOWL, black and white diorite; globular shape with sharply projecting flat lip and two horizontal tubular handles sheathed with gold.

Pre-dynastic period.

D., $3\frac{1}{2}$ inches; H., $2\frac{1}{4}$ inches. *Lent by the Earl of Carnarvon.*

PLATE XXXIV. 25 CUP, black and red polished ware. Flat bottom, with bowl spreading outwards to the lip. Red and black on the outside; black inside. From a Pan-grave, Abydos. Compare this cup with the pre-dynastic pot, No. 29.

XIIIth-XVIIth dynasty.

H., 4 inches.

Lent by Percy E. Newberry, Esq.

PLATE XXIV. 26 VASE, ovoid, white quartzite; with moulded lip and horizontal tubular handles. Flat bottom.

Pre-dynastic period.

H., $3\frac{5}{8}$ inches.

Lent by the Rev. William MacGregor.

27 VASE, oviform, deep buff ware; with flat lip, two horizontal tubular handles, and rim foot. It is decorated with designs in red; on the lip is a wavy line, and immediately below it is a series of frames of diagonal cross-hatchings each separated by a blank space. Below this on each side is a man facing to the right, with one arm raised, standing between two groups each of three addaxes all going to the right above two sets of six solid connected triangles representing hills; below, on one side are six, and on the other five addaxes also going to the right above mountains. The two designs are separated by two bands of diagonal cross-hatchings reaching from the handles to the base.

Pre-dynastic period.

H., $4\frac{3}{4}$ inches.

Lent by the Rev. Randolph Berens.

PLATE XXIV. 28 VASE, pointed lenticular, red breccia; ornamented with vertical ribs, pointed base, and two horizontal tubular handles; at bottom and top are horizontal lines incised. The lip and handles are sheathed with gold.

Pre-dynastic period.

H., $3\frac{1}{8}$ inches.

Lent by the Rev. Randolph Berens.

- 29 OVOID POT, red and black ware, with small lip and small flat base. PLATE XXXIV.
On one side is roughly incised a figure of an ibex.

Early pre-dynastic period.

H., $6\frac{3}{4}$ inches.

Lent by Henry Oppenheimer, Esq.

- 30 VASE, reddish pottery; with lip moulded outwards and three lugs perforated horizontally. Below the lip are four wavy lines, above a row of triangles on a level with the lugs. On the field are a crested bird in outline with spotted body, five flamingos in a row, and a small band of diagonal cross-hatchings. The decoration is in dark red.

D., $6\frac{1}{2}$ inches; H., $6\frac{1}{2}$ inches. *Lent by Horace C. Beck, Esq.*

- 31 VASE, buff ware, oviform; with flat lip, two horizontal tubular handles, and large foot. It is decorated with designs in red; on the lip and base are diagonal cross-hatchings, and beneath the lip is a herringbone pattern. Below this, on one side, are three women hand-in-hand, one of whom holds an object like a fan, and on the other a man between two women, one of whom he holds by the hand. These two groups each stand between three addaxes, going to the left above two rows, one of nine and the other of ten solid connected triangles, representing hills; below, on one side are two addaxes and six ibexes, and on the other two addaxes and eight ibexes, all going to the left, above mountains; and beneath these, on one side, are six ibexes, and on the other two addaxes and three ibexes, in the first case above mountains over a row of frames of diagonal cross-hatchings each separated by a blank space, and in the second above the frames and blank spaces without the triangles signifying mountains. The two designs are separated by two bands of diagonal cross-hatchings reaching from each handle to the bottom of the central design; below, on one side, is a sail or fan-like object, with zigzags, and on the other zigzags only.

Pre-dynastic period.

H., 6 inches.

Lent by the Rev. William MacGregor.

H., 6 inches. *Lent by the Rev. William MacGregor.*

2 BOWL, pale blue faience. Decoration on inside; in the centre is a rosette in low relief, around which are looped wreaths with two ribbon ends hanging at each knot. On the outside the base is in the form of a lotus flower.

Ptolemaic period.

Publ. H. WALLIS, *Egyptian Ceramic Art*, p. 84, fig. 180.

D., $4\frac{1}{4}$ inches. *Lent by the Rev. William MacGregor.*

3 VASE, pale blue faience. Long neck, with cup-like mouth and slender body. Ornamentation in bands; light blue on a dark blue ground.

Ptolemaic period.

H., 3 inches.

Lent by the Provost and Fellows of Eton College.

4 FRAGMENT OF A BOWL, glazed faience. Ornamentation in three bands; pale blue on a dark blue ground: (a) conventional wave pattern; (b) a hunter, with spear and shield between two wild animals; (c) looped wreaths, with two ribbons hanging at each knot.

Ptolemaic period.

H., $2\frac{3}{4}$ inches.

Lent by the Provost and Fellows of Eton College.

PLATE XLVI. 5 FRAGMENT OF A BOWL, blue glazed faience. Ornamentation in pale blue on a darker blue ground. Outside, in three bands: (a) wave pattern; (b) waterfowl between conventional lotus flowers and buds; (c) ivy leaves, berries, and tendrils. The lower part of the bowl is decorated with a scale pattern.

Ptolemaic period.

L., $4\frac{1}{8}$ inches.

Lent by the Rev. William MacGregor.

6 FRAGMENT OF A BOWL, glazed faience. Ornamentation in green on a rich dark blue ground; a bull attacking a man armed with a dagger.

Ptolemaic period.

H., $1\frac{3}{4}$ inch.

Lent by Percy E. Newberry, Esq.

7 VASE, with globular body and expanding neck; deep blue glazed faience. Ornamentation on the outside in relief. Around the neck is a band of waterfowl. On the upper part of the bowl a band of egg and tongue pattern. Around the centre of the bowl are two bands of ornament: (a) fish, cornucopia, grapes, and pomegranates, and (b) wild animals and dogs. The bottom of the bowl is ornamented with outspreading palm leaves.

Roman period.

H., $7\frac{1}{4}$ inches.

Lent by the Provost and Fellows of Eton College.

8 RHYTON, pale blue glazed faience. The end is modelled in the form of the head and fore-part of a lion.

Ptolemaic period.

H., 9 inches.

Lent by the Rev. William MacGregor.

PLATE XLVII. 9 PLATE, with narrow rim and annular foot; blue and white glazed faience. In the centre is a gazelle on a background of foliage, framed by lines and a wave-pattern border. The ornamentation is painted in manganese on a white ground. The rim and reverse are turquoise blue.

Roman period.

19 VASE, with globular body and expanding neck; blue glazed faience. Ornamentation on the outside in relief. Around the neck is a band of conventionalized ivy leaves and berries. Around the upper part of the bowl are four wild animals and dogs. The bottom of the bowl represents an expanded lotus flower.

Roman period

H., $7\frac{1}{4}$ inches.

Lent by the Provost and Fellows of Eton College.

- 20 PENDANT, glazed faience. Ornamentation in pale blue on a dark blue ground; a heart amulet hanging from a bar with string of beads surrounding it. There are three small rectangular pieces projecting at top, each pierced longitudinally with a hole for thread, and around the rim are eight holes for sewing the pendant to the mummy bands.
 Early Ptolemaic period.
 H., $1\frac{7}{8}$ inch. *Lent by the Hon. Richard Bethell.*
- 21 FRAGMENT OF A RHYTON, green and violet glazed faience. PLATE XLVI.
 Ornamentation in five bands. (1) Egg and tongue pattern; (2) rope pattern; (3) rosettes with yellow centres; (4) winged lions between conventional trees of life; (5) waterfowl among lotus flowers and leaves.
 Early Ptolemaic period.
 H., $5\frac{1}{2}$ inches. *Lent by the Rev. William MacGregor.*
- 22 FRAGMENT OF A BOWL, glazed faience. Ornamentation in three bands in low relief; pale blue on a darker blue ground: (a) animals; (b) a banqueting scene; (c) lotus petals.

- 24 FRAGMENT OF A RHYTON, pale blue and violet glazed faience. PLATE XLVI.
 Ornamentation in six bands. (1) Egg and tongue pattern; (2) rope pattern; (3) rosettes; (4) wave pattern, with winged lions and conventional trees of life; (5) a tendril pattern; and (6) a rope pattern similar to (2). Below is a looped wreath with two ribbon ends hanging at each loop.
 Early Ptolemaic period.
 H., 8 inches. *Lent by the Rev. William MacGregor.*

- 25 PORTRAIT HEAD OF A YOUNG MAN in the round, from a mummy: modelled and painted plaster. The face is coloured red-brown, and the hair is black; the slight moustache and beard are also black.

Roman period.

H., 12 inches.

Lent by the Rev. William MacGregor.

- 26 FIGURE OF A CHIMAERA-LIKE MONSTER, hard apple-green faience picked out with violet-blue. The body and head are those of a lion, with the horns of an ibex; the legs, outstretched in the act of running, are broken off. The mouth is open, showing the teeth. The blue colour marks the ribs, the mane, and the corrugations of the horns. The figure shows strong Greek influence in its subject and style.

About XXIXth-XXXth dynasty (Sebennyte period).

L., $2\frac{1}{4}$ inches.

Lent by the Provost and Fellows of Eton College.

- 27 CYLINDRICAL VASE, blue, white, and aubergine faience. Ornamentation on the outside in relief. Beneath the rim is a row of pearls in violet glaze, then, between two rings of white, a band with bird, fish, cornucopia, and fruit. Below is a broad band of conventional leaves and grapes intertwined. Inside, a rich blue glaze. Remains of handle on one side.

Roman period.

Lent by the Provost and Fellows of Eton College.

- 28 MASK, blue glazed faience. Found together with Nos. 12 and 17 at Medinet el Fayûm.

Roman period.

H., $7\frac{1}{2}$ inches.

Lent by the Earl of Carnarvon.

- 29 ARYBALLOS, pale blue faience, of cylindrical form. From the body project at equal intervals the heads of an Egyptian goddess or queen, a lion, a gorgon, and an ape. The head of the goddess is beneath the handle, and that of the gorgon is on the side opposed to it; both

are large, the other two opposed heads being smaller. The head of the goddess has the full cheeks, the smile, and the low forehead and chessboard wig of the Greek imitations of Egyptian figures; the other heads are purely archaic Greek in style. On the handle is an egg and tongue moulding. Greek (Ionian) work of the VIth-Vth centuries B.C.: probably Naukratite.

XXVIth dynasty or later.

H., 2 inches. *Lent by the Rev. William MacGregor.*

- 30 LID OF A BOX, pale blue glazed faience. On the top in relief is the figure of a lion lying on the ground devouring a gazelle. The mane and other details of the lion in a darker blue.

- 31 ARYBALLOS, pale blue faience with two rows of egg and tongue ornamentation on the upper part of the handle.

Persian period.

H., $2\frac{1}{4}$ inches. *Lent by the Rev. William MacGregor.*

- 32 TWO-HANDLED VASE, with globular body, wide flat rim to neck, and flat ring base; blue glazed faience. Ornamentation in low relief. On the top of the rim is a rope pattern. Around the upper part of the bowl is a broad band of conventional ivy sprays, bordered below by a rope pattern. The handles terminate below in human faces.

Roman period.

H., $6\frac{1}{2}$ inches. *Lent by the Rev. William MacGregor.*

- 33 SET OF AMULETS, blue glazed faience. A winged scarab and four genii of Amentet, the latter with plinths at back. Also two necklace ends in the form of falcon heads with disks. All pierced for sewing on to linen mummy bands.

Ptolemaic period.

H. of figures, $2\frac{1}{2}$ inches; L. of scarab from tip to tip of wings, $5\frac{1}{2}$ inches; L. of necklace ends, $2\frac{1}{8}$ inches.

Lent by Dr. J. J. Acworth.

- 34 HEAD OF A FALCON, rich blue highly-glazed faience. The head is modelled in relief on the upper surface, and the eye and other details are in black and green glaze. The back is roughly scooped out, and a large hole has been pierced longitudinally from the back of the head through to the throat.

Roman period.

H., $2\frac{1}{2}$ inches.

Lent by the Provost and Fellows of Eton College.

TABLE CASE E

1 JEWELLERY found on a corpse (apparently male) in a shaft-tomb PLATE L. at Riqqeh.

A. Pectoral of *cloisonné* work formed by soldering thin strips of gold upon a perforated gold plate, the cloisons thus created being filled in with carnelian, lapis lazuli, and turquoise, which are fixed with cement. The symbolism of the design is difficult to explain, but appears to consist of royal emblems, as in the case of other known pectorals. In the centre is the sceptre called *Nehbet*; facing it on each side is a bird standing on the hieroglyph signifying both gold and the sound-value *nub*. The bird is probably intended for the falcon of Horus, though the poise and the details do not conform to the usual representations of the falcon. If this explanation be correct, the king is here symbolized under the form of the falcon-god Horus vanquishing his enemy, the god Set of the town Nubet. At the top is the solar disk between the celestial falcon's eyes, known to the Egyptians under the name *uzat*. The rectangular framework terminates under the *uzat*-eyes in papyrus-blossoms. At the back the gold plate carries fine incised lines representing the markings of the various emblems. The workmanship is at by no means the same high level as the jewellery discovered at Dahshûr and at Illâhun.

H., $1\frac{1}{2}$ inch; B., $1\frac{3}{4}$ inch.

B. Lower portion of a finely designed and executed jewel of gold *cloisonné* work, inlaid with carnelian, lapis lazuli, and turquoise. The design consisted of the hieroglyphs composing the *prenomén* Kheper-kha'-rē' of King Senusret II in the midst of lotus flowers. The topmost hieroglyph was the solar disk, which is lost; below this, partly preserved, is the beetle, which is winged; and at bottom, the sun arising above the horizon.

H., $\frac{5}{8}$ inch; B., 1 inch.

C. Bivalve shell of gold with a ring for suspension at top. The cartouche of gold wire, soldered on to the shell, is of Kha'-kau-rē'

Senusret III; on each side of the cartouche is an uraeus-snake. Similar shells, but without the cartouche or wire, were found at Dahshûr.

H., $\frac{7}{8}$ inch.

D. Small gold image of Min, the god of procreation and fertility. The right arm is upraised and supports the flail; the left hand grasped the phallus, a separate piece. On the head are the usual double feathers, inlaid with lapis lazuli and turquoise.

Publ. ENGELBACH, *Riqqeh and Memphis VI*, Pl. I, with p. 12.

H., $2\frac{1}{8}$ inches.

Lent by the Manchester Museum.

PLATE L. 2 RING AND TWO SPACERS OF A BEAD ARMLET bearing the name of King Antef. Gold.

A. Ring, with lapis lazuli scarab bezel. The scarab has gold legs, and is mounted on a thin gold plate, which is inscribed with the name of Antef.

Early XVIIth dynasty.

D., 1 inch.

B. Two spacers of a bead armlet, gold. Each spacer is composed of four gold plates soldered together at their edges, while running transversely between them are twelve tubes formed of coiled gold plates for the threads of strings of beads. On the upper surface of each bar are three recumbent cats. On the bases are engraved two lines of hieroglyphs reading:

a (1). "The Good God, Lord of the Two Lands, Nub-kheper-re giving life eternally."

(2). "The Great King's wife, who is joined to the Beautiful White Crown, Sebek-em-sa-ef, living."

b (1). "The Good God, Lord of the Two Lands, Antef, giving life."

(2). "The Great King's wife, who is joined to the Beautiful White Crown, Sebek-em-sa-ef, living."

Early XVIIth dynasty.

Another spacer with similar inscription to *b* has been published

by NEWBERRY in the *Proceedings of the Society of Bibl. Arch.*, 1902, p. 285.

L., $1\frac{1}{8}$ inch.

Lent by C. W. Dyson Perrins, Esq.

3 NECKLACE; amethyst, carnelian, garnet, and blue glazed faience beads. Found at Abydos.

XIIth dynasty.

L., 1 foot, 6 inches.

Lent by the Hon. Richard Bethell.

4 FOUR WIG-RINGS, gold. Each ring is formed of four hollow rings soldered together.

5 TWO WIG-RINGS, gold-plated bronze.

XVIIIth dynasty.

D., $\frac{7}{8}$ inch.

Lent by the Hon. Richard Bethell.

6 FOUR GOLD WIG-RINGS, with faience beads. Each ring is formed of a gold plate with double ribbed rims, and three strings of tiny circular lapis-coloured beads threaded on gold wire mounted between. From a tomb in the Mundara, Thebes.

XVIIth dynasty.

D., $\frac{3}{4}$ inch.

Lent by the Earl of Carnarvon.

7 LION COUCHANT, carnelian.

XVIIIth dynasty.

L., $1\frac{1}{4}$ inch.

Lent by the Earl of Carnarvon.

8 TORTOISE, amethyst with turquoise, red jasper, and lapis lazuli inlay. From Denderah.

Early Ptolemaic period.

L., $1\frac{3}{4}$ inch.

Lent by the Earl of Carnarvon.

- 9 *SHEN-RING*. A circular disk of carnelian set in a plate of gold; at the back is a ring for suspension. Found in the same tomb as the Toilet Box in Case J, No. 13, and the necklace and mirror, Case E, Nos. 24 and 25.

XIIth dynasty (Amenemhet IV).

H., $\frac{5}{8}$ inch.

Lent by the Earl of Carnarvon.

PLATE L. 10 SERIES OF JEWELLERY FROM DAHSHÛR. XIIth dynasty.

A and B. Pectoral of gold, with inlaid semi-precious stones. In the centre is a Hathor-head with long pendant necklace and two coiled horns above; this is surmounted by a disk, with uraei on either side. Flanking the goddess's head are figures of a falcon-headed lion (Harmakhis) and a Set-animal; above these are sacred eyes, which are supported right and left by papyrus flowers. All these elements of the design are made in separate pieces of thin gold plate, beaten out over finely modelled [wood?] moulds and soldered together. The obverse was inlaid with carnelian, lapis lazuli, and turquoise fixed with cement. The reverse is delicately chased. At the back of each eye is soldered a broad ring, slightly ribbed, by which the pectoral was suspended. Broken into two pieces, *A* and *B*.

H., $1\frac{1}{2}$ inch; L., $2\frac{1}{4}$ inches.

(A) *Lent by the Provost and Fellows of Eton College.*

(B) *Lent by the Rev. William MacGregor.*

C. Pendant, in the form of a *shen*-ring of *cloisonné* work formed by soldering thin strips of gold upon a gold plate; the cloisons are filled with turquoise, carnelian, and lapis lazuli. The back is plain, and soldered to it is a gold ring by which the pendant was suspended.

H., $\frac{5}{8}$ inch.

Similar *shen* pendants are figured by DE MORGAN, *Fouilles à Dahchour*, 1894, Pl. XX, 29, and G. BRUNTON, *Lahun I*, Pl. II and III.

D. A string composed of ten plaques of nine beads each (arranged in rows of threes), of which four have bivalve shell pendants soldered to them.

L., $\frac{1}{4}$ inch; H., with shells, $\frac{3}{4}$ inch.

Similar plaques and shell pendants are figured by DE MORGAN, *Fouilles à Dahchour*, 1894, Pl. XXIII.

Three pendants, each in the form of a round-topped mace. The shaft is of gold, and the mace-head is divided into four quarters, with carnelian and lapis lazuli inlay.

L., $\frac{1}{2}$ inch.

Similar pendants are figured by DE MORGAN, *Fouilles à Dahchour*, 1894, Pl. XX, 12; XXIV, 12.

E. Two strings of gold, carnelian, lapis lazuli, and turquoise beads.

D. of beads, $\frac{1}{16}$ inch.

F. Two lions couchant, gold, pierced longitudinally: spacers of a necklace.

L., $\frac{3}{4}$ inch.

Similar lions couchant were found by DE MORGAN, *Fouilles à Dahchour*, 1894, Pl. XVII, 12, and Pl. XXIV, 19; and by PETRIE at Lahûn (G. BRUNTON, *Lahun I*, Pl. II and III).

G. Series of pendants from necklaces.

Pendant, in the form of two lotus flowers joined together at their bases. Gold *cloisonné* work with carnelian [turquoise and lapis lazuli] inlay fixed with cement. A pair of gold rings are soldered at the top and bottom of the pendant.

H., $\frac{5}{8}$ inch.

Pendant, in the form of a *dad* amulet. Gold *cloisonné* work with carnelian and turquoise inlay. At the top and bottom of the pendant are soldered small gold rings.

H., $\frac{3}{4}$ inch.

Pendant, in the form of two conventional lotus flowers. Gold *cloisonné* work with carnelian, turquoise, and lapis lazuli inlay. The back is delicately chased. At the top are soldered two small gold rings by which the pendant was suspended.

H., $\frac{5}{16}$ inch.

Pendant, drop-shaped. Gold *cloisonné* work with turquoise and lapis lazuli inlay. At the top is soldered a small gold ring by which the pendant was suspended.

H., $\frac{3}{8}$ inch.

H. Clasp, in the form of four hieroglyphic signs joined together. Gold *cloisonné* work with turquoise, lapis lazuli [and carnelian] inlay fixed with cement. On the back is a sliding clasp with broad ribbed rings above.

H., $\frac{3}{4}$ inch.

Similar clasps were found by DE MORGAN at Dahshûr (*Fouilles à Dahchour*, Pl. XV, 4; XVI, 4; XIX, 4), and by PETRIE at Lahûn (G. BRUNTON, *Lahun I*, Pl. III).

I. Four scarabs, with plates of gold on base, and mounted on gold wire as finger rings.

(1) Amethyst; on the gold plate is engraved the prenomen of Senusret II. L., $\frac{1}{2}$ inch.

(2) Obsidian; the beetle stands on a plain gold base, the sides of which are inlaid with rectangles of carnelian, turquoise, and lapis lazuli. L., $\frac{1}{2}$ inch.

(3) and (4) Lapis lazuli; plain gold bases. L., $\frac{3}{4}$ inch.

J. Pendant cylinder, formed of circular gold, turquoise, and lapis lazuli beads threaded on a metal pin. The gold bands at top and bottom are wanting.

L., $1\frac{1}{4}$ inch.

Compare a similar pendant cylinder figured by DE MORGAN, *Fouilles à Dahchour*, 1894, Pl. XIX, 56.

K. Cowrie shell, gold. Pierced longitudinally with two holes for threading.

L., $1\frac{1}{2}$ inch.

Similar cowries are figured by DE MORGAN, *Fouilles à Dahchour*, 1894, Pl. XVII.

L. Clasp of a bracelet, and piece of a second; gold. A flat plate of gold, with smaller plates soldered on to it for the reception of stone inlay. On the left-hand side is a gold bar pierced with thirty-one minute holes for the ends of threads of strings of beads; this bar has two wide gold tubes soldered to it, which fit between three gold tubes soldered on to the broader gold plate. A gold pin with coiled end fits into these tubes, and secures the bar to

the bar-piece. On the right-hand side of the broader bar are also three gold tubes and a pin, but the narrower bar is missing.

H., $1\frac{7}{8}$ inch.

The second bar on the right-hand side of the series of Dahshûr jewellery is $2\frac{1}{2}$ inches long, and is pierced with thirty-seven minute holes.

M. Plaque of lapis lazuli. On the upper surface are four curls carved in relief. For inlay work. Also two gold drop-shaped beads, and four lenticular beads, three gold and one carnelian.

*N.*¹ Pendant, in the shape of a lotus flower, and two buds of *cloisonné* work formed by soldering thin strips of gold upon a gold plate: the cloisons were filled with carnelian, lapis lazuli [and turquoise] fixed with cement. At the top is soldered a broad ring by which the pendant was suspended.

H., $1\frac{1}{4}$ inch.

*O.*¹ Drop-shaped bead, gold. Hollow.

L., $\frac{7}{8}$ inch.

P. Four drop-shaped beads; carnelian, lapis lazuli, and amethyst. Also one round bead, amethyst; two round gold beads and a small double knot in gold.

- PLATE LI. 26 THREE PLAQUES from bracelets or armlets perhaps belonging to Queen Tiy. Each plaque is slightly convex to take the shape of the wrist or arm. The gold setting is modern.

A. Carnelian. Ornamentation in low relief. Amenhotep III at a *sed*-festival; the King is seated on a throne in the Hall of the *Heb-sed*: Queen Tiy stands before him. The inscriptions give the names and titles of Amenhotep III. This plaque is probably unfinished.

L., 2 inches.

B. Carnelian. Ornamentation in low relief. Amenophis III, wearing the *khepresh*-helmet and holding the crook in one hand and the sign of life in the other, is seated upon a throne, the back of which is formed by a vulture with outspread wings. Behind the King sits Queen Tiy wearing the vulture head-dress and two feathers; she holds in her hands a fly-flap and a sign of life. At her back is an ostrich-feather fan held by an *ankh*-sign with two hands. In front of the King stand two princesses holding sistra and stretching out to him palm shoots representing years.

L., 2 inches.

C. Brown sard. Ornamentation in pierced work, engraved. A human-headed sphinx with wings, in a recumbent position and holding the cartouche with prenomen of Amenhotep III in its outstretched hands.

L., 2 inches.

The three plaques have been published in the *Journal of Egyptian Archaeology*, iii, 73-75, with Pl. XI.

PLATE LIV. 13 TOILET BOX, coniferous wood, veneered with ebony and ivory. The front, two sides, end, and lid have in their centres panels of ivory, bordered by two narrow strips of ebony and ivory, with broad margins of ebony. The top of the box lifts off and exposes a tray

quarter the depth of the box, with two small rectangular partitions in the front corner and a hollow cut out of the bottom to receive a mirror. On the lid near the front is a silver knob, and another similar knob is on the front panel: around these knobs the string fastening was tied, the knot being covered with a pellet of clay which was stamped with a seal. The front is made to pull forward, and has attached to it a drawer half the depth and the whole length of the box. This drawer has its edges, top, and bottom veneered with thin strips of ivory glued to its solid wooden sides and end. In the drawer is a shelf made of two pieces of wood perforated with eight circular holes to receive the toilet vases. The corners of the box are mitred, and the ends of the drawer dovetailed to the front panel. Engraved on the front of the box is a scene showing an official named Kemen offering two vases of unguents to the King Ne-maa-kheru-re (Amenemhet IV), who is seated on a chair. For clothing he wears a striped loin-cloth. On his head is a double feathered crown. In his left hand he holds a staff. Around the margin of the lid of the box is an incised inscription filled with white paste, giving the prenomen and nomen of King Amenemhet IV with a prayer for offerings to Sebek, Lord of Illahûn, for the benefit of Kemen, the son of Ana. Found in a tomb at Thebes.

- 14 GAMING BOARD, ivory and wood. The board is shaped like an axe-blade, and is supported on four feet in the form of bulls' legs standing on inverted truncated cones. The board is made of two ivory slabs backed by two wooden panels which are joined together by three transverse wood pegs passed through the thickness of each panel. The bottom is made of one piece with crossbars at either end. The curved ivory sides and end are backed with wood that is of the same shape as the board, and leave in the interior an oblong space. This space is fitted with a small drawer of ivory and

ebony, which has a bolt of ivory shot in copper staples for fixing it when closed. The legs are dowelled into the wooden side-blocks, and are held in place by means of three ebony rivets. The flat top has engraved upon it a palm tree surmounted by a *shen*-ring, the latter being pierced through the ivory and wooden body beneath. On each side of the palm stem is a parallel line of ten holes, and along the edges of the two sides a row of fifteen holes, and at the top edge on either side of the *shen*-ring a row of five holes. Each hole is encircled by a small ring, incised, and is pierced through the ivory and wood below. These holes were intended to receive the playing pins of which there are ten—five with jackal heads and five shorter ones with dogs' heads. Found in a tomb at Thebes.

Lent by the Earl of Carnarvon.

6 WOODEN FIGURE OF NAKHT-'ONKH, son of Khnum-'o standing on the original wooden pedestal, on which is inscribed in hieroglyphs painted white his name and parentage. Nakht-'onkh advances with the left foot forward and arms hanging slightly forward at the sides of his stiffly projecting apron. He wears no other garment, and his feet and head are bare, the latter being without a wig, and showing only his closely cropped hair. The head and face are extremely well carved, the latter showing the cheerfully smiling visage of an intelligent fellâh. The figure formed part of an untouched burial discovered at Rîfeh in 1907.

Right side of Case T

STELE with rounded top, of fine white limestone. Scene in relief of the scribe Iri venerating the deified monarchs Ahmose (Amasis) I and Ahmes-Nefretari. In the upper register are the king and queen seated side by side on thrones in a shrine; the king wears the *nemes*-head-dress with uraeus, and holds the crook and symbol of life; the queen has the high feathers of Mut. Before them are their titles, and outside the shrine, which is approached by a sloping ramp, is a table of offerings. In the lower register Iri kneels with hands upraised in adoration; before him is a prayer beginning: "Give praises to the king; adoration to the queen," for Iri.

- 13 TOP PIECE AND PANELS OF AN IVORY CASKET. PLATE LV.

Hieroglyphs and ornamentation in very delicate low relief, with some details stained a pale green.

Top Piece. From one end of the casket, with a circular hole drilled near right-hand end on top, and five rectangular socket-holes (three $\frac{3}{4}$ inch wide, two $1\frac{1}{16}$ inch wide) cut in the under-side. Between two lines in relief are inscriptions reading from the centre: (a) "Mayest thou do the desire of thy heart . . ." (b) "Mayest thou do what thou desirest, tire not thereof." L., $7\frac{1}{2}$ inches; H., $1\frac{1}{8}$ inch; B., $\frac{5}{16}$ inch.

Narrow Panels. One perfect, the other a fragment. Ornamentation, a papyrus flower between papyrus buds. Height without tenons 6 inches, breadth 1 inch at top widening to $1\frac{1}{4}$ inch at $3\frac{1}{2}$ inches from top. The tenons are $\frac{1}{4}$ inch at top and bottom, and fit into the smaller sockets of the top piece, and probably belonged to the end of the casket. On the back of the lower tenon is incised the hieroglyph *maa*.

Broad Panels. Three nearly complete, and lower part of a fourth, each with a figure of an official bearing offerings, and in the background papyrus reeds. These officials are all similarly clad. They wear short curled wigs with lotus flowers secured to fillets over forehead. The first two have a band over the left shoulder tied in a bow at the side under the right arm: the third has two bands crossed over the chest. They all wear short plain loin-cloths. The first man holds with his right hand a basket of fruit above his right shoulder, and a duck grasped by the neck in his left hand. Behind him is a short-horned calf wearing a collar, from which hangs a lotus flower. The second man balances with his left hand a basket of figs on his head; from his left arm hangs a bunch of lotus flowers and buds with long stems; in his right hand is a rush basket. In

front walks a stork. The third man leads another calf by a cord tied around its neck, and with his right hand balances a basket of fruit upon his head. From the right arm hangs by a cord a bag of figs. Only the lower part of the fourth panel is preserved. Height without tenons 6 inches, breadth 2 inches at top. The second panel is straight on the left side, but on the right projects $\frac{3}{8}$ inch at $2\frac{1}{2}$ inches from the base. The third panel has $\frac{1}{8}$ inch projections at either side, $2\frac{1}{2}$ inches from the base. The tenons measure $\frac{1}{4}$ inch top and bottom, and on their backs have hieroglyphic signs as guides to the fitter.

Were it not for certain points in the writing of the inscription on the top piece, there would be no question at all as to ascribing the casket to the Old Kingdom, or more precisely to the IVth or Vth dynasty. But as Dr. A. H. Gardiner points out, the inscription cannot be earlier than the Saïte period,¹ and as the inscription is certainly of the same date as the panel reliefs, it is to the Saïte period that the casket may be assigned.

Two panels figured by J. CAPART, *L'Art Egyptien*, 1911, Pl. CXCI, and there ascribed to Saïte (?) period.

Lent by the Rev. William MacGregor.

PLATE XXIII. 14 AXE-HEAD, bronze. Ornamentation, a central panel of pierced work representing two cynocephali apes between a papyrus column. On the blade is the name and title of the owner, "the Superintendent of the priests, the Ox-herd, Khu-meh." From Et Taraff, Thebes.

XIIth dynasty.

L., $3\frac{1}{2}$ inches.

Lent by the Earl of Carnarvon.

15 COMB, ivory; with top in the form of an ostrich.

Early pre-dynastic period.

L., $3\frac{1}{4}$ inches.

Lent by the Senate of the University of London.

¹ "This," Dr. Gardiner writes, "is proved by the use of the boat-sign for *im*, by the writing *mr.n.k* for *mrt.n.k*, and indicated also by the spelling *h̄t* for *h̄rt*." Mr. Howard Carter points out that the position of the handle on the *k*-basket, the form of the *wr*-bird and the horizontal, not simpering mouths of the men in the reliefs, all conform to the conventions of the Old Kingdom, so that if on philological grounds the casket must be assigned to the XXVIth dynasty it is an extraordinary example of faithful archaism.

CASE U

PLATE XLV. 1a A FLYING FALCON AND SERIES OF HIEROGLYPHIC SIGNS for inlaying in a wooden¹ shrine. Vitreous paste. The flying falcon is from the top left-hand corner of the shrine. The hieroglyphic signs are from the protocol of a king, probably Nekht-horheb (Nectanebo I). Each example is delicately modelled on the upper surface in low relief; the backs are flat, and the polychrome inlay imitates the detail of the objects figured. The ground colour is pale blue, the inlay dark blue and red: some of the hieroglyphs have details in yellow and black glaze over the pale blue ground. These are the only perfect examples of their kind at present known, and are of extraordinarily fine technique and workmanship. From Ashmunên. XXXth dynasty.

The hieroglyphs are of three sizes: H., $6\frac{1}{2}$ inches, 6 inches, and $3\frac{1}{2}$ inches. *Lent by the Earl of Carnarvon.*
