Cross-wiki content propagation

Help small wikis grow by translating new sections on mobile and desktop
Problem statement

Millions of speakers of less supported languages have limited access to knowledge. They have access to few articles with little coverage.

Translation has helped medium and large wikis, but had limited effect on small wikis so far.

Goal

Provide a fluent and engaging way to expand knowledge anytime by translating.
Approach

Increase content coverage on small wikis by facilitating translation as a way to expand articles with new sections.

Increase the number of translators by supporting their activities on both desktop and mobile.

Mobile support enables to translate when it was not possible before.

Article sections seem a convenient translation unit to transfer and manipulate.

Audience

Our core audience is composed by new and experienced multilingual editors of small Wikipedias, on different devices.

These are proto-personas based on our own hypotheses and previous research in different contexts. Specific research is needed to confirm these, and detail further. See https://www.mediawiki.org/wiki/Personas_for_product_development
Eko, the new editor

**Discover translation while reading.** Eko looks for information about towers and finds that the Javanese “Menara” article is incomplete compared to the English “Tower” version. She wants to expand the article and finds an easy way to translate the History section into Javanese.

**Find interesting sections to expand.** Happy after translating her first section, she looks for other topics in the architecture field that she can help expand. She can easily find interesting options, check what is currently missing and translate the missing parts based on either the English or the Indonesian version.

New editor
Adi, the casual editor

**Expanding a stub.** Adi is editing the Ukulele article in Malayalam, which is a very short one. He can easily identify missing sections that are available in English and translate them to expand the Malayalam version.

**Continue a previous contribution.** Adi started an article in English a few months back about the Tanpura, a musical instrument. Now he discovers that a new section was recently added to the English version that is missing in Malayalam. After translating the section, he easily finds another missing section, and he is motivated to continue expanding the article.
Expanding a stub

Finds missing sections to add by translating as an alternative.

Content translation is used on desktop to translate a single section in the usual way.
Continue a previous contribution

Notification shows that a new section was added to a relevant article.

After completing the translation, options to translate the next section surface.
Pal, the expert editor

Expand a specific article. Pal, after reading the news on a recent space mission, looks for the plants in space article in Bengali to expand it with the new discoveries. She is able to easily transfer the relevant information including references, and review that the translation is accurate and reads natural, making further edits to polish the final result.

Start a new article on the go. Pal is in her commute when she finds that an article on the Jupiter’s moon “Io” is missing in Bengali. Despite not being a frequent mobile contributor, she is able to translate the lead section of the article to make an initial contribution. Later at home, she expands the initial article created by translating a few new sections.
Expand a specific article

Searches for a page on the translation dashboard

Since the page exists, options to expand it with new sections are provided.
Start a new article on the go

Finds a missing article

Translates the lead section starting with machine translation.

After publishing the lead section, a new section can be added.
