

POR4ULO Outcome Measures 17450285

The DASH survey was chosen as an appropriate measure because it encompasses a wide range of upper limb activities and tasks that help assess upper extremity health and functioning. It is a reliable and validated source (Gummesson, Atroshi & Ekdahl, 2003). It not only addresses physical symptoms but also their social and psychological impact on the person. Scores are normalized through the calculations provided at the end of the survey, which should range from 0 – 100, where lower scores indicate better function or less impact symptoms have on activities of daily living.

The limitation of the DASH survey is that it is high subjective, relying exclusively on what the patient reports.

The questionnaire was first completed pre-surgery and then again post-surgery and 1 week after wearing the device. One week was deemed enough time for the patient to adapt to functioning with the device.

DASH SCORES

	Pre-surgery & Device	Post-Surgery & Device (1 week)
MAIN DASH	40	25.8
WORK MODULE	56.25	43.75
SPORTS MODULE	56.25	43.75

From the scores it can be seen that there is a marked decrease in impairment to functionality. After surgery and wearing the device, the patient reports a decrease in pain and an increase in ability to carry out daily activities.

DASH

INSTRUCTIONS

This questionnaire asks about your symptoms as well as your ability to perform certain activities.

Please answer *every question*, based on your condition in the last week, by circling the appropriate number.

If you did not have the opportunity to perform an activity in the past week, please make your *best estimate* on which response would be the most accurate.

It doesn't matter which hand or arm you use to perform the activity; please answer based on your ability regardless of how you perform the task.

DISABILITIES OF THE ARM, SHOULDER AND HAND

Please rate your ability to do the following activities in the last week by circling the number below the appropriate response.
