U. S. DEPARTMENT OF AGRICULTURE

PLANTED ACREAGE OF PRINCIPAL COMMERCIAL CROPS 1954 AND 1955

The following report of the acreage planted to principal vegetable crops for fresh market in major producing States for the 1954 and 1955 seasons has been prepared by the Crop Reporting Board from data furnished by crop correspondents, State statisticians, and cooperating agencies. This release supplements the 1955 Annual Summary of Commercial Vegetables for Fresh Market, published December 17, 1955, which contains acreage data on a "for harvest" basis.

Acreage for harvest, as published in the 1955 Annual Summary, includes acreage harvested or partially harvested, and mature acreage abandoned because of low prices or other economic factors. Fields abandoned before reaching maturity as a result of economic conditions and those lost from natural causes, either before or after reaching maturity, are not included in acreage for harvest estimates.

Planted acreage for both annual and perennial fresh market crops is the sum of acreage for harvest, acreage lost or abandoned due to natural causes, and acreage abandoned prior to reaching maturity because of economic conditions. Acreage lost and replanted to the same crop early enough to be harvested in the season for which it was originally intended, is counted only once. Acreage lost and replanted to the same crop for harvest in a later season, is considered to have been planted in both seasonal classifications but is included as acreage for harvest in the second season only. Acreage lost and replanted to another vegetable crop is included as planted acreage in estimates for both crops but as acreage for harvest for the second crop only.

Both planted and for harvest acreage published for perennial crops, such as asparagus and strawberries, includes only bearing acreage and excludes non-bearing acreage planted for harvest in a future marketing season.

In the following pages the States are listed in the order of their first appearance in the corresponding crop table of the 1955 Annual Summary. The breakdown of acreage is listed only by major seasonal groups (Winter, Spring, Summer and Fall) although in the corresponding 1955 Annual Summary table, the subgroups (such as Late Spring, Early Summer, etc.) are used for some crops. If a State has acreage in two subgroups for the same season (such as Early Summer and Late Summer) the breakdown is given in a footnote.
