ACADEMIC YEAR 1987

TABLE OF CONTENTS

ACADEMIC CALENDAR

Fall Quarter AY '87

Reporting Date . . . . Wednesday, 24 September 1986
Instruction Begins . . . . Wednesday, 1 October
Columbus Day (Holiday) . . . . Monday, 13 October
Reporting Date for Refresher . . . . Thursday, 6 November
Refresher Begins . . . . Monday, 10 November
Veteran's Day (Holiday) . . . . Tuesday, 11 November
Thanksgiving Day (Holiday) . . . . Thursday, 27 November
Quarter Final Exams . . . . Monday - Thursday, 15-18 December
Graduation Exercises . . . . Thursday, 18 December

Winter Quarter AY '87

Reporting Date . . . . Monday, 29 December 1986
New Year's Day (Holiday) . . . . Thursday, 1 January 1987
Instruction Begins . . . . Monday, 5 January
Martin Luther King's Birthday (Holiday) . . . . . . Monday, 19 January
Reporting Date for Refresher . . . . Thursday, 12 February
Washington's Birthday (Holiday) . . . . Monday, 16 February
Refresher Begins . . . . Tuesday, 17 February
Quarter Final Exams . . . . Monday - Thursday, 23-26 March
Graduation Exercises . . . . Thursday, 26 March

Spring Quarter AY '87

Reporting Date . . . . Monday, 23 March, 1987
Instruction Begins . . . . Monday, 30 March
Reporting Date for Refresher . . . . Thursday, 7 May
Refresher Begins . . . . Monday, 11 May
Memorial Day (Holiday) . . . . Monday, 25 May
Quarter Final Exams . . . . Monday - Thursday, 15-18 June
Graduation Exercises . . . . Thursday, 18 June

Summer Quarter AY '87

Reporting Date . . . . Monday, 29 June, 1987
Fourth of July (Holiday) . . . . Friday, 3 July
Instruction Begins . . . . Monday, 7 July
Reporting Date for Refresher . . . . Thursday, 13 August
Refresher Begins . . . . Monday, 17 August
Labor Day (Holiday) . . . . Monday, 7 September
Quarter Final Exams . . . . Monday - Thursday, 21-24 September
Graduation Exercises . . . . Thursday, 24 September

Fall Quarter AY '88

Reporting Date . . . . Monday, 28 September 1987
Instruction Begins . . . . Thursday, 1 October
Columbus Day (Holiday) . . . . Monday, 12 October
Reporting Date for Refresher . . . . Thursday, 5 November
Veterans Day (Holiday) . . . . Wednesday, 11 November
Thanksgiving Day (Holiday) . . . . Thursday, 26 November
Quarter Final Exams . . . . Monday - Thursday, 14-17 December
Graduation Exercises . . . . Thursday, 17 December

Chief of Naval Operations
Carlisle H. Trost, ADM, USN

CNO GRADUATE EDUCATION POLICY

Because we face ever increasing complexities in technological, managerial, and political/economic fields which affect the Navy, we need officers with a solid intellectual capacity and the vision to capitalize on evolving technology and developments. This requires officers capable of original thought and the capacity to synthesize broad areas of knowledge, analyze complex issues, and appreciate the distinction between what is theoretically possible and actually achievable. Investment in graduate education must be pursued as a priority, even in the face of fiscal austerity and competing demands for our junior officers...

The fully funded graduate education programs are intended primarily for lieutenants and lieutenant commanders who have demonstrated superior professional performance and the intellectual capability to complete a rigorous academic program. These academic programs are designed to equip officers with enhanced intellectual and analytical capacity and make them more skillful warriors and specialists. Our goal is to achieve 20 percent of the officer corps with a graduate level subspecialty.

The intention of graduate education is to prepare an officer for a long career of contributions. Therefore, the tendency to train officers for their next assignment must be balanced by graduate education which furthers their ability to contribute. Program length will normally be two years or less to limit costs.

Officers selected for fully funded graduate education will usually be assigned to study at the Naval Postgraduate School (NPS). NPS programs will be maintained with a predominant emphasis on scientific and engineering subjects. NPS will also provide a program of continuing education so prospective students can improve their knowledge and graduates can maintain currency. For those curricula not offered at NPS, officers will be sent to quality civilian or DoD institutions approved by the appropriate program sponsor.

GRADUATE EDUCATION

Any Navy's ability to capitalize on new technology is linked to its level of officer competence. Accordingly, the United States faces a significant challenge to ensure the intellectual and technical competence of its officers. Of the military services, the Navy is the most hardware intensive. This fact is related to the broad scope of its operational domains: undersea, surface, air, and space. Each levies significant and unique demands to effectively match the nation's technological opportunities to operational reality. This is a complex process that demands the highest quality of intellectual and professional skills.

The Navy's graduate education program supports fleet and shore establishment requirements for specialized education beyond the baccalaureate level. This education is directed toward filling current and future Navy needs in operational, technical and managerial areas in concert with the Officer

Subspecialty System. Officers are educated to the graduate level specified by sponsors for optimum performance of duty in the particular subspecialty area. Under the fully-funded program, officers attend school full time, receive all pay and benefits and have tuition paid by the Navy. Fully-funded graduate education is provided at the Naval Postgraduate School (NAVPGSCOL), Monterey, CA and selected DoD and civilian institutions (CIVINS).

Utilization

Officers who have received Navy fully-funded graduate education will serve one tour in a validated subspecialty position as soon as possible but not later than the second tour following graduation. These officers will serve at least two tours in related subspecialty billets, and successfully completing a subspecialty tour will be viewed as an important indicator of potential for higher rank.

THE SCHOOL AND ITS MISSION

The Navy has developed at the Naval Postgraduate School an unusual academic institution in which the special purposes of the Navy are served through the use of academic programs and structure that are very similar to those of civilian universities. The student body is made up wholly of U.S. and international officers of the military services and federal civilians who are being educated to fill the managerial and technological needs of the services. It must be stressed that the School is primarily an academic institution with emphasis on programs that are relevant to Navy interests, with an accommodation to

unique requirements of matching, scheduling and sequencing officers into the programs.

Mission: The Navy's needs for advanced education of Naval Officers in the fields of science, engineering, operations analysis and management are met primarily through the academic programs of the Naval Postgraduate School. Complementing the School's programs in these fields are programs at certain civilian universities which are preeminent in areas related to the interests of the Navy.

The broad responsibility of the Naval Postgraduate School toward the advanced edu-

cation of naval officers is reflected in its stated mission:

"To conduct and direct the advanced education of commissioned officers, and to provide such other technical and professional instruction as may be prescribed to meet the needs of the Naval Service, and in support of the foregoing; to foster and encourage a program of research in order to sustain academic excellence."

Goals: The mission of the Naval Postgraduate School establishes the continuing combined requirements of excellence in quality of academic programs and responsiveness to change and innovation in the technology and management of the Navy. The following educational goals of the School are dictated by this requirement:

"To enhance continually the contribution of the content of the academic programs to the Navy and the Department of Defense.

"To intensify efforts to provide the best education to the students of the Naval Postgraduate School, and to build a progressively better environment where faculty and students can come together in the search for knowledge and professional excellence.

"To nurture in students a respect for rigor in thought and discipline in work which will be a hallmark of their pursuit of excellence in their professions.

"To attract faculty who by their scholarship and fresh viewpoint will bring new life to the classroom, new vigor to the laboratory and through their research sustain a program of academic excellence."

FROM THE BEGINNING

The Naval Postgraduate School is in its 77th year of operation. The development of a naval institution of higher learning dedicated to the advanced education of commissioned officers began on 9 June 1909 when the Postgraduate Department of the U.S. Naval Academy was established at Annapolis. Ten officers made up the first class, three professors formed the faculty, and marine engineering was the one course of study. In 1919, the postgraduate department was renamed the United States Naval Postgraduate School, but still operated as a part of the Naval Academy.

With the advent of World War II, the School's activities increased substantially. There was a large growth in student enrollment and educational programs were expanded to meet the evolving needs of the Navy. Following the end of the War, plans were initiated to move the School to more suitable facilities and to enhance its academic status.

Between 1945 and 1948, Congress established the School as a separate activity under its own Superintendent, created the office of Academic Dean and granted the Superintendent the authority to award the bachelor's, master's and doctor's degrees. It also approved Monterey as the future home of the School. The Navy officially established the School on the West Coast on 22 December 1951. With its enlarged facilities, the School continued to grow in curricular programs and in student enrollment. In 1956, the Navy Management School was formed as a component of the Postgraduate School to provide graduate education in the theory and application of administrative science.

Currently, the Naval Postgraduate School graduates approximately 800 students per year and offers a range of curricular programs specifically tailored to impart the scientific, engineering, operational and administrative knowledge required to meet the present and projected professional needs of the Department of Defense. Its student body includes officers of all five U.S. services and approximately 25 allied services. U.S. Naval Officers constitute 60% of the student body, with 23% coming from other U.S. Services. The remaining 17% is made up of foreign officers. Also, since 1975, the Postgraduate School has enrolled civilian employees of the U.S. Federal Government.

DEGREES

The Naval Postgraduate School is authorized to confer Bachelor's, Master's, Engineer's and Doctor's degrees upon qualified graduates. Recipients of such degrees must be found qualified by the Academic Council in accordance with prescribed academic standards.

ACCREDITATION

The Naval Postgraduate School is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges. Engineering curricula accredited by the Accrediting Board for Engineering and Technology (ABET) are Aeronautical, Electrical and Mechanical. Degrees offered in Engineering Science and Engineering Technology are not accredited by ABET. The Administrative Science Curricula meets the standards of the National Association of Schools of Public Affairs and Administrators.

MASTER'S DEGREES

Requirements for the Master of Arts and Master of Science Degrees:

The Master's Degree may be awarded for successful completion of a curriculum which has the approval of the Academic Council as meriting the degree requirements. Such curricula shall conform to current practice in accredited institutions and shall contain a well-defined major.

General Postgraduate School minimum requirements for the Master's Degree are as follows:

1. 32 quarter hours of graduate level credits for which at least 20 quarter hours must be earned on campus.
2. A thesis, or its equivalent, is required. If the thesis is waived, at least 8 quarter hours of approved courses, 4000-4999, or comprehensive examinations, shall be substituted for it.
3. Departmental requirements for the degree in a specified subject.
4. A quality point rating of at least 3.00 in all graduate courses in the curriculum, and either 2.50 in the remaining courses or 2.75 in all courses in the curriculum.

Master of Arts Degrees Offered

National Security Affairs

Master of Science Degrees Offered

Aeronautical Engineering
Applied Mathematics
Applied Science
Computer Science
Electrical Engineering
Engineering Acoustics
Engineering Science
Hydrographic Sciences
Information Systems
Management
Mathematics
Material Science
Mechanical Engineering
Meteorology
Meteorology and Oceanography
National Security Affairs
Oceanography
Operations Research
Physics
Systems Technology
Systems Engineering
Telecommunications Systems
    Management

Master's Degrees with Distinction

The award of the Master of Science and the Master of Arts degrees may be made "With Distinction" when a student completes the degree requirements with a minimum of 32-quarter hours earned in residence and is judged to be in the upper 10% of the graduating class from the student's department.

ENGINEER'S DEGREES

Requirements: The Engineer's Degree typically represents one year of study beyond the Master's Degree. It is awarded for successful completion of a curriculum which has the approval of the Academic Council as meriting the degree.

Minimum Postgraduate School requirements for the degree of Engineer are as follows:

1. 72 quarter hours of graduate level courses, including at least 30 hours in courses 4000-4999.
2. An acceptable thesis.
3. One academic year in residence.
4. Departmental requirements for the degree in a specified engineering field.
5. A quality point rating of at least 3.00 in all graduate courses in the curriculum, and either 2.50 in the remaining courses or 2.75 in all courses of the curriculum.

Engineer's Degrees Offered

Aeronautical Engineer
Electrical Engineer
Mechanical Engineer

DOCTOR'S DEGREES

Requirements: Any program leading to a Doctor's Degree shall require the equivalent of at least three academic years of study beyond the baccalaureate level, with at least one academic year being spent at the School. A requirement for admission is a Bachelor's degree that includes the prerequisites for full graduate status in the department of his major study.

A general outline of a candidate's progress through the program is as follows:

a. Application to the appropriate department and successful completion of a screening exam.
b. Appointment of the student's doctoral committee, which bears responsibility for the study program and guidance of the research program.
c. Inclusion of one or more minors in the study program.
d. For the Doctor of Philosophy, a foreign language requirement may be included at the discretion of the major department; for the Doctor of Engineering, demonstrated proficiency in computer programming is required.
e. When the study program is essentially finished, successfully complete the qualifying examination, including both oral and written parts.
f. Admission to candidacy and work on a doctoral dissertation on a subject approved by the doctoral committee.
g. Upon completion of the dissertation and acceptance by the doctoral committee, administration of a final oral examination.
h. Upon unanimous recommendation of the doctoral committee, the Academic Council recommends award of the degree.

Doctorates Offered

Doctor of Philosphy in:
    Aeronautical Engineering
    Computer Science
    Electrical and Computer Engineering
    Engineering Acoustics
    Mechanical Engineering
    Meteorology
    Oceanography
    Operations Research
    Physics

Doctor of Engineering in:
    Aeronautical Engineering
    Electrical and Computer Engineering
    Mechanical Engineering

POSTGRADUATE SCHOOL STATISTICS

Graduate degrees granted by NPS since 1946 are given in the following table to provide perspective. Two of the degrees are no longer offered: Master of Science in Chimistry and the undesignated Master of Science Degree. A third, Master of Science in Computer Systems Management, has been changed to Master of Science in Telecommunication System Management. Growth in program offerings is evident as the figures are tracked from left to right. Between 1955 and 1965 the range of degrees doubled, and by 1975 they had increased again by nearly the same number. Within recent years the populations and offerings have, on an overall basis, been stable.

8

AWARDS FOR GRADUATES

ADMIRAL WILLIAM ADGER MOFFETT AWARD

This award is presented annually by the Point Lobos Section of the American Institute of Aeronautics and Astronautics to an outstanding graduate of the Aeronautical Engineering curriculum. The award is made on the basis of the student's academic excellence, including thesis, and his career potential.

ARMY CHIEF OF STAFF AWARD FOR EXCELLENCE IN OPERATIONS RESEARCH

Presented semiannually to a U.S. Army Officer student in the Operations Analysis Program who possessed an outstanding academic record, including thesis and project work, and who demonstrates qualities indicative of an outstanding military officer.

ARMED FORCES COMMUNICATIONS AND ELECTRONICS ASSOCIATION HONOR AWARD

Presented to that officer graduate who has achieved academic excellence and best demonstrated professional qualities in one of the following programs: Electronics, Communications, Intelligence, Command and Control, or Computer Technology.

ASTRONAUT MICHAEL J. SMITH, CDR, USN, ASTRONAUTICS AWARD

Astronaut and CDR Michael J. Smith, who was an aluminus of NPS gave his life exploring space for the enrichment of mankind. This award is presented annually by the Point Lobos Section of the American Institute of Aeronautics and Astronautics to an outstanding graduate of the Space Systems Engineering or Space Systems Operations curricula. The award is made on the basis of the student's academic excellence, including thesis, and his career potential.

CAPTAIN JOHN C. WOELFEL AWARD

Presented each June to the outstanding Naval Engineering program officer student on the basis of academic and leadership qualities and performance. Officers from the past September, December, March and June graduation classes were considered.

THE CHIEF OF NAVAL OPERATIONS AWARD FOR EXCELLENCE IN ORGANIZATIONAL DEVELOPMENT

This award is presented semiannually for academic excellence to the most outstanding graduate of the Human Resources Management Curriculum.

CHIEF OF NAVAL OPERATIONS ANTISUBMARINE WARFARE AWARD

Sponsored by the National Security Industrial Association and presented in recognition of distinguished academic achievement to that ASW Curriculum graduate who has demonstrated outstanding academic performance and exhibited those qualities indicative of an outstanding military officer.

CHIEF OF NAVAL OPERATIONS COMMUNICATION AWARD

Presented in recognition of distinguished academic achievement in the Communications Engineering or Telecommunications Systems programs to that graduate who has attained an outstanding academic record and who exhibits those qualities of an outstanding military officer.

CHIEF OF NAVAL OPERATIONS AWARD FOR EXCELLENCE IN MANPOWER, PERSONNEL AND TRAINING ANALYSIS

This award is given semiannually to a U.S. Navy, or OP-01 sponsored civilian, graduate of the Manpower, Personnel and Training Analysis curriculum who has demonstrated outstanding academic performance, thesis quality and leadership potential.

CHIEF OF NAVAL OPERATIONS AWARD FOR EXCELLENCE IN OPERATIONS RESEARCH

Presented semiannually to the outstanding USN or USMC graduate of the Operations Research Program on the basis of academic achievement, experience tour performance, thesis work and demonstration of those qualities indicative of the outstanding military officer.

DEPARTMENT OF THE NAVY AWARD FOR ACADEMIC EXCELLENCE IN FINANCIAL MANAGEMENT

This award is presented semiannually to a financial management student who demonstrates overall academic performance, academic excellence in financial management courses, high leadership potential, future ability to contribute to professional, academic and public forums while meeting the highest standards of stewardship of the National Trust, and thesis excellence.

JOINT CHIEFS OF STAFF COMMAND, CONTROL AND COMMUNICATIONS AWARD FOR ACADEMIC ACHIEVEMENT

Presented to the outstanding graduate of the Command, Control and Communications Program in recognition of distinguished academic achievement based upon grades obtained, quality of thesis and overall performance.

MEWBORN STUDENT RESEARCH AWARD

Presented annually to an officer student whose thesis exhibits sound scholarship and highest research ability. Criteria of selection conforms as nearly as possible to the concept of "evidence of research potential" which forms the basis for election to Associate Membership in the Society of Sigma Xi.

MILITARY OPERATIONS RESEARCH SOCIETY GRADUATE RESEARCH AWARD

Presented in recognition of outstanding achievement in graduate research directed toward improving military force utilization. The primary award criterion is research which leads to demonstration of, or potential for, increased operating effectiveness of currently available or near term assets.

MONTEREY PENINSULA COUNCIL NAVY LEAGUE AWARD FOR HIGHEST ACADEMIC ACHIEVEMENT

Presented to the graduating USN, USMC or USCG officer who has maintained the highest academic grade average as a student at the Naval Postgraduate School.

NAVAL SEA SYSTEMS COMMAND AWARD IN NAVAL ENGINEERING

Presented in recognition of distinguished academic achievement in the Naval Engineering Program. The criteria for the award includes demonstrated academic excellence measured by grades attained, quality of thesis and demonstrated leadership potential in Naval Engineering.

NAVAL SEA SYSTEMS COMMAND AWARD FOR WEAPON SYSTEMS ENGINEERING EXCELLENCE

Presented in recognition of distinguished scholastic achievement in a Weapons Engineering field of study. Selection is based on grades attained, quality and applicability of thesis and demonstrated leadership potential in the field of Weapons Engineering.

NAVAL SUPPLY SYSTEMS AWARD FOR ACADEMIC EXCELLENCE IN ADMINISTRATIVE SCIENCE

Presented annually to an outstanding U.S. Navy Supply Corps officer in Administrative Science. This award is made on the basis of academic achievement, research excellence, and contribution to the professional and civilian community.

NAVAL SURFACE WEAPONS CENTER AWARD FOR EXCELLENCE IN SURFACE WARFARE TECHNOLOGY

Presented semiannually to a U.S. officer of high academic standing whose thesis topic and quality of supporting research demonstrates the greatest potential for contribution to surface warfare.

NAVAL UNDERWATER SYSTEMS CENTER AWARD FOR EXCELLENCE IN UNDERWATER SYSTEMS TECHNOLOGY

Presented annually to the student, who by academic standing and relevance of thesis topic, has demonstrated the greatest achievement in the field of Underwater Systems Technology.

OCEANOGRAPHER OF THE NAVY AIR-OCEAN SCIENCE AWARD

Presented to a U.S. Naval officer graduate of the Air-Ocean Science Program who has demonstrated outstanding performance and exhibited those qualities indicative of an outstanding military officer.

REAR ADMIRAL GRACE MURRAY HOPPER AWARD FOR COMPUTER TECHNOLOGY

Presented to a graduating USN, USMC or USCG officer on the basis of thesis quality, academic performance and demonstrated leadership ability in the study of computer technology.

REAR ADMIRAL THOMAS A. MCCLELLAN AWARD FOR ACADEMIC EXCELLENCE IN ADMINISTRATIVE SCIENCE

Presented to a graduate of Administrative Science based upon academic performance, professional commitment, and leadership potential.

RECONNAISSANCE ELECTRONICS WARFARE SPECIAL OPERATIONS NAVY AWARD

Presented in recognition of academic achievement in the Electronic Warfare Systems Technology Program to that graduate who has attained an outstanding academic record and who has exhibited outstanding leadership qualities.

SIGMA XI

The Naval Postgraduate School has a Chapter of the Society of the Sigma XI, an honorary society founded to recognize excellence in the scientific and engineering disciplines. Students who have demonstrated marked promise in their research work are considered for membership each year. The number elected is limited only by the quality of the research work done for a graduate degree.

SPACE AND NAVAL WARFARE SYSTEMS COMMAND AWARD IN ELECTRONICS SYSTEMS ENGINEERING

Presented semiannually to a U.S. Navy Officer student in recognition of distinguished academic achievement in the advanced Electronics Engineering program.

UNITED STATES NAVAL INSTITUTE AWARD

Presented each quarter to that recipient of a master's degree in National Security Affairs whose achievement has significantly advanced professional, literary or scientific knowledge in the naval or maritime services.

WARREN RANDOLPH CHURCH AWARD

Presented annually to an officer student for outstanding performance in mathematics. The criteria for selection includes evidence of initiative, scholarly attitude and mathematical maturity.

GRADES

Student academic performance is evaluated in terms of quality points assigned to the letter grade achieved in a course. Based on the level of achievement associated with each letter grade, the corresponding quality point values range from a maximum of 4 to a minimum of 0 as follows:

Grade	Point Value
A	4
A-	3.7
B+	3.3
B	3
B-	2.7
C+	2.3
C	2
C-	1.7
D+	1.3
D	1
X	0

Letter designations for which no quality points are assigned are given as follows:

I	Incomplete
W	Withdrew
N	Ungraded
P	Pass
F	Fail

The grade of Incomplete is given when an identifiable portion of the course remains undone at the end of the quarter. One additional quarter is granted to submit the delinquent work. If the I is not removed within the twelve weeks following the end of the term in which it was assigned, it becomes an X.

A student may withdraw from a course up to the end of the second week of the quarter without any record of it showing on the transcript. Withdrawals may be made after that up to the end of the eighth week of the quarter, but a grade of W is entered for the course on the transcript. No withdrawals can be made after the eighth week.

Courses may be designated for P and F grading when approved by the Academic Department and the Academic council. A student in a degree program who wishes to take courses not in his normal program may elect to take them in the Pass/Fail mode. Approval must be granted by the student's cognizant Curricular Office and Department Chairman. It is the responsibility of the student to exercise the P/F option by informing the instructor **in writing** at the time of enrollment that a P/F grade is desired. A copy of the approved request shall be forwarded to the Registrar. Students electing to receive the P/F grade in letter graded courses may not apply the hours toward the degree and curriculum requirements of any program.

QUALITY POINT RATING QPR

When the quarter-hour credit of a course is multiplied by the point value of the student's grade, a quality point value for the student's work in the course is obtained. The sum of the quality points for all courses divided by the sum of the quarter-hour credit of these courses gives a weighted numerical evaluation of the student's performance, termed the Quality Point Rating (QPR). A student achieving a QPR of 3.0 has maintained a B average in all courses undertaken with a proper weight assigned for course hours.

COURSES

Courses are designated by an alphanumeric symbol consisting of two letters and four numbers. The first two letters designate the academic department which offers the course, and they are defined as follows:

Administrative Sciences
Service Courses	AS
Telecommunications Systems Management	CM
Defense Communications	CO
Information systems	IS
Management	MN
Aeronautics	AE
Antisubmarine Warfare	ST
Command, Control And Communications	CC
Computer Science	CS
Electrical and Computer Engineering	EC
Electronic Warfare	EW
Mathematics	MA
Mechanical Engineering	ME
Materials Science	MS
Meteorology	MR
National Security Affairs	NS
Oceanography	
Oceanographic Sciences	OC
Hydrographic Sciences	GH
Operations Research	
Operations Analysis	OA
Service Courses	OS
Physics	PH
Chemistry	CH
Science And Engineering	SE

Courses are assigned numbers in accordance with their level of academic credit.

0001-0999	No credit
1000-1999	Lower division college credit (Freshman - Sophmore Level)
2000-2999	Upper division college credit (Junior - Senior level)
3000-3999	Upper division college or graduate credit
4000-4999	Graduate credit

Following the course designator are two numbers in parenthesis separated by a hyphen which indicate the hours of instruction per week in the classroom and in the laboratory respectively. Laboratory hours are assigned half the value shown in calculating quarter hours for the credit value of the course. Thus a (3-2) course, having three hours lecture and two hours laboratory, will be assigned a credit value of 4 quarter hours.

COURSE REGISTRATION AND CREDIT

Each student must be registered in each course in which he/she is a candidate for credit not later than the end of the second week of the term. No student will receive credit for a course unless registration in that course has been approved by one of the following: his curricular officer or academic associate, the chairman of his doctoral committee, or the Dean of Academic Administration.

Overload: A student may not enroll for more than 21 total credit hours or more than four 3000 and/or 4000 courses (excluding laboratories or explicit curriculum requirements) per quarter unless he has either a total QPR of at least 3.50 or permission of the Department or Group Chairman and the Dean of Academic Administration.

Repetition of Courses: A student may repeat a course for the purpose of improving his/her grade when the grade received originally was either D or X, provided such course repetition is taken at the Postgraduate School. Approval must be granted by both the Curricular Officer and the Department Chairman concerned, and the Registrar is to be notified.

For record purposes, both the original and the repeated courses are to be shown on the transcript. For Quality Point Rating computation, the credit hours of the course shall be counted once with the quality points earned being the average of the two.

Auditing: Eligible persons will be allowed to audit courses on a space-available basis with the approval of the professor teaching the course and the Curricular Office if appropriate.

When approval is obtained to audit, students may attend classes, but they have no entitlement to submit papers, questions, or tests for grading nor consume the instructor's time outside of class. Auditors will receive no grade for the course, no credit toward graduation and no formal recognition of accomplishment for courses they have audited.

Medical Absence: The academic record of a student may be deleted completely for a given term when he/she is absent for a portion of the term for medical reasons. The transcript will show, "Excused for the term for medical reasons." The student shall not be permitted to delete only a portion of his/her courses for this reason. The grade "W" shall be used when it is necessary to withdraw from only a part of the student's program. Such excusals shall be requested by the Curricular Officer and approved by the Dean of Academic Administration.

Credit by Examination: The award of credit solely on the basis of examination for any 1000 or 2000 level course is permissible. Grades for such courses shall be awarded on a Pass/Fail basis.

VALIDATION

A student with the appropriate background may validate a course that is required for his/her curriculum. Validation will allow the student to omit that course from the program of study; however, no credit will be granted for a course that has been validated. The basic purpose of course validation is to make optimal use of the student's time at the Naval Postgraduate School. Every validation must be justified by documented evidence of prior work in the area of the course to be validated.

The validation of a course must be approved in writing by the chairman of the department offering the course or by someone designated in writing by the chairman to act for him/her in this regard. Specific criteria for validation (e.g., review of the student's transcripts or examination on the material of the course) are left to the discretion of the cognizant department chairman.

After validating one or more courses, it is appropriate for a student to complete his/her program in less than the maximum time allowed.

ADMISSIONS

U.S. Navy officers interested in attending one of the curricula offered at the Naval Postgraduate School are referred to **OPNAVINST 1520.23** and to the latest **OPNAVNOTE 1520.** These documents provide information, policy, and procedural guidance for the Navy's graduate education program.

SELECTION PROCEDURES

Selection for Navy funded graduate education is based on academic capability, outstanding professional performance, promotion potential and a strong educational background. Officers normally will complete at least one tour of duty prior to entering graduate school.

Documented academic performance in voluntary education programs offered by NAVPGSCOL self-study courses or CIVINS will enhance selection opportunity. Commissioned officers not yet selected for graduate

education are encouraged to take the Graduate Record Examination (GRE) General Test at their own expense and report scores to COMNAVMILPERSCOM and NAVPGSCOL by entering both Code R5806-5 and Code R4831-4 in block 13 of the registration form. The GRE is available through the Defense Activity for Non-Traditional Education Support (DANTES) or the Navy Campus. In cases where scores are provided, they will be used in conjunction with the Academic Profile Code (APC) to assess the officer's academic capability. The additional information may enhance selection opportunity, particularly in the case of individuals whose undergraduate performance is not indicative of academic potential.

Officers selected for fully funded graduate education will be notified by COMNAVMILPERSCOM. Notification will include curriculum options for which the officer is eligible by virtue of designator and APC.

TABLE OF ACADEMIC PROFILE CODE DIGITS

The Academic Profile Code (APC) is a three-digit number that summarizes pertinent portions of a Naval officer's prior college performance and is an important factor in the Navy's graduate education selection process. The Naval Postgraduate School computes APC's within two years after commissioning for officers of most Navy communities. A detailed description of the APC system is also found in OPNAVNOTE 1520. Briefly, the three independent digits reflect an individual's cumulative grade-point average (QPR), performance in calculus related mathematics courses, and qualifications in selected science/engineering areas.

First Digit

The first digit indicates overall academic performance and is derived from the following table:

Code	QPR Range
0	3.60-4.00
1	3.20-3.59
2	2.60-3.19
3	2.20-2.59
4	1.90-2.19
5	0-1.89

(Failures and repeated courses are included in the QPR calculation.)

A Technical Code of 1 or 0 ordinarily is assigned only to an officer whose undergraduate major was Physics or Aeronautical, Electrical, or Mechanical Engineering. Exceptions are made for those desiring to attend civilian colleges for studies in other technical areas; for example, officers of the Civil Engineering Corps. Officers in this category, other than CEC members, should contact the Director of Admissions of the Naval Postgraduate School for re-evaluation of their Tech Codes.

Example

An APC of 221 indicates a total grade average for all college courses in the interval 2.60-3.19, a complete sequence in calculus-of-one-variable with a C+ or B average, and a major in physics or pertinent engineering area with upper-division courses with a C+ or B average.

Threshold

Each curriculum at the Naval Postgraduate School has a specified threshold APC for admission. A list of these is given at the beginning of the section on programs. Officers with

deficient APC's can qualify for entry into these curricula by completing suitable courses from the School's Continuing Education Program or at any accredited civilian college. Transcripts (not grade reports) of work done at civilian schools must be forwarded to the Director of Admissions, Code 0145, Naval Postgraduate School, Monterey, CA 93943, to effect an APC change. The grades in all courses completed will be used to revise an officer's QPR. Only courses with B or better grades are used to upgrade either a Math Code or a Tech Code.

Continuing Education

It is recommended that all officers desiring fully-funded graduate education complete recommended preparatory courses prior to selection for resident programs. Under the guidance of the NAVPGSCOL Office of Continuing Education, preparatory refresher and credit courses are available on a self-study basis. These offerings are conducted in an individualized self-paced mode and include contact with a qualified civilian or military tutor in the local area. Available courses are listed in the Continuing Education Catalog, which is distributed annually to all ships and sta-

Second Digit

The second digit represents mathematical background according to the following criterion:

Code	Meaning
0	Significant post-calculus math with B or better average
1	Calculus sequence completed with B+ or better average
2	Calculus sequence completed with average between C+ and B
3	One calculus course with C or better
4	Two or more pre-calculus courses with B or better average
5	One pre-calculus course with C or better grade
6	No pertinent college-level math with C or better grade

Third Digit

The third digit represents previous course coverage in science and technical fields.

Code	Meaning
0	Significant pertinent upper-division technical courses with B+ or better average
1	Significant pertinent upper-division technical courses with average between C+ and B
2	Complete calculus-based physics sequence with B+ or better average
3	Complete calculus-based physics sequence with average between C+ and B
4	One calculus-based physics course with C or better grade
5	No pertinent technical courses

tions. This catalog also contains enrollment forms. Personnel may enroll in courses at any time. Further information may be obtained by writing to the Director of Continuing Education (code 011) at the NAVPGSCOL, or telephone (408) 646-2558/2559/2984 (Autovon: 878-2558/2559/2984). Preparatory courses may be taken at local duty stations either for credit or for review only. Successful completion of preparatory courses will enhance chances of selection to graduate education, assist or improve performance in the early phases of a graduate program, and reduce resident course requirements at NAVPGSCOL.

Academic Counseling.

The NAVPGSCOL provides academic counseling services as indicated below to assist officers in developing individual educational plans.

(1) Officers who have chosen specific curricula, or who have been selected or detailed for graduate education in programs at NAVPGSCOL, are advised to contact the appropriate NAVPGSCOL curricular office listed in the Programs Section of the catalog.

(2) Officers not yet selected for graduate education and seeking general information about subspecialty codes, selection for graduate education, and preliminary information about graduate education commensurate with career fields are advised to contact the Director of Continuing Education (code 011), NAVPGSCOL or telephone (408)646-2558/ 2559/2984 (Autovon: 878-2558/2559/ 2984.

OTHER U.S.
MILITARY OFFICES

Officers on duty with other branches of service are eligible to attend the Postgraduate School. Requests for admission or transcripts from individual officers should **not** be sent directly to the Naval Postgraduate School. They should apply in accordance with the directives promulgated by the Department of the Army, Department of the Air Force, Commandant U.S. Marine Corps, or the Commandant U.S. Coast Guard, as appropriate.

ALLIED COUNTRY MILITARY OFFICERS

Military officers from allied countries may be admitted to most curricula. Their admission is subject to availability of quotas assigned to each country. The procedures for application are contained in OPNAV INSTRUCTION 4950.1E. Correspondence must be processed through normal channels; requests from individual officers should be sent directly to the Naval Postgraduate School. In addition to fluency in English, candidates must satisfy the academic standards for each curriculum as described in this catalog.

CIVILIAN EMPLOYEES OF U.S. GOVERNMENT

A civilian employee of an agency of the United States Federal Government may be admitted for study upon request and sponsorship of the agency. Federal civilian employees are not required to pursue the curricula designed for officer-students as described in this catalog but instead determine, with the guidance of assigned academic counselors, the combination of courses that will best meet their needs.

A civilian who is expecting agency sponsorship should submit a written request for evaluation for admission at least four months prior to expected commencement of studies. A request should indicate the academic area of interest and degree intentions and be accompanied by a complete set of official transcripts of all previous college work. GRE and/or GMAT scores are not required but will be considered when included in the submission.

Requests for admission should be directed to the Director of Admissions, Code 0145, Naval Postgraduate School, Monterey, CA 93943. Questions about available programs or admission procedures may be telephoned to (408) 646-3093 or Autovon 878-3093.

TRANSFER OF CREDITS

Upon entry to the Naval Postgraduate School, each student's academic record will be evaluated for possible transfer of credit or for exemption from portions of the curricular program by validation of course work previously completed. Students may also utilize knowledge gained through self-study, experience or service-related education to seek validation or credit for curricular courses by taking a departmental examination.

Twelve hours of graduate-level courses previously completed may be accepted for transfer credit. These include graduate-level courses taken after completion of the baccalaureate degree and those taken in the last term before award of the baccalaureate and certified to be in excess of degree requirements.

Questions on transfer credit may be directed by letter to the Dean of Academic Administration, Code 014, Naval Postgraduate School, Monterey, CA 93943, or telephone (408) 646-2391 or Autovon 878-2391.

Superintendent
Robert C. Austin, RADM, USN

Academic Dean
David Alan Schrady, PhD

18

SCHOOL STRUCTURE AND ORGANIZATION

The Naval Postgraduate School was established and is funded by the Congress of the United States. It is administered as an activity within the Department of the Navy; consequently, the institution's governance and administration do not follow norms for civilian higher education. There is no exact correspondence with a board of trustrees or regents.

BOARD OF ADVISORS

The Board of Advisors is composed of distinguished professionals, consisting of highly qualified civilian educators, prominent citizens from business, the professions, and other vocations, and active and retired military officers. The purpose of the Board is to assist the Superintendent on strategic matters of the Naval Postgraduate Education Programs and advise the Secretary of the Navy relative to its needs. In fulfilling this objective, the Board assesses the effectiveness with which the Naval Postgraduate School is accomplishing its mission and evaluates its future plans. Board members are appointed for renewable terms of up to four years by the Secretary of the Navy upon the recommendation of the Superintendent.

The Board meets annually at the Naval Postgraduate School, and after its meeting they submit an annual report. Board members also serve on departmental academic review committees during the year and assist in other matters as requested by the Superintendent or the Secretary of the Navy.

ADMINISTRATION

The Superintendent of the Postgraduate School is a flag officer of the line of the Navy. His principal assistant is the Provost/Academic Dean who is the senior member of the civilian faculty.

The Superintendent has command responsibility for accomplishment of the School's mission. The Provost/Academic Dean is the chief educational officer and is responsible to the Superintendent of all academic matters. He is appointed by the Secretary of the Navy upon the recommendation of a council of NPS senior personnel, chaired by the Superintendent. All other Deans report to the Provost/Academic Dean.

In addition to serving as the institution's president, the Superintendent is the academic coordinator for all postgraduate education programs in the Navy, and, as such, administers fully-funded graduate educational programs, both at the Naval Postgraduate School, other service graduate schools, and civilian universities.

ADMINISTRATIVE STAFF

Principal assistants to the Superintendent and Provost are the administrative staff, which consist of two captains of the line who serve as the Director of Programs and the Director of Military Operations and five faculty members who serve as Deans and Directors of academic functions. These currently are:

DIRECTOR OF PROGRAMS: **Howard Venezia;** Captain, U.S. Navy.

DIRECTOR OF MILITARY OPERATIONS: **William E. Held, Jr.,**Captain, U.S. Navy.

DEAN OF INFORMATION AND POLICY SCIENCE: **Kneale Thomas Marshall,** Professor of Operations Research.

DEAN OF SCIENCE AND ENGINEERING: **John Norvell Dyer,** Ph.D., Professor of Physics

DEAN OF ACADEMIC ADMINISTRATION: **Gerald Herbert Lindsey,** Ph.D., Professor of Aeronautics.

DIRECTOR OF RESEARCH: **Gilbert T. Howard,** Ph.D., Professor of Operations Research.

DIRECTOR OF CONTINUING EDUCATION: **Robert D. Zucker,** Ph.D., Professor of Aeronautics.

The academic program organization is supervised by the Director of Programs, the Dean of Information and Policy Sciences, and the Dean of Science and Engineering who collaborate to share jointly the responsibilities for planning, conducting and administering the several education programs.

ACADEMIC DEPARTMENTS

Members of the faculty are organized into eleven Academic Departments and three Interdisciplinary Groups, each supervised by a Chairman. Over 80% of the teaching staff are civilians of varying professional rank and the remainder are military officers. The departments are grouped into a Division of Information and Policy Sciences and a Division of Science and Engineering. Designated Deans supervise the academic affairs of their respective divisions. Chairmen of the Interdisciplinary Groups report to the Provost.

Division of Information & Policy Sciences

Administrative Sciences
Computer Science
Mathematics
National Security Affairs
Operations Research

Division of Science & Engineering

Aeronautics
Electrical & Computer Engineering
Mechanical Engineering
Meteorology
Oceanography
Physics

Academic Groups

Antisubmarine Warfare
Command, Control & Communications
Electronic Warfare
Space Systems Operations

CURRICULAR OFFICES

The Curricular Offices are organizational entities that are separate from, but interactive with, the Academic Departments in the educational operation of the school. The former are staffed by naval officers and civilian faculty members whose primary functions are threefold: (1) academic counseling and military supervision of officer students; (2) curriculum development and management to insure attainment of professional and academic objectives; and (3) liaison with curricular sponsor representatives.

Students are grouped in accordance with their curricular programs and are assigned to one of ten Curricular Offices for program supervision and for academic and professional counseling. Students in each curricular group pursue similar or closely related curricula. Each Curricular Office is staffed by one or more military officers of suitable experience and rank and one or more Academic Associates. The latter are faculty members selected for this part-time assignment. They are responsible to the Division Deans for the integrity and academic soundness of the academic features of the Curricular Office operation. Curricular Officers are responsible that the curriculum meets the Navy's needs and for the proper administrative operation of their respective offices. They report to the Director of Programs, who is the senior military officer under the Superintendent for all military personnel assigned to curricular or academic duties.

Officer students are grouped into the following curricular program areas:

Administrative Sciences
Aeronautical Engineering
Air-Ocean Sciences
Antisubmarine Warfare
Command, Control and
    Communications (C3)
Computer Technology
Electronics and Communications
National Security Affairs/
    Intelligence
Naval Engineering
Operations Analysis
Weapons Engineering/ASW

FACULTY ORGANIZATIONS

The Faculty has a systematic role in school-wide policy-making and planning through various established Councils. The Faculty Council functions as a primary faculty-input advisory vehicle to the Provost and Superintendent. The Academic Council, a representative body of each academic department and group, has cognizance over all academic standards and degree-granting considerations. The Research Council reviews research proposals for and determines allocation of Foundation Research Program funds, the Computing Advisory Board and the Library Council functions similary recommends campus-wide computer operating policy. The composition of each Council and its specific functions are described in the NPS Organization and Regulations Manual.

20

STUDENT COUNCIL

The Student Council is an organized communication mechanism between the NPS students and the NPS administration. It functions in an advisory capacity in matters involving curricula, facilities, procedures and policies deemed worthy of attention. The Student Council is comprised of thirty-five student representatives, and membership is distributed among the curricula by student population, with each curriculum having at least one representative.

The Student Council is headed by a Chairman, Vice Chairman, and Secretary elected by members of the Student Council. Officers serve for a six-month period. Besides a Steering Committee and an Election Committee, Student Council Committees are formed to correspond with those NPS committees or councils which have an impact or effect on the student body and which can give or receive benefit from such representation. Student Council representation is included in the following NPS standing Councils and Committees:

> Academic Council
> Faculty Council
> Library Council
> Computer Council
>
> Exchange/Bookstore Committee
> Recreation Committee
> O'Club Committee
> Public Works/Housing Committee
> Medical Committee

Student Council meetings are held at least once a month and the minutes of these meetings are distributed to interested offices within the School.

SPECIAL FACILITIES

DUDLEY KNOX LIBRARY

The Library embraces an active collection of 325,000 books, bound periodicals, government documents, pamphlets, and other materials in hard copy and microform; 540,000 research reports in hard copy and microform; and over 1,800 periodicals and other serial publications currently received. These materials parallel the School's curricular fields of engineering, physical sciences, managerial sciences, operations research, naval sciences, and national security affairs.

The Reader Services Division provides the open literature sources, such as books, periodicals and journals, indexes and abstracting services, pamphlet materials and newspapers. It provides access to more than 300 computer data bases in the curricular fields of interest by means of BRS (Bibilographic Retrieval Services), DIALOG (Lockheed Information Systems, NEXIS (Mead Data Central), and RLIN (Research Libraries Group). It furnishes facilities for microform reading and printing and for reproduction of printed matter. It borrows publications not held in its collections from other libraries.

The Research Reports and Classified Materials Division is the principal repository for research documents received by the School. It houses the Library's classified and unclassified research reports in hard copy and microfiche. A machine information storage and retrieval system that utilizes the School's computer facilities is available for bibliographic searches of research and development documents held by the division. An SDI (Selective Dissemination of Information) Service is also available. The Division is able to perform, via its own remote terminal, computer searches of the data banks of the Defense Technical Information Center in Alexandria, Virginia, and thus to provide rapid and efficient access to the 1,000,000 plus documents held by the Center. It also accesses the CIRC (Central Information Reference and Control) System and NASA/RECON.

The Christopher Buckley, Jr., Library is located in the basement of the Library. It is a collection of some 8,000 volumes pertaining principally to naval history and the sea.

W.R. CHURCH COMPUTER CENTER

The many services of the Computer Center are available to all faculty, staff, and students of the School for use in instruction, research, or administrative activities. These services are provided on a multiprocessor hardware configuration consisting of an IBM 3033 Attached Processor (16 megabytes) loosely-coupled with an IBM 3033 Model S (8 megabytes). Both systems have access to all auxiliary storage and the input/output devices including 4 drums with 12 megabytes each as paging devices, 44 IBM 3350-1 disk spindles (317 Mbytes each), 10 IBM 3420-8 tape drives (6250 bpi) and a mass storage system containing cartridges of 50 Mbytes each.

The principal mode of access is via 350 IBM 3278 Display Terminals located in public spaces and private offices in the academic buildings and attached by coaxial cable to the computer in Ingersoll Hall. In addition, there are 20 IBM 3277 APL/Graphic displays available for public use. The computer network is run under the operating system VM/SP (Virtual Machine) which provides batch-processing support on MVS (Multiple Virtual Storage) and interactive computing on CMS (Conversational Monitor System). The extensive programming facilities include VS FORTRAN, WATFIV, VS COBOL, WATBOL, PL/1 Optimizer, BASIC, VS APL, and Pascal. Most languages are available in both interactive and batch-processing modes.

The School has a heavy commitment to computers consistent with their present and future role in military operations. All of the academic curricula have been affected by the presence of computers on campus. All graduate students take at least one course in computer science. They are introduced to computers early in their curricula at the Naval Postgraduate School and encouraged to use them in subsequent course work and research.

The Computer Center supports a wide variety of specialist courses in computer science offered by the Departments of Computer Science, Electrical & Computer Engineering, Mathematics, Operations Research and Administrative Sciences.

The professional staff provides short courses, consulting services in application programming, systems programming and problem formulation assistance for students and faculty members. They participate in an active research and development program directed primarily towards improving the present operational environment or introducing new hardware and software facilities to users. Current projects include work on systems measurement, improvement of operating systems, graphical data processing, time-sharing facilities, micro-to-mainframe communications and networking.

In addition to these facilities, virtually all of the academic departments have developed computing facilities and/or laboratories, mini- and micro-processor based, which provide computing support or are dedicated to specific areas of research. Micro-computers are widely used as stand-alone development tools or as processing elements imbeded in more complex systems. Many students have purchased their own personal computer.

SPECIAL PROGRAMS

FEDERAL CIVILIAN EDUCATION

Any civilian employee of the United States government is eligible to participate in the program of the School. The individual's employing agency is expected to meet the tuition expense for regular on-campus enrollment ($1,500 per quarter per student). Costs associated with participation in the Continuing Education Program are determined on an ad hoc basis.

Programs available to civilian students can be classified as follows:

Regular Curricula: The School's programs for officers are designed to meet the requirements of the services for specific education. The contents usually exceed the requirements for a graduate degree since the service's requirements, rather than degree requirements, determine the scope of each program Civilian students may enter any curriculum at the point at which they are qualified and complete the curriculum along with regular officer students. The programs section describes the available curricula.

Degree Programs: For civilian students, programs can be designed which lead to the award of a graduate degree while meeting the educational goals of each individual. In order to minimize the residency requirement, an off-campus preparatory program may be developed in consultation with a School advisor. This may include self-study courses from the School or courses at a local university. If the available time in residence, typically four calendar quarters or less, is insufficient to complete degree requirements, the thesis-project portion of the program may be completed off-campus.

Non-Degree Programs: Civilian employees may desire to pursue a program for professional advancement without a degree objective. Any of the School's regular courses are available for such efforts. For groups of employees from an agency, special courses can be offered to meet particular requirements, provided the demand is in an area of expertise of the School.

Continuing Education: Approximately thirty-five short courses are delivered annually, both on-site at supporting activities and at Monterey. Attendance in these courses is open to military and civilian employees of the Federal Government. Courses given at Monterey are offered on a tuition-fee basis. A listing of planned short courses is available upon request. Civilian employees of the Federal Government may also enroll in self-study courses which can be completed off-campus for academic credit with assistance of an on-site tutor. Courses completed in this manner prior to beginning a degree program at NPS can reduce time in residency. Until further notice, no fee is charged for civilian enrollments in self-study courses. A listing of available courses, enrollment procedures, and other details of this program are provided in the Catalog of Self-Study Credit Courses, which is available at all ships and stations in the Navy. Copies of this catalog are available upon request.

There are no formal requirements for enrollment in the Continuing Education Program or for a non-degree program. For admission to a program leading to a graduate degree, the minimum qualification is an accredited baccalaureate degree with appropriate preparation for the proposed degree program. As described under Admissions Procedures in this Catalog, the School will require submission of official transcripts covering all college work completed to date.

The point of contact for requests for Naval Postgraduate School Catalogs: Dean of Academic Administration, Code 014, Naval Postgraduate School, Monterey, CA 93943; or telephone (408) 646-2391 or Autovon 878-2391. Requests for information about on-campus programs or admission to degree programs: Director of Admissions, Code 0145, Naval Postgraduate School, Monterey, CA 93943; or telephone (408) 646-3093 or Autovon 878-3093. Requests for a listing of planned short courses or Catalog of Self-Study Courses: Director of Continuing Education, Code 500, Naval Postgraduate School, Monterey, CA 93943; or telephone (408) 646-2558 or Autovon 878-2558.

CONTINUING EDUCATION

The Naval Postgraduate School Continuing Education Program was established in June 1974 as a means of providing extended educational services that will more comprehensively fulfill the school's assigned mission. These extended services include the offerings of self-study credit courses off campus; the delivery, both on and off campus, of professionally relevant short courses; and expanded educational counseling. The self-study credit course offerings are listed in the Catalog of Self-Study Courses which is distributed annually to nearly all ships and stations in the Navy and to selected offices of other DoD establishments. This program is administered by the Continuing Education Office.

Selected graduate preparatory courses are delivered off campus in a self-study self-paced mode for the same academic credit as received when taken on campus. These self-study courses are delivered to officers at their current duty stations for completion during off-duty hours. They have been selected from courses normally taken in the initial phase of curricular programs at the Naval Postgrad-

uate School. Their successful completion will enhance selection for postgraduate education, enhance performance in early phases of graduate education programs, and reduce course requirements in curricular programs at the Naval Postgraduate School. The delivery of a self-study credit course normally requires the local participation of a qualified tutor (e.g., a civilian or officer with requisite graduate education). Self-study courses taken for review do not require a tutor.

Application for enrollment in a self-study course may be made at any time. Applicants should use the appropriate form contained in the self-study catalog. Self-study courses are also available to civilian employees of the federal government.

Commands with available funds may arrange for delivery on site of short courses to meet specific needs on a direct reimbursable basis to the Naval Postgraduate School. Delivery costs may be obtained from the Continuing Education Office.

More information on short courses and self-study courses is available from the Continuing Education Office, Code 500, Naval Postgraduate School, Monterey, CA 93943, or telephone (408) 646-2558 or autovon 878-2558.

The Curricular Office is an organizational entity unique to the Naval Postgraduate School. It supports the School's mission and objectives by providing the structure for the development, maintenance and updating of curricular programs which meet both Navy and Department of Defense needs and academic requirements. The office is composed of a Curricular Officer with possible assistants, one or more Academic Associates, and clerical personnel. The Curricular Officer is a military officer of suitable rank and experience, and the Academic Associate is a faculty member who is familiar with the curriculum. This team performs the following functions:

— provides liaison with the curricular sponsor
— develops and manages each curriculum
— supervises and counsels enrolled students
— provides counseling for future students

The Curricular Officer/Academic Associate team works with the curriculum sponsors to develop educational skill requirements and update the curriculum courses to ensure that graduates are properly educated to face the challenges of their future subspecialty utilization tours.

Curricular Officers and Academic Associates also review the records of all prospective students. Following the student's arrival, they provide both academic and professional counseling as required. This team is responsible for ensuring that each individual's academic program satisfies education skill requirements and is consistent with the individual's educational background.

Prospective students are encouraged to communicate with the cognizant Curricular Officer by letter or telephone for counseling regarding particular off-campus courses they may require to qualify for enrollment. They are also encouraged to take advantage of the Postgraduate School's Continuing Education program which offers preparatory courses required in many of the curricula.

Each service identifies military billets that require specific graduate level education for successful performance. More than 6,000 subspecialty coded billets are presently identified in the Navy. Quotas for officer inputs to graduate education programs are generated annually to ensure that a sufficient number of officers with subspecialty codes will be available to meet current and projected billet requirements. Sponsors such as the Naval Sea Systems Command and Naval Air Systems Command identify the skill requirements for subspecialty coded billets, and the Naval Postgraduate School administers curricular programs to meet the promulgated skill requirements. Curriculum titles, minimum threshold APC levels, subspecialty codes and degree titles are listed below by ascending curriculum number.

Curriculum Number	Curriculum Title	Admission APC	Subspecialty Code	Degree
360	Operations Analysis	324	XX42P	M.S. Operations Research

847	Manpower, Personnel & Training Analysis	345	XX33P	M.S. Management

This section of the catalog includes descriptions of all the curricula offered at the Postgraduate School which are summarized in the Table below. Specific academic requirements for enrollment are contained in each curriculum segment.

Students entering any of the technical curricula normally are ordered to a six-week mathematics refresher course. It begins in the seventh week of each quarter. This course is not designed to teach math, but rather to reacquaint students with calculus. During this refresher, students also take an introductory course in set and logic theory and a programming course in BASIC on desk-top microcomputers.

Some officers are ordered to Engineering Science (Curriculum 460) if they require more preparation for entering one of the technical curricula. This program is either one or two quarters long and includes calculus, physics, and introductory computer courses.

CURRICULA SUMMARY

Curriculum	Curriculum Number	Normal Length (Months)	Normal Convening Dates	Cognizant Curricular Office Code
Administrative Science				
(Material Movement)	813	18	July	36
(Transportation Management)	814	18	July	36
(Acquisition & Contract Management)	815	18	January, July	36
(Allied Officers, DOD Civilians, USA, USMC and USCG)	817	18	January, July	36
(Systems Inventory Management)	819	18	July	36
(Material Logistics Support Management)	827	18	January, July	36
(Financial Management)	837	18	January, July	36

TRANSPORTATION LOGISTICS MANAGEMENT CURRICULUM 813

This curriculum is an interdisciplinary program which integrates mathematics, accounting, economics, behavioral science, management theory, operations/systems analysis, and a subspecialty concentration into an understanding of the process by which the defense mission is accomplished. These programs are designed to provide the officer with fundamental interdisciplinary techniques of quantitative problem-solving methods, behavioral and management science, economic analysis, and financial management; Furthermore it is intended to provide the officer with a Navy/Defense Systems oriented graduate management education and to provide the officer with the specific functional skills required to effectively manage in this subspecialty area.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

TRANSPORTATION LOGISTICS MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Material Movement Subspecialist with a subspecialty code of 1304P. The Curriculum Sponsor is Naval Supply Systems Command Headquarters.

Typical Jobs in this Subspecialty:

Transportation Systems
    CINCLANTFLT, Norfolk, VA
Transportation Logistics
    CINCUSNAVEUR, London
Deputy Chief
    Military Traffic Command
Director of Material Department
    Naval Supply Depot/Naval Supply
    Center Worldwide
Director of Storage Division
    Naval Supply Depot/Naval Supply
    Center Worldwide

Entry Date: Transportation Logistics Management is a six quarter course of study with a single entry date in July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

Academic Associate:

Alan W. McMasters, Assoc. Professor,
Code 54Mg, Ingersoll Hall, Room 209,
(408) 646-2678, AV 878-2678.

Degree: Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

TRANSPORTATION MANAGEMENT CURRICULUM 814

The objectives of this curriculum are to prepare officers for logistics system positions within the Navy, and to emphasize the worldwide transportation aspects of it. Graduate logistics courses cover topics such as the transportation system within CONUS, warehouse siting, materials management, production management, inventory management (both Navy and private sector), materials handling, purchasing and physical distribution. Students take additional courses in transportation in the private sector and military transportation in support of contingencies, as well as options in corporate financial management, production management or logistics engineering.

TRANSPORTATION MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Transportation Management Subspecialist with a subspecialty code of XX 35P. The Curriculum Sponsor is Military Sea Lift Command Headquarters.

Typical Jobs in this Subspecialty:

Executive Officer
Military Sealift Command Office,
Overseas: Guam, Okinawa, Korea, MED
Executive Officer
Military Sealift Command Office, Conus:
Seattle, New Orleans, San Diego,
Anchorage
Tanker Control Officer
Military Sealift Command

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

Entry Date: Transportation Management is a six quarter course of study with a single entry date in July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

ACQUISITION AND CONTRACT MANAGEMENT CURRICULUM 815

The Acquisition and Contract Management Curriculum is an interdisciplinary program which integrates mathematics, accounting, economics, behavioral science, management theory, operations/systems analysis, and specific courses in acquisition and contracting. Inputs from the Navy are from the Supply Corps and civilians in the 1102 series. Marine Corps, Army and Coast Guard officers also participate in the program. The curriculum is designed to provide officers with the skills to serve effectively in hardware system procurement offices, field procurement offices, contract administration offices, and contracting policy support offices.

The following are a sample of the educational skill requirements of the curriculum as delineated by the curriculum sponsor:

Develop, implement and coordinate procurement plans, policy and contracts.

Understand business finance and evaluate potential contractor abilities.

Knowledge of system life cycle, economic analysis, contract definition, etc.

Have an in-depth comprehension of the various types of contracts.

Ability to evaluate requirements, specifications, bids, and proposals.

Determine rights/obligations for settlement of controversies on government contracts.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

ACQUISITION AND CONTRACT MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Acquisition and Contract Management Subspecialist with a subspecialty code of 1306P. The Curriculum Sponsor is Naval Supply Systems Command Headquarters.

Typical Jobs in this Subspecialty:

Contracting Division Officer
    Ships Parts Control Center/Aviation Supply Office, Mechanicsburg, PA
Director of Contracts
    Naval Supply Depots or Naval Supply Centers
Procuring Contracting Officer (PCO)
    Hardware Systems Commands (NAVAIR, NAVSEA, SPAWAR), Washington, D.C.
Business/Financial Manager (B/FM)
    Hardware Systems Commands (NAVAIR, NAVSEA, SPAWAR), Washington, D.C.
Director of Contracting
    Navy Shipyards
Executive Officer
    Navy Regional Contracting Centers (NRCCs)
Director of Contracts
    Navy Regional Contracting Centers (NRCCs)
Navy Representative
    Commander, Defense Contract Administration Plant Representative Office (DCASPRO)

Entry Dates: Acquisition and Contract Management is a six quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

Academic Associate:

ADMINISTRATIVE SCIENCES (NON USN) CURRICULUM 817

These programs are designed to provide the officer with fundamental interdisciplinary techniques of quantitative problem-solving methods, behavioral and management science, economic analysis, and financial management and to enable the officer to evaluate the written research, study, and analysis product of others throughout his career. The curriculum will further provide the officer with the specific functional skills required to effectively manage.

These curricula are interdisciplinary programs which integrate mathematics, accounting, economics, behavioral science, management theory, operations/systems analysis, and a subspecialty concentration area into an understanding of the process by which the defense mission is accomplished. Specialty concentration areas are specified by ordering officers into a specific curriculum.

While Allied students are free to choose any of the specific management curricula available, nearly half choose the more general Administrative Sciences International Curriculum 817. The 817 curriculum allows students to design a program of course work that is specifically useful in effectively managing in the culture uniquely characteristic of their own country's military system. The student may elect to specialize in the relevant portion of a functional area such as financial, logistics, human resources and organization, or manpower and personnel analysis. Or, the student may choose to follow a general management program which would include an overall balance of courses from many functional areas.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services as well as allied officers, and DOD employees, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military and civilian experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

Entry Dates: Administrative Sciences for USA, USCG, USMC, DOD civilians and allied officers is a six quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

Academic Associates:

USA - Management Sciences
George W. Thomas, Assoc. Professor, Code 54Te, Ingersoll Hall, Room 243, (408) 646-2741, AV 878-2741.

USCG & DOD Civilians - Administrative Sciences

USMC - Defense Systems Analysis
Kenneth J. Euske, Assoc. Professor, Code 54Ee, Ingersoll Hall, Room 309, (408) 646-2860, AV 878-2860.

SYSTEMS INVENTORY MANAGEMENT CURRICULUM 819

This curriculum emphasizes the management of Navy owned inventories at all levels. 819 students take additional courses in general inventory model development and the specific details of the Navy's inventory models, spanning the three levels of wholesale, intermediate and retail customer support. Officers are responsible for developing procedures for establishing, maintaining and controlling inventories of material, distributing that material to the Navy customer, and developing the budgets for financing these inventories.

The systems Inventory Management curriculum is interdisciplinary, integrating mathematics, accounting, economics, management theory, operations analysis, and the specialty concentration into an understanding of the process by which the defense mission is accomplished.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

Degree: Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

SYSTEMS INVENTORY MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Systems Inventory Management Subspecialist with a subspecialty code of 1302P. The Curriculum Sponsor is Naval Supply Systems Command Headquarters.

Typical Jobs in this Subspecialty:

Inventory Control Management
    Naval Supply Depot/Naval Supply
    Center
Stock Control
    Navy Shipyards

MATERIAL LOGISTICS SUPPORT MANAGEMENT CURRICULUM 827

The Material Logistics Support Management curriculum emphasizes the production and integrated logistics support of weapon systems. Besides study in mathematics, accounting, economics, behavioral science, management theory and operations analysis, the curriculum delves into production management, and quality assurance, integrated logistic support, procurement and contract administration as well as project management. Skills resulting from the curriculum will prepare those responsible for managing the various segments of a military system's life cycle from initial planning for support to fielding the system, through sustaining operations to phase-out.

MATERIAL LOGISTICS SUPPORT MANAGEMENT SUBSPECIALIST

Completion of this curriculum qualifies an officer as an Material Logistics Support Management Subspecialist with a subspecialty code of XX32P. The Curriculum sponsor is Naval Air Systems Command Headquarters.

Typical Jobs in this Subspecialty:

Aircraft Intermediate Maintenance
Naval Air Stations
Project Management Staff
Naval Air Systems Command,
Washington, D.C.
Integrated Logistics Support Coordinator
for Operational Support
Naval Air Systems Command,
Washington, D.C.
Director of Receiving
Naval Supply Depot/Naval Supply Center

FINANCIAL MANAGEMENT CURRICULUM 837

The objective of the Financial Management Curriculum is to prepare officers for business and financial positions within the Navy. Financial Managers assist the Navy's decision-making processes at all levels by providing accurate, timely, and relevant information. They are concerned with the optimal allocation of human, physical, and financial resources to achieve the Navy's goals and objectives while assuring efficient and effective expenditure of public funds.

Graduate courses cover topics such as financial reporting standards, cost standards, cost analysis, budgeting, internal control, financial auditing, operational auditing, management planning and control systems, quantitative techniques used in planning and control, and the Planning Programming and Budgeting System used within the Department of Defense.

Graduates of the Financial Management Curriculum will be prepared for assignment to positions in budgeting accounting, business and financial management, and Internal Control and Auditing.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

Degree: Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

FINANCIAL MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Financial Management Subspecialist with a subspecialty code of XX31P. The Curriculum Sponsor is OP-92, Fiscal Management Division.

Typical Jobs in this Subspecialty:

Comptroller
  Naval Air Stations
Budgeting
  Commander, Naval Medical Command, Washington, D.C.
Accounting
  Commander, Naval Medical Command, Washington, D.C.
Budget Officer
  Commander, Naval Air Forces Atlantic Norfolk, VA
Comptroller
  Naval Supply Depots/Naval Supply Centers
Fiscal Officer
  Naval Supply Depots/Naval Supply Centers
Public Works Officer
  Weapons Stations, CONUS
Cost Analysis
  Office of Secretary of the Navy, Washington, D.C.
Special Assistants
  Program Planning Office (NAVY)
  Fiscal Management Division (OP-92)

Entry Dates: Financial Management is a six quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

Academic Associate:

Joseph G. San Miguel, Professor, Code 54Sm, Ingersoll Hall, Room 318, (408) 646-2187, AV 878-2187

MANPOWER, PERSONNEL AND TRAINING ANALYSIS CURRICULUM 847

The Manpower, Personal and Training Analysis Curriculum builds upon a fundamentals program, which is generally preparatory in nature and portions of it may be validated. The four quarter graduate program which follows concentrates on personnel management processes; manpower economics, policy analysis, and productivity analysis; and manpower and personnel models. Graduates of this curriculum will receive a Navy/Defense oriented graduate education in management with a specialty in MPT. The program is interdisciplinary in the fundamentals portion as well as in the graduate specialty portion, integrating mathematics, accounting, statistics, economics, and management theory to produce the specific functional skills required to effectively manage in the MPT community.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry.

Officers from the U.S. Services, as well as all others, start the curriculum with widely varied academic backgrounds. Each student's prior academic work and related military experience is evaluated for courses previously completed and applicable to the student's curriculum so that academic credits may be transferred. Validation or credit by examination is encouraged where knowledge of the material has been acquired by experience or service courses.

Degree: Requirements for the degree Master of Science in Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

MANPOWER, PERSONNEL AND TRAINING ANALYSIS SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Manpower, Personnel and Training Analysis Subspecialist with a subspecialty code of XX33P. The Curriculum Sponsor is OP-11, Total Force Training and Education Division.

Typical Jobs in this Subspecialty:

Head, Ship Manpower Requirements Section
 Deputy Chief of Naval Operations (Manpower, Personnel & Training)
 Director Total Force Programming/ Manpower Division OP-12, Washington, D.C.
Programmed Objective Memorandum (POM) Operations
 Deputy Chief of Naval Operations (Manpower, Personnel & Training
 Director Total Force Programming/ Manpower Division, OP-12, Washington, D.C.
Manager (OP-12A)
 Deputy Chief of Naval Operations (Manpower, Personnel & Training
 Director Total Force Programming/ Manpower Division OP-12, Washington, D.C.
Total Force Mobilization Plans Branch
 Deputy Chief of Naval Operations (Manpower, Personnel & Training
 Director Military Personnel Policy Division (OP-134G), Washington, D.C.
Head, Officer Procurement Plans Section (OP-130D)

Entry Dates: Manpower, Personnel & Training Analysis is a six quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

Academic Associate:

George W. Thomas, Assoc. Professor, Code 54Te, Ingersoll Hall, Room 243, (408) 646-2741, AV 878-2741.

AERONAUTICAL ENGINEERING PROGRAMS

Curricular Officer:

Robert G. Bettinger, CDR, USN,
Code 31, Halligan Hall, Room 133,
(408) 646-2491, AV 878-2491.

AERONAUTICAL ENGINEERING AND AERONAUTICAL ENGINEERING WITH AVIONICS CURRICULA 610 & 611

The Aeronautical Engineering Programs are designed to meet the specific needs of the Navy's Operational Technical Managerial System (OTMS) for technical managers with a broad-based graduate education in Aeronautical Engineering. While an undergraduate degree in engineering is preferred, special preparatory programs can accommodate officers with widely varying academic backgrounds.

The Aeronautical Engineering Programs are designed to give the student a broad technical and engineering education in the four principal areas of aeronautics: gas dynamics, flight dynamics, propulsion, and flight structures. Additionally, officers receive graduate level instruction in aircraft/missile design and aero-computer science. Students in the 611 Curriculum receive additional emphasis on avionics systems. The programs are divided into preparatory, graduate and advanced graduate phases. The preparatory phase is tailored to each officer's background and is programmed for minimum time consistent with capability. After the preparatory phase, a common graduate core is completed by both the 610 and 611 students. This phase includes advanced studies in propulsion, aerodynamic analysis, structural analysis and stability and control. During the advanced graduate phase, all students receive in-depth graduate coverage through advanced electives in areas of their choice including flight dynamics, gas dynamics, propulsion and structures. Students in Curriculum 611 receive advanced studies in guidance and control, radar systems and electronic warfare.

Entry Dates: Aeronautical Engineering is an eight quarter course of study with entry dates in April and October. Those requiring the Engineering Science Curriculum will have their time of arrival adjusted to accommodate it. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

Academic Associate:

Richard W. Bell, Professor,
Code 67Be, Halligan Hall, Room 236,
(408) 646-2926, AV 878-2926.

Degree: Requirements for the degree Master of Science in Aeronautical Engineering are met as a milestone en route to satisfying the skill requirements of the curricular programs.

REQUIREMENTS FOR ENTRY

A baccalaureate degree, or its equivalent, with an above average QPR, preferably in engineering or the physical sciences, is required. In addition, Mathematics through differential and integral calculus, with above average grades and completion of a calculus based physics sequence with above average grades is also required. An APC of 323 is the requirement for direct entry, but the Engineering Science Program (Curriculum 460) is available for candidates who do not meet all the admission requirements for direct entry. The required APC for entry via Curriculum 460 is 334.

AERONAUTICAL ENGINEERING SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Aeronautical Engineering Subspecialist with a subspecialty code of XX71P. The Curriculum Sponsor and primary consultant is the Naval Air Systems Command.

Typical Jobs in this Subspecialty:

Project Officer - Power Plants
   Naval Air Systems Command
Weapons Systems Manager
   Naval Air Rework Facility, Pensacola, FL
Commanding Officer
   Naval Plant Representative Office,
   Stratford, CT

Attack Aircraft Class Desk
   COMNAVAIRLANT, Norfolk, VA
Aeronautical Engineer
   Defense Nuclear Agency Headquarters
Instructor, Aeronautical Engineer
   Naval Academy, Annapolis, MD
Deputy Project Manager for the E - Z
   Naval Air Systems Command
V P Program Director
   Naval Air Development Center

NPS/TPS COOPERATIVE PROGRAM

A program, which combines portions of the 610 curriculum at the NPS Monterey with the complete U.S. Naval Test Pilot School syllabus is currently available to selected officers with strong undergraduate engineering backgrounds. After the completion of four quarters of study at NPS, selectees proceed to Patuxent River for the full Test Pilot School Curriculum. This NPS/TPS Cooperative program results in a test pilot designation, XX73G, the Aeronuatical Engineering subspecialty code XX71P and award of the Master's degree in Aeronautical Engineering at the completion of test pilot school.

METEOROLOGY
CURRICULUM 372

This curriculum will provide qualified non-USN personnel with a sound understanding of the science of meteorology and will develop the technical expertise to provide, and utilize meteorological and oceanographic data in support of all aspects of military operations.

REQUIREMENTS FOR ENTRY

The program is not open to officers of the US Navy.

A baccalaureate degree with completion of mathematics through differential and integral calculus and a minimum of one year of college physics is required. An APC of 323 is required for direct entry. The Engineering Science Pro-gram (Curriculum 460) is available for candidates who do not meet all admission requirements for direct entry.

Entry Dates: Meteorology is a seven quarter course of study with preferred entry dates in April and October. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

Academic Associate:

Robert L. Haney, Professor,
Code 63Hy, Root Hall, Room 244,
(408) 646-2308, AV 878-2308.

Degree: Master of Science in Meteorology.

AIR-OCEAN SCIENCE CURRICULUM 373

Completion of this curriculum will provide a thorough understanding of the air-sea environment and will develop the technical expertise to provide and utilize meteorological and oceanographic data in support of all aspects of military operations.

This education will further enhance performance in all duties throughout a career, including operational billets, technical management assignments and policy making positions. Students will develop graduate level technical ability based upon general engineering and scientific principles, acquire diverse professional knowledge and develop analytical ability for practical problem solving.

REQUIREMENTS FOR ENTRY

A baccalaureate degree in the physical sciences, mathematics or engineering is required. Completion of mathematics through differential and integral calculus, one year of college chemistry and calculus-based physics are required. An APC of 323 is required for direct entry.

AIR-OCEAN SCIENCE SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Air Ocean Specialist with a subspecialty code of X X47. The Curriculum Sponsor is OP-006, Oceanographer of the Navy.

Typical Jobs in this Subspecialty:

Commanding Officer
Oceanographic Unit
Oceanographer
CV/BB
Submarine Group Staff
Fleet Staff
Car Gru/Cru Des Gru Staff
O in C Naval Ocean Command Detachment
NAVOCEANCOM Center
Defense Mapping Agency
Office of Naval Research

Entry Dates: Air-Ocean Science is an eight or nine quarter course of study with preferred entry dates in April and October. If further information is needed, contact the Academic Associate or Curricular Officer for this curriculum.

Academic Associates:

Robert L. Haney, Professor,

OPERATIONAL OCEANOGRAPHY
CURRICULUM 374

This curriculum will provide students with an understanding of the air-sea environment and operations analysis principles to forecast atmospheric, oceanic and acoustic conditions in support of all aspects of Naval operations including the ASW, EW and C3 problems. Primary emphasis is placed on the understanding of the impact of the environment (atmosphere, ocean and their interface) on weapons systems, sensors and platforms. The program recognizes the importance of interactions between the atmosphere and the oceans, and deals with the relationships at the air-sea interface.

REQUIREMENTS FOR ENTRY

A baccalaureate degree in the physical sciences, mathematics or engineering is desirable. Completion of mathematics through differential and integral calculus, one year of college physics and one year of college chemistry are required. An APC of 323 is required for direct entry. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements for direct entry.

OPERATIONAL OCEANOGRAPHY
SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Operational Oceanography Specialist with a subspecialty code of X X49. The Curriculum Sponsor is OP-006, Oceanographer of the Navy.

Typical Jobs in this Subspecialty:

CV A.S.W. Module
Cru Des Gru/Car Gru Staff
A.S.W. Operations Center
Navy Laboratories
Office of Naval Research
SACLANT A.S.W. Research Center
La Spezia, Italy
Naval Oceanographic Research and
Development Agency (NORDA)
Defense Mapping Agency

Entry Dates: Operational Oceanography is an eight quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate or Curricular Officer for this curriculum.

Academic Associate:

Joseph Von Schwind, Professor,
Code 68Vs, Hydrographic Sciences
Building, Room 224,
(408) 646-3271, AV 878-3271.

Robert L. Haney, Professor,
Code Hy, Root Hall, Room 244,
(408) 646-2308, AV 878-2308.

Degree: Requirements for the degree Master of Science in Meteorology and Oceanography are met as a milestone en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

MA 2047 (4-0) Linear Algebra & Vector
Analysis
MA 2121 (4-0) Differential Equations
MR/OC 2020 (1-2) Computer Computations
In Air-Ocean Sciences
MR 3420 (3-0) Atmospheric
Thermodynamics
OC 3230 (3-0) Oceanic Thermodynamics

Quarter 2

MA 3132 (4-0) Partial Differential
Equations and Integral
Transforms
MR/OC 3321 (4-0) Air Ocean Fluid Dynamics
MR/OC 3522 (4-2) Remote Sensing of the
Atmosphere and Ocean
MR/OC 3140 Probability and Statistics
for Air-Ocean Science

Quarter 3

MR 3222 (4-3) Meteorological Analysis/
Laboratory
MR 4322 (4-0) Dynamic Meteorology
OC 3240 (4-2) Ocean Circulation
Analysis
Track Option

Quarter 4

MR 3234 (4-0) Tropospheric and
Stratospheric
Meteorology
OC 4211 (3-0) Dynamical
Oceanography
MR/OC 3150 (3-2) Analysis of Air Ocean
Time Series
MR 3254 (3-2) Tropical Meteorology/
Laboratory

Quarter 5

MR/OC 4413 (4-0) Air-Sea Interaction
MR 4416 (4-0) Atmospheric Factors
Electromagnetic and
Optical Propagation
PH 3406 (4-2) Physics of Sound in the
Ocean
Track Option

Quarter 6

MR/OC 0810   Thesis Research
MR 3262 (3-3) Operational Atmospheric
Laboratory
OS 3601 (4-0) Search, Detection, and
Localization Models
OC 4267 (4-3) Ocean Influences and
Prediction: Underwater
Acoustics

Quarter 7

MR 3262 (3-3) Operational Atmospheric
Prediction
GH 3901 (4-2) Mapping Charting
& Geodesy

OCEANOGRAPHY
CURRICULUM 440

The Oceanography Curriculum provides students with a sound understanding of the science of oceanography and develops the technical expertise to provide and utilize oceanographic and acoustical data in support of all aspects of military operations. Particular emphasis is placed on the understanding of oceanic effects on the solution of the undersea warfare problem.

This education further enhances performance in operational billets, technical management assignments and policy-making positions. Students will develop sound graduate level technical ability based on general engineering and scientific principles.

Entry Dates: Oceanography is an eight quarter course of study with entry dates in April and October. If further information is needed, contract the Academic Associate or Curricular Officer for this curriculum.

REQUIREMENTS FOR ENTRY

The program is not open to officers of the U.S. Navy.

A baccalaureate degree in the physical sciences, mathematics or engineering is required. Completion of mathematics through differential and integral calculus, one year of college physics and one year of college chemistry are required. An APC of 323 is required for direct entry. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements for direct entry.

Academic Associate:

Joseph J. Von Schwind, Assoc. Professor, Code 68Vs, Root Hall, Room 216, (408) 646-3271, AV 878-3271.

Degree: Master of Science in Oceanography.

TYPICAL COURSE OF STUDY

Quarter 1

MA 2047 (4-0) Lenear Algebra & Vector Analysis
MA 2121 (4-0) Differential Equations
OC 2020 (1-2) Computer Computations in Air-Ocean Sciences
MR 3420 (3-0) Atmospheric Thermodynamics
OC 3230 (3-0) Ocean Thermodynamics

Quarter 2

MA 3132 (4-0) Partial Differential Equations & Integral Transforms
MR/OC 3321 (4-0) Air-Ocean Fluid Dynamics
MR/OC 3522 (4-2) Remote Sensing of the Atmosphere & OCean
MA 3232 (3-2) Numerical Analysis

Quarter 3

MR 3222 (4-3) Meteorological Analysis/ Laboratory
PH 3406 (4-2) Physics of Sound in the Ocean
OC 3240 (4-2) Ocean Circulation Analysis
MR/OC 3140 Probability and Statistics for Air-Ocean Science

Quarter 4

OC 4211 (3-0) Dynamical Oceanography
OC 3150 (3-2) Analysis of Air-Ocean Time Series
OC 4267 (4-3) Ocean Influences & Prediction: Underwater Acoustics
OC 3212 (3-1) Polar Meteorology/ Oceanography

Quarter 5

OC 4413 (4-0) Air-Sea Interaction
MR 4322 (4-0) Dyanic Meteorology
OC 4213 (3-1) Nearshore & Wave Processes
OC 3445 (2-2) Oceanic & Atmosphere Observational Systems

Quarter 6

OC 0810 Thesis Research
OC 4331 (3-0) Synoptic/Mesoscale Oceanography
OC 4414 (3-0) Advanced Air-Sea Interaction
OC 4212 (4-0) Tides

Quarter 7

OC 0810 Thesis Research
OC 4323 (4-2) Numerical Air & Ocean Modeling
OC 4220 (3-0) Shallow Water Oceanography
Elective

HYDROGRAPHIC SCIENCES CURRICULUM 441

This curriculum of study provides students with a sound understanding of oceanography and hydrography. Hydrography (a subdiscipline of Mapping, Charting and Geodesy (MC&G)) is the science of the measurement, description and charting of the sea floor with special reference to navigation and marine operations. This interdisciplinary program integrates the scientific principles of oceanography with the practical engineering procedures of hydrography. Students achieve the technical expertise to provide and utilize hydrographic data in support of all aspects of hydrographic operations.

Entry Dates: Hydrographic Sciences is an eight quarter course of study with preferred entry in October. If further information is needed, contact the Academic Associate for this curriculum.

REQUIREMENTS FOR ENTRY

This program is open to officers of the National Oceanic and Atmospheric Administration, Coast Guard, Corps of Engineers, allied officers and civilian employees of the U.S. federal government. There is no Navy Subspecialty in Hydrographic Sciences.

A baccalaureate degree with above average grades in mathematics and the physical sciences. Differential and integral calculus one year of college physics and one year of college chemistry are required. An APC of 324 is required for direct entry into the program. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements for direct entry.

Academic Associate:

Joseph J. Von Schwind, Assoc. Professor, Code 68Vs, Root Hall, Room 216, (408) 646-3271, AV 878-3271.

Degree: Master of Science in Hydrographic Sciences.

TYPICAL COURSE OF STUDY

Quarter 1

MA 2121 (4-0) Differential Equations
MA 2047 (4-0) Linear Algebra & Vector Analysis
OC 3230 (3-0) Ocean Thermodynamics
CS 2450 (3-1) Computer Programming with Fortran

Quarter 2

MA 3132 (4-0) Partial Differential Equations & Integral Transform
MR 2220 (4-1) Marine Meteorology
OC 3130 (4-2) Mechanics of Fluids
GH 3901 (4-2) Mapping, Charting & Geodesy

Quarter 3

OC 3120 (4-3) Biochemical Processes in the Ocean
OS 3104 (4-0) Statistics for Science & Engineering
OC 4213 (3-1) Nearshore & Wave Processes
GH 3902 (4-2) Hydrographic & Geodetic Surveying

Quarter 4

CS 3010 (4-0) Computing Devices & Systems
OC 3260 (3-0) Sound in the Ocean
GH 3903 (4-0) Electrical Surveying & Navigation
GH 3906 (2-2) Hydrographic Survey Planning
GH 4908 (3-2) Photogrammetry & Remote Sensing

Quarter 5

GH 3910 (2-1) Hydrographic Survey Field Experience
GH 3911 (1-5) Geodetic Survey Field Experience
GH 4906 (4-0) Geometric & Astronomic Geodesy

Quarter 6

OC 0810   Thesis Research
OC 3325 (3-0) Marine Geophysics
GH 3912 (2-2) Advanced Hydrography
Track Option

Quarter 7

ANTISUBMARINE WARFARE PROGRAM

Curricular Officer

John H. Long, CDR, USN,
Code 331, Spanagel Hall, Room 328,
(408) 646-2116/7, AV 878-2116/7.

ANTISUBMARINE WARFARE CURRICULUM 525

The ASW Curriculum educates officers in the engineering fundamentals, physical principles and analytical concepts that govern operational employment of ASW sensors and weapon systems, and includes extensive breadth in the appropriate scientific and technical disciplines. This interdisciplinary program integrates mathematics, physics, acoustics, electrical engineering, oceanography, operations analysis, human factors, computer science and meteorology. The academic content divides naturally into four major areas: Electrical Engineering with emphasis on signal processing, Underwater Acoustics with emphasis on signal propagation and detection, Operations Analysis with emphasis on tactical application and decision analysis, and Air-Ocean Sciences with emphasis on the environmental factors affecting sound in the sea.

REQUIREMENTS FOR ENTRY

A baccalaureate degree, or equivalent, from a program with a calculus sequence and a calculus-based physics sequence that results in an APC of 323 is required for direct input. Courses in the physical sciences and engineering are desirable. An additional qualification for entry is that a selectee must have demonstrated strong professional performance in at least one ASW mission unit. Officers not meeting the academic requirements for direct input enter the program via one or two quarters of Engineering Science (Curriculum 460).

ANTISUBMARINE WARFARE SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Antisubmarine Warfare Systems Technology Specialist with a subspecialty code of XX44. The Curriculum Sponsor is OP-951, AntiSubmarine Warfare Division.

Typical Jobs in this Subspecialty:
Naval Ocean Systems Center
Naval Underwater Systems Center
Naval Surface Warfare Development Group
Destroyer Squadron Staffs
Operational Test and Evaluation Force
Submarine Development Squadron Twelve
Patrol Wing Staffs
Naval Air Systems Command
Air Test and Evaluation Squadron One
OPNAV

Entry Dates: The ASW curriculum is an eight quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate or Curricular Officer for this curriculum.

Academic Associate:

James V. Sanders, Associate Professor,
Code 33A, Spanagel Hall, Room 328,
(408) 646-2116, AV 878-2116.

Degree: Requirements for the degree Master of Science in System Technology (Antisubmarine Warfare) are met as a milestone en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

MA 1112	(2-2)	Selected Calculus Topics Review
MA 2129	(2-1)	Ordinary Differential Equations and Laplace Transforms
MA 2181	(2-1)	Vector Calculus
OC 2120	(4-0)	Survey of Oceanography
OS 2210	(4-1)	Introduction to Computer Programming

Quarter 2

EO 2720	(4-2)	Introduction to Electronic Systems
OS 2103	(4-1)	Applied Probability for Systems Technology
PH 2119	(4-1)	Oscillation and Waves
MA 3139	(4-0)	Fourier Analysis and Partial Differential Equations

Quarter 3

PH 2401	(3-0)	Introduction to the Sonar Equations
EO 3720	(4-1)	Introduction to Signals & Noise
OS 3303	(4-1)	Computer Simulation
OS 3604	(4-0)	Decision & Data Analysis

Quarter 4

EO 4720	(4-1)	Signal Processing Systems
OC 4267	(4-3)	Ocean Influences & Predictions: Underwater Acoustics
PH 3402	(4-2)	Underwater Acoustics

Quarter 5

(first six weeks)

MR 2413	(3-1)	Meteorology for Antisubmarine Warfare
PH 3306	(4-0)	Electromagnetic Wave Propagation

(last six weeks)
EXPERIENCE TOUR OFF CAMPUS

Quarter 6

EC 4450	(4-1)	Sonar Systems Engineering
OS 3402	(3-1)	Human Vigilance Performance
PH 4403	(4-1)	Advanced Topics in Underwater Acoustics
PH 3002	(4-0)	Non-Acoustic Sensor Systems

Quarter 7

OS 3602	(4-1)	Introduction to Combat Models & Weapons Effectiveness
OS 4601	(4-0)	Test & Evaluation Elective Option
ST 0810		Thesis

Quarter 8

NS 3152	(4-0)	Naval Warfare & Threat Environment

COMPUTER TECHNOLOGY PROGRAMS

Curricular Officer

David D. Blankenship, LCDR, USN
Code 37, Spanagel Hall, Room 401
(408) 646-2174/2175, AV 878-2174/2175.

COMPUTER SYSTEMS MANAGEMENT CURRICULUM 367

This is an interdisciplinary graduate level master's program integrating mathematics, accounting, economics, statistics, computer science, information systems, behavioral science, and management disciplines.

This program prepares the officer for the planning, procurement, and management decision-making skills necessary to evaluate changing technology, to translate operational requirements and economic trade offs into system specifications, and to implement and properly utilize complex tactical and non-tactical military computer centers, networks, and systems. This curriculum is designed to meet the Navy's need for a technically qualified officer with managerial skills essential to the successful implementation and effective utilization of computer systems in military settings.

REQUIREMENTS FOR ENTRY

A baccalaureate degree, or the equivalent, with above average grades in mathematics, (including differential and integral calculus) resulting in an APC of at least 335 is required for direct entry. Students lacking these quantitative prerequisites may be acceptable for the program providing their undergraduate records and/or other indicators of success, such as GRE (Graduate Record Examination), GMAT (Graduate Management Admission Test) formerly ATGSB (Admission Test for Graduate Schools of Business), indicate a capability for graduate level work. While previous computer or automatic data processing (ADP) experience is certainly helpful, it is not essential.

COMPUTER SYSTEMS MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Computer Systems Management Subspecialist with a subspecialty code of XX95. The Curriculum Sponsor is OP-945, Director, Information Systems Division.

Typical Jobs in this Subspecialty:

Weapons Control Project Subsurface
Service Engineer,
    Naval Underwater Systems Center,
    Newport, R.I.
Operation Test Evaluation,
    NAVELEX PDE-106 NAVSPACE PROGRAM,
    Washington, D.C.
Air Systems,
    NAVOCEANSYSCEN, San Diego, Ca.
Computer Systems,
    NSA/CSS, Ft. Meade, Md.
Data Base Management
    Naval War College, Newport R.I.
Computer Systems Analyst/Development,
    COMNAVMEDCOM, Washington, D.C.
Computer Systems Analyst
    COMNAVDAC, Washington, D.C.

Entry Dates: Computer Systems Management is a six quarter course of study with entry dates in April and October. On a case by case basis, students may commence their programs in January and July through prior preparation. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:

Daniel R. Dolk, Assistant Professor,
Code 54Dk, Ingersoll Hall, Room 316.
(408) 646-2260, AV 878-2260.

Degree: Requirements for the degree Master of Science in Information Systems are met as a milestone en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

CS	2970 (5-0)	Struc Prog with PASCAL
IS	2000 (3-0)	Intro to Comp Mgmt
MN	2155 (4-0)	Accounting for Mgmt
MN	3105 (4-0)	Organization and Mgmt

Quarter 2

IS	0810	Thesis (Option Elective)

COMPUTER SCIENCE CURRICULUM 368

This program is an interdisciplinary technical graduate level master's program integrating mathematics, statistics, computer science, electrical engineering, information systems, and operations research. The Computer Science curriculum is designed to provide an officer with the technical knowledge and skills necessary to specify, evaluate, and manage computer system design; to provide technical guidance in applications ranging from data processing to tactical embedded systems; to educate officers in the analysis and design methodologies appropriate for hardware, software, and firmware; and to provide the officer with practical experience in applying modern computer laboratory equipment and research techniques to military problems.

COMPUTER SCIENCE SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Computer Science Subspecialist with a subspecialty code of X X91. The Curriculum Sponsor is OP-945, Director, Information Systems Division.

Typical Jobs in this Subspecialty:

Navigation Systems Integration Projects Office,
    STRATSYSPROG, Wash., D.C.
Assistant Information Management/
    TRIMIS ADDU FM
    COMNAVMEDCOM, Washington, D.C.
ADP Programs/WWMCCS Project,
    DPSCPAC, Pearl Harbor, Hi.
ADP Plans Director,
    FLEMATSUPPO, Mechanicsburg, Pa
ADP Plans-Customer Liaison,
    NARDAC, Pensacola, Fl.
ASST CIC - NTDS,
    USS CARL VINSON (CVN-70)

REQUIREMENTS FOR ENTRY

A baccalaureate degree, or the equivalent, with above average grades in mathematics, (including differential and integral calculus) resulting in an APC of at least 325, is required for direct entry. Undergraduate majors in applied science or engineering are highly desirable. Students lacking these prerequisites may be acceptable for the program providing their undergraduate records and/or other indicators of success, such as GRE (Graduate Record Examination), indicate a capability to work in quantitative subjects. While previous academic or practical experience in computer science is certainly helpful and can enhance an applicant's potential for admission, such experience is not a prerequisite.

Entry Dates: Computer Science is a seven quarter course of study with entry dates in April and October. On a case by case basis, students may commence their program in January and July through prior preparation. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:

Uno R. Kodres, Professor,
Code 52Kr, Spanagel Hall, Room 534A
(408) 646-2197, AV 878-2197.

Degree: Requirements for the degree Master of Science in Computer Science are met as a milestone en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

JOINT COMMAND, CONTROL, AND COMMUNCATIONS (Joint C3) PROGRAMS

Curricular Officer

Linda K. Crumback, MAJOR, USAF,
Code 39, Spanagel Hall, Room 203,
(408) 646-2772, AV 878-2772.

JOINT COMMAND, CONTROL, AND COMMUNICATIONS CURRICULUM 365

The Joint C3 curriculum is designed to provide officers and their civilian DOD equivalents with a comprehensive operational and technical understanding in the field of command, control and communications systems. A primary goal is to enable the student to operate with enhanced capabilities in such diverse fields as military decision making, current and future C3 systems design, and joint military operations. The curriculum is tailored to the requirements of selected officers who have outstanding performance records and anticipate continued careers focused on the conduct of military operations.

The Joint C3 curriculum is designed to meet broad educational objectives endorsed by the Joint Chiefs of Staff. The overall objective is to provide officers and DoD civilian equivalents, through graduate education, with a comprehensive operational and technical understanding in the field of Command, Control and Communications systems as applied to Joint and combined military operations at the national and unified command levels. To develop individuals who have an understanding of the role C3 systems play in the use of military power, and the ability to interpret the inpact of C3 on operating philosophy; possess an adequate background knowledge in the basic technology, human capabilities and joint military operations and how these are exploited in current C3 systems; can perform requirement and planning studies of new C3 systems; and contribute to crisis management. These officers should be able to undertake a wide range of assignments in C3 (both joint and intra-service) over the full span of a career.

REQUIREMENTS FOR ENTRY

The Joint C3 curriculum is open to all U.S. Miliary Services and selected civilian employees of the U.S. Federal Government. Admission requires a baccalaureate degree with above average grades, and mathematics through differential and integral calculus. A Top Secret security clearance is required with Special Intelligence (SI) clearance obtainable. An APC of 325 is required for direct entry. Officers not meeting the academic requirements for direct input may enter the program via one or two quarters of Engineering Science (Curriculum 460).

JOINT COMMAND, CONTROL & COMMUNICATIONS SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Joint Command, Control, and Communications Subspecialist with a subspecialty code of XX45. The Curriculum Sponsor is OP-956, Electronic Warfare.

Typical Jobs in this Subspecialty:

Staff Command and Control Officer
    Commander in Chief, Pacific Fleet
Surface Systems Officer
    Naval Ocean Systems Center
ADP Plans Officer
    World Wide Military Command & Control System Joint Program Office
Staff Operations Plans Officer
    Headquarters, European Command
Staff Operations and Plans Officer
    Commander 7th Fleet
Programs Manager
    Naval Space and Warfare Systems Command

Entry Dates: Joint Command, Control and Communications is a six quarter course of study with a single entry date in October. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

Academic Associate:

Carl R. Jones, Professor,
Code 54Js, Ingersoll Hall, Room 248,
(408) 646-2767, AV 878-2767.

Degree: Requirements for the degree Master of Science in Systems Technology (Command, Control and Communications) are met as a milestone en route to satisfying the skill requirements of the curricular program.

SPACE SYSTEMS OPERATIONS CURRICULUM 366

The Space Systems Operations graduate curriculum is designed to provide officers with an appreciation for military opportunities and applications in space, a comprehensive practical as well as theoretical knowledge of the operation, tasking and employment of space surveillance, communications, navigation, and atmospheric/oceanographic/environmental sensing systems, and a knowledge of payload design and integration.

Entry Dates: Space Systems Operations is an eight quarter course of study with a single entry date in October. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

SPACE SYSTEMS OPERATIONS SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Space Systems Operations Subspecialist with a subspecialty code of X X76. The Curriculum Sponsor is OP-943, Navy Space Systems Division.

Typical Jobs in this Subspecialty:

Commanding Officer
  Naval Space Surviellance Systems
Plans Officer
  North American Aerospace Defense
  Command
Advanced Concepts Officer
  Naval Space and Warfare Systems
  Command
Space Defense Director
  North American Aerospace Defense
  Command

REQUIREMENTS FOR ENTRY

This curriculum is open solely to officers of the U.S. Armed Forces and selected civilian employees of the U.S. Federal Government. Admission requires a baccalaureate degree with above average grades, completion of mathematics through differential and integral calculus, plus at least one course in calculus-based engineering physics. Students lacking this background may matriculate through the engineering science program (Curriculum 460). A Top Secret security clearance is re-quired with Special Intelligence (SI) clearance obtainable.

Academic Associate:

Carl R. Jones, Professor,
Code 54Js, Ingersoll Hall, Room 248,
(408) 646-2767, AV 878-2767.

Degree: Requirements for the degree Master of Science in Systems Technology (Space Operations) are met as a milestone en route to satisfying the skill requirements of the curricular program.

ELECTRONIC SYSTEMS ENGINEERING CURRICULUM 590

This curriculum is designed to educate officers in current electronics technology and its application to modern naval warfare. It establishes a broad background of basic engineering knowledge, leading to selected advanced studies in electronic systems, ship/weapon control systems, information processional applicability. It will enhance individual performance in all duties throughout a naval career, including operational billets, technical management assignments and policy making positions, thereby preparing the officer for progressively increased responsibility including command, both ashore and afloat.

REQUIREMENTS FOR ENTRY

A baccalaureate degree in engineering or the physical sciences is required. Differential and integral calculus and one year of calculus based college physics are required. The Engineering Science Program (Curriculm 460) is available for candidates who do not meet all admission requirements. The additional time required will vary with the candidate's background. Prior to undertaking the program, or as a part of the program, each officer will have earned the equivalent of an accredited BSEE. An APC of 323 is required for direct entry.

Entry Dates: Electronic Systems Engineering is a nine quarter course of study with entry dates in every quarter. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

ELECTRONICS & COMMUNICATIONS SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Engineering Electronics Subspecialist with a subspecialty code XX55. The Curriculum Sponsor is Space and Naval Warfare Systems Command.

Typical Jobs in this Subspecialty:

Instructor
    Naval Academy, Annapolis, Md.
OP-943f Head
    OPNAV
Executive Officer
    SPAWARHDQTRS
Operations Test and Evaluation
    COMOPTEVFOR
Electronics Maint. Officer
    USS NIMITZ CVN 68
Executive Officer
    NEEACT PAC, Pearl Harbor, Hi.
Electronics P & P
    CINCLANTFLT
Ship Coordinator
    COMNAVAIRLANT
Electronics Maint. Officer
    USS BAINBRIDGE LCC 19

Academic Associate:

Robert Strum, Professor,
Code 62St, Spanagel Hall, Room 221A,
(408) 646-2652, AV 878-2652.

Degree: Requirements for the degree Master of Science in Electrical Engineering are en route to satisfying the skill-requirements of this curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

EC 2100 (3-2) Circuit Analysis I
EC 2820 (3-2) Digital Logic Circuits
MA 2047 (4-0) Linear Algebra & Vector Analysis

SPACE SYSTEMS ENGINEERING CURRICULUM 591

To provide officers, through graduate education, with a comprehensive scientific and technical knowledge in technological fields applicable to military and Navy space systems. This curriculum is designed to equip officers with the theoretical and practical skills required to design and integrate military space payloads with other spacecraft subsystems. Officer graduates will be prepared by their education to design, develop, and manage the acquisition of space communications, navigation, surveillance, EW and environmental sensing systems.

REQUIREMENTS FOR ENTRY

A baccalaureate degree, or its equivalent, in engineering or the physical sciences is preferred. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements. The additional time required will vary with the candidate's background. Prior to undertaking the program, or as a part of the program, each officer will have earned the equivalent of an accredited BSEE. An APC of 323 is required for direct entry.

Entry Dates: Space Systems Engineering is a nine quarter course of study with entry dates in January, April, July and October. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:

Rudolf Panholzer, Professor,
    Code 62Pz, Bullard Hall, Room 205,
    (408) 646-2154, AV 878-2154.

Degree: Requirements for the degree Master of Science in Electrical Engineering are met as a milestone en route to satisfying the skill requirements of this curricular program.

SPACE SYSTEMS ENGINEERING SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Space Systems Engineering Specialist with a subspecialty code of XX77. The Curriculum sponsor is OP-943, Navy Space Systems Division.

Typical Jobs in this Subspecialty:

Assistant Project Manager Satellite
Communications
    SPAWAR
Manager Navy Space Project
    SPAWAR
Head DMSP & NAVDEP, Joint Program
Office
    Navy Space Systems Activity, Los Angeles
Assistant for Navigation Systems
    CNO OP -943DI
MILSTAR Systems Engineering
    Navy Space Systems Activity,
    Los Angeles, Ca.
Head Satellite Surveillance
CNO OP-986E
Launch & Control Systems Officer
    Naval Space Command
Assistant for TENCAP Systems
    OP-943E11
Plans & Project Officer
    Naval Space Surveillance Systems
Electronics Engineering Systems Dept. Head
    Navy Astronautics Group, Pt. Mugu, Ca.

ELECTRONIC WARFARE SYSTEMS TECHNOLOGY CURRICULUM 595

This curriculum provides the services with officers thoroughly knowledgeable in the technical and operational aspects of the role of electronic warfare as a vital, integral part of modern warfare. It is designed to provide an understanding of the principles underlying the broad field of electronic warfare, and because of the electronic nature of modern sensor, weapon and command, control and communications systems, it seeks to develop in the officer a grasp of electronic, electrical and electromagnetic fundamentals, theory and techniques.

REQUIREMENTS FOR ENTRY

To undertake studies in this curriculum requires a baccalaureate degree with above average grades and completion of mathematics courses through differential and integral calculus. Students lacking this background may matriculate via the Engineering Science Program (Curriculum 460). An APC of 325 is required for direct entry.

ELECTRONIC WARFARE SYSTEMS TECHNOLOGY SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Electronics Warfare Systems Technology Subspecialist with a code of XX46. The Curriculum Sponsor is OP-956, Electronic Warfare.

Typical Jobs in this Subspecialty:

Staff Electronic Warfare
   COM3RDFLT OPS CP
CDR
   OPNAV OP-954H1
Staff Electronic Warfare
   CINCPACFLT
LCDR
   FLTCORGRU 2
Air Anti-Submarine
   COMCARGRU 8
Staff Electronic Warfare
   COM7THFLT
Electronic Warfare Assistant
   VAQ 33
Executive Officer
   NSGA, Naples/ECCM

Entry Dates: Electronic Warfare Systems Technology is an eight quarter course of study with a single entry date in October. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:

Alfred Cooper, Professor
Code 61Cr, Spanagel Hall, Room 212,
(408) 646-2452, AV 878-2452

Degree: Requirements for the degree Master of Science in Systems Engineering are met as a milestone en route to satisfying the skill requirements of this curricular program.

TYPICAL COURSE OF STUDY

COMMUNICATIONS ENGINEERING CURRICULUM 600

The curriculum will provide officers with a comprehensive scientific and technical knowl- in the field of communications engineering as applied to Navy and Defense command, control and communication systems. It is designed to establish a broad background of basic engineering knowledge, leading to the selected advanced studies in communications. The officer student is provided a sound academic background in mathematics, computer science and technology, physics and electrical engineering. Additionally, the subject areas of digital signal processing, analysis of random signals, radiation, scattering and propagation, and micro-processor-based system design are included.

REQUIREMENTS FOR ENTRY

A baccalaureate degree, or its equivalent, in engineering or the physical sciences is preferred. The Engineering Science Program (Curriculum 460) is available for candidates who do not meet all admission requirements. The additional time required will vary with the candidate's background. Prior to undertaking the program, or as a part of the program, each officer will have earned the equivalent of an accredited BSEE. An APC of 323 is required for direct entry.

COMMUNICATIONS ENGINEERING SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Communications Engineering Specialist with a code of X X8I. The Curriculum Sponsor is OP-941, Naval Communications Division.

Typical Jobs in this Subspecialty

Communications Engineering
    DEFCOMMENGCEN, Washington, D.C.
TACAMO Project Control
    SPAWAR
Command Assistant for Electromagnetic
    CINCPACFLT
Decision & Control
    NOSC, San Diego, CA

## TELECOMMUNICATIONS SYSTEMS MANAGEMENT CURRICULUM 620 and 620CG

This curriculum provides instruction to officers who will perform as communications managers of new communications systems applications or as communication officers in large commands and staffs, afloat and ashore, including the organization of the Joint Chief of Staff and the Defense Communications Agency. The 620 and 620CG curricula are sponsored respectively by the Director of Naval Communications and the U.S. Coast Guard Headquarters. Each curriculum provides comprehensive study in management, with emphasis upon the systems management field. Additionally, the curricula provide study in the technical field appropriate to decision making in advanced systems and program management. These technical courses within the 620 curriculum have been especially prepared for non-engineers whereas those in the 620CG curriculum are engineering courses.

TELECOMMUNICATIONS SYSTEMS MANAGEMENT SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Telecommunications Systems Management Subspecialist with a code of XX82. The Curriculum Sponsor is OP-941, Naval Communications Division.

Typical Jobs in this Subspecialty:

COMM AF
    USS JOHN F. KENNEDY CV 67
Commanding Officer
    NAVCOMSTA, Thurso UK
Commanding Officer
    NAVCOMSTA, Jacksonville, FL
COMM OPS/FLT COMM

OPS T & E
    SPAWAR PDE-120
Staff COMM 84/10
    EUCOM US HDQTRS
PACAREA SI COMM
    CNPACFLT SECGRP
REQUIREMENTS FOR ENTRY

To undertake studies in this curriculum requires a baccalaureate degree with above average grades and completion of mathematics courses through single variable calculus. An APC of 335 is required for direct entry.

Degree: Requirements for the degree Master of Science in Telecommunications Systems Management are met as a milestone en route to satisfying the skill requirements of the curricular program.

Entry Dates: Telecommunications Systems Management is a six quarter course of study with a single entry date in October. The 620CG curriculum is eight quarters in length and convenes in July. If further information is needed, contact the Academic Associate for these curricula.

NATIONAL SECURITY AND INTELLIGENCE PROGRAMS

Curricular Officer

James W. Mueller, CAPT, USN,
Code 38, Root Hall, Room 216,
(408) 646-2228, AV 878-2228.

Assistant Curricular Officer

Kerry M. Tittle, LTJG, USNR,
Code 381, Root Hall, Room 211,
(408) 646-2845, AV 878-2845.

MIDDLE EAST, AFRICA, SOUTH ASIA CURRICULUM 681

Area Studies curricula focus on the history, culture, and religion of a specific region or country and provide students with a knowledge of currrent issues, economic and political structures and institutions, military forces, including strategic capabilities and policy implications, and geopolitical influences. Most include language study at the Defense Language Institute.

REQUIREMENTS FOR ENTRY

Prospective students must be U.S. military officers or civilian employees of the U.S. goverment eligible for a Top Secret Clearance with access to Sensitive Compartmented Information based on a Special Background investigation completed within the past five years. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required. In addition, those students whose sponsors require language training must have a score of at least 85 on the Defense Language Aptitude Battery or language proficiency validated by the Defense Language Proficiency Test.

Entry Dates: Area Studies are four quarter courses of study with entry dates in January and July. In addition, two to four quarters of language instruction are required. If information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

MID EAST, AFRICA, SOUTH ASIA SUBSPECIALTY

Completion of the 681 curriculum qualifies an officer as a Mid East, Africa, South Asia Subspecialist with subspecialty code of XX21. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

Typical Jobs in this Subspeciality:

Operations Intelligence
    Commander Middle East Force
STF Operations and Plans
    Commander Middle East for Bahrain
POL - MIL Planner
    Joint Chiefs of Staff, Washington, D.C.
Mid East/Southwest Asia Policy
    CINCUSNAVEUR LONDON
Area Officer
    DIA
Head, Middle East, Asia, Southwest Asia
    OP-611
Military Assistance Program
    Military Liaison Office Tunisia
CTRY Director - Acting Officer
    Office of the Secretary of Defense
Navigator
    AGF 3 LaSalk
Intelligence Office Iran
    DIA

Academic Associate:

E.J. Laurance, Associate Professor,
Code 56Lk, Root Hall, Room 101A,
(408) 646-2831, AV 878-2831.

Degree: Requirements for the degree of Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

NS 3010	Comparative Analysis and Research Methods
NS 3XXX	Area specialty course
NS 3XXX	Area specialty course
NS 3020	Analysis of International Relations

Quarter 2

NS 3030	American National Security Policy
NS 3040	The Politics of Global Economic Relations
NS 3XXX	Area specialty course
NS 4XXX	Area specialty course

Quarter 3

NS 3XXX	Area specialty course
NS 3XXX	Area specialty course
NS 4XXX	Functional course
NS 4XXX	Area specialty course

Quarter 4

NS 3XXX	Area specialty course
NS 4XXX	Functional course
NS 4XXX	Area specialty course
NS 0810	Thesis Preparation
or	
NS 0811	Preparation for Comprehensive Examination

Note: This year of academic coursework will normally be preceded or followed by two to four quarters of language instruction at the Defense Language Institute.

FAR EAST, SOUTHEAST, PACIFIC CURRICULUM 682

Area Studies curricula focus on the history, culture, and religion of a specific region or country and provide students with a knowledge of current issues, economic and political structures and institutions, military forces, including strategic capabilities and policy implications, and geopolitical influences. Most include language study at the Defense Language Institute.

REQUIREMENTS FOR ENTRY

Prospective students must be U.S. military officers or civilian employees of the U.S. government eligible for a Top Secret Clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the past five years. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required. In addition, those students whose sponsors require language training must have a score of at least 85 on the Defense Language Aptitude Battery or language proficiency validated by the Defense Language Proficiency Test.

FAR EAST, SOUTHEAST, PACIFIC SUBSPECIALTY

Completion of the 682 curriculum qualifies an officer as a Far East, Southeast, Pacific Subspecialist with a subspecialty code of XX22. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

Typical Jobs in this Subspecialty:

Chief of Staff
    COMNAVBASE GUAM
Staff Negotiations Representative
    USCINPAC REP PHILIPPINES
Staff Operations and Plans

    OPNAVSUPPACT, Washington, D.C.

Entry Dates: Area Studies are four quarter courses of study with entry dates in January and July. In addition, two to four quarters of language instruction are required. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

Academic Associate:

E.J. Laurance, Associate Professor,
Code 56Lk, Root Hall, Room 101A,
(408) 646-2831, AV 878-2831.

Degree: Requirements for the degree of Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

NS 3010	Comparative Analysis and Research Methods
NS 3XXX	Area specialty course
NS 3XXX	Area specialty course
NS 3020	Analysis of International Relations

Quarter 2

NS 3030	American National Security Policy
NS 3040	The Politics of Global Economic Relations
NS 3XXX	Area specialty course
NS 4XXX	Area specialty course

Quarter 3

NS 3XXX	Area specialty course
NS 3XXX	Area specialty course
NS 4XXX	Functional course
NS 4XXX	Area specialty course

Quarter 4

NS 3XXX	Area specialty course
NS 4XXX	Functional course
NS 4XXX	Area specialty course
NS 0810	Thesis Preparation
or	
NS 0811	Preparation for Comprehensive Examination

Note: This year of academic coursework will normally be preceded or followed by two to four quarters of language instruction at the Defense Language Institute.

EUROPE AND USSR CURRICULUM 683

Area Studies curricula focus on the history, culture, and religion of a specific region or country and provide students with a knowledge of currrent issues, economic and political structures and institutions, military forces, including strategic capabilities and policy implications, and geopolitical influences. Most include language study at the Defense Language Institute.

EUROPE AND USSR SUBSPECIALTY

Completion of the 683 curriculum qualifies an officer as a Europe/USSR Subspecialist with a subspecialty code of XX24. The Curriculum Sponsor is OP-06,Chief of Naval Operations (Plans, Policy and Operations).

Entry Dates: Area Studies are four quarter courses of study with entry dates in January and July. In addition, two to four quarters of language instruction are required. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

Typical Jobs in this Subspecialty:

Staff Plan
  NATO
ACOS for Plans
  SACLANT
POL-MIL Planner
  Joint Chiefs of Staff
Geopolitical Intelligence Office
  CINCUSNAVEUR LONDON
Atlantic Allied Plans
  COMINEWARCOM
Naval Coordinator
  EUCOM
Staff Infrastructure Policy
  SHAPE
Area Officer
  DIA
NATO Strategic Concepts
  OPNAV
Country Director Spain and Portugal
  Office of Secretary of Defense

Degree: Requirements for the degree of Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

REQUIREMENTS FOR ENTRY

Prospective students must be U.S. military officers or civilian employees of the U.S. government eligible for a Top Secret Clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the past five years. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required. In addition, those students whose sponsors require language training must have a score of at least 85 on the Defense Language Aptitude Battery or language proficiency validated by the Defense Language Proficiency Test.

Academic Associate:

E.J. Laurance, Associate Professor, Code 56Lk, Root Hall, Room 101A, (408) 646-2831, AV 878-2831.

TYPICAL COURSE OF STUDY

Quarter 3

INTERNATIONAL ORGANIZATIONS AND NEGOTIATIONS CURRICULUM 684

This curriculum focuses on the security relationships between the United States and other nation states. Courses address the implications of both governmental and nongovernmental actions, the organization and structure through which relationships are conducted, and the development of international institutions and policies that provide guidelines for such interaction, including international law, the law of war, and the law of the sea.

REQUIREMENTS FOR ENTRY

Prospective students must be U.S. military officers or civilian employees of the U.S. government eligible for a Top Secret clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the past five years. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College level preparation in basic descriptive and inferential statistics is required.

Entry Dates: International Organizations and Negotiation is a six quarter course of study with a single entry date in July. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

INTERNATIONAL ORGANIZATIONS AND NEGOTIATIONS SUBSPECIALTY

Completion of the 684 curriculum qualifies an officer as a International Organizations and Negotiations Subspecialist with a subspecialty code of XX25. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

Typical Jobs in this Subspecialty:

Liaison Officer
   PEP Bahamas
Force Requirements/Programs Office
   SACLANT
Representative for International Negotiations
   Joint Chiefs of Staff
Intelligence Affairs Officer
   EUCOM US HQ
Military Assistant
   U.S. Arms Control and Disarmament
Ship Operations
   COMSC MED
Head, Ocean Policy Branch
   OPNAV
Chief
   DIA
Assistant for Nuclear Negotiations
   OPNAV
Strategic Policy Planner
   Joint Chiefs of Staff

Academic Associate:

Frank M. Teti, Associate Professor,
Code 56TT, Root Hall, Room 201,
(408) 646-2528, AV 878-2528.

Degree: Requirements for the degree Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

NS 3010	Comparative Analysis and Research Methods
NS 3400	Domestic Content of Soviet National Security Policy
NS 3900	International Organizations and Negotiations
NS 3020	International Relations

Quarter 2

NS 3030	American National Security Policy
NS 3040	The Politics of Global Economic Relations
NS 3410	Soviet National Security
NS 3902	Modern Revolution and Political Terrorism

Quarter 3

NS 3960	International Law
NS 3450	Soviet Military Strategy
NS 4500	Seminar in the National Interest
NS 4902	Seminar on Modern Revolution and Terrorism

Quarter 4

NS 4251	American National Security Objectives and Net Assessment
NS 3021	The Role of the Superpowers in the Third World
NS 4900	Seminar in International Negotiations
NS 3452	Soviet Naval and Maritime Strategy

Quarter 5

NS 4250	Problems at Security Assistence and Arms Transfers
NS 4262	Seminar in Strategic Deception
NS 4901	Seminar in Ocean Policy
NS 0810	Thesis Preparation

Quarter 6

NS 3961	The Law of War
NS 4040	Strategic Resources and U.S. National Security Policy

NS 0810	Thesis Preparation

WESTERN HEMISPHERE CURRICULUM 685

Area Studies curricula focus on the history, culture, and religion of a specific region or country and provide students with a knowledge of currrent issues, economic and political structures and institutions, military forces, including strategic capabilities and policy implications, and geopolitical influences. Most include language study at the Defense Language Institute.

REQUIREMENTS FOR ENTRY

Prospective students must be U.S. military officers or civilian employees of the U.S. government eligible for a Top Secret Clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the past five years. Students must have a baccalaureate degree earned with above average academic performance and an APC of 365. College-level preparation in basic descriptive and inferential statistics is required. In addition, those students whose sponsors require language training must have a score of at least 85 on the Defense Language Aptitude Battery or language proficiency validated by the Defense Language Proficiency Test.

WESTERN HEMISPHERE SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Western Hemisphere Subspecialist with a subspecialty code of X X23. The Curriculum Sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

Typical Jobs in this Subspecialty:

Political Military Planner
    Joint Chiefs of Staff
Executive Assistant
    Inter American Defense
Air Anti-Submarine Warfare/Plans
    COMSOLANTFOR
Strategy and Policy Central and South Atlantic
    USCINCLANT
Intelligence Analyst
    USCINCSO
Area Officer
    DIA
OP-613B1 CUBA/CARIBBEAN
    OPNAV
Assistant for Military Sale
    OPNAV-FOREIGN MILITARY
CTRY director
    Office of Secretary of Defense
OP-613C Assistant Branch Head South America

Academic Associate:

E.J. Laurance, Associate Professor,
Code 56Lk, Root Hall, Room 101A
(408) 646-2831, AV 878-2831.

Degree: Requirements for the degree of
Master of Arts in National Security Affairs are
met en route to satisfying the skill require-
ments of the curricular program.

Entry Dates: Area Studies are four quarter
courses of study with entry dates in January
and July. In addition, two to four quarters of
language instruction are required. If further in-
formation is needed, contact the Academic
Associate or Curricular Officer for this
curriculum.

Note: This year of academic coursework will
normally be preceded or followed by two to
four quarters of language instruction at the
Defense Language Institute.

TYPICAL COURSE OF STUDY

Quarter 1

NS 3010	Comparative Analysis and Research Methods
NS 3020	Analysis of International Relations
NS 3501	History and Culture of Latin America
NS 3510	Problems of Government and Security in Latin America

Quarter 2

NS 3030	American National Security Policy
NS 3040	The Politics of Global Economic Relations
NS 3580	U.S. Interests in Latin America
NS 3550	The Role of the Military in Latin America

NS 3520	International Relations and Security Problems of Latin America
NS 3540	Political Economy of Latin American Development Strategy
NS 4510	Seminar in Problems of Government and Security in Latin America
NS 4550	Seminar in Government and Politics in Latin America

Quarter 4

NS 4010	Seminar in Comparative Regional Security
NS 4560	Seminar in International Security Problems of Latin America
NS 4902	Seminar on Modern Revolution and Terrorism
NS 0810 or	Thesis Preparation
NS 0811	Preparation for Comprehensive Examination

STRATEGIC PLANNING
CURRICULUM 687

This curriculum is designed to provide the student with an understanding of the generation and use of military power in support of national objectives, the process of U.S. strategic decision-making, and the deployment of military forces, including maritime nuclear strategic and theater forces in peacetime and under conditions of conventional and nuclear war.

REQUIREMENTS FOR ENTRY

Entrance is open to officers and civilian employees of the U.S. government eligible for a Top Secret clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the past five years. A baccalaureate degree earned with above average academic performance and a minimum APC of 345 are required.

Entry Dates: Strategic Planing is a six quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate or the Curricular Officer of this curriculum.

Academic Associate:

Frank M. Teti, Associate Professor,
Code 56Tt, Root Hall, Room 201,
(408) 646-2528, AV 878-2528.

STRATEGIC PLANNING
SUBSPECIALTY

Completion of the 687 curriculum qualifies an officer as a Strategic Planning Subspecialist with subspecialty codes of XX27 and XX26. The Curriculum sponsor is OP-06, Chief of Naval Operations (Plans, Policy and Operations).

Typical Jobs in this Subspecialty:

International Plans
    COMCANLANT
War Plans
    CINCUSNAVEUR
Staff Plans
    SHAPE
NATO Plans Officer
    COMSTRIKEFLTLANT
Navy Plans Officer
    Special Operations
Nuclear Weapons/Air Warfare
Instructor
    NUCWEAPTRAGRLANT/PAC
SSBN Current Operations
    USCINCLANT
Head Trident Strategic Weapons
    OPNAV

Degree: Requirements for the degree Master of Arts in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

NS 3152	Naval Warfare and the Threat Environment	
OS 3101	Statistical Analysis for Management	
NS 3400	Domestic Context of Soviet National Security Policy	
NS 3020	Analysis of International Relations	

Quarter 2

INTELLIGENCE CURRICULUM 825

This curriculum is a technical, interdisciplinary program integrating the study of political science, data analysis, aeronautical engineering, operations research, physics, electrical engineering, information systems, and oceanography into an understanding of intelligence.

Coursework addresses three broad fields: defense technology, analysis and management, and national security affairs. Defense technology courses are designed to address the special problems of technical intelligence, emphasizing technical literacy. The analysis and management sequence provides a grounding in quantitative techniques and research methods. National security affairs courses address the interface between international politics and national security objectives.

REQUIREMENTS FOR ENTRY

Prospective students must be U.S. military officers or civilian employees of the U.S. government eligible for a Top Secret clearance with access to Sensitive Compartmented Information based on a Background Investigation completed within the past five years. They must have a baccalaureate degree earned with above average academic performance and a minimum APC of 334.

Entry Dates: Intelligence is a six quarter course of study with starting dates in April and October. In addition, all students will report for a math and physics refresher in mid February or mid August. If further information is needed contact the Academic Associate or the Curricular Officer of this curriculum.

INTELLIGENCE SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Intelligence Specialist with a subspecialty code of XX17. The Curriculum Sponsor is Naval Intelligence Command.

Typical Jobs in this Subspecialty:

Operations Intelligence Analyst
NAVOPINTCEN, Washington, D.C.
Technical Intelligence
COMNAVFOR JAPAN
Naval Attache
Attache USSR
Commander Shore Activity
NISC, Washington, D.C.
Staff Operations/Submarine Operations
CINCUSNAVEUR LONDON
Intelligence Officer
COMSUBGRU
Surface Analyst
FOSIF ROTA SPAIN
Tactical Intelligence
Office of the Secretary of Defense
Intelligence Officer
War College,, Newport, R.I.
Intelligence Production Analyst
NORAD/ADCOM JNT SUPP

Degree: Requirements for the degree Master of Science in National Security Affairs are met en route to satisfying the skill requirements of the curricular program.

Academic Associate:

Robert L. Armstead, Associate Professor, Code 61Ar, Spanagel Hall, Room 112, (408) 646-2125, AV 878-2125.

N.K. Green, LCDR, USN, Code 56Gn, Root Hall, Room 209, (408) 646-3038, AV 878-3038

TYPICAL COURSE OF STUDY

Quarter 1

OC 2001	Ocean Systems
NS 2154	Intelligence and the Military
NS 3150	Intelligence Data Analysis and Research Methods
NS 3030	American National Security Policy

Quarter 2

SE 2002	Electro-magnetic Systems
OS 3404	Man-Machine Interaction
NS 3450	Soviet Military Strategy
NS 3020	Analysis of International Relations

Quarter 3

AE 3005	Survey of Aircraft and Missile Technology
NS 3410	Soviet National Security
NS 4251	American National Security Objectives and Net Assessment
NS 3151	Intelligence Systems and Products

Quarter 4

EI 2790	Communications Systems Analysis
NS 3902	Modern Revolution and Political Terrorism
NS 4500	Seminar in the National Interest
NS 4250	Problems of Security Assistance and Arms Transfers

Quarter 5

NAVAL ENGINEERING PROGRAMS

Curricular Officer:

Walter A. Ericson, CAPT, USN
Code 34, Halligan Hall, Room 220,
(408) 646-2033, AV 878-2033

NAVAL ENGINEERING PROGRAMS CURRICULUM 570

The objective of this program is to provide graduate education, primarily in the field of Mechanical Engineering. The graduate will have the technical competence to operate and maintain modern warships and naval systems. He will be able to participate in technical aspects of naval systems acquisitions for technological advances in naval ships and systems. Through emphasis on the design aspect within the program, the graduate will be well prepared to apply these advances in technology to the warships of the future. An original research project resulting in a finished thesis is an integral part of the curriculum. The schedule of classes is arranged to provide time during the final two quarters for concentration in this area of specialization.

REQUIREMENTS FOR ENTRY

A baccalaureate degree or its equivalent is required, preferably in an engineering discipline. A minimum academic profile code (APC) of 323 (334 via Engineering Science Curriculum, 460) is required. This equates to a minimum grade point average of 2.20, with mathematics through differential and integral calculus, and one year of calculus based physics as non-waiverable requirements. The program is open to naval officers in the rank of LTJG through LCDR in the 11XX/14XX community, equivalent grade officers of other U.S. services, and qualified foreign military officers. DoD employees are also eligible. Current enrollment is approximately 115 students.

NAVAL ENGINEERING SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Naval Engineering Specialist with a subspecialty code X X54P. The Curriculum Sponsor is Naval Sea Systems Command. A limited number of particularly well qualified students may be able to further their education beyond the Master's Degree and seek the degree of Mechanical Engineer and a X X54N Subspecialty Code.

Typical Subspecialty Assignments:

Upon award of the X X54P subspecialty code, the officer becomes eligible for assignment to those billets identified as requiring graduate education in Naval Engineering. Typical of these billets are the following:

Industrial Activities — Shipyard, SUPSHIP, Ship Repair Facility
Mechanical Engineering Instructor, USNA
Tender Repair Officer (Engineering Duty Officer)
Fleet/Type Commander Staff
SIMA
Board of Inspection and Survey
Propulsion Examining Board

Entry Dates: Naval Engineering is an eight quarter course of study with entry dates in April and October. For Engineering Duty Officers, the program is nine quarters long. If further information is needed, contact the Academic Associate or the Curricular Officer for this curriculum.

Academic Associate:

Robert H. Nunn, Professor,
Code 69Nn, Halligan Hall, Room 207,
(408) 646-3424, AV 878-3424.

Degree: Requirements for the degree Master of Science in Mechanical Engineering are met as a milestone en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

Quarter 1

MA 1118 (5-2) Multivariable Calculus
EC 2170 (4-2) Intro to Electrical Eng
ME 2101 (4-1) Thermodynamics

OPERATIONS ANALYSIS PROGRAMS

Curricular Officer
Thomas E. Halwachs, CDR, U.S.N.,
Code 30, Root Hall, Room 232,
(408) 646-2786, AV 878-2786.

OPERATIONS ANALYSIS CURRICULUM 360

This program provides education in the application of quantitative analyses to operational, tactical, and managerial problems. The disciplines of mathematics, probability, statistics, economics, human factors, physical science, and optimization which the officer student learns here, or brings with him, supply the theoretical background for analyzing alternative choices in tactical and strategic warfare and in planning, budgeting and procurement of systems and forces. The course of study generates computational capability and develops skills in identifying relevant information, generating decisions criteria, and selecting alternatives. This education enhances performance in all duties throughout a military career, including operational billets, technical management assignments and policy making positions.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades in mathematics is required. Completion of mathematics through single variable differential and integral calculus is considered minimal preparation. A one year course in college physics is highly desired. Students lacking these quantitative prerequisites will be accepted, in certain cases, where their under-graduate records indicate that they are exceptional students and there are other possible indicators of success such as Graduate Record Examination scores, correspondence or extension courses in quantitative subjects, and outstanding motivation for the program. An APC of 324 is required.

OPERATIONS ANALYSIS SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Operations Analysis Subspecialist with a subspecialty code of XX42P. The Curriculum Sponsor is OP-91, Program Resource Appraisal Division.

Typical Jobs in this Subspecialty:
Destroyer Squadron Chief Staff Officer
OPNAV Air Warfare Program Analyst
JCS Analyst
Director OPS Research, SACLANT
Asst Staff OPS/PLANS, COMCARGRU
Staff OPS & PLANS, COMTHIRDFLT

Entry Dates: Operations Analysis is an eight quarter course of study with entry dates in April and October. If further information is needed, contact the Academic Associate for this curriculum or the Curricular Officer.

Academic Associate:

James D. Esary, Professor,
Code 55Ey, Root Hall, Room 273,
(408) 646-2780, AV 878-2780.

Degree: Requirements for the degree Master of Science in Operations Research are met as a milestone en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

OPERATIONAL LOGISTICS CURRICULUM 361

This program provides education in mathematics, probability and statistics, physical science, economics, logistics and computer science. These disciplines supply the theoretical background for analyzing alternative choices in planning for sustainability of Naval Forces involved in long range deployments.

The course of study generates computational capability and develops skills in identifying relevant information, generating decision criteria, and selecting alternatives. This education enhances performance in all duties throughout a military career, including operational billets, technical management assignments, and policy making positions.

OPERATIONAL LOGISTICS SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Operations Logistics Subspecialist with a subspecialty code of XX43P. The curriculum sponsor is OP-04, Office of Chief of Naval Operations (Logistics).

Typical Jobs in this Subspecialty:

AGOS, SACLANT
LOG. PLANS, CINCUSNAVEUR
LOG. PLANS, CINCPACFLT
OPNAV Fleet Mobilization
JCS Logistics
Warfare Analyst, NSURFWPC
OSD Analyst
USCINPAC Analyst
Head Special Studies, Strategic Systems Project Officer
VX-1 Analyst
War College Professor

REQUIREMENTS FOR ENTRY

A baccalaureate degree with above average grades in mathematics is required. Completion of mathematics through single variable differential and integral calculus is considered minimal preparation. A one year course in college physics is highly desired. Students lacking these quantative prerequisites will be accepted, in certain cases, where their under-graduate records indicate that they are exceptional students and there are other possible indicators of success such as Graduate Record Examination scores, correspondence or extension courses in quantitative subjects, and outstanding motivation for the program.

Entry Dates: Operational Logistics is an eight quarter course of study with a single entry date in October. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:

F. Russell Richards, Associate Professor, Code 55Rh, Root Hall, Room 271, (408) 646-2543, AV 878-2543.

Degree: Requirements for the degree Master of Science in Operations Research are met as a milestone en route to satisfying the skill requirements of the curricular program.

Code 33, Spanagel Hall, Room 328,
(408) 646-2116/7, AV 878-2116/7,

WEAPON SYSTEMS ENGINEERING CURRICULUM 530

This program is designed to meet the needs of the military services for an officer having a strong broad-based technical education with particular applications toward weapons systems. The fundamental task of the Weapons Engineering subspecialty community is the design, development, test and evaluation, acquisition, operation and support of naval weapon systems. In support of this career pattern, the objective of these curricula is to provide that advanced technical education on a broad foundation encompassing the basic scientific, analytic and engineering principles underlying the field of naval weaponry. The specific areas of study and the levels of expertise to be attained are formulated to insure a sound basis for technical competence and for subsequent growth as may be required to support the fundamental task of the community.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with mathematics through differential and integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science Curriculum discussed elsewhere in this catalog. An APC of 323 is required.

WEAPONS SYSTEMS ENGINEERING SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Weapons Systems Engineering Subspecialist with a subspecialty code of XX61. The Curriculum Sponsor is Naval Sea Systems Command Headquarters.

Typical Jobs in this Subspecialty:

NTDS-CIC
    FLTCOMBDSSA, San Diego, Ca.
Warfare Systems Officer
    SPAWAR OPSUPFLD 6
Weapons Instructor
    Naval Academy, Annapolis, Md.
Staff Readiness (Weapons)
    COMCRUDESGRU 1,2,3,5,8,12

Entry Dates: Weapons Engineering is a nine quarter course of study with entry dates in March and October. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:

James V. Sanders, Associate Professor
Code 61Sd, Spanagel Hall, Room 146B,
(408) 646-2931, AV 878-2931.

Degree: Requirements for the degree Master of Science in Engineering Science are met as a milestone en route to satisfying the skill requirements of the curricular program. On a case by case basis, some students, depending on background may earn a Master of Science in Physics or one of the engineering disciplines.

TYPICAL COURSE OF STUDY

Quarter 1

MA 1116 (5-0) Multivariable Calculus
MA 2047 (4-0) Linear Algebra and Vector Analysis
EC 2170 (4-2) Introduction to Electrical Engineering
PH 1121 (3-2) Basic Physics I: Mechanics

Quarter 2

MA 2121 (4-0) Differential Equations
CS 2450 (3-1) Fortran
EC 2810 (3-2) Digital Machines
PH 1322 (4-0) Physics II: Electricity and Magnetism

Quarter 3

PH 2151 (4-1) Mechanics I: Particle Mechanics
EC 2420 (3-0) Linear Systems
MA 3132 (4-0) Partial Differential Equations and Integral Transforms
PH 2223 (4-2) Physics III: Optics

Quarter 4

EC 2410 (3-0) Fourier Analysis Signals and Systems
EC 2300 (3-2) Control Systems
PH 2681 (4-2) Introductory Quantum Physics
PH 2724 (4-0) Physics IV: Thermodynamics, Fluids & Acoustics

Quarter 5

PH 3360 (4-1) Electromagnetic Wave Propagation
PH 3161 (4-1) Fluid Dynamics
CS 3201 (3-2) Computer Architecture

Quarter 6

Specialization Course
MS 3201 (3-2) Materials Science
EC 3670 (4-2) Principles of Radar Systems
CS 3550 (3-2) Computers in Combat Systems

Quarter 7

Specialization Course
PH 3461 (4-1) Explosions & Explosives
OS 3104 (4-0) Statistics for Science and Engineering
XX 0810   Thesis

Quarter 8

Specialization Course
MS 3202 (3-2) Failure Analysis and Prevention
XX 0810

Quarter 9

Specialization Course
AE 4712 (3-2) Missile Systems Design and Integration
XX 0810   Thesis
XX 0810   Thesis

WEAPON SYSTEMS SCIENCE CURRICULUM 531

This program is designed to meet the needs of the military services for officers who have a strong broad-based technical education with graduate emphasis in engineering physics and its applications.

In addition to the introductory and core courses previously described, all students in this curriculum take additional courses in electromagnetic phenomena and statistical physics. In-depth option sequences of two or more courses are offered wherein students specialize in a particular area of physics. Students also engage in thesis research in an area related to these advanced studies.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with mathematics through differential and integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science curriculum.

Officers may enhance their selectability by taking off-campus courses, including participation in the Postgraduate School Continuing Education program. An APC of 323 is required.

WEAPONS SYSTEMS SCIENCE SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Weapons Systems Science Sub-Specialist with a subspecialty code of XX63. The Curriculum Sponsor is Naval Sea Systems Command Headquarters.

Typical Jobs in this Subspecialty:

Weapons Department Head
Naval Academy, Annapolis, Md.
Research Associate
Lawrence Livermore Laboratory (6)
Physics Instructor
Naval Academy, Annapolis, Md.
Research Associate
Los Alamos National Laboratory
Electro-Optics Project Officer
Naval Ocean Systems Center, San Diego, Ca.
Testing Officer
COMOPTEVFOR
Research Officer
Naval Research Laboratory
Project Management
Naval Sea Systems Command (4)

Entry Dates: Weapon Systems Science is a nine quarter course of study with entry dates in March and October. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:
James V. Sanders, Associate Professor, Code 61Sd, Spanagel Hall, Room 146B, (408) 646-2931, AV 878-2931.

Degree: Requirements for the degree Master of Science in Physics are met as a milestone en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

NUCLEAR PHYSICS (WEAPONS & EFFECTS) CURRICULUM 532

This program is designed to meet the needs of the naval service for officers who have a broad technical education wtih a graduate specialization in the physics of nuclear weapons and weapons effects. The graduate specialization sequence consists of a series of courses in the area of nuclear physics, effects of nuclear explosions, hardening technologies and nuclear warfare analysis. Students can also take elective courses in this or related areas and are expected to engage in thesis research in their field of specialization.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with mathematics through differential and integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science Curriculum discussed elsewhere in this catalog.

Officers may enhance their selectability by taking off-campus courses, including participation in the Postgraduate School Continuing Education program which has been outlined earlier in the catalog. An APC of 323 is required.

NUCLEAR PHYSICS SUBSPECIALTY

Completion of this curriculum qualifies an officer as a Nuclear Physics (Weapons & Effects Subspecialist with a subspecialty code of XX67. The Curriculum Sponsor Is OP-981N, Headquarters, Nuclear Branch.

Typical Jobs in this Subspecialty:

Test Manager
  Defense Nuclear Agency (DNA)
Research & Development Coordinator
  Defense Nuclear Agency (DNA)
Physicist
  Defense Nuclear Agency (DNA)
Tactical Nuclear Weapons/Plans
  CINCLANT (2)
Test Officer/Programs Officer
  DNA, Dirkland AFB (2)
Navy Research Officer
  Los Alamos National Laboratory (3)
Navy Research Officer
  Lawrence Livermore Laboratory
Nuclear Effects Officer/Nucleonics Officer
  SPAWARSYSCOM (2)
Nuclear Physicist
  DNA, Los Alamos
Instructor
  Nuclear Weapons Training Group,
  Atlantic

Entry Dates: Nuclear Physics is a nine quarter course of study with entry dates in March and October. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:

James V. Sanders, Associate Professor, Code 61Sd, Spanagel Hall, Room 146B, (408) 646-2931, AV 878-2931

Degree: Requirements for the degree Master of Science in Physics are met as a milestone en route to satisfying the skill requirements of the curricular program.

UNDERWATER ACOUSTIC SYSTEMS CURRICULUM 535

Underwater Acoustic Systems is an interdisciplinary program. Courses are drawn principally from the fields of physics, electrical engineering, computer science and mathematics. Although broadly based, the emphasis is on underwater acoustics and signal processing applications to undersea warfare. As can be seen in the following list, courses included relate to the generation and propagation of sound in the ocean, military applications of underwater sound and the electrical engineering and computer science aspects of signal processing in sonar systems. Also included are topics concerning the effects of the noise environment on people.

REQUIREMENTS FOR ENTRY

A baccalaureate degree with mathematics through differential and integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science Curriculum discussed elsewhere in this catalog.

Officers may enhance their selectability by taking off-campus courses, including participation in the Postgraduate School Continuing Education program which has been outlined earlier in the catalog. An APC of 323 is required.

UNDERWATER ACOUSTICS SUBSPECIALTY

Completion of this curriculum qualifies an officer as an Underwater Acoustics Subspecialist with a subspecialty code of X X56. The Curriculum Sponsor is Naval Sea Systems Command/Commander Space and Naval Warfare Systems Command.

Typical Jobs in this Subspecialty:

Physics Instructor
    Naval Academy, Annapolis, MD
OP-981H
    OPNAV
Instructor
    Naval Postgraduate School, Monterey, CA
Training Officer
    PDW-124 (Undersea Surveillance)
Staff
    Commander 7th Fleet
Staff
    COMNAVSURFLANT
Test & Evaluation Officer
    OPTEVFOR
Strategic Systems Project Officer
    Director of SSPO
Staff Anti-Submarine Warfare
    NAVSEASYSCOM
Research & Development Project Officer
    Office of Secretary of Defense

Entry Dates: Underwater Acoustics is a nine quarter course of study with entry dates in March and October. If further information is needed, contact the Academic Associate for this curriculum.

Academic Associate:

James V. Sanders, Associate Professor, Code 61Sd, Spanagel Hall, Room 146B, (408) 646-2931, AV 878-2931.

Degree: Requirements for the degree Master of Science in Engineering Acoustics are met as a milestone en route to satisfying the skill requirements of the curricular program.

TYPICAL COURSE OF STUDY

CURRICULA CONDUCTED AT OTHER UNIVERSITIES

ROBERT C. SIVERLING, Commander, U.S. Navy; Manager Civilian Institutions Program; A.B., Franklin and Marshall College, 1966; M.S. in Management, Naval Postgraduate School, 1983.

The Navy's fully-funded graduate education program supports 71 subspecialties. This involves 73 curricula, 40 at NPS and 33 at over 45 civilian institutions. Programs available at NPS are not offered at civilian institutions. Approximately 20% of the fiscal year officer graduate education assignments are slated for these universities. Where more than one school is listed for a particular curriculum, subspecialty education placement officers plan quota distribution.

In order to qualify for the Civilian Institutions Program, officers must be PG School selected and must meet all the requirements of an officer entering Naval Postgraduate School.

Curriculum	Number	Length	Institution	Primary Consultant
Chemistry	382	2 yrs.	Various	NAVSEASYSCOM

*No NROTC Unit at Institution

Inquiries concerning curricula conducted at other universities should be directed to Manager, Civilian Institutions Program, Naval Postgraduate School, Monterey, CA 93943. Telephone (408) 646-2319 or autovon 878-2319.
The faculty of the Naval Postgraduate School performs its graduate education functions through eleven academic departments:

Administrative Sciences
Aeronautics
Computer Science
Electrical & Computer Engineering
Mathematics
Mechanical Engineering

Meteorology
National Security Affairs
Oceanography
Operations Research
Physics

and four interdisciplinary Academic Groups, each headed by a chairman:

Antisubmarine Warfare
Command, Control & Communications

Electronic Warfare
Space Systems

The departmental facilities, degree requirements, and course offerings are contained in the individual department descriptions which follow.

In support of the courses of study, an active research program is carried on by the faculty and students. The research projects are supported by the Office of Naval Research, the Director of Naval Laboratories, the various Naval Systems Commands, and the National Science Foundation, as well as by other agencies and organizations. The ongoing projects cover a broad spectrum of research problems and include both theoretical and experimental investigations.

The faculty maintains a close liaison with the programs of the Department of Defense research laboratories and development centers, and the knowledge acquired and maintained through this association is incorporated throughout the instructional program.

The undergraduate-level courses included in the departmental offerings are taken for remedial study by students, as required, to prepare them for the graduate-level program. Much of this preparatory subject matter is available for off-campus self-study through the School's Continuing Education Program.

In the course listings that follow, the first two letters in the course designator refer to the department in which it is taught. The following table lists the course alpha prefix codes by department:

Administrative Sciences
    Service Courses . . . . AS
    Telecommunications Systems Management . . . . CM
    Information Systems . . . . IS

The courses are assigned course numbers in accordance with their levels of academic credit as follows:

        0001-0999 No credit
        1000-1999 Lower division credit
        2000-2999 Upper division credit
        3000-3999 Upper division or graduate credit
        4000-4999 Graduate credit

The two numbers in parenthesis (separated by a hyphen) following the course title indicate the hours of instruction per week in classroom and laboratory respectively. Laboratory hours are assigned half the value shown in calculating quarter hours for the credit value of the course. Thus a (3-2) course (having three hours recitation and two hours laboratory) will be assigned credit value of 4 quarter hours.

DEPARTMENT OF ADMINISTRATIVE SCIENCES

Chairman:

Willis R. Greer, Jr., Professor,
Code 54, Ingersoll Hall, Room 230,
(408) 646-2161, AV 878-2161.

Associate Chairmen:

Instruction:

James M. Fremgen, Professor,
Code 54Fm, Ingersoll Hall, Room 301,
(408) 646-2644, AV 878-2644.

Research:

Shu S. Liao, Professor,
Code 54Lc, Ingersoll Hall, Room 302,
(408) 646-2505, AV 878-2505.

Sponsored Research:

Norman F. Schneidewind, Professor,
Code 54Ss, Ingersoll Hall, Room 311,
(408) 646-2719, AV 878-2719.

The Department of Administrative Sciences has primary responsibility for three academic programs and awards three graduate degrees. The largest program is a group of curricula in Administrative Science. These curricula include Acquisition and Contract Management, Financial Management, Manpower/Personnel Training Analysis, Material Logistics Support, Systems Inventory Management, and Transportation Management. Graduates of these curricula are awarded the degree Master of Science in Management. Next largest is the Computer Systems Management Curriculum, whose graduates receive the Master of Science in Information Systems. Finally, the Telecommunications Systems Management Curriculum leads to the degree Master of Science in Telecommunications Systems Management.

The Department has two microcomputer laboratories for instructional and research purposes. One contains several types of personal computers which are used for instruction in programming, computer networks, and data base management. Several of these computers are linked with the School's mainframe computer and with the Defense Data Network, as well as being linked together in a local network. The other laboratory consists of a network of five microcomputers. It replicates a system used in various Coast Guard installations and is used largely by Coast Guard students.

The Administrative Science curricula have been reviewed by the National Association of Schools of Public Affairs and Administration and have been found to be in substantial conformity with its standards for graduate programs in public administration.

MASTER OF SCIENCE IN INFORMATION SYSTEMS

A candidate for the degree of Master of Science in Information Systems must successfully complete or validate core courses in each of the following disciplines:

Accounting and financial management
Organizational sciences
Information systems
Computer Science
Economics
Management theory and practice
Quantitative methods

In addition, each candidate's curriculum must include the successful completion of 48 quarter hours of graduate-level course work and an acceptable thesis or project. At least 12 quarter hours of the course work must be at the 4000 level. Further, this graduate-level course work must include at least 24 quarter hours in Administrative Sciences and at least 16 quarter hours in Computer Science.

The candidate's program must be approved by the Chairman of the Department of Administrative Sciences.

MASTER OF SCIENCE IN MANAGEMENT

The degree Master of Science in Management requires:

a. Completion or validation of the Management Fundamentals program, which consists of a total of 32 quarter hours of 2000 and 3000 level courses, including a minimum of the following hours by disciplines:

Accounting and financial management	6
Economics	6
Organization and management	6
Quantitative methods	8

b. In addition to the above, completion of a minimum of 48 hours of graduate-level courses, at least 12 hours of which are at the 4000 level.

c. The completion of an approved sequence of courses in the student's area of concentration.

d. The submission of an acceptable thesis on a topic previously approved by the Department of Administrative Sciences.

e. Final approval of a program from the Chairman, Department of Administrative Sciences.

MASTER OF SCIENCE IN TELECOMMUNICATIONS SYSTEMS MANAGEMENT

The degree of Master of Science in Telecommunications Systems Management will be awarded at the completion of an interdisciplinary program that satisfies the following requirements:

a. A minimum of 56 quarter hours of graduate-level work, of which at least 12 quarter hours must represent courses at the 4000 level.

b. The program must consist of a minimum of graduate-level credit as follows:

Administrative sciences and quantitative methods	40
Communications systems and computer science	16

c. In addition to the 56 quarter hours of graduate-level course credit, an acceptable thesis must be completed. Each thesis shall have an advisor and a second reader, at least one of whom must be from the Department of Administrative Sciences.

d. The program must be approved by the Chairman of the Department of Administrative Sciences.

DEPARTMENTAL COURSE OFFERINGS

AS 1501 English Language Skills (0-4).
A course in basic English to increase speaking and writing skills and to increase comprehension. A pre and post conversation test is administered to each student. Open only to Allied Officers.

Upper Division or Graduate Courses

AS 3610 Economic Analysis and Operations Research (4-0).
A presentation of basic economic concepts involved in the decision processes of individuals and groups faced with scarcity of resources. Topics covered include consumer theory and demand, individual behavior under uncertainty, producer theory and supply, firm behavior under uncertainty, output and input market structures, partial and general equilibrium analysis, and market imperfections and welfare analysis. PREREQUISITES: MA 2042, MA 2110 (concurrently), and OA 3201 (concurrently).

AS 3611 Planning and Capital Allocation in the Department of Defense (4-1).
Extension of concepts discussed in AS 3610 to allocation of resources over time. Covered are models of consumption and production over time, optimal investment decision rules and investment under uncertainty. Models of welfare economics and cost-benefit analysis are presented. Also covered are planning and decentralization techniques using decomposition algorithms. Cost effectiveness and costing models from current practices in DOD are examined. Institutional procedures and processes such as PPBS, budget enactment and apportionment, FYDP, systems acquisition/DSARC and ZBB are also discussed. PREREQUISITES: AS 3610 and OA 3103.

Graduate Courses

AS 4601 Decision Making in Command (4-0).
This course will focus on the processes and mechanisms of decision making in military organizations, especially in the context of war. After a review of concepts, theories, and models relevant to decision making in organizations, the course will analyze the nature of and constraints on command and control in military organizations. Also, a comparison will be made of the consequences of different organization structures on decision making and implementation. Topics covered will include strategy, implementation, technology, organization design, and conflict resolution. PREREQUISITES: CM 3111 and OS 3636 (or equivalent).

AS 4613 Theory of Systems Analysis (4-0).
Systems analysis (cost-effectiveness analysis) formulated as commensurable and incommensurable physical capital investment choice models. Emphasis on decision rules and the nature of opportunity costs with respect to scale and timing of investment. Interpretation of methods of risk, modeling, and solution computation. Theory of the second best; theory of the social discount rate. Introduction to models of planning and control emphasizing decentralization of the decision-making problem. PREREQUISITES: AS 3611 and OA 4201 (concurrently).

TELECOMMUNICATIONS SYSTEMS MANAGEMENT COURSES

CM 0001 Seminar for Telecomuunication Systems Management Students (0-2).
Guest lectures. Thesis and research presentations.

CM 0810 Thesis Research for Telecommunications Systems Management Students (0-0).
Every student conducting thesis research will enroll in this course.

Upper Division or Graduate Courses

CM 3001 Economic Evaluation of Telecommunications Systems I (4-0).
Study of economic evaluation concepts and methods for planning, coordinating, and controlling telecommunications systems. Topics include cost performance (value) analyses, capacity planning, pricing of telecommunications services, and make, lease, or buy decisions. PREREQUISITE: MN 2155.

CM 3002 Economic Evaluation of Telecommunications Systems II (4-0).
Continuation of material in CM 3001. PREREQUISITE: CM 3001.

CM 3111 C3 Mission and Organization (4-0).
A survey of command, control, and communications organizations within OSD, JCS, and the Service Headquarters. Execution of National Strategic Nuclear Policy and planning for joint employment of general purpose forces are discussed. Service combat organization and service tactical C3 systems are covered. Emphasis is on description of existing C3 organizations and systems, with brief historical perspective. PREREQUISITE: SECRET clearance.

CM 3112 Navy Telecommunications Systems (4-0).
Description of the Naval Telecommunications System, with emphasis on the organization and management control and operational direction of the facilities. Current subsystems are described in detail. PREREQUISITES: SECRET clearance and CM 3111 or permission of the Instructor.

Graduate Courses

CM 4003 Seminar in Telecommunications Systems Management (1-0 to 4-0).
Study of a variety of topics of current interest in telecommunications systems, to be determined by the instructor. PREREQUISITES: A background in telecommunications systems and permission of the Instructor.

CM 4502 Telecommunication Networks (4-0).
This course covers telecommunications network design, development, and managment topics, including service requirements determination, signaling, interoperability, switching, synchronization protocols, demand, and architecture. A variety of applications will be presented. PREREQUISITE: IS 3502.

CM 4925 Telecommunications Systems, Industry, and Regulation (4-0).
Study of the telecommunications industry (domestic and international) and its regulation by Congress, Executive Branch, Federal Communications Commission, and International Telecommunications Union. Consideration of special issues, including allocation of the spectrum, telecommunication service pricing, and DOD lease decisions. PREREQUISITES: CM 3002 and OS 3005.

INFORMATION SYSTEMS COURSES

IS 0001 Seminar for Computer Systems Management Students (0-2).
Guest lectures. Thesis and research presentations.

IS 0810 Thesis Research for Computer Systems Management Students (0-0).
Every student conducting thesis research will enroll in this course.

Upper Division Courses

IS 2000 Introduction to Computer Management (3-0).
This course will provide an introduction to the field of automatic data processing and the functions and and responsibilities of the computer manager. Specific topics include a survey of contemporary computer applications, hardware and software, and introductions to personnel management, financial management, quantitative methods, and computer science in the computer management function.

IS 2100 Information Systems Laboratory (0-2).
The objective is to develop computer literacy early in the Computer Systems Management student's program and to reinforce material in IS 2000. Students will perform elementary laboratory assignments involving use of microcomputer systems and digital logic; hardware architecture; machine, assembly, and high-order language programming; and application packages such as database management and word processing. PREREQUISITE: IS 2000.

IS 3000 Distributed Computer System (4-0).

This course covers the technology, application and management of distributed computer systems. Specific topics include distributed processing, distributed data base management, communication facilities and protocols, economic and performance analysis, and managerial and organizational problems. PREREQUISITES: CS 2810, CS 3010 or CS 3400, and IS 3170 (may be taken concurrently).

IS 3100 Survey of Contemporary Computer Systems (3-0).

Study and analysis of contemporary large, mini, and micro computer systems, including hardware, applications of software, operating systems, and price characteristics. Emphasis is on the study and comparison of specific vendor's systems which are available in the market and evaluation of their applicability to various military requirements. Trends in computer technology and pricing structures. PREREQUISITES: CS 2810, CS 3010 or CS 3400, CS 3030 or CS 3112, and IS 3170.

IS 3170 Economic Evaluation of Information Systems I (4-0).

Study of economic evaluation concepts and methods for planning, coordinating, and controlling computer-based information systems design, implementation, and analysis. Topics included are cost performance (value) analysis, capacity planning, capital budgeting techniques, capital budgeting systems, budgeting and pricing for computer services, information resource management, and a study of the information industries (computers, software, and telecommunications). PREREQUISITE: MN 2155.

IS 3171 Economic Evaluation of Information Systems II (4-0).

Continuation of material in IS 3170. PREREQUISITE: IS 3170.

IS 3183 Management Information Systems (4-0).

Study of what an information system is, how the computer and other resources fit into the system, and management considerations involved in computer-based and other information systems. Study of computer and MIS concepts. PREREQUISITES: MN 3105 and a basic computer course.

IS 3220 Computer Center Management (3-2).

Theory and practice of the management of computer center operations. Specific topics include facilities planning, production scheduling and control, operational procedures, and computer performance evaluation. PREREQUISITES: CS 3030 and OS 3004.

IS 3502 Computer Networks: Wide Area/Local Area (4-0).

Analysis, evaluation, management and development of wide area and local area computer networks and supporting packet switching computer communication systems. Specific topics include network architectures, protocols, functions, standards, error detection/correction, cost reduction, interconnection, management, and security. Example systems include Defense Data Network, System Network Architecture, DECNET, Ethernet, token ring, broadband, fiber optics, private automatic branch exchanges, and satellite communications systems. PREREQUISITES: CS 2810, CS 3010, and OS 3004.

IS 4182 Information Systems Management (4-0).

Management of ADP in the Federal government, especially in the Department of Defense. Specific topics include computer center and computer system development management, procurement of computer systems, and installation and effective utilization of ADP systems. PREREQUISITE: IS 4200 (concurrently).

IS 4183 Applications of Database Management Systems (4-0).

Applications-oriented introduction to database management systems technology. Survey of current database systems and approaches to database technology. Technical and administrative considerations involved in a database implementation project are considered. Students will be expected to implement an applications systems using a database management package. PREREQUISITES: CS 3010, CS 3020, and IS 2000.

IS 4185 Decision Support Systems (4-0).

The application and design of computer-based information systems for management planning, control, and operations. PREREQUISITES: IS 2000, MN 3105, and OS 3101.

IS 4200 System Analysis and Design(4-0).

This course covers computer-based system development, including the following concepts, methodologies, and techniques: information system requirements analysis, technical and economic feasibility studies, system costing, functional specifications, computer and data communication hardware and software trade-off evaluations and specifications, conversion, and testing. PREREQUISITES: CS 2810, CS 3010, and CS 3020 or CS 2810, CS 3111, and CS 3400.

IS 4300 Software Engineering and Management (4-0).
The objective of this course is to educate the student in areas of great concern to the Department of Defense in the fields of software engineering and management. This will be accomplished by studying the wealth of material available in the literature and applying what has been learned by using the computer to analyze typical software. Written and oral technical and management reports will be made to document the student's findings. PREREQUISITES: CS 3030, IS 3171, and OS 3004.

IS 4925 Seminar in Information Systems (I-0 to 4-0).
Study of a variety of topics of current interest in information systems, to be determined by the instructor. PREREQUISITES: A background of information systems and permission of the Instructor.

MANAGEMENT COURSES

MN 0001 Seminar for Administrative Science Students (0-2).
Guest lectures. Thesis and research presentations.

MN 0810 Thesis Research for Administrative Science Students (0-0).
Every student conducting thesis research will enroll in this course.

Upper Division Courses

MN 2031 Economic Decision Making (4-0).
The macroeconomic section focuses on methods of national income determination, the consumption function, the multiplier, and the impact of fiscal and monetary policies. The microeconomic section analyzes individual economic decisions and their relation to attainment of market equilibria. PREREQUISITE: MA 2300 (concurrently).

MN 2111 Seminar in Manpower, Personnel, and Training Issues I (0-2).
An introduction to the institutional and issue focus of the military MPT system. Graded on a Pass/Fail basis only.

MN 2112 Seminar in Manpower, Personnel, and Training Issues II (0-2).
Exposure to elementary analysis of problems and issues in the contemporary military MPT system. Graded on a Pass/Fail basis only.

MN 2113 Seminar in Manpower, Personnel and Training Issues III (0-2).
Presentation and discussion of contemporary issues and problems associated w ith components of the MPT arena. Graded on a Pass/Fail basis only.

MN 2114 Seminar in Manpower, Personnel, and Training Issues IV (0-2).
An in-depth series of analyses of MPT issues and problems selected to integrate the skills covered in courses in the fourth quarter of the MPTA curriculum and to provide suggestions for thesis topics. Graded on a Pass/Fail basis only.

MN 2150 Financial Accounting (4-0).
Study of basic accounting concepts and standards. Specific topics include the accounting cycle, asset valuation, equities and capital structure, earnings measurement, cash flow analysis, and financial statement analysis. (May be taken through Continuing Education.)

MN 2155 Accounting for Management (4-0).
Brief introduction to financial accounting, with emphasis on the content and analysis of financial statements. Specific topics in management accounting include fundamentals of cost accounting, cost-volume-profit analysis, budgeting, relevant costs for decision making, capital budgeting, and financial performance measures. (Closed to students in Administrative Science curricula.)

MN 2302 Seminar for Acquisition and Contracting Students (0-3).
Guest lectures. Thesis and research presentations. Certified Professional Contracts Management certificate examinations. Graded on a Pass/Fail basis only.

MN 2901 MPT Computer Skills Development (0-2).
An introduction to the use and operation of both the NPS mainframe computer system and microcomputers, with emphasis on the relationship to the requirements of the MPTA curriculum. Exposure to pertinent software packages and data files. Graded on a Pass/Fail basis only.

Upper Division or Graduate Courses

MN 3101 Personnel Management (4-0).
Study of the principles and practices of personnel administration in business and government organizations. A survey of the history, development, and current status of labor-management relations in industry and government. Analysis of the labor market and the implications of government regulations for wages and labor-management bargaining. PREREQUISITE: MN 3105.

MN 3105 Organization and Management (4-0).
Study of managing organizations in a dynamic environment. Emphasis is on managerial decision making, planning and control, organizational structure and planned organizational change, and their systemic impacts on organizational effectiveness and adaptation.

MN 3111 Personnel Management Processes (4-0).
A broad coverage of human behavior in the work situation, with special emphasis on the problem of work in the Naval environment. Topical areas covered include selection, placement, training, and evaluation of personnel; motivation, remuneration, morale, supervision, and working conditions in organizations; equipment design and man-machine relationships; and consumer (user) behavior and the impact of technological programs. PREREQUISITES: MN 3105 and OS 3106 (concurrently).

MN 3123 Military Sociology (4-0).
An exploration of classical theories of sociology pertaining to civilian-military relations with modern applications to command and control problems. Sexism, racism, family dissolution, unionization, bureaucratic inertia, career patterns, and professionalism are considered from the perspective of sociology. PREREQUISITE: MN 3105.

MN 3140 Microeconomic Theory (4-0).
Determination of the allocation of resources and the composition of output. Consumer and producer choice theory. Partial and general equilibrium analysis. Welfare economics. Applications to defense problems are emphasized. PREREQUISITES: MA 2300 and MN 2031.

MN 3161 Managerial Accounting (4-0).
Introduction to cost accounting, including job order systems, overhead costing, variable and absorption costing, and standard costs. Emphasis is on applications of accounting data to planning, control, and decision making. Topics covered include budgeting, flexible budgets, variance analysis, performance measures, cost-volume-profit analysis, cost analysis for decision making, and capital budgeting. PREREQUISITE: MN 2150 (May be taken through Continuing Education.)

MN 3172 Public Policy Processes (4-0).
A presentation of means by which resources are allocated to the production of goods in the defense sector. Defense budget preparation. Presidential policy making and management and Congressional budget action are considered and are set within the theory of public goods. PREREQUISITE: MN 3140.

MN 3301 Systems Acquisition and Project Management (4-0).
This course provides the student with an understanding of the underlying philosophies and concepts of the systems acquisition process and the practical application of project management methods within this process. Topics include the evolution and current state of systems acquisition management; the defense systems acquisition cycle; user-producer acquisition management disciplines and activities; and project planning, organization, staffing, directing, and controlling.

MN 3303 Principles of Acquisition and Contracting (4-0).
Introduction to the principles of acquisition and contracting. This course studies the fundamentals of the Federal Acquisition Regulation and the DOD Supplement; the acquisition and contracting processes, including requirements determination, acquisition strategies, basic contract law, ethics, and contracting methods; and acquisition/contract management techniques. PREREQUISITE: MN 3105.

MN 3304 Contract Pricing and Negotiations (4-0).
This course involves the study of pricing theory and strategies, cost methods, cost and price analysis, cost principles, Cost Accounting Standards, and contract negotiations. Students develop and sharpen negotiating skills by participating in practical negotiation exercises. PREREQUISITES: MN 3140, MN 3303, and OS 3105.

MN 3305 Contract Administration (4-0).
This course stresses the management skills and techniques necessary for the successful administration of government prime contracts and subcontracts. Topics include managing contract progress and performance, change control, quality control, cost/financial control, property, terminations, and regulatory and policy concerns. PREREQUISITE: MN 3304.

MN 3307 ADP Acquisition (4-0).
Introduction to the management principles, concepts, and issues involved in Federal government acquisition of ADP requirements. The course focuses on the concepts of system acquisition and project management, as they pertain to ADP acquisition and specific purchases of computer hardware and software, and on administrative issues through the use of case studies. PREREQUISITE: Enrollment in Computer Systems Management curriculum or permission of the Instructor.

MN 3308 Introduction to Systems Engineering (4-0).
This course provides the student with an introduction to system design and development; the underlying philosophy, concepts, and methodology of systems engineering; and its applications in the Department of Defense and in the Navy. Topics covered include an overview of systems engineering, the system life cycle and system design process, decision analysis, and the systems engineering disciplines. Emphasis is placed on the planning and design phases of the system life cycle. PREREQUISITE: A course in statistics.

MN 3311 Acquisition Management Simulation (0-4).
This course is a system life cycle, computer-based simulation, interactive laboratory exercise in which students, in teams, plan, organize, and manage the development and production of a missile system. Trade-offs among performance, reliability, cost, and schedule; evaluation of technical proposals; contract and incentive negotiations; and DSARC reviews are included. PREREQUISITE: MN 3301 or MN 3307 (may be taken concurrently). Graded on a Pass/Fail basis only.

MN 3333 Managerial Communication Skills (4-0).
Study of communicating as an integral function of management. A competency-oriented course designed to enable students to develop proficiency in those aspects of speaking, listening, writing, and reading that are particularly relevant to management. Considers various facets of human communication in 2-person, small group, audience-sized, and organization-wide situations. Topics include subordinate-superior interactions, conducting meetings, making presentations, writing point papers, resolving conflicts, and telecommunicating. PREREQUISITE: Enrollment in an Administrative Science curriculum or permission of the Instructor.

MN 3371 Contracts Managements and Administration (4-0).
Study of the characteristics and phases of the contracting process. Coverage includes planning, execution, and control of the contracting process; techniques used in purchasing goods and services of varying complexities; and the relationship of contracting to the acquisition process.

MN 3372 Material Logistics (4-0).
An overview of the elements of business logistics, including purchasing, inventory management, warehousing, materials handling, transportation and traffic management, facilities location, and the structure of the logistics function within an organization. PREREQUISITE: OS 3105.

MN 3373 Transportation Management I (4-0).
Analysis of transportation systems from a managerial perspective. Topics include carriers and users of systems; alternative modes; intra and intermodal competitive relationships; regulatory and legal considerations; demand, cost, and pricing analysis; and managerial resource allocation problems. Application of these topics to the U.S. domestic freight transportation network. PREREQUISITE: MN 3140 (may be taken concurrently).

MN 3374 Production Management (4-0).
This course examines the production process. Emphasis is distributed among the technical, managerial, and defense aspects of production. Topic coverage ranges from production planning through production control. PREREQUISITES: MN 3105 and OS 3106.

MN 3375 Material Handling Systems (4-0).
A study of the principles and systems concepts of materials handling and their application in the design of a materials handling system. An overview of current DOD automated materials handling systems is also provided.

MN 3377 Inventory Management (4-0).
The inventory management process of the Naval Supply Systems Command, with emphasis on the procedures for determining when and how much of a given item to order. Provisioning, wholesale and retail replenishment, and the supply budgetary process. Required for all Supply Corps officers in Administrative Science curricula, except Systems Inventory Management. PREREQUISITE: OS 3105.

MN 3650 Health Economics (4-0).
An overview and analysis of the underlying elements of the continuing problems in the military and civilian health care delivery systems. Elements covered are organizational structure and change in the mode of health care delivery; supply, demand, output, and quality measurement of health services; the impact of health care legislation; and the relationship of the military and civilian sectors. PREREQUISITE: A course in microeconomics.

MN 3760 Manpower Economics I (4-0).
An introduction to the theoretical aspects of labor economics. Concepts covered include the supply of labor, the demand for labor, market wage determination, internal labor market, human capital formation, migration and mobility, compensating wage differentials, earnings equation, pay and employment discrimination, and unemployment and inflation. PREREQUISITIE: MN 3140.

MN 3801 Technology Transfer (4-0).
The study of dissemination and utilization of technology and associated problems, with emphasis on communications, sociology, and organizational factors. PREREQUISITE: MN 3105 or graduate standing in a technical curriculum and persmission of the Instructor.

MN 3900 Readings in Administrative Science (1-0 to 4-0).
An individualized program of readings and study in some area of the administrative sciences, designed to meet the student's special educational needs. PREREQUISITES: A background in the area of study and departmental approval. Graded on a Pass/Fail basis only.

MN 3902 MPT Computer Skills Enhancement (0-2).
Extension and application of the basic skills covered in MN 2901, with particular reference to applications in current course work. PREREQUISITE: MN 2901. Graded on Pass/Fail basis only.

MN 3903 MPT Computer Applications (0-2).
Empirical analysis of MPT issues and concepts covered in MN 3760 and MN 2113, taken concurrently. PREREQUISITE: MN 3902. Graded on a Pass/Fail basis only.

Graduate Courses

MN 4105 Management Policy (4-0).
Study and analysis of complex managerial situations requiring comprehensive integrated decision making. Topics include operational and strategic planning, policy formulation, executive control, environmental adaptation, and management of change. Case studies in both the public and private sectors are used. PREREQUISITE: Open only to students in the final quarter of an Administrative Science curriculum, Computer Systems Management, or Telecommunications Systems Management.

MN 4106 Manpower/Personnel Policy Analysis (4-0).
Study and analysis of manpower/personnel policy alternatives with emphasis on identifying the trade-offs involved, the dynamic impact of major policy decisions, and the short-term and long-term consequences of decisions. Review, use, and evaluation of tools to aid in selecting policy alternatives. Study of representative cases. PREREQUISITE: Open only to students in the final quarter of the Manpower, Personnel and Training Analysis curriculum.

MN 4110 Multivariate Manpower Data Analysis (4-2).
Study of multivariate statistical methods for analyzing manpower problems. Emphasis is on use and interpretation of multiple regression and related techniques as applied to large personnel data sets. Skills in the use of computer packages such as SPSS and SAS are developed. PREREQUISITE: OS 3106.

MN 4117 Job Analysis and Personnel Training (4-0).
Study of job analysis and its use in determining training requirements. Consideration of instructional systems development and training pipeline management. Attention to cost-benefit issues involving training in regard to selection, equipment design, changing job requirements, and career development. PREREQUISITE: MN 3111.

MN 4119 Seminar in Manpower Analysis (1-0 to 4-0).
Study of a variety of topics of current interest in manpower analysis, to be determined by the instructor. PREREQUISITES: A background in manpower analysis and permission of the Instructor.

MN 4121 Organization Theory (4-0).
Study of the major theories of modern organizations. This course emphasizes the analysis of organizational phenomena from multiple perspectives, using theories of individual, group, and organizational behavior. Topics include organization design and culture, political analysis of organizations, management of change, open systems theory, and contingency theories. PREREQUISITE: MN 3105.

MN 4122 Planning and Control: Measurement and Evaluation (4-0).
Theory and techniques of the managerial functions of planning and control. Emphasis is placed on the effects of the planning and control structure on the behavior of human components of the system. Topics include the problems associated with the utilization of surrogates for measurement purposes; the analysis of the influence of assumptions, values, and objectives on the planning and control process; budgeting and forecasting; and performance evaluation and the reward structure. PREREQUISITES: MN 3105 and MN 3161.

MN 4125 Managing Planned Change in Complex Organizations (4-0).
Examination of the approaches to planning and managing change efforts in complex social systems made up of the interdependent components of technology, structure, task, and people and of the role of the manager or staff specialist and the process of helping. Emphasis is placed on strategies and technologies for diagnosis and planning aimed at effective implementation. Opportunities for practice using both simulations and actual organizational cases. Focuses on problems involved in effective implementation of technologically, structurally, or human resource based planned change efforts. PREREQUISITE: MN 3105.

MN 4126 Seminar in the Behaviorial Sciences (1-0 to 4-0).
Study of a variety of topics of current interest in the behavioral sciences, to be determined by the instructor. PREREQUISITES: A background in the behavioral sciences and permission of the Instructor.

MN 4127 Seminar in Organization Behavior (1-0 to 4-0).
Study of a variety of topics of current interest in organization behavior, to be determined by the instructor. PREREQUISITES: A background in organization behavior and permission of the instructor.

MN 4145 Policy Analysis (4-0).
The application of economic methods to nonmarket transactions. Analysis of large scale defense resource allocation problems. Weapon system definition. Life cycle cost models. Examples of cost-benefit and cost-effectiveness analyses. PREREQUISITES: MN 3140, MN 3161, and OS 3106.

MN 4151 Internal Control and Financial Auditing (4-0).
Study of the objectives and techniques of internal control systems and of audits of financial reports and records. Specific topics include the independent audit function in America, audit evidence, audit evidence, audit procedures, the auditor's decision process, statistical sampling, and special controls and audit problems in computer-based systems. Audits of several transaction cycles are examined. PREREQUISITES: MN 3161, OS 3106, and a basic computer course.

MN 4152 Corporate Financial Management (4-0).
The management of the finance function in industry, with particular attention to defense contractors. Specific topics include cash and working capital management, long-term financing, and determination of optimal capital structure. PREREQUISITE: MN 3161.

MN 4153 Seminar in Financial Management (1-0 to 4-0).
Study of a variety of topics of current interest in financial management, to be determined by the instructor. PREREQUISITES: A background in financial management and permission of the Instructor.

MN 4154 Financial Management in the Armed Forces (4-0).
Review of financial management concepts and practices in DOD and the Armed Forces, with emphasis on the Department of the Navy. Includes study of PPBS, controllership, budget formulation and execution, headquarters and field activity accounting systems, and various types of funds. PREREQUISITES: MN 2155 or MN 3161 and MN 3172.

MN 4155 Operational Auditing (4-0).
This course examines auditing as a tool of management control in large, complex organizations. Case studies are used to discuss the scope of the audit, audit procedures, audit findings and recommendations, auditor training and professionalism, and the roles and responsibilities of auditee-managers, users of audit reports, and auditors. The General Accounting Office's audit and internal control standards are also examined, as well as directives of the Office of Management and Budget, Department of Defense, and Department of the Navy. During the last few weeks, students do field research on an operational audit for a local organization. PREREQUISITE: MN 3161. This course should be taken during one of the last three quarters of the student's program.

MN 4159 Financial Reporting and Analysis (4-0).
Advanced study of basic accounting concepts underlying published financial reports. Emphasis is placed on the measurement, communication, and evaluation processes. Topics include setting accounting policies, alternative bases of valuation, alternative concepts of earnings, and discussion of controversial accounting issues. The course takes the perspective of managers and users of financial information. PREREQUISITE: MN 3161.

MN 4161 Financial Management Control Systems (4-0).
Study of the structure and the processes of management control in government organizations. Specific topics include the basic concepts of planning and control, organization of the management control function, measurement of inputs and outputs, pricing government services, programming, budgeting, accounting, and performance evaluation. PREREQUISITES: MN 3105 and MN 2155 or MN 3161.

MN 4162 Cost Accounting (4-0).
Review of basic cost accounting procedures. In-depth study of cost accounting systems, allocation of direct and indirect costs to cost objectives, and special problems of accounting for materials, labor, and overhead costs. Specific attention is given to the objectives and the substance of Cost Accounting Standards for negotiated defense procurement contracts. PREREQUISITE: MN 3161.

MN 4163 Analytical Techniques for Financial Control and Planning (4-0).
Study of quantitative methods most useful for financial planning and control. Emphasis is on developing quantitative methods as decision support tools, with available computer software as computational aids. Covered are introductions to the relevant quantitative techniques, the conditions for successful applications, data needed for applications, and the use of computational aids for problem solving. The goal is to provide sufficient competency for students to apply sophisticated analytical techniques to various planning and control environments in the public sector. PREREQUISITES: MN 3161 and OS 3106.

MN 4301 Contracting for Major Systems (4-0).
Study of the major systems contracting process, procedures, and practices. This course focuses on the contracting process of the Navy Systems Commands and the Major Weapons Acquisition Process as described in SECNAVINST 5000.1. Major topics include contracting organization for systems acquisition, systems acquisition process, business clearance process, source selection, multi-year procurement, IMIP, and administration of major contracts. Related topics include funding, reliability/maintainability, ILS, foreign military sales, and initial provisioning/spare parts support. PREREQUISITE: MN 3305 or permission of the Instructor.

MN 4302 Public Expenditure Policy and Analysis (4-0).
The process of government decision making, particularly as reflected in the defense budgeting process. Models of budget decision making, including decentralization. Application of social choice concepts. Illustrations from the defense budgeting process. PREREQUISITE: MN 4145.

MN 4310 Logistics Engineering (4-0).
The concept of integrated logistics support and its development. The maintenance concept, functional analysis, life cycle costs, logistics support analysis, human factors in design, provisioning and resupply of repair and spare parts, test and evaluation, and production. PREREQUISITE: OS 3006 (concurrently).

MN 4371 Acquisition and Contracting Policy (4-0).
A seminar using case studies to appraise government and business acquisition/contracting policies. Emphasis is on acquisition/contracting decision making and policy formulation. PREREQUISITES: MN 4301 or MN 3301 and MN 3371 and permission of the instructor.

MN 4372 Seminar in Acquisition and Contract Management (1-0 to 4-0).
Study of a variet of topics of current interest in acquisition and contracting, to be determined by the instructor. PREREQUISITES: A background in acquisition and permission of the Instructor.

MN 4373 Transportation Management II (4-0).
A continuation of MN 3373. Concentration on the management of large-scale transportation networks, emphasizing international transportation and the role of the U.S. merchant marine. Also covered are the DOD transportation agencies and current research in transportation. PREREQUISITE: MN 3373.

MN 4376 Seminar in Material Logistics (4-0).
Study of a variety of topics of current interest in logistics, to be determined by the instructor. PREREQUISITES: A background in logistics and permission of the Instructor.

MN 4500 Productivity Analysis (4-0).
Study of the theoretical and institutional foundations of the analysis of productivity measurement and enhancement programs in DOD. Emphasis is placed on methods of applying microeconomic and organizational effectiveness principles and concepts to the critical analysis of proposed and existing DOD productivity programs, as well as to the development of alternatives which have higher probabilities of effecting the desired increases in program effectiveness and efficiency. PREREQUISITES: MN 3105 and MN 3140.

MN 4650 The Military Health Care Delivery System and Analysis (4-0).
This course is designed to acquaint the student with the structure and operation of the Department of Defense's system for providing health care to those eligible under current regulations; to identify current problem areas; and, through application of systems analysis and management techniques, to address the possible solutions to these problems in a course project. PREREQUISITE: MN 3650.

MN 4651 Hospital Economics and Systems Analysis (4-0).
This course deals analytically and empirically with the major organizational and economic structures and problems associated with the operation of a health care delivery facility or group of facilities (hospital or integrated group of clinics). The roles of institutional incentives, methods of reimbursement, provider organization and payment, and exogenous factors such as general inflation and legislative parameters are discussed. The objective is a working knowledge of these major elements in the health care production process and probble systemic change. PREREQUISITE: MN 3650.

MN 4652 Micro Health Systems Analysis (4-0).
The purpose of this course is to analyze in depth, using analyses of extant institutional constructs, the potential for deriving policy recommendations and designing research to motivate more efficient provision of health care by individual facilities. The emphasis is on identifying gaps in incentives and organizational structures which lead to suboptimal facility behavior in the cost containment and quality areas. PREREQUISITES: MN 4650 and MN 4651.

MN 4761 Manpower Economics II (4-0).
A continuation and application of theoretical development in MN 3760. Recent applications of economic analysis to manpower, personnel, and training problems are studied. Typical topics include accession, supply models, turnover and retention models, alternative retirement systems, civilian earnings effects on military employment, alternative compensation systems, career mix, and billet cost estimation. PREREQUISITE: MN 3760.

MN 4900 Readings in Administrative Science (1-0 to 4-0).
An individualized program of advanced readings and study in some area of administrative science. PREREQUISITES: A background of advanced work in the area of study and departmental approval. Graded on a Pass/Fail basis only.

MN 4904 Advanced MPT Computer Applications (0-2).
Applications of computer skills to problems and issues developed in MN 2114, MN 4110, and MN 4761 (taken concurrently). PREREQUISITE: MN 3903. Graded on a Pass/Fair basis only.

MN 4942 The Structure, Conduct and Performance of the Defense Industries (4-0).
A study of selected defense industries' structures (e.g., seller concentration, product differentiation, barriers to entry, demand for products, and buyer concentration), conduct (e.g., pricing policy, product characteristics policy, and policies toward rivals and customers), and performance (e.g., efficiency, progress, and employment). The government as consumer and regulator. Typical industries studied are aerospace, computers, shipbuilding, and telecommunications. PREREQUISITE: MN 3140 or equivalent.

MN 4945 Seminar in Economics (1-0 to 4-0).

Study of a variety of topics of current interest in economics, to be determined by the instructor. PREREQUISITES: A background in economics and permission of the Instructor.

MN 4970 Seminar in Administrative Science (1-0 to 4-0).

Study of a variety of topics of general interest in the administrative sciences, to be determined by the instructor. PREREQUISITES: A background in administrative sciences and permission of the Instructor.

DEPARTMENT OF AERONAUTICS

Chairman:

Max F. Platzer, Professor,
Code 67, Halligan Hall, Room 135,
(408) 646-2311, AV 878-2311.

Associate Chairman:

Donald M. Layton, Professor,
Code 67Ln, Halligan Hall, Room 253,
(408) 646-2997, AV 878-2997.

The Department of Aeronautics provides advanced professional knowledge in the field of Aeronautical Engineering in order to provide Navy technical managers with a broad base education. Basic and advanced graduate courses are offered in fluid mechanics, structures, guidance and control, flight mechanics and propulsion for rotary and fixed-wing aircraft and missiles.

After a preparatory phase and a graduate core series of courses, students specialize in the advanced graduate phase in either aeronautical Engineering (Curriculum 610) or Aero-Electronic Engineering (Curriculum 611). The Degree of Master of Science in Aeronautical Engineering is offered in both Curricula. Selected students may be eligible to pursue the degree of Aeronautical Engineer or Doctor of Philosophy.

The Department of Aeronautics received a renewal of its full six (6) year accreditation from the Accreditation Board for Engineering and Technology in 1984.

ENTRANCE REQUIREMENTS FOR STUDY OF AERONAUTICAL ENGINEERING

The entrance requirement for study in the Department of Aeronautics generally is a baccalaureate in engineering earned with above average academic performance. This requirement can sometimes be waived for students who have shown distinctly superior ability in backgrounds other than engineering but who have had adequate coverage in the basic physical and mathematical sciences. All entrants must obtain the approval of the Chairman, Department of Aeronautics.

Students who have not majored in Aeronautics, or who have experienced a significant lapse in continuity with previous academic work, initially will take preparatory courses in aeronautical engineering and mathematics at the upper division level, extending through the first three academic quarters and constituting a portion of the course-work for degrees in Aeronautics. Final approval of programs leading to degrees in Aeronautical Engineering must be obtained from the Chairman, Department of Aeronautics.

MASTER OF SCIENCE IN AERONAUTICAL ENGINEERING

Upon completing the preparatory courses, students may be selected on the basis of academic performance for the degree program leading to the Master of Science in Aeronautical Engineering. However, students who have recently earned a degree with major in Aeronautics may apply for admission directly to the graduate program.

The Master of Science degree requires a minimum of 36 credit hours of graduate courses, of which at least 12 credit hours shall be at the 4000 level. It also requires that not less than 32 credit hours shall be in the disciplines of engineering, physical science or mathematics, and that this shall include a minimum of 20 hours of courses in the Department of Aeronautics and a minimum of 8 hours in other departments.

An acceptable thesis is required for the degree unless waived by the Chairman, Department of Aeronautics, in which case 10 quarter hours of 4000 level courses in the disciplines of engineering, physical science, or mathematics will be required in addition to those specified above, increasing the total requirement to 46 quarter hours of graduate level credits.

AERONAUTICAL ENGINEER

Upon completing the equivalent of two quarters of a graduate program, students may be selected on the basis of academic performance for the program leading to the degree Aeronautical Engineer. Selection to this degree program shall be limited to those students who, in the opinion of the faculty, have the potential to conduct the required research. The degree Aeronautical Engineer requires a minimum of 72 credit hours of graduate courses, of which at least 40 credit hours shall be at the 4000 level. It also requires that not less than 64 credit hours shall be in the disciplines of engineering, physical science, or mathematics, and that this shall include a minimum of 36 hours of courses in the Department of Aeronautics and a minimum of 12 hours in other departments. An acceptable thesis is required for the degree.

Students admitted to work for the degree Aeronautical Engineer may be satisfying requirements for the Master of Science degree concurrently. The Master of Science in Aeronautical Engineering may be conferred at the time of completion of the requirements for that degree.

DOCTOR OF PHILOSOPHY AND DOCTOR OF ENGINEERING

The Department of Aeronautics offers programs leading to the doctorate in the fields of gasdynamics, flight structures, flight dynamics, propulsion, aerospace physics, and aerospace vehicle design.

Entrance into the doctoral program may be requested by officers currently enrolled who have sufficiently high standing. A departmental screening examination will be administered to those so requesting. The Department of Aeronautics also accepts officer students selected in the Navy-wide Doctoral Study Program, and civilian students selected from employees of the United States Federal Government.

All applicants who are not already enrolled as students in the Department of Aeronautics shall submit transcripts of their previous academic and professional records and letters of recommendation to the Department Chairman. The Chairman, with the advice of other department members, shall decide whether to admit the applicant to the Doctoral Program.

Every applicant who is accepted for the Doctoral Program will initially be enrolled in the AeE Program under a special option which satisfies the broad departmental requirements for the Engineer's degree and which includes research work. As soon as feasible, the student must find a faculty advisor to supervise his research and help him initially in the formulation of his plans for advanced study. As early as practicable thereafter, a doctoral committee shall be appointed to oversee that student's individual doctoral program as provided in the school-wide requirements for the Doctor's degree.

A noteworthy feature of the program leading to the Doctor of Engineering degree is that the student's research may be conducted away from the Naval Postgraduate School in a cooperating laboratory or other installation of the federal government. The degree requirements are outlined in general school requirements for the Doctor's degree.

In the event that a student is unable finally to satisfy the above requirements for the doctorate for any reason but has in the course of his doctoral studies actually completed all of the requirements for the degree of Aeronautical Engineer, he shall be awarded the latter degree.

AERONAUTICAL LABORATORIES

Eight major laboratory divisions support instructional and research programs in subsonic aerodynamics, gas dynamics, rocket and ramjet propulsion, turbomachinery, computer-aided engineering, flight mechanics, structures and composite materials.

The subsonic aerodynamics laboratory consists of two low-speed wind tunnels and a large continuous flow visualization tunnel. Standard wind tunnel techniques are used in the 32 x 45 inch and 42 x 60 inch tunnels and helium bubble filaments are used in the 5 x 5 x 12 foot test section of the three-dimensional flow visualization tunnel.

The gas dynamics laboratory includes a 4 x 4 inch blowdown supersonic wind tunnel, a cold driven, three-inch double-diaphragm shock tube, a 2 x 2 x 18 foot open-circuit oscillating flow wind tunnel and a vertically mounted, supersonic free-jet. Laser interferometers, schlieren systems, hot wire anemometry and laser-doppler anemometers are used for flow visualizations. Ruby, He-Ne, Argon and CO lasers are available. Extensive use is made of laser holography. An electrohydrodynamic research facility permits studies of electric power generation, turbulence and fuel sprays into gas turbine combustors.

The combustion laboratory consists of an instrumented control room, a propellant evaluation laboratory, a high pressure air facility and three test cells equipped with diagnostic apparatus and motor hardware for investigating solid, liquid, gaseous and hybrid rocket, solid fuel ramjet and gas turbine combustion. Vitiated air heaters are used to generate temperatures to 1300 °R. Several CW and one pulsed laser with holocamera, high speed motion picture cameras, light scattering and transmission measurement systems, schlieren systems, sampling probes and a dark room equipped for holographic reconstruction and data retrieval are utilized.

The Turbo-Propulsion Laboratory (TPL) houses a unique collection of experimental facilities for research and development related to compressors, turbines and advanced air-breathing propulsion engine concepts. In a complex of specially designed concrete structures, one building, powered by a 750 HP compressor, contains 10 x 60 inch rectilinear and 4 x 8 foot diameter radial cascade wind tunnels and a large 3-stage axial research compressor for low speed studies. A second building, powered by a 1250 HP compressed air plant, contains fully instrumented transonic turbine and compressor rigs in explosion proof test cells. A spinpit for structural testing of rotors to 50,000 RPM and 1800 °F is provided. Model experiments and equipment for instrumentation development are located in separate laboratory. Data acquisition from 400 channels of steady state and 16 channels of non-steady state measurements at up to 100kHZ is controlled by the laboratory's HP 100 series computer system. On-line reduction and presentation of data with time sharing terminals are available to multiple users. Terminals for HP 9845 and the central

IBM 307-3033 computers are available for data analysis or flow computation.

The Computer Aided Design — Computer Aided Engineering (CAD/CAE) laboratory is a joint Department of Mechanical Engineering — Department of Aeronautics project. This laboratory, which is now under development, will have twelve 32-bit networked CAD/CAE workstations, twenty-four microcomputer systems and two computer-controlled data acquisition systems.

The flight mechanics laboratory, also under development, will consist of a fixed-base, six-degree-of-freedom flight simulator for ground based studies. A remotely controlled helicopter model is used in rotary-wing studies.

The structural test laboratory contains testing machines for static and dynamic tests of materials and structures and an electrohydraulic closed-loop machine for fatigue testing. Aircraft components as large as an actual aircraft wing are accommodated on a special loading floor where static and vibration tests are conducted. The dynamics section of this laboratory contains shaker tables, analog computers and associated instrumentation. An adjacent strain gage and photoelastic facility provides support to test programs and instruction in structural testing techniques.

The Mechanics of Materials for Composites laboratory is equipped with fabrication and testing facilities for characterizing the mechanical behavior of fiber-reinforced composites. The fabrication facilities include an oven and press with provisions for computer control of temperature and pressure profile for fabrication of laminates and strands. The testing facilities include five mechanically driven universal testing machines for general testing and for life testing. These testing facilities are supported by a wide array of modern data acquisition instruments including computer controlled data loggers, digital voltmeters, acoustic emission analyzer and laser diffraction instruments. Personal computers and a VAX-725 provide ample capacity for analytical interpretation of data and for model formulation.

Through a Memorandum of Understanding with the National Aeronautics and Space Administration (NASA), the Joint NASA Ames Research Center — NPS Department of Aeronautics Institute permits selected students

from the Department of Aeronautics to conduct their thesis research in the NASA laboratories.

SPACE SYSTEMS LABORATORIES

Laboratories which support the Space Systems Programs are located in several departments including Physics, Oceanography and Electrical and Computer Engineering. Refer to the appropriate part of the catalog for descriptions. Aeronautics has developed a Solar Simulator laboratory which features a 2500W source. Experiments are computer controlled using IBM/PC with ISAAC 2000 controller. Solar cells can be tested for radiation damage using the LINAC or Pulserod sources which are located in Physics. The Laser Damage Facility is a Joint Physics/ Aeronautics laboratory developed to support instruction and research related to such topics as satellite vulnerability. The Laser Damage Facility features a pulsed CO electrical laser with sufficient irradiance to generate laser supported detonation waves. An optics laboratory is also available which utilizes lasers for such space functions as remote sensing in addition to precision optical measurements.

DEPARTMENTAL COURSE OFFERINGS

AERONAUTICS

AE 0010 Aeronautical Engineering Seminar (0-1).
Oral presentations of material not covered in formal courses. Topics cover a wide spectrum of subjects ranging from reports of current research to survey treatments of fields of scientific and engineering interest.

AE 0020 Aeronautical Engineering Program Planning (0-1).
Oral presentations by the Aeronautics Academic Associate and faculty members involved in research with Aeronautical students on program planning, thesis requirements and research specialty areas.

AE 0810 Thesis Research (0-0).
Every student conducting thesis research will enroll in this course.

Upper Division Courses

Some preparatory courses in Aeronautics are available through the Continuing Education Division. These one-credit hour mini-courses have been prepared in a self-instructional mode (PSI) and complete descriptions for each mini-course may be found in the Continuing Education catalog. The mini-courses are equivalent to, and may be substituted for, the on-campus courses as follows:

Campus	Equivalent mini-course sequence
AE 2021	AE 2101 through 2106
AE 2042	AE 2401 through 2404

AE 2015 Engineering Dynamics (3-2).
Fundamental physical concepts; dynamics of particles and of systems of particles; concepts of work-energy and impulse-momentum; rigid-body dynamics in two dimensions. PREREQUISITE: MA 2121.

AE 2021 Introduction to Flight Structures (4-1).
Introduction to concepts of stress and strain, and mechanical behavior of materials. Bending and torsional stress and deflection analysis of representative aero-structural components, including statically indeterminate cases. Introduction to stability analysis, and energy methods. (May be taken through Continuing Education as mini-courses AE 2101-06.)

AE 2035 Basic Aerodynamics (3-2).
Continuity/Momentum equations; dimensional analysis; elements of two dimensional ideal flow; thin-airfoil, finite wing theory. PREREQUISITE: AE 2042.

AE 2036 Performance and Stability (3-2).
Model atmosphere; defined airspeeds; aircraft performance including climb, range, endurance and energy management; principles of longitudinal, lateral and directional static stability and control of aircraft. PREREQUISITE: AE 2035.

AE 2042 Fundamentals of Thermo-Fluid Dynamics (3-2).
Properties of fluids. Principles of continuity, momentum, and energy for incompressible and compressible fluids; control volume formulations. Second law of thermodynamics, entropy and irreversibilities; equations of state, properties of pure substances; power cycles. Viscous flows, boundary layer concepts. (May be taken through Continuing Education as mini-courses AE 2401-2404.)

AE 2043 Fundamentals of Gas Dynamics (3-2).
Concepts of compressible flows, adiabatic/ isentropic flow; normal shocks, moving and oblique shocks, Prandtl-Meyer flow; Fanno and Rayleigh flow; introduction to reaction propulsion systems. PREREQUISITE: AE 2042.

AE 2801 Aero-Laboratories (3-2).
An introduction to modern experimental techniques and instrumentation. Lectures and demonstrations in the use of sensing devices and data acquisition systems, data reduction and analysis, report writing. Selected experiments in all aeronautical laboratories. PREREQUISITES: AE 2021, 2035, 2043, and 2015 (concurrent) or equivalent.

Upper Division or Graduate Courses

AE3001 Space Systems Laboratory (0-2).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 3005 Survey of Aircraft & Missile Technology (4-0).
(For Non-Aeronautical Engineering Students) A survey of aeronautical engineering concepts as applied to airplanes and missiles, starting with explanations of the basic principles of aerodynamics, performance, propulsion, etc., and extending to examples of these principles in present-day hardware.

AE 3101 Flight Vehicle Structural Analysis (3-2).
Graduate core course in structures covering basic definitions and field equations for solid bodies, two-dimensional stress analysis, thin skin and thick skin wing bending analysis, fracture and fatigue theory. PREREQUISITE: AE 2021 or equivalent.

AE 3201 System Safety Management and Engineering (3-2).
An introduction to System Safety, with emphasis on the requirements imposed by MILSTD-882A. Fundamental mathematical concepts (probabilities, distribution theory, Boolean algebra); safety analysis techniques (hazard analysis, fault-tree analysis, sneak circuit analysis); safety criteria, tasks, data, and documentation; lifecycle considerations.

AE 3251 Aircraft Combat Survivability (4-1)).
This course brings together all of the essential ingredients in a study of the survivability of fixed wing, rotary wing and missile aircraft in a hostile (non-nuclear) environment. The technology for increasing survivability and the methodology for assessing the probability of survival in a AAA/SAM/Laser environment are presented in some detail. Topics to be covered include: current and future threat descriptions; the mission/threat analysis; combat data analysis of SEA and Mid-East losses; vulnerability reduction techniques and technology for the major aircraft systems; susceptibility reduction concepts and equipment for reducing the probability of detection and avoidance of the threat; and vulnerability, susceptibility and survivability assessment and trade-off methodology. In-depth studies of the survivability of several fixed wing and rotary wing aircraft will be presented. PREREQUISITE: U.S. Citizenship and SECRET clearance.

AE 3304 Rotary Wing Aircraft Technology (3-2).
(For Non-Aeronautical Engineering Students) A course designed to familiarize the student with the major aerodynamic, propulsion, structural, and stability and control aspects of rotary wing aircraft, past and current helicopter developments, technology status and problems. PREREQUISITE: Consent of Instructor.

AE 3305 V/STOL Aircraft Technology (4-0).
(For Non-Aeronautical Engineering students) Basic aerodynamic and propulsion principles and phenomena, past and current vertical take-off and landing aircraft developments, current technology status and problems. U.S. Navy V/STOL aircraft requirements and acquisition programs. Russian V/STOL aircraft and assessment of USSR-V/STOL aircraft technology and trends, impact of V/STOL aircraft technology on naval systems acquisition and operations. PREREQUISITE: Consent of Instructor.

AE 3340 Linear Vibration and Dynamic Stability (3-2).
Single and multiple degree of freedom systems; damped/undamped; free/forced response. Continuous systems. Stability derivatives: aircraft equations of motion; uncoupled and cross-coupled modal solutions. PREREQUISITES: AE 2015 and 2036.

AE 3341 Control of Aerospace Vehicles (3-2).
Elements of classical control analysis as applied to aircraft and missiles; Bode, Nyquist, Root Locus methods; compensators, autopilot design, stability augmentation systems. State-variable methods, state-variable feedback, controllability, observability, and introduction to discrete systems. PREREQUISITES: EE 2402, and AE 3340.

AE 3451 Aircraft and Missile Propulsion (3-2).
Description, design criteria, analysis and performance of ramjets, turboprops, turbojets, and turbofans. Analysis of components: inlets, compressors, combustors, turbines and nozzles. Current state-of-the-art and impact of trends in propulsion technology. PREREQUISITE: AE 2043.

AE 3501 Current Aerodynamic Analysis (3-2).
Introduction to current aerodynamic analysis methods for subsonic and supersonic flight vehicles. Developments proceed from the three-dimensional Navier-Stokes equations to various approximation methods, such as linearized, inviscid, subsonic and supersonic panel methods for wing-body combinations; discussion of sweep-back effect and area rule; laminar and turbulent boundary layer analysis; use of state-of-the-art computer programs. PREREQUISITES: AE 2043 and AE 2035.

AE 3701 Missile Aerodynamics (4-1).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE3705 Air Defense Lethality (4-1).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 3711 Missile Flight Analysis (4-0).
(See Weapons Engineering and Space Science Course listing at the end of this list.)

AE 3795 Introduction to Space Warfare (4-0).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 3802 Advanced Aeronautical Measurement Techniques and Test Facilities (2-3).
This course is intended to introduce the student to aeronautical measuring techniques and test facilities used by NASA and the aerospace industry during the research, development, and testing phase (RDT&E) of aircraft and missile systems. Applications of laser-doppler velocimetry, hot wire instrumentation, flow visualization methods and modern data acquisition systems will be demonstrated. Field trips to NASA Ames Research Center will be arranged to show how the advanced techniques and facilities are applied to solve real-world problems in aeronautics.

AE 3900 Special Topics in Aeronautics
(Variable credit up to five hours.)
Directed graduate study or laboratory research. Course may be repeated for additional credit if topic changes. PREREQUISITE: Consent of Department Chairman.

Graduate Courses

AE 4102 Advanced Aircraft/Missile Structural Analysis (3-2).
The finite element method of structural analysis will be studied and applied to aircraft and missile structures. Capabilities of the current finite element computer programs will be discussed. An introduction to the theory of structural dynamics and stability will also be presented. PREREQUISITE: AE 3101.

AE 4103 Advanced Aircraft Construction (3-2).
A course covering the manufacturing techniques and analysis of composite materials and sandwich construction. Theories of failure, damage and repair. Advanced design concepts. PREREQUISITE: AE 3101.

AE 4202 Reliability in Structures and Materials (3-0).
A course providing the background and specifics associated with the design, certification and maintenance of structures in critical applications. The background includes an introduction to probability, reliability in design, and statistical modeling. The specifics include reliability, testing and statistical modeling of structures with applications to materials development, life durability characterization, proof-test, and maintenance of advanced composite materials. PREREQUISITE: Graduate Standing in an Engineering/Science Curriculum.

AE 4273 Aircraft Design (3-2).
A course in conceptual design methodology which centers around an individual student design project. It draws upon all of the aeronautics disciplines and provides the student with experience in their application to design. PREREQUISITE: Completion of the Aero Graduate Core.

AE 4304 Helicopter Performance (3-2).
The performance characteristics of rotary wing aircraft. Blade motion, momentum theory, blade element theory, tip loss factor, ground effect, hover, vertical flight, forward flight, climbing flight, autorotation, tail rotors, range and endurance, and multiple rotors. Numerical problems in helicopter performance. PREREQUISITE: Aero Preparatory Phase or equivalent.

AE 4305 V/STOL Aircraft Technology (3-2).
Types of V/STOL aircraft, fundamental principles, main performance characteristics, and propulsion requirements, STOL technology: mechanical high-lift devices, powered-lift devices, jet flaps, augmentor wings; VTOL technology: flow vectoring devices, lift engine and lift fan technology, augmentor wings; airframe/propulsion system interactions, ground interference effects: V/STOL stability and control considerations, handling qualities; review of current development programs, NAVY V/STOL requirements and programs. PREREQUISITE: Aero Graduate Core or permission of Instructor.

AE 4306 Helicopter Design (3-2)
Engineering problems that are to be found in rotary-wing design are presented for solution to develop a basic understanding of the conceptual design process for both single and multi-rotor helicopters. Interfaces of sub-systems and the required design tradeoffs, including economic and operational factors, are emphasized. A preliminary design of a single rotor helicopter is conducted to meet specified requirements and the performance of the resulting vehicle is evaluated. PREREQUISITE: AE 4304.

AE 4307 Advanced Helicopter Design (3-2).
An extension of the conceptual design concept to a more detailed design. Elements of static and dynamic stability, control, weight and balance, detailed sizings, and effects of parameter variation are considered. The detailed design will usually be limited to a single area. PREREQUISITE: AE 4306.

AE 4318 Aeroelasticity (4-0).
Response of discrete and continuous elastic structures to transient loads and to steady oscillatory loads. Static aeroelasticity, non-stationary airfoil and wing theory. Unsteady missile aerodynamics. Application to the flutter problem. Transient loads, gusts, buffet, and stall flutter. PREREQUISITE: AE 3340.

AE 4323 Flight Evaluation Techniques (3-2).
Quantitative and qualitative techniques for the evaluation of aircraft performance and handling qualities of flight; aircraft data acquisition systems; normalizing and standardizing of flight test data; pilot rating scales; effects of design parameters; application of specifications to flight evaluations. In-flight laboratory is provided. PREREQUISITE: AE 3340.

AE 4342 Advanced Control for Aerospace Systems (3-2).
State variable analysis including state variable feedback and state variable estimators (observers). Optimal control; digital fly-by-wire systems. Topics from non-linear systems and/or stochastic control. PREREQUISITE: AE 3341.

AE 4343 Guided Weapon Control Systems (3-2).
Detailed analysis of tactical missiles, performance of target trackers, basic aerodynamics of missiles, missile autopilot design, missile servos and instruments, line of sight guidance loops, terminal guidance, proportional navigation. PREREQUISITE: AE 3341 or equivalent.

AE 4431 Aerothermodynamics & Design of Turbomachines (3-3).
Flow and energy exchange in compressors and turbines, and current engineering methods for their aerodynamic design, test, and measurement. PREREQUISITE: Aero Preparatory Phase or equivalent.

AE 4452 Rocket and Missile Propulsion (4-0).
Applications and analysis of solid-propellant rockets, ramjets and ducted rockets. Propellant selection criteria and characteristics, combustion models and behavior, performance analysis, technology requirements. PREREQUISITE: AE 3451.

AE 4502 High-Speed Aerodynamics (4-0).
Nonlinear and linearized analysis of inviscid subsonic and supersonic flow over wings and bodies. Steady and unsteady phenomena. Method of characteristics. Method of distributed singularities. Computer solution of typical problems. If class progress warrants, instructor may elect to present additional topics on transonic flow. PREREQUISITE: AE 3501.

4503 Missile Aerodynamics (4-0).
The aerodynamics of missiles and guided projectiles for various speed regimes and motions. Topics include slender body and linearized theory as well as nonlinear aerodynamic effects, coupling effects, Magnus effects, etc. The impact of these effects on missile flight dynamics, guidance and control is included. PREREQUISITE: AE 3501.

AE 4504 Convective Heat and Mass Transfer (4-0).
Convective heat and mass transfer on internal and external flow systems common to aerospace vehicles; laminar and turbulent flows. Analytic techniques, integral and numerical methods, experimental correlations. Effects of variations in thermophysical properties. PREREQUISITE: AE 3501.

AE 4505 Laser/Particle Beam Technology (3-2).
Survey of different types of particle beams, including electrical, gasdynamic and chemical lasers, electron beams; resonator cavities for lasers and external propagation mechanisms; high energy lasers and charged particle beams, military applications. PREREQUISITE: Consent of Instructor.

AE 4506 Rarefied Gas Dynamics (4-0).
Topics include kinetic theory, distribution functions, Boltzmann equation, transport phenomena from a kinetic theory viewpoint, free molecular flow, transitional flow between continuum and free molecular flow, dynamic coefficient and numerical solutions. PREREQUISITE: Consent of Instructor.

AE 4632 Computer Methods in Aeronautics (3-2).
Use of the digital computer in numerical methods. Classification of Aeronautical Engineering problems as equilibrium, eigenvalue or propagation problems. Computer solution procedures developed for the ordinary and partial differential equations of gas dynamics, heat transfer, flight mechanics and structures. PREREQUISITE: Aero Preparatory Phase or equivalent.

AE 4641 Aeronautical Data Systems (3-2).
A design-project-oriented course utilizing microprocessor technology with emphasis upon aeronautical engineering applications. Both software and hardware aspects of system integration will be considered for engineering tradeoffs during problem definition and solution. PREREQUISITE: EE 2811 or equivalent.

AE 4702 Missile Propulsion (4-0).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 4703 Missile Stability and Performance (4-1).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 4704 Missile Configuration and Design (3-2).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 4706 High Energy Laser System Design (4-0).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 4712 Missile Systems Design and Integration (3-2).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 4791 Spacecraft Systems I (3-2).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 4792 Spacecraft Systems II (4-0).
(See Weapons Engineering and Space Science Course listing at the end of this listing.)

AE 4900 Advanced Study in Aeronautics (Variable credit up to five hours.)
Directed graduate study or laboratory research. Course may be repeated for additional credit if topic changes. PREREQUISITE: Consent of Department Chairman.

WEAPONS ENGINEERING
and
SPACE SCIENCE COURSES

Upper Division or Graduate Courses

AE 3001, Space Systems Laboratory (0-2).
The laboratory will be used to support the Naval Postgraduate School (NPS) experiments to be flown on board Space Shuttle or on other Spacecraft. The laboratory does not consist of canned experiments; the specific activity depends on the nature of the experiment currently being prepared for flight. Course may be repeated for additional credit to continue work on the project. PREREQUISITE: Consent of Instructor.

AE 3701 Missile Aerodynamics (4-1).
Potential flow, thin-airfoil and finite wing theories. Linearized equations, Ackeret theory, Prandtl-Glauert transformations for subsonic and supersonic wings. Planform effects. Flow about slender bodies of revolution, viscous crossflow theory. PREREQUISITE: AE 2043.

AE 3705 Air Defense Lethality (4-1).
This course examines the design and effectiveness of antiaircraft guns and missiles, both surface based and airborne. The techniques and procedures for target detection, target tracking, and propagator flyout (both guided and ballistic) are presented and quantified. Target signatures for radar, IR, and visually directed systems are examined. The types of warheads and fuzes on small arms, antiaircraft artillery, and guided missiles are presented. The vulnerability of the target to the damage mechanisms is examined, and the procedures for assessing the measures of target vulnerability are described. Total system lethality is evaluated by determining the probability of target kill given a single shot and given an encounter. Countermeasures used by the target for reducing the air defense lethality are also described.

AE 3711 Missile Flight Analysis (4-0).
Methodology, with numerical examples, for assessing the capabilities/limitations dictated by aerodynamic shapes and propulsion systems on tactical missile trajectories, at high (surface-air, air-air, etc.) and low (cruise missile) thrust-to-weight. Aft-tail or canard, single or dual symmetry configurations. PREREQUISITE: Completion of an Engineering/Science Core or equivalent.

Graduate Courses

AE 4702 Missile Propulsion (4-0).
Applications and analysis of solid propellant rockets, ramjets and ducted rockets. Propellant selection criteria and characteristics, combustion models and behavior, performance analysis, technology requirements. PREREQUISITE: AE 3701.

AE 4703 Missile Stability and Performance (4-1).
Static and dynamic stability and control. Neutral points, control effectiveness, trim in maneuvering flight. Configuration determinants (canard, aft-control; interior arrangement). Transient (dynamic) modes. Subsonic, transonic, supersonic force and moment data for performance calculations with short and long-range cruciform missiles and cruise missiles: acceleration, climb, ceiling, range and agility in maneuvering trajectories. PREREQUISITE: AE 3701.

AE 4704 Missile Configuration and Design (3-2).
A project oriented course centering on the design of a missile by each student. Principles of aerodynamics, guidance, control, propulsion, and structures will be used to synthesize a missile to respond to a specified threat. PREREQUISITE: AE 4702 and AE 4703 or completion of the Aero Graduate Core.

AE 4706 High Energy Laser System Design (4-0).
Types of lasers including excimer lasers. Laser performance. Adaptive optics. Propagation of laser beams. Pointing and tracking. Acquisition and handoff. Fire control. Damage mechanisms. Advantages and limitations of both CW and Pulsed. Applications include ASMD, SAM-suppression, anti-tank optics, and space warfare. High energy laser systems are contrasted with other directed energy concepts. Students design a complete laser system. PREREQUISITE: Completion of an Engineering/Science Core or equivalent.

AE 4712 Missile Systems Design and Integration (3-2).
Propulsion technology assessment of airbreathers and rockets. Boost, midcourse, terminal guidance and control concepts. Homing guidance law kinematics; target tracker performance. Missile dynamics. Mission profiles; trajectory shaping. Warhead lethality. Airframe structural features. Body/wing aerodynamic design precepts. Synthesis of above to baseline missile definition. PREREQUISITE: AE 3711.

AE 4791 Spacecraft Systems I (3-2).
Examination of the factors affecting space systems selection and design, impact of orbital and sensor characteristics, ground facilities requirements, manufacturing, testing and verification techniques and requirements. Payload design considerations including impact of antennas, RF environment and EMI. Mechanical and electrical design of space systems. Temperature control. Attitude control. Special techniques associated with large space structures. PREREQUISITES: PH 3111, Completion of Space Curricula Core or equivalent. SECRET clearance.

AE 4792 Spacecraft Systems II (4-0).
Survivability of space systems in wartime is discussed along with design features to improve protection. Case studies are selected to emphasize and illustrate material presented previously in AE 4791 as well as material in AE 4792. The students design a space system to meet mission requirements. PREREQUISITE: AE 4792. SECRET clearance.
ANTISUBMARINE WARFARE ACADEMIC GROUP

Chairman:

R. Neagle Forrest, Professor,
Code 71, Spanagel Hall, Room 202,
(408) 646-2653, AV 878-2653.

The Antisubmarine Warfare Academic Group is an interdisciplinary association of faculty, consisting of ten members representing seven separate academic disciplines. An academic group is a less formal organization than an academic department, and each professor in the group has an appointment in an academic department. The Antisubmarine Warfare Academic Group has administrative responsibility for the academic content of the Antisubmarine Warfare Program of Study. Teaching in this multidisciplinary program is carried out by faculty members attached to the following academic departments: Administrative Science, Electrical and Computer Engineering, Mathematics, National Security Affairs, Oceanography, Operations Research, and Physics. Thesis topics for students in this area of study are approved by the group and the final thesis is approved by the Chairman.

MASTER OF SCIENCE IN SYSTEMS TECHNOLOGY

The degree of Master of Science in Systems Technology (Antisubmarine Warfare) will be awarded at the completion of an interdisciplinary program carried out in accordance with the following degree requirements:

The Master of Science in Systems Technology requires a minimum of 45 quarter hours of graduate level work of which at least 15 hours must represent courses at the 4000 level. Graduate courses in at least four disciplines must be included and in three disciplines, a course at the 4000 level must be included.

An approved sequence of at least three courses constituting advanced specialization in option area must be included.

In addition to the 45 hours of course credit, an acceptable group project or thesis must be completed.

The entire program must be approved by the Chairman of the ASW Group.

COURSE OFFERINGS

ST 0001 Seminar (0-1).
Special Lectures, and discussion of matters related to the ASW Program. PREREQUISITE: Enrollment in the ASW Curriculum and SECRET clearance.

ST 0810 Thesis Research/Group Project (0-0).
Students in the ASW Curriculum will enroll in this course while doing either an individual thesis or an equivalent group project involving several students and faculty.

Upper Division or Graduate Course

ST 3000 Study Project On ASW Systems Performance (0-2).
This is a project course in which the project is a study and analysis of the performance of an assigned type of ASW system under a variety of operating conditions. PREREQUISITE: Enrollment in the ASW Curriculum or consent of the Group Chairman and SECRET clearance. Graded on a Pass/Fail basis only.

Graduate Course

ST 4999 Special Studies in ASW (1-0) to 4-0).
A course designed to meet the needs of students for special work in advanced topics related to ASW. PREREQUISITE: Enrollment in the ASW Curriculum and consent of the Group Chairman.

COMMAND, CONTROL & COMMUNICATIONS (C3) ACADEMIC GROUP

Chairman:

Michael G. Sovereign, Professor,
Code 74, Spanagel Hall, Room 203,
(408) 646-2618, AV 878-2618.

Associate Chairman:

Carl R. Jones, Professor,
Code 54Js, Ingersoll Hall, Room 248,
(408) 646-2767, AV 878-2767.

The Command, Control and Communications (C3) Academic Group is an interdisciplinary association of faculty, consisting of fifteen members representing six separate academic disciplines. An academic group is a less formal organization than an academic department, and each professor in the group has an appointment in an academic department. The C3 Academic Group has administrative responsibility for the academic content of the Joint Command, Control and Communications Program of Study. Teaching in this multidisciplinary program is carried out by faculty members attached to the following academic departments: Administrative Sciences, Computer Science, Electrical and Computer Engineering, Mathematics, Meteorology, and Operations Research. Thesis topics for students in this area of study are approved by the group and the final thesis is approved by the Chairman.

MASTER OF SCIENCE IN SYSTEMS TECHNOLOGY

The degree of Master of Science in Systems Technology (Command, Control & Communications) will be awarded at the completion of an interdisciplinary program carried out in accordance with the following degree requirements:

The Master of Science in Systems Technology (Command, Control & Communications) requires a minimum of 45 quarter hours of graduate level work in four different academic disciplines, of which at least 15 hours must represent courses at the 4000 level in at least two of the disciplines. Within the course program there must be a specialization sequence consisting of at least three courses.

In addition to the 45 hours of course credit, an acceptable thesis must be completed.

The Program must be approved by the Chairman of the Command, Control and Communications Academic Group.

GROUP COURSE OFFERINGS

CC 0001 Seminar (0-1).
Special lectures and discussion of matters related to the C3 program.

CC 0810 Thesis Research (0-0).
Every student conducting thesis research will enroll in this course.

CC 3505 C3I Architecture (4-0).
This course supports the C3, Space Operations, and Intelligence Curricula by providing an overview of the principles, concepts, and trade-offs underlying all C3I architectures. Students address alternative models of C3I architecture, and then examine the attributes of a variety of current and proposed C3I architectures. In a class project, students assess the probability that a current or proposed C3I architecture can satisfy a measure of effectiveness of their choice. PREREQUISITES: A 3000-level Operations Research survey course or permission of the instructor. TOP SECRET clearance with access to SPECIAL INTELLIGENCE information.

Graduate Courses

CC 4113 Policies and Problems in C3 (5-0).
An in-depth study of the fundamental role C3 systems fulfill in operational military situations, including crisis warning and crisis management. An analysis of the changing role of intermediate level headquarters and its impact on C3 system requirements and design. Additionally, the course considers the complexities imposed on C3 systems as the force structure becomes more heterogeneous, as in the case of NATO. Case study of selected incidents and systems. Specifically for students in the C3 curriculum. PREREQUISITES: CO 3111, NS 3064.

CC 4200 Combat Systems Engineering (4-0).
This course examines the generation of combat system requirements and the relationships between operational, financial planning, and technical communities in fielding a combat system that fulfills those requirements. The contribution of the technical disciplines to the statement and solution of decision problems in design, priority setting, and scheduling are explored through the use of currently outstanding issues. PREREQUISITES: Consent of the Instructor, Basic probability and statistics, 4th quarter standing, Secret Clearance. Graded on a Pass/Fail basis only.

CC 4900 Special Topics in Command Control and Communications (2-0 to 5-0).
Supervised study in selected areas of command control and communications to meet the needs of individual students. May be repeated for credit if course content changes. PREREQUISITE: Consent of Group Chairman. Graded on a Pass/Fail basis only.

DEPARTMENT OF COMPUTER SCIENCE

Chairman:

Vincent Y. Lum, Professor,
Code 52, Spanagel Hall, Room 513,
(408) 646-2449, AV 878-2449

Associate Chairmen:

Gordon H. Bradley, Professor,
Code 52Bz, Spanagel Hall, Room 514,
(408) 646-2359, AV 878-2359.

Uno R. Kodres, Professor,
Code 52Kr, Spanagel Hall, Room 534,
(408) 646-2197, AV 878-2197.

The Department of Computer Science provides graduate training and education in major areas of computer science. Thus, both basic and advanced graduate courses are offered. However, to bring our officer-students up to speed, a preparatory phase of some specially-tailored courses is provided for the new students. These basic and advanced courses lead to either a degree in Master of Science or Doctor of Philosophy. The requirements to complete either program are rigorous and are comparable to those set up in other major universities.

MASTER OF SCIENCE IN COMPUTER SCIENCE

The degree of Master of Science in Computer Science will be awarded upon the satisfactory completion of a program, approved by the Chairman, Computer Science Department, which satisfies, as a minimum, the following degree requirements:

a. At least 40 quarter hours of graduate-level work of which at least 12 quarter hours must be at the 4000 level.
b. The Program shall include at least:

28 quarter hours in Computer Science
12 quarter hours in the other disciplines

c. Completion of an approved sequence of courses constituting specialization in an area of Computer Science.
d. Completion of an acceptable thesis in addition to the 40 quarter hours of course work.

DOCTOR OF PHILOSOPHY IN COMPUTER SCIENCE

The Department of Computer Science has a program leading to the degree of Doctor of Philosophy. Areas of special strength in the department are data-base systems, software engineering, and systems architecture. Minors in areas of other departments are possible. A noteworthy feature of these areas of research is that the candidate's research may be conducted off-campus in the candidate's sponsoring laboratory or unit of the federal government. The degree requirements are as outlined under the general school requirements for the Doctor's degree.

COMPUTING FACILITIES

The facilities of the W.R. Church Computer Center provides school-wide timesharing and batch processing for Computer Science classroom instruction and research. The Center has an IBM 3033 Attached Processor with 16 megabytes of memory. The system has an IBM 3850 Mass Store that can hold 38 billion bytes of information. The system supports a wide variety of languages, and applications programs. Timesharing service is provided 8 terminal/printer locations across the campus.

In addition to the campus computing center which provides main-frame computing services to the whole school, the Computer Science Department's computing facilities provide students and faculty with access to minis and micros for teaching, thesis work and research.. These facilities are composed of a general-purpose laboratory and several individual laboratories for main stream computer science areas. Further, these laboratories have their computers interconnected via local-area networks. Currently the six individual laboratories are Database systems, Graphics and Video, Software Engineering, Artificial Intelligence, System Architecture, and Microcomputers.

The variety of hardware and software existing in the department is rather large. Currently the computers in the Department in-

clude two VAX 11/780's, one VAX 11/750, two PDP 11/50's, two PDP 11/44's, one PDP 11/34, and nearly a hundred microcomputers of different kinds. We have a large number of terminals, disks, image processors, and other devices. The Department also possesses three very advanced graphic (IRIS) workstations and eight intelligent (ISI) workstations. Further, the department is in the second year of a three year $800,000 program to upgrade its instructional laboratories. Substantial number of additional hardware and computers have been ordered.

Via the local-area networks, all other laboratories are connected to the General Laboratory which in turn provides gateways to the MILNET, ARPANET and CSNET. This interconnection allows us to communicate easily within the Department and without the School.

On the software side, the major operating systems in the Department are Berkeley UNIX and DEC VMS. The languages supported in the systems include C, Lisp, Prolog, as well as the normal ones like Ada, Pascal and Fortran-77. Commercial versions of Ingres and Oracle database systems have been installed.

Naturally, support for the Department's teaching and research is not complete with only hardware and software. We must have high-quality professional support as well. Currently the Department has 9 qualified hardware/software, full-time professionals who oversee the operation of these various equipments. They work closely with the faculty and students in support of teaching and research.

RESEARCH LABORATORIES

The computing equipments of the research laboratories are purchased by various research projects with external funds. They are dedicated to the NPS students and faculty for the thesis development and faculty research. There are six research laboratories in the Computer Science Department. The laboratories and the computer equipment are listed as follows:

Laboratory for Database Systems Research

(DEC PDP 11/44s, DEC's parallel communications link to VAX 11/780, printers and terminals; ISI workstations; Ethernet links to VAX 11/750; MicroVAX-IIs, DECnet connection to VAX 11/780.)

Laboratory for Computer Graphics
(IRIS-2400 graphics workstations with bitmap display memory, high-resolution color monitor, digitizer tablet and mouse, Ethernet link to VAX 11/780.)

Laboratory for Software Engineering Research
(Apple MacIntoshes with extend memory, microfloppy and fixed disks, Apple Imagewriter and Laserwriter, 300/1200 baud modems for remote access; IVY DT20 (IBM-PC/AT compatible) with Intel 80287 math co-processors, color monitors, Okidata Microline 193 text and graphic printers.)

Laboratory for Artificial Intelligence
(Tektronic 4404 and 4406 Artificial Intelligence systems with extended memory, color graphics copiers, dotmatrix printers, streamer tape drive and fixed disks.)

Laboratory for Computer Engineering and Combat Systems
(Intel iSBC 86/12 single-board computers, RAM, bubble memories, disk drives, Intel's MULTIBUS and Ethernet; GEMINI multi-level trusted system; INMOS multitransputer systems.)

Laboratory for Microcomputer Systems
(Z100 microcomputers with Intel-8085 and Intel-8088 processors, color monitors, Daisy wheel and high-speed printers; Intel 86/12A single-board computer with serial interface and Ethernet controller.)

DEPARTMENTAL
COURSE OFFERINGS

CS 0001 Seminar (0-1).
Special or guest lecturers.

CS 0002 Seminar (0-1).
This seminar is open to new students only. It is lectured by the Chairman of the Department and offered every Fall and Spring.

CS 0810 Thesis Research (0-0).
Every student conducting thesis research will enroll in this course.

CS 2000 An Introduction to Computer Systems (3-1).
Primarily designed for computer science majors, this course provides a comprehensive introduction to computer systems in terms of their major building blocks and their interactions for the purpose of tying all the other concurrent and subsequent computer science courses together. The emphasis of the course are on fundamentals, technical issues, conceptual entities and their relationships in a computer system environment. There are no programming assignments. NO PREREQUISITE.

Upper Division Courses

CS 2010 Introduction to Computer Systems (For Non-Majors) (2-0).
An introduction to the general characteristics of contemporary computers and to the functions they serve in a diversity of organizations is provided. The capabilities and limitations of computing as well as the economics of data processing in general are emphasized. There are no prerequisite or co-requisite courses. Prior computing experience is not assumed and programming is not taught.

CS 2106 Introduction to Programming in FORTRAN (1-2).
The course is an introduction to programming using FORTRAN. The course is intended for management students with no previous programming experience who are already familiar with computer fundamentals. PREREQUISITE: CS 2010 or consent of Instructor. Graded on Pass/Fail basis only.

CS 2450 Computer Programming with FORTRAN (3-1).
This course provides an overview of the computer system: hardware, software, and the operating system. Algorithms and programs are developed using a structured approach to stepwise refinement of the algorithms and programs. The design and testing of computer programs in FORTRAN are studied, and practiced by the student in the laboratory. Computer projects of increasing difficulty are assigned. Graded on Pass/Fail basis only.

CS 2850 PL/1 Programming Laboratory (0-2).
Introduction to programming in PL/1 for students with previous experience with computer problem solving with structured programming in a high order computer language. Computer projects of increasing difficulty are assigned. PREREQUISITES: CS 2950 or CS2970. Graded on Pass/Fail basis only.

CS 2950 Structured Programming with FORTRAN (5-0).
An introduction to computer algorithms, programs and hardware. Algorithms and programs are developed using a structured approach to stepwise refinement of the algorithms and programs. The design and testing of computer programs in FORTRAN are studied, and practiced by the student in the laboratory. Computer projects of increasing difficulty are assigned. Computer systems including data representation, computer organization, and systems software are introduced.

CS 2960 Structured Programming with PL/I (5-0).
An introduction to computer algorithms programs and hardware. Algorithms and programs are developed using a structured approach to stepwise refinement of the algorithms and programs. The design and testing of computer programs in PL/I are studied, and practiced by the student in the laboratory. Computer projects of increasing difficulty are assigned. Computer systems topics including data representation, computer organization, and systems software are introduced.

CS 2970 Structured Programming with PASCAL (5-0).
An introduction to computer algorithms programs and hardware. Algorithms and programs are developed using a structured approach to stepwise refinement of the algorithms and programs. The design and testing of computer programs in PASCAL are studied, and practiced by the student in the laboratory. Computer projects of increasing difficulty are assigned. Computer systems topics including data representation, computer organization, and systems software are introduced.

Upper Division or Graduate Courses

CS 3010 Computing Devices and Systems (4-0).
Designed primarily for non-computer science majors, this course examines functional components and their organization as a computer system. Although emphasis is upon computer hardware, the importance of both hardware and software in constituting a computer system is discussed. Important instances of software-hardware trade-offs in the implementation of various components are discussed. In this course, computer systems are examined through a hierarchy of four levels: The electronic circuit level, the logic or digital device level, the programming level, and the systems level. Major emphasis is upon the higher levels (programming and systems). PREREQUISITE: CS 2450 or CS 2960 or CS 2970 or consent of Instructor.

CS 3020 Software Design (3-2).
This course will provide the student with a broad background in the concept, design, implementation and testing of computer programs. The topics will include identification of program requirements, language selection, design methodology, program efficiency, test and debug practices, and documen-

CS 3030 Operating Systems Structures (4-0).

Designed primarily for non-computer science majors, this course will provide a broad overview of operating systems including memory management techniques, job scheduling, processor scheduling, device management and data (information) management techniques. Case studies will be included to illustrate the issues in manager-operating system interfaces, operating system selection, data control and security, and operating system utility support. In addition, future trends in computers will be identified, including maxi, mini, and microcomputers. PREREQUISITES: CS 3010 or equivalent background and consent of Instructor.

CS 3111 Principles of Programming Languages (4-0).

This course is an introduction to the design, evaluation and implementation of programming languages. The four themes of name, data, control, and syntactic structuring are traced through the five major programming language generations. Principles for the evaluation of languages are developed and investigated. Key implementation concepts are covered, including interpreters and run-time organization. PREREQUISITES: CS 2450 or CS 2960 or CS 2970 or consent of Instructor.

CS 3113 Introduction to Compiler Writing (3-2).

This course is intended to explore the basics of modern compiler design and construction techniques. The fundamentals of scanning, parsing and compiler semantics are developed in the framework of modern compiler-compiler and translator-writing system technology. The laboratory periods will be used to develop a small model compiler/assembler. PREREQUISITES: CS 3111 and CS 3300 or consent of instructor.

CS 3200 Introduction to Computer Architecture (3-2).

This course examines the organization of computers, processor architectures, machine and assembly language programming. Microcomputer systems are used in the laboratory to give students hands-on experience. Included are hardware components: the processor, memories, serial I/O, parallel I/O, real time clock, interrupt control, DMA; processor instructions: information transfer, arithmetic, control, process switching; machine language and assembly language programming: arithmetic functions, input/output, interrupt handling, multicomputer control. PREREQUISITES: CS 2970 and either EC 2810 or equivalent.

CS 3201 Introduction to Computer Organization for Non-majors (3-2).

Designed primarily for weapons and electronic warfare majors, this course examines the organization of computers, processor architecture, machine and assembly language programming. Microprocessor systems are used in the laboratory to give students hands-on experience. Included are hardware components: the processor, memories, serial I/O, parallel I/O, real time clock, interrupt control, DMA; processor instructions: information transfer, arithmetic, control, machine language and assembly language programming: arithmetic functions, input/ output, interrupt handling. PREREQUISITES: CS 2450 or CS 2960 and EC 2810 or equivalent.

CS 3300 Data Structures (3-1).

The course deals with the specification, implementation and analysis of data structures. Common data objects such as strings, arrays, records, linear lists and trees, together with the operations used to manipulate these objects are studied. Particular emphasis is placed on linked structures. Implementation of symbol tables by hash tables and other means is presented. Applications to memory management, compiler design and sorting/searching algorithms are given. Computer projects in a high-level language are required. PREREQUISITES: CS 2970 or consent of Instructor.

CS 3310 Artificial Intelligence (4-0).

Survey of topics and methods of Artificial Intelligence. Topics include simple learning tasks, visual scene analysis and descriptions, understanding of natural language, computer game playing, knowledge engineering systems. Methods include heuristic search and exploitation of natural constraints, means-ends analysis, production systems, semantic networks, and frames. Emphasis is placed on solving problems which seem to require intelligence rather than attempting to stimulate or study natural intelligence. Class and individual projects to illustrate basic concepts are assigned. PREREQUISITE: MA 0125 or MA 2025 or consent of Instructor.

CS 3400 Comparative Computer Architecture (4-0).

This course examines the fundamental concepts of computer architectural design. A definition of computer architecture and organization, the history and evolution of computers, and architectural descriptive languages are presented. Initially, the designs of functional architectural components, to include ALU's, control units, memory hierarchies and input-output organizations, are examined. Important instances of software-hardware tradeoffs in such designs are discussed. Basic approaches to enhancing computer performance are discussed. Representative computer class architectures are examined and compared. PREREQUISITE: CS 3200 or CS 3201 or consent of Instructor.

CS 3450 Software System Design (3-1).

This course covers the design and implementation of software system elements, including assemblers, loaders, input/output control sub-systems, and interpreters. PREREQUISITES: CS 3200, CS 3300 and CS 3111 or consent of Instructor.

CS 3460 Software Methodology (3-1).
Methods for the design, implementation and testing of computer software. Stepwise refinement, decomposition, information hiding, program style, debugging, testing and informal verification. Several program designs will be investigated by means of code reading, program modification and writing software. PREREQUISITES: CS 3111 and CS 3300.

CS 3502 Computer Communications and Networks (4-0).
An introduction to the structure and architecture of computer networks. Topics covered include network topology, single and multiple server queueing models, link establishment and link operation protocols, local area networks, packet radio networks, and point-to-point networks. The ISO model and the ARPA, ALOHA and ETHERNET systems are studied. Term papers and/or projects will be an important aspect of the course. PREREQUISITES: CS 3200 or CS 3010 (or equivalent) and MA 2300 (or equivalent).

CS 3550 Computers in Combat Systems (3-2).
This course describes the functions and algorithms of combat systems, the human interaction, and the systems organization in terms of processes. The laboratory experience includes work with navigational, tracking and ballistics functions, display control and the use of wakeup and block primitives in process control. Real-time performance analysis and prediction using simulations is included. PREREQUISITE: CS 3200 or CS 3201 or equivalent.

CS 3601 Theory of Formal Languages and Automata (4-0).
This course will cover the Chomsky hierarchy of Formal Languages (regular sets, context-free languages, context-sensitive languages, and recursively enumerable languages) and the types of grammars and automata associated with each class in the hierarchy. Emphasis is placed on the major results of the theory as they relate to language and compiler design. In addition, the major results involving the concept of undecidability are covered. PREREQUISITES: MA 2025 and MA 3026 or equivalent.

CS 3650 Theory of Algorithms (4-0).
This course focuses on the design and analysis of efficient algorithms. Techniques for analyzing algorithms in order to measure their efficiency are presented. Control structure abstractions, such as divide and conquer, greedy, dynamic programming, backtrack (branch and bound), and local search methods, are studied. The theory of NP-completeness is presented along with current approaches to NP-hard problems. PREREQUISITE: CS 3300 and CS 3601.

CS 3800 Directed Study in Computer Sciences (0-2 to 0-8).
Individual research and study by the student under the supervision of a member of the faculty. Intended primarily to permit interested students to pursue in depth subjects not fully covered in formal class work. PREREQUISITE: Consent of Instructor. Graded on Pass/Fail basis only.

CS 3900 Selected Topics in Computer Science (3-0).
Presentation of a wide selection of topics from current literature. Lectures on subjects of current interest and exploration may be presented by invited guests from other universities, government laboratories, and from industry, as well as by faculty members of the Naval Postgraduate School. Tours of other facilities of interest may also be conducted. PREREQUISITE: Consent of Instructor. Graded on Pass/Fail basis only.

Graduate Courses

CS 4112 Operating Systems (4-0).
An in-depth theoretical treatment of operating systems concepts. Major course topics include process synchronization using semaphores, critical regions, and rendezvous, virtual memory including demand paging and segmentation, dynamic linking and loading, file structures and information security. The producer-consumer problem, readers and writers problem and the dining philosophers problem are examined. Architectural and language implications of evolving operating systems are considered. PREREQUISITES: CS 3450 and either CS 3112 or CS 3030.

CS 4113 Advanced Language Topics (4-0).
This course covers advanced topics and recent developments in programming languages and compilers. Three major topics are functional programming, object-oriented programming and logic programming. Both the theory and practice of functional programming are covered. Theoretical topics include the Church-Rosser theorem, the significance of various evaluation orders, and the use of recursive simultaneous equations to define data types. Functional, object-oriented and logic programming are viewed from the unified perspective of tree transformations. PREREQUISITES: CS 3111 and CS 3450 or consent of Instructor.

CS 4150 Programming Tools and Environments (4-0).
This course covers the design and implementation of tools to aid software development, including syntax-directed editors, version-control systems, language-oriented debuggers, symbolic execution vehicles, programming databases, type checkers, and automatic programming tools. These topics are discussed in the context of an integrated, language-oriented programming environment. PREREQUISITES: CS 3450 and CS 4113 or consent of Instructor.

CS 4202 Computer Graphics (3-2).
An introduction to the principles of the hardware and the software used in the production of computer generated images. The focus of the course is a major design project utilizing the departmental computer graphics and image-processing facilities. The course is intended for students proficient in the development of software systems. PREREQUISITE: CS 2970, CS 3200, CS 3300 or consent of the Instructor.

CS 4203 Interactive Computation Systems (3-2).
A study of the human-computer interface and methods for interactive computer-assisted problem solving. Topics include applicable human psychology, physiology and cognitive science. The main focus of the course is a design project involving computer graphics. PREREQUISITE: CS 4202 or consent of the instructor.

CS 4300 Database Systems (3-1).
This course presents an up-to-date introduction to database systems including database system architectures, physical storage organization, data models, data languages, design of databases, query optimization, database integrity, security, concurrency control and recovery. PREREQUISITES: CS 3450 and CS 3300, or consent of Instructor.

CS 4310 Advanced Artificial Intelligence (4-0).
Artificial intelligence has seen a rapid growth in applications in recent years. This course will survey a wide variety of current research, using a seminar format. Application areas surveyed include planning, language understanding, vision, robotics, machine learning, human tutoring, database design, and statistics. PREREQUISITES: CS 3310 or consent of Instructor.

CS 4311 Knowledge Based Systems (3-1).
This course covers the design and implementation of knowledge-based systems. Topics include acquiring, representing, and organizing knowledge, multiple levels of problem structure and domain knowledge, metaknowledge and multilevel control structures. These topics will be studied in the contest of several problem-solving, signal understanding, and natural language understanding tasks. PREREQUISITES: CS 3310 and CS 3450 or consent of Instructor.

CS 4312 Advanced Database Systems (3-1).
This course is a sequel to CS 4300, Database Systems. The course will provide an in-depth coverage of relational database theory, distributed database systems, semantic data models, query processing and optimization, logic and databases, and other advanced topics. Many topics will be illustrated using both commercial and prototype database systems. PREREQUISITE: CS 4300 or consent of instructor.

CS 4320 Data Base System Design (4-0).
Primarily designed for non-computer science majors, this course explores the design and technology of data base software. Implementation techniques, viable alternatives, data base philosophy data manipulation in complex information environments, and system requirements are explored. Examples of systems will be drawn from active DOD data base systems and current application/ research in the private as well as public sectors. PREREQUISITE: CS 3020 or knowledge of a higher-level language and consent of Instructor.

CS 4322 Advanced Database-Systems Topics (3-1).
This course covers advanced topics and recent developments in database systems and machines. Three major topics are multi-lingual database systems, multi-backend data base systems and data-base machines. In addition to theoretical and design studies, the experimentation of some advanced prototype database systems will be included. PREREQUISITES: CS 3450 and CS 3300, or CS 4300, or consent of Instructor.

CS 4450 Advanced Computer Architecture (4-0).
This course covers advanced topics in computer architecture and the application of concepts in computer architecture to the design and use of computers. The topics discussed include classes of computer architecture, application oriented architecture and high performance architecture. PREREQUISITES: CS 3400 or equivalent.

CS 4451 Design and Analysis of Multiple-Processor, Real-Time Computers (3-1).
This course covers computer architectures ranging from pure multiprocessor to massively parallel systems used for real-time applications. Processing capacities are analyzed and performance estimates are made based on various real-time applications. Reliability and fault-tolerance issues are considered for the multiple-processor systems. Application-program complexities are considered from the programmer's point of view. Laboratory experiments with multiple processor systems will be conducted in the microcomputer laboratory. PREREQUISITES: CS 3200 and CS 3450 or consent of Instructor.

CS 4470 Advanced Computer Graphics Topics (3-2).
This course covers advanced topics in computer image generation. The topics discussed include quality and realism in computer images, advanced realtime interactive systems, and special architectures for the real-time generation and display of computer images. PREREQUISITE: CS 4202, CS 4203 and the consent of the Instructor.

CS 4500 Software Engineering (4-1).

The techniques for the specification, design, testing, maintenance and management of large software systems. Specific topics include software life cycle planning, cost estimation, requirements definition and specification, design, testing and verification, maintenance and reusability. The laboratory sessions will discuss special topics. PREREQUISITE: CS 3460 or CS 3020 or consent of instructor.

CS 4510 Cognitive Sciences and Computer Programming (3-0).

This is a seminar on the application of results in the cognitive sciences to the study of computer programming. There will be extensive readings covering topics in cognitive psychology, software psychology, selected areas of artificial intelligence and programming methodology. Topics covered include definition of the programming task, complexity of programs, understanding of software, and tentative models of the programming task. PREREQUISITE: CS 4500 and the consent of the instructor.

CS 4550 Distributed Computing (4-0).

The course covers all aspects of computer systems that have multiple computers connected by communications links. Distributed systems architectures, local area networks, geographically distributed network, multiprocessor systems, performance and reliability, distributed operating systems and distributed database systems are studied. The course also covers distributed computing related topics in the areas of programming languages, computer science theory and software engineering. PREREQUISITES: CS 3450 and CS 3400.

CS 4600 Topics in Formal Semantics (3-0).

This course covers advanced topics in the theory of formal semantics, as used in formal specifications for programming languages, and other areas of computer science. The topics discussed include specific semantic theories such as denotational semantics, axiomatic semantics, operational semantics, and current uses of formal semantics in the specification of abstract data types and other computing resources. PREREQUISITE: CS 3111 and CS 3601 or consent of the instructor.

CS 4700 Epistemology for Computer Scientists (3-0).

This is a seminar on the applications of epistemology, the theory of knowledge, to computer science problems. There will be a particular emphasis on Artificial Intelligence applications, especially knowledge representation. The course covers the major epistemological theories from Plato to the present, emphasizing those with a relevance to computer science. Other topics discussed include logic (deductive and inductive), philosophy of science, foundations of mathematics and the use of empirical techniques in computer science. PREREQUISITES: CS 3310 and consent of Instructor; CS 4310 or CS 4311 is also recommended.

CS 4800 Directed Study in Advanced Computer Science (0-2 to 0-8).

Directed advanced study in computer science on a subject of mutual interest to student and staff member. Intended primarily to permit students to pursue in depth subjects not fully covered in formal class work or thesis research. May be repeated for credit with a different topic. PREREQUISITE: Consent of Instructor. Graded on Pass/Fail basis only.

CS 4900 Research Seminar in Computer Science (2-0).

This course will examine the current and planned research of Computer Science faculty in multiple fields of study. The course is designed to support Computer Science students in their fourth quarter of study in the selection of an area/topic of thesis research. PREREQUISITE: Computer Science students in fourth quarter or consent of department Chairman. Graded on Pass/ Fail basis only.

CS 4910 Advanced Readings in Computer Science (0-2 to 0-8).

Directed readings in computer science on a subject of mutual interest to student and faculty member. The course allows in-depth study of advanced topics not fully covered in formal class work or thesis research. May be repeated for credit with a different topic. PREREQUISITE: Consent of Instructor.

DEPARTMENT OF
ELECTRICAL AND COMPUTER ENGINEERING

Chairman:

Harriett B. Rigas, Professor,
Code 62, Spanagel Hall, Room 437,
(408) 646-2081, AV 878-2081.

Associate Chairmen:

Academic Affairs:

Robert D. Strum, Professor,
Code 62St, Spanagel Hall, Room 221A,
(408) 646-2652, AV 878-2652.

Research:

John P. Powers, Professor,
Code 62Po, Bullard Hall, Room 223,
(408) 646-2679, AV 878-2679.

The Department of Electrical and Computer Engineering is the major contributor to programs for the education of officers in the Electronic systems Engineering Curriculum, the Communications Engineering Curriculum, and the Space Systems Engineering Curriculum. Additionally, the Department offers courses in support of other curricula such as Electronic Warfare Systems Technology; Telecommunications Systems Management; Command, Control and Communications, Space Systems Operations; Weapons Engineering; Underwater Acoustics; and Engineering Acoustics.

The Department offers programs leading to the Master of Science degree in Electrical Engineering (MSEE), the degree of Electrical Engineer (EE) and Doctor of Philosophy (Ph.D). The school typically graduates 70-75 MSEE degree candidates, 5 Electrical Engineer degree recipients, and 1 Ph.D per year.

A typical MSEE student will spend six to twelve months learning or reviewing material at a junior or senior level before entering into graduate studies. The graduate study portion of a typical program is about one year in duration with a combination of course study and thesis work being performed. The thesis portion of the study is the equivalent of four courses with an acceptable written thesis being a requirement for graduation.

The curriculum is organized to provide the students with course work spanning the breadth of Electrical and Computer Engineering. Students are required to take at least one graduate level course in each of the following areas: Signal Processing; Communications; Electromagnetics; and Computers. In addition to the core requirements students concentrate in one major area of Electrical and Computer Engineering by taking a planned sequence of advanced courses. Currently there are formal concentrations in:

Communications Systems
Guidance, Navigation, and Controls
    Systems
Computer Systems
Signal Processing

The program leading to the MSEE is accredited as an Electrical Engineering Program at the advanced level by the Engineering Accreditation Commission of the Accrediation Board for Engineering and Technology.

The department has about forty faculty members either on a permanent or visiting basis and contributing to the instructional and research programs.

MASTER OF SCIENCE
IN ELECTRICAL ENGINEERING

A Bachelor of Science in Electrical Engineering or its equivalent is required. Credits earned at the Naval Postgraduate School and credits from the validation of appropriate courses at other institutions are combined to achieve the degree equivalence.

To complete the course requirements for the Master's Degree, a student needs a minimum of 36 credits in the course sequence 3000 - 4999 of which at least 27 credits must be in Electrical and Computer Engineering. Specific courses may be required by the Department and at least four courses, which total a minimum of 15 credits, must be in the course sequence 4000-4999.

An acceptable thesis must be presented and approved by the Department.

MASTER OF SCIENCE IN ENGINEERING SCIENCE

Students with acceptable academic backgrounds may enter a program leading to the degree Master of Science in Engineering Science. The program of each student seeking this degree is to include at least 36 credit hours in the course sequence 3000 - 4999 in the disciplines of engineering, science, and mathematics. At least 12 of these 36 hours must be at the 4000 level, and at least 20 hours are to be in electrical engineering courses. A minimum of 8 quarter hours in 4000-level electrical engineering courses and at least 12 credit hours in courses outside of the Electrical and Computer Engineering Department are required. All students must submit an acceptable thesis. This program provides depth and diversity through specially arranged course sequences to meet the needs of the Navy and the interests of the individual. The Department Chairman's approval is required for all programs leading to this degree.

ELECTRICAL ENGINEER

Students with acceptable academic backgrounds may enter a program leading to the degree Electrical Engineer.

A minimum of 72 graduate course credits is required for the award of the Engineer's degree. Of these at least 36 hours are to be in courses in the sequence 4000-4999. An acceptable thesis must be completed. A departmental advisor will be appointed for consultation in the development of a program of study. Approval of all programs must be obtained from the Chairman of the Department of Electrical and Computer Engineering.

DOCTOR OF PHILOSOPHY

The Department of Electrical and Computer Engineering has an active program leading to the degree of Doctor of Philosophy. Areas of special strength in the department are signal processing communications systems, electronic systems, control theory and computer engineering. Joint programs with other departments are possible. A noteworthy feature of these programs is that the student's research may be conducted away from the Naval Postgraduate School in a cooperating laboratory or other installation of the federal government. The degree requirements are as outlined under the general school requirements for the Doctor's degree.

LABORATORIES

The laboratories of the department serve the dual role of supporting the instructional and research activities of the department. The department has well developed laboratories in each area of specialty.

The Controls Laboratory is primarily an instructional laboratory. supporting experiments in simulation and in hardware manipulation. The Circuits/Electronics Laboratory is also an instructional laboratory supporting courses in circuit analysis and design and as electronic devices and applications.

The Digital Systems Laboratory supports both instruction and research. The laboratory is equipped with microprocessor development systems including a HP64000 for advanced course work and thesis research. CAD facilities are capable of schematic capture, circuit simulation, and fault detection. In addition, the ECE Department has a 2500 square foot computer laboratory which provides general support. Major systems include VAX 11/785, a number of intelligent workstations with interactive color graphics, image processing systems. A department-wide Ethernet system will provide resource-sharing and will integrate these systems with office and laboratory microcomputers.

The VLSI Laboratory supports work in system design using integrated circuits and design of custom integrated circuits. Color graphic displays are used for layout of N-channel MOS (Metal-Oxide-Semiconductor) (NMOS) and Complementary MOS (CMOS) circuits.

The Optical Electronics Laboratory supports both research and courses in the areas of optics that use electronics. The laboratory has low and medium power lasers including CO lasers, an argonion laser, a dye laser, a Nd:YAG laser and a variety of HENe and diode lasers. A variety of detectors and imaging equipment is also available.

The Radar and EW laboratories support courses and thesis work. Working radar systems and EW systems have been modified to allow student access to the signal processing portions of the equipment.

The purpose of the Space Systems Laboratory is to provide the instrumentation, computer software and systems necessary to support instructional activities and research related to spacecraft and space systems.

This is a relatively new laboratory which currently has a DOMSAT earth terminal and a TRANSIT navigation satellite receiver installed.

The Microwave Laboratory provides materials, devices, components, instrumentation, computer software and systems to support instructional activities and research in the frequency range from 100 MHz to 300 GHz.

The Transient Electromagnetic Laboratory supports research related to radar target classification based on broadband high-resolution coherent backscattering.

Other support facilities within the department include the Production Laboratory for the prototyping, layout and production of printed circuit boards, the Calibration and Instrument Repair Laboratory, as well as the Supply and Issue Facility for the ordering of instrumentation and electronic components.

DEPARTMENTAL COURSE OFFERINGS

COURSES FOR ENGINEERING AND SCIENCE CURRICULA

EC 0810 Thesis Research (0-0).
Every Student conducting thesis research will enroll in this course.

EC 0950 Seminar (0-1).
Lectures on subjects of current interest will be presented by invited guests from other universities, government laboratories, and from industry, as well as by faculty members of the Naval Postgraduate School.

Upper Division Courses

EC 2100 Circuit Analysis I (3-2).
An introductory course for students with little or no electrical engineering background. The fundamental concepts of voltage, current, power, signals, and sources are developed and applied to the analysis of resistive circuits, including simple transistor amplifiers and the operational amplifier. The principle of superposition, the one-port equivalents due to Thevenin and Norton, and the source transformation theorem are introduced. PREREQUISITE: Linear algebra and calculus (may be concurrent).

EC 2110 Circuit Analysis II (3-2).
A continuation of 2100. Following the introduction of the energy-storage elements, dynamic circuits are analyzed with the aid of the Laplace transform. Network functions and other s-domain concepts are developed. Then the special case of the sinusoidal steady-state is examined, using phasor methods of analysis. Frequency response, filtering, and ac power are discussed. PREREQUISITE: 2100.

EC 2150 Review of Circuit Analysis (4-2).
A review of circuit analysis for students with a moderate background in electrical engineering. Starting from a review of the basic concepts of current, voltage, power, signals, and sources, the methods of dynamic circuit analysis are developed through the real and complex frequency domains. Network functions, frequency response, and ac power are included, as are the more common circuit theorems. PREREQUISITE: Some background in circuit analysis.

EC 2170 Introduction to Electrical Engineering (4-2).
An introductory course intended for students not majoring in electrical engineering. Circuit elements, signals and waveforms; power and energy; Kirchhoff's laws and resistive circuits; diode circuit applications; application of Laplace transform to the step and sinusoidal response of dynamic networks. PREREQUISITES: Linear algebra and calculus (may be concurrent).

EC 2200 Electronics Engineering I (3-3).
An introduction to electronic devices and ciruits. Electronic properties and charge-flow mechanisms of crystalline semiconductor material; properties of p-n junctions in diodes and bipolar junction transistors; static and dynamic models for these devices; applications of diodes in wave shaping and power supplies; application of transistors in amplifiers and digital systems; characteristics and fabrication of integrated circuits. PREREQUISITE: A first course in electrical engineering.

EC 2210 Electronics Engineering II (3-2).
Characteristics of discrete device amplifiers and operational amplifiers (op-amps). Analysis and design of amplifiers including frequency response and biasing considerations. Applications of feedback amplifiers and op-amps. PREREQUISITE: 2200.

EC 2220 Applied Electronics (2-4).
A project course covering the application of linear and communications integrated circuits (ICs). Coverage includes an introductory overview of important linear and communications ICs and practical experimental applications of these devices. PREREQUISITES: 2210 and 2500.

EC 2250 Accelerated Review of Electronics Engineering (4-2).
An advanced review of semiconductor devices and circuits intended for students who have previously studied the subject matter of 2200 and 2210. PREREQUISITE: Sufficient background in electronic circuits. Graded on Pass/Fail basis only.

EC2300 Control Systems (3-2).
The application of feedback principles to the design of linear control systems using frequency domain (Bode-Nichols), s-domain (root locus) and state variable methods. Performance criteria including steady-state accuracy, transient response specifications, bandwidth and integral performance indices are presented. Laboratory work includes testing and evaluation of physical systems and simulation studies. PREREQUISITE: 2420.

EC 2370 Electromechanical Energy Conversion (3-2).
Concepts of force and torque developed as results of the interaction of magnetic fields are presented as the common basis for all electromechanical machinery. Fundamental characteristics of DC motors and generators, synchronous machines and induction motors are developed and applied. Transformers and control and distribution circuits are also introduced. PREREQUISITE: A course in circuits.

EC 2400 Discrete Systems (3-0).
Principles of discrete systems, including modeling, analysis and design. Topics include difference equations, z-transforms, stability, frequency response and system diagrams. PREREQUISITE: FORTRAN or other high level language.

EC 2410 Fourier Analysis of Signals and Systems (3-0).
Analysis of analog signals in the time and frequency domains; properties and applications of Fourier series and transforms; convolution, correlation and spectral density; applications to amplitude modulation and demodulation systems. PREREQUISITES: Differential equations and a course in circuits.

EC 2420 Linear Systems (3-0).
Formulation of system models including state equations, transfer functions and system diagrams; computer and analytical solution of system equations; stability. PREREQUISITES: Laplace transform, differential equations and FORTRAN or other high level language.

EC 2450 Accelerated Review of Systems (4-2).
An advanced review of continuous-time and discrete-system theory intended for students who have pervious education in these areas. Topics covered by each student will depend upon background and competence in the subject matter of 2400, 2410 and 2420. Some parts of the course will be in the self-study mode. PREREQUISITE: Sufficient background in linear system theory. Graded on Pass/Fail basis only (Parts of this course may be taken through Continuing Education as mini courses EE-2151-55).

EC 2500 Communications Theory (3-2).
In this first course on the transmission of electrical signals, the following concepts are formulated mathematically and then considered in terms of devices and systems: sampling, analog modulation and demodulation, frequency multiplexing, digital signal representation, digital modulation and demodulation, time multiplexing; applications to broadcast systems. PREREQUISITE: 2410.

EC 2600 Introduction to Fields and Waves (4-0).
Static field theory is developed and applied to boundary value problems. Time-varying Maxwell equations are developed and solutions to the wave equations are presented. Additional topics include skin effect, reflection of waves and radiation. PREREQUISITE: Vector calculus.

EC 2610 Electromagnetic Engineering (3-2).
A continuation of 2600. Topics include transmission lines, waveguides, cavity resonators, and high frequency components. Applications are presented in the laboratory. PREREQUISITE: 2600.

EC 2650 Accelerated Review of Electromagnetics (4-2).
A comprehensive review of basic electromagnetic theory intended for students who have previously studied the subject matter of 2600 and 2610. PREREQUISITE: Sufficient background in electromagnetic theory. Graded on Pass/Fail basis only.

EC 2800 Introduction to Microprocessors (3-2).
A basic understanding of a typical high performance microprocessor and its associated system is developed. A methodology for solving engineering problems through systematic software development and hardware design is introduced. The laboratory sessions provide familiarization with state-of-the-art development tools and emphasize assembly language programming and hardware interfacing using commercially available microprocessor support chips. PREREQUISITES: A high level language and 2820 (may be concurrent).

EC 2810 Digital Machines (3-2).

An introductory course in the analysis of digital systems and computers. No previous background in electrical engineering or digital techniques is assumed. Topics include: Number systems, logic gates and logic design; arithmetic circuits; flip-flops, counters, registers, and memories; basic digital computer architecture and the internal operation of computers; and elementary machine-language programming. The laboratories are devoted to the study of logic elements, arithmetic circuits, flip-flops, registers, and counters.

EC 2820 Digital Logic Circuits (3-2).

An introductory course in the analysis of digital systems leading up to computers. No previous background in digital concepts or electrical engineering is assumed. Topics include: Boolean algebra, gates, truth tables and Karnaugh maps, integrated circuit families, decoders, multiplexers, PLA's; sequential logic including latches, flip-flops, memories, registers and counters; and sequential machines including state diagrams and synchronous systems.

Upper Division or Graduate Courses

EC 3210 Introduction to Electro-Optical Engineering (3-1).

An overview of the elements that comprise current electro-optical and infrared (EO/IR) systems. Topics include radiation sources (both laser and thermal), detector devices, modulators, optical elements, and propagation characteristics. Examples of various simple EO/IR systems are discussed. PREREQUISITE: 2210 (may be concurrent).

EC 3270 Power Electronics (4-0).

An introduction to the theory and application of low-power analog and digital devices used in the control of electric power systems found in Shipboard Systems. Applications of power electronics with emphasis on regulators, inverters and rectifiers. PREREQUISITES: EC2370 and differential equations.

EC 3310 Linear Optimal Estimation and Control (4-0).

Techniques of optimal control and estimation theory and their application to military systems. Topics include performance measures; dynamic programming, the linear regulator problem; state estimation using observers and Kalman filters; Monte Carlo simulation; combined estimation and control and case studies. PREREQUISITES: 2300 and 3500 (may be concurrent).

EC 3400 Introduction to Digital Signal Processing (3-0).

Discrete Fourier transforms and the fast Fourier transform (FFT) algorithm, flow-graph and matrix representation of filters, quantization effects, ideal filters and approximations, design of recursive and nonrecursive digital filters. Applications such as the determination of power spectra, filtering of signals and harmonic analysis are considered. PREREQUISITES: 2400 and 2410.

EC 3410 Introduction to Discrete-Time Random Processes (4-0).

Fundamentals of discrete-time random processes are developed for digital signal processing, control and communications. Topics covered are multivariate analysis and description of discrete-time random signals, sampling of continuous-time random signals, statistical averages and second moment analysis, linear transformations, optimal estimation, and spectral analysis. Subject matter includes an introductory treatment of linear prediction and autoregressive time series models, Kalman filtering, and maximum likelihood and maximum entropy spectral estimation. PREREQUISITES: EC 3400 and OS 2102.

EC 3440 Image Processing and Recognition (3-2).

Subjects introduced in this course include image representation, enhancement, restoration, transformation, and encoding. Pattern recognition using statistical decision theory will be discussed briefly. Some analysis involving region segmentation and block world understanding will be introduced. Some effort is directed to robotic vision where contemporary techniques used to recognize objects and extract depth information are dealt with briefly. There will be a series of experiments using special peripherals and computers. PREREQUISITE: 3400 (may be concurrent).

EC 3450 Acoustic Field Theory (4-0).

The objectives of this course are to expose the student to various mathematical techniques (both exact and approximate), special functions (e.g., Bessel functions, Hankel functions, Legendre polynomials, etc.), orthogonality relationships, etc., which will enable him to solve fundamental problems concerning the radiation, scattering and propagation of sound in fluids. Topics to be covered include: general solutions of the three-dimensional Helmholtz wave equation in rectangular, cylindrical, and spherical coordinates with Dirichlet, Neumann, and Robin boundary conditions; radiation and scattering from cylinders and spheres; sound propagation in the ocean — the WKB approximation, ray acoustics, and the parabolic equation approximation; and other topics as time permits. PREREQUISITES: 2610 or consent of instructor.

EC 3500 Analysis of Random Signals (4-0).
Fundamental concepts necessary for handling non-deterministic signals and noise in communication, control and signal processing systems are developed. Topics include properties of random time functions, statistical averages, autocorrelation and the power spectral density, transform relations, stationarity and ergodicity, noise models. PREREQUISITES: 2500 and OS 2102.

EC 3510 Communications Engineering (3-0).
The influence of noise and interference on the design and selection of hardware in practical radio communication transmitters and receivers. Specific topics include link and signal-to-noise ratio calculations, bandwidth trade-offs, carrier and data synchronization methods and hardware parameters. PREREQUISITES: 2220 and 3500.

EC 3550 Fiber Optic Systems Fundamentals (3-1).
An introduction to the components and to the concepts of designing fiber optic communications systems. Includes fiber properties and parameters, fiber fabrication and testing, LED and injection laser sources, pin photodiodes and avalance photodiode detectors, receiver design considerations, connector and splice technologies, and system design incorporating analysis and tradeoffs. Data distribution techniques are also studied. PREREQUISITES: 2220 and 2600.

EC 3600 Electromagnetic Radiation, Scattering, and Propagation (3-2).
The principles of electromagnetic radiation as applied to antenna engineering and scattering. The characteristics of various practical antenna types are considered. System parameters such as gain, pattern and cross-section are introduced and array theory is covered. Applications include sidelobe suppression, radar target scattering and satellite communications. PREREQUISITE: 2610.

EC 3610 Microwave Engineering (3-2).
A continuation of 2610, this course covers elements of microwave systems. The course begins with a discussion of circuit media, network characterization with s-parameters and passive circuits such as filters, couplers and impedance transformers. Solid state devices and integrated circuits are then discussed and electron tubes are treated. The course concludes with a study of microwave and millimeter wave propagation. Several laboratory exercises allow the student to pursue selected topics in greater depth in a practical setting. PREREQUISITE: 2610.

EC 3670 Principles of Radar Systems (4-2).
For students in the Avionics and Weapons curricula. Topics include microwave devices, microwave propagation, antenna fundamentals, electronically steerable arrays, pulse radar basics, detection of signals in noise, the radar equation, CW, pulse doppler, moving-target indicators, pulse compression, thee ambiguity function, tracking radars, conical scan, track-while-scan, scan with compensation and monopulse. PREREQUISITES: Consent of Instructor, U.S. Citizenship and SECRET clearance.

EC 3800 Microprocessor-Based System Design (3-2).
Advanced microprocessor system concepts are studed. Multimaster and multiprocessor systems issues. Memory management issures. Coprocessors and other advanced VLSI peripheral devices. HLL for solving engineering applications and linkage to OS and assembly language programs. The laboratory sessions will emphasize a design project involving advanced microprocessorsystem concepts. PREREQUISITES: 2800 and 2820.

EC 3820 Computer Systems (3-1).
The course presents a unified approach design of computer systems stressing the interacting processes implemented in hardware, software and firmware. General features of operating systems are studied as well as specific features of an existing system. The elements of multiprogramming systems are introduced. PREREQUISITE: 2800.

EC 3830 Digital Computer Design Methodology (3-2).
A design and project oriented course. Basic principles, theories and techniques for practical design of digital systems. Emphasizes an integrated viewpoint combining essential elements of classical switching theory with a thorough understanding of the versatility of modern integated circuits. Laboratory introduces modern design aids. PREREQUISITE: 2820.

EC 3910 Topics in Electrical Engineering (3-0 or (4-0).
This course examines topics of current interest in the field of electrical engineering. PREREQUISITE: Consent of Instructor.

Graduate Courses

EC 4100 Advanced Network Theory(3-0).
Topology, circuit formulation, nonlinear modeling, and computer solutions. Circuit sensitivity models. Concepts and test for passivity, activity, causuality, and stability. Driving point synthesis. Transfer function properties and synthesis to meet design criteria. Design with inductorless filters, switched-capacitor filters, operational amplifiers and integrated circuit components. PREREQUISITE: Consent of Instructor.

EC 4210 Electro-Optic systems Engineering (3-0).
Advanced topics and applications of electro-optics. Military applications of infrared technology. Signal-to-noise analysis of laser detector performance. Descriptions of high energy lasers, fiber optics or other topics. Student reports on EO/IR topics of current interest. PREREQUISITE: 3210.

EC 4300 Advanced Topics in Modern Control Theory (3-0).
Advanced topics and current developments in control theory and applications including such subjects as: the calculus of variations and Pontryagin's minimum principle applied to optimal control problems; numerical solution of two-point boundary-value problems; nonlinear estimation techniques; robust design techniques; large-scale systems; system identification; case studies of fire control and ship control systems. PREREQUISITE: Consent of Instructor.

EC 4310 Digital Control Systems (3-0).
Discrete systems are described and analyzed using time-domain and z-transform methods. Analytical design techniques are studied, as well as the engineering characteristics of computer control systems. PREREQUISITES: 2400 and 3310.

EC 4320 Design of Linear Control Systems (4-0).
Advanced concepts in the design of linear systems. Frequency response and root locus methods are applied to the design of stabilization and improvement of performance, using both graphical and analytical (algebraic) methods. For more complex systems, the Mitrovic-Siljak relationships are developed, leading to coefficient plane, parameter plane and parameter space and singular line methods. PREREQUISITE: 3310.

EC 4330 Navigation, Missile, and Avionics Systems (4-0).
The principles of operation of navigation, missile and avionics systems are presented. Topics are selected from the following areas to address the specific interests of the class: IR, EO, radar, laser, and acoustic sensors; inertial platforms; gyros and accelerometers; Loran, Omega, GPS, guidance, fir control, and tracking systems. PREREQUISITES: 3310, U.S. Citizenship and SECRET clearance.

EC 4340 Navigation, Missile and Avionics Systems (4-0).
This course covers essentially the same material as 4330, but with deletion of detailed analysis of specific systems. This course is intended for officers who do not have U.S. Citizenship. PREREQUISITE: 3310.

EC 4350 Nonlinear Systems (3-2).
Analysis and design of nonlinear systems with phase plane and describing function methods. Accuracy, limit cycles, jump resonances, relay servos and discontinuous systems are considered. PREREQUISITE: 2300.

EC 4360 Ship Control Systems (4-0).
Theory of motion of ships. Basic ship control systems: steering control, roll stabilization, boiler control loops, speed and propulsion controls. Sea states and their effects. Performance objectives and performance specifications; models and simulation studies. PREREQUISITE: 2300.

EC 4370 Mathematical Models and Simulation for Control Systems (4-0).
Modeling concepts and techniques for linear and nonlinear systems. Philosophy of model studies. Verification of the model and its parameters. Design studies using computer models. PREREQUISITE: 2300.

EC4430 Advanced Signal Processing and Spectral Estimation (3-0).
Design and implementation of digital signal processing algorithms. Included are a review of FIR and IIR linear filter design techniques with emphasis on structures, implementations, and quantization effects (finite register lengths, correlated and uncorrelated noise). Least square estimation filters including discrete Weiner filtering (stochastic deconvolution), linear prediction, autoregressive moving average processing, Levinson's algorithm and lattice structures, and self adaptive filters. PREREQUISITE: 3400.

EC 4440 Multidimensional Digital Signal Processing (3-1).
Fundamentals of digital signal processing for signals that are a function of two or more independent variables. Analysis in both the time/space and frequency domains. Areas where the theory of one-dimensional signal processing does not extend in any straight forward way to two or more dimensions are highlighted. Topics include convolution, difference equations, recursively computable systems, sampling, regions of support, multidimensional periodicity, Fourier analysis including discrete Fourier transforms, z-transforms, stability, multidimensional causality, and an introduction to filter design. PREREQUISITE: 3400.

EC 4450 Sonar Systems Engineering (4-1).
Mathematical development and discussion of fundamental principles that pertain to the design and operation of passive and active sonar systems. Topics from complex aperture theory, array theory, and signal processing are covered. PREREQUISITES: EC 3450 or PH 3452 or PH 3472 and EC 3500 or EC 4720.

EC 4460 Principles of Systems Engineering (3-0).
An introduction to the concepts, principles, methodology, and techniques of the design of large scale systems. Lecture topics include the systems approach; the system life cycle and system design process; determining system requirements from operational requirements; system effectiveness, reliability, maintainability, safety, and logistic support considerations; test and evaluation; and cost as a design parameter. Applications to Navy electronics systems are used to illustrate the subjects covered. A detailed case study analysis of a specific Navy system is performed by the students. PREREQUISITE: Consent of Instructor.

EC 4480 Signals Intelligence (SIGINT) Systems Engineering (2-2).
Airborne, shipboard, and ground based interept and direction finding system techniques used against simple and sophisticated electromagnetic radiation systems. Among the topics covered are current state of the art for wideband and directional antennas, wideband RF preamplifiers, scanning and chirping receivers, displays, recorders, pattern recognizers, and signal analysis devices. The laboratory periods are largely devoted to the specification and block diagram of systems to handle specified SIGINT tasks. PREREQUISITES: Consent of Instructor; U.S. Citizenship and SECRET clearance.

EC 4550 Digital Communications (4-0).
This course discusses some of the advantages and limitations of digital communications systems, to include: common modulation formats, matched-filter receivers, probability of error calculations, noncoherent receivers, carrier synchronization, frame and bit synchronization, telephone line modems, inter-symbol interference and adaptive equalizers, wide-band modems, exchange of band-width and signal-to-noise ratio, diversity combining, maximum-likelihood and maximum aposterior probability receivers, and channel capacity and finite rate communication with arbitrarily few errors. PREREQUISITE: 3510.

EC 4560 Communications ECCM (3-2).
Methods of reducing the effects of jamming on radio communications systems are considered. Matched filter and correlator theory and application to spread spectrum techniques of digital data transmission are treated. Synchronization problems and techniques are presented. Codes for error correction are briefly considered. Frequency hopping, time hopping, and hybrid systems are studied in addition to direct sequence spreading. Use of steerable null antennas is described. PREREQUISITE: 3510.

EC 4570 Decision and Estimation Theory (4-0).
Principles of optimal signal processing techniques for detecting signals in noise are considered. Topics include Maximum-Likelihood, Bayes Risk, Neyman Pearson and Min-Max criteria and calculations of their associated error probabilities (ROC curves) for signals in Gaussian noise. Principles of Maximum-Likelihood, Bayes Cost, MMSE and Maximum-Aposterior estimators are introduced. Asymptotic properties of estimators and the Cramer-Rao bound are developed. The estimator-correlator structure is derived for detection of signals with unknown parameters. This structure is illustrated by development of the radar (sonar) ambiguity function and matched filter processing systems. State estimation and the Kalman filter are derived and related to MMSE estimators. Emphasis is on dual development of continuous time and discrete time approaches, the latter being most suitable for digital signal processing implementations. PREREQUISITE: 3500.

EC 4580 Information Theory (4-0).
Concepts of information measure for discrete and continuous signals. Fundamental theorems relating to coding and channel capacity. Effects of noise on information transmission. Coding methods for error control in digital communication systems. Selected applications of the theory to systems. PREREQUISITE: 3500.

EC 4590 Communication Satellite Systems Engineering (3-0).
Communication satellite systems including the satellite and user terminals. Subjects include orbits, power sources, antennas, stabilization, link calculations, multiple access techniques, modulation and demodulation schemes, phase-locked loops, coding, transponder intermodulation and hardlimiting, receiver design, spread spectrum in SATCOM for multiple access, anti-jam and covert communications. PREREQUISITE: 3510. (May be concurrent).

EC 4600 Advanced Electromagnetic Theory (3-0).
An introduction is provided to advanced mathematical and numerical techniques of importance in the solution of electromagnetic problems. Applications of interest in the areas of antennas and microwave theory are covered. These include radiation and scattering from wires and surfaces and wave propagation on structures used in microwave integrated circuitry. PREREQUISITE: 3600 or 3610.

EC 4610 Radar Systems (3-2).
The radar range equation is developed in a form including signal integration, the effects of target cross-section, fluctuations, and propagation losses. Modern techniques discussed include pulse compression frequency-modulated radar, MTI, pulse doppler systems, monopulse tracking systems, multiple-unit steerable array radars, and synthetic aperture systems. Laboratory sessions deal with basic pulse radar systems from which the advanced techniques have developed, with pulse compression, and with the measurements of radar cross section of targets. PREREQUISITES: 3500 and 3610 (may be concurrent), or equivalent; U.S. Citizenship and SECRET clearance.

EC 4620 Radar Systems (3-2).
This course covers essentially the same material as 4610, but with deletions of detailed analysis of specific items. PREREQUISITES: 3500 and 3610 (may be concurrent), or equivalent. This course is intended for students who do not have U.S. Citizenship.

EC 4660 High Frequency Techniques (4-0).
The high frequency path from transmitter multicoupler to receiver multicouplers. Topics include HF propagation, propagation prediction, sounders, nuclear effects, ionospheric noise and interference, dynamic range problems, antenna and site effects, and target location techniques. PREREQUISITES: 3600, or consent of Instructor; U.S. Citizenship and SECRET clearance.

EC 4670 Electronic Warfare (4-1).

This course is intended for students who are not in the Electronics or Communications Engineering curricula. Three lecture hours are shared with 4680. In addition to the topics listed under 4680, background material on communication theory and digital signal processing is presented. PREREQUISITES: 3670, U.S. Citizenship and SECRET clearance.

EC 4680 Electronic Warfare Techniques and Systems (3-3).

Active and passive countermeasure techniques are considered, including signal representation, signal analysis, and signal interception. Important parameters of radar and communications systems are defined. Denial and deceptive jamming techniques are considered along with countermeasure and counter-countermeasure techniques. Signal intercept systems are treated. Acoustic, radio-frequency, infrared, and optical countermeasures are discussed. PREREQUISITES: 4610, U.S. citizenship and SECRET clearance.

EC 4690 Principles of Electronic Warfare (unclassified) (3-2).

For students who do not have U.S. citizenship. The objectives are to define EW signals and system parameters, and establish interrelationships of these parameters for active and passive EW systems. Topics studied are signal waveforms and spectra, receivers, signal processing and display, jamming techniques, direction finding, deception and confusion techniques. Laboratory exercises apply the basic principles of jamming and CCM to radar systems. PREREQUISITE: 4620.

EC 4820 Computer Architectures (3-1).

A study of advances in computer architecture. Computer descriptive languages. Memory system issues. Mini-computers and bit-slice microcomputers. High performance computers: pipeline supercomputers, array processors, multiprocessors. Data flow architectures. Fault tolerant and military architectures. PREREQUISITE: 3800 and 3820 or 3830.

EC4830 Digital Computer Design (3-1).

A study of the architecture of and the design process for digital computer systems. Topics covered will include instruction set architectures, advanced computer arithmetic, hierarchical design techniques, design of systems using standard and custom VLSI devices, Modern computer aided-design tools are emphasized. Laboratory project is the design of a digital computer. PREREQUISITES: 3820 and 3830.

EC 4850 Computer Communication Methods (3-0).

The course objective is to develop an understanding of computer communications network design. Coverage includes the essential topics of network topology, connectivity, queueing delay, message throughput and cost analysis. The International Standard Office (ISO) model is divided into physical link, data link, network, transport, session and application layers. The protocol of these layers, data framing, error control, flow control, packet assembly/disassembly, routing, congestion, virtual circuit connection are discussed. New lower networking technologies such as Ethernet, ring, satellite link, X.25 public packet switching are introduced. PREREQUISITE: 2500 and 3820.

EC 4870 VLSI Systems Disign (3-2).

An introduction to the technology and design of very-large-scale-integrated systems. Emphasizing NMOS devices and circuits, a structured approached to system design is developed. The approach is based upon the use of repetitive cell structures and highly regular topologies. A complete VLSI system example is presented in detail. Project work is oriented to system and layout planning of a small system. PREREQUISITE: 3830.

EC 4900 Special Topics in Electrical Engineering (2-0 to 5-0).

Supervised study in selected areas of electrical engineering to meet the needs of the individual student. A written report is required at the end of the quarter. PREREQUISITE: Consent of the Department Chairman. Graded on Pass/Fail basis only.

EC 4910 Advanced Topics in Electrical Engineering (3-0 or 4-0).

This course examines advanced topics of current interest in the field of electrical engineering. PREREQUISITE: Consent of Instructor.

COURSES
FOR INTERDISCIPLINARY
CURRICULA

Upper Division Courses

EO 2710 Introduction to Signals and Systems (4-2).

A first course in communications systems for the C3, Space Operations, and Telecommunications Management curricula. Coverage begins with the representation of signals in the time and frequency domains and progresses through linear system analyis using Fourier transform theory. Analog modulation techniques are presented emphasizing communications system level analysis and spectral representation. Topics include Fourier series, Fourier transforms, linear systems, filters, signal bandwidth, communications channels, and amplitude, frequency, and phase modulation. PREREQUISITE: MA 2050.

EO 2720 Introduction to Electronic Systems (4-2).

A first course in electronic systems for the ASW and EW systems curricula. Emphasis is on the functional aspects of basic circuits and signals. Topics include electrical quantities, resistive circuits, inductance and capacitance, operational amplifiers, time and frequency response, rectifiers and logic elements. PREREQUISITE: Calculus.

EO 2730 Control Systems (2-1).
This course develops the basic tools of the control systems engineer. The applications to electronic warfare are emphasized in the examples and laboratory experiments. The dynamics for a radar control system, a missile seeker head tracking system and missiles are investigated. Basic topics are introduced such as signal flow graphs and system step and frequency response characteristics, and digital systems theory as used in radar tracking and command guided and semiactive homing missiles. PREREQUISITES: Differential equations, Laplace transform and FORTRAN.

EO 2750 Communications Systems (4-2).
A second course in communications systems for the C3, Space Operations, and Telecommunications Management curricula. Coverage begins with the sampling theorem and various forms of digital modulation emphasizing the spectral representation of digital and pulse signals. Noise is introduced with emphasis on its effects on a communication system. Specific topics include sampling, pulse-amplitude modulation, time-division multiplexing, pulse-code modulation, baseband encoding, phase-shift keying, noise temperature, noise figure, and signal-to-noise ratio. PREREQUISITE: EO 2710.

EO 2760 Electromagnetic Theory (4-1).
The experimental laws of electromagnetic theory and the development of Maxwell's equations are presented. Maxwell's equations are then utilized in the study of plane waves, transmission lines, wave guides, cavity resonators, and elementary radiation. Laboratory experiments dealing with high frequency components and measurements reinforce and extend the concepts presented in the lectures. PREREQUISITES: EO 2720 and MA 2181.

EO 2790 Survey of Communications Systems (4-0).
This course supports the Intelligence curriculum by providing an overview of the principles, concepts, and trade-offs underlying communications systems. Topics include: signals and their representation as functions of time and frequency, effects of bandwidth limitations upon signals, analog and digital modems, signal-to-noise considerations in communications systems, reliable communications path concepts, major communications system design trade-offs, and examples of modern communications systems.

Upper Division or Graduate Courses

EO 3720 Introduction to Signals and Noise (4-1).
A course in the analysis of signals and noise for the ASW and EW curricula. Topics include Fourier analysis of periodic and pulse signals, linear filter response, correlation and spectral density of random signals and sampling. PREREQUISITES: EO 2720 and a first course in probability.

EO 3750 Communications System Analysis (3-1).
The final course in communications systems for the C3, Space Operations, and Telecommunications Management curricula. The objective is to study communications from a system perspective concentrating on the relative performance of several important communication systems and the analysis of trade-offs available in the design of communications systems. Specific topics introduced include relative performance of modulation types in noise, bit error rates, error detection and correction, signal to noise ratio, antenna characteristics, propagation, and path calculations. Special subjects will be introduced and existing knowledge reinforced through the study of existing military communication systems. PREREQUISITE: EO 2750.

EO 3760 Electromagnetic Radiation, Scattering, and Propagation (4-2).
The fundamentals of antennas used in the VLF through the microwave portion of the electromagnetic spectrum are presented. Scattering and propagation in this part of the spectrum are also discussed, as are those elements of electromagnetic compatibility which relate to radiation. Laboratory exercises relating to pattern and impedance measurement, and use of computer programs further enhance the student's understanding of the lecture concepts. PREREQUISITE: 2760.

EO 3780 Electronic Warfare Computer Applications (3-2).
Application of digital and analog techniques to the recording, processing, display, and interpretation of electronic warfare signals and data. The computer is applied to the solution of electronic warfare problems such as signal identification. PREREQUISITES: EC 2810, CS 3510, or CS 3230; EO 4780.

Graduate Courses

EO 4720 Signal Processing Systems (4-1).
A study of digital, analog, and hybrid signal processing systems for communications, echo ranging, and electronic surveillance. Examples from current and proposed military systems will be analyzed. The course is designed for the ASW and EW curricula. PREREQUISITE: EO 3720.

EO 4730 Electro-Optic Systems and Countermeasures (3-1).
A study of military applications of electro-optic systems, IR and EO missile seekers, laser designators, optical surveillance, high energy laser systems, laser communications, and laser radar. Emphasis is on system applications, countermeasures and counter countermeasures. Students report on electro-optic systems. PREREQUISITES: EC 4410 or PH 3271; U.S. Citizenship and SECRET clearance.

EO 4750 Signals Intelligence (2-0).

This course focuses on U.S. signals intelligence capabilities for countering current threats and the processes for designing or upgrading U.S. capabilities. It is designed to enhance the student's knowledge and understanding of current and planned U.S. SIGINT systems and capabilities and the design, development and employment of SIGINT and ESM systems. PREREQUISITE: Registration in EW curriculum 595 or consent of Instructor. U.S. Citizenship and SI clearance.

EO 4760 Microwave Devices and Radar (4-2).

Those microwave devices most important in radar and in electronic warfare systems are studied, including magnetrons, traveling-wave tubes, and solid-state diodes. The radar range equation is developed. In addition to basic pulse radar, modern techniques are discussed including doppler systems, tracking radar, pulse compression, and electronically steerable array radars. Electromagnetic compatibility problems involving radar systems are considered. Laboratory sessions deal with basic pulse radar systems from which the advanced techniques have developed, with performance measurement methods, automatic tracking systems, pulse compression, and the measurement of radar cross section of targets. PREREQUISITES: EO 4720, EO 3760 (may be taken concurrently) or consent of Instructor, U.S. Citizenship and SECRET clearance.

EO 4780 Electronic Warfare Systems (3-2).

This course covers electronic warfare in that portion of the electromagnetic spectrum through the millimeter wavelength region. The infrared through electro-optic region is covered in a companion course, EO 4730. Electronic denial and deceptive countermeasures against fuses, communications, and various radar detection and tracking systems are discussed. Equations for required jammer gain and power output are developed. The characteristics of passive countermeasures are discussed. Other topics include anti-radiation missiles, counter countermeasure circuits, target masking and modification, signal intercept, signal sorting, signal identification, and direction finding. Techniques are discussed in relation to U.S., allied, and communist bloc systems. Laboratory work reinforces the classroom discussions. PREREQUISITES: EO 4760, U.S. Citizenship and SECRET clearance.

EO 4790 C3 Countermeasures (2-0 to 5-0).

Supervised study in selected areas of electronic warfare to meet the needs of individual students. A written report is required at the end of the quarter. PREREQUISITE: Consent of Group Chairman. Graded on a Pass/Fail basis only.

ELECTRONIC WARFARE ACADEMIC GROUP

Chairman:

Joseph Sternberg, Professor,
Code 73, Spanagel Hall, Room 200,
(408) 646-3496, AV 878-3496.

The Electronic Warfare Academic Group is an interdisciplinary association of faculty, consisting of eight members representing five separate academic disciplines. An academic group is a less formal organization than an academic department, and each professor in the group has an appointment in an academic department. The Electronic Warfare Academic Group has administrative responsibility for the academic content of the Electronic Warfare Program of study. Teaching in this multidisciplinary program is carried out by faculty members attached to the following academic departments: Electrical and Computer Engineering, Mathematics, Meteorology, Operations Research, and Physics. Thesis topics for students in this area of study are approved by the group and the final thesis is approved by the Chairman.

MASTER OF SCIENCE IN SYSTEMS ENGINEERING

The degree of Master in Science in Systems Engineering (Electronic Warfare) will be awarded at the completion of a multidisciplinary program, Curriculum 595, satisfying the following degree requirements:

The Master of Science in Systems Engineering requires a minimum of 45 quarter hours of graduate level work of which at least 15 hours must represent courses at the 4000 level. Graduate courses in at least four different academic disciplines must be included, and in two disciplines, a course at the 4000 level must be included.

An approved sequence of at least three courses constituting advanced specialization in one area must be included.

In addition to the 45 hours of course credit, an acceptable thesis must be completed.

COURSE OFFERINGS

EW 0002 Seminar (0-1).
Special lectures and discussion of matters related to the EW program. PREREQUISITE: SECRET clearance.

EW 0810 Thesis Research/Group Project (0-0).
Students in the Systems Engineering curricula will enroll in this course which consists of an individual thesis or a group project involving several students and faculty.
ENGINEERING ACOUSTICS ACADEMIC COMMITTEE

Chairman:

Steven L. Garrett, Associate Professor, Code 61Gx, Spanagel Hall, Room 101L, (408) 646-2540, AV 878-2540.

The academic character of the programs in the Engineering Acoustics is interdisciplinary, with courses and laboratory work drawn principally from the fields of physics and electrical engineering. Although broadly based, the emphasis of the programs is on those aspects of acoustics, signal processing, and computers related to underwater sound propagation, electroacoustic transduction, and the detection, classification, tracking, and quieting of underwater targets. These programs are designed specifically for students in the Underwater Acoustics Curriculum and government employees in acoustics-related laboratories and systems commands.

The academic aspects of the program are the responsibility of an academic committee composed of representatives from the Department of Physics and of Electrical and Computer Engineering. The present chairman of this committee is

MASTER OF SCIENCE IN ENGINEERING ACOUSTICS

The degree, Master of Science in Engineering Acoustics, will be awarded as an interdisciplinary program to be carried out in accordance with the following degree requirements:

a. A student pursuing a program leading to a Master of Science in Engineering Acoustics must have completed work which would qualify him/her for a Bachelor of Science degree in engineering or physical science. Credit requirement for the Master of Science degree must be met by courses in addition to those used to satisfy this requirement.

b. The Master of Science in Engineering Acoustics requires a minimum of 36 graduate credit quarter hours of course work; at least 20 graduate quarter hours must be taken in acoustics and its applications. One 4000 level course from each of three of the following areas must be included: wave propagation, transducer theory and design sonar systems, and signal processing.

c. An acceptable thesis must be completed.

Approval of each program by the Engineering Acoustics Academic Committee must be obtained prior to reaching the mid point of the degree program.

DOCTOR OF PHILOSOPHY AND DOCTOR OF ENGINEERING

The Departments of Electrical Engineering and Physics jointly sponsor an interdisciplinary program in Engineering Acoustics leading to either the degree Doctor of Philosophy or Doctor of Engineering. Areas of special strength in the departments are physical acoustics, ocean acoustics, and acoustic signal processing. A noteworthy feature of this program is that a portion of the student's research may be conducted away from the Naval Postgraduate School at a cooperating laboratory or other federal government installation. The degree requirements and examinations are as outlined under the general school requirements for the Doctor's degree. In addition to the school requirements, the departments require a preliminary examination to show evidence of acceptability as a doctoral student.

DEPARTMENT OF MATHEMATICS

Chairman:

Harold M. Fredricksen, Professor,
Code 53Fs, Ingersoll Hall, Room 344,
(408) 646-2206, AV 878-2206.

Associate Chairmen:

Research:

Guillermo Owen, Professor,
   Code 53On, Ingersoll Hall, Room 341,
   (408) 646-2720, AV 878-2720.

Scheduling:

Donald Trahan, Associate Professor,
Code 53Tn, Ingersoll Hall, Room 345,
(408) 646-2763, AV 878-2763.

Advanced Programs:

Carroll Wilde, Professor,
Code 53Wm, Ingersoll Hall, Room 346,
(408) 646-2664, AV 878-2664.

As well as the master of science degrees, the Mathematics Department offers individually tailored minor programs for many of the School's doctoral students. The majority of the departmental effort is devoted to the service courses offered, including the refreshers, and 1000-2000 level courses. The department maintains a microprocessor lab, available at all times to all students and staff.

a. The program must be approved by the Chairman of the Department of Mathematics.

b. The program must include at least fifteen hours at the 4000 level, with at least twelve hours in 4000 level mathematics courses.

c. The program must contain at least nine hours in an approved sequence of applications courses from outside the Mathematics Department, and at least nine hours in an approved sequence of courses from within the Mathematics Department.

d. An acceptable thesis is normally required and is credited as the equivalent of nine hours of 3000 level mathematics courses. (A student may petition the Chairman of the Mathematics Department to substitute nine hours of courses for the thesis.)

e. Courses in the following areas are specifically required in any program; some of these courses may be used to satisfy part (or all) of the mathematics sequence requirement in item (2.c.) above:

(1) Real/complex analysis (a two-course sequence), or applied algebra (a two-course sequence)

(2) Ordinary and/or Partial Differential Equations and Integral Transforms

(3) Numerical Analysis

(4) Probability and Statistics

MASTER OF SCIENCE IN APPLIED MATHEMATICS

In order to enter a program leading to the degree Master of Science in Applied Mathematics, a student must have a background which would qualify him for a Bachelor of Science degree with major in mathematics or, with a strong mathematical orientation, in a physical science or engineering.

A program that leads to the degree Master of Science in Applied Mathematics for a student who has met the entrance criteria must contain a minimum of 45 quarter hours of graduate level courses with a minimum QPR of 3.0, subject to the following conditions:

MASTER OF SCIENCE DEGREE WITH MAJOR IN MATHEMATICS

In order to pursue a program leading to the Master of Science degree with a major in mathematics, a student must have a background which would qualify him for a Bachelor of Science degree with major in mathematics.

A curriculum which satisfies the Master of Science degree requirements consists of a minimum of 45 quarter hours of approved courses in mathematics and related subjects. An acceptable thesis may be counted as equivalent to nine quarter hours. A student must have a QPR of 3.0 or greater in any major program.

At the discretion of the Chairman of the Department of Mathematics, a student pursuing a program leading to the Master of Science degree with major in mathematics may (or may not) be required to write a thesis in mathematics.

The following topics are specifically included in any major program.
    a. 6 hours of Algebra
    b. 6 hours of Analysis

The main areas of thesis topics are
a. Optimization
b. Differential Equations
c. Fourier Analysis
d. Functional Analysis
e. Numerical Methods
f. Optimal Control
g. Calculus of Variations
h. Tensor Analysis and Applications.

DEPARTMENTAL COURSE OFFERINGS

MA 0110 Refresher for BASIC Programming on Desk-top Microcomputers; (2-0).
Numerical calculations and BASIC programming on desk-top microcomputers. Numerical calculations will include powers and roots, logs and exponentials and trigonometric functions. BASIC programming includes input/output, loops, branching, subroutines and use of library functions.

MA 0112 Refresher Mathematics (5-5).
Calculus Review.

MA 0125 Logic and Set Theory (5-0).
An introduction to the elements of set theory and mathematical reasoning. Sets, Venn diagrams, truth tables, quantifiers, logical reasoning. Functions, relations, partitions and equivalence relations. 1-1 correspondence. (Paradoxes of set theory, axiom of choice.) PREREQUISITE: None.

MA 0810 Thesis Research (0-0).
Every student conducting thesis research will enroll in this course.

MA 1070, 1080, 1081, 1082 and 1083 constitute the Technical Transition Program (TTP), and prepares the successful candidates for entry into MA 1116 or 1118.

MA 1070 Vectors and Matrices (3-2).
Solving systems of linear algebraic equations: Gaussian elimination, pivotal condensation. Linear independence/dependence of systems. Matrix algebra. Eigenvalues and eigenvectors for matrices. Applications using microcomputers. Graded on a Pass/Fail basis only.

MA 1080 Differential Calculus of a Single Variable (3-2).
Slope of a curve, derivative, velocity and other rates of change. Limits and continuity. Differentiation of products, powers, and quotients; the chain rule. Implicit differentiation. Tangent line approximation and Newton's method. Derivatives of Trigonometric functions. Curve sketching, related rates, maxima, the Mean Value Theorem. Graded on a Pass/Fail basis only.

MA 1081 Integral Calculus of a Single Variable (3-2).
Indeterminate forms and L'Hopital's rule. Indefinite integrals and the Fundamental Theorem. Area under a curve, trapezoidal/ Simpson's rules. Integration by substitution. Applications to motion along a straight line, volumes, arc length, work, moments and center of mass. Calculus of inverse trigonometric, logarithmic, and exponential functions and their applications. Graded on a Pass/Fail basis only.

MA 1082 Integration Methods and Vectors (3-2).
Integration by parts, products and powers of trig functions, trig substitutions, partial fractions. Improper integrals. Hyperbolic functions. Polar coordinates. Vectors in the plane and space. Parametric equations. Lines and planes in space. Graded on a Pass/Fail basis only.

MA 1083 Vector Functions/Introductory Differential Equations (3-2).
Vector-valued functions, tangent vectors, tangential and normal components of acceleration, curvature and arc length in space. Applications to planetary motion. First order differential equations: separable variables, homogeneous, linear, and exact equations. Second order differential equations with constant coefficients: homogeneous and nonhomogeneous, undetermined coefficients, variation of parameters. Picard's method and Euler's method for numerical solutions. Graded on a Pass/Fail basis only.

MA 1110 Introduction to BASIC Programming on Desk-top Microcomputers; (2-0).
Numerical calculations and BASIC programming on desk-top microcomputers. Numerical calculations will include powers and roots, logs and exponentials and trigonometric functions. BASIC programming includes input/output, loops, branching, subroutines and use of library functions.

MA 1112 Selected Calculus Topics Review (2-2).
Functions, limits, continuity, differentiation of functions of one and several variables, implicit functions, parametric equations, optimization; indefinite, definite and multiple integrals; sequences and series, series representation of functions; Euler's formula; review of complex numbers. PREREQUISITE: A previous course in calculus.

MA 1115 Single Variable Calculus (5-0).
Review of analytic geometry and trigonometry, functions of one variable, limits, derivatives, continuity and differentiability; differentiation of algebraic, trigonometric, logarithmic and exponential functions with applications to maxima and minima, rates, differentials; product rule, quotient rule, chain rule; antiderivatives, integrals and the fundamental theorem of calculus; definite integrals, areas, lengths of curves and physical applications; special methods of integration. PREREQUISITE: Precalculus mathematics (May be taken through Continuing Education as mini-courses MA 1131-36).

MA 1116 Multivariable Calculus (5-0).
Review of calculus of one variable; vector algebra and calculus, directional derivative, gradient and integral theorems; maxima and minima of functions of two independent variables, total differential; double and triple integrals, cylindrical and spherical coordinate systems; infinite series, convergence tests, uniform convergence and Taylor series. PREREQUISITE: Previous course in calculus. (May be taken through Continuing Education as mini-courses MA 1137-40 and 1150.)

MA 1117 Single Variable Calculus with Laboratory (5-2).
All of the course material of MA 1115 with an additional 2 hour problem solving laboratory. PREREQUISITE: Precalculus mathematics (May be taken through Continuing Education as mini-courses MA 1131-36).

MA 1118 Multivariable Calculus with Laboratory (5-2).
All of the course material of MA 1116 with an additional 2 hours problem solving laboratory. PREREQUISITE: Previous course in calculus (May be taken through Continuing Education as mini-courses MA 1137-40 and MA 1150).

Upper Division Courses

MA 2025 Logic, Sets and Functions (4-1).
Propositional logic, elements of set theory, relations, functions and partitions. An introduction to theorem proving techniques, including mathematical induction, in the context of basic mathematical systems.

MA 2042 Linear Algebra (4-0).
Systems of linear equations, matrices, and determinants. Finite dimensional vector spaces, linear dependence, basis, dimension, inner products, orthogonalization. Linear transformations, rank and nullity, change of basis, linear functionals, orthogonal transformations, quadratic forms, symmetric matrices, diagonalization, eigenvalues and eigenvectors. PREREQUISITES: MA 1115.

MA 2047 Linear Algebra and Vector Analysis (4-0).
Solutions of linear systems of equations, algebra of matrices, determinants. Linear vector spaces, linear dependence and independence, subspaces, bases and dimension. Inner products, ortho-normal bases and Gram-Schmidt process. Eigenvectors and eigenvalues. The algebra and calculus of vectors in R^2 and R^3. Del operator, directional derivative, gradient, divergence and curl with applications. Line, surface and volume integrals, Green's, Stoke's and divergence theorems. PREREQUISITE: MA 1116 (may be taken concurrently).

MA 2049 Applied Mathematics for Engineering and Operational Analysis (4-0).
Solutions of systems of linear algebraic equations, Gaussian elimination, pivotal condensation; matrix algebra, determinants, independent systems, eigenvalues, eigenvectors. Linear, constant coefficient, ordinary differential equations, scalar and systems, homogeneous and non-homogeneous; solutions by formula, by Laplace transforms, and by infinite series. PREREQUISITE: MA 1116 (May be taken concurrently).

MA 2050 Applied Mathematics for Engineering and Operational Analysis Plus Lab (4-1).
Course identical to MA 2049 plus a one (1) hour problem solving lab.

MA 2121 Differential Equations (4-0).
Ordinary differential equations: linear and non-linear equations, homogeneous and nonhomogeneous equations, linear independence of solutions, power series solutions, systems of differential equations, Laplace transforms applications. PREREQUISITE: MA 1116 or equivalent, MA 2047 or equivalent concurrently.

MA 2125 Differential Equations (3-0).
An abbreviated version of MA 2121, without Laplace transforms. PREREQUISITE: MA 1116 or equivalent, MA 2047 or equivalent concurrently.

MA 2129 Ordinary Differential Equations and Laplace Transforms (2-1).
First order ordinary differential equations, second order equations with constant coefficients, application, Laplace transforms. PREREQUISITE: Differential and integral calculus.

MA 2151 Introduction to Complex Variables and Numerical Methods (4-0).
Analytic functions, Laplace's equation, rational functions; line integrals in the plane, Cauchy's integral theorem, indefinite integration, Cauchy's integral formula. Taylor series, finite differences, roots of equations, linear equations, numerical integration. PREREQUISITES: FORTRAN programming and MA 1116.

MA 2181 Vector Calculus (2-1).
Differentiation and integration of vector functions. The del operator and related concepts. Green's theorem, Stokes' theorem, divergence theorem. Interpretations and applications. PREREQUISITE: Calculus and vector algebra.

MA 2300 Mathematics for Management (5-0).
This course is designed to provide a mathematical basis for modern managerial tools and techniques. It includes elements of differential and integral calculus, sequences and series and an introduction to matrix algebra. PREREQUISITE: College algebra.

MA 2400 Introduction to Vectors, Matrices and Vector Calculus (3-0).
The algebra of vectors and matrices. Systems of linear equations, determinants; eigenvalues. Directional derivative, gradient, divergence, curl; line, surface and volume integrals; integral theorems; applications. PREREQUISITE: Differential and integral calculus.

MA 2401 Introduction to Differential Equations and Complex Functions (4-1).
Ordinary differential equations including series solutions and Laplace transforms; Fourier series and partial differential equations; complex analytic functions. PREREQUISITE: Differential and integral calculus.

MA 3001 Incremented Directed Study (1-0).
This course provides the opportunity for a student who is enrolled in a three thousand level course to pursue the course material in greater depth by directed study to the extent of one additional hour beyond the normal course credit.

MA 3002 Incremented Directed Study (2-0).
This course provides the opportunity for a student who is enrolled in a three thousand level course to pursue the course material in greater depth by directed study to the extent of two additional hours beyond the normal course credit.

MA 3026 Discrete Mathematics and Automata Theory (5-0).
Analysis of algorithms. Elementary concepts of semigroups, monoids, and groups. Regular languages and finite state automata. Context-free languages and pushdown automata. Applications to computer science. PREREQUISITE: MA 2025.

MA 3035 Mathematical Introduction to Microprocessors (2-1).
An introduction to microprocessors at the hardware/software interface. Machine language programming, assembly language programming, connecting and controlling peripherals (terminal, disc drive...), operating systems.

MA 3046-3047 Linear Algebra I-II (3-0).
Special types of matrices; orthogonal reduction of a real symmetric matrix to diagonal form; quadratic forms and reductions to expressions involving only squares of the variables; applications to maxima and minima; Lambda matrices and related topics; Cayley-Hamilton theorem. Reduced characteristic function; canonical forms, idempotent and nilpotent matrices; solutions to matrix polynomial equations; functions of a square matrix; applications such as to differential equations, stability criteria. PREREQUISITE: MA 2042.

MA 3110 Topics in Intermediate Analysis (4-0).
Integrated with linear algebra. Functions of several variables, continuous transformations, jacobians, chain rule, implicit function theorem, inverse function theorem, extrema, Lagrange multiplier technique, curvilinear coordinates, convexity, difference equations and generating functions. PREREQUISITE: MA 1116 or equivalent, MA 2042 or equivalent concurrently.

MA 3132 Partial Differential Equations and Integral Transforms (4-0).
Solution of boundary value problems by separation of variables; Sturm-Liouville problems; Fourier, Bessel and Legendre series solutions, Laplace and Fourier transforms; classification of second order equations; applications. PREREQUISITE: MA 2121 or equivalent.

MA 3139 Fourier Analysis and Partial Differential Equations (4-0).
Solution of the one-, two-, and three-dimensional wave equations by separation of variables and characteristics; d'Alembert's solution; ray propagation; Fourier analysis applied to ordinary and partial differential equations; convolution theorems. For ASW students. PREREQUISITE: MA 2129.

MA 3185 Tensor Analysis (3-0).
Definition of tensor. Algebra of tensors. The metric tensor. The geometric representation of vectors in general coordinates. The covariant derivative and its application to geodesics. The Riemann tensor, parallelism, and curvature of space. PREREQUISITE: Consent of Instructor.

MA 3232 Numerical Analysis (3-2).
Solution of nonlinear equations, zeros of polynomials. Interpolation and approximation. Numerical differentiation and quadrature. Matrix manipulations; linear simultaneous algebraic equations, eigenvalues. Numerical solutions of ordinary differential equations. Analysis for computational errors. PREREQUISITE: MA 2121 or equivalent (may be taken concurrently) and FORTRAN programming.

MA 3243 Numerical Methods for Partial Differential Equations (4-1).
Finite difference approximations for derivatives. Truncation and discretization errors. Parabolic and hyperbolic equations. Explicit and implicit methods. The Crank-Nicolson method. Approximations at irregular boundaries. Elliptic equations, the Liebmann method. Systems of partial differential equations. Students are expected to write FORTRAN programs for the above methods. PREREQUISITE: MA 3132 and FORTRAN programming.

MA 3400 Mathematical Modeling Processes (3-0).
Practice model construction while demonstrating the utility and universality of mathematics. Topics include modeling using graphical analysis, the model building process, modeling using proportionality, analysis of data, modeling using dimensional analysis, dynamical models, optimization of models and simulation. PREREQUISITE: MA 1116 or MA 2300 or consent of Instructor.

MA 3560 Modern Applied Algebra (3-0).
An introductory course in the techniques and tools of abstract algebra with special emphasis on applications to coding theory, radar and communications systems and computer science. Elements of set theory, equivalence relations and partitions. Semi-groups, groups, subgroups and homomorphisms. Rings, ideals and fields. Directed graphs and lattices. Applications may vary. PREREQUISITE: Consent of Instructor.

MA 3565 Modern Algebra I (3-0).
An advanced course in the subject of abstract algebra. Semigroups, groups, subgroups, normal subgroups. Groups acting on sets, operator groups. The Jordan-Holder Theorem, solvable groups. The Krull Schmidt Theorem. PREREQUISITE: MA 3560 or consent of Instructor.

MA 3605-3606 Fundamentals of Analysis I-II (3-0).
Elements of set theory, the real number system, and the usual topology of E_n; properties of continuous functions; differential of vector-valued functions, Jacobians, and applications (implicit function, inverse function theorem, extremum problems). Functions of bounded variation and theory of Reimann-Stieltjes integration, multiple and iterated integrals, convergence theorems for sequences and series of functions. PREREQUISITE: Consent of Instructor.

MA 3610 Introduction to General Topology (3-0).
Topologies, boses and subbases, compactness and connectivity. Moore-Smith convergence theorems. Metrization and embedding theorems, uniform structures. Tychonoff product theorem, Alexandroff and Stone Cech compactification. PREREQUISITE: MA 3605.

MA 3675-3676 Theory of Functions of a Complex Variable I-II (3-0).
Selected topics from the theory of functions of a real variable; complex functions, power series, Laurent series. Singularities of complex functions; residues and contour integration; zeros of analytic functions, factors of and infinite product representation for analytic functions; maximum modulus theorems for analytic and harmonic functions; conformal mapping. PREREQUISITE: Consent of Instructor.

MA 3730 Theory of Numerical Computation (3-0).
Analysis of computational methods used for the solution of problems from the areas of algebraic equations, polynomial approximation, numerical differentiation and integration, and numerical solution of ordinary differential equations. PREREQUISITE: Consent of Instructor.

Graduate Courses

MA 4237 Advanced Topics in Numerical Analysis (Variable credit, usually (4-0)).
The subject matter will vary according to the abilities and interest of those enrolled. PREREQUISITE: Consent of Instructor. Graded on Pass/Fail basis only.

MA 4362 Orbital Mechanics (3-0).
A review of the two body problem; non central geopotentials; long-term periodic effects; perturbations. PREREQUISITE: Consent of Instructor.

MA 4391-4392 Numerical Methods for Fluid Dynamics I-II (4-0).
Analytical methods used to study potential, inviscid and viscous flows will be considered in the first quarter. Numerical methods for the solution of the same problems will be exclusively used during the second quarter. PREREQUISITES: MA 2129, MA 2151 or MA 2401; MA 3132 or MA 3139.

MA 4393 Topics in Applied Mathematics (3-0).
A selection of topics in applied mathematics. The course content varies. Credit may be granted for taking this course more than once. PREREQUISITE: Consent of Instructor.

MA 4566 Modern Algebra II (3-0).
A continuation of MA 3565. Rings, ring homomorphism, integral domains and euclidean domains. Unique factorization rings, polynominal rings. Modules and ideals. Noetherian rings, field extension and Galois theory. PREREQUISITE: MA 3565.

MA 4593 Topics in Algebra (3-0).
A selection of topics in algebra. Content of the course varies. Students will be allowed credit for taking the course more than once. PREREQUISITE: Consent of Instructor. Graded on Pass/Fail basis only.

MA 4611 Calculus of Variations (3-0).
Euler equation, Weierstrass maximum principle, Legendre condition, numerical procedures for determining solutions, gradient methods, Newton's method, transversality condition, Rayleigh-Ritz method, conjugate points, and applications. PREREQUISITE: MA 2121 (programming experience desirable).

MA 4620 Theory of Ordinary Differential Equations (3-0).
Introduction to the modern theory of ordinary differential equations. Systems of equations. Theoretical and constructive methods of solutions. PREREQUISITE: Consent of Instructor.

MA 4622-4623 Principles and Techniques of Applied Mathematics I-II (3-0).
Linear operators, generalized functions and Hilbert spaces; solutions of partial differential equations by eigenfunctions; variational techniques and their applications to eigenfunctions; integral equations, Laplace, Fourier and other transforms, including their inversion in the complex plane as applied to partial differential equations; method of characteristics for hyperbolic equation. PREREQUISITE: MA 3132 or equivalent.

MA 4635-4636 Functions of Real Variables I-II (3-0).
Semi-continuous functions, absolutely continuous functions, functions of bounded variation; classical Lebesque measure and integration theory, conver-gence theorems and Lp spaces. Abstract measure and integration theory, signed measures, Radon-Nikodym theorem; Lebesque decomposition and product measure; Daniell integrals and integral representation of linear functionals. PREREQUISITE: MA 3606.

MA 4672 Integral Transforms (3-0).
The Laplace, Fourier and Hankel transforms and their inversions. Applications to problems in engineering and physics. PREREQUISITE: Consent of Instructor.

MA 4693 Topics in Analysis (3-0).
A selection of topics in analysis. Content of the course varies. Students will be allowed credit for taking the course more than once. PREREQUISITE: Consent of Instructor.

MA 4872 Topics in Calculus of Variations (3-0).
Recent development of the numerical solution of problems in the calculus of variations. Foundations of numerical methods, applications to control problems. Differentials, perturbations, variational equations, adjoint system, conditions for optimum. Euler equations, maximum principle of Weierstrass and Pontryagin, the Legendre condition. Methods of solution: special variations, variation of extremals, dynamic programming. Applications in ship routing and missile control. PREREQUISITES: MA 2121 and computer programming or Consent of Instructor.

DEPARTMENT OF MECHANICAL ENGINEERING

Chairman:

Anthony J. Healey, Professor,
Code 69Hy, Halligan Hall, Room M-4,
(408) 646-2586/3462, AV 878-2586/3462

Associate Chairmen:

Matthew D. Kelleher, Professor,
Code 69Kk, Halligan Hall, Room 209,
(408) 646-2530, AV 878-2530.

Paul F. Pucci, Professor,
Code 69Pc, Halligan Hall, Room 205,
(408) 64602363, AV 878-2363.

The Department of Mechanical Engineering provides a strong academic program which spans across the discipline areas of structural mechanics, dynamics and control, materials science and the thermal-fluid sciences. These disciplines are blended together with an emphasis on naval engineering applications such as may be experienced on surface vessels and in submarines.

Programs leading to the degree Master of Science in Mechanical Engineering are accredited at the advanced level by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

A specific curriculum must be consistent with the general minimum requirements for the degree as determined by the Academic Council.

Any program leading to award of a degree must be approved by the Chairman of the Department of Mechanical Engineering at least two quarters before completion. In general, approved programs will require more than minimum degree requirements in order to conform to the needs and objectives of the United States Navy.

MASTER OF SCIENCE IN MECHANICAL ENGINEERING

A candidate shall have completed work equivalent to the Bachelor of Science requirements of this department. Candidates who have minor deficiencies, or who would like to review their undergraduate material, may utilize the NPS Continuing Education Program which offers a variety of courses in the self-study mode. Candidates who have not majored in Mechanical Engineering, or who have experienced a significant lapse in continuity with previous academic work, initially will take undergraduate courses in mechanical engineering and mathematics in preparation for their graduate program.

The candidate must take all courses in a curriculum approved by the Chairman of the Department of Mechanical Engineering. At minimum, the approved curriculum must satisfy the requirements below.

The Master of Science degree in Mechanical Engineering requires at least 32 quarter hours of graduate level credits in Mechanical Engineering and Materials Science, at least 10 of which must be at the 4000 level. In addition, at least 8 quarter hours of graduate credit must be earned outside of Mechanical Engineering and Materials Science.

An acceptable thesis is required for the Master of Science in Mechanical Engineering degree. An acceptable thesis for the degree of Mechanical Engineer may also be accepted as meeting the thesis requirement for the Master's degree. Approval of the thesis topic must be obtained from the Chairman of the Department of Mechanical Engieeering. An advisor will be appointed by the Chairman of the Department of Mechanical Engineering for consultation in the development of a program of research.

MASTER OF SCIENCE IN ENGINEERING SCIENCE

Students with acceptable academic backgrounds may enter a program leading to the degree Master of Science in Engineering Science (with major in Mechanical Engineering).

The program must include at least 36 credit hours of graduate work in the disciplines of engineering, science and mathematics, 12 of which must be at the 4000 level. Of these 36 hours, at least 20 hours (8 of which must be at the 4000 level) must be in Mechanical Engineering and Materials Science.

In addition, the program must contain at least 12 hours at the graduate level in courses outside Mechanical Engineering and Materials Science.

The student seeking the degree Master of Science in Engineering Science must submit an acceptable thesis. Programs leading to this degree must be approved by the Chairman of the Department of Mechanical Engineering.

MECHANICAL ENGINEER

A graduate student with a superior academic record may enter a program leading to the degree Mechanical Engineer. A candidate is normally selected after completion of his first year of residence.

The candidate must take all courses in a curriculum approved by the Chairman of the Department of Mechanical Engineering. At minimum, the approved curriculum must satisfy the requirements stated in the paragraphs below.

The Mechanical Engineer degree requires at least 60 quarter hours of graduate level credits in Mechanical Engineering and Materials Science, at least 30 of which must be at the 4000 level. In addition, at least 12 quarter hours of graduate level credits must be earned outside of Mechanical Engineering and Materials Science.

An acceptable thesis is required for the Mechanical Engineer degree. Approval of the thesis program must be obtained from the Chairman of the Department of Mechanical Engineering. An advisor will be appointed by the Chairman of the Department of Mechanical Engineering for consultation in the development of a program of research.

DOCTOR OF PHILOSOPHY AND DOCTOR OF ENGINEERING

The Department of Mechanical Engineering has an active program leading to the degrees of Doctor of Philosophy and Doctor of Engineering. Areas of special strength in the department are hydrodynamics, viscous flows, heat transfer, materials science, dynamics and control, vibrations and finite element analysis.

Joint programs with other departments are possible. A noteworthy feature of the program leading to the Doctor of Engineering degree is that the student's research may be conducted away from the Naval Postgraduate School in a cooperating laboratory or other installation of the Federal Government. The degree requirements are as outlined in the general school requirements for the Doctor's degree.

LABORATORIES

The Mechanical Engineering Laboratories are designed as complements to the educational mission and research interests of the department. In addition to extensive facilities for the support of student and faculty research, a variety of general use equipment is available. This includes machinery for the investigation of dynamic and static problems in engineering mechanics; a completely equipped materials science laboratory, including a scanning electron microscope, a transmission electron microscope, and an x-ray diffractometer; an oscillating water tunnel, a unique underwater towing tank and a low turbulence water channel; a vibration analysis laboratory; a fluid power controls laboratory; a robotics laboratory; facilities for experimentation with low velocity air flows; equipment for instruction in thermal transport phenomena; a laser doppler velocimeter; nuclear radiation detection equipment; and an interactive computer graphics laboratory. Experimentation is further enhanced by a broad selection of analog and digital data acquisition and processing equipment and instrumentation.

DEPARTMENTAL COURSE OFFERINGS
MECHANICAL ENGINEERING

ME/MS 0810 Thesis Research (0-0).
Every student conducting thesis research will enroll in this course.

ME 0951 Seminars (0-1).
Lectures on subjects of current interest are presented by NPS faculty and invited experts from other universities and government and industrial activities.

Lower Division Course

ME 1000 Preparation for Professional Engineers Registration (3-0).
The course will cover the topics from the 8-hour Professional Examination given by the State of California for Professional Engineer. Discussion will involve applicable engineering techniques, including design and analysis of mechanical systems and components. PREREQUISITES: Prior passage of EIT Exam or consent of Instructor. Graded on Pass/Fail basis only.

Upper Division Courses

ME 2001 Introduction to Engineering (3-0).
The origins of engineering. The role of mathematics and the physical sciences in engineering. Definition of an engineering problem, including its formulation, assumptions and method of attack. Engineering analysis. The engineering design process. Engineering communications, including graphics. This course is intended for students with a non-engineering background. PREREQUISITE: MA 1115 (may be taken concurrently).

ME 2101 Engineering Thermodynamics (4-1).
A comprehensive coverage of the fundamental concepts of classical thermodynamics, with insight toward microscopic phenomena. The laws of thermodynamics. Equations of state. Thermodynamic properties of substances. Entropy, irreversibility and availability. Cycle analysis. Gas-vapor mixtures. Combustion and dissociation. PREREQUISITE: MA 1116. (May be taken through Continuing Education as mini-courses ME 2111-15.)

ME 2201 Introduction to Fluid Mechanics (3-2).
Properties of fluids. Hydrostatics and stability of floating and submerged bodies. Fluid flow concepts and basic equations in steady flows: mass, momentum, and energy considerations. Dimensional analysis and dynamic similitude. Viscous effects and fluid resistance. Drag and separated flow over simple bluff bodies. Emphasis on naval engineering applications and problem solving. PREREQUISITE: ME 2502.

ME 2301 Introduction to Naval Architecture (4-0).
Introduction to the hydrostatics and hydrodynamics of a monohull vessel. Hull structural strength using simple approximations and common ship building materials. Intact initial transverse and longitudinal stability. Stability at large angles of heel and under special circumstances such as docking and after damage to the hull. Resistance and powering of the hull; determination of effective horsepower. PREREQUISITES: ME 2201 and ME 2601.

ME 2410 Mechanical Engineering Lab I (2-3).
Fundamentals of mechanical measurement systems, structured laboratory experiments using resistance strain gages, pressure transducers, temperature, flow and velocity measurement devices. PREREQUISITES: ME 2101, ME 2201, and ME 2601, any of which may be taken concurrently.

ME 2440 Modern Methods of Engineering Computation (3-0).
Formulation and solution of engineering problems using modern computers. Introduction to high-level programming languages including FORTRAN and BASIC. Development of computer programs including flowcharting, data transfer, subroutine organization, input and output. Application of programming techniques to the solution of selected problems in Mechanical Engineering. PREREQUISITES: MA 1116, ME 2101, ME 2501 (all may be taken concurrently) ME 2441 (must be taken concurrently).

ME 2441 Engineering Computational Laboratory (0-2).
Introduction to the computing facilities at the Naval Postgraduate School with particular emphasis on those unique to the Department of Mechanical Engineering. Familiarization with software available at the Naval Postgraduate School for solution of engineering problems. Various programming exercises. (ME 2440 must be taken concurrently). Graded on a Pass/Fail basis only.

ME 2501 Statics (3-0).
Forces and moments, particles and rigid bodies in equilibrium. Simple structures, friction, first moments and centroids. PREREQUISITE: MA 1116 (may be concurrent). May be taken through Continuing Education as mini-courses ME 2511-13.)

ME 2502 Dynamics (4-1).
Kinematics and kinetics of particles and rigid bodies. Rectilinear, plane curvilinear and space curvilinear motion. Newton's laws, work and energy, impulse and momentum, and impact. Plane motion of rigid bodies and introduction to gyroscopic motion. PREREQUISITE: ME 2501.

ME 2601 Mechanics of Solids (3-2).
Stress, strain, Hooke's law. Elementary stress and deformation analysis for shafts, beams and columns. Supporting laboratory work. PREREQUISITES: ME 2501 and MA 1116.

Upper Division or Graduate Courses

ME 3150 Heat Transfer (4-2).
Elementary treatment of the principles of Heat Transfer application to problems in Mechanical Engineering. Steady and unsteady conduction. Principles of forced and natural convection. Thermal radiation. Boiling. Condensation. Heat exchanger analysis. Use of the thermal circuit analog numerical and graphical techniques. Selected laboratory experiments. PREREQUISITES: ME 2101, ME 2201, MA 3132 (may be taken concurrently).

ME 3201 Intermediate Fluid Mechanics (3-2).
Steady one-dimensional compressible flow. Fundamentals of ideal-fluid flow, potential function, stream function. Analysis of viscous flows, velocity distribution in laminar and turbulent flows, introduction to the elements of the Navier-Stokes equations, solution of classical viscous laminar flow problems. Boundary-layer concepts. PREREQUIsites; ME 2101, ME 2201, MA 3132 (may be taken concurrently).

ME 3220 Steam Power, Refrigeration, and Turbomachinery (3-2).

The conventional Rankine cycle steam plants, including superheat, reheat, and regenerative cycles. Boiler, condenser, and feed-water heater description. Thermodynamics of refrigeration systems. Fundamentals of turbomachinery: energy and momentum equations, dimensional analysis, and velocity diagrams. Application to pumps, fans, compressors, and turbines. PREREQUISITES: ME 2101 and ME 2201.

ME 3230 Nuclear Power Systems (4-0).

Introduction to atomic and nuclear physics. Fundamentals of nuclear reactor analysis, including nuclear and thermal aspects in core design. Reactor system design and operation. Comparison of principal reactor types emphasizing significant features of marine reactors. Basic health physics considerations and reactor shielding. Basic insight into waste management and reactor safety. PREREQUISITE: MA 3132.

ME 3240 Reciprocating and Gas Turbine Power Plants (3-0).

Thermodynamic analyses and performance characteristics of spark ignition engines (Otto Cycle), compression ignition engines (diesel cycle), and gas turbine engines (Brayton cycle). Gas turbine component characteristics including the aerodynamics of the compressor and turbine design, and the combustor. Ship propulsion requirements, propeller characteristics, and Ship/ Propeller/Power Plant matching. PREREQUISITES: ME 2101, ME 2201. (ME 3241 must be taken concurrently.)

ME 3241 Power Plants Laboratory (0-3).

Selected experiments demonstrating power plant performance, e.g., diesel engine, and gas turbine engine. (ME 3240 must be taken concurrently.) Graded on Pass/Fail basis only.

ME 3430 Mechanical Engineering Lab II (1-3).

A project-oriented continuation of mechanical measurement systems. Application of measurement techniques using group projects in thermodynamics, mechanics of solids, heat transfer, fluid flow, vibrations and nuclear radiation detection. PREREQUISITES: ME 2410, ME 3150, ME 3521, and ME 3611. Graded on Pass/Fail basis only.

ME 3440 Engineering Analysis (4-0).

Rigorous formulation of engineering problems arising in a variety of disciplines. Approximate methods of solution. Finite Difference methods. Introduction to Finite Element methods. PREREQUISITES: ME 2201, ME 2440, ME 2502, and ME 2601.

ME 3521 Mechanical Vibration (3-2).

Free and forced d vibration of discrete linear systems. Vibration isolation and suppression. Vibration of bars, shafts, and beams. Supporting laboratory work. PREREQUISITES: ME 2502, ME 2601, and MA 2401 or equivalent (may be taken concurrently).

ME 3611 Mechanics of Solids II (4-0).

Fundamentals of elasticity. Failure theories. Energy methods. Indeterminate structures. Stability of simple structures. Torsion of members with non-circular cross section. Plate behavior. PREREQUISITES: ME 2601 and MA 2401 or equivalent (may be taken concurrently).

ME 3711 Design of Machine Elements (4-1).

Design of representative machine elements with consideration given to materials selection, tolerances, stress concentrations, fatigue, factors of safety, reliability, and maintainability. Typical elements to be designed include fasteners, columns, shafts, journal bearings, spur and helical gears, and clutches and brakes. In addition to traditional design using factors of safety against failure, particular emphasis is placed on design for specified reliability using probabilistic design methods. PREREQUISITES: ME 2410 and ME 2601.

ME 3801 Linear Automatic Control (3-2).

Classical control design for linear systems with single input, single output design requirements. Mathematical modeling of mechanical systems. Transient response analysis. Root locus and frequency response methods. Control design and compensation techniques. PREREQUISITES: MA 2121 and ME 2502.

Graduate Courses

ME 4160 Applications of Heat Transfer (4-0).

Application of heat transfer principles to engineering systems. Topics include heat exchangers (e.g., boilers, condensers, coolers), cooling electronic components, heat pipes, solar collectors, turbine blade cooling. PREREQUISITE: ME 3150.

ME 4161 Conduction Heat Transfer (4-0).

Steady-state heat conduction in multi-dimensions with and without heat sources. Transient conduction. Numerical methods for heat conduction. Variational methods. Mechanical Engineering applications. PREREQUISITE: ME 3150.

ME 4162 Convection Heat Transfer (4-0).

Fundamental principles of forced and free convection. Dimensionless correlations. Heat transfer during phase changes. Combined conduction, convection and radiation heat transfer systems. Heat exchanger analysis with Mechanical Engineering applications. PREREQUISITES: ME 3150, ME 4220.

ME 4163 Radiation Heat Transfer (3-0).

Basic laws and definitions. Radiation properties of surfaces. Radiant interchange among diffusely emitting and reflecting surfaces. Applications and solutions of the equations of radiant interchange. Radiant interchange through participating media. Combined conduction and radiation. Combined convection and radiation. Spectral aspects of gases. PREREQUISITE: ME 3150.

ME 4202 Compressible Flow (3-0).

Review of simple one-dimensional flow. Generalized one-dimensional flow. Two-dimensional and axisymmetric flows. Subsonic flow with small perturbations. Mach lines. Method of characteristics. Prandtl-Meyer expansion waves. Oblique shocks. Unsteady, one-dimensional flow. Introduction to compressible boundary layer. PREREQUISITE: ME 3201 or equivalent compressible flow coverage.

ME 4211 Applied Hydrodynamics (4-0).

Fundamental principles of hydrodynamics. Brief review of the equations of motion and types of fluid motion. Standard potential flows: source, sink, doublet, and vortex motion. Flow about two-dimensional bodies. Flow about axisymmetric bodies. Added mass of various bodies and the added-mass moment of inertia. Complex variables approach to flow about two-dimensional bodies. Conformal transformations. Flow about hydro- and aerofoils. Special topics such as dynamic response of submerged bodies, hydroelastic oscillations, etc. Course emphasizes the use of various numerical techniques and the relationship between the predictions of hydrodynamics and viscous flow methods. PREREQUISITE: ME 3201.

ME 4215 Dynamics of Marine Vehicles (4-0).

Development of the nonlinear equations of motion in ship-fixed coordinates. Linear forms. Elements of pathkeeping and stability for ships and submersibles. Maneuverability. Hydrodynamic aspects of hull, propulsor, and appurtenances. Design tools for estimating hydrodynamic derivatives and their effects on vehicle performance. Selected topics. PREREQUISITE: ME 3201.

ME 4220 Viscous Flow (4-0).

Development of continuity and Navier-Stokes equations. Exact solutions of steady and unsteady viscous flow problems. Development of the boundary-layer equations. Similarity variables, numerical and integral techniques. Separation, boundary-layer control, compressibility effects. Time-dependent boundary layers. Origin and nature of turbulence, phenomenological theories, calculation of turbulent flows with emphasis on naval engineering applications. PREREQUISITE: ME 3201.

ME 4240 Advanced Topics in Fluid Dynamics (4-0).

Topics selected in accordance with the current interests of the students and faculty. Examples include fluid-structure interactions, cable strumming, wave forces on structures, free-streamline analysis of jets, wakes, and cavities. PREREQUISITES: ME 4220 and ME 4211.

ME 4321 Reactor Engineering Principles and Design (4-2).

Reactor heat generation and removal. Thermal hydraulic analysis of light water reactors. Principles of reactor shielding. Materials and safety considerations in reactor design. Group design project. PREREQUISITE: ME 3230 or equivalent.

ME 4420 Marine Gas Turbines (4-0).

Thermodynamic analyses of gas turbine cycles, including airbreathing and closed cycle engines. Internal aerodynamics of compressor and turbine design. Combustor and source heat exchanger design. Materials considerations. Operational controls and instrumentation. Lubrication and fuels systems. Inlet, exhaust, and silencing systems. Propulsion of surface effect, hydrofoil, and conventional surface ships. Installation arrangements. Waste heat recovery systems and combined cycles (COGAS, CODOG). Auxiliary power generation. Repair and maintenance. PREREQUISITE: ME 3240.

ME 4512 Advanced Dynamics (3-2).

Introduction to the variational principle. Kinematics and kinetics of three-dimensional motion for complex systems utilizing Newton-Euler's method, Lagrange's method, and Kane's method. Computer software implementation and simulation. Applications in robotics emphasizing the dynamic problems of design and control. PREREQUISITE: ME 3521.

ME 4522 Shipboard Vibration and Noise (4-0).

Mechanical impedance, transfer matrices and their application to transmission of vibratory motion from machinery sources to hull plating. Acoustic signal generation at the hull-fluid interface. Characteristics of viscoelastic materials and their use in vibration isolation. Multi-isolator mounts. Study of accordian and flexural vibration of ship hulls using one-dimensional finite element modeling. Military vibration specifications. Use of vibration measurements for machinery condition monitoring. PREREQUISITE: ME 3521.

ME 4525 Naval Ship Shock Design and Analysis (4-0).

Characteristics of underwater explosion phenomena, including the shock wave, bubble behavior and bubble pulse loading, and bulk cavitation. Surface ship/submarine bodily response to shock loading. Application of shock spectra to component design. Dynamic Design Analysis Method (DDAM) and applications to shipboard equipment design. Fluid-Structure Interaction (FSI) analysis, including Doubly Asymptotic Approximation (DAA) and surface ship FSI. Current design requirements for shipboard equipment. PREREQUISITE: ME 3521 or equivalent.

ME 4550 Random Vibrations and Spectral Analysis (3-2).

Engineering application of spectral analysis techniques to characterize system responses under a random vibration environment. Characteristics of physical random data and physical system responses. Application of probability concepts to random data and response analysis. Correlation and spectral density functions. Transmission of random vibration. System responses to single/multiple random excitations. Failure due to random vibration. Supporting laboratory work. PREREQUISITE: ME 3521 or equivalent.

ME 4612 Advanced Mechanics of Solids (4-0).

Selected topics from advanced strength of materials, elasticity, and the theory of plates and shells. Applications of finite element codes to the solution of difficult problems. PREREQUISITE: ME 3611.

ME 4613 Finite Element Methods (4-0).

Systematic construction of line, surface, and volume elements for continuous systems. Computer programming, and applications to structural mechanics, heat transfer and fluid flow. PREREQUISITE: ME 3611.

ME 4620 Theory of Continuous Media (4-0).

Tensor analysis. Stress and strain tensors. Motion of a continuum. Energy and entropy. Constitutive equations. Applications to elasticity and fluid dynamics. PREREQUISITES: ME 3201 and ME 3611.

ME 4721 Marine Vehicle Design (2-4).

Various categories of marine vehicles are described; this includes single hull, multiple hull, submarine, surface effect, wing-in-ground effect and hydrofoil vehicles. A category of marine vehicle is selected to fulfill a stated mission. A vehicle configuration and specification of major components which satisfies mission requirements is sought. Consideration is given to all major facets of marine vehicle synthesis including structures, hull forces, propulsion, electronics, armament, crew, etc. PREREQUISITE: Consent of Instructor.

ME 4722 Marine Engineering Design (2-4).

A major component of a marine vehicle is designed so as to meet stated specifications. Impact of the design features of the major component upon the overall vehicle performance is considered; emphasis is on design tradeoffs. Examples of major components to be designed include complete electrical power generation and distribution system, steering, superconducting electrical motors for main propulsion, bulbous bow for sonar, armor protection of CIC, etc. PREREQUISITE: Consent of Instructor.

ME 4731 Engineering Design Optimization (4-0).

Application of automated numerical optimization techniques to design of engineering systems. Algorithms for solution of nonlinear constrained design problems. Familiarization with available design optimization programs. State-of-the-art applications. Solution of a variety of design problems in mechanical engineering, using numerical optimization techniques. PREREQUISITES: ME 3150, ME 3201, ME 3611, ME 2440 and MA 2400, or equivalent.

ME 4801 Fluid Power Control (3-2).

Fluids and fluid flows in high-performance of actuators and controllers. Power flow and fluid power elements — valve and pump control, linear and rotary motion. State space descriptions. Design of electrohydraulic position and velocity control servomechanisms for high performance with stability. Supporting laboratory experiments. PREREQUISITE: ME 3801.

ME 4802 Marine Propulsion Control (3-2).

Introduction to dynamic propulsion systems modeling and analysis methods. Control design specifications and design strategies. Introduction to modern control design theory and multivariable methods. Theory and applications of optimal control and discrete-time control systems. Case studies of current Naval propulsion control systems. PREREQUISITES: ME 3801, ME 3240 (may be taken concurrently), and MA 3132.

ME 4902 Advanced Study in Mechanical Engineering (1-0 to 6-0).

Directed advanced study in mechanical engineering on a subject of mutual interest to student and staff member. May be repeated for credit with a different topic. PREREQUISITE: Permission of Department Chairman. Graded on Pass/Fail basis only.

MATERIALS SCIENCE

Upper Division Course

MS 2201 Engineering Materials (3-2).

The basic principles of materials science are covered with emphasis on the factors involved in control of the strength and ductility of metallic materials of Naval interest. Atomic and crystal structure are discussed and emphasis is given to microstructural control and microstructure-property relationships. Additional topics include crystalline defects, deformation processes, strengthening mechanisms and heat treatment. The course aims to provide the student with the working vocabulary and conceptual understanding necessary to more advanced study and for communication with materials experts. PREREQUISITE: Undergraduate courses in physics and chemistry and consent of Instructor.

Upper Division or Graduate Courses

MS 3201 Materials Science and Engineering (3-2).
Fundamental principles of materials science are presented with particular emphasis on and advanced coverage of the relationship between microstructure and mechanical properties of engineering materials. The effects of atomic structure, crystal structure and microstructure on properties are presented. Crystalline defects, deformation processes, strengthening mechanisms, fracture, phase equilibria, phase transformations and methods of microstructural control are discussed and practical examples are included. The course aims at providing the engineering student with the vocabulary and conceptual understanding necessary for further study and for communicating on materials engineering topics. PREREQUISITE: Undergraduate course in chemistry and physics.

MS 3202 Failure Analysis and Prevention (3-2).
Properties, problems and failures of structural materials are studied in the context of actual case studies. Topics of interest to Naval, Aero and Weapons engineers are included. For a given case study, the cause(s) of failure are discussed, and the relevant fundamental knowledge to fully understand the observed phenomena is developed. Failures occurring by fatigue, brittle fracture and corrosion mechanisms are discussed. Failure prevention, materials developments and modern methods of materials analysis are among the many aspects that are of interest. PREREQUISITE: MS 3201 or equivalent or consent of Instructor.

MS 3304 Corrosion and Marine Environmental Degradation (3-2).
Presents the basic chemical, electrochemical, mechanical, and metallurgical factors which influence the corrosion, oxidation, and deterioration of materials. Discusses standard methods of corrosion control, such as cathodic protection coatings, cladding, alloy selection, and inhibitors; special problems encountered in unfamiliar environment. PREREQUISITE: MS 2201 or equivalent.

MS 3401 Microscopy (3-2).
Electron microscopy and other sophisticated techniques are emphasized in a coverage of modern methods of microscopic observation. Techniques covered include scanning electron microscopy, transmission electron microscopy, conventional microprobe analysis, field ion microscopy, and polarized light, stereo, interference, phase contrast, and holographic light optical methods. Course and lab will simultaneously cover both theory and practice, including specimen preparation, instrument design and operation, and applications, PREREQUISITE: Consent of Instructor.

MS 3505 Materials Selection for Military Applications (4-0).
This course deals in depth with one of the most common and important problems in materials engineering, that of selecting the optimum material for a given application. Consideration is also given to

evolution of new applications for existing materials, and to materials development for new and old applications. A variety of application areas are covered, including marine structures, aerospace applications, nuclear reactors, electronics, high temperature cryogenic services, and many other situations. Sources of information, methodology, and basic rationale for materials selection decisions are presented. Emphasis is put on the variation in properties of a given material with processing history, and on variation of properties in service. PREREQUISITE: MS 2201 or equivalent.

MS 3606 Introduction to Welding and Joining Metallurgy (3-2).
Metallurgical aspects of welding and joining processes; nature of and applications of welding and joining processes; welding and joining of steels, aluminum alloys, stainless steels, heat-resistant alloys and copper-base alloys; inspection and quality assurance of weldments. PREREQUISITE: MS 2201/3201.

Graduate Courses

MS 4215 Phase Transformations (3-2).
Structural changes which commonly occur in materials by various mechanisms are considered. Solidification, precipitation, recrystallization, and martensitic transformations are emphasized, both in principle and in regard to their technological importance. Principles of nucleation and growth, diffusion and kinetics are presented and their relevance to practical heat treating and fabrication processes are considered. PREREQUISITE: MS 2201 or equivalent.

MS 4302 Special Topics in Materials Science (1-0 to 6-0).
Directed advanced study in materials science on a subject of mutual interest to student and staff member. May be repeated for credit with a different topic. PREREQUISITE: Permission of Department Chairman. Graded on Pass/Fail basis only.

MS 4312 Advanced Materials (4-0).
The course is structured to provide a vehicle for the study of materials pertinent to a specific area of environment utilization or design. Example categories are marine materials, nuclear materials, elevated-temperature materials, aircraft alloys, materials for energy conversion. Topics discussed may include material failures, materials selection, testing, and new concepts in materials engineering. Course scope is decided by mutual agreement of students and Instructor. PREREQUISITES: MS 2201, MS 3202, or equivalent.

MS 4811 Mechanical Behavior of Engineering Materials (4-0).
The response of structural materials to mechanical stress is discussed with emphasis on plastic deformation in metals. Topics include mechanisms of high-temperature deformation, fatigue, and fracture. New concepts allowing development of materials to circumvent these failure mechanisms are treated. PREREQUISITES: MS 3202 or permission of Instructor.

DEPARTMENT OF METEOROLOGY

Chairman:

Robert J. Renard, Professor,
Code 63Rd, Root Hall, Room 252,
AV 878-2516, (408) 646-2516.

Associate Chairman:

Research:

Russell L. Elsberry, Professor,
Code 63Es, Root Hall, Room 243,
AV 878-2373, (408) 646-2373.

Curriculum:

Robert L. Haney, Professor,
Code 63Hy, Root Hall, Room 245,
AV 878-2308, (408) 646-2308.

The Department of Meteorology is one of six Departments in the Science and Engineering Division, and its history dates back to the 1940s when it was part of the Postgraduate Department at the Naval Academy. The Department's academic function is interdisciplinary in nature, in that its supports separate Master of Science Degree programs in Meteorology, Meteorology and Oceanography, and Oceanography, and also provides courses for the Space, Antisubmarine Warfare, Electronic Warfare and C3 Curricula.

Department academic strengths include air/ocean dynamics and numerical modeling and prediction, physical processes of the air/ocean boundary layer, satellite remote sensing and its applications, and synoptic meteorology, to include analysis and prediction in tropical, middle latitude and polar regions of both hemispheres. More than forty courses are offered in Meteorology, primarily at the graduate level. The Department has thirteen teaching faculty, and nine adjunct research faculty who are active researchers, with graduate student participation as research-team members through the M.S. thesis and Ph.D. dissertation process. The current areas of research concentration encompass numerical and analytic air/ocean modeling and numerical weather prediction, tropical meteorology including monsoon circulations and tropical cyclone forecasting, climate dynamics, marine boundary layer studies with emphasis on air/sea interactions and electro-magnetic/optic propagation, and a wide range of synoptic studies (e.g. model output statistics, regional studies, maritime cyclogenesis, short range forecasting, numerical-model output verification).

Both Visiting Scientist and Navy-sponsored Research Chair programs are an integral part of the Department's operation. The Ph.D. program in the Department is active with Navy and Air Force officers, DOD civilians and internationals among its recent graduates.

DEPARTMENT REQUIREMENTS FOR DEGREES

Master of Science in Meteorology

Entrance to a program leading to a Master of Science degree in Meteorology requires a baccalaureate degree with completion of mathematics through differential and integral calculus and a minimum of one year of college physics.

The degree of Master of Science in Meteorology requires completion of:

a. Mathematics courses in vector analsis, partial differential equations, and application of numerical methods and computers to the solution of differential equations.

b. A basic course in applied probability and statistics.

c. The basic sequence of graduate courses in the fields of dynamical, physical and synoptic meteorology, which must include eighteen quarter hours in the 4000 series.

d. An acceptable thesis.

Master of Science in Meteorology and Oceanography

Direct entrance to a program leading to the degree Master of Science in Meteorology and Oceanography requires a baccalaureate degree, preferably in physical sciences, mathematics or engineering. This normally permits the validation of a number of required undergraduate courses such as physics, chemistry, differential equations, linear algebra, vector analysis and various courses in meteorology and/or oceanography, which are prerequisites to the graduate program. These prerequisites may be taken at the Naval Postgraduate School; however, in that event the program may be lengthened by one or more quarters.

The degree of Master of Science in Meteorology and Oceanography requires:

a. Completion of forty-eight quarter hours in meteorology and oceanography, to include at least twenty hours in the 4000 series, with a minimum of one 4000-level course in other than directed study.

b. The basic sequence of graduate courses in the fields of dynamical, physical and synoptic meteorology/oceanography must be included in the forty-eight hours.

c. Completion of an acceptable thesis on a topic approved by either department.

DOCTOR OF PHILOSOPHY

The Ph.D. Program is offered in the Department of Meteorology in the following areas of study: numerical weather prediction, geophysical fluid dynamics, boundary-layer meteorology, analysis of atmospheric systems and tropical meteorology.

The requirements for the degree are grouped into three categories: course work, research in conjunction with an approved dissertation, and examination in both the major and a minor field. The minor field is usually in oceanography, mathematics or physics.

The required examinations are described in this catalog in the section Requirements for the Doctor's Degree. The Department of Meteorology also may require a preliminary examination to show evidence of acceptability as a doctoral student.

Prospective students should consult with the Chairman of the Department of Meteorology for further guidance regarding doctoral programs.

LABORATORIES

In addition to the standard synoptic laboratories, NPS meteorological facilities include a variety of instruments for observing the atmosphere and equipment for receiving weather analyses and forecasts emanating from the National Weather Service, including the DIFAX facsimile network system and the COMEDS link to the Automated Weather Network. Additional information is received from Fleet Numerical Oceanography Center via the Naval Environmental Display System. Weather satellite data are received on a UNIFAX recorder via GOESTAP and displayed in animated form by the Digital Weather Image Processing System. Rawinsonde equipment, acoustic sounders and micrometeorologically instrumented masts, and an NSF-owned Research Vessel operated by the Moss Landing Marine Laboratory, are utilized by faculty and students in the meteorology and oceanography programs. Interactive computer processing of satellite and conventional data is conducted using the COMTAL image analysis system and the VAX 11/750 minicomputer in the Computer Science Department Laboratory. A Joint Meteorology/Oceanography Interactive Digital Environmental Analysis Laboratory began operation in 1986 to provide real-time acquisition and analysis of conventional remotely-sensed data in support of the synoptic and physical meteorology programs. Supplementing the School's extensive computer facilities, discussed in the General Information section of the Catalog, the Department also maintains its own Computer Facility to support faculty and staff research, and student thesis/dissertation projects. Equipment includes a number of networked microcomputers, data and graphics terminals, plotters and printers.

DEPARTMENTAL COURSE OFFERINGS

MR 0110-11-12-13 Applications Seminars (1-0)
Presentation of DOD related research activities, applications to weapons and warfare systems, utilization of oceanography and meteorology in specific billets, presentations by faculty, staff, selected students and visiting authorities. MR 0110 is for orientation; MR 0111 is for intermediate students; MR 0112/0113 is for thesis orientation/topic selection. PREREQUISITE: Enrollment in an Air-Ocean Science curriculum.

MR 0810 Thesis Research (0-0).
Every student conducting thesis research will enroll in this course.

MR 0999 Seminar in Meteorology (2-0).
Students present results of thesis or other approved research investigation. PREREQUISITE: Concurrent preparation of thesis or other acceptable research paper.

Upper Division Courses

MR 2020 Computer Computations in Air-Ocean Sciences (1-2).
Introduction to FORTRAN and the NPS main frame computer as applied to elementary problems in oceanography and meteorology. PREREQUISITES: Calculus and college physics.

MR 2200 Introduction to Meteorology (4-0).
An introductory course that treats the composition and structure of the atmosphere, thermodynamic processes, forces and related small- and large-scale motions, air masses, fronts, severe storms, solar and terrestrial radiation, general circulations and weather forecasting. PREREQUISITE: Department approval. (May be taken through Continuing Education as minicourses MR 2201-02.)

MR 2210 Introduction to Meteorology/Laboratory (4-2).
Same course as MR 2200 plus laboratory periods illustrating lecture material, including weather map analysis over oceanic areas using satellite imagery. PREREQUISITE: Department approval.

MR 2220 Marine Meteorology (4-1).
An introductory course covering forces and related small- and large-scale atmospheric motions and their interaction with the ocean, severe rotating storms, fronts, general circulation and radiation, atmospheric stability, observation techniques, synoptic charts over marine regions, basics of remote sensing and satellite imagery interpretation, forecasting, climates over the ocean, and sea ice and icebergs. Laboratory exercises illustrate lecture material. PREREQUISITE: Department approval.

MR 2262 Elements of Weather Forecasting (1-2).
Survey of subjective and objective methods of atmospheric prognosis. Weather briefings illustrate applications of forecasting principles and use of satellite imagery. PREREQUISITES: MR 3222, MR 3230 or consent of Instructor.

MR 2300 Observations, Instruments and Climatology (3-2).
Surface and upper-air observations, including rawinsondes. Instruments used in synoptic observations. Climate classifications, changes and controls; basic statistical quantities used in climatology; applications to world climates. PREREQUISITE: Introductory Meteorology course (may be concurrent).

MR 2413 Meteorology for Antisubmarine Warfare (3-1).
Atmospheric factors affecting the fluxes of momentum, heat and moisture across the air-sea interface; local and synoptic-scale atmospheric features relevant to electro-magnetic and electro-optical wave propagation; hands-on experience with existing environmental effects assessment models. PREREQUISITES: Differential and integral calculus (may be concurrent).

MR 2416 Meteorology for Electronic Warfare (2-0).
A survey of environmental factors affecting the propagation and attenuation of electro-magnetic waves. Synoptic and climatological conditions associated with anomalous refraction are studied. Layers associated with high aerosol concentration and optical turbulence are identified. Hands-on experience with existing environmental effects assessment models. PREREQUISITES: Calculus, Computer Programming, Electromagnetic Theory (may be concurrent).

MR 2419 Atmospheric Factors In C^3 (2-0).
A survey of atmospheric properties and processes affecting propagation of electromagnetic (EM) and electro-optical (EO) waves. Tropospheric phenomena associated with standard and anomalous EM wave propagation at wavelengths greater than 10 meters. Ionospheric phenomena associated with larger wavelength (Hf) propagation. PREREQUISITE: Enrollment in C^3 curriculum.

MR 2520 Survey of Air-Ocean Remote Sensing (3-0).
Overview of systems for remote sensing of the atmosphere and oceans from space, and operational applications. PREREQUISITES: Undergraduate Physics and Calculus, or consent of Instructor.

Upper Division or Graduate Courses

MR 3140 Probability and Statistics for Air-Ocean Science (3-2).
Basic probability and statistics, in the air-ocean science context. Techniques of statistical data analysis. Structure of a probability model, density distribution function, expectation and variance. Binomial, Poisson and Gaussian distributions. Conditional probability and independence. Joint distributions, covariance and central limit theorem. Transformations of random variables. Histograms and empirical distributions and associated characteristics such as moments and percentiles. Standard tests of hypotheses and confidence intervals for both one-and two-parameter situations. Regression analysis as related to least squares estimation. PREREQUISITE: Calculus.

MR 3150 Analysis of Air/Ocean Time Series (3-2).
Analysis methods for atmospheric and oceanic time series. Correlation, spectrum and empirical orthogonal function analyses. Statistical objective analysis. Optimal design of air-ocean data networks. PREREQUISITES: MA 2121, and a probability and statistics course.

MR 3212 Polar Meteorology/Oceanography (4-0).
Operational aspects of arctic and antarctic meteorology. Polar oceanography. Sea-ice; its seasonal distribution, melting and freezing processes, physical and mechanical properties, drift and predictions. Aspects of geology and geophysics. PREREQUISITES: OC 3240, MR 3222 or consent of Instructor.

MR 3220 Meteorological Analysis (4-0).
Techniques of evaluation, interpretation and analysis of pressure, wind, temperature and moisture data, including weather satellite observations, with emphasis on the low and middle troposphere. Synoptic models of extratropical vortices, waves and frontal systems, with emphasis on three dimensional space structure and time continuity. Introduction to analysis in the high troposphere and low stratosphere. PREREQUISITES: MR 3420, MR/OC 3321.

MR 3222 Meteorological Analysis/ Laboratory (4-3).
Same as MR 3220 plus laboratory sessions on the concepts considered in the lectures, with emphasis on the analysis of the low and middle troposphere, streamline and isotach analysis techniques, satellite interpretation, and vertical cross-section analyses. PREREQUISITE: MR 3420, MR/OC 3321.

MR 3230 Tropospheric and Stratospheric Meteorology (4-0).
An analytic and synoptic interpretation of tropospheric and stratospheric systems with emphasis on the middle and high altitude aspects of extratropical cyclones, jet streams and fronts, and related dynamical properties. PREREQUISITES: MR 3222 (may be concurrent).

MR 3234 Tropospheric and Stratospheric Meteorology/Laboratory (4-3).
Same as MR 3230, plus laboratory sessions emphasizing 4-dimensional interrelationships in the troposphere and lower stratosphere. Diagnostic weather briefs introduce both National Meteorological Center and Fleet Numerical Oceanography Center products. PREREQUISITES: Enrollment in Operational Oceanography Curriculum or consent of Chairman; MR 3222.

MR 3235 Tropospheric and Stratospheric Meteorology Laboratory (0-7).
Practice in 4-dimensional synoptic-scale analysis of variables considered in MR 3230. Emphasis is on a physical understanding of dynamical relationships, including vorticity, divergence and vertical velocity. Diagnostic weather briefs introduce National Meteorological Center and Fleet Numerical Oceanography Center products. PREREQUISITES: MR 3222, MR 3230 (may be concurrent).

MR 3240 Radar Meteorology (3-0).
Principles of radar meteorology. Topics covered include radar systems, meteorological radar equation, doppler radar basics, propagation, attenuation, precipitation and velocity estimation, and characteristic echoes. PREREQUISITES: MR 3222 and MR 3522.

MR 3250 Tropical Meteorology (3-0).
Structure and mechanisms of synoptic-scale wave disturbances, cloud clusters, upper-tropospheric systems, the intertropical convergence zone, tropical cyclones and monsoon circulations; with emphasis on tropical cyclones, tropical scale analysis and energetics. PREREQUISITES: MR 4322; MR 3230, MR 3235 (may be concurrent).

MR 3252 Tropical Meteorology/Laboratory (3-4).
Same as MR 3250 plus laboratory sessions on analysis of tropical systems emphasizing streamline and isotach analysis and incorporating aircraft and satellite observations. Exercises stress tropical cyclone structure, tropical general circulation and the monsoon regimes. Satellite imagery are used as an analysis tool and also in forecasting tropical cyclone intensity. A track forecasting exercise provides an exposure to the use of various dynamic, climatological and statistical forecast models. PREREQUISITES: MR 4322, MR 3230, MR 3235 (may be concurrent).

MR 3254 Tropical Meteorology/Laboratory (3-2).
Same as MR 3250, plus laboratory sessions stressing tropical general circulation, satellite interpretation and tropical cyclone structure. Tropical summary briefs and tract forecasting exercises provide an understanding of the tropical cyclone warning system and the uses of various dynamical, climatological and statistical forecast models. PREREQUISITES: Enrollment in Operational Oceanography Curriculum or consent of Chairman, MR 4322, either MR 3230 and MR 3235 (may be concurrent) or MR 3234 (may be concurrent).

MR 3260 Operational Atmospheric Prediction (3-0).

Subjective and objective methods of atmospheric prognosis and techniques for forecasting operationally-important weather elements from surface to 100 mb. Interpretation, use and systematic errors of computer-generated products. Weather satellite briefs and applications of forecasting principles to current situations. PREREQUISITES: MR 3230, MR/OC 4323 or consent of Instructor.

MR 3262 Operational Atmospheric Prediction/ Laboratory (3-3).

Same as MR 3260 plus laboratory sessions on the application of lecture material. Also, practice in weather briefing, including diagnosis and forecasting of current weather situations using weather satellite observations and National Meteorological Center and Fleet Numerical Oceanography Center products. PREREQUISITES: MR 3230, MR/OC 4323 or consent of Instructor.

MR 3321 Air-Ocean Fluid Dynamics (4-0).

The hydrodynamical equations for a rotating stratified fluid. Forces, kinematics, boundary conditions, scale analysis. Simple balanced flows; baroclinicity, thermal wind; vorticity and divergence: rotational and divergent part of the wind; circulation theorem. Vorticity and potential vorticity. PREREQUISITE: MA 2047 (may be concurrent), or equivalent.

MR 3420 Atmospheric Thermodynamics (3-0).

The physical variables; properties of gases, water and moist air; equations of state and the laws of thermodynamics applied to the atmosphere; adiabatic processes and potential temperature; meteorological thermodynamic diagrams; geopotential and hydrostatic equilibrium, vertical motion in the atmosphere, stability criteria and condensation levels. PREREQUISITE: MA 1116 or equivalent (May be taken through Continuing Education as mini-course, MR 3418-19).

MR 3421 Cloud Physics (3-0).

Basic principles of cloud and precipitation physics and application to weather modification. Selected topics in atmospheric pollution. PREREQUISITE: MR 3420.

MR 3445 Oceanic and Atmospheric Observational Systems (2-2).

Principles of measurement: sensors, data acquisition systems, calibration, etc. Methods of measurement for thermodynamic and dynamic variables in the ocean and atmosphere, including acoustics and optics. PREREQUISITES: OC 3230 and MR 3420.

MR 3520 Remote Sensing of the Atmosphere and Ocean (4-0).

Principles of radiative transfer and satellite sensors and systems; visual, infrared and microwave radiometry and radar systems; application of satellite remotely-sensed data in the measurement of atmospheric and oceanic variability. PREREQUISITES: Undergraduate physics and differential/integral calculus, ordinary differential equations or consent of instructor.

MR 3522 Remote Sensing of the Atmosphere and Ocean/Laboratory (4-2).

Same as MR 3520 plus laboratory sessions on the concepts considered in the lecture series. PREREQUISITES: Undergraduate physics and differential/integral calculus, ordinary differential equations or consent of Instructor.

MR 3540 Radiative Processes in the Atmosphere (3-0).

Applications of radiation theory to atmospheric energy budgets, general circulation and anthropogenic climate changes. Radiational imbalance at the surface leading to heat fluxes and temperature changes in atmosphere and earth. Upper atmosphere phenomena (ozonosphere and ionosphere). Radiative effects of clouds and aerosols, and optical phenomena. PREREQUISITES: MR 3420, MR 3520 or MR 3522.

MR 3570 Operational Oceanography and Meteorology (2-4).

Experience at sea in conducting oceanographic, meteorological, acoustical and other observations and analyses. Integration of satellite remote sensing information with in situ data and on-scene-prediction. Includes pre-cruise planning, real-time operational product interpretation and post-cruise analysis. PREREQUISITES: MR 3222, MR/OC 3522; MR 4416, OC 4267 and OC 4331 (may be concurrent).

Graduate Courses

MR 4241 Mesoscale Meteorology (3-0).

Descriptive and physical understanding of subsynoptic-scale weather systems and their relation to the synoptic-scale environment. Applications to short-range and local-area forecasting utilizing satellite and numerical-model products relevant to mesoscale weather phenomena. PREREQUISITES: MR 3230, MR/OC 4323, or MR 4322 with consent of Instructor.

MR 4242 Advanced Tropical Meteorology (3-0)

Theories and observations of equatorial waves and oscillations; energy sources and instabilities; boundary layer and cumulus convection parameterization; monsoon circulations and their interactions with other scales; Tropical cyclone models and forecasting; selected topics in diagnostic and theoretical studies of tropical flows. PREREQUISITE: MR 3250 and consent of Instructor.

MR 4250 Atmospheric General Circulation (3-0).
The observed circulation. Zonal mean and eddy motions. Balances of momentum, heat, moisture. Energetics. Maintenance of circulation. Zonally asymmetric circulations. Other selected topics of the general circulation of the atmosphere. PREREQUISITE: MR 4322 and consent of Instructor.

MR 4322 Dynamic Meteorology (4-0).
Pressure coordinates, scale analysis, perturbation method; solutions of equations of motion for sound, gravity and synoptic waves; baroclinic and barotropic instability; energetics; geostrophic adjustment. PREREQUISITE: MR 3420, MR/ OC 3321, MA 2047, MA 2121 or equivalent.

MR 4323 Numerical Air and Ocean Modeling (4-2).
Numerical models of atmospheric and oceanographic phenomena. Finite difference techniques for solving hyperbolic, parabolic and elliptic equations, linear and nonlinear computational instability. Spectral and finite element models. Filtered and primitive equation prediction models. Sigmo coordinates. Objective analysis and initialization. Moisture and heating as time permits. PREREQUISITES: MR 4322, MA 3132; MA 3232 desirable.

MR 4324 Advanced Numerical Weather Prediction (3-0).
Initialization, boundary conditions; sensible, latent and radiative heat transfer; simulation of sub-grid scale processes such as convection and friction; spectral methods and finite element models; general circulation models, PREREQUISITE: MR/OC 4323 or consent of Instructor.

MR 4331 Advanced Geophysical Fluid Dynamics I (3-0).
Advanced topics in the dynamics of the atmosphere and the oceans including scale analysis; geostrophic adjustment; dispersion, and barotropic and baroclinic instabilities. PREREQUISITE: consent of Instructor.

MR 4332 Advanced Geophysical Fluid Dynamics II (3-0).
Energetics of unstable disturbances; frontogenesis; boundary layer analysis with application to the Ekman layer and to the frictional and the nonlinear ocean boundary currents; finite amplitude baroclinic waves. PREREQUISITE: consent of Instructor.

MR 4413 Air/Sea Interaction (4-0).
Fundamental concepts in turbulence. The atmospheric planetary boundary layer, including surface layer and bulk formulae for estimating air-sea fluxes. The oceanic planetary boundary layer including the dynamics of the well-mixed surface layer. Recent papers on large-scale air-sea interaction. PREREQUISITE: OC 3240 or MR 4322 (may be concurrent), or consent of Instructor.

MR 4414 Advanced Air/Sea Interaction (3-0).
Advanced topics in the dynamics of the atmospheric and oceanic planetary boundary layers. PREREQUISITE: MR/OC 4413 or consent of Instructor.

MR 4415 Atmospheric Turbulence (3-0).
Approaches for defining the structure of the turbulent atmospheric boundary layer. Review of statistical descriptions of atmospheric turbulence; averaging, moments, joint moments, spectral representation. Equations for a turbulent regime in a stratified, shear flow. Scaling parameters and similarity theories for surface layer profiles, spectra; Kolmogorov hypotheses, Monin-Obukhov stability length. Measurement of atmospheric turbulence. Examination of observed spectra and scales of atmospheric turbulence. PREREQUISITES: MR/OC 3150 or consent of Instructor.

MR 4416 Atmospheric Factors in Electromagnetic and Optical Propagation (4-0).
Principles of microwave and optical wave propagation in the atmosphere. Effects of atmosphere on propagation; refraction, scattering, attenuation, ducting, etc. PREREQUISITE: MR/OC 4413 (may be concurrent).

MR 4520 Topics in Satellite Remote Sensing (3-0).
Selected topics in the advanced application of satellite remote sensing to the measurement of atmospheric and oceanic variables. PREREQUISITE: MR/OC 3522.

MR 4800 Advanced Topics in Meteorology (1-0 to 4-0).
Advanced topics in various aspects of meteorology. Topics not covered in regularly offered courses. The course may be repeated for credit as topics change. PREREQUISITE: Consent of Department Chairman and Instructor.

MR 4900 Special Topics in Meteorology (1-0 to 4-0).
Directed study of selected areas of meteorology to meet the needs of the individual student. PREREQUISITE: Consent of Department Chairman and Instructor. Graded on Pass/Fail basis only.

DEPARTMENT OF
NATIONAL SECURITY AFFAIRS

Acting Chairman:

James John Tritten, Commander, USN,
and Assistant Professor,
Code 56Tr, Root Hall, Room 100,
(408) 646-2521, AV 878-2521.

The Department of National Security Affairs offers programs of study in three major fields, supporting eight different curricula. The three major fields encompass Geographic Area Studies, Strategic Planning and Intelligence. The area studies are subdivided into five groups as follows:

Middle East, Africa and South Asia
Far East, Southeast Asia and The Pacific
Europe and USSR
Western Hemisphere
International Organizations and
    Negotiations

Individual programs in the Area Studies focus on one of the subregions listed or contain a blend of all subregions in the area. Included in the Area Studies program is a program of study in a language of the area at the Defense Language Institute, located in Monterey.

The field of Strategic Planning is subdivided into General Strategic Planning and Nuclear Strategic Planning. Individual programs focus on the evolutionary history of the planning process, strategies for national security, naval and maritime strategy, and management and planning systems.

The Intelligence Curriculum is an interdisciplinary program which integrates political science, mathematics, operations analysis, oceanography, aeronautical engineering, electrical engineering, physics, information systems, and managerial economics into an understanding of intelligence. Approximately half of the coursework in this technical (non-engineering) curriculum is undertaken in Naval Postgraduate School academic departments under the Dean of Science and Engineering; the remaining courses are in the information and policy sciences.

Coursework addresses three broad fields: defense technology, analysis and management, and national security affairs. The defense technology courses are designed to address the special problems of technical intelligence, emphasizing technical literacy and the ability to communicate concerning technological and environmental problems. This sequence seeks to provide the perspective that will assist assessment of the reality and significance of technical and environmental data, as well as ensure familiarity with the resources in these fields that may be applied to intelligence problems.

The analysis and management coursework provides the student with a grounding in quantitative techniques, substantive research methods, and the concepts of resource management. Students are introduced by various means to structure given problems, formulate possible solutions, organize and compile supporting data, assess the reliability, and communicate the significance of the results obtained.

Graduate courses in National Security Affairs outline the interface between international politics, national security objectives, resource management and weapons technology. The sequence synthesizes the political, technological, economic, cultural, social and ideological forces that influence the actors in the international system and models varying scenarios of interaction between them.

DEPARTMENTAL REQUIREMENTS FOR THE DEGREE MASTER OF SCIENCE IN NATIONAL SECURITY AFFAIRS

The degree Master of Science in National Security Affairs will be awarded upon the completion of an interdisciplinary program carried out in accordance with the following degree requirements:

a. A minimum of 45 quarter hours of graduate level work of which at least 12 hours must represent courses at the 4000 level. Graduate courses in at least three different academic disciplines must be included and, in

two disciplines a course at the 4000 level must be included.

b. In addition to the 45 hours of course credit, an acceptable thesis must be completed.

c. The program must be approved by the Chairman of the Department of National Security Affairs.

DEPARTMENTAL COURSE OFFERINGS

NS 0010, 0020, 0030 and 0040, are Seminars for National Security Affairs Students in the Intelligence, Functional Speciality, Area Speciality, and all NSA curricula respectively (0-0). NS 0012: Introduction to NPS Computer Systems for Intelligence (1-1), NS 0042: Micro Computer Utilization (2-2 are special six and three weeks pre-entry courses, respectively.

NS 0810 Thesis Research (0-0).
Students conducting thesis research will enroll in this course.

NS 0811 Preparation for Comprehensive Examination (0-0).
Students preparing for comprehensive examinations will enroll in this course.

Lower Division Courses

NS 1500 American Life and Institutions (3-0).
American political institutions and the political, social, economic, and cultural aspects of American Life. OPEN TO ALLIED OFFICERS. Graded on Pass/Fail basis only.

NS 2154 Intelligence and the Military (4-0).
An overview of the intelligence structure and a survey of the intelligence process focusing on the application of intelligence to the military mission. The organization and functions of the various elements of the intelligence community are presented. Primary emphasis is placed on the use of intelligence by military decision makers. Included are overviews of systems supporting the collection, production and dissemination of intelligence. The course is intended for the non-intelligence specialist and is available to any student wishing to learn about the intelligence community and its ability to provide support to the military.

Upper Division or Graduate Courses

NS 3010 Comparative Analysis and Research Methods (4-0).
An analytical and comparative study of the form and functioning of the major types of contemporary governments, with emphasis on the policymaking process and research methods. Graded on Pass/Fail basis only.

NS 3020 Analysis of International Relations (4-0).
A theoretical systematic analysis of international relations and a study of factors, organizational strategies, and techniques of international politics, to include a segment on cross-national security assistance and arms transfers.

NS 3030 American National Security Policy (4-0).
An institutional and functional analysis of the national and international factors which shape U.S. defense policy. Attention in the course is focused on two major areas; 1) the decision-making process, including the legislative-executive budgetary process, as well as the influence of bureacratic politics and interest group participation upon defense decisions; 2) the problems of strategic choice, including security assistance, threat analysis, net assessment, deterrence theory, and limited war.

NS 3040 The Politics of Global Economic Relations (4-0).
An integrated analysis on the economic and political factors that together determine national and international economic arrangements. The student first addresses the general principles of public finance as a prerequisite for the analysis of budgets and policy priorities in specific countries and areas. The remainder of the course is concerned with the changing world economic order including issues such as trade, aid, crossnational security assistance, multi-national corporations technology and strategic resources.

NS 3150 Intelligence Data Analysis and Research Methods (4-2).
A survey of methods and techniques for synthesis, analysis, interpretation, and reporting of data. Topics include sampling methods, content analysis, data handling and processing, scaling techniques, and parametric and non-parametric tests, with emphasis on application to intelligence. PREREQUISITES: OS 3101, MA 2311 or equivalent. TOP SECRET Clearance with eligibility for SPECIAL INTELLIGENCE information.

NS 3151 Intelligence Systems and Products (4-0).
This course is intended for students in the command and control program. It provides an introduction to intelligence systems and products which support command decision making, an overview of Soviet command and control concepts and practices required for an appreciation of the significance of intelligence reporting, an insight into intelligence procedures to provide perspective for operational security planning, and material on Soviet intelligence organizations and capabilities. PREREQUISITES: TOP SECRET clearance with eligibility for SI/SAO, U.S. Citizenship. SPECIAL INTELLIGENCE information.

NS 3152 Naval Warfare and the Threat Environment (4-0).
This course supports NPS warfare curricula. It concentrates on the threat posed by Sovier naval warfare forces to successul accomplishment of the U.S. Navy's missions. Issues include: U.S. missions in conflict situations: U.S. intelligence and analysis of the Soviet threat; the politico-military and strategic contexts underlying the use of Soviet naval and other forces for maritime warfare; current status and trends in Soviet naval warfare capabilities; continuities and changes in the missions and operations of Soviet naval and related forces; trends in the superpower naval warfare balance. Secret Clearance required.

NS 3230 Strategic Planning and U.S. National Security Policy (4-0).
The focus of this course will be on long term strategic planning and will include such topics as: Strategic Goal Analysis, national and transnational power assessment, analysis of the decision making and administrative processes at the national level, indigenous constraints on the policy process, forecasting and future research techniques and the application of the concepts of strategic planning to the national defense effort. PREREQUISITE: NS 3030.

NS 3231 Maritime Strategy (4-0).
The concentration of this course is on historical cases of maritime versus continental powers and the conflict between the U.S. and the USSR with respect to maritime forces, geography and political interests. It complements the operational ideas of navies presented in NS 3252.

NS 3250 Defense Resources Allocation (4-1).
A presentation of the concepts, principles and methods of defense resources allocation as they pertain to planning, programming, budgeting and related activities. Emphasis is placed on the analytical aspects of decision making drawn from the disciplines of management theory, economics and quantitative analysis. The laboratory sessions include problems and case studies in which the concepts and methods are applied to illustrative situations. PREREQUISITIES: Consent of Instructor. Graded on Pass/Fail basis only.

NS 3251 Maritime Powers and Foreign Policy (4-0).
A comparison of the historical evolution, political uses and operational ideas of the navies of the United States, Great Britain, France, Germany, Russia/Soviet Union and Japan. The principal goal of the seminar is to examine how the great maritime powers of the world created the political basis for their naval power and the effect these fleets have had upon the nature of foreign policy and strategy. A comparison of the rise of the German and Russian/Soviet navies is most striking in this connection. PREREQUISITE: NS 3030 or consent of Instructor.

NS 3263 Strategic Planning for Southwest Asia (4-0).
Examination of the political and military factors necessary for consideration in the development of a successful Western strategy for the defense of Asia.

NS 3279 Directed Studies in National Security Affairs (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations.

NS 3280 Nuclear Weapons and Foreign Policy (4-0)
An interdisciplinary course which covers both the technology and political influences of nuclear weapon systems. The course emphasizes the interaction of nuclear weapon systems with the foreign policies of the major powers and the political blocs from 1945 to present.

NS 3300 Foundations of Middle Eastern Politics: People, Societies, Cultures and Religions (4-0).
An intensive course in Middle Eastern history from the viewpoint of geographical and military factors which have shaped the course of events in the area. The geographic (including oceanographic) environment within which military campaigns have been conducted, which continues to present military problems, is examined. Indigenous and foreign techniques and tactics for dealing with this environment, as well as the historical development of Middle Eastern military organizations are studied.

NS 3310 Problems of Government and Security in Middle East (4-0).
An introductory course in Middle Eastern society and politics designed to provide the maximum background area knowledge to be utilized in follow-on courses in Middle Eastern politics.

NS 3320 International Relations and Security in the Middle East (4-0).
The course focuses on selected problems affecting American security interests in the Middle East: Strategic waterways, including the Suez Canal, the Turkish Straits, and the Indian Ocean; the politics and problems of access to the area's oil resources; the development of U.S. and Soviet policies toward area. The foregoing problems will be set in the context of regional international politics.

NS 3330 United States Interests and Policies in the Middle East (4-0).
This course offers an analysis of the historical backgrounds and the current status of United States cultural, econimic, political and strategic interests in the Middle East. It traces the changing definitions of these interests over time and the alternative policies which have been adopted in order to secure them. The relationship of these policies to broader aspects of United States foreign policy is discussed along with the impact of the policy-making process upon the substance of policies.

NS 3341 Seminar on Middle East Oil (4-0).
An examination of the oil resources of the Middle East for their impact upon the internal, regional and international policies of region-states. The role of international oil companies, consuming states, and organizations of exporting countries is studied. Difference in oil resources and revenues are examined and related to different developmental and international policies. The past and future use of oil as a political weapon is discussed and evaluated. The use of revenues from oil is examined for its impact on levels of development and the regional military balance.

NS 3350 The Middle East: The Military Dimension (4-0).
An examination of the political, sociological, cultural and strategic roles of the military in Middle Eastern history and politics. Among the topics considered are: traditional military patterns, military recruitment, organization, doctrine, and learning experiences.

NS 3360 North Africa: Problems of Government and Security in the Maghreb (4-0).
This course is designed to extend the student's knowledge of selected North African and Red Sea littoral countries, and to provide some insight into the security problems presented by their domestic politics. In addition, some coverage of central African countries will be included.

NS 3361 Problems of Government and Security in Israel (4-0).
Israeli cultural, social, and political patterns: Hebraic traditions, Zionism and the creation of Israel, institutional and sociological frameworks for Israeli politics, elite recruitment, perceptions and strategic orientations, security issues in Israeli domestic and foreign policy. PREREQUISITES: NS 3310 or NS 3301, or their equivalent.

NS 3362 Problems of Government and Security in the Northern Tier: Turkey, Iran, Afghanistan, Pakistan (4-0).
An examination of internal and external political, economic, and social forces in the major non-Arab Middle Eastern states as reflected in their internal development and international policies. Cooperation and conflict in the behavior of these nations toward each other will be explored in the context of their recent efforts at regional cooperation and regional organization (the Sa'dabad Pact, Cento, and RCD). Examination of their relationships to the major outside powers interested in the area, i.e., the U.S. and the Soviet Union. Their relationships both as individual states and as sub-region with the Arab states of the Middle East. PREREQUISITES: NS 3310 and NS 3320.

NS 3379 Directed Studies: Middle East (Credit Open).
Format and content vary by student and professor agreement. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations.

NS 3400 Domenstic Context of Soviet National Security Policy (4-0).
An examination of the role of domestic factors shaping Soviet national security policy: geography, military and economic capabilities, historical influences and traditions, nationalities and demography, ideological influences, and political and economic systems. Emphasis is on the impact of the domestic environment on current Soviet national security policy-making with implications for the United States.

NS 3410 Soviet National Security (4-0).
A follow-up course to NS 3400.
Primary focus is on Soviet images of national security and long trends in the development of national security policy since World War II through the leaderships of Stalin, Khruschev and Brezhnev, and thereafter. Soviet efforts to safeguard their national security objectives are demonstrated through a comparative analysis of crisis management situations at their periphery (intervention and coercion of Hungary, Czechoslovakia, Afghanistan and Poland) and in strategic areas of the Third World (Cuban missile crisis and conflict and war in the Middle East, Angola, Ethiopia and Central America). Implications are drawn for U.S. security. PREREQUISITES: NS 3400 or consent of Instructor.

NS 3450 Soviet Military Strategy (4-0).
Examination of international and external factors conditioning Soviet military doctrine and strategy and their development through the Stalin, Khruschev and Brezhnev eras and beyond. Emphasis is on contemporary Soviet strategic concepts and strategy: surprise and deception, war-fighting capabilities, external role of the Soviet armed forces, strategy for nuclear war, Warsaw Treaty Organization strategy, and Soviet naval strategy in the Third World.

NS 3452 Soviet Naval and Maritime Strategy (4-0).
Examination of t he roles played by the Soviet Navy, Merchant Marine, Fishing Fleet, and Oceanological establishment in securing the objectives of the Soviet Government. Topics include: geographic factors affecting Soviet ocean strategies; non-naval strategy trends; international and domestic factors affecting post-1953 naval strategy, development of Soviet naval warfare capabilities; doctrinal and functional analysis of post-1953 trends in naval strategy; command structure; personnel training; law of the sea positions; U.S.-Soviet naval interaction. PREREQUISITE: TOP SECRET clearance with eligibility for SPECIAL INTELLIGENCE information.

NS 3460 Problems of Government and Security in Eastern Europe (4-0).
This course analyzes the political economic, national security and international affairs of the communist-ruled states of Europe other than the Soviet Union.

NS 3479 Directed Studies: Soviet Union (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the professor, papers and/or examinations.

NS 3500 Perspectives on American Civilization (4-0).
This course, especially designed for the foreign area studies (attache) program, is an interdisciplinary study of American culture, involving the political economic, social, philosophical and literary development of the Nation from 1789 to the present.

NS 3501 History and Culture of Latin America (4-0).
Identifies those aspects of the heritage most relevant to understanding contemporary conditions in Latin America, f rom pre-Columbian Indian traditions and Iberian colonial patterns through the independence movements of the early 19th century and the global economic relationships which reoriented the region toward Northwestern Europe and the United States.

NS 3510 Problems of Government and Security in Latin America (4-0).
Considers the nature of political legitimacy in Latin America. Comparative studies indicate the relative role of revolutionary movements, constitutionalism, and economic output as sources of social cohesion. Major political factors such as technocrats, organized labor, the church, political parties and the military are studied in reference to how they respond to demand for radical change. Critical analysis of government capacity to meet challenges indicates the degree to which countries in the region face a significant likelihood of instability stemming from internal and/or external sources. Specific countries are given attention based on the future assignments of the students.

NS 3520 International Relations and Security Problems of Latin America. (4-0).
Surveys the attempts by countries from various parts of the world—including the Soviet bloc—to penetrate Latin America. The influences of cultural and economic ties, military sales and political subversion have created links between Latin America and Europe with an undercurrent of African relations. The activities coming from outside the region are evaluated in comparison with the efforts of Latin American states to gain diplomatic influence in global organizations and to establish economic links to serve development goals.

NS 3530 United States Interests in Latin America (4-0).
A critical look at Latin America, and at t he case made by analysts who argue that U.S. policy has neglected the region as compared with that of the critics of U.S. influence. Traditional views of neighbors sharing a common heritage and geo-political interest are evaluated. The importance of cultural, economic, and military ries are considered in the context of American global economic and security concerns.

NS 3540 Political Economy of Latin American Development Strategies (4-0).
Examination of the forces affecting the interface of economic and political interests in development strategies, especially since the end of World War II. The objectives sought, obstacles encountered, and means utilized are evaluated. External and internal factors are compared in reference both to measurable contributions and to the perceptions of Latin American leaders.

NS 3550 The Role of the Military in Latin America (4-0).
A broad view of the variety of functions served by the military in Latin American societies. Many Latin American military organizations have had training and advisory links with several countries from the outside region. A number of countries have also developed comprehensive doctrines of both military and other activities as part of research and training at advanced staff schools. Some have overseas combat experience, while many have been involved in internal security operations. These factors are considered by this course along with interservice and civil-military relations.

The 357X sequence consists of a series of directed studies of particular subareas of Latin America. Each individual course description corresponds to that given below for NS 3570.

NS 3570 Directed Studies: Latin America (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, popers and/or examination.

NS 3571 Directed Studies: Canada (Credit Open).

NS 3572 Directed Studies: Brazil (Credit Open).

NS 3573 Directed Studies: Southern Cone Countries (Credit Open).

NS 3574 Directed Studies: Andean Region (Credit Open).

NS 3575 Directed Studies: Cuba (Credit Open).

NS 3576 Directed Studies: Mexico (Credit Open).

NS 3577 Directed Studies: Central America and the Caribbean (Credit Open).

NS 3579 Directed Studies: Western Hemisphere (Credit Open).

NS 3600 Geography, History and Cultures of Asia (4-0).
An introduction to Asia. This basic course addresses the peoples of Asia and their cultures, civilizations, social organization, economic, political and military development before the coming of Europeans. This course is a prerequisite for the advanced courses on Asia.

NS 3620 International Conflicts of Asia to World War II (4-0).
An analysis of the impact of the West on the peoples of Asia, showing the historical roots of many contemporary conflicts of policy.

NS 3630 Foundations of U.S. Policy in Asia (4-0).
A study of 19th and early 20th century U.S. interests and policy toward Asia. Focuses on the emergence of Asian affairs as an issue for American policy-makers and the public from the U.S. revolution through World War II. Emphasis is placed on tracing Asian-American political, economic, strategic, and cultural interaction as it influenced U.S. policy and the policies of key Asian states.

NS 3631 U.S. Security Interests and Policies in Asia since World War II (4-0).
A study of the national interests of the United States in East Asia, South Asia and adjacent oceans from World War II to the present. The development of hostilities in Korea and Vietnam and their aftermath. Evaluation of relations with the new Japan, the PRC and Taiwan, and the independent nations of Asia, produced by the breakup of traditional empires.

NS 3661 Problems of Government and Security in China (4-0).
The rise of the Chinese Communist Party and the establishment of the Communist state; its domestic achievements and problems; the special problem Taiwan; changing foreign policies and the current role of the Peoples Republic of China in world affairs.

NS 3662 Problems of Government and Security of Contemporary Japan (4-0).
The place of Japan in the modern world; and examination of Japan's political dynamics, economic evolution, social transformation, the National Self Defense Forces and alternatives for providing for national security.

NS 3663 Problems of Government and Security of Contemporary Korea (4-0).
Division of the Korean nation into two states; the aftermath of the Korean war; domestic political, economic and social problems of North Korea and South Korea; the prospects for reunification; the military balance and the changing strategic environment; the relations of Pyongyang and Seoul, with their key allies.

NS 3664 Problems of Government and Security in Southeast Asia (4-0).
Consideration given to such internal problems as the growth of nationalism, the role of overseas Chinese, and numerous other social changes, economic modernization, insurgencies, conflicting ideologies and the various types of government. External problems include the role of each nation state and regional groups in international affairs and the interests and policies of outside powers in dealing with the area.

NS 3665 Problems of Government and Security in Australia, New Zealand and Melanesia (4-0).
The politics, economics, and foreign relations of Australia, New Zealand, and Melanesian states. The emergence of new states, and the importance of the area's relations with the United States, the Commonwealth, Western Europe and ASEAN, ANZUS, The U.S.

NS 3666 Problems of Government and Security in South Asia and the Indian Ocean Area (4-0).
Internal problems and foreign relations among the states in the regions of South Asia and the Indian Ocean; the strategic interests of the major powers; the importance of the Indian Ocean to the United States, the Soviet Union and their respective allies.

The NS 367X sequence consists of a series of directed studies of particular subareas of the Far East, Southeast Asia and Pacific. Each individual course description corresponds to that given below for NS 3671.

NS 3671 Directed Studies: China (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations.

NS 3672 Directed Studies: Japan (Credit Open).

NS 3673 Directed Studies: Korea (Credit Open).

NS 3674 Directed Studies: Southeast Asia (Credit Open).

NS 3675 Directed Studies: Australia and New Zealand (Credit Open).

NS 3676 Directed Studies: South Asia (Credit Open).

NS 3679 Directed Studies: General Asia (Credit Open).

NS 3700 History of Europe and Russia, Pre 1917 (4-0).
Review and analysis of the political and military rehistory of Europe, including Russia, from the congress of Vienna to the outbreak of World War I.

NS 3701 History of Europe and the USSR, Post 1917 (4-0)
This course continues the narrative and analysis begun in NS 3700, bringing the student from World War I and the Bolshevik Revolution to the conclusion of World War II.

NS 3710 Problems of Government and Security in Contemporary Western Europe (4-0).
Review and analysis of the history of Western Europe since 1945, including an introduction to the institutions of the European Economic Community and the North Atlantic Treaty Organization.Emphasis on the political systems and security policies of Britain, France, Italy, and the Federal Republic of Germany.

NS 3720 International Relations and Security Problems of the North Atlantic Alliance (4-0).
The origins and evolution of NATO in relation to the provided threat from the East and the postwar recovery of Europe. Problems of strategy, force posture, alliance cohesion, nuclear policy and the differing interests of NATO states. Current issues facing the alliance and their relation to U.S. foreign and defense policy.

NS 3760 Problems of Government and Security in the Mediterranean Region (4-0).
This course provides an introduction to security problems in the Mediterranean region, with special emphasis on U.S. and Soviet policy as well as on the governments of the northern littoral of the Mediterranean.

NS 3761 Problems of Government and Security in the Scandinavian-Baltic Region (4-0).
This course analyzes the political, economic, social and security problems faced by the Scandinavia-Baltic countries. The role they play on the northern flank of NATO will be examined as well as their position vis-a-vis the growing threat of Soviet military and naval power in the Baltic and Norwegian seas.

NS 3762 Problems of Government and Security in the Federal Republic of Germany (4-0).
The origins of the Federal Republic of Germany; political system, economy, and decision-making; central foreign policy problems, including relations with the U.S., the USSR, and the German Democratic Republic; the Bundeswehr and current security issues.

NS 3763 Problems of Government and Security in France (4-0).
The fourth and fifth Republics in the context of French political history; political system economy, and decision-making; central foreign policy problems, including relations with the U.S., the USSR, the Federal Republic of Germany, and Africa; the French armed forces and current security issues.

The NS 377X sequence consists of a series of directed studies of particular subareas of Europe. Each individual course description corresponds to that given below for NS 3770.

NS 3770 Directed Studies: Mediterranean (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations.

NS 3771 Directed Studies: Scandinavia-via-Baltic (Credit Open).

NS 3772 Directed Studies: Federal Republic of Germany (Credit Open).

NS 3773 Directed Studies: France (Credit Open).

NS 3774 Directed Studies: United Kingdom (Credit Open).

NS 3775 Directed Studies: Italy (Credit Open).

NS 3776 Directed Studies: Iberia (Credit Open).

NS 3777 Directed Studies: Eastern Europe (Credit Open).

NS 3779 Directed Studies: General West Europe (Credit Open).

NS 3800 History and Culture of Sub-Saharan Africa (4-0).
An examination of the major historical trends that have shaped African societies. Emphasis will be placed on the interaction between geography, culture, economics and politics. The pre-colonial, and colonial periods in African history will be discussed in detail. This course is intended as a general introduction for the student just beginning the study of Africa.

NS 3810 Problems of Government and Security in Sub-Saharan Africa (4-0).
Emergence of independent African states from a shared colonial heritage, and their common problems in developing viable modern nation-states. Patterns of international cooperation and conflict among African states, including discussions of African socialism, negritude, pan-Africanism, neutralism, and the continuing problem of South Africa's future. Rival policies of outside powers, including the U.S., the Soviet Union, China and the former colonial powers.

NS 3811 Conflict and Change in Africa (4-0).
An examination of the underlying cultural economic and political sources of conflict and change in Africa. Topics to be covered will include: irredentism, civil wars and boundary disputes, ethnic cleavages and political competition, modernization and political stability. These topics will be analyzed by examining a series of case studies; the Congo crisis, the Nigerian civil war, the Eritrea conflict, the Shaba crisis and the Sudanese civil war.

NS 3830 American Interests in Africa (4-0).
This course examines the evolution of American relations w ith Africa from 1960 to the present. It focuses on the ways in which changing geopolitical and economic conditions have altered official perceptions of American interests in Africa - including the Mahgreb. U.S. involvement in conflicts in the Belgian Congo, Nigeria, Angola, Rhodesia and the Horn of Africa will be studied.

NS 3840 African Political Development Strategies (4-0)
An examination of the political modernization strategies adopted by post-independence governments in Africa. Issues to be discussed will include: the role of political parties in Africa, socialism in Africa, and the like. Special emphasis will be placed on Africa's early post-independence problems and their effect on current African strategies.

NS 3879 Directed Studies: African Area Studies (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations.

NS 3900 International Organizations and Negotiations (4-0).
The first part of the course traces the evolution of international organizations from the Concert of Europe, through the League of Nations, United Nations, European Economic Community and NATO, to current forms of organization such as multinational corporations and transnational terrorist groups. The emphasis is on the policy-making process in these organizations and their interaction with nation-States and the international system. The second part of the course is an analysis of international negotiations, with emphasis on applying theories of negotiation to such issues as conflict resolution and arms control.

NS 3902 Modern Revolution and Political Terrorism (4-0).
Study of the general historical framework of modern revolution to include systematical analysis of the development of modern revolutionary situations. Examination of the more important revolutions of modern times, including study of the historical events, testing of the methods of systematic analysis, with emphasis on revolutionary tactics, e.g., political terrorism.

NS 3960 International Law and the Law of War (4-0).
An introduction to the principles of International Law including sovereignity, territory, recognition, the Law of the Sea, and the Laws of War. Special attention is paid to the 1949 Geneva Convention, the Navy's Law of Naval Warfare and the Army's Law of Land Warfare.

NS 3962 Ocean, Maritime and Tort Law for the Hydrographic Community (4-0).
This course is designed to provide a detailed introduction to the personal and institutional liabilities and immunities of the hydrographic community. As such, it will consist of a general introduction to governmental tort law, including the applicable sections of the Federal Tort Claims Act and pertinent cases; relevant areas of Admiralty law and international law, both public and private, as it applies to the rights and duties pertaining to access to, and use of both international and sovereign waters. In addition, special emphasis will be given to the historical and legal developments of the law of the sea; and to present day trends in international conventions leading up to the proposed law of the Sea Treaty.

Graduate Courses

NS 4010 Seminar in Comparative Regional Security (4-0).
A seminar designed for geographical security area students to address global security issues on a comparative basis. PREREQUISITIES: NS 3310, 3410, 3630, 3710 or 3810.

NS 4020 Seminar in Comparative Foreign Policy (4-0).
The objective of this Seminar is to develop the student's ability to analyze and predict the international behavior of states. Emphasis will be placed on comparing the impact of different factors, such as international structure, domestic politics, bureaucratic institutions, economic resources and ideology, on the foreign policies of different countries. Students will be expected to write a seminar paper using the theoretical material covered in the course to compare the foreign policies of two or more countries. PREREQUISITE: NS 3020 or permission of the instructor.

NS 4040 Strategic Resources and U.S. National Security Policy (4-0).
Analysis of the problems of access to global resources and their utilization: agricultural production access to critical raw materials; problems and politics of oil; national and international implications of various strategies of self-sufficiency and interdependency. Emphasis is placed on the security problems arising from the geographic distribution of international resources. PREREQUISITES: NS 3030, NS 3020.

NS 4041 Economics of Third World Military Expenditures (4-0).

A comparative analysis of problems of politic-economic growth and development, focusing on selected developing nations. Alternate systems are compared with respect to development goals, theories of economic organization, institutions and development processes. Emphasis is placed on forecasts of likely changes in economic and political conditions and their effect on the political-military situation in each country. PREREQUISITE: NS 3040 or consent of the Instructor.

NS 4042 National Security and Technology Transfer (4-0).

Examines patterns of East-West Trade, U.S. policies regarding technology transfer to the Eastern bloc. PREREQUISITE: NS 3040 or consent of the Instructor.

NS 4079 Advanced Directed Studies in National Security Affairs (Credit Open).

Format and content vary. Normally involves extensive individual research under direction of the instructor and submission of a substantial paper of graduate seminar quality and scope.

NS 4151 Comparative Command, Control, Communications and Ocean Surveillance (3-0).

An examination of the command and organizational structures, control philosophies, communications systems and ocean surveillance systems of the Soviet and U.S. Navies. The course begins with the Soviet approach, which is used as a basis of comparison with the U.S. approach. Possible exploitable features of the command and control structure are considered. The course emphasizes readings in the appropriate literature, research and seminar discussions. PREREQUISITE: TOP SECRET clearance with access to SPECIAL INTELLIGENCE information; NS 3452, SE 2003, OS 3002 or equivalent. May also be taught as SE 4064.

NS 4152 Problems of Intelligence and Threat Analysis (4-0).

This advanced course focuses on problems in analyzing the intentions and capabilities of a military competitor, especially the Soviet Union. This course is specifically intended to draw on the knowledge and experience of practioners and analysts in the Naval intelligence community. Students will be given the opportunity to undertake analyses where they apply methods and concepts acquired in earlier courses. PREREQUISITE: NS 3150 or NS 3154 or permission of the Instructor. Graded on a Pass/Fail basis only. TOP SECRET clearance with eligibility for SPECIAL INTELLIGENCE information.

NS 4179 Advanced Directed Studies: Intelligence (Credit Open).

Format and content vary. Normally involves extensive individual research under the direction of a substantial paper of graduate seminar quality and scope.

NS 4230 Seminar in Strategic Planning (4-0).

Advanced study in the concepts and methods of long-range defense planning and analysis, particularly with respect to iterative aggregation and synthesis in the Military Departments, the Joint Chiefs of Staff, the office of the Secretary of Defense and the National Security Council. Students are expected to identify and address some evolving strategic issues which have significant long-term implications for the security of the U.S. PREREQUISITE: NS 3230 or permission of Instructor. Graded on a Pass/Fail basis only.

NS 4231 Science, Technology and Public Policy (4-0).

Advanced study and research in the role of science and technology in the formulation and conduct of U.S. national policy, to include interactions among scientific communities, government and the military services. A research focus will be determined for each course. PREREQUISITE: Consent of the Instructor. Graded on a Pass/Fail basis only.

NS 4250 Problems of Security Assistance and Arms Transfer (4-0).

An analysis of the patterns, purposes and effects of cross-national security assistance, including arms sales and the transfer of technology. Special topics include: factors dominating the arms transfer policies of the major powers; the role of the military attache; the design, execution and evaluation of security assistance programs. PREREQUISITES: NS 3030 or NS 3020.

NS 4251 American National Security Objectives and Net Assessment (4-0).

Comparative analysis of trends in U.S. and Soviet security policies, military forces, manpower, and capabilities. Special attention is paid to familiarizing students with original source material and material and major elements in current controversial national security issues. Topics covered include nuclear capabilities and doctrine, BMD and air defense, civil defense, combined arms employment, NATO Warsaw Pact military balance, naval forces, and trends in the U.S. and Soviet economies, especially as they may affect the allocation of resources to defense. PREREQUISITE: TOP SECRET clearance with eligibility for SPECIAL INTELLIGENCE information.

NS 4261 Survey of Strategic Studies (4-0).

An extensive survey of the classical and contemporary literature on strategic thinking: national objectives and strategic alternatives; deterrence, counterforce, arms control, counter insurgency, compellence; components and rules of the international strategic system; arms competitions, nuclear proliferation, terrorism. Student projects on current strategic problems are a major component of the course. PREREQUISITE: NS 3020.

NS 4262 Seminar in Strategic Deception (4-0).
This course explores the utility of strategic deception in advancing military/political objectives from a variety of social scientific perspective; both historical case studies and contemporary issues will be considered. PREREQUISITE: NS3230 or consent of Instructor.

NS 4279 Advanced Directed Studies: Strategic Planning (Credit Open).
Format and content vary. Normally involves extensive individual research under direction of the instructor and submission of a substantial paper of graduate seminar quality and scope.

NS 4280 Advanced Topics in Nuclear Strategy and Deterrence (4-0).
A follow-up course to NS 3280 that examines advanced issues in nuclear strategy, strategic and crisis stability, and deterrence. In addition to advanced theoretical issues of deterrence, this course will specifically investigate the role and importance of nuclear force planning and strategy formulation to deterrence, stability, and foreign policy implementation. Some of this analysis will be done using both static measurement models and dynamic computer nuclear exchange modeling. PREREQUISITE: NS 3280 or permission of the Instructor; SECRET clearance.

NS 4290 Seminar on the Origins of Soviet American Relations (4-0).
This course examines the origins of contemporary U.S. and Soviet military and political relationships and focuses on the 1945 to 1963 time period. Topics covered include theories of the Cold War (including orthodox, revisionist, post-revisionist, and neo-orthodox), Allied war-time diplomacy and contrasting post-war objectives, Cold War alliance strategies, formulation of American post-war foreign policy, Soviet perspectives on the origins of U.S.-Soviet antagonisms, as well as de-colonization and the Cold War in Asia and the Near and Middle East. PREREQUISITE: NS 3030 or consent of the Instructor.

NS 4300 Seminar in Middle Eastrn Civilization (4-0).
Description and analysis of the four major cultural traditions of the Middle East: Arabic, Persian, Judiac, and Turkish. Students read translations of selected classical and contemporary writings from each of these traditions, and secondary materials concerning social and cultural institutions. PREREQUISITES: NS 3310 or NS 3300, or consent of Instructor.

NS 4310 Seminar in Security Problems of the Middle East (4-0).
Advanced Middle Eastern politics and the security problems they present to the U.S. decision-makers. The central theme of the course is U.S. interests in the Middle East, how these interests are threatened, and what policy alternatives have been proposed to secure them. PREREQUISITE: NS 3310 or NS 3320.

NS 4379 Advanced Directed Studies: Middle East (Credit Open).
Format and content vary. Normally involves extensive individual research under direction of the instructor and submission of a substantial paper of graduate seminar quality and scope.

NS 4410 Seminar in Soviet Security Problems (4-0).
An advanced seminar for all students specializing in Soviet and East European affairs designed to provide an introduction to primary methodological approaches for studying Soviet national security (macroanalytical, microanalytical, unitary actor, bureaucratic politics) and methodological techniques (content analysis, Kremlinology, mathematical-statistical methods, and others). Course is also designed to provide students with an opportunity to engage in advanced study and research of specialized topics relating to Soviet security problems in cooperation with the major Soviet study centers and leading Soviet scholars in the United States and abroad. PREREQUISITE: NS 3400, 3410 and 3450.

NS 4420 Security Problems and International Relations of the Warsaw Treaty Organization (WTO) (4-0).
An advanced study of structures and policy-making in the WTO countries and other communist countries not having WTO membership, above all, China, Yugoslavia, Cuba and Vietnam. Focus on the origin and evolution of the WTO alliance, problems of joint strategy, alliance cohesion and reliability, differing interests of various WTO members, conflict management wtihin the alliance and WTO members relations with other important Communists, NATO and Third World countries. Current issues such as the Soviet-Cuban joint intervention in Africa and involvement in the Caribbean basin, the Soviet alliance with Vietnam in Southeast Asia, Soviet-East German military-security operations in the Third World, and the dynamics of Sino-Soviet relations are viewed with an eye to their implications for the United States. PREREQUISITES: NS 3400, 3410, and 3450, or consent of Instructor.

NS 4451 Advanced Topics in Soviet Naval Affairs (4-0).
Advanced study and research in Soviet naval and maritime affairs. Topics include: decision-making processes, scenarios, warfare capabilities and support systems, missions; and U.S.-Soviet naval interactions. PREREQUISITE: TOP SECRET clearance with eligibility for SPECIAL INTELLIGENCE information.

NS 4479 Advanced Directed Studies: Soviet Union (Credit Open).
Format and content vary. Normally involves extensive individual research under direction of the instructor and submission of a substantial paper of graduate seminar quality and scope.

NS 4500 Seminar in the National Interest (4-0).
An advanced study of the underlying assumptions and objectives of American security and foreign policy. The core of the course is an in-depth analysis of the American national interest in the international context. Students are required to write a major seminar paper on American national interests in a specific country or region.

NS 4510 Seminar in Government and Politics in Latin America (4-0).
This seminar will consist of intensive readings of advanced topics in Latin American politics and government, including the interplay between economic, political, military, and social factors in the process of political change at play in the region. Students will be required to prepare classroom lectures on selected subjects and present an article length paper on a separate topic. Reading assignments will be extensive, which presupposes a significant level of knowledge and preparation prior to the course. PREREQUISITES: NS 3510, 3520, 3540 and 3550.

NS 4560 Seminar in International Security Problems of Latin America (4-0).
Reviews the history of Latin America as part of an inter-American system, and the case of joint foreign policy action on economic, political, and military fronts. Case studies draw attention to the role of the United States in the region, both within the formal region institutions and in bilateral relations including military advisor activities. The relations are put in the context of the attitudes of Latin American leaders toward hemispheric solodarity.

The 457X sequence consists of a series of directed studies of particular subareas of Latin America. Each individual course description corresponds to that given below for NS 4570.

NS 4570 Advanced Directed Studies: Latin America (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examination.

NS 4571 Advanced Directed Studies: Canada (Credit Open).

NS 4572 Advanced Directed Studies: Brazil (Credit Open).

NS 4573 Advanced Directed Studies: Southern Cone Countries (Credit Open).

NS 4574 Advanced Directed Studies: Andean Region (Credit Open).

NS 4575 Advanced Directed Studies: Cuba (Credit Open).

NS 4576 Advanced Directed Studies: Mexico (Credit Open).

NS 4577 Advanced Directed Studies: Central America and the Caribbean (Credit Open).

NS 4579 Advanced Directed Studies: Western Hemisphere (Credit Open).

NS 4660 Asia and Soviet Union (4-0).
An advanced study of the interests and policies of the Soviet Union in Asia and the adjacent oceans, with special reference to the impact of Soviet expansiveness on the policies of the United States, China, Japan and other Asian states. This course is open both to Soviet and Asian area specialists.

The NS 467X sequence consists of a series of directed studies of particular subareas of the Far East, Southeast Asia and Pacific. Each individual course description corresponds to that given below for NS 4671.

NS 4671 Advanced Directed Studies: China (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations.

NS 4672 Advanced Directed Studies: Japan (Credit Open).

NS 4673 Advanced Directed Studies: Korea (Credit Open).

NS 4674 Advanced Directed Studies: Southeast Asia (Credit Open).

NS 4675 Advanced Directed Studies: Australia and New Zealand (Credit Open).

NS 4676 Advanced Directed Studies: South Asia (Credit Open).

NS 4679 Advanced Directed Studies in General Asia (Credit Open).
Normally involves extensive individual research under direction of instructor and submission of substantial paper of graduate seminar quality and scope. Designed for advanced study in one of the following areas: Japan, Korea, China, South or Southeast Asia.

NS 4690 International Security Problems of Asia and the Adjacent Oceans (4-0).
Advanced study of Asian security issues with special emphasis on the balance of forces, regional and external alliances, prospects for conflict, and Asian concepts of security and strategy. PREREQUISITE: Consent of Instructor.

NS 4710 Seminar in Political and Security Problems of Europe (4-0).
A research seminar on political and security issues in contemporary Europe. Students conduct and present original research on a selected issue, or related issues, in specific European countries or subregions. The issue around which the seminar is structured varies from term to term. It is chosen to meet the research interests of each group of students enrolled in the course.

NS 4720 Seminar in Soviet-European Relations (4-0).
A seminar intended to deepen the student's knowledge of current issues in Soviet and European affairs.

The NS 477X sequence consists of a series of directed studies of particular subareas of Europe. Each individual course description corresponds to that given below for NS 4770.

NS 4770 Advanced Directed Studies: Mediterranean (Credit Open).
Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations.

NS 4771 Advanced Directed Studies: Scandinavia-Baltic (Credit Open).

NS 4772 Advanced Directed Studies: Federal Republic of Germany (Credit Open).

NS 4773 Advanced Directed Studies: France (credit open).

NS 4774 Advanced Directed Studies: United Kingdom (Credit Open).

NS 4775 Advanced Directed Studies: Italy (Credit Open).

NS 4776 Advanced Directed Studies: Iberia (Credit Open).

NS 4777 Advanced Directed Studies: Eastern Europe (Credit Open).

NS 4779 Advanced Directed Studies: General West Europe (Credit Open).

NS 4810 Current Problems in Africa (4-0).
This course will examine the major problems and crises that have confronted African leaders since 1970. Particular attention will be paid to conflicts in Southern Africa. The OAU's role in conflict management will also be discussed.

NS 4820 Advanced Seminar in Africa Studies (4-0).
Advanced study and research in government, politics, international relations and national security affairs in Sub-Saharan Africa. A continuing theme is the role of the military in African national and international affairs and the implications of contemporary crises for military-security concerns of the continent. PREREQUISITE: NS 3830 or NS 3840.

NS 4830 American Policy Towards Africa (4-0).
The central theme of the course is U.S. interests in Africa, how these interests are threatened, and what policy alternatives have been proposed to secure them. Advanced African politics and the security problems they present to U.S. decisionmakers. PREREQUISITES: NS 3340, NS 3840 or NS 3820.

NS 4850 Role of the Military in Africa (4-0).
Advanced study and research in government, politics, international relations and national security affairs in Sub-Saharan Africa. A continuing theme is the role of the military in African national and international affairs and the implications of contemporary crises for military-security concerns of the continent. PREREQUISITE: NS 3830 or NS 3840.

NS 4879 Advanced Directed Studies: African Area Studies (Credit Open).
Format and content vary. Normally involves extensive individual research under direction of the instructor and submission of a substantial paper of graduate seminar quality and scope.

NS 4900 Seminar in International Negotiations (4-0).
Advanced study and research of the international negotiating process, designed to provide students with an opportunity to analyze specific topics related to negotiating national security.

NS 4901 Seminar in Ocean Policy (4.0).
An advanced survey of the oceanographic, military, political and legal problems of the oceans. Among the topics dealth with are: comparative regional military oceanography, politics and strategy of fleet deployment, and international legal constraints on naval operations.

NS 4902 Seminar on Modern Revolution and Terrorism (4-0).
A research seminar on modern revolution and terrorism. Students will be introduced to the general sources of information and accomplish the research necessary to complete a seminar paper in a related area of their choice. PREREQUISITE: NS 3902.

NS 4950 Seminar on Arms Control and National Security (4-0).
An analysis of international negotiation processes as related to t he control of armaments, including a review of the history of modern arms control efforts, examination of the domestic political context of arms limitation, the implications of international law relevant to treaty negotiations, ratification and enforcement, the intellectual contributions of scientists to the development of arms control theory, and a review of selected substantive issues with respect to security concerns, verification capabilities and compliance measures. PREREQUISITES: NS 3450 and 3900 or consent of the Instructor and SECRET clearance.

DEPARTMENT OF OCEANOGRAPHY

Chairman:

Christopher N. K. Mooers, Professor,
Code 68Mr, Root Hall, Room 304,
(408) 646-2673, AV 878-2673.

Associate Chairman:

Research:

Edward B. Thornton, Professor,
Code 68Tm, Spanagel Hall, Room 327,
(408) 646-2847, AV 878-2847.

Instruction:

Joseph J. von Schwind
Code 68Vs, Bldg. 224,
(408) 646-3271, AV 878-3271.

The Oceanography Department, like the Meteorology Department, primarily supports curricula sponsored by the Oceanographer of the Navy; viz.

#373 Air-Ocean Science, #374 Operational Oceanography, #440 Oceanography, #441 Mapping, Charting, and Geodesy.

The department also provides core courses for Naval Intelligence, ASW, and the Space Curricula, but in accordance with naval priorities, the department focuses on Physical Oceanography and Mapping, Charting and Geodesy (MC&G). In the Physical Oceanography arena, topics include ocean dynamics, numerical ocean circulation modeling, satellite remote sensing of the ocean, air-sea interaction, Arctic oceanography, upper ocean dynamics and thermodynamics, nearshore processes, mesoscale dynamics, synoptic/mesoscale ocean prediction, coastal ocean circulation, ocean optics and acoustics, and environmental acoustics. The MC&G arena includes hydrographic surveying, electronic navigation, marine geodesy, photogrammetry, marine geophysics (bathymetry, gravity, magnetics), naval astronomy and precision time, and digital cartography. For more programmatic details, see the description of the Department of Meteorology.

The Mapping, Charting and Geodesy Curriculum has International Hydrographic Organization-International Federation of Surveyor Category A certification.

MASTER OF SCIENCE IN OCEANOGRAPHY

Entrance to a program leading to the degree Master of Science in Oceanography requires a baccalaureate degree. Minimal requirements include mathematics through differential and integral calculus, one year of college physics, and one year of college chemistry. Previous experience at sea is considered advantageous.

The degree of Master of Science in Oceanography requires:

a. Completion of thirty-five quarter hours of graduate courses, of which fifteen hours must be in the 4000 oceanography series. The entire sequence of courses selected must be approved by the Department of Oceanography. Significant educational experience at sea on a research vessel is required for the degree.

b. Completion of an acceptable thesis on a topic approved by the Department of Oceanography.

MASTER OF SCIENCE IN HYDROGRAPHIC SCIENCES

Entrance to a program leading to the degree Master of Science in Hydrographic Sciences requires a baccalaureate degree. Minimal requirements include mathematics through differential and integral calculus, one year of college physics, and one year of college chemistry. Previous experience at sea is considered advantageous.

The degree of Master of Science in Hydrographic Sciences requires:

a. Completion of forty quarter hours of graduate courses in the MC&G series of which twelve hours must be at the 4000 level. The entire sequence of courses must be approved by the Department of Oceanography. Significant educational experience at sea on a research vessel is required for the degree.

b. Completion of an acceptable thesis on a topic approved by the Department of Oceanography.

MASTER OF SCIENCE IN METEOROLOGY AND OCEANOGRAPHY

Direct entrance to a program leading to the degree Master of Science in Meteorology Oceanography requires a baccalaureate degree preferably in one of the physical sciences, mathematics, or engineering. This normally permits the validation of a number of required undergraduate courses such as physics, chemistry, differential equations, linear algebra, vector analysis and various courses in meteorology and/or oceanography, which are prerequisites to the graduate program. These prerequisites may be taken at the Naval Postgraduate School; however, in that event the program may be lengthened by one or more quarters.

The degree of Master of Science in Meteorology and Oceanography requires:

a. Completion of forty-eight quarter hours in meteorology and oceanography, to include at least twenty hours in the 4000 series, with a minimum of one 4000 level course in other than directed study.

b. The basic sequence of graduate courses in the fields of dynamical, physical and synoptic meteorology/oceanography must be included in the forty-eight hours.

c. A significant and educational experience at sea on a research vessel.

d. Completion of an acceptable thesis on a topic approved by either department.

DOCTOR OF PHILOSOPHY

Department of Oceanography admission requirements for the degree of Doctor of Philosophy include:

a. A Master's degree (or the equivalent) in one of the physical sciences, mathematics, or engineering or

b. A Bachelor's degree with a high QPR or

c. a highly successful first graduate year in a Master's program, with clear evidence of research ability.

The Ph.D. Program is in Physical Oceanography, including areas of study in ocean circulation theory, ocean prediction, and ocean acoustics, among others.

to undertake doctoral work in Oceanography, a student must apply to the Chairman, Department of Oceanography. A copy of the Oceanography Ph.D. Program Guidelines is available from the Department of Oceanography, which should be followed.

OCEANOGRAPHIC LABORATORIES

NPS is an Associate Member of UNOLS (University National Oceanography Laboratory System) and a full member of CENCAL (Central California Cooperative). UNOLS operates the Nation's academic oceanographic research fleet, while CENCAL promotes and coordinates research vessel operations between several academic institutions in Central California. The nearby Moss Landing Marine Laboratory operates the NSF-owned 135-foot R/V POINT SUR for the benefit of CENCAL, with NPS a major user. NPS is also a member of UCAR (University Corporation for Atmospheric Research), which serves some of the computational and other research facility needs of the oceanographic community, too. Together with the Meteorology Department, the Oceanography Department operates the Interactive Digital Image Analysis Laboratory (IDIAL), that is equipped with several workstations for the analysis of satellite images or other digital fields; e.g., numerical model output. The Department also operates a 16-terminal color graphics instructional laboratory for simulation and analysis of oceanographic data.

DEPARTMENTAL COURSE OFFERINGS
OCEANOGRAPHIC SCIENCES

OC 0110, 0111, 0112, 0113 Application Seminars (1-0).
Presentation of DOD related research activities, applications to weapons and warfare systems, utilization of oceanography and meteorology in specific billets, presentations by faculty, staff, selected students, visiting authorities. OC 0110 is for orientation; OC 0111 is for intermediate students; OC 0112/0113 is for thesis orientation/topic selection. PREREQUISITE: Enrollment in an Air-Ocean Sciences curriculum.

OC 0810 Thesis Research (0-0).
Every student conducting thesis research will enroll in this course.

OC 0999 Seminar in Oceanography (2-0).
Students in the various oceanography curricula present their theses for discussion. PREREQUISITE: Preparation of a thesis.

Upper Division Courses

OC 2001 Ocean Systems (4-0).
This course is designed to support the Naval Intelligence Curriculum by providing an overview of significant oceanographic factors, data networks and their products, sound propagation in the ocean, active and passive sonar, and ocean vehicle design practices.

OC 2020 Computer Computations in Air-Ocean Sciences (1-2).
Introduction to FORTRAN, and the NPS mainframe computer, as applied to elementary problems in oceanography and meteorology. PREREQUISITES: Calculus and college physics.

OC 2120 Survey of Oceanography (4-0)
An integrated view of the whole field of oceanography including physical, biological, geological and other chemical aspects. PREREQUISITES: None.

OC 2520 Survey of Air-Ocean Remote Sensing (3-0).
Overview of systems of remote sensing of the atmosphere and oceans from space, and operational applications. PREREQUISITIES: Undergraduate physics and calculus, or consent of Instructor.

Upper Division of Graduate Courses

OC 3120 Biogeochemical Processes in the Ocean (4-3).
Basic biological, geological, and chemical processes in the ocean. Biocoustics, deep scattering layers, and bio-deterioration. Geomorphic features of the ocean floor; kinds and distribution of ocean bottom features. Chemical composition of the ocean.

OC 3130 Mechanics of Fluids (4-2).
Fundamentals of the mechanics of fluids as a basis for geophysical fluid dynamics; introduction to field concepts, conservation principles, forces and effects, stress and rate of strain, momentum, energy, irrotational flow; introduction to turbulence and boundry-layer flow. Emphasis on problem solving. PREREQUISTITE: MA 2121 equivalent (may be concurrent).

OC 3140 Probability and Statistics for Air-Ocean Science (3-2).
Basic probability and statistics, in the air-ocean science context. Techniques of statistical data analysis. Structure of a probability model, ensity, distribution function, expectation, and variance. Binomial, Poisson and Gaussian distributions. Conditional probability and independence. Joint distributions, covariance and central limit theorem. Transformations of random variables. Histograms and empirical distributions and associated characteristics such as moments and percentiles. Standard tests of hypotheses and confidence intervals for both one-and two-parameter situations. Regression analysis as related to least squares estimation. PREREQUISITE: Calculus.

OC 3150 Analysis of Air Ocean Time Series (3-2).
Analysis methods for atmospheric and oceanic time series. Correlation, spectrum, and empirical orthogonal function analyses. Statistical objective analysis. Optimal design of air-ocean data networks. PREREQUISITES: MA 2121 and a probability and statistics course.

OC 3212 Polar Meteorology/Oceanographapy (4-0).
Operational aspects of Arctic and Antartic meteorology. Polar oceanography. Sea ice: amount, its seasonal distribution, melting and freezing processes, physical and mechanical properties, drift, and predictions. Aspects of geology and geophysics. PREREQUISITES: MR 3222, OC 3240, or consent of Instructor.

OC 3230 Oceanic Thermodynamics (3-0).
Physical properties of seawater. Processes influencing the distribution of heat, salt and density in the ocean. Static and dynamic stability in the ocean. PREREQUISITES: Calculus (may be concurrent) and college physics.

OC 3240 Ocean Circulation Analysis (4-2).
Static and dynamic stability in the ocean. Currents without friction: application of geostrophy, thermal wind. Wind-driven and frictional currents: Reynolds equations; Ekman solution; Sverdrup transport; Potential vorticity: westward intensification and topographic steering. Computational and computer graphics analysis laboratory. PREREQUISITES: OC 3230, OC 3321.

OC 3260 Sound in the Ocean (3-0).
Designed for students in the Mapping, Charting, and Geodesy curriculum. A brief introduction to the physics of underwater acoustics followed by a detailed discussion of oceanographic factors affecting sound transmission in the ocean including absorption, reflection, refraction, scattering, and ambient noise. Emphasis placed on acoustic depth sounding, seafloor mapping, etc., for the hydrographic scientist. PREREQUISITE: OC 3230.

OC 3261 Oceanic Factors in Underwater Sound (4-0).
Examines the oceanic factors which influence sound propagation in the ocean and the effects in acoustic forecasting. Factors considered include temporal and spatial variations in sound speed profiles, ambient noise, biological effects, reflection characteristics of ocean surface and bottom, signal fluctuations, and forecasting ocean thermal structure, transmission loss, and ambient noise. This course is designed for the Engineering Acoustics Curriculum. PREREQUISITE: PH 3452.

OC 3321 Air-Ocean Fluid Dynamics (4-0).
The hydrodynamical equations for a rotating stratified fluid. Forces, kinematics, boundary conditions, scale analysis. Simple balanced flows, baroclinicity, thermal wind, vorticity and divergence; rotational and divergent part of the wind; circulation theorem. Vorticity and potential vorticity. PREREQUISITE: MA 2047 (may be concurrent or equivalent).

OC 3325 Marine Geophysics (3-0).

Theory and methods of marine geophysics surveys, and emphasis on gravity, magnetism, seismic and acoustic wave propagation, heat flow, and radio-activity; geophysical anomalies associated with major seafloor features; acoustic reflectivity of the seafloor; marine geodesy. PREREQUISITE: MA 2121 (may be concurrent).

OC 3440 Small Oceanic Processes (2-2).
Introduction to concepts and information about turbulence in the ocean. A survey of measurement techniques and available data is used to study small scale mixing processes and their relationship to internal waves, double diffusion, turbulence generation, and energy dissipation. The role of turbulence in the dynamics and energetics of the ocean. PREREQUISITE: OC 3230.

OC 3445 Oceanic and Atmospheric Observational Systems (2-2).
Principles of measurement; sensors, data acquisition systems, calibration, etc. Methods of measurement for thermodynamic and dynamic variables in the ocean and atmosphere, including acoustics and optics. PREREQUISITES: OC 3230 and MR 3420.

OC 3520 Remote Sensing of the Atmosphere and Ocean (4-0).
Principles of radiative transfer and satellite sensors and systems; visual, infrared and microwave radiometry, and radar systems; application of satellite remotely-sensed data in the measurement of atmospheric and oceanic variability. PREREQUISITE: undergraduate physics and differential integral calculus; ordinary differential equations or consent of Instructor.

OC 3522 Remote Sensing of the Atmosphere and Ocean with the Laboratory (4-2).
Same as OC 3520 plus laboratory sessions on the concepts considered in the lecture series. PREREQUISITE: Same as OC 3520.

OC/MR 3570 Operational Oceanography and Meteorology (2-4).
Experience at sea in conducting oceanographic, meteorological, acoustical, and other observations and analyses. Integration of satellite remote sensing information with in situ data and on scene prediction. Includes pre-cruise planning, real-time operational product interpretation, and post-cruise analysis. PREREQUISITES: MR 3222, MR/OC 3522; concurrent MR 4416, OC 4267, OC 4331.

OC 3610 Wave and Surf Forecasting (2-2).
Theory and prediction of wind-generated ocean waves. Spectral transformation of waves from deep to shallow water. Prediction of surf and wave related influences on operations. PREREQUISITES: OC 3150, OC 4211.

OC 4211 Dynamic Oceanography (4-0).
Linear theory of surface and internal waves; theory of finite amplitude waves. PREREQUISITES: MA 3132, OC 3240.

OC 4212 Tides (4-0).
Development of the theory of tides including the tide-producing forces, equilibrium tides, and the dynamic theory of tides; harmonic analysis and prediction of tides; tidal datum planes and their relationship with geodetic datum planes, short-term and secular changes in sea level. PREREQUISITES: OC 3130 or OC 4211,

OC 4213 Nearshore and Wave Processes (3-1).
Shoal-water wave processes, breakers and surf; nearshore water circulation; beach characteristics; littoral drift; coastal hydraulics; storm surge. PREREQUISITE: OC 4211 or consent of Instructor.

OC 4220 Shallow Water Oceanography (3-0).
Circulation and exchange processes of continental shelf and slope regions, shallow seas, and straits. Dynamics and models of coastal ocean circulations driven by wind, thermohaline, tidal, boundary current, and ocean eddy forces. PREREQUISITES: OC 4211, OC/MR 3321, and OC/MR 4413.

OC 4250 General Circulation of the Atmosphere and Oceans (3-0).
Selected topics on the general circulation of the atmosphere (e.g., heat momentum and moisture fluxes; energetics) and ocean (e.g., linear and nonlinear theories of the wind-driven ocean circulation, nonlinear thermocline theories, mesoscale eddies, mixed-layer theories); coupled ocean-atmosphere general circulation models. PREREQUISITE: Consent of Instructor.

OC 4267 Ocean Influences and Prediction: Underwater Acoustics (4-3).
Examines sound speed profiles (time and space variability), ambient noise, absorption, and reflection from the sea surface and bottom as they affect sound propagation in the ocean. Synoptic prediction techniques for ambient noise and transmission loss are reviewed. Environmental data input and computational approximations for acoustic models are evaluated against observed signal fluctuations and transmission loss. The course is designed for the Air-Ocean Science, Operational Oceanography, and ASW Curricula. PREREQUISITES: OC 2120, PH 2471, concurrent enrollment in PH 3472 or OC 3240 and PH 3431. SECRET clearance.

OC 4323 Numerical Air and Ocean Modeling (4-2).
Numerical models of atmospheric and oceanic phenomena. Finite difference techniques for solving elliptic and hyperbolic equations, linear and nonlinear computational instability. Spectral and finite element models. Filtered and primitive equation equation prediction models. Sigma coordinates. Objective analysis and initialization. Moisture and heating as time permits. PREREQUISITES: MR 4322, MA 3132, and MA 3232 desirable.

OC 4331 Synoptic/Mesoscale Oceanography (4-0).
Contemporary knowledge of synoptic/mesoscale ocean variability. Kinematics, dynamics, and energetics of cyclonic and anticyclonic ocean eddies, ocean fronts, and meandering currents; their geographical and statistical distribution. Methods of observation and practical application. PREREQUISITES: OC 3240, OC/MR 3321, OC/MR 3150 (may be concurrent).

OC 4335 Elements of Ocean Prediction (3-2).
Analyze, forecast, and interpret synoptic information on mesoscale, synoptic scale, and large scale processes on a regional basis. Use is made of dynamical and statistical principles and methods and of diagnostic and prognostic models. PREREQUISITES: OC 4330, and OC/MR 4323 (may be concurrent).

OC 4413 Air/Sea Interaction (4-0).
Fundamental concepts in turbulence. The atmospheric planetary boundary layer, including surface layer, and bulk formulae for estimating air-sea fluxes. The oceanic planetary boundary layer including the dynamics of the well-mixed surface layer. Recent papers on large-scale air-sea interaction. PREREQUISITE: OC 3240 or MR 4322 (may be concurrent) or consent of Instructor.

OC 4414 Advanced Air/Sea Interaction (3-0).
Advanced topics in the dynamics of the atmospheric and oceanic planetary boundary layers. PREREQUISITE: OCF/MR 4413 or consent of instructor.

OC 4330 Operational Oceanography of US/USSR Acoustical Surveillance Systems (3-1).
Advanced topics in the application of oceanographic and acoustic principles to specific operational US/USSR surveillance systems. Ocean acoustic limits on figure of merit, signal to noise ratio, performance index, median detection range, reliable acoustic path range, probability of detection, convergence zone and ducting are established in different oceanic regimes and operational scenarios. Advanced ocean acoustic modeling (FACT, PE, ASTRAL, AND DANES models) is introduced to compare the ocean acoustic effects on systems and to illustrate model limitations in establishing predicted operational performance. Emphasis on classified student projects and use of visiting undersea surveillance authorities. PREREQUISITES: USN officers only, consent of Instructor.

OC 4520 Topics in Satellite Remote Sensing (3-0).
Selected topics in the advanced application of satellite remote sensing to the measurement of atmospheric and oceanic variables. PREREQUISITE: OC/MR 3522.

OC 4610 Soviet Oceanography (1-2).
Soviet civilian and naval oceanography and meteorology. The oceanography of soviet waters. Includes lectures, library research, and a term paper. SECRET clearance required. PREREQUISITES: OC 3240 and MR 3220 or equivalent.

OC 4800 Advanced Topics in Oceanography (1-0 to 4-0).
Advanced topics in various aspects of oceanography. Topics not covered in regularly offered courses. The course may be repeated for credit as topics change. PREREQUISITE: Consent of the Department Chairman and Instructor.

OC 4900 Special Topics in Oceanography (1-0 to 4-0).
Independent study of advanced topics in oceanography not regularly offered. PREREQUISITE: Consent of the Department Chairman and Instructor.

MAPPING, CHARTING, AND GEODESY

Lower Division Courses

GH 1101 Nautical Science for Hydrographers (2-0).

Basic principles of nautical science for hydrographers with little or no previous sea experience. Topics include piloting and navigation, celestial navigation, rules of the road, use of radar, radar plotting, small boat handling, ship capabilities, seamanship, emergency procedures, safety at sea, marine communications, and magnetic and gyro compasses.

Upper Division of Graduate Courses

GH 3901 Mapping, Charting, and Geodesy (4-2).
Principles and fundamentals of geodesy, photogrammetry, and cartography. The application of these disciplines to mapping and charting with emphasis on the propagation of random errors inherent in each phase: data acquisition, data reduction, generalization, and portrayal.

GH 3902 Hydrographic and Geodetic Surveying (4-2).
Principles and applications of hydrographic and geodetic surveying. Introduction to surveying procedures, both at sea and on land, including use of surveying instruments. PREREQUISITE: GH 3901.

GH 3903 Electronic Surveying and Navigation (4-0).
Introduction to the theory and practice of electronic surveying and navigation including principles of electronics, electronic surveying systems and basic components, geometry of electronic surveying, ray path curvature, propagation velocity, and velocity applications to surveying. PREREQUISITE: GH 3902.

GH 3906 Hydrographic Survey Planning (2-2).
Planning and management of a hydrographic survey project. Gathering of sufficient background data (geodetic control, historic tide station locations, etc.) and its implementation in planning a complete basic hydrographic survey of Monterey Bay. PREREQUISITE: GH 3902.

GH 3910 Hydrographic Surveying Field Experience (2-9).
Conduct a basic hydrographic survey of a portion of Monterey Bay. Field work consists of locating horizontal control stations through photogrammetric methods, installing and monitoring a tide gage, and running sounding lines using various types of positioning control. Data acquisition, reduction, and presentation will be emphasized. PREREQUISITES: GH 3906 and concurrent registration in GH 3911.

GH 3911 Geodetic Surveying Field Experience (1-5).
Conduct a geodetic survey project in the Monterey Bay area to support GH 3910. Methods include triangulation, trilateration, traverse, resection, and intersection. Azimuth determination by observation on Polaris. PREREQUISITES: GH 3906 and concurrent registration in GH 3910.

GH 3912 Advanced Hydrography (2-2).
Contemporary aspects of hydrographic methods. Subjects include tidal current measurements, satellite navigation, inertial navigation, sidescan sonar, photobathymetry, laser bathymetry, and automation in hydrography. Laboratory exercise includes planning a hydrographic survey project. PREREQUISITES: GH 3903, GH 3910, and GH 3911; or consent of the Instructor.

GH 3914 Adjustment Computations (2-2).
Solution and analysis of geodetic networks and photogrammetric problems using least squares with matrices. Variance and covariance. Weights. Condition and observation equations and combinations. Statistical tests. PREREQUISITE: MA 2047.

GH 3950 Naval Astronomy and Precise Time (2-0).
Positional astronomy. Coordinate systems. Solar system dynamics. Astrometry (measurements of positions and motions of stars). Time, earth roation, and atomic clocks. Naval applications of astronomy. Overview of astrophysics and cosmology. PREREQUISITE: College physics and calculus.

Graduate Courses

GH 4800 Advanced Topics in Geodetic Science (1-0) to (4-0).
Advanced topics in various aspects of the geodetic science. Topics not covered in regularly offered courses. The course may be repeated for credit as topics change. PREREQUISITES: Consent of the Department Chairman and Instructor.

GH 4906 Geometric and Astronomic Geodesy (4-0).
Properties of the ellipsoid, geometric aspects of geodesy including triangulation, trilateration, traverse, and leveling techniques and instrumentation; adjustment by least squares, astronomic determination of latitude, longitude, and azimuth; time and astronomic instrumentation. PREREQUISITES: OC 3325 and GH 3902.

GH 4907 Gravimetric and Satellite Geodesy (4-0).
Potential theory as applied to the gravity field of the earth; application of Stokes' Formula, integral, and function; deflection of the vertical; gravimetric reduction; geometric and dynamic applications of satellites, orbital geometry and satellite orbit dynamics. PREREQUISITE: GH 4906.

GH 4908 Photogrammetry and Remote Sensing (3-2).
Application of photogrammetric instruments and techniques to planimetric, topographic, and hydrographic data compilation. Use of analog, semianalytical, and analytical photogrammetry in geodetic control extension. Planning and execution of aerial photography. Principles and fundamentals of remote sensing. Application of remote sensing imagery to mapping and charting. PREREQUISITE: GH 3902.

DEPARTMENT OF
OPERATIONS RESEARCH

Chairman:

Peter Purdue, Professor,
Code 55, Root Hall, Room 272,
(408) 646-2381, AV 878-2381.

Associate Chairmen:

Operations:

Alvin F. Andrus, Assoc. Professor,
Code 55As, Root Hall, Room 265.
(408) 646-2413, AV 878-2413.

Research:

Donald R. Barr, Professor,
Code 55Bn, Root Hall, Room 263,
(408) 646-2663, AV 878-2663.

Instruction:

James D. Esary, Professor,
Code 55Ey, Root Hall, Room 273,
(408) 646-2780, AV 878-2780

The Operations Research Department was founded in 1961, primarily to service students in the rapidly expanding OA (360) Curriculum. Graduates of that Curriculum receive the Master of Science in Operations Research degree, as will graduates of the recently inaugurated Operational Logistics (361) Curriculum. The Department consists of approximately forty faculty located in Root Hall. The primary laboratory is the Man/Machine Systems Design Lab on the first floor of Root Hall, but the Department also has an interest in the Wargaming Lab in Ingersoll Hall and the Microcomputer Lab in Ro-262.

In addition to being the primary Department for the 360 and 361 curricula, the Operations Research Department also provides an extensive sequence of service courses for students in other curricula, and is charged with teaching all probability and statistics courses at NPS. Nearly half of the Department's teaching effort is devoted to these courses.

Active research areas within the Department include statistics, stochastic processes, mathematical programming, human factors, wargaming, simulation, combat models, logistic systems and the study of Soviet military operations research.

MASTER OF SCIENCE
IN APPLIED SCIENCE

Students with acceptable academic backgrounds may enter a program leading to the degree in Applied Science with a major in Operations Research. The program of each student seeking this degree must contain a minimum of 20 quarter hours in operations research at the graduate level, including work at the 4000 level. Additionally, the program must contain a minimum of 12 graduate quarter hours in an approved sequence of courses outside the Department of Operations Research. A total minimum of 12 quarter hours at the 4000 level plus an acceptable thesis is required. This program provides depth and diversity through specially arranged course sequences to meet the needs of the Navy and the interests of the individual. The Department Chairman's approval is required for all programs leading to this degree. Applications to include this degree in dual Master's programs will not be approved.

MASTER OF SCIENCE
IN OPERATIONS RESEARCH

A candidate shall previously have satisfied the requirements for the degree of Bachelor of Science in Operations Research or the equivalent.

Completion of a minimum of 40 quarters hours of graduate level courses with:

a. At least 18 quarter hours of 4000 level operations research/systems analysis courses.

b. An elective sequence approved by the Department of Operations Research.

c. At least two but not more than three quarter courses devoted for a thesis.

Submission of an acceptable thesis on a subject previously approved by the Department of Operations Research. This credit shall not count toward the requirement as stated in (a) above.

In addition to the school wide requirement of a 3.00 quality point rating for graduate level courses, the candidate must achieve a minimum of 2.75 quality point rating in all core courses.

DOCTOR OF PHILOSOPHY

The Department offers the Ph.D. degree in Operations Research. The program begins with advanced coursework guided by the student's doctoral committee and leading to qualifying examinations in mathematical programming, statistics and stochastic processes, as well as completion of a minor field of study outside of Operations Research. The primary emphasis then shifts to the student's research program culminating in the Ph.D. dissertation.

Students wishing to enter directly into the doctoral program should write to the Department Chairman. Applicants should include transcripts, Graduate Record Examination (or equivalent) scores, and a brief statement of purpose. Detailed admission procedures may vary depending on the individual's location and position. However, in all cases the student must fulfill the general school requirements for the Doctor's degree. Residency for this program generally requires 2-3 years beyond completion of a Master's Degree.

DEPARTMENTAL COURSE OFFERINGS

OA 0001 Seminar for Operations Analysis Students (0-2).
Guest lecturers. Review of experience tours. Thesis and research presentations.

OA 0810 Thesis Research for Operations Analysis students (0-0)
Every student conducting thesis research will enroll in this course.

Upper Division Courses

OA 2200 Computational Methods for Operations Research (3-2)
Introduction to computer usage with emphasis on computational methods particularly appropriate for operations research. Planning and structuring computer programs. Programming in FORTRAN. Use of text editor, disk files, subroutine libraries, and debugging aids in timesharing mode on mainframe computers. Extensive project work coordinates growing student FORTRAN knowledge with topics in OR computing. Project topics may include numerical error analysis, probability distributions, random sampling, matrix computations, search methods and OR modeling. APL programming will be introduced as a final topic. PREREQUISITES: None.

OA 2600 Introduction to Operations Analysis (4-0)
A first course in Operations Analysis, covering its origins in World War II to current practice. Introduces concepts, tools and methods of analysis, with tactical examples. Emphasis is on measuring combat effectiveness and developing better tactics. PREREQUISITE: None.

OA 2910 Selected Topics in Operations Analysis (2-0 to 5-0)
Presentation of a wide selection of topics from the current literature. This course may be repeated for credit if course content changes. PREREQUISITE: A background in operations research.

Upper Division or Graduate Courses

OA 3101 Probability (4-1).
Probability axioms and event probability. Random variables and their probability distributions. Moment generating functions, moments and other distribution characteristics, distribution families. Functions of a random variable, including the probability integral transformation. PREREQUISITE: MA 1115 or equivalent.

OA 3102 Probability and Statistics (4-1)
Jointly distributed random variables, independence and conditional distributions, covariance and correlation. Functions of several random variables, sampling distributions, limiting distributions, the central limit theorem, approximations. Order statistics, the t and F distributions, the bivariate normal distribution. Point estimation, properties of estimators. PREREQUISITE: OA 3101 and MA 1116 or equivalent; MA 3110 taken concurrently.

OA 3103 Statistics (4-1)
Confidence intervals, Bayesian intervals, hypothesis testing, significance testing, regression, analysis of variance, nonparametric inference. Applications to reliability, test and evaluation and operations research problems. PREREQUISITE: OA 3102 or equivalent.

OA 3104 Data Analysis (3-1)
Techniques of analyzing, summarizing, and comparing sets of real data. The exploratory nature of data analysis is featured through a variety of plotting methods and interactive work on computer terminals. Includes model building, and the discovery and overcoming of shortcomings in data collected in actual situations. PREREQUISITE: OA 3103.

OA 3105 Nonparametic Statistics (4-0)
Tests based on the binomial distribution; confidence intervals for percentiles, tolerance intervals and goodness-of-fit tests; contingency tables; one sample tests, two sample tests and tests for independence based on ranks and scores; nonparametric analysis of variance and regression. Applications will illustrate the techniques. PREREQUISITE: A course in statistical inference.

OA 3201 Linear Programming (4-0)

Theory of optimization of linear functions subject to linear constraints. The simplex algorithm, duality, dual simplex algorithm, sensitivity analyses, parametric linear programming, transportation algorithm and matrix payoff games. Applications to resource allocation, manpower planning, transportation and communications network models, ship scheduling and elementary strategic games. Introduction to machine computing and MPS. PREREQUISITE: MA2042, MA 3110 taken concurrently, and FORTRAN or equivalent.

OA 3301 Stochastic Models I (4-0)

The homogeneous and inhomogeneous Poisson process, filtered and compound Poisson process. Stationary Markov chains and their applications in modeling random phenomena. PREREQUISITE: A calculus based probability course.

OA 3302 OA System Simulation (4-0)

Discrete event digital simulation methodology. Monte Carlo techniques, us of FORTRAN and other available simulation languages. Variance reduction techniques, design of simulation experiments and analysis of results. PREREQUISITES: OA 2200 or equivalent; OA 3103 or equivalent.

OA 33401-3402 Human Factors in Systems Design - I-II (4-0 and 3-0)

The human element in man-machine systems. Selected topics in human engineering and psychophysics with emphasis on their relation to military systems. Man-machine interface and man's motor and sensory capacities. PREREQUISITE: A course in statistics.

OA 3501 Inventory I (4-0)

A study of deterministic and approximate stochastic inventory models. Determiniistic economic lot size models with infinite production rate, constraints, quantity discounts. An approximate lot size-reorder point model with stochastic demand. An approximate stochastic periodic review model. Single period stochastic models. Applications to Navy supply systems. PREREQUISITE: A calculus based probability course.

OA 3601 Combat Models and Games (4-1)

This course provides a discussion of measures of effectiveness and a quantitative introduction to dynamic programming, target coverage models, Kalman filters, Lanchester Systems, and two-person zero-sum games. PREREQUISITES: MA 3110, or OA 3102.

OA 3602 Search Theory and Detection (4-0)

Search and detection as stochastic processes. Characterization of detection devices, use and interpretation of sweep widths and lateral range curves, true range curves. Measures of effectiveness of search-detection systems. Allocation of search efforts, sequential search. Introduction to the statistical theory of signal detection. Models of surveillance fields, barriers, tracking and trailing. PREREQUISITE: OA 3301, PH 3321.

OA 3900 Workshop in Operations Research/ Systems Analysis (2-0 to 5-0)

This course may be repeated for credit if course content changes. PREREQUISITE: Departmental approval. Graded on Pass/Fair basis only.

OA 3910 Selected Topics in Operations Research/ Systems Analysis (2-0 to 5-0)

Presentation of a wide selection of topics from the current literature. This course may be repeated for credit if course content changes. PREREQUISITE: A background of advanced work in operations research. Consent of Instructor.

Graduate Courses

OA 4101 Design of Experiments (3-1)

Theory and application of the general linear hypothesis model. Analysis of variance and analysis of covariance. Planning experiments, traditional and hybrid experimental designs. Use of standard computer package for analysis of experimentation data. PREREQUISITE: OA 3103 or equivalent.

OA 4102 Regression Analysis (4-0)

Construction, analysis and testing of regression models. An in-depth study of regression and its application in operations research, economics and the social sciences. PREREQUISITE: OA 3102, OA 3103, OA 3104.

OA 4103 Advanced Probability (3-0)

Probability spaces, random variables as measurable functions, expectation using the Lebesque Stieltjes integral and abstract integration. Models of convergence, characteristic functions, the continuity theorem, central limit theorems, the zero-one law. Conditional expectation. PREREQUISITE: MA 3605 or departmental approval.

OA 4104 Advanced Statistics (3-0)

Foundations of statistics from a decision-theoretic viewpoint. Robust estimation techniques, biased estimation. Fisher's and Kullback information, asymptotic methods. Sufficiency, completeness, the Cramer-Rao inequality. Sequential tests, empirical Bayes tests. Statistical computation methods. PREREQUISITE: OA 3103 and consent of Instructor.

OA 4201 Nonlinear Programming (4-0)

Introduction to modern optimization techniques, Kuhn-Tucker necessary and sufficient conditions for optimality, quadratic and separable programming, basic gradient search algorithms and penalty function methods. Applications to weapons assignment, force structuring, parameter estimation for nonlinear or constrained regression, personnel assignment and resource allocation. PREREQUISITE: OA 3201, MA 3110.

OA 4202 Network Flows and Graphs (4-0)

Introduction to formulation and solution of problems involving networks. Elements of graph theory, data structures, search algorithms, max-flow min-cut theorem, shortest route problems, minimum cost flows, and PERT/CPM. Applications to production and inventory, routing, scheduling, network interdiction, and personnel management. PREREQUISITE: OA 3201.

OA 4203 Mathematical Programming (4-0)

Advanced topics in linear programming, large scale systems, the decomposition principle, additional algorithms, bounded variable techniques, linear fractional programming, probabilistic programming, formulation and solution procedures for problems in integer variables. Applications to capital budgeting, large scale distribution systems, weapon systems allocation and others. PREREQUISITE: OA 3201.

OA 4204 Games of Strategy (4-0)

Mathematical models of conflict situations, emphasizing the theory of decision making against a completely opposed enemy. Topics include matrix games, Blotto games, stochastic games, and the Shapley value. Applications to combat, resource allocation, cost sharing, etc. PREREQUISITES: knowledge of Linear Programming and a course in Probability.

OA 4205 Advanced Nonlinear Programming (4-0)

Continuation of OA 4201. Advanced topics in nonlinear programming including duality theory, further consideration of necessary and sufficient conditions for optimality, additional computational methods and examination of recent literature in nonlinear programming. PREREQUISITE: OA 4201.

OA 4206 Dynamic Programming and Optimal Control (4-0)

The basic theory, including Bellman's equation and the Maximum Principle. Applications to tactical and economic problems. PREREQUISITE: OA 3201

OA 4301 Stochastic Models II (3-2)

Course objectives are to teach methods of stochastic modeling beyond those taught in OA 3301 and to give students an opportunity to apply these tools to real world problems. Suitably selected projects that entail data collection and analysis are undertaken, with emphasis on problem formulation, choice of appropriate assumptions and attainment of practical results. Topics include renewal processes and Kalman Filtering as illustrated by several military and industrial applications. PREREQUISITE: OA 3301.

OA 4302 Reliability and Weapons System Effectiveness Measurement (4-0)

Component and system reliability functions and other reliability descriptors of system effectiveness. Relationships between system and component reliability. Point and interval estimates of reliability parameters under various life testing plans. Illustrations of current methods of reliability assessment from appropriate MIL-STD's and manuals. PREREQUISITE: OA 3301.

OA 4303 Sample Inspection and Quality Assurance (4-0)

Attribute and variables sampling plans. MIL-STD sampling plans with modifications. Multi-level continuous sampling plans and sequential sampling plans. Structure and implementation of quality assurance programs and analysis of selected quality assurance problems. PREREQUISITE: OA 3103 or consent of instructor.

OA 4304 Decision Theory (3-0)

Basic concepts, Bayes, admissible, minimax, and regret strategies. Principles of choice. Relation of statistical decision functions to the theory of games. Applications in the planning of operational evaluation trials. PREREQUISITE: OA 3103.

OA 4305 Stochastic Models III (4-0)

Lecture topics include, non-stationary behavior of Markov processes, point process models, regenerative processes, Markovian queueing network models, and non-Markovian systems. Applications to include reliability, computer system modeling, combat modeling and manpower systems. Students are given exercises entailing data analysis, formulation of probability models, and application of models to answer specific questions concerning particular phenomenon. PREREQUISITES: OA 3104, OA 3301, OA 4301.

OA 4306-4307 Stochastic Processes I-II (4-0)

The Kolmogorov theorem, analytic properties of sample functions; continuity and differentiability in quadratic mean; stochastic integrals, stationary processes. Stationary and non-stationary problems; Martingale limit theorems and the invariance principle. PREREQUISITE: OA 4103.

OA 4308 Time Series Analysis (4-0)

Second order stationary processes. Harmonic analysis of correlation functions. Filters and spectral windows. Ergodic properties. Problems of inference in time series analysis. Box-Jenkins techniques. Introduction to the analysis of multivariate processes. PREREQUISITE: OA 3301, OA 3104.

OA 4321 Decision Support Systems (3-1)

An introduction to the topic: includes an overview of organizational decision making, discussion of OR techniques integral to DSS, relationships to artificial intelligence and expert systems, specialized computer languages, and non-traditional techniques for handling uncertainty. Current operational systems, both military and civilian, will be used as examples. PREREQUISITES: A course in Computer Programming and a course in probability.

OA 4333 Simulation Methodology (4-0)

A greater-depth coverage of material introduced in OA 3302 and OA 3601. Advanced techniques of model development and simulation experimentation. Discussion of current research. Actual topics selected will depend on interests of students and instructor. PREREQUISITE: OA 3302.

OA 4401 Human Performance Evaluation (4-0)

Experimental considerations, strategy, and techniques in evaluation of human performance characteristics and capabilities. Detailed examination of special methods to include multivariate designs, psychophysical methods, and psychophysiological methods. Review of important variables affecting human performance and criteria, measures of effectiveness, and figures of merit as indicants of performance quality. PREREQUISITE: OA 3401.

OA 4402 Skilled Operator Performance (3-2)

First part of the course is devoted to an examination of the theoretical foundations of skilled performance. The second half of the course is devoted to the study of the acquisition, development and prediction of skilled operator performance in the operational setting. PREREQUISITE: OA 3401.

OA 4404 Operations Research in Man-Machine Systems (4-0)

Application of operations research techniques to man-machine design and evaluation problems. Quantitative methods for performance will be treated using such concepts as reliability, information theory, and signal detection theory. A portion of the course is devoted to summarizing approaches to real world problems incorporating current methods from the literature. PREREQUISITES: OA 3401, OA 3201, OA 3301 and OA 4301 (may be taken concurrently).

OA 4501 Seminar in Supply Systems (4-0)

A survey of the supply system for the U.S. Navy. Topics include the inventory models at all levels for consumables and repairables, budget formulation and execution, provisioning and allowance lists, planned program requirements, transaction item reporting and current topics of research such as stock migration, and material distribution studies. PREREQUISITE: OA 3501

OA 4502 Inventory II (4-0)

A study of stochastic inventory models. Single period models with time dependent costs, constrained multiple item single period models, deterministic and stochastic dynamic inventory models, the periodic review model, the Q-1 continuous review model. PREREQUISITES: OA 3301, OA 3501.

OA 4602 Campaign Analysis (4-0)

The development, use and state-of-the-art of maritime campaign analysis. Emphasis is on formulating the analysis, measures of effectiveness, handling assumptions, and parametric evaluations. Communicating results in speech and writing is an important part of the course. Students conducts a project as study team members. They research a nd report on major portions of major U.S. Navy analyses. PREREQUISITES: OA 3103, OA 3302, OA 3601, OA 3602, OA 4604, and SECRET NOFORN clearance.

OA 4603 Test and Evaluation (3-2)

This course relates the theory and techniques of operations research to the problems associated with test and evaluation. Specific examples of exercise design, reconstruction, and analysis are examined. PREREQUISITES: OA 3104.

OA 4604 War Gaming Analysis (4-0)

Analysis of problems in the design, construction and application of manual computer and interactive gaming. Emphasis is on gaming as a means of evaluating Naval Warfare tactics. NWISS and NAVTAG gaming facilities will be used. PREREQUISITES: OA 3302. SECRET NOFORM clearance.

OA 4605 Operations Research Problems in Naval Warfare (3-0)

Analyses of fleet exercises. Changes in tactics and force disposition arising from the introduction of nuclear weapons and missiles. Relationship of air defense to strike capability and ASW. Current radar, sonar, communications and ECM problems. PREREQUISITE: OA 3601, OA 4604.

OA 4606 Applications of Search, Detection and Localization Models to ASW (3-0)

Applications of search, detection and localization models to search planning, target localization and tracking procedures, and ASW sensor evaluation. Both acoustic and nonacoustic ASW sensors are considered. PREREQUISITES: OS 3601 or OA 4604, SECRET NOFORN clearance.

OA 4607 Tactical Design and Analysis (4-0)

Use of hand-held programmable calculators (HPCs) and their application to tactical problems in the operational environment. Characteristics of currently available HPCs will be discussed and compared with special emphasis on their use of their more sophisticated features. Methods for implementing environmental, search, localization and tracking algorithms on the HPC. Individual and/or group projects allow the student to apply the concepts presented in class to problems in his area of expertise. PREREQUISITES: OA 3602 or OS 3601 or consent of instructor and SECRET NOFORN clearance.

OA 4608 Soviet Military Operations Research (4-0)

This course provides an introduction to Soviet military operations research, with an emphasis on asymmetries in Soviet and American use of military OR. It will focus on how OR influences Soviet military theory and practice. It will begin by examining

the Soviet military mind as influenced by the Russian/Soviet historical experience, Marxist-Leninist ideology, and Soviet social and military instructions. It will then trace the historical development of military OR in the Soviet Union and discuss its nature today. Students will receive English translations of major Soviet works on military OR. PREREQUISITES: Course on combat modeling (e.g. OA 3601 or OA 4654) or consent of Instructor, and SECRET NOFORN clearance.

OA 4654 Airland Combat Models I (4-0)
Introduction to modeling air/ground combat operations with emphasis on detailed approaches for modeling small-scale combat. Topics include: types of models, the modeling process, verification, target acquisition models, target selection, weapon accuracy, lethality models, terrain effects, tactical decision making, and integration of these models into large scale simulation models of combat. Models currently in use in DOD analysis are used as examples throughout the course. PREREQUISITE: OA 3301.

OA 4655 Airland Combat Models II (4-0)
Modeling of large scale air/ground combat operations using aggregated force on force combat models. Topics include: Aggregation and disaggregation, types of models used for large scale operations, firepower index and Lanchester equation approaches to attrition modeling, movement rate of advance models, air warfare models, and air allocation, logistics, C3 I process models, artificial intelligence applications. Models currently in use for DOD analysis are used as examples throughout the course. PREREQUISITE: OA 3301 or consent of the Instructor.

OA 4701 Econometrics (4-0)
Construction and testing of econometric models, analysis of economic time series, and the use of multivariate statistical analysis in the study of economic behavior. PREREQUISITE: OA 3103.

OA 4702 Cost Estimation (4-0)
Advanced study in the methods and practice of systems analysis with emphasis on cost analysis, cost models and methods for total program structures and single projects; relationship of effectiveness models and measures to cost analysis; public capital budgeting of interrelated projects; detailed examples from current federal practices. PREREQUISITE: AS 3611 or equivalent.

OA 4703 Defense Expenditure and Policy Analysis (4-0)
A presentation of the major components of defense budgeting and policy formulation from the standpoint of the three major institutions involved, the agency, executive and congress. The use of quantitative models of institutional behavior is emphasized when examining both individual institutions and the interaction between them. PREREQUISITE: AS 3611.

OA 4704 OR Techniques in Manpower Modeling (4-0)
The most frequently applied manpower models are studied including Markov Chain and Renewal Models using grade and/or length of service categories. Statistical techniques to estimate relevant attrition and promotion rates from cohort and census data are also included in the course to provide both longitudinal and cross-sectional views of personnel systems. Career aspects are analyzed with respect to attrition, promotion opportunity and time to promotion in hierarchical systems with or without promotion zones. Examples emphasize the personnel systems of the military services. PREREQUISITES: OA 3201, OA 3301, OA 3103.

OA 4910 Selected Topics in Operations Analysis (2-0 to 5-0)
Presentation of a wide selection of topics from the current literature. This course may be repeated for credit if course content changes. PREREQUISITE: A background of advanced work in operations research and departmental approval.

OA 4930 Readings in Operations Analysis (2-0 to 5-0)
This course may be repeated for credit if course content changes. PREREQUISITE: Departmental approval. Graded on Pass/Fail basis only.

Service Courses

OS 0810 Thesis Research for C3 Students (0-0)
Every student conducting thesis research will enroll in this course.

Upper Division Courses

OS 2101 Analysis of Experimental Data (4-0)
Introduction to statistical analysis of measurements and experimental data. Frequency distributions, graphical representations. Populations and sampling. Principle of least squares, estimation of mean and standard deviation. Curve fitting and regression, propagation of errors. Confidence intervals, tests and contingency tables. Elementary ANOVA. Relevant probabilistic concepts introduced as needed.

OS 2102 Introduction to Applied Probability for Electrical Engineering (4-1)
First course in probability. Structure of a probability model, density, distribution functions, expectation and variance. Some basic models, Binomial, Poisson and Gaussian distributions. Conditional probability and independence. Joint distributions, covariance and central limit theorem. Transformations of random variables. PREREQUISITE: MA 1116 or equivalent.

OS 2103 Applied Probability for Systems technology (4-1)

First course in probability for students in operational curricula. Topics include classical probability calculation, discrete and continuous random variables, basic probability distributions, introduction to modeling, expectation, variance, covariance and rudiments of discrete-time processes. Emphasis is on developing familiarity with basic concepts and computational skills rather than mathematical rigor. Problem session is used in part to refresh and reinforce necessary calculus topics. PREREQUISITE: MA 1116.

OS 2210 Introduction to Computer Programming (4-1)

An introduction to the operation and programming of the mainframe computer and portable programmable computers used in the ASW Curriculum. The FORTRAN and BASIC languages are emphasized.

Upper Division or Graduate Courses

OS 3001 OR for Computer Scientists (4-0)

An introduction to some methodology and techniques of operations research that are relevant to computer system performance modeling and specification. Topics include Poisson Processes, Reliability Theory and Queueing Theory.

OS 3002 OR for Naval Intelligence (4-0)

This course provides an introduction to the approach and methods of operations research, with special emphasis on military applications of interest to intelligence. It focuses on the mathematical modeling of combat operations and considers intelligence aspects (particularly Soviet use of OR. Students develop basic skills in such modeling. Topics include: operational definitions, measurement of combat effectiveness, model validation/verification, and models versus modeling. Also included are modeling of processes of target acquisition, fire assessment (kill probabilities and target coverage), tactical decision making, and games.

OS 3003 OR for Electronic Warfare (4-0)

This course deals with applicatins of quantitative models to operational electronic warfare problems, with the underlying idea being to make decisions by optimizing some measure of effectiveness (MOE). Topics covered include ESM, ECM/ECCM, strike warfare, ASMD, and cost-effectiveness tradeoffs. PREREQUISITES: Calculus and OS 2103.

OS 3004 OR for Computer Systems Managers (5-0)

A one-quarter survey of Operations Research techniques of particular interest to students in computer systems management. Model formulation, decision theory, linear programming, project management techniques, inventory models, queueing and simulation, reliability and maintainability. Examples will illustrate the application of these techniques to the management of computer systems. PREREQUISITES: MA 2300, OS 3101.

OS 3005 OR for Communications Managers (4-0)

A one-quarter survey of operations research techniques of particular interest to students in communications management. Model formulation, decision theory, games, linear programming, network flows, CPM and PERT, reliability and maintainability, Queueing theory, and systems simulation. PREREQUISITES: MA 2300, OS 3101 or OS 3105.

OS 3006 Operations Research for Management (4-0)

A survey of problem solving techniques for operations research. Topics include decision theory, linear programming, models, project scheduling, inventory, queueing and simulation. PREREQUISITES: MA 2300, OS 3101 or OS 3105.

OS 3007 Operations Research Methodology (4-0)

Survey of Operations Research techniques not covered in OS 3006. Topics may include simulation, search theory, extensions of combat models, network flows, and Markov chains. PREREQUISITES: OS 3106 and OS 3006 concurrently.

OS 3008 Analytical Planning Methodology (4-0)

A one-quarter survey of operations research techniques of particular interest to students in the C3 curriculum, with emphasis on model information. Topics include linear and nonlinear programming, integer programming, networks, flow shop and project scheduling, decision analysis, queueing and simulation. PREREQUISITE: MA 2300.

OS 3101 Statistical Analysis for Management (4-1)

A specialized course covering the basic methods of probability and statistics with emphasis on managerial applications. The course includes applications of probability models, statistical inference and regression analysis. Computation for these applications are carried out on a computer, using commercial software packages. Topics in probability include the binomial, geometric, Poisson and normal distributions, risk, and expected value. Parametric statistical techniques include significance testing and confidence intervals, together with point estimation of model parameters. Regression analysis includes simple linear regression and multiple regression, with estimation of parameters and tests of hypothesis and confidence intervals for regression coefficients and the variance of the error term. PREREQUISITES: College algebra.

OS 3104 Statistics for Science and Engineering (4-0)
Acquaint the engineering student with the techniques of statistical data analysis with examples from quality control, life testing, reliability and sampling inspection. Histograms and empirical distributions and random variables are introduced along with their probability distributions and associated characteristics such as moments and percentiles. Following a brief introduction to decision making, standard tests of hypotheses and confidence intervals for both one and two parameter situations are treated. Regression analysis is related to least squares estimation and associated tests of hypotheses and confidence intervals treated. Additional techniques of data analysis using nonparametric procedures are developed. Quality control charts are discussed as applications along with sampling inspection by attributes and by variables. PREREQUISITE: Calculus.

OS 3105 Statistical Analysis for Management I (4-1)
The first of a two quarter course in the use of the tools of probability and statistics oriented toward management applications. Skills in numerical computation are developed in laboratory periods through the use of MINITAB. Emphasis in the lectures is placed on modeling problems and interpreting results. Those aspects of probability structure that are germaine to distributions such as the binomial and normal. Standard topics of statistical inference for one and two variables are introduced in the settings of both hypothesis testing and confidence interval estimation. PREREQUISITE: MA 2300.

OS 3106 Statistical Analysis for Management II (4-1)
The second of a two-quarter course in the use of the tools of probability and statistics oriented toward management applications. Using the tools and skills developed in OS 3105, the course consists of a general study of linear models. Analysis of variance for one and two way models is followed by simple linear and multiple regression including such topics as curve fitting, residual analysis, and stepwise regression, along with correlation analysis. Again the computer is used as a tool to facilitate computations with emphasis on statistical packages for large data bases, such as SPSS and SAS. The course concludes with a sampling of nonparametric procedures. PREREQUISITE: OS 3105.

OS 3301 Systems Effectiveness Concepts and Methods (4-0).
An introduction to system reliability, maintainability, and effectiveness analysis. Failure (repair) rates and mean times to failure (repair). Models for aging and completion. Block diagrams and fault trees. Life testing. Availability, interval reliability, and the synthesis of reliability, maintainability, and effectiveness analysis. PREREQUISITES: OS 3105, OS 3106.

OS 3303 Computer Simulation (4-1).
Design, implementation and use of digital simulation models will be covered with special emphasis on features common to ASW problems. War gaming will be discussed and a game using the digital computer will be played and critiqued by the class. Exercise planning and analysis will be treated. Basic topics are explained including computer generation of random variates, statistical design and monitoring of model progress, machine representation of dynamic data structures, model verification and validation on special purpose simulation and gaming languages. PREREQUISITES: OS 2103, OS 3604 or equivalent, and a working knowledge of FORTRAN programming.

OS 3401 Human Factors Engineering (3-0).
An introduction to human factors engineering for students in fields such as engineering. Designed to give the student an appreciation of man's capacities and limitations and how these can affect the optimum design of the man-machines system. Emphasis on integration of human factors into the system development cycle considering such topics as manpower/personnel costs, control and display design, human energy expenditure, physiological costs, and evaluation systems. PREREQUISITE: A previous course in probability and statistics.

OS 3402 Human Vigilance Performance (3-1).
Course involves an examination of man's attentiveness and capability in the detection of changes in stimulus events over prolonged periods of observation. Topics to be covered include theories of vigilance; task, signal, subject and environmental influences on performance; physiological and psychological responses and vigilance performance measurement. This course is designed for the ASW curriculum. PREREQUISITE: None.

OS 3403 Human Factors in Electronic Warfare (3-1).
This course will provide the student with the ability t evaluate and predict human performance in specified operational environments. The effects of stress factors such as noise, temperature, motion, workload, etc., on various aspects of human performance will be studied. Students will identify the control and display requirements or an EW system and design a workspace to accommodate an EW data reduction/analysis system. PREREQUISITE: OS 3604.

OS 3404 Man-Machine Interaction (3-0).
An introduction to the man-machine interface problems in C3. Information, display and human communication requirements for effective C3. Applied orientation with student receiving his own computerized mailbox on the ARPANET enabling him to experience message handling systems, query languages, computer to computer communications between the U.S. and Europe, command and control applications programs, file transfer between host computers, etc. PREREQUISITES: Enrollment in C3.

OS 3601 Search, Detection, and Localization Models (4-0).

An introduction to the decision problems associated with Navy detection systems. The relation of detection models to search and localization models, measures of effectiveness of search/detection systems, and the optimum allocation of search effort are discussed. This course is designed for the ASW curriculum. PREREQUISITES: OS 2103 and SECRET clearance.

OS 3602 Introduction to Combat Models and Weapons Effectiveness (4-1).

This course deals with the application of quantitative models to military problems. Topics include Lanchester's theory, game theory, reliability theory, systems effectiveness, and war gaming. This course is designed for the ASW curriculum. PREREQUISITES: OS 2103 and MA 2129.

OS 3603 Simulation and War Gaming (3-1).

Design, implementation and use of digital simulation models will be covered with special emphasis on features common to C3 and EW problems. War gaming will be discussed and a game using the digital computer will be played and critiqued by the class. Exercise planning and analysis will be treated. Basic topics are explained including computer generation of random variates, statistical design and monitoring of model progress, machine representation of dynamic data structures, model verification and validation on special purpose simulation and gaming languages. PREREQUISITES: OS 2103, OS 3604 or equivalent, and a working knowledge of FORTRAN programming. SECRET clearance required.

OS 3604 Decision and Data Analysis (4-0).

This course provides an introduction to the techniques of decision analysis, statistics and data analysis. It is primarily for students in the ASW, EW and C3 curricula. Emphasis is placed on the analysis of data and decision making in the ASW, EW and C3 environments. PREREQUISITES: OS 2103 or equivalent.

OS 3636 Architecture of C3I Systems (4-0).

This course is primarily intended for students in the command and control program. It provides an introduction to the evaluation and modeling of command-control-communications-and intelligence (C3I) systems, with an emphasis on the comparative anatomy of Blue and Red systems and operational intelligence. The student is introduced to concepts pertaining to the design, functioning, and evaluation of such large-scale systems and their architecture. PREREQUISITES: U.S. citizenship and TOP SECRET clearance with eligibility for SBI.

OS 3637 Soviet Operations and Systems

This course is intended for students in any of the operational curricula (but primarily the C3 program). It provides an introduction to Soviet thinking, conceptualization of military affairs, systems, and operations. Soviet control concepts, including troop control, control of combat means, and the role of automation, are emphasized. The systems approach to integrating different types of intelligence data to support U.S. defense (including command) decision making is considered. The course stresses the understanding of Soviet key words and concepts in military affairs. PREREQUISITES: U.S. citizenship and TOP SECRET clearance with eligibility for SI/SAO.

OS 3702 Manpower Requirements Determination (4-0).

The objective is to enable the student to use some o the tools of industrial engineering in the determination of the quantity and quality of manpower required in military systems. Techniques include motion and time study, work sampling, predetermined time standards, work design and layout, materials handling, procedures review and process design. Applications for ship and squadron manning documents and SHORESTAMPS are included. PREREQUISITES: OS 3006 or OA 3201 and OA 3301.

Graduate Courses

OS 4601 Test and Evaluation (4-0).

Designed for system technology students, this course examines problems associated with tests and evaluations of weapon systems and tactics. Included are concepts from experimental design, regression analysis, life testing, data analysis. Realistic data sets and examples are discussed and analyzed. PREREQUISITE: Inferential statistics.

OS 4602 C3 Systems Evaluation (2-4).

This course is designed for Systems Technology students in the Command, Control and Communications Curriculum. The course deals with techniques for the design, implementation and analysis of experiments or exercises aimed at the test and evaluation of systems, tactics, or operational concepts. Course topics include modeling, experimentation methodology, design of experiments, multi-criteria decision analysis, reliability, and man-machine interaction. Case studies and real data will be examined. Students will actively participate in evaluations through laboratory experiments. PREREQUISITES: OS 3008, OS 3603, OS 3604, SECRET NOFORN clearance.

OS 4701 Manpower and Personnel Models (4-0).

The objective of this course is to introduce the student to the major types of manpower and personnel models for estimating the effects of policy changes on the personnel system. Topics include longitudinal and cross-section models, optimization models, data requirements and validation. Applications in the form of current military models are included. PREREQUISITES: OS 3006 and OS 3106.

DEPARTMENT OF PHYSICS

Chairman:

Gordon E. Schacher, Professor,
Code 61Sq, Spanagel Hall, Room 100,
(408) 646-2486, AV 878-2486.

Associate Chairmen:

Administration:

William B. Zeleny, Associate Professor,
Code 61Zl, Spanagel Hall, Room 206C,
(408) 646-2952, AV 878-2952.

Instruction:

Karlheinz E. Woehler, Professor,
Code 61Wh, Spanagel Hall, Room 206B,
(408) 646-2029, AV 878-2029

Expertise in the Department of Physics and efforts in research and teaching of graduate specialization courses for the last twenty years can be summarized under the heading "physics of propagation phenomena in realistic, complex environments". Specialized course sequences are offered in the following areas:

1. Optical Signal Propagation and Detection.
2. Directed Energy Weapon Systems
3. Nuclear Weapons and their Effects
4. Underwater Acoustics
5. Physics of the Space and Satellite Environment
6. Physics of Solids and Solid State devices
7. Classical Field Theory

All of these specializations, except the last, are of obvious relevance to modern and future weapon technologies. The faculty supports an ongoing research program in these areas, and student thesis topics are available in all of them.

DEGREE REQUIREMENTS

The Department of Physics offers the MS degree in Physics and in Engineering Science. In addition, the Ph.D. is offered by the Department. Upon approval by the Department, courses taken at other institutions may be applied towards satisfying degree requirements.

MASTER OF SCIENCE IN PHYSICS

A candidate for the degree Master of Science in Physics must complete satisfactorily a program of study which includes a minimum of 30 quarter hours of physics courses (not including thesis) distributed among courses at the graduate level; of these 30 hours at least 15 hours must be at the 4000 level. Upon approval of the Chairman of the Physics Department, a maximum of 4 hours of courses taken in another department may be applied toward satisfying the above requirements. In lieu of the preceding requirements, students who are qualified to pursue graduate courses in physics when they arrive at the Naval Postgraduate School may complete a minimum of 20 hours entirely of 4000 level physics courses. In addition, all students must present an acceptable thesis.

The following specific course requirements must be successfully completed for a student to earn the degree of Master of Science in Physics:

a. Thermodynamics and Statistical mechanics — the student must take a two-quarter sequence or present equivalent preparation in this area.

b. A course in Advanced Mechanics or Quantum Mechanics.

c. A course in Electromagnetism at the 4000 level.

d. An advanced course in Modern Physics.

e. Specialization, to include at least two advanced courses in an area of specialization.

Programs leading to the Master of Science degree in Physics must be approved by the Chairman of the Department of Physics.

MASTER OF SCIENCE IN ENGINEERING SCIENCE

Students of the Weapon Systems Engineering Curriculum (530) who elect a Physics area as their specialization option will receive the degree Master of Science in Engineering Science. The program must include at least 36 credit hours of graduate work in engineering, science and mathematics, at least 12 of which must be at the 4000 level. Of these 36 hours,

at least 20 hours, including work at the 4000 level, must be in the Department of Physics. This will be the major department, and cognizance over the specialization course sequences, thesis research areas and the degree resides with the Chairman of the Department of Physics.

In addition to the major, the program must contain at least 12 hours at the graduate level in courses representing areas other than the major.

The candidate must present an acceptable thesis on a topic given prior approval by the Department of Physics. Final approval of the program leading to the Master of Science in Engineering Science with major in Physics shall be obtained from the Chairman of the Department of Physics.

DOCTOR OF PHILOSOPHY

The Ph.D. degree is offered in the Department in several areas of specialization which currently include Acoustics, Atomic Physics, Solid State Physics, Theoretical Physics, Nuclear Physics and Plasma Physics.

Requirements for the degree may be grouped into 3 categories: courses, thesis research and examinations in major and minor fields.

The required examinations are outlined under the general school requirements for the Doctor's degree. In addition to the school requirements, the Department requires a preliminary examination to show evidence of acceptability as a doctoral student.

The usual courses to be taken by the candidate include Classical Electrodynamics, Quantum Mechanics and Statistical Physics. (PH 4371, 4971, 4972, 4973, 4771, 4772). Suitable electives are to be chosen in phsyics and the minor fields, mainly from the list of graduate level courses.

PHYSICS LABORATORIES

The physics laboratories are equipped to carry on instructional and research work in atomic physics, nuclear physics, sold state physics, electro-optics, plasma physics, spectroscopy, and acoustics.

The 100 MeV electron linear accelerator provides a pulsed electron beam of 1 microampere average current and is used for radiation studies. This machine is being augment-

ed by a Pulserad 112 single pulse electron accelerator producing a 1.8 MeV, 40 kiloampere beam of 50 nanosecond duration. Both machines are suitable for studies of radiation effects in semiconductor devices and electromagnetic pulse generation.

The electro-optics laboratory uses imaging and detecting systems from the far infrared to the visible range including instrumentation for seagoing experiments in optical propagation. The laser laboratory contains a giant pulse laser and associated detection equipment for the visible spectrum as well as a high power laser in the IR region.

The plasma physics laboratory includes a plasma system, diagnostic equipment for studies of plasma dynamics, and a steady state plasma source with magnetic fields to 10,000 gauss.

The spectroscopy equipment includes a large grating spectrograph, a large prism spectrograph, and an infrared spectrophotometer. The spectroscopic data center contains a comprehensive compilation of the known energy levels and atomic spectral lines in the vacuum ultraviolet range.

The acoustics laboratory equipment includes a large anechoic chamber, a small reverberation chamber, and a multiple-unit acoustics laboratory for student experimentation in airborne acoustics. Sonar equipment, test and wave tanks, and instrumentation for investigation in underwater sound comprise the underwater acoustics laboratory.

DEPARTMENTAL COURSE OFFERINGS

PHYSICS

PH 0110 Refresher Physics (5-3).
NON-CREDIT. A six-week refresher course of selected topics from elementary mechanics for incoming students. Typical topics are kinematics, Newton's Laws, the concepts of work, energy, and linear momentum, and simple harmonic motion. Vector algebra and some aspects of calculus are developed as needed and their use is emphasized. The two ninety-minute laboratory periods are devoted to guided problem solving. PREREQUISITES: Previous college courses in elementary physics and integral calculus.

PH 0499 Acoustics Colloquium (0-1).
Reports on current research, and study of recent research literature in conjunction with the student thesis. PREREQUISITE: A course in acoustics.

PH 0810 Thesis Research (0-0).
Every student conducting thesis research will enroll in this course.

PH 0999 Physics Colloquium (0-1).
Discussion of topics of current interest by NPS and outside guest speakers.

Lower Division Courses

The sequence of introductory physics courses PH 1101, PH 1702, PH 1303 is intended for students with little or no background in mathematics or physics. Emphasis is therefore placed on the development of problem solving skills. These courses are given on a six week accelerated schedule, and on a pass/fail basis.

The sequence of courses PH 1111 and PH 1312 is intended for students in the Engineering Sciences (460) curriculum, and is designed to present to these students the physics background they will need for entry into various technical curricula.

The sequence of courses PH 1121, PH 1322, PH 2223, and PH 2724 represent a thorough review of the basic principles and concepts of classical physics. The courses will emphasize self study and problem solving skills. These courses are intended primarily for students in the Weapons Engineering programs: WS (531), WN (532), WT (530).

PH 1101 Introductory Physics I: Mechanics (3-2).
Vectors, Kinematics in one and two dimensions. Newton's laws, force laws, work and energy, conservative forces, conservation of energy, linear momentum. PREREQUISITES: A course in calculus (may be taken concurrently).

PH 1111 Fundamentals of Physics I: Mechanics (4-2).
Vector algebra, kinematics, dynamics, work and energy, linear and angular momentum, conservation laws, rotational kinematics and dynamics, statics, simple harmonic oscillator, gravitation. PREREQUISITE: A course in calculus (may be taken concurrently).

PH 1121 Physics I: Mechanics (4-2).
Vector algebra, particle kinematics in one and two dimensions, Newton's laws of motion, particle dynamics, work, kinetic and potential energy, conservation of energy, linear momentum and its conservation laws, collisions, rotational kinematics and dynamics, equilibrium of rigid bodies, oscillations and gravitation. PREREQUISITE: A course in calculus (may be taken concurrently).

PH 1303 Introductory Physics III: Electricity and Magnetism (3-2).
Charge and Coulomb's Law, electric field, Gauss' Law, electric potential, current and resistance, electromotive force, magnetic field, Ampere's Law, Faraday's Law. PREREQUISITES: PH 1101 and a course in calculus.

PH 1312 Fundamentals of Physics II: Electricity and Magnetism (4-2).
Electric field and potential, Gauss' Law, capacitors, simple DC circuits, magnetic field, inductance, Maxwell's equations, electromagnetic waves. PREREQUISITES: PH 1111 or equivalent.

PH 1322 Physics II: Electricity and Magnetism (4-0).
Electric charge, Coulomb's Law, electric field and potential, Gauss' Law, capacitors and dielectrics, current and resistance EMF and simple circuits, magnetic field, Ampere's Law, Faraday's Law, inductance, electromagnetic oscillations and waves, Maxwell's equations. PREREQUISITE: PH 1121 or equivalent.

PH 1702 Introductory Physics II: Thermodynamics and Wave Motion (3-2).
Fluids, waves in elastic media, sound waves, heat and the First Law of Thermodynamics, kinetic theory of gases, entropy and the Second Law of Thermodynamics. PREREQUISITES: PH 1101 and a course in calculus.

Upper Division Courses

PH 2001 Physics Thesis Opportunities (1-0).
This course is designed for students interested in choosing and pursuing a Master's thesis in physics. Members of the faculty of the Department of Physics having research projects suitable for Master's degree theses will give presentations on their projects. The course is given in the pass/fail mode. PREREQUISITE: At least 7 quarter-hours of physics courses.

PH 2012 Physics Laboratory I (2-2).
The first course in a two quarter sequence on labortory measurement and analysis techniques. Graphical techniques, linear regression, distribution functions, statistical analysis of data, computer controlled data acquisition, interfacing, communication protocols, digital sampling. PREREQUISITES: PH 1121, MA 2047.

PH 2013 Physics Laboratory II (2-2).
The second course in a two quarter sequence on laboratory measurements and analysis techniques. Fourier analysis, signals in noise, phase sensitive detection, time windowing and averaging, goodness of fit, hypothesis testing. PREREQUISITE: PH 2012.

PH 2119 Oscillation and Waves (4-1).
An introductory course designed to present mechanics to students studying acoustics. Kinematics, dynamics, and work and energy consideration for the free, damped, and driven oscillators. The wave

189

equation for transverse vibration of a string, ideal and realistic boundary conditions, and normal modes. Longitudinal waves in bars. Transverse waves on rectangular and circular membranes. Vibrations of plates. Laboratory periods include problem sessions and experiments on introduction to experimental techniques and the handling of data; the simple harmonic oscillator analog; transverse waves on a string; and transverse, longitudinal, and torsional waves on a bar. PREREQUISITE: Courses in differential equations and basic physics.

PH 2151 Mechanics I — Particle Mechanics (4-1).
After a review of the fundamental concepts of kinematics and dynamics, this course concentrates on those two areas of dynamics of simple bodies which are most relevant to applications in Weapon Systems Engineering: vibrations and projectile motion. Topics include: damped and driven oscillations, rotating coordinate systems, projectile motion with atmospheric friction, and satellite orbits. PREREQUISITE: PH 1121 or equivalent; MA 2121 or equivalent course in ordinary differential equations (may be concurrent).

PH 2203 Topics in Basic Physics: Waves and Optics (4-0).
A course to provide physical background to wave motion, acoustics, and optics for students in the Electronic Warfare Curriculum, and to provide applications of analytical techniques to physical problems. Areas covered are harmonic motion-differential equations, complex notation, damped vibration and resonance; wave motion (properties of waves, sound waves, electromagnetic waves, light waves, optics), geometrical and wave optics. PREREQUISITES: MA 1112, MA 2129 and MA 2181 taken concurrently.

PH 2207 Fundamentals of Electro—Optics (4-0).
This course is designed to provide the background knowledge for electro—optics to students in interdisciplinary curricula. Topics discussed include: matrix formulation of optics, catoptric and catadioptric systems, diffraction, behavior of gaussian profile beams, Fourier optics and resolution, atmospheric transmission, atomic and molecular energy states, line shapes, band theory of semiconductors, the $p-n$ junction, light emitting diodes, stimulated emission, and lasers. PREREQUISITES: MA 3139 and PH 2304 (or equivalent).

PH 2223 Physics III: Optics (4-2).
Geometrical optics; reflection and refraction of rays at plane and spherical surfaces; mirrors, plane and spherical; lenses, thick lenses and lens aberration; matrix methods for thick lenses and lens systems. Physical optics, wave equation, phase and group velocity, Fourier transforms, interference, diffraction, polarization, birefringence. PREREQUISITES: PH 1322 and a course in differential equations.

PH 2265 Geometrical Optics (2-2).
The course first introduces geometrical optics; reflection and refraction of rays at plane and spherical surfaces; mirrors, plane and spherical; lenses, thick lenses and lens aberration; matrix methods for thick lenses and lens systems. A laboratory is included. Subjects to be covered include laboratory procedures, definition of measurement, random and systematic errors, propagation of uncertainties, graphical and analytical treatment of data, statistical concepts, focal length of lens and mirror, refractive index of glass, thick lens, optical instruments, optical spectra, and prism spectrometer. PREREQUISITE: A course in basic physics.

PH 2304 Topics in Basic Physics: Electromagnetism (2-0).
This course follows PH 2203. Basic concepts of electric and magnetic fields are introduced and their interaction with charges and currents discussed. The experimental laws are used to develop Maxwell's Equations, and simple solutions to these equations are considered. PREREQUISITES: PH 2203 or equivalent, and mathematics through vector analysis and ordinary differential equations.

PH 2351 Electromagnetism (4-1).
Electrostatic fields in vacuum and dielectrics, Poisson's and Laplace's equations, electrostatic energy, electric current. The magnetic field of steady currents, Biot-Savart and Ampere's Laws, vector potential, magnetic properties of matter. Electromagnetic induction and Faraday's Law. Magnetic energy. PREREQUISITIES: PH 1322 or equivalent, MA 2047 or equivalent.

PH 2401 Introduction to the Sonar Equations (3-0).
A discussion of each term of the sonar equations, with application to the detection, localization, and classification of underwater vehicles. Topics include ray acoustics, simple transmission loss models, tonals, spectrum and band levels, directivity index, array gain, doppler shift, and detection threshold. This course is intended primarily for students in the Antisubmarine Warfare curriculum and is given in a "structured" PSI mode. PREREQUISITE: Precalculus mathematics. (May be taken through Continuing Education as mini-courses PH 2474-76).

PH 2502 Introduction to Space Mechanics (4-0).
A review of the basic concepts of Newtonian mechanics. Inverse square force law, geometric and energy relations for simple orbits, equations for rocket motion. Definitions and properties of electric and magnetic fields. Motion of charged particles in electric and magnetic fields. PREREQUSITES: Basic physics and calculus.

PH 2641 Modern Physics for Engineers (4-0).
An introductory course intended to impart a broad background in modern physics. The course begins with a brief review of classical mechanics and electromagnetism, followed by atomic and molecular structure and spectra. Black body radiation, photoelectric effect, emission and absorption of radiation by atoms and molecules, and the energy band architecture of solids lead to an introduction to applications in lasers, semiconductors, and microwave devices. Applications may be tailored to suit the interests of the instructor and the class. PREREQUISITE: Elementary calculus and a course in basic physics, or consent of the Instructor.

PH 2681 Introductory Quantum Physics (4-2).
Special relativity plus the fundamental concepts of quantization in modern physics. Topics include the Bohr atom, blackbody radiation, wave—particle duality, the Schroedinger equation and its application to potential barriers and wells, and to the harmonic oscillator and the hydrogen atom. Also the Pauli exclusion principle, spin and angular momentum. PREREQUISITE: PH 2223. A course in theoretical physics (PH 3990) desirable but not mandatory.

PH 2724 Physics IV: Thermodynamics, Fluids and Acoustics (4-0).
Temperature concept, heat and the First Law of Thermodynamics, kinetic theory of gases, entropy and Second Law of Thermodynamics, fluid statics, fluid dynamics, drag waves in elastic media, sound waves, speed and absorption of sound in the ocean, refraction of sound waves, detection theory and thresholds, active and passive sonar. PREREQUISITES: PH 1121 and a course in differential equations.

PH 2810 Survey of Nuclear Physics (4-0).
An introduction to the basic concepts of nuclear physics with emphasis on neutron physics and nuclear reactors. Atomic nature of matter, wave-particle duality, energy levels. Basic nuclear properties, radioactivity, neutron reactions. Elements of fission and fusion reactors. PREREQUISITE: Basic Physics.

PH 2911 Introduction to Computational Physics (3-2).
An introduction to the role of computation in modern physics, with emphasis on the programming of current physics problems. Includes an introduction to mainframe operations in both the time-sharing and batch environments. Algorithmic design and structured programming will be emphasized. Exercises, chosen to emphasize physical objectives, will be assigned in WATFIV and FORTRAN. COREQUISITE: A BASIC physics course.

PH 3002 Non-Acoustic Sensor Systems (4-0).
This course covers the physical principles underlying the operation of a number of operational and proposed non-acoustic sensor systems. Geomagnetism, magnetometers and gradiometers, MAD signatures, optical and IR transmission in the atmosphere and in sea water. FLIR and radar systems for ASW. Exotic detection schemes. PREREQUISITES: PH 3306, EE 3714, SECRET clearance.

PH 3006 Weapons Systems and Weapons Effects (4-0).
This course will cover technical aspects of three areas of modern weapons systems: Nuclear weapons and effects on personnel, equipment and structures; principles of directed energy weapon concepts and their interactions with targets; space based defense system concepts. PREREQUISITES: PH 3301 or equivalent.

PH 3152 Mechanics II — Extended Systems (4-1).
The principles of dynamics are applied to real extended bodies. Topics include: principles of rocket propulsion, rotational motion of axisymmetric bodies and its application to projectile spin and gyroscopic motion. An introduction to generalized methods of description of dynamic systems is given and the general behavior of complex vibrating systems is studied. PREREQUISITE: PH 2151.

PH 3161 Fluid Dynamics (4-1).
This course emphasizes the dynamics of real compressible fluids. The basic properties of fluids are introduced and the concepts of fluid kinematics, stress, and strain are discussed. Both the control-volume and differential equation approaches are applied to the flow of a viscous fluid. The laws of similarity are developed, and the significance of Reynolds, Froude, and Mach number discussed. Topics covered include laminar and turbulent flow, isentropic subsonic channel flow, supersonic flow in nozzels, and two-dimensional supersonic flow. PREREQUISITE: PH 2151 or equivalent.

PH 3166 Physics of Underwater Vehicles (4-2).
This course emphasizes the dynamics of real incompressible fluids. The basic properties of fluids are introduced and the concepts of fluid kinematics, stress, and strain are discussed. Both the control-volume and the differential equation approaches are applied to the flow of a viscous fluid. The laws of similarity are developed, and the significance of Reynolds, Froude, and Mach numbers are discussed. Topics covered include laminar flow, turbulent flow, boundary layer theory, and the calculation of lift and drag. One or more special topics may be discussed (surface waves, cavitation, and the fluid-dynamic generation of sound) depending upon the interests of the instructor and students. PREREQUISITE: PH 2151 or equivalent.

PH 3208 Electro-Optic Principles and Devices (4-0).
This course is designed to provide students in interdisciplinary programs with an understanding of the principles and capabilities of the component devices comprising military electro-optic and infrared systems. Topics treated include: atmospheric extinction, turbulence effects on optical transmission and imaging, thermal blooming and breakdown, adaptive optics, thermal radiation, target signatures, backgrounds, modulators and shutters, beam steerers, reticles, detector characteristics and types, detector noise and cooling, imaging detectors for intensifiers, television and FLIR, CCD and CID devices, and displays. PREREQUISITE: PH 2207 or equivalent.

PH 3252 Electro—Optics (4-0).
This course treats the properties of electro-optic systems together with the basic physical principles involved. Topics included are: diffraction and Fourier transform methods; optical data processing; holography; Fresnel equations, evanescent waves, film and fiber optics; Gaussian beams and laser resonators; molecular spectra, transition probability, line widths, and laser gain; specific lasers, Q-switching and mode locking; semi-conductors, Brillouin zones, junction diodes, photodetection, light emitting diodes and diode lasers. PREREQUISITES: PH 3352, PH 3683, or equivalents.

PH 3301 Radiating Systems (4-0).
This course for students of Operations Research and other Weapon System oriented non-engineering curricula discusses the physical principles exploited by information gathering systems with emphasis on general capabilities and limitations. After a general introduction to wave propagation, topics of discussion are electromagnetic waves, radar, electro-optics including lasers, and underwater sound. These topics will be applied to specific systems such as missile guidance, sonobuoys, and phased arrays, as appropriate to the class and instructor. PREREQUISITES: MA 1116 or equivalent may be taken concurrently, or by consent of Instructor.

PH 3306 Electromagnetic Wave Propagation (4-0).
This course is designed for the ASW curriculum and may be taught as an accelerated 6-week course. An introduction to Maxwell's equations and the basic properties of electromagnetic wave propagation in various media and the interface between media. These concepts are applied to wave propagation in the sea, the atmosphere and the ionosphere. Basic properties of antennas and waveguides. PREREQUISITES: A basic course in electricity and magnetism, vectors, and differential equations.

PH 3352 Electromagnetic Waves (4-0).
Maxwell's equations. Plane waves in vacuum and dielectrics, boundary conditions, energy density and Poynting vector. Polarization. Reflection and refraction at dielectric and conducting boundaries for normal and oblique incidence. Electromagnetic propagation in conductors, with emphasis on sea water, metals, and the ionosphere. Waveguides. Radiation from a dipole antenna, qualitative treatment of antenna arrays and antenna patterns. PREREQUISITE: PH 2351.

PH 3360 Electromagnetic Wave Propagation (4-1).
Introduction to vector fields and the physical basis of Maxwell's equations. Wave propagation in a vacuum, and in dielectrics and conductors. Reflection and refraction at the interface between media. Guided waves, radiation from a dipole, and waves in the ionosphere. PREREQUISITES: MA 2047, MA 3132 (or PH 3990), and PH 2151.

PH 3402 Underwater Acoustics (4-2).
The third of a four-course sequence in acoustics for students in the ASW curriculum, this course is an analytical study of those aspects of underwater sound that influence the sonar equations. Topics include: The wave equation in fluids; acoustic properties of fluids; plane, spherical, and cylindrical waves; absorption of sound in sea water; simple sources; transducer properties and sensitivities; surface interference; the three-element array; normal and oblique incidence reflection and transmission at boundaries; image theory and the shallow-water channel; continuous line source and the plane circular piston; radiation impedance; linear arrays with steering; the Eikonal Equation and ray theory. Laboratory experiments include advanced acoustic instrumentation, longitudinal waves in an air—filled tube, surface interference, properties of underwater transducers, and the 3-element array. PREREQUISITE: PH 2401.

PH 3406 Physics of Sound in the Ocean (4-2).
A survey of physical acoustics with emphasis on the generation, propagation, and detection of sound in the ocean. Topics include: the acoustic wave equation and its limitation in fluids; solutions for plane and diverging waves; ray acoustics; radiation of sound; reflection from boundaries; normal mode propagation in the ocean; effects of inhomogeneities and sound absorption; term by term analysis of the sonar equations emphasizing transmission loss models and detection threshold models; properties of transducers for underwater sound. Laboratory experiments include surface interference, spectral analysis of noise, normal modes, waveguides, and acoustical sources. PREREQUISITES: A course in general physics, a course in differential equations, and working knowledge of complex exponential notation.

PH 3421 Acoustic Wave Propagation (4-1).
Development of and solutions to the acoustic wave equation in extended media. Propagation of plane waves in fluids and reflection and transmission of plane boundaries. Steady state response of acoustic cavities and propagation in waveguides. Sound absorption and dispersion for classical fluids. The Eikonal Equation and necessary conditions for ray acoustics; refraction and ray diagrams. Method of images. Mode propagation in shallow water channels. Laboratory experiments on selected topics. PREREQUISITES: A course in basic mechanics and a course in differential equations.

PH 3451 Fundamental Acoustics (4-2).
Development of, and solutions to, the acoustic wave equation in fluids. Propagation of plane, spherical and cylindrical waves in fluids, sound pressure level, intensity, and specific acoustic impedance. Normal and oblique incidence reflection and transmission from plane boundaries. Transmission through a layer. Image theory and surface interference. Sound absorption and dispersion for classical and relaxing fluids. Acoustic behavior of sources and arrays, continuous line source, plane circular piston, radiation impedance, and the steered line array. Transducer properties, sensitivities, and calibration. Laboratory experiments include longitudinal waves in an air-filled tube, surface interference, properties of underwater transducers, three-element array, reciprocity calibration, speed of sound in water, and absorption in gases. PREREQUISITE: PH 2119.

PH 3452 Underwater Acoustics (4-1). 4 - 2
This course is a continuation of PH 3451. Lumped acoustic elements and the resonant bubble. Normal modes in rectangular, cylindrical and spherical enclosures. Steady-state response of acoustic waveguides of constant cross section, propagating and evanescent modes, and group and phase speeds. Transmission of sound in the ocean, the Eikonal Equation and necessary conditions for ray theory, and refraction and ray diagrams. Sound propagation in the mixed layer, the convergence zone, and the deep sound channel. Passive sonar equation, ambient noise, and doppler effect and bandwidth considerations. Active sonar equations, target strength and reverberation. Laboratory experiments include Helmholtz resonators, normal modes in cylindrical enclosures, water-filled waveguide, and noise analysis. PREREQUISITE: PH 3451.

PH 3458 Noise, Shock and Vibration Control (4-0).
The application of the principles of acoustics and mechanics to the problems of controlling noise, vibration and mechanical shock. Topics include Linear mechanical vibrations; introduction to vibrations of non-linear systems; damping mechanisms; vibration and shock isolation; noise generation and control; effects of noise on man; application to problems of Naval interest such as ship quieting and industrial noise control. PREREQUISITE: A course in acoustics.

PH 3461 Explosives and Explosions (4-1).
Explosives terminology; manufacturing and testing of high explosives and propellants; flame temperatures; thermochemistry of explosive decomposition; the detonation state; explosives safety. Generation and propagation of explosive shock waves in air;Rankine-Hugoniot equations; scaling laws; normal, oblique, and Mach reflection. Dynamic blast loads and corresponding structure response. PREREQUISITE: PH 2724 or equivalent.

PH 3463 Special Topics in Underwater Acoustics and Sound (3-2).
Special topics of interest in the areas of underwater sound, transduction, propagation and detection, depending on the interests and needs of the students. PREREQUISITE: PH 3431 or PH 3452 or PH 3472.

PH 3479 Physics of Underwater Weapons (3-0).
The basic physics of underwater weapons from launch through explosion are addressed using a modern acoustic torpedo to illustrate practical applications. Topics include initial inputs, water entry, power plants, propulsors, drag and drag reduction, stability and control, guidance, acoustic search, terminal homing, exploders, and explosions. An historical summary of U.S. torpedoes and depth charges and a review of current NATO and Soviet torpedoes are also presented. PREREQUISITES: A course in acoustics and a SECRET NOFORN clearance.

PH 3513 Intermediate Orbital Mechanics (4-0).
Review of basic orbital properties. Orbital elements, orbit determination from observations, ground track and earth coverage, basic orbital maneuvers, position and velocity as function of time, ballistic missile trajectories, lunar and interplanetary trajectories. PREREQUISITIES: PH 2502 or PH 2151.

PH 3514 Introduction to the Space Environment (4-0).
Plasma concepts. Solar structure and magnetic field, particle and electromagnetic emissions from the sun, the geomagnetic field, radiation belts, structure and properties of the earth's upper atmosphere,ionosphere, the effects of man in the space environment. PREREQUISITES: Calculus and PH 1312.

PH 3520 Introduction to Space Plasmas (4-0).
Definition of plasma, single particle motions in electric and magnetic fields, invariants of motion, plasma fluid equations, plasma waves and oscillation, applications to solar wind, ionosphere and magnetosphere. PREREQUISITE: PH 3360 or equivalent.

PH 3683 Intermediate Quantum Physics (4-2).
Applies the fundamental concepts of quantum physics to the development and application of theoretical methods for dealing with real systems. Time-independent and time-dependent perturba-

tion theory. The hellium atom, many electron atoms and spectra, the periodic table, diatomic molecules, lasers, solids, semiconductors and superconductivity. PREREQUISITES: PH 2681, PH 3990, and PH 3782 (the latter may be taken concurrently).

PH 3782 Thermodynamics and Statistical Physics (4-0).
Entropy, temperature, Boltzmann factor and Gibbs factor are developed from a quantum point of view. Blackbody radiation, chemical potential partition function, Gibbs sum and applications to an ideal gas are covered. Fermi-Dirac and Bose-Einstein statistics and applications to degenerate systems. Gibbs free energy, Helmholtz free energy, enthalpy, kinetic theory, phase transformations, chemical reactions. PREREQUISITE: PH 2681.

PH 3855 Nuclear Physics (4-2).
This is the first in a sequence of graduate specialization courses on nuclear weapons and their effects. This course deals with the necessary underlying principles of nuclear physics, including nuclear forces, models, stability, reactions and decay processes. The laboratory includes radiation detection techniques and statistics of counting. PREREQUISITES: PH 3152, PH 3360, and PH 3683 or equivalents.

PH 3911 Simulation of Physical Systems (3-1).
Comparisons between simulation, theory and experimentation as techniques of scientific investigation. Computer simulation methodology and techniques: Monte Carlo and deterministic simulations, stochastic techniques, design of simulations, variance reduction and analysis of results. Applications from physics and/or weapons performance. There is a one-hour applications laboratory. PREREQUISITES: MA 3400, or OS 3602, or concent of Instructor.

PH 3990 Methods of Theoretical Physics (4-0).
The general methods of theoretical physics are applied to specific problems chosen from: classical waves, scattering, classical electro-dynamics, resonant cavities, incompressible flow, dielectric and magnetic media, heat conduction, quantum mechanics, and Fourier optics. Emphasis is on the physical applications. PREREQUISITES: MA 2121 and a sequence of courses in basic physics.

PH 3998 Special Topics in Intermediate Physics (1-0 to 4-0).
Study in one of the fields of intermediate physics and related applied areas selected to meet special needs or interest of students. The course may be conducted as seminar or supervised reading in different topics. PREREQUISITE: Consent of the Department Chairman. The course may also be taken on the Pass/Fail basis provided the student has requested so at the time of enrollment.

Graduate Courses

PH 4054 Partide Beam and High Energy Laser Weapon Physics (4-0).
This course is an in depth study into the beam weapon concepts. Topics covered are: relativistic electron beams; their equilibrium, propagation losses and stability; giant power accelerator concepts; target interaction; proton beams; neutral particle beams, their production and limitations; high power microwave beams, high energy laser beams, their production, atmospheric propagation and control and their interaction with tragets. PREREQUISITES: PH 3352, PH 2151 or equivalent, courses in electromagnetism and mechanics. SECRET clearance.

PH 4171 Advanced Mechanics (4-0).
Hamilton's Principle. The equations of motion in Lagrangian and Hamiltonian form. Symmetries and constants of the motion. The inertia tensor and rigid bodies. Canonical transformation and Poisson brackets. Small oscillations. PREREQUISITES: PH 3152, PH 3360 or equivalent.

PH 4253 Sensors, Signals, and Systems (4-2).
This course treats the physical phenomena and practical problems involved in sensor systems for electromagnetic signals. Topics included are: optical modulation, nonlinear optics, acousto-optics; specific lasers, Q-switching and mode locking; atmospheric absorption and scattering of radiation; image intensifiers, television and FLIR systems; detecting, tracking and homing systems; signal sources, target signatures and backgrounds; laser target designators, laser radars, the range equation. The laboratory will include experiments related to this material as well as to that of the preceding course, PH 3252. PREREQUISITES: PH 3252 and a course in electromagnetics.

PH 4283 Laser Physics (4-0).
The physics of lasers and laser radiation. Topics will include: spontaneous and stimulated emission, absorption, interaction of radiation with matter, line broadening mechanisms, optical and electrical pumping, gain, properties of laser beams, Gaussian beams, stable and unstable resonators, rate equations, output coupling, mode locking, short pulsing, specifics of solid state and gas laser systems, high energy and high power lasers, laser-surface interaction, air breakdown, laser supported detonation waves, laser isotope separation, and laser fusion. PREREQUISITE: PH 3252 or equivalent, or consent of Instructor.

PH 4353 Topics in Advanced Electricity and Magnetism (4-0).
Topics selected from: scattering and absorption of waves by single particles; multiple scattering; relativistic formalism and radiation from accelerated charges; propagation in layered conducting media such as the atmosphere, sea water, ocean floor systems. Introduction to free electron lasers. PREREQUISITES: PH 3352 and PH 3990 or equivalent.

PH 4371 Classical Electrodynamics (3-0).
Tensors in special relativity. Classical relativistic electromagnetic field theory. Lorentz electron theory. PREREQUISITES: PH 4353 and familiarity with the special theory of relativity and Lagrangian mechanics.

PH 4403 Advanced Topics in Underwater Acoustics (4-1).
The last in a sequence of courses in acoustics for students in the ASW curriculum, this courses is a continuation of PH 3402. Topics include: Review of the sonar equations, normal modes in enclosures, steady-state response of isospeed acoustic waveguides, propagating and evanescent modes, group and phase speeds, the wave equation with a source term, the point source in cylindrical coordinates, transmission loss models for isospeed shallow water channel with fluid bottom, the parabolic equation, and the parametric array. Laboratory experiments include analysis of underwater noise, normal modes in a rectangular cavity, and acoustic waveguides. PREREQUISITE: PH 3402 or consent of Instructor.

PH 4410 Advanced Acoustics Laboratory (0-6).
Advanced laboratory projects in acoustics. PREREQUISITE: PH 3452 or equivalent.

PH 4453 Sound Propagation in the Ocean (4-0).
An advanced treatment of propagation in the ocean. Reflection of spherical wave from ocean boundaries. Normal mode propagation of sound; the inhomogeneous wave equation and the point source in cylindrical coordinates, shallow water channel with penetrable bottom, deep sound channel, WKB approximation. Range-dependent channels; adiabotic normal modes, parabolic equation. Scattering of sound from rough surfaces and in a random ocean; frequency amplitude and phase fluctuations, multipath propagation. PREREQUISITES: PH 3452 or consent of Instructor.

PH 4454 Transducer Theory and Design (3-2).
A treatment of the fundamental phenomena basic to the design of transducers for underwater sound, specific examples of their application and design exercises. Topics include piezoelectric, magnetostricitive and hydromechanical effects. Laboratory includes experiments on measurement techniques, properties of transducer materials, characteristics of typical transducer types, and a design project. PREREQUISITE: PH 3452, or consent of Instructor.

PH 4456 Seminar in Application of Underwater Sound (3-0).
A study of current literature on application of acoustics to problems of Naval interest. PREREQUISITE: PH 3406 or PH 3452 or PH 4403.

PH 4459 Shock Waves and High-Intensity Sound (3-0).
Nonlinear oscillations and waves on strings. The nonlinear acoustic wave equation and its solution. The parametric array. The physics of shock waves in air and in water. PREREQUISITE: PH 3451.

PH 4515 Physics of the Satellite Environment (4-0).
A graduate level treatment of the structure and properties of the space environment. Topics covered are chosen from: Geomagnetic field and its variations, composition and dynamics of the upper atmosphere, natural and artificial radiation belts, solar emissions and their influence on the near earth space environment. PREREQUISITES: A 3000 level course in electromagnetism. Some background in plasma physics is desirable.

PH 4531 Introduction to Astrophysics (4-0).
Introduction to theories of stellar structure, energy transport in stars, and stellar evolution. Recent advances in astrophysics will be discussed. PREREQUISITE: Consent of Instructor.

PH 4661 Plasma Physics I (4-0).
This course constitutes a broad study of the behavior and properties of gaseous plasma, the fourth — and most abundant — state of matter in the universe. Plasma physics is a vigorously developing branch of contemporary physics. Its many applications are in areas such as astro and space-physics, atomic physics, magneto-hydrodynamic power generation, electron beam excited laser, laser isotope enrichment, ionospheric communication, thermonuclear fusion, and high energy beam weapons. The physical concepts fundamental to various branches of plasma physics are introduced. Topics covered include single particle motions in electromagnetic fields, orbit theory, collision phenomena, breakdown in gases, and diffusion. The magnetohydrodynamic and the two-fluid plasma models are considered. PREREQUISITES: PH 3360, PH 3782, PH 3683, or the equivalent.

PH 4662 Plasma Physics II (3-0).
A continuation of Plasma Physics I. Applications of the hydromagnetic equations to the study of macroscopic motions of plasma. Equilibrium and stability. Classification of plasma instabilities. Kinetic theory, the Boltzmann equation and the macroscopic momentum transport equation. Plasma oscillations and Landau damping. Nonlinear effects, shock waves, radiations from plasma, including bremsstrahlung and cyclotron radiation. Controlled fusion and laser produced plasmas. PREREQUISITES: PH 4353, PH 4661 or equivalent.

PH 4663 Advanced Plasma Physics (3-0).
Selected topics in plasma physics, such as laser-target interaction, dynamics of a laser-produced plasma, self-generated magnetic fields, plasma surface interactions, unipolar arcing, light scattering and absorption in plasma, turbulence and fluctuations, collisionless shock waves. PREREQUISITE: PH 4662 or consent of Instructor.

PH 4750 Radiation Effects in Solids (4-2).
Energy loss of radiation in matter, radiation dosimetry, energy transfer of radiation to matter, theory and spectra of radiation from nuclear weapons, fireball development, electromagnetic pulse phenomena, displacements of atoms in solids,

radiation damage to solid-state devices. PREREQUISITES: PH 2810, PH 3352, and PH 3683, or equivalents.

PH 4751 Semiconductor Physics (3-1).
Basic physics of semiconductor devices. Band model of solids, carriers (holes and electrons), Fermi function, description of diodes, device fabrication techniques, current and capacitance, various doping distributions, transistors. There is a problem session-lab demonstration. PREREQUISITES: PH 3683 or PH 2641 of consent of Instructor.

PH 4760 Solid State Physics (4-0).
Fundamental theory and related laboratory experiments dealing with solids: crystals, binding energy, lattice vibration, dislocations and mechanical properties, free electron theory, band theory, properties of semi-conductors and insulators, magnetism. PREREQUISITES: PH 3683 and PH 3782 (the latter may be taken concurrently).

PH 4771-4772 Statistical Physics I-II (3-0).
Kinetic theory and the Boltzmann theorem, configuration and phase space, the Liouville theorem, ensemble theory, microcanonical, canonical and grand canonical ensembles, quantum statistics. Application to molecules, Bose-Einstein gases, Fermi-Dirac liquids, and irreversible processes. PREREQUISITES: PH 3152, PH 3683, and PH 3782.

PH 4856 Physics of Nuclear Explosions (4-1).
This second course in the nuclear weapon effects graduate specialization sequence considers indepth questions of weapon designs and their specific output environments which are created by the nuclear explosion. Topics are: principles affecting weapon yield efficiency; explosion phenomenology in various ambient environments, blast and shock, thermal radiation, X-rays and gamma rays, neutron fluxes, electromagnetic pulse, radioactive fallout models. PREREQUISITES: PH 3855 and SECRET clearance.

PH 4857 Nuclear Weapon Effects and Hardening Technologies (4-0).
This third course in the nuclear weapon effects graduate specialization sequence considers in detail the effects which nuclear weapon explosion environments have on various defense platforms and systems. Methods of hardening to reduce system vulnerability are considered in each of the effect areas: blast and shock, thermal radiation, transient effects on electronics, EMP, biological effects from contamination, atmospheric and ionospheric effects on communication, detection and surveillance systems. PREREQUISITES: PH 4856, PH 3461 and SECRET clearance.

PH 4881 Advanced Nuclear Physics (3-0).
Topics selected from: relativistic mechanics, scattering of electrons from nuclei, nuclear models, nuclear potentials, relativistic treatment of the electron using the Dirac equation and application to electron scattering to develop the Mott cross-section; treatment of form-factors arising from electron-nucleon and electron-nucleus scattering; application of electron scattering to study the structure of nucleon matter and the study of nucleon models. PREREQUISITE: An upper division course in nuclear physics.

PH 4885 Reactor Theory (3-0).
The diffusion and slowing-down of neutrons. Homogeneous thermal reactors, time behavior; reactor control. Multigroup theory. Heterogeneous systems. PREREQUISITES: An upper division course in nuclear physics.

PH 4911 Simulations of Complex Systems (3-1).
Analysis of the elements of the large simulations, such as SCSS, which are routinely used in the conceptual testing and validation of proposed new military systems, practice in the use of large models written by others, and sensitization to the pitfalls inherent in such models.
The model chosen must address the communications and computer interfacing problems encountered in the integration of new devices into existing systems. The course will include discussions of and hands-on experience in the:
1. verification of large models,
2. validation of large models,
3. exercise of large models,
4. design of simulation experiments,
5. analysis of outcomes,
6. preparation of simulation based reports.
PREREQUISITE: PH 3911.

PH 4971 Quantum Mechanics I (4-0).
PH 4972 Quantum Mechanics II (3-0).

PH 4973 Quantum Mechanics III (3-0).
Review of Lagrange's and Hamilton's equations of motion. Poisson brackets. General principles of nonrelativistic quantum mechanics; stationary states. Addition of angular momenta; time-independent and time-dependent perturbation theory; scattering theory; identical particles and spin. General principles of relativistic quantum mechanics; properties and solutions of relativistic wave equations. PREREQUISITES: PH 3683, PH 3152.

PH 4984 Advanced Quantum Physics (4-0).
This graduate level course covers "formal" quantum mechanics in the Dirac format. Additional topics include group theory with applications to selection rules and crystal fields, variation principles, self-consistent fields in the many-electron atom, scattering theory, and polyatomic molecules. PREREQUISITE: PH 3683.

PH 4991 Relativity and Cosmology (3-0).
Einstein's general theory of relativity. The three classical tests. The Schwarzchild singularity and black holes. Cosmological models and their relations with observations. Introduction to modern developments; gravitational waves, Dicke's theory, problems of quantum cosmology and superspace. PREREQUISITE: PH 4371.

PH 4998 Special Topics in Advanced Physics (1-0 to 4-0).
Study in one of the fields of advanced physics and related applied areas selected to meet special needs or interests of students. The course may be conducted as a seminar or supervised reading. The course carries a letter grade and may be repeated in different topics. PREREQUISITE: Consent of the Department Chairman. It may also be taken on a Pass/Fail basis if the student has requested so at the time of enrollment.

CHEMISTRY

Upper Division Course

CH 2001 General Principles of Chemistry (3-2).
A study of the fundamentals underlying the chemical behavior of matter. Current theories of atomic structure and chemical bonding. Elementary physical chemistry, including chemical equilibria, kinetics and electro-chemistry. The laboratory period will be used for physico-chemical experiments or for problem work, as is deemed appropriate by the Instructor.

Upper Division or Graduate Course

CH 3998 Special Topics in Intermediate Chemistry (1-0 to 4-0).
Study in one of the fields of intermediate chemistry selected to meet special needs or interests of students. The course may be conducted as seminar or supervised reading and carries a letter grade. It may be repeated in different topics. PREREQUISITE: Consent of the Department Chairman. It may also be taken on Pass/Fail basis if the student has requested so at the time of enrollment.

Graduate Course

CH 4998 Special Topics in Advanced Chemistry (1-0 to 4-0).
Study in one of the fields of advanced chemistry or related applied areas selected to meet special needs or interest of students. The course may be conducted as seminar or supervised reading, carries a letter grade and may be repeated in different topics. PREREQUISITE: Consent of Department Chairman. It may also be taken on Pass/Fail basis if the student has requested so at the time of enrollment.

SCIENCE AND ENGINEERING

Upper Division Course

SE 2002 Electromagnetic Systems (4-0).
This course is designed to support the Intelligence curriculum by providing an overview of the principles, concepts and trade-offs underlying systems whose operations requires the transmission and/ or reception of electromagnetic energy. Topics treated in the course include: the electromagnetic spectrum and its usage, principles of electronic reconnaissance, antennas and their characteristics, factors affecting receiver sensitivity, transmission range, radar principles, the radar equation, optics fundamentals, infrared nomenclature, and principles and elements of photographic science.

Upper Division or Graduate Course

SE 3004 Weapons System Analysis (4-0).
This course is designed to support the Intelligence Curriculum. It treats the behavior of weapons systems as influenced by the physical properties of the environment and the physical properties of the devices incorporated into the systems. The course material includes: Electro-optical systems, with some background in semiconductors, Sonar, Non-acoustic ASW (Antisubmarine Warfare), and navigation by means of satellites. PREREQUISITES: SE 2002, EC 2003.

Graduate Courses

SE 4006 Technical Assessment and Intelligence Systems (4-0).
This course is designed to support the Intelligence curriculum. It treats the role of intelligence in support of the DoD Planning, Programming and Budgeting System, the U.S. and Soviert Military R & D Systems, current technical trends affecting military capabilities, and current and projected capabilities of ocean surveillance and technical intelligence systems. PREREQUISITE: TOP SECRET clearance with access to Special Intelligence Information.

SE 4401 Underwater Sound, Systems, and Countermeasures (3-2).
A study of the principles of underwater sound propagation, and the design and operational characteristics of underwater sound systems. Emphasis is placed on various measures used to interfere with and to deceive active and passive Sonar systems, and the techniques used to counter this interference. Topics studied include: sensor arrays, acoustic quieting, signal processing, and examples of active and passive underwater acoustic systems, including acoustic countermeasures. PREREQUISITES: PH 2203, U.S. Citizenship and SECRET clearance.

SE 4858 Nuclear Warfare Analysis (4-0).
This final course in the nuclear weapon effects graduate specialization sequence deals with technical aspects of strategic and tactical nuclear war. As much as possible, quantitative considerations will be stressed. PREREQUISITES: PH 4857 or PH 3006 or equivalent; SECRET clearance.

SPACE SYSTEMS ACADEMIC GROUP

Chairman:

Allen E. Fuhs, Distinguished Professor,
Code 72, Halligan Hall, Room 275,
(408) 646-2948, AV 878-2948.

The Space Systems Academic Group is an interdisciplinary association of faculty, consisting of twelve members representing eight separate academic disciplines. An academic group is a less formal organization than an academic department, and each professor in the group has an appointment in an academic department. The Space Systems Academic Group has administrative responsibility for the academic content of the Space Systems Operations and the Space Systems Engineering Programs of Study. Teaching in these multidisciplinary programs is carried out by faculty members attached to the following academic departments: Administrative Sciences, Aeronautics, Electrical and Computer Engineering, Mathematics, Meteorology, Oceanography, Operations Research and Physics. Thesis topics for students in this area of study are approved by the group and the final thesis is approved by the Chairman.

GROUP FACILITIES

To provide laboratory and experimental experience, several facilities have been developed. The Solar Simulator Laboratory, located in Halligan Hall, consists of apparatus and computers to test solar cells and determine performance parameters such as power and efficiency. In a joint project with the Physics Department, the LINAC has been used to irradiate solar cells, and the resultant degradation has been measured.

The Laser Damage Facility, located in Spanagel Hall, is a joint Physics and Space Systems laboratory. The laboratory has a 9 joule pulsed carbon dioxide laser which can create laser supported detonation waves as well as other phenomena. A vacuum facility allows testing specimens in a simulated space environment.

The Navigation Satellite Receiver Laboratory is a joint Oceanography and Space Systems facility. Students can use the receiver to obtain positional and velocity information using the Global Positioning Satellite. Other navigational receivers are operated by the Electrical and Computer Engineering Department.

Many theses written by Space Systems students are classified. To provide secure computing facilities as well as secure word porcessing, the Space Systems Secured Computing Facility is available for use by faculty and students as required.

DEGREE REQUIREMENTS

The Space Systems Engineering students earn a Master of Science Degree in Electrical and Computer Engineering. Refer to degree requirements as listed by the Department of Electrical And Computer Engineering.

The Space Systems Operations students are awarded the degree of Master of Science in Systems Technology (Space Systems Operations). A minimum of 45 quarter hours of graduate level work of which at least 15 hours must represent courses at the 4000 level. Graduate courses in at least four different academic disciplines must be included, and, in two disciplines, a course at the 4000 level must be included. Space Systems Operations curriculum has a series of Space-unique and/or Space-oriented courses. These required courses fulfil the requirement of three courses constituting advanced study in an area of specialization. Each student is required to write a thesis which is space-oriented. The study program must be approved by the Chairman of the Space Systems Academic Group.

GROUP COURSE OFFERINGS

SS 0010 Space Systems Seminars and Field Trips (0-1).
Seminars consist of lectures to provide perspective on Space Systems. Field trips expose the student to various space activities such as industry, NASA and DoD laboratories and commands.

SS 0810 Thesis Research (0-0).
Every student conducting thesis research enrolls in this course.

SS 2001 Military Operations in Space I (4-0).
An overview of space systems from the Military point of view. Provides introduction to and a perspective on military role in space, the supporting technologies and sciences, and the missions and systems.

Upper Division or Graduate Courses

SS 3001 Military Applications of Space (4-0).
Examination of the military functions which utilize space systems and the capabilities of current systems, impact of space operations on military strategy, doctrine and tactics. National space policy and national organizations involved in space policy, DoD and service relationships. Tasking and use of space systems and ground support elements and techniques to reduce vulnerability. Impact of current R&D programs.

SS 3900 Special Topics in Space Systems (Variable Credit up to five hours).
Directed graduate study either experimental or theoretical in nature. PREREQUISITE: Consent of Chairman of Space Systems Academic Group.

Graduate Courses
SS 4001 Decisions and Space Systems (4-0).
Cost-Performance Analysis including mission analysis, measures of performance, and cost models. Study of the evolution of the interaction of technology, economics, and politics in determining space related activities. Discussion of the militarization of space issue. PREREQUISITES: SS 3001, OS 3008.

SS 4002 Military Operations in Space, II (4-0).
Operation of space systems to achieve mission objectives. Periods of vulnerability. Launch windows. Satellite defense: hardening, maneuver, encryption, covert spores, etc. ASAT operations. Launch windows. Weapons in space and threats to space systems. PREREQUISITES: SS 2001.

SS 4900 Advanced Study in Space Systems (Variable Credit up to five hours).
Directed graduate study based on journal literature, experimental projects, or other sources. PREREQUISITE: Consent of Chairman of Space Systems Academic Group.
FACULTY

DISTINGUISHED PROFESSORS

DYER, JOHN NORVELL (1961) . . . . Distinguished Professor of Physics
      Ph.D., University of California at Berkeley (1960).
FUHS, ALLEN EUGENE (1966) . . . . Distinguished Professor of Aeronautics and Space Systems
      Ph.D., California Institute of Technology (1958).
GAVER, DONALD PAUL, JR. (1970) . . . . Distinguished Professor of Operations Research
      Ph.D., Princeton University (1956).
MARTO, PAUL JAMES (1965) . . . . Distinguished Professor of Mechanical Engineering
      Sc. D., Massachusetts Institute of Technology (1965).
SARPKAYA, TURGUT (1967) . . . . Distinguished Professor of Mechanical Engineering
      Ph.D., University of Iowa (1954).
THALER, GEORGE JULIUS (1951) . . . . Distinguished Professor of Electrical and Computer Engineering
      D. Eng., Johns Hopkins University (1947).

REGULAR FACULTY

DEPARTMENT OF ADMINISTRATIVE SCIENCES

ABDEK-HAMID, TAREK (1986) . . . . Assistant Professor
      Ph.D., MIT Sloan School of Management (1984).
BOGER, DAN CALVIN (1979) . . . . Associate Professor of Economics
      Ph.D., University of California at Berkeley (1979).
BUI, TUNG XUAN (1984) . . . . Assistant Professor of Management Information Systems
      Ph.D., New York University (1985).
CARRICK, PAUL MARSHALL (1969) . . . . Associate Professor of Management
      Ph.D., University of California at Berkeley (1956).
DOLK, DANIEL R. (1982) . . . . Assistant Professor of Management Information Systems
      Ph.D., University of Arizona (1982).
DUKE, JAMES ROBERT, JR., LCDR, US. NAVY (1985) . . . . Instructor of Financial Management
      M.S., Naval Postgraduate School
EOYANG, CARSON KAN (1974) . . . . Associate Professor of Management
      Ph.D., Stanford University (1976).
EUSKE, KENNETH JAMES (1978) . . . . Associate Professor of Accounting
      Ph.D., Arizona State University (1978).
EVERED, ROGER DENNIS (1979) . . . . Professor of Administrative Sciences
      Ph.D., University of California at Los Angeles (1973).
FREMGEN, JAMES MORGAN (1965) . . . . Professor of Accounting
      D.B.A., Indiana University (1961).
FREW, BARRY ALBERT, LCDR, U.S. Navy (1984) . . . . Instructor of Information Systems
      M.S., Naval Postgraduate School (1974).
GREER, WILLIS ROSWELL, JR. (1982) . . . . Professor of Accounting
      Ph.D., University of Michigan (1971).
HAAG, ERNEST VERNON, Captain, U.S. Navy (1984) . . . . Instructor of Organizational Behavior
      M.S., University of Southern California (1980).
HENDERSON, DAVID (1984) . . . . Associate Professor
      Ph.D., University of California at Los Angeles (1976).
HORTON, FENN CLARK (1964) . . . . Associate Professor of Economics
      Ph.D., Claremont Graduate School (1968).
HUDSON, TIMOTHY PATRICK, Major, U.S. Marine Corps (1986) . . . . Instructor of Financial Management
      M.S. Naval Postgraduate School (1980).
JONES, CARL RUSSELL (1965) . . . . Professor of Information and Telecommunications Systems
      Ph.D., Claremont Graduate School (1965).
LIAO, SHU SHENG (1977) . . . . Professor of Accounting
      Ph.D., University of Illinois (1971).
LYONS, NORMAN ROBERT (1979) . . . . Associate Professor of Management Information Systems
      Ph.D., Carnegie-Mellon University (1972).

MATTHEWS, DANNY GERALD, LCDR, Supply Corps, U.S. Navy (1986) . . . . Instructor of Accounting
    M.S., Naval Postgraduate School (1983).
McCAFFERY, JERRY LEE (1984) . . . . Professor of Public Budgeting
    Ph.D., University of Wisconsin (1972).
McCLAIN, JOHN FRANKLIN III, CDR, U.S. Navy (1985) . . . Instructor of Acquisition and Contract Management
    M.S., Naval Postgraduate School (1977).
McGONIGAL, RICHARD ALLIN, LCDR, U.S. Navy (1985) . . Instructor of Acquisition and Contract Management
    M.S., Naval Postgraduate School (1982).
MEHAY, STEPHEN (1986) . . . . Associate Professor of Economics
    Ph.D., University of California (1973).
MOORE, THOMAS (1986) . . . . Assistant Professor of Operations Research
    Ph.D., Virginia Tech (1985)
MOSES, ORRIN DOUGLAS (1986) . . . . Assistant Professor
    Ph.D., University of California, Los Angeles (1983).
ROBERTS, NANCY (1986) . . . . Associate Professor of Education
    Ph.D., Stanford University.
SAN MIGUEL, JOSEPH GIRARD (1982) . . . . Professor of Accounting
    Ph.D., University of Texas (1972).
SCHNEIDEWIND, NORMAN FLOYD (1971) . . . . Professor of Computer Science
    D.B.A., University of Southern California (1966).
SOLNICK, LOREN MICHAEL (1985) . . . . Associate Professor of Labor Economics
    Ph.D., University of Illinois (1973).
SUCHAN, JAMES EDWARD (1986) . . . . Associate Professor of Managerial Communications
    Ph.D., University of Illinois (1980).
THOMAS, GEORGE WILLIAM (1978) . . . . Associate Professor of Economics
    Ph.D., Purdue University (1971).
WEITZMAN, RONALD ALFRED (1971) . . . . Associate Professor of Physchology
    Ph.D., Princeton University (1959).
WHIPPLE, DAVID RICHARD, JR., (1971) . . . . Professor of Economics and Policy Analysis
    Ph.D., University of Kansas (1971).

DEPARTMENT OF AERONAUTICS

BALL, ROBERT EDWIN (1967) . . . . Professor
    Northwestern University (1962).
BELL, RICHARD WILLIAM (1951) . . . . Professor
    California Institute of Technology (1958).
BIBLARZ, OSCAR (1968) . . . . Associate Professor
    Ph.D., Stanford University (1968).
BODAPATI, SATYA (1986) . . . . Associate Director, NAVY-NASA Joint Institute of Aeronautics
    Ph.D., University of Cambridge (1975).
COLLINS, DANIEL JOSEPH (1967) . . . . Professor
    Ph.D., California Institute of Technology (1961).
GAWAIN, THEODORE HENRY (1951) . . . . Professor
    Ph.D., Massachusetts Institute of Technology (1944).
HEALEY, JAMES VALENTINE (1983) . . . . Associate Professor
    Ph.D., University of Southern California (1969).
HEARD, CHESTER ARTHUR, LCDR, U.S. Navy (1984) . . . . Instructor
    M.S., Naval Postgraduate School (1977).
KOLAR, RAMESH (1985) . . . . Assistant Professor
    Ph.D., University of Arizona (1984).
LAYTON, DONALD MERRILL (1965) . . . . Associate Chairman and Professor
    M.S., Princeton University (1954).
LINDSEY, GERALD HERBERT (1965) . . . . Professor
    Ph.D., California Institute of Technology (1963).
MILLER, JAMES AVERY (1963) . . . . Associate Professor
    Ph.D., Illinois Institute of Technology (1963).
NETZER, DAVID WILLIS (1968) . . . . Professor
    Ph.D., Purdue University (1968).
PLATZER, MAX FRANZ (1970) . . . . Chairman and Professor
    Dr. Tech. Science, Technical University of Vienna, Austria (1964).

SHREEVE, RAYMOND PARMOUS (1971) . . . . Professor
    Ph.D., University of Washington (1970).
WU, EDWARD MING-CHI (1984) . . . . Professor
    Ph.D., University of Illinois (1965).
ZUCKER, ROBERT DIEFENDORF (1965) . . . . Associate Professor
    Ph.D., University of Arizona (1966).

DEPARTMENT OF COMPUTER SCIENCE

ADAMS, RICHARD A., MAJ, USAF (1986) . . . . Assistant Professor
    Ph.D., University of Illinois at Urbana (1986).
BAKER, GARY S., CDR, U.S. Navy (1985) . . . . Instructor
    M.S., Naval Postgraduate School (1981).
BRADLEY, GORDON H. (1973) . . . . Professor
    Ph.D., Northwestern University (1967).
CALLAHAN, PAUL W., LCDR, U.S. Navy (1983) . . . . Instructor
    M.S., Naval Postgraduate School (1979).
DAVIS, DANIEL L (1983) . . . . Associate Professor
    Ph.D., California Institute of Technology (1969).
FASS, LEONA F. (1986) . . . . Associate Professor
    Ph.D., University of Pennsylvania (1980).
HSIAO, DAVID K. (1982) . . . . Professor
    Ph.D., University of Pennsylvania (1968).
KODRES, UNO R. (1963) . . . . Professor
    Ph.D., Iowa State University (1958).
LUM, VINCENT Y. (1985) . . . . Chairman and Professor
    Ph.D., University of Illinois at Urbana (1966).
MACLENNAN, BRUCE J. (1979) . . . . Associate Professor
    Ph.D., Purdue University (1975).
McGHEE, ROBERT B. (1986) . . . . Professor
    Ph.D., University of Southern California (1963).
RAUTENBERG, RONALD E., LCDR, U.S. Naval Reserve (1984) . . . . Instructor
    M.S., Naval Postgraduate School (1980).
RAWLINSON, LINDA C., CDR, U.S. Navy (1985) . . . . Instructor
    M.S., Naval Postgraduate School (1980).
ROWE, NEIL C. (1983) . . . . Associate Professor
    Ph.D., Stanford University (1983).
WU, C. THOMAS (1985) . . . . Associate Professor
    Ph.D., University of California, San Diego (1983).
ZYDA, MICHAEL J. (1984) . . . . Assistant Professor
    D.Sc., Washington University (1984).

DEFENSE RESOURCES MANAGEMENT EDUCATION CENTER

BLACKBURN, LINWOOD E., Major, U.S. Army (1985) . . . . Instructor
    M.S., Virginia Polytechnic Institute (1980).
BLANDIN, JAMES SHERMAN (1974) . . . . Associate Professor and Executive Director
    Ph.D., University of Oregon (1974).
BOYNTON, ROBERT EDWARD (1970) . . . . Associate Professor
    Ph.D., Stanford University (1968).
BRUBAKER, EARL ROY (1983) . . . . Professor
    Ph.D., University of Washington (1964).
CONRAD, DONALD HENRY, LTC, U.S. Army (1985) . . . . Instructor
    M.S., Georgia Institute of Technology (1972).
DAWSON, JOHN EDWARD (1966) . . . . Professor
    D.P.A., Syracuse University (1971).
FREDERIKSEN, PETER CARL (1974) . . . . . Associate Professor and Assistant Director for Academic Programs
    Ph.D., Washington State University (1974).
LaCIVITA, CHARLES JOHN (1985) . . . . Assistant Professor
    Ph.D., University of Santa Barbara (1981).

MORRIS, JAMES H. (1982) .... Associate Professor
    Ph.D., University of Oregon (1976).
PIROG, ROBERT LEWIS (1983) .... Assistant Professor
    Ph.D., Columbia University (1978).
ROBERTS, DAVID CHARLES (1980) .... Assistant Professor
    Ph.D., University of Southern California (1976).
VAUGHN, LARRY E., LCDR, Supply Corps, U.S. Navy (1985) .... Instructor
    M.S., Naval Postgraduate School (1974).
VON PAGENHARDT, ROBERT (1967) .... Professor
    Ph.D., Stanford University (1970).
WALL, KENT D. (1985) .... Associate Professor
    Ph.D., University of Minnesota (1971).
WRAY, TERRY L., LCDR, U.S. Navy (1986) .... Instructor
    M.S., Naval Postgraduate School (1979).
YOHANNAN, FRANK, LTCOL, U.S. Marine Corps (1985) .... Instructor
    M.B.A., University of Colorado (1981).

DEPARTMENT OF ELECTRICAL AND COMPUTER ENGINEERING

ABBOT, LARRY WAYNE (1984) .... Assistant Professor
    D. Eng., University of Kansas (1984).
BREIDA, STEPHEN (1958) .... Associate Professor
    M.S.E.E., Purdue University (1954).
BUKOFZER, DANIEL (1980) .... Assistant Professor
    Ph.D., University of California at Davis (1979).
BROWN, THOMAS JAY, MAJ., U.S. Air Force (1984) .... Instructor
    M.S., Air Force Institute of Technology (1973).
COTTON, MITCHELL LAVETTE (1953) .... Associate Professor
    E.E., University of California at Berkeley (1954).
CRISTI, ROBERTO (1985) .... Assistant Professor
    Ph.D., University of Massachusetts
DUFFIN, JOHN HENRY (1962) .... Professor
    Ph.D., University of California at Berkeley (1959).
EWING, GERALD DEAN (1963) .... Associate Professor
    Ph.D., Oregon State University (1964).
GERBA, ALEX, JR. (1959) .... Associate Professor
    M.S. University of Illinois (1957).
HIPPENSTIEL, RALPH (1986) .... Assistant Professor
    Ph.D., New Mexico State University (1985).
KIRK, DONALD EVAN (1965) .... Professor
    Ph.D., Cornell University (1965).
KNORR, JEFFREY (1970) .... Professor
    Ph.D., Cornell University (1970).
LEE, CHIN-HWA (1982) .... Associate Professor
    Ph.D., University of California at Santa Barbara.
LEE, HUNG-MOU (1982) .... Assistant Professor
    Ph.D., Harvard University (1981).
LOOMIS, HERSCHELL (1981) .... Professor
    Ph.D., Massachusetts Institute of Technology (1963).
MICHAEL, SHERIF (1983) .... Assistant Professor
    Ph.D., University of West Virginia (1983).
MOOSE, PAUL HENRY (1980) .... Associate Professor
    Ph.D., University of Washington (1970).
MORGAN, MICHAEL ALLEN (1979) .... Associate Professor
    Ph.D., University of California at Berkeley (1976).
MYERS, GLEN ALLEN (1965) .... Associate Professor
    Ph.D., Stanford University (1965).
PANHOLZER, RUDOLF (1964) .... Professor
    D.Sc., Technische Hochschule in Graz, Austria (1961).
PARKER, SYDNEY RICHARD (1966) .... Professor
    Sc.D., Stevens Institute of Technology (1964).

POWERS, JOHN PATRICK (1970) . . . . Professor
      Ph.D., University of California at Santa Barbara (1970).
RIGAS, HARRIETT B. (1984) . . . . Professor
      Ph.D., University of Kansas (1963).
STRUM, ROBERT DENNY (1958) . . . . Professor
      M.S., University of Santa Clara (1964).
TITUS, HAROLD ARTHUR (1962) . . . . Professor
      Ph.D., Stanford University (1962).
THERRIEN, CHARLES WILLIAM (1984) . . . . Associate Professor
      Ph.D., Massachusetts Institute of Technology (1969).
WARD, JOHN ROBERT (1962) . . . . Professor
      Ph.D., University of Sydney (1958).
ZIOMEK, LAWRENCE JAMES (1982) . . . . Assistant Professor
      Ph.D., Pennsylvania State Univerity (1981).

DEPARTMENT OF MATHEMATICS

DANIELSON, DONALD ALFRED (1985) . . . . Associate Professor
      Ph.D., Harvard University (1968).
FRANKE, RICHARD HOMER (1970) . . . . Professor
      Ph.D., University of Utah (1970).
FREDRICKSEN, HAROLD M. (1980) . . . . Chairman and Professor
      Ph.D., University of Southern California (1968).
JAYACHANDRAN, TOKE (1967) . . . . Professor
      Ph.D., Case Institute of Technology (1967).
KOVACH, LADIS DANIEL (1967) . . . . Professor
      Ph.D., Purdue University (1951).
LATTA, GORDON ERIC (1979) . . . . Professor
      Ph.D., California Institute of Technology (1951).
LUCAS, KENNETH ROBERT (1958) . . . . Associate Professor
      Ph.D., University of Kansas (1957).
MENDEZ, RAUL HERNAN (1981) . . . . Assistant Professor
      Ph.D., University of California at Berkeley (1971).
MORRIS, GEORGE WILLIAM (1968) . . . . Professor
      Ph.D., University of California at Los Angeles (1957).
NETA, BENY (1985) . . . . Associate Professor
      Ph.D., Carnegie-Mellon University (1977).
OWEN, GUILLERMO (1983) . . . . Professor
      Ph.D., Princeton University (1962).
RUSSAK, IRA BERT (1972) . . . . Associate Professor
      Ph.D., University of California at Los Angeles (1967).
SCHOENSTADT, ARTHUR LORING (1970) . . . . Professor
      Ph.D., Rensselaer Polytechnic Institute (1968).
TRAHAN, DONALD HERBERT (1966) . . . . Associate Professor
      Ph.D., University of Pittsburgh (1961).
WEIR, MAURICE DEAN (1969) . . . . Associate Professor
      D.A., Carnegie-Mellon University (1970).
WILDE, CARROLL ORVILLE (1968) . . . . Professor
      Ph.D., University of Illinois (1964).

DEPARTMENT OF MECHANICAL ENGINEERING

CANTIN, GILLES (1960) . . . . Professor
      Ph.D., University of California, Berkeley (1968).
CHALLENGER, KENNETH DAVID (1979) . . . . Associate Professor
      Ph.D., University of Cincinnati (1973).
CHANG, LIANG-WEY (1985) . . . . Assistant Professor
      Ph.D., Purdue University (1984).
HEALEY, ANTHONY (1986) . . . . Professor
      Ph.D., Sheffield University, United Kingdom (1966).
JOSHI, YOGENDRA (1986) . . . . Assistant Professor
      Ph.D., University of Pennsylvania (1984).

KELLEHER, MATTHEW DENNIS (1986) . . . . Professor
    Ph.D., University of Notre Dame (1966).
LIGRANI, PHILLIP MEREDITH (1984) . . . . Associate Professor
    Ph.D., Stanford University (1980).
McNELLEY, TERRY ROBERT (1976) . . . . Associate Professor
    Ph.D., Stanford University (1973).
NUNN, ROBERT HARRY (1968) . . . . Professor
    Ph.D., University of California, Davis (1967).
PERKINS, ARTHUR JEFFREY (1972) . . . . Professor
    Ph.D., Case Western Reserve University (1969).
PUCCI, PAUL FRANCIS (1956) . . . . Professor
    Ph.D., Stanford University (1955).
SALINAS, DAVID (1970) . . . . Associate Professor
    Ph.D., University of California, Los Angeles (1968).
SHIN, YOUNG SIK (1981) . . . . Associate Professor
    Ph.D., Case Western Reserve University (1971).
SMITH, DAVID LEE (1983) . . . . Associate Professor
    Ph.D., Oklahoma State University (1979).

DEPARTMENT OF METEOROLOGY

CHANG, CHIH-PEI (1972) . . . . Professor
    Ph.D., University of Washington (1972).
DAVIDSON, KENNETH L. (1970) . . . . Professor
    Ph.D., University of Michigan (1970).
DURKEE, PHILIP A. (1984) . . . . Assistant Professor
    Ph.D., University of Minnesota (1984).
ELIAS, KRISTINE C., LCDR, U.S. Navy (1986) . . . . Instructor
    M.S., Naval Postgraduate School (1985).
ELSBERRY, RUSSELL L. (1968) . . . . Professor
    Ph.D., Colorado State University (1968).
HANEY, ROBERT L. (1970) . . . . Professor
    Ph.D., University of California at Los Angeles (1971).
RENARD, ROBERT J. (1952) . . . . Professor
    Ph.D., Florida State University (1970).
SHAW, WILLIAM J. (1983) . . . . Assistant Professor
    University of Washington (1982).
VAN DER BIJL, WILLEM (1961) . . . . Associate Professor
    Ph.D., State University, Utrecht (1952).
WASH, CARLYLE H. (1980) . . . . Associate Professor
    Ph.D., University of Wisconsin (1978).
WILLIAMS, ROGER T. (1968) . . . . Professor
    Ph.D., University of California at Los Angeles (1963).

DEPARTMENT OF NATIONAL SECURITY AFFAIRS

AMOS, JOHN WILLIAM, II (1970) . . . . Associate Professor
    Ph.D., University of California at Berkeley (1972).
BLANDIN, SHERMAN, JR. (1968) . . . . Professor
    Ph.D., University of Santa Clara (1977).
BUCHANAN, PAUL G. (1985) . . . . Assistant Professor
    Ph.D., University of Chicago (1985).
CLOUGH, MICHAEL WILLIAM (1979) . . . . Associate Professor
    Ph.D., University of California at Berkeley (1983).
KARTCHNER, KERRY M. (1984) . . . . Assistant Professor
    M.A., University of Southern California (1983).
LAURANCE, EDWARD JOHN (1972) . . . . Associate Professor
    Ph.D., University of Pennsylvania (1973).
LOONEY, ROBERT EDWARD (1979) . . . . Professor
    Ph.D., University of California at Davis (1969).
MAGNUS, RALPH HARRY (1976) . . . . Associate Professor
    Ph.D., University of California at Berkeley (1971).

OLSEN, EDWARD ALLEN (1980) ....Associate Professor and Chairman
     Ph.D., The American University (1974).
PARKER, PATRICK JOHNSTON (1974) ....Professor
     M.B.A., University of Chicago (1955).
STERNBERG, JOSEPH (1985) ....Professor
     Ph.D., Johns Hopkins University (1955).
STOLFI, RUSSEL HENRY (1966) ....Professor
     Ph.D., Stanford University (1966).
TETI, FRANK MICHAEL (1966)..Associate Professor
     Ph.D., Syracuse University (1966).
TRITTEN, JAMES JOHN, CDR, U.S. Navy (1986) ....Assistant Professor and Acting Chairman
     Ph.D., University of Southern California (1984).
YOST, DAVID SCOTT (1979) ....Associate Professor
     Ph.D., University of Southern California (1976).

DEPARTMENT OF OCEANOGRAPHY

BATTEEN, MARY LOUISE (1984) ....Assistant Professor
     Ph.D., Oregon State University (1984).
BOURKE, ROBERT HATHAWAY (1971) ....Associate Professor
     Ph.D., Oregon State University (1972).
GARWOOD, ROLAND WILLIAM, JR. (1976) ....Associate Professor
     Ph.D., University of Washington (1976).
MOOERS, CHRISTOPHER NORTHRUP KENNARD (1979) ....Professor
     Ph.D., Oregon State University (1969).
NYSTUEN, JEFFREY (1986) ....Assistant Professor
     Ph.D., UCSD (Scripps Institution of Oceanography) (1985).
RAMP, STEVEN R. (1986)..Assistant Professor
     M.S., University of Washington (1976).
SEMTNER, ALBERT J. (1986) ....Professor
     Ph.D., Princeton University (1973).
SMITH, DAVID C., IV (1985) ....Assistant Professor
     Ph.D., Texas A&M University (1980).
THORNTON, EDWARD B. (1969) ....Professor
     Ph.D., University of Florida (1970).
TUCKER, STEVENS PARRINGTON (1968)..Assistant Professor
     Ph.D., Oregon State University (1972).
SCHAEFER, GLEN RICHARD, CPT, NOAA Corps (1983) ....Instructor
     M.S., University of Wisconsin (1974).
VON SCHWIND, JOSEPH JOHN (1967)..Associate Professor
     Ph.D., Texas A&M University.

DEPARTMENT OF OPERATIONS RESEARCH

ANDRUS, ALVIN FRANCIS (1963) ....Associate Professor
     M.A., University of Florida at Gainsville (1958).
BARR, DONALD ROY (1966) ....Professor
     Ph.D., Colorado State University (1965).
BOGER, DAN CALVIN (1979)..Associate Professor
     Ph.D., University of California at Berkeley (1979).
BROWN, GERALD GERARD (1973)..Professor
     Ph.D., University of California at Los Angeles (1974).
EAGLE, JAMES NORFLEET, II (1982) ....Associate Professor
     Ph.D., Stanford University (1975).
ESARY, JAMES DANIEL (1970) ....Professor
     Ph.D., University of California at Berkeley (1957).
FORREST, ROBERT NEAGLE (1964) ....Professor
     Ph.D., University of Oregon (1959).
GAFFORD, JACK BURTON, LTC, U.S. Army (1984)....................................Instructor
     M.S., Naval Postgraduate School (1976).
HUTCHINS, CHARLES W., CDR, U.S. Navy (1982) ....Instructor
     Ph.D., Ohio State University (1970).

JACOBS, PATRICIA ANNE (1978) . . . . Associate Professor
    Ph.D., Northwestern University (1973).
LARSON, HAROLD JOSEPH (1962) . . . . Professor
    Ph.D., Iowa State University (1960).
LEWIS, PETER ADRIAN WALTER (1971) . . . . Professor
    Ph.D., University of London (1964).
LINDSAY, GLENN FRANK (1965) . . . . Associate Professor
    Ph.D., Ohio State University (1966).
McMASTERS, ALAN WAYNE (1965) . . . . Associate Professor
    Ph.D., University of California at Berkeley (1966).
MILCH, PAUL ROBERT (1963) . . . . Professor
    Ph.D., Stanford University (1966).
MITCHELL, MARK, LCDR, U.S. Navy (1985) . . . . Instructor
    M.S., Naval Postgraduate School (1983).
NAKAGAWA, GORDON ROSS, CPT, U.S. Navy (1985) . . . . Instructor
    M.S., Naval Postgraduate School.
NEIL, DOUGLAS ELMER (1972) . . . . Assistant Professor
    Ph.D., North Carolina State University (1971).
PARRY, SAMUEL HOWARD (1972) . . . . Associate Professor
    Ph.D., Ohio State University (1971).
PERRY, FRANK MARCHMAN, LTC, U.S. Army (1983) . . . . Instructor
    M.S., Naval Postgraduate School (1975).
POOCK, GARY KENT (1967) . . . . Professor
    Ph.D., University of California at Berkeley (1967).
PURDUE, PETER (1986) . . . . Professor and Chairman
    Ph.D., Purdue University (1972).
READ, ROBERT RICHARD (1961) . . . . Professor
    Ph.D., University of California at Berkeley (1957).
RICHARDS, FRANCIS RUSSELL (1970) . . . . Associate Professor
    Ph.D., Clemson University (1971).
ROCKOWER, EDWARD B. (1986) . . . . Associate Professor
    Ph.D., Brandeis University (1971).
RONEN, DAVID (1986) . . . . Associate Professor
    Ph.D., Ohio State University (1980).
ROSENTHAL, RICHARD EDWIN (1985) . . . . Associate Professor
    Ph.D., Georgia Institute of Technology (1975).
SHUBERT, BRUNO OTTO (1969) . . . . Associate Professor
    Ph.D., Stanford University (1968).
SHUDDE, REX HAWKINS (1962) . . . . Associate Professor
    Ph.D., University of California at Berkeley (1956).
SOVEREIGN, MICHAEL GRAHAM (1970) . . . . Professor
    Ph.D., Purdue University (1965).
STEWART, JOSEPH STANLEY, II, CDR, U.S. Navy (1984) . . . . Instructor
    M.S., Naval Postgraduate School (1973).
SULLIVAN, TIMOTHY JOHN, CDR, U.S. Navy (1984) . . . . Instructor
    M.S., Naval Postgraduate School (1973).
TAYLOR, JAMES GROVER (1968) . . . . Professor
    Ph.D., Stanford University (1966).
WASHBURN, ALAN ROBERT (1970) . . . . Professor
    Ph.D., Carnegie Institute of Technology (1965).
WOOD, ROGER KEVIN (1982) . . . . Assistant Professor
    Ph.D., University of California at Berkeley (1982).
WOODS, WALTER MAX (1962) . . . . Professor
    Ph.D., Stanford University (1961).

DEPARTMENT OF PHYSICS

ARMSTEAD, ROBERT LOUIS (1964) . . . . Associate Professor
    Ph.D., University of California at Berkeley (1964).
ATCHLEY, ANTHONY A. (1985) . . . . Associate Professor
    Ph.D., University of Mississippi (1985).

BUSKIRK, FRED RAMON (1960) . . . . Professor
    Ph.D., Case Institute of Technology (1958).
COOPER, ALFRED WILLIAM MADISON (1957) . . . . Professor
    Ph.D., The Queen's University of Belfast (1961).
COPPENS, ALAN BERCHARD (1964) . . . . Associate Professor
    Ph.D., Cornell University (1965).
DAHL, HARVEY ARNOLD (1964) . . . . Assistant Professor
    Ph.D., Stanford University (1963).
GARRETT, STEVEN LURIE (1982) . . . . Assistant Professor
    University of California at Los Angeles (1977).
HARRISON, DON EDWARD, JR. (1961) . . . . Professor
    Ph.D., Yale University (1953).
HEINZ, OTTO (1962) . . . . Professor
    University of California at Berkeley (1954).
INGBER, LESTER (1986) . . . . Professor
    Ph.D., University of California at San Diego (1966).
MILNE, EDMUND ALEXANDER (1954) . . . . Associate Professor
    Ph.D., California Institute of Technology (1953).
NEIGHBOURS, JOHN ROBERT (1959) . . . . Professor
    Case Institute of Technology (1953).
NETZORG, GREGORY BERTMAN (1984) . . . . Instructor
    M.S., Naval Postgraduate School (1977).
SANDERS, JAMES VINCENT (1961) . . . . Associate Professor
    Ph.D., Cornell University (1961).
SCHACHER, GORDON EVERETT (1964) . . . . Professor
    Ph.D., Rutgers (1961).
SCHWIRZKE, FRED RICHARD (1967) . . . . Professor
    Ph.D., University of Karlsruhe (1959).
WALTERS, DONALD LEE (1983) . . . . Associate Professor
    Ph.D., Kansas State University (1971).
WILSON, OSCAR BRYAN, JR. (1957) . . . . Professor
    Ph.D., University of California at Los Angeles (1951).
WOEHLER, KARLHEINZ EDGAR (1962) . . . . Professor
    Ph.D., University of Munich (1962).
ZELENY, WILLIAM BARDWELL (1962) . . . . Associate Professor
    Ph.D., Syracuse University (1960).
