(3) General remarks about control measures, medicine, reporting and problems.

Control measures against dgestive epidemics.

(a) Thoroughgoing extermination of fly.

(b) National campaign for prevention of dysentery.

(c) Clean sweeping of the latent sources of contagion through encouragement of notice of disease and jerm-searching.

e. Specific disease (seasonal) prevention campaign.

(1) Started this month.

Disease : Tuberculosis (prevention week)

Area of application: Throughout the prefecture.

Campaign appraised as adequate (Yes / no) :

The street medical examination contributed to the understanding of the general public for the prevention of tuberculosis.

Disease : Leprosy (prevention day)

Area of application : Throughout the prefecture.

Campaign appraised as adequate (Yen / No) :

The people of the prefecture acquired the knowledge that the lepra was no incurable disease.

(2) Scheduled to begin next month.

Disease : Toothache (dental hygiene week)

Area : Throughout the prefecture

Are plans adequate ? (Yen / No)

(a) Through health center and dentist association following plans will be carried out.

1. Dental hygiene will be propagated by means of radio, newspaper and magazine.

2. Spread of dental hygiene will be made at stations or centers of the cities.

3. Movable speakers will be utilized.

4. Entertainments such as lecture, symposium, papr show and magic lantern will be held.

5. Dental hygiene consultation office will be established

f. Health center.

(1) Opened this month : None.

(2) Number of health centers now in operation :

Prefecture : Miyazaki.

No. by class : A. 1. C 3. NS 5.

Number of serving 5
More than 100,000

(3) General remarks about the health center program.

(a) Guidance was given to the adjustment of the building of health center.

(b) Advice was given in order to increase business efficiency about the arrangement of rooms in health center.

(1) Nursing schools.

(a) Schools receiving new classification during month.

Higher Nursing School attached to (National Miyakonojo Hospital) A class
Kawato, Miyakonojo city, Miyazaki Prefecture.

Prefectural Miyazaki Nurse School. B class.
Takachihodori 3-chome, Miyazaki city.

(2) "In-service" training.

Reported already in the A column of monthly report on Prefectural Health Department Nursing Division Activities. for May.

(3) Health center nursing.

Reported already in the C column of monthly report on Prefectural Health Department Nursing Division Activities. for May.

(4) Hospital nursing.

Reported already in the B column of monthly report on Prefectural Health Department Nursing Division Activities for May.

(5) Other : None.

p. Public Health information and educational programs.

(1) Information directed at the general public. Resume of media, items and estimated results.

(a) During the tuberculosis prevention week, utmost efforts have been taken to arouse public interest for the prevention against tuberculosis and early treatment, by making the most of every available means of propagation such as radio, newspaper, pamphlet, etc.

At the same time, the street medical examination for its prevention has been taken by the health centres in this prefecture.

In consequence, this movement is believed to has done good work in improving people's health.

(b) Further other available means have been taken under the Public information activities program of the Welfare Ministry.

June 12, 1950.

To : Chief of Public Health Section, Kyushu Civil Affairs Region.

From : Chief of Public Health Department, Miyazaki Prefecture.

SUBJECT : MONTHLY REPORT ON HEALTH AFFAIRS.

The report regarding the subject matter shall be made as follows :

a. General administration.

(1) Resume of civil affairs trips.

Miss Osterdahl of public health section of the Kyushu Civil Affairs Region inspected the condition of operation of the Nichinan Health Centeron May 17 and that of the Kobayashi Health Center on May 18 accompanied by Nakashima interpreter of the prefecture and Nakahara Health Nurse of the medical affairs section of the prefecture and gave various instructions.

(2) General administration of public health activities, plans, programs and progress measurement.

None.

b. Preventive medicine.

(1) Status of immunization under the national immunization Law (use census data, population factors)

Disease	Date, season program begun	No. imm. this period	Cumulative number

o. Nursing affairs.

(1) Nursing schools.

(a) Schools receiving new classification during month.

Higher Nursing School attached to National Miyakonojo Hospital A class
Kawato, Miyakonojo city, Miyazaki Prefecture.

Prefectural Miyazaki Nurse School. B class.
Takachihodori 3-chome, Miyazaki city.

(2) "In-service" training.

Reported already in the A column of monthly report on Prefectural Health Department Nursing Division Activities for May.

(3) Health center nursing.

Reported already in the C column of monthly report on Prefectural Health Department Nursing Division Activities for May.

(4) Hospital nursing.

Reported already in the B column of monthly report on Prefectural Health Department Nursing Division Activities for May.

(5) Other : None.

p. Public Health information and educational programs.

(1) Information directed at the general public. Resume of media, items and estimated results.

(a) During the tuberculosis prevention week, utmost efforts have been taken to arouse public interest for the prevention against tuberculosis and early treatment, by making the most of every available means of propagation such as radio, newspaper, pamphlet, etc.

At the same time, the street medical examination for its prevention has been taken by the health centres in this prefecture.

In consequence, this movement is believed to has done good work in improving people's health.

(b) Further other available means have been taken under the Public information activities program of the Welfare Ministry.

MIYAZAKI PREFECTURE

April 4, 1950

To : Mr. RICHARD F. BROWN,
Chief, Public Health Section, KCAR.

From : Chief of Public Health Dept., Miyazaki Prefecture.

SUBJECT : MONTHLY REPORT ON PUBLIC HEALTH ACTIVITIES FOR MARCH.

I submit to your inspection the monthly report on the above subject for March as follows.

1. Pertaining to Prefectural Office Nursing Division.

A. Planning, starting, or completion of refresher courses sponsored by Welfare Ministry, Prefectural Office, or Nurse-Midwife Association.

1) Refresher courses for nurses are to be given in four areas of the prefecture, Nichinan, Nobecka, Miyazaki, and Miyakonojo. Nurse Hide Ino is to be sent out for the purpose of giving guidance on each occasion; only the exact date remains undecided as yet.

2) Refresher courses for public health nurses are sectionally to be given in each health center; in April they are to be given at Nichinan Health Center and Fukushima Health Center, with some nursing experts sent out from the Nursing Division to give guidance in the matter.

3) Tokio Nakahara, a public health nurse to the Nursing Staff of the Medical Affairs Section of the Public Health Department of the prefecture, took out a diploma on March 25 in proof of her completion of the nursing course of the Public Health School.

4) Hide Ino, a nurse in the service of the Medical Affairs Section of the Public Health Department of the prefecture completed the course of lectures given to nurses to the Nursing Staff on March 6.

5) A five-month nurse training course was started on April 1 with the attendance of 34 students.

6) Hatsue Kitamura, matron to the Miyazaki Health Center is now in school with the Tokyo Metropolitan Public Health School with the view of completing the Course of Nursing in a period of 4 months beginning on April 3.

B. Special or unusual nursing program by the different health center nursing staffs (including sick-nurses and midwives)

Nothing particular to mention.

C. Difficulties or changes in the various health center nursing staffs.

Nothing worth mention.

D. Dates and names of Health Centers Visited by Kencho Nurse or nurses for supervisory visits.

Miyazaki Health Center was visited for the purpose specified above on March 17.

2. Matters of interest and importance in nursing schools.

The teaching schedule for the nurse training school belonging to Miyazaki Prefectural Hospital is to be shown in sheets hereto annexed.

3. Nurse-Midwife Association Activities.

A. Ken Association meetings and unusual or special activities or decisions of interest.

None.

B. Sub. branch or district association matters of interest.

Matters regarding Midwives' Assodation.

It was decided that a study meeting be held for midwives under the sponsorship of Fukushima Health Center at the Health Center building on every Wednesday from 1.00 p.m. to 5. The attendants numbered 33.

Subjects Prescribed:

(1) Epideminology; bacteriological immunology; general principles of nursing:

by Chief of the Center.

(2) Pharmacy; nutrition; physiology; anatomy:

by Dr. Uchida.

(3) School hygienics; maternity hygienics ; dental hygienics:

by Dr. Nagayoshi.

(4) First aid treatment; laws and regulations regarding medical matters.

by Dr. Shimada.

A study meeting for public health nurses under the jurisdiction of Fukushima Health Center:

Date : Every Wednesday, from 1.00 p.m. to 5.

Place: Fukushima Health Center.

Attendance : 23.

Subjects for lecture :

(1) Epideminology; bacterio-immunology; general principles of nursing :
by Chief of the Center.

(2) Pharmacy; nutrition; anatomical physiology:
by Dr. Uchida.

(3) School Hygienics; maternity hygienics; dental hygienics:
by Dr. Nagayoshi.

(4) First aid treatment; laws and regulations regarding medical matters:
by Dr. Shimada.

A study meeting for public health nurses under the charge of Fukushima Health Center.

Date : Every Wednesday from 1.00 p.m. to 5 p.m.

Place: Fukushima Health Center.

Attendance: 11.

Subjects prescribed:

(1) Epideminology; bacterio-immunology; general principles of nursing:
by Chief of the Center.

(2) Pharmacy; nutrition; anatomical physiology:
by Dr. Uchida.

(3). School hygienics; maternity hygienics; dental hygienics:
by Dr. Nagayoshi.

(4) First aid treatment; laws and regulations regarding medical matters:
by Dr. Shimada.

A meeting of members of the public health nurses' Kyoka (Apricot-Blossom) Association in Miyazaki Health Center Area.

Place : Miyazaki Health Center.

Date : March 17, 1950.

Attendance: 31.

Subjects of Lecture:

(1) Report on the decisions by the Japo-American Health Conference in Osaka : by Chief of the Center.

(2) Contraception : by Dr. Satake.

MONTHLY CIVIL AFFAIRS ACTIVITIES REPORT
Period Ending 31 July 1949

ANNEX B - 1

PUBLIC HEALTH ACTIVITIES

1. Public Health Administration

a. Plans for the construction of two new Health Centers at Kobayashi and Fukushima have been completed. Construction will begin in August 1949. The size of the Health Centers will be 150 tsubo each.

2. Veterinary Affairs

a. The DDT program for the spraying of dairy barns and animal stalls was completed on 18 July 1949. A total of 3,689 gallons of DDT was used to spray 61,681 buildings.

3. Nursing Affairs

a. Miss Hideko Yoshida from the Miyakonojo National Hospital has been selected to attend the Class A Nursing School in Tokyo in September.

4. Sanitation

a. Miyazaki City held a Sanitation Week beginning 11 July. All houses were inspected by City Sanitary Inspectors.

b. Miyazaki City has employed an additional thirty-two sanitary teams for the summer months.

c. A prefecture wide Sanitation Week will be held from 10th August.

MONTHLY MILITARY GOVERNMENT ACTIVITIES REPORT
Period Ending 30 June 1949

ANNEX B-1

PUBLIC HEALTH ACTIVITIES

1. Public Health Administration

a. Continued inspections of the facilities at the Kawaminami National Sanitorium have failed to reveal any noticable improvement. Administration is poor, the director apparently is not interested in prevailing conditions of poor medical care, sanitation, nursing service and nutrition. Visits by the Regional National Hospital inspector have been of no avail.

2. Veterinary Affairs

a. The DDT spraying program was approximately 85% completed. It was planned to spray 10,000 sheds by 30 June. Some resistance to the program by the farmers was noted, and many had to pay as much as ¥ 650, which seemed excessive.

3. Preventive Medicine

a. 20,000 cc of Typhoid vaccine have been requested for areas affected by the recent flood. 11,000 immunizations were completed. All areas were immediately warned to boil their water and supplies of chlorcalc were distributed by each health center.

b. Streptomycine therapy was started on seven (7) selected tuberculous patients. Five of these have tuberculosis of the larynx. The length of treatment is too short to evaluate the effectiveness as yet.

4. Sanitation

a. Mr. Alexander, KSMG Region Sanitary Engineer visited the prefecture and conferred with officials in charge of sanitary engineering, environmental sanitation, and the livestock spraying program.

MONTHLY MILITARY GOVERNMENT ACTIVITIES REPORT
Period Ending 31 May 1949

ANNEX B-1

PUBLIC HEALTH ACTIVITIES

1. Public Health Administration

a. Plans have been made to initiate a voluntary contribution campaign to raise ¥ 1,400,000 for the purpose of buying Promin to treat 100 selected lepers from this prefecture.

b. Lack of physician personnel remains the primary administration problem. At present the Department Chief and Public Health Section Chief are the only physicians in the prefectural department. Additional physician personnel to administer and supervise the various programs from this level are necessary.

2. Dental Affairs

a. Public interest in the forth-coming "Dental Hygiene Week" was evidenced by reports from health centers that over 20,000 persons had presented themselves for dental examinations. Studies on topical fluride applications are being started at the model health center.

3. Veterinary Affairs

a. The DDT spraying of dairy barns and animal stalls is progressing satisfactorily.

b. Dr. Luke, KSMG Region Veterinarian visited the prefecture and gave advice on animal disease control, food snitation, and administrative activities at the Miyazaki Veterinary College.

4. Preventive Medicine

a. Dr. Nieda, SCAP, V.D. control chief, visited the prefecture and extended valuable advice concerning diagnosis, treatment, contact tracing and case holding. He was impressed by the observation that there is no licensed prostitution in this prefecture.

RESTRICTED

5. Supply

a. 600 grams of streptomycine were received by the prefectural authorities.

6. Sanitation

a. Thirty-three (33) extra sanitary teams were temporarily employed this month for the clean up program. Thirty-one (31) permanent sanitary inspectors have been selected.

MONTHLY MILITARY GOVERNMENT ACTIVITIES REPORT
Period Ending 30 April 1949

ANNEX B-1

PUBLIC HEALTH ACTIVITIES

1. Public Health Administration

a. In order to conserve funds and to utilize personnel more effeciently, the Nobeoka branch of the prefectural hospital will be moved to a site adjoining the Nobeoka Charity Hospital (now under the control of the Welfare Department) and the hospitals consolidated. The health center will move into the vacated branch prefecture hospital building. The change will necessitate a minimal amount of new construction and will provide increased health center space and 20-30 additional hospital beds for T.B. patients.

b. Due to changes in budgetary allowances, the plan to build three new class "B" health centers was discontinued. However, funds are available to construct three class "C" structures. Plans for the new laboratory were not affected by budget decreases.

2. Nursing Affairs

a. The names of six (6) new applicants for the Nursing School Grading Committee have been submitted.

b. Information on Democratic Organizations was distributed to the Nurse Association films, entitled "How to conduct a Meeting", "A Woman of Science", and "Home Care of T.B.", will be shown to the association members before their annual meeting.

3. Veterinary Affairs

a. One case of suspected Equine Encephalomyelitis reported this month, proved to be meningitis resulting from multiple purulent hepatic abscesses.

b. Twenty (20) newly constructed animal cages were distributed, two to each health center.

RESTRICTED

4. Preventive Medicine

a. Increased emphasis on tuberculosis control, especially in health centers, has resulted in finding more than twice the number of T.B. cases compared with a similiar period (1 Jan - 30 April) of last year. Increased physician personnel and improved equipment in health centers permitting intensified mass examinations, accounted for the substantial increase. Home nursing visits to T.B. patients have increased tremendously. Hospitalization of T.B. patients has not shown any remarkable increase.

b. Eight-hundred (800) cc of typhoid vaccine and 1200 doses of small-pox vaccine are available for emergency use.

5. Sanitation

The greatest single inducement to "clean up" and aid in environmental sanitation was the announcement that the emperor will visit Miyazaki Prefecture during June. Evidence of home and yard cleaning is found even in the most remote areas. Thousands of persons are engaged in ditch clearing and weed cutting (rice paddies must be prepared properly for planting too). Although the present interest in environmental sanitation is not due to any sudden realization of the importance of Public Health Matters and home sanitation, the Public Health authorities are using the occasion to marked advantage and Miyazaki Prefecture will be a much "cleaner" place - at least until the middle of June.

MIYAZAKI MILITARY GOVERNMENT TEAM
APO 24, UNIT 2

MONTHLY MILITARY GOVERNMENT ACTIVITIES REPORT
Period Ending 28 February 1949

ANNEX B-1

PUBLIC HEALTH ACTIVITIES

1. Public Health Administration

a. Total Expenditures for the 1948-49 fiscal year amounted to ¥70,000,000. A budget estimate of ¥90,000,000 was assured for the 1949-50 fiscal year which amounts to five per cent (5%) of the total prefectural budget. Additional funds, obtained through supplementary budgets, will be necessary to construct three new health centers and a prefectural laboratory this year.

b. A new physician-director has been appointed at the Kawaminami National Hospital. Improvement in medical and nursing care is promised. The central kitchen was improved and patients were receiving the proper supplementary rations.

c. A survey of the number of available beds for tuberculosis patients in all types of hospitals revealed the following:

National Hospitals	450 beds
Communicable disease Hospitals	362 beds
Private Hospitals	70 beds
Prefectural Hospitals	40 beds
TOTAL	922 beds

2. Veterinary Affairs

a. The Rabies immunization proceeded slowly and is 85% completed. Special dog kennels were being constructed for each health center. The cages were not constructed in the health center buildings.

b. The Miyazaki Veterinarian College has procured a new pathologist and bacteriologist for the laboratory. Plans for improving the laboratory and library were proceeding slowly, but improvement was noted.

3. Nursing Affairs

a. Miss Kinoshita from the Kobayashi Health Center has been selected to attend the Public Health Nurses instructors course in Tokyo.

b. Investigation of the dispatch nurses revealed that their organization was of the labor boss type. The Prefecture Labor Department has thus far refused to recognize their proposed union and has suggested that they be kept under the supervision of the Public Employment Security Office.

4. Preventure Medicine

a. Spraying with five per cent (5%) residual DDT was started on the sixty-six (66) homes where suspected Japanese B Encephalitis occurred last summer.

b. Dr. Wheeler and Mr. Turner, SCAP Preventive Medicine Section visited this prefecture and extended valuable information to the Japanese officials concerning their health education and sanitation projects. They were favorably impressed by the work being done in the Model Health Center.

5. Sanitation

Plans for a prefecture-wide spring clean-up campaign were completed. Publicity for the driver was started and town and village sanitation chiefs were informed of their part in the program. Numerous flies and insects are now in evidence, and the campaign is to start at the earliest practical date.

HEADQUARTERS
MIYAZAKI MILITARY GOVERNMENT TEAM
APO 24, UNIT 2

MONTHLY MILITARY GOVERNMENT ACTIVITIES REPORT
Period Ending 31 January 1949

ANNEX B-1

PUBLIC HEALTH ACTIVITIES

1. Public Health Administration

a. Increases in all phases of activity in the model health center were noted. An increase in physician personnel allowed the chief to better coordinate functions and activities among the various sections. Patient load as well as administration functions increased.

b. The proposed ¥130,000,000 budget estimate was cut to ¥90,000,000. The Public Health Department director expressed doubts that 5% of the total budget would be available.

c. Utilizing trained personnel from national sanitoria and three health centers, each health center will devote at least one clinic per week to pneumothorax therapy until one physician at each health center can be adequately trained for this procedure.

2. Veterinary Affairs

a. Of the thirty (30) fish cake factories ordered to be closed for sanitary improvements, twenty-one (21) have met the minimum requirements.

b. Six (6) cases of swine erysipelas were reported during January.

c. The Rabies immunization program was 80% completed. Intracutaneous tuberculin testing of cattle was 50% completed. One per cent (1%) of the total tested were found to have a positive reaction.

3. Nursing Affairs

Home visits by public health nurses showed a decided increase over previous months. Decreased emphasis on clinic duties and record keeping allowed the nurses to get out of the health centers more frequently.

4. Dental Affairs

a. One dental technician was brought to trial for practicing

dentistry without a license. As usual, the imposed penalty was too slight (¥500 fine) to be of any value in controlling this practice. Procurators and judges showed marked uninterest in cases of this type.

5. Preventive Medicine

a. Typhus control procedures were relatively adequate. Emphasis was placed on control of lice and fleas in institutions and over crowded areas, rather than on extensive "rat killing" campaigns.

b. The incidence of diphtheria continued to be high. Forty (40) per cent of the reported cases had been previously immunized. Standard treatment with 10,000 units of antitoxin was inadequate in most cases, as no attention was paid to the stage or severity of the disease in deciding the amount of antitoxin to be used. Most of the patients came from rural areas and were not diagnosed until late in the disease.

Status of Immunizations:

Diphtheria	60%
Typhoid	81%
Small-pox	86%
Typhus	71%
B C G	68%

6. Sanitation

The Region Sanitary Engineer visited the team and discussed the utilization of sanitary and civil engineering personnel, as well as the work of sanitary teams and methods of louse control with Japanese Officials.

Inspectors from the 8th Army Engineers inspected the Miyazaki water supply system. The party was favorably impressed by the cursory inspection of the facilities.
