The Molitical Economist.

THE HOUSE OF LORDS AND THE PAPER DUTY. THE CONSERVATIVE ORJECTIONS TO THE BUDGET AND THE REAL ONES.

Ir is not difficult to anticipate the sort of arguments which Lerd Derby will use on Monday next. He intends to oppose saly the repeal of the paper duty, but he disapproves of the Badget as a whole. Lesser organs of Conservative opinion have long assumed the same logical position, and familiarised us with their arguments.

First. It is said that the Budget is a Democratic Budget; that it transfers from the poor burdens which they ought to bear; that it is a scheme which may fitly usher in a legisbear; that it is a scheme which may have the present sum-elected by a lower and worse class than the present electers; that it is a Budget which is unduly oppressive to numbers. If this objections and unduly favourable to numbers. property and unduly favourable to numbers. we should not been put forward by persons entitled to attention, we should not have believed that it was possible to make it. Hardly any of the taxes which Mr Gladstone deals with press on the poor. He has repealed the remnant of the protective duties; he has simplified our tariff; he has arranged the financial items of a treaty with France. But neither French wines, nor the articles subject to the petty duties, nor those subject to the protective duties, press on the lower orders. No one has ever contended that the poor pay the paper duty. It is indeed said that the process of substituting direct for indirect taxation is one which may be used to place unendurable burdens on capital, and that it is this process which Mr Gladstone has used. But Mr Gladstone did not invent that process. It is an old one, as old as finance itself; it has been used many times in this country, and never more than of late years. Whether the use of it be good or had in any times in this country. bad in any case, must depend on the facts of that case. We need not abstain on principle from all resort to it, because in hypothetical circumstances it may be misemployed.

Secondly. It is alleged that Mr Gladstone has sacrificed

large permanent sources of revenue. But this objection is true only of a portion of that part of the Budget which is dependent on the French treaty. The protective duties, the permanent sources of revenue, have been living for years ander a sort of sentence of death. Every financier has wished to abolish them, has hoped to abolish them, has only

permitted them to remain because there were other claims on

his fund which he thought more urgent for the moment.

When we examine the permanent Customs duties affected by the French treaty, we shall find the wine duties to be the only ones which have not been condemned as protective or as too minute to be judicious. And there are many objections to the wine duties: when high, they protect the untaxed imitations and adulterations, and they exclude nearly all the cheaper sorts of light wine; that is, they exclude wine as a beverage, though they admit it as a stimulant. The loss of 830,000l, which is the entire loss to the revenue consequent on the alteration in the wine duties (without reckoning anything for additional consumption), is almost the only sacrifice of uncondemned revenue which Mr Gladstone has made, and this is not a sacrifice of unexceptionable revenue. The real defect of Mr Gladstone's Budget is that to which we have called the attention of our readers many times. It certainly is a concentration of too many excellencies. We shall have is a concentration of too many excellencies. We shall have to pay a heavy price for doing all at once what it would have been easy to do gradually. We may without difficulty explain this.

Taking our financial system as a whole, in what we regard now as its permanent state, it contains two growing and augmenting elements. First. The indirect taxes on articles of general consumption, for the most part either luxuries, as tea and sugar, which are now by long use semi-necessaries, or taxes on beer, spirits, and other stimulants, which it is quite certain that people like, though it is not quite certain that they ought to do so. These indirect taxes grow year by year with the prosperity of the country. We have quoted the figures which prove it over and over again; and even without statistical proof every one would believe that imposts upon ordinary consumption must become greater and greater, as growing wealth enables us to consume more and more. Secondly. We may now, after eighteen years of experience, reckon a moderate income tax as a permanent part of our financial system. And this, too, grows and grows. As the capital of the country augments, its income augments, and the x on those incomes likewise.

Two courses, therefore, are open to a financier. There are certain objectionable elements in our financial system, and there are also certain growing and augmenting elements. He may either wait till the natural and inevitable increase of the elastic taxes enables him to get rid of the bad taxes, or he may increase some decently fair tax that he can rely on, and sweep away at once what every one wishes to have swept The latter is the course which Mr Gladstone has pted. As we all know, he has increased the income tax, and swept away endless duties which no one defends.

We are sure that to a great extent he was right. We wish to have a good financial system soon; we wish to accelerate the process by which the defects in our fiscal system are to be got rid of. We should be ready reasonably and rately to augment direct taxation, to remove what hardly any one wishes to retain; but we have always ventured to question whether Mr Gladstone was prudent in stretching that principle so far as he has stretched it. We fear the strain on the income tax. We hope our apprehensions are excessive or are groundless. But we fear that the country will not be able to endure the pressure which is to be put upon it,—at least will endure it impatiently and unwillingly. In many states of our foreign relations we should be apprehensive lest we might reduce too low the military and naval defences of the nation, and so secure immediate ease at the price bereafter of heavy cost. If we were living in the quiet time of Louis Philippe we might think this risk a great one. But we do not think so now. We have no confidence in Napoleon III. We believe his intriguing and restless policy will always keep the English nation awake; he has committed the greatest error a man in his situation could commit; rightly or wrongly, Europe always believes he is plotting something; and we, at least, shall never be sure that what he meditates would not be a cause of collision between him and us. We have many great duties; many and varied interests to protect. We shall never be at ease while we have near us a Bonaparte with vague, various, and suppressed designs. We have no fear that any reasonable expenditure for the purpose of national defence will be refused. On the contrary, we believe it will be popular.

But we fear that, under various political contingencies, we might be led to resort to financial expedients of which we do not think now. We have no doubt the expenditure will be voted, but have great doubts how it will be met. When parties are nearly divided, Governments are weak; and when Governments are weak, Chancellors of the Exchequer are frail. Suppose one of them, in search of stray votes, were to propose a diminution of the income tax, and on some excuse, more or less plausible, were also to propose a loan. We are not sure that the continued pressure of a high income tax would not induce the nation to assent to it. Borrowing is an easy process, and decent excuses might be found. We should hear a good deal of the "peculiar circumstances" of the time and the improvidence of Mr Gladstone.

It is certain that Mr Gladstone felt these reasons, because he did not impose the full amount of the necessary income tax. He made up 910,000*l* by miscellaneous taxes on trade which no one desired, which have been changed in shape many times since the 10th of February, which may press more heavily on trade than some of the Customs duties which are struck off, which will inevitably cause much irritation and annoyance in business, which we fear must be called *litigious* taxes.

On these grounds, we have always wished that Mr Gladstone had reserved some point of his great scheme till another opportunity,—till the natural increase of the elastic revenue had given him additional resources. It would have been easiest to omit the repeal of the paper duty. It is the part of the Budget most separable from the rest; it has no connection with any other part; it rests on grounds which are entirely peculiar to itself. We admit everything which can be said against the tax; we only fear that the country may not like to pay the needful income tax. If it will, we shall rejoice in the repeal, but we question it.

We now see the precise nature of the question which the House of Lords will have on Monday to decide. Some of our contemporaries have denied the competence of the Peers to reject the Bill for the Repeal of the Paper Duty. We do not go that length. We are ready to admit that rare and exceptional power exists in our constitution which might justify them in rejecting it. But we think they should consider well before they do so. We last week ex-plained that much business had been transacted on the faith of the proposed repeal; that nobody will now believe in the permanence of the tax; that it is unfair to keep an important manufacture for years in a provisional state; that it is scarcely worth while to exercise the rarest of constitutional functions to preserve a condemned source of revenue. These evils The fear of an augmented income tax is a fear only. The danger is but hypothetical, and may average realised. We hope, therefore, that the House of Lords will realised. have the moderation to abstain from exerting the constitutional reserve of power which is vested in them for extreme On account of its nature, such a power should not be used except in crises of the most evident danger, and we submit that this is not one.

ENGLAND AND SICILY.

The common law of England, we learn from the debate of Thursday night, is directly violated by the attempt to raise subscriptions in aid of Garibaldi's enterprise in Sicily, though

it does not appear whether 'ny or what penalty is incurred by those who thus violate the law. Again, we learn that both the statute law and the moral sentiment of this country, though not of course the moral sentiment of Ireland, are offended by the attempt to raise Irish troops for the Papal army under Lamoricière, which is practically a menace against the extended kingdom of Sardinia. And, finally, we have learned distinctly enough that no law could practically be enforced in this country which would have the effect of punishing the subscribers to the Sicilian fund.

We confess our hearty delight that this is sowhich would be almost shared by Mr Whiteside and his Tory friends themselves, if they were in the least aware of the awful horrors which have driven the Sicilian people to insurrection, and have united them as one man in support of their noble deliverer. We confess our cordial concurrence in Lord John Russell's assertion, that "there are cases in which "it is not enough to say, 'Here is a man in rebellion,—" Garibaldi is a man who is fighting against his Sovereign " whom he ought to support.' It is not enough to say " these things in a glib and fluent manner. "tions, whether we take them as questions of law, of morals, or of politics, require a good deal of examination before you can affix either moral blame or moral praise to those who engage in such undertakings." As Lord John Russell truly observes, the efforts made in England to aid the Greek revolution were as illegal as these now made to aid the Sicilian revolution; and yet they were not, and could not have been, suppressed by Government prosecutions. But Lord John Russell did not add what we will venture to add for him, that the insurrection of Greece was not excited and embittered by half the horrors which have now roused the Sicilian people against their worse than barbarous Government. There is in the public sentiment of every free nation a national court of equity which necessarily overrides and modifies the administration of the common law. We affirm, unhesitatingly, that it is and ought to be quite impossible in this country to carry out the law by punishing subscribers to the Sicilian fund. And we believe that many who spoke on the side of prosecution on Thursday night would be the first to indemnify the victims of any such prosecution when they came to know the horrible atrocities which justify the Sicilians in throwing off a Government that is the representative—not of order, but of the most hideous cruelty and the foulest licence. We will state reasons, which we, at least, esteem ample, -why the law could not be enforced in this case against the donors of aid to the Sicilians, without real disgrace to the English Government that should thus attempt to enforce it.

1. The law cannot properly be enforced against men who the whole nation feels to be praiseworthy rather than culpable, for the law is thereby brought into dishonour. This is the case with all who now venture to aid the Sicilians. The Sicilians are now doing, we do not say merely what they ought to do, but what no nation with any lingering embers of self-respect could help doing in their place. any one who doubts this read the pamphlet which has been recently published in Paris, from what we understand to be thoroughly authentic sources, La torture en Sicile par M. La Varenne, and then let him ask himself if it is not one of the first duties of civilised men to assist, egally or illegally, those who are now bent on shaking off so wicked an ession. The pamphlet to which we have referred reveals something more than the cruelty to which we have at last got accustomed in all the acts of the Neapolitan Government; it reveals a diabolic system of torture which not even the worst stories reported of our sepoy-mutineers can rival. If it be true, as there stated on good authority, that a woman has been exposed naked in the open streets for three days, and violated by numbers of the police until she should reveal her husband's hiding place,—if this and a host of similar stories be true, as there is every reason to believe they are, we assert that insurrection becomes the highest duty of a people so treated, and that to aid that insurrection becomes also an act which, however illegal, no healthy national conscience could permit to be punished as a crime. The Sicilian Government has been turned into an instrument not merely of oppression, but of diabolic guilt. And to prosecute men for breaking the letter of law, who are proving

d

diation of such an anarchy,—would be an officious insult to the sentiment of the nation.

2. The English nation is under special obligations to support the cause of a constitution in Sicily. It was entirely through English efforts that the constitution of 1812 was established by Lord William Bentinck, and the Sicilian people certainly believed that that constitution had the guarantee of the English Government. Again, in the revolution of 1848 it was at the suggestion of England that the Duke of Genoa was chosen King by the Sicilians, and an English brig conveyed the envoy who took the offer of the crown and a draft of the constitution to Genoa. The Sicilian Ministers were then recognised by both France and England, and it was in great measure due to the complete reliance of the Sicilians on a foreign protection which we had certainly given them reason to expect, that that revolution failed. We do not for a moment say that our interference in these cases was wise or justifiable; but we do say that we thereby incurred a certain moral obligation to the Sicilians, which would render it singularly unbecoming for our Government to punish any private Englishmen whose sympathy with the Sicilians should induce them to aid the present constitutional party. On the other hand, all the relations between the Government of Naples and England are of a kind to cancel any claim for a strict enforcement of the laws of neutrality which it might have upon us. The late King and the present King have alike laughed at our remonstrances, and set aside all the advice we have given. The atrocities in Naples and Sicily are the deliberate replies of the Government to our representations of the necessity of constitutional reforms, and we cannot now regret that it was so. Such an answer to such protests sets our Government entirely free from any moral claim which might otherwise have been plausibly urged on them to forbid English demonstrations in avour of the insurgents.

3. The English nation takes a very deep interest in se consolidation of the North Italian kingdom, and it is all but certain that were this Sicilian movement crushed, the troops of Naples and Rome would be united against while it is likely enough that Austria would lend a helping hand. In such an emergency Piedmont would be hard pressed. She could not, after the annexation of hard pressed. Tuscany, rely upon the aid of France; and for her to con-quer the Neapolitan force without assistance would be a task quer the Neapolitan force without assistance would be a task of no little difficulty. Naples has now 150,000 excellent troops in the field, and a very formidable park of artillery. This army, in conjunction with Lamoricière's force, might well succeed in wrenching the Romagna again from Piedmont, and possibly in completely breaking up the newly-organised kingdom. The diversion in Sicily is the only protection at present against this danger; and, therefore, it is a most vital question for Piedmont whether or not that insurrection shall be crushed. We do not, of course, urge this as a reason why England should interfere on behalf of Sicily, which we do not at all desire. Unless Italy can regain her own freedom as against purely Italian foes,—there is probably little chance of her keeping it. But we do urge it as a fresh reason against any impolitic prosecution of those Englishmen or Italians who choose to contribute their aid to the movement. The advisability or unadvisability of such a prosecution must depend in some measure on the probability that

by the nation at large. Such prosecutions are in the highest degree impolitic; and any fresh reason, therefore, which justly excites English sympathy in behalf of Garibaldi's enterprise is a fresh reason against enforcing the law.

To sum up these reasons, which we believe to be overwhelming, against any Government prosecutions:—we deprecate any such prosecutions, because all the sympathies of the English people are with the Sicilian revolution, and with the North Italian kingdom, which, in a great measure, depends on the success of the Sicilian revolution; and because it is in the highest degree impolitic to bring the law into dishonour by pressing its letter where the national conscience is set against its administration. We deprecate them, because we are morally free from all obligation to the Government of Naples, and morally involved in many real obligations to the constitutional cause in Sicily. And we deprecate them most of all, because it would be a painful and anomalous spectacle to see an English Government officiously

the objects of it would be regarded as martyrs and heroes

prosecuting men who had acted from sheer detestation of the foul and monstrous iniquities of which Sicily has been recently the scene.

THE CLASSIFICATION OF ELECTORAL INTERESTS IN EDINBURGH.

THE return relative to the householders of the City of Edinburgh has several times been referred to in the House of Commons as proving how very small a change the 61 franchise is likely to make in the constitution of the constituencies. If the 6l franchise be granted, it is said, nearly half the householders of Edinburgh will still be excluded, and those who would be added by the present measure will increase by little more than fifty per cent. the number of those who are already entitled to vote. Now we have never professed much alarm as to the immediate working of the Reform Bill. We have always said that the danger did not arise from the revolutionary effects of the actual measure, but from the democratic tendencies which would be formally sanctioned by it; from the admission of the principle that the most numerous class has a right to rule the nation by virtue of its numbers. We do not then care to show that the change to be effected in any particular place would at once throw all the power into the hands of the working classes. If we did care to show it, we should not single out Edinburgh, where the probable effect of the bill will certainly not compare with that which would be produced in many of our northern cities. Let us compare it for a moment with such places as Leeds or Derby, and it will be seen at once that Edinburgh is not at all a fair type for the great towns of England.

| The state of the state of | Registered ele | ctors. 67 a | nd under 10% |
|---------------------------|----------------|--------------|--------------|
| Edinburgh | 8,469 | | 3,947 |
| Leeds | | ************ | 10,343 |
| Derhy | | | 6.049 |

From which it is clear enough that what holds good for Edinburgh by no means holds good for the great English towns.

But, putting aside this consideration, it is perhaps worth while to avail ourselves of the elaborate analysis given us in this classification* of the population of Edinburgh to see how far the new Bill would diminish the influence of educated thought in the constituency. The four classes into which the return divides the constituency are as follows:—(1) Those classes of whom no members occupy houses under 10l; (2) those of whom some occupy houses below 10l, but of whom fewer live in houses below 6l than in houses between 6l and 10l; (3) householders who belong to the more skilled classes of labourers, many of them occupying houses above 10l in rental, but of whom fewer live in houses between 6l and 10l than in houses under 6l; (4) householders belonging to the less skilled labouring classes. Now, first, let us see of the present constituency,—that is, of those who live in houses above 10l,—how many may be considered to belong to the educated, and how many to the less educated classes. The 10l householders are thus classified:—

| 107 | | | | | exclusively in | |
|-----|--------------|--------------|-----------|------|----------------|-------|
| 104 | Householders | belonging to | lasses (2 | | | 3,484 |
| 101 | _ | _ | | | | |
| 107 | - | - | 4 | | | 431 |
| | | | | | | |

* O wing to some cross classifications, the present registered electors rather exceed n number the 10t householders as classed above.

The 1,763 householders first mentioned are made up chiefly of advocates (108), bankers (32), civil engineers (28), hotel keepers (64), lords of session (12), ministers (152), persons without any profession or business (691), professors (20), publishers (21), secretaries (15), solicitors (151), wine merchants (45), and writers to the signet (274),—in which we have enumerated all the professions which number more than 10 members. These, it will be seen, must rank as on the whole belonging to the highly-educated classes; but these form but one-fifth part of the 10/householders.

Of the 3,484 10*l* householders enumerated under the second head, the greater number may still be said to belong to the fairly-educated classes,—consisting of agents, architects, booksellers, builders, clerks, commercial travellers, drapers, grocers, Government officials, surgeons, teachers, naval and military officers, and so forth. But even amongst

^{*} Parliamentary Paper, No. 278.

them we find 129 "servants," and many other persons who do not usually receive much schooling, though they may fairly be considered to contain intelligent politicians. Adding, these two heads together, we find that 5,247 of the 10/ householders belong to classes which may be considered in general politically intelligent, while about half of them may, perhaps be said to belong to what would be usually called the thoroughly-educated classes. There remain 2,616 of the 101 householders, who are classed under the third and fourth heads, of whom the most numerous are the tailors, the printers and compositors, the painters and glaziers, the joiners, the boot and shoemakers, the cabinetmakers, the bakers, the accountants. These cannot be said, as a whole, class of much political education. No doubt they are fully competent to exercise the franchise, but we should scarcely say that they would throw their weight into the scale of educated political thought, in case the majority of their fellow-tradesmen and panions now about to be enfranchised inclined in the direction of a demagogue. And of the classes last direction of a demagogue. And of the classes last enumerated, a number will be enfranchised by the Reform Bill, almost exactly equal to that of those who now possess it. The new Bill will, indeed, almost exactly double the number of voters among the class of small tradesmen and journeymen just referred to,—2,100 being added of householders between 6l and 10l to the 2,185 of the same class who occupy houses above 101. Nor can we doubt that this will be without political effect on those who already possess the franchise The 166 printers and compositors who will be added by the Bill, will, for instance, greatly influence the votes of the 126 who already possess votes; the 230 newly-enfranchised joiners are not unlikely to carry with them a good many of the 127 who are already voters, and if Mr Bright's suggestion that the trades' unions might wisely be turned into political organisations be carried out, this would undoubtedly be the case. And, indeed, whether this be so or not, a large influx of new voters with but little political knowledge are sure to leaven in some measure that smaller number of men of the same class who already have the franchise.

It seems, then, that in Edinburgh at the present time,— the number of what would ordinarily be called well-educated voters may be at most 3,000 out of 8,000, and that this Bill, while adding about 50 per cent. to the whole number of registered electors, will add more than 100 per cent. to the least politically intelligent section of those electors, by doubling the number of journeymen and small tradesmen, and adding, besides, some hundreds of servants, porters, police officers, labourers, &c., to the constituency. Now, can any impartial labourers, &c., to the constituency. Now, can any impartial thinker for a moment congratulate himself on giving as much political power to each of the individuals in the classes thus added as is possessed by the highest class of those now holding the franchise? If we remember, moreover, what we have proved, that Edinburgh is by no means a fair specimen of the effect of the Bill in our large towns,—we shall not fail to see that, while it is of the first importance that the classes now pro-mised a share in the franchise should really receive it, it is also of the first importance that every member of these classes should not everywhere receive a political influence individually equal, and therefore collectively vastly superior, to that of the best class of the present electors.

STATISTICAL MARES' NESTS.

To judge from the numberless specimens which come before us of loose application and inaccurate quotation, it would seem as if the manipulation of statistics required peculiar care, special training, and an exceptional degree of conscientionsness. Though the source of half our knowledge, and of all our exact knowledge, on matters of commerce, crime, and the more material branches of political philosophy, they have been so shamelessly resorted to by controversialists for mis-siles and weapons of offence, and have so often been compelled to bear false witness in favour of false theories, that cautious men have begun to look upon them with a natural but most unmerited and mischievous mistrust. Of all the sinners who obloquy upon them, no one has offended so grievously as Sir Archibald Alison. No writer has had so many exploded upon those special fallacies which needed figures to sustain them, and yet which all figures so distinctly and unmercifully negatived; no writer, accordingly, has pressed them so law-lessly into his service, or has been, within our memory, so profuse, so unscrupulous, or so unlucky in his use of them. He seldom quotes them accurately; he seldom quotes them twice alike; he constantly misunderstands them in the most amus ing, and cooks them in the most perplexing, manner; and though we cannot and need not suppose that he would wilfully and deliberately deceive his readers till he had first deceived himself, yet the character of his intellect-as shown both in his metaphors and his statistics-is so strangely blundering and muddy, that it enables him innocently to maintain principles and publish tabular statements, which in a clearer and less clumsy brain, would imply downright dishonesty.

The April number of "Blackwood's Magazine" contains an article on Sir Archibald Alison's "History of Europe since "1815," the main purpose of which is to vindicate the historian from the charge (among others) made against him in the January number of the "Edinburgh Review" of having fallen into a most astounding statistical error. The accusation and the answer are both curious in their way. reviewer detects and exposes the blunder of the historian, but apparently not being quite familiar with the practice of handling official tables, falls into a confusion himself. The historian—or the historian's friend—in his reply, fails to detect the mistake of his antagonist, and while admitting, actually proceeds to justify his own. In quoting falsely, he cannot even be brought to perceive that he has done wrong! Sir Archibald, in his history, being anxious to make out what he solemnly believes—that free trade has ruined the country, quotes tables from Porter's "Progress of the "Nation" to show how much "the balance of trade" is against England. We now proceed to quote (with some abridgment) the Edinburgh reviewer's words:-

When statistics are made the basis of arguments, Sir A. continually misquotes them in the interest of his theory. Thus he actually places side by side, as corresponding figures, tables of the declared value of imports with tables of the official value of exports, although the declared values of both imports and exports, which do not suit his theory, stand side by side in the original. Sir Archibald gives the following:—

Exports. Imports. 1849 105,874,607 63,596,026 42,278,582

On referring to "Porter," p. 356, from which the author professes to quote, we find that while these imports are official value, and these exports declared value, from disconnected columns, the exports did in reality absolutely double the imports. Thus, in official values throughout:—

Total Imports. Re-exports of im-ported Merchandise. Exports of Brit and Irish Produ 105,874,000 25,561,000 164,539,000 1849

If we subtract the re-exported foreign and colonial goods from our total imports, we find the net imports to be 80,000,000%, and the net exports 164,000,000%. In place, therefore, of a balance against the country of 42,000,000%, there is a balance of 84,000,000%. in its favour.

Now, the historian, the historian's critic in the "Edin-"burgh Review," and the historian's defender in "Black-"wood's Magazine," have all shown strange inaccuracy and confusion in dealing with these figures. It is perfectly true that the historian, having a case to make out, has committed the monstrous, and as far as his readers are concerned, deceptive, blunder of comparing official values of imports with declared values of exports—that is, he has compared quantities with values; -for, as our readers are well aware, the "official" values are records of mere comparative quantities only, the various articles being estimated according to a conventional standard of prices adopted in 1695, and bearing no relation whatever to the actual prices of to-day. bringing forward this irrefutable and crushing accusation against Sir Archibald, the reviewer has fallen into the error—probably only a typographical one—of mis-placing the words "official" and "declared,"—and affirming in consequence that the historian had before him the declared values both of imports and exports for 1849-the fact being have laboured through a life of horrid industry to bring this obloquy upon them, no one has offended so grievously as Sir Archibald Alison. No writer has had so many exploded doctrines to prop up; no writer has so perversely seized however, is not the only one. For the reviewer goes on to

that, in order to be fair, Sir Archibald cught to have taken the official values in both cases, when he would have seen that the exports more than doubled the imports, and that so far from there being a balance against England of 42,000,000*l*, there was actually a balance of 84,000,000*l* in her favour. The fact being that these figures are perfectly her favour. The last being that these figures are perfectly futile and misleading for any purposes of comparison of values whatever, inasmuch as the official prices (on which these figures are calculated) are 100 per cent. more than the actual prices in the case of exports, and only from 15 to 30 percent in the case of imports. An honest writer, thoroughly cognisant of the facts of the case, would no more have used the delusive comparison of the reviewer than the delusive comparison of the historian.

But how does the defender of Sir Archibald deal with this grave charge brought against him? He admits it, but defends it,—affirming that, as the materials for an accurate comparison did not exist, the historian was perfectly entitled to make the nearest approximation that he could, out of any figures he could get, -and he goes on to show (what there need be no difficulty in admitting) that his figures differed less widely from the truth than those which would result from the reviewer's method of comparison. But, if this defence is anything except an ingenious after-thought, why did the historian never drop a hint that he was placing side by side figures which could not honestly lie in any such juxtaposi-Why did he not tell his readers, in fact, that his table was only guess-work, and that for purposes of fair comparison, neither his figures nor the reviewer's were worth a farthing?

But this is not all. All three writers fall into the error of regarding an excess of imports over exports as indicating a state of affairs unfavourable or menacing to this country.

That "Blackwood's Magazine" and Sir Archibald Alison, the only two fossil Protectionists still above ground, should, as in the good old times, go on measuring the profits of our commerce by the amount to which the value of the articles we sell exceeds that of the articles which are sent to pay us, is natural enough; but the "Edinburgh Review" ought to have known better. Indeed, the defender of the convicted historian quotes, in the same page which contains all this nonsense about the "balance of trade against England," a passage from Porter's "Progress of the Nation" which ought to have enlightened even him. Mr Porter says:-"On the supposition of the correctness of the Custom House "('official') valuation, our foreign and colonial trade must long "since have proved the ruin of our merchants, since the value "assigned to our exports is enormously greater than that "given to the imports." It would seem to require no explanation to an ordinary understanding that, though it may be more blessed to give than to receive, it cannot be more profitable; and that a trade with all the world, in which we, regularly, year after year, send out more than we import in return, to the amount of many millions, must be a losing one, and must show a balance against the country truly apalling. But Sir Archibald and his defender (apparently his critic too) have got rooted in their minds the old fallacy that gold alone is wealth, that the excess of exports over imports must ulti-mately be paid in gold, and therefore that, the larger this excess, the larger also must be the amount of the precious metals received by this country to redress the imaginary

The writer in "Blackwood" gives a table (of which, for a wonder, the figures are accurately quoted from official ources) comparing the real value of exports and imports for the four years 1854-7, and bringing out in strong relief a fact to which we have more than once adverted in this Journal, -viz., that our imports habitually exceed our exports in value by an average yearly sum of from thirty to forty

appear as if these thirty-four millions which we receive every year over and above what we send out, was the measure of the profits of our foreign trade. But no! in the opinion of Sir Archibald Alison and his defender, it is the measure of our loss. We cannot forbear, in conclusion, quoting the explanation given by the writer in "Blackwood" of this discrepancy between the aggregate value of our imports and our

Had the writer in the "Edinburgh Review" been well acquainted with the subject of statistics, he would have known that the real difficulty of ascertaining the balance of trade now lies, not in difficulty of ascertaining the balance of trade now lies, not in respect to the official values of the exports, which are utterly worthless for that object, but in the difficulty of estimating correctly a certain depreciation which exists both in the "declared" value of the exports and the "real" or computed value of the imports. The exports are entered at the value declared by the exporter, that is, nearly at the cost price; but they will be sold as a considerably higher rate to give him a profit and pay the freight. Therefore a considerably larger sum of money will be received for them than appears in the statistical tables. On the other hand, the imports are valued in the Custom House at a rate considerable under imports are valued in the Custom House at a rate considerably under the price at which they have been purchased. For them also, there-fore, a larger sum of money will be paid than the tables show. The difference is larger on the side of the exports (where it includes both freight and profit) than on that of the imports (where it is made up of part of the profit only). To estimate it correctly at present is impossible, from the excessive fluctuations in the foreign trade; goods being sometimes sold at an immense profit, and not unfrequently much below cost price, especially in the

It is not easy to make out the precise meaning of the author of this confused paragraph. But we beg our readers' attention to the passages we have italicised—the statement contained in which about "depreciation" is the pure fancy of the writer, summoned up to explain to himself a phenomenon which puzzled him. The simple truth is this: the value given for the exports is their (estimated) value at the port of shipment-i.e., with freight to the foreign port, insurance, and profit excluded :- in a word, the bare cost of the goods themselves to the merchant who ships them. imports-so far from being valued by the Customs' authorities (as the writer recklessly and untruly, and without any knowledge of the case, chooses to assert,) "at a rate consider-"ably under the price at which they have been purchased" -are valued at the wholesale price (in bond) in England at the time of their arrival-i.e., with freight, insurance, and profit included ;-and in consequence at a price considerably above that at which they were purchased.

THE IRISH EXPERIMENT IN THE TREATMENT OF CRIME.

THE alternations of deep interest and complete apathy with which Englishmen look on their system of penal law are as frequent and startling as those which their interest in the national defences undergo, and arise from the same causes. When we hear of startling crimes,—the systematic replenishment of our criminal population from the convict prisons as the penal sentences of past years expire strikes us with sudden force as a system of suicidal folly. When we hear of the strength of the French army and navy, and hear reports of the threatening words of men in power, the supineness of our own administration comes upon us with startling force, and we look round us for some immediate means of putting forth a spasmodic energy. But the fitfulness of our efforts in the case of our criminal population, if not less natural, is certainly in some ways less excusable than in the case of our national defences. The one sufficient reason why we ought vigilantly to maintain the military and naval preparations of England in an efficient state, is comprehended in the two words, national self-respect. no doubt is consideration enough, and more than enough, -but there are reasons of a higher order, if not of so wide a scope, for maintaining a constant effort to improve the treatment of our criminal population. The

tecting themselves against the dangerous classes-of keeping the predatory profession at bay. But if this be their only motive for attending to the subject, their measures are certain to be selfish, harsh, and ineffectual. No criminal jurisprudence has failed so completely as that which has been conceived exclusively in the spirit of deterring people from crime by the threat of severe punishment. It has had a longer trial than any other system; and all who know what English criminal legislation has effected, know that not even the rosewater philanthropy which professes to regard crime exclusively as a species of misfortune, and to coax the criminal into a better temper, could fail more egregiously to arrest its All our experience shows, and every day is adding evidence of the first importance to the demonstration, that if we think only of making crime unpleasant in the abstract by affixing penalties and stigmas to it, we shall not only fail to reclaim criminals, but fail to inspire that awe of crime amongst those who are not criminals at which we are aiming. plete justice and mercy to the criminal in the estimate and treatment of crime, so far from decreasing the awe of it, robs it of that romantic interest which the very position of an outcast, at war with a merciless society, is apt to inspire. Every step in the direction of true equity not only gives us the only chance there is of redeeming the guilty, but by far the best chance there is of deterring those who are innocent. Nothing does so much to deprive crime of its fascinations to the border-classes, as the clear understanding that it is no longer indiscriminately persecuted,—that it is treated with a certain matter-of-fact sincerity.

We have frequently called attention to the noble experiment which has now for some years been made in Ireland, under the masterly and vigorous superintendence of Captain Crofton, to deal with crime in this truthful and equitable The sixth report of himself and his colleagues in the direction of the Irish convict system is now before us; and we hold very confidently that in the plan which is here further developed, will be found the germs of the only successful method of treating professional criminals. In the recent Irish convict system, and nowhere else in the United Kingdom, every effort has been made not only to bring home to the habitual criminal how wide is the gulf which severs him from the society he has outraged, but, at the same time, to inspire gradually the practical conviction that the gulf is not im-He is treated first as a man who has voluntarily and guiltily severed the ties which bound him to the social system, -and made to feel by some months of separate confinement the crushing penalty of that isolation. enabled to regain gradually some self-respect and hope by a treatment which associates him with others, which varies with the varying characteristics of his own conduct, and which enables him to shorten to some extent the duration of the severer penalties. He is permitted at length to work his way into the "intermediate" prisons, where he is no longer way into the "intermediate" prisons, where he is no longer a mere prisoner, though still under strict discipline and surveillance. He regains here some sense of personal responsibility, some limited freedom of action, some power of earning resources against the day of his liberation, and some feeling that he is again trusted by those whom he respects. And, finally, he is, if he deserves it, liberated some time before the expiration of his sentence, under fixed conditions which ensure a close surveillance during the remainder of his term, and ensure also his recommitment to prison without any fresh conviction in case his liberty be abused and his habits again become disreputable. Now, we submit that this system combines all the true elements which crotchet-mongers of various classes have hitherto taken up in dangerous isola-It does not ignore retributive justice,-for crime is punished, in the first place, not in proportion to its danger-ousness, so much as in proportion to its heinousness and guilt. It does not ignore the deterring end of punishment,—for the industry and effort which are most hateful to the criminal classes as a whole, are made the permanent essentials of prison life and the conditions sine quâ non of any ameliora-tions in the state of the prisoner. It does not ignore the re-formation of the offender,—for the main idea of the system is to treat each individual case individually, and to study the influences best suited to awaken remorse and self-respect in individual criminals. And, what is most important of all, it sets to work in the right order, first administering pure penalty, then severe discipline, and only at the last filling the mind of the criminal with hope, and testing it with a gra-

dually accorded and vigilantly measured liberty.

This system has now been applied in all its details for four years and a half, with the following results:—(1) the number of criminals has greatly diminished, although the expedient of getting rid of them by transportation has ceased, expedient of getting rid of them by transportation has ceased, and although the number of offences which involve a sentence of penal servitude has been much increased by the Act of 1857, which substituted a sentence of three years penal servitude for punishments which did not bring the offender into convict prisons at all; (2) the cost of the prisons has in consequence diminished considerably in spite of a more elaborate penal machinery; (3) there is reason to believe that a very large number of the criminals treated under this system have been really rescued from criminal babits—cortainly from 70 to 80 per cent. criminal habits,—certainly from 70 to 80 per cent.

First, as regards the diminution in crime, we have the following statistics :-

| IN C | USTODY IN | GOVE | BNMENT P | RISON | S IN IREI | AND. |

| 3,209 | *********** | 1856 | ********** | 389 | 000 | 1,107 |
| 2,614 | ********** | 1857 | | 426* | | 910 |
| 2,277 | | 1858 | | 358 | ********** | 946 |
| 1.773 | *********** | 1859 | ********** | 322 | ********* | 595 |
| 1.631 | ********* | 1860 | ********** | | *********** | *** |

* In this year the Act of 1857 came into force, which legalised penal servitude for 3 years for offences which had formerly not rendered the offender limits to be treated at a convict or sent to a convict prison.

Much of this diminution in the number of convicts may be ascribed, no doubt, to the general increase in the properity of Ireland, owing to emigration and other causes. But against this must be set, first, that no less than 109 prisoners were last year sent to convict prisons, who, before the Act of 1857, would have been incarcerated only in the county gaols among a less deeply criminal class; and, secondly, that transportation, which before 1854 removed nearly 1,000 criminals annually from Ireland, has now ceased altogether. Next, as to the cost of crime, besides all the saving caused by the cessation of transportation, the convict system has cost less by 28,000l last year than it did in 1854. The criminals less by 28,000l last year than it did in 1854. treated are, no doubt, less numerous by one half,—but the expenditure has been drawn upon for the foundation of the intermediate prisons which have effected so much good. Thirdly: Out of 1,250 convicts who have been conditionally liberated within the last four years, and watched vigilantly during the remainder of their sentences, only 77 licences have been revoked,—that is, about 6 per cent. in four years, or about 1½ per cent. per annum. 854 have been liberated unconditionally in the same period, and of these, 20 have been reconsigned to the convict prisons.

Of course many more of these, who have been lost sight of, may have relapsed into crime;—for there is not here any of the direct evidence which is obtained as to the conduct of those conditionally liberated under a revocable licence. And others may be expected to relapse in years to come. But making all allowances for a large margin, there can be little doubt that from 70 to 80 per cent. of the criminals treated under this system are really reclaimed from the profession of criminal pursuits.

Finally, the one great lesson which the study of the great Irish convict experiment forces on all thinking men, -which it has forced on the great German jurists, on such men as Mittermaier and von Holtzendorff, as well as on all competent English thinkers,—is this: that the restoration of liberty to criminals should be as gradual, and its results as jealously watched, as possible. The first condition of such as the state of the stat cess is, that the sentences shall be so long as to give room for a conditional liberation of some duration before their final expiration, during which the liberated criminal shall be perfectly aware that he is on his trial, and liable to be recommitted if he gives any reason for the apprehension that he is returning to his old career. Without a considerable period of conditional, revocable, and carefully-watched freedom, the experiment cannot be fairly tried. This is the concentration which the Irish system so far surpasses the English. And this, too, is the one element in which the Irish system is itself capable of improvement, were the sentences penal servitude lengthened to the same limits as the old transportation sentences, not in order to prolong the time of actual incarceration, but in order to prolong the period of conditional and revocable liberty.

THE NEW STAMP ACT

TO THE EDITOR OF THE R

Carlisle, May 13, 1860.

Srs,—Will you kindly inform me whether cheques drawn with an adhesive stamp are within the 12th clause of the New Stamp Act. The use of the word "Bill," and the marginal note, "The payers of foreign bills to cancel stamps," induce me to doubt it.—I am, A COUNTRY BANKER.

The clause referred to by our correspondent is as follows:

The clause referred to by our correspondent is as follows:—

XII. Whenever any bill of exchange, draft, or order having thereon an adhesive stamp shall be presented for payment, the person to whom the same shall be presented shall, upon paying the same, write or impress or cause to be written or impressed upon every stamp affixed to the bill the word "paid," to the end that the stamp may be more effectually cancelled, and made incapable of being used again; and in default of so doing he shall forfeit the penaity of twenty pounds.

The above clause was intended to include cheques with an adhesive stamp on them. The marginal note, which is no part of the Act, is misleading. The London bankers stamp the word "paid" on all the cheques with adhesive stamps which they pay,—and the Board of Inland Revenue believe that all bankers may be

"paid" on all the cheques with adhesive stamps which the and the Board of Inland Revenue believe that all bankers compelled to do so, notwithstanding the use of the word "Bill."

The annexed correspondence on the new stamp duties has passed tween the Victoria Dock Company and the Board of Inland Revenue :-

NEW STAMP DUTIES ACT.

Victoria (L) Docks, 23 Rood lane, May 3.
-Will you kindly favour me with a reply to the following queries, considerable diversity of practice with regard to them? SIR,—

Does a delivery order, atamped at issue, and subsequently bearing veral endorsements, require a second stamp at delivery, if delivered to her than "selves?"

other than "selves?"
2. Does a delivery order, stamp at issue to a buying broker, and endorsed by that buying broker to his principal, require a second stamp upon that endorsement; the delivery taking place upon that endorsement; if not, what evidence does a warehousekeeper require to have to justify him in dispensing with it?

Selly aim in dispensing with it?

3. Do warrants issued prior to the Act require a penny stamp when or sell and the sell are sell as the sell are sell as the sell

Inland Revenue, Somerset House, May 11.

SIE,—I have laid before the Board of Inland Revenue your letter of
the 3rd inst., requesting information on certain questions therein submitted under the New Stamp Act, 23rd of Victoria, chap. 15. In
asswer to the first question, I am directed to inform you that the Board asswer to the first question, I am directed to inform you that the Board are advised by their solicitor that a delivery order stamped when issued, and passed from one to another by endorsement, requires no further stamp previously to its being executed by the Dock Company, either by an actual delivery of goods to the holder or a transfer of them into his name in their books. Your second question is answered as above. 3. The dock warrant entitling the holder to the goods does not require to be stamped as a delivery order by reason of its having been issued before the passing of the Act, and having therefore no stamp affixed to it. 4. The document chargeable with the duty under the head "Dock Warrant" is described as "a writing or document, by whatever name the ewner shall be designated, which shall evidence the title of any person therein named, or his assignee or the holder thereof, to the property in any goods lying in any dock. &c., such writing or document being signed therein named, or his assignee or the holder thereof, to the property in any goods lying in any dock, &c., such writing or document being signed or certified by or on behalf of the company in whose custody such goods may be. The document called a transfer certificate seems to the Board in terms to do thie, and if it be not issued for the purpose they are unable to assign it to any office. It is a document issued by the company holding the goods mentioned in it, addressed to the person into whose name the goods have been transferred, certifying the fact of the transfer by virtue of an order from the previous owner, and stating from what day rent will be payable by him.

There is, however, a note upon it, intimating that the possession of

is, however, a note upon it, intimating that the pos this document does not give to any party a property in the goods, it being solely a certificate of the transfer if made in the books of the company.

This note cannot be intended to controlled the configuration. cannot be intended to neutralise the certificate. dock warrant does not give a property in the goods. The property exists before the deposit, and is not changed by it; but as against the company the warrant evidences the title in the holder of it.

The certificate, the Board apprehend, does the same, and they are advised that it is therefore chargeable as a warrant.—I am, &c.,

T. SARGENT.

The following relates to the new stamp on delivery orders:—Siz,—We have received the annexed reply from the Inland Revenue Office, to our inquiry relating to the liability of brokers to stamps on delivery orders, containing information which may be useful to parties interested.—We are, Sir, your obedient servants,

11 Lime street, London, May 4.

GENTLEMBEN,—The Board have had before them your letter of the 30th ult, requesting information connected with the operation of the recent Act, on a delivery order in the case therein submitted.

In reply, I am directed to observe that as between the buyer and his broker there is no sale or transfer of goods. the transfer of the delivery

er there is no sale or transfer of goods, the transfer of the delivery, therefore, by the broker to his principal by endorsement is not a to the duty.—I am, gentlemen, your obedient servant,

T. SARGENT. nd Revenue Office, Somerset House, W.C., May 3.

THE FRENCH TREATY.

LETTER FROM MR COBDEN.

THE following letter has been intimate friend in Manchester:letter has been addressed by Mr Cobden to an

Paris, 82 Rue de l'Université, May 12, 1860.

MY DEAR SIR,-I will answer your inquiries as briefly as possible.

MY DEAR SIR,—I will answer your inquiries as briefly as possible.

I am as strongly in favour of the principle of ad valorem duties as any one in Manchester. But nearly all the countries of Europe have, from motives of convenience, or to avoid frauds, preferred specific rates, and the French Government cannot be induced to take for its rule the advalorem system. Nor, indeed, is it invariably desirable; for instance, in the case of iron and some other articles, the English producer prefers specific rates. In goods of a simple and uniform nature, admitting of easy classification, such as yarns and plain cottons, though advalorem duties would be preferable, the adoption of specific rates will not be attended with great inconvenience. If there are other articles of so mixed and varied a character as to defy classification, the treaty has made provision for dealing with them in an exceptional manner.

England is really not in a position to dogmatise on this question. The French Government are of course aware that our own tariff hardly contains an advalores duty, and that even in recent years we have been engaged in substituting specific for advalorem rates. At this moment the wine-growers of Burgundy are holding meetings to protest against our specific duties on wine, which, owing to the alcoholic test, impose 50 per cent. more duty on their common qualities, coating perhaps half-a-crown a gallon, than on the rarer kinds of claret, which are often worth more than five shillings a bottle in the cellars of the Gironde. My answer to these complaints is that the evil is inevitable, owing to the exigencies of our revenue system. The French Government plead, with equal good faith, the necessities of their Customs service in defence of their specific duties.

With respect to your other inquiry, there is not the alightest founds—

duties.

With respect to your other inquiry, there is not the slightest foundstion of truth for the reports in question. The commissioners now sitting in Paris are not engaged in correcting the imaginary blunders to which you refer. We have no more power than yourself to negotiate for the alteration of a word of the treaty. Our duties are limited to the carrying out of the provisions of the 13th article, in the manner contemplated from the first, and by the only mode in which it could have been accomplished. The task on which the commission has just entered will call for the exercise of much patient labour; and they who wish to pass a fair judgment on its conduct will wait for the result. Speaking only of the past, I will say that from the time when I was first brought into communication with the French Government, now more than six months since, to the present day, I have experienced from them nothing but frankness, straightforwardness, and good faith. They have never professed to carry out at once a free-trade policy to the advanced stage at which we have arrived in England. They are rather at the point of dewhich we have arrived in England. They are rather at the point of de-parture from which Mr Huskisson started in 1825, with the great advan-tage of having had our experience to guide and encourage them, and of having to deal with protected interests very much in advance of ours of that time. The French Government has begun with the repeal of duties on raw materials, giving notice that after a certain time the prohibitive system will cease, and foreign manufactures be admitted at revenue duties which will operate as a protection to home producers. This is precisely the course pursued by Mr Huskisson, and we know with what happy This is precisely

consequences.

The French Government have entered upon this new commercial policy, not for the benefit of England, but from an enlightened appreciation of the advantages it will confer on the people of France; and were I to doubt the success of the experiment, or fear that they will not were I to doubt the success of the experiment, or fear that they will not persevere in the career on which they have entered, I should be faithless to those principles the application of which has conferred such incalculable advantages and blessings on my countrymen. The present treaty will inaugurate a new era in the commercial intercourse of France and Eng-land, and it will only require a few years to develop that state of mutual dependence which forms the solid basis for the peace and friendship of nations.

it be true that there are sinister influences at work in England, to mar, if possible, this fair prospect? If so, I trust the mercantile, manufacturing, mining, and trading interests of the country will prove true to themselves, for in the present case their interests are eminently those of humanity and civilisation.—Believe me, yours, very truly,

RICHARD CODDEN.

Agriculture.

TILLAGE WITHOUT MANURE.

THE LOIS-WEEDON SYSTEM.

THE proverbial tenacity with which the cultivators of the soil adhere to traditional practices, though often the subject of sarcastic adhere to traditional practices, though often the subject of sarcastic remark, is not altogether without justification. It has been again and again found that modes of culture and management which have proved eminently successful in one district, will not succeed when transferred to another district differing in soil and climate. And the discredit which frequently attaches to well-meant efforts to introduce a new and, as assumed, improved system of husdandry into a district, will generally be found to arise from the improver paying too little regard to the existing practice of the district. The true method of improvement is not so much to change as to elevate and advance the actual system. There is generally a broad elevate and advance the actual system. There is generally a broad basis of truth and reason in the plans of husbandry pursued in each locality, and in all attempts to improve that husbandry regard must be had to such bases.

Of course we do not mean to defend practices which are every-

where too common and always bad; such as defective tillage, insufficient cleaning and manuring, over-cropping and the like, but any system of local husbandry, well performed, should not be hastily cast aside, or altogether changed without full consideration and careful experiment.

Now, there is no doubt that the plan of a "long fallow," formerly universal on strang land once in four or five years, was one which carried with it many advantages, obtained, no doubt, by too great sacrifice, by occasionally thoroughly aerating and pulverising the soil. And may it not be a question whether on many strong and loamy soils as at present managed there is now any effectual substitute for the summer fallow. No one, however, imagines that we can revert to the old system, even on the most tenacious soils. But the questionis, may we not otherwise obtain all the benefit, and more than the benefit formerly believed, and rightly believed, to be derived from a well-made "long fallow"? Confessedly the four and five-course rotations are open to useful modifications, and one of the great purposes for which free action on the part of farmers is desired is to afford them the opportunity of working out practically changes in cultivation which times and circumstances may suggest. Amongst the suggestions offered to the modern farmer is that afforded by the Lois-Weedon system of corn and root culture. As our readers are aware, Mr Smith, the author of that system, grows wheat year after year in the same field without manure, by sowing three rows of wheat at 10 inches apart, leaving intervals of 40 inches between each three rows. These intervals receive a most complete summer fallow, being deeply forked or ploughed, scarified, subsciled, and horse-hoed, so that the land is thoroughly cleaned, aired, and pulverised. The next year the three rows of wheat are planted on the fallowed strip, while the strip which has the previous year borne corn is subjected to the same fallowing process. The wheat is always sown in September, that it may root well and tiller before winter sets in; and the subsidiary operations consist of horse and hand hoeing between the rows until the wheat is in flower, and then the two outside rows are earthed up by the mould board plough. The result of this system in Mr Smith's hands has been that fr

The Lois-Weedon system has been tried by other farmers with a certain amount of success, while Mr Lawes, at Rothamsted, has tried it and pronounced it a failure.

The most complete exposition of the subject we have seen is that contained in a paper, by Mr J. A. Clarke (of Long Sutton, Lincolnshire), read last week at the London Farmers' Club, wherein the writer enters into all the details of the practices pursued at Lois-Weedon, and gives his own practice infollowing the same system on an experimental piece of ten acres of land. He states that he commenced with an inferior piece of land, which had been too much exhausted by previous cropping, and that the determined growth of annual weeds the system at first produced had somewhat interfered with success. Still, with these drawbacks, he had for three years grown the average of 26 bushels of wheat to the acre at the cost of 51 4s 2d per acre. The crop of 1858 was 30 bushels to the acre. He anticipates in future greater crops, but estimates his profit on his present average at 31 per acre. We cannot follow the details of this able paper, which will well repay careful perusal, and our chief object in adverting to it is for the sake of Mr Clarke's suggestions for carrying the system into practice on a really agricultural scale, and as a regular part of the rotation of a whole farm. After expressing his "unhesitating belief that a yield of more than four quarters—32 bushels—to the acre" may be expected from two successive crops cultivated on the Lois-Weedon plan, Mr Clarke'says.

Now, suppose 300 acres arable to be farmed on a three-course rotation (which, by the way, would be rather a novelty), as represented by the following diagram:—

Let 200 acres, A and B, be in wheat; and 100 acres, C, in other corn or green-cropping. Next year, have B and C in wheat, and A in other produce. The year after that, C and A in wheat, and B in other produce. That is, each division would be one year occupied by a variety of cropping; the next year it would be under Lois-Weedon wheat rows; the

third year, again under wheat sown between the stubble-stripes of the former crop; and then broken up for the various cropping. The assumed yield of 32 bushels would give a clear profit (including interest) of 31 log per acre, with the expenses already stated, and wheat at only 40s a quarter. The 200 acres of wheat would thus bring 7001 net annual income. Then, as no manure is required for the wheat, the other 100 acres would have the benefit of all the straw from the 200 acres; and with this large quantity of straw for manure, enciched with corn and cake as in present practice, there would be a chance of a good profit size from the produce of this division. The result, then, is a clear surplus—say of 8001 to 9001, over and above all expenses, on 300 acres of land, when wheat is down at 40s.

There may be difficulties in the way of such a system of husbandry; but the principal one, that of having so much horse-work to be done in the wheat field at assassus when other crops require their labour, is already obviated in anticipation by the steam trench-plough and grabber. And of course I do not set up this threefold rotation as advisable beyond all others; mur do I preclude the use of artificial manures for the triple-row wheat, seeing that more than 40 bushels per acre may stand and ripen on the land (as at Lois-Weeden); and provided you do not overdo the crop in luxuriance, guano or nitrate will pay handsomely for their use here as well as in ordinary farming.

Assuming that as good or better crops of wheat can be grown upon the Lois-Weedon system as upon the ordinary plan of wheat-cropping, it is not improbable that such a rotation as that suggested would prove highly profitable to the tenant and very beneficial to the landlord. The successful practice of the Lois-Weedon plan involves the necessity of having the land first well drained, should the natural drainage be insufficient, and of thoroughly clean cultivation, two things which go far to secure on reasonably good wheat land a crop of four quarters to the acre. If then from 50 to 75 acres of the 100 acres not bearing wheat be every year cropped with roots, well manured and subsequently well managed, there will be from one-sixth to one-fourth of the land every year under the best possible course of renovation by fallow crop. The real question appears to be, whether, taking it altogether and for a series of years, the plan of "long fallowing" alternate strips of land affords such additional benefit to the wheat crop as to compensate for the extra cost beyond the outlay necessary to grow two successive wheat crops by the ordinary method? Mr Clarke's suggested plan would be applicable to either method of wheat-growing. We know by experience that on a strong loam thoroughly pulverised by deep ploughing in alternate years, and kept quite clean, a good crop of wheat can be secured by manuring heavily once in four years. For instance, a rotation of (1) roots, well manured and removed from the land, followed by (2) cats, (3) beans, and (4) wheat, without more manure, has for several years produced very heavy yields of oats and beans, and the average of very nearly 40 bushels, or five quarters of wheat to the acre. Indeed, but for last year, when from the great growth of straw the crop was early and much lodged and the yield reduced to little more than 35 bushels to the acre, the average produce of the wheat for the last five years would have exceeded 40 bushels per am. We are, therefore, quite satisfied that tillage will

A HINT TO HIGHLAND LAIRDS.

An Invernessshire correspondent of the North British Agriculturist, writing on the 7th May instant, says:—"This winter will be especially noticed from the dearth of fodder, and where supplies have been brought from Holland, a ton brought within these two weeks on the Highland road 15l. How it fares with the sheep is not yet accurately known, but clipping time will disclose. In exposed situations one out of three will be out of count. In favoured parts 7 per cent. will scarce cover losses against such rigours." So we learn that the lambing season in the Southern Highlands of Scotland, according to the Dumfries Standard, has been most unfavourable. "The winter only lately passed away," says the report, "has been most disastrous. But for Dutch hay, which has come in in large quantities, much of the stock of the country would have died from starvation. In the lower districts, with the aid of grass fields and artificial food, the loss of old sheep may not be the average of years, and the crop of lambs not 8 or 10 per cent. below that point. But in high sheep ranges, such as the sources of the Tweed and Teviot, the Ettrick, the Yarrow, and the district around St Mary's Lake, the loss in old sheep is, in some cases, 15 or 20 per cent., and lambs are the exception rather than the rule. On a large farm recently let at a rumous rent, and for which there was not only a keen but a mad competition, the loss in old sheep is very great, and on some farms in the range referred to not a lamb is to be seen." Here we have examples of that system of so-called improvement in the Scotch

Highlands, under which all the small cultivators are expelled, and a wide district is thrown into an immense sheep farm, wherein the sheep are dependent throughout the year on the natural produce of the farm, though the old Scotch farmer always made a careful winter's provision for his sheep. There is little if any hay saved, and no tarning grown for winter provender. The land is undrained, and nothing beyond the rudest plans of pastoral husbandry are adopted by the occupiers. They depend altogether on the season, suffering in the state of the season, we have just passed through very severe by the o the occupiers. Iney depend attogether on the season, surfering in iters like the season we have just passed through very severe sea. Of course considerable capital is required by the tenant stock such a farm, often extending over several thousand acres, ton the part of the landlord no outlay is needed beyond the pense of ejecting the crofter tenants, and perhaps some trifling scription towards the cost of sending them to Canada.

Yet on all these Highland sheep farms there are tracts of land, more or less extensive, on which corn and turnips might be grown with advantage, provided the landlord would expend a reasonable in advantage, provided the landlord would expend a reasonable in the necessary buildings, drainage, and other permanent imprements. Not only might larger flocks of sheep be thus kept these Highland districts, but the present perils of a severe winter all be greatly diminished to the sheep-farmer, while many of the offers might be profitably employed as labourers in tillage shandry as an adjunct to sheep farming.

Literature.

mon: An Account of the Island, Physical, Historical, and Topographical; with Notices of its Natural History, Antiquities, and Productions. By Sir James Emerson Tennent, K.C.S., LL.D. Fourth Edition thoroughly revised. Longman, Green, Longman, and Roberts.

(SECOND NOTICE).

LITTLE positive is known about the earliest inhabitants of Ceylon-Some have conjectured that they belonged to the Malayan race; others, to whose opinion Sir Emerson Tennent inclines, that they formed "a branch of the same stock which originally colonised the Dekkan." Like the latter, they were a timid and barbarous race, dwellers in mountains and forests, worshipping snakes and demons; and hence they themselves afterwards acquired from their conquerors the name of snakes and devils. The "Mahawano," a native metrical history of great antiquity, recently brought to light by the indefatigable researches of Mr Turnour, speaks of the early kings as building their great public works by the labour of men and devils,—an assertion startling at first spate; we not see much to be wondered at if in edition to their sight; yet not so much to be wondered at, if, in addition to their demon-worshipping propensities, the ancient Singhalese at all resembled their devil-dancing descendants of the present day as depicted in a little sketch in the second volume of this work.

In the South-eastern extremity of the island them will be a still the second volume of the second work.

e South-eastern extremity of the island there still exists a the Veddahs) who are thought to be lineal descendants of the despised "Yakkos." They retain many of their customs and superstitions, and their rude mode of life unchanged; unless, indeed, the latter has even degenerated under a sense of subindeed, the latter has even degenerated under a sense of subjection and degradation. They live by the chace, making use of
bows and arrows, build no houses, and have no form of worship,
mless the propitiatory dances to demons may be called such. If
they have any commercial dealings with their fellow islanders, it is
done thus:—"They deposit in the night" (in a certain known
locality) "the articles which they are disposed to part with,
indicating by some mutually understood signals, the description of
those they expect in return, and these being brought on the
following day to the appointed place, disappear during the ensuing
night."

In the year B.C. 543, a small band of invaders from the opposite shore, led by Wijaho, "the discarded son of one of the petty sovereigns in the valley of the Ganges," landed on the coast of Ceylon, and speedily reduced the whole island to submission. They then founded in the person of their leader, a dynasty that lasted in and speedily reduced the whole island to submission. They then founded, in the person of their leader, a dynasty that lasted in undiminished power for nearly eight centuries, when it was followed by a succession of less powerful kings known under the title of the second dynasty. The last of this race, a monster of cruelty, was conquered and dethroned by the British in 1815. The splendour of the earlier kings and the prosperity of the island under their rule are attested by the accounts of Arabian, Chinese, and later on of European travellers, as well as by native historians. "So late us the fourth century, the Chinese traveller, Fa-Hian, describes the condition of the place" (the capital city, Anarajapoora) "in terms which fully corroborate the accounts of the Mahawanso. It was crowded, he says, with nobles, magistrates. the Mahawanso. It was crowded, he says, with nobles, magistrates, and foreign merchants; the houses were handsome, and the public buildings richly adorned. The streets and highways were broad and level, and halls for preaching and reading bana were creeted in all the thoroughfares." Even now,

For miles around Anarsjapoora the surface of the country is covered with remnants and fragments of the ancient city; in some places the oil is red with the dust of crumbling bricks; broken statues of balls and lephants, stone sarcophagi and pedestals, ornamented with grotesque

human figures, lie-hidden in the jungle; but the most surprising of all is the multitude of columns, "the world of hews stone pillars," which excited the astonishment of Knox when effecting his escape from captivity.

the astonishment of Knox when effecting his sesape from captivity.

If anything else were needed to assure us that Ceylon was at one time a thickly-peopled and prosperous country, considerably advanced in social status, it would be found in the stupendous reservoirs for artificial irrigation that lie scattered over the interior. The total absence of lakes in Ceylon, and the liability of the rivers to summer droughts, rendered such works a necessity for the well-being of the country. By their aid, lands now wild with jungle and forest raised rice sufficient for the support of their inhabitants, and industry and plenty reigned where now is only desolation and and industry and plenty reigned where now is only desolution and deesy. Kings in the early ages were esteemed according to the number and greatness of "these works of public utility" they constructed; and Sir J. Emerson Tennent urges upon the attention of the Government the great material advantages, and the increase of popularity among the natives, that would be gained by repairing these tanks—an undertaking in most cases feasible, and only involving an outlay that would be well repaid by the results.

The following extract gives so forcible a picture of the wilder scenery of Ceylon, and so striking a description of one of these vast works (worthy to be compared to the Pyramids in the amount of labour it must have involved), that we are tempted to give it almost entire in spite of its length:—

Before daybreak we entered on the bed of the tank of Padivil, at its Before daybreak we entered on the bed of the tank of Padivil, at its south-eastern angle, and proceeded towards the main embankment, a ride which occupied us nearly two hours. The tank itself is the basin of a broad shallow valley, formed by two lines of low hills, which gradually sink into the plain as they approach towards the sea. The extreme breadth of the enclosed space may be twelve or fourteen miles, narrowing to eleven at the spot where the retaining band has been constructed across the valley; and when this enormous embankment was in effectual repair and the receiving filled by the rains, the water must have been thrown

to eleven at the spot where the retaining band has been constructed scross the valley; and when this enormous embankment was in effectual repair and the reservoir filled by the rains, the water must have been thrown back along the basin of the valley for at least fifteen miles.

In a lonely spot, towards the very centre of the tank, we came unexpectedly on an extraordinary scene. A sheet of still water, two or three hundred yards broad and about half a mile long, was surrousded by a line of tall forest trees whose branches stretched above it. The sun had not yet risen when we precived some white objects seated in large numbers on the tops of the trees, and as we came nearer we discovered that a vast colony of pelicans had formed their settlement and breeding place in this solitary retreat. They literally covered the trees in hundreds; and their heavy nests, like those of the awan, constructed of large sticks, formed great platforms sustained by the horizontal branches. In each neat were three eggs rather larger than those of a goose, and the male bird stood patiently beside the female as she sat upon them. Nor was this all. Along with the pelicans prodigious numbers of other large water-birds had selected this for their dwelling place, and covered the trees in thousands, standing on the topmost branches: tall flamingoes, herons, egrets, storks, ibises, and other waders. We had disturbed them thus early, before their habitual hour for betaking themselves to the flahing-fields. By degrees, as the light increased, we saw them beginning to move upon the trees: they looked around them on every side, stretched their awkward legs behind them, extended their broad wings, gradually rose in groups, and slowly seared away in the direction of the sea-shore.

The pelicans were suparently later in their movements; they allowed

gradually rose in groups, and slowly seared away in the direction of the sea-shore.

The pelicans were apparently later in their movements; they allowed us to approach as near them as the swampy nature of the soil would permit; and even when a gun was discharged among them, those only moved off which the particles of shot disturbed. They were in such numbers at this favourite place, that the water over which they had taken up their residence was swarming with crocediles attracted by the frequent fall of the young birds; and the natives refused, from fear of them, to wade in for one of the larger pelicans which had fallen, struck by a rifle ball. It was altogether a very remarkable sight.

About seven o'clock we reached our destination, near the great breach in the embaukment, having first effected a passage with difficulty over the wide stream that was flowing towards it from the basin of the tank. The huge bank was concealed from sight by the trees with which it is overgrows, till suddenly we found ourselves at its foot. It is a prodigious work, nearly eleven miles in length, thirty feet broad at the top, about two hundred at the base, upwards of seventy feet high, and faced throughout its whole extent by layers of squared stone. The fatal breach through which the waters escaped is an ugly chasm, two hundred feet broad, and half as many deep, with the river running slowly below. This breach affords a good idea of the immense magnitude of the work, as it presents a perfect section of the embankment from summit to base. As we stood a perfect section of the embankment from summit to base. As we stood upon the verge of it above, we looked down upon the tops of the highest trees; and a pelican's nest, with young birde, was resting on a branch a considerable way below us.

The existing sluice is a very remarkable work, not merely from its dimensions, but from the ingenuity and excellence of its workmanship. It is built of layers of hewn stones, varying from six to twelve feet in length, and still exhibiting a sharp edge and every mark of the chisel. These rise into a ponderous wall immediately above the vents which regulated the escape of the wart is and each layer of the work is keps in its place by the frequent insertion, endwise, of long plinths of stone, whose extremities project beyond the surface, with a flange to key the several courses, and prevent them from being forced out of their places. The ends of these retaining atones are carved with elephants' heads and other devices, like the extremities of Gothic corbels; and numbers of similarly sculptured blocks are lying about in every direction, though the precise nature of the original ornaments are no longer apparent. nature of the original ornaments are no longer apparent.

We scarcely know which is most astonishing, the abundance and variety of animal life in Ceylon, or the luxuriance of its vegetation. Sir Emerson Tennent's glowing descriptions, and the curious and amusing anecdotes he has amassed, are perhaps the most attractive

T

parts of his book. The character and habits of the elephant in particular have never before been so attentively studied, or put in so favourable a light. There is something quite engaging in the mingled sagacity and simplicity, the mildness and the strength of this huge beast: we at length take his part against his captors, and still more against those who slaughter him for sport. In spite of the damage that the large herds that shelter in the forests during the day do to the rice lands and coffee plantations in the vicinity, and in spite too of an occasional "rogue" or outcast, who revenges his desolation by lying in wait in waste places to kill passing travellers, and delights in doing all the mischief in his power, we cannot read without regret that 3,500 were destroyed in the Northern province alone in the course of three years, or that one officer—Major Rogers—killed upwards of 1,400. Nothing can be more grotesque and at the same time more pathetic than the attitudes of the newly-captured prisoners in a "corral," as given in Sir Emerson Tennent's capital illustrations. We cannot give our readers the picture, but we can the scarcely less vivid description:—

Amongst the last that was secured was the solitary individual belonging to the fugitive herd. When they attempted to drag him backwards from the tree near which he was noosed, he laid hold of it with his truck, and lay down immoveable. The temple tusker and another [decoys] were ordered up to assist, and it required the combined efforts of the three elephants to force him along. When dragged to the place at which he was to be tied up, he continued the contest with despectation, and to prevent the second poose being placed on him with desperation, and to prevent the second noose being placed on his foot, he sat down on his haudches, almost in the attitute of the "Florentine boar," keeping his hind feet beneath him, and defending his fore feet with his trunk, with which he flung back the rope as often as it was attempted to attach it. When overpowered and made fast, his grisf was m affecting; his violence sunk to utter prostration, and he lay on ground, uttering choking cries, with tears trickling down his cheeks.

Exquisitely amusing is the account of the two young elephants included in the same "corral," who were the most vicious of any, brandishing their little trunks aloft, and attacking every one who came within their reach," but who, like other youngsters, could not resist the temptation of "prog," but "in the midst of all their agony and affliction seized upon every article of food that was thrown to them, and ate and roared simultaneously."

meously."

We must resist the temptation of dwelling longer upon these and other scenes in the forest life of Ceylon, and pass on to a brief glance at its more cultivated aspect. At one time, as we have said, Ceylon was rich in rice-fields; now, for lack of water, that branch of industry has fallen into decay, and rice has to be imported from India, to the great detriment of the island, whose rich soil lies waste. Cinnamon, the chief export of old times, and the bone of contention between Portuguese and Dutch, has ceased to be of much importance since other countries have competed in its production. Precious stones are still to be found in considerable numbers in the mountain regions, but the search for them is desultory, and chiefly taken to by the idle and lawless. Tea and cotton have been successfully grown, but the cultivation of these shrubs languishes for want of proper means for their preparation for the market. Cocoa-nut palms are extensively grown, and produce, in the oil, coir, and cordage manufactured from them, valuable articles of commerce. Fish are plentiful on the coasts, and fishing forms the occupation of a caste among the from them, valuable articles of commerce. Fish are plentiful on the coasts, and fishing forms the occupation of a caste among the natives; who, however, for the most part content themselves with raising enough for their own support from small patches of garden ground, or with the care of their palmyra and cocoa palms, and cannot be induced to lend their labour to the grand production of the island, the one to which it owes its modern prosperity, and to which it looks for future importance. The coffee plantations of the interior are entirely dependent on foreign labour, and their growth is much checked by the difficulty of labour. and their growth is much checked by the difficulty of

The cultivation of the coffee plant was introduced by the Dutch in or about 1690. Before that date it was indeed grown by the Singhalese, but only on account of its lovely flowers for the adornment of their temples, and of its young leaves as an ingredient in their curries. The experiment of the Dutch proved a failure and was given up; but the natives, having learnt this fresh use of the plant, continued to grow it in small quantities as they do at an increased rate to the present day. When the English expelled the Dutch, they experimented upon what crops would prove most suitable to the soil. Indigo was tried and abandoned; the sugar cane was but partially successful; but from one garden of coffee shrubs formed by the Governor, Sir Edward Barnes, on his upland estate at Gangarooroa in 1825 has arisen the net-work of plantations that overspread the sides of the hills, and at the time Sir Emerson Tennent writes (in 1857) the exportation of 67,453,680 lbs of coffee. The history of the early successes of coffee-planting, the mania for speculation that ensued upon it, and the subsequent crash,—of the present less brilliant, but more real and steady progress,—of the risks and discouragements that encounter the planter at every turn, from want of labourers and of roads, from the destructive rat or more destructive coffee bug,—accompanied as it is by a map of the coffee districts,—is one of the most important divisions of Sir James Emerson Tennent's valuable work. The cultivation of the coffee plant was introduced by the Dutch

LIFE OF EDMOND MALONE, EDITOR OF SHAKSPEARE. With Selections from his Manuscript Anecdotes. By Sir James Prior, M.R.I.A., F.S.A., &c., Author of "The Life of Edmund Burke," "Life of Oliver Goldsmith," &c., &c. Smith, Elder, and Co.

As a passable collection of trivial gossip and third-rate anecdotes appertaining more or less remotely to the literary circles of the latter part of the 18th century, this book may have interest for some readers, but as a biography its claims to attention are of the very slightest kind. Sir James Prior, in the somewhat laboured exordium in which he attempts to vindicate his task, furnishes exordum in which he artempts to vindicate his task, farmshes small justification for the large octavo volume here presented to the public. In an admirable example of the "Who drives fat oxen, &c.," style of reasoning he urges, "He who has expended learning and industry in making known the lives and labours of learning and industry in making known the lives and labours of others, deserves the record he bestows. It forms a debt of honour, it not of gratitude, which literary men are bound to bestow upon each other." We have all an interest in resisting the admission of this principle, for the consequences of its being acted upon are really dreadful to contemplate. Only fancy our having to look forward to the biographies of all the estimable men now "expending learning and industry" in the reading room of the British Museum "in making known the lives and labours of others." Biography of biographers, all would be biography! Since the celebrated proposal of a "Mutual Testimonial Society," we have met with no design against the peace of mankind so comprehensive and appalling as this.

"Of his own career I found little." Sir James Prior vaguely avanted.

prehensive and appalling as this.

"Of his own career I found little," Sir James Prior vaguely says, speaking of Malone. The assertion is fully borne out in the sequel. Malone's letters appear to have been mostly destroyed or lost, and those which are given in this biography do not awaken any very poignant regret on that account. There seems, in truth, to have been nothing remarkable, either in his character or his circumstances, and Sir James Prior is the very opposite to that sort of biographer, now and then, though rarely, to be met with, who, by psychological insight and descriptive power, can give interest to the life of a commonplace man. But Malone lived in good literary society, and there are occasional notices of eminent men which insociety, and there are occasional notices of eminent men which in , and there are occasional notices of children has used as us, because anything about them interests us to a certain however manufaring trite, or twaddling it may be. Take extent, however maundering, trite, or twaddling it may be the following about Horace Walpole:—

"When Mr Horace Walpole came from abroad about the year 1746, he was much of a Fribble in dress and manner. Mr Colman, at that time a schoolboy, had some occasion to pay him a visit. He told me he has a strong recollection of the singularity of his manner; and that it was then said that Garrick had him in thought when he wrote the part of Fribble, in 'Miss in her Teens.' But I doubt this much; for there is a character in a play called 'Tunbridge Wells,' in which that of Fribble seems to be evidently formed. However, Garrick might have had Mr Walpole in his thoughts.

"This gentleman (Mr Walpole) is still somewhat singular in manner and appearance: but it seems only a singularity arising from a very

"This gentleman (Mr Walpole) is still somewhat singular in manner and appearance; but it seems only a singularity arising from a very delicate and weak constitution, and from living quite retired among his books, and much with ladies. He is always lively and ingenious; never very solid or energetic. He appears to be very fond of French manners, authors, &c., &c., and I believe keeps up to this day a correspondence with many of the people of fashion in Paris. His love of French manners, and his reading so much of their language, have I think infected his style a little, which is not always so entirely English as it ought is be. He is, I think, a very humane and amiable man.

"He regrets much that he wrote the tragedy of the 'Mysterious Mother;' he printed only a hundred copies of it at Strawberry Hill, and cannot be prevailed upon to suffer it to be published. But it is in vain

cannot be prevailed upon to suffer it to be published. But it is in vain now to think of suppressing it, for these one hundred copies being dispersed immediately after his death it will certainly be reprinted. No work of his does him more credit.

"He has printed, I believe, at his own press a complete edition of all his writings in quarto. On examining the late Mr Cole's papers, a sheet of this new edition was found among them, which he took (it is imagined) without the knowledge of Mr Walpole from Strawberry Hill."

Here are some extracts taken at random from the "Maloniana,"

which form a considerable portion of the work :-

Dr Warburton had scribbled a good deal in many other of his books. He bequeathed them, I think, to be sold for the beaefit of the Bath Hospital: but his wife having notice of it, and the old man being for the two or three last years of his life in nearly a stage of dotage, she disposed of them in his lifetime, if I mistake not, to Payne, the bookseller, and they are now dispersed.

ey are now dispersed.

April 15, 1788.—Mr Courtenay happening to dine yesterday with Lord

April 15, 1788.—Mr Courtenay happening to dine yesterday with Lord Lansdown, took occasion to mention the 'Harley Papers' which his lordship was said to have bought from the executors of Mr West. The fact was so; but the much-talked-of letter of the Duke of Marborough was not among them. Lord Lansdown said that Harley intended at first to have sent the original letter to Lord Duplin, but on second thoughts substituted an exact copy, lest the duke should destroy the original. When this copy was shown to the duke, he desired it might be given to him, and is supposed to have destroyed it.

We really find it difficult adequately to express the negative character both of the biography and its subject. We know that to some of our readers we shall have conveyed very little idea of either: we have not stated that Malone was born in Ireland in 1741; went to Trinity College, Dublin, was called to the bar in 1767; settled in London in 1777; in 1795 wrote to Dr Parr for an epitaph which Dr Parr had promised for Johnson's monument; heard from Dr Parr that he would soon be in town; replied "by

inclosing a proposal from Sir William Scott, implying some difference of opinion as to the language employed, which produced cessation of correspondence for more than a month;" then "resumes his pen at greater length, fortified by the opinions of the club that certain alterations should be made in order to suit the general views," &c., &c. To such readers, and to such only, we strongly recommend the book itself. nd the book itself.

THE BOY'S PLAY BOOK OF SCIENCE. Including the various Manipulations and Arrangements of Chemical and Philosophical Apparatus required for the Successful Performance of Scientific Experiments, in Illustration of the Elementary Branches of Chemistry and Natural Philosophy. By JOHN HENRY PEFFER, late Professor of Chemistry at the Royal Polytechnic. Routledge, Warne, and Routledge, Farringdon street.

PEFFER, late Professor of Chemistry at the Royal Polytechnic. Routledge, Warne, and Routledge, Farringdon street.

There are probably few boys who are not at one time or another seized with a passion for chemistry, which drives them, at the imminent peril of eye-brows and fingers, and with "terrible pecuniary losses in retorts, bottles, and jars," to dabble deep in experiments, to the discomposure of maternal feelings, and the discomfort of domestic arrangements in general. A "Boy's Play Book of Science" is sure, therefore, of a wide and appreciating public, and in the present case it well deserves to find one. The abundant experiments this book contains are fully and clearly explained, and lead up from the simpler to the more complex in a lucid and satisfactory series. We must, however, mention that it is not, even in its earlier portions, suited to very young beginners, unless they are sufficiently advanced in other studies to comprehend the scientific facts on which these experiments are based, and the scientific terms by which they are illustrated and explained. The author, in his preface, states that he has been induced to compile his work from the frequent applications he has received from former attendants on his lectures for explanations as to the mode of performing different experiments that have struck their fancy; and he now offers it to the public in the hopes of leading his readers on "gradually from the easy reading of the present 'Boy's Book,' to the study of the complete and perfect philosophical works of Faraday, Brande, Graham, Turner, and Fownes.

A Man's Heart. A Poem. By Charles Mackay. Smith, Elder, and Co.

Dr. Mackay's reputation as a poet will not be increased by the publication of this, his latest poetical effort. We cannot call it a poem, though its writer, following established usage, challenges for it that title. It is, at best, a narrative in verse, and, to our thinking, a dull narrative in indifferent verse. If it were, in any true sense of the word, a poem, we should not care to find fault with its story for either improbability or want of interest. Lyric poetry is not, like dramatic poetry, bound by strict rules of art; its writer may follow his imagination, even if it lead him away from his principal theme; or out of a mere nothing as to incident, he may build up a song that the world will not willingly let die. In narrative poetry, again, such as Scott's, where the excellence lies rather in the vivid life and action of the story, in the way in which an interesting plot is set off with all the wealth of a fertile fancy, than in poetic beauty of thought or of expression, the verses are little more than an ornamental setting to the tale, and, if spirited and good, can dispense with being of the highest order of poetry. In "A Man's Heart" we have neither one thing nor the other,—neither lyric beauty nor the charm of a well-told romance. Dr Mackay has and good, can dispense with being of the highest order of poetry. In "A Man's Heart" we have neither one thing nor the other,—neither lyric beauty nor the charm of a well-told romance. Dr Mackay has been praised for "singing healthily," and much in his former writings is deserving of the praise; why, then, does he here hold up to view such a weak, morbid, passionate thing, and call it "A Man's Heart"? We should be sorry to look upon it as such in any representative light, and think the spectacle, taken as an individual portrait, far from edifying. It seems to be a cross between Byron's heroes and the lover of "Mand." To love with a vague and dreamy love, chiefly shown by weaving flowers and verses.— Byron's heroes and the lover of "Maud." To love with a vague and dreamy love, chiefly shown by weaving flowers and verses,—to rush headlong, when disappointed, into the "the great whirl and Maelstrom of the town,"—to "live a life of lightning," whatever that peculiar mode of existence may be,—to hate the weak girl who has forsaken one—then to come round in violent reaction and again adore her,—to be haunted, when she dies, by

A dark presentiment that he should de
When he had ended an appointed task,—
to accomplish, accordingly, that important task, the painting a portrait and the composing of much dismal verse,—and then to die after the following sentimental fashion:—

And when at last

And when at last

The work was done, and art could do no more,
His mournful prophecy of love and grief
Fulfilled itself: and breathing the one name,
He laid his head upon his father's breast
And clasped the sympathising hand, and died:—
if this is Dr Mackay's notion of what "A Man's Heart" either is,
or ought to be it is.

or ought to be, it is not ours.

The Art-Journal. May, 1860. Arthur Hall, Virtue, and Co. General's powers of rendering the simple grace and unconscious beauty of early girlhood are well known to all who have seen the famous "Broken Pitcher" in the Louvre collection. The

same qualities he has given with equal success in a picture called "Simplicity" in the Royal collection, and which is called "Simplicity" in the Royal collection, and which is beautifully engraved in this number of the Art-Journal. It represents the head and bust of a young girl, dressed in a very picturesque costume; the sweetness of the countenance, the tenderness of the half-gazing, half-abstracted eyes, and the simple beauty of the youthful figure, are given with unrivalled grace. The two remaining engravings give us a Belgian picture by Baron Wappers, rather hard and stiff in drawing, but displaying strength and character, called "The Ommeganck at Antwerp," and a statue of "Ganymede" by E. S. Bartholomew, a young American who died in 1858 while studying in Rome; there is a great deal of promise in the figure. Of woodcuts, besides those illustrating South Wales and the Hudson river, we have several of Mr Dobson's pictures which are familiar to visitors of the Royal Academy during the last few years, several scenes from a new illustrated during the last few years, several scenes from a new illustrated edition of the Waverley Novels, and copies of a few of the Londesborough antiquities, curious specimens of antique

The Stamp Acts Considered and Simplified. A pocket digest or Stamp Duties chargeable in the United Kingdom, condensed under each head of Duty, with general directions on stamped instruments, regulations for stamping executed instruments, and for allowance of spoiled stamps, and an Appendix containing tables of Stamp Acts, ad valorem duties, &c. Fourth Edition. Vacher and Sons. 1860.

This is a very timely and useful publication. Our readers are nware that the New Stamp Act has given occasion for innumerable questions which it is the object of the changes made in this fourth edition of the work before us to solve.

Foreign Correspondence,

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The Legislative Body has commenced the discussion of the bill relative to the reduction of duties on sugar, coffee, cocoa, and tea. The debate thus far has presented nothing remarkable. The opponents of the bill have attacked it with the common-place arguments nents of the bill have attacked it with the common-place arguments which are urged against every financial reform,—namely, that the measure is inopportune, that the Government can ill afford to lose the diminution of revenue it will occasion, that it will not be of any great advantage to consumers, and so forth. But, in spite of all that may be said against it, the bill will be adopted, and by a very large majority too. It fixes the duty on native sugar at 25f the 100 kilogs (2 cwts); on colonial and foreign sugar imported by French vessels, at from 25f to 34f; and on all imports by foreign vessels, at 39f; on coffee the duty is to be 30f to 50f the 100 kilogs by French vessels. 55f by foreign: on cocoa, 20f to 35f by French vessels, at 39f; on coffee the duty is to be 30f to 50f the 100 kilogs by French vessels, 55f by foreign; on cocoa, 20f to 35f by French vessels, 40f by foreign; on tea, 75f to 90f by French vessels, 100f by foreign. The bill, however, enacts that up to the 30th June, 1866, French colonial sugar shall continue to enjoy the reduction of 3f the 100 kilogs accorded by a law of 28th June, 1856; and that the proposed duties on tea shall not, as regards the imports by foreign vessels, come into operation before the 1st May, 1866. Certain concessions also are made to coffee from India and other places put on board French ships previous to the 1st June, 1860.

The Superior Council of Commerce, which, as you are aware, has been charged to fix the duties to be imposed on British productions imported into France under the treaty, has since my last held sittings; and those sittings have been devoted to the question of the duties on iron. The ironmasters are, as was to be expected, making a desperate effort to obtain the uttermost farthing of the 30 per cent. ad valorem duties up to 1864, and 25 per cent. afterwards mentioned in the treaty; and for that purpose are overwhelming the Council with statements and statistical tables, destined to show that, with a lower protection, French ironworks

must be ruined. The cotton-spinners, the cutlers, and others mean, it is announced, to take up similar ground with regard to their several branches of manufactures. These people are besides, it appears, labouring to convince the Council, the Legislative Body, the Ministers, and other people in authority, that if the 30 and 25 per cent. duties were to be imposed on all British articles the English would have noimposed on all british articles the English would have not thing to complain of, inasmuch as the treaty would be strictly and honestly fulfilled. But I see with pleasure that a writer and honestly fulfilled. But I see with pleasure that a writer in the Journal des Débats, speaking apparently under what the French call "inspiration," energetically combats this extravagant pretension, and maintains that it cannot be admitted without a violation of good faith to England. "It is evident," says the writer, "to every man of sense, that the English negotiators of the treaty, when they consented to the entire abolition of duties on French manufactures imported into England, must have asked on French manufactures imported into England, must have asked for and obtained explanations as to the manner in which France would act in regard to the said maxima duties of 30 and 25 per cent. ad valorem. It is impossible that that point should not have been long discussed, for there was nothing more important in the negotiation. The negotiators on both sides were too well informed not to know that in nineteen cases out of twenty duties of 20 and 25 per cent are equivalent to prohibition; and duties of 30 and 25 per cent. are equivalent to prohibition: and, consequently, it must have been clearly explained that the duties of 30 and 25 per cent. would be the exception and not the rule." This important declaration will, without doubt—in spite of all the Protectionists can do—be honestly acted up to by the Council.

Among the numerous objects mentioned in the treaty, are machinery and mechanical instruments, and the new duties which are to be fixed on them are to come into operation not later than the are to be fixed on them are to come into speration not here than the salts December of the present year (Art. 15). The Government has, in compliance with the wish generally expressed, presented a bill to the Legislative Body which enacts that machinery ordered abroad before the 15th January of the present year shall be allowed to be imported at the new duties which may be adopted. The existing duties are, however, to be paid on imports being made, but the difference between them and the new duties is to be re-

The Annuaire de l'Economie Politique et de la Statistique pour 1860 has just been published by Guillaumin and Co. It is the 17th volume of the series; and, excellent as the sixteen others were, is more complete and valuable than they. The first and were, is more complete and waluable than they. The first and largest divisions of the work are set apart to France; and in it we find the latest statistics respecting the population, the commerce, the shipping, the budget, the national debt, the army, post office, telegraph, and criminal, civil, and commercial justice; also accounts of the operations of the savings banks, the Bank of France, the Discount Bank, and other great financial establishments; a list of laws and decrees on financial and commercial subjects recently promulgated; and numerous other matters. The statistics are drawn from official sources, are most carefully directed, are set forth with admirable clearness, and are accomdigested, are set forth with admirable clearness, and are accompanied with grave and learned disquisitions. Altogether they give, in a narrow space, a more complete and more correct idea of the material and moral condition of France than could be obtained from months' studies of official documents, of newspapers, magazines, and books. The rest of the volume contains the latest statistics respecting the population, budgets, commerce, public debts, &c., of every European and American State, and of some of Asia and Africa; an account of the discussions of the Academy of Asia and Africa; an account of the discussions of the Academy of Moral and Political Sciences, and of the Society of Political Economy of Paris, and an admirably-written review, by M. Maurice Block, of the principal economic events of the last year in France, England, and America. From this brief description of the contents of the Annuaire, your readers will see that the work is one which is indispensable to all who, as merchants, as politicians, or as writers, have to occupy themselves in any way with the material interests of different countries. The editors of this valuable annual are Messrs Block and Guillaumin, and the highest credit is due to them for the industry and sagacity with which they have executed their task.

For some time past the receipts of the railways have presented a decline, compared with the corresponding periods of last year. For the week ending the 5th May, the last made up, the decline was nearly 12 per cent. per kilometre on the Eastern line, compared with the same week of 1859; nearly 144 per cent. on the Orleans line, nearly 26 per cent. on the Mediterranean, nearly 94 on the Western, nearly 3 on the Northern, 164 on the Lyons to Geneva, rather more than 32 on the Dauphiné. On the Southern, on the contrary, there was an increase of a little more than 43.

The Legislative Body, in one of its recent sittings, passed a bill authorising the Credit Foncier Company to execute for what is called the Sous Comptoir des Entrepreneurs de Batiments (a sort fank for buildess and ether appeared in the best of the company of t caned the Sous Comptoir des Entrepreneurs de Batiments (a sort of bank for builders and others engaged in the building trade) the operations formerly done by the Discount Bank. The Credit Foncier is to discount for the Sous Comptoir bills bearing its endorsement for an amount not exceeding 380,000/ sterling a year, at the rate of the Bank of France, with 1 per cent. for commission, and the Sous Comptoir is to transfer to the Credit Foncier as security three-fourths of its capital and also the guarantee to the

amount of 100,000 English given by the Government. Transaction will increase considerably the business of the Cre Foncier, and it will at the same time give facilities to the build which they were unable to obtain from the Discount Bank.

At a meeting of the shareholders of the Caisse Generale des Actionnaires, an enterprise got up by M. Millaud of speculating notoriety, the losses for the year 1859 were stated to be 1,690,889ff

The shareholders of the famous Isthmus of Suez Canal have also The snareholders of the famous istumus of Suez Canal have also held a meeting. The report read attacked the English Government for its opposition to the enterprise, and praised the French Government for supporting it. It stated the outlay made by the Company, including that for preliminary surveys, at 9,000,000f, and that the disposable resources are 37,000,000f. A resolution to continue the works was come to.

The events in Sicily and Naples, and the belief that the new phase into which the Eastern question is entering is full of difficulty, have had a very depressing effect on the Bourse. To-day, business is suspended, this being Ascension-day. The quotations

Subjoined is an account of the markets:

FLOUR at Paris, yesterday, was: choice, 55f to 59f the sack of 15g kilogs; inferior, 59f 50c to 60f; ordinary, 57f to 58f. Four marks, present month, 57f; June, 57f 50c to 57f 75c; July, 59f 25c to 59f 50c.

WHEAT at Paris, yesterday, declined, and business was not active. Choice was 35f to 35f 50c the sack of 120 kilogs; good, 34f to 34f 50c; ordinary, 32f 50c to 33f 50c. Of the provincial markets, 27 present a rise of from 10c to 50c the hectolitre; 110 a fall of from 5c to 1f.

COTTON.—At Havre, in the week ending Friday, the sales were 10,914 bales, and the arrivals 23,518. The quotations (deduction made of 12f per 50 kilogrammee, the amount of import duty struck off by the new law) were the same as in the previous week; low New Orleans being 68f, and very ordinary ditto 95f. On Monday and Tuesday low remained

and very ordinary ditto 95f. On Monday and Tuesday low remained at 88f.

Covere...—At Havre, in the week ending Friday, a fair amount of business was done, and prices were maintained. 230 sacks Hayti Port-en-prince, disposable, went at 82f the 50 kilogs in bond; 300 ditto, for delivery, same price; 126 sacks Gonsives, disposable, 84f; 300 Cape, for delivery, 83f 25c; 1,120 sacks Rio not washed, disposable, 75f to 77f; 3,300 cacks ditto, for delivery, 75f to 77f 50c; 210 washed, disposable, 87f to 88f; 326 Bahis, for delivery, 75f; a small lot of Reunion, disposable, 87f to 88f; 326 Bahis, for delivery, 73f; a small lot of Reunion, disposable, 87f to 88f; 326 Bahis, for delivery, 130f. The arrivals exceeded 10,000 sacks. This week, Hayti Cape has been quoted at 83f to 84f; Hayti, 82f to 82f 50c; Gonsives, 85f; Rio, 77f; Ceylon triage, 133f; Costa Rica, 133f 50c, At Bordesux, 1sat week, some rather large sales were made. Costa Rics, nt 2f 70c to 2f 80c the kilog duty paid; Malabar and Mysore, 2f 75c to 2f 84c; Java, 2f 80c to 2f 85c; Moche, 3f 30c to 3f 40c; ditto triage, 3f 50c to 3f 60c; Ceylon native triage, 2f 66c to 2f 68c; ditto plantation, 2f 85c to 2f 95c. At Nuntes, last week, 6,586 sacks Java were sold at 139f to 143f duty paid, and a small lot of Reunion at 145f. This week some Reunion has been disposed of.

Sugar...—The demand at Heure, in the week ending Friday, was more

Sugar.—The demand at *Havre*, in the week ending Friday, was more active than in the preceding week. 312 hogsheads french West Iadia went at 62f to 52f 50c duty paid; 107 ditto for delivery, 62f 50c; 88 ditto "usine," disposable, 62f 50c; 1,684 bales Reunion, 64f 50c; 1,600 ditto "gros grain," 69f duty paid; 1,600 caaks Havana, 37f to 38f in bond. The arrivals were about 1,500 hogsheads French West India, and about 5,000 caaks Havana. This week, French West India has been done about 5,000 casks Havana. This week, French West India has been done at 62f 50c. At Bordeaux, last week, about 1,500 bales Reunion went at 63f 50c; and 286 sarks gros grain at 66f. In French West India nothing was done, but quotations were nominally 62f 50c to 63f 50c. At Nanta, last week, some large lots of Reunion went at 64f to 67f 50c; and some gros grain at 69f to 71f; French West India, common quality, 54f 87kc to 54f 75c; and ditto usine, 66f.

INDIGO.—At Havre, last week, nothing was done, and the sales that week have not been important. At Bordeaux, last week, 95 cases Bengal went at 2f 25c to 2f 35c, and 110 Kurpah and Madras at prices not stated. This week several sales have been made.

HIDES.—The demand at Havre, in the week ending Fridsy, was not very animated. 2,000 Buenos Ayres dry went at 152f 50c to 157f 50c the 50 kilogs duty paid; 1,530 Pernambuco drysalted, 107f; 300 Rio Jansiro salted, 69f; 930 Iceland salted cow, 52f 50c; 965 horse salted, 15 ct the kilog. The arrivals were about 30,000. This week business has not been active. about 5,000 casks Havana.

If 5c the kilog. The has not been active.

Wool.—In all the transactions which took place at Havre, last Monday, purchasers were allowed all the benefit of the modifications in the import duties effected by the new law. 51 bales La Plata unwashed went at 1f 65c to 2f 90c the kilog; and 76 bales sheepskine, Buenos Ayres unwashed, at 1f 15c to 1f 65c. The arrivals exceeded 1,200 bales. This week, Buenos Ayres has been at 1f 60c to 1f 90c; ditto merino, 3f to 3f 25c; La Plata unwashed, at 1f 60c to 3f 25c.

Tallow.—At Havre, last week, there were no sales; nor have there been any this week. At Paris, yesterday, the 100 kilogs were 136f 70c.

Spinits.—At Paris, yesterday, 3-6 was 105f the hectolitre; Montpellier, 140f. At Bordeaux, the day before yesterday, 3-6 Languedoc was 135f.

BBUSSELS, May 16.

At a recent meeting of the shareholders of the Nouvello Montague
Company, a dividend of 75f per share for 1859 was declared; payable,
however, only on the lst July and the Slat December next. The quantity of zinc and lead extracted in the course of the year was stated to be
3,343 tons.

Correspondence.

COTTON SUPPLY.

TO THE EDITOR OF THE ECONOMIST.

TO THE EDITOR OF THE ECONOMIST.

Sis,—It is very desirable that the present position of the prospects of supply and demand should be fairly understood. It may be questioned whether the supply of cotton now available is not more than sufficient for the requirements of the world, and no doubt a steady progressive increase will take place in the present sources of supply. The American crop of 1859-60 it is now certain will exceed 4,500,000 bales, and, before proceeding to further remarks, let us see what are now the known capabilities of supply statisties:—

| America can give | 4,500,000 650,000 350,000 |
|--|---------------------------------|
| In all While the extreme consumption of the world is say per week: Distrest Kingdom 46,000 Continent 90,000 United States 17,000 | 5,500,000 |
| In all 93,000 bales per week, or per annum | 4,836,000 |
| Excess of supply | 664,000 at year will pro |
| Blocks in Europe on Slat December, 1859, about Total supplies from America in 1860 of 1859-00 East December 500,000 | hales. 600,000 |
| Total available supply | 5,100,000 8,9 52,000 |
| Leaves a stock of | 1.148,000 |

from other cultivations.

The supplies from India must always be fluctuating, although, with resumerating prices, they would be largely increased; but the experience of the last year has shown that manufacturers will not use East India cotton, except at a great depreciation in value, when the supply of American is abundant. Notwithstanding the average price of American cotton was higher in 1659 than in 1858, the average price of East India was depreciated 1½d per 1b, while the consumption fell off from 6,500 to 3,400 bales per week. The consequence has been a ruinous loss to importers, and a general discouragement to the prospects of the trade.

The Association make various suggestions for the advancement of cultivation of cotton in India. Much has already been done in the improvement of quality, and Indian cotton is now, as a whole, as free from seed leaf and impurities as can be desired. In the latter respect, it bears a favourable comparison with the large proportion of "sandy" cotton from America. The general range of price, however, in the Eaglish market has been but barely remunerative for some time, and the value of labour is so rapidly rising in India, that a higher range of prices for cotton can alone maintain the cultivation. At present the prospects held out to Indian-grown cotton are extreme difficulty of sale and ruinously depressed prices when the supplies from America are sufficient, with the chances of an active demand should any mishap befall the American crop.

—Yours, obediently,

May 16, 1860. diently, May 16, 1860.

COMMERCIAL AND MISCELLANEOUS NEWS.

A commercial report from Calcutts, dated the 7th ult., remarks:—The prices for which all produce is held deters purchasers; with the scarcity of tonnage, and the higher rates ruling, produce cannot be laid down in

London at anything approaching to quoted value. Rice firm; silk in demand; piece goods less demand; hides less firm; oil seeds held firmly; jute less demand; shellac sought for; cutch lower. A general dulness has hung over the import market, and piece goods, owing to the unfavourable accounts from all the up-country markets, remained in limited demand at about former prices. Only few kinds of grey goods, suitable for the season, have been in fair demand, with a slight improvement in prices. Buyers do not feel inclined to operate freely, and they limit their purchases to their immediate wants. An active demand for European and purchases to their immediate wants. An active demand for European and local account has caused a considerable advance in the value of Government securities. The 5½ per Cents. have been sold at from 102-12 to 103, and the 5 per Cents. at 96. For the 4 per Cents. there is some inquiry at 83. Money is gradually becoming easier, but cannot be said to be abundant, either in the bazaar or with the banks.

The advices at hand by the last mail from the West Indies are un-teresting. In the value of produce scarcely any change had taken place. The Moniteur has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month are added:—

At the corresponding period of the year 1850, a great sensation had been occasioned by the announcement that in consequence of the failure of the good offices of France in the Anglo-Greek quarrel, she had demanded explanations from the English Government, and that those explanations being, as the Prince President's Ministers declared in the Assembly, "not such as France had a right to expect," the French Ambassador had been recalled from London. The French funds immediately fell 2 per cent., and Consols 1 per

In 1857, strong reinforcements of troops were in course of despatch to India to quell the mutinous spirit of the Bengal native army. The money market was tight, gold being bought largely in this market for the Bank of France, whilst the drain of silver to the East was heavy.

In 1858, Lord Derby's Ministry was in a critical position. Money was extraordinarily abundant. The Bank of England had taken a million of Exchequer Bonds created in lieu of others paid off.

In 1859, the manœuvres of the opposing armies in the North of Italy attracted chief attention. Prussia had assumed an attitude of armed watchfulness, and the Prince Regent had expressed his determination to "maintain the basis of

European public right and the balance of power in Europe."
The Queen of England had issued a proclamation of neutrality. The subscriptions to the French loan of 20,806,000l had reached no less than 92,280,000l, of which 3,200,000l were for sums representing not more than 10f (say 8s) of annual interest. The total number of subscribers was 525,000. The pressure in the money market had died away, and the English funds were recovering, owing to the large investments by the public.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 163,393l; in 1857, a deficiency of 8,856,430l; in 1858, a deficiency of 704,354l; and in 1859, a deficiency of 2,267,192l. In 1860, the deficiency is 8,040,358l.

There is no alteration of importance in the money market. As the return given above shows, the commercial demand at the Bank of England has become light, and the bills discounted by that establishment during the pressure some weeks ago are running off. Yet throughout the week the terms in the open market have approximated closely to those of the Bank, the rates for the best bills not having been below $4\frac{1}{4}$ to $4\frac{3}{8}$ per cent. Within the last two days the demand has revived, and little or no business was done teday below $4\frac{3}{8}$ to $4\frac{1}{2}$ per cent. The applications at the Bank to day were likewise considerable to-day were likewise considerable.

Money has been in active demand in the Stock Exchange, but the supply to-day was rather more liberal at 31 to 4 per cent. on Government securities for short periods.

The arrivals of specie and bullion since the date of our last report have been extensive, comprising a total of nearly 700,0002, principally from Australia, the West Indies, and the United States. The improvement in the exchange at New York is causing a steady influx of specie from that quarter, which seems likely to continue. But for a partial revival in the demand for gold for exportation to the Continent, a much larger addition would have been made to the stock in the Bank

The amount of gold sent into the Bank since the date of the return given above is only 8,000% sent in this day, but further considerable parcels are expected to be taken there, the amount still awaiting disposal in the market being considerable.

It is understood that, owing to the recent rise in the China exchanges, and the consequent increase in the demand for specie for that country, the Calcutta and China packet of the 20th inst. will take about 300,000*l*, principally

The Omar Pasha, Southampton, and Dream, are the only vessels known to be on the way from Australia with gold; the total is 164,500%.

The exchanges on St Petersburg and Vienna exhibit the effect of the renewed political distrust, the former having fallen and the latter risen. The movement, in each instance

is in favour of this country. The other exchanges are firm.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley :-

Langley:—
Gold.—Some additional arrivals of gold have come to hand since the date of our last circular, comprising the White Star, from Melbourne, with 44,5001; Norwood, from Melbourne, with 38,000?; Jessie Boyle, from Melbourne, with 33,000?; Result, from Melbourne, with 162,6401; Shannon, from West Indies, with 38,000?; Hammonia, from New York, with 41,000!; Vanderbilt, from New York, with 142,000!; Athenian, from the West Coast of Africa with 10,000! Coast of Africa, with 10,000%. Of these amounts, about 120,000% have been sent to the Bank; about 200,000l remain to be dealt with; and the balance has been purchased for exportation. In addition to the above, the City of Baltimore has brought about 100,000l, principally in gold; but this sum will not be in London until to-morrow. A considerable portion of the gold from America consists of Eagles, and we are therefore able to give a price for actual business, some large amounts having been sold to day at 76s 3½d per oz. About 215,000l is now on the way from Australia, and the next mail is expected to announce the sailing of several additional vessels for England with gold.

Silver.—The market for silver since our last circular of the 10th inst. has been tolerably active. The Shannon steamer, from the West Indies, brought 81,000l; this has been sold at 5s ½d per oz. for the East, continental buyers being unable to give this price. The Sultan, from Lisbon, has brought 3,486l; and the La Pinta (on the 17th inst.) takes 5,320l for the West Indies.

Mexican Dollars.—There have been considerable sales of Mexican dollars during the last week; and the price has risen from 62d to have been sent to the Bank; about 200,000/ remain to be dealt

dollars during the last week; and the price has risen from 62d to 62½d per oz. It is anticipated that the steamer of the 18th inst.

will take out rather a large amount for China. The Arago, from New York, has arrived with 10,000l; and several other remittances

New York, has arrived with 10,000; and several other remittances have also come to hand.

Exchange on Bombay and Calcutta for Bank drafts, at 60 days sight, continues 2s to 2s 0\frac{1}{3}d, with very little doing. Madras, nominal, 2s. Documented bills, 1s 11\frac{1}{3}d to \frac{5}{8}.

India Government loan notes have shared the depression of all

India Government loan notes have shared the depression of all other securities, in consequence of the unsatisfactory aspect of continental politics; since our last quotations they have fallen a good 1 per cent. Immediately after delivery of the last letters from Calcutta the market became firm, and some sales took place at 104½ for 5½ per Cents.; but we cannot quote them better to-day than nominal, at 102½ to 103½ for 5½ per Cents., and 97½ to 98 for 5 per Cents.

An instalment of 8 per cent. fell due on Tuesday on the Canada Loan of 2,800,000l. The next payment is of like mount, and due the 16th proximo, making 50 per cent. paid.

On Tuesday, a call of no less than 1,500,000l (2l per share) fell due on the shares of the South Austrian and Lombardo-Venetian Railway Company; but the majority of the payments had been effected in advance, and the great bulk of the shares are held abroad.

The prospectus of the Thames and Mersey Marine Insurance Company, to the preparation of which reference has been made in the last two numbers of the ECONOMIST, was published on Monday morning. The direction is one of the strongest ever brought before the public, comprising no less than thirty-two well-known commercial names. The interests of London, Manchester, and Liverpool are thus well represented and combined. The consequence has been a great rush for the shares. The London subscription list great rush to the sames. In 20 clock, the applications in this place alone having reached 240,000 shares, whilst the entire capital of the Company consists of only 100,000%. The lists in the provinces are, likewise, closed. It is evident that the majority of the applicants will receive only a small proportion of the amount applied for, and that many will be entirely disappointed. The shares opened on Monday morning at \$\frac{3}{4}\$ to 1 prem., rose on Tuesday to 2 prem. "buyers," fell yesterday morning to 1 to 14 prem., rose again this afternoon to 2 prem., and closed at $1\frac{1}{5}$ prem. The advance to day was caused by the announcement that the Company have secured the services of Mr Henry Bur-

nand, one of the most eminent underwriters of Lloyd' The applications for the shares in the London and South African Bank represented a total considerably larger than the amount to be allotted in this country (one-fourth of the capital being reserved for the colony), yet, under the influence of the depression generally prevailing in the Stock Ex-

change, the price has declined to 4 dis to par.

The following important privileges have been granted by an Imperial ukase promulgated on the 8th inst., to the bondholders of the Three per Cent. Russian Sterling Loan of 1859, negotiated by Messrs Magnus and Thompson, Bonar and Co., viz.:—1. The bonds of the said loan are to be accepted by all departments of State as securities for contracts and supplies at the rate of 420 silver roubles for every 100l of stock (equivalent to about 63l per cent.). 2. The Imperial Commercial Bank and its branches are to accept the said bonds on discount, advancing at the rate of 340 silver roubles for every 100% of stock to the holders (equivalent to about 511 per cent.).

The Muswell Hill Land Company, which has issued its prospectus this week, is formed with a view to purchase the estate of 457 acres, on which it is proposed to build the Great Northern Palace. The capital of the Land Company is to be 140,000%. The sum to be paid for the property is 135,000%, of which 70,000% will be in paid-up shares.

To-morrow comes into operation the new rule, according to which the whole of the London banks will close at three o'clock on Saturday afternoons, instead of four, as hitherto. The rule will also be acted upon by the discount houses.

The Australian Mail service is once more about to be altered. The Peninsular and Oriental Steam Company find that they cannot make the service pay, at the present amount of the subsidy (189,000*l* a year), and they have therefore intimated to Government their intention of throwing up the contract. The montaly communication with Australia, however, is not to be discontinued, for the Company have submitted a new plan to the Government, entailing a total subsidy of only 120,000l a year. Upon this plan, it appears the Company intend to act, the colonial

moiety of the subsidy having already been guaranteed by the colony of Victoria alone. The Company undertake to maintain a monthly service between Melbourne (only) and Point de Galle (Ceylon), in connection with one of the bimonthly lines of postal steamers which now convey the India and China mails. At Point de Galle the Australian mails will be transferred to the Indian steamers. The only port between Melbourne and Point de Galle at which the Australian packets will touch will be King George's Sound, for coaling purposes. The conveyance of the Sydney, Adelaide, and other intercolonial mails to and from Melbourne must be performed by steamers chartered for the purpose by the several Colonial Governments, as the Peninsular and Oriental Company's packet, instead of making a tour of the colonies, will arrive at and sail from Melbourne alone. cipal remonstrance against the alteration will probably emanate from New South Wales and South Australia. It is intended that the new arrangement shall come into ope ration with the mail leaving Australia on the 22nd of July, and with the mail leaving England on the 20th—26th of June. Consequently, the June mail via Southampton will leave Engand on the 20th instead of the 12th, and the outward mail via Marseilles will go on the 26th instead of the 20th. Instructions to this effect have been sent out to the Company's agents in Australia by the mail of this day.

A further important fall has taken place on the Paris Bourse, which has been violently agitated. Distrust of the designs of Russia in Turkey and of the French Government in Italy, now that Garibaldi's expedition is fanning the embers of insurrection in all the Southern portion of that Peninsula, preoccupies the mind of the financial world. It is foreseen that any further development of French ambition in that quarter will probably arouse the active opposition of England. The 3 per Cent. Rentes, which closed on Friday last at 70.25, had also fallen this morning to 68.55, and closed this afternoon at 68.80 for money, and 68.85 for the account. The fall established during the week conse-

quently amounts to 13 per cent.

The English funds have also shown much depression, though relatively far steadier than the French Rentes. The lowest point was touched yesterday, when Consols (which closed on Friday last at 95½ to ½) descended to 94½ to ½ for the 6th of June. To-day more firmness was manifested, and the final quotations were 94½ to ½ for money, and 94¾ for the account. for the account. The fall since last week is \(\frac{1}{2} \) to \(\frac{3}{2} \) per cent. The decline would have been more considerable but for the approach of the Consols dividend period. The market will probably continue very sensitive to the advices from abroad. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

A heavy fall has likewise occurred in British railway stocks, it being feared that the fair prospects of trade may be marred by the complications on the Continent. Speculative holders of stock have shown especial eagerness to re and as the Stock Exchange is in no condition to absorb large amounts, the pressure of sales was attended with an imme-diate effect upon prices. To-day's closing quotations, com

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.12\frac{1}{2} per 1l sterling. On comparing these rates with the English Mint price of \$l 17s 10\frac{1}{4} per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422\frac{1}{2} per mark, and the short exchange on London is 15.3\frac{3}{4} per 1l sterling. Standard gold at the English Mint price is, therefore, at about the same price in London as in Hamburg.

The Commercial Times.

ADDITIONAL MAILS FOR CARTHAGENA, NEW GRANADA.—In addition to the regular mails for Carthagena which are now forwarded by the West India packet leaving Southampton on the 2nd of each month, a wail for Carthagena will, in future, be made up for conveyance as far as Colon by the West India packet sailing from Southampton on the 17th of the month; it being understood that the communication between Colon and Carthagena by means of private ships is frequent, and that mails can be thus forwarded with tolerable certainty of reaching their destination during the fortnight in which there is no direct packet communication. Besides correspondence for the town of Carthagena, any letters, &c., for the interior of New Granada posted between the 2nd and 17th of the month will be sent in this additional mail.

MALLS FOR BRAZIL BY FRESCH PACKET FROM BORDMAUX.—Informs.

and 17th of the month will be sent in this additional mail.

MAILS FOR BRAZIL BY FRENCH PACKET FROM BORDRAUX.—Information has been received from the Director-General of the French Post Office of the establishment of a line of French packets to run once a month between Bordeaux and Rio de Janeiro, calling at Lisbon, St Vincent (Cape de Verds), Pernambuco, and Bahia. The first packet of this line is appointed to be despatched from Bordeaux on the 24th instant; after that date the packets will leave Bordeaux on the 25th of each month. To reach Bordeaux in due time for conveyance by these packets, letters, &c., must be despatched from London, at the latest, by the morning mail of the day before the packet is to sail. The following table shows the rates of postage to be paid upon letters, newspapers, and other printed papers intended for conveyance by the French packets:—

COMMERCIAL EPITOME. FRIDAY NIGHT.

At Mark lane, to-day, there was an improved feeling in the demand for both English and foreign wheat—the supplies of which were limited—at an advance on Monday's rates of 1s per quarter. Barley moved off freely, at extreme rates; but malt commanded very little attention. Oats were 6d per quarter dearer, and the value of all other articles was well supported. The week's imports from abroad are limited, viz., 4,860 quarters of wheat, 4,740 barley, 5,020 oats, 250 sacks and 340 barrels of flour.

There was an improved inquiry for wheat at Liverpool this morning, at 1d to 2d more money compared with Tuesday's rates. We have received the annexed communication, dated the 3rd instant, from Messrs Briggs and Co., of Alexandria:—

The advices received from England by last mail produced for the moment an excited feeling in our grain markets, but this has gradually subsided. Indian corn, which underwent an advance of nearly is per quarter f.o.b., has now sunk beneath the quotation we gave by our last. Wheat and beans, however, are still in active demand. Barley continues excessively scarce, but sums trifing lots of the new crop have commenced appearing in the market. The wheat and barley crops, now being reaped, promise exceedingly well. The crop of beass in Upper Egypt will be a full average, but in Lower Egypt, the plant, when in flower, suffered great injury from violent winds. The yield of Behera beans will, consequently, be very light, the crop in some districts being a total failure. The following are current rates:—Wheat—Saide, 36s 6d to 37s; ditte, suffered great injury from violent winds. The yield of Behera beans will, consequently, be very light, the crop in some districts being a total failure. The following are current rates:—Wheat—Saide, 36s 6d to 37s; ditto, Behera, 36s to 36s 6d: beans—Saide, new, 28s 9d to 29s 2d; ditto, Behera, 36s to 36s 8d: 28s; ditto Behera, 27s to 27s 8d: Indian corn, 26s to 27s; barley, 21s 10d to 23s per quarter; cotton seed, 4f 10s to 5f 1s per ton. Freights are somewhat firmer, say 4s to 4s 6d per quarter for beans to the United Kingdom for orders. To a direct port, 3s 6d to 3s 9d. Cotton to Liverpool, 2d per lb. Grain to Liverpool by stemmer 4s 6d per quarter. Exchange on London at three months date steady, at 96s pinstres per £ sterling. Marseilles, 5.18f to 5.19f per dollar of T. P. 20.

The sales of the week in the Liverpool cotton market have amounted to 48,000 pales, including 35,000 bales to spinners, 3,000 bales on speculation, and 10,000 bales for export. Quotations remain unchanged since last Friday. To-day the market closes quiet: sales 7,000 bales. There has been much less activity closes quiet: sales 7,000 bales. There has been much less activity during the past week in the market; spinners have been lately laying in large supplies, and seem now inclined to look on for a time, and await the chance of coming in on easier terms. Meantime plenty of fresh cotton is adding to the already large stock, so that there appears little chance of present rates being maintained. The American crop prospects continue very favourable, and political aspects are not at all cheering.

New Orleans advices to the 4th inst. state:—"Cotton quiet; sales to-day 5,000 bales at 104c to 11c for middling; sales of the week, 26,000 bales; receipts of the week, 12,500 bales, against 9,500 in same week last year; exports of the week, 66,000 bales; total this season, 1,934,000 bales; increased receipts at this port, 458,500 bales; ditto at all the ports, 767,000 bales; stock in port, 259,000 bales."

Messrs Briggs and Co., of Alexandria, whose letter is dated the 4th instant, observe :-

There is an increased demand for all sound descriptions of cotton for There is an increased demand for all sound descriptions of cotton for the Continent, but, day by day, they become rarer; the stock, computed at 7,000 bales, being of very inferior staple. The following are the sales effected since the 26th April, quoted per lb f.o.b.:—854 bales very ordinary to middling, 5.60d to 8.10d; 735 bales good middling to fair, 8.14d to 8.77d; 237 bales fully fair, 9d to 9.27d; 6 bales fine, 10.25d. Total, 1,830 bales. Freight by steamer, 5.16d with 5 per cent.; by ships, \(\frac{1}{2}\)d per lb in full. Exchange steady, at pisatres 96\(\frac{1}{2}\) per \(\frac{2}{2}\) sterling. Export of cotton in bales from 17th April to 2nd May, 1860:—Great Britain, 5,262; France, 815; Austria, 1,053; total, 7,130.

For most kinds of tea, but especially for medium qualities of congou, there has been a fair, but by no means active inquiry, at quite last week's currency. The show of samples has not increased.

The following report of the tea and silk markets is dated Hong Kong, March 30:

Silk—Prices remain as last quoted. Tea—During the fortnight five chops have been settled. Arrivals have been I chop country tes, leaving a stock on the market of 6 chops. Prices have advanced 1\frac{1}{2} taels to 2 taels for country congons, and fully 2 taels for Canton-packed black tea taels for country congous, and fully 2 taels for Canton-packed black tea.

Musters of the new Tayshen congou are expected in about a fortnight; the crop is said to be a good one, and of fine quality. Settlements for the fortnight are:—Congou—Chops Oopscks at 29½ taels to 38 taels; Oonsms, 25½ taels to 28 taels. Canton-packed Congou—4,000 half-cheats, at 21 taels to 21½ taels. Scented Orange Pekoe—8,000 boxes, at 20 taels to 21½ taels for common. Scented Caper—10,000 boxes, at 14 taels to 19 taels for common spurious leaf to medium mixed leaf. Gunpowder—2,000 boxes, at 16 taels to 18 taels for Americs. One vessel has sailed from Macan for New York. There have been no departure for Great Britain. —2,000 boxes, at 16 tasis to 18 tasis. Procedular 2,000 half-chests, at 16th tasis to 18th tasis for America. One vessel has sailed from Macao for New York. There have been no departures for Great Britsin. One vessel remains on the berth for London, and one for Liverpool. Freights are advancing, and 3t would be given to London. Foothow advices are to the 18th inst. Tea—During the fortnight only a small business has been done, owing to the very small quantity out of the present stock being available for the European market, and the extreme rates required by the teamen. Arrivals have been small and of very inferior quality, and only a few more chops of the commonest kinds are expected to close this season's supply. Settlements have been:—Congou, 4,100 chests at from 9 tacls for "coarse dust" to 19.5 tacls for "best middling," and 720 chests Ningchow at 22 tacls. Stocks—Congou, 8,000 chests, of which about 6,000 chests are below "good common" grade; Oolong, 300 half-cheste. Prices remain as last quoted. Shanghai advices are to the 23d thest. Silk—The alarm caused by the rebels in the silk districts has induced dealers to bring forward supplies more freely, but not to an extent to inst. Silk—The alarm caused by the rebels in the silk districts has induced dealers to bring forward supplies more freely, but not to an extent to affect the season's export. Should the disturbances continue, they may have a considerable effect on the new crop, which the Chinese will be preparing in about a month. Settlements have been 2,500 bales. Prices are unaltered. Stock about 4,000 bales. We quote:—Tastlee, No. 3, 420 to 425 taels; ditto, No. 4, 405 to 410 taels; Tastlee, No. 375 to 400 taels; Taysaam, No. 3, 350 taels; ditto, No. 4, 335 taels; ditto, inferior, 320 to 330 taels. Total export of silk from China to Europe is 56,140 bales, against 64,325 bales, or a decrease for this season of 8,185 bales. Tea.—Only a very limited business has been done during the past fortnight, and settlements are almost entirely confined to common and low kinds, for which a small advance has been obtained. Purchases are as follows, a great portion of which are contract receipts:—Congou and low kinds, for which a small advance has been obtained. Purchases are as follows, a great portion of which are contract receipts:—Congou—Ningchow, 5,600 chests, 27 to 32½ tasis duty paid; Sunchunki and Hohow, 4,500 chests, 20 to 24 tasis duty paid; Shanghai, packed, 4,500 chests, 15 to 19 tasis duty paid. Pekoc—100 chests at 28 tasis. Green tens have been in little demand. Sales are reported of 10,500 half-chests. Stocks consisted of 8,000 chests of black and 14,000 half-chests of green. Two vessels have sailed for London, and three remain on the berth for the same port. For New York, one vessel was loaded, but ten formed only a small part of her cargo, and one remains on the berth. Freights only a small part of her cargo, and one remains on the berth. Freights, 1l 10s to 2l for tes, and 3l 10s for silk to London. To New York, 8 dols for tea. Total export of tea from China to Great Britain is 71,235,300 lbs, against, to same time last year, 49,252,500 lbs, or an increase of 21,982,800 lbs for this season. To the United States, the export is 29,167,500 lbs, against 25,673,800 lbs last year, or an increase for 1859-60 flates on the season. of 3,494,200 lbs.

The raw sugar market has been in a most inactive state, and the quotations have given way fully 6d per cwt. Refined goods have moved off slowly, at barely previous rates. In floating cargoes the transactions have continued on a very moderate scale.

There has been only a limited inquiry for nearly all kinds of effee, and prices have shown a drooping tendency.

The annexed report of the coffee trade at Ceylon to the 14th ult., has been forwarded by Messrs Volkart Brothers:—

Unsettled weather and a scarcity of tonnage in our roads have somewhat checked shipments since our last. Our coffee exports to date are, nevertheless, almost equal to those of same time last year:—

| PLAN | PATION | COFFEE. | | |

Plantation coffee, low, 11s 3d; ditto, mountain, 11s 6d to 11s 9d per hl: native coffee, unpicked, 41s; ditto, picked and dried, 44s per cwt. Plantation coffee, low, 11e 3d; ditto, mountain, 11e 5d to 11e 9d per bhl: native coffee, unpicked, 41e; ditto, picked and dried, 44e per cwd. Our market has continued comparatively bare of native coffee, none but small parcels finding their way in: the value of these have been fully maintained. The new Badulla crop is arriving slowly in Kandy, but the purchases of the fortnight have been very limited. There appears to have been nothing done in plantation coffee since the date of our last report. The receipts of parchment from the interior have been on a liberal scale, whilst the accounts of the receipt hospean are generally encountering. the receipts of parcament from the interior have been on a whilst the accounts of the recent blossom are generally though more rain is wanted.

Cocoa has receded 2s per cwt, and the business doing in it has been limited.

We have no quotable change to notice in the value of rice, in which article, however, very little has been passing.

The result of the indigo sales is thus reported by Messrs Layton, Hulbert, and Co. :-

The quarterly sales of indigo, which commenced on the 8th inst, and terminated on Taesday, comprised 8,820 chests, 1,022 of which were in the B catalogue. During the progress of the sale, 3,249 chests were withdrawn, leaving 2,691 chests Bengal, Benares, &c., 70 chests Oudes, 980 chests Mudrae, and 1,830 chests Kungal, 5771 chests Oudes, withdrawn, leaving 2,691 chests Bengal, Benares, &c., 70 chests Oudes, 980 chests Madras, and 1,830 chests Kurpah; total, 5,571 chests. The intelligence received from Bengal, during the last three months, respecting the objections on the part of the natives to saw indigo in the lower provinces, caused some speculative inquiries in this market previous to the sale, and a few hundred cheats changed hands at the rates of February to 2d to 3d advance. The trade, however, showed little disposition to depart from that system of cautious abstinence which they have pursued to 2d to 3d advance. The trade, however, showed little disposition to depart from that system of cautious abstinence which they have purases since the commencement of the Italian war. It is alone to the distruct engendered throughout the Continent by the ambiguous policy all the French Emperor that we can attribute the prostration and inactivity of the export trade in indigo, prolonged from month to month, while the atocks in every port of Europe have been reduced to a scale of the nurrowest dimensions—the result of several short crops. There was but a thin attendance of buyers, either from our home districts or the Continent, and there were but few orders from Russia; many of the liner marks of Bengal were therefore withdrawn, and others realised the prices of February; broken and defective qualities, when soft and show, from their scarcity, sold very readily at an advance of 2d to 4d per lb, but the close dark kinds required support to maintain former rates, and ordinary consumers and Oudes declined 2d to 3d per lb. Good Kurpahs sold steadily; the inferior ones at 2d decline. Good dry-leaf Madras brought previous rates, and ordinary kinds fell 2d per lb. Prices may be quoted as under:—Bengal—Fine blue, 8s 6d to 8s 8d; fine purple and violet, 8s to 8s 5d; good purple and violet, 7s 8d to 7s 1d; middling and defective, 7s 3d to 7s 7d; consuming, fine, 7s to 7s 4d; do. good, 6s 6d to 6s 1d; do. middling, 6s to 6s 5d; do. ordinary, 5s to 5s 9d; do. ordinary and lean, 2s 2d to 4s 9d: Oude—Good, 5s to 5s 9d; do. ordinary and lean, 2s 2d to 4s 9d: Oude—Good, 5s to 5s 6d; ordinary and low, 1s 8d to 4s per lb. The quantity sold, including several of the withdrawn parcels disposed of before and during the sale, is 4,000 chests, of which about 1,800 are Kurpah and Madras. It is estimated that 2,700 are taken for export, 800 for home use, and 500 for speculation. 1,750 chests remain bought in.

Mesers Moran and Co., of Calcutta, report the state of the indigo chests remain bought in.

Messrs Moran and Co., of Calcutta, report the state of the indigo

Messrs Moran and Co., of Calcutta, report the state of the indigo market to the 7th of April as follows:—

As regards the total outturn of last year's crop, having now obtained the whole of the European factory invoices, we find them agree with our estimate of the 8th September last within 200 maunds, and we believe the native portion of the crop will also prove to have been correctly estimated, but this cannot be ascertained to a point for some time as there are yet some lots to arrive. The disaffection among the indigo ryots has somewhat subsided. Exports of indigo from the 1st November, 1859, to the evening of the 6th March, 1860:—To Great Britain 18,874, Havre and Bordeaux 4,884, Foreign Europe 64, America 1,290, Gulf, &c., 1,721, sundry ports, 2; total, 26,831 chests. With regard to the new crop, the latest letters to hand state that rain is wanted for the sowings and to refresh the October plant, which is beginning to show the effects of nearly six months' drought.

The public sales of Colonial wool continue to be well attended, both by home and foreign buyers, and the biddings for all kinds are still active, at quite last week's quotations. Hemp has produced rather more money, but the inquiry for flax has been much

duced rather more money, but the inquiry for flax has b

restricted. According to a circular of Messrs Aries Dufour and Co., of Lyons, the general position of the silk trade during the past month has but slightly improved. Orders for the United States, as well as for European consumption, although very limited, have created a certain activity, and prevented a further decline in French and Italian silk; but in consequence of the fall in London, China descriptions have been somewhat lower, and several transactions have taken place, particularly in Tsatlees. The accounts thus far of the prospects of coming silk crops are, on the whole, more favourable than for several seasons past; but, with the exception of Spain, where the worm has reached the fourth stage, it is yet too early to speak with perfect confidence.

Most descriptions of rum have realised quite previous quotations Brandy and grain spirits have undergone no change.

The fruit market has continued heavy, at further reduced rates. Dealers, generally, continue to operate with extreme caution.

Rather large quantities of saltpetre have found buyers, on higher

Scotch pig iron has sold slowly at 52s 6d and 51s 6d cash. Last week's shipments were 16,015 tons, against 11,233 tons in the corresponding week of 1859. Most other metals have changed hands slowly.

Linseed oil has advanced to 28l 10s. Olive has produced more money; and other qualities have ruled tolerably firm.

The business doing in the tallow market has been much restricted. To-day, P. Y. C., on the spot, has been quoted at 52s 6d. Town tallow is 51s net cash.

Town tallow is 51s net cash.

Mr H. Kentsch, of San Francisco, reports large discoveries of silver in that region. He observes:—"The mines situate on the castern slope of the Sierra Nevada, in Utah territory, appear to equal in richness the most celebrated mines of Mexico and South America. About 50 tons of silver ore were extracted and south America. About 50 tons of silver ore were extracted and brought down to San Francisco before the winter season, which are yielded over 4001 per ton. During the winter the comunications between San Francisco and these mines have been very difficult. Owing

San Francisco and these mines have been very difficult. Owing to the snow and severe cold the mines could not be worked, and prospecting parties met with little success until within a week or two. New leads have been discovered, and it is now ascertained beyond a doubt that these mines are very extensive. This fact, which has worked the greater part of our population into a fever, will cause a great sensation in commercial circles. It is believed that the quantity of silver extracted from these mines in the course of this year will be considerable."

"The demand for dry goods," observes the New York Shipping List of the 5th inst., "continues moderate, and the market has been somewhat irregular for most descriptions of both foreign and domestic fabrics, while prices have not varied materially for some considerable time past. Goods have been placed to a fair extent to supply the existing wants of the City and near-by trade, but there is little inquiry from the interior as yet. Manufactories are being constructed both in the Eastern, Southern, and Southwestern States, which fact speaks well for the flourishing condition of the manufacturing business. Among the most recent movements in this direction is the proposed organisation of a new Company under the name of the Androscoggin Company, with Company under the name of the Androscoggin Company, with 1,000,000 dols capital, for the construction of a new cotton mill, to be situated at Lewiston, Missouri. The demand for cotton goods for export continues active, and very full prices are realised for all such goods as are wanted for shipment, of which the supply continues moderate, the market buoyant, and holders very firm. Foreign goods continue in steady fair demand for desirable styles, but undesirable fabrics are crowded in the sales rooms, and sold at low rates, which are merely nominal."

The cotton market has been very heavy during the week. A fair demand has arisen daily, but the supply is more than sufficient to meet it. We have again a large import, so that the accounts to-day show a further increase of stock. There is, notwithstanding, very little change to notice in prices. The better kinds of American are very steady, but undoubtedly concessions have been made in many cases in the lower grades. Egyptian are barely so saleable as last week. Brazil without change. East India heavy at last week's rates. The sales to-day will scarcely exceed 7,000 bales. The market is quiet. The reported export amounts to 10,660 bales, consisting of 5,620 American, 80 Brazil, and 4,960 East India.

MARKETS IN THE MANUFACTURING DISTRICTS

Most of the markets held this week have been very inactive, notwithstanding that the stocks in warehouse are limited for the time of year. In prices, however, no change of importance has taken place. The advices from Calcutta seem, for the moment, to have almost wholly checked the demand for export to the East. In the iron districts, trade has continued in a most unsatisfactory state, but no alteration has been reported in the quotations. Coals have sold slowly, owing to the determination on the part of some of the ironmasters to blow out furnaces.

MANCHESTER, May 17.—The Indian letters which were received here on Saturday, bringing the arrangements of the new Indian tariff, have put a stop for the present to business for that quarter, and considerable distruct has been expressed as to the future trade with that country in several articles. Shirtings, on which the duty now amounts to about 11½d per piece in the grey, and 1s 2d in the white state, have fallen here 1½d to 3d per piece. Jacconets, on which the duty is 5d grey and 7½d white, and madapollams, on which the duty is 5d grey and 7½d white, and madapollams, on which the duty is 5d grey and 7½d white, and madapollams, on which the duty is 5d grey and 7½d white, and madapollams, on which the duty is 5d grey and 7½d white, and madapollams, on which the duty is 5d grey and 7½d white, and medapollams, on which the detry is 5d grey, have also declined; but not so much at once, engagements being on them comparatively greater.

Still, as in a few cases, where stocks are held, liberal reductions have been made, but buyers have refrained from operating. The China accounts have added to the adverse effect, and political causes have thrown

New Orl

of calification

a disturbing influence over the other departments of the market. The chief exceptions in which business seems to be going on, are certain classes of ‡ printers and narrow cloths. Yarns have been extremely irregular and lower.

HUDDEBSTEELD.—Bedford and woollen cords continue to meet a steady demand. The country trade has not yet begun to move with anything like healthy activity, notwithstanding the general expectation to the contrary. On the whole business was decidedly quiet both in the Cloth Hall, and in the warehouses, and complaints were very rife as to the general falling off in all branches of trade. Nothing worth mention has yet taken place in our local wool market.—Leeds.—There are only few buyers in the town at present, and they do not operate with any spirit. Their operations, in fact, are more in the way of assorting up stocks than purchases for legitimate objects of speculation. Shipping houses are a little brisker. With respect to flax and yarns, trade is about stationary.—Rochdale.—The demand for flamed continues rather slack. The manufacturers, however, are well employed, and the general condition and prospects of the trade are satisfactory. Wools are held firmly by the staplers, and topmost figures of last week have had to be given by purchasers to-day. Skin wools are becoming scarce.—Halifax.—A trifling improvement is noticeable in the worsted trade, there having been a better demand for both the home and the foreign trade. Prices of all products are firm, as are also those of wool.—Bradfords.—Wools—There is not much change to report under this head. The market continues tolerably well supplied for the time of year, and skin wool is more abundant than usual. Prices continue very firm. Yarns—There is more inquiry for export, but the prices offering are too low to meet the present rates for long wool.—Leess—There is no alteration in prices as compared with last week.—Lelcesyre.—There has been rather more doing in summe denartments of the hosiery trade this HUDDERSFIELD.-Bedford and woollen cords continue to meet a ste low to meet the present rates for long wood. Pieces—There is no attention in prices as compared with last week.— LEGESTER.—There has been rather more doing in some departments of the hosiery trade this week; a little has been doing, for export. In the country districts the hosiery trade remains quiet. There is not much doing in wood, but prices remain very high. Yarns are without change, spinners continuing well employed.—NOTTINGHAM.—Business in the lace trade has been exceedingly dull. The fancy trade continues extremely quiet. There is a fair demand for Mechlins. The silk lace trade is expected to improve the property of the pro exceedingly dull. The fancy trade continues extremely quiet. There is a fair demand for Mechlins. The silk lace trade is expected to improve shortly. In hosiery there is rather more doing, and several branches are more busy than they have been for some time past. Yaros remain without material change. Silk continues dear.—GLASGOW.—The cotton market has been steady, at unchanged prices, except for cotton above middling, which is rather dearer. There is an improved feeling in the goods and yarns market, and considerable contracts have been entered into, particularly for goods as full prices. Yarns are light in stock, and held at extreme rates. Iron—Pig iron sold as low as 52s to 52s 6d.—Dundle.—The transactions, generally, have not increased; nevertheless, last week's prices are supported.—BLEAST.—There is a steady business doing in yarns, at full quotations. In the value of linens no change has taken place.—WOLVERHAMFON.—MF. S. Griffiths reports the following prices for iron:—Finished Qualities—Common Staffordshire bars, 71 10s at the works; best bars, 8l 10s; sheets, 9l; doubles, 10l 10s; nail sheets, 8l 10s; latins, 12l; boiler plates, 9l; doubles, 10l 10s; nail sheets, 8l 10s; latins, 12l; boiler plates, 9l; best and best beat in proportion; common rods, 7l 10s; hoops, 8l 10s; gas strip, 8l; Canada plates, 12l; and all others in proportion. Pig fron—Staffordshire cold blast, 4l 7s 6d; beat native hydrate pig', 3l 15s to 4l 2s 6d; first-class all mine grey forge pigs, 3l 10s to 3l 15s; mine pigs, deteriorated by cinder, 2l 15s to 3l 2s 6d; superior makes of all mine melting iron, 3l 10s to 4l, according to make and quality; favourite Shropshire and Forest of Dean brands, 4l 7s 6d.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, May 5.—FLOUR AND MEAL.—The demand for State and Western flour has been moderate during the past three days, and the sales confined mainly to the wants of the local trade. Prices have been sales commed manny to the wants of the local trade. Prices have been fully sustained, however, and in some instances a slight advance has been obtained. The market for Southern flour has sympathised with that of other kinds, to a certain extent, and the inquiry has been moderate at the prevailing rates of Tuesday last. The sales aggregate 5,700 bbls. Export from 1st to 30th April: wheat flour, 82,212 bbls, against 70,768 bbls in 1859. Export from Jan. 1 to April 30: 236,411 bbls, against 187,358 bbls in 1869.

187,358 bbls in 1859.
GRAIN.—In wheat, only a very moderate business has been done, the firmness of holders having prevented shipments to any considerable extent, as shippers still refuse to operate, except at a material reduction from current rates. The transactions here have been at about previous rates, and amount to 29,750 bushels, including 11,600 Milwaukee Club, chiefly as 1.31 dol; 1,400 winter red Western and Jersey, 1.50 dol; 1,400 white California at about 1.64½; 1,000 white Michigan, 1.60 dol; 250 choice ditto,

1.70 dol; and 1,500 red Southern, on private terms. Also, included in the above aggregate are 22,800 bushels, embracing 200 choice while Michigan at 1.71 dol; 15,300 Milwaukee Club, 1.29 dol to 1.33 dol; 1,000 Racine, 1.31 dol; 2,800 white Indiana, 1.60 dol; and 3,500 Canada, 1.31 dol, closing dull, and prices in favour of the buyer. Corn is delland drooping, with small aggregate sales at about 1 cent. per bushel lower rates; the sales are 36,000 bushels. Export from 1st to 30th April: wheat, 175,878 bushels, against 1,567 bushels in 1859; corn, 106,536 bushels, against 21,761 bushels in 1859. Export from Jan. 1 to April 30: wheat, 311,215 bushels, against 18,916 bushels in 1859; corn, 203,917 bushels, against 67,555 bushels in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENIMA.

MARK LANE, FRIDAY EVENIMA.

Most of the leading markets held this week have been but moderately supplied with home-grown wheat. For good and useful qualities, the demand has ruled somewhat steady, at full quotations; but low and damp parcels have moved off slowly, on former terms. The general quality of the samples brought forward has been telerably good. There has been an improved feeling in the sale for foreign wheats, and, in some instances, the currencies have advanced is per quarter. The business done in it, however, has not been extensive. Malting barley has changed hands slowly, on somewhat uncertain terms; but both griading and distilling sorts have realised very full prices. On the whole, the malt trade has been tolerably active. In the quotations however, no improvement has taken place. Oats have come alowly to hand, and for most kinds there has been a fair sale, at extreme rates to a slight advance. Both beens and peas have sold at full currencies, and there has been an improved inquiry for both English and foreign flour, at quite previous quotations.

The fine rains which have fallen in all parts of England this week, The fine rains which have fellen in all parts of England this week, have had a most beneficial influence upon vegetation. There is new rather a large supply of grass in the pastures—the young wheats have progressed steadily, and the country, generally, has derived great benefit from the favourable change in the weather.

Most of the foreign markets have been somewhat inactive for wheat;

nevertheless, holders, almost generally, have declined to meet buyen an lower terms. Barley, oats, beans, and peas have continued firm in price, and rather large parcels have changed hands on English account. The latest advices from New York are to the effect that a few parcels of wheat,

flour, and maize were in progress of shipment to England. The trade, however, was somewhat heavy at barely previous rates. In Scotland, wheat has sold at full prices, with a fair average demand. Spring corn, except fine barley, which has ruled easier, has commanded e rates.

Throughout Ireland there has been a steady inquiry for wheat and cats at very full prices. Most other produce has changed hands alowly, although the shipments have rather increased.

The few samples of English wheat in to-day's market sold steadily at is per quarter above Monday's currency. Foreign wheat was firm, and the turn dearer. All other kinds of produce, including flour, moved off steadily at extreme rates.

turn dearer. All other kinds of produce, including flour, moved all steadily at extreme rates.

Mr Fd. Rainford states that 46 vessels have arrived off coast lades with grain since the 10th inst. Floating cargoes have commanded more attention, at full prices.

The London averages announced this day were :-

COLUNIAL AND FOREIGN PRODUCE MARKETS. TRANSACTIONS OF THE WEEK.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markers, see "Postscapet."

Mischiel Lane, Friday Morning.

Sucal.—There has been less animation in the demand, and importers still show a disposition to sell freely; consequently former prices cannot be obtained; indeed, some descriptions show 6d per cwt reduction. The improvement in the deliveries for consumption last noticed continues, yet she excess of stock and expected heavy arrivals checks confidence. 1,300 cashs West India were sold to yesterday (Thursday) at the former value: Barbadoes, by auction, went at 35s to 41s 6d, and 42s to 45s 6d for bright yellow. Several other parcels submitted partly found purchasers, including St Lucia at 35s to 42s; grainy Demerara and Berbice, 41s to 46s per cwt. The deliveries last week amounted to 5,460 tons including 410 tons for export, and the total quantity taken for consumption is now equal to that of last year. There has not been any material change in the stock, owing to the landings proving equal to the clearances. The Dutch sale on Tuesday comprised 83,700 baskets Java, and west off well at full prices to a slight advance for low to middling qualities.

Mountains and S00 hears hy arction of the first for the consumptions of the stock.

Maritius.—12,800 bags, by auction, about two-thirds found buyers at the following quotations: brown, 32s to 38s; grey and yellow, 38s 6d to 48s; rather grainy, 39s 6d to 43s 6d for low grey to very good yellow; and 44s 6d per cwt for crystalised.

Besgol.—All good qualities remain scarce. 1,095 bags low soft date brown offered, by auction, were taken in at 32s to 33s per cwt.

Madras.—Native is unaltered. 503 bags grocery kinds realised the full valuations: soft greyish to very good yellow, 40s to 44s 6d; fine yellow and white, 45s to 46s 6d per cwt.

Penang.—4,174 bags were mostly disposed of, at and after the sale: brown, 34s to 37s 6d; soft grey to very good yellow, 38s to 43s 6d per cwt. -12,800 bags, by auction, about two-thirds found buyers

brown, 34s to 37s 6d; soft grey to very good yellow, 38s to 43s 6d per cet.

Foreign.—A floating cargo of 17,000 bags clayed Manilla has sold at 28s, and three of Havans, Nos. 9 to 11½, at 26s 3d to 28s, all for the United Kingdow. A cargo, No. 10½, is reported at 27s 3d for a near port. On the spot, 2,000 bags low brown Siam have changed hands at 31s, and a parcel of clayed Manilla at 37s. By auction, 1,294 casks Porto Rico were only partly sold: low to fine yellow, 40s to 47s; brown, 37s 6d to 13p 6d. 2,839 boxes Havana partially found buyers at 38s to 43s; washed in proportion; grainy white, 48s 6d to 55s. 225 casks 200 barrels Cubs and Havana brought 36s 6d to 40s for soft brown and yellow.

Refined.—The market does not exhibit any change this week, and there is decidedly less inquiry by the home trade. Common dry goods may be quoted at 52s; crushed, 48s to 50s 6d per cwt. There has been little alteration in bonded augars since last Friday.

Molassus.—680 casks Cubs, offered by auction, were bought in: muservado at 18s; clayed at 16s 6d; and 147 casks Madras at 16s. The latter since sold at rather less, and a parcel of old Cuba in reported at 16s. The latter since sold at rather less, and a parcel of old Cuba in reported at 16s. Cuba melado were bought in at 34s to 40s per cwt.

Rum.—There are still buyers of Demerara at the recent decline, with the solder, and the stock in first hands has become small. Fair to good qualities sold this week at 1s 10d to 2s; common Leewards, 1s 8d per proof gallon.

Cocca.—1.148 bags Trinidad about one-third part sold at irregular.

of gallon. proof gallon.—1,148 bags Trinidad about one-third part sold at irregular prices, but generally showing 3s to 5s decline, excepting for the finest sorts at 91s to 95s: the remainder went from 73s to 86s for grey to good mixed red. 221 bags common St Lucia sold rather dearer, from 62s to

mixed red. 221 bage common St Lucia sold rather dearer, from 62s to 65s per cws.

Covers.—Imports from Colombo during the past fortnight have been very large, and the market is unsettled, buyers awaiting public sales. 154 cashs 51 barrels and bags plantation submitted since last Friday sold at burly the former valuations: low middling to middling, 68s 6d to 73s. 1,101 bags native went at 59s to 61s 5d for ordinary to good, and 43s 6d for low qualities mixed with blacks. 180 half and quarter-bales Mocha of indirect import wave taken in at 100s to 105s for mixed small berry. 102 cashs 864 barrels and bags Jamaica went from 59s to 73s for fine ordinary to middling. 43s bags East India were partly taken in at 62s for Singapore Java kind, a few lots low black selling at 35s to 36s. Part of a cargo 8t Domingo affort has sold at 60s 6d per cwt.

TRA.—Since the letters by the overland mall were delivered the market has been firm, with a steady business doing at full rates to a slight advance for the lower grades of congou. Common may be quoted is 4d to 1s 44g per lb. The general demand is by no means animated.

RICS.—Privately a few parcels have changed hands, principally Bengal; low to fine ranging from 9s 9d to 14s 6d. Ballam brought 10s 3d; Madras, 9s 6d. Some Moulassin realised 8s 3d cash. The market is inactive, activithstanding the heavy reduction in the stock every week for some time past.

COCHIMEAL.—378 bags rather more than one-third part sold at about previous quotations: Honduras silvers, 3s to 3s 7d; blacks, 4s 2d to 4s 7d; Teneriffe silvers, 3s 2d to 3s 4d; blacks 3s to 3s 3d; Mexica silvers, 3s 1d to 3s 3d per lb.

Other Dyesturys.—Gambier is again firmer. 1,087 bales sold by auction: good, 17s 3d to 17s 6d; dark, 16s 9d. Business has also been done by private contract. 440 bags Cutch were taken in at 28s 6d. Good Bengal turmeric commands 15s to 15s 6d. Safflower unaitered.

Daugs.—The market is inactive. Yesterday, the 250 cases castor oil brought forward at public sale realised barely previous rates. Cubebs sold at 11l to 11l 17s 6d per cwt. Gum olibanum went dearer for fair to good sorts, at 55s to 65s per cwt.

sold at 111 to 111 17s 6d per cwt. Gum olibanum went dearer for fair to good sorts, at 55s to 65s per cwt.

LAC DRE.—187 chests were mostly bought in: D T st la 101d to 2s ld: other marks from 1s 2d to 1s 6d; ordinary native, 42d to 5d; very low, 1d to 12d per lb.

SHELLAC.—A sale of 50 chests good orange has been made at 1017s 6d per cwt, being rather under the late extreme quotations.

LIMA WOOD.—920 tons were bought in at 137 to 1415s per ton.

LOGWOOD.—250 tons St Domingo have sold for arrival at 4115s per

ton.

RUBBER.—Para is] firmer: fine, 2s 6d to 2s 7d. Yesterday, 110
packages East Indis, by auction, were withdrawn at 2s 2d. Sales have
been made for arrival at 1d per ib less.

METALE.—The markets have been exceedingly dull, and with an absence of all speculative busicess. Spelter remains nominally at 20f 10s
per ton on the spot, but no sales were reported to yesterday (Thursday).

Scotch pig iron has tended downwards in value: mixed numbers were at
one period bringing 53s, but the latest sales have been at 51s 6d to
51s 9d per ton. Foreign tin is steady: Straits, 129s to 130s per cwt.
Other metals present little variation of importance.

HIDES.—East India descriptions remain quiet, and 84,000 offered ver-

HIDES.—East India descriptions remain quiet, and 84,000 offered yes

Hidden—East India descriptions remain quiet, and 84,000 offered yesterday went at previous rates.

Hemp, &c.—On Wednesday, 2,330 bales Manilla offered by auction were sold at 11 to 11 10s reduction for some kinds: common to good roping, 221 5s to 261. The sales of jute proceeded fiatly, and the balk of 7,380 bales was bought is. The portion sold, 1,200 to 1,300 bales, ranged from 141 10s to 231 per ton for common to fine, being about the former value.

Linserd.—Imports continue large from the East Indies, and the fine weather for vegetation has induced holders to meet the market. Bombay offers at 51s 6d to 51s 9d; Calcutta, 49s to 49s 6d per quarter on the spot.

spot.
TURPENTIME.—Business has been done in rough at 9s. Spirits have most with more inquiry. Americas, 35s 6d to 36s per cwt.
OILS.—Moderate transactions have occurred in clive: Gallipoli, 63l; other sorts, 56l to 61l. Floating cargoes of the former bave sold at 60l 10s per tun for the United Kingdom. Sperm continues to decline: American, 97l; colonial, 98l per tun. Palm is steady at 45s 6d for fine. Cocca-nut has been in fair request: Ceylon, 42s 6d to 43s; Cochin, 44s 6d to 45s. The linseed oil market has been firm at 29s 6d; and for delivery in the last six months 29s 6d is demanded. Large sales have been made in rape, but the growing seed crops on the Continent will be improved by the rains: foreign refined, 42s 6d to 43s: contracts of brown for delivery in September to December have been made at 43s per cwt.

the rains: foreign remost, 42 5d to 43s; contracts of brown for delivery in September to December have been made at 43s per cwt.

TALLOW.—A further beavy decline has occurred in Russian on the spot and for early deliveries, but the fall in the quotation for the latter part of the year noticed on Friday appears to have caused partial inquiries. Yesterday the market was steady: Y. C. on the spot, 52s 6d: May and June, 51s 6d; October to December, 51s per cwt.

Particulars or Tallow.—Monday, May 14.

FOSTECRIFT.

FRIDAT LEVERING

FRIDAT LEVERIN

Nos. 12 to 13, at 27s 6d to 28s 4\frac{1}{2}d; and one, No. 11\frac{1}{2}, at 28s 3d for Gottenburg.

Covers.—66 casks Jamaica, and 56 casks 31 barrels plantation Ceylon sold at easier rates. 1,055 bags native went at 59s for good ordinary mixed; and 45s 6d to 49s for low, part blacks; 176 casks bought in at 59s to 61s. 800 bags Costa Rica were partly sold at 69s 6d to 70s 6d for middling, being moderate prices.

Rice.—7,000 bags have been sold: pinky Madras, 9s 6d to 9s 9d; common Moulmein, 8s 3d; and white Bengal at 10s 6d to 12s.

Spices.—85 cases cassis buds were bought in at 10l. 71 barrels Jamaica ginger went at 87s to 115s per cwt. 587 bags Singapore black pepper were bought in, but since sold at 41-16d. 281 bags pimento were chiefly bought in at 3\frac{1}{2}d to 3\frac{1}{2}d per 1\frac{1}{2}s.

Gambiel.—390 bales went at 16s 9d to 17s 3d per cwt.

Olla.—208 casks cocca-nut part sold: Caylon, 43s to 43s 6d; Cochin bought in at 45s. 400 casks palm part sold at 44s 9d to 45s per cwt.

Tallow.—Town was reduced to 52s; Y.C., 52s 6d. Forward deliveries unaltered. 119 pipes South American went at 52s 9d to 53s, being 1s 6d to 2s per cwt cheaper.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very steady this week. For export nothing doing. The Dutch market, which opened this week with a very firm appearance, has since shown weakness, with symptoms of a decline.

GREEN FAUIX.—Demand good. Change of wind has brought arrivals of oranges from Valencis, St Michael, and Lisbon. Some parcels of each, sold by Keeling and Hunt at public sale, went at lower prices. Lamons

sustain the advance. Note in moderate demand; Spanish to be bought

on easier terms.

Day FRUIT.—Low currants are the only descriptions which go off readily, and on these there has been a further decline of 1s to 2s. Several arrivals this week. Turkey raisins also lower. Clearances extensive.

English Wool.—There is rather more inquiry for English wool, at

MIAL AND FOREIGH WOOL.—The sales progress firmly at former The home trade are buying more freely; the continental buyers not quite an eagerly as at opening.
FLAX.—Market firm.

HEMP steady, and a fair amount of business transacted, at the quota-

tions.

COTTOM.—Sales of cotton wool from Friday, 11th May, to Thursday, 17th, inclusive:—100 bales Surat at 4\frac{1}{2}\text{d} to 5\text{d} for fair Dhollera and fully good fair Oomra; 500 bales Madras at 5\text{d} to 5\frac{1}{2}\text{d} for fair to good fair Tinnivelly. The market continues steady, and a fair amount of business has been transacted in Tinnivelly at the extreme prices of last week. The finer qualities of Surat being scarce and firmly held, are fully \frac{1}{2}\text{d} per lb dearer. 700 bales Surat and 300 Tinnivelly are advertised for public sale on Thursday, the 2\text{d} th instant.

on Thursday, the 24th instant.

Silk.-Since the arrival of the last mail from China the market has

on Thursday, the 24th instant.

SILK.—Since the arrival of the last mail from China the market has been quiet, the state of trade preventing home consumers buying, and the larger holders waiting the next mail before pressing sales.

LEATHER AND HIDES.—The supply of fresh leather at Leadenhall on Tuesday was limited. The demand was of a general character, almost all articles meeting some inquiry, and the transactions somewhat larger than for some weeks previously. In prices no change can be quoted. The public sales of foreign raw hides this week wers decidedly dull. Scarcely any saited hides were sold except Australian, nearly 2,000 of which brought only 5d, leas by at least 4d per lb than at the previous sale, and about 1,000 Cape at a similar reduction. Of 84,000 East India kips, 59,000 only were sold, generally at former rates, almost all for the home trade. Some excitement occurred at Leadenhall this week by the presence of a considerable number of the buyers and sellers of oak bark, consequent on the determination of the Government to sell the bark grown in the Royal forests by auction in London. It had previously been the custom to sell it in the large towns in its several localities. There was a large attendance of buyers, and it was all sold, excepting one lot, at 42 s 6d to 51 7s 6d per ton for the timber bark, and at 51 12 s 6d to 7l for flittern or coppice. These prices ranged from 10s to 15s per ton below the value of the previous year; but it must be remembered that at that period the stock of bark was declared to be very short, and the war in Italy had just commenced.

Matals.—The amount of business doing in metals is the smallest. Copper is much neelected, although prices are maintained. Iron is

METALS.—The amount of business doing in metals is the amallest. Copper is much neglected, although prices are maintained. Iron is rather lower for pig, and manufactured shows no revival. Tin is flat, and prices tend rather downward. Spelter is rather lower in price. Lead is well maintained by demand at present, quotations. Tin plates find a better demand at improved prices.

demand at improved prices.

PROVISIONS.

FRIDAY, May 18.—Bason market very quiet; a fall of 2s since our last.

Arrivals fair. In butter there is great fluctuation: fine Friesland rose from 100s on Monday, to 103s next day. To-day's price 106s, quality indifferent. Jersey, 92s to 96s, move off heavily. The continued wet causes great depression of trade. Fine weather is anxiously looked for. A rise in lard this week. Ham trade improving.

METROPOLITAN CATTLE MARKET.

THURSDAY, May 17.—A very limited supply of beasts was on offer in today's market. All breeds sold somewhat briskly at fully Monday's prices; in some instances, indeed, they were rather higher. Sheep—the show of which was very moderate—changed hands freely at quite the late improvement in value. Downs readily produced 5s 6d per 81bs. There was rather less activity in the lamb trade; nevertheless, the quotations were well supported. The supply of lambs was by no means extensive. Calves sold somewhat freely, but we have no change to notice in their value. Pigs and milch cows were very firm in price.

and East Kents, 80s, 105s, 140s; Weald of Kents, 62s, 75s, 84s; 2 62s, 70s, 76s.

FRIDAY, May 18.—The market continues firm, with but few hope fer ; the bine is more growing.

POTATO MARKET.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, May 14.—During the past weak the arrivals coastwise have not been large; but as the weather has been fins, there was enough for the demand at the following quotations:—York Regents, 120s, to 150s; ditto Flukes, 120s to 160s; Lincolnshire Regents, 100s to 130s; Dunhar ditto, 120s to 150s; 2itto reds, 120s to 130s; Peth, Forfar, and Fifeshire Regents, 110s to 130s; ditto reds and Rocks, 100s to 120s; Irish whites, 90s to 110s per ton.

TRURSDAY, May 17.—The arrivals of potatoes coastwise and by rail centinue limited, and trade generally is worse, but prices without quotable change. York Regents, from 160s to 180s; ditto, Thicke, 120s to 190s; Scotch ditto, 100s to 160s; ditto Cups, 110s to 130s; Dunhars, 120s to 140s; Rocks, 110s to 150s per ton.

HAY MARKETS.—THURSDAY.
SMITHFIELD.—Meadow hay, 3l to 4l 15s; clover, 4l to 5l 17s; and straw,
1l 6s to 1l 12s per load. Trade dull.
CUMBERLAND.—Meadow hay, 3l to 5l; clover, 4l to 5l 15s; and straw,
1l 7s to 1l 14s per load. A slow inquiry.
WHITECHAPEL.—Meadow hay, 3l to 4l 15s; clover, 4l 5s to 5l 17s; and
straw, 1l 6s to 1l 12s per load. Trade somewhat heavy.

LIVERPOOL MARKETS.

WOOL.

(FRIDAY, May 18.—There is a moderate demand for all useful kinds for immediate consumption, and, as stocks of these descriptions continue to but light, holders are firm in their demands. The public sales in Louisn are progressing satisfactorily, which tends to maintain the firm tone of our

CORN.

FRIDAT, May 18.—Grain market steady; good consumptive trads in wheat at 1d to 2d advance. Flour in better request. Indian cern still drooping. Galatz, 35s 6d; Ibraila, 34s; Egyptian, 35s. Beans steady. Old Egyptian, 34s; new, 36s. Oats, barley, and oatmeal, in fair request at Tuesday's quotations.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, May 18.—The market for manufactured iron continues quiet, with only a limited demand, and with little or no change in prices. The business in Scotch pig iron during the week has been very moderate, and at reduced rates. The copper market is dull, and there has been no additional demand for the article since the late reduction in price. Little doing in lead, or in any other metals.

The Gagette.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending May 5 amounted to 525,635l, and for the expressionding week of last year to 477,210l, showing an increase of 48,425l. The gross receipts on the eight railways having their termini in the metropolis amounted to 223,810l, and for the corresponding week of 1859 to 209,238l, showing an increase of 14,572l.

BAILWAY AND MINING SHARE MARKET.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, May 14.—The railway market opened heavily this morning on renewed political distrust, but partially rallied in the afternoon. The greatest changes were in South-Eastern, owing to the large speculative transactions in this stock, and the price, after being as low as \$85, improved at the close to \$6\frac{1}{2}\$ to \$\frac{2}{3}\$, or \$\frac{1}{3}\$ per cent. higher than on Saturday. In the colonial market, Indian guaranteed were chiefly affected, but closed firmer than at one period, East Indian being finally quoted 101½ to \$\frac{1}{2}\$ Grand Trunk of Canada stock left off steadily at \$3\frac{1}{2}\$ to \$4\frac{1}{3}\$, and the second preference at 1 to 2 premium, while Great Western shares were flatter. Fresch railways, Braxilian, and South Austrian, and Lombardo-Venetian showed a general decline. American railway bonds were rather dult, especially those of the Illinois and New York Central. The chief feature in mines was another rise in \$\frac{1}{2}\$ solon del Rey. There was no change of importance in Australian Agricultural and Madras Irrigation. Crystal Palace stock was likewise weaker. Victoria debentures, new, were last quoted 106\frac{1}{2}\$ to \$\frac{1}{2}\$ to \$\frac{1}{2}\$ m. serip.

TUESDAY, May 15.—The railway market did not experience any material

the Canadian loan, 101½ to ½ bonds, and 2½ to ½ pm. scrip.

TUESDAT, May 15.—The railway market did not experience any material alteration to-day; the final prices were for the new account at the end of the month. The dealers were chiefly occupied with the settlement, and the general business was limited. Indian guaranteed was again rather dull Grand Trunk of Canada stock was firm at 33 to ½, and the new preference bonds steady at 1 to 2 premium. The foreign market continued fast; several French descriptions, Great Luxembourg, and Lombardo-Venetian presented a renewed decline. In American securities, New York and Eris shares improved. Mines were in little demand, and in some cases are duction took place; St John del Roy, however, again advanced. City Bank shares were higher. In miscellaneous descriptions there was a rise in Madras Irrigation and a decline in Red Sea Telegraph. Victoria debentures, new, were last quoted 106½ to ½; the Canadian loan, 101 to ½ honds, and 2 to ½ premium soris.

Wennesday, May 16.—The railway market was very heavy, especially

Madras Irrigation and a decline in Red Sea Telegraph. Victoria debentures new, were last quoted 106½ to ½; the Canadian loan, 101 to ½ honds, and 2 to ½ premium soris.

WEDNESDAY, May 16.—The railway market was very heavy, especially during the latter part of the day, and closed at a general decline. In colonial descriptions, Indian guaranteed were fairly supported, but Canadia showed a reduction. Grand Trunk stock declined 1 per cent. to 22 to ½ In the foreign market the principal changes were in Lombardo-Venetian, which touched par and premium, the last official price being ½ to ½ Permium. There was subsequently, however, a fall to ½ discount to par. French shares were spaidull, and occasionally exhibited a decline. London and Westminster Bea shares continued to improve. In miscellancous descriptions, Madras Insigation advanaced; while Van Diemen's Land were quoted lower. Vitoria debentures, new, left off 106½ to ½; Canada Five per Cent. hondi 101½ to ½; ditto, serie, 2 to ½ premium.

THURSDAY, May 17.—The railway market was very depressed, chieff from sales to close open accounts in the present state of foreign politic from sales to close open accounts in the present state of foreign politic and St Lawrence, and Great Western of Canada, showed a reduction of the colonial market was flat; most kinds of Indian guaranteed, Atlant and St Lawrence, and Great Western of Canada, showed a reduction of the colonial market was flat; most kinds of Indian guaranteed, Atlant and St Lawrence, and Great Western of Canada, showed a reduction and the result of the colonial market was flat; most kinds of Indian guaranteed, Atlant and St Lawrence, and Great Great Western of Canada, showed a reduction and the result of the colonial market was flat; most kinds of Indian guaranteed, Atlant and St Lawrence, and Great Great Western of Canada, showed a reduction of the colonial market colonial of the Canada and St Lawrence, and Great Western of Canada, showed a reducting the foreign should be coloned to ½ to ½ dis.; Bahia were last

FUND

The Committee Room—50 New Bond street.

The Committee of the Julien Fund, fearing that the subscriptions have been materially checked by the unfortunate death of Mons. Julien, desire to explain that a widow and others, members of his family, can be protected from want only by the kind sail of those who appreciate the great services rendered by the late lamented massire to the cause of the musical selectation of the English people.

The Committee condicently appeal to that benevaleness for which their countrymen are so distinguished, for such prompt and liberal additions to the subscription list as shall enable them to do some justice to the memory of M. Julien, and at the same time afford adequate relief to his bereaved family.

COMMITTEE for the DISTRIBUTION of the JULILIEN FUND.

HOLLOWAY'S PILLS AND 11. OINTHENT.—All the maladies incidental to spring can be prevented, checked in their course, or attimately cured, by these fine purifying and cooling medicaments. The Pills rouse the stomach, regulate the liver, simulate the kidneya, and set gently un the bowels. The Ointment rubbed over any part posterates to neighbouring organs, which is frees from all noxions and irritating humours, and, sided by the Pills, expels them. By these remedies the skin is cleamed of all freckes, spets, and disfigurements, without driving them inwaris as doing harm. It is wonderful how weakness, low spirits, and emerwation give way to vigour and viracity unsign a course of Holloway's medicines, which may be assay used at all times by both sexes.

DR KAHN CONTINUES TO deliver Daily, at Three and Eight o'clock, his popular Lecture on the "Philosophy of Marriage," at Landau and the Austeniacial Museum, too of the Haymarket.

The Museum is open (for gentlemen only) from Twelve to Five, and from Seven to Ten. Admission, One Shilling.

The efficacy and harmless nature of the recensiles employed by Mr. Currus harmless per material by a nuccessful practice extending ever a perfect guarantee that the utmast skill and experiesse will be made available in the treations of their case. Consultations from 10 still ill 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. It is most durable and beautiful paint known, and does not stain or discolour with the London atmos-

the most durants and teather passes of the passes of the passes of the passes. Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface as three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, as well as desirable on every consideration.

ADULTERATIONS.—Prejudice is caused by some Paint Grinders selling Zinc Paint adultarated with Sulphate of Baryles, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number I'wo or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint altogether.

That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White Zinc is stamped

"HUBBUCK, LONDON, PATENT."

TEETH.—MRESKELL,
Surgeon Dentiat, 314 Regent street (fasing the Polytechnic), supplies his PATENTED INCOR-RODIBLE TEETH, which can be matched so closely in shape and colour to those left in the mouth, and are formed to exactly to nature, that the closest observer cannot detect the difference, and in all cases they resister that from one to a complete set upon Mr Excil's neveral falling and painless principle of SELF-ADHESION, without extracting any testin or stamps, or giving any pain whatever; and being incorrodible, they possess the superior advantage of never changing colour nor decoying. Mr Eskell's celebrated ONTEOPLASTIC ENAMEL for stopping Decayed Tresth is a preparation which never changes colour nor affects the colour of the tooth, and is free from any injurious properties either as regards the teeth or general health. It application is easily performed, and without giving the slightest pain. Dediclencies of palate effectually remedied. Loses teeth fastened. Teeth regulated. Discoloured teeth restored, & Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street, London (opposite the Folytechnic). Established 1847.

SPRING AND SUMMER ATTIRE.—

E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have visited the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roef in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and mest popular fabrica.

Their Ready Made Clothing Stock is complete in overy respect, and they veniure to say that for Elegance of Style, Durability of Material and Workmeanship, Tastenluness of Finish and Chesposes, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been fornished with an entirely new stock of fashionable and seasonable goeds at such prices as suable the proprietors to offer their patrons very great advantages.

N.S.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full beaselt of the abolition of the daty on alks, gioves, &cc.

N.B.—E. MOSES and SOAS was a series of the announcing, that they intend giving their customers the full benefit of the abolition of the daty on aliks, gloves, &c.

E. MOSES and SON, Corner of MINDSHESS and ALDMARK, and Cerner of New OXPORD STREET and HART STREET.

COUNTRY BRANCHESS—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly clasersed that if any article be not approved of it will be exchanged, or the money returned without basitation.

Their Book for Spring and Summer, containing "The Growth of an important Branch of British Industry," with ruise for self-measurement, and list of prices, may he had gratis on application, or post free.

SPECIAL NOTICE—E. MOSES and SONS Establishments will be closed an Saturday evening the 28th and Monday the 28th instant, and will be re-opened as usual on Tuesday morning.

Wenham Lake Ice Company, 140 Strand, London, W.G.

CONSTIMPTION AND ASTHMA

for Wenham Lake Ice Company, 140 Strand, Lollsoft, W.C.

CONSUMPTION AND ASTHMA
CURED.—Dr H. JAMES discovered, while in the
East Indies, a Certain Cure for Consumption, Asthma,
Bronchittis, Coughs, Colds, and General Debility. The
remedy was discovered by him when his only child, a
daughter, was given up to die. His child was cured
and is now alive and well. Desirous of benediting his
fellow-creatures, he will issued, post free, to those who
wish it, the recipe, containing full directions for making
and successfully using this remedy, on receipt of their
names, with stamped envelope for return, postage.—
Address to O. P. Brown, 14 Cecil street, Strand.

PENALTIES.

The Commissioners of Island Revenue hereby give Notice, that every person taking, killing, or pursuing game, without first obtaining a certificate, incurs a penalty of 2.20, and is also liable to be surcharged in double the amount of the certificate duty.

Any person is pursuit of game refuseing, on being duly required, to produce his certificate, or to permit the same to be read, or a copy thereof to be taken, or refusing to declare his true name and place of residence, also incurs a penalty of £20;

Gamekæepers are desired to take netlee that a certificate at the russ of £1 7s de will not authorise any person to hill game beyond the limits of the manor for which he is deputed; and, in order that a certificate at such a raise of duty may protect a gamekeeper, it is requisite, not only that he should be deputed by sowns lord are lady of a manor or reputed manor, but also that such deputation should be registered with the Clerk of the Feace, or the gamekeeper will be liable to be surcharged in double the duty of 41 to 10d, and also to be prosecuted by any common informer for the penalty of 20.

N.B.—It is the intention of the Commissioners of Inland Revenue to publish in a separate list the names and residences of all persons surcharged in double duty for sporting without certificates.

FIRST-CLASS PROTESTANT

EDUCATION, at the Royal Continental Collegiate
Institution, Bushey heath, Hera.—In addition to all its
qualities as a first-rate classical and commercial school,
it is also highly recommended for a therough French
education. Some of the parents who are continually
visiting France, and whose sons have scarcely been two
years at this school, are most happy to assure those
parents who are desirous that their children should
acquire a thorough knowledge of the French language,
without wishing them to neglect their English and classical education, that thair senus speak far better and more
grammatically than any of the seas of their friends who
have spent two or three years in schools is France
merely for the purpose of acquiring that language.
Terms inclusive, and vary, according to say and requirements, from £40, £50, to £60 per annum—id est, four
terms, each of 75 days' duration, with two months'
helidays. Pupils are received any day, their term
beginning from the day of their arrival. No restrictions
to parents. Not one case of illness has occurred since
the school has been scathlished (1857).—Address, stating
age and requirements, Professor Vellère (late of the
flarrow Preparatory School), Bushey beath, Herts. The
pupils were a uniform very elegant and becoming.

CAUTION .—FORD'S EUREKA
SHIRTS.—As spurious chirts are advertised and
