TRAVELS

IN

EGYPT AND SYRIA.

STATE OF SYRIA.

CHAP V.

Of the Cultivating, or Sedentary Inhabitants of Syria.

SECT. I.

Of the Ansarians.

THE first people who should be distinguished from the rest of the inhabitants of Syria among those who employ themselves in cultivation, are those, called in that country by the plural name Ansaria, in Delisle's maps stiled Enfyrians, and, in those of Danville, Nafaris. The territory occupied by these Ansaria is that chain of mountains which extends from Antakia to the rivulet called *Nabr-el-Kabir*, or the Great River. The history of their origin, though little known, is yet instructive: I shall give it in the words of a writer who has drawn his materials from the best authorities.*

“ In the year of the Greeks 1202, (A. D. 891),
“ there lived at the village of *Nasar*, in the environs
“ of Koufa, an old man, who from his fastings, his
“ continual prayers and his poverty, passed for a

* Assemani, *Bibliothèque orientale*.

“ saint : several of the common people declaring
 “ themselves his partizans, he selected from among
 “ them twelve disciples to propagate his doctrine.
 “ But the commandant of the place, alarmed at his
 “ proceedings, seized the old man, and confined him
 “ in prison. In this reverse of fortune, his situation
 “ excited the pity of a girl who was a slave to the
 “ goaler, and she determined to give him his liberty ;
 “ an opportunity soon offered to effect her design.
 “ One day when the goaler was gone to bed intoxi-
 “ cated, and in a profound sleep, she gently took the
 “ keys from under his pillow, and, after opening
 “ the door to the old man, returned them to their
 “ place unperceived by her master : the next day,
 “ when the goaler went to visit his prisoner, he was
 “ extremely astonished at finding he had made his
 “ escape, and the more so since he could perceive no
 “ marks of violence. He therefore judiciously con-
 “ cluded he had been delivered by an angel, and ea-
 “ gerly spread the report, to avoid the reprehension
 “ he merited ; the old man, on the other hand assert-
 “ ed the same thing to his disciples, and preached
 “ his doctrine with more earnestness than ever. He
 “ even wrote a book, in which, among other things,
 “ he says : *I, such a one, of the village of Nasar, have*
 “ *seen Christ who is the word of God, who is Ahmed,*
 “ *son of Mohammad, son of Hanafa, of the race of Ali ;*
 “ *who also is Gabriel, and he said to me : Thou art*
 “ *he who readeth, (with understanding,) thou art the*
 “ *man who speaketh truth ; thou art the camel which*
 “ *preserveth the faithful from wrath ; thou art the beast*
 “ *which carrieth their burthen : thou art the (Holy)*
 “ *Spirit, and John, the son of Zachary, Go, and preach*
 “ *to men that they make four genuflections in praying ;*
 “ *two before the rising of the sun, and two before his*
 “ *setting, turning their faces towards Jerusalem : and*
 “ *let them say, three times : God Almighty, God most*
 “ *high, God most great : let them observe only the second*

“ and third festival ; let them fast but two days annu-
 “ ally ; let them not wash the prepuce, nor drink beer,
 “ but as much wine as they think proper ; and, lastly,
 “ let them abstain from the flesh of carnivorous animals.
 “ This old man, passing into Syria, propagated his
 “ opinions among the lower orders of the country
 “ people, numbers of whom believed in him. And,
 “ after a few years, he went away, and nobody ever
 “ knew what became of him.”

Such was the origin of these Anfarians, who are, for the most part, inhabitants of the mountains before mentioned. A little more than a century after this, the crusaders, carrying the war into these countries, and marching from Marrah, along the Orontes, towards Lebanon, fell in with some of these *Nasfireans*, a great number of whom they slew. William of Tyre*, who reports this fact, confounds them with the *assassins*, and possibly they might have resembled each other ; as to what he adds, that the Franks, as well as the Arabs, employ the term *assassins*, without being able to give any account of its origin ; it is a problem easy of solution. *Hassassin*†, in the vulgar Arabic, signifies *Robbers of the night* ; persons who lie in ambush to kill ; and is still understood in this sense at Cairo, and in Syria ; for which reason it was applied to the Bâtenians, who slew by surprize. The crusaders, who happened to be in Syria at the time this practice was most frequent, must have adopted the use of the term in question. What they have related of the old man of the mountain, is in consequence of an improper translation of the phrase *Shaik-el-Djebal*, which signifies *Lord of the mountains*, the title the Arabs gave to the chief of the Bâtenians,

* Lib. xx. chap. 30.

† The root *hafs*, with an aspirated *h*, signifies to kill, to assassinate, to listen, to surprize ; but the compound *hassâs* is not to be found in Golius.

whose residence was to the east of Kourdestan, in the mountains of the ancient Media.

The *Anfaria* are, as I have said, divided into several tribes or sects; among which we distinguish the Shamfia, or adorers of the sun; the Kelbia, or worshippers of the dog, and the Kadmousia, who, as I am assured, pay a particular homage to that part in women, which corresponds to the Priapus*.

M. Niebuhr, to whom the same circumstances were related as to me, could not believe them, because, says he, it is not probable that mankind should *so far* degrade themselves; but this mode of reasoning is contradicted, both by the history of all nations, which proves how capable the human mind is of the most extravagant excesses, and even by the present state of almost all countries, especially of the eastern world, where we meet with a degree of ignorance and ridiculousness sufficient to receive the most palpable absurdities. The whimsical superstitions I have mentioned, may the rather be believed still to exist among the *Anfaria*, as they seem to have been preserved there by a regular transmission from those ancient times in which they are known to have prevailed. Historians remark that, notwithstanding the vicinity of Antioch, Christianity penetrated with the greatest difficulty into these countries; very few proselytes were made here, even after the reign of Julian: and from that period to the invasion of the Arabs there was not much time for its establishment: in fact, revolutions in opinion seldom take place so readily in the provinces as in great cities, where the facility of the communication diffuses new ideas with more rapidity, so that they are soon either universally received or

* I am assured, likewise, that they hold nocturnal assemblies, in which, after certain discourses, they extinguish the lights, and indulge promiscuous lust, as has been reported of the ancient Gnostics.

entirely exploded. The progress made by Christianity among these rude mountaineers, could only serve to prepare the way for Mahometanism, more suitable to their habits and inclinations; and to this absurd medley of ancient and modern doctrines the old man of Nasar owed his success. One hundred and fifty years after, *Mohammed-el-Dourzi* having, in his turn, formed a sect, the Ansarians did not admire its principal article, the Divinity of the Kalif Hakem: for this reason they remain distinct from the Druzes, though they resemble each other in several points. Many of the *Ansaria* believe in the Metempsychosis; others reject the immortality of the soul; and, in general, in that civil and religious anarchy, that ignorance and rudeness which prevail among them, these peasants adopt what opinions they think proper, following the sect they like best, and, frequently, attaching themselves to none.

Their country is divided into three principal districts farmed by the chiefs called *Mokaddamim*. Their tribute is paid to the Pacha of Tripoli, from whom they annually receive their title. Their mountains are in general not so steep as those of Lebanon; and, consequently, are better adapted to cultivation; but they are also more exposed to the Turks, and hence doubtless, it happens, that, with greater plenty of corn, tobacco, wines, and olives, they are more thinly inhabited than those of their neighbours the Maronites, and the Druzes, of whom I shall next speak.

S E C T. II.

Of the Maronites.

Between the Ansarians, to the north, and the Druzes to the south, we find an inconsiderable people long known under the name of *Macuárna* or *Marc-*

nites. Their origin, and the minute difference between them and the Latins, whose communion they follow, have been much discussed by ecclesiastical writers. All that is worth notice, and known with certainty, concerning them, may be reduced to what follows :

Towards the end of the sixth age of the church, while the spirit of retirement from the world was equally novel and fervid, a hermit, of the name of Mâroun, lived on the banks of the Orontes, who, by his fasting, his solitary mode of life, and his austerities, became much respected by the neighbouring people. It seems that, in the disputes which at that time arose between Rome and Constantinople, he employed his credit in favour of the western Christians. His death, far from abating the ardor of his followers, gave new energy to their zeal: it was reported that miracles had been wrought by his remains, and, in consequence, many persons assembled from Kinefrin, from Aouasem and other places, who built at Hama a chapel and a tomb whence soon arose a convent, very celebrated in that part of Syria. The quarrels of the two Metropolitan churches encreased, and the whole empire entered warmly into the dissensions of the priests and princes. Matters were thus situated, when about the end of the seventh century, a monk, named John the Maronite, obtained, by his talents for preaching, the reputation of being one of the most powerful supporters of the cause of the Latins, or Partisans of the Pope. Their opponents, who espoused the cause of the Emperor, and were therefore named *Melkites*, or Royalists, made at that time great progress in Lebanon. To oppose them with success, the Latins determined to send thither John the Maronite: they presented him accordingly to the agent of the Pope, at Antioch, who after consecrating him bishop of Djebail, sent him to preach in those countries. John lost no time in rallying his parti-

fans, and in augmenting their number; but opposed by the intrigues, and even by the open attacks, of the Melkites, thought it necessary to resist force by force; he collected all the Latins, and settled himself with them in Lebanon, where they formed a society independent both with respect to its civil and religious government. This is related by an Historian of the Lower Empire in the following words: “ In the eighth year of the reign of Constantine Pogonatus, (A. D. 676), the Mardaïtes, collecting themselves together, took possession of Lebanon, which became the asylum of vagabonds, slaves, and other sorts of people. They grew so powerful there, as to stop the progress of the Arabs, and to compel the Kalif Moâouia to request of the Greek a truce for thirty years, obliging himself to pay a tribute of fifty horses, one hundred slaves, and ten thousand pieces of gold.*”

The name of Mardaïtes, here used by this Author, is derived from a Syriac word signifying Rebel, and is opposed to *Melkites*, or Royalists, which proves both that the Syriac was still in use at that time, and that the schism which rent the empire was as much civil as religious. Besides, it appears that the origin of these two factions, and the existence of an insurrection in these countries, were prior to these times, for, from the first ages of Mahometanism (A. D. 622), mention is made of petty independent princes, one of whom, named Youseph, was sovereign of Djebail; and the other, called Kefrou, governed the interior parts of the country, which, from him, took the name of *Kesraouan*. We read likewise of another who made an expedition against Jerusalem, and died at a very advanced age at Beskonta,† where he resided. Thus, before Constantine Pogonatus, these mountains were become the refuge of malecontents,

* Cedrenus.

† A village of Kesraouan.

or rebels, who fled from the bigotry of the Emperors and their governors. It was doubtless for this reason, and from a similarity in their opinions, that John and his disciples took refuge there; and it was from the ascendancy they acquired, or already possessed, that the whole nation took the name of Maronites, which was less disgraceful than that of Mardaites. Be this as it may, John, having established order and military discipline among the Mountaineers, having provided them with arms and leaders, they employed their liberty in combating the common enemies of the empire and their little state, and presently become masters of almost all the mountains as far as Jerusalem. The schism which took place at this juncture among the Mahometans, facilitated their conquests. Moaouia rebelling against Ali at Damascus, Kalif a Koufa, found himself obliged, in order to avoid being engaged in two wars at once, to make in 678, a disadvantageous treaty with the Greeks. Seven years after, Abd-el-Malek renewed it with Justinian II. on condition, however that the Emperor should free him from the Maronites. To this proposal, Justinian had the imprudence to consent, and was base enough to get their chief assassinated by an ambassador, whom the too generous man had received into his house without suspicion of treachery. After this murder, the same agent succeeded so well by his intrigues, that he persuaded twelve thousand inhabitants to quit their country, leaving a free passage to the Mahometan arms. Soon after another persecution menaced the Maronites with total ruin; for the same Justinian sent troops against them under Marcian and Maurice, who destroyed the monastery of Hama, and massacred five hundred monks, after which they carried the war quite into Kesraouan; but happily at this moment, Justinian was deposed, when on the point of causing a general massacre at Constantinople; and the Maronites, authorized by his successor, falling upon Mau-

rice, cut his enemy to pieces in an engagement wherein he himself perished. From this period we lose sight of them till the invasion of the Crusaders, with whom they were sometimes in alliance, and sometimes at variance. In this interval, of more than three centuries, they lost part of their possessions, and were reduced to their present limits, paying tribute no doubt, as often as the Arabian or Turcoman governors were able to compel them. This was the case with the Kalif of Egypt, Hakem-Bàmr-Ellah, who about the year 1014, ceded their territory to a Turcoman, Prince of Aleppo. Two hundred years after, Selah-el-din having driven out the Europeans from this country, they were obliged to submit to his power, and purchase peace by contributions. At this period, that is, about the year 1215, the Maronites effected a reunion with Rome, from which they never were widely separated, and which still subsists. William of Tyre, who relates this, observes, that they had forty thousand men able to bear arms. The peace they enjoyed under the Mamlouks was disturbed by Selim the Second, but this prince, occupied by more important objects, did not take the trouble to subject them. This negligence emboldened them; and, in concert with the Druzes, and their Emir, the celebrated *Faker-el-din*, they made daily encroachments on the Ottomans; but these commotions had an unfortunate issue; for Amurath the Third, sending against them Ibrahim, Pacha of Cairo, that General reduced them to obedience, in 1588, and subjected them to the annual tribute they still pay.

Since that period, the Pachas, desirous of extending their authority and extortions, have frequently attempted to introduce their garrisons and Agas into the mountains of the Maronites; but being constantly repulsed, they have been compelled to abide by the treaty. The subjection of the Maronites therefore only consists in the payment of a tribute to

the Pacha of Tripoli, of whom they hold their country, which he annually farms out to one or more Shaiks,* that is to say, persons of eminence and property, who assign their respective shares to the districts and villages. The impost is levied, chiefly, on the Mulberry-trees and vineyards, which are the principal, and almost the sole objects of culture. It varies according to the seasons, and the resistance they can make to the Pacha. Custom houses are established likewise in the maritime towns, such as Djebail, and Bâtroun; but the produce of these is but inconsiderable.

The form of government is not founded on express conventions, but merely on usages and customs. This inconvenience would doubtless, long ere this, have produced disagreeable effects, but for the intervention of many fortunate circumstances. The principal of these is religion, which, placing an insurmountable barrier between the Maronites and the Mahometans, has prevented ambitious men from leaguering themselves with foreigners to enslave their country, which, every where affording strong defences, enables every village, and almost every family, to oppose, by its single force, all usurpation of sovereign power. A third reason may be derived even from the weakness of this society, which having always been surrounded by powerful enemies, has only been able to resist them by maintaining union among its members, which union can only exist by abstaining from oppressing each other, and by reciprocally guarding the safety of each others person and property. Thus the government preserves itself in a natural equilibrium, and customs supplying the place of laws, the Maronites are to this day equally strangers to the oppression of despotism, and the disorders of anarchy.

* In the mountains, the word Shaik signifies, properly, a man of property, or country gentleman.

The nation may be considered as divided into two classes; the people and the Shaiks, by which must be understood the most eminent of the inhabitants, who, from the antiquity of their families, and the opulence of their fortunes, are superior to the common class. They all live dispersed in the mountains, in villages, hamlets, and even detached houses; which is never the case in the plains. The whole nation consists of cultivators. Every man improves the little domain he possesses, or farms, with his own hands. Even the Shaiks live in the same manner, and they are only distinguished from the people by a bad Pelisse, a horse, and a few slight advantages in food and lodging; they all live frugally, without many enjoyments, but also with few wants, as they are little acquainted with the inventions of luxury. In general, the nation is poor, but no man wants necessaries; and if beggars are sometimes seen, they come rather from the sea-coast than the country itself. Property is as sacred among them as in Europe, nor do we see there those robberies and extortions so frequent with the Turks. Travellers may journey there, either by night or day, with a security unknown in any other part of the empire, and the stranger meets with hospitality, as among the Arabs; it must be owned however, that the Maronites are less generous, and rather inclined to the vice of parsimony. Conformably to the doctrines of Christianity, they have only one wife, whom they espouse, frequently, without having seen, and, always, without having been much in her company. Contrary to the precepts of that same religion, however, they have admitted, or retained, the Arab custom of retaliation, and the nearest relation of a murdered person is bound to avenge him. From a habit founded on distrust, and the political state of the country, every one, whether Shaik, or peasant, walks continually armed with a fusil and poniards. This is perhaps an inconvenience; but this advantage re-

sults from it, that they have no novices in the use of arms among them, when it is necessary to employ them against the Turks. As the country maintains no regular troops, every man is obliged to join the army in time of war, and if this militia were well conducted, it would be superior to many European armies. From accounts taken in late years, the number of men, fit to bear arms, amounts to thirty-five thousand. According to the usual mode of computation, this would imply a population of about a hundred and five thousand souls; and, if we add the priests, monks, and nuns, dispersed in upwards of two hundred convents, and the inhabitants of the maritime towns, such as Djebail, Bâtroun, &c. we cannot suppose it less than a hundred and fifteen thousand.

This number, compared with the extent of the country, which is about a hundred and fifty leagues square, gives seven hundred and sixty inhabitants for each square league; which will not appear a small population, when we consider that great part of Lebanon consists only of barren rocks, and that the soil, even where it can be cultivated, produces very little.

In religious matters, the Maronites are dependent on Rome. Though they acknowledge the supremacy of the Pope, their clergy continue, as heretofore, to elect a head, with the title of Batrak, or patriarch of Antioch. Their priests, marry as in the first ages of the church; and their wives must be maidens, and not widows, nor can they marry a second time. They celebrate mass in Syriac, of which the greatest part of them comprehend not a word. The gospel, alone, is read aloud in Arabic, that it may be understood by the people. The communion is administered in both kinds. The Host is a small round loaf, unleavened, of the thickness of a finger, and sometimes larger than a crown piece. On it is the impression

of a seal, which is eaten by the priest, who cuts the remainder into small pieces, and, putting them into the cup, administers to each person with a spoon, which serves every body. These priests have not, as among us, benefices or stated revenues; but they subsist partly on the produce of their masses, the bounty of their hearers, and the labour of their hands. Some of them exercise trades, others cultivate a small piece of land; and all are industriously employed, for the maintenance of their families and the edification of their flock. Their poverty is recompensed by the great respect which is paid them. Their vanity is incessantly flattered; whoever approaches them, whether rich or poor, great or small, is anxious to kiss their hands, which they fail not to present; nor are they pleased that the Europeans withhold this mark of reverence, so repugnant to our manners, though not thought humiliating by the natives, who are accustomed to it from their infancy. In other respects, the ceremonies of the Catholic religion are not performed more publicly, or with less restraint, in Europe than in Kefraouan. Each village has its chapel and its priest, and each chapel its bell: a thing unheard of in any other part of Turkey. The Maronites are vain of this privilege, and that they may not be deprived of it, will not suffer a Mahometan to live among them. They assume to themselves, also, the privilege of wearing the Green Turban, which, except in their territories, would cost a Christian his life.

Italy itself has not more bishops than this little corner of Syria; they here still retain the simplicity of the primitive ages; and may be often met on the roads, mounted on a mule, and followed by a single Sacristan. The greater part of them live in convents, where their food and dress does not differ from that of the other monks; nor does their usual revenue exceed fifteen hundred livres, (about fifty-three pounds) which, in this country, where every article of life is

cheap, enables them to live comfortably. They, as well as the priests, are chosen from the class of monks; and are generally elected for their pre-eminence in learning, which is not difficult to acquire, since the bulk of the monks and priests know nothing but the catechism and the bible. It is nevertheless remarkable, that these two subordinate classes are more amiable in their manners and live more edifying lives; while the bishop and the patriarch, on the contrary, constantly engaged in cabals, disputes of precedence, and religious distinctions, throw the whole country into commotion. Under pretext of exercising ecclesiastical discipline, according to the ancient rules of the church, they mutually excommunicate each other, and their respective adherents; they suspend priests, interdict the monks, and inflict public penance on the laity; in a word, they have retained the turbulent and intriguing spirit, which was the scourge of the Lower Empire. The court of Rome, frequently embarrassed by their disputes, strives to pacify them, in order to preserve the only asylum in her power, remaining in these countries. It is not long since she was obliged to interpose in a singular affair, an account of which may give some idea of the character of the Maronites.

About the year 1755, there was in the neighbourhood of the Jesuit Missionaries, a Maronite girl, named Hendia, whose extraordinary mode of life began to attract the attention of the people. She fasted, wore the hair-cloth, possessed the gift of tears; and, in a word, had all the exterior of the ancient hermits, and soon acquired a similar reputation. Every body considered her as a model of piety, and many esteemed her a saint; from such a reputation to miracles the transition is very easy, and in fact, it was soon reported that she worked miracles. To have a proper conception of the effects of this report, we must not forget that the state of mens minds, in Lebanon, is nearly the same as in the earliest ages. There were

neither infidels therefore, nor wits, nor even doubters. Hendia availed herself of this enthusiasm for the completion of her designs; and, imitating the conduct of her predecessors in the same career, she wished to become the foundress of a new order. In vain does the human heart endeavour to conceal its passions, they are invariably the same; nor does the conqueror differ from the monk; both are alike actuated by ambition and the lust of power; and the pride of pre-eminence displays itself even in the excess of humility. To build the convent, money was necessary; the foundress solicited the pious charity of her followers, whose contributions were so abundant as to enable her, in a few years, to erect two vast stone houses, which could not have cost less than one hundred and twenty thousand livres (five thousand pounds). They are called the Kourket, and are situated on the ridge of a hill, to the north-west of Antoura, having to the west a view of the sea, which is very near, and an extensive prospect, to the south as far as the road of Bairout, which is four leagues distant. The Kourket soon filled with monks and nuns. The Patriarch for the time being was director-general, and other employments, of various kinds were conferred on the different priests and candidates, to whom one of these houses was allotted. Every thing succeeded as well as could have been wished; it is true that many of the nuns died, but this was imputed to the air, and the real cause was not easy to be discovered. Hendia had reigned over her little kingdom near twenty years, when an unforeseen accident threw every thing into confusion. A factor travelling from Damascus to Bairout, in the summer, was overtaken by night near this convent: the gates were shut, the hour unseasonable; and, as he did not wish to give any trouble, he contented himself with a bed of straw, and laid himself down in the outer court, waiting the return of day. He had only slept a few

hours, when a sudden noise of doors and bolts awakened him. From one of the doors came out three women, with spades and shovels in their hands; who were followed by two men, bearing a long white bundle, which appeared very heavy. They proceeded towards an adjoining piece of ground, full of stones and rubbish, where the men deposited their load, dug a hole into which they put it, and covering it with earth, trod it down with their feet, after which they all returned to the house. The sight of men with nuns, and this bundle thus mysteriously buried by night, could not but furnish matter of reflection to the traveller. Astonishment at first kept him silent, but, to this, anxiety and fear soon succeeded; he, therefore, hastily set out for Bairout at break of day. In this town he was acquainted with a merchant, who, some months before, had placed two of his daughters in the *Kourket*, with a portion of about four hundred pounds. He went in search of him, still hesitating, yet burning with impatience to relate his adventure. They seated themselves cross-legged, the long pipe was lighted, and the coffee brought. The merchant then proceeded to enquire of his visitor concerning his journey, who answered, he had passed the night near the *Kourket*. This produced fresh questions, to which he replied by further particulars, and, at length, no longer able to contain himself, whispered to his host what he had seen. The merchant was greatly surprised, the circumstance of burying the bundle alarmed him: and the more he considered it, the more his uneasiness increased. He knew that one of his daughters was ill, and could not but remark that a great many nuns died. Tormented with these thoughts, he knows not how either to admit or reject the dismal suspicions they occasion; he mounts his horse, and, accompanied by a friend, they repair together to the convent, where he asks to see his daughters;—He is told they are sick; he insists they

shall be brought to him; this is angrily refused: and the more he persists, the more peremptory is the refusal, till, his suspicions are converted into certainty. Leaving the convent, in an agony of despair, he went to Dair-el-Kamar; and laid all the circumstances before Saad, Kiaya* of prince *Yousef*, chief of the mountain. The Kiaya was greatly astonished, and ordered a body of horse to accompany him, and, if refused admission, to force the convent; the Kadi took part with the merchant, and the affair was referred to the law; the ground where the bundle had been buried was opened, and a dead body found, which the unhappy father discovered to be that of his youngest daughter; the other was found confined in the convent, and almost dead: she revealed a scene of such abominable wickedness, as makes human nature shudder, and to which, she, like her sister, was about to fall a victim. The pretended faint being seized, acted her part with firmness; and a prosecution was commenced against the priests and the patriarch. The enemies of the latter united to effect his ruin, in order to share his spoils, and he was suspended and deposed. The affair was removed to Rome in 1776, and the society *de Propaganda*, on examination, discovered the most infamous scenes of debauchery, and the most horrible cruelties. It was proved that Hendia procured the death of the nuns, sometimes to get possession of their property, at others, because they would not comply with her desires: that this infamous woman not only communicated, but even consecrated the host, and said mass: that she had holes under her bed, by which perfumes were introduced at the moment she pretended to be in extacy, and under the influence of the Holy Ghost; that she had a faction who cried her up, and published that she was the mother of God, returned upon earth, and a

* The title of the minister of these petty princes.

thousand other extravagancies. Notwithstanding this, she retained a party powerful enough to prevent the severe punishment she merited: she has been shut up in different convents, from whence she has frequently escaped. In 1783, she was present at the visitation of Antoura, and the brother of the Emir of the Druzes was desirous to give her her liberty. Numbers still believe in her sanctity; and, but for the accident of the traveller, her present enemies would not have doubted it. What must we think of reputations for piety, when they may depend on such trifling circumstances!

In the small country of the Maronites, there are reckoned upwards of two hundred convents for men and women. These religious are of the order of St. Anthony, whose rules they observe with an exactness which reminds us of earlier times. The dress of the monks is of brown clumsy woollen, much like that of our capuchin friars. Their food is the same as that of the peasants, with this exception, that they never eat flesh. They have frequently fasts, and make long prayers, day and night; the remainder of their time is employed in cultivating the earth, or breaking the rocks to form the walls of the terraces which support their vineyards and mulberry plantations. Each convent has a brother shoemaker, a brother taylor, a brother weaver, a brother baker; in a word, an artist of every necessary trade. We almost always find a convent of women close to one of men; yet it is rare to hear of any scandalous report. These women themselves lead a very laborious life, and it is this activity, doubtless, which secures them against all mischiefs attendant on idleness. So far, therefore, from being injurious to population, we may affirm that these convents have contributed to promote it, by increasing by culture every article in a proportion greater than its consumption. The most remarkable of the houses of the Maronite Monks is Kozhaia,

six hours journey to the east of Tripoli. There they exorcise, as in the first ages of the church, those who are possessed with devils; for such persons are still to be found in these countries. A very few years ago, our merchants at Tripoli saw one of them who put the patience and learning of the monks to the proof: This man, to outward appearance healthy, was subject to sudden convulsions, which threw him into a kind of madness, sometimes sullen, at others violent. He tore, he bit, he foamed at the mouth; his usual expression was,—*The sun is my mother, let me adore her.* The priests almost drowned him with ablutions, tormented him with fasting and prayer, and, at length, as they reported, drove out the devil; but, from the account given me by more intelligent observers, it appears that those possessed are no other than persons afflicted with idiocy, madness, and epilepsies; and it is worth remarking, that *possession* and *epilepsy* are denoted by the same Arabic word.*

The court of Rome, in affiliating the Maronites, has granted them an Hospitium, at Rome, to which they may send several of their youth, to receive a gratuitous education. It should seem that this institution might introduce among them the ideas and arts of Europe; but the pupils of this school, limited to an education purely monastic, bring home nothing but the Italian language, which is of no use, and a stock of theological learning, from which as little advantage can be derived; they accordingly soon assimilate with the rest. Nor has a greater change been operated by the three or four missionaries maintained by the French capuchins at Gazir, Tripoli, and Bairout. Their labours consist in preaching in their church, in instructing children in the catechism, Thomas a Kempis, and the Psalms, and in teaching them to read and write. Formerly the Jesuits had two

* *Kabal* and *Kabat*. The *K* here is the *Spanish jota*.

missionaries at their house at Antoura, and the Lazarites have now succeeded them in their mission. The most valuable advantage that has resulted from these apostolical labours is, that the art of writing has become more common among the Maronites, and rendered them in this country, what the Copts are in Egypt, I mean, they are in possession of all the posts of writers, intendants, and kiayas among the Turks, and especially of those among their allies and neighbours, the Druzes.

S E C T. III.

Of the Druzes.

THE Druzes, or Derouz, who engaged the attention of Europe about the end of the sixteenth century, are an inconsiderable people, who in their mode of life, form of government, language, and customs, bear a striking resemblance to the Maronites. Religion constitutes the principal difference between them. That of the Druzes was long a problem; but the mystery is at length unveiled, and it is now not difficult to give a tolerably accurate account of it, as well as of their origin, with which it is connected. To gain a proper idea of their history, it will be necessary to trace facts up to their first sources.

Twenty-three years after the death of Mahomet, the disputes between Ali, his son-in-law, and Moaouia, Governor of Syria, occasioned the first schism in the empire of the Arabs, and the two sects subsist to this day; but, in reality, this difference related only to power; and the Mahometans, however divided in opinion respecting the rightful successor of the prophét, were agreed with respect to their dogmas.* It

* The radical cause of this great difference was the aversion conceived against Ali, by Ayesha, wife of Mahomet, because,

was not until the following century that the perusal of Greek books introduced among the Arabs a spirit of discussion and controversy, to which, till then, they were utter strangers. The consequence was, as might be expected, by reasoning on matters not susceptible of demonstration, and guided by the abstract principles of an unintelligible logic, they divided into a multitude of sects and opinions. At this period, too the civil power lost its authority, and religion, which from that derives the means of preserving its unity, shared the same fate, and the Mahometans now experienced what had before befallen the Christians. The nations which had received the religion of Mahomet, mixed with it their former absurd notions; and the errors which had anciently prevailed over Asia, again made their appearance, though altered in their forms. The Metempsychosis, the doctrine of a good and evil principle, and the renovation after six thousand years,

as it is said, he had discovered her infidelity to the Prophet. She never could pardon him this indiscretion, and, after getting him three times excluded from the Califat, finding that by his intrigues he was likely to succeed in the fourth attempt, she resolved to destroy him by open violence. For this purpose she excited against him several Arab chiefs, and, among others, *Amrou*, Governor of Egypt, and *Moaouia*, Governor of Syria. The latter procured himself to be proclaimed *Calif*, or *Successor*, in the city of Damascus. *Ali*, in order to dispossess him, declared war; but the impropriety of his conduct ruined his affairs. After some hostilities, in which the advantages were equal on both sides, he perished at Koufa by the hand of an *Assassin* or *Batenian*. His partizans elected his son *Hosain* in his place; but this young man, ill adapted to such difficult circumstances, was slain in a rencounter by the partizans of *Moaouia*. His death rendered the two factions still more irreconcilable. Their hatred, prevented their agreeing in the exposition of the Koran. The doctors of the respective parties took a pleasure in contradicting each other; and hence arose the division of the Mahometans into two sects, who consider each other as heretics. The Turks follow that of *Omar* and *Moaouia*, whom they hold to be the legitimate successors of the Prophet: the Persians are followers of *Ali*.

as it had been taught by Zoroaster, were again revived among the Mahometans. In this political and religious confusion, every enthusiast became an apostle, and every apostle the head of a sect. No less than sixty of these were reckoned, remarkable for the numbers of their followers, all differing in some points of faith, and all disavowing heresy and error. Such was the state of these countries, when at the commencement of the eleventh century, Egypt became the theatre of one of the most extravagant scenes of enthusiasm and absurdity ever recorded in history. The following account is extracted from the eastern writers. In the year of the Hejira, 386 (A. D. 996) the third Calif, of the race of the Fatmites, called *Hakem-b'amr-ellah*, succeeded to the throne of Egypt, at the age of eleven years. He was one of the most extraordinary princes of whom history has preserved the memory. He caused the first Califs, the companions of Mahomet, to be cursed in the mosques, and afterwards revoked the anathema: He compelled the Jews and Christians to abjure their religion, and then permitted them to resume it. He prohibited the making slippers for women, to prevent them from coming out of their houses. He burnt one half of the city of Cairo for his diversion, while his soldiers pillaged the other. Not contented with these extravagant actions, he forbade the pilgrimage to Mecca, fasting and the five prayers; and at length carried his madness so far as to desire to pass for God himself. He ordered a register of those who acknowledged him to be so, and the number amounted to sixteen thousand. This impious pretension was supported by a false prophet, who came from Persia into Egypt; which impostor, named *Mohammad-ben-Ismael*, taught that it was not necessary to fast or pray, to practise circumcision, to make the pilgrimage to Mecca, or observe festivals; that the prohibition of pork and wine was absurd; and that marriage between brothers and sisters fathers and

children was lawful. To ingratiate himself with Hakem, he maintained that this Calif was God himself incarnate; and, instead of his name *Hakem-b'amr-el-lab*, which signifies, governing by the order of God, he called him *Hakem-b'amr-eh*, governing by his own order. Unluckily for the prophet, his new god had not the power to protect him from the fury of his enemies, who slew him in a tumult, almost in the arms of the Calif, who was himself massacred soon after on Mount *Mokattam*, where he, as he said, had held conversation with angels.*

The death of these two chiefs did not stop the progress of their opinions: A disciple of Mohammad-ben-Ismael, named Hamza-ben-Ahmud, propagated them with an indefatigable zeal in Egypt, in Palestine, and along the coast of Syria, as far as Sidon and Berytus. His profelytes, it seems, underwent the same fate as the Maronites; for being persecuted by the sect in power, they took refuge in the mountains of Lebanon, where they were better able to defend themselves; at least it is certain, that, shortly after this era, we find them established there, and forming an independent society like their neighbours.

The difference of their opinions disposes them to be enemies, but the urgent interest of their common safety forces them to allow mutual toleration, and they have always appeared united, and have jointly opposed, at different times, the Crusaders, the Sultans of Aleppo, the Mamlouks, and the Ottomans. The conquest of Syria by the latter, made no change in their situation. Selim I. on his return from Egypt, meditating no less than the conquest of Europe, disdained to waste his time before the rocks of Lebanon. Soliman II. his successor, incessantly engaged in important wars, either with the Knights of Rhodes, the Persians, the kingdom of Yemen, the Hungarians,

* Vide El-Makin, Hist. Saracen. Lib. I.

the Germans, or the Emperor Charles V. had no time to think of the Druzes. Emboldened by this inattention, and not content with their independence, they frequently descended from their mountains to pillage the Turks. The Pachas in vain attempted to repel their inroads; their troops were invariably routed or repulsed. And it was not till the year 1588 that Amurath III. wearied with the complaints made to him, resolved, at all events, to reduce these rebels, and had the good fortune to succeed. His general, Ibrahim Pacha, marched from Cairo, and attacked the Druzes and Maronites with so much address and vigour as to force them into their strong holds, the mountains. Dissension took place among their chiefs, of which he availed himself to exact a contribution of upwards of one million of piasters, and to impose a tribute which has continued to the present time.

It appears that this expedition was the Epocha of a considerable change in the constitution of the Druzes. Till that they had lived in a sort of anarchy, under the command of different Shaiks, or Lords. The nation was likewise divided into two factions, such as is to be found in all the Arab tribes, and which are distinguished into the party *Kaisi*, and the party *Yamani*.* To simplify the administration, Ibrahim permitted them only one Chief, who should be responsible for the tribute, and execute the office of civil magistrate; and this governor, from the nature of his situation, acquiring great authority, became almost the king of the republic; but as he was always chosen from among the Druzes, a consequence followed which the Turks had not foreseen, and which was nearly fatal to their power. For the Chief thus chosen, having at his disposal the whole strength of the nation, was able to give it unanimity and energy, and it naturally

* These factions distinguish themselves by the colour of their flags; that of the *Kaisis* is red, that of the *Yamanis* white.

turned against the Turks; since the Druzes, by becoming their subjects, had not ceased to be their enemies. They took care, however, that their attacks should be indirect, so as to save appearances, and only engaged in secret hostilities, more dangerous, perhaps, than open war.

About this time, that is, the beginning of the seventeenth century, the power of the Druzes attained its greatest height; which it owed to the talents and ambition of the celebrated Emir Fakr-el-din, commonly called Fakardin. No sooner was this prince advanced to be Chief of that people than he turned his whole attention to humble the Ottoman power, and aggrandize himself at its expense; in this enterprize he displayed an address seldom seen among the Turks. He first gained the confidence of the Porte, by every demonstration of loyalty and fidelity; and as the Arabs, at that time, infested the plain of Balbek, and the countries of Sour and Acre; he made war upon them, freed the inhabitants from their depredations, and thus rendered them desirous of living under his government.

The city of Bairout was situated advantageously for his designs, as it opened a communication with foreign countries, and, among others, with the Venetians, the natural enemies of the Turks. Fakr-el-din availed himself of the misconduct of the Aga, expelled him, seized on the city, and even had the art to make a merit of this hostility with the Divan, by paying a more considerable tribute. He proceeded in the same manner at Saide, Balbek, and Sour, and, at length, about the year 1613, saw himself master of all the country, as far as Adjaloun and Safad. The Pachas of Tripoli and Damascus could not see these encroachments with indifference; sometimes they opposed him with open force, though ineffectually, and sometimes endeavoured to ruin him at the Porte, by secret insinuations; but the Emir,

who maintained there his spies and defenders, defeated every attempt.

At length, however, the Divan began to be alarmed at the progress of the Druzes, and made preparations for an expedition capable of crushing them. Whether from policy or fear, Fakr-el-din did not think proper to wait this storm. He had formed connections in Italy, on which he built great hopes, and determined to go in person to solicit the succours they had promised him; persuaded that his presence would increase the zeal of his friends, while his absence might appease the resentment of his enemies. He therefore embarked at Bairout, and, after resigning the administration to his son Ali, repaired to the court of the Medici, at Florence. The arrival of an Oriental prince in Italy, did not fail to attract the public attention. Enquiry was made into his nation, and the origin of the Druzes became a popular topic of research. Their history and religion were found to be so little known as to leave it a matter of doubt whether they should be classed with the Mahometans or Christians. The Crusades were called to mind, and it was soon suggested that a people who had taken refuge in the mountains, and were enemies to the natives, could be no other than the off-spring of the Crusaders.

This idle conceit was too favourable to Fakr-el-din for him to endeavour to disprove it: he was artful enough, on the contrary, to pretend he was related to the house of Lorraine; and the missionaries and merchants, who promised themselves a new opening for conversions and commerce, encouraged his pretensions. When an opinion is in vogue, every one discovers new proofs of its certainty. The learned in etymology, struck with the resemblance of the names, insisted, that *Druzes* and *Dreux* must be the same word, and, on this foundation, formed the system of a pretended colony of French Crusaders, who,

under the conduct of a *Comte de Dreux*, had formed a settlement in Lebanon. This hypothesis, however, was completely overthrown, by the remark that the name of the Druzes is to be found in the Itinerary of Benjamin of Tudela, who travelled before the time of the Crusades. Indeed the futility of it ought to have been sufficiently apparent, at first, from the single consideration, that had they been descended from any nation of the Franks, they must have retained, at least, the traces of some European language; for a people, retired into a separate district, and living distinct from the natives of the country, do not lose their language. That of the Druzes, however, is very pure Arabic, without a single word of European origin. The real derivation of the name of this people has been long in our possession, without our knowing it. It originates from the founder of the sect of Mohammad-ben-Ismael, who was surnamed *El-Dorzi*, and not *El Darari*, as it is usually printed: the confusion of these two words, so different in our writing, arises from the figure of the two Arabian letters *r* and *z*, which have only this difference, that the *z* has a point over it, frequently omitted, or effaced in the manuscripts.*

After a stay of nine years in Italy, *Fakr-el-din* returned to resume the government of his country. During his absence, his son Ali had repulsed the

* This discovery is due to M. Mitchel, Dragoman, *Baratairet* of France, at Saide, of which place he was a native: he has written a memoir on the Druzes, of which he gave one of the two copies he had to the Chevalier de Taules, Consul at Saide, and the other to the Baron de Tott, when he was there, in 1777, to inspect that factory.

† *Barataire*, is a subject of the Turkish government, privileged by one of the European Ministers, in amity with the Porte, and by that means placed upon a footing with the Franks, with respect to the payment of duties, &c. Each Minister possesses a certain number of these *Barats* at his disposal, which he cannot exceed. T.

Turks, appeased discontents, and maintained affairs in tolerable good order. Nothing remained for the Emir, but to employ the knowledge he could not but have acquired, in perfecting the internal administration of government, and promoting the welfare of the nation; but instead of the useful and valuable arts, he wholly abandoned himself to the frivolous and expensive, for which he had imbibed a passion while in Italy. He built numerous villas; constructed baths, and planted gardens; he even presumed, without respect to the prejudices of his country, to employ the ornaments of painting and sculpture, notwithstanding these are prohibited by the Koran.

The consequences of this conduct soon manifested themselves: the Druzes, who paid the same tribute as in time of war, became dissatisfied. The Yamani faction were roused; the people murmured at the expenses of the prince; and the luxury he displayed renewed the jealousy of the Pachas. They attempted to levy greater tribute: hostilities again commenced, and *Fakr-el-din* repulsed the forces of the Pachas, who took occasion, from this resistance, to render him suspected by the Sultan himself. Amurath III. incensed that one of his subjects should dare to enter into a competition with him, resolved on his destruction; and the Pacha of Damascus received orders to march, with all his forces, against Bairout, the usual residence of *Fakr-el-din*; while forty galleys invested it by sea, and cut off all communication.

The Emir, who depended on his good fortune, and succours from Italy, determined at first to brave the storm. His son, Ali, who commanded at Safad, was ordered to oppose the progress of the Turkish army, and in fact he bravely resisted them, notwithstanding the great disparity of his forces; but, after two engagements, in which he had the advantage, being slain in a third attack, the face of affairs were greatly changed, and every thing went to ruin. *Fakr-el-din*,

terrified at the loss of his troops, afflicted at the death of his son, and enfeebled by age and a voluptuous life; lost both courage and presence of mind. He no longer saw any resource but in a peace, which he sent his second son to solicit of the Turkish Admiral, whom he attempted to seduce by presents; but the Admiral, detaining both the presents and the Envoy, declared he would have the prince himself. Fakr-el-din, intimidated, took to flight, and was pursued by the Turks, now masters of the country. He took refuge on the steep eminence of Niha, where they besieged him ineffectually for a whole year, when they left him at liberty: but, shortly after, the companions of his adversity, wearied with their sufferings, betrayed and delivered him up to the Turks. Fakr-el-din, though in the hands of his enemies, conceived hopes of pardon, and suffered himself to be carried to Constantinople, where Amurath, pleased to behold at his feet a prince so celebrated, at first treated him with that benevolence which arises from the pride of superiority; but soon returning to his former jealousies, yielded to the instigations of his courtiers, and, in one of his violent fits of passion, ordered him to be strangled, about the year 1631.

After the death of *Fakr-el-din*, the posterity of that prince still continued in possession of the Government, though at the pleasure, and as vassals, of the Turks. This family failing in the male-line at the beginning of the present century, the authority devolved, by the election of the Shaiks, on the house of Shelah, in which it still continues. The only Emir of that house, whose name deserves to be preserved, is the Emir Melhem, who reigned from 1640 to 1759; in which interval he retrieved the losses of the Druzes, and restored them to that consequence which they had lost by the defeat of Fakr-el-din. Towards the end of his life, about the year 1754, Melhem, wearied with the cares of government, abdicated his authority, to live

in religious retirement, after the manner of the Okkals; but the troubles that succeeded occasioned him once more to resume the the reins of government, which he held till 1759, when he died, universally regretted.

He left three sons, minors: the eldest of whom ought, according to the custom of the country to have succeeded him; but, being only eleven years of age, the authority devolved upon his uncle, Mansour, agreeably to a law very general in Asia, which wills the people to be governed by a sovereign who has arrived at years of maturity. The young prince was but little fitted to maintain his pretensions; but a Maronite, named Sad-el-Kouri, to whom Melhem had entrusted his education, took this upon himself. Aspiring to see his pupil a powerful prince, that he might himself become a powerful visir, he made every exertion to advance his fortune. He first retired with him to Djebail, in the Kefraouan, where the Emir Yousef possessed large domains, and there undertook to conciliate the Maronites, by embracing every opportunity to serve both individuals and the nation. The great revenues of his pupil, and the moderation of his expenditure, amply furnished him with the means. The farm of the Kefraouan was divided between several Shaiks, with whom the Porte was not very well satisfied. Sad treated for the whole with the Pacha of Tripoli, and got himself appointed sole Receiver. The Motoualis of the valley of Balbek had, for some years before, made several encroachments on Lebanon, and the Maronites began to be alarmed at the near approach of these intolerant Mahometans. Sad purchased of the Pacha of Damascus a permission to make war upon them, and, in 1763, drove them out of the country. The Druzes were at that time divided into two factions: Sad united his interest with those who opposed Mansour, and secretly

prepared the plot which was to raise the nephew on the ruin of the uncle.

At this period the Arab Daher, who had made himself master of Galilee, and fixed his residence at Acre, disquieted the Porte by his progress and pretensions: To oppose him, the Divan had just united the Pachalics of Damascus, Saide, and Tripoli; in the hands of Osman and his children; and it was evident, that an open war was not very remote. Mansour, who dreaded the Turks too much to resist them, made use of the policy usual on such occasions, pretending a zeal for their service, while he secretly favoured their enemy. This was a sufficient motive for Sad to pursue measures directly opposite. He supported the Turks against the faction of Mansour, and manœvered with so much good fortune or address as to depose that Emir, in 1770, and place Yousef in his government.

In the following year, Ali Bey declared war, and attacked Damascus. Yousef, called on by the Turks, took part in the quarrel, but without being able to draw the Druzes from their mountains, to enter into the army of the Ottomans. Besides their natural repugnance, at all times, to make war out of their country, they were, on this occasion, too much divided at home to quit their habitations, and they had reason to congratulate themselves on the event. The battle of Damascus ensued, and the Turks, as we have already seen, were completely routed. The Pacha of Saide, escaping from this defeat, and not thinking himself in safety in that town, sought an asylum even in the house of Emir Yousef. The moment was unfavourable, but the face of affairs soon changed, by the flight of Mohammad Bey. The Emir, concluding that Ali Bey was dead, and not imagining that Daher was powerful enough singly to maintain the quarrel, declared openly against him. Saide was threatened with a siege, and he detached fifteen hundred men of

his faction to its defence; while himself, in person, prevailing on the Druzes and Maronites to follow him, made an incursion with twenty-five thousand peasants into the valley of Bekaa, and, in the absence of the Motoualis, who had joined the army of Daher, laid the whole country waste, with fire and sword, from Belbek to Tyre.

While the Druzes, proud of this exploit, were marching in disorder towards the latter city, five hundred Motoualis, informed of what had happened, flew from Acre, enflamed with rage and despair, and fell with such impetuosity on their army, as to give them a complete overthrow. Such was the surprise and confusion of the Druzes, that imagining themselves attacked by Daher himself, and betrayed by their companions, they turned their swords on each other as they fled. The steep declivities of Djezin, and the pine-woods which were in the route of the fugitives, were strewed with dead, but few of whom perished by the hands of the Motoualis.

The Emir Yousef, ashamed of this defeat, escaped to Dair-el-Kamar, and, shortly after, attempted to take revenge; but, being again defeated in the plain between Said and Sour, (Tyre,) he was constrained to resign, to his uncle Mansour, the ring, which, among the Druzes, is the symbol of command. In 1773, he was restored by a new revolution; but he could not support his power but at the expense of a civil war. In order, therefore, to prevent Bairout falling into the hands of the adverse faction, he requested the assistance of the Turks, and demanded, of the Pacha of Damascus, a man of sufficient abilities to defend that city. The choice fell on an adventurer, who, from his subsequent fortune, and the part he is now acting, merits to be made known.

This man, named Ahmad, is a native of Bosnia, and speaks the Sclavonian as his mother tongue, as the Ragusan captains, with whom he converses in

preference to those of every nation, assert. It is said, that flying from his country at the age of sixteen, to escape the consequences of an attempt to violate his sister-in-law, he repaired to Constantinople, where, destitute of the means of procuring a subsistence, he sold himself to the slave-merchants, to be conveyed to Egypt; and, on his arrival at Cairo, was purchased by Ali Bey who placed him among his Mamlouks.

Ahmad was not long in distinguishing himself by his courage and address. His patron employed him on several occasions, in dangerous coups de main, such as the assassination of such Beys and Cachefs as he suspected; of which commissions he acquitted himself so well as to acquire the name of *Djezzar*, which signifies *Cut-throat*.* With this claim to his friendship, he enjoyed the favour of Ali, until it was disturbed by an accident.

This jealous Bey having proscribed one of his benefactors, called Saleh Bey, commanded Djezzar to cut off his head. Either from humanity or some secret friendship for the devoted victim, Djezzar hesitated, and even remonstrated against the order. But learning the next day that Mohammad Bey had executed the commission, and that Ali had spoken of him not very favourably, he thought himself a lost man, and, to avoid the fate of Saleh Bey, escaped unobserved, and reached Constantinople. He there solicited employments suitable to his former rank, but meeting, as is usual in capitals, with a great number of rivals, he pursued another plan, and went to seek his fortune in Syria, as a private soldier. Chance conducted him among the Druzes, where he was hos-

* This Djezzar is the monster so well described by Baron de Tott, in Part IV. of his *Memoirs*. The Baron translates the word Djezzar, Butcher.—He was in the beginning of 1787 in open revolt against the Porte.

pitably entertained, even in the house of the Kiaya of the Emir Yousef. From thence he repaired to Damascus, where he soon obtained the title of Aga, with a command of five *pair of colours*, that is to say, of fifty men; and he was thus situated when fortune destined him to the government of Bairout.

Djezzar was no sooner established there, than he took possession of it for the Turks. Yousef was confounded at this proceeding. He demanded justice at Damascus; but finding his complaints treated with contempt, entered into a treaty with Daher, and concluded an offensive and defensive alliance with him, at Ras-el-aen, near to Sour. No sooner was Daher united with the Druzes than he laid siege to Bairout, by land, whilst two Russian frigates, whose service was purchased by six hundred purses, cannonaded it by sea. Djezzar was compelled to submit to force, and, after a vigorous resistance, gave up the city, and surrendered himself prisoner. Shaik Daher, charmed with his courage, and flattered with the preference he had given him in the surrender, conducted him to Acre, and shewed him every mark of kindness. He even ventured to trust him with a small expedition into Palestine; but Djezzar, on approaching Jerusalem, went over to the Turks, and returned to Damascus.

The war of Mohammad Bey breaking out, Djezzar offered his service to the Captain Pacha, and gained his confidence. He accompanied him to the siege of Acre, and that admiral having destroyed Daher, and finding no person more proper than Djezzar to accomplish the designs of the Porte in that country, named him Pacha of Saide.

Being now, in consequence of this revolution, superior Lord to the Emir Yousef, Djezzar is mindful of injuries in proportion as he had reason to accuse himself of ingratitude. By a conduct truly Turkish, feigning alternately gratitude and resentment, he is

alternately on terms of dispute and reconciliation with him, continually exacting money as the price of peace, or as indemnity for war. His artifices have succeeded in well that, within the space of five years, he has extorted from the Emir four millions of French money, (above a hundred and sixty thousand pounds), a sum the more astonishing as the farm of the country of the Druzes did not then amount to one hundred thousand livres, (four thousand pounds.)

In 1784, he made war on him, deposed him, and bestowed the government on the Emir of the country of Hasbeya, named Ismael. Yousef, having once more purchased his favor, returned, towards the end of the same year, to Dair-el-Kamar, and even courted his confidence so far as to wait on him at Acre, from whence nobody expected him to return, but Djezzar is too cunning to shed blood while there are any hopes of getting money: he released the prince, and sent him back with every mark of friendship. Since that period, the Porte has named him Pacha of Damascus, where he now resides. There, still retaining the sovereignty of the Pachalic of Acre, and of the country of the Druzes, he has seized on Sad, the Kiaya of the Emir, and, under pretext of his being the author of the troubles, has threatened to strike off his head. The Maronites, alarmed for the safety of this man, whom they revere, have offered nine hundred purses for his ransom. The Pacha demands a thousand; and if, as will probably be the case, their money be exhausted by these repeated contributions, woe to the prince and his minister! on their fate depends that of many others; and, indeed, they may be said to have deserved it, for it was the unskillfulness of the one, and the ambition of the other, which, by inviting the Turks to interfere in the affairs of the Druzes, has given so fatal a blow to the safety and tranquility of the nation that, in the ordinary course of things, it will be long before

it can possibly recover its former prosperity and power.

Let us return to the religion of the Druzes. What has been already said of the opinions of Mohammad-ben-Ismael may be regarded as the substance of it. They practise neither circumcision, nor prayers, nor fasting; they observe neither festivals, nor prohibitions. They drink wine, eat pork, and allow marriage between brothers and sisters, though not between fathers and children. From this we may conclude, with reason, that the Druzes have no religion: yet, one class of them must be expected, whose religious customs are very peculiar. Those who compose it are to the rest of the nation what the *initiated* were to the *profane*; they assume the name of *Okkals*, which means spiritualists, and bestow on the vulgar the epithet of *Djabel*, or ignorant; they have various degrees of initiation, the highest orders of which require celibacy. These are distinguishable by the White Turban they affect to wear, as a symbol of their purity; and so proud are they of this supposed purity, that they think themselves sullied by even touching a profane person. If you eat out of their plate, or drink out of their cup, they break them; and hence the custom, so general in this country, of using vases, with a sort of cock, which may be drank out of without touching them with the lips. All their practices are enveloped in mysteries: their Oratories always stand alone, and are constantly situated on eminences: in these they hold their secret assemblies, to which women are admitted. It is pretended they perform ceremonies there in presence of a small statue resembling an ox or a calf; whence some have pretended to prove that they are descended from the Samaritans. But, besides that the fact is not well ascertained, the worship of the ox may be deduced from other sources.

They have one or two books which they conceal with the greatest care : but chance has deceived their jealousy ; for, in a civil war, which happened six or seven years ago, the Emir Yousef, who is *Djabel*, or ignorant, found one among the pillage of one of their oratories. I am assured, by persons who have read it, that it contains only a mystic jargon, the obscurity of which, doubtless, renders it valuable to adepts. Hakem Bamr-ellah is there spoken of, by whom they mean God, incarnated in the person of the Calif. It likewise treats of another life, of a place of punishment, and a place of happiness, where the Okkals shall, of course, be most distinguished. Several degrees of perfection are mentioned, to which they arrive by successive trials. In other respects, these sectaries have all the insolence, and all the fears, of superstition : they are not communicative, because they are weak ; but it is probable that, were they powerful, they would be promulgators and intolerant.

The rest of the Druzes, strangers to this spirit, are wholly indifferent about religious matters. The Christians who live in their country, pretend that several of them believe in the Metempsychosis ; that others worship the sun, moon, and stars, all which is possible ; for, as among the Ansaria, every one left to his own fancy, follows the opinion that pleases him most ; and these opinions are those which present themselves most naturally to unenlightened minds. When among the Turks, they affect the exterior of Mahometans, frequently the Mosques, and perform their ablutions and prayers. Among the Maronites, they accompany them to church, and, like them, make use of the holy water. Many of them, importuned by the missionaries, suffer themselves to be baptized ; and if solicited by the Turks, receive circumcision, and conclude by dying neither Christians

nor Mahometans; but they are not so indifferent in matters of civil policy*.

S E C T. IV.

Of the Government of the Druzes.

THE Druzes, as well as the Maronites, may be divided into two classes, the common people, and the people of eminence and property, distinguished by the title of Shaiks, and Emirs, or descendants of princes. The greater part are cultivators, either as farmers or proprietors; every man lives on his inheritance, improving his mulberry-trees and vineyards; in some districts they grow tobacco, cotton, and some grain, but the quantity of these is inconsiderable. It appears that at first, all the lands were, as formerly in Europe in the hands of a small number of families. But to render them productive, the great proprietors were forced to sell part of them, and let leases, which subdivision is become the chief source of the power of the state, by multiplying the number of persons interested in the public weal: there still exist, however, some traces of the original inequality, which even to

* The above accounts of the *Druzes* corresponds exactly with the *Historical Memoire* on that people, translated from the manuscript of M. *Venture de Parardis*, which contains *extracts* from their *sacred books, a catechism, &c.* The *Memoir* in question, confirms the accuracy of our Author, who had never seen it, nor was acquainted with M. *Venture*. The latter gentleman and M. *Suguste*, a most amiable man, and a well informed traveller in the east, who had just done the translator the honour of a visit, concur in bestowing the highest commendations on the present work, and do not hesitate to pronounce it the most accurate modern book that has appeared respecting Syria and Egypt. To their elogium may be added the distinguished approbation of M. de *St. Priest*, the late Ambassador of the Court of France at Constantinople, which he has expressed in the strongest terms. T.

this day produces pernicious effects. The great property possessed by some families give them too much influence in all the measures of the nation; and their private interests have too great weight in every public transaction. Their history, for some years back, affords sufficient proofs of this; since all the civil or foreign wars in which they have been engaged have originated in the ambition and personal views of some of the principal families, such as the the Lesbeks, the Djambelats, the Ismaels of Solyma, &c. The Shaiks of these houses, who alone possess one tenth part of the country, procured creatures by their money, and at last, involved all the Druzes in their dissensions. It must be owned, however, that possibly, to this conflict between contending parties the whole nation owes the good fortune of never having been enslaved by its chief.

This chief, called *Hakem*, or governor, also Emir, or Prince, is a sort of king, or general, who unites in his own person the civil and military powers. His dignity is sometimes transmitted from father to son, sometimes from one brother to another, and the succession is determined rather by force than any certain laws. Females can in no case pretend to this inheritance. They are already excluded from succession in civil affairs, and consequently, can still less expect it in political: in general, the Asiatic governments are too turbulent, and their administration renders military talents too necessary to admit of the sovereignty of women. Among the Druzes, the male line of any family being extinguished, the government devolves to him who is in possession of the greatest number of suffrages and resources. But the first step is to obtain the approbation of the Turks, of whom he becomes the vassal and tributary. It even happens, that, not unfrequently to assert their supremacy, they name the *Hakem*, contrary to the wishes of the nation, as in the case of Ismael Hasbeya, raised

to that dignity by Djezzar; but this constraint lasts no longer than it is maintained by that violence which gave it birth. The office of the government is to watch over the good order of the state, and to prevent the Emirs, Shaiks, and villages, from making war on each other; in case of disobedience, he may employ force. He is also at the head of the civil power, and names the Cadis, only, always reserving to himself the power of life and death. He collects the tribute, from which, he annually pays to the Pacha a stated sum. This tribute varies, in proportion as the nation renders itself more or less formidable: at the beginning of this century, it amounted to one hundred and sixty purses, (eight thousand three hundred and thirty pounds,) but Melhem forced the Turks to reduce it to sixty. In 1784, Emir Yousef paid eighty and promised ninety. This tribute, which is called *Miri*, is imposed on the mulberry-trees, vineyards, cotton, and grain. All sown land, pays in proportion to its extent; every foot of mulberries is taxed at three Medins, or three Sols, nine Deniers, (not quite two-pence.) A hundred feet of vineyard, pays a Piafter, or forty Medins, and fresh measurements are often made, to preserve a just proportion. The Shaiks and Emirs have no exemption in this respect, and it may be truly said, they contribute to the public stock in proportion to their fortune. The collection is made almost without expence. Each man pays his contingent at Dair-el-Kamer, if he pleases, or to the collectors of the prince, who make a circuit round the country, after the crop of silks. The surplus of this tribute is for the prince, so that it is his interest to reduce the demands of the Turks, as it would be likewise to augment the impost; but this measure requires the sanction of the Shaiks, who have the privilege of opposing it. Their consent is necessary, likewise, for peace and war. In these cases, the Emir must convoke general assemblies, and lay before

them the state of his affairs. There, every Shaik, and every Peasant, who has any reputation for courage or understanding, is entitled to give his suffrage, so that this government may be considered as a well-proportioned mixture of monarchy, aristocracy, and democracy. Every thing depends on circumstances: if the governor be a man of ability, he is absolute; if weak, a cypher. This proceeds from the want of fixed laws; a want common to all Asia, and the radical cause of all the disorders in the governments of the Asiatic nations.

Neither the chief nor the individual Emirs maintain troops; they have only persons attached to the domestic service of their houses, and a few black slaves. When the nation makes war, every man, whether Shaik or Peasant, able to bear arms, is called upon to march. He takes with him a little bag of flour, a musket, some bullets, a small quantity of powder, made in his village, and repairs to the rendezvous appointed by the governor. If it be a civil war, as sometimes happens, the servants, the farmers, and their friends, take up arms for their patron, or the chief of their family, and repair to his standard. In such cases, the parties irritated, frequently seem on the point of proceeding to the last extremities; but they seldom have recourse to acts of violence, or attempt the death of each other; mediators always interpose, and the quarrel is appeased the more readily as each patron is obliged to provide his followers with provisions and ammunition. This system, which produces happy effects in civil troubles, is attended with great inconvenience in foreign wars, as sufficiently appeared in that of 1784. Djezzar, who knew that the whole army lived at the expence of the Emir Yousef, aimed at nothing but delay, and the Druzes, who were not displeas'd at being fed for doing nothing, prolonged the operations; but the Emir, wearied of paying, concluded a treaty, the terms of which were

not a little rigorous for him, and eventually for the whole nation, since nothing is more certain than that the interests of a prince and his subjects are always inseparable.

The ceremonies to which I have been a witness on these occasions, bear a striking resemblance to the customs of ancient times. When the Emir and the Shaiks had determined on war, at Dair-el-Kamar, cryers in the evening, ascended the summits of the mountain; and there began to cry with a loud voice: *To war, to war; take your guns, take your pistols: noble Shaiks, mount your horses; arm yourselves with the lance and sabre; rendezvous to-morrow at Dair-el-Kamar. Zeal of God! zeal of combats!* This summons heard from the neighbouring villages, was repeated there, and, as the whole country is nothing but a chain of lofty mountains, and deep vallies, the proclamation passed in a few hours to the frontiers. These voices, from the stillness of the night, the long surrounding echoes, and the nature of the subject, had something awful and terrible in their effect. Three days after, fifteen thousand armed men rendezvoused at Dair-el-Kamar, and operations might have been immediately commenced.

We may easily imagine that troops of this kind no way resemble our European soldiers; they have neither uniforms, nor discipline, nor order. They are a crowd of peasants with short coats, naked legs, and muskets in their hands differing from the Turks and Mamlouks, in that they are all foot; the Shaiks and Emirs alone have horses, which are of little use from the rugged nature of the country. War there, can only be a war of posts. The Druzes never risk themselves in the plain, and with reason, for they would be unable to stand the shock of cavalry, having no bayonets to their muskets. Their whole art consists in climbing rocks, creeping among the bushes and blocks of stone, from whence their fire is the more

dangerous; as they are covered, fire at their ease, and by hunting, and military sports, have acquired the habit of hitting a mark with great dexterity. They are accustomed to sudden inroads, attacks by night, ambuscades, and all those *coups de main*, which require to fall suddenly on, and come to close fight with the enemy. Ardent in improving their success, easily dispirited, and prompt to resume their courage, daring even to temerity, and sometimes ferocious, they possess above all, two qualities essential to the excellency of any troops; they strictly obey their leaders, and are endowed with a temperance and vigour of health at this day unknown to most civilized nations. In the campaign of 1784, they passed three months in the open air, without tents, or any other covering than a sheep-skin; yet were there not more deaths and maladies than if they had remained in their houses. Their provisions consisted, as at other times, of small loaves baked on the ashes, or on a brick, raw onions, cheese, olives, fruits, and a little wine. The table of the chiefs was almost as frugal, and we may affirm, that they subsisted a hundred days, on what the same number of Englishmen or Frenchmen would not have lived ten. They have no knowledge of the science of fortification, the management of artillery, or encampments, nor, in a word, any thing which constitutes the art of war. But, had they among them a few persons versed in military science, they would readily acquire its principles, and become a formidable soldiery. This would be the more easily effected, as their mulberry plantations and vineyards do not occupy them all the year, and they could afford much time for military exercises.*

* In this leisure time, when the crop of silk is over in Lebanon, a great many Peasants like our inhabitants of the Limousin leave the mountains to get in the harvests in the plains.

By the last estimate, it appears the number of men able to bear arms was forty thousand, which supposes a total population of a hundred and twenty thousand: no addition is to be made to this calculation, since there are no Druzes in the cities or on the coast. As the whole country contains only one hundred and ten square leagues, there results for every league one thousand and ninety persons; which is equal to the population of our richest provinces. To render this more remarkable, it must be observed that the soil is not fertile, that a great many eminences remain uncultivated, that they do not grow corn enough to support themselves three months in the year, that they have no manufactures, and that all their exportations are confined to silks and cottons, the balance of which exceeds very little the importation of corn from the Hauran, the oils of Palestine, and the rice and coffee they procure from Bairout.—Whence arises then such a number of inhabitants, within so small a space? I can discover no other cause than that ray of liberty which glimmers in this country. Unlike the Turks, every man lives in a perfect security of his life and property. The peasant is not richer than in other countries; but he is free, “he fears not,” as I have often heard them say, “that the Aga, the Kaimmakam, or the Pacha, should send their Djendis,* to pillage his house, carry off his family, or give him the bastinado.” Such oppressions are unknown among these mountains. Security, therefore, has been the original cause of population, from that inherent desire which all men have to multiply themselves wherever they find an easy subsistence. The frugality of the nation, which is content with little, has been a secondary, and not less powerful reason; and a third, is the emigration of a number of Christian families, who daily desert the Turkish provinces

* Soldiers.

to settle in Mount Lebanon, where they are received with open arms by the Maronites, from similarity of religion, and by the Druzes from principles of toleration, and a conviction how much it is the interest of every country to multiply the number of its cultivators, consumers, and allies. They all live quietly together; but I cannot help adding, that the Christians frequently display an indiscreet and meddling zeal, too well calculated to disturb this tranquility.

The comparison, which the Druzes often have an opportunity of making between their situation and that of other subjects of the Turkish government has given them an advantageous opinion of their superiority, which, by a natural effect, has an influence on their personal character. Exempt from the violence and insults of despotism, they consider themselves as more perfect than their neighbours, because they have the good fortune not to be equally debased. Hence they acquire a character more elevated, energetic, and active; in short, a genuine republican spirit. They are considered throughout the Levant as restless, enterprising, hardy, and brave even to temerity. Only three hundred of them have been seen to enter Damascus in open day, and spread around them terror and carnage. It is remarkable, that though their form of Government is nearly similar, the Maronites do not possess these qualities to the same degree. Enquiring the reason, one day, in a company where this observation was made, in consequence of some recent events, an old Maronite, after a moment's silence, taking his pipe from his mouth, and curling his beard round his finger, made answer, "Perhaps the Druzes would be more afraid of death, did they believe in a future state." Nor are they great preachers of that morality which consists in pardoning injuries. No people are more nice than they with respect to the point of honour: Any offence of that kind, or open insult, is instantly punished by

blows of the kandjur or the musket; while among the inhabitants of the towns, it only excites injurious retorts. This delicacy has occasioned in their manners and discourse, a reserve, or, if you will, a politeness, which one is astonished to discover among peasants. It is carried even to dissimulation and falsehood, especially among the chiefs, whose greater interests demand greater attentions. Circumspection is necessary to all, from the formidable consequences of that retaliation of which I have spoken. These customs may appear barbarous to us; but they have the merit of supplying the deficiency of regular justice, which is necessarily tedious and uncertain in these disorderly and almost anarchial governments.

The Druzes have another point of honour: that of hospitality. Whoever presents himself at their door in the quality of a suppliant or passenger, is sure to be entertained with lodging and food, in the most generous and unaffected manner. I have often seen the lowest peasants give the last morsel of bread they had in their houses to the hungry traveller; and when I observed to them that they wanted prudence, their answer was: "God is liberal and great, and all men are brethren." There are, therefore, no inns in this country, any more than in the rest of Turkey. When they have once contracted with their guest, the sacred engagement of *bread* and *salt*, no subsequent event can make them violate it: various instances of this are related, which do honour to their character. A few years ago, an Aga of the Janissaries, having been engaged in a rebellion, fled from Damascus, and retired among the Druzes. The Pacha was informed of this, and demanded him of the Emir, threatening to make war on him in case of refusal. The Emir demanded him of the Shaik Talhouk, who had received him; but the indignant Shaik replied, "When have you known the Druzes deliver up their guests? Tell the Emir, that, as

“ long as Talhouk shall preserve his beard, not a hair
 “ of the head of his suppliant shall fall!” The Emir threatened him with force; Talhouk armed his family. The Emir, dreading a revolt, adopted a method practised as juridical in that country. He declared to the Shaik, that he would cut down fifty mulberry-trees a day, until he should give up the Aga. He proceeded as far as a thousand, and Talhouk still remained inflexible. At length, the other Shaiks, enraged, took up the quarrel, and the commotion was about to become general, when the Aga, reproaching himself with being the cause of so much mischief, made his escape, without the knowledge even of Talhouk.*

* I have found in an Arabic manuscript, another anecdote, which, though foreign to my present subject, I think too excellent to be omitted.

“ In the time of the Califs, says the author, when Abdalah, the *shedder of blood*, had murdered every descendant of Omiah, within his reach, one of that family, named Ibrahim, the son of Soliman, son of Abd-el-Malek, had the good fortune to escape, and reach Koufa, which he entered in disguise. Knowing no person in whom he could confide, he sat down under the portico of a large house. Soon after the master, arriving, followed by several servants, alighted from his horse, entered, and, seeing the stranger, asked him who he was. I am an unfortunate man, replied Ibrahim, and request from thee an asylum. God protect thee, said the rich man; enter, and remain in peace. Ibrahim lived several months in this house, without being questioned by his host. But, astonished to see him every day go out on horseback, and return, at the same hour, he ventured one day to enquire the reason—I have been informed, replied the rich man, that a person named Ibrahim, the son of Soliman, is concealed in this town; he has slain my father, and I am searching for him to retaliate.—Then I knew, said Ibrahim, that God had purposely conducted me to that place; I adored his decree, and, resigning myself to death, I answered,—God has determined to avenge thee, offended man; thy victim is at thy feet. The rich man, astonished, replied,—O! stranger! I see thy misfortunes have made thee weary of life; thou seekest to lose it, but my hand cannot commit such a crime.—I do not de-

The Druzes have also the prejudices of the Bedouins respecting birth; like them, they pay great respect to the antiquity of families; but this produces no essential inconveniencies. The nobility of the Emirs and Shaiks does not exempt them from paying tribute, in proportion to their revenues. It confers on them no prerogatives, either in attainment of landed property, or public employments. In this country, no more than in all Turkey, are they acquainted with game-laws, or glebes, or seigniorial, or ecclesiastical tithes, franc fiefs or alienation fines; every thing is held, as I have said, in freehold: every man, after paying in his miri and his rent, is master of his property. In short, by a particular privilege, the Druzes and Maronites pay no fine for their succession; nor does the Emir, like the Sultan, arrogate to himself original and universal property: there exists, nevertheless, in the law of inheritance, an imperfection which produces disagreeable effects. Fathers have, as in the Roman law, the power of preferring such of their children as they think proper; hence it has happened, in several families of the Shaiks, that the whole property has centered in the same person, who has perverted it to the purpose of intriguing and caballing, while his relations remain, as they well express it, *princes of olives and cheese*; that is to say, poor as peasants.

“ receive thee, said Ibrahim; thy father was such a one; we met each other in such a place, and the affair happened in such a manner.” A violent trembling then seized the rich man; his teeth chattered as if from intense cold; his eyes alternately sparkled with fury, and overflowed with tears. In this agitation, he remained a long time; at length, turning to Ibrahim—To-morrow, said he, destiny shall join thee to my father, and God will have retaliated. But as for me how can I violate the asylum of my house? Wretched stranger, fly from my presence! There, take these hundred sequins: Begone quickly, and let me never behold thee more!

In consequence of their prejudices, the Druzes do not choose to make alliances out of their own families. They invariably prefer their relation, though poor, to a rich stranger; and poor peasants have been known to refuse their daughters to merchants of Saïde and Bairout, who possessed from twelve to fifteen thousand piasters. They observe also, to a certain degree, the custom of the Hebrews, which directed that a brother should espouse his brother's widow; but this is not peculiar to them, for they retain that as well as several other customs of that ancient people, in common with other inhabitants of Syria, and all the Arab tribes.

In short, the proper and distinctive character of the Druzes, is, as I have said, a sort of republican spirit, which gives them more energy than any other subjects of the Turkish government, and an indifference for religion, which forms a striking contrast with the zeal of the Mahometans and Christians. In other respects, their private life, their customs and prejudices, are the same with other Orientals. They may marry several wives, and repudiate them when they chuse; but, except by the Emir and a few men of eminence, that is rarely practised. Occupied with their rural labours, they experience neither artificial wants, nor those inordinate passions, which are produced by the idleness of the inhabitants of cities and towns. The veil, worn by their women, is of itself a preservative against those desires which are the occasion of so many evils in society. No man knows the face of any other woman than his wife, his mother, his sister, and sisters-in-law. - Every man lives in the bosom of his own family, and goes little abroad. The women, those even of the Shaiks, make the bread, roast the coffee, wash the linen, cook the victuals, and perform all domestic offices. The men cultivate their lands and vineyards, and dig canals for watering them. In the evening they sometimes assemble

in the court, the area, or house of the chief of the village or family. There, seated in a circle, with legs crossed, pipes in their mouths, and poniards at their belts, they discourse of their various labours, the scarcity or plenty of their harvests, peace or war, the conduct of the Emir, or the amount of the taxes; they relate past transactions, discuss present interests, and form conjectures on the future. Their children, tired with play, come frequently to listen; and a stranger is surprised to hear them, at ten or twelve years old, recounting, with a serious air, why Djezzar declared war against the Emir Yousef, how many purses it cost that prince, what augmentation there will be of the miri, how many muskets there were in the camp, and who had the best mare. This is their only education. They are neither taught to read the Psalms, as among the Maronites, nor the Koran, like the Mahometans; hardly do the Shaiks know how to write a letter. But if their mind be destitute of useful or agreeable information, at least, it is not pre-occupied by false or hurtful ideas; and, without doubt, such natural ignorance is well worth all our artificial folly. This advantage results from it, that their understandings being nearly on a level, the inequality of conditions is less perceptible. For, in fact, we do not perceive among the Druzes that great distance which, in most other societies, degrades the inferior, without contributing to the advantage of the great. All, whether Shaiks or peasants, treat each other with that rational formality, which is equally remote from rudeness and servility. The Grand Emir, himself, is not a different man from the rest; he is a good country gentleman, who does not disdain admitting to his table the meanest farmer. In a word, their manners are those of ancient times, and that rustic life, which marks the origin of every nation; and prove the people among whom they are still found are, as yet, only in the infancy of the social state.

SECT. V.

Of the Motoualis.

TO the east of the country of the Druzes, in the deep valley which separates their mountains from those of Damascus, we find another small nation, known in Syria by the name of Motoualis. The characteristic distinction between them and the other inhabitants of Syria, is, that they, like the Persians, are of the sect of Ali, while all the Turks follow that of Omar or Moaouia. This distinction, occasioned by the schism, which, in the thirty-sixth year of the Hejira, arose among the Arabs, respecting the successors of Mahomet, is the cause, as I have already observed, of an irreconcilable hatred between the two parties. The sectaries of Omar, who consider themselves as the only orthodox, assume the title of *Sonnites*, which has that signification, and term their adversaries *Shiites*, that is *Sectaries*, (of Ali.) The word *Motouali* has the same meaning in the dialect of Syria. The followers of Ali, dissatisfied with this name, substitute that of *Adlia*, which means asserters of *Justice*, literally *Justiciarians*, a denomination which they have assumed in consequence of a doctrinal point they advance in opposition to the Sonneite faith. A small Arabic treatise, entitled, *Theological Fragments concerning the sects and Religions of the world*,* has the following passage.

“ Those sectaries who pretend that God acts only
 “ on principles of Justice, conformable to human rea-
 “ son, are called Adlia, or Justiciarians. God can-
 “ not, say they, command an impracticable worship,
 “ nor ordain impossible actions, nor enjoin men to

* Abarat el Motkallamim fi mazaheb oua Dianat el Donia.

“ perform what is beyond their ability ; but wherever
 “ he requires obedience, will bestow the power to
 “ obey. He removes the cause of evil, he allows us
 “ to reason, and imposes only what is easy, not what
 “ is difficult ; he makes no man responsible for the
 “ actions of another, nor punishes him for that in
 “ which he has no part ; he imputes not as a crime
 “ what himself has created in man ; nor does he re-
 “ quire him to avoid what destiny has decreed. This
 “ would be injustice and tyranny, of which God is
 “ incapable from the perfection of his being.” To
 this doctrine, which diametrically opposes the system
 of the Sonnites, the Motoualis add certain ceremonies
 which increase their mutual aversion. They curse
 Omar and Moaouia as rebels and usurpers ; and cele-
 brate Ali and Hofain as saints and martyrs. They
 begin their ablutions at the elbow, instead of the end
 of the finger, as is customary with the Turks ; they
 think themselves defiled by the touch of strangers, and
 contrary to the general practice of the East, neither
 eat nor drink out of a vessel which has been used by
 a person not of their sect, nor will they even sit with
 such at the same table.

These doctrines and customs, by separating the
 Motoualis from their neighbours, have rendered them
 a distinct society. It is said, they have long existed
 as a nation, in this country, though their name has
 never been mentioned by any European writer before
 the present century ; it is not even to be found in the
 maps of Danville : La Roque, who left their country
 not a hundred years ago, gives them the name of
Amédiens. Be this as it may, in later times, their
 wars, robberies, success, and various changes of for-
 tune, have rendered them of consequence in Syria.
 Till about the middle of this century, they only pos-
 sessed Balbek, their capital, and a few places in the
 valley, and Anti Lebanon, which seems to have been
 their original country. At that period, we find them

under a like government with the Druzes, that is to say, under a number of Shaiks, with one principal chief, of the family of Harfouh. After the year 1750, they established themselves among the heights of Bekaa, and got footing in Lebanon, where they obtained lands belonging to the Maronites, almost as far as Besharrai. They even incommoded them so much by their ravages, as to oblige the Emir Yousef to attack them with open force, and expel them; but on the other side, they advanced along the river, even to the neighbourhood of Sour, (Tyre.) In this situation, Shaik Daher had the address, in 1760, to attach them to his party. The Pachas of Saide and Damascus claimed tributes, which they had neglected paying, and complained of several robberies committed on their subjects by the Motoualis; they were desirous of chastising them, but this vengeance was neither certain nor easy. Daher interposed, and, by becoming security for the tribute, and promising to prevent any depredations, acquired allies who were able, as it is said, to arm ten thousand horsemen, all resolute and formidable troops. Shortly after, they took possession of Sour, and made this village their principal sea-port. In 1771, they were of great service to Ali Bey and Daher, against the Ottomans. But Emir Yousef, having, in their absence, armed the Druzes, ravaged their country. He was besieging the castle of Djezen, when the Motoualis, returning from Damascus, received intelligence of this invasion. At the relation of the barbarities committed by the Druzes, an advanced corps, of only five hundred men, were so enraged, that they immediately rushed forward against the enemy, determined to perish in taking vengeance. But the surprize and confusion they occasioned, and the discord which reigned between the two factions of Mansour and Yousef, so much favoured this desperate attack, that the whole army, con-

sitting of twenty five thousand men, was completely overthrown.

In the following year, the affairs of Daher taking a favourable turn, the zeal of the Motoualis cooled towards him, and they finally abandoned him in the catastrophe in which he lost his life. But they have suffered for their imprudence, under the administration of the Pacha who succeeded him. Since the year 1777, Djeddar, master of Acre and Saide, has incessantly laboured to destroy them. His persecution forced them, in 1784, to a reconciliation with the Druzes, and to enter into an alliance with the Emir Yousef. Though reduced to less than seven hundred armed men, they did more in that campaign than fifteen or twenty thousand Druzes and Maronites, assembled at Dair-el-Kamar. They alone took the strong fortresses of Mar-Djebaa, and put to the sword fifty or sixty Arnauts,* who defended it. But the misunderstanding which prevailed among the chiefs of the Druzes having rendered abortive all their operations, the Pacha has obtained possession of the whole valley, and the city of Balbek itself. At this period, not more than five hundred families of the Motoualis remained, who took refuge in Anti-Lebanon, and the Lebanon of the Maronites; and driven as they now are from their native soil, as it is probable they will be totally annihilated, and even their very name become extinct.

Such are the different people comprised within the limits of Syria. The remainder of the inhabitants, who are considerably the most numerous, are, as I have said, composed of Turks, Greeks, and Arabs. It now remains for me to give a sketch of the divisions of the country, under the Turkish administration, and to add a few general reflections on its forces

* The name given by the Turks to the Macedonian and Epirot soldiers.

and revenues, its form of government, and the characters and manners of its inhabitants.

But before I proceed to these particulars, it may be proper to give some idea of the commotions, which, in our days, were on the point of producing an important revolution, and erecting an independent power in Syria; I mean the insurrection of Shaik Daher, who for many years attracted the attention of Politicians. A succinct narrative of his history must be the more interesting as it is new, and as the accounts we have seen in the Gazettes of Europe are ill calculated to furnish a just idea of the real state of affairs in these distant countries.

C H A P. VI.

Summary of the history of Daher, son of Omar, who governed at Acre from 1750 to 1776.

SHAIK Daher, who, in our time, has given so much trouble to the Porte, was an Arabian by birth, descended from one of those tribes of Bedouins who usually encamp on the banks of the Jordan, and the environs of Lake Tabaria, (the ancient Tiberias). His enemies are fond of reminding us that in his youth he was a camel driver; but this circumstance, which does honour to his abilities, by suggesting the difficulties he must have encountered in his rise, has besides in this country nothing incompatible with a distinguished birth: it is now, and always will be, usual with the Arab princes, to employ themselves in occupations which appear to us mean. Thus I have already observed that the Shaiks themselves guide their camels, and look after their horses, while their wives and daughters grind the corn, bake the bread,

wash the linen, and fetch water, as in the times of Abraham, and Homer; and this simple and laborious life, possibly contributes more to happiness than that lifeless inactivity, and satiating luxury which surround the great in polished nations. As for Daher, it is certain that he was one of the most powerful families of the country. After the death of his father Omar, about the beginning of the present century, he divided the government with his uncle and two brothers. His domain was Safad, a small town and stronghold in the mountains, to the north-west of the Lake of Tabaria, to which he shortly after added Tabaria itself. There Pococke* found him in 1737, occupied in fortifying himself against the Pacha of Damascus, who not long before had strangled one of his brothers. In 1742, another Pacha, named Soliman-el-adm, besieged him there, and bombarded the place, to the great astonishment of all Syria, where bombs are but little known, even at present†. In spite of his courage, Daher was reduced to the last extremity; when a fortunate, and, as it is alleged, premeditated incident, relieved him from his embarrassment. A violent and sudden cholick carried off Soliman in two days. Asad-el-adm, his brother and successor, wanted either the same motives, or the same inclinations, to continue the war, and Daher was unmolested on the part of the Ottomans. But his activity, and the intrigues of his neighbours, soon gave him other employment. Reasons of interest embroiled him with his uncle and brother, recourse was had to arms more than once, and Daher, always victorious, thought it best to conclude these disputes by the death of his competitors.

* Pococke's Travels, vol. ii. p. 69.

† I have seen letters of M. Jean Joseph Blanc, a merchant of Acre, who was in Soliman's camp at this time, in which a circumstantial account is given of this affair.

Invested then with the whole power of his family, and absolute master of its force, new prospects opened to his ambition. The commerce in which he engaged, according to the custom of all the Asiatic princes and governors, made him sensible of the advantage of an immediate communication with the sea. He conceived that a port in his hands would become a public market, to which strangers resorting, a competition would arise favourable to the sale of his commodities. Acre, situated in his neighbourhood, and under his eye, was suited to his designs, since for several years he had transacted business there with the French factors. This town was in reality but a heap of ruins, a miserable open village, without defence. The Pacha of Saide maintained there an Aga, and a few soldiers who dared not shew themselves in the field; while the Bedouins really governed, and were masters of all the country, up to its very gates. The plain, so fertile in former times, was nothing but an extensive waste, on which the waters stagnated, and infected the environs by their vapours. The ancient harbour was choaked up, but the road of Haifa, which is dependant on it, was so advantageously situated that Daher determined to gain possession of it. A pretext was necessary, which was soon furnished by the conduct of the Aga.

One day, while some warlike stores, intended to be employed against the Shaik, were landing, Daher marched briskly towards Acre, sent a menacing letter to the Aga, which made him take to flight, and entered the town, where he established himself, without resistance: this happened about the year 1749. He was then sixty-three years old. This age seems rather too advanced for such enterprizes; but when we recollect, that, in 1776, at near ninety, he still boldly mounted a fiery steed, it is evident he was much younger than that age usually implies. So bold a measure could not pass unnoticed; this he foresaw, therefore

instantly dispatched a letter to the Pacha of Saide, representing to him that the affair was entirely personal between him and the Aga, and protesting that he was not less the very submissive subject of the Sultan, and the Pacha; that he would pay the tribute of the district he now occupied, as had been done heretofore by the Aga; and would undertake besides to restrain the Arabs, and do every thing in his power to restore this ruined country. This application, backed by a few thousand Sequins, produced its effect in the Divans of Saide, and Constantinople: his reasons were acknowledged just, and all his demands granted.

Not that the Porte was the dupe of the protestations of Daher; it is too much accustomed to such proceedings to mistake them; but it is a maxim with the Turks, not to keep their vassals in too strict an obedience; they have long been convinced, that were they to make war with all rebels, it would be an endless labour, and occasion a vast consumption of men and money: without reckoning the risk of frequent defeats, and the consequent encouragement to revolt. Their plan therefore, is to be patient; temporize*; and excite the neighbours, relations, and the children of the revolters against them: and, sooner, or later, the rebels, who uniformly follow the same steps, suffer the same fate, and end by enriching the Sultan with their spoils.

Daher, on his part, well knew the real value of this apparent friendship. Acre, which he intended for his residence, was destitute of defence, and might easily be surprized, either by sea or land; he determined therefore to fortify it. In the year 1750, under pretext of building himself a house, he erected, on

* The Arabs, in reference to this, have a singular proverb, which admirably paints this conduct; "The Osmanli, say they, catch hares with waggons."

the northern angle towards the sea, a palace, which he provided with cannon. He then built several towers for the defence of the fort, and enclosed the town by a wall, in which he left only two gates. These by the Turks were imagined very formidable works, though they would be laughed at in Europe. The palace of Daher, with its lofty and slight walls, its narrow ditch, and antique turrets, is incapable of the smallest resistance: four field pieces would demolish, in two discharges, both the walls and the wretched cannon mounted on them, at the height of fifty feet. The wall of the town is still more feeble; it has neither fosse, nor rampart, and is not three feet thick. Through all this part of Asia, bastions, lines of defence, covered ways, ramparts, and, in short, every thing relative to modern fortification, are utterly unknown. A single thirty gun frigate would, without difficulty, bombard and lay in ruins the whole coast: but, as this ignorance is common both to the assailants and defendants, the balance remains equal.

After these precautions, Daher occupied himself in effecting such a reformation in the country as should augment his power. The Arabs of Saker, Muzaina, and other neighbouring tribes, had caused a desertion of the Peasants, by their inroads and devastations: he undertook to repel them; and by alternately employing prayers and menaces, presents and arms, he restored security to the husbandman, who might now sow his corn, without fear of seeing the harvest destroyed, or carried off by robbers. The excellence of the soil attracted cultivators, but the certainty of security, that blessing so precious to those who have lived in a state of continual alarm, was a still stronger inducement. The fame of Daher spread through Syria, and Mahometan and Christian farmers, every where despoiled and harrassed, took refuge, in great numbers, with a prince under whom they were sure to find both civil and religious toleration. A colony

of Greeks emigrated from Cyprus, now nearly desolated, by the oppressions of the governor, the insurrections they produced, and the cruelty with which Kior Pacha expiated such offences*. To these, Daher assigned a spot of ground, under the walls of Acre, which they laid out into gardens. The Europeans, who found a ready sale for their merchandize, formed numerous settlements; the lands were cleared, the waters drained, the air became purer, and the country at once salubrious and pleasant.

To strengthen himself still more, Daher renewed his alliances with the great tribes of the desert, among whom he had disposed of his children in marriage. This policy had several advantages; for, in them, he secured an inviolable asylum, in case of accidents; by this means, also, he kept in check the Pacha of Damascus, and procured excellent horses, of which he was always passionately fond. He courted, therefore, the Shaiks of Anaza, of Sardia, and Saker. Then, for the first time, were seen in Acre, those little dry and parched men, unusual, even to the Syrians. He furnished them with arms and cloathing: and the desert, also, for the first time, beheld men in close dresses, and armed with muskets and pistols, instead of bows and match-lock guns.

For some years, the Pachas of Said and Damascus had been incommoded by the Motoualis, who pillaged their lands, and refused their tribute. Daher, sensible of the advantage to be made of these allies, first interposed as mediator, and, afterwards, in order to accommodate the parties, offered to become security for the Motoualis, and pay their tribute. The Pachas accepted this proposal, which rendered their

* When Kior Pacha came to Cyprus, he precipitated a number of the revoltors, from the tops of the walls, upon iron hooks, where they remained suspended, till they expired in dreadful torments.

revenues certain, and Daher was content with the bargain he had made, since he had secured the friendship of a people who could bring ten thousand horse into the field.

The Shaik, however, did not peaceably enjoy the fruit of his labours; since he still had to fear the attacks of a jealous superior, and his power was shaken at home, by domestic enemies, almost as dangerous. Agreeable to the wretched policy of the east, he had bestowed separate governments on his sons, and placed them at a distance from him, in countries which were sufficient for their maintenance. From this arrangement it followed, that these Shaiks, seeing themselves the children of a great prince, wished to support a suitable state, so that their revenues soon fell short of their expences. Their subjects were oppressed by them and their agents, and complaints were made to Daher, who reprimanded them; and court flatterers irritating both parties, a quarrel was the consequence, and war broke out between the father and his children. The brothers, too, frequently quarrelled with each other, which was another cause of war. Besides, the Shaik was growing old, and his sons, who considered him as having arrived at the usual limits of human life, longed to anticipate the succession. He must necessarily leave a principal heir to his titles and power; each thought himself entitled to the preference, and this competition furnished a fresh subject of jealousy and dissention. From motives of narrow and contemptible policy, Daher fomented the discord; this might indeed produce the effect of keeping his soldiery in exercise, and inured them to war; but, besides that it was productive of numberless disorders, it had the farther inconvenience of chusing a dissipation of treasure, which obliged him to have recourse to ruinous expedients; the custom-house duties were augmented, and commerce, oppressed, lost its activity. These civil wars, besides, were de-

structive to agriculture, which cannot be injured, without the consequences being always sensibly felt, in a state so limited as the small territories of Daher.

Nor did the Divan of Constantinople behold, without chagrin, the increasing power of Daher; and his ambitious views, which were now become apparent, increased its jealousy. Its jealousy was still more increased by a request he presented. Till that time he had only held his domains under the title of a renter, and by annual lease. His vanity was wearied of this restriction; and as he had possessed all the essentials of power, he aspired to its titles: nay, perhaps, he thought them necessary, more effectually to establish his authority over his children and his subjects. About the year 1768, he therefore solicited a permanent investiture of his government, for himself and his successor, and demanded to be proclaimed; *Shaik of Acre, Prince of Princes, Governor of Nazareth, Tabaria, and Safad, and Shaik of all Galilee.* The Porte conceded every thing to fear and money: but this proof of vanity, awakened more and more her jealousy and displeasure.

There were, besides, too many causes of complaint, which, though palliated by Daher, could not but increase this distrust, and rouse a desire of vengeance. Such was the adventure of the celebrated pillage of the caravan of Mecca, in 1757. Sixty thousand pilgrims plundered and dispersed over the desert, a great number destroyed by sword or famine, women reduced to slavery, the loss of immense riches, and above all, the sacrilegious violation of so solemn an act of religion, produced a commotion in the empire, which is not yet forgotten. The plundering Arabs were the allies of Daher, who received them at Acre, and there permitted them to sell their booty. The Porte loaded him with the bitterest reproaches, but he endeavoured to exculpate himself, and to appease the Divan, by

sending the white banner of the prophet to Constantinople.

Such was also the affair of the Maltese Corsairs. For some years they had infested the coasts of Syria, and, under the false pretext of a neutral flag, were received into the road of Acre : where they unloaded their spoils, and sold the prizes they had taken from the Turks. No sooner were these abuses divulged, than the Mahometans exclaimed against the sacrilege, and the Porte thundered vengeance. Daher pleaded ignorance of the fact, and, to prove he no way favoured a commerce so disgraceful to the state and to religion, armed two galliots, and sent them to sea, with ostensible orders to drive off the Maltese. But the fact is, that these galliots committed no hostilities against the Maltese, but served, on the contrary, to correspond with them at sea, remote from all witnesses. Daher did more : he pretended the road of Haifa was unprotected ; that the enemy might take shelter there in spite of him, and required the Porte to build a fortress there, and provide it with cannon, at the expence of the Sultan : his demand was complied with, and Daher shortly after, procured the fort to be adjudged useless, demolished it, and transported the brass cannon from thence to Acre.

These things kept alive the discontent and alarms of the Divan, and though these were diminished by the great age of Daher ; the turbulent spirit of his sons, and the military talents of Ali, the eldest of them, still gave the Porte much uneasiness : she dreaded to see an independent power perpetuate itself, and even become formidable. But steady to her ordinary system, refrained from open hostilities, and proceeded by secret means ; she sent Capidjis, excited domestic quarrels, and opposed agents, capable at least of preventing, for a time, the consequences she feared.

The most persevering of these was that Osman, Pacha of Damascus, whom we have seen act a leading

part in the war of Ali Bey. He had merited the favour of the Porte, by discovering the treasures of Soliman Pacha, whose Mamlouk he was. The personal hatred he bore to Daher, and the known activity of his character, were still greater recommendations. He was considered as a proper counterpoise to Daher, and was accordingly named Pacha of Damascus in 1760. To give him still additional weight, his two sons were appointed to the pachalics of Tripoli and Saide; and, to complete his power, in 1765, Jerusalem and all Palestine were added to his apanage.

Osman perfectly seconded the views of the Porte: As soon as he had taken possession of his government, he greatly annoyed Daher. He augmented the tribute of the lands he held under the Pachalic of Damascus: the Shaik resisted, the Pacha menaced, and it was evident the quarrel would come to a speedy issue. Osman watched the opportunity to strike a blow which should bring the matter to a decision: this at length presented itself, and war broke out.

Every year the Pacha of Damascus makes what is called the circuit* of his government, the object of which is to levy the miri or impost on the lands. On this occasion he always takes with him a body of troops, strong enough to support his authority. He thought to avail himself of this opportunity to surprise Daher; and, followed by a numerous body of troops, took his route, as usual, towards the country of Nablous. Daher was then besieging a castle defended by two of his sons: his danger was the greater as he relied on a truce with the Pacha, and he owed his deliverance to his good fortune.

One evening, at the moment he least expected it, a Tartar courier† brought him some letters from

* This is practised in almost all the great pachalics, where the vassals are but in little subjection.

† The Tartars perform the office of couriers in Turkey.

Constantinople. Daher opened them, and, immediately suspending all hostilities, dispatched a horseman to his children, and desired them to prepare a supper for him and three of his attendants, for that he had affairs to communicate of the last importance to them all. The character of Daher was known; his sons obey him; he arrives at the appointed hour; they sup cheerfully together; and at the end of the repast, he produces his letters and reads them; they were from his spies at Constantinople, and to the following purport:—"That the Sultan had deceived him in the last pardon he had sent him; that he had at the same instant delivered a *kat-sheerif** against his head and property; that every thing was concerted between the three Pachas, Osman, and his sons, to surround and destroy him and his family; and that the Pacha was marching in force towards Nablous to surprize him." The astonishment this intelligence excited, may easily be imagined; a council was immediately held, in which the opinions were divided. The greatest number were for marching with all their forces against the Pacha; but the eldest of Daher's sons, Ali, who has rendered himself illustrious in Syria, by his exploits, represented, that a large army could not march quick enough to surprize the Pacha; that he would have time to provide for his defence, and the disgrace of violating the truce fall on them; that nothing could be effected but by a *coup de main*, which he would take upon himself. He demanded five hundred horse; his courage was known, and his demand acceded to. He set off immediately, marching all night, and concealing himself during the day; and the following night was so

* *Kat-sheerif*, which words signify, *Noble Signature*, is a letter of proscription conceived in these terms: "Such a one, who art the slave, of my Sublime Porte, go to such a one, my slave, and bring back his head to my feet, at the peril of thy own."

expeditious, as to reach the enemy early in the morning of the second day. The Turks, according to custom, were asleep in their camp, without order and without centinels; Ali and his cavalry fell upon them, sabre in hand, cutting to pieces every thing that came in their way. All was panic and tumult; the very name of Ali spread terror throughout the camp, and the Turks fled in the utmost confusion. The Pacha had not even time to put on his pelisse: scarcely was he out of his tent, before Ali arrived, who made himself master of his coffer, his shawls, his pelisses, his poniard, his nerkeel,* and, to complete his success, the kat-sheerif of the Sultan. From this moment there was open war, which was carried on, according to the custom of the country, by inroads and skirmishes, in which the Turks but rarely gained the advantage.

The expences it occasioned soon drained the coffers of the Pacha; and, to reimburse them, he had recourse to the grand expedient of the Turks. He levied contributions on the towns, villages, and individuals; whoever was suspected of having money, was summoned, bastinadoed, and plundered. These oppressions had occasioned a revolt at Ramla in Palestine the very first year he obtained the government, which he suppressed by still more odious cruelties. Two years after, in 1767, similar conduct occasioned a revolt at Gaza; he renewed these proceedings at Yafa, in 1769, where among other acts of despotism, he violated the law of nations, in the person of the Resident of Venice, John Damiâni, a respectable old man, whom he put to the torture, by five hundred strokes on the soles of his feet, and, who could only preserve the feeble remains of life, by collecting from

* A pipe, in the Persian manner, consisting of a large flask filled with water, through which the smoke passes, and is purified before it reaches the mouth.

his own fortune, and the purses of all his friends, a sum of near sixty thousand livres, (twenty-five hundred pounds), for the Pacha. This tyranny is common in Turkey; but as it is not usually either so violent, or so general, such cruelties drove the oppressed to despair. The people began to murmur on every side, and Palestine, emboldened by the vicinity of Egypt, now in a state of rebellion, threatened to call in a foreign protector.

Under these circumstances, Ali Bey, the conqueror of Mecca and the Said, turned his projects of aggrandizement towards Syria. The alliance of Daher, the war with the Russians, which entirely occupied the Turks, and the discontents of the people, all conspired to favour his ambition. He accordingly published a manifesto in 1770, in which he declared, that God having bestowed a signal benediction on his arms, he thought himself bound, in duty, to make use of them for the relief of the people, and to repress the tyranny of Osman in Syria. He immediately dispatched a body of Mamlouks to Gaza, who seized on Ramla and Loud. Their appearance divided the adjacent town of Yafa into two factions, one of which was desirous of submitting to the Egyptians; while the other was for calling in Osman, who flew thither immediately, and encamped near the town. Two days after, Daher was announced, who had likewise hastened thither for the same purpose. The inhabitants of Yafa, then imagining themselves secure, shut their gates against the Pacha; but, in the night, while he was preparing to escape, a party of his troops, passing along the sea-shore, entered, by an opening in the wall, and sacked the city. The next day Daher appeared, and, not finding the Turks, took possession of Yafa, Ramla, and Loud, without resistance, in which towns he placed garrisons.

Things thus prepared, Mohammad Bey arrived in Palestine, with the grand army, in the month of February 1771, and followed the Shaik along the sea

coast to Acre. There, having been joined by twelve or thirteen hundred Motoualis, under the command of Nasif, and fifteen hundred Safadians, led by Ali, son of Daher, he marched in April towards Damascus. We have already seen in what manner this combined army beat the united forces of the Pachas, and how Mohammad, master of Damascus, and on the point of taking possession of the castle, on a sudden changed his design, and again took the road to Cairo. On this occasion, Ibrahim Sabbar, Minister of Daher, receiving no other explanation from Mohammad than menaces, wrote to him in the name of the Shaik, a letter filled with reproaches, which proved eventually the cause, or, at least, the pretext of a fresh quarrel. Osman, however, on his return to Damascus, recommenced his oppressions and hostilities; and imagining that Daher, chagrined by the unexpected news he had received, would not be prepared for defence, he formed the project of surprizing him even in Acre. But scarcely was he on his march, when Ali, Daher, and Nasif, informed of his intentions, proposed to turn the tables on him; they, therefore, secretly left Acre, and learning he was encamped on the western bank of Lake Houla, arrived there at break of day, took possession of the bridge of Yakoub, which they found negligently guarded, and fell on him sabre in hand, in his camp, where they made a dreadful carnage. This, like the affair of Nablous, was a total defeat; the Turks, pressed on the land side, threw themselves into the lake, hoping to swim across it; but the terror and confusion of this multitude of men and horses, which mutually embarrassed each other, was such that the enemy made a prodigious slaughter, while still greater numbers perished in the water and mud of the lake. The Pacha was thought to be among the number of the latter, but he had the good fortune to escape, being saved by two negroes, who swam across with him on their shoulders.

In the interim, Darouish, son of Osmond, Pacha of Saide, had engaged the Druzes in his cause, and fifteen hundred Okkals had arrived, under the command of Ali-Djambalat, to reinforce the garrison; while the Emir Yousef, descending into the valley of the Motoualis with twenty-five thousand men, laid every thing waste with fire and sword. Ali, Daher and Nasif, on this intelligence, directed their course instantly on that side, and, on the 21st of October, 1771, happened the action in which the advanced corps of five hundred Motoualis entirely defeated the whole army of the Druzes, whose flight spread terror through Saide, whither they were closely pursued by the Safadians. Ali-Djambalat, despairing to defend the town, evacuated it without delay; but not before his Okkals had pillaged it in their retreat. The Motoualis, finding it without defence, entered and plundered it in their turn. At length, the chiefs put an end to the pillage, and took possession in the name of Daher, who appointed Deguizla, a native of Barbary, renowned for his bravery, to be his *Motsfallam*, or governor.

The Porte, terrified at the defeats she had met with, both from the Russians, and her rebellious subjects, now offered peace to Daher, on very advantageous conditions. To induce him to consent, she removed the Pachas of Damascus, Saide, and Tripoli; disavowed their conduct, and solicited a reconciliation with the Shaik. Daher, now eighty-five or eighty-six years old, was willing to accept this offer, that he might terminate his days in peace; but he was diverted from this intention by his minister, Ibrahim; who did not doubt, but Ali Bey would, the ensuing winter, proceed to the conquest of Syria, and that this Mamlouk would cede a considerable portion of that country to Daher, and in the future aggrandizement of his masters power, he hoped the advancement of his own private fortune, and the means of

adding fresh treasures to those he had already amassed by his insatiable avarice. Seduced by this brilliant prospect, he rejected the propositions of the Porte, and prepared to carry on the war with redoubled activity.

Such was the state of affairs, when, in the month of February of the following year, Mohammad Bey reared the standard of rebellion against his patron Ali. Ibrahim, at first, flattered himself this revolt would have no serious consequences; but he was soon undeceived, by the news of Ali's expulsion, and his subsequent arrival at Acre, as a fugitive and suppliant. This stroke revived the courage of all the enemies of Daher, and the Turkish faction in Yafa availed themselves of it to regain their ascendancy. They appropriated to themselves, the effects left there by the little fleet of Rodoan; and, aided by a Shaik of Nablous, began a revolt in the city, and opposed the passage of the Mamlouks. Circumstances now became very critical, as the speedy arrival of a large army of Turks was announced, which was assembled near Aleppo: Daher, it may be, ought to have remained in the vicinity of Acre; but imagining his diligence would secure him from every attack, he marched towards Nablous, chastising the rebels as he passed, and joining Ali Bey, below Yafa, conducted him without opposition to Acre.

After a reception suitable to Arabian hospitality, they marched together against the Turks, who, under the command of seven Pachas, and in concert with the Druzes, were besieging Saide. In the road of Haifa were some Russian vessels, which, profiting by the revolt of Daher, were taking in provisions: the Shaik negociated with them, and, for a present of six hundred purses, engaged them to second his operations by sea. His army, at this time, might consist of five or six thousand Safadian and Motouali cavalry, eight hundred of Ali's Mamlouks, and about one

thousand Mograbian infantry. The Turks, on the contrary, united with the Druzes, amounted to ten thousand cavalry, and twenty thousand peasants, who, as soon as they received intelligence of the approach of the enemy, raised the siege, and retreated to the north of the town, not intending flight, but to wait for Daher, and give him battle; and the armies engaged the next day, in better order than had hitherto been usual.

The Turkish army, extending from the sea to the foot of the mountains, was drawn up in platoons, nearly in the same line. The Okkals, on foot, were posted on the sea-shore, behind some hedges of Nopals, and in trenches they had dug, to prevent a sally from the town, while the cavalry occupied the plain in no little confusion. Towards the centre, and advanced a little in the front, were eight cannon, twelve and twenty-four pounders, the only artillery hitherto made use of in the open field. At the foot of the mountains, and on their declivity, was the militia of the Druzes, armed with muskets, without entrenchments, and without cannon. On the side of Daher, the Motoualis and the Safadians, ranged themselves, so as to present the greatest front possible, and endeavoured to occupy as much of the plain as the Turks. The right wing, commanded by Nasif, consisted of the Motoualis, and the thousand Mograbian infantry, intended to oppose the peasant Druzes. The other, led on by Ali Daher, was left without support against the Okkals; but he relied on the Russian boats and vessels, which, keeping close in with the shore, advanced in a line parallel to the army. In the centre, were the eight hundred Mamlouks, and behind them, Ali Bey, with the aged Daher, who still animated his people, both by his words and his example.

The action was begun by the Russian vessels; and no sooner had they fired a few broadsides on the Okkals, than they retreated in confusion; the squad-

rons of cavalry now advancing, nearly in a line, came within cannon-shot of the Turks. Instantly the Manlouks, anxious to justify the general opinion of their bravery, galloped full speed towards the enemy. The gunners, intimidated by their intrepidity, and seeing themselves on foot, between two lines of cavalry, unsupported, either by redoubts or infantry, fired their pieces with precipitation, and took to flight. The Mamlouks, who suffered but little from this volley, rushed in an instant amid the cannon, and fell headlong upon the cavalry of the enemy. They met but a feeble resistance, and, in the confusion which ensued, every one not knowing what to do, or what was passing around him, was more disposed to fly than fight. The Pachas first set the example, and in an instant the flight became general. The Druzes, who never engage with good-will on the side of the Turks, presently left the field, and hid themselves in their mountains, and in less than an hour the plain was cleared. The allies, satisfied with their victory would not risk a pursuit, in a country which would become more difficult the nearer they approached Bairout; but the Russian ships, to punish the Druzes, proceeded to cannonade that town, where they made a descent, and burnt three hundred houses.

Ali Bey and Daher, on their return to Acre, determined to take vengeance for the treachery of the people of Nablous and Yafa, and, in the beginning of July 1772, appeared before the latter city. The first proposed an accommodation, but the Turkish faction rejecting every proposition, they were compelled to have recourse to arms. This siege, properly speaking, was only a blockade, nor must we imagine the assailants made their approaches after the European method. They had no other artillery, on either side, than a few large cannon, badly mounted, ill situated, and still worse served. The attacks were carried on neither by trenches, nor mines; and, it

must be owned, that such means were not necessary against a slight wall, without ditch or rampart. A breach was soon made, but the cavalry of Daher and Ali Bey shewed no great eagerness to pass it; the besieged having defended the inside with stones, stakes and deep holes which they had dug. The whole attack was made with small arms, which killed very few, and eight months were wasted in this manner, in spite of the impatience of Ali Bey, who had alone the conduct of the siege. At length the besieged, exhausted with fatigue, and being in want of provisions, surrendered by capitulation. In the month of February 1773, Ali Bey placed a governor in the town, for Daher, and hastened to join the Shaik at Acre, where he found him occupied in preparations to enable him to return to Egypt, to accelerate which event, Ali contributed all in his power.

They waited only for a succour of six hundred men promised by the Russians, but the impatience of Ali Bey determined him to depart without them. Daher made use of every argument to detain him a few days longer. But finding nothing could alter his resolution, he sent fifteen hundred cavalry to accompany him, commanded by Otman, one of his sons. Not many days after (in April 1773), the Russians arrived with the reinforcement which though less considerable than was expected, he greatly regretted he could not employ; but this regret was severely aggravated, when Daher saw his son and his cavalry return as fugitives, to announce to him their own disaster, and the fate of Ali Bey. He was the more affected at this event, as, instead of a useful ally, powerful in resources, he acquired an enemy formidable from his hatred and activity. This, at his age, was a most afflicting prospect, and it is highly to his honor, that he bore it with proper fortitude.

A fortunate event combined at this juncture, with his natural firmness, to console him, and divert his

attention. The Emir Youfef, thwarted by a powerful faction, had been obliged to solicit the assistance of the Pacha of Damascus, to maintain himself in possession of Bairout. He had placed there a creature of the Turks, the Bey, Ahmed-el-Djezzar, of whom I have spoken before. No sooner was this man invested with the command of the town, than he determined to seize it for himself. He began by converting to his own use, fifty thousand piafters belonging to the prince, and openly declared he acknowledged no master but the Sultan; the Emir, astonished at this perfidy, in vain demanded justice of the Pacha of Damascus. Djezzar was disavowed, but not ordered to restore the town. Piqued at this refusal, the Emir complied at length with the general wish of the Druzes, and contracted an alliance with Daher. The treaty was concluded near Sour, and the Shaik, charmed with acquiring such powerful friends, went immediately to reduce the rebel. The Russian ships, which for some time past, had never quitted the coast, now joined the Druzes, and, for a second sum of six hundred purses, agreed to cannonade Bairout. This double attack had the desired success. Djezzar, notwithstanding his vigorous resistance, was obliged to capitulate; he surrendered himself to Daher alone, and followed him to Acre, from whence, as I have related, he escaped soon after.

The defection of the Druzes did not discourage the Turks: the Porte expecting great success in the intrigues she was then carrying on in Egypt, still entertained hopes of overcoming all her enemies; she again placed Osman at Damascus, and gave him an unlimited power over all Syria. The first use he made of this, was to assemble under his orders six Pachas, whom he led through the vale of Bekaa, to the village of Zahla, with intention to penetrate into the mountainous country. The strength of this army,

and the rapidity of its march, spread consternation on every side, and the Emir Yousef, always timid and irresolute, already repented his alliance with Daher; but this aged man, solicitous for the safety of his allies, took care to provide for their defence. The Turks had hardly been encamped six days, at the foot of the mountains, before they learnt that Ali, the son of Daher, was approaching to give them battle. Nothing more was necessary to intimidate them. In vain were they told the enemy had but five hundred horse, while they were upwards of five thousand strong: the name of Ali Daher so terrified them that this whole army fled, in one night, and left their camp, full of spoils and baggage, to the inhabitants of Zahla.

After this success, it might be supposed Daher would have allowed himself time to breathe, and have turned his attention to preparations for his defence, which was become every day more necessary; but fortune had determined he should no longer enjoy any repose. For several years past, domestic troubles had accompanied foreign wars: and it was only by means of the latter, he had been able to appease the former. His children, who were themselves old men, were wearied of waiting so long for their inheritance; and, besides this constant disposition to revolt, had real grievances to complain of, which by giving too much reason for their discontents, rendered them more dangerous. For several years, the Christian Ibrahim, minister of the Shaik, had engrossed all his confidence, which he shamefully abused to gratify his own avarice. He dared not openly exercise the tyranny of the Turks; but he neglected no means, however unjust, by which he could amass money. He monopolized every article of commerce; he alone had the sale of corn, cotton, and other articles of exportation; and he alone purchased cloths, indigo, sugars, and other merchandize,

His avarice had frequently invaded the supposed privileges, and even the real rights of the Shaiks; they did not pardon him this abuse of power, and every day, furnishing fresh objects of complaint, was productive of new disturbances. Daher, whose understanding began to be impaired by his extreme old age, did not adopt measures calculated to appease them. He called his children rebels and ungrateful, and imagined he had no faithful and disinterested servant but Ibrahim: this infatuation served only to destroy all respect for his person, and to inflame and justify their discontents.

The unhappy effects of this conduct fully displayed themselves in 1774. Since the death of Ali Bey, Ibrahim, finding he had more to fear than hope, had abated something of his haughtiness. He no longer saw the same certainty of amassing money by making war. His allies, the Russians, in whom all his confidence was placed, began themselves to talk of peace; and these motives determined him likewise to conclude it, for which purpose he entered into a Treaty with a Capidji whom the Porte maintained at Acre. It was agreed that Daher and his sons should lay down their arms, but retain the government of the country, by receiving the *Tails*, which are the symbols of this power. But it was likewise stipulated, that Saide should be restored, and the Shaik pay the miri, as he had done formerly. These conditions were extremely dissatisfactory to the sons of Daher, and the more so because they were concluded without their participation. They deemed it disgraceful again to become tributaries, and were still more offended that the Porte had granted to none of them the title of their father; they therefore all revolted. Ali repaired to Palestine, and took up his quarters at Habroun; Ahmad and Seid retired to Nablous, Otman among the Arabs of Saker, and the remainder of the year passed in these dissensions.

Such was the situation of affairs, when, at the beginning of 1775, Mohammad Bey appeared in Palestine, with all the forces he was able to collect. Gaza, destitute of ammunition, did not venture to resist. Yafa, proud of the part she had acted in former disputes, had more courage; the inhabitants took arms, and their resistance had nearly disappointed the vengeance of the Mamlouk; but every thing conspired to the destruction of Daher. The Druzes dared not stir; the Motoualis were discontented: Ibrahim summoned assistance from every quarter, but he offered no money, and his solicitations had no effect; he had not even the prudence to send provisions to the besieged. They were compelled to surrender, and the rout to Acre was laid open to the enemy. As soon as the taking of Yafa was known, Ibrahim and Daher fled, and took refuge in the mountains of Safad. Ali Daher, confiding in the treaty between himself and Mohammad, took the place of his father; but soon perceiving he had been deceived, he took to flight likewise in his turn, and Acre remained in the possession of the Mamlouks.

It would have been difficult to foresee the consequences of this revolution, but the unexpected death of its author rendered it, of a sudden, of no effect. The flight of the Egyptians, leaving free the country and capital of Daher, he lost no time in returning; but the storm was by no means appeased. He soon learnt that a Turkish fleet, under the command of Hassan, the celebrated Captain Pacha, was laying siege to Saide. He then discovered too late the perfidy of the Porte, which had lulled his vigilance by professions of friendship, while she was concerting with Mohammad Bey the means of his destruction. During a whole year that the Turks had been disengaged from the Russians, it was not difficult to foresee their intentions from their motions. Still, how-

ever, it was in his power to endeavour to prevent the consequences of this error; but, unfortunately, even this he neglected. Degnizla, bombarded in Saide without hope of succour, was constrained to evacuate the town; and the Captain Pacha appeared instantly before Acre. At sight of the enemy, a consultation was held how to escape the danger, and this led to a quarrel, which decided the fate of Daher.

In a general council, Ibrahim gave his opinion to repel force by force: his reasons were, that the Captain Pacha had but three large vessels; that he could neither make an attack by land, nor remain at anchor, without danger, before the castle; that there was a sufficient force of cavalry and Mogravian infantry to hinder a descent, and that it was almost certain the Turks would relinquish the enterprize without attempting any thing. In opposition to him, Degnizla declared for peace, because resistance could only prolong the war; he maintained it was unreasonable to expose the lives of so many brave men, when the same object might be effected by less valuable means, that is by money; that he was sufficiently acquainted with the avidity of the Captain Pacha, to assert he would suffer himself to be corrupted; and was certain not only that he could procure his departure, but even make him a friend, for the sum of two thousand purses. This was precisely what Ibrahim dreaded; he therefore exclaimed against the measure, protesting there was not a medin in the Treasury. Daher supported his assertion. "The Shaik is in the right," replied Degnizla; "his servants have long known that his generosity does not suffer his money to stagnate in his coffers; but does not the money they obtain from him belong to him? And can it be believed that thus entitled to them we know not where to find two thousand purses?" At these words Ibrahim interrupted him, exclaimed, that as for himself, no man could be poorer. "Say baser," resumed Dig-

nizla, transported with rage. "Who is ignorant, that for the last fourteen years, you have been heaping up enormous treasures? that you have monopolized all the trade of the country; that you sell all the lands, and keep back the payments that are due; that in the war of Mohammad Bey, you plundered the whole territory of Gaza, carried away all the corn, and left the inhabitants of Yafa without the necessaries of life?" He was proceeding, when the Shaik, commanding silence, protested the innocence of his Minister, and accused Degnizla of envy and treachery. Degnizla instantly quitted the council, and assembling his countrymen, the Mograbians or Barbary Arabs, who composed the chief strength of the place, forbid them to fire upon the Captain Pacha.

Daher however, determined to stand the attack, made every necessary preparation; and, the next day, Hassan, approaching the castle, began to cannonade. Daher answered with the few pieces near him; but in spite of his reiterated orders, the others did not fire. Finding himself betrayed, he mounted his horse; and, leaving the town by the gate which opens towards the gardens on the North, attempted to gain the country; but, while he was passing along the walls of these gardens, a Mograbian soldier shot him with a musquet in the loins, and he fell from his horse, when the Barbary Arabs, instantly surrounded his body, cut off his head, which they carried to the Captain Pacha, who, according to the odious custom of the Turks, loaded it with insults while he surveyed it, and had it pickled, in order to carry it to Constantinople, as a present to the Sultan, and a spectacle to the people.

Such was the tragical end of a man, in many respects, worthy of a better fate. It is long since Syria has beheld among her chiefs so great a character. In military affairs, no man possessed more courage, acti-

vity, coolness, or resources. In politics, the noble frankness of his mind was not diminished even by his ambition. He was fond only of brave and open measures; and heroically preferred the dangers of the field to the wily intrigues of the cabinet; nor was it till he had taken Ibrahim for his minister that his conduct was blemished with a sort of duplicity which that Christian called Prudence. The reputation of his justice had established throughout his estates, a security unknown in Turkey; difference in religion occasioned no disputes on this head: he possessed the toleration, or, perhaps, the indifference of the Bedouin Arabs. He had also preserved the simplicity of their customs and manners. His table was not different from that of a rich farmer; the luxury of his dress never exceeded a few Pelisses, and he never wore any trinkets. The greatest expence he incurred was in blood mares, for some of which he even paid as high as twenty thousand livres, (eight hundred and twenty-five pounds). He likewise loved women; but was so jealous of decency and decorum, that he ordered that every one taken in an act of gallantry, or offering insult to a woman, should suffer death; he had, in short, attained the difficult medium between prodigality and avarice, and was at once generous and economical. Whence was it, then, that with such great qualities, he did not further extend, and more firmly establish his power? To this question a minute knowledge of his administration would furnish an easy answer, but I shall content myself with assigning the three principal causes.

First, His government wanted that internal good order, and justness of principle, without which all improvement must be slow and irregular.

Secondly, The early concessions he made to his children introduced a multitude of disorders, which prevented the improvement of agriculture, impover-

ished his finances, divided his forces, and prepared the downfall of himself and his government.

A third and more efficacious cause than all the rest, was the avarice of Ibrahim Sabbar. This man, abusing the confidence of his master, and the weakness incident to age, by his rapacity, alienated from him, his children, servants, and allies. His extortions even lay so heavy on the people, towards the end of his life, as to render them indifferent whether they returned under the Turkish yoke. His passion for money was so sordid that, amid the wealth he was amassing, he lived only on cheese and olives; and, so great was his parsimony, that he frequently stopped at the shops of the poorest merchants, and partook of their frugal repast. He never wore any thing but dirty and ragged garments. To behold this meagre, one-eyed wretch, one would have taken him rather for a beggar than the minister of a considerable state. By these vile practices, he amassed about twenty millions of French money, (eight hundred and twenty-five thousand pounds), which fell to the Turks. No sooner was the death of Daher known in Acre than, the public indignation breaking out against Ibrahim, he was seized, and given up to the Captain Pacha, to whom no present could be more acceptable. The report of this man's treasures was general throughout Turkey; it had contributed to animate the resentment of Mohammad Bey, and was the principal motive of the measures of the Captain Pacha. He no sooner had him in his power than he endeavoured to extort from him a declaration of the sums he possessed, and the place where they were concealed; but Ibrahim firmly denied any such treasures existed. In vain did the Pacha employ caresses, menaces, and the torture, all were ineffectual; and it was by other indications Hassan at length discovered, among the Fathers of the Holy Land, and at the houses of two French merchants, several chests, so large, and so

full of gold, that the biggest required eight men to carry it. With this gold were found also several trinkets, such as pearls and diamonds, and, among others, the Kandjar of Ali Bey, the handle of which was estimated at upwards of two hundred thousand livres, (about eight thousand pounds). All this was conveyed to Constantinople with Ibrahim, who was loaded with chains. The Turks, ferocious and insatiable, still hoping to discover new treasures, inflicted on him the most cruel tortures, to force him to confession, but, it is asserted, he invariably maintained the firmness of his character, and perished with a courage worthy of a better cause.

After the death of Daher, the Captain Pacha confirmed Djeddar Pacha of Acre and Saide, and committed to him the care of completing the destruction of the rebels. Faithful to his instructions, Djeddar alternately attacked them by stratagem and force, and so far succeeded, as to induce Otman, Seid, and Ahmad, to deliver themselves into his hands. Ali Daher alone refused, and him they wished for most. In the following year (1776), the Captain Pacha returned, and, in concert with Djeddar, besieged Ali in Dair-Hanna, a strong hold, about a day's journey from Acre, but he escaped them. To free themselves from their fears, they employed a stratagem worthy of their character. They suborned some Barbary Arabs, who, pretending to have been dismissed from Damascus, came into the country where Ali was encamped. After relating their history to his attendants, they applied to the hospitality of the Shaik. Ali received them as became an Arab, and a brave man; but these wretches falling on him in the night, massacred him, and hastened to demand their reward, though they were not able to bring with them his head. The Captain Pacha, having no longer any thing to fear from Ali, murdered his brothers, Seid, Ahmad, and their children. Otman alone, on ac-

count of his extraordinary talents for poetry, was spared, and carried to Constantinople. Degnizla, who was sent from that capital to Gaza, with the title of governor, perished on the road, not without suspicions of poison. The Emir Youfef, terrified at these events, made his peace with Djezzar, and, from that time, Galilee, again subjected to the Turks, only retains an unprofitable remembrance of the power of Daher.

CHAP. VII.

The distribution of Syria into Pachalics, under the Turkish government.

AFTER Sultan Selim I. had taken Syria from the Mamlouks, he subjected that province, like the rest of the empire, to the government of Viceroys, or Pachas*, invested with unlimited power. The more effectually to secure his authority, he divided the country into five governments, or *Pachalics*, which division still remains. These Pachalics are those of Aleppo, Tripoli, and Saide, lately removed to Acre, that of Damascus, and lastly, that of Palestine, the seat of which is sometimes at Gaza, and sometimes at Jerusalem. Since the time of Selim, the limits of these Pachalics have often varied, but their general extent has always been nearly the same. I shall now proceed to give a more circumstantial detail of the most interesting particulars of their present state, such as the revenues, productions, forces, and most remarkable places.

* The Turkish word *Pacha*, is formed of the two Persian words *Pa-shah*, which literally signify *Viceroy*.

CHAP. VIII.

Of the Pachalic of Aleppo.

THE Pachalic of Aleppo comprehends the country extending from the Euphrates to the Mediterranean, between two lines, one drawn from Scanderoon to Beer, along the mountains; the other from Beles to the sea, by Mara, and the bridge of Shoger. This space principally consists of two plains; that of Antioch to the west, and that of Aleppo to the east: the north and the sea-coast are occupied by considerably high mountains, known to the ancients by the names of Amanus, and of Rhofus. In general, the soil of this government is fat and loamy. The lofty and vigorous plants, which shoot up every where after the winter rains, prove its fertility, but its actual fruitfulness is but little. The greatest part of the lands lie waste; scarcely can we trace any marks of cultivation, in the environs of the towns and villages. Its principal produce consists in wheat, barley, and cotton, which are found especially in the flat country. In the mountains, they rather chuse to cultivate the vine, mulberry, olive, and fig-trees. The sides of the hills towards the sea-coast are appropriated to tobacco, and the territory of Aleppo, to Pistachios. The pasturage is not to be reckoned, because, that is abandoned to the wandering Hordes of the Turkmen and Curds.

In the greater part of the Pachalics the Pacha is, as his title imports, at once the Viceroy and Farmer-general of the country; but in that of Aleppo, he does not possess the latter office. This the Porte has bestowed on a *Mehaffel*, or Collector, who is immediately accountable for what he receives. His lease is only for a year. The present rent of his farm is

eight hundred purses, which make a million of French money, (above forty thousand pounds); but to this must be added, the *price of the babouches**, or a present of eighty or one hundred thousand livres, (three or four thousand pounds), to purchase the favour of the Visir, and men in office. For these two sums, the farmer receives all the duties of the government, which are; First, The produce of import and export duties on merchandize coming from Europe, India, and Constantinople, and on that exported in exchange. Secondly, The taxes paid by the herds of cattle brought every year by the Turkmen and Curds, from Armenia and the Diarbekar, to be sold in Syria. Thirdly, The fifth of the salt works of Djeboul. And, lastly, The Miri, or land-tax. These united may produce from fifteen to sixteen hundred thousand livres, (above sixty thousand pounds)

The Pacha, deprived of this lucrative branch of the administration, receives a fixed allowance of eighty thousand piastres, (eight thousand three hundred and thirty pounds.) This revenue has always been inadequate to the expences; for besides the troops he is obliged to maintain, and the reparation of the highways and fortresses, the expences of which he is obliged to defray, he is under the necessity of making large presents to the ministers, in order to keep his place; but the Porte adds to the account, the contributions he may levy on the Curds and Turkmen, and his extortions from the villages and individuals; nor do the Pachas come short of this calculation. Abdi Pacha, who governed twelve or thirteen years ago, carried off, at the end of fifteen months, upwards of four millions of livres, (one hundred and sixty thousand pounds) by laying under contribution every trade, even the very cleaners of tobacco pipes; and, very lately, another of the same name has been obliged to

* Turkish Slippers,

fly for similar oppressions. The former was rewarded by the Divan with the command of an army against the Russians: but if the latter has not enriched himself, he will be strangled as an extortioner. Such is the ordinary progress of affairs in Turkey!

Custom requires that the commission of the Pacha should be only for three months; but it is frequently extended to six, and even to a year. His office is to retain the province in obedience, and provide for the security of his country against every foreign and domestic enemy. For this purpose he maintains five or six hundred horse, and about the same number of infantry. Besides these, he has the command of the Janisaries who are a sort of enrolled national militia. As this corps is founded throughout Syria, it will be proper to say a few words concerning its constitution.

The Janisaries I have mentioned consist, in each Pachalic of a certain number of enrolled men, who must hold themselves ready to march whenever they are required. As there are certain privileges and exemptions attached to their body, there is a competition to obtain admission into it. Formerly they were subject to regular exercise and discipline; but all observance of this has so declined, within the last sixty or eighty years, that there no longer remains the slightest trace of their ancient good order. These pretended soldiers are only a croud of artizans and peasants, as ignorant as the rest of that class, but infinitely less tractable. When a Pacha abuses his authority, they are always the first to erect the standard of sedition. They deposed and expelled Abdi Pacha from Aleppo, and compelled the Porte to send another in his stead. The Turkish government revenges itself, it is true, by ordering the most active mutineers to be strangled; but on the first opportunity, the Janisaries create other chiefs, and affairs return to their usual course. The Pachas, seeing themselves thwarted by this national militia, have had recourse to the expedient made use

of in similar cases; they have taken foreign soldiers into their service, who have neither friends nor families in the country. These are of two sorts cavalry and infantry.

The cavalry who alone merit the name of soldiers, for this reason assume the appellation of *Daoula* or *Deleti*, and likewise *Delibashes* and *Laouend*, from whence we have formed *Leventi*. Their arms are short sabres, pistols, muskets, and lances. Their head dress is a long cylinder of black felt, without edges, nine or ten inches high, extremely inconvenient, as it does not shade the eyes, and easily falls off their bald heads. Their saddles are made in the English manner, of a single skin stretched upon a wooden tree: they are bare, but not the less incommodious for this, as they shift the horseman so as to prevent him from clinging; in the rest of their accoutrements and cloathing, they resemble the Mamlouks; with this difference, that they are not provided with so good. Their ragged cloaths, their rusty arms, and their horses of different sizes, make them resemble banditti more than soldiers; and, in fact, the greatest part of them have first distinguished themselves in the former capacity, nor have they greatly changed in adopting their second occupation.

Almost all the cavalry in Syria are Turkmen, Curds, or Caramanians; who, after exercising the trade of robbers, in their own country, seek employment and asylum near the person of the Pacha. Throughout the empire, these troops are, in like manner, formed of plunderers, who roam from place to place. From want of discipline, they retain their former manners, and are the scourge of the country which they lay waste, and of the peasants, whom they often pillage by open force.

The infantry are a corps still inferior in every respect. Formerly they were procured from the inhabitants of the country by forced enlistments; but,

within the last fifty or sixty years the peasants of Tunis, Algiers, and Morocco, have thought proper to seek in Syria and in Egypt, that respect which is denied them in their own country. They alone, under the name of *Magarba*, *Mograbians*, or *Men of the West*, compose the infantry of the Pachas. So that, by a whimsical exchange, it happens, that the soldiery of the Barbary States consist of Turks, while that of the Turks is composed of the natives of Barbary. It is impossible for troops to be less encumbered than these; for their whole accoutrements and baggage are confined to a rusty firelock, a large knife, a leathern bag, a cotton shirt, a pair of drawers, a red cap, and sometimes slippers. Their pay is five piasters (about ten shillings and ten-pence) per month, out of which they are obliged to furnish themselves with arms and cloathing. They are maintained at the expence of the Pacha; which, altogether, may be esteemed tolerable encouragement; the pay of the cavalry is double, and each horseman has, besides this, his horse and his ration, which is a measure of chopped straw, and fifteen pounds of barley a day. These troops are divided in the ancient Tartar manner, by *bairaks*, or colours; each bairak is reckoned ten men, but they rarely consist of above six effectives: the reason of which is, that the *Agas*, or commanders of colours, being entrusted with the pay of the soldiers, maintain as few as possible, to profit by the deficiency. The superior *Agas* tolerate these abuses, and partake of the spoils; nay, the Pachas themselves disregard them, and, in order to avoid the payment of the complete number, connive at the rapacity and want of discipline of their troops.

In consequence of such wretched government, the greater part of the Pachalics in the empire are impoverished and laid waste. This is the case in particular with that of Aleppo; In the ancient *deftars*, or registers of imposts upwards of three thousand two hund-

tered villages were reckoned; but at present the collector can scarcely find four hundred. Such of our merchants as have resided there twenty years have themselves seen the greater part of the environs of Aleppo become depopulated. The traveller meets with nothing but houses in ruins, cisterns rendered useless and the fields abandoned. Those who cultivated them are fled into the towns, where the population is absorbed, but where at least the individual conceals himself among the crowd from the rapacious hand of despotism.

The places which merit most attention in this Pachalic are, first, the city of Aleppo, called by the Arabs *Halab**. This city is the capital of the province, and the ordinary residence of the Pacha. It is situated in the vast plain which extends from the Orontes to the Euphrates, and which, towards the south, terminates in the desert. The situation of Aleppo, beside the advantage of a rich and fruitful soil, possesses also that of a stream of fresh water, which never becomes dry. This rivulet, which is about as large as that of the *Gobelins* at Paris, or the New River near London, rises in the mountains of Aentab, and terminates six leagues below Aleppo, in a morass full of wild boars and pelicans. Near Aleppo, its banks, instead of the naked rocks which line them in the upper part of its course, are covered with a fertile earth, and laid out in gardens, or rather orchards, which, in a hot country, and especially in Turkey, cannot but be delightful. The city is in itself one of the most agreeable in Syria, and is perhaps the cleanest and best built of any in Turkey.

* This is the name of which the ancient geographers made *Chalybon*: the *ch* represents here the Spanish *jota*; and it is remarkable, that the modern Greeks still render the Arabic *ha* by the same sound of *jota*; which occasions a thousand double meanings in their conversation, as the Arabs have the *jota* in another letter.

On whatever side it is approached, its numerous minarets and domes present an agreeable prospect to the eye, fatigued with the continued sameness of the brown and parched plains. In the center is an artificial mountain surrounded by a dry ditch, on which is a ruinous fortress. From hence we have a fine prospect of the whole city, and to the north discover the snowy tops of the mountains of Bailan; and on the west, those which separate the Orontes from the sea; while to the south and east, the eye can discern as far as the Euphrates. In the time of Omar, this castle stopped the progress of the Arabs for several months, and was at last taken by treachery, but at present would not be able to resist the feeblest assault. Its slight wall, low, and without a buttress, is in ruins; its little old towers are in no better condition; and it has not four cannon fit for service, not excepting a culverine nine feet long, taken from the Persians at the siege of Basra (Bassora). Three hundred and fifty Janisaries, who should form the garrison, are busy in their shops, and the Aga scarcely finds room in it to lodge his retinue. It is remarkable that this Aga is named immediately by the Porte, which, ever suspicious, divides as much as possible, the different offices. Within the walls of the castle is a well, which, by means of a subterraneous communication, derives its water from a spring a league and a quarter distant. In the environs of the city, we find a number of large square stones, on the top of which is a turban of stone, which are so many tombs. There are many rising grounds round it, which, in case of a siege, would greatly facilitate the approaches of the assailants. Such, among others, is that on which the house of the Derviches stands, and which commands the canal and the rivulet: Aleppo, therefore, cannot be esteemed a place of importance in war, though it be the key of Syria to the north; but, considered as a commercial city, it has a differ-

ent appearance. It is the emporium of Armenia and the Diarbekar; sends caravans to Bagdad, and into Persia; and communicates with the Persian Gulph and India, by Basra; with Egypt and Mecca by Damascus; and with Europe by Scandaroon (Alexandretta) and Latakia. Commerce is there principally carried on by barter. The chief commodities are raw or spun cottons, clumsy linens fabricated in the villages; silk stuffs manufactured in the city, copper, *bourres* (coarse cloths) like those of Rouen, goats hair brought from Natolia; the gall nuts of the Kourdestan, the merchandize of India, such as shawls* and muslins; and pistachio nuts of the growth of the neighbourhood. The articles supplied by Europe, are the Languedoc cloths, cochineal, indigo, sugar, and some other groceries. The coffee of America, though prohibited, is introduced, and serves to mix with that of Moka. The French have at Aleppo a consul, and seven counting-houses; the English and the Venetians two, and the merchants of Leghorn and Holland one. The Emperor appointed a consul there, in 1784, in the person of a rich Jew merchant, who shaved his beard to assume the uniform and the sword. Russia has also sent one very lately. Aleppo is not exceeded in extent by any city in Turkey, except Constantinople and Cairo, and perhaps Smyrna. The number of inhabitants has been computed at two hundred thousand; but, in these calculations, certainty is impossible. However, if we observe, that this city is not larger than Nantes or Marseilles, and that the houses consist only of one

* Shawls are woollen handkerchiefs, an ell wide, and near two long. The wool is so fine and silky, that the whole handkerchief may be contained in the two hands closed: it is said that no wool is employed but that of lambs torn from the belly of their mother before the time of birth. The most beautiful shawls come from Cashmire: their price is from 150 livres (about six guineas,) to 1200 livres (or 50l. sterling.)

story, we shall, perhaps, not think it probable they exceed a hundred thousand. The people of this city, both Turks and Christians, are, with reason, esteemed the most civilized in all Turkey; and the European merchants no where enjoy so much liberty, or are treated with so much respect.

The air of Aleppo is very dry and piercing, but, at the same time, very salubrious for all who are not troubled with asthmatic complaints. The city, however, and the environs, are subject to a singular endemial disorder, which is called the ringworm or pimple of Aleppo; it is in fact a pimple which is at first inflammatory, and at length becomes an ulcer of the size of the nail. The usual duration of this ulcer is one year; it commonly fixes on the face, and leaves a scar which disfigures almost all the inhabitants. It is alledged that every stranger, who resides there three months, is attacked with it; experience has taught that the best mode of treatment is to make use of no remedy. No reason is assigned for this malady; but I suspect it proceeds from the quality of the water, as it is likewise frequent in the neighbouring villages, in some parts of the Diarbekar, and even in certain districts near Damascus, where the soil and the water have the same appearances.

Every body has heard of the pigeons of Aleppo, which serve as couriers at Alexandretta and Bagdad. This use of them, which is not fabulous, has been laid aside for the last thirty or forty years, because the Curd robbers killed the pigeons. The manner of sending advice by them was this: they took pairs which had young ones, and carried them on horseback to the place from whence they wished them to return, taking care to let them have a full view. When the news arrived, the correspondent tied a billet to the pigeon's foot, and let her loose. The bird, impatient to see its young, flew off like lightning, and arrived at Aleppo in ten hours from Alexandretta;

and in two days from Bagdad. It was not difficult for them to find their way back, since Aleppo may be discovered at an immense distance. This pigeon has nothing peculiar in its form, except its nostrils, which, instead of being smooth and even are swelled and rough.

The conspicuous situation of Aleppo brings numbers of sea birds thither, and affords the curious a singular amusement: if you go after dinner on the terraces of the houses, and make a motion as if throwing bread, numerous flocks of birds will instantly fly round you, though at first you cannot discover one; but they are floating aloft in the air, and descending in a moment to seize, in their flight, the morsels of bread, which the inhabitants frequently amuse themselves with throwing to them.

Next to Aleppo, Antioch, called by the Arabs Antakia, claims our attention. This city, anciently renowned for the luxury of its inhabitants, is now no more than a ruinous town, whose houses, built with mud and straw, and narrow and miry streets, exhibit every appearance of misery and wretchedness. These houses are situated on the southern bank of the Orontes, at the extremity of an old decayed bridge: they are covered to the south by a mountain, upon the slope of which is a wall, built by the Crusaders. The distance between the present town and this mountain may be about four hundred yards, which space is occupied by gardens and heaps of rubbish, but presents nothing interesting.

Notwithstanding the unpolished manners of its inhabitants, Antioch, was better calculated than Aleppo to be the emporium of the Europeans. By clearing the mouth of the Orontes, which is six leagues lower down, boats might have been towed up that river, though they could not have sailed up, as Pococke has asserted; its current is too rapid. The natives, who never knew the name of Orontes, call it, on account

of the swiftness of its stream, Elaasi,* that is the Rebel. Its breadth, at Antioch, is about forty paces. Seven leagues above that town it passes by a lake abounding in fish, and especially in eels. A great quantity of these are salted every year, but not sufficient for the numerous fasts of the Greek Christians. It is to be remembered, we no longer hear at Antioch, either of the Grove of Daphne, or of the voluptuous scenes of which it was the theatre.

The plain of Antioch, though the soil of it is excellent, is uncultivated and abandoned to the Turkmen; but the hills on the side of the Orontes, particularly opposite Serkin, abound in plantations of figs and olives, vines, and mulberry trees, which, a thing uncommon in Turkey, are planted in quincunx,† and exhibit a landscape worthy our finest provinces.

The Macedonian king, Seleucus Nicator, who founded Antioch, built, also, at the mouth of the Orontes, on the northern bank, a large and well fortified city, which bore his name, but of which at present not a single habitation remains; nothing is to be seen but heaps of rubbish, and works in the adjacent rock, which prove that this was once a place of very considerable importance. In the sea also may be perceived the traces of two piers, which are indications of an ancient port, now choaked up. The inhabitants of the country go thither to fish, and call the name of the place Souaidia. From thence, as we proceed to the north, the sea coast is shut up by a chain of high mountains, known to the ancient geographers by the name of *Rhofus*: which name was probably derived from the Syriac, and still subsists in

* This is the name which the Greek Geographers have rendered by *Axios*.

† This mode of planting in *Quincunx*, is likewise in use among the Diuzes, and is particularly mentioned by Baron de Tott.

that of *Ras-el-Kanzir*, or Cape of the Wild Boar, a head land on this coast.

The Gulph towards the north-east, is remarkable for the town of Alexandretta, or Skandaroon, of which it bears the name. This town situated on the sea shore, is, properly speaking, nothing but a village, without walls, in which the tombs are more numerous than the houses, and which entirely owes its existence to the road which it commands. This is the only road in all Syria, where vessels anchor on a solid bottom, without their cables being liable to chafe: but in other respects, it has so many serious inconveniences, that necessity alone can prevent the merchants from abandoning it.

First, It is infested, during winter, by a wind, peculiar to this place, called by the French sailors *le Raguier*, which, rushing from the snowy summits of the mountains, frequently forces ships to drag their anchors several leagues.

Secondly, When the snow begins to cover the mountains which surround the Gulph, tempestuous winds arise which prevent vessels from entering for three or four months together.

Thirdly, The road from Alexandretta to Aleppo, by the plain, is infested by Curd robbers, who conceal themselves in the neighbouring rocks,* and frequently attack and plunder the strongest caravans.

Another reason, more forcible than these is the unwholesomeness of the air of Alexandretta, which is extreme. It may be affirmed that it every year carries off one third of the crews of the vessels which remain there during the summer; nay, ships frequently lose all their men in two months. The season for this epidemic disorder is principally from May to the

* The place they are found in exactly corresponds with the Castle of Gyndarus, which, in the time of Strabo was a haunt of robbers.

end of September : it is an intermitting fever of the most malignant kind, and is accompanied with obstructions of the liver, which terminate in a dropsy. The cities of Tripoli, Acre, and Larneca in Cyprus, are subject to the same disorder, though in a less degree. In all these places the same local circumstances seem to have given birth to the contagion ; the cause of it in all is to be ascribed to the adjoining morasses, stagnant waters, and consequent vapours and mephitic exhalations ; a convincing proof of this is, that this disorder does not prevail in seasons when no rain has fallen. But, unfortunately, Alexandretta is condemned, from its situation to be never wholly exempt from it ; for the plain on which the town is built is so low and flat* that the rivulets, finding no declivity, can never reach the sea. When they are swelled by the winter rains, the sea, swelled likewise by tempests, hinders their discharging themselves into it ; hence their waters, forced to spread themselves, form lakes in the plain. On the approach of the summer, the waters become corrupted by the heat, and exhale vapours equally corrupt, which cannot disperse, being confined by the mountains that encircle the gulph. The entrance of the bay besides lies to the west, which, in those countries, is the most unhealthy exposure when it corresponds with the sea. The labour necessary to remedy this would be immense, and after all insufficient ; and, indeed such an undertaking would be absolutely impossible, under a government like that of the Turks. A few years ago, the merchants of Aleppo, disgusted with the numerous inconveniences of Alexandretta, wished to abandon that port and carry the trade to Latakia. They proposed to the Pacha of Tripoli to repair the harbour at

* This plain which is about a league in breadth, and lies at the foot of the mountains, has been formed by the earth, brought down by torrents and rain.

their own expence, provided he would grant them an exemption from all duties for ten years. To induce him to comply with their request, the agent they employed talked much of the advantage which would *in time*, result to the whole country: “ But what signifies it to me what may happen *in time*, replied the Pacha? I was yesterday at Marach, to-morrow, perhaps, I shall be at Djedda; Why should I deprive myself of present advantages, which are certain, for future benefits I cannot hope to partake?” The European factors were obliged therefore to remain at Skandaroon. There are three of these factors, two for the French, and one for the English and Venetians. The only curiosity which they have to amuse strangers with, consists in six or seven marble monuments, sent from England, on which you read: *Here lies such a one, carried off in the flower of his age, by the fatal effects of a contagious air.* The sight of these is the more distressing, as the languid air, yellow complexion, livid eyes, and dropical bellies of those who shew them, make it but too probable they cannot long escape the same fate. It is true, they have some resource in the village of Bailan, the pure air and excellent waters of which surprizingly restore the sick. This village, situated among the mountains, three leagues from Alexandretta, on the road to Aleppo, presents the most beautiful picturesque appearance. It is built among the precipices in a narrow and deep valley, from whence the Gulph of Skandaroon is seen as through a tube. The houses, leaning against the steep declivities of the two mountains, are so disposed, that the terraces of the lower serve as streets and courts to those above. In winter, cascades pour down on every side, which stun the inhabitants with their noise, and, in their fall, sometimes rend off large pieces of the rocks, and even throw down the houses. The cold is very severe there, during that season, but the summer delightful;

the inhabitants, who speak only Turkish, live on their goats and buffaloes, and the produce of a few gardens which they cultivate. The Aga, for some years past, has applied the duties of the custom-house of Alexandretta to his own use, and rendered himself almost independent of the Pacha of Aleppo. The Turkish empire is full of such rebels, who frequently die in peaceable possession of their usurpations.

On the road from Alexandretta to Aleppo, at the last place travellers sleep at, is the village of Martawan, celebrated among the Turks and Europeans, on account of an extraordinary practice of the inhabitants who let out their wives and daughters for a trifling sum.* This prostitution, held in abhorrence by the Arabs, seems to me to have originated in some religious custom, which ought perhaps to be sought for in the ancient worship of the goddess Venus, or to be attributed to the community of women permitted by the Ansarians, to which tribe the inhabitants of Martawan belong. The Franks pretend that the women are pretty. But it is probable that long abstinence at sea, and the vanity of intrigue, constitute all their merit; for their exterior announces nothing but the disgusting uncleanness of misery.

In the mountains which terminate the Pachalic of Aleppo to the north, we find Kles and Aentah, two considerable villages. They are inhabited by Armenian Christians, Curds, and Mahometans, who, notwithstanding the difference of their religions, live in friendship, and, by their union, are enabled to resist the Pacha, whom they often brave, and enjoy in tranquility the produce of their flocks, bees, and a

* See Baron de Tott's Memoirs. M. du Rocher now resident of the king of France with the Emperor of Morocco, has furnished me with many entertaining anecdotes respecting this whimsical custom, but too indelicate for the press. T.

few cultivated spots on which they grow corn and tobacco.*

Two days journey to the north-east of Aleppo is the town of Mambedj, so celebrated in ancient times, under the names of Bambyce, and Hierapolis†. No traces remain of the temple of that great goddess with whose worship Lucian has made us acquainted: The only remarkable monument is a subterraneous canal, which conducts the water from the mountains of the north for the distance of four leagues. All this country was formerly full of such aqueducts: the Assyrians, Medes, and Persians, esteemed it a religious duty to convey the water to the desert, in order to multiply, according to the precepts of Zoroaster, *the principles of life and of abundance*: we therefore, at every step, meet with astonishing proofs of ancient population. Along the whole road from Aleppo to Hama, we discover the ruins of ancient villages, cisterns fallen in, and the remains of fortresses, nay even of temples. I particularly remarked a quantity of oval and round hillocks, which, from the nature of the earth and their steep ascent on this even plain, evidently appear to have been the work of man. The reader may form some idea of the labour they must have cost, from the dimensions of that of Kan-Shaikoun, which I found to be seven hundred and twenty paces, or fourteen hundred French feet in circumference, and near a hundred feet high. These hillocks, scattered at regular intervals of nearly a league from each other, are covered with the ruins of citadels, and, probably, were also places sacred to the adoration of some deity, according to the well known practice of the ancients,

* These towns successfully revolted in 1780, against the tyranny of the Second Abdi Pacha, mentioned by our author. T.

† The name of Hierapolis still subsists in that of another village, called *Yerabolos*, and situated on the Euphrates.

of worshipping “on high places.” These conjectures seem confirmed by the tradition of the inhabitants, who attribute all these works to the infidels. At present, instead of that cultivation which might be expected, we meet with nothing but waste and desolate lands: yet the soil is of a good quality, and the small quantity of grain, cotton, and sesamum it produces, is excellent. But all the frontiers of the Desert are destitute of springs and running water. That of the wells is brackish; and the winter rains, on which the inhabitants place their principal dependance, sometimes fail. For this reason, nothing can be conceived more melancholy than these parched and dusty plains, without trees, and without verdure; or more miserable than the appearance of the straw and earthen huts which form their villages; nor can any greater wretchedness be imagined than that of the peasants, exposed at once to the oppression of the Turks, and the robberies of the Bedouin Arabs. The tribes which encamp in these plains are called the Mawalis; they are the most powerful, and the richest among the Arabs, as they pay some attention to agriculture, and partake in the trade of the caravans which go from Aleppo, either to Bassora or Damascus, or to Tripoli by the way of Hama.

CHAP. IX.

Of the Pachalic of Tripoli.

THE Pachalic of Tripoli comprehends the country which stretches along the Mediterranean, from Latakia to the Narh-el-Kelb, and is bounded on the west by that torrent, and the chain of mountains which overlook the Orontes.

The principal part of this government is hilly; the sea-coast alone, between Tripoli and Latakia, is a level country. The numerous rivulets which water it contribute greatly to its fertility; but, notwithstanding this advantage, this plain is much less cultivated than the mountains, without even excepting Lebanon, with its numerous rocks and pine-trees. Its chief productions are corn, barley, and cotton. In the territory of Latakia tobacco and olives are principally cultivated: but in Lebanon, and the Kefraouan, white mulberry-trees and vineyards.

This Pachalic contains several different tribes and religions. From Lebanon to above Latakia, the mountains are peopled by the Ansarians of whom I have before spoken; Lebanon and the Kefraouan are inhabited entirely by the Maronites, and the sea-coast and cities, by Schismatic Greeks, and Latins, Turks, and descendants of the Arabs.

The Pacha of Tripoli enjoys all the privileges of his place. The military and finances are in his hands; he holds the government in quality of a farm from the Porte, on a lease of one year only, at the annual rent of seven hundred and fifty purses, (thirty-nine thousand pounds;) besides this, he is obliged to supply the Caravan of Mecca with corn, barley, rice, and other provisions, the expenses of which are estimated at seven hundred and fifty purses more. He is himself obliged to conduct this convoy into the Desert, to meet the pilgrims. To indemnify him for these expenses he receives the Miri, the customs, the farms of the Ansarians and the Kefraouan, and adds to all these numerous annual extortions and exactions; indeed had he no more than this last article, his profits would be considerable. He maintains about five hundred cavalry, as ill provided as those of Aleppo, and a few Mogravian infantry.

The Pacha of Tripoli has always been desirous of personally governing the country of the Ansarians,

and the Maronites; but these people having invariably opposed by force the entrance of the Turks into their mountains, he has been constrained to abandon the collection of the tribute to under farmers, approved of by the inhabitants. Their office is not like his, held only for a year, but is disposed of by auction; whence arises a competition of wealthy persons, who perpetually afford him the means of exciting or fomenting troubles in the tributary nation: this administration is the same we find in history to have been usual with the ancient Persians and Assyrians, and which appears to have been frequent in all ages in the eastern world.

The farm of the Ansarians is at this day divided between three chiefs or *Mokaddamin*; that of the Maronites is wholly in the hands of the Yousef, who pays thirty purses (fifteen hundred and sixty pounds) for it. Among the remarkable places in this Pachalic we must first mention Tripoli,* in Arabic *Tarabolos*, the residence of the Pacha. It is situated on the river Kadisha, at the distance of a quarter of a league from its mouth, and precisely at the foot of Mount Lebanon, which overlooks and surrounds it with its branches to the east, the south, and even a little to the north-west. It is separated from the sea by a small triangular plain, half a league in breadth, at the point of which is the village where the vessels land their goods. The Franks call this village *la Marine*,† the general name given by them to these places in the Levant. There is no harbour but a simple road, which extends from the shore to the shoals called *the Rabbit and Pigeon Islands*. The bottom is rocky, and mariners are not fond of remaining here, as the cabals

* A Greek name, signifying *three cities*, it having been built by three colonies, from Sidon, Tyre, and Aradus, who each of them formed settlements so near each other, that they were soon united into one.

† Such maritime places were by the ancients called *Majumæ*.

are soon worn out, and the vessels exposed to the north-west winds, which are frequent and violent on all this coast. In the time of the Franks, this road was defended by towers, seven of which are still subsisting, from the mouth of the river to the village. They are strong built, but now serve only as a place of resort for birds of prey.

All the environs of Tripoli are laid out in orchards, where the nopal grows spontaneously, and the white mulberry is cultivated for the silk worm; and the pomegranate, the orange, and the lemon tree, for their fruit, which is of the greatest beauty. But these places, though delightful to the eye, are unhealthy. Every year, from July to September, epidemic fevers like those of Skandaroon and Cyprus, rage here: these are owing to the artificial inundations with which the mulberry-trees are watered, in order that they may throw out their second leaves. Besides, as the city is open only to the west, the air does not circulate, and the spirits are in a constant state of oppression, which makes health at best but a kind of convalescence.* The air, though more humid, is more salubrious at *la Marine*, doubtless because it has room to circulate. It is still more so in the islands; and were the place in the hands of an enlightened government, the inhabitants should be invited to live there. Nothing more would be necessary to induce them, than to convey water to the village by conduits, as seems formerly to have been done. It is worthy

* Since my return from France, I have received accounts that in the spring, 1785, there raged an epidemical disorder, which desolated Tripoli and the Kesraouan. It was a violent fever, accompanied with blue spots, which made it suspected to have an affinity with the plague. What may be esteemed singular, it was observed to attack very few Mahometans, but made its chief ravages among the Christians; whence it may be concluded it was in a great measure occasioned by the unwholesome food and meagre diet they live on during Lent.

of observation, also, that southern shore of the small plain is full of the ruins of habitations, and columns broken and buried in the earth, or in the sea sands. The Franks had employed a great number of them in the building their walls, in the remains, of which they are still to be seen laid crossways.

The commerce of Tripoli consists almost wholly in indifferent coarse silks, which are made use of for laces. It is observed, that they are every day losing their quality. The reason assigned for which, by well informed persons, is the decay of the mulberry-tree, of which scarcely any thing now remains but some hollow trunks. A stranger instantly replies why not plant new ones? But I answer, that is an European observation. Here they never plant; because, were they to build or plant, the Pacha, would say this man has money. He would send for him, and demand it of him: should he deny that he has any, he must suffer the bastinado; and should he confess, he must still receive it to extort from him the acknowledgment that he has still more. Not that the Tripolitans are remarkable for their patience; they are on the contrary, considered as extremely mutinous. Their title of Janisaries, and the green turban they wear, in quality of *Sherifs*, inspire them with the spirit of revolt. Ten or twelve years ago, the extortions of a Pacha drove them to extremities; they expelled him, and remained eight months independent; but the Porte sent a man well versed in her maxims, who, by dint of promises, oaths, and pardons, gained and dispersed them, and concluded by putting to death eight hundred in one day; their heads are still to be seen in a cave near Kadisha. Such is the government of the Turks! The commerce of Tripoli is in the hands of the French alone. They have a consul here, and three commercial houses. They export silks, and sponges fished up in the road; these they exchange for cloths, cochineal, sugar and West-India

coffee; but this factory, both with respect to imports and exports, is inferior to its subordinate town Latakia.

The town of Latakia, founded by Seleucus Nicator, under the name of *Laodicea*, is situated at the base, and on the southern side of a small peninsula, which projects half a league into the sea. Its port, like all the others on this coast, is a sort of basin, environed by a mole, the entrance of which is very narrow. It might contain five and twenty or thirty vessels; but the Turks have suffered it so to be choaked up, as scarcely to admit four. Ships of above four hundred tons cannot ride there; and hardly a year passes, that one is not stranded in the entrance. Notwithstanding this, Latakia carries on a very great commerce, consisting chiefly of tobacco, of which upwards of twenty cargoes are annually sent to Damietta: the returns from thence are rice, which is bartered in Upper Syria for oils and cottons. In the time of Strabo, instead of tobacco, the exports consisted in its famous wines, the produce of the hill sides. Even then, Egypt was the market by way of Alexandria. Have the ancients or the moderns gained by this exchange? Neither Latakia nor Tripoli can be mentioned as places of strength. They have neither cannon nor soldiers; a single privateer would make a conquest of them both. They are each supposed to contain from four to five thousand inhabitants.

On the coast, between these towns, we meet with several inhabited villages, which formerly were large cities: such are Djebila, Merkab, situated on a steep declivity, and Tartoufa; but we find still more places which have only the half-destroyed remains of ancient habitations. Among the latter, one of the principal is the rock, or island of Rouad, formerly a powerful city and republic, known by the name of *Aradus*. Not a single wall is remaining of all that

multitude of houses, which, according to Strabo, were built with more stories than even those of Rome. The liberty enjoyed by the inhabitants had rendered it very populous, and it subsisted by naval commerce, manufactures, and arts. At present the island is deserted; nor has tradition even retained the memory of a spring of fresh water in its environs, which the people of Aradus discovered at the bottom of the sea, and from which they drew water, in time of war, by means of a leaden bell, and a leathern pipe fitted to its bottom. To the south of Tripoli is the country of the Kefraouan, which extends from Nahr-el-Kelb, passing by Lebanon, as far as Tripoli. Djebail, the ancient Byblos, is the most considerable town in this territory: it has not, however, above six thousand inhabitants. Its ancient port, which resembles that of Latakia, is in a still worse situation; scarcely any traces of it remain. The river Ibrahim, the ancient *Adonis*, which is two leagues to the southward, has the only bridge to be seen, that of Tripoli excepted; from thence to Antioch. It is of a single arch, fifty feet wide, and upwards of thirty high; of a very light architecture, and appears to have been a work of the Arabs.

Among the mountains, the places most frequented by the Europeans, are the villages of Eden and Besharrai, where the missionaries have a house. During the winter, many of the inhabitants descend to the coast, and leave their houses under the snow, with somebody to guard them. Besharrai is in the road to the Cedars, to which it is a journey of seven hours, though the distance be but three leagues. These Cedars, so boasted, resemble many other wonders; they support their reputation very indifferently on a near inspection; the sight of four or five large trees, which are all that remain, and have nothing remarkable in their appearance, is not worth the trou-

ble it costs the traveller to climb the præcípices that lead to them.

On the frontiers of the Kefraouan, a league to the northward of Nahr-el-kelb, is the little village of Antoura, where the Jesuits were established in a house, which, though it has not the splendor of those in Europe, is a neat and simple mansion. Its situation on the side of the hill, the limpid waters which refresh its vineyards and mulberry-trees, the prospect it commands over the valley, and the distant view it has of the sea, render it a most agreeable hermitage. The Jesuits attempted to annex to it a convent of young women, situated at a quarter of a league's distance in front; but the Greek Christians having dispossessed them, they built one close to them, under the name of the *Visitation*. They had also built two hundred paces higher, a seminary, which they wished to fill with Maronite and Latin-Greek students; but it has remained deserted. The Lazarites, who have succeeded them, maintain a superior curate, and a lay-brother at Antoura, who do the duties of the mission with equal charity, politeness, and decency.

C H A P. X.

Of the Pachalic of Saide, called likewise the Pachalic of Acre.

TO the south of the Pachalic of Tripoli, and on the same coast, is a third Pachalic, that, till now, has borne the name of the city of Saide, its capital, but may henceforward assume that of Acre, to which place the Pacha has of late years transferred his residence. The extent of this government has greatly varied at different times. Before Shaik Daher, it

was composed of the country of the Druzes, and the whole coast from Nahr-el-keleb, as far as Mount Carmel. In proportion as Daher obtained power, he infringed on the territories of the Pacha, and reduced him to the city of Saide, from which he was at last expelled; but after the ruin of Daher, the government resumed its ancient limits. Djezzar, who succeeded that chief in quality of Pacha for the Turks, has annexed to the Pachalic the countries of Safad, Tabaria, and Balbek, formerly tributary to Damascus, and the territory of Kaifaria, (the ancient Cesarea) inhabited by the Arabs of Saker. This Pacha, perceiving the advantage of the works erected by Daher at Acre, transferred his residence to that city, which is now become the capital of that province.

By these different augmentations, the Pachalic of Acre at present includes all the country from the Nahr-el-keleb, to the south of Kaifaria, between the Mediterranean to the west, and Anti-Lebanon, and the upper part of the course of Jordan, to the east. It derives the more importance from this extent as it unites the valuable advantages of situation and soil. The plains of Acre, Esdrelon, Sour, Havula, and the Lower Bekaa, are justly boasted for their fertility. Corn, barley, maize, cotton, and sesamum, produce, notwithstanding the imperfection of the culture, twenty and twenty-five for one. The country of Kaifaria possesses a forest of oaks, the only one in Syria. Safad furnishes cottons, which, from their whiteness, are held in as high estimation as those of Cyprus. The neighbouring mountains of Sour produce as good tobacco as that of Latakia, and in a part of them is produced a perfume of cloves, which is reserved exclusively for the use of the Sultan and his women. The country of the Druzes abounds in wines and silks, in short, from the situation of the coast, and the number of its creeks, this Pachalic necessarily

becomes the emporium of Damascus and all the interior parts of Syria.

The Pacha enjoys all the privileges of his office; he is despotic governor, and farmer general. He remits to the Port annually the fixed sum of seven hundred and fifty purses; but he, as well as the Pacha of Tripoli, is obliged to furnish the *Djerde* or provisions for the pilgrims of Mecca. His expences for this article are estimated likewise at seven hundred and fifty purses, in rice, corn, barley, &c. The time limited for his government is a year, but is frequently prolonged. His revenues are, the Miri; the farms of the tributaries, as the Druzes, the Motoualis and some Arab tribes; the numerous fees from successions and extortions; and the produce of the customs on the exports, imports, and the conveyance of merchandize; which article alone amounted to one thousand purses (above fifty thousand pounds,) when Djezzar farmed all the harbours and creeks in 1784. This Pacha likewise, as is usual with the Turkish governors in Asia, cultivates lands on his own account, enters into partnership with merchants and manufacturers, and lends out money for interest to husbandmen and traders; the total from these various emoluments is estimated at between nine and ten millions of French money, (about four hundred thousand pounds.) If we compare with this his tribute, which, with the supply of the caravan, amounts only to fifteen hundred purses, or one million, eight hundred and seventy-five thousand livres, (seventy-eight thousand one hundred and twenty-five pounds), we must be astonished that the Porte allows him such enormous profits; but this also is a part of the policy of the Divan. The tribute once settled never varies, only, if the Pacha becomes rich, he is squeezed by extraordinary demands. He is often left to accumulate in peace; but when he has once amassed great wealth, some expedient is

always contrived to bring to Constantinople his coffers or his head.

At present, the Porte is on good terms with Djezzar, on account, it is said, of his former services; in fact, he greatly contributed to the ruin of Daher: he destroyed the family of that prince, restrained the Bedouins of Sakar, humbled the Druzes, and nearly annihilated the Motoualis. These successes have caused him to be continued in his government for ten years. He has lately received the three tails, and the title of *Wazir* (*Visir*), which accompanies them;* but the Porte, as usual, begins to take umbrage at his good fortune. She is alarmed at his enterprising spirit, and he, on his side, is apprehensive of the duplicity of the Divan: so that a mutual distrust prevails, from which some important consequences may well be expected. He maintains a greater number of soldiers, and in better condition than any other Pacha; and takes care to enroll none but those of his own country; that is to say, Bosniaks and Arnauts; their number is about nine hundred horsemen. Added to these, he has nine thousand Mogravian infantry. The gates of his frontier towns have regular guards, which is usual in the rest of Syria.

By sea, he has one frigate, two galliots, and a xebeck, which he has lately taken from the Maltese. By these precautions, apparently intended to secure him from foreign enemies, he has put himself on his guard against the stratagems of the Divan. More than one attempt has been made to destroy him by Capidjis; but he has watched them so narrowly, that they have not been able to effect any thing; and the *cholera*, of which two or three of them have suddenly died, has cooled the zeal of those who take upon them so ticklish an employment. Besides, he constantly maintains spies in pay, in the *Serai*, or palace of the

* Every Pacha of three tails is stiled *Visir*.

Sultan; and his money procures him plenty of protectors. By these means he has just obtained the Pacha of Damascus, to which he had long aspired, and which is, in fact, the most important in all Syria. He has resigned that of Acre to a Mamlouk, named Selim, his friend, and the companion of his fortune; but this man is so devoted to him, that Djezzar may be considered as in possession of both the governments. It is said, he is soliciting that of Aleppo; which if he procures, he will possess nearly the whole of Syria, and the Porte possibly may find in him a rebel more dangerous than Daher; but, as conjectures concerning such events are of little use, I shall pass, without pursuing them any further, to give some description of the most remarkable places of this Pacha.

The first that presents itself, as we proceed along the coast, is the town of Berytus, which the Arabs pronounce *Bairout*, like the ancient Greeks. It is situated in a plain, which from the foot of Lebanon, runs out into the sea, narrowing to a point, about two leagues from the ordinary line of the shore, and on the north side forms a pretty long road, which receives the river of Nahr-el-Salib, called also Nahr-Bairout. This river has such frequent floods in winter, as to have occasioned the building of a considerable bridge; but it is in so ruinous a state as to be impassable: the bottom of the road is rock, which chafes the cables, and renders it very insecure. From hence, as we proceed westward towards the point, we reach, after an hour's journey, the town of Bairout. This, till lately, belonged to the Druzes; but Djez-

* It is asserted on good authority, that Djezzar, dreading a visit from his *old friend*, the *Captain Pacha*, now employed in quelling the revolt in Egypt, has quitted his government, and prudently fled with all his ill-gotten wealth, it is supposed, into Bosnia, his native country, at the commencement of the year 1787. T.

zar thought proper, as we have seen, to take it from them, and place in it a Turkish garrison. It still continues, however, to be the emporium of the Maronites and the Druzes, where they export their cottons and silks, almost all of which are destined for Cairo. In return, they receive rice, tobacco, coffee, and specie, which, they exchange again for the corn of Bekaa, and the Hauran. This commerce maintains near six thousand persons. The dialect of the inhabitants is justly censured as the most corrupt of any in the country; it unites in itself the twelve faults enumerated by the Arabian grammarians.

The port of Bairout, formed like all the others of the coast, by a pier, is, like them, choaked up with sands and ruins. The town is surrounded by a wall, the soft and sandy stone of which may be pierced by a cannon ball, without breaking or crumbling; which was unfavourable to the Russians in their attack; but in other respects this wall and its old towers, are defenceless. Two inconveniencies will prevent Bairout from ever becoming a place of strength; for it is commanded by a chain of hills to the south-east, and is entirely destitute of water, which the women are obliged to fetch from a well at the distance of half a quarter of a league, though what they find there is but indifferent. Djezzar has undertaken to construct a public fountain, as he has done at Acre; but the canal which I saw dug, will soon become useless. By digging, in order to form reservoirs, subterraneous ruins have been discovered, from which it appears, that the modern town is built on the ancient one. The same may be observed of Latakia, Antioch, Tripoli, Saide, and the greater part of the towns on the coast, which has been occasioned by earthquakes, that have destroyed them at different periods. We find likewise without the walls to the west, heaps of rubbish, and some shafts of columns, which indicate that Bairout has been formerly much

larger than at present. The plain around it is entirely planted with white mulberry-trees, which, unlike those of Tripoli, are young and flourishing; because, in the territories of the Druzes, there is no danger in renewing them. The silk, therefore, produced here, is of the very finest quality. As we descend from the mountains, no prospect can be more delightful than to behold, from their summits or declivities, the rich carpet of verdure, formed by the tops of these useful trees in the distant bottom of the valley.

In summer, it is inconvenient to reside at Bairout, on account of the heat, and the warmth of the water; the town, however is not unhealthy, though it is said to have been so formerly. It has ceased to be unhealthy since the Emir Fakr-el-din planted a wood of fir trees, which is still standing, a league to the southward of the town. The monks of Mahr-Hanna, who are not systematical philosophers, have made the same observation respecting several convents; they even assert, that since the heights have been covered with pines, the waters of several springs have become more abundant, and more salubrious; which agrees with other known facts.*

The country of the Druzes affords few interesting places. The most remarkable is *Dair-el-Kamar*, or House of the Moon, which is the capital and residence of the Emirs. It is not a city, but a large town ill built, and very dirty. It is situated on the back of a mountain, at the foot of which flows one of the branches of the ancient river Tamyras, at present the rivulet of Damour. It is inhabited by Greek Catho-

* Dr. Franklin, to whom mankind are indebted for so much, in every branch of knowledge, has given very satisfactory reasons for this salutary effect of trees, particularly pines; the subject has been well treated too by several English and French philosophers; among others by the *Marquis de Castellun*, in his *North America*, under the article *Virginia*. T.

lics and Schismatics, Maronites and Druzes, to the number of fifteen or eighteen hundred. The *Serai*, or palace of the prince, is only a large wretched house falling to ruin.

I must also mention Zabla, a village at the foot of the mountains in the valley of *Bekaa*; for the last twenty years this place is become the centre of correspondence between Balbek, Damascus, Bairout, and the interior of the Mountains. It is even said that the counterfeit money is made here; but the clumsy artists, though they can imitate the Turkish piasters, have not been able to approach the workmanship of the German Dahlers.

I neglect to observe that the country of the Druzes is divided into *Katas*, sections, or districts, which have each of them a distinct character. The *Matra*, which is to the north, is the most stoney, and abounds most in iron. The *Garb* affords the most beautiful pines. The *Sabel* or *flat* Country, which lies next the sea, produces mulberry-trees and vineyards. The *Shouf* in which Dair-el-Kamar is situated, has the greatest number of Okkals, and produces the finest silks. The *Tefah*, or district of Apples, which is to the south, abounds in that species of fruit. The *Shakif* grows the best tobacco, and the name of *Djourd* is given to all the higher country and the coldest of the mountains: to this district in summer the shepherds retire with their flocks.

I have already said that the Druzes had received among them the Greek Christians and Maronites, and granted them lands to build convents on. The Greek Catholics, availing themselves of this permission, have founded twelve within the last seventy years. The principal is Mar-Hanna: this monastery is situated opposite the village of Shouair, on a steep declivity, at the bottom of which a torrent runs in winter into the Nahr-el-keleb. The convent built amid rocks and blocks of stone is far from magnificent,

and consists of a dormitory with two rows of little cells, above which is a terrace substantially vaulted; it maintains forty monks. Its chief merit consists in an Arabic Printing-Press, the only one which has succeeded in the Turkish empire. This has been established about fifty years, and the reader will perhaps not be offended if I say something of its history.

At the commencement of the present century, the Jesuits, profiting by the prospect which the protection of France procured them, manifested, in their house at Aleppo, that zeal for the improvement of knowledge which they have every where shewn. They had founded a school in that city, intended to educate the children of Christians in the doctrines of the Catholic religion, and enable them to confute heretics; this latter article is always a principal object with the missionaries; whence results a rage for controversy, which causes perpetual differences among the partisans of the various sects in the east. The Latins of Aleppo, excited by the Jesuits, presently recommenced, as heretofore, their disputations with the Greeks; but as logic requires a methodical acquaintance with language, and the Christians, excluded from the Mahometan-schools, knew nothing but the vulgar Arabic, they were unable to indulge their passion for controversy in writing. To remedy this, the Latins determined to study the Arabic language grammatically. The pride of the Mahometan Doctors at first refused to lay open their learning to *Infidels*, but, their avarice overpowered their scruples; and for a few Purfes, this so much boasted science of grammar, and *the Nabou*, was introduced among the Christians. The student who distinguished himself most by his progress was named Abd-allah-Zaker, who to his own desire of learning, added an ardent zeal to promulgate his knowledge and his opinions. It is impossible to determine to what length this spirit of making profelytes might have been car-

ried at Aleppo, had not an accident not unusual in Turkey, disturbed its progress. The Schismatics, vexed at the attacks of Abd-allah, endeavoured to procure his ruin at Constantinople. The Patriarch, excited by the priests, represented him to the Visir as a dangerous man; the Visir, accustomed to these disputes, feigned to pay no attention to his complaint; but the patriarch, backing his reasons with a few purses, the Visir delivered him a *Kat-sherif*, or warrant of the Sultan, which according to custom, conveyed an order to cut off Abd-allah's head. Fortunately he received timely warning, and escaped into Lebanon, where his life was in safety: but in quitting his country, he by no means abandoned his ideas of reformation, and was more resolutely bent than ever on propagating his opinions. This he was only able to effect by writings; and manuscripts seemed to him an inadequate method. He was no stranger to the advantages of the press, and had the courage to form the three-fold project of writing, founding types, and printing; he succeeded in this enterprize from the natural goodness of his understanding, and the knowledge he had of the art of engraving, which he had already practised in his profession as a jeweller. He stood in need of an associate, and was lucky enough to find one who entered into his designs: his brother, who was superior at Mar-Hanna, prevailed on him to make that convent his residence, and from that time, abandoning every other care, he gave himself up entirely to the execution of his project. His zeal and industry had such success, that in the year 1733, he published the Psalms of David in one volume. His characters were found so correct and beautiful, that even his enemies purchased his books; and since that period there have been ten impressions of it; new characters have been founded, but nothing has been executed superior to his. They perfectly imitate hand-writing; they express the full and the fine let-

ters, and have not the meagre and straggling appearance of the Arabic characters of Europe. He passed twenty years in this manner, printing different works, which, in general, were translations of our books of devotion. Not that he was acquainted with any of the European languages, but the Jesuits had already translated several books, and as their Arabic was extremely bad, he corrected their translations, and often substituted his own version, which is a model of purity and elegance. The Arabic he wrote was remarkable for a clear, precise, and harmonious style, of which that language had been thought incapable, and which proves that, should it ever be cultivated by a learned people, it will become one of the most copious and expressive in the world. After the death of Abd-allah, which happened about 1755, he was succeeded by his pupil; and his successors were the religious of the house itself; they have continued to found letters and to print, but the business is at present on the decline, and seems likely to be soon entirely laid aside. The books have but little sale, except the Psalter, which is the classic of the Christian children, and for which there is a continual demand. The expenses are considerable, as the paper comes from Europe, and the labour is very slow. A little art would remedy the first inconvenience, but the latter is radical. The Arabic characters requiring to be connected together, to join them well and place them in a right line requires an immense and minute attention. Besides this, the combination of the letters varying according as they occur, at the beginning, in the middle, or at the end of a word, it is necessary to found a great number of double letters; by which means the cases being too multiplied, are not collected under the hand of a compositor; but he is obliged to run the whole length of a table eighteen feet long, and seek for his letters in near nine hundred divisions: hence a loss of time which will never

allow Arabic Presses to attain the perfection of ours. As for the inconsiderable sale of the books, this must be attributed to the bad choice they have made of them; instead of translating works of real utility, calculated to awaken a taste for the arts indiscriminately among all the Arabs, they have only translated mystic books peculiar to the Christians, which, by their misanthropic morality, are formed to excite a disgust for all science, and even for life itself. Of this the reader will judge from the following Catalogue.

CATALOGUE of the BOOKS printed at the Convent of
MAR-HANNA-EL-SHOUAIR, in the mountains of
the Druzes.

1. **T**HE balance of Time, or the Difference between Time and Eternity, by Father Nieremberg, Jesuit.
2. The Vanity of the World, by Didaco Stella, Jesuit.
3. The Sinner's Guide, by Louis de Grenade Jesuit.
4. The Priest's Guide.
5. The Christian's Guide.
6. The Food of the Soul.
7. The Contemplation of Passion Week.
8. Christian Doctrine.
9. Explication of the Seven Penitential Psalms.
10. The Psalms of David, *translated from the Greek.*
11. The Prophecies.
12. The Gospel and Epistles.

1. Mizan-el-Zaman. 2. Abatil-el-Aalam. 3. Morshed-el-Kati. 4. Morshed-el-Kahen. 5. Morshed-el-Mafih. 6. Kouel Nafs. 7. Taaminol-el-Afboua. 8. Taalim-el-Mafih. 9. Tassir-el-Sabat. 10. Mazamir. 11. El Onbouat. 12. El-Endjil oua el Rafayel.

13. Les Heures Chretiennes (hourly prayers;) to which is added, the Christian Perfection of Rodriguez, and the Regulation of the Monks; both printed at Rome.

IN MANUSCRIPTS THIS CONVENT POSSESSES;

1. The Imitation of Jesus Christ.
2. The Garden of the Monks, or Life of the Holy Fathers of the Desert.
3. Moral Theology of Buzebaum.
4. The Sermoms of Segneri.
5. Theology of St. Thomas, in 4 vol. *folio*, the copying of which cost one thousand two hundred and fifty livres (52*l.*)
6. Sermons of St. John Chrysoftom.
7. Principles of Laws, by Claude Virtieu.
8. * Theological Disputes of the Monk George.
9. Logic, translated from the Italian, by a Maronite.
10. The Light of Hearts, by Paul of Smyrna, a converted Jew.
11. * Questions and Enquiries concerning Grammar, and *the Nabou*, by Bishop Germain, Maronite.
12. * Poems of the same, on pious subjects.
13. * Poems of the Curate Nicholas, brother of Abd-allah-Zakar.
14. * Abridgment of the Arabic Dictionary, called *the Ocean*.

13. El-Soueyat.

1. Taklid-el-Masih. 2. Bestan el Rohoban. 3. Elm el Nia l'Bouzembraoum. 4. Maouacz Sainari. 5. Lahout Mar Touma. 6. Mawacz Fomm el Dahab. 7. Kawaed el Naouamis l'Kloud Firtiou. 8. Madjadalat el Anba Djordji. 9. El Mantek. 10. Nour el Aebab. 11. El Mataleb wa el Mebâhes. 12. Diwan Djermanos. 13. Diwan Ankoula. 14. Moktasar el Kamous.

N. B. *All these are the productions of Christians; those marked with a star* were originally written in Arabic: the following are Mahometan works.*

1. The Koran.
2. The *Ocean* of the Arabic Tongue, translated by Golius.
3. The thousand Distichs of Ebn-el-Malek, on Grammar.
4. Explication of the Thousand Distichs.
5. Grammar of Adjeroumia.
6. Rhetoric of Taftazani.
7. Sessions, or Pleasant Stories of Hariri.
8. Poems of Omar-ebn-el-Fardi, of the amorous kind.
9. Science of the Arabic Tongue; a small book in the nature of the *Synonymes Français*, of Abbé Girard.
10. Medicine of Ebn-Sina, (Avicenna.)
11. Simples and Drugs, translated from Dioscorides, by Ebn-el-Bitar.
12. Dispute of the Physicians.
13. Theological Fragments on the different Sects of the World.
14. A little Book of Tales (of little value) from which I have an extract.
15. History of the Jews, by Josephus, a very incorrect translation.

A small book of Astronomy, on the principles of Ptolemy, and some others of no value.

1. Koran. 2. El Kamous l'Firowzâbadi. 3. El Alf bait l'Ebn-el-malek. 4. Taffir el-alf-bait. 5. El-Adjiroumia. 6. Elm el Bayan l'Taftazani. 7. Makanat el Hariri. 8. Diwan omar Ebn el fardi. 9. Fakah el Logat. 10. El tob l'Ebn fina. 11. El Mofradat. 12. Daouat el Otobba. 13. Abarat el Motakal-jamin. 14. Nadim el wahid. 15. Tarik el Yhoud, l'Yousefous.

This is all the library of the convent of Mar-Hanna from which we may form an idea of the literature of Syria, since, excepting one possessed by Djezzar, there does not exist another. Among the original books, there is not one, which, in fact, merits a translation. Even the *Sessions* of *Hariri*, are only interesting from their style, and, in the whole order, there is but one monk who understands them, nor are the others found much more intelligible by his brethren in general. In the administration of this house, and the manners of the religious who inhabit it, we find some singularities which deserve our notice.

Their order is that of Saint Basil, who is to the orientals what Saint Benedict is to the western Christians, except that they have adopted a few alterations in consequence of their peculiar situation, and the court of Rome has given her sanction to the code they drew up thirty years ago. They may pronounce the vows at the age of sixteen, for it has ever been the aim of all Monastic legislators to captivate the minds of their proselytes at an early age, that they may more implicitly comply with their institutions. These vows are, as every where else, vows of poverty, obedience, devotion to the order, and chastity; and it must be allowed that they are more strictly observed in this country than in Europe. The condition of the oriental Monks is infinitely more hard than that of the European. We may judge of this from the following description of their domestic life. Every day they have seven hours prayers at church, from which no person is exempted. They rise at four in the morning, go to bed at nine in the evening, and make only two meals, viz. at nine and five. They live perpetually on a meagre diet, and hardly allow themselves flesh meat in the most critical disorders. Like the other Greeks, they have three Lents a year, and a multitude of fasts, during which they can neither eat eggs, nor milk, nor butter,

nor even cheese. Almost the whole year they live on lentils and beans with oil, rice and butter, curds, olives, and a little salt fish. Their bread is a little clumsy loaf badly leavened, which serves two days, and is fresh made only once a week. With this food they pretend to be less subject to maladies than the peasants; but it must be remarked that they have all issues in their arms and many of them are attacked by Hernias, owing, as I imagine, to their immoderate use of oil. The lodging of each is a narrow cell and his whole furniture consists in a mat, a matras and a blanket; but no sheets, for of these they have no need, as they sleep with their cloathes on. Their cloathing is a coarse cotton shirt striped with blue, a pair of drawers, a waistcoat, and a surplice of coarse brown cloath, so stiff and thick, that it will stand upright without a fold. Contrary to the custom of the country they wear their hair eight inches long, and, instead of a hood, a cylinder of felt, ten inches high, like those of the Turkish cavalry. Every one of them, in short, except the Superior, Purveyor, and Vicar, exercises some trade either necessary or useful to the house; one is a weaver, and weaves stuffs; another a tailor, and makes cloaths; this is a shoe-maker, and makes their shoes; that a mason, and superintends their buildings. Two of them have the management of the kitchen, four work at the Printing-press, four are employed in Book-binding, and all assist at the Bake-house, on the day of making bread. The expence of maintaining forty or five and forty persons, of which the convent is composed, does not exceed the annual sum of twelve purses, or six hundred and twenty-five pounds; and from this sum must be deducted the expences of their hospitality to all passengers, which of itself forms a considerable article. It is true, most of these passengers leave presents or alms, which make a part of the revenue of the house; the other part arises from the

culture of the lands. They farm a considerable extent of ground, for which they pay four hundred piastres to two Emirs: these lands were cleared out by the first Monks themselves; but at present they commit the culture of them to peasants, who pay them one half of all the produce. This produce consists of white and yellow silks, which are sold at Bairout, some corn and wines,* which, for want of demand, are sent as presents to their benefactors, or consumed in the house. Formerly the religious abstained from drinking wine; but, as is customary in all societies, they have gradually relaxed from their primitive austerity: they have also begun to allow the use of tobacco and coffee, notwithstanding the

* These wines are of three sorts, the red, the white, and the yellow; the white, which are the most rare, are so bitter as to be disagreeable. The two others, on the contrary, are too sweet and sugary. This arises from their being boiled, which makes them resemble the baked wines of Provence. The general custom of the country is, to reduce the must to two thirds of its quantity. It is improper for a common drink at meals, because it ferments in the stomach. In some places, however, they do not boil the red, which then acquires a quality almost equal to that of Bordeaux. The yellow wine is much esteemed among our merchants, under the name of *Golden Wine (Vin d'or)*, which has been given it from its colour. The most esteemed is produced from the hill sides of the Mouk, or village of Masbeh near Antoura. It is not necessary to heat it, but it is too sugary. Such are the wines of Lebanon, so boasted by the Grecian and Roman epicures. The Europeans may try them, and see how far they agree with the ancients in opinion: but they should observe, that the passage by sea ferments boiled wines a second time, and bursts the casks. It is probable, that the inhabitants of Lebanon have made no change in their ancient method of making wines, nor in the culture of their vines. They are disposed on poles of six or eight feet high. They are not pruned as in France, which certainly must greatly injure both the quantity and quality of the crop. The vintage begins about the end of September. The convent of Mar-Hanna makes about one hundred and fifty *Rabia*, or earthen jars, containing about one hundred and ten pints each; the price current in the country, is about seven or eight sols, (four pence) the French pint.

remonstrances of the older Monks, who are ever jealous of too much indulging the habits of youth.

The same regulations are observed in all the houses of the order, which, as I have already said, amount to twelve. The whole number of these religious is estimated at one hundred and fifty; to which must be added, five convents of women which depend on them. The first superiors who founded them, thought they had performed a good work; but at present the order repent it has been done, because nuns in a Turkish country are very dangerous, as they are connected with the wealthiest merchants of Aleppo, Damascus, and Cairo, who for a stipulated sum get rid of their daughters by placing them in these convents. The merchants likewise bestow on them considerable alms. Several of them give an hundred pistoles yearly, and even as high as one hundred Louis d'or, or three thousand livres (one hundred and twenty-five pounds,) without requiring any other interest than their prayers to God, that he would preserve them from the rapacity of the Pachas. But, as they imprudently attract their notice, by the extreme luxury of their dress and furniture, neither their presents, nor the prayers of the religious, can save them from extortion. Not long since, one of these merchants ventured to build a house at Damascus, which cost him upwards of one hundred and twenty thousand livres, (five thousand pounds.) The Pacha observed it, and presently gave the owner to understand, he had a curiosity to see his new house, and would pay him a visit, and take a dish of coffee with him. As the Pacha, therefore, might have been so delighted with it, as not to have quitted it again, it became necessary to avoid his politeness, by making him a present of thirty thousand livres, (seven thousand five hundred pounds.)

Next to Mar-Hanna, the most remarkable convent is that of *Dair Mokallas*, or St. Saviour. It is situ-

ated three hours journey to the north-east of Saide. The religious had collected there a considerable number of printed Arabic books, and manuscripts; but Djezzar, having carried the war into these districts about eight years ago, his soldiers pillaged the house, and took away all the books.

As we return to the sea-coast, we must first remark Saide, the degenerate offspring of ancient Sidon.* This town, formerly the residence of the Pacha, is like all the Turkish towns, ill built, dirty, and full of modern ruins. Its length along the sea shore is about six hundred paces, and its breadth one hundred and fifty. On the south side, on a small eminence, is a fort built by Degnizla. From hence we have a view of the sea, the city, and the country: but a few cannon would easily destroy this whole work, which is only a large tower of a single story, already half in ruins. At the other extremity of the town, that is, to the north-west, is the castle, which is built in the sea itself, eighty paces from the main land, to which it is joined by arches. To the west of this castle is a shoal fifteen feet high above the sea, and about two hundred paces long. The space between this shoal and the castle forms the road, but vessels are not safe there in bad weather. The shoal, which extends along the town, has a basin enclosed by a decayed pier. This was the ancient port; but it is so choaked up by sands, that boats alone can enter its mouth, near the castle. Fakr-el-din, Emir of the Druzes, destroyed all these little ports, from Bairout to Acre, by sinking boats and stones to prevent the Turkish ships from entering them. The basin of Saide, if it were emptied, might contain twenty or twenty-five small vessels. On the side of the sea, the town is absolutely without any wall; and

* The name of Sidon still subsists in a small village half a league from Saide.

that which encloses it on the land side is no better than a prison wall. The whole artillery does not exceed six cannon; and these are without carriagés and gunners. The garrison scarcely amounts to one hundred men. The water comes from the river Aoula, through open canals, from which it is fetched by the women. These canals serve also to water the orchards of mulberry and lemon-trees.

Saïde is a considerable trading town, and is the chief emporium of Damascus, and the interior country. The French, who are the only Europeans to be found there, have a consul, and five or six commercial houses. Their exports consist in silks, and particularly in raw and spun cottons. The manufacture of this cotton is the principal art of the inhabitants, the number of whom may be estimated at about five thousand.

Six leagues to the south of Saïde, following the coast, we arrive by a very level plain at the village of Sour. In this name we, with difficulty, recognize that of *Tyre, to*, which we receive from the Latins; but if we recollect that the *y* was formerly pronounced *ou*; and observe, that the Latins have substituted the *t* for the *θ* of the Greeks, and that the *θ* had the sound of the English *th*, in the word *think*, we shall be less surpris'd at the alteration. This has not happened among the orientals, who have always called this place *Tfour* and *Sour*.

The name of *Tyre* recalls to the memory of the historical reader so many great events, and suggests, so many reflections, that I think I may be allowed to enter with some minuteness into the description of a place, which was, in ancient times, the theatre of an immense commerce and navigation, the nurse of arts and sciences, and the city of, perhaps, the most industrious and active people the world has yet seen.

Sour is situated on a peninsula, which projects from the shore into the sea, in the form of a mallet with an oval head. This head is a solid rock, covered with a brown cultivable earth, which forms a small plain of about eight hundred paces long, by four hundred broad. The isthmus, which joins this plain to the continent, is of pure sea sand. This difference of soil renders the ancient insular state of the plain, before Alexander joined it to the shore by a mole, very visible. The sea, by covering this mole with sand, has enlarged it by successive accumulations, and formed the present isthmus. The village of Sour is situated at the junction of this isthmus with the ancient island, of which it does not cover above one third. The point to the north is occupied by a basin, which was a port evidently formed by art, but is at present so choaked up that children pass it without being wet above the middle. The opening at the point is defended by two towers, corresponding with each other, between which formerly passed a chain fifty or sixty feet long, to shut the harbour. From these towers began a line of walls, which, after surrounding the basin, enclosed the whole island; but at present we can only follow its traces by the foundations which run along the shore, except in the vicinity of the port, where the Motoualis made some repairs twenty years ago, but these are again fallen to decay.

Further on in the sea, to the north-west of the point, at the distance of about three hundred paces, is a ridge of rocks on a level with the water. The space which separates them from the main land in front, forms a sort of road, where vessels may anchor with more safety than at Saide; they are not, however, free from danger, for they are exposed to the north-west winds, and the bottom injures the cables. That part of the island which lies between the village and the sea, that is the western side, is open; and

this ground the inhabitants have laid out in gardens; but such is their sloth, that they contain far more weeds than useful plants. The south side is sandy, and more covered with rubbish. The whole village contains only fifty or sixty poor families, which live obscurely on the produce of their little grounds, and a trifling fishery. The houses they occupy are no longer, as in the time of Strabo, edifices of three or four stories high, but wretched huts, ready to crumble to pieces. Formerly they were defenceless towards the land, but the Motoualis, who took possession of it in 1766, enclosed it with a wall of twenty feet high, which still subsists. The most remarkable building is a ruin at the south-east corner. This was a Christian church, built probably by the Crusaders; a part of the choir only is remaining; close to which, amid heaps of stones, lie two beautiful columns, with shafts of red granite, of a kind unknown in Syria. Djezzar, who has stripped all this country to ornament his mosque at Acre, wished to carry them away; but his engineers were not able even to move them.

Leaving the village on the side of the isthmus, at a hundred paces from the gate, we come to a ruined tower, in which is a well, where the women go to fetch water. This well is fifteen or sixteen feet deep; but the depth of the water is not more than two or three feet. Better water is not to be found upon the coast. From some unknown cause, it becomes troubled in September, and continues some days full of a reddish clay. This season is observed as a kind of festival by the inhabitants, who then come in crowds to the well, and pour into it a bucket of sea water, which, according to them, has the virtue of restoring the clearness of the spring. As we proceed along the isthmus, towards the continent, we perceive, at equal distances, the ruins of arcades, which lead in a right line to an eminence, the only one in the plain.

This hill is not factitious, like those of the desert; it is a natural rock of about one hundred and fifty feet in circumference, by forty or fifty high: nothing is to be discovered there but a house in ruins, and the tomb of a Shaik or Santon,* remarkable for the white dome at the top. The distance of this rock from Sour is about a quarter of an hour's walk. As we approach it, the arcades I have mentioned become more numerous, and are not so high; they terminate by a continued line, and, at the foot of the rock, form suddenly a right angle to the south, and proceed obliquely toward the sea: we may follow their direction for above an hour's walk at a horse's pace, till, at length, we distinctly perceive, by the channel on the arches, that this is no other than an aqueduct. This channel is three feet wide, by two and a half deep; and is formed of a cement harder than the stones themselves. At last we arrive at the well where it terminates, or rather from which it begins. This is what some travellers have called the well of Solomon, but, among the inhabitants of the country, it is known only by the name of *Ras-el-aen*, or, Head of the Spring. They reckon one principal, two lesser and several small ones; the whole forming a piece of masonry which is neither of hewn or rough stone, but of cement mixed with sea pebbles. To the south, this stone-work rises about eighteen feet from the ground, and fifteen to the northward. On this side is a slope, wide and gradual enough to permit carts to ascend to the top: when there, we discover what is very surprising; for, instead of finding the water low, or no higher than the ground level, it reaches to the top, that is the column which fills the well, is fifteen

* Among the Mahometans, the word *Shaik* bears the various significations of *santon*, *hermit*, *ideot* and *madam*. They have the same religious respect for persons disordered in their intellects, which was usual in the time of David.

feet higher than the ground. Besides this, the water is not calm, but bubbles up like a torrent, and rushes through channels formed at the surface of the well. It is so abundant as to drive three mills which are near it, and form a little rivulet before it reaches the sea, which is only four hundred paces distant. The mouth of the principal well is an octagon, each side of which is twenty-three feet three inches, the diameter, therefore, must be sixty-one feet. It has been said that this well has no bottom; but the traveller La Roque asserts, that in his time he found it at six and thirty fathom. It is remarkable, that the motion of the water at the surface, has corroded the interior lining of the well, so that its edge rests almost upon nothing, and forms a half arch suspended over the water; among the channels which branch out from it, is a principal one which joins that of the arches I have mentioned: by means of these arches, the water was formerly conveyed to the rock, and from the rock, by the isthmus, to the tower, whence the water was drawn. In other respects, the country is a plain of about two leagues wide surrounded by a chain of considerably high mountains, which stretch from Kasmia to Cape Blanco. The soil is a black fat earth, on which a small quantity of corn and cotton are successfully cultivated.

Such is the present state of Tyre, which may suggest several observations relative to the situation of that ancient city. We know, that at the time when Nabuchodonosor laid siege to it, Tyre was on the continent; and appears to have stood near *Palæ-Tyrus*, that is, near the well; but, in that case, why was this aqueduct constructed at so much expence* from the rock? Will it be alledged it was built after the Tyrians had removed into the island? But prior to the time of Salmanasar, that is, one hundred and

* The piles of the arches are nine feet wide.

thirty-six years before Nabuchodonosor, their annals mention it as already existing. "In the time of Eululæus, king of Tyre," says the historian Menander, as cited by Josephus,* "Salmanafas, king of Afyria, having carried the war into Phœnicia; several towns submitted to his arms: the Tyrians resisted him; but being soon abandoned by Sidon, Acre, and Palæ-Tyrus, which depended on them, they were reduced to their own forces. However, they continued to defend themselves, and Salmanafar, recalled to Ninevah, left a part of his army near the rivulets and the aqueduct, to cut off their supply of water. These remained there five years, during which time the Tyrians obtained water by means of the wells they dug."

If Palæ-Tyrus was a dependence of Tyre, Tyre then must have been situated elsewhere. It was not in the island, since the inhabitants did not remove thither until after Nabuchodonosor. Its original situation must, therefore, have been on the rock. The name of this city is a proof it; for *Tfour*, in Phœnician signifies rock, and strong hold. On this rock the colony of Sidonians established themselves, when driven from their country, two hundred and forty years before the building of Solomon's Temple. They made choice of this situation, from the double advantage of a place which might be easily defended, and the convenience of the adjacent road, which would contain and cover a great number of vessels. The population of this colony augmenting in time, and by the advantages of commerce, the Tyrians were in want of more water, and constructed the aqueduct. The industry we find them remarkable for in the days of Solomon, may perhaps, induce us to attribute this work to that age. It must, however, be very ancient, since the water of the aqueduct has

* *Antiq. Judaic.* lib. 9. c. 14.

had time to form, by filtration, a considerable incrustation, which, falling from the sides of the channel, or the inside of the vaults, has obstructed whole arches. In order to secure the aqueduct, it was necessary that a number of inhabitants should settle there, and hence the origin of Palæ-Tyrus. It may be alleged, this is a factitious spring, formed by a subterraneous canal from the mountains; but if so, why was it not conducted directly to the rock? It seems much more probable it is natural; and that they availed themselves of one of those subterraneous rivers of which we find many in Syria. The idea of confining this water to force it to rise is worthy of the Phœnicians.

Things were thus situated, when the king of Babylon, conqueror of Jerusalem, determined to destroy the only city which continued to brave his power. The Tyrians resisted him for thirteen years, at the end of which, wearied with endless efforts, they resolved to place the sea between them and their enemy, and passed accordingly into the opposite island, a quarter of a league's distance. Till this period the island must have contained few inhabitants, on account of the want of water.* Necessity taught them to remedy this inconvenience by cisterns, the remains of which are still to be found in the form of vaulted caves, paved and walled with the utmost care.† Alexander invaded the east, and, to gratify his barbarous pride, Tyre was destroyed, but soon rebuilt; her new inhabitants profited by the mole, by which the Macedonians had made themselves a

* Josephus is mistaken, when he speaks of Tyre as built in an island in the time of Hiram. In his usual manner he confounds its ancient with its posterior state. See *Antiq. Judaic.* lib. 8. c. 5.

† A considerable one has been lately discovered without the walls, but nothing was found in it, and the *Mosfallam* ordered it to be shut up.

passage to the island, and continued the aqueduct to the tower, where the water is drawn at this day. But the arches being in many places wasting, and serviceable in none, how is it that the water is conveyed thither? This must be done by secret conduits contrived in the foundations and which still continue to bring it from the well. A proof that the water of the tower comes from Ras-el-aen is, that it is troubled in September as at the tower, at which time it is of the same colour, and it has at all times the same taste. These conduits must be very numerous; for though there are several lakes near the Tower, yet the well does not cease to supply a considerable quantity of water.

The power of the city of Tyre on the Mediterranean, and in the west, is well known; of this Carthage, Utica, and Cadiz are celebrated monuments. We know that she extended her navigation even into the ocean, and carried her commerce beyond England to the north, and the Canaries to the south. Her connections with the east, though less known, were not less considerable: the islands of Tyrus, and Aradus, (the modern Barhain) in the Persian Gulph; the cities of Faran and *Phœnicum Oppidum*, on the Red Sea, in ruins even in the time of the Greeks, prove, that the Tyrians had long frequented the coasts of Arabia and the Indian sea: but there exists an historical fragment, which contains descriptions the more valuable, as they present a picture of distant ages, perfectly similar to that of modern times. I shall cite the words of the writer in all their prophetic enthusiasm, only correcting these expressions which have hitherto been misunderstood.

“ Proud city, that art situate at the entry of the
 “ sea! Tyre, who hast said, My borders are in the
 “ midst of the seas; hearken to the judgments pro-
 “ nounced against thee! Thou hast extended thy
 “ commerce to (distant) islands, among the inhabi-

“ tants of (unknown) coasts. Thou makest the fir
 “ trees of Sanir* into ships; the cedars of Lebanon
 “ are thy masts; the poplars of Bisan thy oars. Thy
 “ sailors are seated upon the box-wood of Cyprus, †
 “ inlaid with ivory. Thy sails and streamers are
 “ woven with fine flax from Egypt; thy garments
 “ are dyed with the blue and purple of Hellas (the
 “ Archipelago.) Sidon and Arvad send thee their
 “ rowers; Djabal (Djebila) her skilful ship-builders;
 “ thy mathematicians and thy sages guide thy barks;
 “ all the ships of the sea are employed in thy com-
 “ merce. The Persian, the Lydian, and the Egyp-
 “ tian, receive thy wages; thy walls are hung round
 “ with their bucklers, and their cuirasses. The sons
 “ of Arvad line thy parapets; and thy towers, guard-
 “ ed by the Djimedean, (a Phœnician people), glit-
 “ ter with their brilliant quivers. Every country is
 “ desirous of trading with thee. Tarsus sends to thy
 “ markets iron, tin, and lead. Yonia ‡, the country
 “ of the Mosques, and of Teblis §, supply thee with
 “ slaves, and brazen vessels. Armenia sends thee
 “ mules, horses, and horsemen. The Arab of De-
 “ dan (between Aleppo and Damascus), conveys thy
 “ merchandize. Numerous isles exchange with thee
 “ ivory and ebony. The Aramean (the Syrian) ||

“ brings thee rubies, purple, embroidered work, fine
 “ linen, coral, and agate. The children of Israel
 “ and Judah sell thee cheese, balm, myrrh, raisins,
 “ and oil, and Damascus supplies the wine of Hal-
 “ boun, (perhaps Halab, where there are still vines),
 “ and fine wool. The Arabs of Oman offer to thy
 “ merchants polished iron, cinnamon, and the aro-
 “ matic reed; and the Arabians of Dedan bring thee
 “ rich carpets. The inhabitants of the Desert, and
 “ the Shaiks of Kedar, exchange their lambs and
 “ their goats for thy valuable merchandize. The
 “ Arabs of Saba and Rama (in the Yemen) enrich
 “ thee with aromatics, precious stones, and gold.*
 “ The inhabitants of Haran, of Kalana, (in Meso-
 “ potamia), and of Adana (near to Tarsus), the fac-
 “ tors of the Arabs of Sheba (near the Dedan), the
 “ Assyrians, and the Chaldeans, trade also with thee,
 “ and sell thee shawls, garments artfully embroidered,
 “ silver, masts, cordage, and cedars; yea, the (boatt-
 “ ed) vessels of Tarsus, are in thy pay. O Tyre!
 “ elate with the greatness of thy glory, and the im-
 “ mensity of thy riches; the waves of the sea shall
 “ rise up against thee; and the tempest plunge thee
 “ to the bottom of the waters. Then shall thy
 “ wealth be swallowed up with thee; and with thee
 “ in one day shall perish thy commerce, thy mer-
 “ chants and correspondents, thy sailors, pilots, ar-
 “ tists, and foldiers, and the numberless people who
 “ dwell within thy walls. Thy rowers shall desert
 “ thy vessels. Thy pilots shall sit upon the shore,
 “ looking sorrowfully toward the land. The nations
 “ whom thou enrichedst, the kings whom thou didst
 “ gratify with the multitude of thy merchandize,
 “ fore afraid at thy ruin, shall cry bitterly in despair;

* Strabo, lib. 16, says, that the Sabæans furnished Syria with all the gold that country received, before they were supplanted by the inhabitants of Gerrha, near the mouth of the Euphrates.

“ they shall cut off their hair; they shall cast ashes
 “ on their heads; they shall roll in the dust, and
 “ lament over thee, saying, “ Who shall equal Tyre,
 “ that queen of the sea?”*

The vicissitudes of time, or rather the barbarism of the Greeks of the Lower Empire, and the Mahometans, have accomplished this prediction. Instead of that ancient commerce so active and so extensive, Sour, reduced to a miserable village, has no other trade than the exportation of a few sacks of corn, and raw cotton, nor any merchant but a single Greek factor in the service of the French of Saïde, who scarcely makes sufficient profit to maintain his family. Nine leagues to the south of Sour, is the city of Acre, in Arabic called Akk, known in the times of remote antiquity under the name of Aco, and afterwards under that of Ptolemais. It is situated at the north angle of a bay which extends in a semicircle of three leagues, as far as the point of Carmel. After the expulsion of the Crusaders, it remained almost deserted; but in our time has again revived by the industry of Daher; and the works erected by Djezzar, within the last ten years, have rendered it one of the principal towns upon the coast.

The mosque of this Pacha is boasted as a masterpiece of eastern taste. The bazar, or covered market, is not inferior even to those of Aleppo, and its public fountain surpasses in elegance those of Damascus. This last is also the most useful work; for, till then, Acre was only supplied by a ruinous well; the water, however, is still, as formerly, of a very indifferent quality. The Pacha has derived the more honour from these works, as he was himself both the engineer and architect: he formed the plans, drew the designs, and superintended the execution. The port of Acre is one of the best situated on the coast,

* See Ezekiel, chap. xxvii.

as it is sheltered from the north north-west winds by the town itself; but it is greatly choaked up since the time of Fakr-el-din. Djezzar has contented himself with making a landing-place for boats. The fortifications, though more frequently repaired than any other in all Syria, are of no importance; there are only a few wretched low towers, near the port, on which cannon are mounted, but these rusty iron pieces are so bad, that some of them burst every time they are fired. Its defence on the land side, is only a mere garden wall without any ditch.

This country is a naked plain, longer than that of Sour, but not so wide; it is surrounded by small mountains, which make an angle at Cape Blanco, and extend as far as Carmel. The unevenness of the country causes the winter rains to settle in the low grounds, and form lakes which are unwholesome in summer from their infectious vapours. In other respects, the soil is fertile, and both corn and cotton are cultivated with the greatest success. These articles form the basis of the commerce of Acre, which is becoming more flourishing every day. Of late, the Pacha, by an abuse common throughout all the Turkish empire, has monopolized all the trade in his own hands; no cotton can be sold but to him, and from him every purchase must be made; in vain have the European merchants claimed the privilege granted them by the Sultan; Djezzar replied, that he was the Sultan in his country, and continued his monopoly. These merchants in general are French, and have six houses at Acre, with a consul; an Imperial agent too is lately settled there, and about a year ago, a Resident for Russia.

That part of the bay of Acre in which ships anchor with the greatest security lies to the north of Mount Carmel, below the village of Haifa, (commonly called Caiffa). The bottom is good holding ground, and does not chafe the cables; but this harbour is open

to the north-west wind, which blows violently along all this coast. Mount Carmel, which commands it to the south, is a flattened cone, and very rocky; it is about two thousand feet high. We still find among the brambles, wild vines and olive-trees, which prove that industry has formerly been employed even in this ungrateful soil: on the summit is a chapel dedicated to the prophet Elias, which affords an extensive prospect over the sea and land. To the south, the country presents a chain of rugged hills, on the tops of which are a great number of oak and fir-trees, the retreat of wild boars and lynxes. As we turn towards the east, at six leagues distance, we perceive *Nasra*, or Nazareth, so celebrated in the history of Christianity; it is an inconsiderable village, one third of whose inhabitants are Mahometans, and the remaining two thirds Greek Catholics. The fathers of the holy land, who are dependant on the Great Convent of Jerusalem, have an Hospitium and a church here. They are usually the farmers of the country. In the time of Daher, they were obliged to make a present to every wife he married, and he took great care to marry almost every week.

About two leagues to the south-east of *Nasra* is Mount Tabor, from which we have one of the finest views in Syria. This mountain is of the figure of a broken cone, eight hundred, or a thousand yards in height. The summit is two thirds of a league in circumference. Formerly it had a citadel, of which now only a few stones remain. From hence we discover, to the south, a series of vallies and mountains, which extend as far as Jerusalem, while, to the east, the valley of Jordan, and Lake Tabaria, appear as if under our feet; the lake seems as if enclosed in the crater of a volcano. Beyond this, the eye loses itself, towards the plains of the Hauran; and then turning to the north, returns by the mountains of Hasbeya, and the Kasimia, to repose on the fertile

plains of Galilee, without being able to reach the sea.

The eastern bank of Lake Tabaria offers nothing remarkable but the town whose name it bears, and the fountain of warm mineral waters in the neighbourhood. This fountain is situated in the open country, at the distance of a quarter of a league from Tabaria. For want of cleaning it is filled with a black mud, which is a genuine Ethiops Martial. Persons attacked by rheumatic complaints find great relief, and are frequently cured by baths of this mud. The town is little else than a heap of ruins, and not inhabited at most by more than one hundred families. Seven leagues to the north of Tabaria, on the brow of a hill, stands the town or village of Safad, the seat of Daher's power. Under the government of this Shaik an Arabian college flourished there, in which the Motoualis doctors instructed youth in the science of grammar, and the allegorical interpretation of the Koran. The Jews, who believe the Messiah will establish the seat of his empire at Safad, had also taken an affection to this place, and collected there to the number of fifty or sixty families; but the earthquake of 1759, destroyed every thing, and Safad, regarded by the Turks with an unfavourable eye, is now only a village almost deserted. As we ascend from Safad to the north, we follow a chain of lofty mountains, named Djebal-el-Shaik, among which are the sources of the Jordan, and likewise those of a number of rivulets which water the plain of Damascus. The high grounds from whence these rivulets flow, form a small district called Hasbeya, which is at present governed by an Emir, a relation and rival of the Emir Yousef, who farms it of Djezzar for sixty purses. The country is mountainous, and greatly resembles the Lower Lebanon; the chain of mountains which stretch along the vale of Bekaa, was called by the ancients Anti-Lebanon, from their being parallel to the Lebanon of the Druzes and

Maronites; and the vale of Bekaa, which separates them, is properly the ancient Cœle Syria, or *hollow Syria*. This valley, by collecting the water of the mountains, has rendered it constantly one of the most fertile districts of all Syria, but the mountains concentrating the rays of the sun, produce likewise a heat in summer not inferior to that of Egypt. The air nevertheless is not unhealthy, no doubt because perpetually renewed by the north wind, and because the waters never stagnate. The inhabitants sleep without injury upon their terraces. Before the earthquake of 1759, this whole country was covered with villages and plantations of the Motoualis; but the destruction occasioned by this terrible calamity, and the subsequent wars with the Turks, have almost destroyed every thing. The only place which merits attention is the city of Balbek.

Balbek, celebrated by the Greeks and Latins, under the name of *Helicopolis*, or the City of the Sun, is situated at the foot of Anti-Lebanon, precisely on the last rising ground where the mountain terminates in the plain. As we arrive from the south we discover the city only at the distance of a league and a half, behind a hedge of trees, over the verdant tops of which appears a white edging of domes and Minarets. After an hour's journey we reach these trees, which are very fine walnuts; and soon after, crossing some ill cultivated gardens, by winding paths, arrive at the entrance of the city. We there perceive a ruined wall, flanked with square towers, which ascends the declivity to the right, and traces the precincts of the ancient city. This wall, which is only ten or twelve feet high, permits us to have a view of those void spaces, and heaps of ruins, which are the invariable appendage of every Turkish city; but what principally attracts our attention, is a large edifice on the left, which, by its lofty walls, and rich columns, manifestly appears to be one of those temples which

antiquity has left for our admiration. These ruins, which are some of the most beautiful and best preserved of any in Asia, merit a particular description.

To give a just idea of them, we must suppose ourselves descending from the interior of the town. After having crossed the rubbish and huts with which it is filled, we arrive at a vacant place which appears to have been a Square; there, in front, towards the west, we perceive a grand ruin, which consists of two pavillions ornamented with pilasters, joined at their bottom angle by a wall one hundred and sixty feet in length. This front commands the open country from a sort of terrace, on the edge of which we distinguish, with difficulty, the bases or twelve columns, which formerly extended from one pavillion to the other, and formed a portico. The principal gate is obstructed by heaps of stones; but that obstacle surmounted, we enter an empty space, which is an hexagonal court of one hundred and eighty feet diameter. The court is strewn with broken columns, mutilated capitals, and the remains of pilasters, entablatures, and cornices; around it is a row of ruined edifices, which display all the ornaments of the richest architecture. At the end of this court, opposite the west, is an outlet, which formerly was a gate, through which we perceive a still more extensive range of ruins, whose magnificence strongly excites curiosity. To have a full prospect of these, we must ascend a slope, up which were the steps to this gate, and we then arrive at the entrance of a square court, much more spacious than the former.* The eye is first attracted by the end of this court, where six enormous and majestic columns, render the scene astonishingly grand and picturesque. Another object not less interesting, is a second range of columns to the

* It is three hundred and fifty feet wide, and three hundred and thirty six in length,

left, which appear to have been part of the Peristyle of a temple; but before we pass thither, we cannot refuse particular attention to the edifices which enclose this court on each side. They form a sort of gallery which contains various chambers, seven of which may be reckoned in each of the principal wings: viz. two in a semicircle, and five in an oblong square. The bottom of these apartments still retains pediments of niches and tabernacles, the supporters of which are destroyed. On the side of the court they are open, and present only four and six columns totally destroyed. It is not easy to conceive the use of these apartments; but this does not diminish our admiration at the beauty of their pilasters and the richness of the frieze of the entablature. Neither is it possible to avoid remarking the singular effect which results from the mixture of the garlands, the large foliage of the capitals, and the sculpture of wild plants with which they are every where ornamented. In traversing the length of the court, we find in the middle a little square Esplanade, where was a pavilion, of which nothing remains but the foundation. At length we arrive at the foot of the six columns; and then first conceive all the boldness of their elevation, and the richness of their workmanship. Their shafts are twenty-one feet eight inches in circumference, and fifty-eight feet high; so that the total height, including the entablature, is from seventy-one to seventy-two feet. The sight of this superb ruin thus solitary and unaccompanied, at first strikes us with astonishment; but, on a more attentive examination, we discover a series of foundations, which mark an oblong square of two hundred and sixty-eight feet in length, and one hundred and forty-six wide; and, which, it seems probable, was the Peristyle of a grand temple, the primary purpose of this whole structure. It presented to the great court, that is to the east, a front of ten columns, with nineteen on each side,

which with the other six, make in all fifty-four. The ground on which it stood was an oblong square, on a level with this court, but narrower than it, so that there was only a terrace of twenty-seven feet wide round the colonade; the esplanade this produces, fronts the open country, toward the west, by a sloping wall of about thirty feet. This descent as you approach the city becomes less steep, so that the foundation of the pavillion is on a level with the termination of the hill, whence it is evident that the whole ground of the courts has been artificially raised. Such was the former state of this edifice, but the southward side of the grand temple was afterwards blocked up to build a smaller one, the Perystile and walls of which are still remaining. This temple, situated some feet lower than the other, presents a side of thirteen columns, by eight in front, (in all thirty-four), which are likewise of the Corinthian order; their shafts are fifteen feet eight inches in circumference, and forty-four in height. The building they surround is an oblong square, the front of which turned toward the east, is out of the line of the left wing of the great court. To reach it you must cross trunks of columns, heaps of stone, and a ruinous wall by which it is now hid. After surmounting these obstacles, you arrive at the gate, where you may survey the enclosure which was once the habitation of a god; but instead of the awful scene of a prostrate people, and sacrifices offering by a multitude of priests, the sky, which is open from the falling in of the roof, only lets in light to shew a chaos of ruins covered with dust and weeds. The walls, formerly enriched with all the ornaments of the Corinthian order, now present nothing but pediments of niches, and tabernacles of which almost all the supporters are fallen to the ground. Between the niches is a range of fluted pilasters, whose capitals support a broken entablature; but what remains of it displays a rich frieze of foliage resting on

the heads of satyrs, horses, bulls, &c. Over this entablature was the ancient roof, which was fifty-seven feet wide, and one hundred and ten in length. The walls which supported it are thirty-one feet high, and without a window. It is impossible to form any idea of the ornaments of this roof, except from the fragments lying on the ground; but it could not have been richer than the gallery of the Peristyle: the principal remaining parts contain tablets in the form of lozenges, on which are represented Jupiter seated on his eagle; Leda caressed by the swan; Diana with her bow and crescent, and several busts which seem to be figures of emperors and empresses. It would lead me too far, to enter more minutely into the description of this astonishing edifice. The lovers of the arts will find it described with the greatest truth and accuracy in a work published at London in 1757, under the title of *Ruins of Balbek*. This work, compiled by Mr. Robert Wood, the world owes to the attention and liberality of Mr. Dawkins, who in 1751 visited Balbek, and Palmyra. It is impossible to add any thing to the fidelity of their description.

Several changes however have taken place since their journey: for example, they found nine large columns standing, and, in 1784, I found but six. They reckoned nine and twenty at the lesser temple, but their now remain but twenty; the others have been overthrown by the earthquake of 1759. It has likewise so shaken the walls of the lesser temple, that the stone of the soffit* of the gate has slid between the two adjoining ones, and descended eight inches; by which means the body of the bird sculptured on that stone, is suspended, detached from its wings, and the two garlands, which hung from its beak and terminated in two Genii. Nature alone has not effected

* The *Soffit* is the cross stone at the top of a gate.

this devastation; the Turks have had their share in the destruction of the columns. Their motive is to procure the iron cramps, which serve to join the several blocks of which each column is composed. These cramps answer so well the end intended, that several of the columns are not even disjointed by their fall; one, among others, as Mr. Wood observes, has penetrated a stone of the temple wall without giving way; nothing can surpass the workmanship of these columns; they are joined without any cement, yet there is not room for the blade of a knife between their interstices. After so many ages, they in general still retain their original whiteness. But, what is still more astonishing is, the enormous stones which compose the sloping wall. To the west, the second layer is formed of stones which are from twenty-eight to thirty-five feet long, by about nine in height. Over this layer, at the north-west angle, there are three stones, which alone occupy a space of one hundred and seventy-five feet and one half; viz. the first, fifty-eight feet seven inches; the second, fifty-eight feet eleven, and the third, exactly fifty eight feet, and each of these are twelve feet thick. These stones are of a white granite, with large shining flakes, like Gypse; there is a quarry of this kind of stone under the whole city, and in the adjacent mountain, which is open in several places, and, among others, on the right, as we approach the city. There is still lying there a stone, hewn on three sides, which is sixty-nine feet two inches long, twelve feet ten inches broad, and thirteen feet three inches in thickness. By what means could the ancients move those enormous masses? This is doubtless a problem in mechanics curious to resolve. The inhabitants of Balbek have a very commodious manner of explaining it, by supposing these edifices to have been constructed by *Djenoun*, or Genii, who obeyed the orders of king Solomon, adding, that the motive of such immense

works was to conceal in subterraneous caverns vast treasures, which still remain there. To discover these, many have descended into the vaults which range under the whole edifice; but the inutility of their researches, added to the oppressions and extortions of the governors, who have made their supposed discoveries a pretext, have at length disheartened them; but they imagine the Europeans will be more successful, nor would it be possible to persuade them but what we are possessed of the magic art of destroying Talismans. It is in vain to oppose reason to ignorance and prejudice: and it would be no less ridiculous to attempt to prove to them that Solomon never was acquainted with the Corinthian order, which was only in use under the Roman emperors. But their tradition on the subject of this prince may suggest three important observations.

First, that all tradition relative to high antiquity, is as false among the orientals as the Europeans. With them, as with us, facts which happened a hundred years before, when not preserved in writing, are altered, mutilated, or forgotten. To expect information from them with respect to events in the time of David or Alexander, would be as absurd as to make enquiries of the Flemish peasants concerning Clovis or Charlemagne.

Secondly, that throughout Syria, the Mahometans, as well as the Jews and Christians, attribute every great work to Solomon: not that the memory of him still remains by tradition in those countries; but from certain passages in the Old Testament; which, with the gospel, is the source of almost all their tradition, as these are the only historical books read or known; but as their expounders are very ignorant, their applications of what they are told, are generally very remote from truth: by an error of this kind, they pretend that Balbek is *the house of the forest of Lebanon*, built by Solomon; nor do they approach nearer pro-

bability, when they attribute to that king the well of Tyre, and the buildings of Palmyra.

A third remark is, that the belief in hidden treasures has been confirmed by discoveries which have been really made from time to time. It is not ten years since a small coffer was found at *Hebron*, full of gold and silver medals, with an ancient Arabic book on medicine. In the country of the Druzes, an individual discovered, likewise, some time since, a jar with gold coin in the form of a crescent; but as the chiefs and governors claim a right to these discoveries, and ruin those who have made them, under pretext of obliging them to make restitution, those who find any thing endeavour carefully to conceal it; they secretly melt the antique coins, nay, frequently bury them again in the same place where they found them, from the same fears which caused their first concealment, and which prove the same tyranny formerly existed in these countries.

When we consider the extraordinary magnificence of the temple of Balbek, we cannot but be astonished at the silence of the Greek and Roman authors. Mr. Wood, who has carefully examined all the ancient writers, has found no mention of it, except in a fragment of John of Antioch, who attributes the construction of this edifice to Antoninus Pius. The inscriptions which remain corroborate this opinion, which perfectly accounts for the constant use of the Corinthian order, since that order was not in general use before the third age of Rome; but we ought by no means to alledge as an additional proof, the bird sculptured over the gate; for if his crooked beak, large claws, and the caduceus he bears, give him the appearance of an eagle, the tuft of feathers on his head, like that of certain pigeons, proves that he is not the Roman eagle: besides that the same bird is found in the temple of Palmyra, and is therefore evidently an oriental eagle, consecrated to the sun,

who was the divinity adored in both these temples. His worship existed at Balbek, in the most remote antiquity. His statue, which resembled that of Osiris, had been transported there from the Heliopolis of Egypt, and the ceremonies with which he was worshipped there have been described by Macrobius, in his curious work entitled *Saturnalia**. Mr. Wood supposes, with reason, that the name of Balbek, which in Syriac signifies *City of Bal*, or of the Sun, originated in this worship. The Greeks, by naming it Heliopolis, have, in this instance, only given a literal translation of the oriental word, a practice to which they have not always adhered. We are ignorant of the state of this city in remote antiquity; but it is to be presumed that its situation, on the road from Tyre to Palmyra, gave it some part of the commerce of these opulent capitals. Under the Romans, in the time of Augustus it is mentioned as a garrison town; and there is still remaining, on the wall of the southern gate, on the right, as we enter, an inscription which proves the truth of this, the words *KENTURIA PRIMA*, in Greek characters, being very legible. One hundred and forty years after, Antoninus built there the present temple, instead of the ancient one, which was doubtless falling into ruins; but Christianity having gained the ascendancy under Constantine, the modern temple was neglected, and afterwards converted into a church, a wall of which is now remaining, that hid the sanctuary of the idols. It continued thus until the invasion of the Arabs, when it is probable they envied the Christians so beautiful a building. The church being less frequented fell to decay; was succeeded, and it was converted into a place of defence, battlements were built on the wall which surrounded it, on the pavillions and at the angles,

* He there calls it Heliopolis, a city of the *Affyrians*, the ancients frequently confounded that nation with the *Syrians*.

which still subsist; and from that time, the temple, exposed to the fate of war, fell rapidly to ruin.

The state of the city is not less deplorable; the wretched government of the Emirs of the house of Harfouche, had already greatly impaired it, and the earthquake of 1759 completed its destruction. The wars of the Emir Yousef, and Djezzar, have rendered it still more deserted and ruinous; of five thousand inhabitants, at which number they were estimated in 1751, not twelve hundred are now remaining and all these poor, without industry or commerce, and cultivating nothing but a little cotton, some maize, and water-melons. Throughout this part of the country, the soil is poor, and continues to be so, both as we proceed to the north, or to the south-east, towards Damascus.

C H A P. XI.

Of the Pachalics of Damascus.

THE Pachalics of Damascus, the fourth and last of Syria, comprehends nearly the whole eastern part of that country. It extends to the north from Marra, on the road to Aleppo, as far as Habroun, in the south-east of Palestine. It is bounded to the west by the mountains of the Ansarians, those of Anti-Lebanon, and the upper part of the Jordan; then crossing that river in the country of Bisan, it includes Nablous, Jerusalem, and Habroun, and enters the desert to the east, into which it advances more or less, according as the country is capable of cultivation; but in general it does not extend to any considerable distance from the latter mountains, except in the district of Tadmour or Palmyra, towards which it stretches full five days journey.

In this vast extent of country, the soil and its productions are very various; but the plains of the Hauran, and those on the banks of the Orontes, are the most fertile: they produce wheat, barley, doura, fesamum, and cotton. The country of Damascus, and the Upper Bekaa, are of a gravelly and poor soil, better adapted to fruits and tobacco, than any thing else. All the mountains are appropriated to olive, mulberry, and fruit trees, and in some places to vines, from which the Greeks make wine, and the Mahometans dried raisins.

The Pacha enjoys all the privileges of his post, which are more considerable than those of any other Pachalic; for besides the farm of all the customs and imposts, and an absolute authority, he is also conductor of the sacred caravan of Mecca, under the highly respected title of *Emir Hadj*.* The Mahometans consider this office as so important, and entitled to such reverence, that the person of a Pacha who acquits himself well of it, becomes inviolable even by the Sultan: it is no longer permitted to *shed his blood*. But the Divan has invented a method of satisfying its vengeance on those who are protected by this privilege, without departing from this literal expression of the law, by ordering them to be pounded in a mortar, or smothered in a sack, of which there have been various instances.

The tribute of the Pacha to the Sultan, is no more than forty-five purses (two thousand three hundred and forty three pounds;) but he is charged with all the expences of the Hadj: these are estimated at six thousand purses, or three hundred and twelve thousand five hundred pounds. They consist of provisions of corn, barley, rice, &c. and in the hire of camels, which must be provided for the escort and a

* The caravan of Mecca bears exclusively the name of *Hadj*, which signifies pilgrimage: the others are called simply *Kasbe*.

great number of pilgrims. Besides this, eighteen hundred purses must be paid to the Arab tribes, who dwell near the road, to secure a free passage. The Pacha reimburses himself by the miri, or duty upon lands, either by collecting it himself, or by farming it out, as he does in many places. He does not receive the customs, these are collected by a *Destardar*, or master of the registers, and are appointed for the pay of the Janisaries, and governors of castles, which are on the route to Mecca. Besides his other emoluments, the Pacha is the heir of all the pilgrims who die on the journey, and this is not the least of his perquisites; for it is invariably observed that those are the richest of the pilgrims. Besides all this, he has the profits he makes by lending money for interest to merchants and farmers, and taking from them whatever he thinks proper, in the way of *balse*, or extortion.

His military establishment consists in six or seven hundred Janisaries, better conditioned, and more insolent, than in other parts of the country; as many Barbary Arabs, who are naked, and plunderers as they are every where, and in eight or nine hundred Dellibaches, or horsemen. These troops, which in Syria pass for a considerable army, are necessary, not only by way of escort for the caravan, and to restrain the Arabs, but likewise to enable him to collect the miri from his own subjects. Every year, three months prior to the departure of the Hadj, he makes what is called his circuit; that is, he travels through his vast government, at the head of his soldiers, and raises contributions on the towns and villages. This is seldom effected without resistance; the ignorant populace, excited by factious chiefs, or provoked by the injustice of the Pacha, frequently revolt, and pay the sums levied on them with the musket; the inhabitants of Nablous, Bethlehem, and Habroun, are famous for this refractoriness, which has procured them pe-

culiar privileges ; but when opportunity offers, they are made to pay ten-fold. The Pachalic of Damascus, from its situation, is more exposed than any other to the incursions of the Bedouin Arabs ; yet it is remarked to be the least ravaged of any in Syria. The reason assigned is, that instead of frequently changing the Pachas, as is practised in the other governments, the Porte usually bestows this Pachalic for life : in the present century it was held for fifty years by a rich family of Damascus, called El-Adm, a father and three brothers of which succeeded each other. Afad, the last of them, whom I have before mentioned in the history of Daher, held it fifteen years during which time he did an infinite deal of good. He had likewise established such a degree of discipline among the soldiers as, to prevent the peasants from being injured by their robberies and extortions. His passion, like that of all men in office throughout Turkey, was to amass money, but he did not let it remain idle in his coffers, and, by a moderation unheard of in this country required no more interest for it than six per cent.* An anecdote is related of him which will give an idea of his character : Being one day in want of money, the informers, by whom the Pachas are constantly surrounded, advised him to levy a contribution on the Christians, and on the manufacturers of stuffs. “ How much do you think that they may produce ? ” said Afad. “ Fifty or sixty purses,” replied they. “ But,” answered he, “ these people are by no means rich, how will they raise that sum ? ” “ My lord they will sell their wives jewels ; and, besides, they are Christian dogs.” I’ll shew you,” replied the Pacha, “ that I am an abler extortioner than you.” The same day he sent an order to the Musti to wait upon

* In Syria and in Egypt, the ordinary interest is from twelve to fifteen, nay, frequently from twenty to thirty per cent.

him secretly, and at night. As soon as the Mufti arrived, Afad told him, " he was informed he had long led a very irregular life in private; that he, though the head of the law, had indulged himself in drinking wine and eating pork, contrary to the precepts of the most pure book; assuring him, at the same time, he was determined to inform against him to the Mufti of Stamboul (Constantinople), but that he wished to give him timely notice, that he might not reproach him with perfidiousness." The Mufti, terrified at this menace, conjured him to desist; and, as such offers are an open and allowed traffic among the Turks, promised him a present of a thousand piastres. The Pacha rejected the offer; the Mufti doubled and trebled the sum, till at length they strike a bargain for six thousand piastres, with the reciprocal engagement to observe a profound silence. The next day, Afad sends for the Cadi, and addresses him in the same manner; tells him he is informed of several flagrant abuses in his administration; and that he is no stranger to a certain affair, which may perhaps cost him his head. The Cadi, confounded, implores his clemency, negotiates like the Mufti; accommodates the matter for a like sum, and retires, congratulating himself that he has escaped even at that price. He proceeded in like manner with the Wali, the Nakib, the Aga of the Janisaries, the Mohtefeb, and, after them, with the wealthiest Turkish and Christian merchants. Each of these, charged with offences peculiar to their situations; and, above all, accused of intrigues, were anxious to purchase pardon by contributions. When the sum total was collected, the Pacha, being again with his intimates, thus addressed them, " Have you heard it reported, in Damascus, that Afad has been guilty of extortion?" " No, Seignior." " By what means, then, have I found the two hundred purses I now shew you?" The informers began to exclaim in

great admiration, and enquire what method he had employed. "I have fleeced the rams," replied he, "and not skinned the lambs and the kids."

After fifteen years reign, the people of Damascus were deprived of this man, by intrigues, the history of which is thus related: About the year 1755, one of the black eunuchs of the seraglio, making the pilgrimage of Mecca, took up his quarters with Afad; but not contented with the simple hospitality with which he was entertained, he would not return by Damascus, but took the road to Gaza. Hosein Pacha, who then was governor of that town, took care to give him a sumptuous entertainment. The eunuch on his return to Constantinople, did not forget the treatment he had received from his two hosts; and, to shew at once his gratitude and resentment determined to ruin Afad, and raise Hosein to his dignity. His intrigues were so successful that, after the year 1756, Jerusalem was detached from the government of Damascus, and bestowed upon Hosein, under the title of a Pachalic, and the following year he obtained that of Damascus. Afad, thus deposed retired with his household into the desert, to avoid still greater disgrace. The time of the caravan arrived: Hosein conducted it, agreeable to the duty of his station; but, on his return, having quarrelled with the Arabs, concerning some payment they claimed, they attacked him, defeated the escort, and entirely plundered the caravan, in 1757. On the news of this disaster, the whole empire was thrown into as much confusion as could have been occasioned by the loss of the most important battle. The families of twenty thousand pilgrims, who had perished with thirst and hunger, or been slain by the Arabs; the relations of a multitude of women who had been carried into slavery; the merchants interested in the plundered caravan, all demanded vengeance on the cowardice of the Emir Hadj, and the sacrilege of the Bedouins.

The Porte, alarmed, at first proscribed the head of Hosein; but he concealed himself so well, that it was impossible to surprize him; while he, from his retreat, acting in concert with the eunuch his protector, undertook to exculpate himself, in which, after three months he succeeded, by producing a real or fictitious letter of Afad, by which it appeared that this Pacha had excited the Arabs to attack the caravan, to revenge himself of Hosein. The proscription was now turned against Afad, and nothing but the opportunity wanting to carry it into execution.

The Pachalic, however, remained vacant: Hosein, disgraced as he was, could not resume his government. The Porte, desiring to revenge the late affront, and provide for the safety of the pilgrims in future, made choice of a singular man, whose character and history deserve to be noticed. This man, named Abd-allah-el-Satadji, was born near Bagdad, in an obscure station. Entering very young into the service of the Pacha, he had passed the first years of his life in camps and war, and been present, as a common foldier, in all the campaigns of the Turks against the famous Shah-Thamas-Kouli-Khan; and the bravery and intelligence he displayed, raised him, step by step, even to the dignity of Pacha of Bagdad. Advanced to this eminent post, he conducted himself with so much firmness and prudence, that he restored peace to the country from both foreign and domestic wars. The simple and military life he continued to lead requiring no great supplies of money; he amassed none; but the great officers of the Seraglio of Constantinople, who derived no profits from his moderation, did not approve of this disinterestedness, and waited only for a pretext to remove him.

This they soon found. Abd-allah had kept back the sum of one hundred thousand livres (above four thousand pounds,) arising from the estate of a mer-

chant. Scarcely had the Pacha received it, before it was demanded from him. In vain did he represent, that he had used it to pay some old arrears of the troops; in vain did he request time: the Visir only pressed him the more closely; and, on a second refusal, dispatched a black eunuch, secretly provided with a kat-sheerif, to take off his head. The eunuch, arriving at Bagdad, feigned himself a sick person travelling for his health; and, as such, sent his respects to the Pacha; observing the usual forms of politeness, and requesting permission to pay him a visit. Abd-allah, well acquainted with the practices of the Divan, was distrustful of so much complaisance, and suspected some secret mischief. His treasurer, not less versed in such plots, and greatly attached to his person, confirmed him in these suspicions; and, in order to discover the truth, proposed to go and search the eunuch's baggage, while he and his retinue should be paying their visit to the Pacha. Abd-allah approved the expedient, and at the hour appointed, the treasurer repaired to the tent of the eunuch, and made so careful a search, that he found the kat-sheerif concealed in the lapelles of a pelisse. Immediately he flew to the Pacha, and sending for him into an adjoining room, told him what he had discovered.* Abd-allah, furnished with the fatal writing, hid it in his bosom, and returned to the apartment; when resuming, with an air of the greatest indifference, his conversation with the eunuch: "The more I think of it," said he, "Seignior Aga, the more am I astonished at your journey into this country; Bagdad is so far from Stamboul, we can boast so little of our air, that I can scarcely believe you have come hither for no other purpose but the re-establishment of your health." "It is true,"

* I have these facts from person who was intimate with this treasurer, and had seen Abd-allah at Jerusalem.

replied the Aga ; “ I am also commissioned to demand
“ of you something on account of the four thousand
“ pounds you received.” “ We will say nothing
“ of that,” answered the Pacha ; “ but come” ad-
ded he with an air of firmness, “ confess that you
“ have likewise orders to bring with you my head.
“ Observe what I say, you know my character, and
“ you know my word may be depended on : I now
“ assure you that, if you make an open declaration
“ of the truth you shall depart without the least in-
“ jury.” The eunuch now began a long defence,
protesting that he came with no such black intentions.
“ *By my head,*” said Abd-allah, “ confess to me the
“ truth :” the eunuch still denied. “ *By your head ;*”
he still denied : “ Take care, *By the head of the
Sultan ;*” he still persisted. “ Be it so,” says Abd-
allah, “ the matter is decided : thou hast pronounced
“ thy doom ;” and drawing forth the kat-shefif,
“ Know you this paper ? Thus you govern at Con-
“ stantinople : Yes, you are a troop of villains,
“ who sport with the lives of whoever happen to dis-
“ please you, and shed, without remorse, the blood
“ of the servants of the Sultan. The Visir must have
“ heads : he shall have one ; off with the head of
“ that dog and send it to Constantinople.” The
order was executed on the spot, and the eunuch’s
retinue, dismissed departed with his head.

After this decisive stroke, Abd-allah might have
availed himself of his popularity to revolt ; but he
rather chose to retire among the Curds. Here the
pardon of the Sultan was sent him, and an order,
appointing him Pacha of Damascus. Wearied of
his exile, and destitute of money, he accepted the
commission, and set out with one hundred men who
followed his fortune. On his arrival on the frontiers
of his new government, he learnt that Asad was en-
camped in the neighbourhood : he had heard him
spoken of as the greatest man in Syria, and was de-

firous of seeing him. He therefore disguised himself, and, accompanied only by six horsemen, repaired to his camp, and desired to speak with him. He was introduced, as is usual in these camps, without much ceremony; and, after the customary salutations, Afad enquired of him whither he was going, and whence he came? Abd-allah replied, he was one of six or seven Curd horsemen who were seeking employment, and hearing Satadji was appointed to the Pachalic of Damascus, were going to apply to him; but being informed on their way that Afad was encamped in the neighbourhood, they had come to request of him provisions for themselves and their horses. With pleasure, replied Afad; but do you know Satadji? Yes. What sort of a man is he? Is he fond of money? No; Satadji cares very little for money or pelisses, or shawls or pearls, or women; he is fond of nothing but well-tempered arms, good horses, and war. He does justice, protects the widow and the orphan, reads the Koran, and lives on butter and milk. Is he old? said Afad. Fatigue has made him appear older than he is: he is covered with wounds; he has received a blow with a sabre that has made him lame of his left leg; and another, which makes him lean his head on his right shoulder. In short, said he, hastily rising, he is in shape and features, exactly like my picture. At these words Afad turned pale, and gave himself up for lost; but Abd-allah, sitting down again, said to him, Brother, fear nothing; I am not sent by a troop of banditti; I come not to betray thee: on the contrary, if I can render thee any service, command me, for we are both held in the same estimation with our masters; they have recalled me, because they wish to chastise the Bedouins; when they have gratified their revenge on them, they will again lay plots to deprive me of my head. *God is great; what he has decreed will come to pass.*

With these sentiments, Abd-allah repaired to Damascus; where he restored good order, put an end to the extortions of the soldiery, and conducted the caravan, sabre in hand, without paying a piastre to the Arabs. During his administration, which lasted two years, the country enjoyed the most perfect tranquility. The inhabitants of Damascus still say, that under his government they slept in security with open doors. He himself, frequently disguised as one of the poorest of the people, saw every thing with his own eyes. The acts of justice he sometimes did, in consequence of his discoveries under these disguises, produced a salutary circumspection. Some instances are still told by the people with pleasure. It is said, for example, that being on his circuit at Jerusalem, he had prohibited his soldiers from either taking, or ordering any thing without paying. One day, when he was going about in the disguise of a poor man with a little plate of lentiles in his hand, a soldier, who had a faggot on his shoulders, would force him to carry it. After some resistance, he took it on his back, while the Delibathe following him, drove him on with imprecations. Another soldier, knowing the Pacha, made a sign to his comrade, who instantly took to flight, and escaped through the cross streets. After proceeding a few paces, Abd-allah no longer hearing his man, turned round, and vexed at missing his aim, threw his burthen on the ground, saying, the rascally knavish dog! he has both robbed me of my hire and carried off my plate of lentiles. But the soldier did not long escape; for, a few days after, the Pacha again surprizing him in the act of robbing a poor woman's garden, and ill treating her, ordered his head to be struck off upon the spot.

As for himself, he was unable to ward off the destiny he had foreseen. After escaping several times from hired assassins, he was poisoned by his nephew. This he discovered before he died, and, sending for

his murderer: Wretch that thou art, said he, the villains have seduced thee, thou hast poisoned me to profit by my spoils: it is in my power, before I die, to blast thy hopes, and punish thy ingratitude; but I know the Turks; they will be my avengers. In fact, Satadji had scarcely breathed his last before a Capidji produced an order to strangle the nephew: which was executed. The whole history of the Turks proves that they love treason, but invariably punish the traitors. Since Abd-allah, the Pachalic of Damascus has passed successively into the hands of Selik, Osman, Mohammed, and Darouish, the son of Osman, who held it in 1784. This man, who has not the talents of his father, resembles him in his tyrannical disposition, of which the following is a striking instance. In the month of November, 1784, a village of Greek Christians, near Damascus, which had paid the miri, was called upon to pay it a second time. The Shaiks, appealing to the register, refused to comply; but a night or two after, a party of soldiers attacked the village, and slew one and thirty persons. The wretched peasants, in consternation, carried the heads to Damascus, and demanded justice of the Pacha. After hearing their complaints, Darouish told them to leave the heads in the Greek church, while he made the necessary enquiries. Three days elapsed, and the heads putrifying, the Christians wished to bury them; but to effect this the Pacha's permission was necessary, for which they were under the necessity of paying forty purses, or above two thousand pounds.

About a year ago, (in 1785), Djezzar, availing himself of the credit his money had gained him at the Porte, dispossessed Darouish, and governs at present at Damascus, to which it is said he is endeavouring to add the Pachalic of Aleppo. But it is not probable the Porte will consent to grant him this, as such an increase of power would render him mas-

ter of all Syria; but besides that the necessity of observing the Russians, leaves the Divan no leisure to consider these affairs, it concerns itself but little about the revolt of the governors, since constant experience has proved, that, sooner or later, they never fail to fall into the snares that are laid for them. Nor is Djezzar likely to be an exception to this rule; for though not destitute of talents, and especially cunning*, his abilities are unequal to the task of conceiving and accomplishing a great revolution. The course he pursues is that of all his predecessors: he only concerns himself with the welfare of the public, so far as it coincides with his private interest. The Mosque he has built at Acre, is a monument of pure vanity, on which he has expended, without any advantage, the sum of three millions of French livres, (one hundred and twenty-five thousand pounds): his Bazar is undoubtedly of more utility; but before he began to build a market for the sale of corn and vegetables, he should have paid some attention to the state of agriculture, by which they are to be produced, and this is in a very languishing condition indeed, except close to the walls of Acre. The principal part of his expences consists in his gardens, his baths, and his white women: of the latter he possessed eighteen in 1784, and the luxury of these women is most enormous. As he is now growing old and has lost the relish for other pleasures, he regards nothing but amassing money. His avarice has alienated his soldiers, and his severity created him enemies even in his own house. Two of his pages have already attempted to assassinate him; he has had the good luck to escape their pistols, but fortune will not always favour him; he will one day share the fate of so many others, and be taken by surprise, when he will

* Baron de Tott has called Djezzar a *lion*: I think he would have defined him better by calling him a *wolf*.

reap no other fruit from his indoltry in heaping up wealth, than the eagerness of the Porte to obtain possession of it, and the hatred of the people he has oppressed. Let us now return to the most remarkable places in this Pachalic.

The first that presents itself is the city of Damascus, the capital and residence of the Pachas. The Arabs call it *el-Sham*, agreeable to their custom of bestowing the name of the country on its capital. The ancient Oriental name of *Demeshk* is known only to geographers. This city is situated in a vast plain, open to the south and east, and shut in towards the west and north by mountains, which limit the view at no great distance; but in return, a number of rivulets arise from these mountains, which render the territory of Damascus the best watered and most delicious province of all Syria; the Arabs speak of it with enthusiasm; and think they can never sufficiently extol the freshness and verdure of its orchards, the abundance and variety of its fruits, its numerous streams, and the clearness of its rills and fountains. This is also the only part of Syria where there are detached pleasure houses in the open country. The natives must set a higher value on these advantages, as they are the more rare in the adjacent provinces. In other respects, the soil, which is poor, gravelly, and of a reddish colour, is ill adapted for corn; but is on that account more suitable to fruits, which are here excellently flavoured. No city affords so many canals and fountains; each house has one; and all these waters are furnished by three rivulets, or branches of the same river, which after fertilizing the gardens for a course of three leagues, flow into a hollow of the Desert to the south-east, where they form a morass called *Behairat-el-Mardj*, or the Lake of the Meadow.

With such a situation it cannot be disputed that Damascus is one of the most agreeable cities in Tur-

key; but it is still deficient in point of salubrity. The inhabitants complain with reason, that the white waters of the Barrada are cold and hard; and it is observed that the natives are subject to obstructions; that the whiteness of their skin is rather the paleness of sickness than the colour of health; and that the too great use of fruit, particularly of apricots, occasions there, every summer and autumn, intermittent fevers and dysenteries.

Damascus is much longer than it is broad. M. Niebuhr, who has given a plan of it, makes it three thousand two hundred and fifty toises, or something less than a league and a half in circumference. Comparing these dimensions with those of Aleppo, I suppose that Damascus may contain eighty thousand inhabitants. The greater part of these are Arabs and Turks; the number of Christians is estimated at above fifteen thousand, two thirds of whom are Schismatics. The Turks never speak of the people of Damascus without observing, that they are the most mischievous in the whole empire; the Arabs, by a play on words, have made this proverb: *Shami, sboumi*, The man of Damascus, wicked: on the contrary, they say of the people of Aleppo, *Halabi, tchelebi*, The Aleppo man, a *petit maitre*. From a prejudice arising from the difference of religions, they also add, that the Christians there are more vile and knavish than elsewhere; doubtless, because the Mahometans are there more fanatic and more insolent. In this they resemble the inhabitants of Cairo; like them, they detest the Franks, nor is it possible to appear at Damascus in an European dress; our merchants have not been able to form any establishment there; we only meet with two Capuchin Missionaries, and a physician who is not permitted to practise.

This hatred the people of Damascus bear the Christians, is maintained and increased by their communication with Mecca. Their city, say they, is a holy

place, since it is one of the gates of the Caaba: for Damascus is the rendezvous for all the pilgrims from the north of Asia, as Cairo is for those from Africa. Their number every year amounts to from twenty to fifty thousand; many of them repair here four months before the time, but the greatest number only at the end of the Ramadan. Damascus then resembles an immense fair; nothing is to be seen but strangers from all parts of Turkey, and even Persia; and every place is full of camels, horses, mules, and merchandize. At length, after some days preparations, all this vast multitude set out confusedly on their march; and, travelling by the confines of the Desert, arrive in forty days at Mecca, for the festival of the Bairam. As this caravan traverses the country of several independent Arab tribes, it is necessary to make treaties with the Bedouins, to allow them certain sums of money for a free passage, and take them for guides. There are frequent disputes on this subject between the Shaiks, of which the Pacha avails himself to make a better bargain; but in general the preference is given to the tribe of Sardia, which encamps to the south of Damascus, along the Hauran; the Pacha sends to the Shaik a mace, a tent, and a pelisse, to signify he takes him as his chief conductor. From this moment it is the Shaik's business to furnish camels at a stated price; these he hires likewise from his tribe and his allies; the Pacha is responsible for no damages, and all losses are on his own account. On an average, ten thousand camels perish yearly; which forms a very advantageous article of commerce for the Arabs.

It must not be imagined that the sole motive of all these expences and fatigues, is devotion. Pecuniary interest has a more considerable share in this expedition. The caravan affords the means of engrossing every lucrative branch of commerce; almost all the pilgrims convert it into a matter of speculation. On

leaving their own country, they load themselves with merchandize, which they sell on the road; the specie arising from this, added to what they have brought with them, is conveyed to Mecca, where they exchange it for muslins and india goods from Malabar and Bengal, the shawls of Cashmire, the aloes of Tonquin, the diamonds of Golconda, the pearls of Bahain, some pepper, and a great quantity of coffee from the Yemen. Sometimes the Arabs of the Desert deceive the expectation of the merchant, by pillaging the stragglers, and carrying off detached parties of the caravan. But in general the pilgrims arrive safe; in which case their profits are very considerable. At all events they are recompensed in the veneration attached to the title of *Hadji*, (Pilgrim;) and by the pleasure of boasting to their countrymen of the wonders of the Caaba, and Mount Arafat; of magnifying the prodigious crouds of pilgrims, and the number of victims, on the day of the Bairam; and recounting the dangers and fatigues they have undergone, the extraordinary figure of the Bedouins, the Desert without water, and the tomb of the prophet at Medina, which, after all, is neither suspended by a loadstone, nor the principal object of their pilgrimage. These wonderful tales produce their usual effect, that is, they excite the admiration and enthusiasm of the audience, though, from the confession of sincere pilgrims, nothing can be more wretched than this journey. Accordingly, this transient admiration has not prevented a proverb, which does little honour to these pious travellers. *Distrust thy neighbour*, says the Arab, *if he has made a Hadj; but if he has made two, make haste to leave thy house*: and, in fact, experience has proved that the greater part of the devotees of Mecca are peculiarly insolent and treacherous, as if they wished to recompense themselves for having been dupes, by becoming knaves.

By means of this caravan, Damascus is become the centre of a very extensive commerce. By Aleppo the merchants of this city correspond with Armenia, Anadolli, the Diarbekar, and even with Persia. They send caravans to Cairo, which, following a route frequented in the time of the patriarchs, take their course by Djefr-Yakoub, Tabaria, Nablous and Gaza. In return, they receive the merchandize of Constantinople and Europe, by way of Saide and Bairout. The home consumption is balanced by silk and cotton stuffs, which are manufactured here in great quantities, and are very well made; by the dried fruits of their own growth, and sweetmeat cakes of roses, apricots, and peaches, of which Turkey consumes to the amount of near a million of livres, (about forty thousand pounds). The remainder, paid for by the course of exchange, occasions a considerable circulation of money in the custom-house duties, and the commission of the merchants. This commerce has existed in these countries from the most remote antiquity. It has flowed through different channels, according to the changes of the government, and other circumstances; but it has every where left very apparent traces of the opulence it produced.

The Pachalic of which I am speaking, affords a monument of this kind too remarkable to be passed over in silence. I mean the remains of Palmyra, a city celebrated in the third age of Rome, for the part it took in the differences between the Parthians and the Romans, the power and fall of Odenatus and Zenobia, and its destruction under Aurelian. From that time history preserved the name of this great city, but it was merely the name, for the world had very confused ideas of the real grandeur and power it had possessed. They were scarcely even suspected in Europe, until towards the end of the last century, when some English merchants of Aleppo, tired with hearing the Bedouins talk of the immense ruins to be found

in the Desert, resolved to ascertain the truth of these extraordinary relations. The first attempt was made in 1678, but without success; the adventurers were robbed of all they had by the Arabs, and obliged to return without accomplishing their design. They again took courage in 1691, and at length obtained a sight of the antiquities in question. Their narrative, published in the philosophical transactions, met with many who refused belief; men could neither conceive nor persuade themselves that in a spot so remote from any habitable place, such a magnificent city as their drawings described could have subsisted. But since Mr. Dawkins published, in 1753, the plans and views he himself had taken on the spot in 1751, all doubts are at an end, and it is universally acknowledged that antiquity has left nothing, either in Greece or Italy, to be compared with the magnificence of the ruins of Palmyra.

I shall give a summary of the relation of Mr. Wood, the companion and editor of the journey of Mr. Dawkins.*

“ After learning at Damascus that Tadmour, or
 “ Palmyra, depended on an Aga who resided at
 “ Hassia, we repaired in four days, to that village,
 “ which is situated in the Desert, on the route from
 “ Damascus to Aleppo. The Aga received us with
 “ that hospitality which is so common in these coun-
 “ tries amongst all ranks of people, and, though ex-
 “ tremely surprized at our curiosity, gave us instruc-
 “ tions how to satisfy it in the best manner. We
 “ set out from Hassia the 11th of March 1751, with
 “ an escort of the Aga’s best Arab horsemen, armed
 “ with guns and long pikes; and travelled in four
 “ hours to Sudud, through a barren plain, scarce
 “ affording a little browsing to antelopes, of which we

* *Ruins of Palmyra*, by Robert Wood, 1 vol, in folio, with fifty plates, London 1753.

“ saw a great number. Sudud is a poor small vil-
“ lage, inhabited by Maronite Christians. Its houses
“ are built of no better materials than mud dried in
“ the sun. They cultivate as much good ground
“ about the village as is necessary for their bare
“ subsistence, and make a good red wine. After
“ dinner, we continued our journey, and arrived in
“ three hours at Owareen, a Turkish village, where
“ we lay.

“ Owareen has the same appearance of poverty as
“ Sudud; but we found a few ruins there, which
“ shew it to have been formerly a more considerable
“ place. We remarked a village near this entirely
“ abandoned by its inhabitants, which happens often
“ in these countries; where the lands have no ac-
“ quired value from cultivation, and are often desert-
“ ed to avoid oppression. We set out from Owareen
“ the 12th, and arrived in three hours at Carietein;
“ keeping always in the direction of a point and half
“ to the south of the east. This village differs from
“ the former, only by being a little larger. It was
“ thought proper we should stay here this day, as
“ well to collect the rest of our escort which the
“ Aga had ordered to attend us, as to prepare our
“ people and cattle for the fatigue of the remaining
“ part of our journey; for, though we could not
“ perform it in less time than twenty-four hours, it
“ could not be divided into stages, as there is no
“ water in that part of the Desert.

“ We left Carietein the 13th, being in all about
“ two hundred persons, with the same number of
“ beast of carriage, consisting of an odd mixture of
“ asses, mules and camels. Our route was a little
“ to the east of the north, through a flat sandy plain,
“ without either tree or water, the whole about ten
“ miles broad, and bounded, to our right and left,
“ by a ridge of barren hills, which seemed to join
“ about two miles before we arrived at Palmyria.

“ The 14th, about noon, we arrived at the end of
 “ the plain, where the hills seemed to meet. We
 “ find between these hills a vale, through which an
 “ aqueduct (now ruined) formerly conveyed water
 “ to Palmyra. In this vale, to our right and left,
 “ were several square towers of a considerable height,
 “ which, upon a nearer approach, we found were
 “ the sepulchres of the ancient Palmyrenes. We
 “ had scarce passed these venerable monuments, than
 “ the hills opening, discovered to us, all at once,
 “ the greatest quantity of ruins we had ever seen*,
 “ and, behind them, towards the Euphrates, a flat
 “ waste as far as the eye could reach, without any
 “ object which shewed either life or motion. It is
 “ scarce possible to imagine any thing more striking
 “ than this view. So great a number of Corinthian
 “ pillars, with so little wall or solid building, afforded
 “ a most romantic variety of prospect.”

Undoubtedly the effect of such a sight is not to be
 communicated. To have a just conception of the
 whole, the dimensions must be supplied by the ima-
 gination. In this space we sometimes find a palace,
 of which nothing remains but the courts and walls;
 sometimes a temple whose peristyle is half thrown
 down; and now, a portico, a gallery, or triumphal
 arch. Here stand groups of columns, whose symme-
 try is destroyed by the fall of many of them; there
 we see them ranged in rows of such length, that simi-
 lar to rows of trees, they deceive the sight, and as-
 sume the appearance of continued walls. If from
 this striking scene we cast our eyes upon the ground,
 another, almost as varied, presents itself: on all sides
 we behold nothing but subverted shafts, some whole,
 others shattered to pieces, or dislocated in their joints;
 and on which side soever we look, the earth is strewn
 with vast stones half buried, with broken entabla-

* Though these travellers had visited *Greece* and *Italy*.

tures, damaged capitals, mutilated frizes, disfigured relief, effaced sculptures, violated tombs, and altars defiled by dust.

But I must refer the reader to the plates of Mr. Wood, for a more particular explanation of these various edifices, and to make him sensible of the degree of perfection to which the arts had arrived in those remote ages. Architecture more especially lavished her ornaments and displayed her magnificence in the temple of the sun, the tutelar deity of Palmyra. The square court which enclosed it, was six hundred and seventy-nine feet each way, and a double range of columns was continued all round the inside. In the middle of the vacant space, the temple presents another front of forty-seven feet, by one hundred and twenty-four in depth. Around it runs a peristyle of one hundred and forty columns, and, what is very extraordinary, the gate faces the setting and not the rising sun. The soffit of this gate which is lying on the ground, presents a zodiac, the signs of which are the same as in ours. On another soffit is a bird similar to that of Balbek, sculptured on a ground of stars. It is a remark worthy the observation of historians, that the front of the portico has twelve pillars, like that of Balbek; but what artists will esteem still more curious is, that these two fronts resemble the gallery of the Louvre, built by Perrault, long before the existence of the drawings which made us acquainted with them; the only difference is, that the columns of the Louvre are double, whereas those of Balbek and Palmyra are detached.

Within the court of this same temple, the philosopher may contemplate a scene he will esteem still more interesting. Amid these hallowed ruins of the magnificence of a powerful and polished people, are about thirty mud-walled huts, which contain as many peasant families, who exhibit every external sign of extreme poverty. So wretched are the present inha-

bitants of a place once so renowned and populous. These Arabs only cultivate a few olive-trees; and as much corn as is barely necessary for their subsistence. All their riches consist in some goats and sheep they feed in the Desert. They have no other communication with the rest of the world than by little caravans, which come to them five or six times a year from Homs, of which they are a dependency. Incapable of defending themselves from violence, they are compelled to pay frequent contributions to the Bedouins, who by turns harass and protect them. The English travellers inform us, "These peasants are healthy and well shaped, and the few distempers they are subject to, prove that the air of Palmyra merits the eulogium bestowed on it by Longinus, in his epistle to Porphyry. It seldom rains there, except at the equinoxes, which are accompanied also by those hurricans of sand, so dangerous in the Desert. The complexion of these Arabs is very swarthy from the excessive heat; but this does not hinder the women from having beautiful features. They are veiled; but are not so scrupulous of shewing their faces as the eastern women generally are; they dye the end of their fingers red, (with henna), their lips blue, and their eye-brows and eye-lashes black; and wear very large gold or brass rings in their ears and noses."

It is impossible to view so many monuments of industry and power, without enquiring what age produced them, and what was the source of the immense riches they indicate; in a word, without enquiring into the history of Palmyra, and why it is so singularly situated, in a kind of island separated from the habitable earth, by an ocean of barren sands. The travellers I have quoted, have made very judicious researches into this question, but too long to be inserted here; I must again refer the reader to that work, to see in what manner they distinguish two sorts

of ruins at Palmyra, one of which must be attributed to very remote ages, and are only rude, unshapen masses; while the others, which are the magnificent monuments so often mentioned, are the work of more modern times. He will there see, in what manner they prove from the style of agriculture, that these latter must have been erected in the three centuries preceding Dioclesian, in which the Corinthian was preferred to every other order. They demonstrate with great ingenuity, that Palmyra, situated three days journey from the Euphrates, was indebted for its wealth and splendor to the advantage of its position on one of the great roads, by which the valuable commerce that has at all times subsisted between India and Europe was then carried on; they have proved, in short, that the Palmyrenes were at the height of their prosperity, when, become a barrier between the Romans and the Parthians, they were politic enough to maintain a neutrality in their disputes, and to render the luxury of those powerful empires subservient to their own opulence.

Palmyra was at all times a natural emporium for the merchandize coming from India by the Persian Gulph, which, from thence by way of the Euphrates or the Desert, was conveyed into Phœnicia, and Asia Minor, to diffuse its varied luxuries among the nations with whom they were always in great request. Such commerce must necessarily, in the most early ages, have caused this spot to be inhabited, and rendered it a place of importance, though at first of no great celebrity. The two springs of fresh water* it possesses, were, above all, a powerful inducement in a Desert every where else so parched and barren. These doubtless were the two principal motives which

* These waters are warm and sulphureous, but the inhabitants who, excepting these springs, have none but what is brackish, find them very good, and they are at least wholesome.

drew the attention of Solomon, and induced that commercial prince to carry his arms to a place so remote from the ordinary limits of Judea. "He built strong walls there," says the Historian Josephus,* "to secure himself in the possession, and named it Tadmour, which signifies the place of Palm-trees." Hence it has been inferred that Solomon was its first founder; but we should, from this passage, be rather led to conclude that it was already a place of known importance. The Palm-trees he found there are not the trees of uninhabited countries. Prior to the days of Moses, the journies of Abraham and Jacob, from Mesopotamia into Syria sufficiently prove a communication between these countries, which must soon have made Palmyra flourish. The cinnamon and pearls mentioned in the time of the Hebrew legislator, demonstrate a trade with India and the Persian Gulph, which must have been carried on by the Euphrates and Palmyra. At this distance of time, when the greater part of the monuments of these early ages have perished, we are liable to form very false opinions concerning the state of these countries in those remote times, and are the more easily deceived, as we admit as historical fact antecedent events, of an entirely different character. If we observe, however, that men in all ages are united by the same interests and the same desires, we cannot help concluding, that a commercial intercourse must early have taken place between one nation and another, and that this intercourse must have been nearly the same with that of more modern times. Without therefore going higher than the reign of Solomon, the invasion of Tadmour by that prince, is sufficient alone to throw a great light on the history of that city. The king of Jerusalem would never have carried his attention to so distant and detached a spot, without some powerful motive

* *Antiq. Jud.* lib. 8. c. 6

of interest, and this interest could be no other than that of an extensive commerce, of which this place was already the emporium. This commerce extended itself to India, and the Persian Gulph was the principal point of union. Various facts concur in corroborating this last assertion; nay, necessarily force us to acknowledge the Persian Gulph as the centre of the commerce of that *Ophir*, concerning which so many false hypothesis have been framed. For, was it not in this Gulph that the Tyrians carried on a flourishing trade from the most remote ages, and are not the isles of *Tyrus* and *Aradus* sufficient proofs of the settlements they made there? If Solomon sought the alliance of the Tyrians, if he stood in need of their pilots to guide his vessels, must not the object of their voyage have been those places which they already frequented, and to which they repaired from their port of *Phœnicum oppidum*, on the Red-sea, and perhaps from *Tor*, in which name we may discover traces of that of their own city. Are not pearls, which were one of the principal articles of the commerce of Solomon, almost the exclusive produce of the coast of the Gulph, between the isles of *Tyrus* and *Aradus*, (now called *Barhain*), and *Cape Masandoum*? Have not peacocks, which were so much admired by the Jews, been always supposed natives of that province of *Persia* which adjoins to the Gulph? Did they not procure their monkeys from *Yemen*, which was in their way, and where they still abound? Was not *Yemen* the country of *Saba*, (or *Sheba*,) the queen of which brought frankincense and gold to the Jewish king? And is not the country of the *Sabeans* celebrated by *Strabo* for producing great quantities of gold? *Ophir* has been sought for in *India* and in *Africa*; but is it not one of those twelve *Arabian* districts, or tribes mentioned in the genealogical annals of the *Hebrews*? And ought it not therefore to be looked for in the vicinity of the countries they

inhabit, since this genealogical geography always observes a certain order of situation, whatever Bochart and Calmet may have said to the contrary? In short, do we not directly perceive the name of Ophir, in that of *Ofar*, a town of the district of Oman, on the pearl coast? There is no longer any gold in this country; but this is of no consequence since Strabo positively asserts, that in the time of Seleucidæ, the inhabitants of Gerrha, on the road to Babylon, obtained considerable quantities from it. On weighing all these circumstances, it must be admitted that the Persian Gulph was the centre of the most extensive commerce of the ancient eastern world, and that it was with a view of communicating with it by a shorter or more secure route, that Solomon turned his attention towards the Euphrates; and that, from the convenience of its situation, Palmyra must from that period have been a considerable city. We may even reasonably conjecture, when we reflect on the revolutions of the following ages, that this commerce became a principal cause of those various wars in lower Asia, for which the barren chronicles of those early times assign no motives. If after the reign of Solomon the Assyrians of Niniveh turned their ambitious views towards Chaldea, and the lower part of the Euphrates, it was with the intention to approach that great source of opulence the Persian Gulph. If Babylon, from being the vassal of Niniveh, in a short time became her rival, and the seat of a new empire, it was because her situation rendered her the emporium of this lucrative trade; in short, if the kings of this great city waged perpetual wars with Jerusalem and Tyre, their object was not only to despoil these cities of their riches but to prevent their invading their trade by the way of the Red-sea. An historian* who has informed us that Nabuchodo-

* John of Antioch.

nosor, before he laid siege to Jerusalem, took possession of Tadmour, clearly indicates that the latter city acted in concert with the two neighbouring capitals. Their gradual decline became, under the Persian empire, and the successors of Alexander, the efficient cause of the sudden greatness of Palmyra in the time of the Parthians and Romans; she then enjoyed a long peace, for many centuries, which allowed her inhabitants to erect those monuments of opulence whose ruins we still admire. They the more readily adopted this species of luxury, as the nature of the country permitted no other, and from the natural propensity of merchants, in every nation, to display their wealth in magnificent buildings. Odenatus and Zenobia carried this propensity to its greatest height; but by attempting to exceed its natural limits, they at once destroyed the equilibrium, and Palmyra, stripped by Aurelian of the power she had acquired in Syria, was besieged, taken, and ravaged by the emperor, and lost in one day her liberty and security, which were the principal sources of her grandeur. From that period, the perpetual wars of these countries, the devastations of conquerors, and the oppressions of despots, by impoverishing the people, have diminished the commerce and destroyed the source which conveyed industry and opulence into the very heart of the Deserts: the feeble channels that have survived, proceeding from Aleppo and Damascus, serve only at this day to render her desertion more sensible and more complete.

Leaving these venerable ruins, and returning to the inhabited world, we first meet with Homs, the Emesus of the Greeks, situated on the eastern bank of the Orontes: this place, which was formerly a strong and populous city, is, at present, only a large ruinous town, containing not more than two thousand inhabitants, partly Greeks, and partly Mahometans. An Aga resides here, who holds, as a sub-renter of

the Pacha of Damascus, the whole country as far as Palmyra. The Pacha himself holds this farm as an appenage deriving immediately from the Sultan. Hama and Merra are held in the same manner. These three farms pay four hundred purses, or five hundred thousand livres (above twenty thousand pounds); but they produce nearly four times that sum.

Two days journey below Homs, is Hama, celebrated in Syria for its water-works. The wheels are in fact the largest in this country, being thirty-two feet in diameter. Troughs are fastened to the circumference, and so disposed as to fall in the river, and when they reach the vertex of the wheel, discharge the water into a reservoir, whence it is conveyed by conduits to the public and private baths. The town is situated in a narrow valley on the banks of the Orontes, contains about four thousand inhabitants, and possesses some trade from its situation on the road from Aleppo to Tripoli. The soil, as throughout this whole district, is well adapted to wheat and cotton; but agriculture, exposed to the rapine of the *Motsallam* and the Arabs, is in a very languishing condition. An Arab Shaik, named Mohammed-el-Korfan, is become so powerful of late years, as to impose arbitrary contributions on the country. He is supposed to be able to bring into the field thirty thousand horsemen.

Continuing to descend the Orontes, by an unfrequented route, we arrive at a marshy country, where we meet with a place interesting from the change of fortune it has undergone. This place, called Famia, was formerly one of the most celebrated cities of Syria, under the name of Apamea. "It was there," says Strabo, "that the Seleucidæ, had established the school and nursery of their cavalry." The soil of the neighbourhood, abounding in pasturage, fed no less than thirty thousand mares, three hundred stallions, and five hundred elephants; instead of which the marshes of *Famia* at present scarcely afford a few

buffaloes and sheep. To the veteran soldiers of Alexander, who here reposed after their victories, have succeeded wretched peasants who live in perpetual dread of the oppressions of the Turks and the inroads of the Arabs. The same prospect is repeated on every side throughout these districts. Every town, every village is built of materials furnished by ruins, and founded on the rubbish of ancient edifices. We continually meet with such ruins, both on the desert, and returning along this road, as far as the mountains of Damascus; and even as we pass to the southward of that city in the immense plains of the Hauran. The pilgrims of Mecca, who traverse the latter for five or six days journey, assure us they find, at every step, the vestiges of ancient habitations. They are, however, less remarkable in these plains, for want of durable materials. The soil is a pure earth without stones, and almost without pebbles. What is said of its actual fertility, perfectly corresponds with the idea given of it in the Hebrew writings. Wherever wheat is sown, if the rains do not fail, it repays the cultivator with profusion, and grows to the height of a man. The pilgrims assert, also, that the inhabitants are stronger and taller than the rest of the Syrians. They must differ from them likewise in other respects, on account of the climate, for this part of the country is so excessively hot and dry, as to resemble Egypt more than Syria. In the desert, as they have no running waters nor wood, they make their fires with dung, and build huts with pounded earth and straw. They are very tawny; they pay a tribute to the Pacha of Damascus, but the greatest part of their villages put themselves under the protection of some Arab tribes; and when the Shaiks are prudent, the country prospers, and enjoys security. The mountains, however, which border on these plains to the West and North, are still more secure, on which account a number of families of the Druzes and Maronites,

wearied with the troubles in Lebanon, have of late years taken refuge there, and built *dea*,* or villages; where they freely profess their religion, and have priests and chapels. An intelligent traveller would here, no doubt, be able to make various interesting discoveries in antiquities and natural history; but no European has been hitherto known to have penetrated these recesses.

As we approach the Jordan, the country becomes more hilly and better watered; the valley through which this river flows abounds, in general, in pasturage, especially in the upper part of it. As for the river itself, it is very far from being of that importance which we are apt to assign to it. The Arabs, who are ignorant of the name of Jordan, call it *el-Sbaria*. Its breadth, between the two principal lakes, in few places exceeds sixty or eighty feet; but its depth is about ten or twelve. In winter it overflows its narrow channel, and, swelled by the rains, forms a sheet of water sometimes a quarter of a league broad. The time of its overflowing is generally in March, when the snows melt on the mountains of the Shaik; at which time, more than any other, its waters are troubled, and of a yellow hue, and its course impetuous. Its banks are covered with a thick forest of reeds, willows, and various shrubs, which serve as an asylum for wild boars, ounces, jackals, hares, and different kinds of birds.

Crossing the Jordan, half way between the two lakes, we enter a hilly country, anciently celebrated under the name of the kingdom of Samaria, but at present called the country of *Nablous*, its capital. This town, situated near to Sichem, and on the ruins of the Neapolis of the Greeks, is the residence of a Shaik, who farms the tribute, for which he is accountable to the Pacha of Damascus, when he makes

* Hence the Spanish word, *aldea*.

his circuit. The state of this country is similar to that of the Druzes, with this difference, that its inhabitants are such zealous Mahometans as not willingly to suffer any Christians among them. They are dispersed in villages among the mountains; the soil of which is tolerably fertile, and produces a great deal of corn, cotton, olives, and some silks. Their distance from Damascus, and the difficulty of invading their country, by preserving them to a certain degree from the oppressions of the government, enables them to live in more peace and happiness, than is to be found elsewhere. They are at present even supposed the richest people in Syria; which advantage they owe to their political conduct during the late troubles in Galilee and Palestine; when the tranquility in which they lived, induced many persons of property to take refuge there. But, within the last four or five years, the ambition of certain Shaiks, encouraged by the Turks, has excited a spirit of faction and discord, the consequences of which have been almost as mischievous as the oppressions of the Pachas.

Two days journey to the south of Nablous, following the course of the mountains, which at every step became more barren and rocky, we arrive at a town, which, like many others already mentioned, presents a striking example of the vicissitude of human affairs: when we behold its walls levelled, its ditches filled up, and all its buildings embarrassed with ruins, we scarcely can believe we view that celebrated metropolis, which formerly, withstood the efforts of the most powerful empires, and, for a time, resisted the arms of Rome herself: though, by a whimsical change of fortune, its ruins now receive her homage and reverence; in a word, we with difficulty recognize *Jerusalem*. Still more are we astonished at its ancient greatness, when we consider its situation, amid a rugged soil, destitute of water, and surrounded by dry channels of torrents, and steep heights. Remote

from every great road, it seems neither to have been calculated for a considerable mart of commerce, nor the centre of a great consumption. It overcame however every obstacle, and may be adduced as a proof of what popular opinions may effect in the hands of an able Legislature, or when favoured by happy circumstances. The same opinions still preserve to this city its feeble existence. The renown of its miracles perpetuated in the East, invites and retains a certain number of inhabitants within its walls. Mahometans, Christians, Jews, without distinction of sects, all make it a point of honour to see, or to have seen, what they denominate the *noble* and *holy* city.* To judge from the respect the inhabitants profess for the sacred places it contains, we should be ready to imagine there is not in the world a more devout people; but this has not prevented them from acquiring, and well deserving, the reputation of the vilest people in Syria, without excepting those even of Damascus. Their number is supposed to amount to twelve or fourteen thousand.

Jerusalem has from time to time had Governors of its own, with the title of Pachas; but it is in general, as at this day, a dependency of Damascus, from which it receives a *Motsallam*, or deputy Governor. This *Motsallam* farms it and receives the revenues arising from the *Miri*, the Customs, and especially from the follies of the Christian inhabitants. To conceive the nature of this last article, it must be understood that the different communions of schismatic, and catholic Greeks, Armenians, Copts, Abyssinians and Franks, mutually envying each other the possession of the holy places, are continually endeavouring to

* The Orientals never call Jerusalem by any other name than *El-Kods*, the *Holy*. Sometimes adding the Epithet *El-Sheriff*, the *noble*. This word *El-Kods* seems to me the etymology of all the *Casus* of antiquity, which like Jerusalem were *high places*, and had Temples, or *Holy-places* erected on them.

out-bid one another in the price they offer for them to the Turkish Governors. They are constantly aiming to obtain some privilege for themselves, or to take it from their rivals: And each sect is perpetually informing against the other for irregularities. Has a church been clandestinely repaired; or a procession extended beyond the usual limits: has a pilgrim entered by a different gate from that customary: all these are subjects of accusation to the government, which never fails to profit by them, by fines and extortions. Hence those hatreds, and that eternal jangling, which prevail between the different convents; and the adherents of each communion. The Turks, to whom every dispute produces money, are, as we may imagine, far from wishing to put an end to them. They all, in whatever station, derive some advantage from these quarrels: some sell their protection, others their interest. Hence a spirit of intrigue and cabal, which has diffused venality through every class; and hence perquisites for the Mofallam, which annually amount to upwards of one hundred thousand piasters. Every pilgrim pays him an entrance fee of ten piasters, and another for an escort for the journey to the Jordan, without reckoning the fines imposed in consequence of the imprudencies committed by these strangers during their stay. Each convent pays him so much for the privilege of processions, and so much for all repairs they undertake, besides presents on the accession of a new superior, or a new Mofallam; not to speak of private gratifications to obtain secret trifles they solicit; all which is carried to a great length among the Turks, who are as well versed in the art of squeezing money as the most able law practitioners in Europe. Besides all this, the Mofallam collects duties on the exportation of certain singular commodities from Jerusalem, I mean *beads, relics, sanctuaries, crosses, passions, agnusdei's, scapularies,* &c. of which near three hundred chests are sent

off annually. The fabrication of these utensils of piety procures subsistence for the greatest part of the Christian and Mahometan families of Jerusalem and its neighbourhood; men, women, and children are employed in carving, and turning wood and coral, and in embroidering in silk, with pearls, and gold and silver thread. The convent of the Holy-land, alone, lays out annually to the amount of fifty thousand piasters in these wares, and those of the Greeks, Armenians, and Copts, taken together, pay a still larger sum. This sort of commerce is the more advantageous to the manufactures as, their goods cost them little beside their labour; and the more lucrative for the sellers as the price is enhanced by superstition. These commodities, exported to Turkey, Italy, Portugal, and more especially to Spain, produce a return of considerable sums, either in the form of alms or payments. To this the convents join another not less important article of traffic, *the visits of the pilgrims*. It is well known that at all times the devout curiosity of visiting the *holy places*, has conducted Christians of every country to Jerusalem. There was even a time when the ministers of religion taught it was indispensibly necessary to salvation, and this pious zeal pervading all Europe, gave rise to the Crusades. Since their unfortunate issue, the zeal of the Europeans cooling every day, the number of Pilgrims has diminished; and is now reduced to a few Italian, Spanish and German monks, but the case is different with the Orientals. Faithful to the spirit of past times, they continue to consider the journey to Jerusalem as a work of the greatest merit. They are even scandalized at the relaxation of the Franks in this respect, and say, they have all become heretics or infidels. Their priests and monks who find their advantage in this fervor, do not cease to promote it. The Greeks, especially, declare that *the pilgrimage ensures plenary indulgence, not only for*

the past, but even for the future; and that it absolves not only from murder, incest, and pederasty; but even from the neglect of fasting and the non-observance of festivals, which are far more heinous offences. Such great encouragements are not without their effect; and every year a crowd of pilgrims of both sexes and all ages, set out from the Morea, the Archipelago, Constantinople, Anatolia, Armenia, Egypt and Syria; the number of whom in 1784, amounted to two thousand. The monks, who find, by their registers, that formerly ten or twelve thousand annually made this pilgrimage, never cease exclaiming that religion rapidly decays, and that the zeal of the faithful is nearly extinguished. It must be confessed, however, that this zeal is rather expensive, since the most moderate pilgrimage never costs less than four thousand livres, (one hundred and sixty-six pounds,) and some of them, by means of offerings, amount to fifty or sixty thousand, (twenty five hundred pounds.)

Yafa is the port where the pilgrims disembark. They arrive in November; and repair without delay to Jerusalem, where they remain until after the festival of Easter. They are lodged confusedly, by whole families, in the cells of the convents of their respective communions; the monks take especial care to tell them that this lodging is gratuitous; but it would be neither civil, nor very safe to depart without making an offering greatly exceeding the usual price of apartments. Besides this, it is impossible to dispense with paying for masses, services, exorcisms, &c. another considerable tribute. The pilgrim must also purchase crucifixes, beads, agnusdei's, &c. On Palm-sunday, they go to purify themselves in the Jordan, an expedition which likewise requires a contribution. One year with another, it produces to the governor fifteen thousand Turkish sequins, or four thousand six hundred and eighty-seven pounds,* about one half of which

* At the rate of six shillings and three-pence the sequin.

is laid out in the expences of the escort, and the sums demanded by the Arabs. The reader must consult particular relations of this pilgrimage, to form an idea of the tumultuous march of this fanatic multitude into the plain of Jericho; the indecent and superstitious zeal with which they throw themselves, men, women, and children, naked into the Jordan; the fatigue they undergo before they reach the borders of the Dead-sea; the melancholy inspired by the sight of the gloomy rocks of that country, the most savage in nature; their return and visitation of the holy places; and the ceremony of *the new fire, which descends from heaven on the holy Saturday, brought by an angel*. The Orientals still believe in this miracle, though the Franks acknowledge that the priests retire into the Sacricity, and effect what is done by very natural means.

Easter over, each returns to his own country, proud of being able to rival the Mahometan in the title of Pilgrim*; nay, many of them, in order to distinguish themselves as such, imprint on their hands, wrists, or arms, figures of the cross, or spear, with the cypher of Jesus and Mary. This painful, and sometimes dangerous, operation† is performed with needles, and the perforations filled with gunpowder, or gunpowder of antimony, and is never to be effaced. The Mahometans have the same practice, which is also to be found among the Indians, and other savages, as it was likewise among several ancient nations with whom it had a connection with religion, which it still retains wherever it prevails. So much devotion does not however exempt these pilgrims from the proverbial censure thrown upon the

* The difference between them is, that those of Mecca are called *Hadjes*, and those of Jerusalem *Mokadsh*, a name formed from that of the city, *El-Kods*.

† I have seen a pilgrim who had lost an arm by it, the cubital nerve being wounded in the operation.

Hadjes; since the Christians say likewise: *beware of the pilgrims of Jerusalem.*

We may well suppose that so great a multitude, residing at Jerusalem for five or six months, must leave behind them considerable sums; and reckoning only fifteen hundred persons, at one hundred pistoles each, we shall find they cannot expend less than a million and a half of livres, (sixty two thousand five hundred pounds). Part of this money is paid to the inhabitants and merchants for necessaries, and these lose no opportunity of imposing upon strangers. Water in 1784, cost twenty sols (ten pence) a sack. Another part goes to the governor and his subalterns, and the remainder is the profit of the convents. Great complaints are made of the improper use the Schismatics make of this money, and their luxury is spoken of as a great scandal, their cells being ornamented with porcelain and tapestry, nay even with fabres, kandjars and other weapons. The Armenians and the Franks are much more modest; with the former, who are poor, it is a virtue of necessity; but with the latter, who are not so, it is prudence.

The convent of these Franks, called *Saint Sauveur*, is the principal religious house of all the Missions of the Holy Land which are in the Turkish empire. Of these they reckon seventeen, composed of Franciscans of every nation, but who are commonly French, Italian, and Spanish. The general administration is entrusted to three individuals of these nations, but so that the superior must be always a native subject of the Pope; the Agent, a subject of the Catholic king, and the Vicar, a subject of his most Christian majesty. Each of these administrators has a key of the general treasury, that the money may not be touched without common consent. Each of them is assisted by a second, called a *Discreet*: these six and a Portuguese *Discreet*, form together the *Directory*, or sove-

reign Chapter, which governs the convent and the whole order. The first legislators had formely so balanced the powers of these administrators that it was impossible for the whole to be governed by the will of one; but as all governments are subject to revolutions, some circumstances which happened a few years since, have changed the nature of this. The following is a short history of the transaction.

About twenty years ago, in consequence of some irregularities incident to all great administrations, the convent of the Holy Land incurred a debt of six hundred purses, or thirty-one thousand two hundred and fifty pounds. This was daily encreasing, the expenditure continuing to exceed the receipts: It would have been an easy matter to liquidate this at one stroke, as the treasury of the holy sepulchre possesses, in diamonds and all sorts of precious stones, in chalices, crucifixes, golden ciboires, (boxes containing the Host,) and other presents of Christian princes, to the amount of upwards of a million of livres; but besides the aversion which the ministers of temples have, at all times, to alienate sacred things, it might be good policy in the present case, not to shew the Turks, nor even the Christians, too great resources. The situation was embarrassing; and it became still more so from the murmurs of the Spanish agent, who loudly complained of being alone obliged to sustain the burthen of the debt, for, in fact, he it was who furnished the most considerable fund. Under these circumstances, J. Ribadeira, who occupied this post died, and chance bestowed the succession on a man, who, still more impatient than himself, determined at every hazard to apply a remedy; and he set about the execution of his project with the more zeal, as he promised himself private advantages in the meditated reform. He therefore prepared his plan; and addressing himself directly to the king of Spain, by means of his confessor, represented to him:

“ That the zeal of the Christian princes having
“ greatly cooled of late years, their ancient largesses
“ to the convent of the Holy Land were considerably
“ diminished; that his most Faithful Majesty had re-
“ trenched more than one half of the forty thousand
“ dollars he was accustomed to bestow; that his
“ most Christian Majesty, thinking the protection he
“ granted sufficient, scarcely paid the three thousand
“ livres he had promised; that Italy and Germany
“ daily became less liberal, and that his Catholic
“ Majesty was the only sovereign who continued the
“ benefactions of his predecessors.” He also stated,
on the other hand, that, “ the expences of the estab-
“ lishment not having suffered a proportionable dimi-
“ nution, a deficiency had been incurred, which ren-
“ dered it necessary to have recourse to an annual
“ loan, that by this means a considerable debt was
“ contracted, which daily encreasing, menaced the
“ institution with final ruin; that among the causes
“ of this debt, the pilgrimage of the monks who
“ came to visit the holy places must be particularly
“ taken into account, that it was necessary to defray
“ the expences of their journey, their passage by sea,
“ their tribute, and board at the convent for two or
“ three years, &c. That it so happened, that the
“ greatest part of these monks came from those very
“ states which had withdrawn their bounties; that
“ is, from Portugal, Germany, and Italy; that it
“ seemed unreasonable for the king of Spain to pay
“ for those who were not his subjects, and that it
“ was a still greater abuse to see the administration
“ of these funds entrusted to a chapter, almost
“ wholly composed of foreigners. The petitioner,
“ insisting on this last article, prayed his Catholic
“ Majesty to interpose in the reformation of the
“ abuses, and to establish new and more equitable
“ regulations, the plan of which he submitted,
“ &c.”

These representations produced the desired effect. The king of Spain first declared himself *Especial Protector of the order of the Holy Land, in the Levant*; and then named the petitioner, *J. Juan Ribeira*, his *Royal Agent*; he gave him in quality of this office, a seal, with the arms of Spain, and entrusted him with the sole management of his *gifts*, without being accountable to any other than himself. From that moment, *J. Juan Ribeira*, become a plenipotentiary, signified to the consistory that henceforward he would have a private treasury, distinct from the common stock; that the latter could continue, as heretofore, charged with the general expences, and that in consequence, all the contributions of the different nations should be paid in there; but as that of Spain bore no proportion to the others, he should apply no more than what was adequate to their respective contingents, retaining the surplus for his private treasury; that the pilgrimages, henceforth, should be at the expence of the nations from whence they came, except the subjects of France, the care of whom he took upon himself. By this regulation, the pilgrimages, and the greatest part of the general expences being limited, the disbursements are more proportionable to the receipts, and they have begun to pay off the debt; but the monks do not view with a favourable eye the agent thus become independent; nor can they pardon him for concentrating in himself almost as much wealth as is possessed by the whole order: for, in eight years, he has received four *conduits*, or *contributions* from Spain, estimated at eight hundred thousand dollars. The money in which these contributions are paid, consisting in Spanish dollars, is usually put on board a French ship which conveys it to Cyprus, under the care of two monks. From Cyprus, part of these dollars are sent to Constantinople, where they are sold to advantage, and converted into Turkish coin. The other part goes directly by the

way of Yafa to Jerusalem, where the inhabitants expect it with as much anxiety as the Spaniards look for the galleons. The agents pay a certain sum into the general treasury, and the remainder is at his disposal. The uses he makes of it consists, first, in a pension of three thousand livres to the French Vicar and his *Discreet*, who by this means, procure him a majority of suffrages. Secondly, in presents to the governor, the Mufti, the Kadi, the Nakib, other great officers, whose credit may be of use to him. He has likewise to support the dignity of his office, which is by no means a trifling expence; for he has his private interpreters, like a consul, his table and his Janisaries: he alone, of all the Franks, mounts on horseback in Jerusalem, and is attended by a body of cavalry; in a word, he is, next to the Mofallam, the first person in the country, and treats with the powers of it, upon a footing of equality. We may suppose, however, that so much respect is not for nothing. A single visit to Djezzar for the church of Nazareth, cost thirty thousand Pataques (above six thousand five hundred and forty-two pounds.) The Mahometans of Jerusalem who desire his money, seek his friendship. The Christians who solicit alms from him, dread even his indifference. Happy the family he selects for his favourites, and woe to the man who has the misfortune to displease him; for his hatred can display itself either by open or indirect means: a hint to the *Wali* ensures the bastinado, without the victim knowing whence it proceeds. So much power made him disdain the customary protection of the ambassador of France, and nothing but such an affair as he had lately with the Pacha of Damascus, could have reminded him that his protection is more efficacious than twenty thousand Sequins. His agents, proud of his protection, abuse their authority, like all subalterns. The Spanish monks of Yafa and Ramla, treat the Christians who depend on them with a

rigour which is very far from evangelical. They excommunicate them in the open church, abusing them by name; they threaten the women who have been indiscreet in talking of them; and oblige them to do public penitence, with a taper in their hands; they deliver over the intractable to the Turks, and refuse every succour to their families; in short, they offend against the customs of the country, and all decorum, by visiting the wives of the Christians, who should only be seen by their very near relations, and by remaining with them, without witnesses, in their apartments, under pretence of confessing them. The Turks are not able to conceive so much liberty without an abuse of it. The Christians, who are of the same opinion, murmur at it, but do no more. Experience has taught them that the indignation of the RR. PP. (reverend fathers) is attended with dreadful consequences. It is whispered, that, six or seven years ago, they procured an order from the Captain Pacha, to cut off the head of an inhabitant of Yafa who opposed them. Fortunately the Aga took upon himself to suspend the execution, and to undeceive the Admiral; but their animosity has never ceased to persecute this man, by every kind of chicanery. Not long ago, they solicited the English ambassador, under whose protection he has placed himself, to surrender him to a punishment, which in fact was only an unjust revenge.

Let us now quit these details, which, however, very properly describe the present situation of this country. When we leave Jerusalem, we only find three places in this part of the Pachalic which merit attention.

The first is *Raba*, the ancient Jericho, situated six leagues to the north-east of Jerusalem, in a plain six or seven leagues long, by three wide, around which are a number of barren mountains, that render it extremely hot. Here formerly was cultivated the

balm of Mecca. From the description of the Hadjes, this is a shrub, similar to the pomegranate-tree, with leaves like those of rue: it bears a pulpy nut, in which is contained a kernel that yields the resinous juice we call *balm* or *balsam*. At present there is not a plant of it remaining at Raha; but another species is to be found there, called *Zakkoun*, which produces a sweet oil, also celebrated for healing wounds. This *Zakkoun* resembles a plumb-tree; it has thorns four inches long, with leaves like those of the olive-tree, but narrower and greener, and prickley at the end; its fruit is a kind of acorn, without calix, under the bark of which is a pulp, and then a nut, the kernel of which gives an oil that the Arabs sell very dear; this is the sole commerce of Raha, which is no more than a ruinous village.

The second place deserving notice, is *Bait-el-lahm*, or Bethlehem, so celebrated in the history of Christianity. This village, situated two leagues south-east of Jerusalem, is seated on an eminence, in a country full of hills and vallies, and might be rendered very agreeable. The soil is the best in all these districts; fruits, vines, olives, and sesamum succeed here extremely well; but as is the case every where else, cultivation is wanting. They reckon about six hundred men in this village capable of bearing arms upon occasion, and this often occurs, sometimes to resist the Pacha, sometimes to make war with the adjoining villages, and sometimes in consequence of intestine dissentions. Of these six hundred men, about one hundred are Latin Christians, who have a Vicar dependent on the great convent of Jerusalem. Formerly their whole trade consisted in the manufacture of beads; but the reverend fathers not being able to find a sale for all they could furnish, they have resumed the cultivation of their lands. They make a white wine, which justifies the former celebrity of the wines of Judea, but it has the bad

property of being very heady. The necessity of uniting for their common defence prevails over their religious differences, and makes the Christians live here in tolerable harmony with the Mahometans, their fellow citizens. Both are of the party *Yamani*, which, in opposition to that called *Kaisi*, divides all Palestine into two factions, perpetually at variance. The courage of these peasants, which has been frequently tried, has rendered them formidable through all that country.

The third and last place of note is *Habroun*, or Hebron, seven leagues to the south of Bethlehem; the Arabs have no other name for this village than *El-Kalit**, the *well beloved*, which is the epithet they usually apply to Abraham, whose sepulchral grotto they still shew. Habroun is seated at the foot of an eminence, on which are some wretched ruins, the misshapen remains of an ancient castle. The adjacent country is a sort of oblong hollow, five or six leagues in length, and not disagreeably varied by rocky hillocks, groves of fir-trees, stunted oaks, and a few plantations of vines and olive-trees. These vineyards are not cultivated with a view to make wine, the inhabitants being such zealous Mahometans as not to permit any Christians to live among them: they are only of use to procure dried raisins which are badly prepared, though the grapes are of an excellent kind. The peasants cultivate cotton, likewise, which is spun by their wives, and sold at Jerusalem and Gaza. They have also some soap manufactories, the Kali for which is sold them by the Bedouins, and a very ancient glass-house, the only one in Syria. They make there a great quantity of coloured rings, bracelets for the wrists and legs, and for the arms above the elbows†, besides a variety of

* The *K* is here used for the Spanish *Iota*.

† These rings are often more than an inch in diameter; they are passed on the arms of children, and it often happens, as I

other trinkets, which are even sent to Constantinople. In consequence of these manufactures, Habroun is the most powerful village in all this quarter, and is able to arm eight or nine hundred men, who adhere to the faction Kaifi, and are the perpetual enemies of the people of Bethlehem. This discord, which has prevailed throughout the country, from the earliest times of the Arabs causes a perpetual civil war. The peasants are incessantly making inroads on each other's lands, destroying their corn, dourra, sesamum, and olive-trees, and carrying off their sheep, goats, and camels. The Turks, who are every where negligent in repressing similar disorders, are the less attentive to them here, since their authority is very precarious; the Bedouins, whose camps occupy the level country, are continually at open hostilities with them, of which the peasants avail themselves to resist their authority, or do mischief to each other, according to the blind caprice of their ignorance, or the interest of the moment. Hence arises an anarchy, which is still more dreadful than the despotism which prevails elsewhere, while the mutual devastations of the contending parties render the appearance of this part of Syria more wretched than that of any other.

Proceeding from Hebron towards the west we arrive, after five hours journey, at some eminences, which, on this side, form the last branch of the mountains of Judea. There the traveller, wearied with the rugged country he has quitted, views with pleasure the vast plain which extends beneath his feet, to the sea that lies before him. This is the plain which, under the name of *Falastin*, or Palestine, terminates, on this side, the country of Syria, and forms the last division concerning which it remains for me to speak.

have frequently seen, that the arm growing bigger than the ring, a ridge of flesh is formed above and below, so that the ring is buried in a deep hollow and cannot be got off, and this is considered as a beauty.

CHAP. XII.

Of Palestine.

PALESTINE, in its present state, comprehends the whole country included between the Mediterranean to the west, the chain of mountains to the east, and two lines, one drawn to the south, by Kan Younes, and the other to the north, between Kaifaria and the rivulet of Yafa. This whole tract is almost entirely a level plain, without either river or rivulet in summer, but watered by several torrents in winter. Notwithstanding this dryness the soil is good, and may even be termed fertile, for when the winter rains do not fail, every thing springs up in abundance; and the earth, which is black and fat, retains moisture sufficient for the growth of grain and vegetables during the summer. More dourra, sesamum, water-melons, and beans, are sown here than in any other part of the country. They also raise cotton, barley, and wheat; but though the latter be most esteemed, it is less cultivated, for fear of too much inviting the avarice of the Turkish governors, and the rapacity of the Arabs. This country is indeed more frequently plundered than any other in Syria, for being very proper for cavalry, and adjacent to the Desert, it lies open to the Arabs, who are far from satisfied with the mountains; they have long disputed it with every power established in it, and have succeeded so far as to obtain the concession of certain places, on paying a tribute, from whence they infest the roads, so as to render it unsafe to travel from Gaza to Acre. They might even have obtained the entire possession of it, had they known how to avail themselves of their strength; but, divided among themselves by jarring interests, and family quarrels,

they turn those weapons on each other which they should employ against the common enemy, and are at once enfeebled by their disregard of all good order and government, and impoverished by their spirit of rapacity.

Palestine, as I have said, is a district independent of every Pachalic. Sometimes it has governors of its own, who reside at Gaza under the title of Pachas; but it is usually, as at present, divided into three appenages, or *Melkana*, viz. Yafa, Loudd, and Gaza. The former belongs to the *Walda*, or Sultana Mother. The Captain Pacha has received the two others as a recompense for his services, and reward for the head of Daher. He farms them to an Aga, who resides at Ramla, and pays him two hundred and fifteen purses for them, viz. one hundred and eighty for Gaza and Ramla, and thirty-five for Loudd.

Yafa is held by another Aga, who pays one hundred and twenty purses to the Sultana. For this he receives the whole miri and poll-tax of the town, and some adjacent villages; but the chief part of his revenue arises from the custom-house, as he receives all the duties on imports and exports. These are pretty considerable, as it is at Yafa that the rice of Damietta is landed for Jerusalem, and the merchandize of a small French factory at Ramla; it is the port likewise for the pilgrims of the Morea and Constantinople, and the produce of the coast of Syria, from hence also all the spun cottons of Palestine, and the commodities exported from this country, along the coast, are shipped. The forces this Aga maintains, are only thirty musketeers, horse and foot, who scarcely suffice as a guard to two wretched gates, and to keep off the Arabs.

As a sea-port, and place of strength, Yafa is nothing; but it is capable of becoming one of the most important on the coast, on account of two springs of fresh water which are within its walls, on the sea

shore. These springs enabled it to make the obstinate resistance it did in the late wars. The port, which is formed by a pier, and at present choaked up, might be cleared out, and made to contain twenty vessels of three hundred tons burthen each. Those which come there at present, are obliged to cast anchor at sea, at near a league's distance from the shore: where they are by no means safe, the bottom being a bank of rock and coral, which extends as far as Gaza.

Before the two late sieges, this was one of the most agreeable towns on the coast. Its environs were covered with a forest of orange and lemon trees, citrons, and palms, which here first begin to bear good fruit.* Beyond it the country abounds in olive trees, as large as walnut trees; but the Mamlouks having cut them all down for the pleasure they take in destroying, or to make fires, Yafa has lost its greatest convenience and ornament; fortunately it was impossible to deprive it of the rivulets that water its gardens, and nourish the young suckers, which have already begun to shoot.

Three leagues to the east of Yafa is the village of *Loudd*, the ancient *Lydda*, and *Diospolis*. A place lately ravaged by fire and sword would have precisely the appearance of this village. From the huts of the inhabitants to the Serai, or palace of the Aga, is one continued heap of rubbish and ruins. A weekly market, however, is held at Loudd, to which the peasants of the environs bring their spun cotton for sale. The poor Christians who dwell here, shew, with great veneration, the ruins of the church of St. Peter, and make strangers sit down on a column, which, they say that Saint once rested on. They point out the place where he preached, where he prayed, &c. The whole country is full of such traditions. It is im-

* We meet with some after having passed Acre, but their fruit ripens with difficulty.

possible to stir a step without being shewn the traces of some apostle, some martyr, or some virgin; but what credit can be due to these traditions, when experience proves that the history of Ali Bey and Daher is already disputed and uncertain?

One third of a league to the southward of Loudd, along a road lined with nopals, stands Ramla, the ancient Arimathea. This town is almost in as ruinous a state as Loudd itself. We meet with nothing but rubbish within its boundaries; the Aga of Gaza resides here in a Serai, the floors and walls of which are tumbling down. "Why," said I, one day to one of his Sub-Agas, "does he not at least repair his own apartment?" "Yes," replied he, "but if another should next year obtain his place, who would repay him the expence?"

He maintains about one hundred horsemen, and as many Barbary soldiers, who are lodged in an old Christian church, the nave of which is used as a stable, and in an ancient kan, which is disputed with them by the scorpions. The adjacent country is planted with lofty olive trees, disposed in quincunces. The greatest part of them are as large as the walnut trees of France; but they are daily perishing through age, the ravages of contending factions, and even from secret mischief; for, in these countries, when a peasant would revenge himself of his enemy, he comes by night, and saws or cuts his trees close to the ground, and the wound, which he takes care to cover, draining off the sap like an issue, the olive tree languishes and dies. Amid these plantations, we meet, at every step, with dry wells, cisterns fallen in, and vast vaulted reservoirs, which prove that, in ancient times, this town must have been upwards of a league and a half in circumference. At present it scarcely contains two hundred families. The little land which is cultivated, by a few of them, belongs to the Mufti, and two or three persons related to him. The rest con-

tent themselves with spinning cotton, which is chiefly purchased by two French houses established there. They are the last in this part of Syria, there being none either at Jerusalem or Yafa. At Ramla there is also a soap manufactory, which is almost all sent into Egypt. I must not forget to mention that the Aga built here, in 1784, the only wind-mill I have seen in Syria or Egypt, though they are said to have been originally invented in these countries. It was completed after the plan, and under the direction of a Venetian carpenter.

The only remarkable antiquity at Ramla is the minoret of a ruined mosque on the road to Yafa. By an Arabic inscription it appears to have been built by Saf-el-din, Sultan of Egypt. From the summit, which is very lofty, the eye follows the whole chain of mountains, which begins at Nablous, and skirting the plain, loses itself toward the south. In this plain, between Ramla and Gaza, we meet with a number of villages, badly built, of dried mud, and which, like their inhabitants, exhibit every mark of poverty and wretchedness. The houses, on a nearer view, are only so many huts, sometimes detached, at others ranged in the form of cells around a court-yard, inclosed by a mud wall. The women have there, as elsewhere, separate apartments. In winter, they and their cattle may be said to live together, the part of the dwelling allotted to themselves being only raised two feet above that in which they lodge their beasts. The peasants are by this means kept warm, without burning wood; and œconomy indispensable in a country absolutely destitute of fuel. As for the fire necessary for culinary purposes, they make it of dung kneaded into cakes, which they dry in the sun, exposing them to its rays on the walls of their huts. In summer their lodging is more airy, but all their furniture consists in a single mat, and a pitcher for drinking. The environs of these villages are sown,

at the proper season, with grain and water melons; all the rest is a desert, and abandoned to the Bedouin Arabs, who feed their flocks on it. At every step we meet with ruins of towers, dungeons, and castles with fosses, and sometimes a garrison, consisting of the lieutenant of an Aga, and two or three Barbary soldiers, with nothing but a shirt and a musket; but more frequently they are inhabited by jackals, owls, and scorpions.

Among the inhabited places may be distinguished the village of Mesmia, four leagues from Ramla, on the road to Gaza, which furnishes a great deal of spun cotton. At the distance of a short league to the east, is a detached eminence, called for that reason *El-Tell*. It is the capital of the tribe of Wahidia, one of the Shaiks of which named Bakir, was assassinated three years ago by the Aga of Gaza, at an entertainment to which he had invited him. On this hill are found many remains of habitations and caverns, such as are to be met with in the fortifications of the middle ages. This must have been at all times a favourite situation, from its steepness, and the spring which is at the bottom. The channel through which it flows, is the same that loses itself near Ascalon (*Ascalon*.) To the east the soil is rocky, but covered with scattered firs, olives, and other trees. Bait-djibrim, the Betha-Gabris of Antiquity, is an inhabited village not quite three quarters of a league to the southward. Seven hours journey from thence, toward the south-west, is another village of the Bedouins, called the Hesi, which has in its neighbourhood an artificial square hill, above seventy feet high, one hundred and fifty wide, and two hundred long. The whole ascent to it has been paved, and on its summit we still find the remains of a very strong citadel.

As we approach the sea, three leagues from Ramla, on the road to Gaza, is Yabna, the ancient Jamnia. This village has nothing remarkable, but a fictitious

eminence like that of Hesi, and a rivulet, the only one in these districts which does not dry up in summer. Its whole course is not more than a league and a half. Before it reaches the sea, it forms a morass called Roubin, where the country people had begun a plantation of sugar canes, which made the most promising appearance; but, after the second crop, the Aga demanded a contribution, which compelled them to desert it.

Leaving Yabna, we meet successively with various ruins, the most considerable of which are at Ezdoud, the ancient Azotus, famous at present for its scorpions. This town, so powerful under the Philistines, affords no proofs of its ancient importance. Three leagues from Ezdoud is the village of El-Majdal, where they spin the finest cottons in Palestine, which, however, are very clumsy. On the right is Azkalan, whose deserted ruins are every day removing farther from the sea, by which it formerly was washed. This whole coast is daily accumulating sands, insomuch, that most of the places which it is known anciently were sea ports, are now four or five hundred paces within land; of this Gaza is an example.

Gaza, called by the Arabs *Rezsa*, with a strong guttural pronunciation of the *r*, is composed of three villages, one of which, under the name of *the Castle*, is situated between the two others, on an inconsiderable eminence. This castle, which might have been strong for the time in which it was built, is now nothing but a heap of rubbish. The Serai of the Aga, which makes a part of it, is in as ruinous a state as that of Ramla; but it has the advantage of a most extensive prospect. From its walls, we view at once the sea, from which it is separated by a sandy beach, a quarter of a league wide, and the country, whose date trees, and level and naked aspect, as far as the eye can discern, reminds us of Egypt; and, in fact, in this latitude, the soil and climate both ap-

pear to be truly Arabian. The heats, the drought, the winds, and the dews, are the same as on the banks of the Nile; and the inhabitants have the complexion, stature, manners, and accent of the Egyptians, rather than those of the Syrians.

The situation of Gaza, by fitting it for the medium of communication between these two nations, has rendered it at all times a town of some importance. The ruins of white marble sometimes found there, prove it was formerly the abode of luxury and opulence; nor was it unworthy of this preference. The black soil of the surrounding country is extremely fertile, and the gardens, watered by limpid streams, produce, even yet, without art, pomegranates, oranges, exquisite dates, and ranunculus roots, in great request, even at Constantinople. It has, however, shared in the general destruction; and, notwithstanding its proud title of the capital of Palestine, it is no more than a defenceless village, peopled by at most only two thousand inhabitants. The manufacture of cottons is their principal support; and, as they have the exclusive supply of the peasants and Bedouins of the neighbourhood, they may keep going about five hundred looms. There are likewise two or three soap manufactories. The article of ashes, or *kalis*, was formerly a considerable commerce. The Bedouins, who procured these ashes, by simply burning the plants of the desert, sold them at a reasonable rate; but since the Aga has monopolized this commodity, the Arabs, compelled to part with it at his price, are no longer anxious to collect it; and the inhabitants, constrained to purchase at his pleasure, neglect making soap. These ashes, however, are an object worthy of attention, from the quantity of alkali they contain.

A branch of commerce more advantageous to the people of Gaza, is furnished by the caravans which pass and repass between Egypt and Syria. The provisions they are obliged to take for their four days

journey in the desert produce a considerable demand for their flour, oils, dates, and other necessaries. Sometimes they correspond with Suez, on the arrival or departure of the Djedda fleet, as they are able to reach that place in three long days journey. They fit out, likewise, every year, a great caravan, which goes to meet the pilgrims of Mecca, and conveys to them the convoy or *Djerda* of Palestine, and supplies of various kinds, with different refreshments. They meet them at Maon, four days journey to the south-south-east of Gaza, and one day's journey to the north of Akaba, on the road to Damascus. They also purchase the plunder of the Bedouins; an article which would be a Peru to them, were these accidents more frequent. It is impossible to ascertain the profits they made by the plunder of the great caravan in 1757. Two-thirds of upwards of twenty thousand camel loads, of which the Hadj, or caravan of pilgrims, was composed, were brought to Gaza. The ignorant and famished Bedouins, who know no value in the finest stuffs, but as they serve to cover them, sold their cashmire, shawls, callicoës, muslins, firsakes, Persian stuffs, coffee, and gums, for a few piastrës. We may judge from the following story, of the ignorance and simplicity of these inhabitants of the deserts. A Bedouin of Anaza having found, among his booty, several bags of fine pearls took them for doura, and had them boiled to eat them; but seeing that they did not soften, was on the point of throwing them away, when an inhabitant of Gaza gave him in exchange for them a red bonnet of Faz. A similar incident happened in 1779, at the time of the pillage of the caravan which M. de St. Germain accompanied; and but the other day, in 1784, the caravan of Barbary, consisting of upwards of three thousand camels, was likewise pillaged, and the quantity of coffee dispersed by the Bedouins throughout Palestine, was so great, as to cause the price of that article to

fall suddenly to one half of what it was before; and it would have fallen still more, had not the Aga prohibited the sale of it, in order to compel the Bedouins to deliver it all into his hands. A monopoly of this sort in the affair of 1779, produced him more than eighty thousand piastres. One year with another, adding these casualties to his other extortions, to the miri, the customs, the twelve hundred camel loads, which he purloins from the three thousand he should furnish for the Mecca convoy, he raises, one year with another, a revenue full double the hundred and eighty purses he pays for his farm.

Beyond Gaza there are only deserts. It must not, however, be understood, that the country becomes suddenly uninhabitable; we still continue, for a day's journey, along the sea coast, to meet with some cultivated spots and villages. Such is Kan-younes, a sort of castle, in which the Mamlouks keep a garrison of twelve men. Such also is El-Arish, the last spot where water which can be drank; is to be found until you arrive at Salaiha in Egypt. El-Arish is three quarters of a league from the sea, in a sandy country, as is all that coast. Returning to the desert, by the east, we meet with other strips of cultivable land, as far as the road to Mecca. These are little vallies, where a few peasants have been tempted to settle by the waters, which collect at the time of the winter rains, and by some wells. They cultivate palm-trees and doura, under the protection, or rather exposed to the rapine, of the Arabs. These peasants, separated from the rest of mankind, are half savages, and more ignorant and wretched than the Bedouins themselves. Incapable of leaving the soil they cultivate, they live in perpetual dread of losing the fruit of their labours. No sooner have they gathered in their harvest, than they hasten to secret it in private places, and retire among the rocks which border on the Dead Sea. This country has not been visited by any travel-

ler, but it well merits such an attention; for, from the reports of the Arabs of Bakir, and the inhabitants of Gaza, who frequently go to Maan, and Karak on the road of the pilgrims, there are, to the south-east of the lake Asphaltites, within three days journey, upwards of thirty ruined towns, absolutely deserted. Several of them have large edifices, with columns which may have belonged to ancient temples, or at least to Greek churches. The Arabs sometimes make use of them to fold their cattle in; but in general avoid them, on account of the enormous scorpions with which they swarm. We cannot be surpris'd at these traces of ancient population, when we recollect that this was the country of the Nabatheans, the most powerful of the Arabs; and of the Idumeans, who, at the time of the destruction of Jerusalem, were almost as numerous as the Jews, as appears from Josephus, who informs us, that on the first rumour of the march of Titus against Jerusalem, thirty thousand Idumeans instantly assembled, and threw themselves into that city for its defence. It appears that, besides the advantage of being under a tolerably good government, these districts enjoyed a considerable share of the commerce of Arabia and India, which increased their industry and population. We know that, as far back as, the time of Solomon, the cities of *Atsioum-Geber* (Ezion Geber), and *Ailab* (Elloth) were highly frequented marts. These towns were situated on the adjacent gulf of the Red Sea, where we still find the latter yet retaining its name and perhaps the former in that of *El-Alkaba*, or the End (of the Sea.) These two places are in the hands of the Bedouins, who being destitute of a navy and commerce, do not inhabit them. But the pilgrims of Cairo report that there is at El-Akâba a wretched fort, with a Turkish garrison, and good water; an advantage truly valuable in these countries. The Idumeans, from whom the Jews only took their ports at intervals, must have

found in them a great source of wealth and population. It even appears, that they rivalled the Tyrians, who also possessed a town, the name of which is unknown, on the coast of Hadjaz, in the desert of Tih, and the city of Faran, and without doubt El-Tor, which served it by way of Port. From this place the caravans might reach Palestine and Judea in eight or ten days. This route which is longer than that from Suez to Cairo, is infinitely shorter than that from Aleppo to Bassora, which requires five and thirty or forty days, and possibly in the present state of things, would be the best, if the passage by Egypt should remain entirely shut up. Nothing more would be necessary, than to make an agreement with the Arabs, treaties with whom are infinitely more secure than with the Mamlouks.

The Desert of Tih, which I have just mentioned, is that into which Moses conducted the Jews, and kept them for a whole generation, to initiate them in the art of war, and transform a multitude of shepherds into a nation of conquerors. The name *El-Tih* seems to have a reference to their history, as it signifies the Country of Wandering; but we must not imagine this to be in consequence of tradition, since the present inhabitants are foreigners, and men in all countries find it difficult to recur even to their grandfathers; it is from reading the Hebrew books and the Koran, that the name of El-Tih has been given this tract by the Arabs; they also call it *Barr-el-tour-Sina*, which signifies Country of Mount Sinai.

This desert, which is the boundary of Syria to the south, extends itself in the form of a peninsula between the two gulphs of the Red Sea; that of Suez to the west, and that of El-Akaba to the east. Its breadth is ordinarily thirty leagues, and its length seventy. This great space is almost wholly occupied by barren mountains which join those of Syria, on the north, and, like them, consist of calcareous stone: but as

we advance to the southward they become granitous, and Sinai and Horeb are only enormous masses of that stone. Hence it was the ancients called this country *Arabia Petrea*. The soil in general is a dry gravel, producing nothing but thorny acacias, tamarisks, firs, and a few scattered shrubs. Springs of water are very rare, and those few are sometimes sulphureous, and *Thermal*, as at Hammam-Faraoun, at others brackish and disagreeable, as at El-Nabá opposite Suez; this saline quality prevails throughout the country, and there are mines of fossil salt in the northern parts. In some of the vallies, however, the soil becoming better, as it is formed of the earth washed from the rocks, is cultivable after the winter rains, and may almost be stiled fertile. Such is the vale of Djirandel, in which there are even groves of trees. Such also is the vale of Faran, in which the Bedouins say there are ruins, which can be no other than those of the ancient city of that name. In former times every advantage was made of this country that could be obtained from it,* but at present, abandoned to nature, or rather to barbarism, it produces nothing but wild herbs. Yet, with such scanty provision this Desert subsists three tribes of Bedouins, consisting of about five or six thousand Arabs, dispersed in various parts. They are called by the general name of *Tawara*, or the Arabs of Tor, the best known and most frequented place in the country. It is situated on the eastern side of the branch of Suez, in a sandy and low ground, as is all this coast. Its whole merit consists in a pretty good road for shipping, and water which may be drank; the Arabs also bring some thither from Sinai, which is really good. The ships of Suez lay in their provisions here when they sail to Djedda.

* M. Niebhur discovered, on a mountain, some tombs with hieroglyphics, which may induce us to believe the Egyptians had made settlements in these countries.

There is nothing further to notice except that we find here a few palm-trees, the ruins of a wretched fort without a garrison, a small Greek convent, and some huts of poor Arabs, who live on fish and serve as sailors for wages. There are also to the southward, two small villages of Greeks, who are equally poor and miserable. As for the subsistence of the three tribes, it is derived from their goats, camels, some acacia gums sold in Egypt, and their robberies on the roads of Suez, Gaza, and Mecca.

These Arabs have no mares, like the other tribes, or at least they bring up very few; but they supply the want of them by a sort of camel, which they call *Hedjina*. This animal is of the same shape with the common camel, with this difference, that he is made much more slender, and moves quicker. The ordinary camel only goes a foot pace, and measures his steps so slowly, that he hardly advances thirty-six hundred yards an hour; the *Hedjina*, on the contrary, trots at pleasure, and, from the length of his paces, easily goes two leagues an hour. The great advantage of this animal is to be able to continue this pace thirty or forty hours successively, almost without rest, and without eating or drinking: he is made use of by couriers, and for long journeys which require expedition; if he has once got the start by four hours the swiftest Arabian mare never can overtake him; but one must be accustomed to the motion of this animal; his jolts soon flay the skin, and disable the best rider, in spite of the cushions with which they stuff the saddle. All that we have heard of the swiftness of the dromedary, may be applied to this animal. He has however only one bunch; nor do I recollect, out of five and twenty or thirty thousand camels, I may have seen in Syria and Egypt, ever to have observed a single one with two.

But the most considerable profits of the Bedouins of Tor arise from the pilgrimage of the Greeks to

the convent of Mount Sinai. The schismatics have so much faith in the relics of saint Chatharine, which they say are deposited there, that they doubt of their salvation if they have not visited them at least once in their lives. They repair thither even as far as from the Morea and Constantinople. The rendezvous is at Cairo, where the monks of Mount Sinai have correspondents, who treat with the Arabs for a convoy. The ordinary price is twenty-eight pataques, (six pounds two and six-pence) each passenger, exclusive of provisions. On their arrival at the convent, the Greeks perform their devotions, visit the church, kiss the relics and images, mount on their knees more than one hundred steps off the-hill of Moses, and conclude by making an offering, the value of which is not fixed, but rarely amounts to less than fifty pataques*.

Except at the time of these visitations, which only take place once a year, this convent is the most desert and savage abode in nature. The adjacent country is nothing but a pile of rugged and naked rocks. Mount Sinai, at the foot of which it is seated, is a peak of granite which seems to overwhelm it. The house is a sort of square prison, whose lofty walls have only one window, which, though very high up, serves likewise by way of door; for, to enter this convent, you must get into a basket, which the monks leave suspended at the window, and occasionally hoist up with ropes. This precaution arises from their fear of the Arabs, who might force the convent if the usual entrance was

* To these pilgrims we must attribute the inscriptions and clumsy figures of asses, camels, &c. engraven on these rocks, which have from thence acquired the name of *Djebel Mokattab*, or Written Mountain. *Mr. Wortley Montague* who travelled a great deal in these countries, and carefully examined these inscriptions, is of this opinion. *M. Cour de Gebelin*, author of *Le Monde Primitif*, has lost his labour, endeavouring to discover some mysterious meaning.

by a door: they never open the only one there is, except on a visit from the bishop, at all other times it is kept closely shut. This visitation should take place every two or three years; but, as it necessarily occasions a considerable contribution for the Arabs, the monks evade it as much as possible. They do not, however, so easily escape the daily distribution of a certain quantity of provisions; and the quarrels which arise, on this subject, frequently drawn on them a shower of stones, and even musket-shot from the discontented Bedouins. They never stir into the country, but by dint of labour, have made a garden, on the rocks, with earth they have brought thither, which serves them to walk in. They cultivate excellent fruit there, such as grapes, figs, and especially pears, of which they make presents, and which are highly esteemed at Cairo, where they have no such fruit. Their domestic life is the same with that of the Greeks and Maronites of Lebanon, that is, it is entirely devoted to useful works or to religious duties. But the Monks of Lebanon enjoy the inestimable advantage of liberty and security, which is not possessed by those of Sinai. In other respects, this confined and melancholy state of existence is that of all the monks, in the country of the Turks. Thus live the Greeks of Mar-Simeon to the north of Aleppo, and of Mar-Saba on the Dead-sea; this also is the life of the Copts in the convents of the desert of Saint Macarius, and in that of Saint Anthony. Every where their convents are prisons, with no other light than a window by which they receive their victuals; and every where are they built in dismal places, destitute of whatever can give pleasure, and where nothing is to be found but rocks and stones, without either grass or moss, and yet they are full of monks. There are fifty at Sinai, five and twenty at Mar-Saba, and upwards of three hundred in the two Deserts of Egypt. I one day enquired the reason of this, in a conversation

with one of the superiors of Mar-hanna, and asked him, "What could induce men to engage in a mode of life so miserable?" "What" said he, "are not you a Christian? Is not this the path which leads to heaven?"—"But," replied I, "we may also obtain salvation without renouncing the world; (and between ourselves, father,) I do not perceive that the monks, though they are pious, possess that ancient fervour which throughout life, kept its eyes fixed on the hour of death." "It is true," said he, "we have no longer the austerity of the ancient Anchorites, and in reality this is one reason why our convents are so full. You who come from a country where men live in security and abundance, may consider our life as an insupportable self-denial, and our retreat from the world as a sacrifice. But, in the situation of this country, perhaps, the case is different. What can we do? Turn merchants! We should then be over-whelmed with the cares of business and our families, and, after having worked hard for thirty years, comes the Aga, the Pacha, or the Cadi; we are brought to trial without even the shadow of a crime; witnesses are suborned to accuse us; we are bastinadoed, plundered, and turned into the world as naked as the first day we entered it. As for the peasant, his case is still worse, the Aga oppresses him, the soldier pillages him, and the Arabs rob him. Shall we become soldiers? the profession is laborious and dangerous, and how it will end not very certain. It may seem hard perhaps to shut ourselves up in a convent; but, at least, we live there in peace, and, though in a state of habitual abstinence and poverty, we perhaps possess and enjoy more than we should if we had continued in the world. Observe the situation of the peasants, and look at ours. We possess every thing they have, and even what they have not; we are better clad, and better fed; we drink

“ wine and coffee: and who are our monks but the
 “ children of peasants? You talk of the Copts of
 “ Saint Macarius and Saint Anthony! Be assured
 “ their condition is much better than that of the Be-
 “ douins and Fellahs who surround them.”

I own I was astonished at so much frankness, and just reasoning; but I felt, more forcibly than ever, that the human heart is moved by the same springs, in every situation. The desire of happiness is every where the motive, whether sought in hope or actual enjoyment, and there is always the most to gain in the part which it adopts. The discourse of this monk may suggest many other reflections, and shew how far the spirit of retirement from the world is connected with the state of any government; from what causes and under what circumstances it must originate, be predominant, decline, &c. But I shall now conclude this geographical view of Syria, and resume, in a few words, what I have said of its revenues and forces, to enable the reader to form a compleat idea of its political state,

CHAP. XIII.

Political state of Syria resumed.

SYRIA may be considered as a country composed of three long strips of land of different qualities: one of these, extending along the Mediterranean, is a warm, humid valley, the healthiness of which is doubtful, but which is extremely fertile; the other, which is the frontier of this, is a mountainous and rude soil, enjoying a more salubrious temperature; the third, which lies behind the mountains to the east, combines the dryness of the latter with the warmth of the former. We have seen by what a happy com-

combination of the properties of climate and soil this province unites in a small compass the advantages and productions of different zones, inasmuch, that nature seems to have designed it for one of the most agreeable habitations of this continent. It may be reproached, however, like almost all hot countries, with wanting that fresh and animated verdure which almost perpetually adorns our fields; we see there none of that gay carpeting of grass and flowers which decorate the meadows of Normandy and Flanders, nor those clumps of beautiful trees which gave such richness and animation to the landscapes of Burgundy and Brittany. As in province, the land of Syria has almost always a dusty aspect, which is only enlivened here and there by firs, mulberry-trees, and vineyards. This deficiency is less the fault of nature, possibly, than that of art; had not these countries been ravaged by the hand of man, they might perhaps at this day have been shaded with forests. Thus much is certain, and it is the advantage of hot over cold countries, that in the former, wherever there is water, vegetation may be perpetually maintained and made to produce an uninterrupted succession of fruits to flowers, and flowers to fruits. In cold, nay even in temperate climates, on the contrary, nature benumbed for several months, loses in a sterile slumber the third part, or even half the year. The soil which has produced grain, has not time, before the decline of the summer heat, to mature vegetables; a second-crop is not to be expected, and the husbandman sees himself condemned to a long and fatal repose. Syria, as we have seen, is exempt from these inconveniencies; if therefore it so happens, that its productions do not correspond with its natural advantages, this is less owing to its physical than political state. To fix our ideas on this head, let us resume, in a few words, what we have already explained in detail of the revenues, forces, and population of the province.

From the state of the contributions of each pachalic, it appears that the annual sum paid by Syria into the *Kefna*, or Treasury of the Sultan, amounts to two thousand three hundred and forty-five purses, viz,

For Aleppo	-	-	800	Purses
Tripoli	-	-	750	
Damascus	-	-	45	
Acre	-	-	750	
Palestine	-	-	—	

Total 2345

Which are equal to 2,931,250 livres, (122,135*l.* 8*s.* 4*d.*)

To this sum must be added, first, the casual inheritance of the fortunes of the Pachas, and of individuals, which may be estimated at one thousand purses, annually; secondly, the poll tax paid by the Christians, called *Karadji*, which is almost every where distinct from the other taxes, and is accountable directly to the *Kefna*. This capitation does not take place in the countries which are sub-let, as those of the Maronites and Druzes, but is confined to the *Rayas*, or immediate subjects. The capitation tickets are from three and five to eleven piasters a head. It is difficult to estimate the total produce, but allowing one hundred and fifty thousand to pay the tax, at the mean rate of six piasters, we have the sum of 2,250,000 livres; and we cannot be far from the truth, if we compute the total of the Sultan's revenue from Syria to be 7,500,000 livres, (312,500*l.*)

Let us now estimate what the country produces to those who farm it, and we shall have

For Aleppo	-	-	2,000	Parfes
Tripoli	-	-	2,000	
Damascus	-	-	10,000	
Acre	-	-	10,000	
Palestine	-	-	600	
			<hr/>	
Total			24,600	

Which make 30,750,000 livres, (1,281,250*l.*) This sum must be considered as the least we can allow for the produce of Syria, the profits of the sub-farms, such as the countries of the Druzes, the Maronites, the Ansarians, &c. not being included.

The military establishment is by no means proportionable to what in Europe we should expect from such a revenue; all the troops of the Pachas united cannot amount to more than 5,700 men, both cavalry and infantry, viz.

		<i>Cavalry.</i>		Natives of <i>Barbary.</i>
For Aleppo	-	600	-	500
Tripoli	-	500	-	200
Acre	-	1,000	-	900
Damascus	-	1,000	-	600
Palestine	-	300	-	100
			<hr/>	
Total			3,400	2,300

The constant forces of the country then consist in three thousand four hundred cavalry, and two thousand three hundred Barbary infantry. It is true, that, in extraordinary cases, these are joined by the Janisaries, and that the Pachas enlist vagabond volunteers from every quarter, which form those sudden armies we have seen collected in the wars of Daher and Ali Bey: but the sketch I have given of the military skill of these armies, and the discipline of such troops, may convince us, that Syria is still worse defended

than Egypt. We must, however, allow the Turkish soldiers two inestimable good qualities; a frugality which enables them to subsist in the most exhausted country, and a bodily health capable of enduring the greatest fatigues. This is the effect of the hardships to which they are inured, by their manner of living. Continually on horseback, and in the field, lying on the earth, and sleeping in the open air, they do not experience that contrast between the luxurious life of cities, and the fatigue of camps, which is so fatal to the soldiers of polished nations.

Syria and Egypt, compared with respect to the facility with which they may be attacked or defended, differ almost in every point. Egypt is protected from a foreign enemy on the land side by her deserts, and on that of the sea, by her dangerous coast. Syria, on the contrary, is open on the side of the continent by the Diarbekar, and exposed also on that of the Mediterranean by a coast every where accessible. It is easy to make a descent in Syria, but very difficult to land in Egypt: Egypt once invaded is conquered; Syria may resist; Egypt when conquered is extremely difficult, to keep, and easily lost; Syria is so easily defended, it is impossible it should be lost. Less skill is necessary to conquer one, than to preserve the other. The reason is, that Egypt being a country of plains, war there makes a rapid progress; every moment brings on a battle, and every battle is decisive; Syria, on the contrary, being a mountainous country, war there must be a war of posts, and every loss may be repaired.

The subject of population, which remains to be discussed, is infinitely more difficult than the two preceding ones. Calculations of this kind can only be made from analogies always liable to error. The best way will be to compute from two extremes, the populousness of which is pretty well known. The part of the country which is the best peopled, is that of the Maro-

nites and Druzes, and gives nine hundred inhabitants for each square league, which computation will also serve for the countries of Nablous, Hafbeya, Adjaloun, the territory of Damascus, and some other places. The other, which is the least populous, is that of Aleppo, which gives from three hundred and eighty to four hundred inhabitants to each square league, which estimation will suit the greater part of Syria. Calculating from these materials, by a method too tedious to explain here, it appears to me that the total population of Syria may be estimated at 2,305,000 souls, viz.

For the Pachalic of Aleppo	320,000
that of Tripoli, not including the	
Kefraouan - - -	200,000
the Kefraouan - - -	115,000
the country of the Druzes -	120,000
the Pachalic of Acre - -	300,000
Palestine - - - -	50,000
the Pachalic of Damascus -	1,200,000
	<hr/>
	Total 2,305,000
	<hr/>

Let us suppose it two millions and a half, and since Syria contains about five thousand two hundred and fifty square leagues, at the rate of one hundred and fifty in length, and thirty-five in breadth, we shall have upon an average four hundred and seventy-six inhabitants for every square league. So feeble a population in so excellent a country may well excite our astonishment, but this will be still increased, if we compare the present number of inhabitants, with that of ancient times. We are informed by the philosophical geographer, Strabo, that the territories of Yamnia and Yoppa in Palestine, alone, were formerly so populous, as to be able to bring forty thousand armed men into the fields. At present they could scarcely furnish three thousand. From the accounts we have

of Judea in the time of Titus, and which are to be esteemed tolerably accurate, that country must have contained four millions of inhabitants; but at present, there are not, perhaps, above three thousand. If we go still farther back into antiquity, we shall find the same populousness among the Philistines, the Phœnicians, and in the kingdoms of Samaria, and Damascus. It is true that some writers, reasoning from what they see in Europe, have called in question these facts; several of which, indeed, appeared to be disputable; but the comparisons on which they build, are not on that account the less erroneous; first, because the lands of Asia in general are more fertile than those of Europe; secondly, because a part of these lands are capable of being cultivated; and in fact are cultivated, without lying fallow or requiring manure; thirdly, because the Orientals consume one half less for their subsistence than the inhabitants of the western world, in general; for all which reasons it appears, that a territory of less extent may contain double and treble the population. These authors exclaim against the armies of two and three hundred thousand, furnished by states, which in Europe could not produce above twenty or thirty thousand; but it is not considered that the constitutions of ancient nations were wholly different from ours; that these nations were purely cultivators; that there was less inequality, and less idleness than among us; that every cultivator was a soldier; that in war, the army frequently consisted of the whole nation, and, in a word, that their state was that of the present Maronites and Druzes. Not that I wish to appear an advocate for those rapid populations, which from a single man, are made to pour forth in a few generations, numerous and powerful nations. In these relations there are a multitude of mistakes in words, and errors of Copyists; but admitting only what is conformable to experience and nature, there is nothing to contradict

the great population of high antiquity; without appealing to the positive testimony of history, there are innumerable monuments which depose in favour of the fact. Such are the prodigious quantity of ruins dispersed over the plains, and even in the mountains, at this day deserted. On the most remote parts of Carmel are found wild vines and olive-trees, which must have been conveyed thither by the hand of man; and in the Lebanon of the Druzes and Maronites, the rocks now abandoned to fir-trees and brambles, present us in a thousand places with terraces, which prove they were anciently better cultivated, and consequently much more populous than in our days.

It now only remains for me, to collect the general facts scattered through this work, and those I may have omitted, in order to form a complete description of the political, civil, and moral state of the inhabitants of Syria.

CHAP. XIV.

Government of the Turks in Syria.

THE reader must already have been convinced from the various traits that have been laid before him, that the government of the Turks in Syria is a pure military despotism; that is, the bulk of the inhabitants are subject to the caprices of a faction of armed men, who dispose of every thing according to their interest and fancy. To form a more perfect conception of the spirit with which this faction governs, it will be sufficient to consider by what title they claim possession.

When the Ottomans, under Sultan Selim, took Syria, from the Mamlouks, they considered it only as the spoil of a vanquished enemy; as a possession acquired by the law of arms and war. Now, according

to this law, among barbarous nations, the vanquished is wholly at the discretion of the victor, he becomes his slave; his life, his property belongs to his conqueror; he may dispose of all as master, he owes his captive nothing, and accords what he leaves him as a favour. Such was this law among the Greeks and Romans, and among all those societies of robbers whom we have honoured with the name of conquerors. Such, at all times, was that of the Tartars, from whom the Turks derive their origin. On these principles, even their first social state was formed. In the plains of Tartary the hordes, divided by interest, were no other than bands of robbers, armed for attack or defence, and to seize as fair booty, whatever they might covet. Already, all the elements of their present state were formed; continually wandering and encamped, they were at once shepherds and soldiers; each horde was an army; now, in an army, laws are but the orders of the chief, these orders are absolute and suffer no delay, they must proceed from one will, and from a single head: hence, a supreme authority in him who commands; and a passive submission in him who obeys. But as in the transmission of these orders, the instrument becomes an agent in his turn, the consequence is, a spirit at once imperious and servile, which is precisely that exhibited by the Turkish conquerors. Proud, after their victory, of being one of the conquering people, the meanest of the Ottomans treated the most illustrious of the vanquished with the lofty superiority of a master; and this spirit diffusing itself through every rank, we may judge of the distance from whence the Supreme Chief looks down upon the croud of slaves beneath him. The sentiments he conceives of them cannot be better portrayed than in the formulary of the titles assumed by the Sultans in their public acts; "I," say they, in their treaties with the kings of France, "I, who am, by the infinite grace of the great, just, and omnipotent Crea-

“ tor, and by the innumerable miracles of the Chief of
 “ Prophets, Emperor of Powerful Emperors, the Re-
 “ fuge of Sovereigns, the Distributor of Crowns to the
 “ Kings of the Earth, Servant of the two thrice facred
 “ cities, (Mecca & Medina) Governor of the Holy City
 “ of Jerufalem, Master of Europe, Afia, and Africa,
 “ conquered by our victorious Sword, and our terrific
 “ Lance, Lord of the Two Seas, (the White and
 “ Black Seas) of Damafcus the Odour of Paradise,
 “ of Bagdad the feat of the Caliphs, of the Fortreffes
 “ of Belgrade, Agria, and a multitude of Countries,
 “ Iflands, Straights, Nations, Generations, and of
 “ fo many victorious armies, which refofe beneath
 “ the fhade of our Sublime Porte; I, in fhort, who
 “ am *the Shadow of God on Earth, &c.*”

From fuch exalted grandeur, how muft the Sultan
 look down on the reft of mankind? In what light
 muft he view that earth which he poffeffes, and dif-
 tributes, but as a domain of which he is abfolute ma-
 fter? What muft the people he has fubdued appear,
 but flaves devoted to his fervice? And what the fol-
 diers he commands, but fervants by whose means he
 retains thefe flaves in obedience? Such is the real
 character of the Turkish government. This empire
 may be compared to a plantation in one of our Sugar
 Iflands, where a multitude of flaves labour to fupply
 the luxury of one Great Proprietor, under the infpec-
 tion of a few fervants who take good care of them-
 felves. There is no difference, except that the domi-
 nions of the Sultan being too vaft for a fingle admi-
 niftration, he is obliged to divide it into fmall plan-
 tations, and feparate governments, adminiftered in the
 fame mode as the united empire. Such are the pro-
 vinces under the government of the Pachas. Thefe
 provinces again being too extenfive, the Pachas have
 had recourfe to further fubdivifion, and hence that
 ferief of fubalterns, which, ftep by ftep, defcends to
 the loweft employments. In this gradation of autho-

rity, the object in view being invariably the same, the means employed never change their nature. Thus, power being absolute and arbitrary in the monarch, is transmitted absolute and arbitrary to all his sub-delegates. Each of these is the exact image of his next superior. It is still the Sultan who dictates and commands, under the varied names of *Pacha*, *Motfallam*, *Kaiem-Makam*, and *Aga*, nor is there one in this descending scale, even to the *Delibashe*, who does not represent him. It is curious to hear with what insolence the lowest of these soldiers, giving his orders in a village, pronounces: *It is the will of the Sultan; it is the Sultan's pleasure*. The reason of this insolence is easily explained: for the bearer of the orders of the Sultan becomes, for that moment, himself the Sultan. It is not difficult to conceive what must be the consequence of such an administration, since all experience invariably proves, that moderation is the most difficult of virtues; and since even those men who preach it most fervently, frequently neglect to practise it; how numerous must be the abuses of unlimited power in the great, who are strangers both to forbearance and to pity, in upstarts proud of authority and eager to profit by it, and in subalterns continually aiming at a greater power. Let us judge therefore, how far certain speculative writers are justified in insinuating, that despotism in Turkey is not so great an evil as we imagine, since, from its residing in the person of the sovereign, it can only affect the great by whom he is immediately surrounded. It is certain, to use the expression of the Turks, *that the sabre of the Sultan does not descend upon the dust*; but this sabre he entrusts to the hands of his Vizir, who delivers it to the Pacha, from whom it passes to the Motfallam, to the Aga, and even to the lowest Delibashe; so that it is, in fact, within the reach of the vilest retainer to office, and its destructive edge descends even to the meanest heads. This erroneous reasoning arises from the state of the people

at Constantinople, to whom the Sultan is more attentive than to those of the provinces; but this attention, which his own personal safety renders necessary there, is paid to no other part of the empire; and, even there, it may be said to be attended with disagreeable effects; for, if Constantinople is in want of provisions, ten provinces are furnished for a supply. Yet, which is of most importance to the empire, the capital or the provinces? In case of war, by which must soldiers be furnished, and by which fed? To the provinces therefore must we look to discover the real effects of despotism, and, in Turkey, as every where else, we must be convinced that arbitrary power in the sovereign is fatal to the state, as from the sovereign it must necessarily devolve upon his subalterns, and become more abused the lower it descends; since it is a maxim verified by constant experience, that the slave, become master, is the most rigorous of tyrants. Let us now examine the abuses of this administration, as far as it respects Syria.

In each government, the Pacha, being the image of the Sultan, is, like him, an absolute despot. All power is united in his person; he is chief both of the military and the finances, of the police and criminal justice. He has the power of life and death; he has the power of making peace and war; in a word, he can do every thing. The main object of so much authority is to collect the tribute, that is, to transmit the revenue to the great proprietor who has conquered, and who possesses the country by the right of his *terrific lance*. This duty fulfilled, no other is required from him; the means employed by the agent to accomplish it is a matter of no concern; those means are at his discretion; and such is the nature of his situation, that he cannot be delicate in his choice of them; for, in the first place, he can neither advance, nor even maintain himself, but in proportion as he can procure money. Secondly, The place he holds depends on the favour

of the Visir, or some other great officer ; and this can only be obtained and secured by bidding higher than his competitors. He must therefore raise money to pay the tribute, and also to indemnify himself for all he has paid, support his dignity, and make a provision in case of accidents. Accordingly, the first care of a Pacha, on entering on his government, is to devise methods to procure money, and the quickest are invariably the best. The established mode of collecting the miri and the customs, is to appoint one or more principal farmers, for the current year, who, in order to facilitate the collection, divide it into lesser farms, which are again subdivided, even to the smallest villages. The Pacha lets these employments to the best bidder, wishing to draw as much money from them as possible. The farmers, who, on their side, have no object in taking them but gain, strain every nerve to augment their receipt. Hence an avidity in these delegates always bordering on dishonesty ; hence those extortions to which they are the more easily inclined as they are sure of being supported by authority ; and hence, in the very heart of the people, a faction of men interested in multiplying impositions. The Pacha may applaud himself for penetrating into the most hidden sources of private profits, by the clear sighted rapacity of his subalterns ; but what is the consequence ? The people, denied the enjoyment of the fruit of their labour, restrain their industry to the supply of their necessary wants. The husbandman only sows to preserve himself from starving ; the artist labours only to bring up his family ; if he has any surplus, he carefully conceals it. Thus the arbitrary power of the Sultan, transmitted to the Pacha, and to all his subdelegates, by giving a free course to extortion becomes the main spring of a tyranny which circulates through every class, whilst its effects, by a reciprocal re-action, are every where fatal to agriculture, the arts, commerce, population ; in a word, every thing which constitutes the power of the state, or, which is the same thing, the power of the Sultan himself.

This power is not subject to less abuses in the army. Perpetually urged by the want of money, on which his safety and tranquility depend, the Pacha has retrenched, as far as possible, the usual military establishment. He diminishes the number of his troops, lessens their pay, winks at their disorders; and discipline is no more. Were a foreign war now to happen, were the Russians to appear again in Syria, as in the year 1772, who would defend that province for the Sultan?

It sometimes happens, that the Pachas, who are Sultans in their provinces, have personal hatreds against each other. To gratify these, they avail themselves of their power, and wage secret or open war, the ruinous consequences of which are sure to be felt by the subjects of the Sultan.

It also happens, that these Pachas are tempted to appropriate to themselves the power of which they are the depositaries. The Porte, foreseeing this, endeavours to provide against their defection, by various means. The employments are divided, and particular officers maintained in the castles of the capitals, as at Aleppo, Damascus, and Tripoli; but should a foreign enemy appear, what benefit would result from this division? Every three months Capidjis are sent who keep the Pachas in alarm, on account of the secret orders of which they are the bearers; but not unfrequently the Pachas, as cunning as themselves, get rid of these troublesome spies. The Porte, in short, often changes the residence of the Pachas, that they may not have time to form connections in the country; but as all the consequences of a bad form of government have a mischievous tendency, the Pachas, uncertain of to-morrow, treat their provinces as mere transient possessions, and take care to make no improvement for the benefit of their successors: on the contrary, they hasten to exhaust them of the produce, and to reap in one day, if possible, the fruit of many

years. It is true, these irregularities, every now and then, are punished by the cord, one of the practices of the Porte, which best displays the spirit of its government. When a Pacha has laid waste a province; when, in consequence of repeated acts of tyranny, the clamours of the people have reached Constantinople, woe be unto him if he be without a protector, or sparing of his money! At the end of the year, a Capidji arrives, producing the firman of prorogation: sometimes bringing with him a second or third tail, or some other fresh mark of favour; but, whilst the Pacha is celebrating a festival on the occasion, an order appears for his deposition, then another for his exile, and frequently a kat-sheerif for his head. The ostensible reason is always for having oppressed the subjects of the Sultan: but the Porte, by taking possession of the wealth of the extortioner, and restoring nothing to the people, leaves sufficient room to think that the government is far from disapproving a system of robbery and plunder which it finds so profitable. Every day, therefore affords, fresh examples of oppressive and rebellious Pachas; and if none of them have hitherto succeeded in forming a stable and independent government; it is less owing to the wise measures of the Divan, and the vigilance of the Capidjis, than their own ignorance in the art of governing. In Asia, those moral means are never employed, which, in the hands of able legislators, have frequently raised powerful states on foundations at first extremely feeble. The Pachas regard nothing but money; nor has repeated experience been able to make them sensible that this, so far from being the pledge of their security, becomes the certain cause of their destruction. They are wholly devoted to amassing wealth, as if friends were to be purchased. Afa, Pacha of Damascus, left eight millions of livres (about three hundred and thirty thousand pounds) and was betrayed by his Mamlouk, and smothered in the bath. We have seen what was

the fate of Ibrahim Sabbar with his twenty millions. Djezzar is following the same course, and will end in the same way. Not one of them has ever thought of inspiring and promoting that disinterested love of the public welfare, which in Greece and Italy, nay, even in Holland and Switzerland, has enabled the lower classes of people to enter into a successful contest with the greatest empires. The Emirs and Pachas all immitate the Sultan : all regard the country they govern as their private property, and their subjects as their domestics ; while they, in their turn, see in their superiors only imperious masters ; and since they are all alike, of what importance is it which they serve ? Hence, in these states, the custom of employing foreign in preference to national troops. The chiefs are distrustful of the people, conscious that they do not merit their attachment ; their aim is not to govern, but to tyrannize over the country, and by a just retaliation, their country sees their ruin with indifference. The mercenaries, too, whom they keep in pay, faithful to their views of interest, sell them to the enemy, to profit by their spoils. Daher had maintained for ten years the wretch who murdered him. It is a truth worthy of remark, that the greater part of the African and Asiatic states, especially since the days of Mahomet, have been governed on these principles, and that no part of the world has exhibited so many commotions in its provinces, or revolutions in its empires. Ought we not then to conclude, that arbitrary power in the sovereign is no less fatal to the military strength, than the finances of a nation. But let us proceed to enquire what are its effects on the civil government of Syria.

The Pacha, as being the image of the Sultan, is the head of all the police of government ; under which title must be comprehended criminal justice. He possesses the most absolute power of life and death, and this he exercises without formality, and without

appeal. Wherever he meets with an offence, he orders the criminal to be seized, and the executioner, by whom he is accompanied, strangles him, or takes off his head upon the spot; nay, sometimes he himself does not disdain this office. Three days before my arrival at Sour, Djezzar had ripped up a Mason with an axe. The Pacha frequently strolls about disguised, and woe to the man whom he surprizes in a fault! But, as he cannot be present every where, he commits this duty to a deputy, called the *Wali*, whose office resembles that of the *Officiers de Guet* in France. Like them he patrols night and day; keeps a watchful eye on the seditious; apprehends robbers; and, like the Pacha, judges and condemns without appeal. The criminal bends his neck; the executioner strikes; the head falls, and the body is carried off in a leathern sack. This officer has a multitude of spies, who are almost all of them thieves, and by their means knows every thing that passes. It is not, therefore, astonishing, that cities like Cairo, Aleppo, and Damascus, should be safer than Genoa, Rome, or Naples; but how dearly is this safety purchased? and how many innocent lives are sacrificed to the partiality and injustice of the *Wali* and his agents!

The *Wali* presides likewise over the police of the markets; that is, he inspects their weights and measures; and, on this head, his severity is extreme; for the smallest deficiency in the weight of bread, meat, *debs*, or confectionary, he inflicts five hundred strokes of the bastinado, and, sometimes, even death. Examples of this are frequent in the great cities, yet is there no country wherein false weights are more common; all the dealer has to do is to keep a sharp look-out for the passing of the *Wali*, and Mohteseb, or inspector of the market. As soon as they appear on horse-back, the deficient weights are put out of the way, and others produced. The dealers also bargain with the servants who precede these two officers; and for a certain sum can ensure impunity.

The office of the Wali by no means extends to those various objects of utility which are under the regulation of our police. No attention is paid either to the cleanliness or the salubrity of the cities. They are never paved, swept, or watered, either in Syria or in Egypt. The streets are narrow and winding, and almost always encumbered with rubbish. Travelers are, above all, shocked at the sight of a multitude of hideous dogs, which have no owners. They form a sort of independent body, subsisting on public alms. They are quartered by families and districts, and should one of them happen to pass his limits, a combat ensues, which is extremely troublesome to passengers. The Turks, who shed the blood of man so readily, do not kill these dogs, though they avoid touching them as unclean. They pretend they ensure the safety of the cities by night; but this is more owing to the Wali, and the gates with which every street is secured. It is alledged, likewise, that they devour the carrion; but in this they are assisted by a great number of jackalls, which are concealed by hundreds in the gardens, and among the ruins and tombs. We must not expect either walks or plantations in the Turkish cities. In such a country, life, doubtless, will appear neither secure nor agreeable; but this also is the consequence of the arbitrary power of the Sultan,

C H A P. XV.

Of the Administration of Justice.

THE administration of justice in civil suits, is the only species of authority which the Sultans have withheld from the executive power of the Pachas; whether, from a sense of the enormous abuses which might

result from it, or from knowing that it required more time and information than fall to the share of these their deputies. Other officers are appointed for this purpose, who, by a wise regulation, are independent of the Pachas; but as their jurisdiction is founded on the same principles with the rest of the government, it is attended with the same inconveniencies.

All the magistrates of the empire, called *Cadis*, or judges, depend on one principal chief, who resides at Constantinople. The title of his dignity is *Cadi-el-askar**, or judge of the army; which title alone indicates, as I have already observed, that the power is entirely military, and resides wholly in the army and its general. This grand Cadi names the judges of the capital cities, such as Aleppo, Damascus, Jerusalem &c. These judges again name others in the places within their dependency. But what is the qualification required? Always money. All these employments, like those of the government, are sold to the best bidder, and, farmed in the same way from year to year. What is the consequence? That the farmers endeavour to recover the money advanced; to obtain interest, and also a profit. What therefore can we expect from such dispositions in men who hold the balance of justice in their hand, and decide on the property of their fellow citizens?

The tribunal whence these *Cadis* issue their decisions, is called the *Mabkama*, or place of Judgment. Sometimes it is at their own houses; but never is it at a place which corresponds with the idea annexed to so sacred an employment. In an empty mean apartment, the Cadi is seated on a mat, or wretched carpet. On each side of him are his clerks, and some domestics. The door is open to every body; the parties appear; and there, without interpreters, advocates, or attornies, each pleads his own cause. Squatted on the ground, they state the facts, discuss, reply,

* Commonly called *Cadi Leskier*.

contest, and argue again in their turns. Sometimes the debates are violent; but the cries of the clerks, and the staff of the Cadi, soon restore order and silence. Gravely smoking his pipe, and twisting the end of his beard round his finger, this judge listens, interrogates, and concludes by pronouncing a sentence without appeal, which at most allows but two months delay. The parties are never well satisfied; they retire, however, with respect; and pay a fee, estimated at one tenth of the litigated property, without murmuring at the decision, as it is invariably dictated by the *infallible Koran*.

It must be owned this simplicity of justice, which does not consume the property, either in preliminary, accessory or subsequent expences; and this proximity of the sovereign tribunal, which does not compel the pleader's absence from his place of residence, are two inestimable advantages; but it cannot be denied that they are counterbalanced by too many abuses. In vain have some writers, to render more conspicuous the vices of our legal customs, boasted the administration of justice among the Turks. These commendations, founded on a superficial knowledge of the theory of Mahometan jurisprudence, are not justified, when we consider what is actually practised. Daily experience proves, that there is no country wherein justice is more corrupted than in Egypt, Syria, and, no doubt, all the rest of the Turkish empire*. Venerality is no where more open, nor more impudent. The parties may bargain for their cause with the Cadi, as they would for any common commodity. Instances of great sagacity and equity, no doubt, are to be found; but they are rare, which is the very reason why they are so celebrated. Corruption is habitual and general; and how is it possible to be otherwise,

* See, on this subject, the observations of Sir James Porter, the English minister at Constantinople.

where integrity may be ruinous, and injustice lucrative; where each Cadi, deciding without appeal, fears neither a revision of his sentence, nor punishment for his partiality; and where, in short, the want of clear and precise laws; affords a thousand ways of avoiding the shame of an evident injustice, by opening the crooked paths of commentaries and interpretations?

Such is the state of jurisprudence among the Turks, that there exists no public and acknowledged code, where individuals may instruct themselves in their respective rights. The judgments given, are in general, founded on unwritten *customs*, or on the frequently contradictory *decisions* of the Doctors. The collections of the decisions are the only books wherein the judges can acquire any notions of their duty; and in them they find only particular cases more calculated to confound than enlighten their ideas. The Roman law in many particulars has served as a basis for the determinations of the Mahometan Doctors; but the great and inexhaustible source to which they recur, is the *most pure book*, the *depository of all knowledge* the *code of all legislation*, the *Koran of the Prophet*.

C H A P. XVI.

Of the influence of religion.

IF the object of religion among the Turks were such as it ought to be among all nations; did it teach the great moderation, in the exercise of their power, and the vulgar, toleration amid the diversity of opinions, it would still be a matter of doubt whether it could sufficiently correct the vices of which we have been speaking; since the experience of all men proves that morality only influences conduct, so far as it is second-

ed by the civil laws. But nothing can be worse calculated to remedy the abuses of government than the spirit of *Islamism*: we may on the contrary, pronounce it to be their original source. To convince himself of this, the reader has only to examine their reverend book. In vain do the Mahometans boast that the Koran contains the seeds and even the perfection of all political and legislative knowledge, and jurisprudence: nothing but the prejudice of education, or the interest of some secret partiality can dictate, or admit such a judgment. Whoever reads the Koran, must be obliged to confess, that it conveys no notion, either of the relative duties of mankind in society, of the formation of the body politic, or of the principles of the art of governing; nothing, in a word, which constitutes a legislative code. The only laws we find there may be reduced to four or five ordinances relative to polygamy, divorces, slavery, and the succession of near relations; and even these form no code of jurisprudence, but are so contradictory, that they cannot be reconciled by the altercations of the doctors. The rest is merely a chaos of unmeaning phrases; an emphatical declamation on the attributes of God, from which nothing is to be learnt; a collection of puerile tales, and ridiculous fables; and, on the whole, so flat and fastidious a composition, that no man can read it to the end, notwithstanding the elegance of M. Savary's translation. But should any general tendency or semblance of meaning be visible through the absurdities of this delirious effusion, it is the inculcation of a fierce and obstinate fanaticism. We are wearied with the perpetual recurrence of the words *impious, incredulous, enemies of God and the Prophet; rebels against God and the Prophet; devotion towards God and the Prophet*. Heaven is open to whomsoever combats in their cause; *Houris* stretch out their arms to martyrs; the imagination takes fire, and the proselyte exclaims, "Oh Mahomet: thou art the messen-

“ger of God; thy word is his; he is infallible; thou
 “canst neither err nor deceive me: go on, I follow
 “thee.” Such is the spirit of the Koran, and it is
 visible in the very first line. “There is no doubt in
 “this book; it guides without error those who believe
 “without doubting, who believe in what they do not
 “see.” What is the tendency of this, but to establish
 the most absolute despotism in him who commands,
 and the blindest devotion in him who obeys? and such
 was the object of Mahomet. He did not wish to en-
 lighten men, but to rule over them; he sought not
 disciples, but subjects; and obedience, not reasoning is
 required from subjects. It was to lead them the more
 easily that he ascribed all to God. By making him-
 self his minister, he removed every suspicion of per-
 sonal interest; and avoided alarming that distrustful
 vanity which is common to all men; he feigned to
 obey that he might exalt obedience; he made himself
 but the first of servants, with a certainty that every
 man would strive to be the second, and command the
 rest. He allured by promises, and terrified by mena-
 ces; and, as every novelty is sure to meet opponents,
 by holding out the terrors of his anathemas, he left
 them the hope of pardon. Hence, in some passages
 we find an appearance of toleration; but this toleration
 is so rigid, that sooner or later, it must lead to abso-
 lute submission; so that in fact the fundamental spirit
 of the Koran continually recurs, and the most arbi-
 trary power is delegated to the messenger of God,
 and by a natural consequence to his successors. But
 by what kind of precepts is the use of this power
 manifested? “There is only one God, and Maho-
 “met is his prophet. Pray five times a day turning
 “towards Mecca. Eat not in the day time during
 “the whole month of the Ramadan. Make the
 “pilgrimage of the Caaba, and give alms, to the
 “widow and orphan.” Here is the profound source
 from whence must spring all the sciences, and every

branch of political and moral knowledge. The Solons, the Numas, the Lycurguses; all the Legislators of antiquity have in vain exhausted their genius to explain the relations of mankind in society, to declare the duties and rights of every class, and every individual: Mahomet more able or more profound than they, resolves all into five phrases. It certainly may be safely asserted, of all the men who have ever dared to give laws to nations, none was more ignorant than Mahomet; of all the absurd compositions ever produced, none is more truly wretched than his book. Of this, the transactions of the last twelve hundred years in Asia, are a proof; for where I inclined to pass from a particular subject to general considerations, it would be easy to demonstrate, that the convulsions of the governments, and the ignorance of the people, in that quarter of the globe, originate more or less immediately in the Koran, and its morality; but I must confine myself to the country we are now considering, and returning to Syria, explain to the reader, the state of its inhabitants, relative to religion.

The people of Syria in general, as I have already said, are Mahometans or Christians; this difference of worship is productive of the most disagreeable effects in their civil state. Treating each other mutually as rebels, infidels, and impious, the followers of Jesus Christ and Mahomet, are actuated by a reciprocal aversion which keeps alive a sort of perpetual war. We may readily conceive the excesses to which the prejudices of education may carry the vulgar, at all times violent; and the government so far from interposing as a mediator in the dissensions, foments them by its partiality. Faithful to the spirit of the Koran, it treats the Christians with a severity, which displays itself in varied forms. Mention has been sometimes made of the toleration of the Turks; the following is the price at which it is purchased:

All kind of public worship is prohibited the Christians, except in the Kesraouan, where the government has not been able to prevent it. They cannot build any new churches; and if the old ones fall to decay, they are not allowed to repair them, unless by a permission which costs them very dear. A Christian cannot strike a Mahometan without risk of his life, but if a Mahometan kill a Christian, he escapes for a stipulated price. Christians must not mount on horseback in the towns; they are prohibited the use of yellow slippers, white shalls, and every sort of green colour. Red for the feet, and blue for the dress, are the colours assigned them. The Porte has just renewed its ordinances to re-establish the ancient form of their turbans; they must be of a course blue muslin, with a single white border. When they travel, they are perpetually stopped at different places to pay *Rafars**, or tolls, from which the Mahometans are exempt: in judicial proceedings, the oath of two Christians is only reckoned for one; and such is the partiality of the Cadis, that it is almost impossible for a Christian to gain a suit; in short, they alone are subject to the Capitation, called *Karadji*, the ticket of which bears these remarkable words: *Djazz-elras* that is (redemption) *from cutting off the head*; a clear proof of the title by which they are tolerated and governed.

These distinctions, so proper to ferment hatred and divisions, are disseminated among the people, and manifest themselves in all the intercourse of life. The meanest Mahometan will neither accept from a Christian, nor return the salute of *Salam-alai-k* †, health to thee, on account of the affinity between the word *Salam* and *Eslam*, (Islamism), the proper name of

* The R here is a guttural r.

† Or, *Salam-alai-Kom*, health to you. Hence the word *Salamalch*.

their religion, and *Moslem*, (Mussulman) the name of the person who professes it: the usual salutation is only good morning, or good evening, and it is well too if it be not accompanied with a *Djaour*, *Kafer*, *Kelb*, i. e. impious, infidel, dog, expressions to which the Christians are familiarized. The Mahometans even affect to mortify them, by practising before them the ceremonies of their worship. At noon, at three o'clock, and at sun-set, as soon as the criers from the tops of the minarets announce the time of prayer, they appear at the doors of their houses, where, after making their ablution, they, gravely spread a mat or carpet, and turning themselves towards Mecca, cross their arms upon their breasts, stretch them towards their knees, and begin nine prostrations, down to the ground, reciting the preface to the Koran. In conversation, they frequently make a break by their profession of faith, "There is but one God, and Mahomet is his prophet." They talk perpetually of their religion, and consider themselves as the only *faithful* to God. To confute them, the Christians, in their turn, affect great devotion; and hence that ostentation of piety which forms one of the principal characteristics of the Orientals; but the heart makes no sacrifice, and the Christians retain a deep remembrance of all these insults, and only wait a favourable opportunity to seek their revenge. The effects of this were visible in the time of Daher, when, proud of the protection of his minister, in many places they assumed a superiority over the Mahometans. The excesses they committed on that occasion should serve as a lesson to any European power, which may hereafter obtain possession of countries inhabited by Greeks and Mahometans.

C H A P. XVII.

Of property, ranks, and conditions.

THE Sultans having arrogated to themselves, by right of conquest, the property of all the lands of Syria, the inhabitants can no longer pretend to any real, or even personal property; they have nothing but a temporary possession. When a father dies, the inheritance reverts to the Sultan, or his delegate, and the children can only redeem the succession by a considerable sum of money. Hence arises an indifference to landed estates, which proves fatal to agriculture. In the towns, the possession of houses is in some measure less uncertain and less ruinous; but every where the preference is given to property in money, as more easy to hide from the rapine of the Despot. In the tributary countries, such as those of the Druzes, the Maronites, Hefbeya, &c. there exists a real property founded on customs, which their petty princes dare not violate; on which account the inhabitants are so attached to their estates, that it is very rare to hear of an alienation of lands among them. There is nevertheless one method, even under the Turkish administration, of securing a perpetual *usus-fructus*, which is by making what is called a *Wakf*, that is an endowment or donation of an estate to a Mosque. The proprietor then becomes the irremoveable guardian of his property, on condition of a fine, and under the protection of the professors of the law; but this act has this inconvenience, that, instead of protecting, the men of the law frequently devour the property: and, in that case, to whom are they to look for redress, since the embezzlers of the property are at the same time the distributors of justice? For this reason, these lawyers are almost the

only landholders, nor do we see, under the Turkish government, that multitude of small proprietors, who constitute the strength and riches of the tributary countries.

What I have said of conditions in Egypt will apply equally to Syria : they may be reduced to four or five ; the cultivators or peasants, artisans, merchants, military men, and those who fill the different departments of the law and juridical offices. These various classes again may be comprehended under two others : the people, which includes the peasants, artisans and merchants ; and the government, composed of the military, and legal and judicial officers. According to the principles of their religion, the power should reside in the latter order ; but since the dispossession of the Caliphs by their lieutenants, a distinction has taken place between the spiritual and temporal power, which has left but an illusory authority to the interpreters of the law : such is that of the Grand Mufti*, who represents the Caliph, among the Turks. The real power is in the hands of the Sultan, who represents the lieutenant or general of the army. That favourable prejudice, however, which the people entertain for dethroned powers, still preserves to the professors of the law, a credit of which they almost always avail themselves, to form a *party of opposition* ; the Sultan is awed by it at Constantinople, nor do the Pachas venture too openly to thwart it in their provinces. In each city this party is headed by the Mufti, who derives his authority from that of Constantinople, his employment is hereditary and not venal, which single circumstance has preserved more energy in this body than in all the others. From the privileges they enjoy, the families which compose it bear a considerable resemblance to

* This term signifies *decider* of the cases which concern religion.

our nobility; although its true type be the army. They resemble also our magistracy, our clergy, and even our citizens, as they are the only persons in that country who live on their rents. From them to the peasantry, the artificers, and traders, the descent is sudden, yet, as the condition of these three classes form the true standard of the police and power of an empire, I shall select the particulars best calculated to enable the reader to form just ideas.

CHAP. XVIII.

State of the Peasants and of Agriculture.

IN Syria, and even throughout the Turkish empire, the peasants, like the other inhabitants, are deemed *slaves* of the Sultan; but this term only conveys the meaning of our word *subjects*. Though master of their lives and properties, the Sultan does not sell men; he does not limit them to a certain spot. If he bestows an appanage on some grandee, it is not said, as in Russia and Poland, that he gives five hundred or a thousand peasants; in a word, the peasants are oppressed by the tyranny of the government, but not degraded by the servitude of feodality.

When Sultan Selim had conquered Syria, in order to render the collection of the revenue more easy, he established a single territorial tribute called the *miri*. It should seem, that this Sultan, notwithstanding the ferocity of his character, understood the importance of favouring the husbandman, for the *miri*, compared with the extent of the lands, is an infinitely moderate impost; and it was the more so at the time in which it was fixed, as Syria was then better peopled than at present, and perhaps also possessed a greater trade,

as it lay on the most frequented route to India, little use having been yet made of the passage by the Cape of Good Hope. That this tax might be collected regularly, Selim, gave orders to prepare a *deftar*, or register, in which the contingent of each village should be set down. In short, he established the miri, at an invariable rate, and ordered it should neither be augmented nor diminished. Moderate as it was in its original establishment, it could never be oppressive to the people; but by abuses inherent in the constitution of the Turkish government, the Pachas and their agents have found the secret of rendering it ruinous. Not daring to violate the law established by the Sultan respecting the immutability of the impost, they have introduced a multitude of changes, which, without the name, produce all the effects of an augmentation. Thus, having the greatest part of the land at their disposal, they clog their concessions with burthensome conditions; they exact the half, nay even two thirds, of the crop; they monopolize the seed and the cattle, so that the cultivators are under the necessity of purchasing from them at their own price. The harvest over, they cavil about losses, and pretended robberies, and as they have the power in their hands, they carry off what they think proper. If the season fails, they still exact the same sum, and to pay themselves, expose every thing the poor peasant possesses to sale. Happily, his person at least remains free, for the Turks are ignorant of the refinement of imprisoning for debt the man who has no longer any property. To these constant oppressions are added a thousand accidental extorsions. Sometimes the whole village is laid under contribution for some real or imaginary offence; and sometimes a service of a new kind is introduced. A present is exacted on the accession of each governor; a contribution of grass is demanded for his horses, and barley and straw for his cavaliers: they must provide, likewise, for all

the soldiers who pass, or who carry orders, and the governors take care to multiply these commissions which are a saving to them, but inevitable ruin to the peasants. The villages tremble at every *Lawend* who appears; he is a real robber under the name of a soldier; he enters as a conqueror, and commands as a master: *Dogs, Rabble; bread, coffee, tobacco; I must have barley, I must have meat.* If he casts his eyes on any poultry, he kills them; and when he takes his departure, adding insult to tyranny, he demands what is called *kera-el-dars*, the hire of his grinders. In vain do the peasants exclaim against this injustice; the sabre imposes silence. Justice is remote and difficult of access; nay, complaints are even dangerous. What is the consequence of all these depredations? The poorer class of inhabitants ruined, and unable any longer to pay the *miri*, become a burthen to the village, or fly into the cities: but the *miri* is unalterable and the sum to be levied must be found somewhere, their portion falls on the remaining inhabitants, whose burthen, though at first light, now becomes insupportable. If they are visited by a two years drought and famine, the whole village is ruined and abandoned; but the tax it should have paid is levied on the neighbouring lands. They proceed in the same manner with the *Karadji* of the Christians. Its amount having been estimated at the time they were first numbered, it must always produce the same, though those who pay should be less numerous. Hence it happens that this capitation is sometimes carried from three, five, and eleven piastres, at which it was first fixed, to thirty-five and forty; which absolutely impoverishes those on whom it is raised, and obliges them to leave the country. These burthens are more especially oppressive in the countries bestowed as an appanage, and in those which are exposed to the Arabs. In the former the Titulary, greedy to augment his revenue, delegates full power to his Lessee to augment the taxes, and he

is well seconded by the avidity of the subalterns. These men, refining on the arts of wringing money from the people, have contrived to impose duties on every commodity brought to market, on entries, the conveyance of goods, and even the burthen of an ass. It is remarked that these exactions have made a rapid progress, especially in the last forty years, from which time they date the decline of agriculture, the depopulation of the country, and the diminution in the quantity of specie carried to Constantinople. With respect to the Bedouins, if they are at war they pillage as enemies; and if at peace, devour every thing they can find as guests; hence the proverb, *Avoid the Bedouin whether friend or enemy.* The least wretched of the peasants, are those of the countries which raise themselves a certain stipulated sum, as is done by the Druzes, the Kefraouan, Nablous &c. yet even there they are liable to be oppressed and impoverished by various abuses. But nothing is more destructive to Syria, than the shameful and excessive usury customary in that country. When the peasants are in want of money to purchase grain, cattle, &c. they can find none but by mortgaging the whole or part of the future crop greatly under its value. The danger of letting money appear, closes the hands of all by whom it is possessed; and if it is parted with it must be from the hope of a rapid and exorbitant gain; the most moderate interest is twelve per cent. the usual rate is twenty, and it frequently rises as high even as thirty.

From all these causes we may easily conceive how miserable must be the condition of the peasants. They are every where reduced to a little flat cake of barley or dourra, to onions, lentils, and water. They are so little acquainted with dainties, that they esteem strong oil, and rancid fat as delicacies. Not to lose any part of their corn, they leave in it all sorts of wild grain, even tares*, which occasions vertigoes, and dimness of

* In Arabic *Ziwan*.

fight for several hours, as I have myself experienced. In the mountains of Lebanon and Nablous, in time of dearth, they gather the acorns from the oaks, which they eat, after boiling or roasting them on the ashes. The truth of this has been authenticated to me among the Druzes, by persons who have themselves made use of them. We must therefore no longer accuse the poets of hyperbole; but it will only be the more difficult to believe that the golden age was the age of abundance.

By a natural consequence of this misery, the art of cultivation is in the most deplorable state; the husbandman is destitute of instruments, or has very bad ones; his plough is frequently no more than the branch of a tree, cut below a bifurcation, and used without wheels. The ground is tilled by asses, and cows, rarely by oxen; they would bespeak too much riches; beef is therefore very scarce in Syria and Egypt, where, besides, it is always lean and bad, like all the meat of hot countries. In the districts exposed to the Arabs, as in Palestine, the countryman must sow with his musket in his hand. Scarcely does the corn turn yellow, before it is reaped, and concealed in *Matmoures*, or subterraneous caverns. As little as possible is employed for seed corn, because they sow no more than is barely necessary for subsistence; in a word, their whole industry is limited to a supply of their immediate wants; and to procure a little bread, a few onions, a wretched blue shirt, and a bit of woollen, much labour is not necessary. The peasant lives therefore in distress; but at least he does not enrich his tyrants, and the avarice of despotism is its own punishment.

C H A P. XIX.

Of the Artisans, Traders, and Commerce.

THE class of men who give value to commodities, by manufacturing them, or bringing them into circulation, is not so ill treated in Syria, as that which produces them; the reason of which is, that the property of the artisans and traders consisting in personal effects, is more concealed from the scrutinizing eye of government than that of the peasants; besides which, the artists and merchants, collected in the towns, escape more easily, in the crowd, from the rapacity of their rulers. This is one of the principal causes of the populousness of the towns in Syria, and even throughout Turkey. While in other countries, the cities are in some measure the overflow of the country, there they are the effect of its desertion. The peasants, expelled from their villages, fly thither for refuge, and find in them tranquillity and even a degree of ease and plenty. The Pachas are more particularly attentive to this last article, as on it depends their personal safety; for besides the immediate effects of a sedition, which might be fatal to them, the Porte would not pardon them for endangering the safety of the empire, for want of supplying the people with bread. They take care therefore to keep provisions cheap in all the considerable towns, and especially in that which they reside: if there be a dearth, it is always least felt there. In case of a failure in the harvest, they prohibit the exportation of grain, and oblige every person who possesses any, to sell it at the price they fix under pain of death; and if there be none in the province, they send for it to other countries, as was the case at Damascus in November 1784. The Pacha placed guards on all the roads, permitted the Arabs to pillage every carriage

going out of the country, and sent orders into the Hauran, to empty all the *Matmoures*, so that while the peasants were dying with hunger in the villages, the people of Damascus paid for their bread but two paras, or two sols and a half, (one penny farthing), the French pound, and thought it dear even at that price; but as in the political machine no part is independent of the rest, it was not possible to give such a mortal wound to agriculture, without its being felt by the arts and commerce. The reader will judge from a few details, whether the government be not as negligent in this as in every other particular.

Commerce in Syria, considered as to the manner in which it is carried on, is still in that state of infancy which characterizes barbarous ages and uncivilized countries. Along the whole coast there is not a harbour capable of admitting a vessel of four hundred tons, nor are the roads secured by forts. The Maltese corsairs formerly availed themselves of this want of vigilance, to make prizes close in with the shore; but as the inhabitants made the European merchants responsible for such accidents, France has obtained from the Order of Malta a prohibition of their corsairs from their appearing within sight of land; so that the natives may peaceably carry on their coasting trade, which is tolerably brisk, from Latakia to Yafa. In the interior parts of the country, there are neither great roads nor canals, nor even bridges over the greatest part of the rivers and torrents, however necessary they may be in winter. Between town and town, there are neither posts nor public conveyance. The only conveyance of this kind is the *Tartar* courier, who comes from Constantinople to Damascus, by way of Aleppo. This courier has no relays but in large towns, at very great distances; but in case of need he may dismount the very first horseman he meets. He leads with him, according to the custom of the Tartars, a second horse in hand, and has frequently a companion for fear of accidents.

The communication between one town and another is maintained by carriers, who have no fixed time of departure. This arises from the absolute necessity of forming troops, or caravans; nobody travels alone, from the insecurity of the roads. One must wait for several travellers who are going to the same place, or take advantage of the passage of some great man, who assumes the office of protector, but is more frequently the oppressor of the caravan. These precautions are, above all, necessary in the countries exposed to the Arabs, such as Palestine, and the whole frontier of the desert; and even on the road from Aleppo to Skandaroon, on account of the Curd robbers. In the mountains, and on the coast, between Latakia and Carmel, we may travel with more safety; but the roads in the mountains are extremely bad, as the inhabitants are so far from levelling them, they endeavour to render them more rugged, in order as they say, to cure the Turks of their desire to introduce their cavalry.

It is remarkable, that we never see either a waggon or a cart in all Syria; which arises, no doubt, from the apprehension of having them seized by the minions of government, and suffering a great loss at one stroke. Every thing is conveyed on the backs of mules, asses, or camels: all which animals are excellent here. The two former are employed in the mountains, and nothing can equal their address in climbing and sliding over the slopes of the craggy rocks. The camel is more made use of in the plains, because he consumes less, and carries more. His usual burthen is about seven hundred and fifty pounds. His food is every thing you chuse to give him; straw, brambles, pounded dates, beans, barley, &c. With a single pound of food, and as much water in a day, he will travel for weeks together. In the whole way from Cairo to Suez, which is a journey of forty or forty-six hours, including the time of repose, they neither eat nor drink; but these fastings, repeated, exhaust them as

well as other animals. Their breath then becomes foetid. Their ordinary pace is very slow, not exceeding thirty-four or thirty-six hundred yards an hour. It is needless to press them, they go no quicker; but by allowing them to rest, they will travel from fifteen to eighteen hours a day.

There are no inns any where; but the cities, and commonly the villages, have a large building called a *Kan*, or *Kervan-ferai*, which serves as an asylum for all travellers. These houses of reception are always built without the precincts of the towns, and consist of four wings round a square court, which serves by way of inclosure for the beasts of burden. The lodgings are cells, where you find nothing but bare walls, dust, and sometimes scorpions. The keeper of this *Kan* gives the traveller the key and a mat; and he provides himself the rest. He must, therefore, carry with him his bed, his kitchen utensils, and even his provisions; for frequently not even bread is to be found in the villages. On this account the Orientals contrive their equipage in the most simple and portable form. The baggage of a man who wishes to be completely provided, consists in a carpet, a mattress, a blanket, two saucepans with lids, contained within each other; two dishes, two plates, and a coffee-pot, all of copper, well-tinned; a small wooden box for salt and pepper; six coffee cups, without handles, in a leathern box; a round leathern table, which he suspends from the saddle of his horse; small leathern pouches, or bags for oil, melted butter, water and brandy, (if the traveller be a Christian) a pipe, a tinder-box, a cup of cocoa-nut, some rice, dried raisins dates, Cyprus cheese, and above all, coffee-berries, with a roaster, and wooden mortar to pound them. I am thus particular to prove, that the Orientals are more advanced than we, in the art of dispensing with many things; an art which is not without its merit.

Our European merchants are not contented with such simple accommodations. Their journeys, therefore, are very expensive, and consequently not frequent; but even the richest natives of the country make no difficulty in passing part of their lives in the manner I have described, on the roads of Bagdad, Bassora, Cairo, and even of Constantinople. Travelling is their education, their science; and to say of any man he is a merchant, is to pronounce him a traveller. They find in it the advantage of purchasing their goods at the first hand, procuring them at a cheaper rate, ensuring their safety by escorting them themselves; preventing many accidents, and obtaining some abatement of the numerous tolls. They learn, in short, to understand weights and measures, the extreme diversity of which renders their's a very complicated profession. Each town has its particular weight, which under the same denomination, differs from that of another. The *Rotle* of Aleppo weighs about six pounds, Paris weight; that of Damascus five and one quarter; that of Saide less than five; that of Ramla near seven. The *Derbem* alone, that is the drachm, which is the first element of these weights, is the same every where. The long measures vary less: only two are known, the Egyptian cubit (*Draa Masri*), and the cubit of Constantinople (*Draa Stam-bouli*.)

Coin is still more fixed; and you may travel over the whole empire from Kotchim to Afouan, without experiencing any change in its denomination or its value. The most simple of these coins is the *Para*, called also a *Medin*, a *Fadda*, a *Kata*, or a *Mesria*. It is of the size of an English silver three-pence, and is only worth five liards (a little above a halfpenny). After the para, follow successively pieces of five, ten, and twenty paras; then the *Zolata*, or *Islote*, which is worth thirty; the *Piastre*, called *Kersh-afadi*, or Pi-

astre of the Lion, worth forty paras, or fifty French fols (two shillings and a penny); and, is most generally used in commerce; and, lastly, the *Abou-Kelb*, or *Piaſtre* of the Dog, which is worth sixty paras. All these coins are silver, but with such a mixture of copper alloy, that the *abou-kelb* is as large as a crown of six livres, though its value be only four livres five fols (three and sixpence halfpenny). They bear no image, because of the prohibition of the Prophet, but only the cypher of the Sultan on one side, and on the other these words: *Sultan of the two Continents, Kaban**, (i. e. Lord) *of the two Seas, the Sultan, Son of the Sultan N. struck at Stamboul* (Constantinople), or at *Maſr* (Cairo); which are the only two cities where there is a mint.

The gold coins are the sequin, called *Dahab*, or piece of gold; and also *Zabr-Mahaboub*, or Well-beloved Flower. It is worth three piasters of forty paras, or seven livres ten fols (six shillings and three pence); the half sequin is only worth sixty paras. There is likewise a sequin, called *Fondoucli*, which is worth one hundred and seventy paras: but it is very rare. Besides these coins, which are those of the whole Turkish empire, some of the European specie has as much currency; such are the silver dahlers of Germany, and the gold sequins of Venice. The dollars are worth in Syria from ninety to ninety-two paras, and the sequins from two hundred and five, to two hundred and eight. These two coins are worth from eight to ten paras more in Egypt. The Venetian sequins are in great request from the fineness of their standard, and the practice they have of employing them for womens trinkets. The fashion of these trinkets does not require much art; the piece of gold is simply pierced, in order to suspend it by a chain likewise of gold, which flows upon the breast. The

* *Kahan* is a Tartarian word.

more sequins there are attached to this chain, and the greater the number of these chains, the more is a woman thought to be ornamented. This is the favourite luxury, and the emulation of all ranks. Even the female peasants, for want of gold, wear piasters or smaller pieces; but the women of a certain rank disdain silver; they will except of nothing but sequins of Venice, or large Spanish pieces, and crusadoes. Some of them wear two or three hundred, as well lying flat, as strung one on another, and hung near the forehead, at the edge of the head-dress. It is a real load: but they do not think they can pay too dearly for the satisfaction of exhibiting this treasure at the public bath, before a crowd of rivals, to awaken whose jealousy constitutes their chief pleasure. The effect of this luxury on commerce, is the withdrawing considerable sums from circulation, which remain dead; besides, that when any of these pieces return into common use, having lost their weight by being pierced, it becomes necessary to weigh them. The practice of weighing money is general in Syria, Egypt, and all Turkey. No piece, however defaced, is refused there; the merchant draws out his scales and weighs it, as in the days of Abraham, when he purchased his sepulchre. In considerable payments, an agent of exchange is sent for, who counts paras by thousands, rejects a great many pieces of false money, and weighs all the sequins, either separately or together.

Almost the whole commerce of Syria is in the hands of the Franks, Greeks, and Armenians; formerly it was engrossed by the Jews. The Mahometans take little part in it; not that they are prevented from engaging in it by the prejudices of their religion, or by indolence, as some political writers have imagined; but from the obstacles thrown in their way by their own government. The Porte, constant to its usual system, instead of giving a decided preference to the Turkish

subjects, finds it more lucrative to sell their rights and industry to foreigners. Some of the European states have, by treaties, obtained a diminution of custom-house duties to three *per. cent.* while the merchandise of the subjects of the Sultan pays strictly ten, or when favoured, seven *per. cent.* Besides this, the duties once paid in any port, the Frank is not liable to pay a second time in another. But the case is different with the Ottoman subject. The Franks, too, having found it convenient to employ Latin Christians as agents, have procured them a participation of their privileges, and they are no longer subject to the power of the Pachas, or amenable to Turkish justice. They cannot be plundered; and whoever has a commercial process with them, must plead before the European consul. With such disadvantages, is it surprising that the Mahometans should relinquish commerce to their rivals? These agents of the Franks are known in the Levant under the name of *Baratary Drogmans*; that is, privileged Interpreters*. The *barat* or *privilege*, is a patent, of which the Sultan makes a present to the ambassadors residing at the Porte. Formerly these ambassadors, in their turn, made presents of them to particular persons in each factory; but within the last twenty years they have been made to understand, it is more lucrative to sell them. The present price is from five to six thousand livres (two hundred or two hundred and fifty pounds). Each Ambassador has fifty, which are renewed on the death of the possessor, and form a pretty considerable perquisite.

France has the greatest trade to Syria of any European nation. Her imports consist in five principle articles; 1st. The cloths of Languedoc. 2dly, Cochineal from Cadiz. 3dly, Indigos. 4thly, Sugars. And,

* An interpreter in Arabic is called *Terdjeman*, of which our old writers have made *Trachement*. In Egypt it is pronounced *Tergoman*; of which the Venetians have made *Dragomano*, and the French converted into *Drogman*.

5thly, West-India coffee, which is in great request with the Turks, and which they mix with that of Arabia, more esteemed indeed, but too high priced. To these must be added hardware, cast iron, sheet lead, tin, Lyons laces, soap, &c.

The returns consist almost wholly in cotton, either spun or raw, or manufactured into coarse stuffs; in some silks of Tripoli, the others being prohibited; in gall nuts, in copper and wool, which come from countries out of Syria. The factories, or as we call them, *Echelles**, of the French, are seven in number, i. e. Aleppo, Skandaroon, Latakia, Tripoli, Saide, Acre, and Ramla. The sum of their imports amounts to 6,000,000 of livres (250,000*l.*) viz.

For Aleppo and Skandaroon,	3,000,000
Saide and Acre, - - -	2,000,000
Tripoli and Catagie, - - -	400,000
Ramla, - - - - -	600,000
	<hr/>
Total,	6,000,000

All this commerce passes through the single channel of Marseilles, which possesses the exclusive privilege of sending ships to, and receiving them from, the Levant, notwithstanding the remonstrances of the Province of Languedoc, which furnishes the principal commodities. Strangers, that is, the natives of Turkey, are prohibited from carrying on their commerce, except through the medium of the Marseilles factors, established in their country. This prohibition was abolished in 1777, for several reasons set forth in the ordinance; but the merchants of Marseilles made such representations, that, since the month of April, 1785,

* This whimsical name of *Echelles* (in English *ladders*) was adopted by the inhabitants of Provence, from the Italian *scala*, a corruption of the Arabic word *kalla*, which signifies a place proper to receive vessels, a road, a harbour. At present the natives say, as the Italians, *scala, rada*.

matters have again been placed upon their former footing. It is for France to determine how far this trade is to her interest. Considered relative to the Turkish empire, it may be said, that the commerce of the Turks with Europe and India, is more detrimental than advantageous. For the articles exported being all raw unwrought materials, the empire deprives itself of all the advantages to be derived from the labour of its own subjects. On the other hand, the commodities imported from Europe and India, being articles of pure luxury, only serve to increase the dissipation of the rich, and the servants of government, whilst, perhaps, they aggravate the wretched condition of the people, and the class of cultivators. Under a government which pays no respect to property, the desire of multiplying enjoyments, cannot but irritate cupidity, and increase oppression. In order to procure more clothes, furs, laces, sugars, shawls, and India goods; there must be more money, cotton, and silks, and more extortions. A momentary advantage may have accrued to the states which furnish these objects of luxury; but are not the advantages of the present moment borrowed from the wealth of future times? And can we hope long to carry on an advantageous commerce with the country which is precipitately hastening to ruin?

CHAP. XX.

Of the Arts, Sciences, and Ignorance of the People.

THE arts and trades in Syria afford room for many considerations. First, The different kinds of them are infinitely less numerous than with us; we can scarcely reckon twenty, even including the most necessary. In

the first place, the religion of Mahomet having proscribed every sort of image and figure, there exists neither painting, nor sculpture, nor engraving, nor any of those numerous professions which depend on them. The Christians alone purchase, for the use of their churches, some pictures of the Greeks at Constantinople, who in point of taste, are real Turks. In the second place, a multitude of our trades are rendered unnecessary, from the small quantity of furniture used by the Orientals. The whole inventory of a wealthy family consists in a carpet for the feet, in mats, cushions, matresses, some small cotton cloths, copper and wooden platters for the table, a few stewing pans, a mortar, a portable mill, a little porcelain, and some plates of copper tinned. All our apparatus of tapestry, wooden bedsteads, chairs, stools, glasses, desks, bureaux, closets; our buffets with their plate, and table services; in a word, all our cabinet and upholstery work, are luxuries totally unknown to them, so that nothing is so simple as a Turkish removal. Pockocke is of opinion that these customs originate in the wandering life formerly led by the ancestors of these nations; but they have had sufficient time to forget this since they have become settled; and we should rather search for the cause of it in the nature of their government, which reduces every thing to what is strictly necessary. Their clothing is not more complicated, though much more expensive. They are strangers to the hats, perukes, hair-dressing, buttons, buckles, stocks, laced ruffles, and all that superfluity with which we are surrounded. Cotton or silk shirts, which even the Pachas, do not count by dozens, and which have neither ruffles nor wristbands, nor plaited collars; an enormous pair of breeches, which serve also by way of stockings; a handkerchief on the head; another round the waist, with the three large folds of cloth and callico I have mentioned in describing the dress of the Mamlouks, compose the whole wardrobe

of the Orientals. Their only articles of luxury are goldsmith's work, which is confined to women's trinkets, saucers for coffee wrought like lace, the ornaments of their harness, their pipes, and the silk stuffs of Aleppo and Damascus. In passing through the streets of the towns, you meet with nothing but a number of beaters of cotton on tenters, retailers of stuffs and mercery, barbers to shave the head, tanners, locksmiths, saddlers, and especially sellers of little loaves, hardware, grain, dates, and sweet-meats, but very few butchers, and these ill supplied. There are also in the great towns a few wretched gun-smiths, who can only repair fire-arms, for not one of them can cast a pistol barrel; as for gun-powder, the frequent occasion they have to make use of it, has excited the industry of the peasants in general to make it, but there is no public manufactory.

In the villages, the inhabitants, limited to mere necessaries, have no arts but those without which they cannot subsist; every one endeavours to supply his own wants, that he may not be obliged to share what he has with others. Each family manufactures the coarse cottons with which they are clothed. Every house has its portable mill, with which the women grind the barley or the Dourra for their sustenance. The flour from these mills is coarse, and the little round loaves made of it, ill leavened and badly baked; but they preserve life, and that is all which is required. I have already observed how simple and cheap their instruments of husbandry are. In the mountains they do not prune the vines, and they nowhere ingraft trees; every thing, in short, reminds us of the simplicity of ancient times, which, possibly, as at this day, was only the ignorance of poverty. When we enquire the reason of their want of industry, the answer is uniformly the same: "It is good enough; That is sufficient: What end would it answer to do more?" They are in the right, since they would not be permitted to reap the benefit of their labours.

Secondly ; The state of the arts in these countries, and the manner in which they are exercised, are interesting, as they preserve, almost in every respect, the discoveries and methods of ancient times. For example, the stuffs manufactured at Aleppo are not of Arabian invention ; this art is borrowed from the Greeks, who themselves, doubtless, imitated the ancient Orientals. The dyes they use are, probably, as old as the time of the Tyrians, and they carry them at this day to a perfection not unworthy of that people ; but the workmen, jealous of their art, make an impenetrable mystery of the the process. The manner in which the ancients secured the harness of their horses against the strokes of the sabre, was undoubtedly the same which is now made use of at Aleppo and Damascus, for the head stalls of their bridles*. The small silver plates with which the leather is lined, hold together without nails, and are so jointed, that without depriving the leather of its pliancy, there remains no interstice for the edge of the weapon.

The cement they make use of, is no doubt that of the Greeks and Romans. To make it properly, they take care only to use the lime when boiling : they mix with it one third of sand, and another of ashes and pounded brick-dust. With this composition they form wells, cisterns, and vaults, which the water cannot pass through. I have seen a singular species of the latter in Palestine that deserves to be described. The vault is built with cylinders of brick, eight or ten inches long. These cylinders are hollow, and may be about two inches diameter within. They are in a

* On this subject, I shall observe, that the Mamlouks of Cairo exhibit every year at the processions of the Caravan, coats of mail, helmets, and vizors, brassets, and all the armour of the time of the Croisades. There is also a collection of old arms in the mosque of the Dervises, a league above Cairo, on the banks of the Nile.

slight degree tapering, the widest end is closed, the other open. To form the roof, they are ranged by the side of each other, with the close end exposed to the weather : they are fastened with plaister of Jerusalem or Nablous, and four workmen can complete the roof of a chamber in a day. The first rains usually penetrate it ; but a coat of oil is then laid over it, which effectually keeps the water out. The cracks withinside are closed by a layer of plaister, and the whole forms a durable and very light roof. With these cylinders they build the walls at the edges of the terraces on the house tops, throughout Syria, to prevent the women, who wash and dry their linen there, from being seen. The use of them has been lately introduced at Paris ; but the invention is of great antiquity in the east.

We may affirm the same of the manner of working the iron mines in Lebanon, on account of its great simplicity. It is the method now employed in the Pyrenees, and known under the name of the *Catalonian Forge*. The furnace consists in a sort of chimney formed in the side of a steep declivity. The funnel is filled with wood ; which is set fire to. The bellows is applied to the inferior mouth, and the iron ore poured in from above ; the metal falls to the bottom, and is taken out by the same mouth at which the fire is lighted. Even their ingenious wooden sliding locks may be traced back to the time of Solomon, who mentions them in his song.

To their music we must not ascribe so high an antiquity. It does not appear to have an earlier origin than the age of the Califs, under whom the Arabs applied themselves to it with more ardour, as all the learned men of that day added the title of Musician, to that of Physician, Geometrician, and Astronomer ; yet, as its principles were borrowed from the Greeks, it might afford matter of curious observation to adepts in that science. Such persons are very rarely to be

met with in the east. Cairo is perhaps the only place in Egypt or in Syria, where there are a few Shaiks who understand the principles of the art. They have collections of airs which are not noted in our manner, but written in characters, all the names of which are Persian. They have no music but vocal; for they neither know nor esteem instrumental, and they are in the right; for such instruments as they have, not excepting their flutes, are detestable. They are strangers likewise to any other accompaniment than the unison, and the continued base of the Monochord. They are fond of singing with a forced voice in the high tones, and one must have lungs like theirs to support the effort for a quarter of an hour. Their airs, in point of character and execution, resemble nothing we have heard in Europe, except the Seguidillas of the Spaniards. They have divisions more laboured even than those of the Italians, and cadences and inflexions of tones impossible to be imitated by European throats. Their performance is accompanied with sighs and gestures, which paint the passions in a more lively manner than we should venture to allow. They may be said to excel most in the melancholy strain. To behold an Arab with his head inclined, his hand applied to his ear, his eyebrows knit, his eyes languishing; to hear his plaintive tones, his lengthened notes, his sighs and sobs, it is almost impossible to refrain from tears, which, as their expression is, are far from bitter; and indeed they must certainly find a pleasure in shedding them, since among all their songs, they constantly prefer that which excites them most, as among all accomplishments singing is that they most admire.

Dancing, which with us holds an equal rank with music, is far from being held in the same estimation by the Arabs. This art, among them, is branded with all kind of shame; a man cannot practise it with-

out dishonour,* and the exercise of it is only permitted to women. This judgment will appear to us severe, but before we condemn it, it must be considered, that in the eastern world, dancing is not an imitation of war, as among the Greeks, nor a combination of graceful attitudes and movements, as with us; but a licentious imitation of the utmost wantonness of love. This is the species of dance which, brought from Carthage to Rome, announced the decline of her republican manners, and which, since arrived in Spain by the Arabs, still subsists there under the title of the *Fandango*. Notwithstanding the freedom of our manners, it would be difficult, without wounding the ear, accurately to describe it; it will be sufficient to say that the female dancer, with her arms extended, and an empassioned air, singing and accompanying her song with castanets, which she holds between her fingers, executes without changing her place, all those motions of the body which passion itself carefully conceals under the veil of night. Such is their licentiousness, that none but prostitutes venture to dance in public. Those who make a profession of it are called *Rawazi*, and those who excel, assume the name of *Alma*, or proficient in the art. The most celebrated are those of Cairo. A late traveller, (M. Savary,) has drawn a flattering picture of them; but I confess the originals did not produce the same enthusiasm in me. With their yellow linnen, their tawny skins, their naked pendent breasts, their blackened eye-lashes, their blue lips, and their hands stained with henna, these Alma only reminded me of the *Bacchantes* of the *Porcherons*†; and if we reflect that, even

* The sacred dance of the *Dervises*, the motions of which are supposed to imitate the revolutions of the stars, must be excepted.

† Wine-houses without Paris, and free from the city duties; the resort of the populace—the idea might, perhaps, be better conveyed by the term *Bacchantes of Billingsgate*.

among the most polished nations, this class of women retain not a little vulgarity, it is not credible, that among a people, where the most simple arts are still in a state of barbarism, they can shew much refinement and delicacy in one which requires the most.

The intimate connection between the arts and sciences, leaves no room to doubt that the latter are still more neglected, or to confess the truth, totally unknown. The barbarism of Syria, as well as that of Egypt, is complete; and, from the similarity which is usually found in the different provinces of the same empire, we may form the like judgment of all the countries under the dominion of the Turks. In vain have some persons denied this assertion; in vain do they talk of *colleges, places of education, and books*: these words in Turkey convey not the same ideas as with us. The age of the Califs is past among the Arabs, and yet to begin among the Turks. These two nations have at present neither geometricians, astronomers, musicians, nor physicians. Scarcely can we meet with one of the latter who knows how to bleed with a fleam; when they have ordered a cautery, applied fire, or prescribed some common recipe, their knowledge is exhausted: and consequently the valet de chambre of an European is consulted as an Esculapius; where indeed should physicians be formed, since there are no establishments of the kind, and anatomy is directly repugnant to the prejudices of their religion? Astronomy might gain more admirers, but by astronomy they understand only the art of discovering the decrees of fate by the motions of the stars, and not the profound science of calculating their revolutions. The monks of Mar-Hanna, who are possessed of books, and maintained a correspondence with Rome, are not less ignorant than the rest. Never, before my arrival among them, had they heard that the earth turned round the sun, and this opinion was very near giving great offence to the bro-

therhood; for the zealots, finding that it contradicted the Holy Bible, were inclined to treat me as a heretic: fortunately the Vicar General had good sense enough to doubt, and to say: "Without blindly crediting the Franks, we must not too hastily deny all they assert; for every thing they bring us, the produce of their arts, is so infinitely superior to our own, that they may possibly discover things which are beyond our ideas." I escaped by not taking the blame of this novel hypothesis on myself, but restoring the discovery to our modern philosophers, who are esteemed by the monks at this day, as Visionaries.

A great difference than should be made between the present Arabs, and those of the times of El-Mamoun, and Aroun-el-Raschid, and it must be admitted that, even of them, we have formed very extravagant ideas. Their empire was too often destroyed to suffer them to make any great progress in the sciences. What we see happen in our days in some of the European states proves that they require ages to become established in any country. And from what we know of the Arabian writers, do we not constantly find them either the translators or echoes of the Greeks? The only science which is peculiar to them, and the only one they continue to cultivate, is that of their own language; but, by the study of language, we must not understand that philosophical spirit of research, which, in words, investigates the history of ideas, in order to perfect the art by which they are communicated. Among the Mahometans, the study of the Arabic is only cultivated on account of its connection with religion; and this is in fact very confined, for the Koran is "the immediate word of God:" but, as this word only retains the identity of its nature, so far as it corresponds with the meaning of God and his prophet, it is a matter of the greatest moment to learn, not only the exact signification of the words employed, but, likewise, the accents, inflexions, sighs and pauses, in short, all the

most minute niceties of profody and reading ; and it is impossible to form an idea how complicated all this is without having heard their declaration in the Mosques. As for the principles of the language, those of the grammar alone take several years to acquire. Next is taught the *Nabou*, a part of grammar which may be defined, the science of terminations foreign to the vulgar Arabic, which are superadded to words, and vary according to the numbers, cases, genders and persons. When this is attained, the student is reckoned among the learned. Eloquence is next to be studied, and that requires whole years ; for the masters, mysterious like the Brachmans, discover the secrets of their art only by degrees. At length, they proceed to the study of the law and the *Fakah*, or *Science, per excellentiam*, by which they mean theology. Now, if we consider that the perpetual object of these studies is always the Koran, and that it is necessary thoroughly to be acquainted with all the mystical and allegorical significations ascribed to it, and to read all the commentaries and paraphrases upon it, of which there are two hundred volumes on the first verse ; if we reflect that it is requisite to dispute on thousands of ridiculous cases of conscience ; such as, if it be allowed to mix mortar with impure water, whether a man who has an issue be not in the case of a defiled woman ; as also to be able to discuss the various questions, whether the soul of the prophet was not created before that of Adam ; whether he did not counsel God in the creation ; and what was the counsel he gave : it cannot but be allowed, that one may pass one's whole life-time in learning a great deal, and knowing nothing.

As for the instruction bestowed on the vulgar, as the professors of the law do not perform the function of our vicars and priests, as they neither preach, nor catechize, nor confess, it may be pronounced that they receive none : all the education of children con-

sists in attending private masters, who teach them to read the Koran, if they are Mahometans, or the Psalms, if Christians, and a little writing, and reckoning from memory : this continues till they arrive almost at manhood, when each of them chuses some profession, in order to marry and gain a livelihood. The contagion of ignorance infects even the children of the Franks, and it is a maxim at Marseilles, that a *Levantin* must be a dissipated youth, idle, and without emulation, and whose whole knowledge will be confined to being able to speak several languages, though this rule, like all others, has its exceptions.

In examining the causes of the general ignorance of the Orientals, I shall not say with a late traveller, that it arises from the difficulties of the language, and of reading and writing ; undoubtedly the difficulty of the dialects, the perplexity of the characters, and the defects of their alphabet, multiply the obstacles to instruction. But habit surmounts them, and the Arabs attain as perfect a facility in writing and reading, as the Europeans themselves. The real cause is the few means of instruction they possess, among which must be first reckoned the scarcity of books. With us nothing is so common as this valuable assistance : nothing so general among all ranks as the practice of reading. In the East, on the contrary, nothing is so rare. There are but two libraries throughout Syria, that of Mar-hanna, of which I have spoken, and that of Djezzar at Acre. The reader has seen how insignificant the former is, both with respect to the number and the choice of its books. I shall not speak of the latter as an eye witness ; but two persons who have seen it, have assured me, that it did not contain more than three hundred volumes ; yet these are the spoils of all Syria, and among others, of the Convent of St. Sauveur, near Saide, and of the Shaik Kairi, Mufti of Ramla. At Aleppo, the house of Bitar is the only one which possesses any books, and those are astro-

nomical, which nobody understands. At Damascus the lawyers hold even their own science in no estimation. Cairo alone is rich in books. There is a collection of very ancient ones at the Mosque of El-azhar, and a considerable number is in daily circulation; but Christians are forbid to touch them. Twelve years ago, however, the monks of Mar-hanna desirous of procuring some, sent one of their number thither to purchase them. By a fortunate accident he got acquainted with an Effendi, with whom he became a favourite, and who wishing to obtain from him some lessons in Astrology, in which he thought him an adept, procured him some books. In the space of six months this monk assured me, that upwards of two hundred passed through his hands; and on my enquiring on what subjects, he replied, treatises on grammar, the Nahou, eloquence, and the interpretation of the Koran; but very few histories, or even tales. He had never seen two copies of the Arabian Nights Entertainments. From this state of facts, we are certainly authorized to confirm, not only that there is a scarcity of good books in the east, but that books of any kind are very rare. The reason of this is evident. In these countries every book is a manuscript; the writing of which is necessarily slow, difficult, and expensive. The labour of many months produces but one copy. That must be without erasure, and is liable to be destroyed by a thousand accidents. It is impossible therefore for books to multiply, and consequently for knowledge to be propagated. If we compare this state of things with what passes among ourselves, we cannot but be deeply impressed with the advantages of printing. We shall even be convinced, on reflection, that this art alone is possibly the main spring of those great revolutions, which, within the last three centuries, have taken place in the moral system of Europe. The press, by rendering books com-

mon, has diffused a more equal share of knowledge through every class; and by rapidly communicating ideas and discoveries, has produced a more speedy improvement and more universal acquaintance with the arts and sciences: by its means, all those who occupy themselves in literary pursuits, are become a body perpetually assembled, who pursue without intermission the same labours. By printing, every writer is become a public orator, who addresses himself not only to his city, but to his nation, and to all Europe. If in this new species of popular assembly he has lost the advantage of declamation and gesture to excite the passions, he is amply indemnified by that of having a more select audience, and being able to reason with more temperance; and if the impression he makes be less lively, it is certainly more durable. Since the discovery of the art of printing, therefore, single men have been seen to produce by the mere effects of their writings, moral revolutions in whole nations, and have obtained an influence over the minds of men, which has even awed and controuled the authority of the reigning powers.

Another very remarkable effect of the press, is that which it has had on history. By giving a general and rapid publicity to facts, it has rendered their certainty more easy to be ascertained; whereas, when books were written by hand, the collection made by one man, producing only one copy, could be seen and criticized by only a very small number of readers; and these readers are the more to be suspected, as they must depend on the choice of the author. If he should permit copies to be taken, they multiply and spread very slowly. In the mean time witnesses drop off, proofs which might once have been produced lose their force, contradictions start up, and a wide field is open to error, passion, and misrepresentation. This is the cause of all these monstrous relations with which the histories of antiquity, as well as those of

Modern Asia abound. If among those histories we find some which bear striking marks of probability, they are those whose writers were either eye-witnesses of the facts they relate, or public men who wrote to an enlightened people, able to contradict them whenever they departed from truth. Such was Cæsar, the principal actor in the events related in his own memoirs; such was Xenophon, the general of the ten thousand, whose able retreat he has so well described; such was Polybius, the friend and companion of Scipio, the conqueror of Carthage; such also were Sallust and Tacitus, who had been consuls; Thucidides, the commander of an army, and Herodotus, senator, and deliverer of Halicarnassus. When history on the contrary is only a collection of ancient events, delivered down by tradition; when these facts are merely collected by individuals, it is neither of the same species, nor does it bear the same character. How great is the difference between the preceding writers and Livy, Quintus Curtius, and Diodorus Siculus! Fortunately, however, for them, the countries in which they wrote were civilized, and public information might serve to guide them respecting recent facts. But when nations were in a state of anarchy, or groaning under such a despotism as prevails at this day in the east, writers, absorbed in that ignorance and credulity which ever accompany such a state, might boldly commit their errors and prejudices to history; and we may remark, that it is in the productions of such ages and nations that we meet with all the monsters of fiction, while in polished periods, and in the hands of original writers, the annals of history only present us with a narrative of facts similar to those which are daily passing before our eyes.

This influence of the press is so efficacious, that the establishment of Mar-Hanna alone, imperfect as it is, has already produced a sensible difference among the Christians. The art of reading and writing, and even

a sort of information, are more common among them at present, than they were thirty years ago. Unfortunately their outset has been of that kind, which long retarded the progress of improvement, and excited innumerable disorders in Europe. For bibles and religious books being the first which proceeded from the press, the general attention was turned towards theological discussions, whence resulted a fermentation which was the source of the Schisms of England and Germany, and the unhappy political troubles of France. If instead of translating their Buzebaum, and the Misanthropical reveries of Nieremberg and Didaco Stella, the Jesuits had printed and dispersed books of practical morality and public utility, adapted to the state of the Kefraouan and the Druzes, their labours might have produced in those countries, and even through all Syria, political consequences which might eventually have changed its whole system. At present, all hope of such improvement is over, or at least greatly retarded; the first fervor has been spent on useless objects. Besides, the monks are poor, and if Djezzar takes it into his head he will destroy their press. To this he will probably be induced by the fanaticism of the professors of the law, who, without very well knowing what they have to dread from the press, have, notwithstanding, conceived an aversion to it; as if folly possessed the natural instinct of divining what may prove its destruction.

The scarcity of books, and the want of the means of information are then, as I have just said, the causes of the ignorance of the Orientals; but these must, after all be regarded merely as accessaries: the radical source is still in the government, which not only does not encourage the propagation of knowledge, but exerts every effort to stifle it in the birth. Under the administration of the Turks, there is no prospect of obtaining rank or fortune through the channel of the arts and sciences, or polite literature. The talents of

the most distinguished geometricians, astronomers, or engineers of Europe, would not preserve their possessor from languishing in obscurity, or groaning beneath the persecution of tyranny. If science, therefore, which itself is acquired with so much difficulty and labour, can only make us regret its inutility, and even expose us to danger; it is better never to possess it. For this reason, the orientals are ignorant, and must necessarily be so, from the same principle which makes them poor, as they may apply with justice to science, what they say of the arts: "What good purpose will it answer to do more?"

CHAP. XXI.

Of the manners and character of the Inhabitants of Syria.

OF all the subjects of observation any country affords, the moral character of its inhabitants is unquestionably the most important; but it must likewise be acknowledged, it is at the same time most difficult: for it is not sufficient to make a barren enquiry into facts; the essential object is to investigate their various causes and relations; to discover the open or secret, the remote or immediate springs, which produce in men those habits of action we call manners, and that uniform disposition of mind we name character. Now, to succeed in such an enquiry, it is necessary to communicate with the men we wish to know; we must place ourselves in their situations, in order to feel by what agents they are influenced, and the consequences which result; we must live in their country, learn their language, and adopt their customs; conditions seldom complied with by travellers; and which even

when they are, still leave to be surmounted numerous difficulties, which arise from the nature of the thing itself; for we have not only to combat the prejudices we may meet in our way, but to overcome our own, against which we can never be sufficiently on our guard; habits are powerful, facts liable to be mistaken, and error easy. The observer, then, should be circumspect though not timid, and the reader, obliged to see with the eyes of others, should watch attentively both the reasoning of his guide, and the deductions he may be inclined to draw himself.

When an European arrives in Syria, or indeed in any part of the eastern world, what appears most extraordinary to him, in the exterior of the inhabitants, is the almost total opposition of their manners to our own: it seems as if some premeditated design had determined to produce an infinity of the most striking contrasts between the people of Asia and those of Europe. We wear short and close dresses; theirs are long and ample. We suffer our hair to grow, and shave the beard; they let the beard grow, and shave the head. With us, to uncover the head is a mark of respect; with them a naked head is a sign of folly. We salute in an inclined posture; they upright. We pass our lives erect; they are almost continually seated. They sit and eat upon the ground; we upon raised seats. With respect to language, likewise, their manner of writing is directly contrary to ours, and the greatest part of our masculine nouns are feminine with them. To the bulk of travellers these contrasts only appear whimsical; but it may be interesting to philosophers, to enquire into the causes of so great a diversity of habits, in men who have the same wants, and in nations which appear to have one common origin.

Another distinguishing characteristic, no less remarkable is that religious exterior observable in the countenances, conversation, and gestures of the inhabitants of Turkey. In the streets every one appears

with his string of beads. We hear nothing but emphatical exclamations of *Ya allab!* O God! *Allab akbar!* God most great! *Allab taala,* God most high! Every instant the ear is struck with a profound sigh, or noisy eructation which follows the pronouncing of some of the ninety-nine epithets of God; such as *Ya rani!* Source of riches! *Ya sobban!* O most to be praised! *Ya mastour!* O impenetrable! If a man sells bread in the streets, he does not cry bread, but exclaims *Allab Kerim,* God is liberal. If he sells water he cries, *Allab djawad,* God is generous; and so of other articles. The usual form of salutation is, *God preserve thee;* and of thanks, *God protect thee:* in a word, God is in every thing, and every where. These men then are very devout, says the reader? Yes, but without being the better in consequence of this devotion, for I have already observed, their zeal is no other than a spirit of jealousy, and contradiction arising from the diversity of religions; since in the Christian a profession of his faith is a bravado, an act of independence; and in the Mahometan, an act of superiority and power. This devoutness, therefore, merely the offspring of pride and profound ignorance, is no better than a fanatic superstition, and the source of innumerable disorders.

There is still another characteristic in the exterior of the Orientals, which attracts the attention of an observer: I mean their grave and phlegmatic air in every thing they do, or say. Instead of that open and cheerful countenance, which we either naturally possess or assume, their behaviour is serious, austere, and melancholy; they rarely laugh, and the gaiety of the French appears to them a fit of delerium. When they speak it is with deliberation, without gestures, and without passion; they listen without interrupting you; they are silent for whole days together, and by no means pique themselves on supporting conversation. If they walk, it is always leisurely, and on business;

they have no idea of our troublesome activity, and our *walks* backward and forward for amusement. Continually seated, they pass whole days musing; with their legs crossed, their pipes in their mouths and almost without changing their attitude. It should seem as if motion were a punishment to them, and that like the Indians, they regard inaction as essential to happiness.

This observation, which may be extended to the greater part of their habits and customs, has in our time; given occasion to a great summary system of the causes of the peculiar character of the Orientals, and several other nations. A celebrated writer, reflecting on what the Greeks and Romans have said of Asiatic effeminacy; and the accounts given by travellers of the indolence of the Indians, is of opinion, that this indolence forms the distinguishing character of the inhabitants of those countries; pursuing his enquiries into the common cause of this general fact, and finding, that all these nations inhabit what are called *hot countries*, he has attributed the cause of their indolence to heat; and assuming the fact as a principle, has laid it down as an axiom, that the inhabitants of hot countries must necessarily be indolent; inert of body, and from analogy, likewise inert of mind and character. He goes even still farther; remarking, that unlimited monarchy is the most habitual state of government among these nations; and considering despotism as the effect of the supineness of a people; he concludes, that despotism is as much the natural government of these countries, and as necessary as the climate under which they live. It should seem as if the severity, or, more properly speaking, the barbarity of the inference should have put men upon their guard against such erroneous principles: yet this system has been received with great applause in France, nay, even throughout Europe; and the opinion of the author of the *Spirit of Laws*, is become

among the most numerous class of reasoners, an authority from which it is presumptuous to differ. This is not the place to write a formal treatise completely to overthrow this error : besides that such a refutation already exists in the work of a philosopher, whose name is at least equal to that of Montesquieu. But in order to raise some doubts at least in the minds of those who, without giving themselves time to reflect, have adopted this opinion, I shall offer a few objections which the subject naturally suggests.

The doctrine of the general indolence of the Oriental and southern nations, is founded on that opinion of Asiatic effeminacy originally transmitted to us by the Greeks and Romans ; but what are the facts on which that was built ? Were they fixed and determinate, or did this opinion rely on vague and general ideas like the systems of the moderns ? Had the ancients a more accurate knowledge of those countries in their time, than we have obtained in ours ; and are we justified in founding on their report an hypothesis difficult to establish from our own more minute examination ? But, admitting the facts as we receive them from history, were the Assyrians, whose ambition and wars during five hundred years, threw Asia into confusion ; the Medes, who shook off their yoke, and dispossessed them ; the Persians who, under Cyrus, within the space of thirty years, extended their conquests from the Indus to the Mediterranean : were these inert and indolent people ? May we not oppose to this system the Phœnicians, who, for so many centuries, were in possession of the commerce of the whole ancient world ; the Palmyrenians, of whose industry we possess such stupendous monuments ; the Carduchi of Xenophon, who braved the power of the *Great King* in the very heart of his empire ; the Parthians, those unconquerable rivals of Rome ; and even the Jews, who, limited to a little state, never ceased to struggle, for a thousand years, against the most powerful em-

pires? If the men of these nations were inert, what is activity? If they were active, where then is the influence of climate? Why in the same countries, where so much energy was displayed in former times, do we at present find such profound indolence? Why are the modern Greeks so debased amid the very ruins of Sparta and Athens, and in the fields of Marathon and Themopylæ? Will it be alledged, that the climate has changed? Where are the proofs? Supposing this true, it must have changed by irregular fits; the climate of Persia must have altered greatly from Cyrus to Xerxes; that of Athens from Aristides to Demetrius Phalereus; and that of Rome from Scipio to Sylla, and from Sylla to Tiberius. The climate of the Portugueze must have changed since the days of Albuquerque; and that of the Turks since Soliman. If indolence be peculiar to the southern countries, whence is it that we have seen Carthage in Africa, Rome in Italy, and the Buccaneers at St. Domingo? Why do we meet with the Malays in India, and the Bedouins in Arabia? Why, too, at the same period, and under the same sky, do we find a Sybaris near Crotona, a Capua in the vicinity of Rome, and a Sardes contiguous to Miletus? Whence is it, that we see, under our own eyes, and in Europe itself, northern governments as languid as those of the south? Why, in our own empire, are the southern more active than the northern provinces? If the same effects are observable under directly contrary circumstances, and different effects under the same circumstances, what becomes of these pretended principles? What is this influence of climate? and what is to be understood by activity? Is it only to be accorded to warlike nations? and was Sparta, when not engaged in war to be esteemed inert? What do we mean by hot countries? Where are we to draw the line of cold and temperate? Let the Partisans of Montesquieu ascertain this, that we may henceforward be enabled to determine the quan-

tity of energy in a nation by the temperature, and at what degree of the thermometer we are to fix its aptitude to slavery or freedom!

But a physical observation has been called in to corroborate this position; and we are told that heat abates our strength; we are more indolent in summer than in winter: the inhabitants of hot countries, therefore, must be indolent. Let us suppose this true. Whence is it then, that, under the same influence of climate, the tyrant possesses more energy to oppress, than the people to defend themselves? But, is it not evident that we reason like the inhabitants of a country where cold is more prevalent than heat? Were a similar thesis to be maintained in Egypt and Africa, it would there be said, the cold prevents motion, and obstructs the circulation. The truth is, that our sensations are relative to our habits, and that bodies assume a temperament analogous to the climate in which they live; so that they are only affected by the extremes of the ordinary medium. We hate sweating; the Egyptian loves it, and dreads nothing so much as a failure of perspiration. Thus, whether we refer to historical, or natural facts, the system of Montesquieu, so specious at first sight, turns out, when examined, to be a mere paradox, which has owed its success only to the impression made by the novelty of the subject, at the time the Spirit of Laws appeared, and the indirect flattery it offered to those nations by which it was so favourably received.

To give precision to our ideas, respecting the question of activity, a shorter and more certain method than these far-fetched and equivocal reasonings would have been, to have studied nature herself, and to have examined the origin and motives of activity in man. If we pursue this mode of investigation, we shall perceive that all action, whether of body or mind, has its source in our necessities; and augments as they increase. We may follow its gradations from the rudest

beginnings, to the state of the most mature improvement. In man yet savage, hunger and thirst awaken the first exertions of the soul and body. These are the wants which prompt him to run, search, watch, and employ cunning or violence, as he finds them necessary: all his activity depends on the means of providing for his subsistence. Is that easily obtained, has he fruit, game and fish, within his reach, he is less active, since by putting forth his hand, he can satisfy himself: and being satisfied, nothing invites him to stir, till the experience of various employments has awakened in him desires which become new wants, and new motives of activity. On the other hand, are the means of supplying his necessities difficult to be obtained; is game hard to be found, and possessed of agility to avoid him; are the fish wily, and do the fruits soon decay; man is forced to be more active; he must exercise his body and mind, to maintain life; he must become swift like the beasts, wily like the fish, and provident to preserve his fruits; he must endeavour the improvement of his mental faculties. He, therefore, bestirs himself, he thinks, he meditates; he conceives the idea of bending the branch of a tree to form a bow, and pointing a reed to make an arrow, he fastens a handle to a sharp stone, and procures him a hatchet; he then labours to make nets, to fell trees, to hollow out their trunks, and build canoes. Already has he provided for his most urgent necessities; already the experience of a multitude of sensations has made him acquainted with enjoyments and sufferings; and his activity is redoubled to remove the one, and multiply the others. He has felt the pleasure of being shaded from the heat of the sun; he builds himself a cabin: he has experienced that a skin secures him from the cold; he makes himself clothing: he has tasted brandy and smoked tobacco; he likes them, and wishes to have more; but to procure them he must bring beaver skins, elephants

teeth, gold dust, &c. He redoubles his activity, and carries his industry so far as to sell even his fellow creature. In such a progress, as in the primary cause, it must be acknowledged, that activity has little or no connection with heat; only the inhabitants of the north being reputed to stand more in need of nourishment than those of the south, it may be alledged, that they must consequently be possessed of more activity; but this difference in necessary wants, has very narrow limits. Besides, it is well ascertained, that an Esquimaux or a Samoyede, requires really a greater quantity of aliment, than a Bedouin or an Ichthyophagus of Persia? Are the savages of Brazil and Guinea less voracious than those of Canada and California? Let my opponents beware: the facility of obtaining a great quantity of food, is perhaps the primary cause of voraciousness; and this facility, especially in a savage state, depends less on climate than on the nature of the soil, and its richness or poverty in pasturage, in forests, and in lakes, and consequently in game, fish, and fruits; circumstances which are found indifferently under every parallel.

From these reflections it appears, that the nature of the soil has a real influence on activity. We must perceive, that in the social as in the savage state, a country, in which the means of subsistence are somewhat difficult to be procured, will have more active, and more industrious inhabitants; while in an other where nature has lavished every thing, the people will be indolent and inactive. And this is perfectly conformable to historical facts, for we always find the conquering nations poor, and issuing from lands either barren or difficult of cultivation, while the conquered people are inhabitants of fertile and opulent countries. It is even worthy of observation, that these needy conquerors, established among rich nations, shortly lose their energy, and become effeminate. Such was the case with the Persians, who, under Cyrus, descended

from the Elymaïs, into the fertile fields watered by the Euphrates; such was the Macedonians under Alexander, when transplanted from Mount Rhodope to the plains of Asia; such the Tartars of Djenkis-kan, when settled in China and Bengal; and such the Arabs so victorious under Mahomet, after the conquest of Spain and Egypt. Hence we may affirm, that it is not as inhabitants of hot, but as inhabitants of rich, countries that nations are inclined to indolence; and this maxim is exactly conformable with what we observe in society in general, since we see there is always least activity among the more opulent classes; but as this satiety and poverty do not exist for all the individuals of a nation, we must recur to reasons more general, and more efficacious, than the nature of the soil; I mean the social institutions called *Government* and *Religion*. These are the true sources and regulators of the activity or indolence of individuals, and nations. These are the efficient causes, which as they extend or limit the natural or superfluous wants, limit or extend the activity of all men. A proof that their influence operates in spite of the difference of climate and soil, is, that Tyre, Carthage, and Alexandria, formerly possessed the same industry as London, Paris, and Amsterdam; that the Buccaneers, and the Malayans have displayed equal turbulence and courage with the Normans; and that the Russians and Polanders have the apathy and indifference of the Hindoos, and the negroes. But as their nature varies and changes with the passions of men, their influence changes and varies in very short intervals of time. Hence it is, that the Romans, commanded by Scipio, resembled so little those governed by Tyberius; and that the Greeks of the age of Aristides and Themistocles, were so unlike those of the time of Constantine. Let us examine what passes within ourselves. Do we not experience, that our activity has less dependence on physical causes, than the actual

circumstances of the society of which we are members? Are our desires excited by necessary or superfluous wants, both our bodies and minds are animated with new life; passion inspires us with an activity ardent as our desires, and persevering as our hopes. Are these hopes disappointed, desire decays, activity languishes, and discouragement induces apathy and indolence. This explains why our activity varies with our conditions, our situations and the different periods of our life. Why does the man, who was active in his youth, become indolent in his old age? Why is there more activity in capital and commercial cities, than in towns without commerce, and in the country? To awaken activity there must be objects of desire; and to maintain it, the hope of arriving at enjoyment. If these two essentials are wanting, there is an end to individual and national activity. And such is the condition of the Orientals in general, and particularly of those of whom we are treating. What should induce them to move, if no motion procures them the hope of an enjoyment equivalent to the trouble they must take? How can they be otherwise than indolent in their most simple habits, if their social institutions render it a sort of necessity?

The most intelligent observer of antiquity, after having made the same remark on the Asiatics of his time, has assigned the same reason. “As to the
 “effeminacy and indolence of the Asiatics, (says he
 “in a passage which well deserves to be cited,)* if
 “they are less warlike, and more gentle in their
 “manners than the Europeans, no doubt the nature
 “of their climate, more temperate than ours, con-
 “tributes greatly to this difference. But we must
 “not forget the form of their governments, which are
 “all despotic, and subject to the arbitrary will of their
 “kings. Men who are not permitted the enjoyment

* *Hippocrates de acre, locis et aquis.*

“ of their natural rights, but whose passions are per-
 “ petually under the guidance of their masters, will
 “ never be found courageous in battle. To them the
 “ risks and advantages of war are by no means equal.
 “ Obligated to forsake their friends, their country, their
 “ families; to support cruel fatigues and even death
 “ itself, what is the recompence of so many sacrifices?
 “ Danger and death. Their masters alone enjoy the
 “ booty and the spoils they have purchased with their
 “ blood. But let them combat in their own cause,
 “ and reap the reward of their victory, or feel the
 “ shame of their defeat, they will no longer be defi-
 “ cient in courage; and the truth of this is sufficiently
 “ proved by both the Greeks and Barbarians, who,
 “ in those countries, live under their own laws, and
 “ are free; for they are more courageous than any
 “ other race of men.”

This is precisely the definition of the Orientals of
 our days; and what the Grecian philosopher has said
 of some particular tribes, who resisted the power of
 the Great king and his Satraps, corresponds exactly
 with what we have seen of the Druzes, the Maronites,
 the Curds, the Arabs, Shaik Daher, and the Bedou-
 ins. It must be admitted, the moral character of na-
 tions, like that of individuals, chiefly depends on the
 social state in which they live; since it is true, that
 our actions are governed by our civil and religious
 laws, and since our habits are no more than a repeti-
 tion of those actions, and our character only the dis-
 position to act in such a manner, under such circum-
 stances, it evidently follows, that every thing de-
 pends on government and religion. In all the obser-
 vations I have made, I have never failed to remark
 the influence of these two causes operating more or
 less immediately. This will become still clearer, when
 we considered more circumstantially.

I have said that the Orientals, in general, have a
 grave and phlegmatic exterior, a staid and almost

listless deportment, and a serious, nay, even sad and melancholy countenance. Were the climate or the soil the radical cause of this, the effect would be the same in every individual. But this is not the case; under this general character, there are a thousand peculiar minute varieties in different classes and individuals, arising from their situation, relative to the influence of government, which differs in its effects on these classes, and these individuals. Thus we observe that the peasants subjects to the Turks are more gloomy than those of the tributary countries; that the inhabitants of the country are less gay than those of the towns; and that those on the coast are more cheerful than such as dwell at a greater distance from it; that in the same town, the professors of the law are more serious than the military, and these again more so than the people. We may even remark, that in the great cities, the people have much of that dissipated and careless air they usually have with us; because there, as well as here, inured to suffering from habit, and devoid of reflection from ignorance, they enjoy a kind of security. Having nothing to lose, they are in no dread of being plundered. The merchant, on the contrary, lives in a state of perpetual alarm, under the double apprehension of acquiring no more, and losing what he possesses. He trembles lest he should attract the attention of rapacious authority, which would consider an air of satisfaction as a proof of opulence, and the signal for extortion. The same dread prevails throughout the villages, where each peasant is afraid of exciting the envy of his equals, and the avarice of the Aga and his soldiers. In such a country, where the subject is perpetually watched by a despoiling government, he must assume a serious countenance for the same reason that he wears ragged cloaths, and makes a public parade of eating cheese and olives. The same cause, though it has a less influence on lawyers, is not, however, without its effect on them;

but the insolence in which they have been educated, and the pedantry of their manners, render it unnecessary to assign any other.

With respect to their indolence, it is not surprizing that the inhabitants of the cities and the country, fatigued with labour, should have an inclination to repose. But it is remarkable, that when these people are once in action, they exert themselves with a vivacity and ardour almost unknown in our climates. This is more particularly observable in the sea ports and commercial towns. An European cannot but admire with what activity the sailors, with their naked arms and legs, handle the oars, bend the sails, and perform ever manœuvre: with what ardour the porters unload a boat, and carry the heaviest couffes.* Always singing, and answering by couplets to one who directs their labour, they perform all their motions in cadence, and redouble their exertions by making them in time. It has been said, on this subject, that the inhabitants of hot countries have a natural propensity to music; but in what consists its analogy with the climate? Would it not be more rational to say, that the hot countries we are acquainted with, having made a considerable progress in improvement and knowledge long before our cold climates, the people have retained some traces of the fine arts which were formerly cultivated among them. Our merchants frequently reproach this people, and especially those of the country, with not labouring so often, nor so long, as they are able. But why should they labour beyond their wants, since the superfluity of their industry would procure them no additional enjoyment? In many respects, a man of the lower class of people resembles the savages; when he has expended his strength in procuring a subsistence, he takes his repose; it is, only by rendering

* Sacks made of straw, greatly used in Asia.

that subsistence less difficult to acquire, and by exciting him with the temptation of present enjoyments; that he can be induced to exert an uniform activity; and we have seen, that the Turkish government is of a directly contrary tendency. As to the sedentary life of the natives, what motives has a man to bestir himself in a country where the police has never thought either of laying out walks, or encouraging plantations; where there is no safety without the towns, nor pleasure within their precincts; where every thing, in short, invites to stay at home? Is it astonishing that such political maxims should have produced sedentary habits? And must not these habits, in their turn become the causes of inaction?

The comparison of our civil and domestic state, with that of the Orientals, will furnish still further reasons for that phlegm which constitutes their general character. One of the chief sources of gaiety with us, is the social intercourse of the table, and the use of wine. The Orientals are almost strangers to this double enjoyment. Good cheer would infallibly expose them to extortion, and wine to corporal punishment, from the zeal of the police in enforcing the precepts of the Koran. It is with great reluctance, that the Mahometans tolerate the Christians in the use of a liquor they even envy them; wine, therefore, is not habitual or familiar, except in the Kef-raouan, and the country of the Druzes; and their repasts there have a cheerfulness which brandy does not procure even in the cities of Aleppo and Damascus.

A second source of gaiety among us, is the free intercourse between the two sexes, which prevails more particularly in France. The effect of which is, that even without any particular views, the men endeavour to obtain the good opinion of the women, and study to acquire the manners most likely to ensure it. Now, such is the nature, or such the education

of the sex, that the first merit in their eyes is to be able to amuse them; and nothing is so certain of succeeding with them, as sprightliness and mirth. Hence we have contracted a habit of trifling, politeness and frivolity, which is become the distinguishing character of the French nation in Europe. In Asia, on the contrary, the women are rigorously secluded from the society of men. Constantly shut up in their houses, they have no communication but with their husband, their father, their brother, or at most with their cousin-german. Carefully veiled in the streets, they dare hardly speak to a man, even on business. Every body must be strangers to them: it would be indecent to fix your eyes on them, and you must let them pass you, as if they were something contagious in their nature. And indeed this is nearly the idea of the Orientals, who entertain a general sentiment of contempt by that sex. It may be asked, what is the cause of this? The same which operates on every thing; the laws and government. In fact, Mahomet, passionately fond as he was of women, has not, however, done them the honour of treating them in his Koran as appertaining to the human species; he does not so much as make mention of them either with respect to the ceremonies of religion, or the rewards of another life; and it is even a sort of problem with the Mahometans, whether women have souls. The government is still more unjust towards them; for it denies them the possession of any landed property, and so completely deprives them of every kind of personal liberty, as to leave them dependent all their lives on a husband, a father, or a relation. In this state of slavery, having nothing at their disposal, we cannot suppose it very necessary to solicit their favour, or to adopt that gaiety of manners they find so captivating. The government and laws are, no doubt, the efficient cause of this sequestration of the women; and, perhaps, were it not for the facility of divorces, and the

dread of seeing a wife or daughter carried off by some powerful man, the Asiatics would be less anxious to conceal them from strangers.

This situation of the women among the Orientals, occasions a great contrast between their manners and ours. Such is their delicacy on this head, that they never speak of them; and it would be esteemed highly indecent to make any enquiries of the men respecting the women of their family. We must be considerably advanced in familiarity with them, to enter into a conversation on such a subject; and when we then give them some account of our manners, it is impossible to express their amazement. They are unable to conceive how our women go with their faces uncovered, when, in their country, an uplifted veil is the mark of a prostitute, or the signal for a love adventure. They have no idea how it is possible to see them, to talk with them, and touch them, without emotion, or to be alone with them without proceeding to the last extremities. This astonishment will sufficiently shew what opinion they entertain of their females; and we need not hesitate to conclude they are absolutely ignorant of love, in our sense of the word. That desire on which it is founded, is with them stripped of all those accessories which constitute its charm; privation is there without a sacrifice, victory without a combat, and enjoyment without delicacy; they pass at once from torment to satiety. Lovers there are prisoners, always watching to deceive their keepers, and always alert to seize the first opportunity, because it seldom happens, and is soon lost. Secret as conspirators, they conceal their good fortune as a crime, because it is attended with no less fatal consequences. Indiscretion can scarcely avoid the poniard, the pistol, or poison. Its destructive consequences to the women render them implacable in punishing, and, to revenge themselves, they are frequently more cruel than their husbands and their

brothers. This severity preserves a considerable degree of chastity and decorum in the country; but in the great towns, where there are more resources for intrigue, as much debauchery prevails as among us; only with this difference, that it is more concealed. Aleppo, Damascus, and above all, Cairo, are not second in this respect to our provincial capitals. Young girls are reserved there as every where else, because the discovery of a love adventure would cost them their lives; but married women give themselves up to pleasure with the more freedom, to indemnify themselves for the long and strict restraint they have endured, and because they have often just reasons for revenging themselves on their masters. In fact, from the practice of polygamy permitted by the Koran, the Turks, in general, are enervated very early, and nothing is more common than to hear men of thirty complaining of impotence. This is the malady for which they chiefly consult the Europeans, desiring them to give them *Madjoun*, by which they mean provocatives. This infirmity is the more mortifying to them, as sterility is a reproach among the Orientals: they still retain for fecundity all the esteem of ancient times; and the best wish you can make a young girl, is that she may soon get a husband, and have a great number of children. From this prejudice they hasten their marriage so much, that it is not rare to see girls of nine or ten years old married to boys of twelve or thirteen. It must however be confessed, that the apprehensions of libertinism, and the severity with which this is punished by the Turkish police, greatly contribute to these premature unions, which must likewise be reckoned among the causes of their early impotence. The ignorance of the Turks will not suffer itself to be persuaded on this head, and they are so irrational as to force nature, at the very time their health is impaired by excess. This also is to be ascribed to the Koran, in which the amorous

prophet has taken care to insert a precept inculcating the species of duty. Montesquieu, therefore, is in the right, to assign polygamy as one of the causes of depopulation in Turkey; but it is one of the least considerable, as there are few but the rich who allow themselves a plurality of women; the common people, and especially those of the country, content themselves with one; and persons are sometimes to be met with, even among the higher ranks, who are wise enough to imitate their example, and confess that one wife is quite sufficient.

What we are able to learn of the domestic life of the husbands who have several wives, is neither calculated to make their lot envied, nor to give a high idea of this part of Mahomet's legislation. Their house is a perpetual scene of tumult and contention. Nothing is to be heard but quarrels between the different wives, and complaints made to the husband. The four legal married women complain that their slaves are preferred to them, and the slaves that they are abandoned to the jealousy of their mistresses. If one wife obtains a trinket, a token of favour, or permission to go to the bath, all the others require the same and league together in the common cause. To restore peace, the polygamist is obliged to assume the tone of a despot, and from that moment he meets with nothing but the sentiments of slaves, the appearance of fondness and real hatred. In vain does each of these women protest she loves him more than the rest; in vain do they fly, on his entering the apartments, to present him his pipe and his slippers, to prepare his dinner, to serve him his coffee; in vain, whilst he is effeminately stretched out upon his carpet, do they chase away the flies which incommode him; all these attentions and caresses have no other object than to procure an addition to their trinkets and moveables, that if he should repudiate them, they may be able to tempt another husband, or find resource in what becomes

their only property. They are merely courtizans; who think of nothing but to strip their lover before he quits them; and this lover, long since deprived of desires, teased by feigned fondness, and tormented with all the littlefness of satiety, is far from enjoying, as we may well imagine, an enviable situation. The contempt the Turks entertain for their women, arises from this concurrence of circumstances, and it is evidently the effect of their own customs. For how should the women retain that exclusive love, which renders them most estimable, when so many share in the affections of their husband? How should they possess that modesty which constitutes their greatest virtue, when the most shocking scenes of debauchery are daily before their eyes? How, in a word, should they be endowed with the manners requisite to make them amiable, when no care whatever is taken of their education? The Greeks at least derive this advantage from religion, that, being permitted to take but one wife at a time, they enjoy more domestic peace, though perhaps, without approaching nearer to real happiness.

It is remarkable, that in consequence of the difference in religion, there exists between the Christians and Mahometans of Syria, and indeed of all Turkey, as marked a difference of character as if they were two distinct nations, living under different climates. Travellers, and our merchants, who on account of the habits of intimacy in which they live with both, are still better qualified to decide, agree that the Greek Christians are in general wicked and deceitful, abject in adversity, insolent in prosperity, and especially remarkable for levity and fickleness: the Mahometans, on the contrary, though haughty even to insolence, possess however a sort of goodness of heart, humanity, and justice; and above all, never fail to manifest great fortitude under misfortune, and much firmness of character. This contrast between men, living under the same sky, may appear surprising; but the prejudices of

their education, and the influence of the government under which they live, sufficiently account for it. The Greeks, treated by the Turks with all the haughtiness and contempt which they shew to their slaves, cannot but at last assume the character perpetually ascribed to them : they have been obliged to practice deceit, to escape from violence by cunning, and they have recourse to the meanest flatteries, because the weak must ever court the strong ; they are dissemblers and mischievous, because he who cannot openly revenge himself, disguises his hatred ; cowardly and treacherous, since he who cannot attack in front, naturally strikes behind ; and insolent in prosperity, because they who attain wealth or power unworthily, are eager to revenge themselves by returning all the contempt they have received in the pursuit. I was one day observing to a very sensible monk, that among all the Christians, who in more modern times have been advanced to eminent stations in this country, not one of them has shewn himself worthy of his good fortune. Ibrahim was meanly avaricious ; Sad-el-Kouri irresolute and pusillanimous, his son Randour, ignorant and insolent, and Rezk, cowardly and deceitful : his answer was word for word, as follows “ The Christians have not *hands* “ proper to manage the reigns of government, be- “ cause, during their youth they have been continually “ employed in *beating cotton*. They resemble those “ who walk for the first time on high terraces, they “ grow giddy at seeing themselves so exalted, and as “ they are afraid they shall be forced to return to “ their olives and cheese, they are in haste to make “ all the profits they can. The Turks on the contra- “ ry, are accustomed to govern ; they are masters “ habituated to their authority, and use it as if there “ was no fear of their being deprived of it.” We must not forget at the same time, that the Mahometans have the prejudices of fatalism instilled into them from their birth, and have a full persuasion that every thing

is predestined. Hence they experience a security which moderates both desire and fear, and a resignation by which they are equally prepared for good and evil; they are habituated in a kind of apathy, which equally prevents them from regretting the past or providing against the future. Does the Mahometan suffer by any misfortune? Is he plundered? Is he ruined? he calmly says, "It was written," and submits without a murmur, to the most unexpected transition from opulence to poverty: Even on the bed of death, nothing disturbs the tranquility of his resignation, he makes his ablution, repeats his prayers, professes his belief in God, and the prophet; he tranquilly says to his son; "turn my head towards Mecca," and dies in peace. The Greeks, on the contrary, who believe that God may be prevailed on to change his purpose, by vows, fasting, prayer, and pilgrimages, live in the perpetual desire of obtaining some new blessing, the fear of losing some good they already possess, or tormented with regret for some duty they omitted. Their hearts are a prey to every contending passion, nor do they avoid their destructive effects; but so far as the circumstances in which they live, and the example of the Mahometans enfeeble the prejudices of their childhood. We may add a remark equally true of both religions, that the inhabitants of the inland country have more integrity, simplicity, and generosity, and are in every respect of more amiable manners than those upon the sea-coast, no doubt because the latter continually engaged in commerce, have contracted, by their mode of life, a mercantile spirit, naturally inimical to all those virtues which are founded on a moderation and disinterestedness.

After what I have said of the manners of the Orientals, we shall be no longer astonished that their whole character partakes of the monotony of their private life, and of the state of society in which they live. Even in the cities where we see most activity,

as Aleppo, Damascus, and Cairo, all their amusements consist in going to the bath, or meeting together in coffee-houses, which only resemble ours in name. There, in a large room, filled with smoak, seated on ragged mats, the wealthier class of people pass whole days in smoaking their pipes, talking of business, in concise phrases, uttered at long intervals, and frequently in saying nothing. Sometimes the dullness of this silent assembly is relieved by the entrance of a singer, some dancing girls, or one of those story tellers they call *Nasbid*, who to obtain a few Paras, relates a tale, or recites verses from some ancient poet. Nothing can equal the attention with which they listen to this orator; people of all ranks have a very extraordinary passion for this species of amusement. A European traveller is not a little surpris'd to see the Turkish sailors, when the weather is calm, assemble on the deck, and attentively listen for two or three hours together, to a declamation, which the most unexperienced ear must at once perceive to be poetry, from the exactness of the measure and the continually recurring rhymes. It is not in this alone that the common people of the east excel ours in delicacy. The populace even in the great cities, notwithstanding the turbulence of their dispositions, are never so brutal as we frequently see them with us, and they have the great merit of not being addicted to drunkenness, a vice from which our country peasants are not free. Perhaps this is the only real advantage produced by the legislation of Mahomet: unless we may add the prohibition of the games of chance, for which the Orientals have therefore no taste; chess is the only amusement of this kind they hold in any estimation, and we frequently find among them very skilful players.

Of all the different species of public exhibitions, the only one they know, and which is common at Cairo alone, is that of strollers, who shew feats of

strength like our rope-dancers, and tricks of flight of hand like our jugglers. We there see some of them eating flints, others breathing flames, some cutting their arms or perforating their noses, without receiving any hurt, and others devouring serpents. The people, from whom they carefully conceal the secrets of their art, entertain a sort of veneration for them, and call these extraordinary performances, which appear to have been very ancient in these countries, by a name which signifies *prodigy* or *miracle*. This propensity to admiration, and facility of believing the most extraordinary facts or tales, is a remarkable feature in the character of the Orientals. They admit, without hesitation or the least shadow of doubt, the most wonderful things that can be told them, and if we regard the tales current among them, as many prodigies happen every day as have been ascribed to the age of the *Genii* and Fairies; the reason of which no doubt is, that being totally ignorant of the ordinary course of physical and moral causes, they know not the limits of probability and impossibility. Besides, having been accustomed from their earliest youth to believe the extravagant fables of the Koran, they are wholly destitute of any standard of analogy, by which to distinguish truth from falsehood. Their credulity therefore arises from their ignorance, the imperfection of their education, and the nature of their government. To this credulity the extravagance of imagination which some have so much admired in their romances, is in a great measure to be attributed; but though they were deprived of this source, their works would still possess many brilliant ornaments. In general, the Orientals are remarkable for a clear conception, an easy expression, a propriety of language in the things they are acquainted with, and a passionate and nervous style. They have particularly a taste for moral sentences, and their proverbs shew they know how to unite the justness of

observation, and profundity of the thought to an ingenuity and force of expression. Their conversation appears at first to have a sort of coldness, but when we are accustomed to it, we find ourselves greatly attached to them. Such is the good opinion with which those who have had most communication with them have been impressed, that the greater part of our travellers and merchants, who have known them best, allow that they find in them a people of a more humane and generous character, and possessing more simplicity, and more refined and open manners, than even the inhabitants of European countries, as if the Asiatics, having been polished long before us, still preserved the traces of their early improvement.

But it is time to terminate these reflections; I shall only add one more, which is personal to myself. After having lived near three years in Egypt and Syria; after having been habituated to spectacles of barbarism and devastation; on my return to France, the sight of my own country had almost the same effect on me as that of a foreign land; I could not avoid feeling a kind of surprise, when traversing our provinces from the Mediterranean to the ocean, instead of those ruined countries and vast deserts to which I had been accustomed, I saw myself transported as it were into an immense garden, where cultivated fields, populous towns, and country seats continually succeeded each other during a journey of twenty days. When I compared our elegant and solid buildings, to the brick and mud-walled cottages I had left behind me, the opulence and industry of our cities to the ruinous and desolate condition of the Turkish towns, the plenty, peace, and power of this kingdom, to the poverty, anarchy, and feebleness of the empire of the Turks; to admiration succeeded pity, and to pity philosophical meditation. "Whence," said I to myself, "so striking a contrast between countries so much alike? Why so much life and activity here, and

“ there so much indolence and neglect? Why so
“ great a difference between men of the same spe-
“ cies?” Then, remembering that the countries I
had seen so desolate and barbarous, were once flourish-
ing and populous, a second reflection succeeded
almost involuntarily. “ If formerly,” said I, “ the
“ states of Asia enjoyed this splendor, who can as-
“ sure us that those of Europe will not one day ex-
“ perience the same reverse?” This thought ap-
peared to me distressing, yet perhaps it may be useful.
For let us suppose that at the time when Egypt and
Syria were at the summit of their glory, some one had
delineated to the people and governments of those
countries, their present deplorable state; let us sup-
pose he had said to them, “ Such is the humiliating
“ decline which must be the consequence of such and
“ such political errors: thus shall injudicious laws
“ deprive you of all your wealth and all your power.”
Is it not probable that these governments would have
taken care to avoid those fatal mistakes, which must
conduct them to such entire destruction? What they
have not done, it is in our power to do: their exam-
ple may be a lesson to us. The great utility of his-
tory is, that by reviving the memory of past events,
it enables the present time to anticipate the costly
fruits of experience. Travels, in this sense, are no
less useful, and have this advantage; that as they
treat of present objects, the observer is better able
than the posthumous historian, to discover the rela-
tions and causes of facts, and to explain the whole
working, however complicated of the political ma-
chine. By exhibiting together with the present state
of a country, the nature of the subsisting government,
the narrative of the traveller may develop the causes
of its greatness and decline, and furnish us with means
to determine the actual duration of the empire. Seen
under this point of view, Turkey is a country more
especially instructive. The account I have given of

it, shews how the abuse of authority, by causing the misery of individuals, becomes eventually destructive to the power of a state ; and what we may safely venture to predict, will soon prove, that the ruin of a nation sooner or later recoils on those who have been the cause of it, and that the errors or crimes of those who govern cannot fail of their punishment, even from the very misery and wretchedness of those whom they have governed.

The first part of the book is devoted to a general
 description of the country and its inhabitants.
 The second part contains a detailed account of
 the various tribes and their customs.
 The third part is a collection of
 the most interesting stories and legends
 which have been handed down from
 generation to generation.

CONTENTS
OF THE
SECOND VOLUME.

STATE OF SYRIA CONTINUED.

	PAGE
<p>CHAP. V. <i>Of the cultivating or sedentary inhabitants of Syria</i></p>	3
<i>Of the Ansarians</i>	ibid.
<i>Of the Maronites</i>	7
<i>Of the Druzes</i>	22
<i>Of the Motoualis</i>	53
<p>CHAP. VI. <i>Summary of the history of Daher, son of Omar, who governed at Acre from 1750 to 1776</i></p>	57
<p>CHAP. VII. <i>Distribution of Syria into Pacha-lics, under the Turkish Government</i></p>	85
<p>CHAP. VIII. <i>Of the Pacha-lic of Aleppo, its limits, productions, revenues, forces, and remarkable places—Of the City of Aleppo and its commerce—Of the Cities of Antioch and Skandaroon, or Alexandretta—Of the villages on the frontiers of the desert.</i></p>	86
<p>CHAP. IX. <i>Of the Pacha-lic of Tripoli, its limits and productions—Of the cities of Tripoli, Latakia, &c.</i></p>	102
<p>CHAP. X. <i>Of the Pacha-lic of Saide, called likewise that of Acre, its limits, productions, &c.—Of the city of Bairout—Of the country of the Druzes—Of the convent of Marhanna—Of the Arabic printing-press established at this convent—Catalogue of the Arabic books</i></p>	

CONTENTS.

PAGE

<i>printed there—Of the city of Saide, the ancient Sidon—Of the village of Sour, the ancient Tyre—Of the situation and commerce of ancient Tyre—Of the city of Acre—Of the cities of Tabaria, of Safad and Balbek—Of the ruins of the temple of the Sun at Balbek</i>	109
CHAP. XI. <i>Of the Pachalic of Damascus, its limits, productions, &c.—Of the city of Damascus and its commerce—Of the ruins of Palmyra—Of the cities of Homs, Hama, Apamea, and the ruins on the frontiers of the Desert—Of the country of Nablous—Of the city of Jerusalem—Of the convent and order of the Holy Land, its revenues and present administration</i>	151
CHAP. XII. <i>Of Palestine—Of the cities Yafa, Ramla, and Gaza—Of the adjoining Desert and the ruined cities on the road to Mecca—Of the ancient commerce of these countries by the Red Sea—Of the Desert of Sinai—Of the convent of Sinai</i>	197
CHAP. XIII. <i>Political state of Syria resumed</i>	214
CHAP. XIV. <i>Of the government of the Turks in Syria</i>	221
CHAP. XV. <i>Of the Administration of Justice</i>	231
CHAP. XVI. <i>Of the influence of religion</i>	334
CHAP. XVII. <i>Of property, ranks, and conditions</i>	240
CHAP. XVIII. <i>State of the Peasants and of Agriculture</i>	242
CHAP. XIX. <i>Of the Artisans, Traders, and Commerce</i>	247
CHAP. XX. <i>Of the Arts, Sciences, and Ignorance of the People</i>	256
CHAP. XXI. <i>Of the manners, customs, and character of the inhabitants of Syria</i>	271
