# TTER TOCIS Dr. RICHARD HUCK. erd and a root of

#### S IR,

HE knowledge of the conftruction and method of using Vapor Baths being confined to very few people, I am urged by a strong persuasion of 10032 A 3

#### [6]

of the good confequences which will follow the more general admission of them into practice, to publish the following short account of them. I address it to you, Sir, because you have been assiduous in finding opportunities to ascertain the effects of Vapor Bathing; because I am convinced of the liberality of your sentiments, and of the eagerness with which you cultivate the improvement of the science you profels.

Many

## [7]

Many objections have been made to the introduction of Vapor Baths. These have probably arisen from different causes; but the opinion of difficulties attending the process, hath been most frequently alledged. When the contrary appears, I shall hope to see Gentlemen of the profession availing themselves of the advantages which they will certainly obtain by a prudent and steady use of this medicine, not only in difeases where fomentations do A 4 fervice,

fervice, but also in many others hitherto deemed incurable.

All stand and the state of the state

Vapor Baths may be divided into three kinds; first, those which convey the dry Vapor; secondly, those which convey the moist Vapor; and thirdly, those which combine the dry and moist Vapors.

The judgement of the Phyfician will be exerted in the proper application of these, separated or united;

Ministra last sale of the

## [9]

united; and whatever pretenc may be made, it appears difficult to draw refources elfewhere.

I man at Lorenter

The most fimple contrivance, provided it answers the purpose of conveying the different kinds of Vapor effectually, is to be preferred.

To at the of the of the

All the apparatus, which is neceffary for bathing with the moift or united Vapor, is defcribed on the Plate, and will be fufficiently explained, that the use of the different

#### [ 10 ]

ferent parts may be underftood, or to give all neceffary information to the artificer who is employed to make them.

and some or a strain & sugar

Fig. 1. is a fection of a Bath made of copper, which conveys the moift and dry Vapor united.
A. a valve, which will occafional-ly prevent the afcent of both kinds of Vapor, partly or wholly.

B. a valve, to prevent the ascent of the Vapor of the spirit of wine, used for the lamp.

C. the

#### [ 11 ]

C. the head of the Bath.

- D. a button to the orifice, through which the medicated liquor is to be poured into the Bath, or into which air may be thrown, to make the Vapor rife in larger quantities.
- E. the body of the Bath.
- F. the ftand in which the lamp is fixed.

Fig. 2. G. the head of a Bath made of tin, for moift Vapor only.H. the body, which varies little from a common kettle.

I. a

#### [ 12 ]

I. a cylindrical tube made of tin, to fix to either Bath.K. a conical tube for the fame purpose.

and al and did a out

The tin tubes may be made of different dimensions; and it was recommended to make flexible ones of leather, or of leather inclosing a spiral piece of tin or wire to prevent them from collapsing.

But on trial, these were found not to answer; for by drawing on

# [13]

on the leather or oil-cloth to confine the Vapor, the flexibility was in a great meafure loft. Nor was a tin pipe made on the principle of a lobfter's tail found more convenient. However, a tube contrived in imitation of the machine ufed by hair-dreffers, in which the wires are circular, has been found by experience to anfwer every purpofe we can defire.

As the method of conftructing Baths is beyond expression easy, the

and a lo soon intitution and a start

# [ i4 ]

the following directions for using them will be found very convenient, and are in general all which it is neceffary to observe.

a sana Leuron Line a're Bobul a' be eig a

If it is thought requifite to bath the whole body, a piece of oil-cloth is to be laid upon the inferior bed-clothes, and over that a blanket, on which the Patient muft lie. A cradle after the fashion of that in common use to prevent the disturbance of a fractured limb by the bed-clothes, is neceffary to allow the free access of

## [ 15 ]

of the Vapor to every part of the body. The cradle ought to be covered with another piece of oilcloth, and over that what bedclothes we chufe, which muft be tucked in clofe, efpecially about the neck, to prevent the efcape of the Vapor. Thin flannel may be thrown loofely over the body, to avoid any inconvenience from the immediate heat.

In portial Rayhour, the Court

A finall opening must be left at the feet for the admission of the tube. No

### [ 16 ]

No other regulation of the heat is neceffary than what will occur to the Operator, from the fenfations of the Patient, and his own judgement.

ware the support of the man

One or more lamps may be lighted, according to the quantity of Vapor we defire to raife.

#### ( at another the heat.

In partial Bathings, the fame method muft be ufed; and even in this cafe, it would be better for the Patient to be in bed, as an

## [ 17 ]

an univerfal fweat is commonly brought on.

It feems better not to continue the ufe of the Vapor too long, the firft time it is applied. Though it has been applied to particular parts for three or four hours, the ufual time has been about fifteen minutes; but the fpontaneous fweat which follows may be kept up at pleafure.

The more obstinate and deep rooted the Disease, the more gen-B tle

#### [ 18 ]

tle should be the application of the Vapor, when first used, unless in cases of imminent danger.

This feems a good general rule, for very obvious reasons.

The decoction from which the Vapor is to be raifed, may be medicated with ingredients adapted to the complaints for which the Bath is ufed. Little more has been expected of late years, from fomentations of any kind, than warmth and moifture. Perhaps the

## [ 19 ]

the ancient Physicians were too scrupulously exact in distinguishing the different qualities of herbs, and other natural bodies, and often deceived in their expectations, or at least in their opinion of the mode of operation, as they attributed to these relaxing and bracing properties by which they supposed that difeases were cured. But as there is an effential difference in almost every mode of trial, between Rofemary and Mallows for instance, it is reasonable to think that their effect will be dif-

B 2

ferent

[ 20 ]

ferent when they are applied with the intention of curing difeafes. Indeed the contrary opinion has not a little contributed to reduce Botany, from whence men of genius, in all ages, have hoped to reap great advantages, to the almoft ufelefs footing on which it now ftands.

The dry Vapor may be loaded with the active parts of fuch medicines as are judged to be proper, by diffolving or infufing them in the fpirit of wine used for the lamp. [ 21 ]

lamp. Or Gums, and the like fubftances, may be mixed up with other inflammable matter in the manner of a fufe, which feems a preferable method to the very aukward one, in which fumigations have been generally ufed.

The following Cafes, which have fallen under my own obfervation, are intended to confirm the accounts given by Mr. Symonds, of the effects of Vapor-Bathing. For though Vapor-Baths, under different forms, have been

B

3

at

#### [ 22 ]

at all times recommended and ufed by Phyficians, it is to this very fenfible and ingenious Surgeon we are obliged, for the prefent introduction and eafy method of applying them; a knowledge which, I am informed, he has acquired with great expence and trouble. Since that time, indeed, fixed Baths of the fame kind have been eftablifhed at Chelfea and Knightfbridge.

They are mentioned rather as incitements to others to use this valuable

#### [ 23 ]

valuable medicine, than as guides in what complaints it will be proper; though it may be right to obferve, that no bad confequences have ever been known to follow the application of it.

A Gentleman had been under the care of a very eminent Phyfician in town, for a Fever preceded by ftrong rigors, and attended with a very acute pain, extending from the region of the fpleen to the left groin. He had  $B_4$  been

#### [ 24 ]

been bled very often, fomented, and taken a variety of medicines, but the pain continued very violent, especially upon the leaft motion, though the Fever was abated. The complaint was judged to be an adhesion of the Colon to the Peritonæum, and it was fulpected that an ablcels was formed at the part. He was bathed the first time, twenty minutes, with the united Vapor, and found himfelf eafier. The Bathing was repeated every night and morning,

### [ 25 ]

morning, eight times, when he was perfectly freed from the pain, which did not return.

1 1 10 S 10 30

Many of my friends have used the Vapor-Bath frequently in complaints of the Bowels, arifing from different causes, in which it fcarce ever failed to give present ease, and has often intirely cured them; nor is the effect furprising, if we confider the speedy and powerful manner in which it operates.

A Gen-

## [ 26 ]

A Gentleman's servant was fuddenly feized with an acute pain in the left fide of the Thos He had a high Fever, oprax: preffion in breathing, and a teazing cough. Bleeding and the medicines given not relieving him, I applied the Vapor-Bath, which eased him, but did not effect a cure; which was indeed obtained with great difficulty by repeated bleeding, and a steady use of the most efficacious medicines.

Vapor-Bathing has been often used

## [ 27 ]

ufed in complaints of the Thorax. Thofe which are external will frequently be removed by it; but in the true Pleurify or Peripneumony, it feems unequal to the difeafe, though it generally gives fome relief.

Glandular fwellings of the jaws, throat, and breafts, are often very troublefome and obftinate against the most powerful remedies. Many instances have occurred, where the Vapor-Bath has fuc-

## [ 28 ]

fucceeded, after every other method has failed.

in my 22 . I so march

A White Swelling is a term which has been applied with fuch latitude, that no precise idea is conveyed by it. Perhaps no two Surgeons mean the fame difeafe when they use it. It is well known, however, in practice, that. there is a disease of the joints, particularly of the knee, which from the conftant acute pain is often thought to require amputation,

ž

#### [ 29 ]

tion, though on diffecting the limb afterwards, we find no figns of difease, except a little thickening of the ligaments, perhaps none at all. Judging by analogy, I thought it probable that all or the greatest part of these would be cured by the Vapor-Bath, if used before the bones were affected; and I was happy to find my conjectures were not ill-founded, when you informed me that within your own knowledge, fome extraordinary cures of this difease had been performed, under the

## [ 30 ]

the direction of a Surgeon \* no lefs remarkable for his candor than ingenuity. This Gentleman ufed the fteam of warm water only, till the pain was much leffened, and then, a proportion of the ingredients for the fpirit of Salt Armoniac, by which the tumor was removed.

To give particular Cafes of all the diforders in which Vapor-Bathing has done fervice, would

\* Mr. Wyatt, Surgeon to the Middlefex Hofpital.

be

### [ 31 ]

be an endless task. As a sudorific, nothing can more speedily answer our intention, or be more powerful; witnefs the cures of dropfies, partial and general, which have been obtained by its use. Many difeases of the skin would probably be relieved by it. Chronical Rheumatisms, and that most pertinacious fymptom the Sciatica, contractions and impaired motions of the limbs after violent injuries, would generally yield to it. Many men are discharged from his Majesty's service, in time of war,

war, as unferviceable, for thefe complaints, which might probably be cured by it; therefore intereft, as well as humanity, fhould induce us to give it a fair trial.

But there is no difeafe in which Vapor-Bathing promifes more defirable effects, than in the Venereal. Experience fhews, that there are many conftitutions which will not bear, without great inconvenience, the operation of Mercury; and many fymptoms, which will be fooner relieved by other means. Perhaps,

#### [ 33 ]

Perhaps, befides the various fymptoms which the fame caufe will produce in different constitutions, there may be in nature, different species of the same kind of virus. Mercury feems to fail more frequently in the delicate habits of body; than in the ftrong; and the former are more subject to eruptions on the skin, nocturnal pains and exoftofes, and they are likewife more subject to returns of the difease after it has disappeared. It does not ftay long enough in the conftitution to produce its

C

proper

# [ 34 ]

proper effect; and fuch are in general fo irritable, that they fuffer exceedingly from the use of it. Thèse always receive benefit from warm bathing, before they are put into the mercurial courfe, which without doubt can only be depended upon for an effectual cure. Vapor-Bathing is yet more speedy, and often more desirable, becaufe we are able to apply it with lefs trouble. The following detail of its effects upon some symptoms may be useful.

An

## [ 35 ]

An Officer lately returned from America had been many years ill of the venereal difease, for which he had fcarce attempted to get a perfect cure. He had an Exoftofis of long standing upon the ulna of the right arm, nocturnal pains, and eruptions over the whole head and face. He was Vaporbathed for three fuccessive nights, and took fifteen grains of Dover's Powder, at bed-time. The pains were abated, and the eruptions began to fcale. I put him on a C 2 courfe

·

## [ 36 ]

courfe of mercurial ointment. The Exoftofis not receding, this was partially bathed twice every day, and in a fortnight was intirely gone. The ointment was perfifted in, till he had ufed fix ounces, when he was free from any complaint.

I have tried it once with fuccefs in an Exoftofis which remained after a courfe of mercury; but the Patient was immediately put upon the fame regimen, as if

no

## [ 37 ]

no steps had been taken to remove the infection.

Phymofes are often exceedingly troublefome, and attended with bad confequences by concealing Chancres. The cure obtained by flitting the Prepuce is often as troublefome as the difeafe.

A young man applied to me who had a Phymofis. I fhould have gueffed from the appearance, that it would have required fix or feven

#### [ 38 ]

feven days to relax it. I directed him to ufe the Bath, and finding the conftriction beginning to give way, I continued it for three hours, when I was able to withdraw the Prepuce entirely and drefs the Chancres, which were very numerous, on the Corona Glandis. A confiderable tightnefs returned for three or four days, but it always yielded to a fhort application of the Bath.

Buboes are sometimes of so indolent dolent a nature, that they will neither fuppurate nor difperfe. One of long ftanding was intirely removed by the Bath, though it required a longer continuance of its ufe than any cafe in which I have tried it.

[ 39 ]

Vapor-Bathing has been used for the Hernia Humoralis, as it is called, and apparently with superior advantage to fomentations.

Probably the number of in-3 curable

# [ 40 ]

curable fymptoms in this difeafe would be much leffened by Vapor-Bathing, fuch as Tumors on the Tefticles, Diffortions of the Penis, Nodes and all other kinds of Tumors, the fixing of the Jaw, difeafes of the Proftrate Gland, and Urethra, &c.

Experience proves the advantages of Vapor-Baths; nor is it difficult to conceive, that the fleam of warm water fhould be much more fubtile and penetrating than water itfelf. It feems to have [41]

have the properties of a Fluid of an intermediate nature between water and air. But accounting for the mode of operation is no part of the present defign, as it does not seem absolutely necessary to adapt the effects of Vapor-Bathing to any Hypothesis, provided the facts are ascertained. Though arguments might probably be hence drawn to prove, with great plausibility, that diseases proceed, according to the doctrine of different systematic Writers, either from too strict or too lax Fibres,

## [ 42 ]

bres, from Spalm, or from the defect or excels of Electric Fire.

#### I am,

#### With the most affectionate esteem,

Dear SIR,

Your obliged humble Servant,

#### THOMAS DENMAN.
