DETECTION OF COCONUT CADANG-CADANG VIRUS

1. Homogenization

2. Centrifugation (I)
   (10,000 g during 10 minutes)

3. PEG
   (polyethylene glycol)

4. 2 hours of incubation (4°C)

5. Centrifugation (II)
   (Low speed)

6. Isolation of the nucleic acids

   ELECTROPHORESIS (Electrophor)
