Is Wikibase an answer to the needs of GLAMs beyond the scope of Wikidata?

<table>
<thead>
<tr>
<th>What</th>
<th>Who</th>
</tr>
</thead>
<tbody>
<tr>
<td>data donations</td>
<td>museums</td>
</tr>
<tr>
<td>image donations</td>
<td>performing arts</td>
</tr>
<tr>
<td>trainings</td>
<td>archives</td>
</tr>
<tr>
<td>edit-a-thons</td>
<td>universities</td>
</tr>
</tbody>
</table>

Where are we now?

- Cultural policy attention
- Moving away from early adopter phase

What’s next: Wikibase?

Why?
1) Data that are out of scope for Wikidata
2) Data models / thesauri incompatible to Wikidata

Challenges

- User-friendly image batch upload
- Write Quickstatements to Wikibase (OpenRefine?)
- Automatic import of (some) Wikidata properties and triples into Wikibase
