CHAPTER I

INTRODUCTION

General

In the early 1960's the role of the United States as a leader of the free world as well as the economy of this country, was more seriously affected by international economic forces than at any time in recent peacetime history. The strength of the United States, both at home and abroad, was linked with the strength of the dollar and the dollar, was and still is the primary currency in the Free World's financial structure. While the dollar still commanded a high degree of confidence throughout the world, it had lost some of its luster and its strength relative to other currencies. The dollar was no longer free from occasional fears and suspicions. This condition had been brought about by the persistent and sizable deficits in the United States International Balance of Payments.

There was unanimous agreement on the need for the United States to bring its international accounts into equilibrium. The importance of a strong dollar was most clear, not solely because of the role it played in providing the world's monetary base, but primarily to provide the strength to the voice of the United States in political, military and economic dealings with other nations.

CHAPTER I

INTRODUCTION

GENERAL

In the early years of the United States as a leader of the free world as well as the source of this country, we have naturally attracted the attention of nations and peoples from all over the world. The strength of the United States, both as a power and a nation, was linked with the struggle for the dollar and the dollar was and still is the primary currency in the free world's financial system. While the dollar still commands a high level of confidence throughout the world, it has lost some of its former and its prestige relative to other currencies. The dollar has no longer the same universal value and stability. This condition has been caused by the breakdown of the dollar's position in the world's international system of payments.

There are numerous agreements on the part of the United States to bring the international economy into equilibrium. The objective of a strong dollar has been clear, but clearly defined in the role of paper in providing the world's monetary base has been less than desirable in the eyes of the world's nations. It is desirable to bring the world's monetary base into equilibrium.

The United States rejected the classical measures of devaluation and import restrictions (measures generally taken by other countries when plagued with continuing payments deficits and reserve losses) as a means for solving its balance of payments problem. Instead, the United States chose to redress the deficit in a gradual and discretionary fashion in all categories of transactions which make up the balance of payments. Concentrated action was taken in an effort to increase United States exports in the flow of trade between the United States and other nations. Legislation was initiated which was designed with the goal of slowing down private capital outflow from the United States for long term foreign investment. The Federal Reserve Board took action which was designed to increase domestic short-term interest rates and thereby retard the outflow of short-term capital from the United States. The Department of Defense implemented various actions to reduce the foreign exchange costs associated with our overseas military commitments.

The determination of the United States to balance its international transactions within the overall National Security Objectives is reflected in the following excerpt from President John F. Kennedy's address to the International Monetary Fund, Washington, D. C. on September 30, 1963:

We are determined to do whatever must be done in the interest of this country and, indeed, in the interest of all to protect the dollar as a convertible currency at its current fixed rate.

We are determined and I believe in your interests as well as our own to maintain the firm relationship of gold and the dollar at the present price of thirty five dollars an ounce, and I can assure you will do just that.

The United States rejected the classical doctrine of international law which restricted international law to relations between states. It based its theory on the fact that the United States was a world power and that its interests were affected by the actions of other states. It argued that the United States should be regarded as a sovereign state and that its actions should be governed by the same principles of international law as those of other states. This view was embodied in the Monroe Doctrine and the Roosevelt Corollary. The United States also argued that the United States had a special responsibility for the maintenance of international law and that it should be regarded as a world power. This view was embodied in the Roosevelt Corollary. The United States also argued that the United States had a special responsibility for the maintenance of international law and that it should be regarded as a world power. This view was embodied in the Roosevelt Corollary.

The determination of the United States to maintain the international system was based on the fact that the United States was a world power and that its interests were affected by the actions of other states. It argued that the United States should be regarded as a sovereign state and that its actions should be governed by the same principles of international law as those of other states. This view was embodied in the Monroe Doctrine and the Roosevelt Corollary. The United States also argued that the United States had a special responsibility for the maintenance of international law and that it should be regarded as a world power. This view was embodied in the Roosevelt Corollary.

We do not seek by precipitous acts to improve our position at the expense of others. We do seek by comprehensive effort, consistent with our international responsibilities to reduce outflows which are weakening our capacity to serve the world community. In short, every nation in the world has a direct interest, for the dollar is an international currency, and the security of the dollar therefore involves the security of us all.

During the five year period 1958 through 1962, the net deficits in the United States balance of payments averaged a little more than three billion dollars per year. During this same period, the deficits associated with our overseas military commitments slightly exceeded the average annual net deficits. Since these military deficits represented the largest single adverse factor in the United States balance of payments position and fell within the public sector - thus controllable by the Federal Government, they were considered by many as the prime cause of the overall balance of payments deficits and were the initial target for action in solving the problem. The Department of Defense initiated vigorous economy efforts to hold down and reduce overseas expenditures; however, since our forces overseas represented an integral part of the nation's defense programs, it was intended that these reductions be accomplished without jeopardizing essential national security objectives.

Purpose

The chief purpose of this dissertation is to review the actions taken by the Department of Defense to reduce overseas expenditures in order to curb the outflow of "gold," which became a significant concern of

President Kennedy immediately following his inauguration. The examination, therefore, will focus on the time frame of 1958 to the official beginning of the Vietnamese Intervention (which is the Tonkin Incident of August 1964). Additionally, this paper will consider other proposed actions for the reduction of overseas expenditures which could be taken without jeopardizing the security objectives of the defense programs of the United States and its Allies.

Methodology

The approach used in the development of this effort is that of library research. The bulk of the source material used herein came from public documents, Department of Defense files, and interviews with responsible government and civilian officials knowledgeable in the area under examination. It should be noted, however, that numerous secondary works were reviewed and utilized also.

Chapter II will attempt to summarize the material presented and to offer various conclusions derived therefrom.

Chapters III and IV will attempt to describe and analyze the actions of the Department of Defense in trying to accomplish a reduction in the Balance of Payments Deficit.

Chapter V will attempt to provide a brief overview of reporting problems in the Balance of Payments Deficit.

CHAPTER II

BALANCE OF PAYMENTS DEFICITS AND RELATED PROBLEMS

Spending, borrowing and lending, and investing are not confined within national boundary lines. Consumers and business firms in the United States buy goods and services from all over the world. United States citizens and business firms lend and invest in foreign countries; foreigners lend and invest in the United States. United States financial institutions and business concerns pay interest and dividends on foreign investments in this country and, in turn, receive income on funds invested abroad. United States citizens have always spent large amounts for foreign travel; foreign visitors always spend in the United States. The United States Government makes payments abroad; foreign governments make payments here. These are only a few illustrations on the multitude of transactions that crisscross national boundaries. Some transactions result in receipts from others in payments to foreign countries.¹ A summary tabulation of all of these transactions during a given period of time is commonly referred to as the "Balance-of-Payments." If

¹Clay J. Anderson, "Defending the Dollar" in Federal Reserve Bank of Philadelphia Publication, November 1962, p. 1.

payments are larger than receipts, a country has a deficit; if receipts are larger than payments, it has a surplus in its international balance of payments.

Except for the year 1957, the United States balance of payments has shown a deficit every year since 1950. Between 1950 and 1956, the deficits averaged one and one-half billion dollars per year and were of no real concern to the United States:

These earlier deficits in our balance-of-payments were, in fact, favorable in their world effect. They helped to restore foreign monetary systems by enabling foreign governments to earn the dollars which they needed to rebuild their international reserve. They made it possible for the industrialized countries of Western Europe to restore the convertibility of their currencies, thus freeing world trade and payments from exchange control. This was a benefit to the export trade of the United States.²

Furthermore, the payments deficits generated during this period caused little loss of gold from the United States gold reserves. Because of the special role of the dollar as a standard and store of value, it became convenient for foreign commercial banks to hold large operating balances of United States dollars as the medium of international exchange. In addition, it became a matter of policy for many foreign financial institutions to hold part of their official reserves in dollars or dollar claims (deposits with United States banks and United States Treasury obligations).

In 1957, the United States balance of payments

²John F. Kennedy, Message to Congress on Balance of Payments and Gold, February 6, 1961, Congressional Quarterly Almanac, Vol. XVII, 1961.

payments are lower than receipts, a country has a surplus; if receipts are lower than payments, it has a surplus. In its international balance of payments.

through for the year 1957, the United States

balance of payments has shown a deficit every year since 1950. Between 1950 and 1956, the deficit averaged one and one-half billion dollars per year and rose to an estimated amount to the United States.

These trade deficits in our balance-of-payments were, in fact, recorded in their own right. They helped to reduce foreign exchange reserves by causing foreign governments to stop the dollar which they needed to rebuild their international reserves. They made it possible for the industrial countries to withdraw funds to expand the convertibility of their currencies, thus lowering world trade and payments from exchange control. This was a benefit to the world trade of the United States.

Furthermore, the persistent deficits recorded during this period caused a loss of confidence in the dollar as a standard and store of value. It became necessary for the United States to raise interest rates to hold large quantities of dollars. In addition, it became a matter of national emergency. In addition, it became a matter of policy for many foreign industrial institutions to sell part of their dollar reserves in dollars or dollar assets (especially with United States banks and United States currency institutions).

In 1957, the United States balance of payments

²John P. Kennedy, Message to Congress on Balance of Payments and Gold, February 6, 1957, Congressional Quarterly Almanac, Vol. XVII, 1957.

reflected a small surplus. This was the result of the abnormal increase in United States exports of petroleum and petroleum products during the Suez crisis.

Beginning with 1958, and continuing for a five year period, the United States balance-of-payments reflected large deficits which averaged a little over three billion dollars per year. Unlike the conditions that existed during 1950-56 period when commercial banks and foreign institutions were building their dollar operating accounts and reserves, the large payments deficits generated during the 1958 thru 1962 period were accompanied with a loss of gold from the United States gold reserves. Foreign financial institutions were converting the growing supply of dollars into gold by buying gold from the United States Treasury. Out of the nearly sixteen billion dollar cumulative 1958-1962 deficits, almost seven billion dollars of gold reserves were transferred to foreign ownership. This represented a thirty per cent decline in United States gold stocks from that held in 1957.

The gold transfers did not make the underlying balance of payments fundamentally worse. They did reflect a decision by foreigners to take more of their earnings in gold and to hold less in dollars.³

The loss of seven billion dollars of gold reserves was not, in itself, the basis of concern since the United States still had approximately seventeen billion dollars of gold reserves, which represented forty per cent of the free world's gold holdings. The official concern, in the United States and abroad, was that foreign countries held

about twelve billion dollars worth of their official reserves in the form of dollar claims which were redeemable in gold from the United States Treasury. Furthermore, short-term and other liquid liabilities of the United States, in the form of dollar claims held by foreigners, had grown to approximately fifteen and one-half billion dollars. These dollar claims could readily find their way into foreign financial institutional channels and then be used to buy additional gold from the United States Treasury. The combined total of official and unofficial "gold" claims exceeded the amount of the United States gold reserves.

The receipts and expenditures which made up the United States balance of payments resulted from a great number of transactions. It was the combined effect of all of these transactions that generated the payments deficits. While the causes of the deficits cannot always be clearly pinpointed, grouping the transactions into major components or categories can identify the strengths and weaknesses of the United States balance of payments.

Exports and Imports of Goods and Services

The United States had had a surplus on goods and services for many years. Receipts from sales of merchandise, services rendered foreigners, and income on foreign investments had substantially exceeded payments to foreigners for these purposes. The annual surplus on goods and services from 1949 to 1960 had ranged from a low of about two billion dollars to a high of over eight billion dollars. In 1961, the surplus exceeded seven billion

about twenty billion dollars worth of their currency
 available in the form of notes and coins which were
 convertible into gold over the United States Treasury.
 Furthermore, short-term and other liquid liabilities
 of the United States in the form of notes and coins held
 by foreigners, had grown to approximately fifteen billion
 two billion dollars. These dollar claims would readily
 find their way into foreign financial institutions
 and thus be used to buy additional gold from
 the United States Treasury. The combined total of
 official and unofficial gold claims exceeded the amount
 of the United States gold reserves.

The countries and individuals which were to be
 covered by the balance of payments account were a great
 number of nations. It was the official policy of
 all of these governments that guaranteed the payments
 balance. With the passage of the Bretton Woods
 Agreements, it was generally agreed that the
 gold and payments balance of the United States should
 be maintained.

United States and Foreign Gold Reserves

The United States had had a surplus on gold and
 foreign currencies for many years. However, from 1913 to 1929
 the United States had had a surplus on foreign currencies
 and had correspondingly increased payments to foreigners
 for their currencies. The annual surplus on gold and
 foreign currencies from 1913 to 1929 had averaged about
 two billion dollars or a fifth of one percent of the
 national income. In 1929 the surplus exceeded seven billion

dollars. Merchandise contributed to the major part of the United States surplus on goods and services. The excess of merchandise exports over imports averaged around four million dollars during the period 1959-1964.⁴ During this period, the United States sold more goods than it bought in practically all major geographical sectors of the free world--Canada, Western Europe, Asia, and Africa. However, the export surplus was not large enough to offset other international expenditures. Furthermore, since a considerable part of this surplus export may be traced to aid-generated exports and to United States private capital outflows, performance in this category is not as satisfactory as would appear at first glance.

This condition, coupled with the rising relative productivity trends in Western Europe and the growth and development of the European Common Market, generated considerable concern that the United States would not be able to continue to maintain its traditional surplus in merchandise trade. One of the goals of the Common Market was the removal of tariff and trade barriers between member countries and the establishment of a uniform external tariff on imports from outside the Common Market. Substantial progress had already been made through 1964 in reducing tariffs among Common Market countries. United States exports to the Common Market countries had consistently exceeded imports from these countries. The annual export surplus from 1959-1964 averaged one billion dollars. As tariff and trade barriers

The first stage of the process is the selection of the material to be translated. This is done by the translator, who must choose material that is both representative of the source language and suitable for the target audience. The second stage is the actual translation, which involves a careful analysis of the source text and the production of an equivalent in the target language. This process is often iterative, with the translator making adjustments as they go along. The final stage is the proofreading and editing of the translated text, which ensures that the translation is accurate and readable.

This document is a translation of the original text. The original text is in the source language and is available in the original document. The translation is provided for your convenience and is not intended to be used as a substitute for the original text.

within the Common Market countries were lowered and eliminated, producers in those countries had an increasing advantage in competing with the United States exporters. Reduced tariffs and trade barriers within the Common Market countries also tended to reduce the costs of raw material and semi-finished goods thereby resulting in lower finished-goods prices which allowed them to be more competitive in member countries, and consequently increased their share of export markets. There was a widespread impression that the best the United States could hope for by a vigorous trade expansion program within the authority of the Trade Expansion Act of 1962 would be to maintain the share of exports and to obtain its share of any rising volume of exports.⁵

Private Capital Movements

One of the major factors in the United States balance-of-payments deficit during those years was the very large outflow of United States private capital. From 1950 to 1955, the outflow of United States long-term and short-term private capital averaged about one billion one hundred million dollars per year. In 1960 and 1961, the recorded United States capital outflow was three billion nine hundred million dollars average per year.⁶ In

addition to the recorded transactions, there is reasonable evidence that a large percentage of the deficits in the "Unrecorded Transactions" represents outflow of short-term private capital.⁷

On the basis of this it could be concluded that the balance-of-payments difficulties of the United States were the direct result of United States private capital movements abroad. Such a conclusion, based upon the statistics alone, would be superficial. It has been established that the outflow of private capital in some instances replaced the need for United States Government loans and grants, thereby helping to moderate the deficits in the "United States Government Account" sector of the balance of payments. Others have identified private capital outflow with the export of capital equipment, raw materials and goods which in turn, contributes to the surplus in the "Export of Goods and Services" sector of the balance of payments. These factors, coupled with the sizable earnings that are made from the foreign investments, gives rise to serious questions on whether United States private long-term capital movements abroad were detrimental or beneficial to the United States balance of payments.

The views expressed by some that investments abroad benefit the United States balance-of-payments is substantiated in a study, prepared by Standard Oil Company of New Jersey, of the accounts of approximately two hundred

⁷Philip W. Bell, "Private Capital Movements and the United States Balance of Payment Position," 78th Congress, 3d Session, Joint Committee Publication, Factors Affecting the United States Balance of Payments, U. S. Government Printing Office, Washington, D. C., 1962, pp. 395 thru 484.

Attention to the limited commitment, there is a possibility
 evidence that a large percentage of the balance in the
 "unallocated" category, "unallocated" balance of about
 two thirds capital.

In the case of this it could be concluded that
 the balance-of-payments difficulties of the United States
 are the direct result of United States private capital
 movements abroad, with a condition, based upon the
 statistics alone, would be expected. It has been
 established that the outflow of private capital is more
 important than the inflow of United States government
 loans and exports, thereby helping to increase the deficit
 in the United States government account. It is
 balance of payments. There have been limited private capital
 outflow with the export of capital equipment, the purchase
 and goods which in turn, contribute to the deficit in the
 United States and private, exports of the balance of
 payments. These factors, coupled with the private services
 that are made from the foreign investments, have also an
 effect on the balance of payments. It is also possible
 that capital movements abroad may be substantial or essential
 to the United States balance of payments.

The data obtained by the United States

show that the United States balance-of-payments is
 characterized in a study, prepared by the United States
 of the history of the accounts of approximately two hundred

(1) This is Bill. Review Capital Investments and
 the United States Balance of Payments Position, 1962

United States oil companies who operated internationally for five years or longer. This study shows that profits from oil operations abroad, together with proceeds of United States oil equipment sold overseas, more than outweighed the total capital outflow for oil investment abroad and expenditures on oil imported into the United States. The net outflow resulting from international oil trading by United States companies amounted to \$638 million in 1962 and to \$1,635 million from 1958 to 1963.⁸

Walter S. Salant, in his book "U. S. Balance of Payments in 1968" indicates that:

The weakening in the balance of payments caused by a new flow of funds from the United States is matched by the cumulation of annual inflows of funds resulting from the original investment somewhere between the fifth and sixth year following the investment. By the end of the tenth year, the sum of the inflows is more than double the original outflow and the beneficial effects continue at a growing rate thereafter.⁹

If, in fact, United States private investments abroad were beneficial to the long-term United States balance-of-payments and they were greatly instrumental in maintaining the international solvency of the United States--assets of seventy-seven billion dollars (total United States investments abroad) far exceeded liabilities of fifty billion dollars (total foreign investments in the United States) the question arises: what was the concern about the balance-of-payments deficits and specifically why were actions considered to stem the flow of

⁸"USA, Oil Helps Payments Balance," Published in Petroleum Press Service, Volume XXX, No. 2, December 1963.

United States private investment to foreign countries?

The answers to these questions deals with the immediate effects the long-term investments had on the United States balance-of-payments and their direct bearing on the liquidity position of the United States. More than one-half of the fifty billion dollars liabilities to foreigners were short-term. They consisted mainly of time deposits at commercial banks, United States government securities, commercial paper and demand deposits in American banks. Foreign governments and international organizations accounted for the largest part of dollar claims against the United States. The willingness of foreigners to hold dollars and dollar claims is based on the belief that they will be able to convert their dollars into gold and that the prevailing price or conversion rate of thirty-five dollars per ounce of gold will not be altered. Only official holders-- governments and central banks--can convert their dollar holdings into gold. Foreign private holders of dollars and dollar claims, on the other hand, cannot buy gold from the United States. However, when their short-term dollars and dollar claims greatly exceed the amount they need as working balances in conducting international transactions, they will normally convert dollars into their local or other needed currencies. In this way, foreign dollar holdings could shift from private to official hands, and from a potential claim to a possible direct claim against our gold reserves. The potential and possible dollar claims exceeded our total gold reserves during this period. Any loss of confidence that the United States would maintain the value of the dollar

could generate a sudden massive international transfer of private dollar claim holdings and subsequently a "run" on the United States gold reserves.

In contrast to the foreign investments in the United States, over sixty-five per cent of the seventy-seven billion dollars worth of United States investments abroad were private long-term investments and could not be quickly disposed of for foreign currencies without great loss. The United States long-term foreign investments were of little value to counter a "run" upon the United States gold reserves.

In July 1963, several moves were directed by the Kennedy Administration at different elements in the private capital situation. First, the Federal Reserve Board allowed interest rates to rise with the aim of reversing or at least reducing the outflow of short-term funds. Secondly, an "Interest Equalization Tax" was proposed to raise the cost of foreign borrowing in the United States capital market. Thirdly, substantial cuts in taxation were proposed to stimulate more investment at home. Finally, a number of financial devices, including currency "swaps" with central banks of other countries, were adopted with the objective of reducing foreign holdings of dollars convertible into gold. The results of these moves led to a marked improvement in the United States balance-of-payments during the third quarter of 1963.¹⁰

United States Government Transactions

United States Government payments abroad were much larger than receipts from foreign governments. In 1961, payments exceeded receipts by nearly six billion dollars and the net outflow on United States government transactions averaged about this amount annually during the period 1958-1963. The two major categories of transactions contributing to the deficits in this area were: (1) Defense Expenditures abroad for goods and services; and, (2) Transactions associated with the United States Foreign Assistance Programs.

Defense transactions will be discussed in detail in the next chapter.

United States Foreign Assistance Programs

From 1946-1964, extensive aid by the United States assisted foreign countries to have fewer import restrictions, to control currency devaluations, and to accumulate dollar reserves that staved off economic and political chaos and collapse. Programs of reconstruction and development were carried on, levels of production were raised, dependence on the United States gradually reduced, native political stability was enhanced, and military rearmament speeded up in order to resist totalitarian encroachments.

The foreign aid programs that evolved in form and scope helped to serve the national objectives of this country and to deal effectively with the changing international situation. The programs of 1947 to Greece and Turkey were primarily military and enabled these countries to withstand external communist pressures and to put down

United States Government Documents

United States Government Documents (United States
 and Japan) has been the subject of the United States
 1961 program entitled "United States Government
 Documents and the United States Government
 (United States Government Documents and the United States
 the period 1952-1961). The two major objectives of the
 actions mentioned in the title in this area were:
 (1) to provide information about the work and activities
 and (2) to facilitate access to the United States
 Government Documents program.
 United States Documents will be discussed in detail
 in the next chapter.

United States Foreign Relations Documents

From 1945-1961, extensive aid to the United States
 various foreign countries to give them better conditions
 to control military development and to promote social
 progress that would aid economic and political growth and
 progress of reconstruction and development.
 The United States has been a major force in the world
 since the United States entered the world war.
 The United States has been a major force in the world

internal communist inspired aggression. The aid to Western Europe, commencing in 1947, was essentially economic in nature with its stated purpose of promoting industrial and agriculture production, securing financial stability, and aiding international trade relations. Again, for a time during the period of the Korean conflict, the principal goal of foreign assistance was to develop military strength and to shore up unstable economies on the periphery of the communist world. As of 1964, two-thirds of all assistance was devoted to the objective of promoting economic and social progress in under developed countries. Another important trend in foreign assistance was the shift from grants to loans. Under the Marshall Plan, almost ninety per cent of aid to Europe was in the form of grants. The technical assistance and supporting assistance that followed also employed grants as the major instrument of aid. However, as the concept of long-term development and concentration of resources grew, loans became the principal form of assistance. For example the fiscal year 1964 budget for the Agency for International Development called for sixty per cent of its program to be in the form of loans.

It was claimed that United States foreign assistance was responsible for the balance-of-payments deficit and the gold drain and that the elimination of the program would not only solve the problem but would reduce government expenditures and tax needs, at least in that area. Proponents of foreign aid contended that peaceful assistance is constructive and cheaper than armaments powerful enough to yield equivalent protection.

President John F. Kennedy, in his message to Congress

The first of these is the fact that the
 Communist Party of the United States
 has been successful in its efforts
 to bring about a change in the
 leadership of the Communist Party
 in the United States. This is
 a significant development in the
 history of the Party, and it
 is one which should be noted
 with interest. The fact that
 the Party has been able to
 bring about such a change in
 its leadership is a clear
 indication of its strength
 and of its ability to
 overcome all obstacles.
 The fact that the Party
 has been able to bring
 about such a change in
 its leadership is a clear
 indication of its strength
 and of its ability to
 overcome all obstacles.

on April 2, 1963, dealt with the cost of foreign aid programs and their need when he stated:

The United States today is spending over 10 per cent of its gross national product on programs primarily aimed at improving our national security. Somewhat less than one-twelfth of this amount, and less than 0.7 per cent of our GNP, goes into the mutual assistance program: roughly half for economic development, and half for military and other short-term assistance. The contribution of this program to our national interest clearly outweighs its cost. The richest nation in the world would surely be justified in spending less than one per cent of its national income on assistance to its less fortunate sister nations solely as a matter of international responsibility; but inasmuch as these programs are not merely the right thing to do, but clearly in our national self-interest, all criticisms should be placed in that perspective. That our aid programs can be improved is not a matter of debate. But that our aid programs serve both our national traditions and our national interest is beyond all reasonable doubt.¹¹

The Honorable David E. Bell, Administrator, Agency for International Development, at a hearing before the Joint Economic Committee, Congress of the United States, in 1963 addressed himself to the question of foreign aid impact upon the United States balance of payments when he stated:

Today, fully eighty percent of A.I.D. funds are committed for the export of U. S. goods and services--not dollars. Of the less than twenty percent which will enter the balance of payments, all but a minor fraction will be spent in less-developed--not

¹¹John F. Kennedy, Message to Congress on Proposed Mutual Defense and Assistance Programs FY 1964, 2 April 1964, Published in "Proposed Mutual Defense and Assistance Programs FY 1964," U. S. Government Printing Office, Washington, D. C., April 29, 1963, p. 184.

In April 1967, the Secretary of the Department of Health, Education and Welfare (HEW) announced that the Agency for International Development (AID) would be reorganized to include the United States Agency for International Development (USAID).

The proposed reorganization of HEW and the merger of AID with HEW was a major step in the restructuring of the Federal Government's foreign aid programs. The merger was intended to eliminate the duplication of functions between AID and HEW, and to provide a more coordinated approach to international development. The proposed reorganization of HEW and the merger of AID with HEW was a major step in the restructuring of the Federal Government's foreign aid programs. The merger was intended to eliminate the duplication of functions between AID and HEW, and to provide a more coordinated approach to international development.

The Department of Health, Education and Welfare (HEW) and the Agency for International Development (AID) were reorganized to form the United States Agency for International Development (USAID). This reorganization was part of a broader effort to streamline the Federal Government's foreign aid programs and to provide a more coordinated approach to international development.

The United States Agency for International Development (USAID) was established in October 1961. It is the primary U.S. agency for providing economic and technical assistance to other countries. USAID's activities are carried out through a network of field offices around the world.

¹ John H. Dancy, Director of International Development, Department of Health, Education and Welfare, U.S. Government Printing Office, Washington, D.C. (1967), p. 147.

developed--countries. . . . The effect of existing A. I. D. procurement policies has been to increase A. I. D. financed exports of commodities and services sharply. . . . By confining an increasingly larger proportion of its commodity financing to United States exports, economic aid contributes to the United States merchandise exports. In calendar year 1962, United States merchandise exports totalled \$20.5 billion and the surplus over imports was \$4.3 billion. If the \$2.3 billion in commodities financed by "economic aid" as broadly defined (including Public Law 480 surplus agriculture commodities as well as A. I. D. financed exports), are deducted, the surplus would be reduced to \$2 billion.¹²

Looking beyond the balance of payments problem, there appears to be positive long-term gains to be won for the United States from the growth of economies abroad--the main purpose of the foreign aid programs. Prosperous nations buy more than the poor ones. United States exports to the "Marshall Plan" countries more than doubled from 1950 to 1962. However, United States exports to the less-developed countries rose by only fifteen per cent during the 1950's.

Although there was increasing criticism of the United States foreign aid programs, some of which appeared wholly justified, these aid programs generally did what they were expected to do. The aid programs were supported by four successive Presidents--Democratic and Republican alike--and indorsed by a bipartisan majority of ten

¹²David E. Bell, "Mutual Defense and Assistance Programs," Remarks at the Hearings before the Joint Economic Committee, Congress of the United States, 88th Congress, 1st Session, Pursuant to Sec. 5(a) of Public Law 304 (79th Congress), Part I - Current Problems and Policies, U. S. Government Printing Office, Washington, D. C., 1963.

successive Congresses. The aid programs were and are necessary and hopefully will continue to receive the support of the majority of the American people.

SECTION III

THE UNITED STATES GOVERNMENT
DEPARTMENT OF AGRICULTURE

The United States Government is committed to the principle of providing technical assistance to developing countries. This assistance is provided through the United States Agency for International Development (USAID) and the United States International Development Cooperation Agency (USAIDCA). The assistance is provided in the form of grants, loans, and technical assistance.

In 1954, the Department of Agriculture authorized the establishment of the United States Agency for International Development (USAID). The purpose of USAID is to provide technical assistance to developing countries. This assistance is provided through the United States International Development Cooperation Agency (USAIDCA). The assistance is provided in the form of grants, loans, and technical assistance.

The United States Agency for International Development (USAID) is a federal agency that provides technical assistance to developing countries. This assistance is provided through the United States International Development Cooperation Agency (USAIDCA). The assistance is provided in the form of grants, loans, and technical assistance.

U.S. DEPARTMENT OF AGRICULTURE
WASHINGTON, D.C. 20250

CHAPTER III

DEFENSE DEPARTMENT ACTIONS TO IMPROVE THE UNITED STATES BALANCE OF PAYMENTS

Up to as late as 1960, Department of Defense overseas activities were operating under procurement policies which encouraged maximum utilization of foreign sources for supplies and material needed to support their overseas operations.

In early 1952, the Department of Defense "Offshore Procurement Program" was implemented. The purpose of this program was to create or expand sources of supply abroad which would be nearer to the area where requirements are generated and consumed and to strengthen the mobilization base of our Allies and thus decrease their dependence upon the United States. By the end of 1956, over two billion dollars had been spent by the United States for procurement from foreign producers under this program.¹

Complementary to the "Offshore Procurement Program" was the "Facilities Assistance Program," initiated in fiscal year 1954. The primary purpose of this program was to create local sources of supply for propellant and explosives production by furnishing equipment and technical

¹U. S. Department of the Air Force, Information and Guidance, Military Assistance Program, Washington, D. C., 1957, p. 18.

CHAPTER III

THE UNITED STATES POLICY OF ASSISTANCE
AND ECONOMIC RECONSTRUCTION

Up to as late as 1946, Department of Defense
overseas activities were operating under government
policies which encouraged massive utilization of foreign
resources for supplies and material needed to support their
overseas operations.

In early 1951, the Department of Defense "offshore"
program was implemented. The purpose of
this program was to create a special source of supply
which would be used to the extent where possible
needs are generated and consumed and to strengthen the
economic base of our allies and their domestic
dependence upon the United States. By the end of 1951,
over two billion dollars had been spent by the United
States for procurement from foreign countries under this
program.¹

Complementary to the "Offshore Procurement Program"
was the "Fertilizer Assistance Program," which was
fiscal year 1951. The primary purpose of this program
was to create local sources of supply for fertilizer and
expensive production by fertilizing equipment and fertilizer.

¹ U. S. Department of the Army, Information
and Statistics, Military Assistance Program, Washington,
D. C., 1951, p. 18.

assistance for the construction of facilities in Western Europe for these purposes. The initial program was highly successful and was then broadened for the purpose of establishing centrally located facilities in Europe for the international cross-servicing and maintenance of material furnished under the Military Assistance Program.²

In addition to the "Offshore Procurement" and "Facilities Assistance" programs, which dealt primarily with major items of supply and material, overseas procurement activities were strongly encouraged to utilize foreign sources of supply to the maximum extent possible to satisfy their requirements for commercial "off-the-shelf" items required for normal day-to-day operations and maintenance.

These procurement programs and policies, coupled with (1) the expenditures by United States servicemen and civilians, employed by the overseas military installations, and their dependents on the local economies; (2) Department of Defense contributions to jointly financed and jointly used NATO facilities--such as airfields, communication facilities and depots, generated gross military expenditures entering into the United States Balance-of-Payments of two billion one hundred million dollars average per year during the period 1950 thru 1956 and three billion one hundred million dollars average per year during the period 1957 thru 1960.³

²Ibid., p. 19.

³U. S. Department of Commerce, Office of Business Economics, Balance of Payments Statistical Supplement Revised Edition, U. S. Government Printing Office, Washington, Pt. 4, p. 259.

Although studies for reducing overseas defense expenditures were being conducted within the Department Of Defense during the latter part of 1959 and early 1960, the first positive action towards reducing the defense contributions to the deficit in the United States balance-of-payments came on November 17, 1960, when President Dwight D. Eisenhower directed the Secretary of Defense to:

Reduce and thereafter limit the number of dependents abroad of military and civilian personnel to a total of not more than 200,000 at any one time, which total shall be subject to annual review. This reduction shall be accomplished at the rate of not less than 15,000 per month commencing January 1, 1961, pursuant to such rules and regulations as the Secretary may prescribe and shall, to the maximum extent feasible, apply to dependents located in highly industrialized countries with strong currencies. Exceptions to the foregoing limitations shall require the personal authorization of the Secretary or Deputy Secretary of Defense.

Take promptly all possible steps to reduce by a very substantial amount the expenditures, from funds appropriated to the military services and for the military assistance program, that are planned for procurement abroad during calander year 1961, by establishing a minimum amount by which such procurement shall be reduced.

Prohibit the purchase of foreign goods by the non-appropriated fund activities related to the military services, except where exceptions to this prohibition are made under the personal authorization of the Secretary or Deputy Secretary of Defense.⁴

President Kennedy, immediately upon entering office, ordered a reappraisal of the balance-of-payment situation

⁴U. S. President, 1952-1960 (Eisenhower), Directive by the President Concerning Steps to be Taken with Respect to the United States Balance of Payments, November 16, 1960, Federal Register, Vol. 25, No. 232, Washington, Wednesday, pp. 12219-12278, p. 12221.

Although studies for economic development
 organizations were being conducted within the framework
 of orders during the latter part of 1955 and early 1956,
 the first positive action towards creating the economic
 conditions to the extent of the United States dollar
 payments was in November 1956, when President
 Dwight D. Eisenhower issued the Executive Order

which was intended to limit the amount of investments
 by U.S. citizens and citizens of U.S. possessions in a total
 of not more than \$100,000 in any one year, which total
 shall be subject to annual review. This restriction
 shall be accomplished by the date of not later than
 12:00 PM on the 15th day of January 1, 1957, pursuant
 to such rules and regulations as the Secretary may
 prescribe and shall, in the various cases herein,
 apply to investments located in highly industrialized
 countries with heavy taxation. Countries in the
 Communist bloc shall register the payment
 authorization of the Secretary on every quarterly
 at the end of the year.

The purpose of this Order is to reduce to a
 very substantial extent the expenditures of U.S. funds
 appropriated to the military services and for the
 Office of Defense Production, and the amount for
 investment in highly industrialized countries shall be
 restricted to a maximum amount of \$100,000 per
 year for each individual.

Under the terms of Article 100 of the
 Constitution, the President has the honor to
 certify that the above is the true and correct
 copy of the original of the Executive Order
 of the Secretary of State, signed by the Secretary.

Witness my hand and the Great Seal of the United States
 at the City of Washington, this 15th day of January, 1957.

D. W. Eisenhower, President, 1953-1961 (Eisenhower Library)
 as the President General Order was signed by the President
 in the United States Office of the Secretary of State, January 15, 1957.
 Federal Register, Vol. 22, No. 17, January 15, 1957, page 1500.
 1957-1958, p. 1500.

with particular reference to the then outstanding order to reduce the number of dependents of Department of Defense Personnel overseas. On February 6, 1961, President Kennedy advised Congress that ". . . it has become clear that the present limitation on dependents was not the best way to accomplish this savings, and that this limitation was seriously hurting morale and recruitment in the armed forces."⁵ He further advised Congress that the savings expected from the restriction of military dependents overseas could be made through other measures and therefore he had directed the Secretary of Defense to rescind the limitation on dependents and to put the other measures into effect immediately.

As subsequent action to the Presidential directives of November 16, 1960 and February 6, 1961, the Department of Defense implemented a series of actions to reduce the net adverse effect military expenditures were having upon the United States balance of payments. In directing these actions, the Secretary of Defense established a prime objective of the Department of Defense, the reduction of the net adverse balance of United States defense expenditures entering the international balance of payments by one billion dollars between fiscal years 1961 and 1963.⁶

⁵U. S. President, 1961-1963 (Kennedy) Message to Congress on Balance of Payments and Gold, February 6, 1961, Congressional Quarterly Almanac, Vol. XVII, 1961.

⁶Charles J. Hitch, Assistant Secretary of Defense, Statement before the Subcommittee on International Exchange and Payments of the Joint Economic Committee, December 12, 1962, Pt. 2.2, p. 19.

with particular reference to the time following order
 to reduce the number of dependents in Department 25
 before the above mentioned order of February 2, 1951.
 It is noted that the present limitation on dependents
 became effective when the present limitation on dependents
 was not the best way to accomplish this purpose, and that
 this limitation was necessary to insure security and control
 over the funds of the United States Government.
 It is noted that the various agencies of the
 Government are not in a position to determine the
 number of dependents which should be allowed in each
 and every case and that the Secretary of Defense
 is required to limit the number of dependents but to not
 exceed the number of dependents which are authorized.

It is noted that in the Presidential Memorandum
 of January 18, 1951 and February 2, 1951, the Department
 of Defense implemented a series of actions to reduce the
 number of dependents which are authorized to be listed upon
 the United States balance of payments. It is noted that
 the Secretary of Defense authorized a series
 of actions of the Department of Defense for reduction of
 the number of dependents of United States citizens working
 abroad and that the Department of Defense is authorized to
 issue orders for the reduction of dependents of citizens of
 the United States working abroad from 1951 and 1952.

²U. S. Statistical, 1951-1952 (Monthly, January 25,
 1951) for balance of payments and gold, February 2,
 1951, Congressional Quarterly Almanac, Vol. 1951, 1951.

³Charles W. Eichel, Assistant Secretary of Defense,
 returned before the Subcommittee on International
 Finance and Economy of the Joint Economic Committee
 December 12, 1951, H. R. 511.

He further established a long-term objective to reduce the total net adverse dollar outflow stemming from defense programs to one billion dollars by fiscal year 1966.

The Department of Defense's efforts to reduce overseas military expenditures can be divided roughly into the following areas: (1) the reduction of overseas expenditures for major equipment and supplies from the military function appropriations; (2) the reduction of overseas expenditures by individuals (United States military and civilian personnel and their dependents); (3) the reduction of overseas expenditures for the Military Assistance Program; and (4) the review of overseas bases and construction projects to preclude unnecessary foreign exchange costs.⁷ Since the Presidential directive of November 16, 1960, a series of Department of Defense directives were issued in each of the above major areas, some modifying and/or superceding previous directives on the same subject. In many cases directives in one area are functionally related to directives in another area only by the fact that actions under these directives result in transactions entering into the United States balance-of-payments. For this reason, the various actions taken by the Department of Defense have been segregated for discussion under the major categories outlined above.

Overseas Expenditures for
Major Equipment and Supplies

The first of a series of Department of Defense Directives dealing with procurement of supplies and services

⁷Ibid.

to further investigate a long-term strategy to reduce the level of energy-related emissions from the power sector in the United States by 2050.

The purpose of this report is to provide a comprehensive overview of the current energy landscape in the United States and to identify key areas for future research and policy development. The report is organized into three main sections: (1) the current energy landscape, (2) the challenges facing the energy sector, and (3) the opportunities for a more sustainable energy future. The first section provides a detailed overview of the current energy landscape, including the role of fossil fuels, nuclear power, and renewable energy sources. The second section discusses the challenges facing the energy sector, such as the need to reduce greenhouse gas emissions, the need to improve energy efficiency, and the need to develop new energy technologies. The third section discusses the opportunities for a more sustainable energy future, including the potential for renewable energy, energy storage, and smart grids. The report concludes with a list of recommendations for future research and policy development.

Executive Summary

1. Introduction

The U.S. energy sector is facing a number of challenges, including the need to reduce greenhouse gas emissions, the need to improve energy efficiency, and the need to develop new energy technologies.

This report provides a comprehensive overview of the current energy landscape in the United States and identifies key areas for future research and policy development.

to be procured and used outside of the United States was issued on December 16, 1960. This directive established as a minimum goal the reduction of sixty-five million dollars in planned foreign purchases during calendar year 1961. To meet this goal, guidelines were established for determining which purchases would no longer be purchased abroad:

Requirements for supplies of foreign origin will be reviewed to determine whether domestic supplies can adequately fulfill the needs of the services.

Where it is estimated that the cost of United States supplies or services (including transportation and handling costs) will not exceed the cost of foreign supplies or services by more than twenty-five percent, such proposed purchases shall normally be returned to the United States for award. Judgment should be exercised with respect to large purchases coming within this category involving the maximum differential.

Future research and development programs planned abroad shall be reviewed to determine if United States firms or individuals possess the requisite qualifications to perform the research and development work but due consideration should be given to the interdependence of such research work being performed abroad with other joint programs of the United States and other governments.⁸

Exceptions were granted in this directive from the guidelines to allow: (1) emergency purchases; (2) purchases under one thousand dollars; (3) purchases of subsistence which were so fragile or perishable that their quality at the point of consumption would be impaired or destroyed if shipped from the United States; (4) purchases of supplies

⁸U. S. Department of Defense, Office of the Secretary of Defense, "Supplies and Services to be Procured and Used Outside of the United States," Memorandum, to the Service Secretaries, Washington, D. C., December 16, 1960.

to be approved and will be subject to the usual review and
 approval process. It is noted that the proposed amendments
 are a minimum and the Commission will consider any further
 amendments to the proposed amendments during the public
 consultation period. The Commission will also consider any
 amendments which may be proposed during the public
 consultation period.

The Commission will also consider any amendments to the
 proposed amendments which may be proposed during the public
 consultation period. It is noted that the proposed amendments
 are a minimum and the Commission will consider any further
 amendments to the proposed amendments during the public
 consultation period. The Commission will also consider any
 amendments which may be proposed during the public
 consultation period.

The Commission will also consider any amendments to the
 proposed amendments which may be proposed during the public
 consultation period. It is noted that the proposed amendments
 are a minimum and the Commission will consider any further
 amendments to the proposed amendments during the public
 consultation period. The Commission will also consider any
 amendments which may be proposed during the public
 consultation period.

A copy of the proposed amendments is available on the
 Commission's website at www.commission.gov.uk.
 Details of the public consultation period are available
 on the Commission's website at www.commission.gov.uk.

and services available only from foreign sources and for which there are no acceptable substitutes; (5) purchases made with excess foreign currencies held by the United States Treasury to the extent such purchases avoid an adverse effect upon the United States balance-of-payments; (6) purchases of supplies or services required to be made pursuant to a treaty or executive agreement; and (7) other purchases as specifically authorized by the Secretary of Defense.

The directive of December 16, 1960 was extremely broad in scope and with flexible terms. Apparently, the underlying intent of the directive was to give the military services sufficient latitude and discretion in establishing specific measures to accomplish the objective. For example, on the guideline for the purchase of supplies and services involving a price differential, the word "normally" was used leaving to service decision the returning of requirements where the cost differential was less than twenty-five per cent. Furthermore, the statement "to use judgment with respect to requirements involving the maximum differential" was interpreted by most overseas activities as giving substantial weight to budgetary consideration in connection with large purchases, even though the cost of the supplies or services in the United States (including transportation and handling costs) was within the twenty-five per cent differential. In addition, the directive was silent as to the level of authority necessary to make the various determinations (e.g., whether to buy United States or foreign when the requirement was large and the price differential was slightly below twenty-five per cent), required by the

the original available data from the period 1960-1969 and the
 data from the 1970-1979 period. (b) The
 data from the 1980-1989 period are also available.
 These data are the result of the work done by the
 authors during the period 1980-1989. (c) The
 data from the 1990-1999 period are also available.
 These data are the result of the work done by the
 authors during the period 1990-1999. (d) The
 data from the 2000-2009 period are also available.
 These data are the result of the work done by the
 authors during the period 2000-2009.

The analysis of the data is extremely
 broad in scope and will include every aspect of the
 data available. The analysis will be done in
 a number of stages. The first stage will be to
 describe the data in general terms. This will
 include a description of the data sources, the
 data collection methods, and the data processing
 procedures. The second stage will be to describe
 the data in more detail. This will include a
 description of the data in terms of the variables
 used, the units of measurement, and the time
 period covered. The third stage will be to
 describe the data in terms of the relationships
 between the variables. This will include a
 description of the correlations between the
 variables, the regression coefficients, and the
 other statistical measures. The fourth stage
 will be to describe the data in terms of the
 patterns of change over time. This will include
 a description of the trends, the cycles, and
 the other patterns of change. The fifth stage
 will be to describe the data in terms of the
 underlying causes of the patterns of change.
 This will include a description of the factors
 that are thought to be responsible for the
 patterns of change. The sixth stage will be to
 describe the data in terms of the implications
 for policy. This will include a description of
 the ways in which the data can be used to
 inform policy decisions.

directive. Accordingly, this authority was exercised by various individuals at different levels at overseas installations, each using his own interpretation of the directive.

Although it was anticipated that the directive of December 16, 1960 would easily meet the minimum objective of reducing planned overseas procurement by sixty-five million dollars, an analysis of departmental reports covering the first half of calendar year 1961, revealed that the goals were not being met. To provide a broader base for opportunities to reduce purchases from foreign suppliers, the directive was expanded on August 9, 1961,⁹ to apply to proposed purchases to be made by purchasing offices located within the United States of supplies and services solely for use outside the United States, its possessions and Puerto Rico.

On July 16, 1962, the Secretary of Defense issued a revised directive governing the purchases of supplies and services for use outside the United States, its possessions, and Puerto Rico.¹⁰ This revised directive closed most of the "loop holes" of the December 16, 1960 directive by: (1) providing that the procurement action would be restricted to domestic source end products or services of domestic concerns, when the estimated price of the requirement, delivered from United States sources, would not exceed \$10,000; (2) providing that the procurement action would be restricted to domestic source end

⁹Idem., August 9, 1962.

¹⁰Idem., July 16, 1962.

Although it was anticipated that the Committee would be able to complete its report by the end of 1945, it was not until the summer of 1946 that the Commission presented its report. The report, in addition to the information gathered from the various sources, contains a detailed account of the activities of the Committee and the results of its work. It also contains a list of the names of the individuals who were investigated and the results of the investigation.

On July 16, 1946, the Committee to Inform Present and Future Generations presented its report to the President. The report is a detailed account of the activities of the Committee and the results of its work. It also contains a list of the names of the individuals who were investigated and the results of the investigation.

Approved: August 1, 1946
 Approved: July 16, 1946

products or services of domestic concerns, when the estimated cost of the requirement was more than \$10,000, but it was estimated that the cost of domestic source end products, or services of domestic concerns (including transportation and handling costs) would not be more than fifty per cent in excess of the cost of foreign supplies or services (including transportation and handling costs); and, (3) providing that in all instances where the estimated cost of a requirement was in excess of \$10,000 and the estimated or actual cost of domestic source end products or services of domestic concerns would be more than fifty per cent in excess of the cost of foreign supplies or services, the requirement and supporting data would be submitted to the Secretary of Defense for determination whether to buy domestic end products or services of domestic concerns or foreign supplies or services.

In addition to outlining specific procedures governing the solicitation of bids and proposals for supplies and services to be used outside the United States, its possessions and Puerto Rico, the July 16, 1962 directive made substantial changes in the exceptions previously allowed from the prescribed procurement policy on applying the price differential in evaluating bids or proposals on domestic end products or the services of domestic concerns. These changes included: (1) the authority to accomplish small purchases in overseas areas without cost determinations between domestic and foreign products or services was reduced from one thousand to five hundred dollars per transaction; (2) a limitation of ten thousand dollars was placed upon the use of the exception allowing procurement from foreign sources of

requirements under compelling emergencies; (3) the exception allowing the procurement of perishable subsistence items (such as fresh vegetables, fresh fruit, milk, etc.) which are of such a nature that their quality at the point of consumption would be destroyed or significantly impaired if shipped from the United States remained; however, the making of this determination was restricted to the Commanders of specific military commands and forces with authority to redelegate this authority to individuals at lower echelons only for those procurements which were estimated not to exceed ten thousand dollars; and (4) the authority to make the determination--that the requirement was of a nature that could be filled only by foreign suppliers or service concerns--was greatly curtailed by specifying that the Commanders of military commands would make the determination for procurements estimated not to exceed one million dollars (with power of redelegation of the determination authority to lower echelons for requirements estimated not to exceed ten thousand dollars); that the Departmental Secretaries or the Director, Defense Supply Agency, as appropriate, would make the determination on requirements estimated to exceed one million dollars but not more than three million dollars; and that the Secretary of Defense or the Deputy Secretary of Defense would make the determination for all procurements estimated to exceed three million dollars.

The results of procurements in fiscal year 1963, under guidance contained in Secretary McNamara's directive of July 16, 1962, as amended, are reflected in the following tables.

Table IV shows the four hundred and twenty-four million dollars of new contracts for foreign origin supplies and services, broken down by the various exceptions specified in the July 16, 1962 directive which permitted procurements abroad. Requirements which could be filled only from foreign sources amounted to one hundred and eighty million dollars, or forty-two per cent of the total exceptions. Perishable subsistence purchases amounted to seventy-three million dollars, or seventeen per cent of total exceptions. Purchases made pursuant to a treaty or executive agreement between governments amounted to sixty-two million dollars, or fifteen per cent of total procurements under the exceptions. Purchases under ten thousand dollars each made under the "price differential exception" totalled fifty million dollars, or twelve per cent of total exceptions. The "all other" category consists of purchases, in excess of ten thousand dollars each for which the estimated domestic cost was over fifty per cent that of foreign cost, and which amounted to forty-nine million seven hundred thousand dollars, or thirteen per cent of total exceptions.

As previously stated in 1962, the Secretary of Defense set as the long-range goal of the Department of Defense a reduction in the net adverse effect of United States defense expenditures entering the balance-of-payments to one billion by fiscal year 1966. The question, however, arose as to what further action could be taken in the area of overseas expenditures for major equipment and supplies to meet the objective? Further, what would be the net effect of any such action upon the Department

of Defense? To attempt to answer these questions it was necessary to analyze the foreign origin procurements made during fiscal year 1963 under the authorized exceptions of the July 16, 1962 directive.

REQUIREMENTS WHICH COULD BE FILLED
 ONLY BY FOREIGN SUPPLIES
 OR SERVICES

According to the data contained in Table IV,
 requirements which could be filled only by foreign
 supplies and/or services are listed in the table below. All of
 these are in the form of purchase orders. Almost all of

the requirements purchased under this exception fall into one of the following categories of requirements: (1) utilities, including gas, water, electricity, steam, sewage, refuse collection and disposal; (2) communication services; (3) port handling and stevedoring services; (4) maintenance and repair of, and procurement of spare parts for, foreign manufactured vehicles, equipment, machinery and systems; (5) packing and crating services; (6) laundry and dry cleaning; (7) coal handling and storage; (8) industrial gases; and, (9) transportation services. Everyone of these general areas, with the exception of "(4)" above, were directly related to the support of United States military forces on any installation whether in the United States or in a foreign country. The nature of these supplies and services are such that they cannot be obtained from other than the source located in the general vicinity of the installation. Further, a high portion of the cost for providing these supplies and services is composed of overhead and indirect costs and therefore the total cost does not fluctuate upward or downward in direct relation to the strength of the military force utilizing these supplies and services.

With respect to general area "(4)" above, almost all of the expenditures are for fixed equipment, machinery and systems of the installation. To replace this equipment with United States manufactured equipment, machinery or systems would usually necessitate the execution of alteration and minor construction contracts which would generate greater foreign exchange costs than were being incurred in the procurement of maintenance and repair services or spare parts for the foreign equipment, machinery

the organization, Government and the military. This
 is the main part of the following description of the organization.
 (1) Military organization and, within this organization, the
 military, police, judicial and administrative (2) administrative
 organization (3) local building and engineering services
 (4) maintenance and repair of the equipment of the
 force (5) foreign communications (6) foreign relations
 (7) primary and secondary education (8) health services
 (9) industrial services (10) transportation
 services (11) power (12) water supply (13) other services

and systems. It therefore can be concluded that costs under this exception would continue to occur and would remain constant in direct relation to the number of overseas installations maintained by the Department of Defense.

Perishable Subsistence

Perishable subsistence purchases during fiscal year 1963, totalled seventy-three million dollars and represented seventeen per cent of total expenditures under the exceptions. Purchases in this category which exceeded ten thousand dollars per transaction were required to be approved by a Major Overseas Commander. It therefore can be assumed that these purchases represented the minimum requirements needed to provide balanced diets to military troops and dependents and that possible substitutes of products of United States origin, not susceptible to deterioration or spoilage while in shipment from the United States, were considered rejected.

Although foreign exchange costs in this category could be reduced by transporting perishable subsistence of United States origin by military jet aircraft, the cost to military appropriations, generated by such operations, would be three to five times as great as the costs of procuring this subsistence in foreign countries. Further, a sizable portion of the "airlift" capability would have to be diverted to the accomplishment of this task.

It therefore can be concluded that expenditures in this category would remain constant in direct relation with the size of the United States military forces maintained

The following are the general principles which should govern the preparation of the report on the work of the Committee:

The report should be prepared in a clear and concise manner, and should be based on the best available information.

The report should be prepared in the English language.

The report should be prepared in the metric system.

Guidelines for the Preparation of the Report

1. The report should be prepared in a clear and concise manner, and should be based on the best available information.
2. The report should be prepared in the English language.
3. The report should be prepared in the metric system.
4. The report should be prepared in the form of a single document.
5. The report should be prepared in a format which is suitable for publication.
6. The report should be prepared in a format which is suitable for reproduction.
7. The report should be prepared in a format which is suitable for filing.
8. The report should be prepared in a format which is suitable for distribution.

abroad.

Treaty or Executive Agreement

Procurements pursuant to a treaty or executive agreement between governments amounted to sixty-two million dollars, or fifteen per cent of total expenditures under the exceptions.

Savings in this area were generally not subject to control by the Department of Defense. Until such time as new treaties or executive agreements were negotiated and executed between the United States and the foreign governments, reductions in this category would be minor and of little significance in meeting the objectives of the Department of Defense.

Procurements of \$500 or Less

The twenty-seven million dollars expended for purchases of five hundred or less per transaction represented six per cent of total expenditures under the exceptions. Supplies and services procured under this exception usually were (1) emergency purchases, subsistence, sole source, etc., or (2) "one-time" or "sporadic" requirements which even though available from sources in the United States, were not recurring requirements and therefore did not justify the costs associated with the maintenance of stocks of the items at the overseas installation.

The requirements under this exception were usually procured under one of the simplified purchase procedures (Imprest Funds, Blanket Purchase Agreements, etc.), which were designed to provide means for

PROCESSES INVOLVED IN THE

Processes involved in a study on sensitive information between governments involved in military activities, or other part of total expenditures under the auspices of the Department of Defense.

Review in this area was primarily not subject to control by the Department of Defense. While such time as was available as sensitive information was maintained and controlled between the United States and the foreign governments, reduction in this category would be made and of little significance in meeting the objectives of the Department of Defense.

PROCESSES INVOLVED IN THE

The twenty-seven million dollars awarded for purchases of five hundred or less per transaction represented six per cent of total expenditures under the Department of Defense. Supplies and services provided under this program usually vary (1) according to program, (2) according to source, and (3) "one-time" or "recurring" requirements with the latter usually from sources in the United States, and recurring requirements and the latter did not justify the costs associated with the acquisition of stocks at the time of the program's termination.

The Department under the auspices of the usually provided under one of the existing programs (Department of Defense funds, United States Government funds), which were designed to provide such as

accomplishing small dollar purchases with considerably less administrative effort and cost than that usually associated with the more complex procurement methods.¹¹

The abolishment of this exception to purchase small requirements abroad, would (1) in the case of the first category of items and services, result in the requirements being purchased from foreign sources under one of the other exceptions available; or, (2) in the case of the supplies in the second category, result in increased Department of Defense appropriation cost because stocks of these items would have to be established and maintained to allow for the delays associated with the requisitioning of these requirements from the United States.

In light of the above, it can be concluded that the retention of this exception was appropriate and purchases thereunder would continue as long as forces are maintained abroad.

Other Purchases Under \$10,000
and "Other Purchases"

The combined expenditures under the exceptions "Other Purchases under \$10,000" and "Other Purchases" amounted to seventy-two and a half million dollars and represented approximately seventeen per cent of total expenditures under all exceptions. These purchases consisted of requirements which were available from United States sources but because the domestic cost was over

¹¹U. S. President, 1961-1963 (Kennedy), Message to Congress on Balance of Payments and Gold, February 6, 1961, Congressional Quarterly Almanac, Vol. XVII, 1961.

comparative study of the various systems with a view to
ascertaining the most efficient and economical method
of carrying out the various operations connected with the
management of the various departments of the business.

The object of this study is to determine the most
efficient method of carrying out the various operations
connected with the management of the various departments
of the business. It is to be noted that the object of
this study is not to determine the most efficient method
of carrying out the various operations connected with the
management of the various departments of the business, but
to determine the most efficient method of carrying out the
various operations connected with the management of the
various departments of the business.

In light of the above it can be concluded that
the results of this study are of great value and
importance and would be of great value to the
management of the business.

Other Departments of the Business
and Other Matters

The various departments of the business are
connected with the management of the business and
the various operations connected with the management
of the business. It is to be noted that the object
of this study is not to determine the most efficient
method of carrying out the various operations connected
with the management of the various departments of the
business, but to determine the most efficient method
of carrying out the various operations connected with
the management of the various departments of the
business.

It is to be noted that the object of this study is
not to determine the most efficient method of carrying
out the various operations connected with the
management of the various departments of the business,
but to determine the most efficient method of carrying
out the various operations connected with the
management of the various departments of the business.

fifty per cent higher than the foreign costs, determinations were made to satisfy the requirements through purchase from foreign sources.

By requiring all of these requirements to be procured from United States sources or by increasing the price differential to be added to domestic prices for evaluation purposes, a substantial dollar amount would be eliminated from the United States balance-of-payments.

According to statistics maintained by the Department of Defense, the additional costs incurred by making purchases from domestic sources under the fifty per cent price differential rule totalled twenty-one million dollars or twenty-eight per cent more than the estimated cost of foreign source items. The twenty-eight per cent represented the average increased cost of individual requirements where the price differential was from one per cent to forty-nine per cent greater than the foreign cost.

If the purchases made during fiscal year 1963 from foreign sources under the fifty per cent differential rule were to have been purchased from domestic sources, the added costs to the Department of Defense would have been at least fifty per cent (thirty-seven million dollars) greater than they were when purchased from foreign sources.

Although it was recognized by the President of the United States that some increased budgetary costs would accrue by virtue of the reduction of dollar flow abroad and the Congress had been apprised of the "cost differential" rules being applied in the purchase of requirements for use outside the United States,¹² there was some question as to

what extent these increased costs would be tolerated in defense appropriations before other actions, outside the "Government Account" sector, would be considered more appropriate to curb dollar outflow.

Construction of New Facilities/Maintenance,
Repair, Alteration of
Existing Facilities

The initial effort to reduce overseas military expenditures for construction of real property and the maintenance, repair and alteration to existing real property was that made on December 16, 1960 when the Secretary of Defense directed that "No further contracts for the construction of family housing and related facilities, such as schools chapels, hospitals, and commissories would be awarded pending rejustification and specific approval from the Office of the Assistant Secretary of Defense (Property and Installations)."¹³

On July 12, 1962, the Secretary of Defense announced a plan to reduce the foreign exchange cost of overseas construction by the use of techniques such as prefabricated housing, constructed in the United States and transported to overseas areas.¹⁴ Again on November 27, 1962, the Secretary of Defense announced a goal of

reducing by twenty-five per cent the fiscal year 1963 estimated expenditures for maintenance, repair, alteration and minor construction of real property overseas. This goal would be accomplished by: (1) procuring the maximum amount of materials and supplies in the United States to be supplied contractors as a replacement for those now being furnished by the contractors; and, (2) restricting alteration and minor construction projects performed by contract to those urgently required for the support of the military mission. To insure that the objective was being met, a rule was set forth which required that all contracts for maintenance estimated to exceed \$100,000 or repair work in the \$50,000--\$100,000 cost category would be approved by the Secretary of the Military Department or his designee. Further, any requirement for repair work estimated to exceed \$100,000 would require approval in advance by the Assistant Secretary of Defense (Installations & Logistics) or his designee.¹⁵

The restraining orders on the expenditures of funds overseas for construction of new facilities or for the rehabilitation and maintenance of existing facilities were, when considered by themselves, negative in nature and were of little benefit in reducing the balance of payments deficits. There is little question that as long as military units are located at specific overseas facilities, needs will exist for new facilities to house and support the military members and their dependents. However, when these restraining orders are considered in

¹⁵Ibid.

reported by the Committee for the fiscal year 1953
 estimated expenditures for salaries, travel, and other
 items and minor operations of the property owners.
 This year would be accomplished by: (1) securing the
 various items of materials and supplies in the United
 States to be supplied contractors as a requirement for
 this new item furnished by the contractor; and (2)
 restricting activities and minor construction projects
 performed by contract to those already provided for the
 support of the military mission. To insure that the
 objective was being met, a rule was set forth which
 required that all contracts for maintenance activities
 to exceed \$10,000 or more work in the \$20,000--
 \$100,000 cost category would be approved by the Secretary
 of the Military Department or his designee. Further, any
 requirement for repair work to exceed \$10,000
 would require approval in advance of the Secretary
 of Defense (Assistant Secretary) or his
 designee.

The existing orders on the expenditures of
 funds overseas for construction of new facilities or for
 the rehabilitation and maintenance of existing facilities
 were then considered by the Committee. It was
 and ways of little benefit in reducing the amount of
 required activities. There is a large position that as long
 as military units are located at facilities in the
 facilities, costs will not be too high to incur to build
 and support the military units and their dependents.
 However, when those restricting orders are considered in

light of other actions initiated, they represent a major factor in the overall Department of Defense overseas expenditure reduction program. One such supplementary action involves the consolidation and/or elimination of overseas facilities, announced by the Secretary of Defense on July 16, 1962:

A comprehensive review of the requirements for each of our foreign military bases and installations occupied by United States military services has been undertaken. As a part of this over-all review, a special study group visited selected countries in Western Europe to determine the feasibility of combined utilization of depots with our Allies, as well as to ascertain the possibilities for a reduction, elimination or consolidation of headquarters, training and major logistical support activities.¹⁶

To construct new facilities or the rehabilitation of existing facilities at locations which could subsequently be declared "nonessential" in overall defense planning, would not only result in unnecessary foreign exchange costs but would subject the Department of Defense to criticism for inadequate planning resulting in unwarranted budgetary expenditures.

Various newspaper articles from July 16, 1962 to 1964 tended to reflect the success of the consolidation/elimination of overseas facilities program:

President John F. Kennedy said Thursday the United States has withdrawn some support troops from Europe in the past few months but there is no present plans to bring home any U. S. combat forces. He said there

from other bases in the world to avoid leaving any gap in Northern Japan's air defenses.²²

The consolidation and/or elimination of overseas facilities without materially reducing the United States defense capabilities, resulted in: (1) the return of redundant logistic forces to the United States; (2) the transfer of United States logistic supply points and operations to countries where the foreign exchange costs were reduced or eliminated through "country-to-country offset agreements;" and/or (3) the withdrawal of older weapon systems overseas with mission responsibilities assigned to more advanced weapon systems located within the United States, appeared to be the most direct means in attempting to reduce the military deficits in the United States balance-of-payments.

²²The Globe and Mail, Toronto, Canada, 31 December 1963.

from other cases in the world to which it is applied.
 See the footnote on page 110.

The Commission's study indicates that various
 political and social conditions, especially among the Latin
 American countries, resulted in: (1) the form of
 economic organization of the United States (2) the
 extent of public ownership and (3) the
 question of public debt for Latin American
 countries. It is pointed out that the
 extent of public ownership is determined
 by the extent of public ownership in the
 United States, which is determined by the
 extent of public ownership in the United States.
 It is also pointed out that the extent of
 public ownership is determined by the extent
 of public ownership in the United States.
 It is also pointed out that the extent of
 public ownership is determined by the extent
 of public ownership in the United States.

CHAPTER IV

DEPARTMENT OF DEFENSE BALANCE OF
PAYMENTS: A POTPOURRI

Military Assistance Program

Insofar as the Military Assistance Program was concerned, the adverse United States balance-of-payments received its first major consideration with the passage of the Foreign Assistance Act of 1961. Section 604 (a) of this Act prescribes:

Funds made available under this Act may be used for procurement outside the United States only if the President determines that such procurement will not result in adverse effects upon the economy of the United States or the industrial mobilization base, with special reference to any areas of labor surplus or to the net position of the United States in its balance of payments with the rest of the world, which outweigh the economic or other advantages to the United States of less costly procurement outside the United States. . . .¹

On October 18, 1961, the President of the United States determined in pertinent part, under Section 606 (a) of the Act that:

I also hereby direct that funds made available under the Foreign Assistance Act of 1961 for military assistance programs not be used for procurement outside the United States except to procure items required for military assistance which are not produced in the United States, to make local purchases for administrative purposes, and to use

¹U. S. Department of Defense, Directive No. 2125.1, "Military Assistance Program Offshore Procurement (MAP/OSP)," December 5, 1963.

local currency available for military assistance purposes. Upon certification by the Secretary of Defense, however, that exclusion of procurement outside the United States would seriously impede attainment of military assistance program objectives, the Secretary of Defense may authorize exceptions to these limitations.²

The Department of Defense implementation of Section 604 (a) of the Foreign Assistance Act of 1961 and the President's directive of October 18, 1961, was by Department of Defense Directive 2125.1, dated January 2, 1962, the act which authorized the use of Military Assistance Program funds for offshore procurements, subject to certification by the Assistant Secretary of Defense that the exclusion of procurement outside the United States would seriously impede the attainment of Military Assistance Program objectives, for the following additional purposes: (1) Government-to-Government cost-sharing projects under the Mutual Weapons Development Program; (2) Government-to-Government commitments involving cost-sharing production projects, when MAP is an integral part of the cost-sharing commitment; (3) Procurement required to support overriding foreign policy objectives as approved by the Secretary of State; and, (4) Procurement required to support overriding military logistical considerations which are important to the defensive capabilities of the Free World.³

On December 5, 1963, the Department of Defense

²Ibid.

³U. S. Department of Defense, Directive No. 2125.1, "Military Assistance Program Offshore Procurement (MAP/OSP)," December 5, 1963.

issued a revised Directive 2125.1. The major changes included: (1) a requirement that all Military Assistance Program procurements contemplated to be made outside the United States, its possessions and Puerto Rico, which were estimated to exceed three million dollars would be referred to the Secretary of Defense for determination on a case by case basis; (2) a provision that Military Assistance Program procurement of supplies and services (including construction materials, but excluding construction services) to be used outside the United States, its possessions and Puerto Rico, would be restricted to domestic source end products, or services of domestic concerns located in the United States if the price delivered from the United States sources would not exceed ten thousand dollars; (3) a provision that procurements which exceed ten thousand dollars would be restricted to United States domestic sources if the estimated domestic price was estimated to be not more than fifty per cent in excess of the cost of Foreign supplies or services; (4) a requirement that all procurements in excess of ten thousand dollars where the domestic price exceeds the fifty per cent differential, would be referred to the Office of the Secretary of Defense for determination and approval; (5) a limitation on the use of Military Assistance Program funds for new commitments on government-to-government cost-sharing projects; and (6) authority to continue the use of Military Assistance Program funds for United States contributions to the budgets of International Military Headquarters and to NATO projects.⁴

⁴Ibid.

Overseas Expenditures by Individuals

On September 30, 1960, there were 529,000 United States military personnel and 21,000 United States Department of Defense civilian employees assigned in foreign countries. These military and civilian personnel were accompanied by 487,000 dependents.⁵

The Presidential directive of November 16, 1960, called for a reduction in the number of dependents overseas, at a rate of 15,000 per month commencing January 1, 1961, to a total of not more than 200,000.⁶

According to the schedule established by the Presidential directive, a total of nineteen months would be required to reduce the 487,000 dependents to the maximum of 200,000. The reduction of dependents overseas would result, according to Department of Defense calculations, in a balance-of-payments savings of eighty-three dollars per dependent/month, thereby resulting in balance-of-payments savings totaling \$97.1 million in calendar year 1961; \$257.7 million in calendar year 1962; and \$285.0 million in calendar year 1963.⁷

The Military Services issued the initial directive to their activities, announcing the implementation of that portion of the directive dealing with the limitation of dependents, on November 18, 1960. Immediate action was directed to: (1) discontinue overseas movement of dependents who were not in receipt of a reservation scheduling overseas travel prior to February 1, 1961; (2) allow those individuals not selected for overseas assignment prior to November 18, 1960, who have submitted a "volunteer statement for overseas duty," to withdraw such statement; (3) discontinue issuance of dependent travel authorizations; (4) discontinue granting authorizations to extend beyond the normal overseas tour to any military personnel accompanied by dependents.⁸

On November 23, 1960, the Overseas Military Commands were directed to hold in abeyance all actions to incur additional obligations and commitments of funds for the procurement of new/replacement furniture, for the rehabilitation and/or improvement of government owned family quarters and for the acquisition of new leased family units.⁹

That portion of the President's directive, dealing with the prohibition against the resale of foreign goods in nonappropriated fund activities, was implemented by the

the Secretary of Defense on November 25, 1960.¹⁰

During December 1960 and January 1961, the Military Services conducted numerous studies on the effects the restriction on dependents overseas would have upon military personnel. On February 1, 1961, the Deputy Secretary of Defense sent a letter to the President of the United States advising him of the adverse effects on the morale and career incentives of military personnel generated by the restrictions on the movement of dependents overseas. Also in this letter, the Deputy Secretary of Defense outlined various programs which could be implemented, to reduce the expenditures overseas by military and civilian personnel and their dependents, that would generate greater savings than that contemplated by the restriction on dependents overseas.¹¹ On February 1, 1961, President Kennedy rescinded the Presidential Directive of November 16, 1960, as it dealt with the limitation of dependents overseas, and directed that the alternate methods and programs to reduce overseas expenditures be implemented immediately.¹²

The Department of Defense actions to reduce overseas expenditures by military and United States civilian

The passage of the Bill by the House of Representatives.

Bill was passed on July 26, 1872.

At the time of its passage the House of Representatives was divided into two camps, the majority of which was in favor of the bill. The minority consisted of those who were opposed to it. The bill was passed by a vote of 103 yeas and 73 nays.

The bill was then sent to the Senate. The Senate was also divided into two camps, the majority of which was in favor of the bill. The bill was passed by a vote of 51 yeas and 39 nays.

The bill then went to the President. The President signed the bill on July 27, 1872. The bill then became law.

The bill was a landmark piece of legislation. It established the Department of the Interior. It also established the Bureau of Land Management. The bill was a major step in the development of the United States as a nation.

The bill was also significant in that it established the principle of federalism. It established the principle that the federal government has a responsibility to manage the land of the United States. This principle is still in effect today.

The bill was a major achievement of the Reconstruction era. It established the Department of the Interior. It also established the Bureau of Land Management. The bill was a major step in the development of the United States as a nation.

The Department of the Interior
Bureau of Land Management
Washington, D. C. 20250

personnel and their dependents fell into three separate categories. One category dealt specifically with ways and means to change the spending and saving habits of the individuals abroad. Another category dealt with the operations of Nonappropriated Fund Activities with a view of improving the services offered so as to satisfy the minimum needs of overseas personnel and thereby reduce the dollar expenditures by individuals in the local economies. The third category involved actions to reduce to an absolute minimum our military and civilian forces overseas, consistent with our overseas military commitments, without degrading the effectiveness of our military strength. For the purpose of clarity and simplicity, the various actions taken by the Department of Defense in the area of individual expenditures have been grouped for discussion under the three categories mentioned above.

Actions to Change Spending
and Saving Habits of
Individuals

The initial action in this category was taken on March 6, 1961, with an objective to reduce expenditures by individuals abroad by \$75 to \$110 million during calendar year 1961. Because there were slightly over one million individuals (military members, United States citizen civilian employees and dependents of both) abroad, an average reduction in spending of seventy-five to one hundred ten dollars per year per capita would be required to meet this objective. In this action, the military departments were directed to: (1) initiate an extensive education process to point out the position of the United

The Board of Directors of the company has been advised that the
 company is currently in the process of reorganizing its
 operations and that it is expected that the reorganization
 will be completed by the end of the year. The Board has
 approved the plan of reorganization and has authorized the
 management to carry out the same. The Board has also
 authorized the management to issue new shares of common
 stock in connection with the reorganization. The Board
 has also authorized the management to enter into such
 other agreements as may be necessary or advisable in
 connection with the reorganization. The Board has also
 authorized the management to take such other action as
 may be necessary or advisable in connection with the
 reorganization.

Notice of Meeting of the Board of Directors
 of the Company

The Board of Directors of the Company will meet on
 Monday, June 15, 1942, at 10:00 A.M. in the Board
 Room of the Company at 1234 Main Street, New York,
 New York. The Board will meet to discuss the
 reorganization of the Company and to take such
 other action as may be necessary or advisable in
 connection with the reorganization. The Board will
 also discuss the financial statements of the Company
 for the year ended December 31, 1941. The Board
 will also discuss the proposed plan of reorganization
 and will take such action as may be necessary or
 advisable in connection with the reorganization.

States in the international balance of payments and the action the individual may take which would contribute to a solution of the problem; (2) institute a voluntary program for reduction of individual expenditures for foreign goods to items which--

Are purchased in an exchange outlet or other approved United States military operated resale activity, and then only to goods for which a real need exists. Are required for the use of the individual or his household incident to his duty overseas and a reasonable substitute can not be procured from an exchange outlet or from the United States. If not covered under above, do not exceed a total cost of one hundred dollars per year per individual overseas;¹³

(3) encourage and promote a savings program to the end that there would be an average one hundred dollars additional savings per year for each individual overseas.

To supplement the voluntary savings program, the Department of Defense imposed a prohibition upon the transportation at government expense of foreign made motor vehicles purchased by Department of Defense personnel or their dependents. The only exceptions to this prohibition were the fact that the car was owned or on order on or before March 6, 1961, the date of the order establishing the prohibition, or when it had been established that adequate facilities did not exist for the maintenance and repair of motor vehicles produced and assembled in the United States. Further, the Department of Defense took no action to urge extension of the Act of December 5, 1942

¹³U. S. Department of Defense, Office of the Secretary of Defense, "Overseas Expenditures Reduction Program--Individual," Memorandum to the Service Secretaries, Washington, D. C., March 6, 1961.

status in the individual balance of payments and the

which expired on June 30, 1961. This Act offered the entry, free of custom charges, of bonafide gifts from members of the Armed Forces of the United States to the extent of fifty dollars in any shipment. After expiration of the Act, the ten dollar free entry for gifts available to tourists was applicable to members of the United States Armed Forces.

Many individuals consider the voluntary savings programs of little or no benefit in reducing overseas expenditures by Department of Defense personnel and their dependents. They actually claim that the environment and social conditions associated with most overseas assignments (where dependents are allowed) were such that service personnel were induced to spend rather than save. In support of this position, this group usually cites the following examples:

- 1) The average military family of five or six, located in almost any part of the United States, must exercise considerable planning in managing its financial matters. The subject of "Help" to the housewife with household tasks and taking care of the children is not even considered except on special occasions. In contrast, this same family in many overseas locations is able to obtain "domestic help" on a full time basis for about the same costs as "once a week" help in the United States. Even though the "once a week" help was not utilized while within the United States, once overseas, who would not expend this nominal cost to give the wife a well deserved vacation from these household chores?

- 2) Most American families can only dream of an extended trip to a foreign country. Only a very small

... (faint text) ...

... (faint text) ...

... (faint text) ...

... (faint text) ...

percentage of these families realize such a dream in their life time. This factor has a direct bearing upon military families assigned overseas. The thought-- "we may never be able to afford a vacation to this area"-- tends to stimulate extended travel and vacations, not only in the country of assignment, but to all surrounding countries as well. The cumulative costs of such vacations quite often exceeded current earnings and were financed from past savings.

3) In a large number of overseas areas, Department of Defense members were required to utilize their own personal household goods and effects at their overseas location. During overseas tours, the members and families were exposed to high quality household goods at prices greatly reduced from prices of comparable merchandise in the United States or at prices comparable to United States "mass produced" merchandise of sometimes inferior quality. Because of this, military members tended to postpone normal replacement purchases while in the United States in anticipation of an overseas assignment; or, accomplish earlier disposal of still functionally satisfactory household goods and replacement with a purchase in the overseas area prior to rotation back to the United States. As a result, the expenditures by military members for household goods while overseas greatly exceeded the normal annual expenditures in this category while in the United States.

On the other hand, there are those officials and individuals who, while agreeing to the increased expenditures of military members on overseas tours, point to numerous statistics which: (1) clearly point out the

benefits of extended travel in the broadening of the education of military members; thus, preparing them to assume positions of greater responsibility within the Department of Defense; (2) stress the importance of "meeting the people" of our Allies to learn their customs, traditions and problems thereby resulting in a better basis for cooperation and understanding during war-time periods; (3) reflect the rapid attrition rate of household goods subjected to frequent moves. As such, it is necessary from a purely economic point of view, for military members to procure better quality merchandise to withstand this abnormal wear and tear.

Nonappropriated Fund Activities
of the Department of Defense

That portion of the Presidential Directive of November 17, 1960, which prohibited the purchase of foreign goods by nonappropriated fund activities, was implemented by the Department of Defense on November 25, 1960. In this implementation, interim authority was granted to procure items of subsistence and other items which could not be immediately procured from the United States and it was determined that such items were essential to the health and welfare of personnel of the Department of Defense and their dependents.¹⁴ In addition, this implementation established procedures for the submission of requests for exception under the Presidential Directive.

¹⁴U. S. Department of Defense, Office of the Secretary of Defense, "Nonappropriated Fund Activities of Department of Defense," Memorandum to the Service Secretaries, Washington, D. C., 25 November 1960.

The first part of the report deals with the general situation of the country and the position of the various groups. It then goes on to discuss the work of the various departments and the results of their work. The second part of the report deals with the work of the various departments and the results of their work. The third part of the report deals with the work of the various departments and the results of their work.

Summary of the work of the various departments
of the Government of India

The first part of the report deals with the general situation of the country and the position of the various groups. It then goes on to discuss the work of the various departments and the results of their work. The second part of the report deals with the work of the various departments and the results of their work. The third part of the report deals with the work of the various departments and the results of their work.

The fourth part of the report deals with the work of the various departments and the results of their work. The fifth part of the report deals with the work of the various departments and the results of their work. The sixth part of the report deals with the work of the various departments and the results of their work.

During the next ten months, a series of exceptions were granted from the provisions of the Presidential Directive as it related to the purchase of foreign goods by nonappropriated fund activities. These included:

1) December 6, 1960--authority was granted to purchase foreign perishable goods, beverages and similar items for consumption on the premises.¹⁵

2) December 6, 1960--authority was granted to purchase foreign goods for other than resale provided it has been determined that goods manufactured in the United States, serving the same functional purpose, were not available.¹⁶

3) December 22, 1960--nonappropriated fund activities located in Canada and Mexico were exempted from the provisions of the directive. Some of the primary factors which had a bearing upon the issuance of this exception were the economic ties and contiguous borders between the United States and these countries; the exempted status of dependents in both Canada and Mexico; and, the common interest in providing for the common defense.¹⁷

4) January 18, 1961--authority was granted to purchase the following goods for resale: (a) goods for which there are no acceptable substitutes of United States manufacture and which are required to operate and/or maintain customer owned equipment such as 220v/110v transformers, bulbs, sockets, and accessories; (b) infant

caskets; (c) distinctive unit ensigna; (d) soft drinks; (e) printed matter such as maps, postcards, magazines, newspapers, travel books, etc.; and, (f) items for use in connection with hobby craft shop and craft programs of the military services.¹⁸

5) February 2, 1961--nonappropriated fund activities located in the Republic of Korea were authorized to purchase for resale goods which were produced or manufactured in the Republic of Korea. Reasons cited as justification for this exception were: (a) favorable effect of dollar earnings on the Korean economy; (b) the relative small impact of nonappropriated fund purchases of Korean goods on the balance-of-payments problem; and, (c) the close economic, military and political associations and relationships between the United States and the Republic of Korea.¹⁹

6) February 27, 1961--authority was granted to purchase foreign goods in countries where the United States Treasury held large accumulated balances of local currency. All purchases made under this authority were required to be payable in foreign currencies rather than United States dollars.²⁰

7) June 6, 1961--authority was granted to: (a) make emergency purchases; (b) make purchases pursuant to treaty or executive agreements; (c) purchase foreign goods for other than resale wherein it is estimated the cost of United States goods serving the same functional purpose

¹⁸Idem., 18 January 1961.

(including transportation and handling costs) would exceed foreign costs of foreign goods by more than twenty-five per cent; (d) purchase foreign high octane gasoline, kerosene, and heating and cooking fuels for resale which are not otherwise available from appropriated fund stocks; (f) purchase automobile parts for American-made cars from foreign sources where supplies of American manufacturers are not available from either bonded warehouses or foreign distributors.²¹

After approximately nine months of operations by overseas nonappropriated fund activities under the provisions of the Presidential Directive of November 17, 1960, as implemented by the Department of Defense, the Secretary of Defense announced a major change in policy governing the sale of foreign goods by nonappropriated fund activities. By Memorandum of August 8, 1961, he stated:

It is recognized that procurement of locally available foreign items by U. S. personnel in overseas areas produce a more favorable effect on the balance of payments problem if procured through U. S. operated nonappropriated fund resale activities, rather than if such items are procured directly by such personnel on the local economy.

Prior instructions from this office are further modified to authorize these activities to henceforth deal in foreign items with the following provisions:

1. Transshipment directly between major overseas commands, i.e., USCINCPAC area and USCINEUR area, of items other than beverages, is prohibited.
2. Shipments among countries within an overseas command shall be held to a minimum so that, in general, only foreign items readily available locally will be dealt in by nonappropriated fund activities.
3. Foreign items, with the exception of beverages, sold through these activities shall be priced at least

as high as in local markets.

Previous instructions in conflict with policy are hereby amended.²²

As a result of this change in policy, the nonappropriated fund activities reverted back to operations generally the same as were in effect prior to the Presidential Directive of November 17, 1960. This cycle of actions substantiates the theories of many that as long as it is to the financial advantage of the Department of Defense personnel to buy foreign made products, in lieu of United States manufactured products, such purchases will be accomplished.

Reduction of United States Forces Overseas

When the Department of Defense was taking action to implement the President's Directive of November 19, 1960, it was estimated that each dependent overseas spent an average of \$1,000 per year in the local economies. In the latter part of 1961, it was estimated that the personal expenditures in the local economies of United States military and civilian forces and their dependents was an average of \$750 per year per person, including dependents.²³

With over one million military and civilian personnel and dependents overseas, it can readily be seen

Secretary

President

that one major factor contributing to the deficit in the military sector of the United States balance-of-payments was the expenditures on the local economies by these individuals. However, the Kennedy Administration rejected the "easy course of action" for reducing the number of individuals overseas who were associated with our defense posture by rescinding the order of the preceding Administration on the restriction of dependents overseas. In lieu thereof, the Department of Defense undertook a comprehensive review of all United States military units overseas to determine if, in light of the overall defense posture, a reduction of military personnel as well as dependents could be accomplished.

Quick Reaction Airlift Capability

One means for reducing overseas military personnel was to expand the program for prepositioning equipment and supplies in forward areas where trouble is likely to occur and utilize airlift to rapidly transport military forces, held in reserve in some central location within the United States, to the troubled area.

The "Big Lift" exercise conducted in October 1963, when 15,000 military personnel were airlifted from Texas to Western Europe, has been identified as the initial step towards the withdrawal of substantial numbers of United States military personnel from Europe. Although the exercise was not officially announced as a means for reducing the military deficit in the United States balance-of-payments, the exercise was so identified primarily on the basis of the statement made in Chicago, Illinois on

that the major factor contributing to the decline in the
 literacy rates of the United States is the lack of
 the educational system on the part of the government.
 In order to improve the literacy rates, the government
 should invest more money in the educational system.
 The government should also invest more money in the
 educational system to help students who are having
 difficulty in learning to read. The government should

 having difficulty in learning to read. The government
 should also invest more money in the educational system
 to help students who are having difficulty in learning
 to read.

THE IMPACT OF EDUCATION ON THE ECONOMY

The impact of education on the economy is a complex
 issue that has been debated for many years. Some
 people believe that education is the key to economic
 growth, while others believe that it is a waste of
 money. In this paper, we will explore the impact of
 education on the economy and discuss the pros and
 cons of each side of the argument.

One of the main arguments in favor of education is
 that it helps to create a skilled workforce. This
 workforce is essential for the economy to grow and
 prosper. Education also helps to reduce poverty and
 improve the quality of life for many people.

However, there are also some arguments against
 education. Some people believe that education is
 too expensive and that it does not always lead to
 better jobs. They also believe that education can
 be a waste of time and money.

In conclusion, the impact of education on the
 economy is a complex issue that has many different
 sides. While there are many benefits to education,
 there are also some drawbacks. It is important to
 weigh the pros and cons carefully before making a
 decision about whether or not to invest in education.

October 19, 1963, by the Deputy Secretary of Defense,
Roswell Gilpatric:

This Big Lift exercise will demonstrate our ability to project our military power far more quickly over far larger distances than has ever been the case in the past. By employing such a multibase capability, the U. S. should be able to make useful reductions in its heavy overseas military expenditures without diminishing its effective military strength or its capacity to apply that strength swiftly in support of its world-wide policy commitments.²⁴

In the eyes of many, the "Big Lift" exercise was termed an overwhelming success in demonstrating how far the United States had come in developing global mobility for its forces. Whereas, others proclaimed it as successful in peacetime, politically dangerous in time of crisis and totally useless in time of an armed conflict:

There remains a discussion of the airlift in case of the outbreak of an armed conflict . . . picture the situation in Europe after the first day of local nuclear conflict. . . . Let us assume the enemy has attacked. All available tactical aircraft are engaged in counter strikes against the enemy's lines of communication, and their numbers are decimated in the process . . . soon no airfields will remain intact, having been plastered by the enemy's short and medium range missiles. Furthermore, the distance from the border to the supply depots is short, 200 miles or less, so that relatively unsophisticated missiles suffice to destroy them. . . . The Big Lift would find no fighter cover, no airfields, no depots. To send an airlift of the dimensions of Big Lift into the battle zone or the supply depots would be pure folly.²⁵

²⁴Roswell Gilpatric, Deputy Secretary of Defense, Speech on October 19, 1963, in Chicago, Illinois, Air Force and Space Digest, December 1963.

²⁵Stefan Geisenheyner, "And How Did the Europeans Size Up Big Lift," Air Force and Space Digest, December, 1963, pp. 38-40.

The predictions that United States troops in Europe would be reduced was, from a military view, alarming to some United States Allies. They claimed that any withdrawal of forces from any likely danger zone would increase the risk involved and the temptation for the aggressor to attack. It was stated that United States forces in Europe were by far the strongest deterrent on the ground to an assault by Russia and that a withdrawal of all or part of the United States divisions could tempt her into military ventures that would not be considered if United States forces were present.

On the other hand there are those that felt Europeans should quit applying the "double standard" when discussing the common defense--that of expecting the United States to meet its NATO commitments as a matter of course, while never coming near to fulfilling their own obligations in the alliance. In this connection, General Eisenhower said:

When I went back to Europe in 1951 to command the forces of NATO, the United States agreed to supply the equivalent of six infantry divisions which were to be regarded as an emergency reinforcement of Europe while our hard-hit Allies were rebuilding their economies and capabilities for supporting defense. Now twelve years later, those forces, somewhat reinforced, are still there. . . . I believe the time has now come when we should start withdrawing some of these troops. Although we have invested billions of dollars in air and naval bases and have built up a supply system all over Europe . . . all this does not seem to have the same effect of "showing the flag" as far as Europeans are concerned, as the presence of U. S. ground troops. . . . One American division in Europe can "show the Flag" as

The first part of the report is devoted to a description of the work done during the year. definitely as can several.²⁶

The outright withdrawal of one or more of the United States Army divisions from Western Europe did not result in a substantial reduction in the net deficit in the United States balance of payments. The divisions were located almost entirely within the Federal Republic of Germany, the one NATO country most concerned in a unified common defense afforded by a strong NATO. To help reduce the deficit in the United States balance of payments attributed to military expenditures in Germany, an "offset" agreement was executed by the Federal Republic of Germany with the United States. Under this agreement, the United States provided a cooperative logistic system for the Armed Forces of both countries and the Federal Republic of Germany increased the level of military procurements in the United States and utilized United States supply lines, depots and maintenance and support facilities in amounts which "offset" the foreign exchange costs of maintaining United States forces in Germany. Therefore, a reduction of military expenditures in Germany resulting from the reduction of the number of divisions located in Germany would also result in a corresponding reduction in the amount of the "offset" agreement.

The policy of prepositioning of equipment and supplies and the use of airlift to transport troops to critical areas are considered by the Department of Defense

²⁶Dwight D. Eisenhower, "Lets be Honest With Ourselves II," Saturday Evening Post, October 26, 1963, p. 27.

as tools for use primarily in meeting emergencies created by limited war situations.²⁷ This factor, coupled with the favorable "offset" agreement with the Federal Republic of Germany, did not support the opinion that "Big Lift" was intended to precede the withdrawal of one or more of the Army divisions from Germany. This question was resolved when the Secretary of State, in a speech at Frankfurt, Germany on October 26, 1963 declared: "We have six divisions in Germany. We intend to maintain these divisions here as long as there is need for them-- and under present circumstances there is no doubt that they will continue to be needed. . . ." ²⁸ Further, at a press conference in Washington, D. C. on October 31, 1963, President Kennedy reaffirmed that the United States had no intention of reducing Army strength in Europe under present conditions.²⁹

On January 14, 1964, the Department of Defense announced plans to "again demonstrate its ability to deploy combat troops quickly" with the movement of an Army brigade by air from Hawaii to Okinawa. This Pacific exercise will involve the matching of troops with heavy

equipment and supplies prepositioned aboard converted Victory ships now moored in Subic Bay in the Philippine Islands.³⁰

Rotation of United States
Military Personnel

The effective demonstration of military airlift capabilities by "Big Lift" pointed the way towards another possibility for reducing expenditures overseas in both the "individual expenditure" and military expenditure sectors of the United States balance of payments. This plan involved the rotation of entire military units between the United States and overseas locations. Under this concept, the personnel of fully operational and combat-ready forces, deployed in any part of the world, would be rotated with personnel of similar forces located within the United States. By reducing the tours of servicemen involved in such swaps to periods of three, six or twelve month periods the rotations would be accomplished without dependents. Reducing dependents overseas would make possible substantial reductions in support personnel and facilities as well as reducing the percentage of the servicemen's pay and allowances presently available for spending on the local overseas economies. Support of this plan was received from many quarters. Former President Eisenhower stated:

It would be helpful, at this time, to put all of our troops abroad on a "hardship basis"--that is, send them on shortened tours of foreign duty and without their families as we do in Korea. Unless we

SECTION 2
GENERAL PROVISIONS

The following provisions of this act shall
be effective upon the date of its passage
and shall apply to all persons and
organizations and all other persons
of the United States who are or
shall become citizens of the United States.
The United States is hereby authorized
to acquire by purchase or otherwise
any interest in any property in
the United States for the purpose of
establishing a system of
national industrial control and
development as well as to acquire
any and all other property
interest in the local business
concerns of the United States.

It shall be the duty of the
United States to acquire any
interest in any property in
the United States for the purpose
of establishing a system of
national industrial control and
development as well as to acquire
any and all other property
interest in the local business
concerns of the United States.

take definite action, the maintenance of permanent troop establishments abroad will continue to overburden our balance of payments problem. . . .³¹

Others pointed out that the United States Marine Corps had been rotating units between the United States and overseas areas for several years and that, if it works for one of the Services, it would work for the others also. Still others stated that the rotation plan would overcome three of the major criticisms directed at "Big Lift":

1) By maintaining combat-ready troops and equipment in position at all times, the defensive capabilities in the immediate danger zone would not be weakened.

2) Even if, during a rotation airlift, the aggressor struck and destroyed the air bases in the forward area, the incoming personnel could be landed in rear areas and transported by other means to areas of prepositioned equipment and supplies and then used as reinforcements.

3) The equipment and supplies, depended upon to repel the initial strikes of the aggressor, would always be in the hands of troops who would keep it positioned and in constant readiness for such attacks.

On the other hand there are those that contended that the rotation plan was nothing more than a new means for restoring the restrictions of the Presidential Directive of November 17, 1960. They felt that the good and valid reasons, which were the basis for rescinding

the Presidential Directive, were still valid and present. In addition to the hardships created by "separations" from families, they contended that the rotation plan would impose additional financial burdens upon the military families or substantially increase the budgetary cost of the Department of Defense. Questions asked or problems posed most frequently in connection with the rotation plan were: (1) Where will the dependents stay while the fathers and husbands are overseas? (2) Will they be required to vacate the government quarters at the United States installation while the military member is overseas? (3) If they are not required to vacate government quarters, where will the military personnel returning from overseas house their dependents? Most installations within the United States do not have sufficient government quarters to house the military families of the normal assignments to the installation. To double the number of families at an installation would only result in greatly inflated rental and leasing costs of housing in the local community which, in turn, would place an impossible burden upon all military members seeking shelter off the military installation. To resolve the housing problem it would be necessary to construct additional housing at the installation which would be operating under the rotational plans; or, additional military installations would have to be activated (or existing installations, which otherwise would be surplus to the military needs, would have to be retained) solely to accommodate the rotation plan.

The United States Marine Corps rotation program involves the placement of military personnel on temporary duty status while overseas thereby maintaining the

permanent residence of the military dependents at the United States installation. Also, only a portion of the operational forces generally located at a United States Marine Corps installation are involved in the rotation at any one time. It is questionable if similar rotation plans involving entire United States Army divisions or Navy personnel would be feasible or possible.

.....

.....

equipment provided on the military grounds at the
 United States Government. This, only a portion of the
 mechanical force usually located at a military camp.
 Having large installations are limited in the relation
 of any one class. In the questionnaire it should be
 given involving water, road, and other equipment as
 they personnel would be located on the ground.

CHAPTER V

ACCOUNTING OF DEPARTMENT OF DEFENSE ACTIONS TO IMPROVE THE UNITED STATES BALANCE OF PAYMENTS

Numerous questions were raised concerning the accounting methods and reporting procedures for Department of Defense transactions entering the United States balance of payments. It has been alleged that reporting and accounting of cash transactions abroad, did not reflect the net adverse dollar outflow generated by Department of Defense activities in carrying out its overseas commitments. Typical examples cited of erroneous reporting and accounting fall into the following categories:

- 1) Department of Defense Contracts with Foreign Contractors: The Department of Defense activities execute many thousands of contracts with foreign contractors every year. These contracts are for requirements which have been determined, under provisions of the Department of Defense balance of payments directives, to be of a type or category requiring performance of work under the contract to be accomplished in the overseas area. Although the basic contract is always with a foreign contractor, in the performance of the work it is often necessary for this foreign contractor to subcontract a large portion of the total contract cost for supplies, material and services of United States origin. Yet, in compiling the balance

CHAPTER 7

ACCOUNTING OF DEPARTMENT OF DEFENSE
ACTION TO IMPROVE THE DEFENSE SYSTEM
STATUS OF REPORTS

Summary mention was made concerning the
accounting records and reports prepared for the
Department of Defense regarding the status of
action of reports. It has been found that
and accounting of such transactions should be
within the next several days and the
Department of Defense advised in writing that
various committees. Typical examples cited in
the report and accounting for the following

committee:

- 1) Department of Defense Research and
Development: The Department of Defense
very complex of contracts with various
firms. These contracts are the responsibility
and determined under provisions of the
Defense Reliance of systems, etc. It is
in many ways requiring performance of work
to be completed in the defense area. Almost
every contract is signed with a specific
performance of the work it is also
through contract to summarize a form
local contract for reports, reports, etc.
of other types data. It is essential

of payments statistics, the total contract amount of the basic contract with the foreign contractor is recorded and reported as a "United States Government Payment" abroad. Whereas, the shipment of United States origin supplies, equipment and services required for performance under the basic contract are recorded and reported as "Export of goods and Services" usually with little or no identification that these exports were generated by a Department of Defense contract with a foreign contractor.

2) Department of Defense Procurements accomplished through Barter Transactions: One of the provisions of the Agriculture Trade Development and Assistance Act, Public Law 480, 83rd Congress, provides for the disposal of surplus United States Agriculture commodities by barter. Up to 1961, agricultural commodities disposed of through barter were exchanged primarily for foreign-produced strategic and critical materials, the bulk of which was transferred to supplemental and national stockpiles and counted towards achievement of the National Stockpile Objectives. With the sharp curtailment of stockpile of strategic and critical material in 1960 and 1961, efforts were made to expand the use of barter to satisfy other United States government requirements. At the direction of the President of the United States, an Executive Stockpile Committee was established to study the problems of the barter program. Several of the recommendations made in the "Report on the Barter Program" submitted to the President by the Stockpile Committee and approved on September 20, 1962 by the President, were of special concern and interest of the Department of Defense. These recommendations provided that:

The Government of India has decided to set up a
 Special Committee to study the various aspects of the
 health services in the State. The Committee is headed
 by the Minister for Health and Family Welfare and
 its members will be selected from the various
 departments of the Government. The Committee will
 submit its report to the Government within a period
 of three months. The Government will take
 necessary steps to improve the health services
 in the State.

 in the State.

Greater emphasis than in the past should be given to the use of barter transactions for the procurement of non-strategic material items (including but not limited to offshore procurement). . . . The Department of Defense . . . should cooperate with the Department of Agriculture by effecting offshore procurement, using qualified barter arrangements to the greatest practicable extent when dollars would otherwise be spent abroad for the items being procured. . . . Offshore military procurement by barter should not be effected in West Germany or any other country in which the United States has arrangements for payments to offset United States military expenditures in that country, except with the concurrence of the Secretary of the Treasury. . . . In addition to the foregoing, the Department of Defense . . . should continue to cooperate with the Department of Agriculture to convert to barter arrangements dollar contracts for foreign-produced items.

Department of Defense barter procedures and instructions were issued in February 1963. From March thru December 1963, Department of Defense activities overseas accomplished barter procurements which totalled approximately fifty million dollars. Even though the barter transaction does not result in any dollar outflow from the United States (only surplus agriculture commodities are shipped from the United States, with the Department of Defense contractor paid from the proceeds of the sale of these commodities in foreign countries) the Department of Defense contract is recorded as a "United States Government Payment" abroad. In turn, the shipments of agriculture commodities under the barter transaction are reflected in the balance of payments as "Exports of goods and Services" usually with little or no reference that such exports were generated by a Department of Defense procurement abroad.

Although the reporting and recording of transactions, as outlined above, balance out in the overall

United States balance of payments statistics, to the uninformed it appears that the Department of Defense is the major and primary contributor in the growing amount of outstanding dollars and dollar claims held by foreign financial institutions and foreign individuals.

In order to clearly define and identify the net adverse effect of Department of Defense expenditures in support of overseas military operations, the Department of Defense, issued Directive No. 7360.7, dated July 1, 1963, which identified, among other things, those transactions which did not result in an adverse dollar outflow to foreign governments, individuals and institutions.

The purpose of this directive was to provide a list of transactions which would be considered as not resulting in an adverse dollar outflow to foreign governments, individuals and institutions. The list was developed as a result of a study of the Department of Defense's balance of payments transactions. The study was conducted by the Department of Defense's Office of Economic and Financial Affairs. The list was developed as a result of a study of the Department of Defense's balance of payments transactions. The study was conducted by the Department of Defense's Office of Economic and Financial Affairs. The list was developed as a result of a study of the Department of Defense's balance of payments transactions. The study was conducted by the Department of Defense's Office of Economic and Financial Affairs.

The list was developed as a result of a study of the Department of Defense's balance of payments transactions. The study was conducted by the Department of Defense's Office of Economic and Financial Affairs. The list was developed as a result of a study of the Department of Defense's balance of payments transactions. The study was conducted by the Department of Defense's Office of Economic and Financial Affairs.

United States balance of payments situation, as the
 estimated it appears that the Department of Defense is
 the major and primary contributor to the growing excess
 of international dollars and dollar claims held by foreign
 financial institutions and foreign countries.

To refer to directly dollar and liability has the
 system of the Department of Defense expenditures is
 support of overseas military operations, the Department
 of Defense, issued Directive No. 7380.7, dated July 1, 1961,
 which identifies, among other things, those transactions
 which are not valid in an overseas dollar market as
 foreign government, individuals and institutions.

CHAPTER VI

CONCLUSIONS AND OBSERVATIONS

The Department of Defense initiated and implemented vigorous and aggressive actions to reduce the net adverse effect military expenditures abroad had upon the United States balance of payments during the period covered by this paper.

The program to restrict procurement of foreign manufactured or produced products resulted in sizable reductions in the "military expenditure abroad" sector of the United States balance of payments. However, such reductions were accomplished at an increased cost to the Department of Defense budget of approximately 28 per cent above the costs which would have been incurred if foreign products had been purchased. Additional reductions of approximately seventy million dollars could have been realized in this area by increasing the price differential allowed in the procurement of commodities or services of United States origin; however, such additional reductions would increase Department of Defense costs by at least 50 per cent for each additional dollar's worth of requirements returned to the United States for purchase.

Additional savings in expenditures for new facilities and/or repair of existing facilities could be accomplished only by a substantial reduction in the number of military units, personnel, and dependents assigned to overseas areas.

CHAPTER VI

RESEARCH AND DEVELOPMENT

The Department of Defense has long been recognized as a major force in the development of advanced scientific and technological knowledge. This program is a major part of the Department's effort to maintain its leadership in the field of research and development. The program is designed to support the development of new technologies and to provide the Department with the information it needs to make decisions about the future of the Department's research and development efforts. The program is organized into several major areas: basic research, applied research, and development. Basic research is the foundation of all scientific and technological progress. It is the search for new knowledge about the natural world. Applied research is the search for new ways to use existing knowledge. Development is the process of bringing new technologies to the marketplace. The Department's research and development program is designed to support all three of these areas. It is a major part of the Department's effort to maintain its leadership in the field of research and development.

The negotiations and expansion of "Offset Agreements" with foreign governments for joint use of facilities and for the purchase of United States manufactured military products, to compensate for the costs of maintaining United States military units in overseas areas, represented during the time frame under examination, the most significant method for effecting further reductions in the balance of payments deficits attributed to United States overseas military commitments.

Voluntary programs for the reduction of personal expenditures in foreign countries by Department of Defense personnel and their dependents were of questionable value.

Mass rotation of combat units between the United States and overseas locations would require a sizable increase in the overall Department of Defense appropriations. The rotation of small units, without dependents would have contributed considerably in the reduction of personal expenditures.

Past identification and reporting procedures of transactions entering the United States balance of payments reflected a distorted picture of the net adverse effect military expenditures abroad were having on the overall balance of payments.

However, after some reflection, it is the considered opinion of this author that further research and study of this very complex problem be conducted. A possible point of interest for some future scholar would be a consideration of the advisability and ramifications involved in checking the U. S. balance of payments deficits through direct foreign support of U. S. Forces. This would, of course, involve quantifying the costs and benefits

The realization and execution of these plans under the foreign governments the past use of military and the presence of United States military military products, to compensate for the loss of military United States military units is necessary to be reorganized during the time these units are available. The first step must be taken for effecting these changes in the balance of payments details relative to United States military military operations.

Voluntary programs for the reduction of personal expenditures in foreign countries by persons in foreign countries and their equipment was of considerable value. This reduction of costs will reduce the United States and overseas business would receive a benefit. Interest in the overall Department of Defense operations. The location of such units, without immediate need for continued development in the production of weapons.

These facilities and reporting procedures will transactions involving the United States balance of payments program. A detailed picture of the balance sheet military operations should be taken in the overall balance of payments.

However, after some reflection, it is the conclusion of this author that further expansion and development of this program is desirable. It is felt that the program for the United States should be a constant plan of the availability and utilization involved in meeting the U. S. balance of payments balance through direct foreign reports of U. S. income. This will in course, involve quarterly reports for each and every

associated with the "U. S. Defense Umbrella" that protects much of the free world. Is it too much to ask for an equitable contribution from ones Allies toward the maintenance of his security? Furthermore, is the U. S. balance of payments position best served by requiring a "buy American policy" in the distribution of largesse through offset agreements? Is it possible that U. S. policy, and therefore its balance of payments position, might be best served by removing all restrictions concerning the market place in which U. S. foreign aid is spent, but at the same time, insist that recipient countries contribute to their national security on an equitable basis consistent with the ability of each to contribute? The significance of the answers to the questions posed are obvious and adoption of them could generate sufficient cash flows into the U. S. Treasury to return and maintain a favorable balance in gold payments. The advisability of pursuing this course of action and an in depth analysis of the ramifications involved are subjects certainly worthy of further investigation.
