GRAPHOTYPE, a new process for obtaining blocks for surface-printing, the invention of Mr. De Witt Clinton Hitchcock in 1860. It was described by Mr. Fitz-Cook at the Society of Arts, 6 Dec. 1865. Drawings were made on blocks of chalk with a silicious ink; when dried, the soft parts were brushed away, and the drawing remained in relief; stereotypes were then taken from the block. Now superseded by the zinc-type and other processes.

GRATTAN'S PARLIAMENT, a name popularly given to the Irish parliament, after it had been declared independent, mainly by the exertions of Henry Grattan, by an act passed in England, May, 1782. It came to an end by the passing of the Act of Union, 2 July, 1800. In 1806, Grattan said of his parliament "I have a parental recollection. I sat by her cradle; I followed her hearse." Grattan strongly urged the passing of an act for Catholic emancipation till his death 4 June, 1820.

GRAVITATION, as a supposed innate power, was noticed by the Greeks, and also by Seneca, who speaks of the moon attracting the waters, about 38. Kepler investigated the subject about 1615, and Hooke devised a system of gravitation about 1674. The principles of gravity were demonstrated by Galileo at Florence, about 1633; but the great law on this subject, laid down by Newton in his "Principia," in 1687, is said to have been proved by him in 1670. The fall of an apple from a tree in 1666 is said to have directed his attention to the subject.

Newton says, "I do not anywhere take on me to define the kind or manner of any action, the causes or physical reasons thereof, or attribute forces in a true and physical sense to certain centres, when I speak of them as attracting, or ended with attractive powers." On 15 July, 1867, M. Chasles laid before the Paris Academy of Sciences some letters alleged to be from Newton to Pascal and others tending to show that to Pascal was due the theory of gravitation. The authenticity of these letters was authoritatively denied, and their forgery and his own delusion were acknowledged by M. Chasles before the academy 13 Sept. 1869.

GREECE, anciently termed *Hellas*. The name of *Græcia* first occurs in the writings of Aristotle (B.C. 384-322). Greece was so called from an ancient king, *Græcus*, and *Hellas* from another king, *Hellen*, the son of *Deucalion*. From *Hellen's* sons, *Dorus* and *Æolus*, came the *Dorians* and *Æolians*; another son *Xuthus* was father of *Achæus* and *Ion*, the progenitors of the *Achæans* and *Ionians*. *Homer* calls the inhabitants indifferently *Myrmidons*, *Hellenes*, and *Achæans*. They were also termed *Danaï*, from *Danaus*, king of *Argos*, 1474 B.C. Greece anciently consisted of the peninsula of the *Peloponnesus*, Greece outside of the *Peloponnesus*, *Thessaly*, and the islands. The principal states of Greece were *Athens*, *Sparta*, *Corinth*, *Thebes*, *Arcadia*, and afterwards *Macedon* (*all which see*). The limits of Modern Greece are much more confined. Greece became subject to the Turkish empire in the 15th century. The population of the kingdom, established in 1829, 96,810; in 1861, 1,096,810, with the *Ionian isles* (added in 1864), about 1,348,522 in 1870, 1,457,894; in 1879, 1,979,147; in 1889, 2,187,208; 1896 2,433,806. The early history is mythic, and the dates *purely conjectural*.

GRESHAM COLLEGE (London), established by sir Thomas Gresham in 1575, founder of the Royal Exchange. He left a portion of his property in trust to the city and the Mercers' company to endow this college for lectures in divinity, astronomy, music, geometry, civil law, physic, and rhetoric; he died 21 Nov. 1579. The lectures commenced in Gresham's house, near Broad-street, June, 1597 (where the founders of the Royal Society first met in 1645). The buildings were pulled down in 1768, and the Excise office erected on its site, the property having been acquired by the crown for an annuity of 500*l.* The lectures were then read in a room over the Royal Exchange for many years. On the rebuilding of the exchange, the Gresham committee erected the present building in Basinghall-street, which was designed by G. Smith, and opened for lectures, 2 Nov. 1843. It cost above 7000*l.* In 1871 the college acquired a valuable collection of books and pictures, bequeathed by Mrs. HOLLIER. Changes respecting the lectures were advocated in 1875, and some made in 1876.

GRETNA GREEN (Dumfries, S. Scotland, near the border). Here runaway marriages were contracted for many years, as Scotch law ruled that an acknowledgment before witnesses made a legal marriage. His first residence was at Megg's hill, on the common or green betwixt Gretna and Springfield, to the last of which villages he removed in 1782. A man named Elliot was afterwards the principal officiating person. The general assembly, in 1826, in vain attempted to suppress this system; but an act of parliament, passed in 1856, made these marriages illegal after that year, unless one of the persons married had lived in Scotland 21 days.

GUELPHS AND GIBELINES, names given to the papal and imperial factions who destroyed the peace of Italy from the 12th to the end of the 15th century (the invasion of Charles VIII. of France in 1495). The origin of the names is ascribed to the contest for the imperial crown between Conrad of Hohenstaufen, duke of Swabia, lord of Wiblingen (hence *Ghibelin*), and Henry, nephew of Welf, or Guelph, duke of Bavaria, in 1138. The former was successful; but the popes and several Italian cities took the side of his rival. *Hie Guelph* and *Hie Ghibelin* are said to have been used as war-cries in 1140, at a battle before Weinsberg, in Würtemberg, when Guelph of Bavaria was defeated by the emperor Conrad IV., who came to help the rival duke Leopold.* The Ghibelines were almost totally expelled from Italy in 1267, when Conradin, the last of the Hohenstaufens, was beheaded by Charles of Anjou. Guelph (of uncertain origin) is the popular name of the present royal family of England; see *Brunswick*.

GUIDE-BOOKS for travellers are an English invention. Paterson's "British Itinerary," appeared in 1776; the last edition in 1840; when it was superseded by railway guides. Galigni's "Picture of Paris," 1814. Murray's "Handbook for Travellers on the Continent," the parent of the series, appeared in 1836. The publication of Carl and Fritz Baedeker's foreign guide-books began in 1828 with a handbook for the Rhine in German-French. This was followed by German handbooks for other parts of the continent, which owed much to Murray's handbooks, and included much original matter. The first English editions appeared in 1860. New editions of the illustrated guide-books, price 1*s.* each, published by Messrs. Ward, Lock, and Co., were issued 1894 *et seq.* See *Murray*.

GUIDES, a corps in the French army, especially charged with the protection of the person of the general, was formed by Bessières, under the direction of Bonaparte, who had been nearly carried off by the enemy, 30 May, 1796. GUIENNE, a French province, was part of the dominions of Henry II. in right of his wife Eleanor, 1152. Philip of France seized it in 1293, which led to war. It was alternately held by England and France till 1453, when John Talbot, earl of Shrewsbury, in vain attempted to retake it from the latter.

GUILDHALL (London) was built in 1411. When it was rebuilt (in 1669), after the great fire of 1666, no part of the ancient building remained, except the interior of the porch and the walls of the hall. The front was erected in 1789; and a new roof built, 1864-5. Beneath the west window are the colossal figures of Cog and Magog, said to represent a Saxon and an ancient Briton; replaced older ones, 1708; renewed, 1837. The hall can contain 7000 persons. Here were entertained the allied sovereigns in 1814, and Napoleon III., 19 April, 1855; and here the city industrial exhibition was held, 6 March, 1866, and the International Botanical banquet, 22 May, 1866. A memorial window, the gift of the cotton workers of Lancashire, to commemorate the munificence of the metropolis towards them in the famine of 1862-4, was uncovered, 15 July, 1868. The prince consort memorial window was unveiled in the presence of prince Arthur, 3 Nov. 1870. A library existed in the Guildhall in 1426, from which books were taken by the protector Somerset in the reign of Edward VI. A new library was founded, 2 June, 1824. GUILLOTINE, an instrument for causing immediate and painless death, named after its supposed inventor, a physician named Joseph Ignatius Guillotin. In 1866 M. Dubois, of Amiens, stated that the idea only was due to Guillotin, who at a meeting of the legislative assembly in 1789 expressed an opinion that capital punishment should be the same for all classes. Accordingly, at the request of the assembly, M. Louis, secretary of the "Académie de Chirurgie," submitted to it on 20 March, 1792, a mode of capital punishment, "sure, quick, and uniform," which he had invented. The first person executed by it was a highway robber named Pelletier, on 25 April; and Danguemont was its first political victim, 21 Aug. following. Guillotin died in 1814. The guillotine at Paris was burnt by the communist insurgents, 7 April, 1871. A similar instrument (called the *Mannaia*) is said to have been used in Italy, at Halifax in England (see *Halifax*), and in Scotland, there called the *Maiden* and the *Widow*. See *Gogging*.

GUN, see *Artillery, Cannon, Fire-arms*.—**GUN-CLUB**, for pigeon-shooting, founded by sir Gilbert East, in 1862, had 200 members, noblemen and gentlemen, in July, 1867.

GUN-COTTON, a highly explosive substance, invented by professor Schönbein, of Basel, and made known in 1846. It is purified cotton, steeped in a mixture of equal parts of nitric acid and sulphuric acid, and afterwards dried, retaining the appearance of cotton wool. See *Collodion*. Its nature was known to Braconnot and Pelouze.

The diet of Frankfort voted, 3 Oct. 1846, a recompense of 100,000 florins to professor Schönbein and Dr. Böttger, as the inventors of the cotton powder, provided the authorities of Mayence, after seeing it tried, pronounced it superior to gunpowder as an explosive.

Improvements were made in the manufacture of gun-cotton by an Austrian officer, Baron von Lenk, about 1852, and it was tried by a part of the Austrian army in 1855, but did not obtain favour.

In 1862 details of the manufacture were communicated by the Austrian government to our own government, and Mr. (late sir Frederick) Abel, our war-office chemist, was directed to experiment on the constitution and desirability of gun-cotton. The British Association also appointed a scientific committee to consider its merits. A complete decision was not arrived at.

The first trial of English-made gun-cotton was made in the spring of 1864, at the manufactory at Stowmarket, Suffolk, by Messrs. Prentice.

There was manufactured, by a company, the "patent safety gun-cotton," according to Mr. Abel's patent (including the pulping, compressing, and wet processes), based on researches commenced in 1866. The cotton was said to be explosive by detonation, and not by ignition. A great explosion took place at Stowmarket

- 24 persons were killed (including A. E. H. and W. R. Prentice, managers); about 60 were dreadfully wounded, and nearly the whole town was destroyed as if by a bombardment, 11 Aug. 1871.
- The verdict at the inquest attributed the explosion to the culpable "addition of sulphuric acid to the gun-cotton subsequent to its passing the tests required by government," 6 Sept. 1871.
- A government commission, appointed in Sept. to consider the manufacture and use of gun-cotton, reported in favour of both, with special regard to compressed gun-cotton, 13 Dec. 1871.
- Another report recommended this gun-cotton to be stored wet, with drying apparatus near; and to be kept in slighter boxes, 25 July, 1872.
- Mr. E. O. Brown, of the war department, Woolwich, discovers that wet gun-cotton can be exploded by concussion by a detonating fuse, about Nov. 1872.
- It is used as an explosive agent in mining, &c.
- GUN-CLOTH, made on a similar principle, was patented by Mr. W. A. Dixon, about 1866.
- COTTON-GUNPOWDER, patented by Mr. R. Punshon, 1871. A modified form was tried and reported successful, near Faversham, 3 Feb. 1875. See *Ivory*.
- Fire at the Colton powder works near Faversham; estimated damage, 600*l.* 1 March, 1866.
- GUNDAMUK**, see *Gandamuk*.
- GUN LICENCE ACT**, passed 9 Aug. 1870; annual licence, 10*s.* Licences issued: year 1876-7, 77,068; 1877-8, 75,571; 1880-1, 72,834; 1901-2, 76,807. See under *Game Laws*, 1883.
- GUNPOWDER**. The invention of gunpowder is generally ascribed to Bertholdus or Michael Schwartz, a Cordelier monk of Goslar, south of Brunswick, in Germany, about 1320. But many writers maintain that it was known much earlier in various parts of the world. Some say that the Chinese and Hindus possessed it centuries before. Its composition, moreover, is expressly mentioned by Roger Bacon, in his treatise *De Nullitate Magic*. He died in 1292 or 1294. Various substitutes for gunpowder have been recently invented, such as the white gunpowder of Mr. Horsley and Dr. Ehrhardt, and gun-paper by Mr. Hoehstöden. A new gunpowder by M. Newmayer, of Toya, near Leipsic, was discussed in Nov. 1866. "Pellet gunpowder" was ordered to be used in gun-charges in the army, March, 1868. An act to amend the law concerning the making, keeping, and carriage of gunpowder, &c. was passed 28 Aug. 1860, and other acts since. See *Birmingham*, 1870. In May, 1872, a company was formed to manufacture Mr. R. Punshon's patent cotton-gunpowder, asserted to be very safe and controllable. The manufacture of the German "brown" or "cocca" powder was set up at Chilworth in Surrey, 1886. See *Chronoscope*.
- The use of gunpowder was denounced by Ariosto, 1516; by Jean Marot, 1532; by Cervantes, 1604; termed "villanous salt-petre" by Shakspeare, about 1598.
- ENGLISH WAR GUNPOWDER**: 75 parts nitrate of potash (salt-petre); 10 sulphur; 15 carbon. These proportions may be slightly varied.
- W. Hunter, after a careful examination of the question, in 1847, thus states the result:—"July and August, 1346, may be safely assumed to be the time when the explosive force of gunpowder was first brought to bear on the military operations of the English nation."
- Above 11 tons of gunpowder on board the *Lottie Sleigh*, in the Mersey, exploded; much damage done in Liverpool and Birkenhead, but no lives lost, 16 Jan. 1864.
- About 104,000 lbs. of gunpowder exploded at the Belvedere powder magazines of Messrs. Hall & Co., at Plumstead, near Woolwich; 13 persons perished, and the shock was felt at 50 miles' distance, 1 Oct. 1864. Searching inquiries were made into the circumstances, and new regulations for the keeping and transmission of powder issued in November; see *Dartford*.
- Mr. Gale, a blind gentleman of Plymouth, on 22 June, 1865, patented his method of rendering *gunpowder unflammable* by combining with it finely powdered glass, which can be readily separated by a sieve when the powder is required for use. Successful public experiments were made.
- Mr. Gale exhibited his process before the queen at Windsor, 10 Nov. 1865, and it was severely tested at a martello tower, near Hastings, 20 June, 1866. The attainment of perfect security was still doubtful. Gale's Protected Gunpowder company was formed, Oct. 1865, and wound up, March, 1867.
- Great explosion at Messrs. Hall's powder-mills, near Faversham; 11 men killed, much damage done; shock felt at Canterbury, 10 miles off, 28 Dec. 1867. Another explosion about 21 Dec. 1868.
- Dixon & Beck's works blown up; 9 lives lost, 25 July, 1868.
- Explosion at Hounslow mills, 3 lives lost, 6 Sept. 1872; again one life lost and great destruction of property, 3 May, 1887.
- Milner's powder-magazines placed in fire at Woolwich arsenal and found secure, 8, 9 Oct. 1872.
- About 5 tons of gunpowder in barrels exploded in the barge *Tilbury*, on the Regent's canal, near the North Bridge-gate, Regent's-park, nearly 5 A.M. 2 Oct. 1874. Three men on the barge killed; shock felt about 30 miles off; destruction extended over about a square mile; some houses thrown down; very many windows blown in; the house of Mr. Alma-Tadema, the artist, much injured.
- The powder was sent by Pigou and Wilks to Derbyshire for blasting purposes;—order of the barges: *Ready*, tug steamer; *June*, *Dec*, *Tilbury*, *Limehouse*, and *Hawkesbury*. 6333*l.* had been subscribed for the sufferers up to 1 May, 1875.
- Verdict of Inquest*—Explosion caused by ignition of vapour from benzoline by a fire or light in the cabin of the *Tilbury*. The Junction Canal company guilty of gross negligence, and the present laws inadequate for public safety, 19 Oct. 1874.
- The company declared responsible on trial (by Capt. Jackson), 14 May, 1875.
- One thousand and fifty-four claims had been settled for 63,660*l.* June, 1876.
- Recently smokeless gunpowder has been produced; the Dutenhofer, the Stein, the Pallina, the Schultz and Hengst, Chilworth and Lebel powders give very little smoke, 1888-9.
- The smokeless gunpowder of Herr Falkenstein tried at Berlin, reported efficient, Aug. 1889.
- Sir F. A. Abel, in a discourse at the Royal Institution, 31 Jan. 1890 (*Proceedings*, vol. XIII.), explained and illustrated the merits and demerits of "smokeless explosives." Smokeless gunpowder much used in the autumn manoeuvres, 1890.
- See *Rome*, 23 April, 1891.
- M. St. Marc's smokeless gunpowder tried at the Armstrong artillery range, Silloth, Cumberland; reported successful, about 14 Dec. 1892.
- Explosion at Waltham abbey; 9 men killed and others injured, 13 Dec. 1893; inquest, open verdict, 11 Jan. 1894; a committee of inquiry censured some of the arrangements, and recommended additional precautions, 25 April; further changes recommended by a committee, reported 10 Sept. 1894; 4 men killed by an explosion in the nitro-glycerine factory for cordite, 7 May, 1894; 3 men killed there, and 2 killed in the cordite factory at Cliffe, Kent, 15 Dec. 1902.
- Gunpowder exported: 1876, 14,268,672 lbs.; 1880, 14,927,500 lbs.; 1890, 10,330,400 lbs.; 1896, 8,089,000 lbs.; 1900, 7,047,200 lbs.; 1901, 6,865,712 lbs.
- GUNPOWDER PLOT**, for springing a mine under the houses of parliament, and destroying the king, lords, and commons there assembled, was discovered on 4 Nov. 1605. It was projected by Robert Catesby early in 1604, and several Roman catholics of rank were in the plot. Guy Faux was detected in the vaults under the house of lords, hired for the purpose, preparing the train for being fired on the next day. Catesby

and Percy (of the family of Northumberland) were killed at Holbeach house, whither they had fled, 8 Nov.; and Guy Faux, sir Everard Digby, Rookwood, Winter, and others, were executed, 30, 31 Jan. 1606. Henry Garnet, a Jesuit, suffered as an accomplice, 3 May following. An anonymous letter sent to lord Montague led to the discovery. It contained the following words, "Though there be no appearance of any stir, yet I say they shall receive a terrible blow this parliament, and yet they shall not see who hurts them." The vault called Guy Faux cellar, in which the conspirators lodged the barrels of gunpowder, remained till 1825, when it was converted into offices. "What Gunpowder plot really was," an answer to Father Gerard (who expressed his belief that the story of the plot was fabricated by lord Salisbury, the minister of James I., for his own purposes), by prof. S. K. Gardiner, published, July, 1807.

GYMNASIUM, a place where the Greeks performed public exercises, and where philosopher poets, and rhetoricians repeated their composition. In wrestling and boxing the athletes were often naked (*gymnos*), whence the name. A London gymnastic society, formed in 1826, did not flourish. In 1862, M. Ravenstein set up another gymnastic association. The German Gymnastic Institution in St. Pancras-road, London, was opened on 29 Jan. 1865, and a large and perfect gymnasium at Livepool was inaugurated by lord Stanley, 6 Nov. 1866. A London athletic club existed in Nov. 1866. Since then gymnastics have been much cultivated. An international athletic congress opened in Paris 16 June, 1894.

GYMNOSOPHISTÆ, a set of naked philosophers in India. Alexander (about 324 B.C.) was astonished at the sight of men who seemed to despise bodily pain, and endured tortures without a groan. *Pliny*.

GYPSIES, GIPSIES, or EGYPTIANS (French, *Bohémiens*; Italian, *Zingari*; Spanish, *Gitanos*; German, *Zigeuner*); vagrants, supposed to be descendants of low-caste Hindoos expelled by Timour, about 1399. They appeared in Germany and Italy early in the 15th century, and at Paris, 1427. In England an act was made against their itinerancy, in 1530; and in the reign of Charles the thirteenth persons were executed at one assize for having associated with gypsies for about a month. The gypsy settlement at Norwood was broken up and they were treated as vagrants, May, 1790. There were in Spain alone, previously to 1860 more than 120,000 gypsies, and many communities of them yet exist in England. Notwithstanding their intercourse with other nations, their manners, customs, visage, and appearance are almost wholly unchanged, and their pretended knowledge of futurity gives them power over the superstitions. Esther Faa was crowned queen of the gypsies, Blyth, on 18 Nov. 1860. The Bible has been translated into gypsy dialects. Gypsy parliaments are occasionally held. George Smith, king of the gypsies, Falcoln hall, Edinburgh, protested against the Movable Dwellings bill, 10 Jan. 1891. The Gypsy Lore society, founded in 1888, had 70 members in 1891, and published a journal.

GEORGE BORROW fraternised with the gypsies, and wrote several works describing his adventures, especially "The Zinculi" (1841); "The Bible in Spain" (1844); "Lavengro" (1850); and a "Dictionary of the Gypsy Language" (1874). He was born in 1803, and died Aug. 1881.

GYROSCOPE (from *gyrere*, to revolve), the name of a rotatory apparatus invented by Fessel of

Cologne (1852), and improved by professor Wheatstone and M. Foucault of Paris. It is similar in principle to the rotatory apparatus of Bohnenberger of Tübingen (born 1765, died 1831).—The gyroscope, by exhibiting the combined effects of the centrifugal and centripetal forces, and of the cessation of either, illustrates the great law of gravitation.

HABEAS CORPUS. The subjects' *Writ of Right*, passed "for the better securing the liberty of the subject," 31 Charles II. c. 2, 27 May, 1679. If any person be imprisoned by the order of any court, or of the queen herself, he may have a writ of habeas corpus, to bring him before the court of queen's bench or common pleas, which shall determine whether his committal be just. This act (founded on the old common law) is next in importance to *Magna Charta*. The *Habeas Corpus* act can be suspended by parliament for a specified time when the emergency is extreme. In such a case the nation parts with a portion of its liberty to secure its own permanent welfare, and suspected persons may then be arrested without cause or purpose being assigned. *Blackstone*.

The constitution of the United States provides that "the privilege of habeas corpus shall not be suspended, unless when, in cases of rebellion or invasion, the public safety may require it;" but does not specify the department of the government having the power of suspension. A series of contests on this subject between the legal and military authorities began in Maryland, May, 1861

In consequence of the affair of John Anderson (see *Slavery in England*, note), an act was passed in 1862, enacting that no writ of *Habeas Corpus* should issue out of England into any colony, &c., having a court with authority to grant such writ.

HANSARD'S DEBATES AND UNION, see *Reporting*.

HANSE TOWNS. The Hanseatic league (from *hansa*, association), formed by port towns in Germany against the piracies of the Swedes and Danes: began about 1140; the league signed 1241. At first it consisted only of towns situate on the coasts of the Baltic sea, but in 1370 it was composed of sixty-six cities and forty-four confederates. The league proclaimed war against Waldemar, king of Denmark, about the year 1348, and against Eric in 1428, with forty ships and 12,000 regular troops, besides seamen. On this several princes ordered the merchants of their respective kingdoms to withdraw their effects. The Thirty Years' War in Germany (1618-48) broke up the strength of the association, and in 1630 the only towns retaining the name were Lübeck, Hamburg, and Bremen. The league suffered also by the rise of the commerce of the Low Countries in the 15th century. Their privileges by treaty in England were abolished by Elizabeth in 1578.

A large portion of his life and wealth was spent on the collection. He died 21 May, 1724. The Harleian Miscellany, a selection from the MSS. and Tracts of his library, was published in 1744 and 1808.

HARLEIAN SOCIETY, founded in 1869 for the publication of heraldic visitations, &c.

HARLEY ADMINISTRATION, see *Oxford*.

HARLEY STREET, London, W. At No. 139, the house inhabited by Mr. Henriques, the decomposed body of a woman, stabbed in the breast and covered with chloride of lime, was found 3 June; verdict of coroner's inquest, wilful murder by person unknown, 14 June, 1880.

HARMONICA, or musical glasses (tuned by regulating the amount of water, and played by a moistened finger on the rim), were played on by Gluck in London, 23 April, 1746; "arranged" by Puckeridge and Delaval, and improved by Dr. Franklin in 1760; Mozart, Beethoven, and others composed for this instrument: see *Copophone*. "HARMONICON," an excellent musical periodical, edited by W. Ayton, Jan. 1823—Sept. 1833.

HARMONICORD, a keyed instrument, in which sounds are produced by friction, invented by Th. Kauffmann in 1810.

HARMONISTS, a sect, founded in Württemberg by George and Frederick Rapp, about 1780. Not much is known of their tenets, but they held their property in common, and considered marriage a civil contract. They emigrated to America, and built New Harmony in Indiana in 1815. Robert Owen purchased this town about 1823; but failed in his scheme at establishing a "social" community and returned to England: see *Socialists*. The Harmonists removed to Pittsburg in Pennsylvania in 1822.

HARMONIUM, a keyed instrument, resembling the accordion, the tones being generated by the action of wind upon metallic reeds. The Chinese were well acquainted with the effects produced by vibrating tongues of metal. M. Biot stated, in 1810, that they were used musically by M. Grenié; and in 1827-29, free reed stops were employed in organs at Beauvais and Paris. The best known harmoniums in England are those of Alexandre and Debain, the latter claiming to be the original maker of the French instrument. In 1841, Mr. W. E. Evans, of Cheltenham, produced his English harmonium, then termed the Organ-Harmonica, and by successive improvements he produced a fine instrument, with diapason quality, and great rapidity of speech, without loss of power. Dawes' melody attachment patented 1864.

HARMONY, the combination of musical notes of different pitch, appears not to have been practised by the Greeks.

Hucbald, a Flemish monk, published combinations in his "Enchiridion Musicae," 9th century.

Harmony greatly promoted by Palestrina, and especially by Monteverde.

Jean de Muris wrote "Ars Contrapuncti" in 14th century.

Francis of Cologne described "descant," 1600.

Beethoven greatly enlarged the range of harmonic bases.

HARNESS, chariots and the leathern dressings used for horses to draw them, are said to have been the invention of Erichthonius of Athens, who was made a constellation after his death, under the name of *Boötes* (Greek for ploughman), about 1487 B.C.

HARO, CRY OF (*Clameur de Haro*), traditionally derived from Raoul, or Rollo, of Normandy, ancestor of our Norman princes of England. Rollo administered justice so well, that injured persons uttered the cry "*Ha Rou! Ha Rou! A mon aide, mon prince, on me fait tort.*" The cry was raised in a church in Jersey in 1859.

HARP. Invented by Jubal, 3875 B.C. (*Gen. iv. 21*). David played the harp before Saul, 1063 B.C. (*1 Sam. xvi. 23*). The Cimbri, or English Saxons, had this instrument. The celebrated Welsh harp was strung with gut; and the Irish harp, like the more ancient harps, with wire. Erard's improved harps were first patented in 1795.

One of the most ancient harps existing is that of Brian Boroihme, monarch of Ireland: it was given by his son Donagh to pope John XVIII., together with the crown and other regalia of his father, in order to obtain absolution for the murder of his brother Teig. Adrian IV. alleged this as being one of his principal titles to the kingdom of Ireland in his bull transferring it to Henry II. This harp was given by Leo X. to Henry VIII., who presented it to the first earl of Clanricarde: it then came into possession of the family of De Burgh; next into that of MacMahon of Glenagh, county of Clare; afterwards into that of MacNamara of Limerick; and was at length deposited by the right hon. William Conyngham in the College Museum, Dublin, in 1782.

The *clavicharp*, fitted like the pianoforte with a keyboard, and played like the pianoforte, was introduced into Brussels and Antwerp by Mlle. Dratz, and played on by her at Prince's Hall, London, 13 March, 1838.

HARPER'S FERRY (Virginia), see *United States*, 1859-62.

HARPSICHOORD, see *Pianoforte*, note.

HARRISON'S TIME-PIECE, made by John Harrison, of Foulby, near Pontefract. In 1714, the government offered rewards for methods of determining the longitude at sea; to obviate the irregularities in the rate of clocks by variations of temperature, Harrison invented the method of compensation, before 1720. He came to London, and produced his first time-piece in 1735; his second in 1739; his third in 1758; and his fourth, which procured him the reward of 20,000*l.* offered by the Board of longitude, a few years after. He obtained 10,000*l.* of his reward in 1764, and other sums, more than 24,000*l.* in all, for further improvements in following years. He was born, May, 1693, and died in 1776.

In the patent museum at South Kensington is an eight-day clock made by Harrison in 1715. It strikes the hour, indicates the day of the month, and with one exception (the escapement) its wheels are entirely made of wood. The clock was going in 1871.

HARROGATE (Yorkshire). The first or old spa in Knaresborough forest was discovered by capt.

Peel, the statesman, and lord Byron, the poet, were educated here. The school building suffered by fire, 22 Oct. 1838. The school arrangements were modified by the public schools act, 1868. Visit of the prince and princess of Wales, speech day, 7 July, 1894. Charles II. called Harrow church "the visible church." Fire, 8, 9 Feb. 1896.

HARTLEPOOL, E. Durham, an ancient seaport, said to have been burnt by the Danes, 800, fortified by the Bruces and others, and chartered by John. The foundation of West Hartlepool, with its harbour, docks, churches, &c., is due to the sagacity, skill, and energy of Mr. Ralph Ward Jackson. The work began in 1844, and the harbour was opened 1 June, 1847. The population, about 400 in 1840, was 16,998 in 1881; and 21,521 in 1891; 1901, 22,723. HARTLEY COAL MINE (Northumberland). On 16 Jan. 1862, one of the iron beams, about 20 tons weight, at the mouth of the ventilating shaft, broke and fell, destroyed the brattice, divided the shaft, and carried down sufficient timber to kill five men who were ascending the shaft, and buried alive 202 persons, men and boys. Several days elapsed before the bodies could be removed. Much sympathy was shown by the queen and the public, and about 70,000*l.* were collected for the bereaved families. The coroner's verdict asserted the necessity of two shafts to coal mines, and recommended that the beams of colliery engines should be of malleable instead of cast iron.

HARTWELL (Buckinghamshire), the retreat of Louis XVIII., king of France, 1807-14. He landed in England at Yarmouth, 6 Oct. 1807, took up his residence at Gosfield-hall, in Essex, and afterwards came to Hartwell, as the count de Lille. His consort died here in 1810. On his restoration, he embarked at Dover for France, 24 April, 1814. See *France*.

HARVARD COLLEGE, Cambridge (Massachusetts, North America), was founded by the general court at Boston, on 28 Oct. 1636. It derived its name from John Harvard, of Emmanuel College, Cambridge, who bequeathed to it his library and 779*l.* in 1638. Present annual income now (1903) over \$1,000,000, chiefly under the management of the state until 1865, when the government was vested in a board of 30 overseers. HASTINGS, a cinque-port, Sussex; said to owe its name to the Danish pirate Hastings, who built forts here, about 893; but Mr. Kemble thinks it was the seat of a Saxon tribe named Hastings. At Senlac, now Battle, near Hastings, more than 30,000 were slain in the conflict between Harold II. of England and William duke of Normandy, the former losing his life and kingdom, 14 Oct. 1066, his birthday. He and his two brothers were interred at Waltham abbey, Essex. The new town, St. Leonard's-on-sea, was begun in 1828. A new pier here was inaugurated by earl Granville, 5 Aug. 1872. HASTINGS' TRIAL. Warren Hastings, governor-general of India, was tried by the peers of Great Britain for high crimes and misdemeanours. Among other charges was his acceptance of a present of 100,000*l.* from the nabob of Oude; see *Chunar, Treaty of*. The trial occupied 145 days, and lasted seven years and three months; commencing 13 Feb. 1788, terminating in his acquittal, 23 April, 1795. Mr. Sheridan's speech on the impeachment excited great admiration.

Hastings was born in 1732; went to India as a writer in 1750; became governor-general of Bengal in 1772; of India, 1773; governed ably, but, it is said, unscrupulously and tyrannically, till he resigned in 1785. The expenses of his trial (70,000*l.*) were paid by the East India Company; and a pension was granted to him. He died a privy-councillor in 1818.

HAYTI or **HAITI**, Indian name of a West Indian island, discovered by Columbus in Dec. 1492, and named Hispaniola, and afterwards St. Domingo. Before the Spaniards fully conquered it, they are said to have destroyed, in battle or cold blood, three million of its inhabitants, including women and children, 1495. The island now comprises the Dominican republic (*which see*) in the east, and the republic of Hayti in the west. The population of Hayti in 1887 was about 550,000; 1894, about 1,000,000; capital, Port-au-Prince, 1894, about 34,000.

HEAD MASTERS, incorporated association of, founded 1891. Annual meeting, Guildhall, 9 Jan. 1901.

HEALTH, GENERAL BOARD OF, was appointed by the act for the promotion of the public health, passed in 1848. This board was reconstructed in Aug. 1854, and sir Benjamin Hall was placed at its head, with a salary of 2000*l.*; succeeded by W. F. Cowper, Aug. 1855, and by Ch. B. Adderley in 1858. In 1858 this board was incorporated into the privy council establishment; Dr. Simon being retained as medical officer. See *Hygiene, Hygieopolis, Sanitation, Exhibitions, Public Health, &c.*

HEARTH, or CHIMNEY, TAX, on every fire-place or hearth in England, was imposed by Charles II. in 1662, when it produced about 200,000*l.* a year. It was abolished by William and Mary at the Revolution in 1689; imposed again, and again abolished.

HEAT (called by French chemists *Calorie*). Little progress had been made in the study of the phenomena of heat till about 1757, when Joseph Black put forward his theory of latent heat (heat, he said, being absorbed by melting ice), and of specific heat. Cavendish, Lavoisier, and others, continued Black's researches. Sir John Leslie put forth his views on radiant heat in 1804. Count Rumford put forth the theory that heat consists in motion among the particles of matter, which view he supported by experiments on friction (recorded in 1802). This theory (now called the dynamical or mechanical theory of heat, and used to explain

all the phenomena of physics and chemistry) has been further substantiated by the independent researches of Dr. J. Meyer of Heilbronn and of Mr. James P. Joule of Manchester, who assert that heat is the equivalent of work done. Mr. Joule, in his papers published 1841-2, laid the foundation of the science of thermo-dynamics, on which he worked till his death, 11 Oct. 1889. The Joule Memorial fund proposed, 30 Nov. 1889, was instituted by the Royal Society, Jan. 1890. In 1854, Sir William Thomson (aft. lord Kelvin), of Glasgow, published his researches on the dynamical power of the sun's rays. Thermo-electricity, produced by heating pieces of copper and bismuth soldered together, was discovered by Seebeck in 1823. A powerful thermo-electric battery was constructed by Marcus of Vienna, in 1865. Professor Tyndall's "Heat, a Mode of Motion," first published Feb. 1863, third edition, 1868, sixth edition, 1880. The researches of philosophers are still devoted to this subject; see *Boiling* and *Colorescence*. Greatest heat in the hot summer of 1868: at Nottingham, in sun, 122.4; in shade, 92.2, 22 July, 1 p.m.: 14 Aug. 1876, 95.7 in the shade; 147 in sun; 26 June, 1878, 95 in the shade.

Sir George Cayley invented a heated-air engine in 1807, and Mr. Stirling applied it to raising water in Ayrshire in 1818. One invented by Mr. Wenham was described in 1873. Improvements have been made by C. Wm. Siemens. Coal gas is generally employed.—See *Gas Engines*.

Captain John Ericsson constructed a ship, in which caloric, or heat, was the motive power. On 4 Jan. 1853, it sailed down the bay of New York, at the rate of 14 miles an hour, it is said at a cost of 80 per cent. less than steam. Although caloric engines were not successful, capt. Ericsson continued his experiments, and patented an improved engine in 1856. In 1868 he proposed condensation of the sun's rays, and their employment as a motive power; in March, 1889, he exhibited his apparatus in New York shortly before his death, aged 86.

A portable heat radiator, a small vessel containing burnt charcoal, used by the peasantry of Kashmir; adopted by lord Dundonald in his "Instrar," and recommended by him for the troops (*Times*), and developed, 13 Dec. 1897.

HEBREWS; see *Jews*. The Epistle to the Hebrews ascribed to St. Paul is dated 64. The chief classic authors of all nations, except Greece, have been translated into Hebrew.

HEBRIDES (the *Ebude* of Ptolemy and the *Hebudes* of Pliny), western isles of Scotland, long subject to Norway; ceded to Scotland in 1264; and annexed to the Scottish crown in 1540 by James V. The heritable jurisdictions were abolished in 1747.

HEBRON (in Palestine). Here Abraham resided, 1860 B.C.; and here David was made king of Judah, 1048 B.C. On 7 April, 1862, the prince of Wales visited the reputed cave of Machpelah, near Hebron, said to contain the remains of Abraham and his descendants.

HECATOMB, an ancient sacrifice of a hundred oxen, particularly observed by the Lacedæmonians when they possessed a hundred cities. The sacrifice was subsequently reduced to twenty-three oxen, and goats and lambs were substituted.

HECLA, MOUNT (Iceland). Its first recorded eruption is 1004. About twenty-two eruptions have taken place, according to Olsson and Paulson. Great convulsions of this mountain occurred in 1766, since when a visit to the top in summer is not attended with great difficulty. Perhaps the most awful volcanic eruption on record took place in 1784-5, when rivers were dried up, and many villages overwhelmed or destroyed. The mountain was in a state of violent eruption from 2 Sept. 1845, to April, 1846. Three new craters were formed, from which pillars of fire rose to the height of 14,000 English feet. The lava formed several hills, and pieces of pumice stone and scoriæ of 2 cwt. were thrown to a distance of a league and a half; the ice and snow which had covered the mountain for centuries melted into prodigious floods.

HEGIRA, ERA OF THE, dates from the flight (Arabic *hejra*) of Mahomet, from Mecca to Medina, on the night of Thursday, 15 July, 622. The era commences on the 16th. Some compute this era from the 15th, but Cantemir proves that the 16th was the first day. 33 of its lunar years are equal to 32 of those of the vulgar era.

HEIDELBERG (Germany) was the capital of the Palatinate, 1362-1719. The protestant electoral house becoming extinct in 1693, a war ensued, in which the castle was ruined, and the elector removed his residence to Mannheim. It was annexed to Baden in 1802. Here was the celebrated tun, constructed in 1343, when it contained twenty-one pipes of wine. Another was made in 1664, which held 600 hogsheds. It was destroyed by the French in 1688; but a larger one, fabricated in 1751, which held 800 hogsheds, and was formerly kept full of the best Rhenish wine, is said to be mouldering in a damp vault, empty, since 1769. Population, 1890, 31,737; 1900, 40,119.

The anniversary of the foundation of the university in 1386 was enthusiastically celebrated early in August, 1886.

HELENA, ST., an island in the South Atlantic Ocean, discovered by the Portuguese under Juan de Nova Castilla, on St. Helena's day, 21 May, 1502. The Dutch afterwards held it until 1600, when they were expelled by the English. The British East India Company settled here in 1651; and the island was alternately possessed by the English and Dutch until 1673, when Charles II., on 12 Dec., assigned it to the company once more. St. Helena was the place of Napoleon's captivity, 16 Oct. 1815; and here he died, 5 May, 1821. His remains were removed in 1840, and interred at the Hôtel des Invalides, Paris; see *France*, 1840. HELIOGRAPHY (from *helios*, the sun).

A system of telegraphing by mirrors flashing the rays of the sun, said to have been employed by the ancients in the time of Alexander, about 333 B.C.

A portable heliograph, invented by Mr. H. Mance, of the Persian telegraph department, was announced in 1875. It was employed in India, 1877-78; in the Afghan and Zulu campaigns, 1879-80, and S. African war, 1899-1902. See also *Photography*.

HELIOMETER, an instrument for measuring the diameters of the sun, moon, planets, and stars, invented by Savary, in 1743; applied by M. Bouguer, in 1744. A fine heliometer, by Repsold of Hamburg, was set up at the Radcliffe observatory, Oct. 1849.

HELIOPOLIS; see *Baalbec* (in Syria). The name was also given to a city in Lower Egypt (the biblical On or Bethshemesh) in the earliest known times, a chief seat of the worship of the sun. It suffered much by the Persian invasion, 525 B.C., and was in ruins in the time of Strabo, who died about A.D. 24.

HELIOSCOPE (a peculiar sort of telescope, prepared for observing the sun so as not to affect the eye), was invented by Christopher Scheiner in 1625.

HELLAS, in Thessaly, the home of the Hellenes and the Greek race, which supplanted the Pelasgians from the 15th to the 11th century B.C., derived its name from Hellen, king of Phthiotis, about 1600 B.C. The Hellenes separated into the Dorians, Æolians, Ionians, and Achaïans. The present king of Greece is called "king of the Hellenes;" see *Greece*.

HELLENIC SOCIETY, to promote Hellenic studies, formed at a meeting, 16 June, 1879, by Mr. C. T. Newton and others. Journal published 1881, *et seq.*

HELLESPONT (now the Strait of the Dardanelles) was named after Helle, daughter of Athamas, king of Thebes, who was drowned here. According to the legendary story of the loves of Hero of Sestos, and Leander of Abydos, Leander was drowned in a tempestuous night as he was swimming across the Hellespont (about one mile), and Hero, in despair, threw herself into the sea, dated seventh century B.C. Lord Byron and lieutenant Ekenhead also swam across, 3 May, 1810. See *Xerxes*.

HELMETS, among the Romans, were provided with a vizor of grated bars, to raise above the eyes, and heaver to lower for eating; the Greek helmet was round, the Roman square. Richard I. of England wore a plain round helmet; but most of the English kings had crowns above their helmets. Alexander III. of Scotland, 1249, had a flat helmet, with a square grated vizor, and the helmet of Robert I. was surmounted by a crown, 1306. *Gwillim*.

HELOTS, *captives*, derived by some from the Greek *helen*, to take; by others from Helos, a city which the Spartans hated for refusing to pay tribute. The Spartans, it is said, ruined the city, reduced the Helots to slavery, and called all their slaves and prisoners of war *Helote*, 700 B.C. The number of the Helots was much enlarged by the conquest of Messenia, 668 B.C.; and is considered to have formed four-fifths of the inhabitants of Sparta. In the Peloponnesian war the Helots behaved with uncommon bravery, and were rewarded with liberty, 431 B.C.; but the sudden disappearance of 2000 manumitted slaves was attributed to Lacedæmonian treachery. *Herodotus*. The connection between the Helots and Helos, is now considered mythical.

HELVETIAN REPUBLIC. Switzerland having been conquered by the French in 1797, a republic was established April, 1798, with this title; see *Switzerland*.

In 1785 there were imported from Russia, in British ships, 17,695 tons of hemp and flax." *Sir John Sinclair*. It was zealously opposed by the popes of Rome, and was annulled by Justin I. in 518. The orthodox party triumphed, and many heretic bishops were expelled from their sees.

HEPTARCHY (or government of seven rulers) in England was gradually formed from 455, when Hengist became king of Kent. It terminated in 828, when Egbert became sole monarch of England. Heraldry, as an art, is ascribed first to Charlemagne, about 800; and next to Frederick Barbarossa, about 1152; it began and grew with the feudal law. *Mackenzie*. The great English works on Heraldry are those of Barcham or Barkham, published by Gwillim (1610), Edmondson (1780), and Burke's "Armory" (1842; new ed. 1883, contains a history and the arms of above 66,000 British families, &c.). HERCULANEUM, an ancient city of Campania, overwhelmed, together with Pompeii, by an eruption of lava from Vesuvius, 23 or 24 Aug. 79.

Successive eruptions laid them still deeper under the surface, and all traces of them were lost until excavations began in 1711; and in 1713 many antiquities were found. In 1738 excavations were resumed, and works of art, monuments, and memorials of civilized life were discovered. 150 rolls of MSS. papyri were found in a chest, in 1754; and many antiquities were purchased by sir William Hamilton, and sold to the British Museum, where they are deposited; but the principal relics are preserved in the museum of Portici. The "Antichità di Ercolano," 8 vols. folio, were published by the Neapolitan government, 1757-92.

HEREDITY. The transmission of qualities of like kind of those of the parents has been specially studied by Mr. Francis Galton, F.R.S. who published "Hereditary Genius," 1869, and "Records of Family Faculties," containing tabular forms to be filled up, in order to obtain authentic data for his new science of "Eugenics." Money prizes, 5*l.* and upwards, were offered for the best records. His "Inquiries into Human Faculty" was published in 1883, and "Natural Inheritance" in 1889. Works also by Haeckel, Hertwig, Nägeli, Herbert Spencer, Virchow, Gayau, and others.

Dr. August Weismann, in his "Studies in the Theory of Descent," English translation, 1882, and in his "Essays on Heredity," &c., 1889, set forth his reasons for opposing the theory, and referred to his researches on the lowest forms of animal life, *protozoa*, &c., and to Darwin's principle of natural selection, which he considers as the only possible theory for explaining the difficulties connected with metamorphoses of species. Much controversy ensued, in which the late prof. G. J. Romanes took a leading part.

HEREFORD was made the seat of a bishopric about 676, Putta being first bishop. HERETICS (from the Greek *hairesis*, choice). Paul says, "After the way they call *heresy*, so worship I the God of my fathers," 60 (*Acts* xxiv. 14). Heresy was unknown to the Greek and Roman religions. Simon Magus is said to have broached the Gnostic heresy about 41. This was followed by the Manichees, Nestorians, Arians, &c.; see *Inquisition*. It is stated that the promulgation of laws for prosecuting heretics was begun by the emperor Frederick II. in 1220; and immediately adopted by pope Honorius III.

Epiphanius chosen bishop of Constantius in Cyprus, 367, wrote "Panarium," a discourse against heresies, died 402.
 Thirty heretics came from Germany to England to propagate their opinions, and were branded in the forehead, whipped, and thrust naked into the streets in the depth of winter, where, none daring to relieve them, they died of hunger and cold (Speed) 1160.
 Laws against heretics repealed, 25 Henry VIII. 1534-5.

HESSE (W. Germany), the seat of the Catti, formed part of the empire of Charlemagne; from the rulers of it in his time, the present are descended. It was joined to Thuringia till about

1263, when Henry I. (son of a duke of Brabant and Sophia, daughter of the landgrave of Thuringia) became landgrave of Hesse. The most remarkable of his successors was Philip the Magnanimous (1509), an eminent warrior and energetic supporter of the Reformation, who signed the Augsburg Confession in 1530 and the League of Smalcald in 1531. At his death, in 1567, Hesse was divided into HESSE-CASSEL and HESSE-DARMSTADT, under his sons William and George, and their descendants played an eminent part in the convulsions of Germany during the 17th and 18th centuries.* In 1803 Hesse-Cassel became an electorate, and in 1806 Hesse-Darmstadt a grand duchy; which titles were retained in 1814. In 1807 Hesse-Cassel was incorporated with the kingdom of Westphalia, but in 1813 the electorate was re-established. Capital, Darmstadt. Population (1875), grand duchy, 884,218; (1885), 956,611; (1890), 993,659; 1900, 1,120,135.

1821. William II.; born 28 July, 1777; died 20 Nov. 1847

1847. Frederic William; born 20 Aug. 1802.

The elector, in 1850, remodelled the constitution given in 1831 (by which the chamber had the exclusive right of voting the taxes), and did not convene the chamber until the usual time for closing the session had arrived, when his demand for money for 1851 was laid before it. The chamber called for a regular budget, that it might discuss its items. The elector dissolved the chamber, and declared his dominions in a state of siege, 7 Sept. 1850.

He fled to Hanover, and subsequently to Frankfurt; and on 14 Oct. he formally applied to the Frankfurt diet for assistance to re-establish his authority in Hesse. On 6 Nov. an Austro-Bavarian force of 10,000 men entered Hesse-Cassel, under the command of Prince Thurn und-Taxis, who fixed his head-quarters in Hanau; and on the next day a Prussian force entered Cassel. The elector returned to his capital, the taxes having been collected under threats of imprisonment, 27 Dec. 1850.

The constitution of 1831 was abolished, and a new one established, 1852.

The conflict was soon resumed, and continued till, by law of 20 Sept. 1866, Hesse-Cassel was annexed to Prussia, 8 Oct. 1866.

HIEROGLYPHICS, literally sacred sculptures or engravings, the representation of objects to express language, used by the ancient Egyptians, Mexicans, and other nations. The Egyptians used about 1700 hieroglyphs, engraved on stone, painted on wood, and written on papyri. They were either phonetic or ideographic. Their invention is mythically ascribed to Athotes. See "Book of the Dead," in article *Death*. Young, Champollion, Rosellini, Lepsius, Brugsch, Mariette, Chabas, Birch, and others (in the present century) have much elucidated Egyptian hieroglyphics; see *Rosetta Stone*. A. Erman's "Egyptian Grammar," English translation by J. H. Breasted, published about July, 1894.

HIGH AND LOW CHURCH, sections in the Church of England became prominent in the reign of Elizabeth. High church principles were maintained by Abp. Whitgift, and set forth by Richard Hooker "the judicious" in his *Ecclesiastical Polity*, 1593-7. They were opposed by the Puritans. The contest, hot in the reign of Anne, has continued since. Dr. Sacheverell, preacher at St. Saviour's, Southwark, was prosecuted for two seditious sermons preached (14 Aug. and 9 Nov. 1709) to create apprehension for the safety of the church, and to excite hostility against dissenters. His friends were called High Church and his opponents Low Church, or moderate men, 1720. The queen favoured Sacheverell, and presented him with the rectory of St. Andrew's, Holborn. He died in 1724.

HIGH COMMISSION, COURT OF, an ecclesiastical court, erected by 1 Eliz. c. 1, 1559, by which all spiritual jurisdiction was vested in the crown. HIGHNESS. The title of *Highness* was given to Henry VII.; and this, and sometimes *Your Grace*, was the manner of addressing Henry VIII.; but about the close of the reign of the latter, the titles of "Highness" and "Your Grace" were absorbed in that of "Majesty." Louis XIII. of France gave the title of Highness to the prince of Orange, in 1644; this prince had previously only the distinction of Excellency. Louis XIV. gave the princes of Orange the title of High and Mighty Lords, 1644. *Hénault*.

HIGH TREASON. To regulate the trials for this crime the statute, so favourable to liberty, the 25th of Edward III., 1352, was enacted, by which two living witnesses are required. By an act passed 19 April, 1821, this provision was extended to Ireland, parliament having refused to sanction the sentence of death against the duke of Somerset. In 1800 it was enacted that when the overt act was a direct attempt on the life of the sovereign, the trial should be conducted in the same manner as in the case of an indictment for murder. The trial of John Horne Tooke and others for constructive high treason failed, see *Horne Tooke*, Nov., Dec. 1794. See *Treason*.

The last two cases of execution for high treason:—

I. William Cundell *alias* Connell, and John Smith; tried on a special commission, 6 Feb. 1812, being two of fourteen British subjects taken in the enemy's service in the isles of France and Bourbon. Mr. Abbot, afterwards lord Tenderden and chief justice, and sir Vicary Gibbs, attorney-general, conducted the prosecution, and Mr. Brougham, aft. lord Brougham, defended the prisoners. The defence was, that they had assumed the French uniform to aid their escape to England. They were hanged and beheaded on the lodge of Horsemonger-lane gaol on 16 March, 1812.

All the other convicts were pardoned, upon condition of serving in colonies beyond the seas.

II. The *Cato-street Conspirators* (which see), executed 1 May, 1820.

African war, prosecuted by the crown on the charge of high treason, and tried at the king's bench before the lord chief justice, Mr. Justice Wills, and Mr. Justice Channell, and sentenced to death 23 Jan. 1903. The lord chief justice laid down, "that if a subject, in time of war, joined the king's enemies, for whatever purpose, that was an act of treason." Sentence afterwards commuted to penal servitude for life.

This event was anticipated by geologists, and through scientific precautions no loss of life ensued.

HISTORY. The Bible, the Parian Chronicle, the histories of Herodotus, "the father of history," and Ctesias, and the poems of Homer, are the foundations of early ancient history. Later ancient history is considered as ending with the destruction of the Roman empire in Italy, 476. *Modern history* dates from the age of Charlemagne, about 800. There was not a professorship of modern history in either of our universities until the years 1724 and 1736, when Regius professorships were established by George I. and George II. At Oxford professor E. A. Freeman, appointed 1884, died 16 March, 1892, succeeded by Mr. J. A. Froude, April, 1892; died, 20 Oct. 1894; succeeded by Mr. F. York Powell, Dec. 1894. The castle of Jerablus, a mound and ruins, 20 miles below Beredjik on the Euphrates; was visited by Henry Maundrell, 1699; by Dr. Pococke, 1745; and by J. H. Skene and Mr. Geo. Smith (died 1876), who agreed in considering the remains to be those of Carchemish, the ancient capital of the Hittites, captured and annexed by Sargon, king of Assyria (about 721 B.C.) when the nation was thoroughly subdued. The site had been held successively by Hittites, Assyrians, Babylonians, Greeks, Romans, and Arabs.

A rich harvest may be expected from its exploration.

Captain C. R. Conder's discovery of a key to the language of Hittite inscriptions on bas-reliefs, gems, &c., some of which were discovered by Burckhardt, 1808, and re-discovered by Mr. Palmer in 1870, announced 26 Feb. 1887; they consist of invocations, hymns, &c. to the sun, &c. His "Altaic Hieroglyphs and Hittite Inscriptions" published 1887.

Prof. A. Sayce, in 1879, considered the Hittites to have been in very early times the predominant power in Asia Minor and N. Syria. The investigations of Messrs. Ramsay, Hogarth and Headlam, in 1890, supported by the English Asia Minor Exploration Fund, led to many discoveries which are described in the *Times* of 25 July, 1891. Investigations proceeding, 1903. New discoveries by the French expedition of

1893-94, and by M. E. Chantre, in Cappadocia, in 1898; see capt. Conder's letter, *Times*, 10 Oct. 1899. 3rd and enlarged edition of "The Hittites," by prof. Sayce, 1903, describes his partially successful efforts in interpreting the cuneiform Hittite inscriptions.

HOLSTEIN AND SCHLESWIG (N.W. Germany), duchies once belonging to Denmark. The country, inhabited by Saxons, was subdued by Charlemagne in the beginning of the 9th century, and afterwards formed part of the duchy of Saxony. In 1106 or 1110, Adolphus of Schaumburg became count of Holstein; his descendants ruled till 1459, when Adolphus VII. died without issue, and the states of Holstein and Schleswig elected Christian, king of Denmark, his nephew, as their duke, through fear of his arms. In 1544, his grandson, Christian II., divided his states amongst his brothers, with the condition that the duchies should remain subject to Denmark. The eldest branch of the family reigned in Denmark till the decease of Frederick VII., 15 Nov., 1863. From a younger branch (the dukes of Holstein-Gottorp) descended through marriage, the kings of Sweden from 1751-1818, and the reigning family in Russia since 1762, when the duke, as the husband of Anne, became czar. In 1773, Catherine II. of Russia ceded Holstein-Gottorp to Denmark in exchange for Oldenburg, &c. The duchies were occupied by the Swedes in 1813, but restored to Denmark in 1814, and on 28 May, 1831, constituent assemblies were granted to them. Since 1844 disputes have been rife between the duchies and Denmark, and in 1848 the states-general of the duchies voted their annexation to the German confederation, in which they were supported by

Prussia; war ensued, which lasted till 1850, when they submitted to Denmark. The agitation in the duchies, encouraged by Prussia, revived in 1857. The Germans in Schleswig desired it to be made a member of the German confederation, like Holstein; but both duchies demanded a local government more independent of Denmark, which changes were resisted by that power. For the events of the war of 1864, see *Denmark*. By the convention signed at Gastein (*which see*), 14 Aug. 1865, the government of Holstein was left with Austria, and that of Schleswig with Prussia. The whole of Holstein and part of Schleswig were ceded to Prussia by the treaty of Prague, signed 23 Aug. 1866. Population in 1860, 1,004,473. The 5th clause, directing North Schleswig to be given to Denmark if the people voted for it, was not acted on, although claimed; and was abrogated, Feb. 1879. Expulsion of Danes, see *Prussia*, Oct. 1898.

HOLY ALLIANCE was ratified at Paris, 26 Sept. 1815, between the emperors of Russia (its originator) and Austria, and the king of Prussia, by which they ostensibly bound themselves, among other things, to be governed by Christian principles in all their political transactions, with a view to perpetuating the peace they had achieved. The compact was severely censured in this country as opposed to rational liberty.

HOLY MAID OF KENT. Elizabeth Barton was incited by the Roman Catholic party to oppose the Reformation by pretending to inspirations from heaven. She foretold the speedy and violent death of Henry VIII. if he divorced Catherine of Spain, and married Anne Boleyn, and direful calamities to the nation. She and her confederates were executed at Tyburn, 5 May, 1534.

HOLYOKE, Massachusetts, U.S. A Roman Catholic church here took fire; a panic ensued; and about 80 were burnt or trampled to death, 26, 27 May, 1875.

HOLY PLACES IN PALESTINE. These places have been a source of contention between the Greek and Latin churches for several centuries. In the reign of Francis I. they were placed under Latin monks, protected by the French government; but

the Greeks from time to time obtained firmans from the Porte invalidating the rights of the Latins, who were at last (in 1757) expelled from the sacred buildings, which were committed to the care of the Greeks by a hattî-scheriff, or imperial ordinance.

The holy sepulchre partially destroyed by fire and rebuilt by the Greeks, who claim additional privileges, and cause fresh dissensions 1803

The Russian and French governments sent envoys (M. Dashkoff and M. Marcellus) to adjust the dispute; an arrangement prevented by the Greek revolution 1821

The subject again agitated, and the Porte proposed that a mixed commission should adjudicate on the rival claims. M. Tifoff, the Russian envoy, acting on behalf of the Greeks, and M. Lavalette, the French envoy, on that of the Latins, took up the question very warmly 1850

A firman issued by the Porte, confirming and consolidating the rights previously granted to the Greek Christians, and declaring that the Latins had no right to claim exclusive possession of certain holy places specified, but permitting them to possess a key of the church at Bethlehem, &c., as in former times 9 March, 1852

The French government acquiesced with much dissatisfaction; but the Russian envoy still desired the key to be withheld from the Latin monks. M. D'Ozeroff made a formal declaration of the right of Russia to protect the orthodox in virtue of the treaty of Kainardji in 1774, and demanded that the firman of 9 March, 1852, should be read at Jerusalem, although it militated against his pretensions, which was accordingly done. The dispute still continued, the Porte being exposed to the attacks of both the Russian and French governments March, 1853

Prince Menschikoff arrives at Constantinople as envoy extraordinary, and in addition to the claims respecting the holy places, made demands respecting the protection of the Greek Christians in Turkey which led to the war of 1854-6. (See *Russo-Turkish War*) 28 Feb. "

HOLY ROMAN EMPIRE. The German empire received this title under the emperor Otho I. the great, crowned at Rome by pope John XII., 2 Feb. 962. See *Rome*, and *Germany*.

HOLY ROOD or **CROSS.** A festival instituted on account of the recovery of a large piece of the cross by the emperor Heraclius, after it had been taken away, on the plundering of Jerusalem, about 615. The feast of the invention (or finding) of the Cross is on 3 May; that of the exaltation of the Cross, 14 Sept. At Boxley abbey, in Kent, was a crucifix, called the *Rood of Grace*; at the dissolution it was broken in pieces as an imposture by Hilsey, bishop of Rochester, at St. Paul's cross, London, 1536.

HOLYROOD PALACE (Edinburgh), formerly an abbey, was for several centuries the residence of the monarchs of Scotland. The abbey, of which some vestiges remain, was founded by David I. in 1128, and in the burial-place within its walls are interred several of his successors. The palace is a large quadrangular edifice of hewn stone, with a court within surrounded by piazzas. In the north-west tower is the bed-chamber which was occupied by queen Mary; and from an adjoining cabinet to it David Rizzio, her favourite, was dragged forth and murdered, 9 March, 1566. The north-west towers were built by James V., and the remaining part of the palace was added during the reign of Charles II. The palace was burnt in 1650, and rebuilt in 1659. Great improvements were made in 1857. Queen Victoria held a court here, 30 Aug. 1850; King Edward VII., 12 May, 1903.

HOLY SEPULCHRE, a Byzantine church in modern Jerusalem. Fergusson, Robinson, and

others, consider the true site of the holy sepulchre to be the mosque of Omar, the "dome of the Rock." The question is still undecided. The order of the Holy Sepulchre was founded by Godfrey of Bouillon, 1099; revived by pope Alexander VI. 1496; re-organised, 1847 and 1868.

HOME SECRETARY, see *Secretaries*, and all the administrations under the name of their premier. New Home Office, Westminster, occupied 6 Aug. 1875.

"**HOME, SWEET HOME.**" The words are attributed to John Howard Payne, an American actor, who died in 1852; the music is said to be Sicilian, but it is probably by sir Henry Bishop, who introduced the song into Clari, or the Maid of Milan, in 1823.

HOMER'S ILIAD AND ODYSSEY, the earliest and most perfect epic poems in the world. The first begins with the wrath of Achilles, and ends with the funeral of Hector; the second recounts the voyages and adventures of Odusces or Ulysses, after the destruction of Troy. Various dates are assigned to these works, from 962 to 915 B.C.

F. A. Wolf, in his *Prolegomena*, in 1795, argued that the Homeric poems were composed of independent epic songs, collected and arranged by Peisistratus about 550 B.C. This theory occasioned much controversy between scholars and poets; Mr. Andrew Lang, in "Homer and the Epic," vigorously defends "the one author theory," March, 1893.
 The first English version of the Iliad, by Arthur Hall, appeared in 1581. The present text is attributed to the time of Pericles, who died B.C. 429. The most celebrated versions of Homer's works are Chapman's, 1616; Hobbes's, 1675; Pope's, 1715-25; Cowper's, 1791. The translation of the Iliad by the earl of Derby (1864) is much commended.

HOMICIDE is said to have been tried at Athens by the Arcepagites. Among the Jews, wilful murder was capital; but for chance-medley the

offender was to flee to one of the cities of refuge, and there continue till the death of the high-priest, 1451 B.C. (*Num.* xxxv.). 9 Geo. IV. c. 31 (1828), distinguishes between justifiable homicide and homicide in its various degrees of guilt, and circumstances of provocation and wilfulness; see *Murder*.

HOMILDON HILL (Northumberland), where the Scots, headed by the earl of Douglas, were defeated by the Percies (among them Hotspur), 14 Sept. 1402. Douglas and the earls of Angus, Murray, Orkney, and the earl of Fife, son of the duke of Albany, and nephew of the Scottish king, with many of the nobility and gentry, were taken prisoners.

HOMILIES in early Christian times were discourses delivered by the bishop or presbyter, in a homely manner, for the common people. Charlemagne's "Homiliarium" was issued 809. The Book of Homilies drawn up by abp. Cranmer, and published 1407, and another prepared by an order of convocation, 1563, were ordered to be read in those churches that had not a minister able to compose proper discourses.

HOMŒOPATHY, a hypothesis promulgated in his "Organon of Medicine," 1810, and in other works, by Dr. Samuel Hahnemann, of Leipsic (died 2 July, 1843), according to which every medicine has a specific power of inducing a certain diseased state of the system (*similia similibus curantur*, likes are cured by likes); and if such medicine be given to a person suffering under the disease which it has a tendency to induce, such disease disappears, because two similar diseased actions cannot simultaneously subsist in the same organ. *Brande*. Infinitesimal doses of medicine, such as the millionth of a grain of aloe, have been employed, it is said, with efficacy. The system requires the patient to regulate his diet and habits carefully. It has led to a more accurate study of the materia medica. Introduced into England, 1827. The Hahnemann hospital was opened in Bloomsbury-square, 16 Sept. 1850. "The World's Convention of Homœopathic Physicians" opened at Philadelphia, 26 June, 1876, London School of Homœopathy, founded 15 Dec. 1876. Congress, Liverpool, 14 Sept. 1877; Southport, 22 Sept. 1892; London, 3 June, 1898; London, 11 July, 1902. Fifth quinquennial international congress at Queen's hall London, 4 Aug, 1896. Under the heading *Ōdium Medicum*, many controversial letters from allopaths and homœopaths appeared in the *Times*, Jan. 1888.

HORN BOOKS used in education in England from early times to the 18th century, were tablets on which were inscribed the alphabet, the nine digits, etc., protected by a thin plate of transparent horn. Great variety of forms, now very rare. Four were exhibited at the Caxton exhibition, 1877, and nine at the loan exhibition of the Horner's company, 1882. Mr. Andrew Tuer's handsome and exhaustive "History of the Horn book," dedicated to queen Victoria by command, was published, May, 1896.

HORN; HORNPIPE. The horn is thought to be, next to the reed, the earliest wind instrument, and has been found among most savage nations. It was first made of horn, hence the name; afterwards of brass, with keys, for the semi-tones, in the last century.—The dance called the Hornpipe is supposed to be so named from its having been performed to the Welsh *pib-corn*, that is hornpipe, about 1300. *Spencer*. HORSE. The people of Thessaly were excellent equestrians, and probably first among the Greeks who broke them in for service in war; whence probably arose the fable that Thessaly was originally inhabited by centaurs. HOSPITAL SHOPPING DAY. A scheme organised, Sept. 1903, by a committee, with lord Dunraven as chairman, to augment King Edward's Hospital fund; the king and the prince of Wales as patron and president signifying their approval. Shopkeepers of all classes, to the number of 33,000, were invited to give a certain percentage, according to individual choice, of their takings on a specified day to the fund, and a special appeal was made to the public to make extra purchases to aid the object in view. A large number of firms in the West-end and in other parts of London responded favourably to the proposal. The first "Hospital Shopping Day" took place, 3 Nov. 1903. Receipts to 17 Nov. 1,027*l*.

HOUR. The early Egyptians divided the day and night each into twelve hours, a custom adopted

by Jews or Greeks probably from the Babylonians. The day is said to have been first divided into hours from 293 B.C. when L. Papius Cursor erected a sun-dial in the temple of Quirinus at Rome. Previously to the invention of water-clocks (*which see*) 158 B.C., the time was called at Rome by public criers. In England, the measurement of time was, in early days, uncertain; one expedient was by wax candles, three inches burning an hour, and six wax candles burning twenty-four hours, said to have been invented by Alfred, A.D. 886; see *Day*. For *Hours of Prayer, Horæ*, see *Breviary*. The *Hour*, daily conservative newspaper, first appeared, 24 March, 1873; last time, 11 Aug. 1876.

HOUSE DUTY was imposed in 1695. Its rate was frequently changed till its repeal. It was re-imposed as a substitute for the window-tax, in 1851. In the year 1872-3 it produced 1,243,818*l*.; in 1875-6, 1,421,052*l*.; 1880, 1,623,000*l*.; 1885, 1,885,000*l*.; 1891, 1,570,000*l*.; 1893-4, 1,425,000*l*.; 1898-9, 1,570,000*l*.; 1899-1900, 1,670,000*l*.; 1900-1, 1,720,000*l*.; 1901-2, 1,775,000*l*. Trevelyan's proposal lost in the commons (287 to 173), 13 May, 1874; (268 to 166), 7 July, 1875; (264 to 165), 30 May, 1876; (276 to 220), 29 June, 1877; (271 to 219), 22-23 Feb. 1878; (291 to 226), 4 March, 1879. HUDIBRAS. The first three cantos of this political satire, by Samuel Butler, appeared in 1663; the other parts in 1664 and 1678.

HUDSON'S BAY, discovered by Sebastian Cabot, 1512, and re-discovered by captain Henry Hudson, when in search of a north-west passage to the Pacific Ocean, 1610, had been visited by Frobisher. The "governor and company of adventurers of England trading to Hudson's Bay," obtained a charter from Charles II. in 1670. The "fertile belt" was settled by lord Selkirk in 1812. For these territories the bishopric of Rupert's Land was founded, 1849. The charter having expired, the chief part of the company's territories, on the proposition of earl Granville, the colonial secretary (9 March, 1869), were transferred to the Dominion of Canada for 300,000*l.*, and a right to claim a certain portion of land within fifty years, and other privileges; the company having consented to this, 9 April, 1869. A portion of the people resisted the annexation, and gen. Louis Riel proclaimed independence and seized the company's treasury, Jan. 1870. On 3 or 4 March he tried and shot Thomas Scott, a Canadian, who had escaped from his custody. Col. (afterwards lord) Wolsley conducted a Canadian expedition to the territories (now named Manitoba), and issued a proclamation to the loyal inhabitants, 23 July, saying "our mission is one of peace." Riel was unsupported and offered no resistance. The lieutenant-governor, Adams George Archibald, arrived 3 Sept. The Company had a large sale of furs in 1888. Annual meetings are held (1893). hundred to hundred, and county to county, all robbers and felons. The pursuit of a felon was aided by a description of him in the *Hue and Cry*, a gazette established for advertising felons in 1710. *Ashe*.

HUGUENOT SOCIETY of London, established by sir H. Austen Layard and other descendants of Huguenots, about 15 April, 1885. The society publishes historical works, 1888.

HUGUENOTS, a term (derived by some from the German *Eidgenossen*, confederates; by others from Hugues, a Genevese Calvinist) applied to the Reformed party in France, followers of Calvin. They took up arms against their persecutors in 1561. After a delusive edict of toleration, a great number were massacred at Vassy, 1 March, 1562, when the civil wars began, which lasted with some intermission till the edict of Nantes in 1598 (revoked in 1685). The massacre of St. Bartholomew's day, 24 Aug. 1572, occurred during a truce; see *Calvinists, Protestants, Bartholomew, Edict, and Camisard*. S. Smiles's "History of the Huguenots," appeared in 1867. The crypt in Canterbury cathedral, assigned to French protestants in 1550, is still used by them for divine worship.

HUMANE SOCIETY, ROYAL (London), for the recovery of persons apparently drowned, was founded in 1774, by Drs. Goldsmith, Heberden, Towers, Lettson, Hawes, and Cogan, and principally by the last three. The society has above 280 depôts supplied with apparatus. The principal one was erected in 1794, on a spot of ground given by George III. on the north side of the Serpentine river, Hyde-park. The motto of this society is appropriate—“*Lateat scintillula forsan*”—“a small spark may perhaps lie hid.” Nearly 500 persons were relieved in 1887; 544 in 1890; 536 persons rewarded for bravery. 580 lives saved in 1894; 527 rewards; 812 lives saved in 1895, 800 rewards; 650 lives saved, 716 rewards in 1897. HUNGARY, part of the ancient Pannonia and Dacia, was subjected to the Romans about 106, and retained by them till the 3rd century, when it was seized by the Goths, who were expelled about 376 by the Huns. See *Huns*, and *Attila*. After Attila's death, in 453, the Gepide, and in 500 the Lombards held the country. It was acquired by the Avars about 568, and retained by them till their destruction by Charlemagne in 799. About 890 the country was settled by a Scythian tribe, named Vingours or Ungri (whence the German name *Ungarn*) and the Magyars of Finnish origin. The chief of the latter, Arpad (889), was the ancestor of a line of kings (see *below*). The progress of the Magyars westward was checked by their defeat by the emperor Henry the Fowler, 934. HUSSITES. After the death of Huss,* many of his followers took up arms, in 1419, and formed a political party under John Ziska, and built the city of Tabor. He defeated the emperor Sigismond, 11 July, 1420, and a short truce followed. Ziska, blinded at the siege of Rabi, beat all the armies sent against him. He died of the plague, 18 Oct. 1424, and is said to have ordered a drum to be made of his skin to terrify his enemies even after death. Two Hussite generals, named Procopius, defeated the imperialists in 1431; and a temporary peace ensued. Divisions took place among the Hussites, and on 30 May, 1434, they were defeated, and Procopius the elder slain at Bömischbrod or Lippau. Toleration was granted by the treaty of Iglau, and Sigismond entered Prague 23 Aug. 1436. The Hussites opposed his successor, Albert of Austria, and called Casimir of Poland to the throne; but were defeated in 1438. A portion of the Hussites existed in the time of Luther, and were called "Bohemian brethren."

HUSTINGS (said to be derived from *house court*, an assembly among the Anglo-Saxons), an ancient court of London, being its supreme court of judicature, as the court of common council is of legislature. The court of *hustynge*s was granted to the city of London, to be holden and kept weekly,

* The clergy having instigated the pope to issue a bull against heretics, John Huss (born in Bohemia in 1373), a zealous preacher of the Reformation, was cited to appear before a council of divines at Constance, the emperor Sigismond sending him a safe-conduct. He presented himself accordingly, but was thrown into prison, and after some months' confinement was adjudged to be burned alive, which he endured with resignation, 6 or 7 July, 1415. Jerome of Prague, his intimate friend, who came to this council to support and second him, also suffered death by fire, 30 May, 1416, although he also had a safe-conduct.

by Edward the Confessor, 1052. One was held to outlaw defaulters, Guildhall, London, 6 Dec. 1870; others in 1882 and 7 July, 1896. Above 4,000 wills are on the roll of the court, commencing with the 43rd year of king Henry III. Winchester, Lincoln, York, &c., were also granted hustings courts.

HUTCHINSONIANS included many eminent clergy, who did not form any sect, but held the opinions of John Hutchinson, of Yorkshire (1674-1737); they rejected the Newtonian system, and contended that the scriptures contain a complete system of natural philosophy. His work, "*Moses' Principia*," was published in 1724. He derived all things from the air, whence, he said, proceeded fire, light, and spirit, types of the Trinity. In 1712 he invented a time-piece for finding the longitude. He died in 1737.

HYDERABAD (S. India), the territory of the Nizam (the greatest mahometan potentate in India), who derives his authority from Azof Jah, a chief under Aurungzebe, who made him viceroy as Nizam-ool-Moolk, regulator of the state. He died in 1748. Pop. 1881, 9,845,594; 1891, 11,537,000; 1901, 11,141,142; city and suburbs, 448,460.

- Civil war between his descendants ensues 1748-65
 Nizam Ali dethroned his brother, 1761; ravaged the Carnatic, 1765; made a treaty with the East India Company, 1766; he joined Hyder Ali; left him, 1768; acquired part of Tippoo Sultan's territories; and became feudatory of the British empire, 1799 *et seq.*; died 1802
 One of his successors, Secunder Jah, ruled feebly; died, succeeded by an illegitimate son 1829
 The nizam died, leaving his young son in charge of Salar Jung (or Jang); enjoining him to support the British during the mutiny, which he did faithfully 1857-8
 Sir Salar Jung made K.C.S.I.; visits Europe; presented to the Queen, 29 June; returned to Bombay, 24 Aug. 1876; died 8 Feb. 1883
 The young nizam Mir Mahbub Ali (aged 18) installed at Hyderabad by the viceroy of India, the marquis of Ripon 5 Feb. 1884
 The nizam in a letter to lord Dufferin, the viceroy, makes an offer to present 20 lakhs of rupees for three years, total 600,000l., for the defence of the N.W. Indian territories, Sept.; acknowledged with thanks by the viceroy, announced 10 Oct.; and by the queen, about 26 Oct. 1887; the offer with others declined (see *India*) 18 Nov. 1888

HYDRAULIC PRESS, see under *Hydrostatics*.

HYDROCHLORIC ACID or **CHLORHYDROIC ACID**, the only known compound of chlorine and hydrogen, was discovered by Dr. Priestley, 1772; its constitution determined by Davy, 1810. It is also called muriatic acid and spirit of salt; see under *Alkalies*.

HYDROGEN (from *hydōr*, water). Paracelsus observed a gas rise from a solution of iron in oil of vitriol, about 1500; Turquet de Mayerne discovered its inflammability, 1656; as did Boyle, 1672; Lermery noticed its detonating power, 1700. In 1766 Cavendish proved it to be an elementary body; and in 1781, he and Watt first showed that in the combination of this gas with oxygen, which takes place when it is burnt, water is produced; subsequently

Lavoisier decomposed water into its elements, and gave hydrogen its present name instead of "inflammable air." One volume of oxygen combines with two volumes of hydrogen to form water. Hydrogen is never found in the free state.

In 1877, Cailletet and Wroblewski obtained by rapid expansion of the compressed gas, a condensation or mist, which was supposed to be produced by the liquefaction of hydrogen. Olszewski had seen a few drops of an unknown liquid falling in a glass tube and remaining for a few instants unevaporated, subsequently proved to be due to impurities. Prof. Dewar's paper on "The Density of Hydrogen in Palladium," was published in 1873; "The Absorption of Hydrogen by Palladium at high temperatures, pressures, etc.," was published in 1897. On 10 May, 1898, at the Royal Institution, he produced half a wine-glassful of liquefied hydrogen at 240 deg. centigrade (below zero) in 5 min., and on the 12th he doubled the quantity. On the 12th he reported it to the Royal Society, and on the 16th to the French Academy. By means of this liquid he also, on the 10th, liquefied a mixture of helium and other gas or gases.

Lecture on liquid hydrogen at the Royal Institution, 20 Jan. 1899; further researches; boiling point by exhaustion, 15° of absolute temperature; liquid hydrogen exhibited boiling in a vacuum tube immersed in liquid air, 21° absolute temperature; and experiments with liquid hydrogen and the vitality of seeds; see *Athenæum*, 16 Dec. 1899; hydrogen obtained in the solid state by prof Dewar, 16° absolute scale, reported, Jan. 1900.

HYDROGENIUM, a hypothetical metal. In a paper read before the Royal Society, 7 Jan. 1869, Mr. Thomas Graham, master of the Mint, suggested that a piece of the metal palladium, into which hydrogen had been pressed, became an "alloy of the volatile metal hydrogenium."

HYDROGRAPH, an apparatus invented by capt. Neale, for transmitting sound by water, for the purpose of signalling between ships, lighthouses, &c.; it consists of a transmitter, a receiver, and electric recorder; experiments were made on the Solent under the auspices of the Trinity Board.—*Times*, 19 Oct. 1893.

HYDROGRAPHY is the description of the surface waters of the earth. The first sea-chart is attributed to Henry the Navigator, in the 16th century. There is a hydrographic department in the British admiralty, by which a series of charts has been issued. International Hydrographic and Biological congress meets at Stockholm, 15 June, 1899. See *China*, May, 1903.

HYDROMETER, the instrument by which is measured the gravity, density, and other properties of liquids. The oldest mention of the hydrometer occurs in the 5th century, and may be found in the letters of Synesius to Hypatia; but it is not improbable that Archimedes was the inventor of it, though no proofs of it are to be found. *Beckmann*. Archimedes was killed in 212 B.C., and Hypatia was torn to pieces at Alexandria, A.D. 415. "Hypatia," by the rev. Charles Kingsley, appeared in 1853. Robert Boyle described a hydrometer in 1675; Baumé's (1762) and Sykes', about 1818, have been much employed. Modifications of the apparatus have been invented.

HYDROPATHY, a term applied to the treatment of diseases by cold water, practised by Hippocrates in the 4th century B.C., by the Arabs in the 10th century A.D., and revived by Dr. Currie in 1797. A system was suggested in 1825 by Vincenz Priessnitz, of Grafenberg, in Austrian Silesia. The rational part of the doctrine was understood and

maintained by Dr. Sydenham, before 1689. Priest-nitz died 26 Nov. 1851.

A grand hydropathic establishment at Bushey, Herts, opened, 13 Feb. 1883. Many others exist throughout the kingdom.

HYDROPHOBIA, in man, rabies in animals, M. Pasteur announced his discovery of a method of checking this disease, analogous to vaccination, the system afterwards applied to various diseases.

He operates on monkeys and other animals successfully, May, on dogs, Aug. 1884; on 40 persons 14 Dec. 1885. An international hospital, afterwards termed the Pasteur institute, founded (40,000l. subscribed) May, 1886; opened by president Carnot, 14 Nov. 1888. Out of 726 cases treated, 4 deaths reported 12 April, 1886; 1673 persons treated, 1 May, 1888, to 1 May, 1889. The principle much opposed 1886-7. A British commission for inquiry (sir James Paget, Dr. Burdon Sanderson, and others) appointed 12 April, 1886; visits Paris, and reports confidence in M. Pasteur's treatment, 27 June, 1887. M. Pasteur proposes and verifies other applications of his principles, 1887-8. The book, "M. Pasteur, Histoire d'un Savant," was published in 1883; and an English translation by lady Claud Hamilton in 1885. Reported number of patients by M. Pasteur (he died 28 Sept. 1895) since 1885, 6,950, to 28 June, 1889; 1,830 patients, 7 deaths in 1889; 1,520 patients, 5 deaths, in 1895; 1,308 patients, 4 deaths in 1896; 1,521 patients, 6 deaths in 1897; 1,614 patients, 4 deaths in 1899; 1,321 patients, 8 deaths in 1901; 1,105 patients, 2 deaths in 1902.

The 8th institute in France opened at Lyons, 1 Jan. 1890; many in other countries; one at Kasauli, India, opened 1900, reported very successful,

9 Aug. " 50,000 rupees and 10,000 rupees from sir Chas. Rivas to the Indian Pasteur institute at Kasauli; also Drumbar house from the Punjab government, and other grants, reported 9 Sept. "

The hymns of Dr. Watts (died 1784), of John Wesley (died 1791), and of his brother Charles (died 1788), are used by English churchmen and dissenters. "Hymns, Ancient and Modern," edited by rev. sir Henry Baker, first appeared in 1860. "A Dictionary of Hymnology," edited by the rev. John Julian, D.D., was published Jan. 1892.

ICONOCLASTS (image-breakers). The controversy respecting images (which had been introduced into churches for popular instruction about 300) was begun about 726, and occasioned much disturbance and loss of life in the Eastern Empire. Leo Isauricus published two edicts for demolishing images in churches in that year, and enforced them with great rigour in 736. The defenders of images

were again persecuted in 752 and 761, when Constantine forbade his subjects becoming monks. The worship of images was restored by Irene in 780. This schism was the occasion of the second council of Nice, 787. Theophilus banished all the painters and statuary from the Eastern Empire, 832. The Iconoclasts were finally excommunicated at the 8th general council at Constantinople, 869-870. This controversy led to the separation of the Greek and Latin churches. Many images in churches were destroyed in Scotland and the Netherlands in the 16th century, and in England during the Reformation and the civil war, 1641-8.

IMPOSTORS. The following are among the most extraordinary:—

Aldebert, a Gaul, in 743, pretended he had a letter from the Redeemer, which fell from heaven at Jerusalem; he seduced multitudes to follow him into woods and forests, and to live in imitation of John the Baptist. He was condemned by a council at Rome in 745.
 Gonzalvo Martin, a Spaniard, pretended to be the angel Michael in 1359; he was burnt by the inquisition in Spain in 1360.
 George David, son of a waterman at Ghent, styled himself the son of God, sent into the world to adopt children worthy of heaven; he denied the resurrection, preached in favour of a community of women, and taught that the body only could be defiled by sin; he had many followers; died at Basle, 1556, promising to rise again in three years.

Otrefief, a monk, pretended to be Demetrius the son of Ivan, czar of Muscovy, whom the usurper Boris had put to death; he maintained that another child had been substituted in his place; he was supported by Poland; his success led the Russians to invite him to the throne, and deliver into his hands, Feodor, the reigning czar, and all his family: his imposition discovered he was assassinated in his palace, 1606.

Sabbata Levi, a Jew of Smyrna, amused the Jews and Turks a long time at Constantinople and other places, by personating our Saviour, 1666.

Joseph Smith, see *Mormonites*.

Apparition of our Lady of Salette; the imposture exposed and several persons prosecuted, April, 1846. The superstition revived and flourishing, Aug. 1872.

Pilgrimage of about 20,000 persons to Lourdes, in the Pyrenees, on account of alleged miracles (the virgin was said to have appeared to two girls, 11 Feb. 1858), 6 Oct. 1872; see *France*.

Insurrection of the Mahdi, see *Soudan* 1881 et seq.

An adventurer, who named himself "Comte Blanco," and "prince Louis Marie César of Bourbon, grandson of Ferdinand VII. of Spain," was recognised at Paris in 1869 by queen Isabella and others. Detected by a photographer as his son-in-law. Supported by a rich English widow. Kept a small court at Jurangon near Pau, as a king. Deposed and expelled by the police, he went to Holland and England, and died in London.

IN BRITISH HISTORY.

A man pretending to be the Messiah, and a woman assuming to be the Virgin Mary, were burnt, 1222.

Jack Cade assumed the name of Mortimer; see *Cade*, 1450.

In 1487, Lambert Simmel, tutored by Richard Simon, a priest, supported by the duke of Burgundy, personated the earl of Warwick. Simmel's army was defeated by Henry VII., and he was made a scullion in the king's kitchen.

For Warbeck's imposture in 1492, see *Warbeck*.

Elizabeth Barton, styled the Holy Maid of Kent, spirited up to hinder the Reformation by pretending to inspirations from heaven, foretelling that the king would have an early and violent death if he divorced Catherine of Spain and married Anne Boleyn. She and her confederates were executed at Tyburn, 21 April, 1534.

In 1553 (first year of Mary's reign, after her marriage with Philip of Spain), Elizabeth Croft, a girl 18 years of age, was secreted in a wall, and with a whistle made for the purpose, uttered many seditious speeches against the queen and the prince, and also against the mass and confession, for which she did penance.

William Hacket, a fanatic, personated our Saviour, and was executed for blasphemy, 1501.

Valentine Greatrix, an Irish impostor, who pretended to cure all diseases by stroking the patient: his imposture deceived the credulous, and occasioned very warm disputes in Ireland and England about 1666. Boyle and Flamsteed believed in him.

Dr. Tittus Oates, see *Oates*.

Robert Young, a prisoner in Newgate, forged the hands of the earls of Marlborough, Salisbury, and other nobility, to a pretended association for restoring king James: the lords were imprisoned, but the imposture being detected, Young was fined 1000*l.*, and put in the pillory, 1692. He was afterwards hanged for coining. Three French refugees pretend to be prophets, and raise tumults; convicted as impostors, Nov. 1707.

IMPRESSIONISTES, a name given to artists who aim at producing rapid unstudied effects independent of the canons of art, such as Manet, Duez, and others in France. In England Mr. Whistler exhibited such pictures in 1877, including moonlight scenes, &c., painted in two days, showing great sense of colour. For Mr. Ruskin's criticisms see *Trials*, 1878. The Impressionistes are also characterized as illustrators of their own times by pure art; MM. Manet, Durand, Ruel, Degas, and Renoir, are French examples; they exhibited in London in June, 1882 and since, especially in April, 1889.

IMPRESSMENT OF SEAMEN, affirmed by sir M. Foster to be of ancient practice. The stat. 2 Rich. II. speaks of impressment as a matter well known, 1378. The first commission for it was issued 29 Edw. III. 1355. Pressing, either for the sea or land service, declared to be illegal by the parliament, Dec. 1641, but practised till present times. Impressment was not resorted to in the Russian war, 1854-5.

In Dec. 1798, Mr. Pitt proposed and carried, amid great opposition, resolutions for increased taxes "as an aid for the prosecution of the war" with France.

INDEMNITY BILL, by which the minister of the crown or the government is relieved from the responsibility of measures adopted in extreme and urgent cases, without the previous sanction of parliament. One was passed 19 April, 1801; another to indemnify ministers against their acts during the suspension of the *Habeas Corpus* act, was carried in the commons (principal divisions, 190 to 64); and in the lords (93 to 27), 10 March, 1818. INDEPENDENTS or CONGREGATIONALISTS, hold that each church or congregation is independent of all others in religious matters; that there is no absolute occasion for synods or councils, whose resolutions may be taken for advice, but not as decisions to be peremptorily obeyed; and that one church may advise or reprove another, but has no authority to excommunicate. Robert Brown preached these doctrines about 1585, but, after 32

imprisonments, he eventually conformed to the established church. A church was formed in London in 1593, when there were 20,000 independents. They were driven by persecution to Holland, where they formed several churches; that at Leyden was under Mr. Robinson, often regarded as the author of Independency. In 1616 Henry Jacobs returned to England and founded a meeting-house. Cromwell, himself an independent, obtained them toleration, in opposition to the Presbyterians. The independents published an epitome of their faith, drawn up at a conference at the Savoy, in 1658; and the congregational union of England and Wales formed in 1831, published their "declaration of faith, order, and discipline," in 1833. In 1851 they had 3244 chapels for 1,067,760 persons in England and Wales; in 1902 United Kingdom, 4,873 churches; 3,121 ministers; 1,743,583 sittings, 431,517 church members, 1902. Annual meetings of the union are held; see *Worship*. The first independents in Scotland were the Glasites (*which see*). The first independent church in America was founded by the followers of John Robinson, at Plymouth, New England, in 1620.

INDEXES OF PROHIBITED BOOKS. The Index by which the reading of the Scriptures was forbidden (with certain exceptions) to the laity, was confirmed by a bull of pope Clement VIII. in 1595.

The council of Nice (325) forbade magical books. Pope Paul IV., 1555, began the "Index" published by Pius IV., 1559. The Talmud and heretical books were especially prohibited, causing much dissatisfaction. The Inquisition was engaged in the work, which was organized by the Council of Trent. The Congregation of the Index was instituted and rules laid down. The Indexes are—1. *Prohibitorius*, of books absolutely forbidden to be read; 2. *Expurgatorius*, of books not to be licensed till purged from error. Many of the works of the great authors of France, Spain, Germany, and England, are thus prohibited. On 25 June, 1864, Hugo's "Les Misérables" and other books were added to the number, and many others since.

* On the introduction of the improved (Enfield) musket in the Indian army, greased cartridges had been brought from England. These were objected to by the native soldiers, and the issue of them was immediately discontinued by orders in Jan. 1857. A mutinous spirit however gradually arose in the Bengal native army. In March several regiments were disbanded, followed by others, till in June the army had lost by disbandment and desertion, about 30,000 men. On 5 April, a sepoy, and on 20 April, a jemadar, or native lieutenant, were executed. At the end of May 34 regiments were lost. In April, 85 of the 3rd Bengal native cavalry at Meerut refused to use their cartridges. On 9 May they were committed to gaol. On Sunday, the 10th, a mutiny in the native troops broke out; they fired on their officers, killing col. Finnis and others. They then released their comrades, massacred many Europeans, and fired the public buildings. The European troops rallied and drove them from their cantonments. The mutineers then fled to Delhi (*which see*).

† At the end of June the native troops at the following places were in open mutiny: Meerut, Delhi, Ferozepore, Allyghur, Roorkee, Murdann, Lucknow, Cawnpore, Nussereabad, Neemuch, Hansi, Hissar, Jhansi, Mehidpore, Jallundur, Azimghur, Futteghur, Jaunpore, Barcilly, Shahjehanpore, Allahabad. At the stations printed in italics, European women and children were massacred.—The Relief Fund for the sufferers in India was commenced 25 Aug. 1857. INDIA COMPANY, EAST. The first commercial intercourse of the English with the East Indies was a private adventure of three ships fitted out in 1591. Only one of them reached India; and, after a voyage of three years, the commander, captain Lancaster, was brought home in another ship, the sailors having seized his own; but his information gave rise to a mercantile voyage, and the establishment of a company, whose first charter, in Dec. 1600, was renewed in 1609, 1657, 1661, 1693, and 1744. Its stock in 1600 consisted of 72,000*l.*, when it fitted out four ships. Meeting with success, continued to trade, and India stock sold at 500*l.* or a share of 100*l.* in 1683. East India, Vols. I. and II. 1898.

A new company (the "English") was chartered 5 Sept. 1608, and the old (the "London") suspended from trading for three years; the two were united 1702
 New East India company established 1708
 Privileges of the company continued till 1783 1744
 Affairs of the company were brought before parliament, and a committee exposed a series of intrigues and crime Aug. 1772

As remedial measures two acts passed, (one authorised a loan of 1,000,000*l.* to the company; the other celebrated as the *India bill*) effected most important changes in the constitution of the company and its relations to India. A governor-general was appointed to reside in Bengal, to which the other presidencies were then made subordinate; a supreme court of judicature was instituted at Calcutta: the salary of the governor was fixed at 25,000*l.* per year; that of the council at 10,000*l.* each; and of the chief judge at 8000*l.*; the affairs of the company were controlled; all the departments were re-organised, and all the territorial correspondence was henceforth to be laid before the British ministry June, 1773

Mr. Pitt's bill appointing the Board of Control (which see), passed 18 May, 1784
 The company's charter was renewed for 20 years 1793
 Trade with India thrown open 1813
 Trade to China opened; Charter renewed till 1854 1833
 The government of India was continued in the hands of the company till parliament should otherwise provide 1853

In consequence of the mutiny of 1857, and the disappearance of the company's army, the government of India was transferred to the crown, the Board of Control was abolished, and a Council of State for India instituted by the act 21 & 22 Vict. c. 106, which received the royal assent, 2 Aug. * 1858

The company's political power ceased on 1 Sept., and the queen was proclaimed as Queen of Great Britain and the Colonies, &c., in the principal places in India, amid much enthusiasm 1 Nov. "
 The company to be dissolved, 1 June, 1874, and dividends redeemed, by the "East India Stock Dividend Redemption Act," passed 15 May, 1873
 The EAST INDIA-HOUSE built 1726; enlarged and a new front erected, 1799; sold with the furniture, 1861; pulled down in Sept. and Oct. 1862

* Lord Palmerston brought in a bill for the purpose on 12 Feb., which was accepted by the house on 18 Feb. He resigned on the following day, and the bill dropped. A similar bill was introduced by Mr. Disraeli on 12 March; but many of its details being objected to, it was withdrawn. On lord John Russell's proposition, the house proceeded to consider the matter by way of resolutions; on 17 June, lord Stanley brought in the above mentioned bill, being the third on the subject introduced during the session.

INDIA, COUNCIL OF, established by act of parliament, 2 Aug. 1858, in the place of the board of control (*which see*). It consists of 15 members (salary 1200*l.* a year), eight of whom were appointed by the queen, and seven elected by the directors of the East India company. The members may not sit in parliament. The council met first on 3 Sept. 1858, when lord Stanley, secretary of state for India, presided. The members of the *first* council are recorded below. The larger tribes are the Cherokees (22,000), the Choctaws (18,000), the Creeks (13,550), and the Chickasaws (5000); the Sioux (30,000). A large proportion are in comfortable circumstances, and have schools and churches; other tribes are the Delawares, Sacs, Foxes, Shawnees, Sioux, and Ioways. During the American civil war in 1861, the Choctaws joined the confederates, who permitted two Choctaw delegates to sit in congress; the first being Sampson Folsom and Eastman Loman; but the principal chief of the Cherokees, on 4 May, 1861, issued a proclamation of neutrality, which was maintained with great difficulty. In a war provoked by outrages general Sheridan defeated the Indians, and they surrendered unconditionally Dec. 1868. Negotiations undertaken by the Quakers had no effect, and the war was renewed June, 1869. As a chastisement for murders and other outrages major Baker killed 173 Indians, including women and children, Jan. 1870. In June following a deputation of eminent chiefs was received by the president at Washington, and promises and presents were made to them. INDICTION, a Roman term originally applied to a tribute of corn, paid every fifteen years, and to the time at which it was paid. The first examples in the Theodosian code are of the reign of Constantius II., who died 361.—In memory of the great victory obtained by Constantine over Maxentius, 8 Cal. Oct. 312, the council of Nice ordained that the accounts of years should be no longer kept by the Olympiads, but by the Indiction, which has its epocha 1 Jan. 313. It was first used by the Latin church in 342.

INDIGO, the dye obtained from the woad plant, *isatis tinctoria*, was used by the Egyptians, and other ancient nations; and the processes are described by Pliny. After the passage of the Cape of Good Hope, in 1497, it was gradually superseded by the eastern indigo, got from the *indigofera*. The mention of indigo occurs in English statutes in 1581. Its cultivation was begun in Carolina in 1747. The quantity imported into Great Britain in 1840 was 5,831,269 lbs.; in 1850, 70,482 cwt.; in 1861, 83,109 cwt.; in 1871, 106,307 cwt.; in 1881, 81,088 cwt.; in 1890, 81,854 cwt.; 1893, 66,981 cwt.; 1900, 33,877 cwt.; 1901, 51,359 cwt.

After long-continued experiments, especially by prof. A. Baeyer, the dye has been prepared artificially from its chemical elements in coal tar 1869-80
 Professor H. E. Roscoe, at the Royal Institution, proved that the properties of the artificial and natural indigo were identical 27 May, 1881

INDO-CHINA, a name given to central Asia. The countries under French government or protection are Annam, Cochin China, Cambodia, and Tonquin. Burmah is subject to Great Britain, and Siam is independent, 1893. M. de Lannesson appointed gov.-general (actively aggressive), superseded by M. Armand Rousseau, 29 Dec. 1894; he died, Dec. 1896; succeeded by M. Doumer, Dec. 1896; succeeded by M. Beau, July, 1902.

INDORE, a province of British India; the principal native rulers have been the Mahratta chiefs, named Holkar, rivals of the Scindiahs at Gwalior. Rao Holkar received a grant of territory from the British in 1733. After severe conflicts the Mahratta chiefs were finally quelled in 1818. The town of Indore, founded in 1767, was destroyed by Scindiah after a battle on 14 Oct. 1801. The maharajah Shivaji Rao Holkar died 17 June, 1886. Succeeded by his son, Tuckaji Rao Holkar, who was present at the queen’s jubilee in London in 1887. Indore was visited by the viceroy, the marquis of Lansdowne, 24 Nov. 1891. The maharajah Shivaji Rao Holkar in ill-health, abdicated in favour of his son, Tukoji Rao, aged 12, 31 Jan. 1903. Population, 1881, 1,055,217; 1891, 1,091,689; 1901, 850,690.

INDUCTION of electric currents, discovered by Faraday, and announced in his “Experimental Researches,” published in 1831-2. Ruhmkorff’s magneto-electric induction coil was constructed in 1850. See under *Electricity*.

INDUCTIVE PHILOSOPHY, based on the results of observations and experiments, really *common sense*, is especially expounded by Bacon in the second book of his “*Novum Organon*,” published 1620. Wm. Harvey (1578-1657) endeavoured “to search out the secrets of nature by the way of experiment.” See *Blood*.

INDULGENCES in the early church were the moderation of ecclesiastical punishment. The papal system for the absolute pardon of sin, commenced by Leo. III. about 800, were granted in the 11th century by Gregory VII., and by Urban II., and by others, in the 12th century as rewards to the crusaders. Clement V. was the first pope who made public sale of indulgences, 1313. In 1517, Leo X. published general indulgences throughout Europe, and the resistance to them led to the Reformation.

INFALLIBILITY OF THE POPE, in regard to faith and morals, was decreed by the Vatican Council, and promulgated, 18 July, 1870. The doctrine was much opposed in Germany, and led to the constitution of the church named "Old Catholics," which see. Mr. Gladstone's pamphlets, "The Vatican Decrees in their bearing on Civil Allegiance," published Nov. 1874, and "Vaticanism," in Feb. 1875.

INFANTICIDE, especially female, was very prevalent in barbarous countries. Lord Macartney stated that 20,000 infants were killed annually; it is now gradually decreasing in India. On 12 Nov. 1851, Mr. Raikes induced the Chohan chiefs to agree to resolutions against it, and a great meeting in the Punjab was held for the same purpose, 14 Nov. 1853. Much suspicion was caused in London in 1867 through the deaths of children farmed out to improper persons. The agitation revived, June, 1870. Margaret Waters was convicted of the murder of John Cowen, an illegitimate infant, by poison and neglect, 23 Sept. 1870. She had adopted about 40 children, receiving a few pence as premium; in four years, many had died. John and Catherine Barns, of Tranmere, near Birkenhead, convicted of manslaughter (see *Trials*), 29 Oct. 1879. The Infant Life Protection act passed 25 July, 1872; amended, 1897. Female infanticide prohibited in China about June, 1873. Amelia E. Dyer, a baby farmer, convicted of the murder of infant children, the bodies having been thrown into the Thames at Reading, 22 May; executed, 10 June, 1896. Two women "baby-farmers" executed at Holloway, 3 Feb. 1903.

INFANTRY, foot soldiers; their organisation much improved during the wars of Charles V. and

Francis I., in the 16th century. The British army comprised 99 regiments of regular infantry in 1858, when the Canadians raised a regiment termed the 100th. The number 109, beside the rifle brigade until 1881 included the nine regiments formerly in the pay of the East India company, and several colonial corps. In 1871 the principle of localisation, the linking of battalions, and short service, came into operation, in 1881 the existing 109 regiments and the rifle brigade were reorganised forming 71 territorial regiments of the line, each regiment comprising usually 2 battalions of its own and linked battalions of the militia and volunteers. The army scheme of reorganisation introduced by Mr. Brodric, March 1901, increases the strength of the infantry and raises the number of militia. Marshal Soult (or marshal Bugeaud) said, "The British infantry is the finest in the world: happily there is not much of it." In 1902, 178,361. *Mounted infantry* were largely and successfully employed in the operations of the war in S. Africa, 1899-1902.

INFANTS' RELIEF ACT, passed 7 Aug. 1874, to amend the law relating to contracts made by persons under age.

The powers of wives and widows in respect to the care and training of their children, were somewhat enlarged in 1839, more so in 1873, and very much more by a bill brought in by Mr. James Bryce, read a second time 26 March, 1884. Guardianship of Infants Act passed, 1886.

INFIRMARIES. Ancient Rome had no houses for the cure of the sick; diseased persons were carried to the temple of Æsculapius for cure. Institutions for the accommodation of travellers, the indigent, and sick were founded by the emperor Julian about 362; and infirmaries or hospitals were frequently built to cathedrals and monasteries. The emperor Louis II. caused infirmaries situated on mountains to be visited, 855. In Jerusalem the knights and brothers attended on the sick. There were hospitals for the sick at Constantinople, in the 11th century. The oldest mention of physicians and surgeons established in infirmaries occurs in 1437. *Beckmann*; see *Hospitals*. Parish workhouse infirmaries established, 1867.

INFLUENZA, a name given in Italy about 1741 to an epidemic febrile catarrh with variations, probably known to the ancients.

It prevailed in Europe in 1510, and has since frequently appeared, generally commencing in Russia and thence spreading over the continent. It appeared in Britain in 1762 and frequently since, especially in 1830-1, 1833, 1836-7, and 1847. It appeared at Paris in 1866-7, and at Berlin, 1874-5. In Oct. 1889, it was severe in St. Petersburg, and thence spread over Europe, reaching Great Britain, Canada and the United States N.A., Jan. 1890, causing indirectly the deaths of several eminent persons. In the spring, the

disease was severe in India and Australia. In 1891 the disease was severe in the west of the United States N.A., and in London and other parts of England, and also on the Continent. The disease reappeared in Jan. 1892, in much the same localities. In London the general mortality was much increased, all classes being attacked. The death of the duke of Clarence and Avondale, 14 Jan. 1892, was attributed to pneumonia following influenza. Reports of the epidemic of 1889-90, by Dr. Parsons, issued by government, 1891-3. Moderate outbreak in London, Feb. 1893, chiefly among the upper and middle classes, the marquis of Salisbury, duke of Abercorn, marquis of Londonderry and others, March; many cases autumn and winter, 1893-04; epidemic in London; prevalent in United Kingdom and on the continent, many deaths, Feb.-April, 1895. Epidemic in St. Petersburg and S. Russia, March, 1895. Epidemic in London and home counties, Jan., Feb. 1898; again rife in London and Paris, spring, 1899; again in London and other parts, Jan. 1900.

INFORMERS, upon penal statutes, compounding with defendants without leave of the court, were punishable with fine and pillory, by 18 Eliz. c. 5 (1576). Their share of a penalty was regulated by 2 & 3 Vict. c. 71 (1839).

INGOUR, a river rising in the Caucasus and falling into the Black Sea. Omar Pasha, marching to the relief of Kars, crossed this river on 6 Nov. 1855, with 10,000 men, and attacked the Russians, 12,000 strong, who, after a struggle, retreated with the loss of 400 men. The Turks had 68 killed and 242 wounded. Kars, however, was not saved.

INK. The ancient black inks were composed of soot and ivory black, and Vitruvius and Pliny mention lamp-black; but they had ink of various colours, as red, gold, silver, and purple. Red ink was made of vermilion and gum. **INDIAN INK** was brought from China, and must have been in use by the people of the east from the earliest ages. **INVISIBLE**, or **SYMPATHETIC INKS**, were known at early periods. Ovid (A.D. 2) teaches young women to write with new milk. Receipts for preparing invisible ink were given by Peter Borel, in 1653, and by Le Mort, in 1669. *Beckmann*.

INKERMANN (Crimea). The Russian army (about 40,000) having received reinforcements, and being encouraged by the presence of the granddukes Michael and Nicholas, attacked the British (8000) near the old fort of Inkermann, before daybreak, 5 Nov. 1854. They were kept at bay for six hours till the arrival of 6000 French. The Russians were then repulsed, leaving 9000 killed and wounded. The loss of the allies was 462 killed, 1952 wounded, and 191 missing. Sir George Cathcart, and generals Strangways, Goldie, and Torrens, were among the slain. On 15 Nov. 1855, an explosion of about 100,000 lbs. of gunpowder occurred near Inkermann, and caused great loss of life.

INOCULATION, see *Small Pox*. Lady Mary Wortley Montagu introduced inoculation from small pox to England from Turkey. In 1718 she had her son inoculated at Adrianople with success. She was allowed to have it first tried in England on seven condemned criminals, 1721; and in 1722 two of the royal family were inoculated. The practice was preached against by many of the bishops and clergy until 1760. Dr. Mead practised inoculation very successfully up to 1754, and Dr. Dimsdale of London, inoculated Catherine II., empress of Russia, in 1768. Of 5964 who were inoculated in 1797-99, only three died. An inoculation hospital was established in 1746. *Vaccine* inoculation was introduced by Dr. Jenner, 21 Jan. 1799; he had discovered its virtue in 1796, and had been making experiments during the intermediate three years. Inoculation was forbidden by law in 1840. Dr. A. E. Wright's typhoid vaccine elaborated in 1896, introduced in the army, reported, June, 1899; satisfactory results obtained at Ladysmith, 1895-1900, reported, 5 Sept. 1902; M. Haffkine's system of inoculation against cholera and plague used successfully in India, see *Bombay*. Dr. Kitasato's method of treating dysentery by serum inoculation very successful, 1895-99. INQUESTS, see *Coroner*.

INQUISITION or **HOLY OFFICE**. Pre-vious to Constantine (306), heresy and spiritual offences were punished by excommunication only; but shortly after his death capital punishments were added, and inquisitors were appointed by Theodosius, 382. Priscillian was put to death in 384 by the emperor Maximus. Justinian decreed the doctrine of the four holy synods as to the holy scrip-

tures and their canons to be observed as laws, 529; hence the penal code against heretics. About 800 the power of the western bishops was enlarged, and courts were established for trying and punishing spiritual offenders, even with death; the punishment being termed in Spain *auto-da-fé*, "an act of faith." In the 12th century many heresies arose, and during the crusades against the Albigenses, Gregory IX., in 1233, established by rules the inquisitorial missions sent out by Innocent III., 1210-15, and committed them to the Dominicans. Pietro da Verona (styled Peter Martyr), the first inquisitor who burnt heretics, assassinated by an accused gonfalonier, 6 April, 1252, was canonized.

INSOLVENCY. The first insolvent act was passed in 1649, but it was of limited operation; a number of acts of more extensive operation were passed at various periods, and particularly in the reign of George III. The benefit of the act known as the Great Insolvent Act, was taken in England by 50,733 insolvents from the time of its passing in 1814, to March, 1827, a period of thirteen years. Since then the acts relating to insolvency have been several times amended. Persons not traders, or being traders whose debts are less than 300*l.*, might petition the court of bankruptcy, and propose compositions, and have *pro tem.* protection from all process against their persons and property, by 6 Vict. c. 116 (1842). In 1861, by a new bankruptcy act, the business of the insolvent debtors'

court was transferred to the court of bankruptcy; and a number of imprisoned debtors were released in Nov. 1861. See *Bankrupts*.

INTERDICT or **ECCLESIASTICAL CENSURE**, seldom decreed in Europe till the time of Gregory VII. 1073, but often afterwards. When a prince was excommunicated, all his subjects retaining their allegiance were excommunicated also, and the clergy were forbidden to perform any part of divine service, or any clerical duties, save the baptism of infants, and taking the confessions of dying penitents. In 1170, pope Alexander put all England under an interdict; and when king John was excommunicated in 1208, the kingdom lay under a papal interdict for six years. England was put under an interdict, on Henry VIII. shaking off the pope's supremacy, 1535; and pope Sixtus V. published a crusade against queen Elizabeth of England in 1588; see *Excommunication*.

INTEREST, see *Usury*. The word interest was first used in an act of parliament of the 21st James I. 1623, wherein it was made to signify a lawful increase by way of compensation for the use of money lent. The rate fixed by the act was 8*l.* for the use of 100*l.* for a year, in place of usury at 10*l.* before taken. The Commonwealth lowered the rate to 6*l.* in 1651; confirmed in 1660; and by an act of the 13th of queen Anne, 1713, it was reduced to 5*l.* The restraint being found prejudicial to commerce was somewhat relaxed in 1830, and was totally removed by 17 & 18 Vict. c. 90 (1854).

INTERIM OF AUGSBURG, a decree issued by the emperor Charles V. in 1548, with the view of attempting to reconcile the Catholics and Protestants, in which it entirely failed. It was revoked in 1552. The term *Interim* has been applied to other decrees and treaties.

INVESTITURE OF ECCLESIASTICS, was a cause of discord between the pope and temporal sovereigns in the middle ages; and led to actual war between Gregory VII. and the emperor Henry IV. 1075-1085. Henry V. gave up the right, by treaty, Feb. 1111; but other sovereigns resolutely refused to concede it.

INVOCATION OF THE VIRGIN AND SAINTS to intercede with God. This practice of the Romish church has been traced to the time of Gregory the Great, 593. The Eastern church began (in the 5th century) by calling upon the dead, and demanding their suffrage as present in the divine offices.

IODINE (from the Greek *iōdēs*, violet-like), was discovered by M. De Courtois, a manufacturer of saltpetre at Paris in 1812, and investigated by M. Clement, 1813. On the application of heat it rises in the form of a dense violet-coloured vapour, easily evaporates, and melts at 220 degrees: it changes vegetable blues to yellow, and a seven-thousandth part converts water to a deep yellow colour, and starch into a purple.

IONA, ICOLMKILL, or HI, one of the Hebrides. About 565 St. Columba founded a monastery here, which flourished till the 8th and 9th centuries, when it was frequently ravaged by the Norsemen. Other religious bodies afterwards were formed here, and the isle was long esteemed sacred.

IONIA (Asia Minor). About 1040 B.C. the Iones, a Pelasgic race, emigrated from Greece, and settled here and on the adjoining islands. They built Ephesus, Smyrna, and other noble cities. They were conquered by the great Cyrus about 548 B.C.; revolted 504, but were again subdued. After the victories of Cimon, Ionia became independent and remained so till 387, when it was once more subjected to Persia. It formed part of the dominions of Alexander and his successors; was annexed to the Roman empire, 133, and conquered by the Turks.—Ionia was renowned for poets, historians, and philosophers. The "Antiquities of Ionia" were published by Chandler, Revett, and Pars, 1769-1840, and the Dilettanti Society, 1840-1881.

IONIAN ISLANDS (on W. coast of Greece). Corfu, the capital, Cephalonia, Zante, Ithaca, Santa Maura, Cerigo, and Paxo. They were colonised by the Iones, and partook of the fortunes of the Greek people; were subject to Naples in the 13th century, and in the 14th to Venice.

* The list of Irish sovereigns, printed in previous editions, has been omitted. The Irish writers carry their succession of kings very high. The learned antiquary, Thomas Innes, of the Scots' College of Paris, expressed his wonder that "the learned men of the Irish nation have not, like those of other nations, yet published the valuable remains of their ancient history whole and entire, with just translations, in order to separate what is fabulous, and only grounded on the traditions of their poets and bards, from what is *certain* history." "O'Flaherty, Keating, Toland, Kennedy, and other modern Irish historians, have rendered all uncertain, by deducing their history from the Deluge with as much assurance as they deliver the transactions of Ireland from St. Patrick's time."—Anderson.

IRON. The Greeks ascribed the discovery of iron to themselves, and referred glass to the Phœnicians. Moses relates that iron was wrought by Tubal-Cain (Gen. iv. 22). Swedish iron is very celebrated, and Dannemora is the greatest mine of Sweden.—The weekly publication "*Iron*," which began 18 Jan. 1873, was a continuation of the "*Mechanics' Magazine*" (started 1823), and was combined with "*Industries*," in 1893. See *Steel*.

The Carron iron works in Stirlingshire, where there is much ironstone and coal, were established mainly by the exertions of dr. John Roebuck, 1759-60; this was the beginning of the great Scotch iron-works.

The operation termed *puddling*, and other very great improvements in the manufacture, invented by Mr. Henry Cort, about 1781, who did not reap the due reward of his ingenuity. He died in 1800.

One of the finest, thickest, and heaviest armour-plates ever rolled in the world was pressed into the very perfection of a manufactured armour-plate at the great Atlas Ironworks of sir John Brown and Co., Sheffield.

The size of it when in the furnace was a little over 20 feet long by about 4 feet broad and 21 inches thick. Its rough weight was over 21 tons. It was built up in the furnace before being rolled by five mould plates, each 3 inches thick, and one solid plate of 6 inches. This mass when reduced by intense heat to the consistency of dough, was withdrawn from the furnace, and in the course of less than a quarter of an hour was passed between the enormous rollers many times, was reduced to a compact slab of iron of a uniform thickness of 15 inches, and then passed on to its bed to cool till fit for having its rough edges planed down to the proper dimensions, 6 Sept. 1867. Armour-plate 24 inches thick rolled at same works, Oct. 1876.

IRON CROSS, an order of knighthood established by Frederick William III. of Prussia, 10 March, 1813, to honour patriotic bravery in the war against France; was revived by William I. in the Franco-Prussian war, and awarded by him to his son for his victory at Wissembourg, 4 Aug. 1870. About 40,000 persons were decorated in 1870-71.

IRON CROWN (of Italy), of gold and precious stones, set in a thin ring of iron, said to have been forged from a nail of Christ's cross, was made by order of Theudelinde for her husband, Agilulf, king of the Longobards, 591. She presented it (to

be kept) to the church at Monza. Charlemagne was crowned with this crown, and after him all the emperors who were kings of Lombardy; Napoleon I. at Milan, on 26 May, 1805; put it on his head, saying, "*Dieu me l'a donnée; gare à qui y touchera.*" (God has given it to me; woe to him who touches it.) The crown was removed from Monza to Mantua by the Austrians, on 23 April, 1859. After the peace of Vienna in 1866, the crown was given up to general Menabrea on 11 Oct., and presented to king Victor Emmanuel, at Turin, on 4 Nov. The order of the "Iron Crown of Italy," instituted by Napoleon 26 May, 1805, was abolished in 1814, but revived by the emperor of Austria 12 Feb. 1816; see *Gotha*. The order of the Crown of Italy was instituted by king Victor Emmanuel 20 Feb. 1868.

IRON-MASK, THE MAN WITH THE.* A mysterious prisoner in France, wearing a mask and closely confined under M. de St. Mars, at Pignerol (1679), Exilles (1681), Sainte Marguerite (1687), and at the Bastille (1698), where he died 19 Nov. 1703. He was of noble mien, and was treated with profound respect; but his keepers had orders to despatch him if he uncovered. M. de St. Mars himself always placed the dishes on his table, and stood in his presence.

IRRIGATION, practised in the east and in Egypt from the most remote ages. It was strenuously advocated for India by sir A. Cotton and others at the Social Science Congress at Manchester, Oct. 1866. In 1865 acts were passed for utilising London sewage in the irrigation of grass land, and the results are said to be generally favourable. The subject was much discussed, Aug. 1873. A method of producing artificial rain from ponds by means of steam-power, patented by Isaac Brown, of Edinburgh, was tried by Mr. Coleman, at Stoke Park, and reported successful; see *Sewage, and Intermittent Filtration, Madras* (1895), *Egypt, Nile*.

IRUN (a frontier village of Spain). On 16 May, 1837, the British auxiliary legion under general Evans, marched from St. Sebastian to attack Irun (held by the Carlists), which after a desperate resistance was carried by assault, 17 May.

IRVINGITES, followers of Edward Irving, † now called the "Holy Catholic Apostolic Church."

* The following conjectures have been made as to his identity:—An Armenian patriarch forcibly carried from Constantinople (who died ten years before the mask); the duc de Vermandois, son of Louis XIV., reported to have perished in the camp before Dixmude; the duc de Beaufort, whose head is reported to have been taken off before Candia; James, duke of Mommouth, executed on Tower-hill; a son of Anne of Austria, queen of Louis XIII., either by cardinal Mazarin, or by the duke of Buckingham; the twin brother of Louis XIV. (a conjecture received by Voltaire and others); Fouquet, an eminent statesman in the time of Louis XIV.; and a count Matthioli, secretary of state to Charles II., duke of Mantua. M. Delort and the right hon. Agar Ellis (afterwards lord Dover) endeavoured to prove Matthioli to have been the person. The mask, it seems, was not made of iron; but of black velvet, strengthened with whalebone, and fastened behind the head with a padlock.

† Edward Irving was born 15 Aug. 1792, and was engaged as assistant to Dr. Chalmers, at Glasgow, in 1819. In 1823 he attracted immense crowds of distinguished persons to his sermons at the Scotch church, Hatton-garden. A new church was built for him in Regent-square in 1827. Soon after, he propounded new

They use a liturgy (framed in 1842, and enlarged 1853), and have church officers named apostles, angels, prophets, &c. ISTHMIAN GAMES received their name from the isthmus of Corinth, where they were observed: their institution is mythically attributed to Sisyphus of Corinth, 1326 B.C., and to Theseus in honour of Neptune about 1234. The games, which were solemnly kept every third year, were discontinued at the destruction of Corinth by Lucius Mummius, 146 B.C. The games were revived by Julius Cæsar, 60 B.C.; and by the emperor Julian, A.D. 362, and ceased in 396, when Corinth was sacked by the Goths.

The following terms are often used with reference to certain periods in the history of Italian literature and art.

1. *Trecento* (three hundred), from the birth of Dante (1265) to the death of Boccaccio (1375), which two, with Petrarca, are styled "the triumvirate of the Trecento."
2. *Quattrocento* (four hundred), from 1375 to the revival of Italian literature by Lorenzo de' Medici in the 15th century. During this period Latin was revived, to the prejudice of Italian.
3. *Cinquecento* (five hundred), from about 1480 to 1590. A sensuous style of art, founded on the heathen mythology, began to prevail.
4. *Seicento* (six hundred), from 1590 to 1700. The bad taste which prevailed during this period is ascribed to the influence of the Spaniards and the Jesuits throughout Italy. *Seicentisti* is a term of reproach.

The *Trecento* and *Cinquecento* were the most flourishing periods.

ITALIAN REPUBLIC was the name given to the remodelled Cisalpine republic. Napoleon Bonaparte, president, Jan. 1802.

ITALY, a name mythically derived either from *Italus*, an early king, or *italus*, a bull calf. The invading Pelasgians from Greece, and the Aborigines (Umbrians, Oscans, and Etruscans), combined, form the Latin race, still possessing the southern part of Europe. The history of Italy is soon absorbed into that of Rome, founded 753 B.C. In the middle ages it was desolated by intestine wars and the interference of the German emperors; since then, Spain, France, and Germany struggled for the possession of the country, which has been divided among them several times. Spain, which predominated in Italy during the 16th and 17th centuries, yielded to the house of Austria at the beginning of the 18th. The victories of Bonaparte in 1797-8 changed the government of Italy; but the Austrian rule was re-established at the peace in 1814. In 1848 the Milanese and Venetians revolted and joined Piedmont, but were subdued by Radetzky; see *below*. The hostile feeling between Austria and Piedmont gradually increased till war broke out in April, 1859. The Austrians were defeated, and the kingdom of Italy, comprising Piedmont, Sardinia, Lombardy, Tuscany, Modena, Parma, the Romagna, Naples, and Sicily was re-established, 17 March, 1861, by the Italian parliament (consisting of 443 deputies from 59 provinces). On 29 Oct., 1861, the internal government was re-organized; the 59 provinces were placed under prefects, subject to four directors-general. War with Austria was declared 18 June, 1866; and on 3 Oct., peace was signed at Vienna, and Venetia was ceded to Italy; see *below* for the events. The settlement of the kingdom of Italy was consummated by the occupation of Rome as the capital, 1870. The "Itineraria Antonini," embracing the whole Roman empire, usually ascribed to the emperor Aurelius Antoninus, and his successors, A.D. 138-180, was probably based upon the survey made by order of Julius Cæsar, 44 B.C. JACOBINS, a name given to the Dominicans in France, because their first convent was the hospital of the pilgrims of St. James (Jacobus), at Paris, at the request of pope Honorius III. (1216-27). The Jacobin club (first called "club Breton") consisted of about forty gentlemen and men of letters, who met in the hall of the Jacobin friars, at Paris, in Oct. 1789, to discuss political and other questions. Similar societies were instituted in all the principal towns of the kingdom. The club was closed 11 Nov. 1794.

JACOBITES, a Christian sect, so called from Jacob Baradaeus, a Syrian, about 541; see *Euty-chians*.—The partisans of James II. (Latin, Jacobus II.) were so named after his expulsion from England in 1688-9.

A sentimental revival of Jacobitism appeared in England in 1801, the "White Rose League" having been formed. Here, according to sir Robert Wilson, were massacred 3800 prisoners by Bonaparte; but this is doubted. Jaffa suffered by an earthquake in Jan. 1837, when it is said that 13,000 persons were killed.

JAVA, a large island in the Eastern Archipelago, is said to have been reached by the Portuguese in 1511, and by the Dutch in 1595. The latter, who now possess it, built Batavia, the

capital, about 1619; see *Batavia*. The atrocious massacre of 20,000 of the unarmed natives by the Dutch, sparing neither women nor children, to possess their effects, took place in 1740. The island capitulated to the British, 18 Sept. 1811. The sultan was dethroned by the English, and the hereditary prince raised to the throne, in June, 1813. Java was restored to Holland by treaty in 1814, and given up in 1816. The English promoted free labour instead of forced; but the Dutch reverted to the old system, and in 1830 abolished free labour, introducing the "culture system," by which the government controls the cultivation of the land and buys the produce at its own price. In Aug. 1860, the Swiss soldiers here, aided by the natives, mutinied, but were soon reduced, and many suffered death. The diminished prosperity of Java led to warm discussions in the Dutch chamber in 1866.

The valuable "History of Java," by sir T. Stamford Raffles (successful governor 1811-16; his life by Mr. Demetrius Boulger, published 1892), was published 1817.

Java has a great many volcanoes, and has frequently been devastated by eruptions and earthquakes; those of 5 Jan. 1699, 31 Oct. 1876, and 10 June, 1877, were very destructive.

Java and neighbouring isles desolated by a series of violent eruptions from about two-thirds of its 46 volcanoes, beginning with Krakatoa, casting up immense quantities of lava, mud, ashes, and fragments of rocks, darkening the air for about 50 square miles. Mountains were split up, some disappeared, and many new craters were formed. Rumbling noises heard 25 Aug., violent eruptions of Krakatoa 26 Aug. There was much submarine disturbance, and an immense "tidal wave" destroyed Anjer and other places, 27 Aug. The lighthouses in the straits of Sunda were swallowed up, and new volcanic peaks appeared, rendering navigation highly dangerous. Loss of life estimated at 35,000, 25-28 Aug. Great atmospheric, oceanic, and electrical disturbances for thousands of square miles. See under *Sura*, 1883.

A committee of the Royal Society issued a report on the eruption, Oct. 1882.

The Prussians were defeated, losing nearly 20,000 killed and wounded, and nearly as many prisoners, and 200 field pieces; the French lost 14,000 men. Napoleon advanced to Berlin, and issued the Berlin decree (*which see*).

JENKINS' EAR. In 1731, an English merchant-vessel was boarded by a Spanish guardship, and the captain, Robert Jenkins, cruelly used, his wounded ear being torn off. JERSEY. The chief island of the Channel archipelago (which includes Guernsey, Sark, Alderney, &c.), formerly held by the Romans in the 3rd and 4th centuries after Christ—Jersey being termed *Cæsarea*. The isles were captured by Rollo, and thus became an appanage of the duchy of Normandy, and were united to the crown of England by his descendant, William the Conqueror. The inhabitants of the Channel Islands preferred to remain subjects of king John, at the period of the conquest of Normandy by Philip Augustus, and while retaining the laws, customs, and (until lately) the language of their continental ancestors, have always remained firm in their allegiance to England. Almost every war with France has been

characterised by an attack on Jersey, the most formidable of which, under the baron de Rullecour, was defeated by the English garrison and Jersey militia, commanded by major Pierson, 6 Jan. 1781. Mr. J. Bertrand Payne, in his "Armorial of Jersey," and his "Gossiping Guide," has exhaustively treated the general and family history of the island. Jersey became a place of refuge for M. Rouher, Baroche, Drouyn de Lhuys, and other distinguished French imperialists, Sept. 1870. Some of the Trappists and other monks expelled from France, settle in Jersey, 1880-1. JERVIS'S ACTS, 11 & 12 Vict., cc. 42, 43 (1848), relate to legal proceedings against criminals.

JESTER is described as "a witty and jocose person, kept by princes to inform them of their faults, and of those of others, under the disguise of a waggish story." Several of our kings, particularly the Tudors, kept jesters. Rahere, the founder of St. Bartholomew's priory, West Smithfield, London, 1133, is said to have been a court jester and minstrel. There was a jester at court in the reigns of James I. and Charles I., but we hear of no licensed jester afterwards.

JESUITS. The society or company of Jesus, was founded by Ignatius Loyola, a page to Ferdinand V. of Spain, subsequently an officer in his army, and afterwards canonised. Having been wounded in both legs at the siege of Pampeluna, in 1521, he devoted himself to theology, and renounced the military for the ecclesiastical profession. He dedicated his life to the Blessed Virgin as her knight; made a pilgrimage to the Holy Land, and on his return laid the foundation of his society at Paris, 16 Aug. 1534. He presented his institutes, in 1539, to pope Paul III., who made many objections; but Ignatius adding to the vows of chastity, poverty, and obedience, a fourth of implicit sub-

mission to the holy see, the institution was confirmed by a bull, 27 Sept. 1540. The number of members was not to exceed sixty, but that restriction was taken off by another bull, 14 March, 1543; and popes Julius III., Pius V., and Gregory XIII. granted many privileges. Loyola died 31 July, 1556. Francis Xavier, and other missionaries, the first brethren, carried the order to the extremities of the habitable globe, but it met with great opposition in Europe, particularly in Paris: see *Paraguay* and *Jansenists*. The order still exists in many European states contrary to the laws.

JESUIT'S BARK, called by the Spaniards fever-wood, from the cinchona or chinchona tree, discovered, it is said, by a Jesuit, about 1535 (and used by the order). Its virtues were not generally known till 1633, or 1638, when it cured of fever the wife of the viceroy (Chinchona) at Peru, hence termed *pulvis comitissæ*. It was sold at one period for its weight in silver, and was introduced into France in 1649; and is said to have cured Louis XIV. of fever when he was dauphin. It came into general use in 1680, and sir Hans Sloane introduced it here about 1700. The cinchona plant, largely planted in the Neilgherry hills, India, in 1861, is said to be thriving greatly, and also in Ceylon; see *Quinine*.

JEWISH DISABILITIES, see under *Jews*, 1269-1867.

JEWISH ERA AND CALENDAR. The Jews usually employed the era of the Seleucideæ until the 15th century, when a new mode of computing was adopted. They date from the creation, which they consider to have been 3760 years and 3 months before the commencement of our era. To reduce Jewish time to ours, subtract 3761 years. The Jewish year consists of either twelve or thirteen months, of 29 or 30 days. The civil year commences with the month Tisri, immediately after the new moon following the autumnal equinox; the ecclesiastical year begins with Nisan.

REFORMED OF BRITISH JEWS. In 1840 and 1841 a congregation was formed by Spanish and German Jews, for simplifying the ritual observances. Their West London Synagogue in Burton-street, opened 1 Jan. 1842; removed to Margaret-street, Regent-street, 1849; succeeded by a magnificent synagogue, in Upper Berkeley-street, consecrated . . . 22 Sept. 1870

The Reformed Jews recognise the authority of the Old Testament or written law only, and reject the oral law embodied in the Talmud, which is accepted by the Orthodox or Rabbinical Jews.

JEWISH REFORM UNION, to provide services in English for Jews to whom the ordinary synagogue service does not appeal, formed 1901.

JEYNES or JAINS, a sect of Buddhists, in India, dating from the 9th century. They do not recognise a creator, but believe matter to be eternal, and refrain from destroying life, considering animals to be sacred.

Their discipline is very strict; a trial for defamatory of character by a libel, accusing certain members of breaking the laws of caste, lasted 34 days at Moorshedabad, and cost above 100,000 rupees. The verdict was for the defendants . . . March, 1891

JEYPOOR, one of the four principal Rajpoot states of India, tributary to the British. The new capital, Jeypoor, termed the Paris of India, was built in the last century. The Maharajah, friendly to the British, by whom he was supported, died in Sept. 1880; he nominated a successor, installed 30 Sept. 1880. Pop. 1901, 159,550.

JEZREELITES, New and Latter House of Israel, was founded by James Jershom Jezreel (James White), who died 1885. They asserted that the Gospel is sufficient for the salvation of the soul, but for the salvation of the body the Law must be added. Jezreel's widow, "Queen Esther," died in 1888; since then the sect has become almost extinct. Their headquarters were at Gillingham, near Chatham.

JIDDAH. *See Jeddah.*

JIHAD, or religious warfare against unbelievers, although inculcated in the Mohammedan law, was prohibited by the Sheeahs, and only permitted by the Sunnites in some cases; certainly not with any nation with whom they had made a treaty of peace. The Jihad was preached by fanatics in India in 1871, and prohibited by government.

A jihad against the Russians was announced by the sheikh-ul-Islam, at Constantinople, about 28 May, 1877

JINGO PARTY, a name given (in 1878) to persons who preferred war with Russia to submission to her aggressive policy. A popular song said—

"We don't want to fight, but, by jingo if we do,
We've got the ships, we've got the men, and we've got
the money too."
"By jingo" occurs in Jarvis's "Don Quixote," and the "Vicar of Wakefield."

JOAN OF ARC, the maid of Orleans, born at Domremy, imagined that she had a divine commission to expel the English, who under the earl of Salisbury were besieging Orleans. Charles VII. entrusted her with the command of some French troops, and she raised the siege, and entered Orleans with supplies, 29 April, 1429; and the English, who were before the place from 12 Oct. preceding, abandoned the enterprise 8 May following. She captured several towns in the possession of the English, whom she defeated in a battle near Patay, 18 June, 1429. She was wounded several times herself, but never shed any blood with her own hand. She was taken at the siege of Compiègne, 25 May, 1430; and, after a trial, burnt for a witch at Rouen, 30 May, 1431. A statue of Joan of Arc, the work of the late princess Marie of France, was inaugurated at Orleans, 13 Sept. 1851, and the 435th anniversary of the deliverance of the city was celebrated there on 14 May, 1865. The anniversary of her death celebrated, 30 May, 1878. See *Patay*. Her statue at Beaufort unveiled 9 Aug.; at Domremy 26 Aug. 1891; at Chignon, 14 Aug. 1893; at Rheims, 15 July, 1896; at St. Pierre-le-Montier, 24 Aug. 1902. JOHN DOE AND RICHARD ROE, names well known, as standing pledges for the prosecution of suits. In early times real and substantial persons were required to pledge themselves to answer to the crown for an amercement or fine set upon the plaintiff, for raising a false accusation, if he brought an action without cause, or failed in it; and in 1285, 13 Edw. I. sheriffs and bailiffs were, before they made deliverance of the distress, to receive pledges for pursuing the suit, and for the return of the property, if return were awarded. But this becoming a matter of form, the fictitious names of Doe and Roe were used until the form was declared to be no longer necessary by the Common Law Procedure Act, 1852.

JOHN O'GROAT'S HOUSE, an ancient house formerly situated on Duncan's Bay Head, the most northerly point of Great Britain, deriving its name from John of Groat, or Groot, and his brothers, originally from Holland, said to have settled here about 1489.

The house was of an octagon shape, being one room, with eight windows and eight doors, to admit eight members of the family, the heads of different branches of it, to prevent their quarrels for precedence at table. Each came in by this contrivance at his own door, and sat at an octagon table, at which, of course, there was no chief place or head.

JUGGERNAUT, correctly *Jagannâth*, or "Lord of the World," one of the incarnations of Krishna, is an idol formed of an irregular pyramidal black stone, with two rich diamonds to represent eyes; the nose and mouth are painted vermilion. The number of pilgrims that visit the god is stated at 1,200,000 annually. Formerly some were crushed by the wheels of the car (so lately as Aug. 1864); a great many never returned, and, to the distance of fifty miles, the way was strewn with human bones. The temple of Juggernaut has existed about 800 years. The state allowance to the temple was suspended by the Indian government in June, 1851. The festival was kept, June, 1872. Twelve persons were said to be killed by accident, Aug. 1873. The festival of 1878 reported a failure.

JUGURTHINE WAR. Jugurtha murdered his cousin, Hiempsal, king of Numidia, and usurped his throne, 118 B.C. He gave Adherbal a share in the government, but killed him in 112. Cæcilius Metellus was first sent against him, and defeated him in two battles; and Marius brought him in chains to Rome to adorn his triumph, 106 B.C., where he was put to death in 104. This war has been celebrated by the pen of Sallust.

JULIAN ERA AND YEAR, see *Calendar*. *Julian period* (by Joseph Scaliger, about 1583), a term of years produced by the multiplication of the lunar cycle 19, solar cycle 28, and Roman indiction 15. It consists of 7980 years, and began 4713 years before our era. It has been employed in computing time to avoid the ambiguity attendant on reckoning any period antecedent to our era, an advantage in common with the mundane eras used at different times. By subtracting 4713 from the Julian period, our era is found; if before Christ, subtract the Julian period from 4714.

JULIERS, a Prussian province; made a duchy in 1356; became the subject of contention on the extinction of the ruling family in 1609; was allotted to Neuburg in 1659; seized by the French in 1794; and ceded to Prussia in 1815.

JUNIUS'S LETTERS began in the *Public Advertiser*, 21 Jan. 1769.

They have been ascribed to Mr. Wm. Burke, Mr. William Gerard Hamilton, commonly called Single-speech Hamilton, John Wilkes, Mr. Dunning (afterwards lord Ashburton), serjeant Adair, the rev. J. Rosenhagen, John Roberts, Charles Lloyd, Samuel Dyer, general Lee, the duke of Portland, Hugh Boyd, lord George Sackville, earl Temple, and sir Philip Francis. The last-named is generally considered to have been the author. Junius said, "I am the depository of my own secret, and it shall perish with me." The work of Mr. Chabot and hon. E. T. B. Twisleton was considered decisive of sir Philip Francis being Junius, May, 1871. "Junius is as much unknown as ever."—*Athenæum*, 8 Sept. 1888.

Sale of manuscript papers of sir Philip Francis, reported to be inconclusive respecting "Junius," June, 1892; the sir Philip Francis correspondence sold for 430*l.* 2*s.* 27 Nov. 1897 Mr. Charles Knight in his description of the letters in his "Popular History of England," 1860, asserts that they abound in gross exaggeration and venomous abuse. Mr. H. R. Francis, in his "Junius" *Revealed*, published March, 1864, maintains that his grandfather (Sir Philip) was Junius. The *Athenæum* (17, 24 March, 1894, and Mr. Fraser Rae, in 6 papers, 19 Feb. 1898) considers the book unsatisfactory. Mr. Fraser Rae's paper, "New Light on Junius," and facsimiles of handwriting, appeared, *Athenæum*, 8, 15 April, 6 May, 1899.

JUNKER PARTY (*Junker*, German for *young noble*), a term applied to the aristocratic party in Prussia, which came into power under Otto von Bismarck-Schönhausen, appointed prime minister, 9 Oct. 1862. Their political organ is the *Kreuz-Zeitung*.

JUNO, the planet discovered by M. Harding, of Lillienthal near Bremen, 1 Sept. 1804. Its distance from the sun is 254 millions of miles, and it accomplishes its revolution in four years and 128 days, at the rate of nearly 42,000 miles an hour.

JUNONIA, festivals in honour of Juno (the Greek *Hera*, or *Hērē*) at Rome, and instituted 431 B.C.

JUNTO, a name given to the leaders of the whig party in the reigns of William III. and Anne (1689-1714); the chiefs were admiral Edward Russell, John Summers, Charles Montague, and Thomas Warton.

JUPITER, known as a planet to the Chaldeans. The discovery of the satellites, incorrectly attributed to Simon Mayr (Marius) in 1609, was made by Galileo on 8 Jan. 1610; see *Planets*. JUPITER'S moons were all invisible on 21 Aug. 1867; a very rare occurrence. A fifth very small satellite was discovered by Mr. Barnard at the Lick observatory, 9 Sept. 1892. Dark spots observed, 1901-2.—JUPITER AMMON'S temple in Libya was visited by Alexander, 332 B.C. Cambyses' army sent against it perished miserably, 525 B.C. The Greek Zeus was the Roman Jupiter, contracted from *Diouis pater*, the father of Heaven.

JURIDICAL SOCIETY was established in Feb. 1855, and opened with an address by sir R. Bethell on 12 May following.

JURIES. Trial by jury was introduced into England during the Saxon heptarchy, mention being made of six Welsh and six Anglo-Saxon freemen appointed to try causes between the English and Welsh men of property, and made responsible, with their whole estates real and personal, for false verdicts. *Lambard*. By most authorities their institution is ascribed to Alfred about 886, which is not historical. In *Magna Charta*, juries are insisted on as the great bulwark of the people's liberty. When either party is an alien born, the jury shall be one half denizens, and the other half aliens, stat. 28 Edw. III. 1353. By the common law a prisoner upon indictment or appeal might challenge peremptorily thirty-five, being under three juries; but a lord of parliament, and a peer of the realm, who is to be tried by his peers, cannot challenge any of his peers. An act for the trial by jury in civil cases in Scotland was passed in 1815. An act to consolidate and amend the laws relating to juries in Ireland was passed 4 Will. IV. 1833. A new act respecting juries, regulating their payment, &c., was passed 9 Aug. 1870. The clause respecting their payment was rescinded by act passed 28 Feb. 1871. Laws respecting juries in Ireland amended, 14 Aug. 1871. New Juries bill brought in by the attorney-general, sir John Coleridge, Feb. 1873. Special juries bill passed, May, 1898. Juries are summoned to assist the coroner in investigating the causes of sudden or violent death.—**GRAND JURIES** (of not less than 12 or more than 23 persons), decide whether sufficient evidence is adduced to put the accused on trial.—The constitution of 1791 established the trial by jury in France.—An imperial decree abolished trial by jury throughout the Austrian empire, 15 Jan. 1852.—Trial by jury began in Russia, 8 Aug. 1866; in Spain, 1880—A true bill for libel granted against alderman sir F. Truscott in his absence, who was honourably acquitted, 18 Sept. 1879.

COERCION OF JURIES.—It is said that in early times the suitors used to feed the jury empanelled in their action, and hence arose the common law of denying sustenance to a jury after the hearing of the evidence. A jury may be detained during the pleasure of the judge if they cannot agree upon a verdict; and may be confined without meat, drink, or fire, candle light excepted, till they are unanimous.—Some jurors have been fined for having fruit in their pockets, when they were withdrawn to consider of their verdict, though they did not eat it. *Leon Dyer*, 137. A jury at Sudbury not being able to agree, and having been some time under duress, forcibly broke from the court where they were locked up, and went home, 9 Oct. 1791. *Phillips*. In Scotland, Guernsey, Jersey, and France, juries decide by a majority; in France, since 1831, a majority of two-thirds is required.

"**JUSTE MILIEU**" (moderation and conciliation to parties), according to Louis-Philippe (in 1830), is the only principle of government which can secure the welfare of France.

JUSTICE GENERAL, Lord, Scotland, see *Court of Session*.

JUSTICES OF THE PEACE are unpaid local magistrates, invested with extensive powers in minor cases, but subject to supersession and punishment by the King's Bench for an abuse of their authority. They were first nominated by William I. in 1076. *Stow*. Persons termed conservators of the peace in each county were appointed by

1 Edw. III. c. 2, 1327; and their duties were defined in 1360. The form of a commission of the peace settled by the judges, 23 Eliz. 1580. *Hawkins*; see *Eyre*.

JUSTICES, LORDS, were appointed by English sovereigns to govern during their absence; especially by William III., George I. and George II. (1695-1760). George III. never left England. In Sept. 1821, when George IV. went to Hanover, lords justices were appointed, the duke of York being the first. No such appointment was made during the reign of queen Victoria, it having been decided by the law authorities in 1843 to be unnecessary when the queen went to France. Ireland is always ruled by lords justices when the lord-lieutenant is out of the country, or his office is vacant.—Two *lords justices of the court of appeal in chancery*, having rank next after the chief baron of the exchequer, were appointed from 1 Oct. 1851, salary 6000*l*. For recent changes see *Appeal and King's Bench*.

JUSTICIARS. In ancient times the kings of England used to hear and determine causes; but it

is declared by law that if the king cannot determine every controversy, he, to ease himself, may divide the labour among persons, men of wisdom and fearing God, and out of such to appoint judges. The Saxon kings of England appointed a judge after this manner, who was, in fact, the king's deputy. After the Norman conquest, the person invested with that power had the style of *Capitalis Justicie*, or *Justiciarius Anglia*. These judges continued until the erection of the courts of king's bench and the common pleas. The first justiciars of England were Odo, bishop of Bayeux, and William Fitz-Osborne, in 1067; and the last was Philip Basset, in 1261, or Hugh le Despencer, 1263 (Henry III). Authorities vary.

These compilations have since been called, collectively, the body of civil law (*Corpus Juris Civilis*).

The siege lasted from 18 June to 28 Nov. 1855. The sufferings of the garrison were very great from cholera and want of food. The Russians made a grand assault on 29 Sept. but were repulsed with the loss of above 6000 men, and the garrison were overcome by famine alone. *Sandwith*. Kars was restored to Turkey, Aug. 1856.

On accepting general Williams' proposal for surrendering, general Mouravieff said:—"General Williams, you have made yourself a name in history; and posterity will stand amazed at the endurance, the courage, and the discipline which this siege has called forth in the remains of an army. Let us arrange a capitulation that will satisfy the demands of war, without disgracing humanity." KEEPER OF THE KING'S CONSCIENCE. The early chancellors were priests, and out of their supposed moral control of the king's mind grew the idea of an equity court in contradistinction to the law courts. A bill in chancery is a petition

through the lord chancellor to the king's conscience for remedy in matters for which the king's common law courts afford no redress. The keeper of the king's conscience is therefore now the officer who presides in the court of chancery; see *Chancellor* and *Lord Keeper*.

KEEPER (LORD) OF THE GREAT SEAL OF ENGLAND differed only from the lord chancellor in that the latter had letters patent, whereas the lord keeper had none. Richard, a chaplain, is said to have been the first keeper under Ranulph, in 1116. Foss says that the distinction between the two offices was made 1232. The two offices were made one by 5 Eliz. 1593. *Cowell*; see *Chancellor*. The office of lord keeper of the great seal of SCOTLAND was established in 1708, after the union.

After the battle of Evesham and defeat and death of Simon de Montfort, by Prince Edward (afterwards Edward I.) 1265, Montfort's younger son, Simon, shut himself up in Kenilworth castle, which sustained a siege for six months against the royal forces of Henry III., to whom it at length surrendered. KHERSON, an ancient Dorian colony (deriving its name from Chersonesus, a peninsula), came under the sway of the great Mithridates about 120 B.C.; and afterwards under that of Rome, A.D. 30. It continued important, and its possession was long disputed by the Russians and Greeks. Justinian II. cruelly treated it. It was taken by Vladimir, grand-duke of Russia in 988, when he and his army received Christian baptism, and he married the emperor's sister Anne, who obtained Kherson as her dowry. The city was destroyed by the Lithuanians; and the Turks found it deserted when they took possession of the Crimea in 1475. What ancient remains the Turks and Tartars had spared, the Russians conveyed away for the construction of Sebastopol.

An expedition sent against it by the emperor Nicholas of Russia in 1839 perished through the rigour of the climate in 1840. In 1875, colonel F. A. Louis-Philippe I. was invited to the monarchy under the style of the "king of the French" 9 Aug. 1830

The emperors of Germany, in order that their eldest sons might be chosen their successors in their own life-time, politically obtained them the title of "*king of the Romans*." The first emperor so elected was Henry IV. 1055

Richard, brother of Henry III. of England, was induced to go to Germany, where he disbursed vast sums under the promise of being elected next emperor; he was elected "*king of the Romans*" (but failed in succeeding to the imperial crown) 1256

The title of "king of France" assumed, and the French arms quartered, by Edward III., in right of his mother, 1340; discontinued by Geo. III. 1802

The style "king of Rome" was revived by Napoleon I. for his son, born 20 March, 1811
The title "king of Italy" conferred on Victor Emmanuel II. of Sardinia by Italian parliament 17 March, 1861
Edward VII., by the Grace of God of the United Kingdom of Great Britain and Ireland and of the British dominions beyond the seas, king, defender of the Faith, emperor of India, proclaimed 4 Nov. 1901

KING-OF-ARMS: three for England,—Garter, Clarenceux, and Norroy; Lyon king-at-arms for Scotland, and Ulster for Ireland. These offices are very ancient: Clarenceux is so named from Lionel, third son of Edward III., the sovereign who founded the order of the Garter; see *Garter*. Lionel having by his wife the honour of Clare, was made duke of Clarence; which dukedom afterwards escheating to Edward IV., he revived the office of Clarence king-at-arms. The office of Bath king-of-arms, created in 1725, was changed to Gloucester king-of-arms, 14 June, 1726. Ulster was substituted, it is said, in lieu of Ireland king-of-arms, by Edward VI., 1553; but the monarch himself named it as a new institution.

KING'S ADVOCATE, a title of the Lord Advocate for Scotland. First appointed by James III. about 1480. King's Advocate was first entitled *Lord Advocate* in 1598. See under *Advocate*.

KING'S BENCH, or QUEEN'S BENCH, COURT OF, obtained its name from the king sometimes sitting here on a high bench, and the judges, to whom the judicature belongs in his absence, on a low bench at his feet. This court in ancient times was called *Curia Domini Regis*. The court of queen's bench sat for the last time, July, 1875, (see *Supreme Court*). Chief justice Cockburn received the freedom of London, 9 March, 1876; said to be the first case of the kind. The Queen's Bench Division of the high court of justice till 1881 consisted of the chief justice of England and four judges. The chief justice of the king's bench division is now chief justice of England; the exchequer and common pleas division were abolished in 1881.

KING'S BENCH PRISON (Southwark), near the site of one of the oldest prisons of London, long used for the confinement of debtors. Here, it is said, prince Henry (afterwards Henry V.) was committed by Justice Gascoigne. The prison was burnt down by the London rioters, 7 June, 1780; see *Gordon's No-Popery Riots*. It was rebuilt in 1781, and contained about 230 rooms. Formerly, the debtors were allowed to purchase the liberties, to enable them to have houses or lodgings without the walls, or to purchase day-rules, to go out of the prison under certain regulations. The rules included St. George's Fields, &c. A consequence of the bankruptcy act, 1861, was the release of many insolvent debtors; and an act was passed in 1862 "for discontinuing the queen's prison and removal of the prisoners to Whitecross-street prison." The buildings, used as a military prison, were pulled down and the site sold, 1879-80.

KING'S BOOK, or "Valor Ecclesiasticus temp. Henrici VIII." the return of the commissioners appointed in 1534 to value the first fruits and tenths granted to the king. An edition by John Bacon ("Liber Regis") was published in 1780, and it was printed for the Record Commission, 1810-25.

KING'S BOUNTY, an annual grant of 1000*l.* for the Maunday royal alms distributed by the lord high almoner, began early in the reign of George III. and continued till 10 George IV. 1829. See *Maunday*.

KING'S COLLEGES, see *Aberdeen* and *Cambridge*. King's College, London, incorporated 14 Aug. 1829, and opened 8 Oct. 1831. It was incorporated with the university of London in 1837. The hospital was founded in 1839. The dining-hall and kitchen fell in, through drainage, 8 a.m., 6 Dec. 1869; no lives were lost. In consequence of the withdrawal of the government grant, on account of denominational tests, the council of the college issues an appeal to the public for additional funds (50,000*l.*), 24 Jan. 1891: new buildings of the school at Wimbledon opened by the duke

of Cambridge, 6 July, 1899. The Christian Knowledge Society votes 5,000*l.*, payable in instalments, 4 Dec. 1894. The government annual grant of 1,700*l.* was restored irrespective of tests, 1 April, 1896. New laboratories opened by lord Lister, 30 Oct. 1900. The council passes a resolution (22-2) abolishing religious tests, theology excepted, 13 June, 1902; an appeal for endowment issued at a meeting, 19 Nov. 1902. Rev. A. C. Headlam, principal (April 1903), in succession to Dr. Robertson, consecrated bp. of Exeter.

KING'S COUNSEL, the first under the degree of serjeant was sir Francis Bacon, made so, *honoris causa*, without patent or fee, in 1604, by James I. The first modern king's counsel was sir Francis North, afterwards lord keeper, in 1663.

KING'S COUNTY (Ireland), formed out of confiscated property, and so named from Philip, king of Spain, the husband of queen Mary of England, in 1556.

KING'S CROSS MARKET, N. London, opened 7 Aug. 1868; did not succeed.

KINGSDOWN'S ACT, 24 & 25 Vict. c. 114 (1861) relates to wills.

KING'S EVIL (scrofula), formerly supposed to be cured by the king's touch; the first being Edward the Confessor, in 1058. In the reign of Charles II. 92,107 persons were touched; and, according to Wiseman, the king's physician, they were nearly all cured! Queen Anne officially announced in the *London Gazette*, 12 March, 1712, her intention to touch publicly. The custom was dropped by George I., 1714.

KING'S LYNN, see *Lynn Regis*.

KING'S PROCTOR, the name formerly given to a class of practitioners in the Admiralty and Ecclesiastical courts. The king's proctor is the official, now the solicitor to the treasury, who intervenes to oppose a petition for divorce if collusion or fraud are suspected.

KINGSTON, see *Hull*.—**KINGSTON**, Jamaica, was founded in 1603, after the great earthquake in 1692 which destroyed Port Royal; it was constituted a city, 1802. An awful fire here ravaged a vast portion of the town, and consumed 500,000*l.* of property, 8 Feb. 1782; another fire in 1843; another great fire; town nearly destroyed; estimated loss about 3,000,000*l.*, 5 deaths announced, 11 Dec. 1882. See *Mansion House*. The bishopric was established in 1856; see *Jamaica*.

KINGSTON TRIAL. The duchess of Kingston was arraigned before the lords in Westminster-hall, on a charge of bigamy, having married first, capt. Hervey, earl of Bristol, and next, during his lifetime, Evelyne Pierrepont, duke of Kingston, 15-22 April, 1776. She was found guilty, but, on pleading the privilege of peerage, the punishment of burning in the hand was remitted, and she was discharged on paying the fees.

KINGSTOWN (Dublin). The harbour here was commenced in June, 1817. The name was

changed from Dunleary in compliment to George IV., who here embarked for England at the close of his visit to Ireland, 3 Sept. 1821. Kingstown railway from Dublin opened 17 Dec. 1834.

KISSING the hands of great men was a Grecian custom. Kissing was a mode of salutation among the Jews, 1 *Samuel* x. 1, &c. The "kiss of charity," or "holy kiss," commanded in the Scriptures (*Romans* xvi. 16, &c.), was observed by the early Christians, and is still recognised by the Greek church and some others. Kissing the pope's foot (or the cross on his slipper) began with Adrian I. or Leo III. at the close of the 8th century.

KIT-KAT CLUB, of above thirty noblemen and gentlemen, instituted in 1703, to promote the Protestant succession. The duke of Marlborough, sir R. Walpole, Addison, Steele, and Dr. Garth were members. It took its name from its dining at the house of Christopher Kat, a pastry-cook in King-street, Westminster.

KNEELING. The knee was ordered to be bent at the name of Jesus (see *Philippians* ii. 10), about the year 1275, by the order of the pope. The ceremony of a vassal kneeling to his lord is said to have begun in the 8th century.

KNIGHTS. The word knight is derived from the Saxon *Knicht*, a servant (*i.e.*, servant to the king, &c.). The institution of the Roman knights (*Equites* or horsemen, from *equus*, a horse), is ascribed to Romulus, about 750 B.C., when the curie elected 300. Knighthood was conferred in England by the priest at the altar, after confession and consecration of the sword, during the Saxon heptarchy. The first knight made by the sovereign with the sword of state was Athelstane, by Alfred, A.D. 900. *Spelman*. The custom of ecclesiastics conferring the honour of knighthood was suppressed in a synod held at Westminster in 1100. *Ashmole's Institutes. Salmon*. On the decline of the empire of Charlemagne, all Europe being reduced to a state of anarchy, the proprietor of every manor became a petty sovereign; his mansion was fortified by a moat, and defended by a guard, and called a castle. Excursions were made by one petty lord against another, and the women and treasure were carried off by the conqueror. At length the owners of rich fiefs associated to repress these marauders, to make property secure, and to protect the ladies; binding themselves to these duties by a solemn vow, and the sanction of a religious ceremony. Cervantes' "*Don Quixote*," a satire on knight-errantry, was published in 1605;

KÖNIGGRÄTZ (Bohemia). Near here was fought the decisive battle between the Austrians commanded by marshal Benedek, and the Prussians commanded by their king William I., 3 July, 1866. Prince Frederick Charles halted at Kammenitz on Monday, 2 July, his troops commenced their march at midnight, and the first shot was fired about 7:30 a.m. 3 July. The attack began at Sadowa (after which the battle is also named) about 10 o'clock, and a desperate struggle ensued, the result appearing uncertain, till the army of the crown prince of Prussia arrived about 12:30. When Chlum, which had been taken and lost seven times by the Prussians, was taken for the eighth time, the fate of the day was decided; and the retreat of the Austrians, at first orderly, became a hasty disastrous flight. About 400,000 men were engaged in this battle, one of the greatest in modern times. The Austrians are said to have lost 174 guns, about 40,000 killed and wounded, and 20,000 prisoners. The Prussians lost about 10,000 men. The victory gave the supremacy in Germany to Prussia, unity to North Germany, and Venetia to Italy; and led to the legislative independence of Hungary.

Several others were tried and executed by commissioner Forsyth soon after. For this severity Mr. Cowan was ordered to be dismissed, and Mr. Forsyth removed to another station, April, 1872. The Kooka leaders claim 800,000 followers; but the probable number is about one-tenth.

Its general aim was to unite the professors of idolatry and the Jews and Christians in the worship of one God (whose unity was the chief point inculcated), under certain laws and ceremonies, exacting obedience to Mahomet as the prophet. The leading article of faith preached is compounded of an eternal truth and a necessary fiction, namely, that there is only one God, and that Mahomet is the apostle of God. *Gibbon*. The Koran was translated into Latin in 1143; into French, 1647; into English by Sale, 1734; and into other European languages, 1763 *et seq.* It is a rhapsody of 6000 verses, divided into 114 sections; see *Mahometanism*, &c.

By direction of the American minister at Constantinople, captain Ingraham, of the American sloop *St. Louis*, demanded his release; but having heard that the prisoner was to be clandestinely transported to Trieste, he demanded his surrender by a certain time, and prepared to attack the Austrian vessel on 2 July; Koszta was then given up. The masters and mistresses of manor-houses, in former times, served out bread to the poor weekly; and were therefore called *Lafords* and *Lef-days*—signifying *bread givers* (from *hlaf*, a loaf): hence Lords and Ladies. LAKE DWELLINGS contain relics of the stone, iron, and bronze ages. Herodotus (about 450 B.C.) described the Pæonians as living on platforms in Lake Prasias. Similar relics discovered in lake Constance, March, 1882; they have also been discovered in Britain and various parts of Europe, Africa, and South America; they are now considered to be evidence of a stage in human progress. The artificial fortified islands termed "Crannoges" discovered in some Irish lakes are attributed to the 9th and 10th centuries. They have been frequently used as places of refuge. *Artificial lake*, see under *Liverpool*, 1881 *et seq.*

The tower of the church was erected about 1375; and other parts of the edifice in the 15th century. Simon of Sudbury, archbishop of Canterbury, was killed here by the followers of Wat Tyler, who attacked the palace, burnt the furniture and books, and destroyed the registers and public papers, 14 June, 1381. The domestic portion of the palace was greatly enlarged for archbishop Howley (who died 1848), by Mr. Blore, at an expense of 52,000l. LAMMAS-DAY, the 1st of August, one of our four cross quarter-days of the year. Whitsuntide was the first, Lammas the second, Martinmas the third, and Candlemas the last; and such partition of the year was once equally common with the present divisions of Ladyday, Midsummer, Michaelmas, and Christmas. Some rents are yet payable at each of these quarterly days in England, and very generally in Scotland. *Lammas* probably comes from the Saxon *hlammasse*, loaf mass, because formerly upon that day our ancestors offered bread made of new wheat. Anciently, those tenants that held lands of the cathedral church of York were by tenure to bring a lamb alive into church at high mass.

LAMPETER COLLEGE (Cardiganshire), was founded by bishop Burgess in 1822, and incorporated 1828. Henry James Prince, founder of the Agapemone (*which see*), was one of the revivalist Lampeter brotherhood, instituted among the students here about 1836.

LAMPS. The earthen lamp of Epictetus the philosopher sold after his death for 3000 drachmas. Lamps with horn sides said to be the invention of Alfred. London streets were first lighted with oil-lamps in 1681, and with gas-lamps in 1814. A lamp "constructed to produce neither smoke nor smell, and to give considerably more light than any

lamp hitherto known," was patented by M. Aimé Argand in 1784, and was brought into general use in England early in the nineteenth century. On his principle are founded the lamps invented by Carcel about 1803, and since 1825, the moderator lamps of Levasseur, Hadrot, and Neuburger. See *Safety Lamp*. Paraffin oil and naphtha spirit are now much used in lamps. The Water Safety Lamp invented by Mr. Devoll, was tried and approved 2 June, 1890. The flame is extinguished by the water if the lamp is overturned. The Kitson oil lamp, in which petroleum is burnt as gas, used successfully in Portland-place, May, 1901. See *Petroleum*.

LANCASTERIAN SCHOOLS, based on a system of education by means of mutual instruction, devised by Joseph Lancaster about 1796, were not much patronised till about 1808. The system led to the formation of the British and Foreign School society, in 1805, whose schools are unsectarian, and use the Bible as the only means of religious instruction. Lancaster was accidentally killed at New York in 1838.

LANCET, a weekly medical journal, established and edited by Thomas Wakley, surgeon (afterwards coroner for Middlesex and M.P. for Finsbury), first published 3 Oct. 1823. LANGUAGE must either have been revealed originally from heaven, or the fruit of human invention. The latter opinion is embraced by Horace, Lucretius, Cicero, and most of the Greek and Roman writers; the former by the Jews and Christians, and many modern philosophers. Some suppose Hebrew to have been the language spoken by Adam; others say that the Hebrew, Chaldee, and Arabic are only dialects of the original tongue. "And the whole earth was of one language and of one speech" (*Genesis xi. 1*). * George I. in 1724, and George II. in 1736, appointed regius professors of modern languages and of history to each of the universities of England.

The original European languages were thirteen, viz.: Greek, Latin, German, Slavonian, spoken in the east; Welsh; Biscayan, spoken in Spain; Irish; Albanian, in the mountains of Epirus; Tartarian; the old Illyrian; the Jazygian, remaining yet in Liburnia; the Chaucian, in the north of Hungary; and the Finnic, in east Friesland.

From the Latin sprang the Italian, French, Spanish, and Portuguese.

The Turkish is a mixed dialect of the Tartarian.

From the Teutonic sprang the present German, Danish, Swedish, Norwegian, English, Scotch, &c.

There are 324 known languages, or rather dialects, in the world. Of these, 937 are Asiatic; 587 European; 276 African; and 1624 American languages and dialects. *Adehung*.

In 1861 and 1862 professor Max Müller lectured on the "Science of Language" at the Royal Institution, London. He divides languages into three families:—

I. **ARYAN** (in Sanskrit, *noble*).

Laon surrendered to the Germans 9 Sept. 1870. As the last man of the garde mobile left the citadel, a French soldier, in contravention of the capitulation, blew up the powder magazine, causing great destruction to the town and fortress. The grand-duke William of Mecklenburg-Schwerin was bruised, and 95 German riflemen and 300 French garde mobiles were killed or wounded; general Therenin Du Hame, the commander, was wounded. The French attributed the explosion to accident.

LA PEROUSE'S VOYAGE. In 1785 La Perouse sailed from France for the Pacific, with the *Boussole* and *Astrolabe* under his command, and was last heard of from Botany Bay, in March, 1788. One constructed by Dr. Türk was greatly modified, in 1857, by Dr. Czermak, who exhibited its successful action in London in 1862. A similar apparatus is said to have been constructed by Mr. John Avery, a surgeon in London, in 1846. The British Laryngological and Rhinological Association was founded in 1888.

LATERAN, a church at Rome, dedicated to St. John, "the mother of all the churches," was originally a palace of the Laterani, a Roman family, and was given to the bishops of Rome by Constantine, and inhabited by them till their removal to the Vatican in 1377. Eleven councils have been held there.

LATHE. The invention is ascribed to Talus, a grandson of Dædalus, about 1240 B.C. Pliny ascribes it to Theodore of Samos, about 600 B.C. Great improvements have been made in recent times.

LATHOM-HOUSE (Lancashire), was heroically defended for three months against the parliamentarians, by Charlotte, countess of Derby. She was relieved by prince Rupert, 27 May, 1644. The house was, however, surrendered 4 Dec. 1645, and dismantled.

LATIN LANGUAGE, a member of the Aryan family, and one of the original languages of Europe, from which sprang the Italian, French, and Spanish; see *Latium*. A large portion of our language is derived from the Latin. It ceased to be spoken in Italy about 581; and was first taught in England by Adelmus, brother of Ina, in the 7th century. The use of Latin in law deeds in England gave way to the common tongue about 1000; was revived in the reign of Henry II.; and again was replaced by English in the reign of Henry III. It was finally discontinued in religious worship in 1558, and in conveyances and in courts of law in 1731 (by 4 Geo. II. c. 25). A corrupt Latin is still spoken in Roumelia. The foreign pronunciation of Latin (*a*, ah; *e*, a; *i*, e, &c.) was adopted in English universities and many schools about 1875-6. For "Latin name," see *Latium*.

LATITAT, an ancient writ, directing the sheriff to apprehend persons to be brought before the king's bench court, had its name from its being supposed that the person was lying hid, and could not be found in the county to be taken by bill. The writ was abolished by the Uniformity of Process act, 23 May, 1832.

LATITUDE. First determined by Hipparchus of Nice, about 162 B.C. It is the extent of the earth or the heavens, reckoned from the equator to either pole. Maupertuis, in 1737, in latitude 66°20 measured a degree of latitude, and made it 69,493 miles. Swanberg, in 1803, made it 69,292. At the equator, in 1744, four astronomers made it 68°7'32; and Lambton, in latitude 12, made it 68°7'43. Mudge, in England, made it 69°148. Cassini, in France, in 1718 and 1740, made it 69°12; and Biot, 68°7'69; while a recent measurement in Spain makes it but 68°6'3—less than at the equator, and contradicts all others, proving the earth to be an oblate spheroid (which was the opinion of Cassini, Bernouilli, Euler, and others), instead of a prolate spheroid; see *Longitude*.

LAW'S BUBBLE. John Law, of Edinburgh (born 1681), was made comptroller-general of the finances of France, upon the strength of a scheme for establishing a bank, and an East India and a Mississippi company, by the profits of which the national debt of France was to be paid off. See *Mississippi*. He first offered his plan to Victor Amadeus, king of Sardinia, who told him he was not powerful enough to ruin himself. The French ministry accepted it; and in 1716, he opened a bank in his own name, under the protection of the duke of Orleans, regent of France, and the excluded rich subscribed for shares both in the bank and the companies. In 1718 Law's was declared a royal bank, and the shares rose to upwards of twenty-fold the original value; so that, in 1719, they were worth more than eighty times the amount of all the current specie in France. In 1720 this fabric of false credit fell to the ground, spreading ruin throughout the country. Law died in poverty at Venice in 1729.—*The South Sea Bubble* in England occurred in 1720; see *South Sea*.

LAZZARONI (from *lazzaro*, Spanish for a pauper or leper), a term applied by the Spanish viceroys to the degraded beings in Naples, half-clothed and houseless. No man was born a lazzaro; and he who turned to a trade ceased to be one. The viceroy permitted the lazzaroni to elect a chief with whom he conferred respecting the imposts on the goods brought to the markets. In 1647, Masaniello held the office, and made an insurrection; see *Naples*. In 1793, Ferdinand IV. enrolled several thousands of lazzaroni as pikemen (spontoneers), who generally favoured the court party; on 15 May, 1848, they were permitted, on the king's behalf, to commit fearful ravages on the ill-fated city.—*Colletta*.

LEAP-YEAR or **BISSEXTILE**, originated with the astronomers of Julius Cæsar, 46 B.C. They fixed the solar year at 365 days, 6 hours, comprising, as they thought, the period from one vernal equinox to another; the six hours were set aside, and at the end of four years, forming a day, the fourth year was made to consist of 366 days. The day thus added was called intercalary, and was placed a day before the 24th of February, the sixth of the calends, which was reckoned *twice*, hence called *bissextile* or *twice sixth*. This added day with us is Feb. 29th; see *Calendar*. This arrangement makes the year nearly three minutes longer than the astronomical year: to obviate this, 1700, 1800, and 1900 were not leap-years, but 2000 will be one; see *Calendar* and *Year*.

LEARNING AND **THE ARTS** flourished among the Greeks, under Pisistratus, 537 B.C., and especially under Pericles, 444 B.C.; and with the Romans at the commencement of the Christian era, under Augustus. The Greek refugees caused their revival in Italy, particularly after the taking of Constantinople by the Turks in 1453, and the invention of printing shortly before,—the period of the *Renaissance*. Leo X. and his family (the *Medici*) greatly promoted learning in Italy, in the 16th century; when literature revived in France, Germany, and England; see *Literature*, and authors under *Greek*, *Latin*, *English*, and other languages.

LEATHER was very early known in Egypt and Greece, and the thongs of manufactured hides were used for ropes, harness, &c., by all ancient nations. The Gordian knot was made of leather

thongs, 330 B.C. A leather cannon was proved at Edinburgh, fired three times, and found to answer, 23 Oct. 1778. *Phillips*. The duty on leather imposed 1697, produced annually in England, 450,000*l.* and in Ireland about 50,000*l.* It was abolished, 29 May, 1830. Many bankruptcies were declared in the leather trade, in the autumn of 1860 in England. In the case of Lawrence, Mortimore, and Co., enormous fraudulent dealings in bills were disclosed. A plan for making artificial leather out of cuttings, &c., was made known in 1860.—*Leather cloth* (invented by Messrs. J. R. & C. P. Crockett, of Newark, U.S., and patented in 1849) is unbleached cotton coated with a mixture of boiled linseed oil and turpentine, and coloured. The Leather-cloth company, London, successors to Messrs. Crockett, was established, 1859. LECTURES. Those on Physic were instituted by Dr. Thomas Linacre, of the College of Physicians (founded by Henry VIII.) about 1502. *Clinical* lectures, at the bed-side of the patients in hospitals are said to have been given (by Dr. John Rutherford) in Edinburgh, about 1748; in Dublin, about 1785; in London, by sir B. C. Brodie (1813-17). Mr. G. Macilwain, about 1824, gave surgical clinical lectures in connection with a dispensary. The political lectures of Thelwall, commenced in Jan. 1795, were interdicted by an act of parliament. In the autumn of 1857 and since, many distinguished noblemen and gentlemen lectured at mechanics' institutes. An act passed in 1835 prohibited the publication of lectures without the consent of the lecturers. See *Gresham College*, *Boyle's Lectures*, *Royal and London Institutions*, *Trials*, 1887, &c.

The impost was increased several times subsequently, particularly in 1805, 1808, and 1845. In 1853 the legacy duty was extended to landed or real property. Further changes were made in 1881, 1888, 1889; the duty was replaced in 1894 by the "Estate duty," *which see*, also *Succession Duty Act*, and *Wills*. John Camden Neild, an eccentric miser, died 30 Aug. 1852, bequeathing about 250,000l. to the queen.

LEGHORN, *Livorno*, Tuscany, a mere village in the 15th century, owes its prosperity to the Medici family. It suffered dreadfully by an earthquake in 1741; and was entered by the French army, 27 July, 1796, but the British property had been removed. It was held by the French 1796-9 and retaken, 1800. It was unsuccessfully attacked by the British and Italian forces in Dec. 1813. The Austrians took this city from the insurgents, 12, 13 May, 1849, and quelled a slight insurrection, July 6, 1857. In June, 1857, above 60 persons were killed at the theatre, through an alarm of fire; see *Tuscany and Italy*. Population, 1890, 104,960; 1901, 93,505.

When Hannibal was in Italy, 216 B.C., the legion consisted of 5200 soldiers; and under Marius, in 88 B.C., it was 6200 soldiers besides 700 horse. There were ten, and sometimes as many as eighteen, legions kept at Rome. Augustus had a standing army of 45 legions, together with 25,000 horse and 37,000 light-armed troops, about 5 B.C.; and the peace establishment of Adrian was thirty of these formidable brigades. A legion was divided into ten cohorts, and every cohort into six centuries, with a vexillum, or standard, guarded by ten men. The peace of Britain was protected by three legions. See *Thundering Legion*.

The honour was conferred on many British subjects who distinguished themselves in the Russian war, 1854-6, and in the Paris exhibitions of 1855, 1867, 1878 and 1889. The palace and offices were burnt by the communalists, 23 May, 1871. The Legion comprised upwards of 54,000 members in 1887. The alleged traffic in decorations caused much excitement, Oct. 1887; council censured by the chamber, resigns, 16 July; plans for re-organisation proposed, Oct.; gen. He was also an eminent sculptor. The first husband of the duchess of Kent, prince Emich of Leiningen, died 4 July, 1814.

LEINSTER, a kingdom in 1167, now one of the four provinces of Ireland. The abduction of Devorgilla, wife of O'Ruare, a lord of Connaught, by Dermot king of Leinster in 1152, is asserted to have led to the landing of the English and the subsequent conquest. The province of Leinster gave the title of duke to Schomberg's son in 1690. The title became extinct in 1719, and was conferred on the family of Fitzgerald in 1766.

Here took place, on 16, 18, 19 Oct. 1813, "the battle of the nations," between the French army and its allies, commanded by Napoleon (160,000), and the Austrian, Russian, and Prussian armies (240,000 strong). The French were beaten chiefly owing to 17 Saxon battalions, their allies, turning upon them in the heat of the engagement. 80,000 men perished on the field, of whom more than 40,000 were French, who also lost 65 pieces of artillery, and many standards. The victory was followed by the capture of Leipsic, of the rear guard of the French army, and of the king of Saxony and his family. The 50th anniversary was celebrated 18 Oct. 1863. LEPROSY, a skin disease described in *Leviticus* xiii. (B.C. 1490), which prevailed in ancient times throughout Asia. It has now almost disappeared from Europe. It chiefly affected the lower classes, yet occasionally proved fatal to the very highest personages. Robert Bruce of Scotland died of leprosy in 1329. A hospital for lepers was founded at Granada, by queen Isabella of Castile, about 1504, and a large number of leper houses were founded in Britain. Dr. Edmondson met with a case in Edinburgh in 1809.

The great increase of leprosy in the Sandwich Islands compelled the government to isolate the lepers, and large numbers were transported to Molokai, where they endured much suffering. Since 1873 Father Joseph Damien (de Venster), R. C. Belgian missionary, devoted his whole life most successfully to their general relief, and finally died of their disease, aged 49, 10 April, 1889 (succeeded by Father Wendolin). Other missionaries, male and female, are continuing his labours.

LEVANT (the East), a term applied to Greece, Turkey, Asia Minor, &c. Levant companies, in London, were established in 1581, 1593, and 1605.

LEVELLERS, a fanatical party in Germany, headed by Muncer and Storck in the 16th century, who taught that all distinctions of rank were usurpations on the rights of mankind. At the head of 40,000 men, Muncer commanded the sovereign princes of Germany and the magistrates of cities to resign their authority; and on his march his followers ravaged the country. The landgrave of Hesse at length defeated him at Frankenhäusen, 15 May, 1525; 7000 of the enthusiasts fell in the battle, and the rest fled; their leader was taken and beheaded at Mulhausen. The English "Levellers," powerful in parliament in 1647, were put down by Cromwell in 1649, and their leader Lilburn was tried and acquitted. At the period of the French revolution some Levellers appeared in England. A "Loyal Association" was formed against them by John Reeves, Nov. 1792.

LEVELS. The great Level of the Fens is a low-lying district of about 2000 square miles, in Lincolnshire, Huntingdonshire, Cambridgeshire, and Norfolk, said to have been overflowed by the sea during an earthquake, 368. It was long afterwards an inland sea in winter, and a noxious swamp in summer, and was gradually drained—by the Romans, the Saxons, and especially by the monks during the reigns of the Plantagenet kings. One of the first works on a large scale was carried out by Morton, bishop of Ely, in the reign of Henry VII. A general drainage act was passed by the advice of lord Burghley, in 1601, but little work was done till the reign of James I., who, in 1621, invited over the great Dutch engineer, Cornelius Vermuyden, to assist in the general drainage of the country. After completing several great works, Vermuyden agreed (in 1629) to drain the "Great Level." He was at first prevented from proceeding with his undertaking through a popular outcry against foreigners; but eventually, aided by Francis, earl of Bedford, in spite of the great opposition of the people, for whose benefit he was labouring, he declared his great work complete in 1652. He also reclaimed much valuable land at Axholme, in Lincolnshire, 1626-30, and many Dutch and French protestants settled here about 1634; and a few of their descendants still remain.—There are the Middle, Bedford, South, and North Levels.

The drainage of the Great Level employed the talents of Rennie (about 1807), and of Telford (1822), and of other eminent engineers.

The Middle Level commission cut through certain barrier banks, and replaced them by other works 1844

LIBEL. By the Roman laws of the Twelve Tables, libels which affected the reputation of another were made capital offences. In the British law, whatever renders a man ridiculous, or lowers a man in the opinion and esteem of the world, is deemed a libel. "The greater the truth the greater the libel," the well-known law maxim of a high authority, is now disputed; see *Trials*, 1788, 1790, 1792, 1803, 1808 *et seq.*, 1863, 1882 *et seq.*; and (note) *Patents and Times*.

LICHFIELD (Staffordshire). The see of Mercia (at Lichfield) was founded about 656; removed to Chester, 1075; to Coventry, 1102. In 1121 Robert Peche was consecrated bishop of Lichfield and Coventry. By an order in council, Jan. 1837, the archdeaconry of Coventry was added to the see of Worcester, and Dr. Samuel Butler became bishop of Lichfield. This see has given three saints to the Romish church; and to the British nation one lord chancellor and three lord treasurers. It is valued in the king's books at 559*l.* 18*s.* 2*d.* Present income, 4,200*l.* Population, 1881, 8,349; 1891, 7,864; 1901, 7,902.

Lichfield cathedral was first built about 656; the present structure was founded by Roger de Clinton, the 37th bishop, in 1148. Walter de Langton (bishop in 1296), built the chapel of St. Mary, now taken into the choir, and under bishop Heyworth (1420) the cathedral was perfected. The building was despoiled at the Reformation, and was scandalously injured in the parliamentary war (when its monuments, its fine sculptures, and beautifully painted windows, were demolished). It was repaired at the restoration, 1660; in 1788; and by Gilbert G. Scott, 1860-63 and 1884.

In Lichfield castle, king Richard II. kept his Christmas festival, 1397, when 200 tuns of wine and 2000 oxen were consumed. A charter was granted to Lichfield, constituting it a city, by Edward VI., 1549. It was absorbed into the county in 1885.

LICHFIELD HOUSE COMPACT, said to have been made between the Whig government and Daniel O'Connell in 1835 at Lichfield-house, 13, St. James's-square.

LICINIUS LAWS. In 375 B.C., C. Licinius Stolo and L. Sextius, tribunes of the people, promulgated various rogationes or laws to weaken the power of the patricians and benefit the plebeians: one was to relieve the plebeians from their debts; another enacted that no person should possess more than 500 jugera of the public land, or more than 100 head of large cattle, or 500 of small, in the Roman states; and the third, that one of the consuls should be a plebeian. After much opposition these were carried, and L. Sextius became the first plebeian consul, 366. Another law, 56 B.C., of this name, imposed a severe penalty on party clubs, or societies assembled for election purposes; and another, about 103 B.C. (brought forward by P. Licinius Crassus), limited the expenses of the table.

LIÈGE (Belgium), a bishopric, under the German empire, from the 8th century till 1795. Liège frequently revolted against its prince-bishops. After a severe contest, the citizens were beaten at Brusthem, 28 Oct. 1467, and Liège taken by Charles the Bold, duke of Burgundy, who treated them with great severity. In 1482 Liège fell into the power of De la Marck, the Boar of Ardenne, who killed the bishop, Louis of Bourbon, and was himself defeated and killed. Liège was taken by the duke of Marlborough, 23 Oct. 1702; and by the French and others, at various times, up to 1796, when it was annexed to France. It was incorporated with the Netherlands in 1814, and with Belgium in 1830. Iron-works were established at Liège in the 16th century, and have been greatly enlarged by the Cockerills in the 19th, see *Seraing*. An international volunteer shooting contest held here, Sept. 1869. The Iron and Steel Institute met here 18 Aug. 1873. The *American Life-raft*, composed of cylinders lashed together, sailed from New York, 4 June, 1867, navigated by three men, capt John Miles and Messrs. Miller and Mullane, and arrived at Southampton, 25 July following.

LIFE-PRESERVER, the apparatus of capt. Manby (brought into use in Feb. 1808), effects a communication with the distressed vessel by a rope, thrown by a shot from a mortar, with a line attached to it. For the night, a night-ball is provided with a hollow case of thick pasteboard, and a fuse and quick match, and charged with fifty balls, and a sufficiency of powder to inflame them. The fuse is so graduated that the shell shall explode at the height of 300 yards. The balls spread a brilliant light for nearly a minute, and give a clear view of every surrounding object. In 20 years, 58 vessels and 410 of their crews and passengers had been saved. Capt. Manby died 18 Nov. 1854, aged 89. See *Rockets*.

The **BOAT-LOWERING APPARATUS**, in consequence of many being lost when boats were lowered from the *Amazon* in 1852, invented by Mr. Charles Clifford, of London, in 1856, has been much approved of, and has been generally adopted in the royal navy.

LIGHT. The law of refraction discovered by Snellius, about 1624. The motion and velocity of light discovered by Reaumur, and after him by Cassini, and calculated by Rømer (1676) and Bradley (1720). Its velocity ascertained to be about 190,000,000 of miles in sixteen minutes, or nearly 200,000 miles in a second, which is a million of times swifter than the velocity of a cannon ball, about 1667. The light of the sun takes eight minutes and eight seconds for its transmission through space to the earth. See *Emission Theory*. The undulatory theory of light, its polarisation, and its chemical action, were all made known in the nineteenth century by Dr. Thos. Young, Weber, Fresnel, Malus, Arago, Biot, Brewster, Wheatstone, Ritter, Niepce, Daguerre, Talbot, Stokes, Tyndall, Rayleigh, Dewar, Crookes, &c.; see *Optics, Photography, Calorescence, Fluorescence, Röntgen Rays, Radium*.

Velocity of Light. Direct determination by the toothed-wheel method by Fizeau agreed with the astronomical result 1849
 Foucault, with the revolving mirror, gave 298,000 kilometres in a second of mean time 1865
 Cornu's improved tooth-wheel apparatus gave 300,400 kilometres in a second of mean time 1874
 Professor Simon Newcomb, of Washington, with his "phototachometer" (completed in May, 1880) gave 299,860 kilometres in a second of mean time 1886
 Mr. aft. sir Wm. Crookes, F.R.S., considered that he had demonstrated the mechanical action of light by experiments with delicate balances in the highest procurable vacuum, and calculated the force of the sun's rays upon the earth to be 2.3 tons to the square mile, 1873-6. His apparatus was termed *Radiometer* (which see). After much investigation, Mr. Crookes admitted that the action was not due to radiation, but to difference of heat-absorption and the reaction of residual air.

Mr. Crookes at the Royal Society announces experiments respecting an ultra-gaseous state of matter, supporting the emission theory 5 Dec. 1878
 Dr. C. Wm. Siemens reported to the Royal Society that the electric light acts on vegetation like solar light 4 Dec. 1880

LIGHT BRIGADE. See *Balaklava*.

LIGHTHOUSE, called *Pharos* (now *phare*, French; *farò*, Italian), from one erected at *Pharos*, (which see) near Alexandria, Egypt, 550 feet high,

said to have been visible forty-two miles, about 283 B.C. There was one at Messina, at Rhodes, &c. The light was obtained by fires. A coal-fire light was exhibited at Tynemouth castle, Northumberland, about 1638. The first true lighthouse erected in England was the Eddystone lighthouse (which see) in 1758-60. Lights were exhibited in various places by the corporation of the Trinity-house early in the 16th century. 2814 lighthouses in the world (1867).

BRITISH LIGHTHOUSES.

The lighthouse (40 years old, height 80 feet, weight 300 tons) on the pier at Sunderland, Durham, was moved forward 500 feet without stopping the illumination, under the superintendence of Mr. John Murray, October, 1841.

The Commissioners on Lights, &c. (1861), report 171 shorelights in England, 113 in Scotland, and 73 in Ireland (total, 357); and 47 floating-lights. 6 lighthouses building, April, 1867.

The French have 224 lighthouses on shore.

The source of light in our lighthouses is principally oil; but in harbour lights gas has been successfully used. Glass reflectors were used in 1780, and copper ones in 1807. A common coal-fire light was discontinued at St. Bees so recently as 1822. Fresnel's Dioptric system (which see), devised about 1819, was adopted for the first time in England by Messrs. Wilkins, at the direction of the corporation of the Trinity-house, 1 July, 1836.

The most brilliant artificial light ever produced—derived from magneto-electricity by a machine devised by professor Holmes—was first employed at the South Foreland lighthouse, near Dover, on 8 Dec. 1858; and at Dengeness (or Dungeness) in 1862. Mr. Holmes' arrangement, and a similar one constructed by M. Serin, were shown at the International exhibition, London, in 1862.

LIGHTING UP (Towns, &c.), see *London*, 1584, 1694; *Gas and Electric Light*.

LIGHTNING-CONDUCTORS were first set up for the protection of buildings by Franklin shortly after 1752, when he brought down electricity from a thunder-cloud. Richmann, of St. Petersburg, was killed while repeating these experiments, Aug. 1752. The first conductor in England was set up at Payne's Hill, by Dr. Watson. In 1766 one was placed on the tower of St. Mark, at Venice, which has since escaped injury, although frequently injured by lightning previously. A powder magazine at Glogau, in Silesia, was saved by a conductor in 1782; and, from the want of one, a quantity of gunpowder was ignited at Brescia in 1767, and above 3000 persons perished. In 1762, Dr. Watson recommended conductors to be used in the navy; and they were employed for a short time, but soon fell into disuse from want of skill and attention. Mr. (afterwards sir William) Snow Harris devoted his attention to the subject from 1820 to 1854, and published a work, in 1843, detailing his experiments. In 1830, above thirty ships were fitted up with his conductors, and in 1842 his plans were adopted, and his conductors are now manufactured in the royal dockyards. In 1854 parliament granted him 5000*l.* A lightning research committee formed, Jan. 1901, with a view to the better protection of buildings, 200 observers in the United Kingdom, and others abroad. 713 deaths by lightning in the United States in 1900 (291 in the open, 57 under trees, 158 in houses).

LIMA (Peru). In 1534, Pizarro, marching through Peru, was struck with the beauty of the valley of Rimac, and there he founded this city, and gave it the name of *Ciudad de los Reyes*, or city of the kings, 1535. Here he was assassinated, 26 June, 1541. Awful earthquakes occurred here, 1586, 1630, 1687, and 28 Oct. 1746. In 1854-5, thousands perished by yellow fever. LIME or **LINDEN TREE**, probably introduced in the 16th century. The limes in St. James's park are said to have been planted at the suggestion of Evelyn, who recommended multiplying odoriferous trees, in his "Fumifugium" (1661). A lime-tree planted in Switzerland in 1410, existed in 1720, the trunk being thirty-six feet in circumference.

LIME-LIGHT, produced by the combustion of oxygen and hydrogen or carburetted hydrogen on a surface of lime. This light evolves little heat and does not vitiate the air. It is also called Drummond Light, after its inventor, lieut. Thomas Drummond, who successfully produced it as a first-class light in 1826, and employed it on the ordnance survey. It is said to have been seen at a distance of 112 miles. It was tried at the South Foreland lighthouse in 1861. Lieut. Drummond was born, 1797, died 15 April, 1840. To him is attributed the maxim that "property has its duties as well as its rights."

LIMERICK, anciently *Lumneach* (S. W. Ireland). About 550, St. Munchin is said to have founded a bishopric and built a church here, which latter was destroyed by the Danes in 853. Donald O'Brien, king of Limerick, founded the cathedral about 1200. Limerick obtained its charter in 1195, when John Stafford was made first provost; and its first mayor was Adam Servant, in 1198. It was taken by Ireton after six months' siege in 1650. In Aug. 1690 it was invested by the English and Dutch, and surrendered on most honourable terms, 3 Oct. 1691.* An awful explosion of 218 barrels of gunpowder greatly shattered the town, killing 100 persons, 1 Feb. 1694. Louis, dauphin of France, invited over by the discontented barons in the last year of king John's reign, was acknowledged by them as king of England here; but the nobility, summoned by the earl of Pembroke to Gloucester to crown Henry III., marched against Louis and the barons, and defeated them in a most sanguinary fight (called the Fair of Lincoln), 20 May, 1217; and Louis withdrew. LINCOLN'S-INN (London), derives its name from Henry de Lacy, earl of Lincoln, who erected a mansion on this spot in the reign of Edward I., which had been the bishop of Chichester's palace. It became an inn of court, 1310. The gardens of Lincoln's-inn-fields were laid out by Inigo Jones, about 1620, and erroneously said to occupy the same space as the largest pyramid of Egypt, which is 764 feet square; Lincoln's-inn square being 821 feet by 625 feet 6 inches. William lord Russell was beheaded in Lincoln's-inn-fields, 21 July, 1683. The square (formed in 1618) was enclosed with iron railings about 1737. The new hall and other buildings were opened, 30 Oct. 1845, and the square planted. The theatre in Lincoln's-inn-fields was built in 1695; rebuilt in 1714; made a barrack in 1756, and pulled down in 1848. LITHOGRAPHY (drawing on stone). The invention is ascribed to Alois Senefelder, about 1796; and shortly afterwards the art was announced in Germany, and was known as polyautography. It became partially known in England in 1801 *et seq.*, but its general introduction is referred to Mr. Ackermann, of London, about 1817. Senefelder died in 1841. Improvements have been made by

* Floyer Sydenham, an eminent Greek scholar, of Wadham college, Oxford, and translator of some of the works of Plato, was arrested and thrown into prison for a trifling debt due for his frugal meals, and there, in 1788, died of a broken heart in want and misery, when nearly eighty years of age. The sympathy excited gave rise to this institution, since well supported. Williams was in early life a dissenting minister, and wrote on education. He was consulted by the early revolutionary party in France as to the form of a constitution for that country; he, Dr. Priestley, sir James Mackintosh, and other distinguished Englishmen, having been previously declared French citizens. He died 29 June, 1816.

Engelmann and many others; see *Printing in Colours*. Exhibition of lithographs (2000) at S. Kensington, opened, 21 Nov. 1898. "Wharf-litho," Mr. G. R. Hildyard's new process, 1899.

LITHOSCOPE. An instrument for distinguishing precious stones, invented by sir David Brewster; described by him Jan. 1864.

LITHOTOMY. The surgical operation of cutting for the stone, it is said, was performed by Ammonius, about 240 B.C. The "small apparatus," so called from the few instruments used in the operation, was practised by Celsus, about A.D. 17. The "high apparatus" was practised (on a criminal at Paris) by Colot, 1475; by Franco, on a child, about 1566; and in England, by Dr. Douglass, about 1519. The "lateral operation," invented by Franco, much performed in Paris by Frère Jacques, in 1697, has been greatly improved. The "great apparatus" was invented by John de Romanis, and described by his pupil Marianus Sanctus, 1524.

LITHOTRITY (or bruising the stone). The apparatus produced by M. Leroy d'Etiolles in 1822 has since been improved.

Prizes of 6000 and 10,000 francs were awarded M. Jean Civiale for his method of operation, 1827 & 1829.

LITHUANIA, formerly a grand-duchy, N. E. of Prussia. The natives (belonging to the Slavonic race) long maintained their independence against the Russians and Poles. In 1386, their grand-duke Jagellon became king of Poland and was baptized: Lithuania was not incorporated with Poland till 1501, when another duke Casimir, became king of that country. The countries were formally united in 1569. The larger part of Lithuania now belongs to Russia, the remainder to Prussia. Great fire at Grodno, buildings destroyed, reported, 3 Aug. 1899.

LITTLE ENGLANDISM, a term defined by sir Edward Grey as an *aimless antipathy to the British Empire*, *Times*, 18 July, 1901.

LITURGIES (from the Greek *leitōs*, public, and *ergon*, work). The Greek and Roman liturgies are very ancient, having been committed to writing about the 4th and 5th centuries. The Romish church recognises four: the Roman or Gregorian, the Ambrosian, the Gallican, and the Spanish or Mosarabic. The Greek church has two principal liturgies: St. Chrysostom's and St. Basil's, and several smaller ones. Parts of these liturgies are attributed to the Apostles, to St. Ignatius, 250, to St. Ambrose (died 397), and to St. Jerome (died 420).

The present English Liturgy was first composed, and was approved and confirmed by parliament, in 1547-8. The offices for morning and evening prayer were then put into nearly the same form in which we now have them, and published 1549 and 1552.

At the solicitation of Calvin and others, the liturgy was reviewed and altered 1551

It was first read in Ireland, in the English language, in 1550, and in Scotland, where it occasioned a tumult, in 1637, and was withdrawn 1638

The liturgy was revised by Whitehead, formerly chaplain to Anne Boleyn, and by bishops Parker, Grindall, Cox, and Pilkington, dean May, and secretary Smith.

John Knox is said to have used a liturgy for several years. The rev. Robert Lee, of Edinburgh, introduced a form of prayer in public worship, but gave it up when ordered to discontinue it in May, 1859; he soon after resumed it, and the discussion on the subject ceased only at his death, 14 March, 1868

See *Common Prayer*.

LIVERIES OF THE CITY OF LONDON. The term is derived from the custom of the retainers of the lord mayor and sheriffs wearing clothes of the form and colour displayed by those functionaries. Liveries were regulated by statute in 1392, and frequently since. The nobility gave liveries to their retainers. See *Companies*.

LIVERPOOL (W. Lancashire), is supposed to be noticed in Domesday-book under the name *Esmedune*, or *Smedune*.* Soon after the conquest, William granted that part of the country situated between the rivers Mersey and Ribble to Roger of Poitiers, who, according to Camden, built a castle here, about the year 1089. It afterwards was held by the earls of Chester and dukes of Lancaster. Liverpool is the second city of the Empire. The income of the estates of the Corporation 13l. in 1672, now about 12,500,000l. * In other ancient records its appellations are *Litherpuil* and *Lyrrpal*, signifying probably in the ancient dialect, the lower pool; though some have deduced its etymology from a pool frequented by an aquatic fowl, called the "Liver," or from a sea-weed of that name; and others, from its having belonged to a family of the name of Lever, whose antiquity is not sufficiently established to justify their conclusion.

LLOYD'S (London), at the Royal Exchange about 1692. A coffee-house, kept by Edwd. Lloyd, Abchurch-lane, became a place of meeting of merchants. After several removals it was established finally at the Royal Exchange in 1774, and remained there till the fire in 1838, when it was removed till the present building was completed in 1844. Here resort eminent merchants and ship-owners, and here are effected insurances on ships and merchandise. A Register of ships began about 1764; and the terms A1, &c. were used about 1775. The number of subscribers was 316,864. No less than 231,920,155 francs were made up by subscription of 50 francs and under. About 600 millions came from foreign countries. See *France*.

Foreign Loans Committee: appointed to inquire concerning certain loans to Honduras, Costa Rica, and Paraguay, in their report comment on the exaggerated statements respecting the revenues and resources of the states in the prospectuses, the efforts of the contractors to make fictitious markets; the proceedings on the stock exchange to maintain their prestige; the secrecy adopted in the proceedings; "the best security against the recurrence of such evils will be found, not so much in legislative enactments as in the enlightenment of the public as to their real nature and origin, thus rendering it more difficult for unscrupulous persons to carry out schemes . . . which have ended in so much discredit and disaster," July, 1875.

LOGARITHMS, the indexes of the ratio of numbers one to another, were invented by John Napier, baron of Merchiston, who published his canon, or table, in 1614. The invention was completed by Mr. Henry Briggs, at Oxford, who published tables, 1616-18. The method of computing by means of marked pieces of ivory was discovered about the same time, and hence called *Napier's bones*.

It is divided into spaces of 50 feet, and the way which the ship makes is measured by a half-minute sand-glass, which bears nearly the same proportion to an hour that 50 feet bear to a mile: the line used in the royal navy is 48 feet.

LOGOGRAPHIC PRINTING, in which the commoner words were cast in one mass, was patented by Henry Johnson and Mr. John Walter of the *Times* in 1783. Anderson's "History of Commerce," vol. iv., was printed by these types in 1789.

LOGRONO, see *Najara*.

LOI DES SUSPECTS, enacted by the French convention, 17 Sept. 1793, during the reign of terror, filled the prisons of Paris. The Public Safety bill, of a similar character, was passed, 18 Feb. 1858, shortly after Orsini's attempt on the life of the emperor, Napoleon III.

LOLLARDS (bysome derived from the German *lollen*, to sing in a low tone, by others derived from the English verb to loll or lounge), the name given to the first reformers of the Roman catholic religion in England, the followers of Wykliffe. The sect is also said to have been founded in 1315 by Walter Lollard, who was burnt for heresy at Cologne in 1322. The Lollards are said to have devoted themselves to acts of mercy. The first Lollard martyr in England was William Sawtree, parish priest of St. Osith, London, 12 Feb. 1401, when the Lollards were proscribed by parliament, and numbers of them were burnt alive. Sir John Cobham, lord Oldcastle, a follower of Wykliffe, was accused of treason and condemned, Sept. 1413. He escaped to Wales, where he was captured, and brought to London and burnt, 25 Dec. 1418. Lollards' tower, part of the bishop's prison, was near St. Paul's, not Lambeth palace. *Dr. Maitland*.

LOMBARDISTS, disciples of Peter Lombard, the schoolman, bishop of Paris, author of the "Book of Sentences," who died in 1164.

LOMBARD MERCHANTS, in England, were understood to be composed of natives of some one of the four republics of Genoa, Lucca, Florence, or Venice. *Anderson*. Lombard usurers were sent to England by pope Gregory IX. to lend money to convents, communities, and private persons who were not able to pay down the tenths which were collected throughout the kingdom with great rigour that year, 13 Hen. III. 1299. They had offices in the street named after them to this day. Their usurious transactions caused their expulsion from the kingdom in the reign of Elizabeth.

LOMBARDY (N. Italy) derived its name from the Longobardi, a German tribe from Brandenburg, said (doubtfully) to have been invited into Italy by Justinian to serve against the Goths. Their chief, Alboin, established a kingdom which lasted from 568 to 774. The last king, Desiderius, was dethroned by Charlemagne. (For a list of the Lombard kings, see *Italy*.) About the end of the 9th century the chief towns of Lombardy fortified themselves, and became republics. The first *Lombard league*, consisting of Milan, Venice, Pavia, Modena, &c., was formed to restrain the power of the German emperors, in 1167. On 29 May, 1176, they defeated the emperor Frederick Barbarossa at Legnano, and eventually compelled him to sign the peace of Constance in 1183. In 1226 another *league* was formed against Frederick II., which was also successful. After this, petty tyrants rose in most of the cities, and foreign influence quickly followed. The Guelph and Ghibelline factions greatly distracted Lombardy; and from the 15th century to the present time, it has been contended for by the German and French sovereigns. The house of Austria obtained it in 1748, and held it till 1797, when it was conquered

by the French, who incorporated it with the Cisalpine republic, and in 1805 with the kingdom of Italy. On the breaking up of the French empire in 1815, the LOMBARDO-VENETIAN KINGDOM was established by the allied sovereigns and given to Austria, who had lost her Flemish possessions. Lombardy and Venice revolted, and joined the king of Sardinia in March, 1848; but they did not support him well, and were again subjected to Austria after his defeat at Novara, 23 March, 1849. An amnesty for political offences was granted in 1856. Great jealousy of Sardinia was felt by Austria after 1849. In 1857 diplomatic relations were suspended; and in April, 1859, war broke out; the Austrians crossing the Ticino and entering Piedmont. The French emperor declared war against Austria, and immediately sent troops into Italy. The Austrians were defeated at Montebello, 20 May; Palestro, 30, 31 May; Magenta, 4 June; and Solferino, 24 June. By the peace of Villafranca (11 July), the largest part of Lombardy was ceded to Louis Napoleon, who transferred it to the king of Sardinia. It now forms part of the new kingdom of Italy, to which Venetia was also surrendered by the treaty of Vienna, 3 Oct. 1867. Population, 1890, 3,906,958; 1901, 4,278,188.

LOMBOK, an island in the Indian Archipelago, subject to the Dutch since 1863. See *Holland*, 1894 *et seq.*

LONATO (Brescia, N. Italy). Here Napoleon Bonaparte defeated Wurmser and the Austrians, 3 Aug. 1796.

LONDON, the capital of the British empire. The earliest history is traditional. The Celtic name is said to have been Lyn-din, lake-fort; Tacitus in the first century, calls it Londinium, and describes it as a flourishing trading city; it was afterwards called Augusta, an appellation frequently given to great cities; several other forms of the name appear in documents, such as Lundenbyrig, Lundenia, and London-wic. In 1860, London and the suburbs were estimated to cover 121 square miles (11 miles each way, being three times as large as in 1800; in 1880, 122 square miles. London was constituted an "administrative" county by the local government act, 1888, including as rateable value seven-eighths of Middlesex, about two-thirds of Surrey, and nearly one-third of Kent. The population of the "city" in 1801, 156,859; in 1811, 120,909; in 1821, 125,434; in 1831, 125,574; in 1841, 125,008; in 1851, 122,440; in 1861, 112,063; in 1871, 74,897; in 1881, 50,652. Day census, 25-30 April, 261,061; 1891, 5 April, 37,694 (day census, 27 April, 301,384). The "port" of London extends from London Bridge to the North Foreland. Tonnage entering and leaving the port, 1871, 7,600,000; 1885, 12,000,000 (dues paid over 41,000*l.*). The "city" returns 2 instead of 4 members to parliament by Act of 1885. "*London Statistics*," published by London County Council, 1893-94. See *Docks, Mayors, Metropolitan Board of Works, London County Council, and Treaties*.

The town appears to have prospered under British, Roman, and Saxon rules, and to have been much indebted to Alfred and his successors, but suffered greatly by the Danes; it was not attacked by William I., by whom the citizens were conciliated, and its corporate government was recognized by his son Henry I. The city received many favours from the Plantagenet kings, but frequently resisted their exactions. London is governed by the lord mayor, the court of aldermen, the common council, and other offices. London was not included in the municipal corporations Act, 1835. The London county council was constituted by the local government Act passed in 1888.

* This terrible pestilence broke out in India, and spreading itself westward through every country on the globe, reached England. Its ravages in London were so great that the common cemeteries were not sufficient for the interment of the dead, and various pieces of ground without the walls were assigned for burial-places. Amongst these was the waste land now forming the precincts of the Charter-house, where upwards of 50,000 bodies were then deposited. This disorder did not subside till 1357. *Leigh*.

† This proclamation or decree was dated from None-such, 7 July, 1580, and it was forbidden to erect new buildings where none had before existed in the memory of man. The extension of the metropolis was deemed calculated to encourage the increase of the plague; create a trouble in governing such multitudes; a dearth of victuals; multiplying of beggars, and inability to relieve them; an increase of artisans more than could live together; impoverishing other cities for lack of inhabitants. The decree stated that lack of air, lack of room to walk and shoot, &c., arose out of too crowded a city. A proclamation to the same effect was also issued by James I.

LONDON BRIDGE. The first bridge said to have been built 994, was much injured by the Danes 1008 and destroyed by a flood 1091. Another bridge erected by command of William II., was burnt in 1136. The late old bridge was commenced about 1176, by Peter of Colechurch, and completed in 1209, with houses on each side, connected together by large arches of timber which crossed the street.

A fire at the Southwark end brought crowds on the bridge; the houses at the north end caught fire likewise, and prevented their escape: and upwards of 3000 persons lost their lives, being either killed, burned, or drowned. July, 1212

The bridge restored in 1300, again destroyed by fire in 1471; 13 Feb. 1632, and Sept. 1725

All the houses pulled down 1756

Waterworks begun, 1582; destroyed by fire 1774

The toll discontinued 27 March, 1782

The first pile was driven 200 feet to the west of the old bridge, 15 March, 1824; the first stone was laid by the lord mayor, alderman Garratt 15 June, 1825

The bridge opened by William IV. and his queen, 1 Aug. 1831

The cost was 506,000l.

Plans for widening the bridge rejected 1875

It was computed that on 17 March, 1859, there passed over London-bridge 20,498 vehicles (of which 4483 were cabs and 4286 omnibuses), and 167,910 persons (107,074 on foot, and 60,836 in vehicles). In April 1881 in one day (24 hours) passed over 78,943 passengers in 10,733 vehicles.

Attempt to explode S.W. end, damage to property, not life; near 6 p.m., 500l. reward offered, 13 Dec. 1884

LONDON STONE. A stone said to have been placed by the Romans in Cannon-street, then the centre of the city, 15 B.C. London stone was known before the time of William I. It was removed from the opposite side of the way in 1742; and again moved to its present position in the wall of St. Swithin's church, 1798. LONGEVITY. Methuselah died, aged 969 2349 B.C. (*Gen. v. 27*). LONGITUDE, determined by Hipparchus, at Nice, who fixed the first degree in the Canaries, 162 B.C. Harrison made a time-keeper, in A.D. 1759, which in two voyages was found to correct the longitude within the limits required by the act of parliament 12 Anne, 1714; and obtained the reward; see *Harrison's Timepiece*. The chronometers of Arnold, Earnshaw, and Bréguet, are highly esteemed. Chronometers are now received on trial at Greenwich Observatory. The act relating to the discovery of the longitude at sea was repealed in 1828. The Bureau des Longitudes at Paris was established in 1795.

LORDS.* The nobility of England date their creation from 1066, when William Fitz-Osborn is said to have been made earl of Hereford by William I.; and afterwards Walter d'Evreux, earl of Salisbury; Copsi, earl of Northumberland; Henry de Ferrers, earl of Derby; and Gherbod (a Fleming) earl of Chester. Twenty-two other peers were made in this sovereign's reign. The first peer created by patent was lord Beauchamp of Holt Castle, by Richard II. in 1387. In Scotland, Gilchrist was created earl of Angus by Malcolm III. 1037. In Ireland, sir John de Courcy was created baron of Kingsale, &c., in 1181; the first peer after the obtaining of that kingdom by Henry II.

LORDS, HOUSE OF. The peers of England were summoned *ad consuetudum*, to consult, in early reigns, and by writ, 6 & 7 John, 1205; but the earliest writ extant is 49 Hen. III. 1265. The commons did not form a part of the great council of the nation until some ages after the conquest; see *Parliament*. The house of lords includes the spiritual as well as temporal peers of Great Britain. The bishops are supposed to hold certain ancient baronies under the king, in right whereof they have seats in this house. Some of the temporal lords sit by descent, and some by creation: others by election, since the union with Scotland in 1707, and with Ireland, 1801. In 1719, with the king's consent, a bill for limiting the power of the sovereign of creating peers, was introduced into the lords and twice passed, but twice rejected by the commons.—Scotland elects 16 representative peers, and Ireland, 28 temporal peers for life. The house of lords in Jan. 1902, consisted of 4 princes of the blood, 2 archbishops, 22 dukes, 22 marquises, 144 earls, 37 viscounts, 336 barons, and 24 bishops; in all, 592. The valuable "Constitutional History of House of Lords," by L. O. Pike, was published in 1894. Sir Wm. * Peers of England are free from all arrests of debts, as being the king's hereditary counsellors; therefore a peer cannot be outlawed in any civil action, and no attachment lies against his person; but execution may be taken upon his lands and goods. For the same reason, they are free from all attendance at courts leet or sheriffs' turns; or, in case of a riot, from attending the *posse comitatus*. He can act as a justice of the peace in any part of the kingdom. See *Baron, Earl, &c.*

Here is the *Casa Santa*, or Holy House, in which it is pretended the Virgin Mary lived at Nazareth, and said to have been carried by angels into Dalmatia from Galilee in 1291, and brought here a few years after. The lady of Loretto, gaudily dressed, stands upon an altar holding the infant Jesus in her arms, surrounded with gold lamps. Loretto was taken by the French in 1797; the holy image, which had been carried to France, was brought back with pomp, 5 Jan. 1803.

He died in 1868. A bill for creating life peerages was read a second time in the lords, 27 April, 1869, but afterwards rejected.

L'ORIENT (W. France). Lord Bridport off this port defeated the French fleet, 23 June, 1795. Strike and riot, 4, 5 Aug. 1903.

LORRAINE (Lotharingia), formerly a French now a German province, became a kingdom under Lothaire (son of the emperor Lothaire I.) about 855; and was divided at his death, in 869, part of it being made a duchy. From the first hereditary duke, Gerard, nominated by the emperor Henry III. in 1048, descended the house of Lorraine, represented now by the emperor of Austria, whose ancestor, the empress Maria Theresa, married in 1736 Francis formerly duke of Lorraine, then of Tuscany. Lorraine, given to the dethroned king of Poland, Stanislaus I., for life, was, at his death in 1766, united to France; see *Nancy*. Lorraine was the seat of war in Aug. 1870, and about the fifth part, including Metz and Thionville, was annexed to Germany at the peace, 26 Feb. 1871.

LOTS. Casting lots, as an appeal to God, was sacred among the Jews, *Proverbs* xvi. 33. It was employed in the division of the land of Canaan, about 1444 B.C., by Joshua (xiv.), and in the election of Matthias the apostle, A.D. 33, *Acts* i.—Lots for life or death have been frequently cast. For an instance, see *Wales*, 1649, note.

LOTTERIES are said to have originated in Florence about 1530, and to have been legalised in France in 1539, and soon became common. They were prohibited by pope Benedict XIII. (1724-30), and sanctioned by Clement XII. (1730-40). See *Art Union* under *Arts and Paris* (exhibition 1889).

The first mentioned in English history took place, day and night, at the western door of St. Paul's cathedral. It contained 40,000 "lots" at 10s. each lot, the profits were for repairing the harbours, and the prizes were pieces of plate,

Missing Word Competition. In 1892, some weekly periodicals occasionally printed a sentence in which one word was omitted, and offered a money prize to the person who correctly supplied the deficiency; i. e. coupons being issued. This was condemned by sir John Bridge at Bow-street as a species of lottery, and several persons were fined. This sentence was confirmed by Mr. Justice Stirling in the Chancery division, in the case of Barclay and others v. Pearson (in relation to *Pearson's Weekly*), and he decided that the £23,628l. which had been paid into court, should be returned to Mr. Pearson, to be distributed by him to the claimants, to whom the court could give no help, as the affair was illegal, 9 Feb. 1893. This was done. See *Trials* . . . June, 1899

LOUVRE, in Paris, is said to have been a royal residence in the reign of Dagobert, 628. It was a prison-tower constructed by Philippe Augustus in 1204. It afterwards became a library, and Charles VI. made it his palace (about 1364). The new buildings, begun by Francis I. in 1528, were enlarged and adorned by successive kings, particularly Louis XIV.—Napoleon I. turned it into a museum, and deposited in it the finest collection of paintings, statues, and treasures of art known in the world. The chief of those brought from Italy have since been restored to the rightful possessors. The magnificent buildings of the new Louvre, begun by Napoleon I. and completed by Napoleon III., were inaugurated by the latter in great state, 14 Aug. 1857. The library was destroyed and other buildings much injured by the communists, May, 1871. Baroness Nathaniel de Rothschild bequeaths Greuze's "Laitière," a fine collection of Botticellis and others to the Louvre, 1899. Five new rooms opened, 20 May, 1901; 111 pictures, 140 bronzes, given, Jan. 1902.

LÜBECK, a city in N. Germany, one of the four republics of the German confederation, was built in the 12th century, and was chief founder of the Hanseatic league about 1240, which lasted till 1630. Lübeck was declared a free imperial city about 1226; but was frequently attacked by the Danes. The French took it by assault, 6 Nov. 1806, and Napoleon incorporated it with his empire in 1810. On his fall in 1814 it became once more a free imperial city. It joined the North German confederation 18 Aug. 1866. LUCCA (central Italy), a Roman colony, 177 B.C.; a Lombard duchy, A.D. 1327; a free city about 1370; took an active part in the civil wars of the Italian republics. It was united with Tuscany, and given as a principality to Eliza Bonaparte by her brother Napoleon I., 1805. Lucca, as a duchy, was given to Maria Louisa, widow of Louis, king of Etruria, in 1814. It was exchanged by her son Charles-Louis for Parma and Placentia in 1847; was annexed to Tuscany, and with it became part of the kingdom of Italy, in 1860.

LUCERNE (Switzerland) became independent in 1332, and joined the confederation. The city Lucerne is said to derive its name from a light (*lucerna*) set up to guide travellers. It dates from the 8th century, and was subject to the abbots of Murbach, who surrendered it to the house of Hapsburg. It was taken by the French in March, 1798, and was for a short time capital of the Helvetic republic; which, as the focus of insurrection against the French, was suppressed Oct. 1802. As a catholic canton, Lucerne was very active on behalf of education by the Jesuits, 1844; see *Switzerland*. Population, 1888: canton, 135,360; city, 20,314; 1901: canton, 146,474; city, 29,633.

LUCIFER MATCHES came into use about 1834. Friction matches were invented by Walker of Stockton-on-Tees, 1829. In March, 1842, Mr. Reuben Partridge patented machinery for manufacturing the splints. In 1845, Schrötter of Vienna produced his amorphous phosphorus (by heating ordinary phosphorus in a gas which it cannot absorb), by the use of which lucifers are rendered less dangerous, and the manufacture less unhealthy. *Phosphoros* (Greek) and *lucifer* (Latin), both signify *light-bearer*.

Mr. Lowe's proposed tax on lucifers (with "*ex luce lucellum*" on the box) was much opposed, and withdrawn, April, 1871. For their exertions, a drinking fountain at Bow was inaugurated as a memorial to Bryant and May, 5 Oct. 1872. The match manufacture was made a monopoly in France in Oct. 1872, for 750,000*l.*

 Enlightened principles of treatment were introduced by Wm. Tuke, at the Society of Friends' "Retreat," at York, and by Pinel, at the Bicêtre, Paris, with very great success 1792
 Esquirol succeeds Pinel, and strongly recommends instruction in the management of mental disorders 1810
 Exposure of enormous cruelties in the Bethlem hospital 1815
 This led to gradual improvements, and at last to the total abolition of mechanical restraints at Lincoln, 1837; and at Hanwell Asylum (under the superintendence of Dr. John Conolly) and at other places 1839

LUTHERANISM,* the form of Christianity

* Martin Luther was born at Eisleben, 10 Nov. 1483; studied at Erfurt, 1501; was professor of philosophy at Wittenberg, 1508; resisted the sale of indulgences, affixing his theses against them on the door of the Castle church at Wittenberg (*which see*), 31 Oct. 1517; defended himself at Augsburg, 1518; at Worms, 1520; was excommunicated, 16 June, 1520; began his German bible, 1521; married Katherine de Bora, 1525; published his German bible complete, 1534; died 18 Feb. 1546.

professed by the majority of the people of the north of Germany, Prussia, Denmark, and Sweden. The doctrines are mainly embodied in Luther's catechisms, in the Augsburg Confession, and in the *Formula Concordiæ* of the Lutherans, published in 1580. Their first university was founded at Marburg, in 1527, by Philip, landgrave of Hesse. The Luther memorial at Worms was unveiled in presence of the king of Prussia and other sovereigns, 25 June, 1868. Fourth century of Luther's birth celebrated at Halle, Eisleben (where he was born), Berlin, and throughout Germany; also at London, Edinburgh, Dublin, and other places in the united kingdom; at Paris, and other places on the continent, 31 Oct.—17 Nov. 1883.

LUTZEN, or LUTZENGEN (N. Germany). Here Gustavus Adolphus, king of Sweden, defeated the imperialists under Wallenstein, 16 Nov. 1632, but was himself killed; and here the French army, commanded by Napoleon, defeated the combined armies of Russia and Prussia, commanded by general Wittgenstein, 2 May, 1813. The battles of Bautzen and Wurscheu immediately followed (19-21 May), both in favour of Napoleon. The allies were compelled to pass the Oder, and an armistice was agreed to, afterwards prolonged; but, unfortunately for the French emperor, this did not produce peace.

The marbles brought from Lycia by sir Charles Fellows were deposited in the British Museum, 1840-46.

LYDIA, or Mæonia, an ancient kingdom in Asia Minor; the early history wholly mythical. Of a long dynasty of kings, the last was Cræsus, "the richest of mankind." The coinage of gold and silver money, and other useful inventions, are ascribed to the Lydians. LYING-IN HOSPITALS. The first, established in Dublin by Dr. Bartholomew Mosse, a physician, amid strong opposition, was opened March, 1745; see *Hospitals*.

LYMPHATICS (absorbent vessels connected with digestion), discovered about 1650 by Rudbek in Sweden, Bartholin in Denmark, and Jolyffe in England. Asellius discovered the lacteals in 1622. In 1654, Glisson ascribed to these vessels the function of absorption; and their properties were studied by Wm. and John Hunter, Monro, Hewson, and other great anatomists.

LYNCH LAW, punishment inflicted by private individuals, independently of the legal authorities. The origin of the term is doubtful; the practice has been attributed to James Lynch Fitz-Stephen, warden of Galway, about 1526, to Lynch, a farmer in Virginia, and to Lynch, a person sent to America to suppress piracy, 1687-8. "Judge Lynch" is thought by some to be a mythical person. This mode of administering justice still exists in the outlying districts of the United States. Four robbers were taken from prison and hanged by a vigilance committee at New Albany, on the Ohio, 11 Dec. 1868.

LYRE. Its invention is ascribed to the Grecian Hermes (in Latin Mercury), who, according to Homer, gave it to Apollo, the first that played upon it with method, and accompanied it with poetry. The invention of the primitive lyre, with three strings, is ascribed to the first Egyptian Hermes. It is said that Terpander added several strings to the lyre, making the number seven, 673 B.C., and that Phrynis, a musician of Mitylene, added two more, making nine, 438 B.C.

M.

MACADAMISING, a system of road-making invented by Mr. John Macadam, and published by him in an essay, in 1819, having practised it in Ayrshire. He prescribed stones to be broken to six ounces weight, and the use of clean flints and granite clippings. Hereceived 10,000*l.* from parliament; was appointed surveyor-general of the metropolitan roads in 1827, and died in 1836; see *Roads*.

MACAO (in Quang-tong, S. China) was given to the Portuguese as a commercial station in 1586 (in return for their assistance against pirates), subject to an annual tribute, which was remitted in 1886. Here Camoens composed part of the "Lusiad." The abuses of the Coolie trade by the Portuguese led to its abolition here by the British and Chinese governments in 1873. Outbreak of plague reported, 23 April, 1895.

MACARONI. This name, given to a poem by Theophilus Folengo, 1509, continues to designate trifling performances, as buffoonery, puns, anagrams, "wit without wisdom, and humour without sense." His poem was so called from a nutritious preparation of wheat-flour in tubes and threads. These poems, in Italy and France, gave rise to *Macaroni academics*, and in England to *Macaroni clubs* (about 1772), when everything ridiculous in dress and manners was called "Macaroni." William's macaroni manufactory in London, only one in England, Dec. 1897.

MACCABEES, a name of the Asmonæans, who commenced their career during the persecution of Antiochus Epiphanes, 167 B.C. Mattathias, a priest, resisted the tyranny; and his son, Judas Maccabeus, defeated the Syrians in three battles, 166, 165 B.C.; but fell in an ambush, 161 B.C. His brother Jonathan made a league with the Romans and Lacedæmonians, and after an able administration was treacherously killed at Ptolemais by Tryphon, 143 B.C. His brother and successor, Simon, was also murdered, 135 B.C. John Hyrcanus, son of Simon, succeeded. His son Judas, called also Aristobulus, took the title of king, 107 B.C. The history of the Maccabees is contained in five books of that name, two of which are included in our Apocrypha. Four are accounted canonical by the Roman Catholic church; none by Protestant communions.

The magnificent Maccabees chapel at Geneva, founded in 1475, by the cardinal Jean de Broguier, president of the council of Constance and the place of his sepulchre. The building, much injured and desecrated at the time of the Reformation, was finely renovated in 1881 and fitted up as a museum.

MACDONALD AFFAIR, see *Prussia*, 1861.

MACE, a weapon anciently used by the cavalry of most nations, was originally a spiked club, hung at the saddle-bow, and usually of metal. Maces were also early ensigns of authority borne before

officers of state, the top being made in the form of an open crown, and commonly of silver gilt. The lord chancellor and speaker of the house of commons have maces borne before them. Edward III. granted to London the privilege of having gold or silver maces carried before the lord mayor, sheriffs, aldermen, and corporation, 1354. It was with the mace usually carried before the lord mayor on state occasions, that Walworth, lord mayor of London, is said to have knocked the rebel Wat Tyler off his horse, for rudely approaching Richard II., a courier afterwards despatching him with his dagger, 15 June, 1381. Cromwell, entering the house of commons to disperse its members and dissolve the parliament, ordered one of his soldiers to "take away that bangle," the mace, which was done, and the doors of the house locked, 20 April, 1653.

MACEDON (N. Greece). The first kingdom is said to have been founded by Caranus, about 761 B.C. It was successively under the protection of Athens, of Thebes, and Sparta, until the reign of Philip, the father of Alexander the Great, who by his political wisdom and warlike exploits made it a powerful kingdom, and paved the way for his son's greatness.

MADEIRA, an island, N. W. coast of Africa, discovered, it is said, in 1344, by Mr. Macham, an English gentleman, or mariner, who fled from France for an illicit amour. He was driven here by a storm, and his mistress, a French lady, dying, he made a canoe, and carried the news of his discovery to Pedro, king of Aragon, which occasioned the report that the island was discovered by a Portuguese, 1345. It is asserted that the Portuguese did not visit this island until 1419 or 1420, or colonise it until 1431. It was taken by the British in July, 1801; and again by admiral Hood and general Beresford, 24 Dec. 1807, and retained in trust for the royal family of Portugal, who had emigrated to the Brazils. It was restored to the Portuguese in 1814. Since 1852 the renowned vintages here have been almost totally ruined by the vine disease (oidium). Population, 1882, 133,955; 1900, 150,528.

MADRIGAL, an unaccompanied song for three or more voices, of which fine examples are by English composers. Madrigals, invented in the Netherlands, were adopted in Italy, where fine specimens were produced. Many were published by Morley, 1594; Weelkes, 1597; Wilbye, 1598; and Bennet, 1599. The Madrigal Society in London began in 1741. English Glee and Madrigal Union founded in 1851. Rimbault's "Bibliotheca Madrigalium" published 1847. The madrigal, "Summer is i cumen in" is attributed to the 13th or 14th century.

MAESTRICHT (Holland), the ancient *Trajectum ad Mosam*, the capital of Limburg. It revolted from Spain, and was taken by the prince of Parma in 1579, when a dreadful massacre took place. In 1632, the prince of Orange reduced it after a memorable siege, and it was confirmed to the Dutch in 1648; Louis XIV. took it in 1673; William, prince of Orange, invested it in vain in 1676; but in 1678 it was restored to the Dutch. In 1748 it was besieged by the French, who were permitted to take possession of the city on condition of its being restored at the peace then negotiating. In Feb. 1793, Maestricht was unsuccessfully attacked by the French, but they became

masters of it, Nov. 1794. In 1814 it was made part of the kingdom of the Netherlands, and now belongs to Holland. Population, 1891, 32,225; 1900, 34,182.

MAFIA, a secret terrorist murderous society in Sicily, comprising all classes; became prominent in 1860. It is opposed to the Camorra. Efforts for the suppression of both were made by the government in 1874-5. Murder trials (see *Italy*), Oct. 1901-July, 1902. See *New Orleans*, 1890-95.

MAGDALA, a very strong place in Abyssinia (*which see*). On Good Friday, 10 April, 1868, the troops of the emperor Theodore attacked the first brigade of the British army under sir Robert Napier, and were repulsed with great slaughter. On the next day all the European prisoners were given up, but Theodore himself refused to surrender; and on Easter Monday, 13 April, Magdala was stormed, and Theodore himself killed—it is said by his own hand.—British loss, 2 killed; 20 wounded; Abyssinian loss, about 500 killed and wounded out of about 5000. Magdala was burnt to the ground by the British, 17 April, 1868.

MAGDALENS AND MAGDALENETTES, communities of nuns, consisting chiefly of penitent courtesans. The order of penitents of St. Magdalen was founded 1272, at Marseilles. The convent of Naples was endowed by queen Sancha, 1324. That at Metz was instituted in 1452. At Paris, 1492. The Magdalen at Rome was endowed by pope Leo X., in 1515, and favoured by Clement VIII. in 1594. The Magdalen hospital, London, was founded in 1758, under the direction of Dr. Dodd. The asylum in Dublin was opened in June, 1766.

MAGDEBURG (Prussia). The archbishopric was founded about 967. The city suffered much during the religious wars in Germany. It was besieged and taken by the elector Maurice, Nov. 1550, and Nov. 1551; blockaded for seven months by the imperialists, under Wallenstein, in 1629; and barbarously sacked by Tilly on 10 May, 1631. It was given to Brandenburg in 1648; was taken by the French, 8 Nov. 1806; annexed to the kingdom of Westphalia, 9 July, 1807; restored to Prussia, May, 1813. Valuable fine art collection burnt 6 April, 1891. Population, 1890, 202,325; 1900, 229,663.

The *Magdeburg Experiment* is shown by means of a hollow sphere, composed of two hemispheres, fitting air-tight. When the air is exhausted by the air-pump, the hemispheres are held together by the pressure of the atmosphere, and require great force to separate them. The apparatus was suggested by Otto von Guericke, the inventor of the air-pump. He died in 1686. *Brande*.

MAGELLAN, STRAITS OF (connecting the Atlantic and Pacific oceans), was passed by Fernando de Magelhaens (Magellan), a Portuguese, on 27 Nov. 1520. He gave the latter ocean its name on account of its calmness. Magellan completed the first voyage round the world, with a fleet of discovery fitted out by the emperor Charles V., but was killed in 1521. The Spaniards had a fort here, called Cape Famine, because the garrison perished from want.

MAGENTA, a small town in Lombardy, near which the French and Sardinians defeated the Austrians, 4 June, 1859. The emperor Louis Napoleon commanded, and he and the king of Sardinia were in the thickest of the fight. It is said that 55,000 French and Sardinians, and 75,000 Austrians were engaged. The former are asserted to have lost 4000 killed and wounded, and the Austrians 10,000, besides 7000 prisoners. The French generals Espinasse and Clerc were killed. The arrival of general MacMahon during a deadly struggle between the Austrians and the French, greatly contributed to the victory. The contest near the bridge of Buffalora was very severe. The Austrians fought well, but were badly commanded. The emperor and king entered Milan on 8 June following; MacMahon and Regnault d'Angely were created marshals of France. A monument erected here in memory of the slain was solemnly inaugurated 4 June, 1872.—The red dye, rosaniline, obtained by chemists from gas-tar, is termed *magenta*; see *Aniline*.

MAGI, an order of priests and teachers among the ancient Medes and Persians, with much political power. One of them who on the death of Cambyses asserted that he was Smerdis, a son of Cyrus, and claimed the throne of Persia, was deposed by Darius Hystaspes, 521 B.C., and a massacre of the Magi followed. They retained their religious position till the later Roman empire. The constitution of the order is traditionally assigned to Zoroaster, the

Zarathustra of the Zendavesta, whose time and very existence are uncertain, the 6th century B.C. being mentioned. He is said to have taught the knowledge of Ormuzt, the supreme good principle, to the Magi, whom he classified as learners, masters, and perfect scholars, the possessors of all spiritual power, and the science of the age, see *Parsees*. The name Magi has been applied to the "wise men" of *Matt. ii.*, and the Parsees at Bombay are descendants of the Guebres or fire-worshippers.

MAGIC, see *Alchemy, Witchcraft, &c.* The invention of the **MAGIC LANTERN** is ascribed to Roger Bacon, about 1260, but more correctly to Athanasius Kircher, who died 1680. Sir David Salomons, in a discourse at the Royal Institution on "Optical Projection," exhibited an arrangement of the magic lantern, in which by the use of lenses magnifying up to 4,500 diameters, he stated that he was enabled to magnify a postage stamp to the size of 2½ acres, 26 Feb. 1892. See Godwin's "Lives of the Necromancers," 1834, and Ennemoser's "History of Magic," translated by W. Howitt, 1854.

MAGISTRATES, see *Justices*. Stipendiary borough magistrates may be appointed by 5 & 6 Will. IV. c. 76, 1853; and by 26 & 27 Vict. c. 97, 1863. The present arrangement of metropolitan magistrates (the chief sitting at Bow-street) was made by acts of parliament in 1792 and 1839. Eleven courts were appointed in 1840. Their salaries raised from 25 March, 1875. Henry Fielding, the novelist, was acting magistrate for Westminster and at Bow-street. He was succeeded by his half-brother, sir John Fielding, in 1761; by

MAGNA CHARTA. Its fundamental parts were derived from Saxon charters, continued by Henry I. and his successors. On 20 Nov. 1214, the archbishop of Canterbury and the barons met at St. Edmondsbury. On 6 Jan. 1215, they presented their demands to king John, who deferred his answer. On 19 May they were censured by the pope. On 24 May they marched to London, and the king was compelled to yield. The charter was sealed by John at Runnymede, near Windsor, 15 June, 1215. It was many times confirmed, by Henry III. and his successors. This last king's grand charter was granted in 1224, and was assured by Edward I.; see *Forests*. The original MS. charter is lost. The finest MS. copy, which is at Lincoln, was reproduced by photographs in the "National MSS." published by government, 1865.

MAGNA GRÆCIA, the independent states founded by Greek colonists in South Italy, Sicily, &c. Cumæ, in Campania, is said to have been founded in 1034 B.C., Pandosia and Metapontum in 774 B.C. These states were ruined through siding with Hannibal when he invaded Italy, 216 B.C.

MAGNESIA (Asia Minor). Here Antiochus the great, king of Syria, was defeated by the Scipios, 190 B.C.—*Magnesia alba*, the white alkaline earth used in medicine, was in use in the beginning of the 18th century. Its properties were developed by Dr. Black in 1755.

MAGNESIUM, a metal first obtained from magnesia by sir Humphry Davy in 1808, and since produced in larger quantities by Bussy, Deville, and especially by Mr. E. Sonstadt, in 1862-4. Its light when burnt is very brilliant, and is so rich in chemical rays that it may be used in photography. Lamps made for burning magnesium wire, were employed by the excavators of the tunnel through Mount Cenis. By its light photographs of the interior of the Pyramids were taken in 1865. Larkin's magnesium lamp (in which the metal is burnt in the form of a powder) was exhibited at the Royal Institution on 1 June, 1866, and before the British Association at Nottingham in Aug. 1866.

MAGNETISM. The attractive power of the loadstone or magnet was early known, and is referred to by Homer, Aristotle, and Pliny; it was also known to the Chinese and Arabians. The Greeks are said to have obtained the loadstone from Magnesia in Asia, 1000 B.C. Roger Bacon is said to have been acquainted with its property of pointing to the north (1294). The invention of the mariner's compass is ascribed to Flavio Gioia, a Neapolitan, about 1310; but it was known in Norway previous to 1266; and is mentioned in a French poem, 1150. In the present century our knowledge of the phenomena of magnetism has also been greatly increased by the labours of Arago, Ampère, Hans-ten, Gauss, Weber, Poggenдорff, Sabine, Lamont, Du Moncel, Archibald Smith, sir Wm. Thomson (lord Kelvin), &c. (see <i>Animal Magnetism</i>).	
In the Royal Institution, London, is a magnet by Logeman, of Haarlem, constructed on the principles of Dr. Elias, which weighs 100 lb, and can sustain 430 lb. Hæcker, of Nuremberg, constructed a magnet weighing 36 grains, capable of sustaining 146 times its own weight. This was exhibited in 1851, also at the Royal Institution.

The South Foreland lighthouse, near Dover, was illuminated by the magneto-electric light in the winter of 1858-9 and 1859-60 (the light removed to Dungeness in 1861), the Lizards, by Dr. C. William Siemens' magneto-electric light, 1878. See *Faradisation*.

An eminent example is found in Ibn Tumert, the Almohade Mahdi in the 12th century. See *Babysm*, and for the latest Mahdis see *Soudan*, 1881, et seq. A Mahdi has risen in Bokhara, named Mahomed Abdallah Ben Oman, May, 1884. See *Dervishes*. "Ten Years' Captivity in the Mahdi's Camp" by Father Ohrwaller, published Autumn, 1892. MAHOGANY is said to have been brought to England by Raleigh, in 1595; but not to have come into general use till 1720.

MAHOMETANISM embodied in the Koran, includes—the unity of God, the immortality of the soul, predestination, a last judgment, and a sensual paradise. Mahomet asserted that the Koran was revealed to him by the angel Gabriel during a period of twenty-three years. He enjoined on his disciples circumcision, prayer, alms, frequent ablu- tion, and fasting, and permitted polygamy and concubinage.

 The former (also called Sunnites) recognise the "Sunna" (traditions) sayings of Mahomet (supple- mentary to the Koran) which the Shiites reject. Husan and other sons of Ali were murdered A.D. 680, and a miracle play and a festival in their honour are still observed.

The queen of Edward I. of England is said to have had four maids of honour (1272-1307); queen Victoria had eight; queen Alexandra has 4.

MAIDSTONE, Kent, a British town, anciently termed the city of the Medway (Caer Meguaid), a possession of the archbishops of Canterbury in 1086-7. It was chartered by several kings, from Edward VI. to George II. The royalist Kentish men were here defeated by Fairfax, 1648. The archbishop's palace was built in 1348. The *Maine liquor law*, prohibiting the manufacture, sale, and use of intoxicating drinks, with certain exceptions, was enacted in 1851. In 1872, it was officially reported to have greatly decreased drunkenness and rendered the trade disreputable.

About 300 of the British with many officers fell (including Lieut.-col. Galbraith, major G. F. Blackwood, captains Garratt, McMath, Cullen, Roberts, and others), especially officers of the 66th regiment; with about 700 of the native troops killed or missing. The British commanders were censured. Ayooob Khan did not improve his victory, and was totally defeated by gen. sir F. Roberts, 1 Sept. 1880. See *Mazra*.

MAJESTY. Among the Romans, the emperor and imperial family were thus addressed, and also the popes and the emperors of Germany. The style was given to Louis XI. of France in 1461. *Voltaire*. Upon Charles V. being chosen emperor of Germany in 1519, the kings of Spain took the style. Francis I. of France, at the interview with Henry VIII. of England, on the Field of the Cloth of Gold, addressed the latter as Your Majesty, 1520. James I. used the style "Sacred," and "Most Excellent Majesty."

On 8 Sept. the French again attacked the Malakhoff; at eight o'clock the first mine was sprung, and at noon the French flag floated over the conquered redoubt; see *Sebastopol*. In the Malakhoff and Redan were found 3000 pieces of cannon of every calibre, and 120,000 lbs. of gunpowder.

MALARIA. The parasite of malaria—*i.e.*, azue and yellow fever—discovered by Laveran in 1880. The theory that mosquitoes conveyed the disease held also by King, Bignami and Manson. Major Ronald Ross (K.C.B. 1902) began his researches on sir Patrick Manson's theory in India in 1895, and proved deductively and experimentally that mosquitoes of the genus called *Anopheles Claviger* conveyed the disease, 1897-98; confirmed by profs. Koch and Grassi and Drs. Bignami and Bastianelli, Dec. 1898. See *Sierra Leone*, Aug. 1899.

A duty was laid upon malt in 1667; repealed but reimposed 1697, *et seq.* Important acts for the regulation of malt duties were passed in 1830 and 1837. In March, 1858, there were 6157 licensed maltsters in the United Kingdom. The duty on malt in 1863 amounted to 6,273,727*l.* In 1864 the duty was remitted on malt used for cattle feeding; and in 1865, an act was passed allowing the excise duty to be charged according to the weight of the grain used. A parliamentary committee to consider repeal of malt tax was agreed to, 14 May, 1867, without success; a motion to repeal the tax was negatived (244-17), 23 April, 1874. Tax abolished, 1880 (when it was 2s. 8½*d.* a bushel). It ceased 1 Oct. 1880.

MALTA (formerly Melita), an island in the Mediterranean, held successively by the Phœnicians, Carthaginians, and Romans, which last conquered it, 259 B.C. The apostle Paul was wrecked here, A.D. 62. (*Acts xxvii., xxviii.*) Malta was taken by the Vandals, 534; by the Arabs, 870; and by the Normans from Sicily, 1090. With Sicily it became successively part of the possessions of the houses of Hohenstaufen, of Anjou (1266), and of Aragon (1260). In 1530 Charles V. gave it to the Knights Hospitallers, who defended it most courageously and successfully, in 1551 and 1565, against the Turks, who were obliged to abandon the enterprise after the loss of 30,000 men. The island was taken by Bonaparte in the outset of his expedition to Egypt, 12 June, 1798. He found in it 1200 pieces of cannon, 200,000 lbs. of powder, two ships of the line, a frigate, four galleys, and 40,000 muskets, besides an immense treasure collected by superstition; and 4500 Turkish prisoners, whom he set at liberty. Malta surrendered to the British under Pigot, 5 Sept. 1800. At the peace of Amiens it was stipulated that it should be restored to the knights. The British, however, retained possession, and the war recommenced between the two nations; but by the treaty of Paris, in 1814, the island was guaranteed to Great Britain. A legislative constitution was established in 1849; and after various changes was replaced by a more popular one proclaimed 22 Dec. 1887. *La Valetta*, the capital, was founded in 1557 by the grand master La Valetta, and completed and occupied by the knights, 18 Aug. 1571. The Protestant college was founded in 1846. A grand new naval dry dock was opened, May, 1871. Governor of Malta and Gozo, sir Patrick Grant, March, 1867; sir C. T. Malta, Knights of. A military religious order, called also Hospitaliers of St. John of Jerusalem, Knights of St. John, and Knights of Rhodes. Some merchants of Malfi, trading to the Levant, obtained leave of the caliph of Egypt to build a house for those who came on pilgrimage to Jerusalem, and whom they received with zeal and charity, 1048. They afterwards founded a hospital for the reception of pilgrims, from whence they were called Hospitaliers (Latin, *hospes*, a guest). The military order was founded about 1099; confirmed by the pope, 1113. In 1119 the knights defeated the Turks at Antioch. After the Christians had lost their interest in the East, and Jerusalem was taken, the knights retired to Acre, which they defended valiantly in 1290. John, king of Cyprus, gave them Limisso in his dominions, where they stayed till 1310, in which year they took Rhodes, under their grand master De Vallaret, and the next year defended it under the duke of Savoy against an army of Saracens. The story that his successors have used F. E. R. T. (*Fortitudo ejus Rhodum tenuit*, or his valour kept Rhodes) for their device is much doubted. From this they were also called *knights of Rhodes*; but Rhodes being taken by Solymán in 1522, they retired into Candia, thence into Sicily. Pope Adrian VI. granted them the city of Viterbo for their retreat; and in 1530 the emperor Charles V. gave them the isle of Malta. The order was suppressed in England in 1540; restored in 1557; and again suppressed in 1559. St. John's Gate, Clerkenwell, a relic of their possessions, still exists. The emperor Paul of Russia declared himself grand master of the order in June, 1799. After the death of the grand master, Tommasi di Contara, in 1805, the order was governed by a lieutenant and a college at Rome, till Pope Leo XIII. made count Ceschi à Santa Cisee (lieutenant since 14 Feb. 1871) grand master, 28 March, 1879. The knights sent a hospital establishment into Bohemia during the war in 1866, which afforded great relief to the wounded and sick.

MAMELON, a hill, one of the defences of Sebastopol, captured by the French, 7 June, 1855.

MAMELUKES, originally Turkish and Circassian slaves, established by the sultan of Egypt as a body-guard, about 1260. They advanced one of their own corps to the throne of Egypt, May, 1260, and continued to do so until it became a Turkish

province, in 1517, when the boys took them into pay, and filled up their ranks with renegades from various countries. On the conquest of Egypt by Bonaparte, in 1798, they retreated into Nubia; but, assisted by the Arnauts, reconquered Egypt from the Turkish government. In 1804, Napoleon embodied some of them in his guard. On 1 March, 1811, they were decoyed into the power of the Turkish pacha, Mehemet Ali, and slain at Cairo.

MAMERTINI, sons of Mamers or Mars, were Campanian soldiers of Agathocles. They seized Messina in Sicily, in 281, B.C., and when closely besieged by the Carthaginians, and Hiero of Syracuse, in 264, they implored the help of the Romans, which led to the first Punic war.

MAMMOTH, an extinct species of elephant. An entire mammoth, flesh and bones, was discovered in Siberia, in 1799. Remains of this animal have since been found at Harwich, in 1803, and at places in Europe, Asia, and America. Mammoth is also termed Mastodon.

MAN, ANTIQUITY OF. In 1836, M. Boucher de Perthes found some rude flint implements, which he believed to be of human manufacture, mingled with bones of extinct animals, in the old alluvium near Abbeville in Picardy, France, and also in 1847, near Amiens. Similar flints have since been found in Sicily by Dr. Falconer, at Brixham by Mr. Pengelly, and lately in various parts of the world. Hence many geologists infer that man existed on the earth many ages earlier than has been hitherto believed.

Some burnt bricks found in the Nile are considered to be 20,000 years old, and some bones found in lacustrine deposits in Florida, 30,000 years old. The "Engis skull" found by Schmerling in the valley of the Meuse about 1834

It was afterwards subjected to the earl of Northumberland, on whose attainer Henry IV. granted it in fee to sir John Stanley, 1406. It was taken from this family by Elizabeth, but was restored in 1610 to the earl of Derby, through whom it fell by inheritance to the duke of Athol, 1735. The bishop has no seat in the house of lords; but lord Auckland (bishop, 1847-54) sat by right of his barony. Present income 2,000*l.*

MANASSAS JUNCTION (Virginia, United States), an important military position, where the Alexandria and Manassas Gap railways meet, near a creek named BULL RUN. 1. It was held by the confederates in 1861, when they were attacked by the federal general Irwin McDowell. He began his march from Washington on 16 July, and gained some advantage on the 18th at Centreville. On the 21st was fought the *first* battle of Bull Run. The federals, who began the fight, had the advantage till about three o'clock p.m., when the confederate general Johnston brought up reinforcements, which at first the federals took for their own troops. After a brief resistance, the latter were seized with sudden panic, and, in spite of the utmost efforts of their officers, fled, abandoning a large quantity of arms, ammunition, and baggage. The confederate generals Johnston and Beauregard did not think it prudent to pursue the fugitives, who did not halt till they arrived at Washington. The federal army is said to have had 481 killed, 1011 wounded, 1216 missing. The loss of the confederates was stated to be about 1500.—In March, 1862, when the army of the Potomac, under general McClellan, marched into Virginia, they found that the confederates had quietly retreated from the camp at Manassas. 2. On 30 Aug. 1862, this place was the site of another great battle between the northern and southern armies.

In August, general "Stonewall" Jackson, after compelling the federal general Pope to retreat, defeated him at Cedar mountain on the 9th, turned his flank on the 22nd, and arriving at Marassas repulsed his attacks on the 29th. On the 30th general R. E. Lee (who had defeated general McClellan and the invading northern army before Richmond, 26 June to 1 July) joined Jackson with his army, and Pope received reinforcements from Washington. A desperate conflict ensued, which ended in the confederates gaining a decisive victory, compelling the federals to a hasty retreat to Centreville, where they were once more routed, 1 Sept. The remains of their army took refuge behind the lines of Washington on 2 Sept. Pope was at once superseded, and McClellan resumed the command to march against the confederates, who had crossed the Potomac and entered Maryland; see *United States*.

MANCHESTER (Lancashire), in the time of the Druids, was one of their most principal stations, and had the privilege of sanctuary attached to its altar, in the British language *Mejne*, a stone. It was one of the seats of the Brigantes, who had a castle, or stronghold, called *Mancinion*, or the place of tents, near the confluence of the rivers Medlock and Irwell. The site of this, still called the "Castle Field," was, about 79, selected by the Romans as the station of the *Cohors Prima Fritiorum*, and called by them *Mancunium*; hence its Saxon name *Manceastre*, from which its modern appellation is derived. *Lewis*. Manchester constituted a harbour and port, 22 Dec. 1893. See under *Population*.

The French (1838) and British (1861) have missionary stations there. Population estimated over a million. The Japanese invaded Manchuria during the war of 1894-5. Capt. Frank E. Younghusband's "Travels in Manchuria," published, March, 1896. Prosperity increased by Russian immigration, 1897-8. See *Corea*. For the massacres here, see *China*, 14 Aug. 1901. MANERU, near Puente de la Reyna Navarre. Here took place a conflict between the republicans, under Moriones, and the Carlists, under Otto; both claimed a victory; 6 Oct. 1873.

MANGANESE. Black oxide of manganese, long used to decolorise glass, and called *Magnesia nigra*, was formerly included among the ores of iron. Its distinctive character was proved by the researches of Pott (1740), Kaim and Winterl (1770), and Scheele and Bergmann (1774); it was first eliminated by Gahn. Manganese combined with potassium is called mineral chameleon, from its rapid change of colour under certain circumstances. Forchammer employed it as a test for the presence of organic matter in water; and Dr. Angus Smith, successfully applied this test to air in 1858. The oxide is the important ingredient in Condy's "disinfecting fluid." Manganese bronze, is a metal produced by Mr. P. M. Parsons, inventor of white brass, 1876. Manganese steel produced by Messrs. Pfeil & Co. 1887.

MANICA, a territory in S. Africa in Mashonaland, near Mozambique, which on account of its mines, the Portuguese vainly endeavoured to acquire in the 16th century. See *Zambesi*.

MANICHEANS, a sect founded by Manes, in Persia, about 261. It spread into Egypt, Arabia, and Africa. A rich widow, whose servant Manes had been, left him much wealth, after which he assumed the title of Apostle, or envoy of Jesus Christ, and announced that he was the paraclete or comforter that Christ had promised to send. He maintained two principles, the one good he called light, the other bad he called darkness. He rejected the Old Testament, and composed a system of doctrine from Christianity and the dogmas of the ancient fire-worshippers. Sapor, king of Persia,

believed in him at one time; but afterwards banished him. He was burnt alive by Bahram or Varanes, king of Persia, in 277. His followers dispersed, and several sects sprang from them.

MANILLA (or **MANILA**) (built about 1573), capital of the Philippine isles, a great mart of Spanish commerce. Manilla was taken by the English, 6 Oct. 1762, when the archbishop engaged to ransom it for about a million sterling; never wholly paid. Manilla has suffered greatly by earthquakes. It is stated that nearly 3000 persons perished by one in 1645. In Sept. 1852, the city was nearly destroyed, and on 3 July, 1863, about a thousand lives were lost. The duke of Edinburgh was hospitably entertained here, 19 Nov. 1869. See *Earthquakes* 1852, 1863, 1880. Destructive typhoon, 20, 21 Oct. 1882. See *Spanish-American War*.

MANIPUR (Manipore), a small native state, N.E. India, adjoining Assam and Burmah; population, 1881, 221,070; army about 5,000.

The state has long been protected by the British from the attacks of the Burmese. In 1834, Gumbheer Singh, the restored rajah, died, and was succeeded by his son, Chandra Kirti Singh, two years old. The regent, Nar Singh, a relative, usurped the government, and ruled till his death in 1850, when the young rajah was restored; a British resident being afterwards placed in the capital, with good effect. Much trouble was given by rival members of his family till 1866; he died in 1885 or 1886. He left eight sons, who formed opposing parties. The eldest, Sura Chandra Singh, became maharajah, and appointed his eldest brother, Kula Chandra Dhuya Singh, jujraj, or heir-apparent, afterwards termed regent, a weak, incapable man. In Sept. 1890, his brother, Takendrajil Singh, the senaputti, or commander-in-chief, dethroned the maharajah and set up the jujraj in his place. The maharajah retired to Calcutta.

On 21 Feb. 1891, Mr. James W. Quinton, chief commissioner of Assam, was directed to proceed with a sufficient force to Manipur, to recognise the regent, and to remove the senaputti. He entered Manipur 22 March, with 470 men and officers, civil and military, and was well received by the regent and the senaputti, but could not succeed in getting the latter to attend a durbar or court. Mr. Quinton as an ultimatum required the surrender of the senaputti, the letter being taken by Mr. F. St. C. Grimwood, political agent, without any result, 23 March. On the 24th, colonel Skeue proceeded with 250 men to arrest the senaputti at his house within the fort enclosure, of which they obtained possession after a sharp struggle, during which lieutenant Brackenbury was mortally wounded. The senaputti had escaped. About 10 A.M., the Manipuris opened fire on the residency in front, and about noon on the rear, and shelled it. About 4 P.M. the troops were withdrawn from the senaputti's house, and all the force was posted in the residency, which was seriously damaged by artillery about 5 P.M., and the ammunition began to fall short. About 7 P.M. negotiations were re-opened by letter from Mr. Quinton, and the firing ceased, but the conditions offered by the regent could not be accepted. Having been invited by the senaputti halfway between the residency and the palace, Mr. Quinton took with him colonel Skeue, Mr. F. St. C. Grimwood, Mr. H. Cossins, and lieutenant Simpson, unarmed, and without escort. After a long parley, the party entered the fort and were seen no more, and it was afterwards discovered that they were all killed (beheaded or otherwise). The firing re-commenced about midnight. The ammunition having been greatly reduced, it was decided to retire from the residency, and to march across the country to meet captain Cowley's advancing party. This was done about 2 A.M. on the 25th, the party taking with them 17 wounded, and Mrs. Grimwood, who displayed

much judgment, courage, and humanity. There was no serious resistance during the march, but a few skirmishes occurred. About 10 a.m. they met captain Cowley's party, who supplied them with food and other assistance. They continued their march, arriving, on 30 March, at Lakhipur on the Cachar frontier.

Lieut. C. J. W. Grant hearing, on 27 March, of the disaster at Manipur, volunteered to attempt the relief of the British captives, and marched with 80 native soldiers from Tamu in Burmah, 28 March; entrenched himself near Thobal, 31 March; held out against the attacks of the Manipuri army (about 3,000) till 7 April; and resisted negotiations judiciously; only 1 killed. [Lieut. Grant was made major and otherwise honoured.]

About 2,000 Manipuris, entrenched near Tamu, attacked and dispersed by general Graham's party, captain Drury being especially successful, 25 April; three columns under gen. Graham, and others from different directions converge at Manipur, which they find totally deserted, the regent, senaputti, and other princes having fled, 26 April; the palace had been blown up; the heads of Mr. Quinton and his companions were found in the enclosure.

Funerary ceremony was held over the exhumed bodies of Mr. Quinton and his companions, 30 April; general Collett was left in command at Manipur, some of the troops left. The Manipuris returned to their homes, May; the regent and his minister were captured, 8 May, and the senaputti,

about 23 May, 1891

The regent, the senaputti, and prince Angao Sena, a younger brother, were tried for rebellion and abetting to murder, and sentenced to death (all appealed) 9-20 June, "

The sentences of death on the senaputti and the Tongal general, as implicated in the murders, were confirmed. The sentences on the regent and his younger brother commuted to transportation for life to the Andaman Islands; forfeiture of property, announced 10 Aug. The senaputti and the Tongal general hanged at Manipur, 13 Aug. "

It was decided that Manipur should still be ruled by a native prince, 23 Aug.; and Chura Chand, aged 5, great grandson of Nar Singh, was appointed rajah, 13 Sept.; dignity to be hereditary, subject to the government of India; an annual tribute to be paid; declaration communicated Oct. "

The young prince was invested with a dignity, 29 April, 1892

Heavy rain, causing destructive floods and loss of life May, 1893

MANOMETER (Greek, *manos*, thin), an instrument for measuring the rarity of the atmosphere, gases, and vapours. One is said to have been made by Otto von Guericke about 1660, and the "statical barometer" of Robert Boyle was a simple manometer. Various forms of the apparatus were devised by Ramsden (about 1773), by Roy (1777), by Cazalet (1789), and by Bourdon and others. A manometer was constructed for the investigation respecting the elasticity of steam conducted by Prony, Arago, Dulong, and Girard, 1830.

MANORS are as ancient as the Saxon times, and imply a territorial district with its jurisdiction, rights, and perquisites. They were formerly called baronies, and still are lordships. Each lord was empowered to hold a court called the court-baron for redressing misdemeanours, and settling disputes between the tenants. *Cabinet Lawyer*.

- MANTES, a town in the department of Seine-et-Oise, France, is situated on the river Seine, about 36 miles from Paris. - MANTINEA (Arcadia, Greece). Here—(1) Athenians and Argives were defeated by Agis II. of Sparta, 418 B.C. (2) And here Epaminondas and the Thebans defeated the combined forces of Lacedæmon, Achaia, Elis, Athens, and Arcadia, 362 B.C. Epaminondas was killed in the engagement, and Thebes lost its power among the Grecian states. The emperor Adrian built a temple at Mantinea in honour of his favourite Alcinous. The town was also called Antigonía. Other battles were fought near it.
- MANTIS, a genus of remarkable insects, whose forms and colours of their bodies and wings imitate the leaves and twigs that environ them. The praying mantis (*mantis religiosa*) derives its name from the peculiar position of its anterior pair of legs.
- MANTUA (N. Italy), an Etruscan city, near which Virgil was born, 70 B.C. Mantua was ruled by the Gonzagas, lords of Mantua, from 1328 to 1708, when it was seized by the emperor Joseph I. It surrendered to the French, 2 Feb. 1797, after a siege of eight months; retaken by the Austrians and Russians, 30 July, 1799, after a short siege. After the battle of Marengo (14 June, 1800), the French again obtained possession of it. It was included in the kingdom of Italy till 1814, when it was restored to the Austrians, who surrendered it to the Italians, 11 Oct. 1866, after the peace.

- MARATHON (in Attica). Here, on 28 or 29 Sept. 490 B.C., the Greeks, only 11,000 strong, defeated the Persian army amounting to about 110,000. The former were commanded by Miltiades, Aristides, and Themistocles. Among the slain (about 6400) is

said to have been Hippias, who had been expelled from Athens, and was the instigator of the war. The Persian army was forced to retreat to Asia; see *Greece*.

Investigations in 1890 on the presumed site of this battle led to the discovery of vases, and the probable grave of the 102 Athenians who fell.

MARBLE. Diponon and Scyllis, statuarys of Crete, were the first artists who sculptured marble, and polished their works; all statues previously being of wood, about 568 B.C. *Pliny*. The edifices or monuments of Rome were constructed of, or ornamented with, fine marble. The ruins of Palmyra are chiefly of white marble. The marble arch, London, erected at Buckingham palace, 1830, was removed to Hyde-park, March, 1851.

MARBURG (W. Germany). The cathedral was founded, 1231; and the first Protestant university in 1527. It suffered much during the Seven years' war, 1753-60.

MARCH, the first month of the Roman year, until Numa added January and February, 713 B.C. It is said that Romulus gave to this month the name of his supposed father, Mars; though Ovid observes, that the people of Italy had the month of March before the time of Romulus, but placed it differently in the calendar. The year commenced, on the 25th of this month till 1753; see *Year*. The March of 1845 and 1886 had much frost and skating.

MARCHES. The old boundaries between England and Wales, and England and Scotland. The Lords Marchers of the Welsh borders had vice-regal authority; the wardens of the Scotch marches were subordinate officers. These powers were abolished, 1536, and 1689.

MARCOMANNI, a people of Southern Germany, expelled the Boii from Bohemia, and, united with other tribes, invaded Italy about 167, but were repelled by the emperors Antoninus and Verus. They were defeated by the legion called, from a fabled miracle, the Thundering Legion, 179; and finally driven beyond the Danube by Aurelian, 271.

MARENGO (N. Italy). Here the French army, commanded by Bonaparte, after crossing the Alps into Piedmont, attacked the Austrians, 14 June, 1800; his army was retreating, when the arrival of general Dessaix turned the fortunes of the day. The slaughter on both sides was dreadful. By a treaty between the Austrian general Melas and Bonaparte, signed 15 June, the latter obtained twelve strong fortresses, and became master of Italy.

MARESCHALS or **MARSHALS**, in France, were the esquires of the king, and originally had the command of the vanguard to observe the enemy and to choose proper places for its encampment. Till the time of Francis I., in 1515, there were but two marshals, who had 500 livres per annum in war, but no stipend in time of peace. The number was afterwards greatly increased. Napoleon's marshals were renowned for skill and courage; see *Marshal*.

Near here was fought the battle of Pavia (*which see*), 24 February, 1525.—3. After the battle of Magenta, 4 June, 1859, the Austrians entrenched themselves at Malegnano. The emperor sent marshal Baraguay d'Hilliers with 16,000 men to dislodge them, which he did with a loss of about 850 killed and wounded, on 8 June. The Austrians are said to have lost 1400 killed and wounded, and 900 prisoners, out of 18,000 engaged.

MARINES, soldiers serving on ship-board, were first established with the object of forming a nursery to man the fleet. An order in council, dated 16 Oct. 1654, authorised 1200 soldiers to be raised and formed into one regiment. In 1684, the third regiment of the line was called the Marine Regiment; but the system of having soldiers exclusively for sea service was not carried into effect until 1698, when two marine regiments were formed. More regiments were embodied in subsequent years; and in 1741 the corps consisted of ten regiments, each 1000 strong. In 1759 they numbered 18,000 men. In the latter years of the French war, ending in 1815, they amounted to 31,400, but there were frequently more than 3000 supernumeraries. The *jollies*, as they are called, frequently distinguished themselves. The "Royal Marine Forces" (so named 1 May, 1802), now comprehend artillery and light infantry. The vote for 1857 was for 16,000 marines, inclusive of 1500 artillery. *P. H. Nicolas*. Marine Engineers' Institution, founded in 1872. MARINO, SAN, a republic in central Italy. Its origin is ascribed to St. Marinus, a hermit, who resided here in the 5th century. Its independence lost for a short time, to Caesar Borgia, 1503, and to the pope, 1739; was confirmed by pope Pius VII. in 1817. A convention with Italy, 27 March, 1872. New extradition treaty with Gt. Britain ratified, 1 Oct. 1900. Population, in 1858, about 8000; in 1869, 7303; in 1874, 7816; in 1891, about 8,000; 11,000 in 1900.

MARONITES, Christians in the East, followers of one Maron in the 5th century; they are said to have embraced the errors of the Jacobites, Nestorians, and Monothelites. About 1180 they numbered 40,000, living in the neighbourhood of mount Libanus, and were of service to the Christian kings of Jerusalem. They were reconciled to the church of Rome soon after. For an account of the massacres of the Maronites in 1860, see *Druses*.

MAROONS, a name given in Jamaica to runaway negroes. When the island was conquered

from the Spaniards, a number of their negroes fled to the hills and became very troublesome to the colonists. A war of eight years' duration ensued, when the Maroons capitulated on being permitted to retain their free settlements, about 1730. In 1795 they again took arms, but were speedily put down and many were transported. *Bravde*.

The tracts appeared about 1586. Some had very singular titles: such as "An Abnand for a Parrat," "Hay any Worke for Cooper?" &c. They were collected and reprinted in 1843.

MARQUESAS ISLANDS (Polynesia) were discovered in 1595 by Mendana, who named them after the viceroy of Peru, Marquesa de Mendoza. They were visited by Cook in 1774, and were taken possession of by the French admiral Dupetit Thouars, 1 May, 1842.

MARQUIS, a dignity, called by the Saxons *markin-reve*, by the Germans *markgrave*, took its original form from *mark* or *March*, a limit or bound (see *Marches*); the office being to guard or govern the frontiers of a province. Marquis is next in honour to a duke. The first Englishman on whom the title was conferred was the favourite of king Richard II., Robert de Vere, earl of Oxford, created marquis of Dublin, and placed in parliament between the dukes and earls, 1385. James Stewart, second son of James III. of Scotland, was made marquis of Ormond, in 1476, without territories, afterwards earl of Ross.

MARRIAGE was instituted by God (*Gen. ii.*), and confirmed by Christ (*Mark x.*), who performed a miracle at the celebration of one (*John ii.*). Matrimonial ceremonies among the Greeks are ascribed to Ccerops, king of Athens, 1554 B.C. See *Age, Affinity*.

ROYAL MARRIAGE ACT, 12 Geo. III. c. 11, was passed in 1772, in consequence of the marriage of the duke of Gloucester, the king's brother, with the widow of the earl Waldegrave, and of the duke of Cumberland with the widow of colonel Horton and daughter of lord Ingham. [By this act, none of the descendants of George II., unless of foreign birth, can marry under the age of 25, without the consent of the king; and after that age, after twelve months' notice given to the privy council, they may contract such marriage, which shall be good unless both houses of parliament disapprove. The marriage of the duke of Sussex with the lady Augusta Murray, solemnised in 1793, was pronounced illegal, 1794, and the claims of their son, sir Augustus d'Este, declared invalid, by the house of lords, 9 July, 1844. He married lady Cecilia Underwood (afterwards duchess of Inverness), 1831.

H. R. H. the princess Louise was married to the marquis of Lorne by the queen's consent, 21 March, 1871.

HALF MARRIAGE. *Semi-Matrimonium*. Among the Romans concubinage was a legitimate union, not merely tolerated but authorised. The concubine had the name of *semi-conjux*. Men might have either a wife or a concubine, provided they had not both together. Constantine the Great checked concubinage, but did not abolish it. This ancient custom of the Romans was preserved, not only among the Lombards, but by the French when they held dominion in that country. Cujas assures us that the Gascons and other people bordering on the Pyrenean mountains had not

* Of these marriages, it is stated in the registrar's returns that 47,570 men and 70,601 women could not write, and that they signed the marriage register with their marks.—In France, the marriages were 208,893 in 1820; 243,674 in 1825; and 259,177 in 1830. As respects Paris, 7754 marriages were, bachelors and maids, 6456; bachelors and widows, 368; widowers and maids, 708; widowers and widows, 222.

relinquished this custom in his time, 1590. The women bore the name of "wives of the second order." *Hénault*. See *Morganatic Marriages*.

DOUBLE MARRIAGES. There are some instances of a husband and two wives (but they are very rare) in countries where polygamy was interdicted by the state. The first Lacedæmonian who had two wives was Anaxandrides, the son of Leon, about 510 B.C. Dionysius of Syracuse married two wives, viz.: Doris, the daughter of Xenetus, and Aristomache, sister of Dion, 398 B.C. It is said that the count Gleichen, a German nobleman, was permitted, under peculiar circumstances, by Gregory IX., in A.D. 1237, to marry and live with two wives. The Mormons practise and encourage polygamy.

FORCED MARRIAGES. The stat. 3 Henry VII. (1487) made the principal and abettors in marriages with heiresses, &c., contrary to their will, equally guilty as felons. By 39 Eliz. (1596) such felons were denied the benefit of clergy. This offence was made punishable by transportation, 1 Geo. IV. (1820). The remarkable case of Miss Wharton, heiress of the house of Wharton, whom captain Campbell married by force, occurred in William III.'s reign. Sir John Johnston was hanged for seizing the young lady, and the marriage was annulled by parliament, 1690.—Edward Gibbon Wakefield was tried at Lancaster, and found guilty of the felonious abduction of Miss Turner, 24 March, 1827; and his marriage with her was immediately dissolved by act of parliament.

MARRIAGES BY SALE. Among the Babylonians, at a certain time every year, the marriageable females were assembled, and disposed of to the best bidder. This custom is said to have originated with Atossa, daughter of Belochos, about 1433 B.C.

MAR'S INSURRECTION. John, earl of Mar, proclaimed James III. at Braemar, Aberdeenshire, 6 September, 1715. He was defeated at Sheriffmuir, 13 Nov., and escaped from Moutrose with the Pretender, 4 Feb. 1716.

MARS, a planet, next to the earth in order of distance from the sun; the spots on its surface were first observed by Fontana, in 1636. Two satellites named Phobos and Deimos, were discovered by professor Asaph Hall, at Washington, U.S., 11 Aug. 1877.

M. Dubois of Paris suggests that these satellites may be planetoids attracted by Mars, Aethra and another of these bodies having disappeared about the time of the discovery.

M. Schiaparelli, of Milan, describes configurations like canals, 1882, and M. Perrotin since has mapped them and asserts that Mars has an atmosphere and clouds (1887)

"They have likewise discovered two lesser stars or satellites which revolve about Mars."—*Swift*, Gulliver's Travels—Voyage to Laputa, about 1726.

MARSAGLIA (Piedmont, N. Italy). Here the imperialists under prince Eugene and the duke of Savoy were defeated by the French under Catinat, 4 Oct. 1693.

MARSEILLAISE HYMN. The words and music are ascribed to Rouget de Lille, or L'Isle, a French engineer officer, who, it is said, composed it by request, 1792, to cheer the conscripts at Strasburg. It derived its name from a body of troops from Marseilles marching into Paris in 1792 playing the tune. This account is doubted by some (1879). The author was pensioned by Louis Philippe, 1830, and died in 1836.

MARSEILLES. The ancient *Massilia* (S. France), a maritime city, founded by the Phœceans about 600 B.C.; an ally of Rome, 218 B.C. Cicero styled it the Athens of Gaul, on account of its excel-

MARSHALSEA COURT, having jurisdiction in the royal palace, was very ancient, of high dignity, and coeval with the common law. Since the decision of the case of the Marshalsea (see *lord Coke's 10 Rep. 68*) no business has been done in this court; but it was regularly opened and adjourned at the same time with the Palace court, the judges and other officers being the same. These courts were removed from Southwark to Scotland-yard in 1801, were abolished by parliament, and discontinued 31 Dec. 1849; see *Prisons*.

During the civil wars they and their allies rebelled, having demanded and been refused the rights of Roman citizenship, 91 B.C. MARSTON-MOOR (near York). The Scots and parliamentary army were besieging York, when prince Rupert, joined by the marquis of Newcastle, determined to raise the siege. Both sides drew up on Marston-moor, on 2 July, 1644, and the contest was long undecided. Rupert, commanding the right wing of the royalists, was opposed by Oliver Cromwell, at the head of troops disciplined by himself. Cromwell was victorious; he drove his opponents off the field, followed the vanquished, returned to a second engagement and a second victory. The prince's artillery was taken, and the royalists never recovered the blow.

MARTELLO TOWERS, said to have been erected by Charles V. on the coasts of Italy. Similar circular buildings were erected in the beginning of the present century, on the southern coast of England, and other parts of the empire, as defences against invasion. MASS, in the Roman church, is the office or prayers used at the celebration of the Eucharist, in memory of the passion of Christ, and to this every part of the service alludes. The general division consists in high and low; the first is that sung by choristers, and celebrated with the assistance of a deacon and sub-deacon; low masses are those in which the prayers are rehearsed without singing. Mass was first celebrated in Latin about 394; it was introduced into England in the 7th century. Prostration was enjoined at the elevation of the host in 1201. Dr. Daniel Rock, in "The Church of our Fathers" (1849), describes an ancient MS. of "The Service of the Mass, called the Rite of Salisbury," compiled for that cathedral, by St. Osmund and others, during the 12th century. MASTER OF THE GREAT WARDROBE, an
 ancient office abolished in 1782; duties transferred
 to the lord chamberlain.

MASTER OF THE REVELS, an officer of the
 court. Solomon Dayrolle was the last appointed.
 Part of the duties were transferred to the licenser of
 plays, 1737.

MASTER OF THE ROLLS, an equity judge,
 derives his title from having the custody of all
 charters, patents, commissions, deeds, and recog-
 nizances, entered upon rolls of parchment; his de-
 crees are appealable to the court of chancery. The
 repository of public papers, called the Rolls, was in
 Chancery-lane. The rolls were formerly kept in a
 chapel founded for the converted Jews; but after
 the Jews were expelled the kingdom in 1290 it was
 annexed for ever afterwards to the office of the
 mastership of the rolls. Here were kept all the
 records since the beginning of the reign of king
 Richard III., 1483; all prior to that period being
 kept in the Tower of London; see *Records*. The
 first recorded master of the rolls was either John de
 Langton, appointed 1286, or Adam de Osgeobey,
 appointed 1 Oct. 1295; but it is clear that the office
 was in existence long before. *Hardy*. The duties
 were defined in 1833; the salary regulated in 1837.
 Changes by the judicature act of 1881. By the
 supreme court of judicature act, the master of the
 rolls was made a judge of appeal only.

 the ignorance of sir Christopher Hatton, lord chan-
 cellor of England, in 1587. The office was abolished
 in 1852. The offices of the masters in the queen's
 bench, common pleas, and exchequer divisions of

MATTERHORN, a part of the main ridge of the Alps, about 14,836 feet high, S. Switzerland. After various fruitless attempts by professor Tyn-dall and other eminent climbers, in 1860, the summit was reached on 14 July, 1865, by Mr. Edward Whymper and others. During their descent, four of the party were killed. Mr. Hadow fell; the connecting rope broke, and he himself, lord Francis Douglas, the rev. Mr. Hudson, and Michael Croz, a guide, slipped down, and fell from a precipice nearly 4000 feet high. Miss Walker, with her father, ascended the Matterhorn, 22 July, 1871. Three gentlemen ascended without a guide, 21 July, 1876. Dr. W. O. Moseley, an American, was killed here, 14 Aug. 1879. On this day it was the custom of our sovereigns or their almoners to give alms, food, and clothing to as many poor persons as they were years old. It was begun by Edward III., when he was fifty years of age, 1363, and is still continued.

MAUR, ST., see *Benedictions*.

MAURITANIA (N. Africa), with Numidia, became a Roman province, 33 B.C. Augustus created (30 B.C.) a kingdom formed of Mauritania and part of Getulia, for Juba II., a descendant of the ancient African princes. Suetonius Paulinus suppressed a revolt here, A.D. 42, when it was made a province, divided into parts. The country was subjugated by the Vandals, 429, and Greeks, 533, and fell into the hands of the Arabs, about 680. See *Morocco*, and *Moors*.

MAURITIUS, or ISLE OF FRANCE (in the Indian Ocean), was discovered by the Portuguese, 1505; but the Dutch were the first settlers in 1598. They called it after prince Maurice, their stadholder, but on the acquisition of the Cape of Good Hope, they deserted it; and it continued unsettled until the French landed, and gave it the name of one of the finest provinces in France, 1715. This island was taken by the British, 2 Dec. 1810, and confirmed to them by the treaty of Paris in 1814. The bishopric was founded 1854. Sir Henry Barkly, governor, in 1863, succeeded by sir Arthur H. Gordon, 1870; sir Arthur Purves Phayre, 1874; sir George F. Bowen, 1879; sir J. Pope Hennessy, Dec. 1882; sir Charles Cameron Lees, Sept. 1889; Sir Herbert E. H. Jerningham, April, 1893; sir C. Bruce, Jan. 1897. MAUSOLEUM. Artemisia married her own brother, Mausolus, king of Caria, Asia Minor, 377 B.C. At his death, 353, it is said she drank in liquor his ashes after his body had been burned, and

erected to his memory at Halicarnassus a monument, one of the seven wonders of the world (350 B.C.), termed *Mausoleum*. She invited all the literary men of her age, and proposed rewards to him who composed the best elegiac panegyric upon her husband. The prize was adjudged to Theopompus, 357 B.C. She died 352 B.C. The statue of Mausolus is among the antiquities brought from Halicarnassus by Mr. (aft. sir) C. T. Newton in 1857, and placed in the British Museum. A mausoleum for the royal family of England was founded by the queen at Frogmore, 15 March, 1862.

MAUVE (French for *malva*, mallow), a dye produced by Dr. Stenhouse from lichens in 1848; now produced from *Aniline* (*which see*).

MAY, the fifth month of the year, received its name, some say, from Romulus, who gave it this appellation in respect to the senators and nobles of his city, who were denominated *majores*; others supposed it was so called from Maia, the mother of Mercury, to whom they offered sacrifices on the first day. The ancient Romans used to go in procession to the grotto of Egeria on May-day; see *Evil May-day*.

Mrs. Elizabeth Montague (who died in 1800) gave for many years, on May day, an entertainment at her house in Portman square, to the chimney-sweepers of London.

MAYNOOTH COLLEGE (Ireland), founded by parliament, 1795, and endowed by a yearly grant voted for the education of students designed for the Roman Catholic priesthood in Ireland. An act for its government was passed in 1800. It contains about 500 students. Permanent endowment of this college (30,000*l.* for the enlargement of the buildings and 26,000*l.* annually) was granted by parliament, June, 1845. This occasioned much controversy in England, a motion being made for its abolition almost every session. The college was repaired and enlarged in 1860. By the Irish Church act, passed 26 July, 1869, the annual parliamentary grant was to cease after 1 Jan. 1871; a compensation being made. A synod held here, Sept. 1875, condemned mixed education. The buildings were much injured by fire, 31 Oct. 1878; damage estimated at 10,000*l.* The pictures and books were saved. The centenary celebrated, an international assembly of ecclesiastics present, 25-27 June, 1895. The king and queen visit the college (see *Ireland*, 1903), Mgr. Gargan, president since 1894, died, aged 84, 27 Aug. 1903.

MAYO ASSASSINATION. Richard Southwell Bourke, earl of Mayo, was born 21 Feb. 1822. As lord Naas he was chief secretary for Ireland, in the Derby and Disraeli administrations, 1852, 1858-9, 1866-8. In Sept. 1868, he was appointed viceroy of India, and energetically fulfilled the duties. He was assassinated at Port Blair in the Andaman islands, on a visit of inspection, by Shere Ali, a convict, 8 Feb. 1872. The Indian government granted an annual pension of 1000*l.* to the countess, and 20,000*l.* for the children; and 1000*l.* a year was added to lady Mayo's pension by parliament, voted unanimously, 22 July, 1872.

MAYORS OF CORPORATIONS. At the time of the Norman conquest, 1066, the chief officer of London was called *port-grave*, afterwards softened into *port-reeve*, from Saxon words signifying chief governor of a harbour. He was afterwards called provost; but in Henry II.'s reign the Norman title of *maire* (soon after *mayor*) was brought into use. At first the mayor was chosen for life, but afterwards for periods of irregular duration; now he is chosen annually, but is eligible for re-election. He must be an alderman, and have been sheriff. His duties commence on 9 Nov. In early times the mayor was always an M.P. for the city. The prefix **LORD** is peculiar to the mayors of London, Dublin, York, Belfast, Liverpool, Manchester, Leeds, Birmingham, Sheffield, Bristol (1890), Cork (1900) Sydney and Melbourne (1902), and to the provosts of Edinburgh, Glasgow, Dundee, Aberdeen and Perth. The dukes of Norfolk and Sutherland, the marquis of Ripon, and the earls of Derby and Lonsdale, and 6 other peers were elected mayors, Nov. 1895.

MAZRA (or Baba Wali), near Candahar, Afghanistan. Here gen. sir Frederick Sleigh Roberts totally defeated Sirdar Mahomed Ayoub Khan, and captured his camp and all his cannon, 1 Sept. 1880. Amongst the killed were colonel F. Brownlow, capt. St. John F. Frome, and capt. E. Straton; lieutenant Hector MacLaine (made prisoner 27 July) was found recently murdered. Ayoub Khan with some followers fled towards Herat.

MAZURKA, a Polish dance of the 16th century, introduced into England about 1845; Chopin's music for the mazurka is much admired.

MEAL TUB PLOT, against the duke of York, afterwards James II., contrived by one Dangerfield, who secreted a bundle of seditious letters in the lodgings of colonel Maunsell, and then gave information to the custom-house officers to search for smuggled goods, 23 Oct. 1679. After Dangerfield's apprehension, on suspicion of forging these letters, papers were found concealed in a *meal-tub* at the house of a woman with whom he cohabited, which contained the scheme to be sworn to, accusing the most eminent persons in the Protestant interest, who were against the duke of York's succession, of treason,—particularly the earls of Shaftesbury, Essex, and Halifax. On Dangerfield being whipped the last time, as part of his punishment, 1 June, 1685, one of his eyes was struck out by a barrister named Robert Francis. This caused his death, for which his assailant was hanged.

MEATH (Ireland). Many episcopal sees in Meath (as Clonard, Duleck, and others of less note) were fixed at Clonard, before 1151-2, when the division of the bishoprics in Ireland was made by John Paparo, then legate from Pope Eugene III. Eugene was the first styled bishop of Meath, about 1174. Meath was valued, 30 Henry VIII., at 373*l.* 12*s.* per annum.

MECCA (in Arabia), the birth-place of Mahomet, about 571, whence he was compelled to flee, 15 July, 622 (the Héjira). On one of the neighbouring hills is a cave, where it is asserted he retired to perform his devotions, and where the greatest part of the Koran was brought to him by the angel Gabriel, 604. Mecca, after being vainly

besieged by Hoscin for the caliph Yezid, 682, was taken by Abdelmelek, 692. In 1803 it fell into the hands of the Wahabees, a Mahometan sect. They were expelled by the pacha of Egypt in 1818, who retired in 1841. It is said that 160,000 pilgrims visited Mecca in 1858, and only 50,000 in 1859. The grand shereef was assassinated by a fanatic, 21 March, 1880. Pilgrimage to Mecca still continues; annual average, 93,350 (1887); about 300,000 in 1893.

MECHLIN or **MALINES** (Belgium), renowned for its lace manufacture, was founded in the 6th century; destroyed by the Normans in 884; sacked by the Spaniards, 1572; taken by the prince of Orange, 1578, and by the English, 1580; and

frequently captured in the 17th and 18th centuries, partaking in the evil fortunes of the country. A Roman Catholic congress was held here Sept. 1867. Population 1890, 50,962; 1900, 56,013.

MECKLENBURG (N. Germany), formerly a principality in Lower Saxony, now independent as the two grand duchies of Mecklenburg-Schwerin (population in 1885, 575,152; 1890, 578,565; 1900, 607,835); and Mecklenburg-Strelitz (population in 1885, 98,371; 1890, 97,978; 1900, 102,628). The house of Mecklenburg claims to be descended from Genseric the Vandal, who ravaged the western empire in the 5th century, and died 477. During the Thirty years' war Mecklenburg was conquered by Wallenstein, who became its duke, 1628; it was restored to its own duke, 1630. After several changes the government was settled in 1701 as it now exists in the two branches of Schwerin and Strelitz. In 1815 the dukes were made grand dukes. The dukes joined the new North German confederation by treaty, 21 Aug. 1866.

MEDALS, see *Numismatics*. The ancient medals resembled medallions. Modern medals began about 1453 in the 15th century with the works of Vittore Pisano, of Verona, who died 1456, and his followers. Charles I. authorized the presentation of a badge or medal for "forlorn hopes" soldiers, May, 1643. The house of commons resolved to grant rewards and medals to the fleet whose officers (Blake, Monk, Penn and Lawson) and men gained a glorious victory over the Dutch fleet, off the Texel, in 1653. Blake's medal of 1653 was bought by his majesty, William IV. for 150 guineas. In 1692 an act was passed for applying the tenth part of the proceeds of prizes for medals and other rewards for officers, seamen, and marines. Subsequent to Lord Howe's victory, 1 June, 1794, it was thought expedient to institute a naval medal. Medals were struck for the victory of Waterloo; a general war medal (for the war 1793-1814) was ordered in 1847; and special medals were given after the Caffre and Chinese wars. Medals were presented by the queen to persons distinguished in the war in the Crimea, 18 May, 1855. Medals were given to arctic voyagers of 1875-6, in 1877; after Egyptian war, 1882, distributed by the queen at Windsor, 21 Nov. 1882; medals for the Soudan war, 1885; a Burmah medal was given for the war, 1885-7; for the South African war, 1902. crown, 16 July. When viscount Althorp became

year, lord Melbourne waited on the king to receive

new chancellor of the Exchequer, when his majesty

said he considered the administration at an end.

Sir Robert Peel succeeded, but was compelled to re-

sign in 1835, and lord Melbourne returned to office.

The total destruction of the Pisan fleet on 6 Aug. 1284, by the Genoese near the same place, after a most sanguinary conflict, was considered to be the just punishment of their impiety.

MEMPHIS, an ancient city of Egypt ("of which the very ruins are stupendous"), is said to have been built by Menes. It included several grand temples with the tombs of the kings. The invasion of Cambyses, 525 B.C., began the ruin of Memphis, and the founding of Alexandria, 332, completed it. It was restored by Septimius Severus, A.D. 202. In the 7th century, under the dominion of the Saracens, it fell into decay.—MEMPHIS, Tennessee, U. S., on the Mississippi, was taken from the confederates by the federals after a severe conflict, 6 June, 1862.

In crossing this strait, a ferry-boat was lost, and fifty persons, chiefly Irish, 4 Dec. 1785. The road from London to Holyhead has long been regarded as the highway from the British metropolis to Dublin; Mr. Telford was applied to by the government to perfect this route by the London and Holyhead mail-coach road, which he did by erecting beautiful suspension bridges over the river Conway and the Menai Strait, commenced in July, 1818, finished in July, 1825, opened 30 Jan. 1826. The Britannia tubular bridge over the Menai was constructed by Stephenson and Fairbairn in 1849-50; see *Tubular Bridges*.

MENDICANT FRIARS. Several religious orders commenced alms-begging in the 13th century, in the pontificate of Innocent III. They spread over Europe, and formed many communities; but at length by a general council, held by Gregory X. at Lyons, in 1272, were reduced to four orders—Dominicans, Franciscans, Carmelites, and Augustines. The Capuchins and others branched off. See *Franciscans*, &c.

MENDICITY SOCIETY (Red Lion-square, London), was established in 1818 for the suppression of public begging, and other impositions. Tickets received from the society are given by subscribers to beggars, who obtain relief at the society's house, if deserving. In 1857, 54,074 meals; in 1860, 42,912; in 1865, 52,137; in 1872, 26,330; in 1878, 55,180 were distributed. In 1878, 1700 begging letters were investigated; in 1891, 1358; in 1896, 1,516; in 1897, 1,611. 1,400*l.* were expended in relief in 1894; 1,244*l.* in 1897; and 1,182 vagrants apprehended; 1,146*l.* in 1901; 1,504 vagrants taken up; 889 begging letters received. He also determined the ratio of spheres, spheroids, &c., about 218 B.C.; see *Arithmetical*. The *Mensurator*, a new machine for the solution of triangles, was explained by Mr. W. Marsham Adams, at the British Association Meeting at Brighton, Aug. 1872.

Here Garibaldi and his volunteers, after having entrenched his positions at Monte Rotondo and Mentana on their march towards Tivoli, on Sunday, 3 Nov. 1867, were totally defeated by the pontifical and French troops under generals Kánzlar and Polhès, after a severe conflict, in which general Faillly said "the Chassepot rifles did wonders." There were about 5000 men on each side, but the Garibaldians were very badly armed. The loss of the papal and French troops was about 200 killed and wounded; that of Garibaldi about 800. Garibaldi crossed the Italian frontier, and was arrested at Correse, and eventually sent to Caprera (about 25 Nov.). See *Rome*. A monument to the Garibaldians who fell here was inaugurated 25 Nov. 1877.

MESMERISM. Frederick Anthony Mesmer, a German physician, of Merseburg, published his doctrines in 1766, contending, in a thesis on planetary influence, that the heavenly bodies diffused through the universe a subtle fluid which acts on the nervous system of animated beings. Quitting Vienna for Paris, in 1778, he gained numerous proselytes and much money by experiments with and without metallic plates, producing effects termed then "animal magnetism," now "hypnotism." A committee of physicians and philosophers investigated his pretensions, and Bailly, in a paper drawn up in 1784, exposed the futility of animal magnetism. Mesmerism excited attention again about 1848, when Miss Harriet Martineau and others announced their belief in it. In 1859, the Mesmeric Infirmary issued its tenth annual report, archbishop Whately being president, and the earl of Carlisle and Mr. Monckton Milnes (since lord Houghton) among the vice-presidents. See *Animal Magnetism and Hypnotism*.

The "New Mesmerism" exhibited in Paris by Dr. Luys and others, which included the alleged externalization of sensations and transference of sensibility to inanimate objects, such as dolls, was well described in the *Times*, 28 Dec. 1892, and 5, 11 Jan. 1893, and by Mr. Ernest Hart in the *British Medical Journal* Jan. 1893

It was at first governed by kings; after its restoration to power in the Peloponnesus it formed an inferior republic, under the protection first of the Thebans, and afterwards of the Macedonians.

The first Messenian war began 743 B.C.; was occasioned by violence offered to some Spartan women in a temple of devotion common to both nations; the king of Sparta being killed in his efforts to defend the females. Eventually, Ithome was taken, and the Messenians became slaves to the conquerors B.C. 724

The second war, to throw off the Spartan yoke, commenced about 685, ending in the defeat of the Messenians, who fled to Sicily 668

The third war (the Messenians emigrate) 464-455

METALS. Tubal-Cain is mentioned as an "instructor of every artificer in brass and iron." (*Gen.* iv.) The Phœnicians had great skill in working metals. Bunsen and Kirchhoff's method of chemical analysis by means of the spectrum has added cæsium, rubidium, thallium, indium, gallium, and others to the known metals. See *Elements, Mines, Iron, and the other metals.* "Metallurgy," published by Dr. John Percy, 1861-80; he died 19 June, 1889. "Electro-Metallurgy," translated from the German of Dr. W. The term, literally denoting "after physics," originated from these words having been put at the head of certain essays of Aristotle, which follow his treatise on Physics. *Maekintosh.* Modern metaphysics arose in the 15th century—the period when an extraordinary impulse was given to the study of the human mind in Europe, commonly called the "revival of learning." Hobbes, Cudworth, S. T. Cole-ridge, Dugald Stuart, and sir W. Hamilton, were eminent British metaphysicians, and Descartes, Pascal, Kant, Schelling, and Fichte, foreign ones. See *Philosophy.*

METAURUS, a river in central Italy, where Hasdrubal, the brother of Hannibal, was defeated and slain, 207 B.C., when marching with abundant reinforcements. The Romans were led by Livius and Claudius Nero, the consuls. The latter commanded the head of Hasdrubal to be thrown into his brother's camp. The victory saved Rome.

METEMPSYCHOSIS, a doctrine attributed to Pythagoras, about 528 B.C., asserts the transmigration of the soul from one body to another. It is also ascribed to the Egyptians, who would eat no animal food lest they should devour the body into which the soul of a deceased friend had passed. They had also an idea that so long as the body of the deceased was kept entire, the soul would not transigrate; and therefore embalmed the dead. See *Buddhism.*

METEOROGRAPH, an apparatus for the invention of which father Secchi of Rome received a prize at the Paris International Exhibition, July, 1867. It is self-acting, and registers the various changes of the atmosphere in the form of a diagram.

METEOROLOGY (from the Greek *metēōros*, aerial), the science which treats of the phenomena which have their origin in the air, such as rain, lightning, meteors, fogs, &c. The writings of Theophrastus, on meteorology, 3rd century B.C. were translated by Jas. G. Wood, edited by G. J. Symons, published 1894. Aristotle, Bacon, Boyle, and Franklin wrote on the subject.

By the exertions of Mr. James Glaisher, long the secretary, the apparatus at Greenwich was erected; and meteorology has appeared in the "Greenwich Observations" since 1848. See *Balloon—Scientific Ascents.*

The Royal Meteorological Society's annual exhibitions began in 1830.

Meteorological observatories have been erected in all parts of the globe.

The Meteorological department of the Board of Trade, established in 1855, under admiral Fitzroy, commenced the publication of reports in 1857. The admiral published his "Weather-Book" in 1863. His exertions are said to have overworked his brain; and on 30 April, 1865, he died by his own hand. The Meteorological office was soon after placed under the direction of Mr. Robert H. Scott. It has issued apparatus and instruction books to captains of ships and established observatories in many places in the empire. It was handed over to the Royal Society in 1871, and endowed by Mr. J. P. Gassiot. Annual reports on ocean-meteorology, weather telegraphy and climatology issued.

During the experiments made at the Jodrell laboratory, Kew, by Dr Oliver and Herr Joseph Nowack in October, 1839, when many weather changes occurred, only one forecast was given by the weather plant, which therefore cannot be relied upon for meteorological purposes. METEORS, LUMINOUS, include shooting stars, fire-balls, and falling stones or aërolites. They were described by Halley, Wallis, and others early in the 17th century. The periodicity of the star showers about the 10th of August (termed in the middle ages St. Lawrence's tears) was discovered separately by Quetelet, 1836, and by Herrick in 1837. The following are remarkable epochs for their annual return:—2 Jan.; 29 July; 3 and 9-12 Aug.; 8-14 Nov.; 11 Dec. *R. P. Greg.* See *August*.

The magnificent continuous star-shower of 14 Nov. 1866, had been predicted by professor Newton some time previously. A fine display occurred on the night of 13 Nov. 1868, in the United States. A similar phenomenon had been witnessed by Humboldt at Cumana (S.A.), 12 Nov. 1799; and by Dr. D. Olmsted, at New-Haven (U.S.), 13 Nov. 1833. They were well observed in Britain and Europe, 27 Nov. 1872; and in Southern and Western Europe, 27 Nov. 1885.

AÉROLITES, falling-stones, accompanying meteors, are found in our museums. They contain iron, nickel, and other minerals.

METHOD (Greek, a way of transit), that which gives to knowledge its character. S. T. Coleridge's treatise on the science of method is prefixed to the first volume of the "Encyclopædia Metropolitana," 1845.

The most recent work on this subject is Professor Stanley Jevons' "Principles of Science: a Treatise on Logic and Scientific Method," 1874. "The powers of mind concerned in creation of science are discrimination, detection of identity, and retention."

METHUEN TREATY, a treaty for regulating the commerce between Great Britain and Portugal, made 27 Dec. 1703, concluded by Paul Methuen, our ambassador at Lisbon. It greatly favoured the importation of port wine into this country by lowering the duty, to the discouragement of French wines. It was abrogated in 1834.

METHYL, a colourless inodorous gas, a compound of hydrogen and carbon, obtained in the free state first by Frankland and Kolbe separately, in 1849.

METHYLATED SPIRITS. By an act passed in 1855 a mixture of spirits of wine with 10 per cent. of its bulk of wood-naphtha, or methylic alcohol, is allowed to be made duty free for use in the arts and manufactures, not less than 450 gallons being made at one time. In 1861 an act was passed permitting the methylated spirits to be retailed by licence.

METONIC CYCLE, a period of 19 years, or 6940 days, at the end of which the changes of the moon fall on the same days; see *Catippie Period, Golden Number*.

METRIC SYSTEM. Before the revolution there was no uniformity in French weights and measures. On 8 May, 1790, the constituent assembly charged the Academy of Sciences with the organisation of a better system. The committee named for the purpose by the academy included the names of Berthollet, Borda, Delambre, Lagrange, Laplace, Méchain, and Prony. Delambre and Méchain were charged with the measurement of an arc of the meridian between Dunkirk and Barcelona, and from their calculations the *mètre*, which is equal to a ten-millionth part of the distance between the poles and the equator (3'2808 English feet) was made the unit of length and the base of the system by law on 7 April, 1795. The system was completed in 1799, and made by law the only legal one on 2 Nov. 1801. A decree on 12 Feb. accommodated the old measures to the new system; but on 4 July, 1837, it was decreed that after 1 Jan. 1840, the metric and decimal system in its primitive simplicity should be used in all business transactions. The example of France has been followed by the greater part of Europe, and will probably in time be adopted in the British empire.

Unit of CAPACITY, *litre*=a cubic *décimètre* (or 10th of a *mètre*)=1'76077 English pint.

Unit of WEIGHT, *gramme*=weight of a cubic centimètre (the 100th part of a *mètre*) of distilled water=0'56438 English drachm.

Unit of MONEY, the *franc*, a piece of silver weighing 5 grammes.

The multiples of these units are expressed by Greek numerals (*deca*, 10; *hecto*-, 100; *kilo*-, 1000; *myria*-, 10,000). The divisors are expressed by Latin numerals (*deci*-, 10; *centi*-, 100; *milli*-, 1000).

METZ, a fortified city in Lorraine, annexed to the empire of Germany, 10 May, 1871. It was the Roman Divodunum or Meti, capital of the Mediomatrici, a powerful Gaulish tribe, and afterwards of the kingdom of Austrasia, or Metz, in the 6th century. It was made a free imperial city, 985. It was besieged by Charles VII. of France for seven months in 1444, and was ransomed for 100,000 florins; was captured by Henry II., 10 April, 1552, and successfully defended by the duke of Guise against the emperor Charles V. with an army of 100,000 men, 31 Oct. 1552 to 15 Jan. 1553. Metz was ceded to France by the peace of Westphalia, 24 Oct. 1648, and was fortified by Vauban and Belleisle. On 28 July, 1870, the emperor Napoleon III. arrived at Metz and assumed the chief command. After the disastrous defeats at Woerth and Forbach, on 6 Aug. the whole French army (except the corps of MacMahon, De Failly, and Douay) was concentrated here, 10, 11 Aug., and by delay was hemmed in by the Germans. Marshal Bazaine assumed the chief command, 8 Aug. The emperor departed with the vanguard, which crossed the Moselle early on 14 Aug. Population, 1890, 60,194; 1900, 58,424.

1. Battle of Pange or Courcelles, gained by the first army under Von Steinmetz, after several hours' fighting, with great German loss, 14 Aug. 1870
Bazaine was censured for not advancing on 15 Aug. "
2. Battle of Vionville or Mars-la-Tour, gained by the 2nd army under prince Frederick Charles, after twelve hours' fighting. By the unexpected unmasking of a mitrailleuse battery, Henry, prince of Reuss, and many German nobles were killed in a few moments. The victory was at first claimed by the French. (This battle, the most sanguinary in the war hitherto, included a Balaclava charge of a German regiment of cavalry upon a French battery, by which it was decimated, but to which the victory was greatly due. Twice as many Germans were killed as at Königgratz, the killed and wounded being estimated at 17,000. The French loss was said to have been equally great) 16 Aug. "
Bazaine masses his troops for a decisive conflict, 17 Aug. "
3. Battle of Rézonville or Gravelotte, gained by the combined 1st and 2nd armies, commanded by the king in person, after twelve hours' fighting. "The most desperate struggle took place on the slopes over Gravelotte, which the Germans gained by nightfall, after repeated fatal charges; the fortune of the day being long in suspense. But the right of the French had been outflanked, they fell back fighting to the last, and retired under cover of Metz. The French are said to have lost 19,000; and the Germans, 25,000." (The king, on the 10th, had not undressed for thirty hours. The carnage is considered to have been unexampled; a large number of French prisoners were made; and enormous loss was experienced by the imperial guard. The German army included Saxons and Hessians), 18 Aug. "
Bazaine repulsed in a sortie at Courcelles, near Metz (he claimed a victory) 26 Aug. "
His whole army defeated by gen. Manteuffel of the army of prince Frederick Charles, in a battle lasting from the morning of 31 Aug. to noon, 1 Sept. "

One cause of the fall of Metz was the great army it contained; it might have been successfully defended by 20,000 men.

Marshal Bazaine was tried and condemned to death for surrendering Metz and the army, 6 Oct.-10 Dec.; punishment commuted to 20 years' imprisonment, 12 Dec.; he escaped from Isle St. Marguerite . . . 9 Aug. 1874

MICROBES, see *Germ*.

MICROMETER, an astronomical instrument used to measure any small distances and the minuter objects in the heavens, such as the apparent diameters of the planets, &c., was invented by Wm. Gascoigne, who was killed at the battle of Marston-moor, 2 July, 1644. It was improved by Huyghens about 1652. Sir Joseph Whitworth made a machine to measure the millionth of an inch, about 1858; the measurement of the 30,000th of an inch is now common. Dr. Carpenter measured a filament, the breadth being the 200,000th part of an inch, 1879.

MICROPHONE (Greek, *mikros*, little; *phone*, sound), a name given by Wheatstone, in 1827, to an instrument for rendering weak sounds audible by means of solid rods. The name was also given to an arrangement invented (in Dec. 1877) by professor D. E. Hughes (inventor of the type-writing telegraph, born in London 16 May, 1831, died 22 Jan. 1900), and shown to the Royal Society, 9 May, 1878.

MICROPHITE, a microscopic plant, especially parasitic; some physiologists consider bacteria and bacilli to be microphites, 1890.

MICROSCOPES, said to have been invented by Jansen, in Holland, about 1590; by Galileo, about 1610; by Fontana, in Italy, and by Drebbel, in Holland, about 1621. Those with double glasses were made at the period when the law of refraction was discovered, about 1624. Solar microscopes were invented by Dr. Hooke. In England great improvements were made in the microscope by Benjamin Martin (who invented and sold pocket microscopes about 1740), by Henry Baker, F.R.S., about 1763, and still greater during the present century by Wollaston, Ross, Jackson, Varley, Hugh Powell, and others. *Diamond microscopes* were made by Andrew Pritchard in 1824; and the properties of "test objects" to prove the qualities of microscopes, discovered by him and Goring in 1824-40. A *binocular microscope* (*i. e.*, for two eyes) was constructed by professor Riddell in 1851, and Wenham's binocular prism was made known in 1861. Næchet's *stereoscopic microscope*, 1867; Abbe's *orthoscopic* and *pseudoscopic*, 1881. Treatises on the microscope by J. Quekett (1848), by Dr. W. B. Carpenter (1856-1902), and Griffith and Henfrey's "Micrographic Dictionary" (1856, 1875, and 1883), are valuable. The Microscopical Society of London was established 20 Dec. 1839, and the Quekett Microscopical Club, 1865. In 1865 Mr. H. Sorby exhibited his *spectrum microscope*, by which the millionth of a grain of blood was detected.

MICROTOME, an instrument for cutting minute sections of organic tissue for the microscope, invented, 1885, by prof. Wm. Rutherford (who died, 21 Feb. 1899); improved by Dr. Paul Meyer and others.

It advanced under Celsus, who flourished A.D. 37, and of Galen, who lived 131. In England midwifery became a science about the period of the institution of the college of physicians, 10 Hen. A process for its condensation was invented by Mr. Gail Borden, near New York, in 1849, for which he was awarded a medal at the Great Exhibition in 1851, when he erected factories. He invented meat biscuit, 1850. The Anglo-Swiss condensed milk company was established in 1866; and since then the Aylesbury and other companies. MILKY WAY (Galaxy) in the heavens. Juno is said by the Greek poets to have spilt her milk in the heavens after suckling Mercury or Hercules. Democritus (about 428 B.C.) taught that the *via lactea* consisted of stars, which Galileo (1610-42) proved by the telescope. See *Stars*, 1892.

MILLBANK PENITENTIARY, Westminster. The very unhealthy site was purchased of the Grosvenor family. The building, a modifi-

cation of Jeremy Bentham's Panopticon (*which see*), first received convicts 27 June, 1816.

In consequence of many deaths during a great epidemic the convicts were placed in Woolwich hulks, 1822-3. On 16 June, 1843, a committee reported the penitentiary a failure. The system was abolished in parliament, and the building styled Millbank prison; made a military prison, 1870.

The hand-mill was in use among the Britons previously to the conquest by the Romans. The Romans introduced the water-mill. Cotton mills moved by water were erected by sir Richard Arkwright, at Cromford, Derbyshire. He died in 1792. See *Mechanics*. He was afterwards restored to favour, and became secretary of state, 1776.

* This militia act was consequent upon the then prevailing opinion of the necessity of strengthening our national defences against the possibility of French invasion. The act empowered her majesty to raise a force not exceeding 80,000 men, of which number 50,000 were to be raised in 1832, and 30,000 in 1835; the quotas for each county or riding to be fixed by an order in council.

MINERALOGY, the science of minerals, is a branch of geology; see *Geology, Mines, and Crystallography*. It was not much studied by the ancients. George Agricola in the 16th century made the first attempt to treat it scientifically.

The study of mineralogy was advanced by Becker, Kircher, and Woodward in the 17th century. A British Mineralogical Society established in 1800 Haly's "Traité de Minéralogie" appeared in 1801 Mineralogical society of Great Britain held first meeting in London, 3 Feb. 1876, and others since. MINES. Strabo and Tacitus enumerate gold and silver as among the products of Britain. The earliest instance of a claim to a mine royal being enforced occurs 47 Hen. III. 1262. It related to mines containing gold, together with copper, in Devonshire. In Edward I.'s reign, according to Mr. Ruding, the mines in Ireland, which produced silver, were supposed to be so rich that the king directed a writ for working them to Robert de Ufford, lord justice, 1276. The lead mines of Cardiganshire, from which silver has ever since been extracted, were discovered by sir Hugh Middleton in the reign of James I.; see *Coal*, and the various metals. Average depth of mines (1891) 400 yards. Deep mines: Ashton Moss colliery, near Manchester, 2,850 ft.; part 3,000 ft.; copper mine, Calumet, near lake Superior, U.S., 3,900 ft. Hans Sachs, a shoemaker (1494-1576), a poet of the reformation, was for a time their dean. His works were published at Nuremberg, 1560. "Owleglass" and "Reynard the Fox," are attributed to the Meistersingers.

MINSTER, or **MONASTERIUM**, a place occupied by monks; see *Westminster* and *York*. "The Minster," an illustrated monthly magazine, supported by the archbishop of Canterbury, sir Benjamin Baker, and other eminent persons; No. 1, Jan. 1895.

MINSTRELS, originally pipers appointed by lords of manors to divert their copyholders while at work, owed their origin to the glee men or harpers of the Saxons, and continued till about 1560. John of Gaunt erected a court of minstrels at Tutbury in 1380. So late as the reign of Henry VIII. they intruded without ceremony into all companies, even at the houses of the nobility; but in Elizabeth's reign they were adjudged rogues and vagabonds (1597).

MINT. Athelstan enacted regulations for the government of the mint about 928. There were several provincial mints under the control of that of London. Henry I. is said to have instituted a mint at Winchester, 1125. Stow says the mint was kept by Italians, the English being ignorant of the art of coining, 7 Edw. I. 1278. The operators were formed into a corporation by the charter of king Edward III., in which condition it consisted of the warden, master, comptroller, assay-master, workers, coiners, and subordinats. The first entry of gold brought to the mint for coinage occurs in 18 Edw. III. 1343. Tin was coined by Charles II. 1684; and gun-metal and pewter by his successor James after his abdication. Sir Isaac Newton was warden, 1699-1727, during which time the debased coin was called in, and new issued at the loss of the government. Between 1806 and 1810, grants amounting to 262,000*l.* were made by parliament for the erection of the present mint, which was completed in 1810; it was injured by fire, 31 Oct. 1815. The new constitution of the mint, founded on the report of the hon. Wellesley Pole, took effect in 1817. Professor Thomas Graham, the master of the mint, died 16 Sept. 1869. By the Coinage Act, passed 4 April. 1870, the office was combined with that of the chancellor of the exchequer, the duties being transferred to the deputy-master (Sir C. W. Fremantle, K.C.B., 1 Jan. 1890; resigned, Sept. 1894; succeeded by Mr. Horace Seymour, made K.C.B. June, and died 25 June, 1902; Mr. W. E. Macartney appointed Jan. 1903. (Sir Wm. Mirrors or looking-glasses were made at Venice, A.D. 1300; and in England, at Lambeth, near London, in 1673. The improvements in manufacturing plate-glass, and that of very large size, have cheapened looking-glasses very much. Various methods of coating glass by a solution of silver, thus avoiding the use of mercury, so injurious to the health of the workmen, have been made known; by M. Petitjean in 1851; by M. Cimeg in 1861, and by Liebig and others.

Among the Protestants, an early undertaking of this kind was a Danish mission, planned by Frederick IV. in 1706. The Society for the Propagation of the Gospel in foreign parts was established 1701, and the Moravian Brethren encouraged missions about 1732. The London Missionary Society held their first meeting, 4 Nov. 1794 (1st mission sent to the South Sea Islands in the *Duff*, 1796); centenary celebrated, 15 Jan. 1895. MITHRIDATE, a medical preparation in the form of an electuary, supposed to be an antidote to poison and the oldest compound known, is said to have been invented by Mithridates, king of Pontus, about 70 B.C.

MITHRIDATIC WAR, caused by the massacre of 80,000 Romans, by Mithridates VI., king of Pontus, 88 B.C., and remarkable for its duration, its many sanguinary battles, and the cruelties of its commanders. Mithridates having taken the consul Aquilius, made him ride on an ass through a great part of Asia, crying out as he rode, "I am Aquilius, consul of the Romans." He is said to have killed him by causing melted gold to be poured down his throat, in derision of his avarice, 85 B.C. Mithridates was defeated by Pompey, 66 B.C.; and committed suicide, 63 B.C.

MITRAILLEUSE, or **MITRAILLEUR**, a machine-gun in which 37 or more large-bored rifles are combined with breech-action, by means of which a shower of bullets may be rapidly projected by one man. It was invented in Belgium, and adopted by the French emperor soon after the Prusso-Austrian war in 1866, and was much used in the Franco-Prussian war in 1870. Its peculiar "dry, shrieking, terrible sound" was described in the bombardment of Saarbrück, 2 Aug. 1870. Modifications of the mitrailleuse have been made by Montigny and others. The Fosbery mitrailleuse was tried and approved at Shoeburyness, 11 Aug. 1870.—It is mentioned in *Grose's Military Antiquities* (1801) that in England, in 1625, a patent was granted to William Drummond for a machine composed of a number of muskets joined together, by the help of which two soldiers can oppose a hundred, and named, on account of its effect, "thunder carriage," or more usually, "fire carriage." An English

mitrailleuse, a modification of the American gatling, containing 50 cartridges, was tried at Woolwich, 18 Jan. 1872; fifty of them were ordered to be made by Armstrong.

MITRE. The cleft cap or mitre was worn by the Jewish high-priest, 1491 B.C. It had on it a golden plate inscribed "HOLINESS TO THE LORD." *Exodus xxxix. 28.* The most ancient mitre that has the nearest resemblance to the present one is that upon the seal of the bishop of Laon, in the 10th century. *Fosbroke.* Anciently the cardinals wore mitres, but at the council of Lyons, in 1245, they were directed to wear hats.

They were frequently at war with the Israelites, and were subdued with divine help by Ehud about 1336, by David about 1040, and by Jehoshaphat, 895 B.C., but often harassed the Jews in the decay of their monarchy. The discovery of a stone with inscription in Phœnician characters, relating to Mesha, king of Moab, referred to in 2 *Kings*, iii., was announced in Jan. 1870, and impressions were exhibited soon after.

MODELS. The first were figures of living persons, and Dibutades, the Corinthian, is the reputed inventor of those in clay. His daughter, being about to be separated from her lover, traced his profile by his shadow on the wall; her father filled up the outline with clay, which he afterwards baked, and thus produced a figure of the object of her affection, giving rise to an art till then unknown, about 985 B.C.

A beautiful model of the new town of Edinburgh, before the building began, was formed in wood.

A model was made of a bridge over the Neva, of uncommon strength as well as elegance; and of the mountains of Switzerland, by general Pflüger (1766-85).

M. Choffin's model of Paris also was remarkable for its precision.

Fine models of Gibraltar, Quebec, and other fortified places, are deposited in the Rotunda at Woolwich. See *Waxwork and Lodging-houses.*

MODENA (formerly Mutina), capital of the late duchy in Central Italy; was governed by the house of Este, from 1288 till 1796, when the last male of that house, the reigning duke Hercules III., was expelled by the French. By the treaty of Campo Formio, the Modenese possessions were incorporated with the Cisalpine republic, 1797, and with the kingdom of Italy, 1805. The archduke Francis of Este, son of the archduke Ferdinand of Austria, and of Mary, the heiress of the last duke, was restored in 1814. Moore in "Lalla Rookh," 1817.

MONACHISM (from the Greek *monos*, alone). Catholic writers refer to the prophet Elijah, and the Nazarites mentioned in *Numbers*, ch. vi., as early examples. The first Christian ascetics appear to be derived from the Jewish sect of the Essenes, whose life was very austere, practising celibacy, &c. About the time of Constantine (306-22) numbers of these ascetics withdrew into the deserts, and were called *hermits*, *monks*, and *anchors*;* of whom Paul, Anthony, and Pachomius were most celebrated. Simeon, the founder of the Stylitæ (or pillar saints), died 451. He is

MONEY is mentioned as a medium of commerce in *Genesis* xxiii., 1860 B.C., when Abraham purchased a field as a sepulchre for Sarah. The coinage of money is ascribed to the Lydians. MOORS, formerly the natives of Mauritania (*which see*), but afterwards the name given to the Numidians and others, and now applied to the natives of Morocco and the neighbourhood. They frequently rebelled against the Roman emperors, and assisted Genseric and the Vandals in their invasion of Africa, 429. They resisted for a time the progress of the Saracens or Arab Mahometans, but were overcome in 707, and in 1019 were by them introduced into Spain, where their arms were long victorious. In 1063 they were defeated in Sicily by Roger Guiseard. The Moorish kingdom of Grenada was set up in 1237, and lasted till 1492, when it fell before Ferdinand V. of Castile, mainly owing to internal discord. The expulsion of the Moors from Spain was decreed by Charles V., but not fully carried into effect till 1609, when the bigotry of Philip III. inflicted this great injury to his country. About 1518 the Moors established the piratical states of Algiers and Tunis (*which see*). In the history of Spain, the Arabs and Moors must not be confounded.

About 1000 it was subdued by Boleslas of Poland, but recovered by Ulrich of Bohemia in 1030. After various changes, Moravia and Bohemia were amalgamated into the Austrian dominions in 1526. Moravia was invaded by the Prussians in 1866, and they established their head quarters at Brünn, the capital, 13 July. The demand of the Moravians for home rule was resisted Oct. 1871. Strike of 30,000 coal miners at Ostrau, and rioting suppressed by military, 16, 17 April, 1890. Population in 1890, 2,276,870; 1900, 2,435,081.

MORAVIANS, or **UNITED BRETHERN**, said to have been part of the Hussites, who withdrew into Moravia in the 15th century; but the brethren assert that their sect was derived from the Greek church in the 9th century. In 1722 they formed a settlement (called *Herrnhut*, the watch of the Lord) on the estate of count Zinzendorf. Their church consisted of 500 persons in 1727. They were introduced into England by count Zinzendorf about 1738; he died at Chelsea in June, 1760. In 1851 they had thirty-two chapels in England. They are zealous missionaries, and founded settlements in foreign parts, about 1732. London Association founded, 1817. Mr. Thos. It has been asserted that our George I. was thus married to the duchess of Kendal; the late duke of Sussex to lady Cecilia Underwood; Frederic VI. of Den-

MORMONS (calling themselves the Church of Jesus Christ of the LATTER-DAY SAINTS). This sect derives its origin from Joseph Smith, called the Prophet, who announced in 1823, at Palmyra, New York, that he had had a vision of the angel Moroni. In 1827 he said that he found the book of Mormon, written on gold plates in Egyptian characters. This book is said to have been written about 1812, by a clergyman named Solomon Spaulding (or by Martin Harris, who died Sept. 1875), as a religious romance in imitation of the scripture style. It was translated and published in America in 1830, in England in 1841. It fell into the hands of Rigdon and Smith, who determined to palm it off as a new revelation. The Mormons command the payment of tithes, permit polygamy, encourage labour, and believe in their leaders working miracles. Missionaries are propagating these doctrines in Europe with more success than would be expected.

On 19 Oct. 1857, a colossal mortar, constructed by Mr. Robert Mallet, was tried at Woolwich; with a charge of 70 lbs. it threw a shell weighing 2550 lbs. 1½ mile horizontally, and about ¾ mile in height.

MORTIMER'S CROSS (Herefordshire). The earl of Pembroke and the Lancastrians were here severely defeated by the young duke of York, afterwards Edward IV., 2 Feb. 1461. He assumed the throne as Edward IV. in March following.

MORTMAIN ACTS (*mort main*, dead hand). When the survey of all the land in England was made by William I., 1085-6, the whole was found to amount to 62,215 knights' fees, of which the church then possessed 28,015, to which additions were afterwards made, till the 7th of Edward I., 1279, when the statute of mortmain was passed, from a fear that the estates of the church might grow too bulky. By this act it was made unlawful to give any estates to the church without the king's leave; and this act, by a supplemental provision, was made to reach all lay-fraternities, or corporations, in the 15th of Richard II., 1391. Mortmain being such a state of possession as makes property inalienable, it is said to be in a dead hand. Several statutes have been passed on this subject; legacies by mortmain were especially restricted by the 9th Geo. II., c. 36 (1736). Law consolidated and amended 1888; 1891, 1892.

MOSAIC WORK (the Roman *opus tessellatum*), is of Asiatic origin, and is probably referred to in *Esther*, ch. i. 6, about 519 B.C. It had attained to great excellence in Greece, in the time of Alexander and his successors, when Sosos of Pergamus, the most renowned Mosaic artist of antiquity, flourished. He acquired great fame by his accurate representation of an "unswept floor after a feast." The Romans also excelled in Mosaic work, as evidenced by the innumerable specimens preserved. Byzantine Mosaics date from the 4th century after Christ. The art was revived in Italy by Tañ, Gaddi, Cimabue, and Giotto, who designed Mosaics, and introduced a higher style in the 13th century. In the 16th century Titian and Veronese also designed subjects for this art. The practice of copying paintings in Mosaics came into vogue in the 17th century; and there is now a workshop in the Vatican where chemical science is employed in the production of colours, and where 20,000 different tints are kept. In 1861, Dr. Salviati of Venice had established his manufacture of "Enamel-mosaics," and in July, 1864, he fixed a large enamel Mosaic picture in one of the spandrels under the dome of St. Paul's cathedral, London. He also executed commissions for queen Victoria and other persons. He died Feb. 1890, aged 74. See *Paul's, St.*, 1896.

It is stated that Crompton at the time knew nothing of the latter. He did not patent his invention, but gave it up in 1780 to the public. It produced yarn treble the fineness and very much softer than any ever before produced in England. Parliament voted him 5000*l.* in 1812, now considered a most inadequate compensation. MUSIC.* "Jubal, the father of all such as

* Pythagoras (about 555 B.C.) maintained that the motions of the twelve spheres must produce delightful

handle the harp and the organ" (3875 B.C. *Gen.* iii. 21). The flute, and harmony, or concord in music, are said to have been invented by Hyagnis, 1506 B.C. *Arund. Marbles*. Vocal choruses of men are first mentioned 556 B.C., *see Athens. Dufresnoy*. *See Organ*, and other musical instruments. Prior to 1600, the chief music in England was masses, ballads, and madrigals, but dramatic music was much cultivated from that time. About the end of James I.'s reign, a music professorship was founded in the university of Oxford by Dr. Wm. Hychin; and the year 1710 was distinguished by the arrival in England of George Frederick Handel. Mozart came to England in 1763; Joseph Haydn in 1791; and Carl Maria von Weber in 1825. MUSICAL NOTES, &c. *See Canon*. The first six are said to have been invented by Guy Aretino, a Benedictine monk of Arezzo, about 1025. *Blair*. The notes at present used were perfected in 1338. Counterpoint was brought to perfection by Palestrina about 1555. Gafforio of Lodi read lectures on musical composition in the 15th century, and they effected great improvement in the science. The Italian style of composition was introduced into these countries about 1616.

THE MUSICAL PITCH was settled in France in 1859. The middle A to be 370 simple or 435 double vibrations in a second; but through error of measurement the fork made gave (A) 439 double vibrations (C, 522). At a meeting on the subject, held at the Society of Arts, on 23 Nov. 1860, the concert pitch of C was recommended to be 528 vibrations in a second; but the fork made by Mr. J. H. Griesbach gives 539½ vibrations. Mr. Hullah adopted 512 vibrations.

A lower pitch was adopted at concerts in London in Jan. 1869. 528 vibrations for C adopted for performances at the international exhibition of 1872, at a meeting, 20 Jan. 1872.

[Handel's tuning-fork, 1740, was 495; the Philharmonic Society's, 1813-43, was 515.]

Mr. A. J. Ellis's elaborate "History of Musical Pitch" is published in "Journal of the Society of Arts," 5 March, 1880, and separately.

MUSICAL FESTIVALS IN ENGLAND. It was then agreed to hold festivals at Hereford, Gloucester, and Worcester, in rotation annually. Until the year 1753, the festival lasted only two days; it was then extended at Hereford to three evenings; and at Gloucester, in 1757, to three mornings, for the purpose of introducing Handel's "Messiah," which was warmly received, and has been performed annually ever since. Musical festivals on a great scale are now annually held at various cathedrals in England; Chester, 21 July, 1897; *see Handel and Crystal Palace*.

"*Sons of the Clergy*" annual musical performances at St. Paul's began 1700.

MUSICAL FESTIVALS. Several were held on the continent in the 18th century; for Haydn at Vienna, 1808-1811; others at Erfurt 1811, Cologne 1821, and frequently since.

MYSTERIES, derived from the Greek *mysterion*, a mystery or revealed secret. The *Sacred mysteries* is a term applied to the doctrines of Christianity, called the "mystery of godliness," 1 *Tim.* iii. 16, as opposed to the "mystery of iniquity," 2 *Thess.* ii. 7. The Holy Eucharist is also termed the sacred mysteries. The *Profeane* mysteries were the secret ceremonies performed by a select few in honour of some deity. From the Egyptian mysteries of Isis and Osiris sprang those of Bacchus and Ceres among the Greeks. The Eleusinian mysteries were introduced at Athens by Eumolpus, 1356 B.C.—**MYSTERY PLAYS**; see *Drama*.

MYSTICS, a name given to those theologians who, in addition to the obvious meaning of the Holy Scriptures, assert that there are interpretations to be discovered by means of an emanation of the Divine Wisdom, by which the soul is enlightened and purified; for which purpose they advocate seclusion for contemplation and asceticism.

Mysticism taught at Alexandria by Clemens, Pantaenus, Origen, and others, who mingled Christianity and Platonism, 2nd and 3rd centuries.

Much promoted by the works of the pseudo-Dionysius ("The Mystic Theology," &c), 6th century.

Introduced into the Western empire, 9th century.

Eminent mediæval mystics (opposed by the schoolmen), Master Eckhart (1251-1329); John Tauler of Strasburg, where he acted heroically during the plague, termed the "black death" (1290-1361); Henry Suso (1300-65). They aimed at a more spiritual religion than Romanism; but their followers were charged with immorality, pantheism, communism, and maintaining private inspiration.

Jacob Böhme or Behmen, the German mystic, published his "Aurora" (an alleged divine revelation) 1612; died, 18 Nov. 1624.

For modern mystics, see *Quakers, Quietists, Hutchinsonians, and Swedenborgians.*

This fiction was refuted by Burnet, and is rejected by Roman Catholic authorities, such as Lingard.

A Roman citizen had generally three names; *prænomen*, denoting the individual; *nomen*, the gens or clan; *cognomen*, the branch of the clan: sometimes he had the *agnomen* (e.g., Publius Cornelius Scipio Africanus). The popes change their names on their exaltation to the pontificate, "a custom introduced by pope Sergius, whose name till then was Swine-snout," 687. *Platina*. Onuphrius (followed by most of the modern authorities), refers it to John XII., 956; stating that it was done in imitation of SS. Peter and Paul, who were first called Simon and Saul. In France the name given at baptism was some-

times changed. The two sons of Henry II. of France were christened Alexander and Hercules; at their confirmation these names were changed to Henry and Francis. Monks and nuns, at their entrance into monasteries, assume new names. See *Surnames*. Miss Yonge's "History of Christian Names," published 1863 (new edition 1884). M. A. The colony was conquered by the Romans in the Samnite war, 326 B.C. Naples, after resisting the power of the Lombards, Franks, and Germans, was subjugated by the Normans under Roger Guiscard, king of Sicily, A.D. 1131. Few countries have had so many political changes, and cruel and despotic rulers, or suffered so much by convulsions of nature, such as earthquakes, volcanic eruptions, &c. NATIONAL ASSEMBLY, FRENCH. Upon the proposition of the abbé Sieyès, the states-general of France constituted themselves the National Assembly, 17 June, 1789. On the 20th the hall of this new assembly was shut by order of the king ; upon which the deputies of the *tiers état* repaired to the *Jeu de Paume*, or Tennis-court, and swore not to dissolve until they had digested a constitution for France. On the 22nd they met at the church at St. Louis. This assembly abolished the state religion, annulled monastic vows, divided France into departments, sold the national domains, established a national bank, issued assignats, and dissolved itself 21 Sept. 1792 ; see *National Convention*. In 1848 the legislature was again termed the National Assembly. It met 4 May, and a new constitution was proclaimed, 12 Nov. A new constitution was once more proclaimed by Louis Napoleon in Jan. 1852, after dissolving the National Assembly, 2 Dec. 1851. The present French National Assembly was elected 8 Feb., and met 12 Feb. 1871 ; new constitution adopted, 25 Feb. 1875 ; see *France*.

The members of both houses of parliament and the majority of the male population joined it immediately ; all persons holding office under government were required to be members ; see *Aid to Sick and Wounded, Artillery, Arts, Colonies, Education, Employers, Farmers, Social Science, Tuberculosis, and Volunteers*.

NATIONAL CONVENTION OF FRANCE, constituted in the hall of the Tuileries 17 Sept., and formally opened 21 Sept. 1792, when M. Grégoire, at the head of the National Assembly, announced that that assembly had ceased its functions. It was

then decreed, "That the citizens named by the French people to form the National Convention, being met to the number of 371, after having verified their powers, declare that the National Convention is constituted." This convention continued until a new constitution was organised, and the executive directory was installed at the Little Luxembourg, i Nov. 1795; see *Directory*. The chartists (*which see*) in England formed a national convention in 1839.

NATIONAL COUNCIL OF THE EVANGELICAL FREE CHURCHES, popularly known as "The Free Church Council," originated in an article by dr. Guinness Rogers to the *Methodist Times*, 20 Feb. 1890. The idea of the article, for the federation of the nonconformist bodies to promote their common interests, took practical shape, and the first free church congress was held at Manchester, 7 Nov. 1892. The second congress took place at Leeds, Mar. 1894, when it was determined that each congress should have an official president, dr. Berry being the first elected to hold that office. Since that date the congress has been held annually. The objects of the national council are "to facilitate intercourse and co-operation among the evangelical free churches; to assist in the organization of local councils; to encourage devotional fellowship and mutual counsel concerning the spiritual life and religious activities of the churches; to advocate the New Testament doctrine of the church, and to defend the rights of the associated churches; to promote the application of the law of Christ in every relation of human life." Among prominent past and present leaders of the movement have been and are dr. Clifford, rev. F. B. Meyers (president for 1903), dr. Guinness Rogers, the late rev. H. Price Hughes, dr. Munro Gibson, dr. Fairbairn, rev. T. Law (the secretary), the late dr. Dale, the late dr. Parker, the late dr. Berry, dr. Townsend, dr. A. Maclaren, Messrs. G. Cadbury, R. W. Perks, M.P., Evan Spicer, J. Rutherford, and other prominent nonconformists. In addition to social organizations, "free church lectures" on the history and principles of nonconformity are given. The free church council has taken a very active part in the nonconformist agitation against the education act of 1902, and that for London 1903, and also in the passive resistance movement (*which see*). Offices, Memorial hall, Farringdon-street, E.C.

NATIONAL DEBT. In 1693 an excise act was passed, granting duties for carrying on the war with France; the act also secured certain recompenses and advantages to such persons as should collectively advance 1,000,000*l.* for the same purpose; this sum was speedily subscribed. The permanent debt began by the establishment of the Bank of England in 1694, mainly through the exertions of Charles Montague, afterwards earl of Halifax, under the condition of its lending money to the government on interest, the repayment of the principal not to be demanded. The rapid growth of the debt was mainly caused by foreign wars, and its reduction was continually demanded. See *Stocks*, *Sinking Fund*, and *Local Loans*. Debts of the metropolitan authorities by loans, reported by Mr. Cosmo Rose-Innes (*Times*, 24 Oct. 1895), about 38,500,000*l.*, yearly charge about 2,500,000*l.* Total debt of the English and Welsh local authorities 1885, 173,207,968*l.*; 1895, 202,742,864*l.*; 1900, 293,864,224*l.*

NATIONAL GUARD OF FRANCE was instituted by the Committee of Safety at Paris on 13 July, 1789 (the day before the destruction of the Bastille), to maintain order and defend the public liberty. Its first colours were blue and red, to which white was added, when its formation was approved by the king. Its action was soon paralysed by the revolution, and it ceased altogether under the consulate and empire. It was revived by Napoleon in 1814, and maintained by Louis XVIII., but was broken up by Charles X., after a tumultuous review in 1827. It was revived in 1830, and helped to place Louis Philippe on the throne. In 1848 its reconstitution and its enlargement from 80,000 to 100,000 men led to the frightful conflict of

June, 1848. Its constitution was entirely changed in Jan. 1852, when it was subjected entirely to the control of the government. Formerly it had many privileges, such as choosing its own officers, &c. In consequence of the defection of part of the National Guard and the incompetency of the rest during the outbreak in Paris in 1871, its gradual abolition was decreed by the national assembly at Versailles (488-154), 24 Aug. 1871. The peaceful disarmament began in September. National guards established in Spain, Naples, and other countries, during the nineteenth century.

NATIVITY. There are three festivals in the Roman and Greek churches, under this name. The Nativity of Christ, also observed by the protestants, on 25 Dec. (see *Christmas*); the Nativity of the Virgin Mary, not observed by the protestants at all. Pope Sergius I., about 690, established the latter, but it was not generally received in France and Germany till about 1000; nor by the eastern Christians till the 12th century. The festival of the nativity of St. John the Baptist, 24 June, Midsummer-day, is said to have been instituted in 488.

NATURAL HISTORY was studied by Solomon, 1014 B.C. (1 *Kings* iv. 33); Aristotle (384-322 B.C.); by Theophrastus (394-297 B.C.); and by Pliny (23-79 A.D.); see *Botany, Zoology, British Museum*, &c.

NATURAL PHILOSOPHY, see *Philosophy*.

NATURAL SELECTION, see *Species*.

NATURALIZATION is defined to be "the making a foreigner or alien a denizen or freeman of any kingdom or city, and so becoming, as it were, both a subject and a native of a king or country that by nature he did not belong to." The first act of naturalization passed in 1437; and various similar enactments were made in most of the reigns from that time; several of them special acts relating to individuals. An act for the naturalisation of the Jews passed May, 1753, but was repealed in 1754, on the petition of all the cities in England; see *Jews*, for the privileges since granted them. The act for the naturalization of prince Albert passed 3 Viet., 7 Feb. 1840. A committee to inquire into the naturalization laws, appointed May, 1868, earl of Clarendon chairman, met 25 Oct. 1868; reported about Feb. 1869; and new acts for this purpose were passed 12 May, 1870, and 25 July, 1872. In 1870 there were about 9500 Americans in England, and about 2,500,000 British subjects in the United States of America. By the new act the latter were enabled to renounce their allegiance; and by the convention signed 3 Feb. 1871, the nationality of British subjects was made dependent on choice and not on birth. Naturalization (abroad) act passed, 6 July, 1895.

Committee on naturalization's report issued, with suggestions, see *Times* leader, 3 Oct. 1901.

NATURALISM, a realistic style in literature, mainly introduced by Balzac, 1829 *et seq.* "Naturalism" is now defined as the knowledge of phenomena, and the laws by which they are connected, but nothing more. Some writers combine with naturalism, agnosticism, positivism, and empiricism (*which see*).

Naturalism and Agnosticism," the Gifford lectures, 1896-8, 2 vols., by prof. James Ward, published 1899, in which he opposes the mechanical view of nature, viz. *naturalism*, and insists upon the recognition of mind as the animating principle. Edmond and Jules de Goncourt published "Medical and Physiological Novels," 1846 *et seq.* Emile Zola, in his "Rougon-Macquart" series, 1871 *et seq.*, portrayed deformed and diseased rather than true nature. A dramatized form of his "Assommoir," entitled "Drink," had a long run in London in 1879.

NATURE, a weekly illustrated journal of science, first appeared 4 Nov. 1869; editor, Mr. Joseph Norman Lockyer, F.R.S. Mr. Alex. Macmillan, one of the founders, born 1818, died, 25 Jan. 1896.

La Nature (founded and edited by M. Gaston Tissandier, died Sept. 1899; see *Balloons*) appeared in 1892.

NATURE PRINTING. This process consists in impressing objects, such as plants, mosses, feathers, &c., into plates of metal, causing these objects, as it were, to engrave themselves; and afterwards taking casts or copies fit for printing from. Kniphoff, of Erfurt, between 1728 and 1757, produced his *Herbarium vivum* by pressing the plants themselves (previously inked) on paper; the impressions being afterwards coloured by hand. In 1833, Peter Kyhl, of Copenhagen, made use of steel rollers and lead plates. In 1842 Mr. Taylor printed lace. In 1847 Mr. Twining printed ferns, grasses, and plants; and in the same year Dr. Branson suggested the application of electrotyping to the impressions. In 1849, professor Leydolt, of Vienna, by the able assistance of Mr. Andrew Worring, obtained impressions of agates and fossils. The first practical application of this process is in Von Heuffer's work on the mosses of Arpasch, in Transylvania; the second (the first in this country) in "The Ferns of Great Britain and Ireland," edited by Dr. Lindley, the illustrations to which were prepared under the superintendence of Mr. Henry Bradbury in 1855-56, who also in 1859-60 printed "The British Sea-weeds," edited by W. G. Johnston and Alex. Croall. The process was applied to butterflies by Joseph Merrin of Gloucester, in 1864.

Near here, on 20 Oct. 1827, the combined fleets of England, France, and Russia, under command of admiral Codrington, nearly destroyed the Turkish and Egyptian fleets. More than thirty ships, many of them four-deckers, were blown up or burnt, chiefly by the Turks themselves, to prevent their falling into the hands of their enemies. This destruction of the Turkish naval power was characterised by the duke of Wellington as an "untoward event." The port is also called Navarino.

NAVARRÉ, now a province of Spain, formed a part of the Roman dominions, and was conquered from the Saracens by Charlemagne, 778. His descendants appointed governors, one of whom, Garcias Ximenes, took the title of king in 857. In 1076, king Sancho IV. was poisoned, and Sancho Ramirez of Aragon seized Navarre. In 1134, Navarre became again independent under Garcias Ramirez IV. In 1234, Thibault, count of Champagne, nephew of Sancho VII., became sovereign of Navarre; and in 1284, by the marriage of the heiress Jane with Philip IV. le Bel, Navarre was united to France.

NAVIGATION LAWS. A code of maritime laws is attributed to Richard I. of England, said to have been decreed at the isle of Oleron, 1194, and further enactments were made by Richard II. in 1381.—In Oct. 1651, the parliament passed an act entitled "Goods from foreign parts, by whom to be imported," the principles of which were affirmed by 12 Charles II. c. 18, "an act for the encouraging and increasing of shipping and navigation" (1660). The latter act restricts the importation and exportation of goods from or to Asia, Africa, or America, to English ships, of which the masters and three-fourths of the mariners are to be English. This was followed by many acts of similar tenor; which were consolidated by 3 & 4 Will. IV. c. 54 (1833). These acts were in the whole or in part repealed by the act "to amend the laws in force for the encouragement of British shipping and navigation" (passed 12 & 13 Vict. c. 29, 26 June, 1849, after much opposition), and which came into operation 1 Jan. 1850. The steam navigation act passed 14 & 15 Vict. c. 79, 1851, same into operation 1 Jan. 1852. The act regulating the navigation of the river Thames was passed in 1786.—In Feb. 1865 the emperor recommended the modification of the French navigation laws; in Feb. 1872, new restrictions were laid upon foreign ships, chiefly affecting British.

NAVIGATORS (or Navvies). These helpers in the construction of railways probably derived their name (about 1830) from formerly making the inland navigation in Lincolnshire, &c., and are doubtfully said to be descendants of the original Dutch canal labourers. Navy Mission Society (new) met at Lambeth palace, 7 May, 1880. A "steam navy" suitable for working in sand, gravel, or heavy clay, made by Messrs. Ruston, Proctor, & Co., of Lincoln, 1878.

- NAVAL SALUTE TO THE BRITISH FLAG began in Alfred's reign, and though sometimes disputed, may be said to have been continued ever since. The Dutch agreed to

strike to the English colours in the British seas, in 1673. The honour of the flag salute at sea was also formally assented to by France in 1704, although it had been long previously exacted by England; see *Flag and Salutes at Sea*.

NAVAL UNIFORMS. The first notice of the establishment of a uniform in the British naval service, which we have met with, occurs in the *Jacobite's Journal* of 5 March, 1748, under the head of "Domestic News," in these terms:—"An order is said to be issued, requiring all his majesty's sea-officers, from the admiral down to the midshipman, to wear a uniformity of clothing, for which purpose pattern coats for dress suits and frocks for each rank of officers are lodged at the Navy-office, and at the several dockyards for their inspection." This is corroborated by the *Gazette* of 13 July, 1757, when the first alteration in the uniform took place, and in which a reference is made to the order of 1748, alluded to in the journal above mentioned, and which in fact is the year when a naval uniform was first established. James I. had indeed granted, by warrant of 6 April, 1609, to six of his principal masters of the navy, "liverie coats of fine red cloth." The warrant is stated to have been drawn *verbatim* from one signed by queen Elizabeth, but which had not been acted upon by reason of her death. This curious document is in the British Museum; but king James's limited red livery is supposed to have been soon discontinued.—*Quarterly Review*. An act respecting them was passed in 1894.

NAVY PAY OFFICE, organised in 1644, was abolished in 1836, when the army and navy pay departments were consolidated in the Paymaster General's office.

NAVY LIST was first officially compiled by John Finlaison, the celebrated actuary, and published monthly in 1814 *et seq.*; Lean's "Royal Navy List" is published quarterly.

NAVAL REVIEWS. The queen reviewed the fleet at Spithead, near Portsmouth, 11 Aug. 1833; again, March, 1854, before it sailed to the Baltic, at the commencement of the Russian war; and again, at Portsmouth, on the conclusion of peace, in the presence of the parliament, &c. The fleet extended in an unbroken line of 5 miles, and consisted of upwards of 300 men-of-war, carrying 3800 guns, and manned by 40,000 seamen. There were about 100,000 spectators, 23 April, 1856.

A grand naval review (15 great wooden ships, 15 iron-plated, 16 gun-vessels and boats), was held at Spithead (the queen, the sultan, and the viceroy of Egypt present), 17 July, 1867; another at Spithead before the shah of Persia, 23 June, 1873; another at Spithead by the queen (10 broadside ships, 8 turret ships, &c.), 3 Aug. 1878; another at Portsmouth, the queen and colonial visitors present (at the expense of the officers), 23 July, 1886.

Grand unexampled naval review (jubilee) by the queen at Spithead, 23 July, 1887; 135 vessels of all kinds, including 26 ironclads, 20,200 officers and men; one man died through the bursting of a saluting gun. **DIAMOND JUBILEE** review at Spithead; the prince of Wales, the royal family, and foreign visitors present; 165 British warships in 4 lines, 5 miles in length, between Portsmouth and the Isle of Wight; outside them, 2 lines of foreign warships, and special merchant vessels with guests; illuminations, &c. at night, 26 June, 1897.

CORONATION REVIEW, Spithead, 16 Aug. 1902. The fleet assembled on 28 June, but owing to the illness of the king the review was postponed. There were present 20 battle-ships, 24 cruisers, 15 torpedo-gunboats, 32 torpedo-destroyers, 5 training-ships, and 7 brigs, in all 103 vessels, exclusive of yachts, torpedo-boats, and special-service vessels. For the review on 28 June the following foreign men-of-war assembled:—Germany, 1 vessel; Russia, 1; France, 1; Spain, 1; Portugal, 1; Sweden and Norway, 2; Denmark, 1; Holland, 1; Greece, 1; Italy, 1; United States, 1; Japan, 2; Chili, 1; and the Argentine Republic, 1; only those belonging to Japan, Italy, and Portugal remained for the review on the 16 Aug. The review by the king passed off successfully, but a heavy thunderstorm in the evening marred the otherwise brilliant spectacle of the illuminated fleet.

NAVAL VOLUNTEERS (OF RESERVE). By 16 & 17 Vict. c. 73 (1853), the admiralty were empowered to raise a body of sea-faring men to be called the "Naval Coast Volun-

teers," not to exceed 10,000, for the defence of the coast, and for actual service if required. In 1859, acts were passed to enable the admiralty to raise a number of men, not exceeding 30,000, as a reserve force of seamen, to be called the "Royal Naval Volunteers." In November following, the admiralty issued a statement of the "qualifications, advantages, and obligations" of this reserve. The enrolment commenced on 1 Jan. 1860. The engagement is for five years, and the volunteers are entitled to a pension when incapacitated after the expiration of the term. At the prospect of war with the United States in Dec. 1861, a great number of seamen at Hartlepool, Dundee, London, Aberdeen, &c., offered their services. About 24,000 men, in 1896. Naval Reserve act passed, 14 Aug. 1896. Naval Volunteers Reserve act, 22 July, 1902.

First enrolled body of Royal Naval Volunteers inspected, about 18 Jan. 1873.

NAVY OF FRANCE. It is first mentioned in history, 728, when, like that of England at an early period, it consisted of galleys; in this year the French defeated the Frisian fleet. The French fleet was almost annihilated by Edward III. at the battle of Sluys, 24 June, 1340. It was considerably improved under Louis XIV. at the instance of his minister Colbert, about 1697. The French navy was in its splendour about 1781; became greatly reduced in the wars with England; see *Naval Battles*. It was greatly increased by the emperor Napoleon III., and in 1859 consisted of 51 ships of the line (14 sailing vessels and 37 steamers), and 398 other vessels, in all 449; including vessels building, converting, or ordered to be built. The new French iron-clad frigate *Gloire*, constructed by M. Dupuy de Lôme, launched in 1860, was generally considered as successful. The *Solferino* and *Magenta* were launched in June, 1861; other iron vessels since. The *Magenta* was destroyed by fire, 6 killed, 31 Aug. 1875. The *Devastation*, a great iron-clad, launched at Lorient, 19 Aug. 1879. France had 22 battle-ships, 11 armoured vessels for coast defence, besides gun-boats, cruisers and torpedo-boats; in all 256 vessels in 1888. The Supreme Navy Council was created by decree, 6 Dec. 1880. Navy league, founded 12 May, 1899. See *Navies (Foreign)*.

NEBULÆ, the luminous cloudlike mist visible to the naked eye in some constellations, such as Orion, in others only by powerful telescope; much studied by astronomers, and formerly considered to be clusters of stars. Halley gave a list of 6 nebulae, with a theory, in 1716. Messier, in 1784, gave 103. Sir Wm. Herschel discovered more than 2,500, and sir John Herschel more than 2,000; 7,840 known up to 1887; Dr. Dreyer's index catalogue gives 1,529, published total, 9,369, 1895.

The *Nebular Hypothesis* put forth by Laplace in his "Systeme du Monde," 1796, supposed that the solar system was evolved mechanically from a vast diffused revolving nebula, and that nebulae were the early stages in the formation of planets and their satellites, by cooling, condensation, and contraction. This theory was adopted by sir William Herschel, and though at first opposed, is now generally accepted in a modified form. Mr. Lassell scrutinized the dumb-bell nebula in Orion, and reported that the bright parts did not appear to be stars, Oct. 1860. Dr. Wm. Huggins reported his analyses of certain nebulae by their spectra, and believed them to be gaseous, 1865.

For sir Norman Lockyer's theory see under *Meteors*, 17 Nov. 1887.

Mr. Wm. Ford Stanley's "Notes on the Nebular Theory," a full work, published 1895.

Prof. Max Wolf, of Heidelberg, discovered a fine cluster in *Coma Berenices*, April, 1901.

NEEDLES. "The making of Spanish needles was first taught in England by Elias Crowse, a German, about the eighth year of queen Elizabeth, and in Queen Mary's time there was a negro who made fine Spanish needles in Cheapside, but would never teach his art to any."—*Stowe*. The manufacture was greatly improved at Whitechapel, London; Redditch, in Gloucestershire, and Hathersage, in Derbyshire. An exhibition of ancient needlework was formed at South Kensington Museum in 1873. Royal school of art (started 1872); new building erected at cost of 52,000*l.* (10,000*l.* from Mr. Edw. Stern). Opened by the princess of Wales, 29 April, 1903; princess Christian opens an embroidery exhibition, 30 April.

NEEDLE-GUN (*Zündnadelgewehr*), a musket invented by J. N. Dreyse of Sauerbrunn, about 1827, and made a breech-loader in 1836, which was adopted by the Prussian general Manteuffel about 1846. It was found to be a most effective weapon in the war with Denmark in 1864, and in that with Austria in 1866. The ignition of the charge is produced by a fine steel rod or needle being pressed through the cartridge. The principle is claimed for James Whitely, of Dublin, 1823; Abraham Mosar, 1831; and John Hanson, of Huddersfield, 1843.

NEPAUL (N. India) was conquered by the Ghoorkas, 1768, who made treaties with the British, 1791 and 1801; but frequently made incursions; and in consequence war with them commenced 1 Nov. 1814; terminated 27 April, 1815. A treaty of peace was signed between the parties, 2 Dec. 1815. War was renewed through an infraction of the treaty by the Nepaulese, Jan. 1816; and after several contests, unfavourable to the Nepaulese, the former treaty was ratified, 15 March, 1816. An extraordinary embassy from the king of Nepal to the queen of Great Britain arrived in England, landing at Southampton, 25 May, and remained till Aug. 1850; it consisted of the Nepaulese prince, Jung Bahadoor, and his suite, to whom many honours were paid. NEPHOSCOPE (*nephos*, Greek, a cloud). An
 apparatus for measuring the velocity of clouds, in-
 vented by Karl Braun, and reported to the Academy
 of Sciences, Paris, 27 July, 1868.

NEPTUNE, a primary planet, first observed
 on 23 Sept. 1846, by Dr. Galle, at Berlin, in con-
 sequence of a letter from M. Le Verrier, who had
 conjectured from the anomalous movements of
 Uranus that a distant planet might exist nearly in
 the position where Neptune was situated. Calcula-
 tions to the same effect had been previously made
 by Mr. J. Couch Adams, of Cambridge; but unfor-
 tunate delays occurred in their publication, and
 also of professor Challis's consequent discovery of
 the planet. The Royal Society of London awarded
 its gold medal to both astronomers as equals in the
 theoretical discovery. A satellite of Neptune was
 discovered by Mr. Lassell on 10 Oct. following.
 Neptune is said to have been seen by Lalande, and
 thought to be a fixed star. The Greek god Po-eidon
 became the Roman Neptune. Prof. J. C. Adams
 died 21 Jan. 1892; his "Papers" published
 March, 1897.

NERVES. Our knowledge of the nature and
 functions of the nervous system has been greatly
 enlarged by the researches and experiments of phy-

 He published papers on the nervous system,

 bishop of Constantinople (428-431), who is repre-
 sented as a heretic. He was opposed by Eutyches;
 see *Eutychians*.

1. He rejected the error of those who said Christ was
 a mere man, as Ebion, Paul of Samosata Plotinus.
 2. He maintained that the Word was united to the
 humanity in Christ Jesus, and that this union was
 most intimate and strict. 3. He held that these two
 natures made one Christ, one Son, one Person; only
 made up of two natures. 4. And this one Person may
 have either divine or human properties attributed to
 Him.

 first known lord was Ulric de Fenis, about 1032,
 whose descendants ruled till 1373, after which by
 marriages it frequently changed governors. On the
 death of the duchesse de Nemours, the last of the
 Longuevilles, in 1707, there were many claimants;
 among them our William III. He and the allies
 however gave it to Frederick I. of Prussia with the
 title of prince. In 1806 the principality was ceded
 to France, and Napoleon bestowed it on his general
 Berthier, who held it till 1814, when it fell to the
 disposal of the allies. They restored the king of
 Prussia with the title of prince with certain rights

 bringing them to trial Sept. 1856

NEW ENGLAND (N. America). The first settlement made in 1607, was named New England by captain Smith, in 1614. A band of 102 Puritans, now termed the "Pilgrim Fathers" (with 28 women), arrived here in the *May Flower*, and founded the settlement on Plymouth Rock, 25 Dec. 1620, which was named New Plymouth. This was the nucleus of Massachusetts, from whence were gradually developed New Hampshire, Vermont, Connecticut, and Rhode Island. In 1643 these settlements formed the first American confederation, a defensive union, with a constitution based on the Mosaic law, governed by a religious aristocracy, which lasted till 1693. Maine was made an independent state in 1820.

NEW FOREST (Hampshire), was made ("afforested") by William the Conqueror, 1070-85. It is said that the whole country, for thirty miles in compass, was laid waste. William Rufus was killed in this forest by an arrow shot by Walter Tyrrel, that accidentally glanced against a tree, 2 Aug. 1100, the site of which is now pointed out by a triangular stone. The New Forest Deer Removal act was passed 14 & 15 Vict. c. 76, 7 Aug. 1851. Agitation for the preservation of this forest, autumn, 1870. In accordance with an act passed in 1877, the forest is now managed by a court of Verderers as a public pleasure ground, and cattle farm. New Forest (sale of lands for public purposes) act passed, 24 July, 1902. See *Forests*.

NEWFOUNDLAND (N. America), said to have been discovered by John Cabot, who called it *Prima Vista*, 24 June, 1497. It was formally taken possession of by sir Humphry Gilbert, 1583. In the reign of Elizabeth other nations had the advantage of the English in the fishery. In 1577 there were 100 fishing vessels from Spain, 50 from Portugal,

150 from France, and only 15, but of larger size, from England.—*Hakluyt*. But the English fishery in some years afterwards (1625) had increased so much that the ports of Devonshire alone employed 150 ships, which sold their fish in Spain, Portugal, and Italy. The sovereignty of England was recognised in 1713, by the treaty of Utrecht, certain rights on the "French shores" being reserved for France. Newfoundland obtained the privilege of a colonial legislature in 1832; and the bishopric was established in 1839. Population, 1884, 197,335; 1901, 220,247. Appalling fire at St. John's, a great portion of the town destroyed, the loss estimated at 1,000,000*l.* sterling, 9 June, 1846. On 14 Jan. 1857, a convention was concluded between the English and French governments, confirming certain French privileges of fishery in exchange for others. The English colonists were dissatisfied with this convention. Newfoundland refused union with the dominion of Canada, March, 1869; a railway from St. John's to St. George's bay, proposed by the colonial government Aug. 1878. Capital, St. John's; population, 1884, 31,142. Governor, col. sir Stephen J. Hill, 1870; sir John H. Glover, Jan. 1876. NEWGATE, LONDON. The PRISON derives its
 name from the gate, to which was attached a small
 prison, gradually enlarged. One was erected in 1086
 by the bishop of London. It was used as a prison
 for persons of rank as early as 1218; but was rebuilt
 about two centuries afterwards by the executors of
 sir Richard Whittington, whose statue with a cat
 stood in the niche till the time of its demolition
 by the great fire of London, in 1666. It was then
 reconstructed; but becoming an accumulation of
 misery and inconvenience, was pulled down and
 rebuilt between 1778 and 1780. During the riots
 in 1780, the interior was destroyed by fire, but
 shortly afterwards restored. In 1857 the interior
 was pulled down to be re-erected on a plan adapted
 to the reformatory system. Newgate was disused
 as an ordinary prison, 31 Dec. 1881. Building
 demolished 1902-3. Sale of fittings and relics

 building, part of an old Roman wall was discovered.

In 1788 the British and French governments agreed not to occupy these islands, but French aggressions were protested against by the Australian colonies, 1887. French vessels land troops here to protect their countrymen, 1 June, 1886.

NEWMARKET (Cambridgeshire), renowned for its horse-races. It is first mentioned in 1227; and probably derived its name from the market then recently established. James I. erected a hunting seat here, called the king's house, to which Charles I. was taken as a prisoner in 1647, when the parliament army was quartered in the neighbouring village of Kennet. Charles II., who was fond of racing, built a stand-house for the sake of the diversion, about 1667,* and from that period races have been annual to the present time; and many extraordinary races have been run; see *Races*. Population, 1881, 5,093; 1891, 6,213; 1901, 19,065.

* During the races, on 22 March, 1683, Newmarket was nearly destroyed by an accidental fire, which occasioned the hasty departure of the company then assembled, including the king, the queen, the duke of York, the royal attendants, and many of the nobility; and to this disaster historians have ascribed the failure of the Rye house plot, the object of which was said to be the assassination of the king and his brother on the road from Newmarket to London, if the period of their journey had not been thus anticipated; see *Rye House Plot*.

NEW ORLEANS, capital of Louisiana, N. America (*which see*), founded in 1717, under the reignty of the duke of Orleans. In 1788, seven-eighths of the city were destroyed by fire. The British attacked New Orleans in Dec. 1814, and were repulsed with great loss by the Americans under general Jackson, 8 Jan. 1815; the British general, sir Edward Pakenham, was killed. New Orleans was surrendered to the Federals in April, 1862. The strong feeling of the inhabitants in favour of the Confederates and against the Federals induced general B. Butler to rule them with military rigour, occasionally degenerating into brutal tyranny, especially towards females, May to October, 1862. He was replaced by general Banks, 16 Dec. 1862. Sanguinary riots; due to agitators, begun 30 July, 1866, only suppressed by martial law; about 40 persons, white and coloured, were killed, and about 160 wounded, similar riots occurred, 24 Oct. 1868, and often since. Population in 1880, 216,090; in 1890, 158,019; 1900, 300,000.

New Orleans.—John McEnery elected governor of Louisiana by the southern whites, 4 Nov. 1872; but W. P. Kellogg, elected by the coloured people and their white friends, was recognised by the Federal government. To defend themselves against tyranny, the southern formed the "white league," and collected arms, which they refused to surrender on demand on 15 Sept. 1874. They deposed Kellogg at New Orleans after some resistance, and established McEnery as governor, but submitted to the president's proclamation; and Kellogg was restored 18 Sept.

CHARTIST RIOTS.—About 10,000 chartists (*which see*), from the neighbouring mines, armed with guns, pikes, &c., arrived at Newport, 4 Nov. 1839. They divided themselves into two bodies—one, under the command of Mr. John Frost, an ex-magistrate, proceeded down the principal street; whilst the other, headed by his son, took the direction of Stow-hill. They met in front of the Westgate hotel, where the magistrates were assembled with about 30 soldiers of the 45th regiment, and several special constables. The rioters broke the windows and fired on the inmates, by which the mayor, Mr. (afterwards sir Thomas) Phillips, and several other persons, were wounded. The soldiers returned the fire, and dispersed the mob, which fled, leaving about 20 dead, and others wounded. A detachment of the 10th royal hussars arrived from Bristol, and the town became tranquil.

Frost was apprehended on the following day, together with his printer, and other influential persons among the chartists. He and others were tried and sentenced to death (afterwards commuted to transportation) Jan. 1840

An amnesty was granted them, 3 May, and they returned to England Sept. 1856

NEW RIVER, for the supply of London with water, was begun 1609, and finished in 1613, when the projector, Hugh Myddelton, a London goldsmith, was knighted by James I.—*Strype*. This artificial river, which rises in Hertfordshire,* and which, with its windings, then forty-eight miles long, was brought to London, and opened 29 Sept. 1613. So little was the benefit of it understood, that for above thirty years the seventy-two shares (equally divided into *King's* and *Adventurer's*), netted only 5*l.* apiece. NEW SOUTH WALES, the principal colony of Australia on the eastern coast, was explored and taken possession of and named by captain Cook in 1770. At his recommendation a convict colony was first formed here. Captain Arthur Phillip, the first governor, arrived at Botany Bay with 800 convicts, 20 Jan. 1788; but he subsequently preferred Sydney, about seven miles distant from the head of Port Jackson, as a more eligible situation for the capital. Gold was discovered in 1851. A new constitution was granted in 1855 (18 & 19 Vict. c. 54). The Intercolonial Exhibition was opened at Sydney, by the governor-general lord Belmore, 30 Aug. 1870. It consisted of two departments, agricultural and non-agricultural. A conference of delegates from the Australian colonies met at Sydney in Jan. 1873, to deliberate on a customs' union, postal and railway arrangements, &c. NEWSPAPER PROVINCIAL SOCIETY, established in 1836, became the Newspaper Society in 1839; see *Press Association*.

NEWSPAPERS. The Roman *Acta Diurna* were issued, it is said, 691 B.C. In modern times, a *Gazette*, which derived its name from its price, a small coin, was published in Venice (about 1536). The *Gazette de France*, now existing, first appeared in April, 1631, edited by Renaudot, a physician. It was patronised by the king, Louis XIII., who wrote one article for it, and by Richelieu. The first real newspaper published in England* was established by sir Roger L'Estrange, in 1653: it was entitled the *Public Intelligencer*, and continued nearly three years, when it ceased, on the appearance of the *Gazette*. In the reign of James I., 1622, appeared the *London Weekly Courant*; and in the year 1642 (the period of the civil war) were printed a variety of publications, certainly in no respect entitled to the name of newspapers. See *Fourth Estate*. The following are the titles of some of them:—

- England's Memorable Accidents.
- The Kingdome's Intelligencer.
- The Durnal of Certain Passages in Parliament.
- The Mercurius Aulicus.
- The Scotch Intelligencer.
- The Parliament's Scout.
- The Parliament's Scout's Discovery, or certain Information.
- The Mercurius Civicus, or London's Intelligencer.
- The Country's Complaint, &c.
- The Weekly Accounts.
- Mercurius Britannicus.

A paper called the *London Gazette*,† published 22 Aug. 1642. The *London Gazette* of the existing series, published first at Oxford, the Court being there on account of the plague, 7 Nov. 1665, and afterwards at London, 5 Feb. 1666. A valuable index (1830-1883) compiled by Alex. Pulling for council of law reporting, published Nov. 1885.
