The full title of No. 50 is "The English Mercurie, published by authority, for the prevention of false reports, inprinted by Christopher Barker, her highness's printer, No. 50." It describes the Spanish Armada, giving "A journal of what passed since the 21st of this month, between her majesty's fleet and that of Spayne, transmitted by the Lord Highie Admiral, to the Lórdes of council."

NEW STYLE. Pope Gregory XIII., in order to rectify the errors of the current calendar, published a new one, in which ten days were omitted—5 Oct. 1582, becoming 15 Oct. The new style was adopted in France, Italy, Spain, Denmark, Holland, Flanders, Portugal, in 1582, in Germany in 1584, in Switzerland in 1583 and 1584, in Hungary in 1587; in Scotland in 1600, and in England in 1751. In 1752 eleven days were left out of the calendar—3 Sept. being reckoned as 14 Sept. The difference between the old and new style up to 1699 was 10 days; after 1700, 11 days; after 1800, 12 days. In Russia, Greece, and throughout the East, the old style is still retained. The czar, Alexander II., was born on the 17th April, 1818, old style, 29 April, new style; see *Calendar*.

NEW TESTAMENT, see *Bible*.

NEWTONIAN PHILOSOPHY, the doctrines respecting gravitation, &c., taught by sir Isaac Newton in his "Principia," published in 1687; see *Gravitation*. He was born 25 Dec., 1642; became master of the mint, 1699; president of the Royal Society, 1703; and died 20 March, 1727. A statue of him in marble by Roubiliac was set up at Trinity College, Cambridge, 14 July, 1755, and one in bronze by Theed, at Grantham, 21 Sept. 1858, when lord Brougham delivered a discourse on the life and works of Newton. The latter statue cost 1600*l.*, a sum obtained by public subscription.

NEWTOWNBARRY RIOT (S.E. Ireland). At a seizure of stock for tithes, a conflict ensued here between the yeomanry and the people, when thirty-five persons were killed or wounded, 18 June, 1831. The jury at the inquest were unable to agree on a verdict.

NEWTOWN-BUTLER (N. Ireland). On 30 July, 1689, the Enniskilleners under Gustavus Hamilton thoroughly defeated the adherents of James II. commanded by general Maccarty, taking him prisoner with his artillery, arms, and baggage.

NEW YEAR'S DAY, &c. The beginning of the Jewish year was changed and the passover instituted, 1491 B.C. A feast is said to have been instituted by Numa, and dedicated to Janus (who presided over the new year), 1 Jan. 713 B.C.

On this day the Romans sacrificed to Janus a cake of now sifted meal, with salt, incense, and wine; and all the mechanics began something of their art of trade; the men of letters did the same, as to books, poems, &c.; and the consuls, though chosen before, took the cake and entered upon their office this day. Nonius Marcellus refers the origin of NEW-YEAR'S GIFTS among the Romans to Titus Tatius, king of the Sabines, who having considered as a good omen a present of some branches cut in a wood consecrated to Strenia, the goddess of strength, which he received on the first day of the new year, authorised the custom afterwards, and gave these gifts the name of Strenæ, 747 B.C.

NEW YORK, the "empire state" of the United States of N. America, is said to have been

Population of the city, in 1860, 805,651; in 1870, 942,292; in 1880, 1,206,299; in 1890, 1,515,301; of the state in 1880, 5,082,871; in 1890, 5,997,853; 1900, 7,268,894; of Albany, the state capital, in 1880, 90,758; in 1890, 94,923; of Brooklyn, in 1880, 566,693; in 1890, 806,343; of Buffalo, in 1880, 155,134; in 1890, 255,664. NEY'S EXECUTION. Ney, duke of Elchingen, prince of the Moskwa, and one of the most valiant of the marshals of France, was shot as a traitor, 7 Dec. 1815. On 7 Dec. 1853, his statue was erected on the spot where he fell.

After the abdication of Napoleon I., 5 April, 1814, Ney took the oath of allegiance to the king, Louis XVIII. On Napoleon's return to France from Elba, he marched against him; but his troops deserting, he regarded the cause of the Bourbons as lost, and opened the invader's way to Paris, March, 1815. Ney led the attack of the French at Waterloo, where he fought in the midst of the slain, his clothes pierced with bullet-holes, five horses having been shot under him; night and defeat obliged him to flee. Though included in the decree of 24 July, 1815, which guaranteed the safety of all Frenchmen, he was sought out, and on 5 Aug. taken at the castle of a friend at Urillac, and brought to trial before the Chamber of Peers, 4 Dec. The 12th article of the capitulation of Paris, fixing a general amnesty, was quoted in his favour in vain.

A suspension bridge of a single span of 820 feet over the Niagara, connecting the railways of Canada and New York, was opened in March, 1855. It is elevated 18 feet on the Canadian, and 28 feet on the American side; superseded by a great new steel arch bridge, last panel fitted, 28, 29 March, 1897, a great engineering feat, constructed by the Pennsylvania steel company for the Canadian and New York incorporations. There are at present four bridges crossing the river.

About eighteen miles below Fort Erie are the remarkable falls. The river is here 740 yards wide; the half-mile immediately above the cataracts is a rapid, in which the water falls 58 feet; it is then thrown, with astonishing grandeur, down a stupendous precipice of 150 feet perpendicular, in three distinct and collateral sheets; and, in a rapid that extends to the distance of nine miles below, falls nearly as much more. The river then flows in a deep channel till it enters lake Ontario, at Fort Niagara.

Thomson, afterwards lord Kelvin) was appointed to consider the best method for utilizing 125,000 horse power, of the force of the Niagara falls, which is computed to be about 4,500,000 horse-power. Prizes were given by the Cataract company to the authors of various projects 9 Feb. 1891.

In the *Times* of 8 June, 1892, professor George Forbes, who was engaged in the undertaking, reported that the engineering works were nearly completed, and that the electrical arrangements by which the vast force was to be transmitted, were begun.

NICÆA, see *Nice*.

NICARAGUA, a state in Central America (*which see*). The present constitution was established 19 Aug. 1858. At the commencement of 1855 it was greatly disturbed by two political parties: that of the president, Chamorro, who held Granada, the capital, and that of the democratic chief, Castellon, who held Leon. The latter invited Walker, the filibuster, to his assistance, who in a short time became sole dictator of the state.* By

* William Walker was born at Tennessee, in the United States, where he became successively doctor, lawyer, and journalist, and afterwards gold-seeker in California, whence he was invited to Nicaragua by Castellon, with the promise of 52,000 acres of land, on condition of bringing with him a band of adventurers to sustain the revolutionary cause. Walker accepted the terms, and on 28 June landed at Realajo with 68 men. He increased his forces at Leon, and soon after attacked the town of Rivas, where he was repulsed with loss. He then joined col. Kinney, who had occupied and governed Grey Town, 6 Sept. On 13 Oct. Walker captured Granada by surprise when in a defenceless state, shot Mayorga, one of the ministers, and established a rule of terror. By intervention of the American consul he made peace with the general of the state army, Corral, but shot him on 7 Nov., on finding him corresponding with fugitives at Costa Rica. Walker at first was only general-in-chief; but on Rivas, whom he had made president, deserting him, he became sole dictator. On 14 May, 1856, his envoy Vijil was recognised by the president of the United States, whence also he obtained reinforcements during his retention of power. Costa Rica declared war against him, 28 Feb. 1856; the other states of central America soon followed the example, and a sanguinary struggle ensued, lasting till May, 1857. On 25 Nov. 1856, Walker totally burnt Granada, being unable to defend it, and removed the seat of government to Rivas. This place he surrendered to gen. Mora on 7 May, 1857, on the intervention of capt. Davis, of the *St. Mary's*, U.S. Himself, his staff, and 260 men were conveyed in that vessel to New Orleans, where they were received with great enthusiasm. On 25 Nov., 1857, he again invaded Nicaragua, landing at Punta Arenas with 400 men; but on 8 Dec. was compelled to surrender to capt. Paulding, U.S., and was conveyed to New York. He escaped punishment by *nolle prosequi* (2 June, 1858); but capt. Paulding was tried for exceeding orders, and blamed—yet excused by president Buchanan. On 5 Aug. 1860,

the united efforts of the confederated states the filibusters were all expelled in May, 1857. On 1 May, 1858, Nicaragua and Costa Rica appealed to the great European powers for protection. Nicaragua railway, a transit route between the Pacific and Atlantic, proposed, and company formed Nov. 1866. President T. Martinez elected, 1859 and 1863; Fernando Guzman, elected 1 March, 1867; Vicente Quadra elected 1 Feb. 1871; Pedro Joaquin Chamorro, 1 Feb. 1875; Joaquin Zavala, 1 March, 1879; dr. NICE or **NICEA**, a town in Bithynia, Asia Minor, N. W. Antigonus gave it the name Antigoneia, which Lysimachus changed to Nicea, the name of his wife. It became the residence of the kings of Bithynia about 208 B.C. At the battle of Nice, A.D. 194, the emperor Severus defeated his rival, Pescennius Niger, who was again defeated at Issus, and soon after taken prisoner and put to death. The first general council was held here 19 June to 25 Aug. 325, which adopted the **NICENE CREED** and condemned the Arians. It was attended by 318 bishops from divers parts, who settled both the doctrine of the Trinity and the time for observing Easter. An addition was made to the creed, 381; was rejected, 431. See *Filioque*. When the Crusaders took Constantinople, and established a Latin empire there in 1204, the Greek emperors removed to Nice and reigned there till 1261, when they returned to Constantinople; see *Eastern Empire*. Nice was taken by the Ottoman Turks in 1330.

NICE (S.E. France) was the seat of a colony from Massilia, now Marseilles, and formed part of the Roman empire. In the middle ages it was subject to Genoa, and suffered from the frequent wars, being taken and retaken by the imperialists and French. It was taken by the Austrians under Melas, 1800; seized and annexed to France 1792; restored to Sardinia in 1814. Nice was again annexed to France in virtue of the treaty of 24 March, 1860; the people having voted nearly unanimously for this change by universal suffrage. The French troops entered 1 April, and definite possession was taken 14 June following. Garibaldi, a native, vehemently protested against this annexation. Population, 1901, 125,099.

NIGHTINGALE FUND. On 21 Oct. 1854, Miss Florence Nightingale left England with a staff of thirty-seven nurses, and arrived at Scutari, 5 Nov. She rendered invaluable services to the army; and returned to London, 8 Sept. 1856. In honour of this a meeting was held at Willis's rooms on 29 Nov. 1855, to raise funds to establish an institution for the training of nurses and other hospital attendants. The queen gave Miss Nightingale a valuable jewel.

NIHILISM, a popular name for the school of philosophy which believes nothing without physical evidence, renounces all forms of Divine revelation, and gives nothing in their place.

NIHILISTS, ultra-reformers in Russia, said to propose the destruction of all government, and to begin society afresh. They became known and spread in 1872; their alleged leader, Zye hareff. The government began to suppress them, Sept. 1875. One of the leaders, Michael Bakounin, died at Lugano, 1 July, 1876. For recent events, see *Russia, 1877-87 et seq.* The term *Nihilist* was invented by the Russian novelist Turgénief, who died 3 Sept. 1883.

NIL DARPAN, see *India*, June, 1861.

NILE (Egypt). The longest river in Africa, formerly considered to have its rise in what were termed "the mountains of the moon." The travels of Bruce were undertaken to discover the source of the Nile. He set out from England in June, 1768; on the 14th of November, 1770, discovered the source of the Blue Nile in lake Tana, and returned home in 1773. The Nile overflows regularly every year, from about the 15th of June to the 17th of September, when, having given fertility to the land, it begins to decrease. The first Nilometer (a pillar) is said to have been set up by Osirtasen III., a king of the XII. dynasty, 2,300 B.C. One was set up by Solymani the Caliph, 715 A.D. In 1829, the inundations of the Nile rose to 26 instead of 22, by which 30,000 people were drowned and immense property lost. Mr. Petherick set out early in 1861 to explore the country at the source of the Nile. For recent discoveries, see *Africa* 1863. A bridge over the Nile (above 1300 feet) at Cairo, was completed by a French company, Aug. 1872. For the discoveries of Speke, Grant, and Baker, see *Victoria Nyanza, &c.*

Mr. H. M. Stanley, in his book, "Darkest Africa," published June, 1890, expressed his opinion that the newly-discovered lake Albert Edward Nyanza, at the head of the Semliki river which is fed by the snows of the mighty Ruwenzori range (possibly the mountains of the moon mentioned by Ptolemy the geographer in the 2nd century A.D.), is the real source of the Nile.

The *barrage* works of the Nile, consisting of two great dams or weirs for irrigation, and the conveyance of boats by means of locks, constructed under the direction of Monget Bey, a Frenchman, 1843-61; were unsuccessful and eventually neglected.

In 1885 the great powers agreed to the expenditure of 1,000,000l. on irrigation works, and the renovation of the barrage was effected under the direction of sir Colin Scott Moncrieff, 1886-90; supplementary dams advised by sir W. E. Garstin in 1897.

Mouget Bey died at Paris, aged 82, Dec. 1890. The White Nile cleared of *sudd* by major Peake; navigable from Khartum to fort Berkeley, end May, 1900

Sir Benjamin Baker made K.C.B., sir Wm. Garstin, C.M.G., Mr. Wm. Willcocks, major Hanbury Brown, and Fakry pasha, K.C.M.G.; other honours conferred; sir E. Cassel and sir John Aird decorated by the khedive, 10 Dec.]

NILE, BATTLE OF THE (or *Aboukir*), 1 Aug. 1798, near Rosetta, between the French fleet under Bruceys, and the British under sir Horatio Nelson. Nine of the French line-of-battle ships were taken,

two were burnt, and two escaped. The French ship, *L'Orient*, with Brueys and 1000 men on board, blew up, and only 70 or 80 escaped. Nelson's exclamation upon commencing the battle was, "Victory or Westminster Abbey!"

NIMEGUEN (Holland). Here was signed the treaty of peace between France and the United Provinces, 1678. The French were successful against the British under the duke of York, before Nimeguen, 28 Oct. 1794; were defeated by them 3 Nov.; but gained the place 8 Nov. NINETEENTH CENTURY AND AFTER, a magazine open to writers of totally different opinions; first appeared, March, 1877; introductory sonnet written by lord Tennyson; editor, sir James Knowles (K.C.V.O., 6 Dec. 1903).

NINEVEH, the capital of the Assyrian empire (see *Assyria*), founded by Ashur about 2245 B.C. The empire fell when Nebuchadnezzar captured Nineveh 606 B.C. The discoveries of Layard and others since 1839, in the neighbourhood of Mosul, at Koyunjik, the site of the ancient Nineveh, and other places, have in a manner disinterred and re-peopled a city which for centuries had ceased to figure on the page of history. Botta commenced his explorations at Khorsabad in 1843, and published his great work "Monuments de Ninive," 1849-50. In 1848 Mr. (after sir, K.C.B.) Austen Henry Layard, published his "Nineveh and its Remains," and in 1853 his "Discoveries," in his second visit in 1849-50. He was born 5 March, 1817, and died 5 July, 1894. See *Gladstone*, 1868, ambassador at Constantinople, 1877-80. Mr. Hormusd Rassam, in 1854, discovered an ancient palace. Mr. George Smith described his excavations and their results in 1873-4, in "Assyrian Discoveries," 1875. He died at Aleppo, 19 Aug. 1876. See *Assyria*. Mr. Rassam, appointed his successor, among other valuable discoveries at Balawat, nine miles N.E. of Nimroud, and at Koyunjik, &c., found a bronze monument with inscriptions recording the names, title, genealogy, and exploits of king Assur-nazir-pal (B.C. 885-860), builder of the palaces and temples of Kalakh, the capital of the middle Assyrian empire. Mr. Rassam arrived in London with collections, Dec. 1882.

The forms, features, costume, religion, modes of warfare, and ceremonial customs of its inhabitants stand before us as distinct as those of a living people; and by help of the sculptures and their cuneiform inscriptions, the researches of the learned have increased the knowledge of Assyrian history. Among the sculptures that enrich the British Museum may be mentioned the winged bull and lion, and numerous hunting and battle pieces; and the bas-relief of the eagle-headed human figure, presumed to be a representation of the Assyrian god Nisroch (from *Nisr*, an eagle or hawk), whom Sennacherib was in the act of worshipping when he was assassinated by his two sons, about 710 B.C. 2 *Kings* xix. 37.

NIObIUM, a rare metal, discovered by Hatchett in columbite, a black earth, and named columbium, 1801. It was pronounced to be identical with tantalum (or tantalum) by Wollaston; but was rediscovered by H. Rose in 1846, and named niobium.

NIRVANA. see *Buddhism*.

NISBET or **NESBET** (Northumberland). Here a battle was fought between the English and Scotch armies, the latter greatly disproportioned in strength to the former. Several thousands of the Scots were slain upon the field and in the pursuit, 7 May, 1402.

NISI PRIUS ("unless before"), words in a writ summoning a person to be tried at Westminster, unless the judges should come to hold their assizes in the place where he is. Judges sit in Middlesex by virtue of 18 Eliz. c. 12 (1576).

NISMES (Nîmes), S. France, was the flourishing Roman colony, Nemausus. Its noble amphitheatre was injured by the English in 1417. The inhabitants embraced Protestantism, and suffered much persecution in consequence, and Nîmes has frequently been the scene of religious and political contests. The treaty termed the Pacification of Nîmes (14 July, 1629) gave religious toleration for a time to the Huguenots.

NITRE, see *Saltpetre*.

NITRIC ACID, a compound of nitrogen and oxygen, formerly called *aqua fortis*, is said to have been first obtained in a separate state by Raymond Lully, an alchemist, about 1287; but we are indebted to Cavendish, Priestley, and Lavoisier for our present knowledge of its properties. H. Cavendish demonstrated the nature of this acid in 1785. *Nitrous acid* was discovered by Scheele about 1774. *Nitrous gas* was accidentally discovered by dr. Hales. *Nitrous oxide gas* (laughing gas) was discovered by dr. Priestley in 1776. The use of this gas as an anæsthetic, recommended by H. Davy in 1800, was begun in America (by Mr. Wells, a dentist), 1844; in Paris, 1866; in London, 31 March, 1868, ingenious apparatus having been invented for its application.

NITROGEN or **AZOTE** (from the Greek *a*, no, and *zao* or *zō*, I live), an irrespirable elementary gas, and an important element in food, discovered by Rutherford about 1772. Before 1777, Scheele separated the oxygen of the air from the nitrogen, and almost simultaneously with Lavoisier discovered that the atmosphere is a mixture of these two gases. Nitrogen combined with hydrogen forms the volatile alkali ammonia, so freely given off by decomposing animal and vegetable bodies. See *Air*, 1894. Prof. Hermann Helmholtz (born 1831) demonstrated in 1886 the power of leguminous plants to fix free nitrogen through the agency of microbes in their root nodules whereby the soil is much enriched. Clover gives up to the soil that which wheat requires. He died 24 Sept. 1895.

NITRO-GLYCERINE (also called **NITRO-LEUM**), an intensely explosive amber-like fluid, discovered by Sobrero in 1847; is produced by adding glycerine (in successive small quantities) to a mixture of one part of nitric acid and two parts of sulphuric acid. Alfred Nobel, a Swede, first attempted its application as an explosive agent in 1864. It has caused several most disastrous accidents, with great loss of life. In attempting to bury some nitro-glycerine in the town moor at Newcastle-on-Tyne, 17 Dec. 1867, an explosion took place, and seven persons lost their lives, including Mr. Mawson, the sheriff, and Mr. Bryson, town surveyor; see *Dynamite*. Mr. Alfred Nobel's nitro-glycerine manufactory, near Stockholm, blown up; 15 persons killed, many injured, 10 June, 1868. An act prohibiting its importation for a time, and regulating its transmission, was passed in 1869, and repealed by the Explosives Act of 1875. Secret manufacture discovered, see *Birmingham*, 1883.

NIZAM, see *Hyderabad*.

NOBEL BEQUEST. Dr. Alfred Nobel, a Swede, died 1896 (see *Nitro-Glycerine*, *Blasting*

Gelatine, and *Dynamite*), left a large sum of which the interest was to be awarded annually by a board of control at Stockholm in prizes each of the value of about 8,000*l.* to those who in the previous year should have rendered the greatest service to mankind, in inventions or discoveries in physical sciences, chemistry, physiology or medicine, literary work, and the cause of international brotherhood, in the suppression or reduction of standing armies, or the founding of Peace congresses. Regulations for the competition issued, Oct. 1900. The Peace prize of 150,000 kronen divided between M. Henri Dunant (Swiss) and M. Frédéric Passy (French); 200,000*fr.* each to M. Sully Prudhomme, French poet, for literature; to Dr. Behring, of Halle, for medicine; to prof. van't Hoff of Berlin, for chemistry; and prof. Röntgen of Munich, for physics. The distribution took place at Stockholm, the crown prince and others present, 10 Dec. 1901. The Peace prize awarded to Mr. William Randall Cremer, M.P., for his work on behalf of international arbitration; the four Nobel prizes were given to prof. Henri Becquerel of Paris, divided with M. and M^{me}. Curie also of Paris, for physics; to prof. Arrhenius of Stockholm for chemistry; to prof. Finsen, of Copenhagen for medicine, and to M. Bjornstjerne Björnson, of Christiania, for literature, 11 Dec. 1903. *Nobel Institutes* are in process of establishment to carry out scientific investigation on the lines of the above scheme of the founder.

The Nobel committee of the society of authors, formed for the purpose of recommending English candidates for the literature prize; first meeting held in London, Dr. Richard Garnett in the chair (lord Avebury elected permanent chairman),

NOBILITY. The Goths, after they had seized a part of Europe, rewarded their heroes with titles of honour, to distinguish them from the common people. The right of peerage seems to have been at first territorial. Patents to persons having no estate were first granted by Philip the Fair of France, 1095. George Neville, duke of Bedford (son of John, marquis of Montague), ennobled in 1470, was degraded from the peerage by parliament, on account of his utter want of property, 19 Edw. IV., 1478. Noblemen's privileges were restrained in June, 1773; see *Lords*, and the various orders of the nobility.

In 1845 a statistical writer said that there were 500,000 nobles in Russia, 239,000 in Austria; in Spain (in 1780), 470,000; in France (before 1790) 360,000 (of whom 4,120 were of the *ancienne noblesse*); in the United Kingdom, 1,631 with transmissible titles (dukes to baronets).

NOBILITY OF FRANCE preceded that of England. On 18 June, 1790, the National Assembly decreed that hereditary nobility could not exist in a free state; that the titles of dukes, counts, marquises, knights, barons, excellencies, abbots, and others be abolished; that all citizens take their family names; liveries and armorial bearings also to be abolished. The records of the nobility, 600 volumes, were burnt at the foot of the statue of Louis XIV., 25 June, 1792. A new nobility was created by the emperor Napoleon I., 1808. The hereditary peerage was abolished 27 Dec. 1831; re-instituted by Napoleon III., 1852.

NOBLE, an English gold coin (value 6*s.* 8*d.*), first struck in the reign of Edward III., 1343 or

1344, said to have derived its name from the excellence of the metal of which it was composed.

NOCTURNE, a name given by John Field (who died 1837) to a new and very pleasing musical composition. He was followed very successfully by Chopin, who died, 1849. The term was adopted by Mr. Whistler, the artist, for his night pieces, in which he began with line, form, and colour, 1877-8.

"NOLUMUS LEGES ANGLIÆ MUTARI," see *Bastards*, and *Merton*.

NOMINALISTS (or **CONCEPTUALISTS**), a scholastic sect, opposed to the Realists, maintain that general ideas have no existence outside our minds, and only exist by the names we give them. The founder of the sect, Jean Roscellin, a canon of Compiègne, was condemned by a council at Soissons, 1092, but the controversy was revived in the 12th century. Among the Nominalists are reckoned Abelard, St. Thomas Aquinas (partially), Occam, Hobbes, Locke, Berkeley, and Dugald Stewart. The Realists assert that general ideas are real things with positive existence.

NON-CONFORMISTS. The Protestants in England are divided into conformists and non-conformists; or, churchmen and dissenters. The first place of meeting of the latter, in England, was established at Wandsworth, near London, 20 Nov. 1572. The name of non-conformists was taken by the Puritans when the Act of Uniformity came into operation on 24 Aug. 1662 (termed "Black Bartholomew's day"), when 2000 ministers of the established religion resigned, not choosing to conform to the statute passed "for the uniformity of public prayers and administration of the sacraments;" see *Puritans*, and *Dissenters*. The laws against them were relaxed by the Toleration act, 24 May, 1689.—The *Nonconformist* newspaper (edited by Mr. Edward Miall, aft. M.P.) first appeared 14 April, 1841. He died 29 April, 1881.

NONES, in the Roman calendar, were the fifth day of each month, excepting March, May, July, and October, when the nones fell on the seventh day.

NON-JURORS considered James II. to have been unjustly deposed, and refused to swear allegiance to William III. in 1689. Among them were Sancroft, archbishop of Canterbury; Ken, bishop of Bath and Wells, and the bishops of Ely, Gloucester, Norwich, and Peterborough, and many of the clergy, who were deprived 1 Feb. 1691. Non-jurors were subjected to double taxation, and obliged to register their estates, May, 1723. They formed a separate communion, which existed till the beginning of the present century.

NON NOBIS, DOMINE! ("Not unto us, O Lord!" &c., *Psalms* cxv. 1), a musical canon,

sung as a grace at public feasts, was composed by W. Birde in 1618.

NON-RESISTANCE OATH (containing a declaration that it is unlawful to take arms against the king upon any pretence whatever), enforced by the Corporation act, 1661, was repealed in 1719.

NOOTKA SOUND (Vancouver's Island), discovered by captain Cook in 1778, and settled by the British in 1786, when a few British merchants in the East Indies formed a settlement to supply the Chinese market with furs; but the Spaniards in 1789 captured two English vessels and took possession of the settlement. The British ministry demanded reparation, and the affair was amicably terminated by a convention, and a free commerce was confirmed to England in 1790.

"**NO-POPERY RIOTS**," see *Gordon*. The cry was revived against the Catholic emancipation bill, 1829. The Anti-popery association petitioned against the election of Mr. Alderman Knill, R. C., as lord mayor of London, Oct. 1892.

NORDLINGEN (Bavaria). Here the Swedes under count Horn were defeated by the Austrians, 27 Aug. 1634; and the Austrians and allies by Turenne in 1645.

NORE MUTINY, see *Mutinies*.

NORFOLK ISLAND (Pacific Ocean), discovered in 1774, by captain Cook, who found it uninhabited, except by birds. The settlement was made by a detachment from Port Jackson under governor Phillip, in 1788, in Sydney bay, on the south side of the island. This was at one time the severest penal colony of Great Britain. The island was abandoned in 1809, but re-occupied as a penal settlement in 1825, penal settlement removed in 1855. The descendants of the mutineers of the *Bounty* were removed to it in June, 1856, from *Pitcairn's Island* (which see). Visited by lord Hampden, transferred to New South Wales and endowed with a new constitution, col. Spalding installed resident magistrate, 14 Nov. 1896. Population, 1901, 827.

NORMAL SCHOOLS (from *norma*, a rule). One for the instruction of teachers, established at Paris by a law, 30 Oct. 1794, opened 20 Jan. 1795, under the direction of La Place, La Harpe, Haüy, and other eminent men, was soon closed. Another, established by Napoleon in 1808, was closed in 1822. The plan was revived in 1826, and has been developed in England and other countries. See *Science and Art*.

NORMANDY (N. France), part of Neustria, a kingdom founded by Clovis in 511 for his son Clotaire, which, after various changes, was united to France by Charles the Bald in 837. From the beginning of the 9th century it was continually devastated by the Scandinavians, termed Northmen or Normans, to purchase repose from whose irruptions Charles the Simple of France ceded the duchy to their leader Rollo, 905. Rollo, the first duke, held it as a fief of the crown of France, and several of his successors after him, until William, the seventh duke, acquired England, in 1066. It remained a province of England till the reign of

king John, 1204, when it was conquered by Philip Augustus and reunited to France. It was re-conquered by Henry V., 1418, and held by England partially till 1450. The English still possess the islands on the coast, of which Jersey and Guernsey are the principal.

NORTH AMERICAN REVIEW began at Boston, U.S., in 1815, as a rival of the Edinburgh and Quarterly Reviews. It was published at first every second month; in 1818, quarterly; in 1879, monthly, at New York.

NORTHAMPTON was burnt by the Danes in 1010. Here Henry III. proposed to found a university in 1260, and held a parliament in 1269. Northampton was ravaged by the plague in 1637. It was seized and fortified by the parliamentary forces in 1642. A fire nearly destroyed the town, 3 Sept. 1675. Riots here because Mr. C. Bradlaugh was not elected M.P., 6 Oct. 1874, were suppressed by the military. Population, 1881, 51,881; 1891, 61,016; 1901, 87,021.

* Sir John Franklin died 11 June, 1847 (see *Franklin*); Sir E. Parry died 8 July, 1855, aged 65; and sir John Ross died 30 Aug. 1856, aged 80.

† In 1830 he discovered Boothia Felix: on 1 June, 1831, his nephew, com. James Clark Ross, discovered the north magnetic pole, in 70° 57' 17" N. lat., and 96° 46' 45" W. long.

Entertaining a strong conviction that the waters in which the *Investigator* then lay communicated with Barrow's straits, he set out on 21 Oct., with a few men in his sledge, to test his views. On 26 Oct. he reached Point Russell (73° 31' N. lat., 114° 14' W. long.), where from an elevation of 600 feet he saw Parry or Melville Sound beneath them. The strait connecting the Atlantic and Pacific Oceans he named after the prince of Wales. The *Investigator* was the first ship which traversed the Polar sea from Behring's straits to Behring island. NORWICH, BISHOPRIC OF, originally East Anglia; the first bishop was Felix, a Burgundian, sent to convert the East Anglians about 630. The see was divided into two distinct bishoprics—Elmham, in Norfolk, and Dunwich, in Suffolk, about 673. Both sees suffered extremely from the Danish invasions, insomuch that after the death of St. Humbert, they lay vacant for a hundred years. At last the see of Elmham was revived, and Dunwich was united to it; but Arfastus removed the seat to Thetford, where it continued till Herbert Losinga removed it to Norwich, 1094. This see has given to the church of Rome two saints; and to the nation five lord chancellors. It was valued in the king's books at 899*l.* 18*s.* 7½*d.* per annum. NOTABLES, French assemblies of nobles, bishops, knights, and lawyers. An assembly of the notables was convened by the duke of Guise, 20 Aug. 1560, and by other statesmen. Calonne, the minister of Louis XVI., summoned one which met on 22 Feb. 1787, on account of the deranged state of the king's finances, and again in 1788, when he opened his plan: but as any reform militated too much against private interest to be adopted, Calonne was dismissed, and soon after retired to England. Louis having lost his confidential minister, De Vergennes, by death, called De Brienne, an ecclesiastic, to his councils. The notables were re-assembled on 6 Nov. 1788. In the end, the states-general were convoked 5 Dec.; and from this assembly sprang the national assembly (*which see*). The notables were dismissed by the king, 12 Dec. 1788.—The *Spanish notables* assembled and met Napoleon (conformably with a decree issued by him commanding their attendance), at Bayonne, 25 May, 1808.

NUITS. A small fortified town, near Dijon, in Burgundy, N.E. France, chartered in 1212; frequently captured and ravaged, specially in 1569, 1576, and 1636. It was taken by the Badenese under Von Werder, 18 Dec. 1870, after five hours' conflict, in which above 1000 French are said to have been killed and wounded, and 700 prisoners taken. The German loss was also heavy. A dépôt of arms and ammunition was gained by the victors.

NUMANTINE WAR. The war between the Romans and the Celtiberians (Celts who possessed the country near the Iber, now the Ebro) began, 143 B.C., on account of the latter having given refuge to their allies the Sigdians, who had been defeated by the Romans. Numantia, an unprotected city, withstood a long siege, in which the army of Scipio Africanus, 60,000 men, was opposed by no more than 4000 men able to bear arms. The Numantines fed upon horse-flesh, and their own dead, and then drew lots to kill one another. At length they set fire to their houses, and destroyed themselves, so that not one remained to adorn the triumph of the conqueror, 133 B.C.

NUMIDIA (N. Africa), the seat of the war of the Romans with Jugurtha, which began 111 B.C., and ended with his subjugation and captivity, 106. The last king, Juba, joined Cato and was killed at the battle of Thapsus, 46 B.C., when Numidia became a Roman province; see *Mauritania*.

Ruding's *Annals* is the great work on British coinage (new edition, 1840).—The Numismatic Society in London was founded by Dr. John Lee in 1836. It publishes the *Numismatic Chronicle*.—Mr. Yonge Akerman's *Numismatic Manual* (1840) is a useful introduction to the science. Foreign works are numerous.

NUNCIO, an envoy from the pope of Rome to catholic states. The pope deputed a nuncio to the Irish rebels in 1645. The arrival in London of a

nuncio, and his admission to an audience by James II., July, 1687, is stated to have hastened the Revolution.

NUNNERY. The first founded is said to have been that to which the sister of St. Anthony retired at the close of the 3rd century. The nuns were expelled from their convents in Germany, in July, 1785; in France, in Jan. 1790. In Feb. 1861, monastic establishments were abolished in Naples, compensation being made to the inmates. For memorable instances of the fortitude of nuns, see *Aere*, and *Coldingham*.

NUREMBERG, a free imperial German city in 1219. In 1522, the diet here demanded ecclesiastical reforms and a general council, and in 1532 secured religious liberty to the Protestants. It was annexed to Bavaria in 1805. Albert Dürer was born here in 1471. Population, 1890, 142,403; 1900, 261,022.

OATES'S PLOT. Titus Oates, at one time chaplain of a ship of war, was dismissed for immoral conduct, and became a lecturer in London. In conjunction with Dr. Tongue, he invented a plot against the Roman Catholics, who he asserted had conspired to assassinate Charles II., and extirpate the Protestant religion. He made it known 12 Aug. 1678, and in consequence about eighteen Roman Catholics were accused, and upon false testimony convicted and executed; among them the aged viscount Stafford, 29 Dec. 1680. Oates was afterwards tried for perjury (in the reign of James II.), and being found guilty, was fined, put in the pillory, publicly whipped from Newgate to Tyburn, and sentenced to imprisonment for life, May, 1685. Pardon on the accession of William and Mary, and a pension of 3*l.* a week granted to him, 1689.

OATHS were taken by Abraham, B.C. 1892 (*Gen.* xxi. 24), and authorised (B.C. 1491) *Exod.* xxii. 11. The administration of an oath in judicial proceedings was introduced by the Saxons into England, 600.—*Rapin*. That administered to a judge was settled 1344.

OBELISK (Greek *obelos*, a spit, *monolithos*, a single stone). The Egyptian symbol of the supreme God. The first mentioned in history was that of Rameses II., king of Egypt, about 1322 B.C. The Arabians called them Pharaoh's needles, and the Egyptian priests the fingers of the sun. Several were erected at Rome; one was erected by the emperor Augustus in the Campus Martius, on the pavement of which was a horizontal dial that marked the hour, about 14 B.C. Of the obelisks brought to Rome by the emperors, several have been restored and set up by various popes. One was excavated and set up in the piazza of St. John Lateran, Rome, by Sixtus V. 1588.

Egyptian Obelisks.—42 are known, some broken: 12 at Rome; 1, from Luxor, set up in the Place de la Concorde, Paris, Oct. 1836; 5 in England (2 British museum; 1 Alhwick; 1 Soughton hall; 1 on Thames embankment).

The obelisks improperly named *Cleopatra's Needles* were erected by Thothmes III. at On (Heliopolis), about 1600 B.C. One was removed to Alexandria by Augustus, about 23 B.C. After being long imbedded in the shore, it was acquired for Great Britain by sir Ralph Abercromby, in 1801; but not removed. It was offered to the British government by Mehemet Ali, and again by the Khedive, 15 March, 1877.

Mr. James Erasmus Wilson (knt. Nov. 1881) having offered to pay all expenses, Mr. John Dixon, the engineer, undertook to convey it to England. The vessel, *Cleopatra*, containing it sailed with the *Olga* 21 Sept. During a violent gale, the vessels were separated, 14-15 Oct.; six lives were lost in a fruitless attempt to recover it. The *Cleopatra*, which was abandoned, was found by the *Fitzmaurice* (capt. Carter), and towed to Ferrol, whence it was towed by the *Anglia*, and arrived in London, 20 Jan. 1878.

The salvage awarded was 2000*l.*, 6 April, 1878. After much discussion, the Thames embankment (between Charing cross and Waterloo bridges) was selected for its site; where, by much engineering skill, it was placed, 12 Sept. 1878.

The obelisk weighs 186 tons, 7 cwt., 2 stones, 11 lb. Height, from base to point, 68 feet 5½ inches. It was placed under the care of the metropolitan board of works by act passed 22 July, 1878.

Sir J. Erasmus Wilson died 8 Aug. 1884. In London are three English obelisks: first in Fleet-street, at the top of Bridge-street, erected to John Wilkes, lord mayor of London in 1775 (see *North Briton*); and immediately opposite to it at the south end of Farringdon-street, stands another of granite to the memory of Robert Waltham, lord mayor in 1824, erected 25 June, 1833; the third at the south end of the Blackfriars-road marks the distance of one mile and a fraction from Fleet-street. Controversy during 1903 respecting its removal and the substitution of an illuminated clock-tower on the site. The *Washington Obelisk*, at Washington, U.S., 555 feet high, inaugurated, 21 Feb. 1885

Observatories of early date probably existed in Egypt, China, and India.

OCTOBER, the eighth month in the year of Romulus, as its name imports, and the tenth in the year of Numa, 713 B.C. October was sacred to Mars.

These octrois, of ancient origin, were suppressed in 1791; re-established, 1797, and re-organised in 1816, 1842, and 1852. In 1859, the octrois of Paris produced above 54 million francs. The Belgian government became very popular in July, 1860, by abolishing the *Octrois*. The Coal and Wine dues of London were of this nature.

ODOMETER (from the Greek *hodos*, way, and *metron*, measure), see *Pedometer*.

ODONTOLOGY (from the Greek *odontes*, teeth), the science of the teeth, may be said to have really begun with the researches of professor Richard Owen, who in 1839 made the first definite announcement of the organic connection between the vascular and vital soft parts of the frame and the hard substance of a tooth. His comprehensive work, "Odontography" (illustrated with beautiful plates), was published 1840-45. The Odontological Society was established 1856.

ODRYSÆ, a people of Thrace. Their king Teres retained his independence of the Persians, 508 B.C. Sitalces, killed in battle with the Triballi, 424, was succeeded by Seuthes, who reigned prosperously; Cotys, another king (382-353), disputed the possession of the Thracian Chersonesus with Athens. After 9 or 10 years' warfare, Philip II. of Macedon reduced the Odryse to tributaries, and founded Philippopolis and other colonies, 343. The Romans, after their conquest of Macedon, favoured the Odryse, and in 42 their king Sadales bequeathed his territories to the Romans. The Odryse, turbulent subjects, and often chastised, were finally incorporated into the empire by Vespasian, about A.D. 70.

The fact that oil, if passed through red-hot iron pipes, will be resolved into a combustible gas, was long known to chemists; and after the process of lighting by coal-gas was made apparent, Messrs. OLYMPIADS, the era of the Greeks, from 1 July, 776 B.C., the year in which Crœsus was successful at the Olympic games. The computation of Olympiads ceased with the 35th, A.D. 440.

OLYMPIC GAMES, so famous among the Greeks, traditionally said to have been instituted in honour of Jupiter by the Idaeï Dactyli, 1453 B.C., or by Pelops, 1307 B.C., revived by Iphitus, 884 B.C., were held at intervals of four years, on the banks of the Alpheus, near Olympia, in the Peloponnesus, now the Morea, to exercise the youth in five kinds of combats; the conquerors being highly honoured. The prize contended for was a crown made of a kind of wild olive, appropriated to this use. The festival was abolished by Theodosius, A.D. 394. In 1858 M. Zappas, a wealthy Peloponnesian, gave funds to re-establish these games, under the auspices of the queen of Greece.—**OLYMPIC THEATRE**, London, opened 1806; see *Theatres*.

OPERA-HOUSE, THE ITALIAN, or QUEEN'S, or (since 1901) HIS MAJESTY'S THEATRE. The original building is generally supposed to have been constructed by sir John Vanbrugh, though Mr. Pennant attributes it to sir Christopher Wren. It was built as "the queen's (afterwards changed to king's) theatre," opened 9 April, 1705; and burnt down 17 June, 1789. The foundation of the new theatre was laid 3 April, 1790; and the house was opened 22 Sept. 1791, on an improved plan; a new exterior was erected in 1820, from designs by Mr. Nash, *relievo* by Mr. Budd, 1821. OPIUM, the juice of the white poppy, was known to the ancients, its cultivation being mentioned by Homer, and its medicinal use by Hippo-

crates. It is largely cultivated in British India, and was introduced into China by our merchants, which led eventually to the war of 1839, the importation being forbidden by the Chinese government. The revenue derived from opium by the Indian government in 1862 was about 7,850,000*l.*; in 1874, 8,000,000*l.*; in 1880, about 10,500,000*l.*, but it has since declined. Laudanum, a preparation of opium: was employed early in the 17th century. A number of alkaloids have been discovered in opium: narcotine by Derosne, and morphia by Sertürner, in 1803. A society for suppressing the opium trade held meeting in London, 17 Jan. 1881 and since, 8 Oct. 1902.

The Chinese government derives a large revenue from the duty on imported opium which was fixed by the treaty of 1858. The plant is now largely grown in China.

Sir Joseph Pease's resolution condemning the cultivation of opium in India, the traffic in the drug, and the revenue, was adopted by the house of commons (160-130), 10 April, 1891; this caused much excitement in India.

The report accepted by the Imperial government.

The French, under marshal Soult, were surprised here by lord Wellington, and defeated in an action fought 12 May, 1809. The Miguelites besieged Oporto, and were repulsed by the Pedroites, with considerable loss, 19 Sept. 1832. The Oporto wine company was abolished in 1834, but re-established by a royal decree, 7 April, 1838. An international exhibition was opened here by the king, 18 Sept. 1865. OPTIMISM (from *optimus*, the best), the doctrine that everything which happens is for the best, in opposition to Pessimism (from *peessimis*, the worst). The germ of optimism is to be found in Plato, and in St. Augustin, and other fathers; and has been especially propounded by Malebranche and Leibnitz, and adopted by Pope, Bolingbroke, Rousseau, and others. Optimism as expressed in the term, "the best of all possible worlds," is ridiculed by Voltaire (1694-1778) in his "Candide." The term *meliorism* (from *melior*, better) has been lately introduced. See *Pessimism*.

"**OPTION**," a term given at the time to the permission given to the inhabitants of Alsace and Lorraine by the German government to choose, before 30 Sept. 1872, whether they would quit their country or become German subjects. Great numbers emigrated into the French territories. The "option" of archbishops respecting their claims on a benefice becoming void on the creation or translation of a bishop, was abolished in 1845. ORANGE, a principality in S.E. France, formerly a lordship in the 9th or 10th century. It has been ruled by four houses successively: that of Giraud Adhemar (to 1174); of Baux (1182 to 1393); of Chalons (to 1530); and of Nassau (1530 to 1713); see *Nassau*. Philibert the Great, prince of Orange, the last of the house of Chalons, having been wronged by Francis I. of France, entered the service of the emperor Charles V., to whom he rendered great services by his military talents. He was killed at the siege of Florence, 3 Aug. 1530. He was succeeded by his nephew-in-law, René of Nassau; see *princes of Orange* under *Holland*. The eldest son of the king of Holland is styled the prince of Orange, although the principality was ceded to France in 1713. See *Arausia*.

ORANGE FREE STATE (annexed by Gt. Britain, and styled Orange River Colony, 28 May, 1900), a republic in South Africa, founded by Boers from Cape Colony in 1836. ORANGEMEN. The "Battle of the Diamond," 21 Sept. 1795 (see *Diamond*), and the treachery experienced by the Protestants on that occasion, convinced them they would become an easy prey to the Roman Catholics, from their small numbers, unless they associated for their defence, and consequently the Orange Society was formed in 1795. The first Orange lodge was formed in Armagh; but the name of Orangemen already existed. An Orange lodge was formed in Dublin; the members published a declaration of their principles (the maintenance of church and state under the house of Brunswick) in Jan. 1798. After 1813 Orangeism declined; but revived again in 1827, when the duke of Cumberland became grand-master; and it is stated that in 1836 there were 145,000 Orangemen in England, and 125,000 in Ireland. After a parliamentary inquiry Orange clubs were broken up in conformity with resolutions of the house of commons; but were revived in 1845-1889. In Oct. 1857, the lord chancellor of Ireland ordered that justices of the peace should not belong to Orange clubs. The Orangemen in Canada were greatly excited during the visit of the prince of Wales in Sept. 1860. Mr. Wm. Johnston, a grand-master, convicted of violating the Party Processions act, was elected M.P. for Belfast, Nov. 1869. See *Belfast*. The Orangemen vigorously oppose the home rule movement, see *Ulster*, 1892-3.

ORANGES. The sweet, or China orange, was first brought into Europe from China by the Portuguese, in 1547; and it is asserted that the identical tree, whence all the European orange-trees of this sort were produced, is still preserved at Lisbon, in the gardens of one of its nobility. Orange-trees were first brought to England, and planted, with little success, in 1595; they are said to have been planted at Beddington park, near Croydon, Surrey. The duty on imported oranges was repealed in 1860.

ORATOR HENLEY. An eccentric English gentleman of some talents, in 1726, opened his "oratory," a kind of chapel, in Newport-market, where he gave lectures on theological topics on Sundays, and on other subjects on Wednesdays, every week. Novelty procured him many hearers; but he was too imprudent to gain any permanent advantage. He removed his oratory to Clare-market, and sank into obscurity previously to his death, in 1756.

ORATORIANs (from the Latin *orare*, to pray), a regular order of priests established by St. Philip Neri, about 1564, and so called from the oratory of St. Jerome, at Rome, where they prayed. They had a foundation in France, commenced by Guillaume Gibieufand Pierre de Berulle (afterwards cardinal), 1612, approved by pope Paul V. 1613.—The rev. Frederick Faber and others, as "Fathers of the Oratory," established themselves first in King William-street, Strand, in 1848, and afterwards at Brompton.

ORATORIO, a sacred musical composition, the subject of it being generally taken from the Scriptures. The origin of our oratorios (so named from having been first performed in an oratory) is ascribed to St. Philip Neri, about 1550. The first true oratorio, Emilio del Cavaliere's "Rappresentazione," was performed at Rome in 1600. He was followed by Giovanni Carissimi, Alessandro

Scarlatti, &c. Bach's "Passion Music," the "St. Matthew," was produced at Leipzig on Good Friday, 1729, see *Passion-Week*. Handel composed 17 English oratorios; his first, "Esther," was performed at the Haymarket theatre, 2 May, 1732. "Israel in Egypt" was produced in 1738, and the "Messiah" in 1741; Haydn's "Creation" in 1798; Beethoven's "Mount of Olives," 1803; Spohr's "Last Judgment" (properly "Last Things"), 1825; Mendelssohn's "St. Paul" in 1836, and "Elijah" in 1846; Costa's "Eli," 1865; "Naaman," 1864; S. Bennett's "Woman of Samaria," 1867; Macfarren's "John the Baptist," 1873; Sullivan's "Prodigal Son," 1869; "Light of the World," 1873; "Martyr of Antioch," 1880, &c. Latterly the name has been modified, e.g., *Dramatic Oratorio*, such as Mackenzie's "Rose of Sharon;" Hubert Parry's "Judith," "Job," "King Saul" (1894), &c. *Sacred Trilogy*, Gounod's "Redemption," Berlioz's "Childhood of Christ;" Elgar's "The Apostles," Pts. I. and II., 1903; or, again, as a form of *Dramatic Cantata*, as Schumann's "Paradise and the Peri," Sullivan's "Golden Legend," Mackenzie's "Dream of Jubal."

ORCHIDS, a natural order of plants of a very peculiar organization, recently much cultivated. In 1880 a great establishment for their cultivation was set up at St. Albans by Mr. Sander, "the orchid king," patronised by the Rothschilds, who introduced him to the queen at Waddesdon Manor, 14 May, 1890. The orchids at Blenheim sold for about 5,250*l.*, 19-23 Dec. 1892.

ORCHOMENUS, a small Greek state in Beotia, was destroyed by the Thebans, 367 B.C.; restored by Philip II. of Macedon, 354; and given up by him to Thebes, 346.

ORDEAL was known among the Greeks and Jews (*Num. v. 2*). It was introduced into England by the Saxons. A prisoner who pleaded not guilty might choose whether he would put himself for trial upon God and his country, by twelve men, as at this day, or upon God only. The trial by ordeal was abolished in 1218.

ORDER OF THE CORPORATE RE-UNION, virtually a new episcopal church, said to arise out of the Christian Unity Association (*which see*). It proposed to form four stations, (Canterbury, York, Caerleon, and St. Andrews), with rectors and provincials; announced 11 Sept. 1877.

ORDERS, see *Knighthood*.

ORDERS IN COUNCIL were issued by the British government 7 Jan. and 11 Nov. 1807, prohibiting trade with the ports occupied by the French, being reprisals for Napoleon's *Berlin* and *Milan decrees* (see *Continental System*). They greatly checked the progress of manufactures in this country, and caused much distress and smuggling. They were repealed in regard to America, 18 June, 1812. The action under these orders led to the disastrous war with the United States in 1812-15.

ORDINANCES, see *Ordonnances*, *Self-Denying Ordinances*.

ORDINATION of ministers in the Christian church began with Christ and his apostles; see *Mark* iii. 14, and *Acts* vi. and xiv. 23. In England in 1549 a new form of ordination of ministers was ordered to be prepared by a committee of six prelates and six divines.

ORDNANCE OFFICE. Before the invention of guns, this office was supplied by officers under the following names: the bowyer, the cross-bowyer, the galeater, or purveyor of helmets, the armourer, and the keeper of the tents. Henry VIII. placed it under the management of a master-general, a lieutenant, surveyor, &c. The master-general was chosen from among the first generals in the service of the sovereign. The appointment was formerly for life; but since the restoration, was held *durante bene placito*, and not infrequently by a cabinet minister.—*Beatson*. The letters patent for this office were revoked 25 May, 1855, and its duties vested in the minister of war, lord Panmure. The last master-general was lord Fitzroy-Somerset, afterwards lord Raglan. The revival of the office recommended by the Ordnance Commission (see under *Army*, 1886).

ORDNANCE SURVEY. The trigonometrical survey of England was commenced by gen. Roy, in 1784, continued by col. Colby, and completed by col. (aft. sir Henry) James in 1856. The publication of the maps (scale 7 inches to a mile), commenced in 1819, under the direction of col. Mudge, and was completed in 1862; a large part of these maps have been coloured geologically. The survey of Ireland (6 inches to a mile) has been completed and published; that of Scotland, completed Nov. 1882. By the Survey act, passed 12 May, 1870, the ordnance survey was transferred to the Board of Works, and by an act passed in 1889, to the Board of Agriculture, beginning 1 April, 1890. Directors, lieut.-gen. John Cameron, succeeded sir Henry James in 1875, died 30 June, 1878; col. A. C. Cooke; col. R. H. Stotherd, 1885; col. Farquharson (K.C.B. 1899); col. Duncan Johnston, 1901. In 1892 several sets of maps were in course of publication or preparation. The Ordnance Survey maps having been considered deficient, a departmental committee was appointed in April, 1892, and met during the year; sir John Dorington, M.P., chairman. Report, with recommendations, presented to the Board of Agriculture, 31 Dec. 1892; published, 6 March, 1893. New maps issued, May, 1902; survey sections sent to S. Africa, spring, 1902; 4-inch and 1-inch maps revised, issued, Aug. 1902; others issued 1903. Pocket maps of many of the sections, scale 1 in. and $\frac{1}{4}$ in. to a mile, are published at a cheap rate.

ORDONNANCES, the laws enacted by the Capetian kings of France previous to 1579. They began with "in the name of the king," and ended with "such is our good pleasure." The first in French is dated 1287 (Philip IV.) The publication of these "ordonnances," ordered by Louis XIV., 1706, is still in progress. The "ordonnances" of Charles X., promulgated 26 July, 1830, led to the revolution.

OREGON TERRITORY (N. America), is said to have been visited by Drake in 1579. Lieut. Broughton took possession of part of it for Great Britain in 1792. In 1810 a settlement named Astoria, was founded by a New York Company. Oregon was occupied by the English in 1814, but was claimed by the United States government, to whom the greater part was ceded, after much negotiation, by the treaty of 12 June, 1846. Oregon was made a territory in 1848, and admitted as a state, Feb. 1859. Capital, Salem. Population, 1880, 174,768; 1890, 313,767; 1900, 413,536.

ORGAN, a development of the pandean pipes; the "organ" in *Gen.* iv. 21 should be translated *pipe*. The invention is attributed to Ctesibius, a barber of Alexandria, about 250 B.C.; and to Archimedes, about 220 B.C. The organ was brought to Europe from the Greek empire, and was applied to religious devotions in churches, about A.D. 657.—*Bellarmino*. Organs were used in the western churches by pope Vitalianus, in 658.—*Ammonius*. It is affirmed that the organ was known in France in the time of Louis I., 815, when one was constructed by an Italian priest. The organ at Haarlem is one of the largest in Europe; it has 60 stops and 8000 pipes. At Seville is one with 110 stops and 5300 pipes. The organ at Amsterdam has a set of pipes that imitate a chorus of human voices. Of the organs in ENGLAND that at St. George's Hall, Liverpool, by Mr. Willis, was the largest; next in order that at York minster, and that in the music-hall, Birmingham. In London, the largest was, perhaps that of Spitalfields church; and that in Christ Church was nearly as extensive. The erection of the famous Temple organ was competed for by Schmidt and Harris; after long disputes, the question was referred to vote, and Mr. Jefferies, afterwards chief justice, gave the casting vote in favour of Schmidt (called Father Smith), about 1682. A monster organ was erected in the Crystal Palace, Sydenham, in June, 1857. The organ, by Willis, at the Royal Albert Hall, is now said to be the largest in the world; 1871. A larger proposed for a cathedral in Long Island, North America, 1880. A noble organ (by Bryceson), with many appliances, opened in the hall, Primrose-hill-road, London, N. Jan. 1876; see *Westminster Abbey*, 1895.

Barrel organs are said to have been first made early in the 18th century. The finest was the *Apollonicon* (which see).

ORIFLAMME, see *Auriflamma*.

ORIGENISTS pretended to draw their opinions from the writings of Origen, who lived 185-253. They maintained that Christ was the son of God in no other way than by adoption and grace; that souls were created before the bodies; that the sun, moon, stars, and the waters that are under the firmament, have souls; that the torments of the damned shall have an end, and that the fallen angels shall, after a time, be restored to their first condition. They were condemned by councils, and the reading of Origen's work was forbidden.—*Burke*. These doctrines were condemned by the council of Constantinople in 553.

ORLEANS (a city in central France), formerly *Aurelianun*; gave title to a kingdom, 491, and

It was besieged by the English under earls of Salisbury and Suffolk, 12 Oct. 1428, bravely defended by Gaucour (as its fall would have ruined the cause of Charles VI. king of France), and relieved by the heroism of Joan of Arc, afterwards surnamed the Maid of Orleans, 29 April, 1429, and the siege was raised 8 May; see *Joan of Arc*. (The 439th anniversary was celebrated 10 May, 1868; the emperor and empress being present.) During the siege of Orleans, Feb. 1563, the duke of Guise was assassinated.

The planetarium, now termed the Orrery, it is said, was constructed by Rowley, after a pattern devised by the clock-maker, George Graham, at the expense of Charles Boyle, earl of Orrery, about 1715. A large "planetarium" was constructed by the rev. Wm. Pearson, for the Royal Institution, London, about 1803. An excellent planetarium, constructed in London by signor N. Perini, was exhibited in Dec. 1879.

On the death of Charles II. of Spain, the French seized Ostend; but in 1706, after the battle of Ramillies, it was retaken by the allies. It was again taken by the French in 1745, but restored in 1748. In 1756, the French garrisoned this town for the empress-queen Maria Theresa. Upon a scrutiny, he whose name was oftenest written was sentenced by the council to be banished from his altar and hearth. 6000 votes were required. Langworthy bequeathed 10,000*l.* to develop the chair of experimental physics, 1874. In 1880 "Owens" became the first college of the new Victoria University, Manchester. The Beyer laboratories and natural history museums were erected 1887 at a cost of 80,000*l.* Mr. R. C. Christie, formerly professor, gives 50,000*l.*, 5 Oct. 1897. New physical (research) laboratory (cost 40,000*l.*) opened by lord Rayleigh, 29 June, 1900. See *Victoria University*. OWHYHEE or **HAWAII**, the chief of the 12 islands which constitute the territory of Hawaii situated in the N. Pacific Ocean. The islands are said to have been discovered in 1542 by Gaetano, and were rediscovered by capt. Cook in 1778, who named them the Sandwich islands after lord Sandwich, then the first lord of the admiralty. Capt. Cook was killed at Owhyhee by the natives 1779. King Kamehameha I., who died 1819, united the 12 islands into one monarchy, and under his successor, Kamehameha II., idolatry was abolished, 1819-20; the king and his queen visited England, and died in London 1824. In 1840, Kamehameha III. established a constitution, which included an assembly of nobles, and a representative council. The independence of the kingdom was guaranteed by the English and French governments in 1843. A more popular constitution was granted in 1887, but in 1893 a revolution broke out, and the queen Liliuokalani was dethroned, and a republic was proclaimed in 1894. Hawaii was formally annexed to the United States 1898, and became one of its territories in 1900. Population, about 100,000. three-fourths of which are Japanese. Honolulu is the capital of the Hawaiian group; population about 30,000.

OXFORD, PROVISIONS OF, for several political reforms; enacted by "the mad parliament," June 12'8; several times annulled and confirmed during the "barons' war."

OXFORD'S ACT, BISHOP OF, see *District Churches*.

OXFORD'S ASSAULT ON THE QUEEN. Edward Oxford, a youth who had been a servant in a public-house, discharged two pistols at queen Victoria and prince Albert, as they were proceeding up Constitution-hill in an open phaeton from Buckingham palace, 10 June, 1840. He stood within a few yards of the carriage, but neither her majesty nor the prince was injured. Oxford was tried at the Old Bailey (10 July), and was adjudged to be insane, and sent first to Bethlehem hospital, next to Broadmoor; and set at liberty in 1868, on condition of going abroad.

"OXFORD MOVEMENT", 1833-45, by R. W. Church, late dean of St. Paul's, published 10 March, 1891; see *Puseyism and Tractarianism*.

OXUS (the Persian and Turkish Djihoun, local name, Amou Daryá), a river of Central Asia; supposed to have changed its course before 1000 A.D., and to have resumed its ancient bed in 1878. The Oxus navigated as far as Faizabad Kali (Afghan frontier) by the Russians under adm. Baturin; reported, 11 Dec. 1894.

OXYGEN, a gas (named from the Greek *oxus*, sharp, as being generally found in acids), is the most abundant of all substances, constituting about one-third of the solid earth, and forming about nine-tenths of water and one-fifth of the atmosphere. It was first separated from red oxide of mercury by Priestley, 1 Aug. 1774, and by Scheele, who was ignorant of Priestley's discovery, in 1775. It is a supporter of animal life (in respiration), and of combustion. An oxygen gas company was announced in Dec. 1864; its object being the cheap manufacture of oxygen for its application to the production of perfect combustion in lamps, stoves, furnaces, &c. It is now largely produced with about 5 per cent. of inert nitrogen by the Brin method from atmospheric air (1893). Oxygen was liquefied by Raoul Pictet at Geneva (pressure, 320 atmospheres, temp. 140° below zero Cent.), 22 Dec. 1877. See *Ozone*.

Professor Dewar obtained 2 cubic centimètres ($\frac{1}{17}$ of a fluid oz.) of liquid oxygen by means of liquid ethylene (the illuminating part of coal gas), temp. 140° below zero Cent. (by Wroblewski and Olzewski's method), at the Royal Institution, London, in the presence of the prince and princess of Wales, 26 June, 1884. He exhibited for the first time some solid oxygen in the form of snow (temperature -200° Cent. -400° Fahr.), produced by placing liquid oxygen in a partial vacuum, at the Royal Institution 27 May, 1886.

Professor Dewar exhibited between 300 to 400 centimètres liquid oxygen at the Faraday Centenary, 26 June, 1891. The feeble magnetism of oxygen, demonstrated by Faraday, was shown by Professor Dewar to be greatly increased when reduced to the liquid state by a temperature of 180° below zero centigrade; announced 10 Dec. 1891. Some liquid oxygen placed in the magnetic field sprang to the poles and adhered to them till evaporated; this was publicly exhibited by the professor at the Royal Institution, 10 June, 1892. Several pints of liquid oxygen and

liquid air were then produced in the presence of the audience.

At the Friday evening meeting of the Royal institution, 20 Jan. 1893, prof. Dewar exhibited some of the remarkable properties of liquid oxygen and air, and he showed how the liquid state could be maintained longer by surrounding it with a very high vacuum. These costly experiments had been aided by a gift of 1,000l. from the Goldsmiths' company. The lecture and experiments were repeated before the prince of Wales, the duke of York, and a distinguished company, 22 Feb. 1893. Prof. Dewar reported to the Royal society that he had obtained solid air in the form of ice, a mysterious body, 9 March, 1893. Further researches reported, 22 Jan. 1897. Prof. Dewar was awarded the Rumford medal of the Royal society in 1894.

A statue of Priestley, by F. J. Williamson, at Birmingham, was unveiled by professor T. H. Huxley, 1 Aug. 1874, the centenary of the discovery of oxygen. This was also celebrated at Northumberland, Pennsylvania, where he was buried, Feb. 1804. The following telegram was sent 31 July: "The brethren at the grave to the brethren at the home of Priestley send greeting on this centennial anniversary of the birth of chemistry."

A method of obtaining oxygen from air, devised and patented by M. Margis, of Paris. The principle is that of dialysis, or diffusion under pressure, Sept. 1882. See *Gas* (liquefaction).

By the explosion of a cylinder of compressed oxygen, the carrier was killed, 15 March, 1895.

OXYGEN HOME, 2, Fitzroy square, London; founded for the treatment of ulcers and wounds by oxygen gas, about 1866; the oxygen is supposed to turn the toxins or poisons secreted by certain micro-organisms into oxy-toxins or antidotes; continued success reported, 10 May, 1899.

OYER AND TERMINER, a commission directed to the judges of the courts, by virtue whereof they have power to *hear and determine* treasons, felonies, &c., 1285.

O YES! A corruption of the French *oyez*, hear ye! The ancient term still used by a public crier and by the usher of courts of justice to enjoin silence and attention.

OYSTER (the Latin *Ostrea edulis*). British oysters are celebrated by the Roman satirist Juvenal (Sat. iv. 140) about 100. The robbery of oyster-beds is prohibited by 7 & 8 Geo. IV. c. 29 (1827). About 15,000 bushels of oysters were said to be produced from the Essex beds alone. In 1858 M. Coste commenced rearing oysters in great numbers on the coast of Brittany, and his plan has been found successful.

An act for promoting the cultivation of oysters in the United Kingdom, passed Aug. 1866
One for the preservation of oyster fisheries 3 May, 1867
Certain restrictions of the Oyster Fisheries act, 1862, removed by the Fisheries act 1868
The fisheries (oyster, crab, and lobster) act forbids the sale of deep-sea oysters between 15 June and 4 August; and the sale of others, between 14 May and 4 August; passed 10 Aug. 1877
Professor Huxley at the Royal Institution asserts the uselessness of restrictions and a close time for oysters, and the present uncertainty of culture, 11 May, 1883

Artificial breeding greatly promoted by professor Brooks of Baltimore (who discovered non-hermaphrodite), Lieutenant Winslow, U.S., and M. Bouchen-Brandely, announced June, 1884
Act for the cultivation of oysters in Ireland passed
Dean of Winchester and other guests at a banquet poisoned by eating oysters, contaminated by sewage. The dean subsequently died 22 Dec. 1902
Typhoid epidemic in Hampshire, occasioned by consumption of Ensworth oysters (see *Times*, 11 July, 1903) Dec. 1902-Jan. 1903
Committee representing the oyster trade to consider the contamination of oysters by sewage, pass various resolutions 5 Jan. ,,

Oysters, about 1830 the commonest of food, are now becoming scarcer and scarcer, although their reproduction is about a million-fold. A committee recommend a close time for dredging, viz. 1 May to 1 Sept., deep-sea fishing to be restricted, as at present, from 15 June to 15 Aug.; no oyster to be sold under $2\frac{1}{2}$ inches in diameter. The Whitstable beds in 1875 are said to have produced about 79,564,000 oysters; value about 55,140*l*.

American and Portuguese oysters are now largely imported.

Oysters successfully cultivated at Arcachon, near Bordeaux, 1889.

OZOKERIT, a mineral hydro-carbon found in Moldavia and Wallachia. From it is distilled a substance suitable for making candles, introduced in the autumn of 1871.

OZONE (from the Greek *ozein*, to yield an odour), was discovered by Schönbein, of Basel, in 1840, when experimenting with the then newly-invented battery of sir Wm. Grove, and was recognised by him successively as a minute constituent of the oxygen gas resulting from the electrolysis of water effected by a current of high tension; of air or oxygen through which electric discharges have taken place; and of air in which moist phosphorus has been undergoing slow oxidation.

Marignac determined the action of ozone on various substances to be due to their oxidation . . . 1845
 Ozonometers constructed . . . 1858
 M. Schönbein announced his discovery of another modification of oxygen, which he termed *antozone*, hitherto found only in the compound state (in peroxides of sodium, potassium, &c.) . . . 1859

 Andrews and Tait demonstrated ozone to be a condensed form of oxygen . . . 1860, "
 This further established by Soret and Brodie, by quantitative reactions. (Odling suggested and Brodie proved ozone to be 3 parts of oxygen compressed into the space of 2) . . . 1872
 Ozone, generated by a current produced by Wilde's magneto-electric machine, employed to bleach sugar, by Edward Beane's patent . . . Aug. 1868
 Liquefied by Hantefeuille and Chappuis . . . Oct. 1880

PADLOCKS are said to have been invented by Beecher at Nuremberg, 1540, but are mentioned much earlier.

PADUA, the Roman Patavium, in Venetia, N. Italy, said to have been founded by Antenor, soon after the fall of Troy. It flourished under the Romans. Patavian Latin was considered very corrupt, and is traced in Livy, a native of Padua. After being an independent republic, and a member of the Lombard league, Padua was ruled by the Carrara family from 1318 with a short interruption till 1405, when it was seized by the Venetians. The university was founded about 1220. It was closed through disturbances, 1848-50.

Andrew, the last Palæologus, son of Thomas, ruler of the Morea, after the overthrow of his father, became a Mahometan at Constantinople about 1533. A person who called himself John Anthony Palæologus Lascaris died at Turin, Sept. 1874. His claims were doubted.

PALÆONTOLOGY (from the Greek *palaios*, ancient, and *onta*, beings), treats of the evidences of organic beings in the earth's strata. It combines biology and geology (*which see*). Wm. Buckland, Cuvier, Mantell, Agassiz, Owen, Edward Forbes, Cope, Marsh, and Blainville, all of the present century, may be reckoned as fathers of this science. The Palæontographical society, which publishes elaborate monographs of British organic remains, was founded in 1847. The journal "Palæontographica" (German) began 1851. PALAIS ROYAL, Paris, originally Palais Cardinal, built for cardinal Richelieu by Lemerrier, 1620-36, received its present name when occupied by Louis XIII., to whom the cardinal gave it shortly before his death in 1642. Louis XIV., in 1692, gave it to his nephew Philippe, duke of Orleans, and it became the residence of his successors. It was confiscated by the republic in 1793, after the execution of Philippe Egalité. Louis Philippe resided in it, 1814-31. It suffered much injury at the revolution in 1848. Under the second empire

it became the residence of prince Jerome and his son Napoleon. The buildings were much injured by fire by the communists, 24 May, 1871.

PALATINATE OF THE RHINE, one of the seven ancient electorates of Germany. It was long united to Bavaria, but was separated in 1294.—Frederic V., the elector-palatine in 1610, married in 1613 Elizabeth, the daughter of James I. of England, and thus was an ancestor of queen Victoria; see *Hanover*. In 1619 he was elected king of Bohemia, but lost all by his defeat by the Austrians at Prague in 1620. The Palatinate was horribly ravaged by Tilly in 1622, and by the French in 1688. Several thousands of the ruined peasantry were sent to America by the British government and people. The elector palatine, Charles Theodore, inherited Bavaria in 1778; since when the two electorates have been united; see *Bavaria*.

PALATINE. William the conqueror made his nephew, Hugh De Abrincis, count palatine of Chester with the title of earl, about 1070. Edward III. created the palatine of Lancaster, 1539; see *Lancaster, duchy of*. The bishopric of Durham also made county palatine. There is also mention made of the county palatine of Hexham, in 33 Henry VIII. c. 10, which then belonged to the archbishop of York, but by the 14th of Elizabeth it was dissolved, and made part of the county of Northumberland. The palatine jurisdiction of Durham was separated from the diocese, and vested in the crown, 6 Will. IV. c. 19, 21 June, 1836.

PALE, the name given to the part of Ireland colonised by the English—viz., parts of the counties of Louth, Dublin, Meath, and Kildare. Anglo-Irish rulers were termed lords of the pale. Their arbitrary exactions led to a royal commission of inquiry in 1537. The defection of the lords of the pale in 1641 was followed by a general insurrection, and the royal cause was ruined in 1647. In 1652 Ireland was committed to the rule of four commissioners.

PALERMO (N. W. Sicily), the ancient Panormus. It has been held by the Carthaginians, 415 B.C.; taken by the Romans, 254 B.C.; by the Saracens, A.D. 832; and by the Normans, 1072. Here Roger II. was crowned king of Sicily, 1130. Palermo was the scene of the Sicilian Vespers (*which see*), 30 March, 1282. It suffered from earthquake in 1726 and 1740. The king Ferdinand resided at Palermo from 1806 to 1815, while Naples was ruled by Joseph Bonaparte and Joachim Murat. It revolted against the tyranny of Ferdinand II. 12 Jan. 1848. It was attacked by general Filangieri, 29 March, 1849, and surrendered on 14 May. It was taken by Garibaldi, 6 June, 1860. An insurrection against the abolition of the monastic establishments broke out in Palermo on 13 Sept. 1866, and was suppressed by the royal troops with much bloodshed; order was restored by 22 Sept. After being several times conquered by the Saracens, and retaken from the 7th to the 10th century, and after being the scene of the wars of the Crusades (*which see*), and other conflicts, Palestine was united to the Ottoman empire by Selim I. in 1516. PALESTRO (N. Italy). Here the Sardinians defeated the Austrians, 30, 31 May, 1859.

PALIMPSEST (from the Greek, *palin*, again; and *psao*, I efface), parchments written on after the previous writing had been partially effaced. Cardinal Mai, by removing the second writing in some MSS., recovered the original. This was the case with Cicero's "De Republica," published by Mai in 1821. It had been covered by a treatise of Lactantius.

PALL, PALLIUM, in the Roman Church an ensign of dignity of a strictly personal character conferred by the pope upon archbishops. It consists of a narrow band of pure white wool, taken from two lambs, which annually, on the feast of

St. Agnes, are brought to the church of St. John Lateran, and after being blessed are presented to the pope; the wool is afterwards made up into pallia by a community of nuns. The pallium, which is worn around the shoulders, is ornamented with four purple crosses, and its form is indicated in the arms of the archbishop of Canterbury. By a decretal of pope Gregory XI. (about 1370), no archbishop could call a council, bless the chalice, consecrate churches, ordain a clerk, or consecrate a bishop, till he had received his pall from the see of Rome. The pall was first worn by an Irish archbishop in 1152, when Gelasius was recognised as primate of all Ireland. The late cardinal Vaughan was invested with the pallium in the pro-cathedral, Kensington—the first occasion of its investiture in England since the time of cardinal Pole. Archbishop Bourne, the new archbishop of Westminster, receives the pallium from pope Pius X. at Rome, 12 Nov. 1903.

PALLADIUM, the statue of Pallas, said to have fallen from heaven near the tent of Ilus, as he was building Ilium, which the oracle of Apollo declared should never be taken so long as the Palladium was found within its walls. The Greeks are said to have obtained it by craft during the Trojan war, 1184 B.C.; but some writers assert, another statue was taken, and that the real Palladium was conveyed from Troy to Italy by Æneas, 1183 B.C., and preserved by the Romans with the greatest secrecy in the temple of Vesta.—**PALLADIUM** is a rare metal, discovered in platinum ore by Dr. Wollaston, in 1803.

PALLAS, the planet, was discovered by Olbers, at Bremen, 28 March, 1802.

PALLISER'S CHILLED SHOT, see **CANNON**.

PALL MALL, a street near St. James's palace, London, is named from a French game at ball (*pale-mail*, being a wooden mallet), resembling the modern croquet, having been played there about 1600, and introduced into England about 1660. Among eminent inhabitants were Nell Gwyn and Dr. Thomas Sydenham. The **PALL MALL GAZETTE**, a daily independent political and literary journal, first appeared 7 Feb. 1865, and was edited by Mr. Frederick Greenwood till 1 May, 1880, when it became a liberal paper, edited by Mr. John Morley, who retired 25 Aug. 1883. Price 2d. reduced to 1d. 2 Jan. 1882. The paper became again conservative, Dec. 1892. Mr. H. J. C. Cust, M.P., editor, spring, 1893.

Nos. 6, 7, 8, 9 July, 1885, contained Mr. Stead's statements respecting offences against young women and children. Greatly disproved on investigation. See *Trials*, Oct.—Nov. 1885.

PALM-SUNDAY. When Christ made his entry into Jerusalem, multitudes of the people who were come to the feast of the Passover, took branches of the palm-tree, and went forth to meet him, 33. It is usual, in some countries, to carry palms on the Sunday before Easter, hence called Palm-Sunday.

PALMYRA (Syria) was supposed to have been the Tadmor in the wilderness built by Solomon, but was manifestly Grecian. The brilliant part of the history of Palmyra was under Odenatus and his queen Zenobia. At the death of Odenatus, Zenobia assumed the title of queen of the East, in 267. Aurelian defeated her at Emesa, in 272, and made her captive, 273, and killed Longinus, the philosopher, her friend. Palmyra is now inhabited by a few Arab families. The ruins were visited in 1751, by Mr. Wood, who published an account of them in 1753. The rev. Dr. W. Wright published "Palmyra and Zenobia" in 1895.

PAMPHLETS. Their first appearance amongst us is generally thought to have been in opposition to the church of Rome. Those who were first convinced of the reasonableness of the "new learning," as it was then called, propagated their opinions in small pieces, cheaply printed, and (what was then of great importance) easily concealed. Political pamphlets began in Edward VI.'s time,

and were very numerous in the 17th and 18th centuries (by De Foe, Swift, Steele, and others).

Paul Louis Courier wrote "Simple Discours" and other pamphlets against the priests and nobles after the restoration of the Bourbons, 1815. His "Pamphlet des Pamphlets," defending the pamphleteer (published, 1824), probably led to his murder, 10 April, 1825. Large collections are in the libraries of the British Museum and the Royal and London Institutions. Certain enactments respecting pamphlets removed by an act passed July, 1860.

Political pamphlets, "Killing no Murder," &c., selected by Mr. A. F. Pollard, published, 1897.

PANAMÁ, the isthmus which joins the two Americas; see *Darien*. Across this a ship canal was proposed by the *Buqueer-Clayton treaty*, 19 April, 1850. A treaty for the construction of a ship canal through the isthmus by the United States was signed by representatives of that government and that of Colombia 26 Jan. 1870. A railway was opened in 1855. In that year a new state, New Granada, was divided into eight federal states, one of which is named PANAMÁ. A revolution took place in Panamá, on 9 March, 1865; the government was deposed, and don Jil Colunje became president; succeeded by Vincent Olarte, 1 Oct. 1866. (Barker died in April, 1806.) J. P. Lautherbourg, a painter, termed the panoramist, invented the "Eidophusikon," natural phenomena represented by moving pictures, exhibited at Lislestreet, Leicester-square, 3 April, 1781. The Panthays sent an embassy to England in 1872, without effect. Sultan Suleiman committed suicide.

PANTHEISM, the formula of which is "everything is God, and God is one," was especially taught by Xenophanes, who died 500 B.C. The doctrine is attributed to Spinoza, Kant, Fichte, and other modern philosophers. Amalie of Chartres, censured for holding the doctrine, recanted 13th century. He is said to have asserted that "all is God, and God is all."

PANTHEON, at Rome, a circular temple built by Agrippa, the son-in-law of Augustus, 27 B.C. It had niches in the wall, where the image or representation of a particular god was set up; the gates brass, the beams covered with gilt brass, and the roof covered with silver. Pope Boniface III. dedicated it to the Virgin Mary and all the saints, by the name of S. Maria della Rotunda, or "ad Martyres," A.D. 608.*—THE PANTHEON IN LONDON was erected by subscription, and opened 27 Jan. 1772; formed into an opera house; burned down 14 Jan. 1792; rebuilt for masquerades in 1795; opened as theatre, 1812; made a bazaar in 1834. The bazaar was closed in 1867, and the premises taken by Gilbey and Co., wine merchants, who lent the south part for a temporary church.

PANTHEON, Paris, a magnificent building founded by Louis XV. in pursuance of a vow, dedicated to Ste. Geneviève; built by Soufflot, 1757-90; named Pantheon, and decreed to be a mausoleum for eminent men, 1791; made a church, 1806; named Ste. Gene-

viève, 1821; re-named Pantheon, 1831; again a church, Nov. 1852; again secularised, 27 May, 1885; received the remains of Victor Hugo, 1 June, 1885. The remains of Voltaire and Rousseau found there by a commission, 18 Dec. 1897.

PANTOGEN, see *Atomic Theory*.

PANTOMIMES were representations by gestures and attitudes among the Greeks, and were introduced on the Roman stage by Pylades and Bathyllus, 22 B.C. Comic masques were introduced here from Italy about 1700. The first regular English pantomime is said to have been "Harlequin executed," produced by John Rich at the Lincoln's-inn-fields theatre, 26 Dec. 1717. Joseph Grimaldi (1779-1837) was a most eminent clown.

"PAPAL AGGRESSION." In a consistory holden in Rome, 30 Sept. 1850, the pope (Pius IX.) named fourteen new cardinals, of whom four only were Italians. Among them was Dr. Nicholas Wiseman, vicar-apostolic of the London district, who was at the same time nominated lord archbishop of Westminster.

A pastoral letter from Dr. Wiseman read in all the Roman catholic chapels of his see (all England parcelled out into Romish dioceses). 27 Oct. "

The answer of the bishop of London (Dr. Blomfield) to a memorial from the protestant clergy of Westminster, against a Romish hierarchy in this country, was followed by the "Durham" letter from lord John Russell, then chief minister of the crown, to the bishop of Durham, in which he severely censured, not only the papal aggression, but also the proceedings of the tractarian clergy of the Church of England 4 Nov. "

Immediately from every quarter of England addresses poured in to her majesty the queen, calling upon her and the government to resist the usurpation; 6700 addresses, it is said, had been voted from nearly as many influential meetings up to 31 Dec. "

Dr. Briggs, created Roman catholic bishop of Beverley, was enthroned in St. George's chapel at York, 13 Feb. 1851

Dr. Browne, created bishop of Clifton, and Dr. Burgess, bishop of Shrewsbury: both consecrated in St. George's cathedral, Southwark 27 July, " The Ecclesiastical Titles act, 14 & 15 Vict. c. 60, prohibited the constitution of bishops of pretended provinces under a penalty of 100*l.* Aug. " It was not acted upon, and was repealed 24 July, 1871

PAPAL INFALLIBILITY. This dogma, maintained by one party in the Roman church, tolerated by another, and utterly rejected by a third, was adopted and promulgated at the general council at Rome 18 July, 1870, a great many bishops having withdrawn. The dogma was inculcated by the false decretals of Isidore and others, but not adopted by the council of Trent; see *Councils* *XXI*. Professor Döllinger, the historian, was excommunicated at Munich for rejecting this dogma, 18 April, 1871: he was made a D.C.L. at Oxford about 16 June following; see *Old Catholics*. The doctrine was strenuously attacked by Mr. W. E. Gladstone, in his pamphlet, "The Vatican Decrees," Nov. 1874.

PAPAL STATES, see *Rome*, and *Popes*.

PAPER, see *Papyrus*. Paper was probably made in Egypt, and centuries before the Christian era. It was made of cotton about 600 A.D.; and of rags about 1300.* White coarse paper was made

by sir John Spielman, a German, at Dartford, in England, 33 Eliz. 1580; and here paper mills were erected. *Stow*. Paper for writing and printing manufactured in England, and an act passed to encourage it, 2 Will. III. 1690; before this time we paid for these articles to France and Holland 100,000*l.* annually. The French refugees taught our people; we had made coarse brown paper almost exclusively, until they came among us; we made white paper first in 1690. *Anderson*. Paper-making by a machine was suggested by Louis Robert, who sold his model to Didot, the great printer, who brought it to England, and, conjointly with Fourdrinier, perfected the machinery. The latter obtained a patent for paper-making machinery in 1801; and for manufacturing paper of an indefinite length in 1807. The machinery was improved by Bryan Donkin. A sheet of paper, 13,800 feet long, and 4 feet wide, was made at Whitehall-mills, Derbyshire, in 1830; and one 21,000 feet long, and 6 feet 3 inches wide, was made at Colyton in Devon in 1860. Esparto, a Spanish grass, first imported in 1857, has been largely employed in the paper manufacture since 1864. In 1866 wood was largely manufactured into paper at Philadelphia; and at the Paris exhibition, 1867, fine specimens of wood-paper were shown; see *Parchment* (note). The paper duty, imposed in 1694 (producing about 1,400,000*l.* annually), after having been the subject of agitation for several years, was repealed in 1861. Hop-stalks said to be used for paper-making in France, 1873.

Paper-mills in Great Britain, 1877, about 385 (England, 300; Scotland, 65; Ireland, 20); annual produce about 360,000 tons; value, 16,090,000*l.* Great increase since.

PAPER-HANGINGS, &c. Stamped paper for this purpose was first made in Spain and Holland about 1555. Made of velvet and floss, for hanging apartments, about 1620. The manufacture of this kind of paper rapidly improved in this country during the present century.—PAPER BRICKS have been made in America; and paper tubing for water and gas, made by M. Jaloureau of Paris, was shown in 1860.

PAPER-MONEY, see *Banks* and *Greenbacks*.

PAPIER MACHÉ. This manufacture (of paper-pulp combined with gum and sometimes with china clay) has existed for above a century. Martin, a German snuff-box maker, is said to have learnt the art from one Lefevre about 1740. In 1745 it was taken up by Baskerville, the printer at Birmingham, and soon spread over that district. Papier maché is now largely employed in ornamenting the interior of buildings, &c. A large dome at Brussels ordered to be made of it, Dec. 1881.

manufacture. He gives engravings of manufacturers' marks, French and English, the dates of which range from 1330 to 1431. He also gives an extract from a work by Bartholus, a writer of the middle of the 14th century, in which mention is made of a paper manufactory in the Marches of Ancona. At the end of Wynkin de Worde's edition of Bartholomæus De Proprietatibus Rerum, 1494, its thin paper, made by John Tate in England, is commended.

PAPISTS, see *Roman Catholics*.

PAPUA, see *New Guinea*.

PAPYRUS, the reed from which was made the paper of Egypt and India, used for writings until the discovery of parchment, about 190 B.C. The earliest known specimens of papyri were found in the monuments attributed to the third dynasty, 3966 B.C. Many papyri were discovered at Herculaneum in 1754; and many were collected by the French in Egypt, 1798. A manuscript of the *Antiquities of Josephus* on papyrus, among the treasures seized by Bonaparte in Italy, and sent to the National Library at Paris, was restored in 1815.

Fac-similes of the largest known papyrus, found in 1855, behind Modinet Habu on the Nile, and now in the British Museum, were published with translations by the trustees in 1876.

PARADOX (Greek, *para*, beyond; and *doxa*, opinion), something contrary to common opinion. Professor De Morgan's "Budget of Paradoxes" (of all kinds) was published in 1872. John Paget's "Paradoxes and Puzzles, Historical, Judicial, and Literary," published 1874.

PARAFFIN (from *parum affinis*, from its having little affinity with anything), also called photogen, a solid substance, somewhat like spermaceti, produced by distillation of coal, and first obtained by Reichenbach in 1830, and by Dr. Christison about the same time. It was procured from mineral oil by Mr. James Young about 1848 at Alfreton in Derbyshire. Soon after it was largely obtained from Boghead coal. It is also obtained from Irish peat. It makes excellent candles. Much litigation ensued through interference with Mr. Young's patent-right. In 1882, 120,508 cwt. were imported into the United Kingdom; 1900, 984,571 cwt.; 1901, 839,437 cwt.

PARAGUAY, a republic in S. America, discovered by Juan Diaz de Solis in 1515, and by Sebastian Cabot in 1526; conquered by Alvarez Nuñez in 1535, and civilized by the Jesuits, who in 1608 commenced their missions there and held it till their expulsion in 1768. Paraguay rose against the Spanish yoke in 1811. In 1814, Dr. José G. R. Francia was elected dictator; he ruled vigorously but tyrannically; he was succeeded on

his death in 1840 by Vibal. From 1814 to 1844 the country was rigidly closed against foreigners. The president, C. A. Lopez, elected in 1844, was succeeded by his son, Francis S. PARC AUX CERFS, a deer-park at Versailles, near Paris, made by Louis XII., and kept as such till 1694, when Louis XIV. took the land for building. PARCHMENT. Invented for writing books by Eumenes (some say by Attalus), of Pergamus, the founder of the celebrated library at Pergamus, formed on the model of the Alexandrian, about 190 B.C. Parchment-books from this time became those most used, and the most valuable as well as oldest in the world are written on the skins of goats. It should be mentioned that the Persians and others are said to have written all their records on skins long before Eumenes' time. Parchment superseded by paper of a special kind for grants of probate, Dec. 1900.

Parchment paper (or vegetable parchment) was invented and patented in 1857, by Mr. W. E. Gaine, C.E., who discovered, that when paper is exposed to a mixture of two parts of concentrated sulphuric acid and one part of water for no longer time than is required to draw it through the fluid, it is immediately converted into a strong tough skin-like material. It must be instantly washed with water. Its great strength points out many applications of this material, e.g., maps, school and account-books, and drawing-paper. In 1859 it appeared that a similar invention had been made in Paris by Fignier and Pomarède in 1846.

PARDONS. General pardons were proclaimed at coronations: first by Edward III. in 1327. The king's power of pardoning is said to be derived *a lege sue dignitatis*; and no other person has power to remit treason or felonies, stat. 27 Hen. In the time of Julius Caesar, Lutetia comprised the city only. It was greatly improved by the emperor Julian, who made it his residence while he governed Gaul, 355 to 361. It became successively the capital of the kingdoms of Paris, Soissons, and Neustria, and eventually of all the kingdom. Many ecclesiastical councils were held at Paris, 360-1528. The representative of the house of Orleans is styled count of Paris. Population of Paris in 1856, 1,178,262; in 1872, estimated population, 1,851,792; in 1876, 1,988,806; in 1881, 2,269,023; in 1891, 2,424,705; 1896, 2,536,000; 1901, 2,714,068. See *France.*

PARISHES. Their boundaries in England are said to have been fixed by Honorius, archbishop of Canterbury, 636, or by Alfred about 890. They were enlarged, and the number of parishes was consequently reduced in the 15th century, when there were 10,000. Parish registers were commenced in 1538. Acts were passed in 1844 and 1856 by which new parishes may be formed out of too extensive ones; acts amended in 1869. The appointment of parish constables was made unnecessary by an act passed Aug. 1872. See *Registers*, and *Benefices*. Number of ecclesiastical parishes or districts in 1893, 1,400. By the Local

Government act, passed 5 March, 1804, *Parish and District Councils* were appointed for rural parishes of 300 inhabitants or upwards, with suitable arrangements, to consist of from 5 to 15 members (women eligible) annually elected, on 15 April; 1st election in 7,142 parishes, 4 Dec. *et seq.* 1804. Parish councils were established in Scotland by the Local Government act of 1804. Parish registers of several counties are now published by the Parish Register Society, 1807. Parish councillors (tenure of office) act passed, 20 June, 1839.

PARKESINE. A new substance, composed of gun-cotton, obtained from various vegetable bodies, and oil. It can be formed with the properties of ivory, tortoiseshell, wood, india-rubber, gutta-percha, &c. It is the invention of Mr. Alexander Parkes, of Birmingham, and was shown by him at the Exhibition in 1862. In Dec. 1865, at the Society of Arts, parkesine was proved to be an excellent electric insulator, and therefore likely to be suitable for telegraphic purposes.

PARK LANE MURDER, see *Trials*, 1872.

PARKS. The Romans attached parks to their villas. Fulvius Lupinus, Pompey, and Hortensius, among others, had large parks. In England, the first great park of which particular mention is made was that of Woodstock, formed by Henry I., 1125. Queen Caroline, consort of George II., inquired, it is said, of the first Mr. Pitt (afterwards earl of Chatham), how much it would cost to shut up the parks as private grounds. He replied, "Three crowns, your majesty." The design was never afterwards entertained. See *Finsbury, Southwark, Green, Hyde, James's, St., Regent's, Victoria, Alexandra, Battersea, West Ham, and People's Parks, Clissold, Waterlow, and Yellowstone Park, U.S., and London Parks Act*.

Niger, 22 May, 1795; and returned 22 Dec. 1797. after having fruitlessly encountered great danger, He again sailed from Portsmouth on his second voyage, 30 Jan. 1805, appointed to a new expedition by government. It is stated that his party fired on the natives when resisted, and that he was killed at Broussa on the Niger, Nov. 1805. His "Travels in Africa" were published in 1799.

PARLIAMENT (from the French *parlement*, discourse) derives its origin from the Saxon general assemblies, called *Wittenagemot*. The name was applied to the assemblies of the state under Louis VII. of France, about the middle of the 12th century, but it is said not to have appeared in our law till its mention in the statute of Westminster I., 3 Edw. I., 1272: and yet Coke declared in his *Institutes*, and spoke to the same effect, when speaker (1592), that this name was used even in the time of Edward the Confessor, 1041. The first clear account we have of the representatives of the people forming a house of commons, was in the 43rd Hen. III. 1258, when it was settled by the statutes of Oxford, that twelve persons should be chosen to represent the commons in the three parliaments, which, by the sixth statute, were to be held yearly. *Burton's Annals*. The general representation by knights, citizens, and burgesses, took place 49 Hen. III. 1265. *Dugdale's Summons to Parliament*, edit. 1685; see *Commons and Lords*. The power and jurisdiction of parliament are so transcendent and absolute, that it cannot be confined, either for causes or persons, within any bounds. It hath sovereign and uncontrollable authority in making and repealing laws. It can regulate or new-model the succession to the crown (as was done in the reigns of Henry VIII. and William III.). It can alter and establish the religion of the country, as was done in the reigns of Henry VIII., Edward VI., Mary, and Elizabeth. *Sir Edward Coke*.* The ninth edition of May's "Practical Treatise on Parliament" was published in 1883; tenth edition, with many changes by sir Richard Palgrave, published Dec. 1893, Mr. G. Barnett Smith's elaborate "History of the English Parliament" was published Nov. 1892; see *Triennial and Septennial*. Return of the names of members of parliament from the earliest period to the present time, ordered by the house of commons, 4 May, 1876, and 9 March, 1877. Part I. (1213-1702), published 1879. * When the royal assent is given to a public bill, the clerk says "*Le roi [or la reine] le veut.*" If the bill be a private bill, he says "*Soit fait comme il est désiré.*" If the bill have subsidies for its object, he says, "*Le roi [or la reine] remercie ses loyaux sujets, accepte leur b^en^evolence, et aussi le veut.*" If the king do not think proper to assent to the bill, the clerk says, "*Le roi [or la reine] s'avisera*" which is a mild way of giving a refusal. It is singular that the French language should still be used.

PARLIAMENT OF IRELAND, it is said, began with conferences of the English settlers on the hill of Tara, in 1173. Writs for knights of the shire were issued in 1295. The Irish parliament met last on 2 Aug. 1800; the bill for the union having passed.

PARLIAMENT OF SCOTLAND consisted of barons, prelates, and abbots, and occasionally of burgesses. A great national council was held at Scone by John Balliol, 9 Feb. 1292; and by Robert Bruce at Cambuskenneth, in 1326. A house of commons was never formed in Scotland. The parliament of Scotland sanctioned the act of union on 16 Jan. 1707, and met for the last time on 22 April, same year.

The parliament hall, Edinburgh castle, erected by James I., in 1434, was thoroughly and judiciously restored by M. Hippolyte Blanc, at the expense of the late Mr. Nelson and family. The hall was reopened, Feb. 1891. The undertaking was greatly promoted by the investigations of lords Napier and Etrick, major Gore Booth, and Mr. R. Chambers.

PARLIAMENT OF PARIS was instituted by Philip Augustus II., 1190, and was made the chief court of justice in France by Philip IV.; at his suggestion it revoked a bull of pope Boniface VIII., 1302. It was suppressed by Louis XV., 1771; restored by Louis XVI., 1774; demanded a meeting of the states-general in 1787; and was suspended by the national assembly, 3 Nov. 1789; see *Commune*.

The report of the commissioners was laid before parliament, 13 Feb. 1890. The following is an abridgment of their conclusions:—I. That the respondent members of parliament collectively were not guilty of conspiring for the absolute independence of Ireland as a separate nation, but that some of them (Messrs. M. Harris, Dillon, W. O'Brien, W. Redmond, O'Connor, J. Condon, and J. J. O'Kelly), together with Mr. Davitt, established the Land League mainly for that purpose. II. That the respondents [44] did conspire to promote agrarian agitation, the non-payment of rents, and the expulsion of the landlords (styled the English garrison). III. That they acquitted Mr. Parnell and others of the charge of insincerity in their denunciations of the Phoenix Park murders, and affirmed the fac-simile letter to be a forgery. IV. They found that the respondents did disseminate the *Irish World* and other newspapers, intending to incite to sedition and other crimes. V. That the charges of incitement to crime, except by intimidation, and of payments for that purpose, were not proved. VI. They found that the respondents did not denounce the system of intimidation, though they knew its effects; and VII. That they defended persons charged with agrarian crime, and supported their families, but it was not proved that they subscribed for testimonials for, or were intimately associated with, notorious criminals, or aided their escape by payments. VIII. That they found that the respondents made payments to compensate persons injured in the commission of crime. IX. That the respondents did invite and obtain the assurance and co-operation of the Physical Force Party in America, including the Clan-na-Gael, and did not repudiate the action of that party.

[Certain allegations against Mr. Parnell were declared not proved.]

The report adopted with thanks, by the commons, after 7 days' debate, 3-11 March; by the lords (without a division), 21 March, 1890. Mr. Gladstone's amendment rejected by 339 to 268.

In consequence of the issue of the divorce suit, capt. O'Shea, Mrs. O'Shea, and Mr. C. S. Parnell, 15-17 Nov. 1890, Mr. Parnell was requested by Mr. W. E. Gladstone and other English liberals to retire from the chairmanship of the Irish party. He declined, and issued a manifesto to the people of Ireland, giving an account of private conferences with Mr. Gladstone and Mr. John Morley, 29 Nov. The Irish R.C. bishops demanded Mr. Parnell's retirement, 3 Dec. After a week's angry discussion in the commons' committee-room No. 15, the Irish party divided; Mr. Justin M'Carthy, the vice-chairman, was elected chairman by 44 members; Mr. Parnell continuing chairman with 26 followers, 6 Dec. PAROCHIAL CHARITIES COMMISSION, see *London*, 1878, and under *Charities*, 1883.

PARRICIDE. There was no law against it in Athens or Rome, such a crime not being supposed possible. About 172 B.C., L. Ostius having killed his father, the Romans scourged the parricide: sewed him up in a leathern sack made air-tight, with a live dog, a cock, a viper, and an ape; and thus cast him into the sea. Miss Blandy was executed at Oxford for the murder of her father, April, 1752; see *Trials*, March, 1890.

PARSEES or **GUEBRES**, the followers of Zaradush, called by the Greeks Zoroaster, who is doubtfully said to have lived before sixth century B.C. (see *Magi*), dwelt in Persia till 638, when, at the battle of Kadsah, their army was decimated by the Arabs, and the monarchy annihilated at the battle of Nahāvend in 641. Many submitted to the conquerors, but others fled to India, and their descendants still reside at Bombay (where they are termed Parsees). Sir Jamssetjee Jejeebhoy, the 3rd baronet, was elected president of the community there, July, 1877. Mr. Dadabhai Naoroji, a Parsee merchant, was for several years professor of Gujerati at University college, London. He was nominated as M.P. for the Holborn district, but not elected, 1886; elected 6 July, 1892, for Central

Fin-bury; visits Bombay, Dec. 1893. "History of the Parsis," by Do-abhai Franji Karaka, published, 1884. See *Bombay*. A Parsee fire temple at Bombay was consecrated, Nov. 1891.

Cooverbai, an eminent scholar, promoter of native female education, the mother of Mr. M. M. Bhow-naggree, M.P. for N.E. Bethnal-green (1895), died, aged 65, at Bombay, 6 Feb. 1896.

Death of Bai Motilbai Wadia, great benefactress to Bombay, age 187, 15 June, 1897.

Sir Dinshaw Manockjee Petit, a noble benefactor, died at Bombay, aged 78, 5 May, 1901.

"**PARTANT POUR LA SYRIE**," popular French song; words by comte Alexandre de Laborde; music by Hortense Beauharnais, wife of Louis Bonaparte, King of Holland, about 1809. The music became very popular after her son became emperor, in 1852, as Napoleon III.

PARTHENON (from Greek *parthenos*, virgin), a temple at Athens dedicated to Minerva, erected about 442 B.C. In it Phidias placed his renowned statue of that goddess, 438 B.C. The roof was destroyed by the Venetians in 1687. Ruinous state of the building through earthquakes, described *Times*, 14 Aug. 1897. "The Parthenon" published by Mr. James Fergusson in 1883. See *Elgin Marbles*.

PARTHENOPEAN REPUBLIC was established by the French at Naples (anciently called Parthenope), 23 Jan. 1799, and overthrown in June same year.

PARTHIA (Asia). The Parthians were originally a tribe of Scythians, who, being exiled, as their name implies, from their own country, settled near Hyrcania. Arsaces laid the foundation of an empire which ultimately extended over a large part of Asia, 250 B.C.; the Parthians were never wholly subdued by the Romans. The last king, Artabanus V., was killed, A.D. 226; and his territories were annexed to the new kingdom of Persia founded by Artaxerxes, who had revolted against Parthia.

PARTICULARISTS. The name given to those Germans who desire the maintenance of the independence of the German states, and oppose their absorption into the empire. M. Gasser, one of them, failed in an attempt to form a ministry in Bavaria, Sept. 1872. Particularism revived during the election in 1893.

PARTITION ACT, relative to the division of property sold by direction of the court of chancery, passed 25 June, 1638.

PARTITION TREATIES. The first treaty between England and Holland for regulating the Spanish succession (declaring the elector of Bavaria next heir, and ceding provinces to France) was signed 19 Aug. 1698; and the second (between France, England, and Holland, declaring the archduke Charles presumptive heir of the Spanish monarchy, Joseph Ferdinand having died in 1699), 13 March, 1700. Treaty for the partition of Poland; the first was a secret convention between Russia and Prussia, 17 Feb. 1772; the second between the same powers and Austria, 5 Aug. same year; the third was between Russia, Austria, and Prussia, 24 Oct. 1795.

PARTNERSHIP. The laws respecting it were amended in 1863 and 1890; see *Limited Liability*.

PARTY, see *Processions*.

PASIGRAPHY (from Greek, *pasi*, for all):

a system which professes to teach people to communicate with each other by means of numbers which convey the same ideas in all languages. A society for this purpose was established at Munich; and the president, Anton Bachmaier, published a dictionary and grammar for German, French, and English, 1868-71; 4334 mental conceptions may be thus communicated.

PASQUINADES. Small satirical poems obtained this name about 1533.

At the stall of a cobbler named Pasquin, at Rome, idle persons used to assemble to listen to his sallies, to relate anecdotes, and rail at the passers-by. After the cobbler's death, his name was given to a statue to which lampoons were affixed.

PASSAROWITZ TREATY, concluded 21 July, 1718, between Germany and Venice, and the Turks, by which the house of Austria ceded certain commercial rights, and obtained from Turkey the Temeswar, Belgrade, and part of Bosnia, Servia, and Wallachia. The Turks gained the Morea.

PASSAU (Germany), **TREATY OF,** whereby religious freedom was established, was ratified between the emperor Charles V. and the protestant princes of Germany, 31 July, 1552. In 1662 the cathedral and great part of Passau were consumed by fire.

PASSENGERS—by public vehicles, are protected by 1 & 2 Will. IV. c. 22 (1831), 1 & 2 Vict. c. 79 (1838), and 16 & 17 Vict. c. 33 (1853); another act was passed in 1889. Mr. Cleghorn, under whom the front seat on the near side of one of the general omnibus company's carriages had given way, recovered 400*l.* damages against the company, in a verdict by consent, in the Queen's bench, 10 Dec. 1856. The Ships' Passenger act, 18 & 19 Vict. c. 119, passed in 1855, was amended in 1863; see *Campbell's Act*, and under *Railways*.

PASSIONISTS, a congregation of clerks of the holy cross, founded by St. Paul of the Cross, who died 1775, and was canonized by the pope 1867. A home was set up in England in 1841, and others since. The monastery, Highgate, London, N., solemnly blessed by cardinal Manning, and opened, 16 July, 1876.

PASSION PLAY, see *Drama*.

PASSION-WEEK, the name given since the Reformation to the week preceding Easter, was formerly applied to the fortnight. Archbishop Laud says the two weeks were so called "for a thousand years together," and refers to an epistle, by Ignatius, in the 1st century, in which the practice is said to have been "observed by all." The week preceding Easter is now by some termed "Holy Week," the previous week "Passion Week."

PASSION-MUSIC: Gregory Nazianzen (A.D. 330-390) is said to have first set forth the history of the Passion in a dramatic form.

Guidetti, in 1586, published music for this subject, which has been treated since by many composers. J. S. Bach's great "Passion Musik," first performed on Good Friday, 1729, has been revived with great success in this country, beginning with that "according to St. Matthew," 6 April, 1854; performed annually at St. Paul's on Tuesday in Holy Week.

PASSIVE RESISTANCE, the term used by the opponents of the Education act, 1902, in justification of their action in refusing to pay the rate levied for education on the alleged ground that the act gives an unfair advantage to the

schools of the established church, and to its doctrinal teaching in the supported schools. Early in the spring of 1903 many nonconformists in the neighbourhood of London and in the provinces refusing, as they stated, on conscientious grounds to pay the rate their goods were seized and sold. Much agitation has resulted and still (Nov. 1903) continues, see Education Acts 1902, 1903 in *Addenda*.

The passover was celebrated in the new temple, 18 April, 515 B.C. *Usher*.

PASSPORT SYSTEM forbids subjects to quit one country or enter another without the consent of the sovereign thereof. In 1858 the system was somewhat changed in this country, and the stamp duty on passports was reduced from 5*s.* to 6*d.* Passports were abolished in Norway in 1859; in Sweden in 1860; and (with regard to British subjects) in France, 16 Dec. 1860; in Italy, 26 June, 1862; in Portugal, 23 Jan. 1863; and are falling into disuse in other countries. The passport system was established in the United States on 19 Aug. 1861. The passport system, revived in France on account of the war, 1 Aug. 1870, was abolished by M. Thiers, 10 April, 1872, in compliance with the wish of the British government.

PATENTS (from *pateo*, I lie open), licences and authorities granted by the king. Patents are said to have been granted for titles of nobility in 1344, by Edward III. They were first granted for the exclusive privilege of printing books, in 1591. The property and right of inventors in arts and manufactures were secured by letters patent by an act passed in 1623. The later laws regulating patents are very numerous; among them are 5 & 6 Will. IV. c. 83 (1835), and 15 & 16 Vict. c. 83 (1852). By the latter COMMISSIONERS OF PATENTS were appointed, viz., the lord chancellor, the master of the rolls, the attorney-general for England and Ireland, the lord advocate, and the solicitors-general for England, Scotland, and Ireland. In 1853, a journal was published under their authority, and indexes of patents, from March, 1617, to the present time. Specifications of patents may be consulted by the public at the Free Library and Reading-room, in Southampton-buildings, opened 5 March, 1854. A museum containing models, portraits, &c., was established in 1859 at South Kensington, mainly by the exertions of Mr. Bennet Woodcroft.

In 1864, the alleged defalcations of Mr. Edmunds, a clerk in the patent office and an official of the house of lords, led to his retirement. He obtained a pension of 800*l.*, which was taken from him by a vote of the house of lords on 9 May, 1865. Much litigation ensued. In an action against Mr. Gladstone, the prime minister, and others, for a libel, Mr. Edmunds was non-suited, 21, 22 June, 1872; and he failed in actions against several newspapers for printing a treasury minute. His appeal to the house of lords failed 16 June, 1873.

It was first conferred on the five grand sees of Rome, Constantinople, Alexandria, Antioch, and Jerusalem. The Latin church had no patriarchs till the 6th century. The first founders or heads of religions orders are called patriarchs.

PATRONAGE OF LIVINGS by Laymen in England is very ancient; in *Scotland* was opposed by the books of discipline 1560 and 1578, abolished 1649, restored 1660. The system led to the disruption of the established church, and the foundation of the free church, 18 May, 1843. The abolition of lay patronage was earnestly advocated by the authorities of the established church in March, 1870, and the duke of Argyll volunteered to resign his patronage in May. Of 1109 livings 319 belonged to the crown, and about 600 to private persons. An act (37 & 38 Vict. c. 82) for abolishing patronage in Scotland, brought in by the duke of Richmond, 18 May, passed, 7 Aug. 1874. In England a church patronage bill (to check sales and give rights to parishioners, &c.), introduced by the archbp. of Canterbury, 13 May, 1886; a bill passed by the lords, 1 April, 1887; another bill read third time, 2 May, 1893; another bill passed committee in the lords, 1895; dropped. PAULIANISTS or **PAULINIANS**, followers of Paul bishop of Samosata, afterwards patriarch of Antioch, 260, who are said to have denied Christ's divinity and the trinity; he was excommunicated 269 by a council at Antioch.

PAULICIANS, a sect of Christian reformers, arose about 652. Although they were severely persecuted, they spread over Asia Minor, in the 9th century, and finally settled at Montfor, in Italy, where they were attacked by the bishop of Milan in 1028. Severe decrees against them were made in 1163, and they gradually dispersed; very probably sowing the seeds of the great reformation of the 16th century.

PAUL JONES, a Scotchman, born 1742; died at Paris, 1792. He commanded an American privateer during the American war, and made daring depredations on British commerce. He pillaged the house of lord Selkirk, near Kirkeudbright, and at Whitehaven burnt shipping in the harbour, April 1778. The Dutch permitted Paul Jones to enter their ports with two British ships of war which he had taken, and which the stadtholder peremptorily refused to deliver up, 1779.

PAUL'S CROSS, ST. (London), which stood at the north side of the cathedral, was a capital formed of wood, mounted upon steps of stone, and covered with lead, from which the most eminent divines were appointed to preach every Sunday in

the forenoon. To this place the court, the mayor, the aldermen, and principal citizens used to resort. It was in use as early as 1259, and was appropriated not only to preaching, but to political and ecclesiastical discourses, &c. The cross was demolished in 1643, by order of the parliament.

PAUL'S SCHOOL, ST., was endowed in 1512 by John Colet, dean of St. Paul's, for 153 boys "of every nation, country, and class," in memory of the number of fishes taken by Peter (*John* xxi. 11). The first schoolhouse was burnt in 1666; the second, by Wren, was taken down in 1824, and another building erected by George Smith. William Lilly was the first master, and his grammar is still used by the school. *Timbs*. The claim of the Mercers' company to be owners instead of trustees of Colet's estate was set aside by the vice chancellor, 11 Feb. 1870. The school ordered to be removed to West Kensington; site bought, June, 1878. New building designed by Mr. Waterhouse opened by lord Selborne, 23 April, 1884. PAUPERS, see *Poor*.

PAVAN, Pavane, or Pavin, was a slow dance of the 16th and 17th centuries, sometimes accompanied by singing.

PAVEMENT. The Carthaginians are said to have been the first who paved their towns with stones. The Romans, in the time of Augustus, had pavement in many of their streets; the Appian way, a paved road, was constructed 312 B.C. In England there were few paved streets before Henry VII.'s reign. London was first paved about 1533. It was paved with flagstones between 1815 and 1825. Wood and asphalt paving were tried in 1839, and have been disused since 1847; see *Wood Pavement*. Asphalt has been much used since 1869. Wood reported to be the best for London, May, 1876.

PAVIA (N. Italy), the ancient *Ticinum* or *Papia*. Its university, founded by Charlemagne, is said to be the oldest in Europe. Pavia was built by the Gauls, who were driven out by the Romans, and these in their turn were expelled by the Goths: in 568 it was taken by the Lombards, and became the capital of their kingdom. In the 12th century it was erected into a republic, but soon after was subjected to Milan and followed its fortunes. On 24 Feb. 1525, a battle was fought near here between the French and the Imperialists, when the former were defeated, and their king, Francis I., after fighting with heroic valour, and killing seven men

with his own hand, was at last obliged to surrender himself a prisoner. It was long asserted that Francis wrote to his mother, Louisa of Savoy, regent of the kingdom during his absence, saying, *Tout est perdu, madame, fors l'honneur* (All is lost, madam, except honour). The words are now said to have been, *L'honneur et la vie qui est sauvé*.

PAWNBROKING. The Roman emperors lent money upon land. The origin of borrowing money by means of pledges deposited with lenders is referred to Perugia, in Italy, about 1462. The institutions were termed *monti di pietà* (which see). Soon afterwards it is said that the bishop of Winchester established a system of lending on pledges, but without interest. The business of pawnbrokers was regulated in 1756, and licences issued in 1783. The rate of interest on pledges was fixed in 1800. In London there were, in 1851, 334 pawnbrokers; and in England, exclusively of London, 1127; the number is increasing more than in proportion to the population. In 1860 an act was passed enabling pawnbrokers to charge a half-penny for every ticket describing things pledged for a sum under 5s. The acts relating to pawnbrokers were amended in 1856, 1859, 1860. Pawnbrokers in Great Britain: 1851, 1873; in 1861, 2578; in 1871, 3540. The law was consolidated in the pawnbrokers' act passed 10 Aug. 1872.

PEARLS, mentioned *Job* xxviii. 18. M. Réaumur, in 1717, alleged that pearls are formed like other stones in animals. An ancient pearl was valued by Pliny at 80,000l. sterling. One which was brought in 1574 to Philip II., of the size of a pigeon's egg, was valued at 14,400 ducats. A pearl named the *Incomparable*, spoken of by De Boote, weighed thirty carats, equal to five pennyweights, and was about the size of a muscadine pear. The pearl mentioned by Tavernier, as being in possession of the emperor of Persia, was purchased of an Arab in 1633, and is valued at a sum equal to 110,400l. Value of pearls imported into Great Britain, 1856, 56,162l. Artificial mother of pearl is said to have been made at Berne by Mr. K. Gehmia.

"PECULIAR PEOPLE," a small sect founded in London by Wm. Bridges and Jas. Ban-yard in 1838; chief seat Essex. Two members, Thomas and Maryanne Wagstaffe, were tried and acquitted of manslaughter, 29 Jan. 1868. They had neglected getting medical assistance for their sick child, and depended on the efficacy of their elders' prayers and anointing it with oil (*James* v. 14). Many cases of

healing by these means are asserted. On 8 May, 1872, a father was convicted for neglecting to get medical advice for his child who died of small pox; and the sect agreed to modify their practice. Establishments for healing diseases by prayer exist in Germany.

At another trial, Thomas Hines was acquitted, in accordance with the opinion of the court; Baron Pigott held that the case did not amount to criminal neglect because the prisoner had not called in a doctor to his sick child, 19 Aug. 1874; similar cases since; 1875-6. John Robert Downes (for neglect respecting scarlet fever) sentenced to 3 months' imprisonment 21 Sept. 1876. Thos. Senior sentenced to 4 months' imprisonment for manslaughter of his infant child, 15 Dec. 1898; similar cases since.

After the battle of Marathon, a soldier was sent from the field to announce the victory at Athens. Exhausted with fatigue, and bleeding from his wounds, he cried out, "Rejoice, we are conquerors!" and immediately expired.

PELAGIANS, followers of Pelagius, a Briton, appeared at Rome about 400. Their doctrines were condemned by councils at Jerusalem, Carthage, and other places, 415, 530. They maintained:—

1. That Adam was by nature mortal, and whether he had sinned or not would certainly have died.
2. That the consequences of Adam's sin were confined to his own person.
3. That new-born infants are in the same condition with Adam before the fall.
4. That the law qualified men for the kingdom of heaven, and was founded upon equal promises with the gospel.
5. That the general resurrection of the dead does not follow in virtue of Christ's resurrection.

PENANG, or **PRINCE OF WALES'S ISLAND**, was given up to the East India company in 1780, by captain F. Light, who received it as a marriage portion with the daughter of the king of Keddah. After several changes it became one of the Straits Settlements (*which see*).

PENDULUMS. The isochronous property of the pendulum is said to have been applied to clocks by Galileo about 1639, and by Richard Harris about 1641. Christian Huyghens claimed this discovery, 1658. See *Clocks*. George Graham invented the compensating pendulum, 1715. Experiments were made to determine the density of the earth by pendulums by Mr. (aft. sir) G. B. Airy (aftd. astronomer royal), and others, in a mine in Cornwall, in 1826 and 1828; and at Horton colliery 1854. In 1851, M. PENNSYLVANIA (N. America), the first state in the Union in regard to mineral wealth. The settlement by the Swedes here in 1643, was taken by the Dutch in 1655, and acquired by the British in 1664. Pennsylvania was granted by Charles II. to the duke of York, 1664; and it was sold to the Penn family, 1681. Pennsylvania was afterwards purchased from the Indians by the celebrated William Penn (son of admiral Penn), who went out from England with a number of colonists; from which period the settlement gradually increased. Mr. Penn granted a charter in May, 1701, but the emigrants from the Low Countries refused it, and separated themselves from the province of Pennsylvania. They afterwards had their own assembly,

in which the governor of Pennsylvania presided. This state adopted an independent constitution in 1787, and established the present in 1790. Capital, Harrisburg; principal city, Philadelphia. Great destruction of property and life by a tornado, especially at Pittsburg and Reading, 9 Jan. 1839.

Several days' violent storms and heavy rain in the Alleghenies swelled the rivers, and caused the overflow of the lakes, May, 1885. At 5 p.m. 31 May, the South Fork reservoir, a lake about 4 miles square, burst the huge dam, and a mass of water rushed down the South Fork, four miles, by the deep circuitous Conemaugh valley, to its junction with the Conemaugh river, driving all before it. For a distance of about 12 miles round Johnstown the flood swept out towns and villages, destroying all the bridges, railways, and factories. South Fork, Johnstown, Cambria city, Morrelville, Sheridan, and other flourishing towns were completely blotted out. A great mass of floating wreckage, which was stopped by a stone railway bridge at Johnstown, took fire; above five hundred persons, who were hurled on the burning mass, perished.

The most energetic measures were taken by the government, by several states, and by the railway companies for the relief of the sufferers, and for averting imminent famine and pestilence. Robbers of the dead and living were lynched by a vigilance committee. Troops were sent to maintain order, liberal subscriptions were begun in London, Paris, and other places, June.

It is stated that the dam had previously given visible signs of its being in a very insecure condition, and had not been properly constructed. Several towns and villages submerged, June; many bridges swept away; above 150 deaths reported.

Latest statistics state the result of the Johnstown disaster to be about 6,000 deaths . . . 26 July, 1889

PERJURY. The early Romans threw the offender headlong from the Tarpeian precipice; and the Greeks set a mark of infamy upon him. In England perjury was punished with the pillory, fine, and imprisonment, 1562. By the Abolition of Oaths bill, persons making a false declaration are deemed guilty of a misdemeanor; Act 5 & 6 Will. IV. cc. 60 and 61, 9 Sept. 1835; a perjury bill was read a second time, 2 April, 1895. Perhaps the greatest perjurer in modern times was Titus Oates; see *Oates*. An insurrection here against the pope was put down by the Swiss with great cruelty, 20 June, 1859. In 1798 he established an orphan school where he began with the mutual instruction, or monitorial system, since adopted by Lancaster; but his school was soon after turned into a hospital for the Austrian army. In 1802, in conjunction with Fellenberg, he established his school at Hofwyl, which at first was successful, but eventually declined through mismanagement.

PETROLEUM, rock oil or mineral oil similar to paraffin, has been found in many parts of the world, especially at Rangoon. In 1859 and since, a number of oil-springs were discovered in the bituminous coal regions of N. W. Pennsylvania, now termed "Petrolia," and others have been discovered in Ohio and other states, and also in Canada. Numerous artesian wells were sunk, manufactories erected, and an almost unlimited supply obtained; between 1859-77, 2,802,500,000 gallons; in 1863, 8,907,365 gallons. In consequence of the importation of this oil into this country, and many accidents having taken place through its inflammability at low temperature, acts for "the safe keeping of petroleum" were passed, 29 July, 1862; July, 1868, Aug. 1871, and 1879. PHILISTINES, a people of Palestine, conquered Israel, 1156 B.C., and ruled it forty years. They were defeated by Samuel, 1120; and by Saul and Jonathan, 1087. They again invaded Israel about 1063, when David slew their champion, Goliath. After David became king he thoroughly subdued them, 1040. In common with Syria, their country was subjugated by the Romans, under Pompey, about 63.—In Germany, about 1830, Heine and the liberal party applied the term "Philistines" to the opponents of progress, or conservative party.

In England the term has been applied to the opponents of "culture" and refinement, chiefly among the upper middle classes by Mr. Matthew Arnold and others 1867 et seq.

PHILOSOPHER'S STONE, see *Alochemy*.

PHILOSOPHICAL LAMP, constructed by Johann Wolfgang Döbereiner, who applied in it the property possessed by spongy platinum of causing the combination of oxygen and hydrogen, discovered by him in 1823.

PHILOSOPHY (love of wisdom), the knowledge of the reason of things (distinguished from history, the knowledge of facts, and from mathematics, the knowledge of the quantity of things)—the hypothesis or system upon which natural effects are explained. *Locke*. Pythagoras first adopted the name of philosopher (such men having been previously called sages) about 528 B.C. Philosophers were expelled from Rome, and their schools suppressed, by Domitian, A.D. 83. Philosophy is now divided into:—1. Moral or Ethical; 2. Intellectual; 3. Natural or Physical.

MORAL AND INTELLECTUAL PHILOSOPHY.

PHIPPS' EXPEDITION. The hon. captain Phipps (afterwards lord Mulgrave) sailed from England in command of the *Sea-Horse* and *Careace* ships, to make discoveries, as near as possible to the North Pole. In August 1773, he was for nine days environed with barriers of ice, in the Frozen Ocean, north of Spitzbergen, 80° 48' N. lat. A brisk wind in two or three days accomplished their deliverance. They returned to England without having made any discoveries, 20 Sept. 1773. Nelson was coxswain to the second in command.

PHLOGISTON, a term employed by Stahl to designate the hypothetical matter or principle of fire; "the inflammable principle" of bishop Watson, near the close of the 17th century. The chemical theory based upon it was refuted by Lavoisier, 1790, who substituted for it the theory of oxygenation.

PHOCIS, a state in Northern Greece. The Phocians seized Delphi 357 B.C., and commenced the second Sacred War. They were opposed by Thebes and other states, and were utterly subdued by Philip II. of Macedon in 346. By the excavations of the British school of archaeology at Abe the remains of two ancient temples of Apollo, with relics of bronzes, inscriptions, &c., and at Hyampolis, a shrine of Artemis (Diana), &c., were discovered, reported, 30 Aug. 1894.

PHŒNICIA, on the sea coast of Syria. The natives were the most eminent navigators and traders of antiquity, their cities or allied states being Tyre, Sidon, Berytus, Tripoli, Byblos, and Ptolemais, or Acre. From the 10th to the 13th centuries before Christ, they established colonies on the shores or isles of the Mediterranean—Carthage, Hippo, Utica, Gades, and Panormus, and they are said to have visited the British Isles. Phœnicia was conquered by Cyrus, 537 B.C.; by Alexander, 332; by the Romans, 47; and after partaking of the fortunes of Palestine, was added to the Ottoman empire, A.D. 1516. See *Sidon* and *Tyre*.

PHŒNIX CLUBS, of a treasonable character, were formed in Ireland in 1858. They met at night to drill. Several persons were arrested and tried in March, 1859, at Tralee; but the jury could not agree on their verdict. Daniel Sullivan was condemned to penal servitude for ten years, April, 1859. Eventually some of the prisoners pleaded guilty, and were discharged on being bound over to keep the peace.

PHONOGRAPH, a machine proposed to be attached to pianofortes and other keyed instruments, by which any music that is played may be written down on blank paper, since it rules and prints the notes simultaneously. It was patented by Mr. Fenby, 13 June, 1863. The motive-power is electro-magnetism. Machines with a similar object were projected by Mr. Creed in 1847; Mr. J. F. Unger in 1774; and by Mr. Carreyre in 1827. See *Telephonography*.

When these are placed upon the diaphragm of a telephone connected with revolving apparatus, the sounds may be reproduced with a weirdlike effect. Improved by Mr. Sheldford Bidwell, 1879. PHONOGRAPHY (from the Greek *phōnē*, sound), suggested by Franklin, 1768. The Phonetic society, whose object was to render our mode of writing and printing more consonant to sound, was established, 1 March, 1843; sir W. C. Trevelyan, president, and Mr. Isaac Pitman, secretary, the latter being the inventor of the system which was made known in 1837; knighted, May, 1894; died, aged 84, 22 Jan. 1897. Among other works published by the promoters of the system, was the "Phonetic News," in 1849. Phonography has been adopted for European and oriental languages, 1887, *et seq.* "Phonographic Quarterly Review," published, Nov. 1894; see *Visible Speech*.

PHOSPHOR-BRONZE, an alloy of copper, tin, and phosphorus, invented by Messrs. Montefiore-Levi and Künzel, of Belgium, in 1867. It is very hard, ductile, and elastic, with a colour resembling gold.

PHOSPHORESCENCE. The property possessed by some bodies of retaining luminosity after exposure to light observed by the ancients; especially noticed by Vincenzo Cascardiolo (1602), Boyle, Canton, Wilson, and others; and specially studied by Edmond Becquerel, and Balmain. See *Luminous Paint*, *Air* (footnote).

PHOSPHORUS was discovered in 1667, by Brandt, of Hamburg, who procured it from urine. The discovery was prosecuted by John Kuncel, a Saxon chemist, about 1670, and by the hon. R. Boyle about the same time. *Nouv. Dict.* Phosphoric acid is first mentioned in 1743, but is said to have been known earlier. Gahn pointed out its existence in bones in 1769, and Scheele devised

a process for extracting it. Canton's phosphorus is so called from its discoverer, 1768. Phosphorated hydrogen was discovered by Gengembre in 1812. The consumption of phosphorus has immensely increased since the manufacture of lucifer matches. In 1845, Schrötter, of Vienna, discovered allotropic or amorphous phosphorus, which ignites more slowly and is less unwholesome in working than ordinary phosphorus.

Mr. S. A. Rosenthal and dr. S. J. von Komocki succeed in preparing matches without yellow phosphorus, reported Sept. 1898

PHOTOGRAPHY. The action of light on chloride of silver was known as early as the 16th century. The phenomenon was studied by Scheele (1777), Senebier (1790), Ritter and Wollaston (1801). From the results of these investigations, experiments were made by Thos. Wedgwood and Humphry Davy, in the Royal Institution, London, which were published in its Journal, 1802. Wedgwood may be regarded as the first *photographer*. His paper was entitled "an account of a method of copying paintings upon glass, and of making profiles by the agency of light upon nitrate of silver."

Further discoveries were made by Nièpee in 1814, and sir J. Herschel in 1819.

Louis J. M.-Daguerre commenced his experiments in 1824; and in 1826 joined Joseph Nicéphore Nièpee, and worked with him till the death of the latter in 1833. The production of *Daguerreotype* plates was announced in Jan. 1839; and the French chamber of deputies granted a pension to Daguerre and to Nièpee's son Isidore.

In 1839 Mr. Henry Fox Talbot first published his mode of multiplying photographic impressions by producing a *negative* photograph (i. e., with the light and shades reversed) from which any number of positive copies may be obtained. His patent for producing the *Talbotype* or *Calotype* (on paper) is dated Feb. 1841.

Since then, Mr. Warren de la Rue, of London, has produced excellent photographs of the moon, and other heavenly bodies, and on 18 July, 1860, photographed the solar eclipse.

By means of the gelatine dry plate, the results of the astronomical work of years is now obtained in hours. Delicate details are obtained not only of comets, nebulae and faint stars, but also of stars invisible by the most powerful telescopes. Since 1876, Dr. W. Huggins and Mr. Andrew A. Common in England, and Mr. Draper in America, have been eminently successful in celestial photography. About 400 stars have been depicted in the space of two square inches.

PHOTOHELIOGRAPH, an apparatus for registering the position of the sun's spots by means of clockwork and photography; erected at the suggestion of sir John Herschel at Kew observatory about 1857. It was used by Mr. Warren de la Rue to photograph the disc of the sun during the eclipse of 18 July, 1860.

PHOTOALYNOGRAPHY, the art of producing engravings by the action of light and electricity. The earliest specimens were produced by Nicéphore Niépce, and presented by him in 1827 to the great botanist, Robert Brown. Great advances have since been made in this art by MM. Niépce de St. Victor (who published a treatise on it in 1856), Vitry, W. R. Grove, H. Fox Talbot, &c. In 1852, Paul Fretsch patented a process which he called "Photogalvanography."

PHOTOGLYPHIC ENGRAVING (a process by which the light actually etches a picture on a plate that may be and has been printed from) was patented by Mr. Fox Talbot in 1838, and is described and exemplified in the *Photographic News*, 9 and 16 Sept. 1859, a specimen being given in the latter number.

PHOTOZINOGRAPHY (a process by which photographs are transferred to zinc plates which may be printed from) was devised by sir Henry James, chief of the Ordnance Survey, and made known in 1860. By it maps, charts, and engravings may be printed at a small cost.

PHOTO-SCULPTURE: M. Villème's employment of photographs in the formation of sculpture was announced in 1863.

MESRS. Goupil's process of *Photogravure*, rivalling mezzo-tint, reported highly successful; fine pictures reproduced, Feb. 1884.

PHOTOMETER (light measurer); one was constructed by Dr. W. Ritchie in 1825. Many improvements have been made recently in photometry. See under *Stars*.

Mr. A. Vernon Harcourt's new holophotometer highly approved June, 1888.

Stellar Photometry, the measurement of the light of the stars, has been much studied by astronomers, especially by sir John Herschel, prof. Argelander, prof. C. Pritchard and others. Mr. W. J. Dibdin, in his "Guide to the measurement of light," published in 1889, describes his application of terrestrial photometry to stellar light.

PHOTOPHONE. In this apparatus, constructed by professor Graham Bell and Mr. Sumner Tainter of Washington, in 1880, a thin plane mirror is thrown into vibration by the voice; a beam of light is reflected from this mirror and received at a distance by a cell of the metal selenium; when, by arrangement, this is connected with a telephone, the sounds are reproduced.

PHOTOSPHERE, see *Sun*, note.

PHOTOTACHOMETER, an instrument for measuring the velocity of light, invented by Professor Simon Newcomb of Washington, 1879-80.

PHOTOTHERAPY, the treatment of disease by light, successfully applied by prof. Finzen, of

Copenhagen, in smallpox, 1893, and lupus, see *Tuberculosis*, 1901.

PHRENOLOGY, see *Craniology*.

PHRYGIA (now Karamania), a province in Asia Minor, became part of the Persian empire in 537 B.C., and partook of its changes. After their defeat of Antiochus the Great, king of Syria, 190 B.C., the Romans added Phrygia to the kingdom of Pergamus, which was bequeathed to them by Attalus III., the last king, 133 B.C.

PHYLLOXERA, see *Vine*.

PHYSIC appears to have been first practised by the Egyptian priests. Pythagoras endeavoured to explain the philosophy of disease and the action of medicine, about 529 B.C. Hippocrates, the father of medicine, flourished about 422 B.C., and Galen, born A.D. 131, was the oracle of medical science. About 980 Avicenna, an Arab, wrote a system of medicine. Dr. R. Quain's *Dictionary of Medicine*, published 1882. 3rd edition issued 1902. "The System of Medicine," consisting of contributions by eminent physicians and surgeons, edited by sir J. Russell Reynolds, in 5 vols., published 1866-75. A "System of medicine," by many writers, edited by dr. Clifford Allbutt, vol. I., June 1896; vol. III., 1898. See *Medical*.

The dogmatic age of medicine lasted till the Reformation, when it was attacked by Paracelsus (1493-1541), and Vesalius (1514-64). Since 1800 medical practice has been completely transformed by physiological and chemical research.

The discovery of the circulation of the blood, by Dr. Harvey, furnished an entirely new system of physiological and pathological speculation, 1628. See *Medical and Societies*.

PHYSICIAN TO THE KING.—John, the king's chaplain and physician (afterwards bishop of Bath and Wells), mentioned 1090.

The earliest mandate or warrant for the attendance of a physician at court is dated 1454, and 33 Henry VI., a reign fertile in the patronage which was afforded to practitioners in medicine; but no appointment existed which can justly be called physician to the royal person. By this warrant the king, with the consent of his privy council, deputed to three physicians and two surgeons the regulation of his diet, and the administration of such medicines and remedies as might be sufficient for his cure, without any allusion to the previous existence or permanency of the office which they were authorised for a time to fill, or to a remuneration for their services.—*Life of Linacre*.

Miss Garrett (afterwards Mrs. Anderson) licensed at Apothecaries' hall, London, to practise medicine, 28 Sept. 1865.

At a meeting of the Royal Medical and Chirurgical Society, 3 May, 1866, it was resolved that the "Royal Society of Medicine" (including the various sections) be founded; the resolution was affirmed, 22 Feb. 1870; but in 1871 the project dropped.

School of Medicine for Women in London (council: Professors Burdon-Sauderson and Huxley, Mrs. Garrett-Anderson, M.D., Mrs. Blackwell, M.D., and others); opened, Oct. 1874.

Registration of medical women, permitted by Medical act, 39 & 40 Vict. c. 41, 11 Aug. 1876.

The queen lays the foundation of the Medical Examination hall on the Victoria embankment, 24 March, 1886.

The curriculum for medical students changed from 4 to 5 years; begins Oct. 1893.

London school of tropical medicine promoted by the liberality of Mr. Chamberlain, col. sec., Dec. 1898; established in the London Docks; good research work, reported, 3 Nov. 1902 *et seq.*

through his interest with cardinal Wolsey, obtained letters patent, constituting a corporate body of regular physicians in London, with peculiar privileges, 23 Sept. 1518. Linaere was elected the first president of the college. Dr. W. Harvey was a great benefactor to this institution, 1653. He built a library and public hall, which he granted for ever to the college, with his books and instruments. The college was afterwards held in a building in Warwick-lane, erected by sir C. Wren, where it continued till 1825, when the present elegant stone edifice in Trafalgar-square was erected from designs by sir R. Smirke. The college is composed of fellows and members, formerly called licentiates and extra-licentiates. The queen's bench division decided that the college was entitled by the medical act of 1836 to grant diplomas both of medicine and surgery, 8 March, 1893. The prince of Wales elected a fellow of the college, July, 1897.—The College of Physicians, Dublin, was founded by charter of Charles II. 1667, and was re-incorporated in 1692. PHYSICS, see under *Philosophy, Natural*.

PHYSIOGNOMY, a science which affirms that the dispositions of mankind may be discovered from the features of the face. The origin of the term is referred to Aristotle; and Cicero was attached to the science. It became a fashionable study from the beginning of the 16th century; and in the 18th century, the essays of Le Cat and Pernetty led to the modern system.

J. K. Lavater, who endeavoured to raise physiognomy to the rank of a science, published his celebrated work "Physiognomische Fragmente," 1775-78, of which an English translation by Holcroft was published in 1793. The subject was considered by C. R. Darwin in his work "Expression of the emotions in Man and Animals," 1873, and by Mantegazza in his "Physiognomy and Expression," 1890.

PHYSIOLOGY is that part of physics which treats of the inner constitution of animals and plants, and the several functions and operations of all their organs and tissues. The works of Müller, Milne-Edwards, Huxley, Carpenter, Virchow, Brown-Séquard, Helmholtz, Ludwig, Du Bois-Reymond, Salomon Stricker Rutherford and sir John Bucknill, are much celebrated, and Todd's "Cyclopaedia of Physiology" (1836-59) is a library in itself. Physiological Society, in London, founded by Dr. Burdon-Sanderson (bart. 1899) and others, early in 1876; see *Anatomy, Biology, Morphology, Royal Institution*. International congresses of physiology: Basle, 1888; Liège, Aug. 1892; Berne, 9 Sept. 1895; Cambridge, 23-26 Aug. 1898; Tuin, 17 Sept. 1901.

By means of the Röntgen rays the action of the heart and viscera in a living human body were made visible at a meeting in Munich . 6 Aug. 1896

PHYSIC GARDENS. The first cultivated in England was by John Gerard, surgeon of London, in 1567; that at Oxford was endowed by the earl of Danby, in 1652; that at Cambridge was commenced about the middle of the last century; and that at Chelsea, originated by sir Hans Sloane, was given to the Apothecaries' company in 1721; this last was very much admired by Linnæus. The trustees of the London parochial charities agree to dedicate 800*l.* per ann. to its maintenance, March, 1899. New laboratories and plant-houses opened by lord Cadogan, 25 July, 1902.

PHYSICAL EDUCATION, British College of, started in 1893; a meeting of the council was held at the earl of Meath's house, sir Benjamin Richardson in the chair, 20 Oct. 1894. Annual meetings. See *Scotland*. Royal Commission on PHYSICAL DETERIORATION appointed, 1903.

PHYSICAL SOCIETY, established 14 Feb. 1874; Dr. J. H. Gladstone, first president. NATIONAL PHYSICAL RECREATION SOCIETY founded, 1885-6; in full activity, Mr. Herbert J. Gladstone, president, Nov. 1896. NATIONAL PHYSICAL LABORATORY, committee appointed respecting its establishment, lord Rayleigh chairman, 3 Aug. 1897; favourable report issued, 4 Oct. 1898; government grants 14,000*l.* for erection and 4,000*l.* per ann. for maintenance, Mr. R. T. Glazebrook appointed director, Aug. 1899. Bushy-house, Teddington, granted by the queen to the Royal society for the laboratory, Dec. 1900; opened by the prince and princess of Wales, 19 March, 1902.

PHYSICIANS, ROYAL COLLEGE OF, of London (of England since 1858), was projected by Dr. Linaere, physician to Henry VIII., who,

PIANETTE, a small upright piano introduced by Bord of Paris in 1857.

PIANOFORTE,* The invention is attributed to Cristofalli (or Cristofori), an Italian, J. C. Schröter, a German, and Marius, a Frenchman, early in the 18th century. The strings are struck by small hammers, and not by quills, as in harpsichords. Schröter is said to have presented a model of his invention to the court of Saxony, in 1717; and G. Silberman manufactured pianofortes with considerable success in 1772. Pianofortes were made in London by M. Zumpie, a German, 1766, and have been since greatly improved by Clementi, Broadwood, Collard, Kirkman, Erard, Pleyel, and others.

Upright pianos, first made in this country, were suggested by Isaac Hawkins in 1800, and Thomas Lond, in 1802. Wm. Southwell patented "cabinet pianos" in 1807; superseded, from about 1840, by the cottage, piccolo, and other pianos.

A keyed instrument at Modena was named "piano e forte," 1598.

A "stone pianoforte," formed of a series of flints and other stones of various sizes, collected in France and arranged by M. Baudre, was played on by him at the Royal Institution, on 16 March, 1866.

The new *transposing* piano, invented by Mr. Henry Schallehn, was exhibited at the Savoy hotel, Westminster, 10 June, 1890.

The Janko pianoforte, with a new arrangement of keyboard, exhibited in the Portman rooms, London, W., 24 Nov. et seq. 1891, said to possess many advantages.

See Grove's "Dictionary of Music," article "Pianoforte." Mr. A. J. Hipkins' "History of the Pianoforte," published 1896.

A "double piano," a new harpsichord and harp, played on at Messrs. Pleyel's rooms, London, 12 April, 1897.

Among mechanical contrivances for pianoforte playing or "dumb pianists" are the *Pianola*, and the *Metzler Piano-player*, 1903.

PICARDY (N. France), was conquered by the English in 1346, and by the duke of Burgundy in 1417, to whom it was ceded by the treaty of Arras, 21 Sept. 1435; and annexed to France by Louis XI., 1463.

PICCADILLY, a fine street, W. London; the name, of uncertain origin, was Pickadilla and Pigudello, about 1660, when a house of entertainment existed near the Haymarket, termed Piccadilly hall, after which buildings were gradually extended westwards.

PICCOLO PIANO, a small pianoforte introduced by Robert Wornum in 1829.

PICENTINES, a Sabine tribe, subdued by the Romans, and their capital, Aesulum, taken, 268 B.C. They began the Social war in 90, and were conquered in 89 B.C.

PICHEGRU'S CONSPIRACY, see *Georges*.

* The nucleus of the instrument was a little box over which was stretched strings: such was the citole, the dulcimer, and the psaltery. The clavitherium had keys; the clavichord (about 1500) had dampers; successive improvements were the virginals (on which queen Elizabeth played), the spinet (about 1700), and the harpsichord (with two rows of keys), said to have been used in the 15th century, for which Bach and Handel composed in the 17th century. A collection of harpsichords (one dated 1555) is in the South Kensington museum. A double-pianoforte (with two keyboards reversed), giving remarkable effects (patented by M. M. Mengeot), played on at Covent-garden theatre, 21 Oct. 1878.

PICKETING, see *Trials*, Aug. 1867 and 1897.

PIE-POUDRE COURT, the Court of Dusty Foot, whose jurisdiction was established for cases arising at fairs and markets, to do justice to the buyer and seller immediately upon the spot. By stat. 17 Edw. IV., it had cognizance of all disputes in the precincts of the market to which it might belong, 1477.

PIER AND HARBOUR ACT, to facilitate the formation, management, and maintenance of piers and harbours in Great Britain and Ireland, was passed in 1862.

PIETISTS, a Lutheran sect, instituted in Leipsic, by Philip James Spener, a professor of theology, about 1689, with the view of reforming the popular religion. He established "colleges of pietists," with preachers resembling those of the society of friends and the methodists in Britain, about 1760. A body resembling the Pietists, named Chasidim, arose among the Jews in the Ukraine, and spread through Poland and European Turkey.

PIETRO BARSANTI CLUB, see *Italy*, 1878.

PIEZOMETER (Greek *piezo*, I compress), an apparatus for measuring the compressibility of liquids, invented by Ersted (died 1851); improved by Despretz & Saigey.

PIGEONS were employed as carriers by the ancients. Hirtius and Brutus corresponded by means of pigeons at the siege of Modena. The pigeons of Aleppo served as couriers at Alexandretta and Bagdad. Thirty-two pigeons liberated from London at 7 o'clock in the morning, 22 Nov. 1819; at noon one of them arrived at Antwerp; a quarter of an hour afterwards a second arrived; the remainder on the following day. *Phillips*. At a pigeon race, 25 July, 1872, from Spalding to London, the speed allowed was 90 seconds a mile; see *Post Office*, 1870.

In a pigeon race from Dover to Plymouth, some pigeons attained the velocity of 1,233 yards, 1,218 yards and 1,008 yards per minute 22 July, 1886. About 300 pigeon-flying societies exist in France: the organization of carrier-pigeon stations ordered by the minister for war, Jan. 1888. About 350 similar societies exist in Germany, stated Jan. 1888.

National Peristeric Society (originating from the Columbarian Society, founded in 1750), has annual shows. A bill for prohibiting shooting pigeons rising from a trap attended with cruelties, passed by the commons with large majorities, in 1883 and 1884 (195-40), was rejected by the lords in 1883 (30-17), and on 9 May, 1884 (78-48).

PILCHARD FISHERY. Peculiar to Land's End, Cornwall, reverts to W. Ireland, after suspension of two centuries (stated July, 1883).

PILGRIMAGE OF GRACE, a name assumed by religious insurgents in the north of England, who opposed the dissolution of the monasteries. The movement, which commenced in Lincolnshire in Sept. 1536, was suppressed in Oct.; but soon after revived in Yorkshire; and an expedition, bearing the foregoing name, having banners on which were depicted the five wounds of Christ, was headed by Aske, and other gentlemen, and joined by priests and 40,000 men of York, Durham, Lancaster, and other counties. They took Hull and York, with smaller towns. The duke of Norfolk marched against them, and by making terms dispersed them. Early in 1537 they again took arms but were promptly suppressed, and the leaders, several abbots, and many others, were executed.

PILGRIMAGES began with the pilgrimage of the empress Helena to Jerusalem, 326. They became very frequent at the close of the 10th century. Robert II. of France made several pilgrimages; among others one to Rome about the year 1016, perhaps in 1020, when he refused the imperial dignity and the kingdom of Italy. The pilgrimage to Canterbury is described by Chaucer in his *Canterbury Tales* about 1383. The pilgrimage of Mahometans to Mecca, the birth-place of the prophet, is commanded in the Koran. This pilgrimage was very great from India, where it has been encouraged by the princes, but discouraged by the British as idolatrous. The great mortality due to want and disease compelled the government to intervene with strict sanitary regulations, and it is now stated that the number of deaths has diminished, and the number of pilgrims increased. The contract with Messrs. Cook and sons in 1886 to convey pilgrims from Bombay to Mecca is said to be a failure financially, reported, Jan. 1895. See *Cholera*. Pilgrimages to shrines of the Virgin Mary in France revived in 1873, and since, in consequence of miracles alleged to have taken place at La Salette in 1846 and at Lourdes, 11 Feb. 1858; those of La Salette discredited by Pope Leo X., 1879. See *Sacred Heart*.

PILLAR SAINTS, see *Monachism*.

PILLORY, a scaffold for persons to stand on, to render them publicly infamous. This punishment was awarded against persons convicted of forgery, perjury, libelling, &c. In some cases the head was put through a hole, the hands through two others, the nose slit, the face branded with one or more letters, and one or both ears were cut off. There is a statute of the pillory, 41 Hen. III. 1256. Many persons died in the pillory by being struck with stones by the mob, and pelted with rotten eggs and putrid offal. It was abolished as a punishment except for perjury, 1815, and totally abolished in 1837. The last who suffered at the Old Bailey was Peter Jas. Bossy, for perjury, 22 June, 1830.

PILNITZ (near Dresden, Saxony). The convention of Pilmitz took place between the emperor Leopold and the king of Prussia, 20 July, 1791. On 27 Aug. the treaty of Pilmitz, or, as some style it, the Partition treaty, was finally agreed upon at Pavia by the courts in concert. It was to the effect "that the emperor should retake all that Louis XIV. had conquered in the Austrian Netherlands, and uniting these provinces to the Netherlands, give them to his serene highness the elector palatine, to be added to the palatinate; Bavaria to be added to the Austrian possessions," &c.

PILOT. The act relating to pilots, 16 & 17 Vict. c. 129 (1853), with other acts, is embodied in the Merchant Shipping act; 15th annual conference of the United Kingdom Pilots' association at Carnarvon, 12 July, 1898; see *Trinity-House*.

On 20 Dec. 1881, Georgina Moore, 7½ years old, living with her parents in Winchester-street, disappeared; her body was found by bargemen in the Medway, near Yalding, 30 Jan. 1882. Esther Pay, with whom she was last seen, accused of her murder, was acquitted, 29 April, 1882.

Pimlico poisoning case. See *Trials*, April, 1886.

PINCHBECK, an alloy of 25 per cent. of zinc and 75 copper, used for watch-cases, &c.; named after either Christopher or Thomas Pinchbeck, London, mechanics: the former is said to have died in 1732, the latter in 1783.

PINDAREES, bands of freebooters, or mercenary soldiers in the central provinces of India, headquarters Malwa, who, after the fall of the Mogul empire, ravaged the native territories and the British settlements, 1804, *et seq.*, till finally crushed by two armies commanded by the marquis of Hastings in 1817.

PINE-TREES. The stone pine (*Pinus Pinea*), brought to these countries before 1548. The cluster pine (*Pinus Finaster*), brought from the south of Europe before 1506. The Weymouth pine (*Pinus Strobus*), from North America, 1705. Frankincense pine (*Pinus Taeda*), from North America, before 1713. There are other varieties.

PINKIE (near Edinburgh), where the English under the Earl of Hertford, protector, totally defeated the Scots under the regent Arran, 10 Sept. 1547. There fell not 200 of the English, but above 10,000 of the Scots. Above 1500 were taken prisoners.

PINS have been found in British barrows (*Foss-broke*); and are mentioned in a statute of 1483. Brass pins were brought from France in 1540, and first used in England, it is said, by Catherine Howard, queen of Henry VIII. Pins were made in England in 1543. *Stow*. They were first manufactured by machinery in England in 1824, under a patent of Lemuel Wellman Wright, of the United States.

PIOMBINO, a principality, Italy, previously ruled by the Appiani family, was acquired by the Spaniards, 1589. It was ceded to France, 1801, and given by Napoleon to his sister Elise, wife of prince Baciocchi, who held it from 1805 to 1815, when it was restored to the Buoncampagni family, subject to Tuscany. It became part of the kingdom of Italy, 1860.

PIPE ROLL SOCIETY, founded in 1884 for printing all extant public records prior to the year A.D. 1200.

PIRACY, Greek *pirati*, was severely suppressed by the Romans. Pompey destroyed the Cilician pirates, 67 B.C.; see *Buccaners*. Many acts of parliament have been passed for the suppression of piracy; the latest in 1837.

PIRÆUS, the port of Athens, was united to the city by two long walls, one erected by Themistocles, and the other by Pericles, 456 B.C., which were destroyed by Lysander, 404 B.C. It was fortified by Conon, 393 B.C. The Piræus was able to contain 400 Greek vessels. It was occupied by the French during the Russian war in 1854.

PIRMASENS (Bavaria). Here Moreau and the French were defeated by the duke of Brunswick and the Prussians, 14 Sept. 1793.

PISA, an ancient city in Tuscany, was founded about six centuries before Christ, and was favoured by the early Roman emperors as a flourishing republic. The citizens took an active part in the Italian wars of the middle ages, but became subject to Florence, after a long siege, 1405-6. In 1494 Pisa became independent under the protection of Charles VIII. of France, but was retaken by the Florentines in 1509. The university was founded

in 1343, and revived by the Medici in 1472 and 1542. The rival popes, Benedict XIII. and Gregory XII., were deposed at a council held at Pisa in 1409, and Alexander V. elected in their room. The Campanile or leaning tower was built about 1154,* and the Campo Santo about the same time. Fire panic in the cathedral, 9 persons crushed to death, 21 injured, 29 May, 1897.

PISCICULTURE, see *Fisheries*.

PISTOLS, the smallest fire-arms, said to have been invented at Pistoja in Italy; were first used by the cavalry of England about 1544. Of late years they have been made with a revolving cylindrical breech, in which are formed several chambers for receiving cartridges, and bringing them in succession into a line with the barrel ready for firing. The earliest model of this kind of arm is to be found in the museum of the United Service Institution, and is supposed to date from the reign of Charles I. An eight-chambered matchlock revolver of the 16th century is placed in the Royal Artillery Museum, Woolwich. The manufacture of pistols by machinery was first introduced into England from the United States, America, in the year 1853, by col. Colt, who invented the Colt revolving pistol, 1851. This system of manufacture induced the British government to establish the Enfield armoury, in 1855; see *Fire-Arms*.

PIT BROW WOMEN, see *Coal*, 23 June, 1887.

PITCAIRN'S ISLAND, in the Pacific Ocean, said to have been discovered by Pitcairn in 1768, seen by Cook in 1773, and since colonised by ten mutineers from the ship *Bounty*, captain Bligh, in 1789; see *Bounty*.

The mutineers remained unknown to England until discovered accidentally in 1814. A ship nearing the island was hailed by a swarthy youth in the English language, when it appeared that the mutineers, soon after settling there, had married some black women from a neighbouring island, and had become a well-conducted community under the care of Adams, the principal mutineer. He died in 1829, when George Hunt Nobbs, an Englishman, who arrived a few years before, became chief. In Aug. 1852 admiral Moresby spent a few days on the island. By his means Nobbs was sent to England and obtained ordination. His death (aged 86) announced Jan. 1885. As their numbers increased, the island proved incapable of their support. The English government removed them, with all their property, in the ship *Morayshire*, on 3 May, 1856, and landed them, after a boisterous passage, on Norfolk Island, prepared previously for their reception, 8 June. The government stocked Norfolk Island with 2000 sheep, 450 head of cattle, and twenty horses, and gave them stores to last twelve months; their numbers were 96 males and 102 females.

The island visited by H.M.S. *Peterel* was found to be prosperous, Dec. 1875. Population, 15 Aug. 1879, 93; in 1890, 126.

Harry Christian sentenced to death for murdering a woman and her children (June, 1897), reported, 8 Nov. 1898; the *Sokoto* s.s. visited the island, 30 Aug. 1902.

PITCH, see under *Music*.

* The Campanile was erected to contain bells, and stands in a square close to the cathedral. It is built entirely of white marble, and is a cylinder of eight stories, each adorned with a round of columns, rising one above another. It inclines so far on one side from the perpendicular, that in dropping a plummet from the top, which is 188 feet in height, it falls sixteen feet from the base. Some thought this was done purposely by the architect; others attributed it to an accidental subsidence of the foundation. From this tower Galileo made his observation on gravitation (about 1635).

PITT ADMINISTRATIONS.* The first administration was formed on the dismissal of the Portland ministry 18 Dec. 1783, and terminated by resignation in 1801. PITTSBURG LANDING (near Corinth, Tennessee). On Sunday, 6 April, 1862, a great battle was fought between the American federals under Grant and Prentiss, and the confederates under Albert Sydney Johnston and Beauregard. The latter began the attack and were victorious, but lost their able general Johnston. The federals were reinforced the next day and renewed the attack; the confederates maintained their ground; but soon after retired in good order to Corinth. This engagement is also named the battle of Shiloh.

PLACENTIA (now Piacenza), N. Italy, founded by the Romans about 220 B.C. It suffered in all the convulsions attending the fall of the empire and the wars of the middle ages. In 1254 it fell under the rule of the family of the Scotti. In 1302 Alberto Scotte was overcome, and Placentia was united to Milan, then ruled by the Visconti. On their extinction in 1447, Placentia revolted, but was taken by Sforza duke of Milan, and treated very cruelly. In 1513 it was given to pope Leo X. In 1545 Paul III. gave it with Parma as a duchy to his son Peter Louis Farnese. The French and Spaniards were defeated by the Austrians and Sardinians near Placentia, 16 June, 1746; see *Parma*.

PLANE. A true plane, most successfully obtained by sir Joseph Whitworth. Fine specimens exhibited at the Royal Institution in 1873.

PLANETARIUM, see *Orrery*.

PLANETS. Jupiter was known as a planet to the Chinese and the Chaldeans, and inserted in a chart of the heavens, made about 600 B.C., and in which 1460 stars are accurately described; this chart is said to be in the national library at Paris. The four satellites of Jupiter discovered by Galileo, 7 Jan. 1601, see *Mars, Saturn*. We now know eight primary planets, termed major; *Mercury, Venus, the Earth, Mars, Jupiter, Saturn, Uranus, Neptune*; and secondary or minor, situated between the orbits of Mars and Jupiter. The numerical order differs in the lists of English, German, and French astronomers. In the French and German lists, *Aglaia* to *Pandora* are numbered 47 to 55; *Meletè* is 56.

Uranus, formerly called *Georgium Sidus* and *Herschel*; discovered by W. Herschel (see *Georgium Sidus*) 13 March, 1781
Neptune, discovered by Galle (in consequence of the calculations of Le Verrier) (see *Neptune*), 23 Sept. 1846. It had been theoretically discovered by professor J. Couch Adams of Cambridge 1845
Vulcan (between Mercury and the Sun), said to be discovered by M. Lescaubault, a physician (not seen since), 26 March, 1859, and its discovery is now generally doubted; said to have been seen by Watson during the solar eclipse (doubted by Peters) 29, 30 July, 1878

† *Atropos* said to have been discovered by R. Luther, 14 April, 1869. Not observed since.

During 1902 43 small planets were discovered. The minor planets are very small, being in general only a few miles in diameter. They are divided into three groups (Mars group, Chief group, and Jupiter group) according to their mean velocities.

The rapid discovery of planetoids by photography, especially by Wolf and Charlois, in recent years, has caused much confusion in records, 1892-1903. Eight small planets during May and June discovered by Wolf and Dugan, reported 1 July, 1903, provisionally indicated by 1903 [Numbers unnamed are uncertain, not having been verified.]

PLANING-MACHINE. One for wood was constructed by Bramah, about 1802; and one for iron by Joseph Clement in 1825.

PLANTAGENET,* HOUSE OF, to which

belonged fourteen English kings, from Henry II., 1154, to Richard III., 1485; see *England, Kings*.

PLANTATIONS, see *Trade*.

PLASSEY, in Bengal, India, the site of a battle fought between the British under Clive and the Hindoos under Surajah Dowlah, 23 June, 1757; 68,000 men were vanquished by 1000 British and about 2000 sepoy. The victory laid the foundation of our empire in India.

PLASTER OF PARIS. Gypsum, sulphate of lime, used for moulds, statuary, &c., first found at Montmartre, near Paris, whence its name. The method of taking likenesses by its use was first discovered by Andrea del Verrochio, about 1466.

PLATA, LA, see *Argentine Republic*.

PLATÆA (Bœotia, N. Greece), site of the battle between Mardonius, commander of the army of Xerxes of Persia, and Pausanias, commander of the Lacedæmonians and Athenians, 22 Sept. 479 B.C.; the same day as the battle of Mycale. Of 300,000 Persians scarce 3000 escaped with their lives. The Grecian army, about 110,000, lost but few men. The Greeks obtained immense plunder, and were henceforth delivered from the fear of Persian invasions. Platæa, as an ally of Athens, was destroyed by the Thebans, 372; and rebuilt by Philip II. after his victory at Chæronea, 338.

PLATE. In England, plate, with the exception of spoons, was prohibited in public-houses by statute 8 Will. III. (1606). The celebrated Plate act passed in May, 1756. This act was repealed in 1780. The act laying a stamp-duty upon plate passed in 1784; see *Goldsmiths' Company*. By 17 & 18 Vict. c. 96 (1854), gold wares were allowed to be manufactured at a lower standard; but a later act excepted marriage rings.—The art of covering baser metals with a thin plate of silver, either for use or for ornament (**PLATING**), said to have been invented by a Birmingham spur-maker, who began with making the branches of a pair of spurs hollow, and filling the hollow with a slender rod of steel. He continued to make the hollow larger and the iron thicker, till at last he merely coated the iron spur with silver; see *Electrotype*.

Mr. Wilfred Joseph Cripps' "Old English Plate," a valuable work, containing the researches of Mr. O. Morgan, published, 1878. His "Old French Plate," 1880. Duty on silver plate to be reduced gradually till abolished, from 1 June, 1881; abolished 17 April, 1890.

PLATE-WAYS, on ordinary roads for waggons carrying goods, proposed at Liverpool about 1880, to supersede railways for cheapness; not adopted.

PLATFORM, see *Public Meetings*.

PLATINUM, the heaviest of all the metals, except iridium. The name originated with the Spaniards on account of its silvery colour; *Plata* signifying silver. It was found in the auriferous sand of the river Pinto, in South America, and was

succeeded to the earldom, his confessor sent him, in atonement for the murder, to Jerusalem, attended by only two servants, one of whom was to lead him by a halter to the Holy Sepulchre, the other to strip and whip him there, like a common malefactor. Broom, in French *genet*, in Latin *genista*, being the only tough, plant shrub in Palestine, the noble criminal was smartly scourged with it, and from this instrument of his chastisement he was called *Planta-genista*, or Plantagenet; other accounts are given. *Skinner* and *Mézéray*.

unknown in Europe until 1741, when don Antonio Ulloa announced its existence in the narrative of his voyage to Peru. *Greig*. In its ore have been found the metals palladium, rhodium, osmium, iridium, and ruthenium (*which see*). Platinum was rendered malleable and ductile by Dr. Wm. Hyde Wollaston, whose processes are described in the Royal Society's Bakerian lecture for 1829. He died in 1828, having, it is said, gained 30,000*l.* by his inventions. In 1859, M. H. Ste.-Claire Deville made known a new method of obtaining platinum from its ore, in great abundance and purity; and at the international exhibition of 1862 was shown a mass worth 3840*l.*, weighing 266½ lb., of a metal hitherto considered infusible, obtained by his process, employing the oxy-hydrogen flame. See *Philosophical Lamp*.

Dodé's process for coating iron with platinum to prevent rust, shown at Johnson & Matthey's, 11 Jan. 1879. *Platinotypes*, photographic reproductions of pictures, by a peculiar process by Mr. F. Hollyer, specimens exhibited in the Dudley Gallery, Oct. 1892.

PLATONIC PHILOSOPHY, the most popular of all systems (see *Philosophy*). Plato's dialogues have been termed "Philosophy backed by example." He was a disciple of Socrates, 409 B.C., and died 347. The leading feature of his mind was comprehensiveness. The Cambridge Platonists included Whichcote, Cudworth, John Smith, Henry More.

Professor Jowett's popular translation of "Plato's Dialogues" published in 1871; 3rd edition, 1893.

PLATONIC YEAR, the period of time which the equinoxes take to finish their revolution, at the end of which the stars and constellations have the same place with regard to the equinoxes that they had at first. Tycho Brahe says that this year or period requires 25,816 common years to complete it; Ricciolus computes it at 25,920; and Cassini at 24,800; at the end of which time some imagined that there would be a total and natural renovation of the whole creation.

PLATTSBURG. A British expedition against this place, a town of New York, on Lake Champlain, was designed under general sir George Prevost, but was abandoned after the naval force of England had suffered a defeat in an engagement with the Americans, 11 Sept. 1814, when the British squadron in Lake Champlain was captured; see *United States*.

PLAY-GROUNDS. In 1858 a society was established by the earl of Shaftesbury and other benevolent persons to provide play-grounds for the recreation of adults and the children of the humble classes. Ground was liberally offered by the government; and by the marquis of Westminster and others; and in 1859 an act of parliament was passed to facilitate grants of lands for this purpose, for which part of Smithfield was to be reserved. The scheme was not successful.

The Metropolitan Public Garden, Boulevard, and Play-ground association formed by lord Brabazon (aft. earl of Meath) and others in 1882 has done good service in the east of London.

The London Playing-fields association founded; very active in obtaining places, Feb. *et seq.* 1890-2. Hackney marsh (337 acres), purchased by the London county council and others as a playground for east London, opened by sir John Hutton, 21 July, 1894.

PLAYS, see *Drama* and *Theatres*.

PLEADINGS. In the early courts of judicature in England, pleadings were made in the Saxon language; and in Norman-French from the period of the conquest in 1066 until 1362. Pleadings

were ordered to be in English by 36 Edward III. 1362, and Cromwell extended the rule to all legal proceedings 1650. In English law the proceedings are the mutual statements of the plaintiff's cause of action and the defendant's ground of defence.

PLEBEIANS, Plebes, or Plebs, the commons of Rome, as distinguished from the Patricians; see *Rome*, 494-366 B.C.

PLEBISCITUM, a term given to a law passed by the *comitia tributa*, an assembly of the Roman people in their tribes, first established in 491 B.C. The term has been recently revived in France and Italy, and applied to *Universal Suffrage* (which see).

The Russians lost about 2000 killed, 4000 wounded. The Russian attack was considered rash, like that at Balaclava, and a disastrous check.

PLOUGH. "Thou shalt not plough with an ox and an ass together." *Deut.* xxii. 10 (1451 B.C.). The Roman plough is minutely described by Virgil, about 31 B.C. Engines to plough grounds, whether inland or upland, were patented by David Ramsay and Thomas Wildgoose, in 1618; and many improvements in ploughs have been patented since. The application of steam power to ploughing was patented by John Upton in 1837, and by others since, more especially by lord Willoughby D'Eresby, the marquis of Tweeddale, and the earl of Caithness, see *Steam-Plough*.

International trial of ploughs, &c., at Haarlem; prizes won by English makers (Howards, Ransomes, &c.), 17-19 Sept. 1879.

PLOUGH MONDAY, in January, the first Monday after the Epiphany. It received the appellation from its having been fixed upon by our forefathers as the day upon which they returned to the duties of agriculture after enjoying the festivities of Christmas. *Ashe*. On Plough Monday, too, the ploughmen of the north country used to draw a plough from door to door and beg plough money to drink. *Bailey*.

On Plough Monday, the lord mayor of London holds annually at Guildhall a grand court of wardmote, at which the election of the common council and other officers on St. Thomas' day, 21 Dec., is confirmed.

PLUM. We have two native plums; our finer kinds came from Italy and Flanders about 1522. The *Diospyros Lotus*, the date plum, was brought from Barbary, before 1596; the Pishamin plum, *Diospyros virginiana*, from America, before 1629. Formerly damsons, apricots, and peaches went by this name, as raisins do to this day.

PLURALITIES. Clergymen have been restrained from holding more than one benefice by several statutes; the first being 21 Henry VIII. 1529. In 1838 an act was passed prohibiting the holding of more than two benefices except they were at a distance less than ten miles; and the law on this subject was still further amended in 1850, 1855, and 1885, provisions being made for the amalgamation of neighbouring benefices. See *Electors*.

PLURAL NUMBER, see *We*.

PLUS (+) AND MINUS (-). Professor De Morgan attributes these signs to either Christopher Rudolf, who published a book on algebra about 1522, or Michael Stifelius, about 1544.

PLYMOUTH BRETHERN, a body of Christians calling themselves "the Brethren," first

appeared at Plymouth about 1830. In 1851 they had 132 places of worship in England and Wales. They object to national churches as too latitudinarian, and to other dissenters as too sectarian. They receive into communion all who confess Christ, and own the Holy Ghost as his vicar. Their doctrines agree with those of most evangelical protestant churches, but they recognise no order of ministers. Mr. Darby, regarded as their founder, afterwards separated from them with some adherents.

PNEUMATIC DESPATCH COMPANY, to convey letters and parcels through tubes by means of atmospheric pressure and a vacuum. The company's act was passed 13 Aug. 1859, and tubes were laid down in Threadneedle-street on 12 Sept. 1860; and on 20 Aug. 1861, successful experiments were performed at Battersea. In 1862 tubes were laid down from the Euston railway station to the N.W. post-office in Camden-town, and on 21 Feb. 1863, the conveyance of the mail-bags began. In Oct. 1865, tubes had been laid down between Euston railway and Holborn; and on 7 Nov. several persons travelled in them. Engineer, Mr. Rammell. The company stopped through insufficient support, 1876. A pneumatic tube by Siemens, employed to transmit telegraphic messages, began about Jan. 1871.

POET-LAUREATE. Selden could not trace the precise origin of this office.

Warton, in his *History of English Poetry*, states that in the reign of Henry III. there was a *Versificator Regis*, to whom an annual stipend was first paid of 100s.

Chaucer, on his return from abroad, assumed the title of poet-laureate; and in the twelfth year of Richard II., 1389, he obtained a grant of an annual allowance of wine. In the reign of Edward IV., John Kay was laureate; Andrew Bernard was laureate, temp. Henry VII.; and John Skelton, temp. Henry VIII.

James I. in 1615 granted to his laureate a yearly pension of 100 marks; and in 1630, this stipend was augmented by letters patent of Charles I. to 100*l.* per annum, with an additional grant of one tierce of Canary Spanish wine to be taken out of the king's store of wine yearly. We believe that on Southey's appointment the tierce of Canary wine was commuted for 27*l.*

Laurence Eusden commenced a series of Birth-Day and New Year's Odes, which continued till the death of Pyc, in 1813.

On the death of Warton its abolition was recommended by Gibbon, whose elegant compliment on the occasion still more forcibly applied on Wordsworth's death, in 1850—"This is the best time for not filling up the office, when the prince is a man of virtue, and the poet just departed was a man of genius."

The standard of France was overthrown, many of her nobility slain, and her king was taken prisoner, and brought to London; see *Tours* and *Vouglé*.

POISONING. A number of Roman ladies formed a conspiracy and poisoned their husbands. A female slave denounced 170 of them to Fabius Maximus, who ordered them to be publicly executed, 331 B.C. It was said that this was the first public knowledge they had of poisoning at Rome. Poisoning was made petty treason in England, and was punished by boiling to death (of which there are some remarkable instances), 23 Henry VIII. 1531; see *Boiling to death*. The frequency of cases of poisoning by means of arsenic, in England, caused the British legislature to pass a law rendering the sale of arsenic difficult (14 Viet. c. 13, 6 June, 1851). The sale of poison is now regulated by the Pharmacy act of 1868. Additional restrictions by act passed in 1885. The *Poisoned Grain Prohibition Act* passed 28 July, 1863.

A deadly poison, freely administered by Italians in the seventeenth century, was called *aqua tofana*, from the name of the woman Tofania, who made and sold it in small flat vials. She carried on this traffic for half a century, and eluded the police; but, on being taken, confessed that she had been a party in poisoning 600 people. Numerous persons were implicated by her, and many of them were publicly executed. All Italy was thrown into a ferment, and many fled, and some persons of distinction, on conviction, were strangled in prison. It appeared to have been chiefly used by married women who were tired of their husbands. Four or six drops were a fatal dose; but the effect was not sudden, and therefore not suspected. It was as clear as water, but the chemists have not agreed about its real composition. A proclamation of the pope described it as aquafortis distilled into arsenic, and others considered it as a solution of crystallised arsenic.

Between 1666 and 1676, the marchioness de Brinvilliers poisoned her father and two brothers and many others. She was executed, 16 July, 1676.

W. Palmer was executed in 1856, and Miss M. Smith tried in 1857, for poisoning; see *Trials*. Catherine Wilson, a noted poisoner, was executed on 20 Oct. 1862. Edward William Pritchard, M.D., was executed at Glasgow, 28 July, 1865, for the slow murder of his wife and her mother by antimony.

Nov. 1858, 17 persons died at Bradford through eating sweetmeats in which arsenic had been mixed by

mistake. Mr. Hodgson, a chemist, was tried for homicide, and acquitted.

Weltmann, a bookbinder at Posen, poisoned 4 wives and 2 children, about 1859.

Christiana Edmunds, of Brighton, was convicted of murdering a child by poisoned sweetmeats; other persons barely escaped (sentence remitted on the ground of insanity), 16 Jan. 1872.

Mary Ann Cotton, imprisoned Oct. 1872, suspected of poisoning 16 persons, principally children; convicted of poisoning her child, 7 March; executed at Durham, 24 March, 1873.

POLICIES OF ASSURANCE ACT, passed 20 Aug. 1867; see *Insurance*.

POLITICAL ECONOMY, the science which has for its object the improvement of the condition of mankind, and the promotion of civilization, wealth, and happiness; was considered by Plato, Xenophon, and Aristotle. Its history in this country may be dated from the publication of sir Wm. Petty's "Treatise on Taxes," 1662, and "Political Arithmetic," 1691; Dr. Adam Smith's "Wealth of Nations," 1776. The works of J. S. Mill, M'Culloch, Malthus, Ricardo, Carey, Jevons, Sidgwick, Marshall, and Fawcett are celebrated. A professorship of political economy was established at Oxford by Mr. Henry Drummond, M.P., 1825; and at Cambridge, first by Mr. G. Pryme, in 1823; but regularly established by the university in 1863, Henry Fawcett (blind) being the first professor.

Archbishop Whately endowed a professorship at Trinity college, Dublin; Isaac Butt first professor. 1832

The Political Economy club, London, founded in 1821, by Thos. Tooke and others, to propagate free trade principles, kept the hundredth anniversary of the publication of Smith's "Wealth of Nations" on 31 May, 1876.

Mr. R. H. Inglis Palgrave's "Dictionary of Political Economy," published 1891 et seq.

Imaginary systems: Plato's "Republic;" he died 347 B.C. Sir T. More's "Utopia," 1548; sir P. Sidney's "Arcadia," 1590; James Harrington's "Oceana," 1656; Wm. Morris's "News from Nowhere," 1891; and E. Bellamy's "Looking Backwards," 1888.

POLITICAL OFFICES PENSIONS ACT passed 9 Aug. 1869.

POLITICAL UNIONS were formed in England in 1831 to carry the Reform Bill; the most important was that of Birmingham.

POLITICIANS. A politician is described as a man well versed in policy, or the well regulating and governing of a state or kingdom; a wise and cunning man. A man of artifice; one of deep contrivance. *South.* The term was first used in France about 1569. A new faction appeared, known by the name of Politicians, headed by the duc d'Alençon and the Montmorencies, and strengthened by the accession of the Huguenots in 1574. The duke was arrested and the Montmorencies sent to the Bastille.

POLKA, a dance said to have been invented between 1830 and 1834 in Bohemia, and to have obtained its name in Prague in 1835. It became very popular, and was introduced into England about 1844.

POLL ACT passed in Ireland by the Junto of the Pale, putting a price upon the heads of certain Irish; the earl of Desmond being then deputy,

5 Edward IV. 1465. This act long endured, see *Ireland*, 1465.

POLLENTIA (Piedmont, N. Italy), the site of a great victory of Stilicho, the Imperial general, over Alaric the Goth, 29 March, 403.

POLL-TAX or **CAPITATION TAX**, existed among the ancient Romans. It was first levied in England in 1380; and occasioned the rebellion of Wat Tyler (see *Tyler*), 1381. It was again levied in 1513. By the 18th Charles II. every subject was assessed by the head, viz., a duke 100l., a marquis 80l., a baronet 30l., a knight 20l., an esquire 10l., and every single private person 12d., 1667. This grievous impost was abolished by William III. 1689.

POLLUTION OF RIVERS, see *Rivers*.

POLO, the game of ball termed hockey played on horseback, became popular in England in 1872, having been introduced from India. Games were played by lancers and life-guards at Woolwich, 16, 19 July, 1872. A polo club was formed, and international contests held; at Brighton one opened 3 Aug. 1878. Polo is said to have been an old Russian game, mentioned 1492 under the name of Chūgān, as brought from Persia. English beat the Americans, 3 games out of 4, June, 1902.

POLOTSK (Russia). The French under marshal Oudinot were here defeated by the Russians under general Wittgenstein, 30 and 31 July, 1812; the next day, the Russians were defeated. After several smaller actions with various results, Polotsk was stormed by the Russians, and retaken Oct. 1812.

POLTOWA, see *Pullowa*.

POLYGAMY, &c., was permitted among the early nations, and now by Mahometans. In Media, it was a reproach to a man to have less than seven wives. Among the Romans, Marc Antony is mentioned as the first who took two wives. The practice was forbidden by Arcadius, 394. The emperor Charles V. punished polygamy with death. In England, by stat. 1 James I. 1603, it was made felony, with benefit of clergy. It was formerly punished with transportation, but now by imprisonment or penal servitude; see *Marriages*. Polygamy exists among the Mormons (*which see*). Abolished in the United States, 23 March, 1882.—**POLYANDRY** (where one woman has several husbands) is permitted in some eastern countries, the children having equal rights.

POLYGLOT, from two Greek words denoting "many languages," is chiefly applied to editions of the Bible in several languages.

Giustiniani published a polyglot psalter, 1576.

1. The Complutensian Polyglot, in six vols. folio, was printed at Alcalá (Complutensis), in Spain, 1502-14; the first edition published in 1522, at the expense of the celebrated cardinal Ximenes, costing 250,000 ducats. Six hundred copies of it were printed; three on vellum. Count MacCarthy, of Toulouse, paid 437l. for one of these copies at the Pinelli sale.
2. The Polyglot, printed at Antwerp, by Montanns, 3 vols. folio, in 1559-69, at the expense of Philip II. of Spain.
3. Printed at Paris, by Le Jay, in 10 vols. folio, 1628-45.
4. Edited by Bryan Walton, in 6 vols. folio, 1654-7. Copies of all four are in the library of the British and Foreign Bible Society.
5. Edited by Dr. Samuel Lee, published by S. Bagster, 1 vol. folio, 1831.
6. Hexaglot bible: begun by Henry Cohn; completed by the rev. Edwd. R. De Levante and others, 6 vols. 4to, 1874.

POLYNESIA, a name recently given to the isles in the great Pacific Ocean, see *Owhyhee*, *Otaheite*, *Sandwich Islands*, *Fiji Isles*, &c. These islands have been classified as Micronesia, Melanesia, and East Polynesia. The Polynesian society, Wellington, New Zealand, was founded in 1892. The archipelago explored by Mr. Fred. W. Christian, 1890-98.

POLYPES, also named *Hydræ* (*many-footed animals*), on account of their property of reproducing themselves when cut in pieces, every part soon becoming a perfect animal; first discovered by Leeuwenhoek, and described by him in the *Philosophical Trans.* 1703. The polypes are of the order *Zoophytes*, and are partly animal and vegetable.

POLYTECHNIC INSTITUTION, ROYAL, Regent-street, London, was erected by Thompson in 1838, opened 6 Aug. 1839, and enlarged in 1848. It contained a hall of manufactures with machines worked by steam-power, lecture theatres, &c., diving-bell, electric machine, &c. *Timbs*. The institution did not prosper commercially, and its decline was hastened by the fall of a staircase on 3 Jan. 1859, when one person was killed and many injured. The institution was closed in May, 1859, but was re-opened by a new company on 12 Nov. 1860; see *École Polytechnique*. Professor Pepper, the director for many years, resigned in 1872; returned, 1878. The classes were formed into a college, which was inaugurated by the earl of Shaftesbury, 7 Oct. 1872. Polytechnic institution announced to be closed on 27 Aug. 1881; affairs wound up. Plant sold for about 2000*l.* 23 March, 1882. In 1882 it was occupied by the Polytechnic young men's christian institute, principally by the instrumentality of Mr. Quintin Hogg (suffocated by fumes in a geyser bath, 17 Jan. 1903), for educational purposes, with about 2000 members; over 17,000, Jan. 1903.

POMERANIA, a Prussian province, N. Germany, was held by the Poles, 980, and by Denmark, 1210; made an independent duchy, 1479; and divided between Sweden and Brandenburg, 1648. The Swedish part, awarded to Denmark in 1814, was given up to Prussia for Lauenburg, 1815; see *Denmark*; *Wrecks*, 1878.

POMFRET or **PONTEFRACT** (S. York). At the castle (built 1080), Richard II. was confined and murdered, 10 Feb. 1400. Some writers assert that Richard escaped and died in Scotland. In this castle also, the earl Rivers, lord Grey, sir Thomas Vaughan, and sir Richard Haut or Hause, were put to death by order of the duke of Gloucester, then protector of England (afterwards Richard III.), about 26 June, 1483. The castle, which had stood four sieges, was dismantled in 1639. The first parliamentary election by ballot took place here, 15 Aug. 1872, very quietly. It lost one of its two members in 1885. Population, 1881, 8,798; 1891, 9,702; 1901, 13,398.

POMPEII (S. Italy), an ancient city of Campania, was partly demolished by an earthquake in A.D. 63. It was afterwards rebuilt, but was overwhelmed by an eruption of Vesuvius, accompanied by an earthquake, on the night of 24 Aug. 79. The principal citizens were then assembled in an amphitheatre where public spectacles were exhibited. The ashes buried the whole city and covered the surrounding country. After a lapse of fifteen centuries, a countryman, as he was turning up the ground, found a bronze figure; and this discovery led to further search, which brought numerous other objects to light, and at length the city was uncovered. The part first cleared was supposed to be the main street, 1750. The kings of Naples greatly aided in exploring Pompeii, and the present Italian government resumed the work in 1863.

A commemorative meeting of antiquaries and philosophers met at Pompeii, 25 Sept. 1879. Further discoveries made, autumn 1882 *et seq.* The remains of a handsome five-storied house were uncovered . . . July, 1890

POMPEY'S PILLAR stands about three-quarters of a mile from Alexandria, between the city and the lake Mareotis. The shaft is fluted, and the capital ornamented with palm-leaves; the whole, which is highly polished, composed of three pieces, and of the Corinthian order. The column measures, according to some, 94 feet; to others 141, and even 160 feet; but of its origin, name, use, and age, nothing is certain.

It is generally believed that the column has no reference to Pompey, to whom a mark of honour was, nevertheless, set up somewhere about this part. One supposes the edifice was dedicated to Vespasian, another to Severus; and Mr. Clarke, from a half-effaced inscription on the base, considered that Adrian is the

person honoured; while many assert, from the same inscription, that it is dedicated "to Diocletian Augustus, most adorable emperor, tutelary deity of Alexandria."

PONDICHERY (S.E. India), the capital of French India, and first settled by the French in 1674. At this place, near Amiens, took place a fierce indecisive conflict, lasting from 11 A.M. to 6 P.M., between the Germans under Manteuffel and the French army of the north under Faidherbe, 23 Dec. 1870. Both sides claimed a victory; the French general asserted that he remained master of the field.

The college first consisted of 4 patricians, with a chief (*Pontifex Maximus*); to these 4 plebeians were added, by the Ogulnian law, 300 B.C. Sylla increased the number to 15 (8 *maiores*, 7 *minores*), (81), and Julius Cæsar to 16. T. Coruncanian, a plebeian, obtained this office, 254 B.C.

POOR. The poor of England, till the time of Henry VIII., subsisted as the poor of Ireland until 1838, entirely upon private benevolence. By statute 23 Edw. III. 1349, it was enacted that none should give alms to a beggar able to work. By the common law, the poor were to be sustained by "parsons, rectors of the church, and parishioners, so that none should die for default of sustenance;" and by 15 Rich. II. impropriators were obliged to distribute a yearly sum to the poor; but no compulsory law was enacted till the 27th Hen. VIII. 1535. The origin of the present **POOR LAW** is referred to the 43rd of Elizabeth, 1601, by which overseers were appointed for parishes. See *Settlement, Act of*.

POOR CHILDREN'S AID SOCIETY, for providing food, clothing, &c., established 1887.

POOR KNIGHTS OF WINDSOR, or ALMS KNIGHTS. Soon after his institution of the order of the Garter, Edward III. founded this charity, for the provision of 24 (afterwards 26) poor persons eminent for military services. Edward IV. discharged the college from the support of the alms-knights, but Elizabeth re-established the charity for 13 knights, 1559. King William IV. changed the name to the "Military Knights of Windsor," in consequence of their all having held commissions in the army, Sept. 1833.—The "Naval Knights of Windsor" are maintained on a distinct foundation, under the bequest of Samuel Travers, 1724. The corporation was established in 1798. An act making lieutenants and widowers eligible was passed in 1867. Alterations made by act passed in 1885. An act to dissolve the corporation was passed in 1892.

POPE (from the Greek *Pappas* and *Papa*, a father or grandfather), considered by Romanists to be the visible chief of the church, the vicar of Jesus Christ, and the successor of St. Peter. over the Christian church was established; see *Italy, Reformation, and Rome, Modern.*

PORCELAIN, see *Pottery*.

PORPHYROGENITUS, "born in the purple," a term applied to emperors of the east, born while their fathers were reigning.

PORT ARTHUR, China. See *Corea*, Nov. 1894; *Russia*, 1898. Russian conference held here, July, 1903.

PORT BRETON, an isle near New Caledonia, South Pacific.

In 1877 the marquis Du Breil de Rays purchased of the king Maragano a quantity of land on which to found a colony. Glowing prospectuses were issued in France, a company was formed, and, the scheme being favoured by the legitimists, a large number of shares were purchased and much money received. Other speculating companies were formed, and colonial government officers nominated. In spite of warning and prohibition several vessels sailed in 1879 with emigrants to meet with misery, disease, and, to a large extent, with death. A few who had been landed in New Caledonia got back to France and published an account of their sufferings. The marquis and some of his associates were brought to trial 27 Nov. 1883; he was sentenced to four years' imprisonment and a fine of 3000 francs, his associates to shorter imprisonment, 2 Jan. 1884; on appeal, sentence confirmed, 14 March, 1884.

PORTE, or **SUBLIME PORTE**, official name of the court of the sultan of Turkey. Mostasem, the last of the Abbasside caliphs (1243-58), fixed in the threshold of the principal entrance to his palace at Bagdad a piece of the black stone adored at Mecca, and thus this entrance became the "porte" by eminence, and the title of his court. The sultans, successors of the caliphs, assumed the title. — *Bouillet*.

PORTEOUS MOB. Capt. Porteous, at Edinburgh, on 15 April, 1736, commanded the guard at the execution of Wilson, a smuggler, who had saved the life of a fellow criminal, by springing upon the soldiers around them, and by main force keeping them back, while his companion fled. This excited great commiseration, and the spectators pelted the guard with stones. Fearing a rescue, Porteous ordered his men to fire upon the mob, and seventeen persons were killed or wounded. He was found guilty of murder, 22 June, 1736; but the Queen granted him a reprieve (the king being then in Hanover). The people, at night, broke open the prison, took out Porteous, and hanged him on a dyer's sign-post, in the Grass-market, 7 Sept. 1736. None of the rioters were ever detected.

PORTER. Dr. Ashe says that this malt liquor obtained its appellation on account of its having been drunk by porters in the city of London, about

1730. The number of licensed brewers in 1850, in England, was 2257; in Scotland, 154; and in Ireland, 96—total, 2507. On 17 Oct. 1814, at Meux's brewhouse two large vats of porter burst, destroying neighbouring houses. Several lives were lost; and the loss was between 8000 and 9000 barrels.

PORTERAGE ACT, regulating the charge for portorage of small parcels, passed 1799.

The Fellowship of Free Porters established in London in the 13th century, with exclusive privileges, relating to grain, &c., much reduced by the act of parliament of 1872 and the construction of docks. The institution was gradually dying out. After urgent demands and much delay, the distribution of the accumulated funds and property amongst the members was ordered by the rulers, 12 Oct. 1893. The fellowship disbanded by the court of common council, June, 1894.

Final payment of assets, 10,379*l.* 4*s.* 7*d.*, distributed to 495 members, 18 Dec. 1894.

PORT HAMILTON, see *Corea*.

PORT JACKSON (New South Wales), thirteen miles north of Botany Bay, was so named by capt. Cook in 1770; see *Sydney*. Here the duke of Edinburgh was shot by O'Farrell, a Fenian, 12 March, 1868, but soon recovered. The assassin was hanged, 21 April.

PORTLAND ADMINISTRATIONS. The first was the "coalition ministry," of which

William Henry Cavendish, duke of Portland,* as first lord of the treasury, was the head. It obtained the name of the "coalition" ministry, and included lord North with Mr. Fox, formerly inveterate opponents. Formed 5 April, 1783; dissolved by Mr. Pitt's coming into power, Dec. same year.

FIRST ADMINISTRATION.

Duke of Portland, *first lord of the treasury*.

PORTLAND CEMENT, first mentioned in a patent granted to Joseph Aspden, a bricklayer of Leeds, 1824. His son made the true cement at Northfleet. Its value as a building material was established by Mr. John Grant's tests, 1859-71. Portland cement concrete was used by Mr. E. A. Bernay in 1867.

PORTLAND ISLE (off Dorset), the English Gibraltar. Fortified before 1142. Portland castle was built by Henry VIII. about 1536. Off this peninsula a naval engagement commenced between the English and Dutch, 18 Feb. 1653, which continued for three days. The English destroyed eleven Dutch men-of-war and thirty merchantmen. Van Tromp was admiral of the Dutch, and Blake of the English.—Here is found the noted freestone used for building our finest edifices. The Portland lights were erected 1716 and in 1789. The pier, with nearly half a mile square of land, was washed into the sea in Feb. 1792. Prince Albert laid the first stone of the Portland breakwater, 25 July, 1849, and the last stone was laid by the prince of Wales, 10 Aug. 1872. Mr. James Rendel, the first chief engineer, was succeeded on his death in 1856 by Mr. (aft. sir) John Coode. The breakwater and other harbour works cost 1,033,600*l.* exclusive of convict labour. The Portland prison was established in 1848. A mutiny among the convicts here in Sept. 1858, was promptly suppressed. The king visits the prison and Whitehead's torpedo works, 4 April, 1902.

PORTLAND (or BARBERINI) VASE. This beautiful specimen of Greek art (composed of a glass-like substance, with figures and devices raised on it in white enamel; height 10 inches; diameter in the broadest part, 7; with a handle on each side) was discovered about the middle of the 16th century, in a marble sarcophagus in a sepulchre at a place called Monte del Grauo, about 2½ miles from Rome. The sepulchre was supposed to have been that of the Roman emperor, Alexander Se-

verus (222-235), and his mother Mammæa, and the vase is supposed to have been the cinerary urn of one of these royal personages. It was placed in the palace of the Barberini family, at Rome, where it remained till 1770, when it was purchased by sir William Hamilton, from whose possession it passed to that of the duchess of Portland, 1787; at the sale of her effects, it is said to have been bought by the then duke of Portland, who, in 1810, deposited it (on loan) in the British museum. On 27 Feb. 1845, this vase was smashed to pieces with a stone by a man named William Lloyd; it has been skilfully repaired, and is now shown to the public in a special room. Josiah Wedgwood made a mould of it, and took a number of casts.

PORTO BELLO (S. America), discovered by Columbus, 2 Nov. 1502, was taken by Morgan the buccaneer in 1668; by the British under admiral Vernon, from the Spaniards, 21 Nov. 1739, and the fortifications destroyed. Before the abolition of the trade by the galleons, in 1748, it was the great mart for the rich commerce of Peru and Chili.

PORTO FERRAJO, capital of Elba (*which see*); built and fortified by Cosmo I., duke of Florence, in 1548. The fortifications were not finished till 1628, when Cosmo II. completed them with great magnificence; see *France*.

PORTO NOVO (S. India). Here sir Eyre Coote, with about 9500 men and 55 light field-pieces, skilfully defeated Hyder Ali, ruler of the Carnatic, with 80,000 men and some heavy cannon, 1 July, 1781. Hyder lost about 10,000, the British 587 killed and wounded. **PORTO NOVO**, W. Africa, a French settlement on the coast of Dahomey, *which see* (1890 *et seq.*).

PORTO RICO, a West India island, belonging to Spain; discovered by Columbus in 1493. Attacks on it by Drake and Hawkins repulsed, 1595. Revolt suppressed, 1823. Slavery abolished, 23 March, 1873. Ceded to United States, N.A., 10 Dec. 1898; see *Spanish American War*. Fearful hurricane, many deaths, 7 Aug. 1899; see *West Indies*. Mr. Wm. Hunt appointed governor, 30 Aug. 1901; fatal rioting *re* election registrations, reported, 29 Oct. 1902.

PORTREEVE (derived from Saxon words signifying the governor of a port or harbour). The chief magistrate of London was originally so styled; but Richard I. appointed two bailiffs, and afterwards London had mayors. *Camden*; see *Mayors*.

PORT ROYAL (Nova Scotia), capital of the French colony, Acadie, founded in 1604; after having been taken and restored several times, it was finally acquired by the British in 1710, and named Annapolis.

* Born 1738; became lord chamberlain, 1765; lord lieutenant of Ireland, 1782; premier, 1783; home secretary, 1794; lord president, 1801; premier again, 1807; died 1809, when Mr. Spencer Perceval became premier.

PORT ROYAL (Jamaica), once a considerable town, was destroyed by earthquakes in 1602 and 1602; laid in ashes by fire in 1702; reduced to ruins by an inundation of the sea in 1722; and destroyed by a hurricane in 1774. After these calamities, the custom-house and public offices were removed to Kingston. Port Royal was again greatly damaged by fire in 1750; by another awful storm in 1784; and by a devastating fire in July, 1815; in 1850 it suffered by cholera.

PORT ROYAL DES CHAMPS (near Paris) was a French Cistercian convent, founded by Odo, bishop of Paris, at the wish of king Philip Augustus, 1204. Having fallen into decay, it was revived and reformed in 1608 by Angelica Arnauld. In 1625 the increased community removed to Paris. The Port Royal des Champs, in 1656, became the retreat of the Arnaulds, Tillemont, Pascal, Lancelot, and other eminent Jansenists, who devoted themselves to education, and produced the Port Royal grammars, logic, and other works. This institution was condemned by the pope in 1709, and the buildings were pulled down, and tombs desecrated, by the order of Louis XIV., in 1710. The Port Royal at Paris was suppressed, with other monasteries, in 1790.

PORTUGAL, the ancient Lusitania. The present name is derived from Porto Callo, the original appellation of Oporto. After a nine years' struggle, under Viriathes, a brave able leader, the Lusitanians submitted to the Roman arms about 137 B.C. Portugal underwent the same changes as Spain on the fall of the Roman empire. There are in Portugal two universities, that of Coimbra, founded in 1308, and the smaller one of Evora, founded in 1533. Lisbon has also its royal academy, and the small town of Thomar has an academy of sciences; but, in general, literature is at a low ebb in Portugal. The poet Camoens, called the Virgil of his country, and author of the *Lusiad* (1569), translated into English by Mickle, was a native of Lisbon. Population of the kingdom and colonies, 31 Dec. 1863, 8,037,194; in 1872, kingdom on the continent, with Madeira and Azores, 4,390,589; colonies, 3,258,140; in 1878, kingdom and colonies, 8,031,831; 1881, kingdom, 4,708,178; 1 Dec. 1900, 5,428,800. POSITIVE PHILOSOPHY set forth by Auguste Comte, an eminent mathematician, born 19 Jan. 1798; died at Paris, 5 Sept. 1857, succeeded by M. Pierre Laffitte as director of positivism; died, aged 80, early Jan. 1903. M. P. Emile Littré, the great French philologist, ardently embraced the system, and published "De la Philosophie Positive," in 1845.—See *Calendar*.

Comte's "Cours de Philosophie Positive," published 1830-42; "Système de Politique Positive, on Traité de Sociologie, instituant la Religion de l'Humanité (l'amour pour principe, l'ordre pour base, et le progrès pour but)," 1851-4.

It professes to base itself wholly on positive facts or observed phenomena, and rejects all metaphysical conceptions, which it considers negatives, having nothing real or true in them; and dispenses with the science of mind. It sets aside theology and metaphysics as two merely preliminary stages in life; and abandons all search after causes and essences of things, and restricts itself to the observation and classification of phenomena and the discovery of their laws. Comte asserted that Europe had now arrived at the third stage of its progress.

Positivism does not recognise the supernatural or the future state.

The Society of Positivists in London meet in Newton-hall, in Fleur-de-lis-court, near Gough-square, on Sunday evenings, when discourses on philosophy, morality, science, politics, &c., are delivered. Their professed object is to promote the perfection of man by means of education in its widest sense, aiming at the attaining of universal brotherhood independently of all professed religious sects; concerts are occasionally given; Frederick Harrison, president (*Pall Mall Gazette*, 29 Nov. 1883).

"The Church of Humanity" is a modified form of positivism, described by Mr. Richard Congreve, an ardent comtist (*Pall Mall Gazette*, 17 Jan. 1884); he died, aged 81, 5 July, 1899.

The alkalis and earths had been previously regarded as simple substances. Potassium ignites on contact with moisture.

POTATOES, natives of Chili and Peru, generally considered to have been brought to England from Santa Fé, in America, by sir John Hawkins, 1565. Others ascribe their introduction to sir Francis Drake, in 1586; their general introduction, 1592. Their first culture in Ireland is referred to sir Walter Raleigh, who had large estates in that country, about Youghal, in the county of Cork. It is said that potatoes were not known in Flanders until 1620. A fine kind of potato was first brought from America by Mr. Howard, who cultivated it at Cardington, near Bedford, 1765; and its culture became general soon after. The *failure of the potato*

crop in Ireland, several years, especially in 1846, caused famine, to which succeeded pestilent disease of which multitudes died; among them many priests and physicians. Parliament voted ten millions sterling; and several countries of Europe, and the United States of America, forwarded provisions and other succours; see *Ireland*. In 1868 it was reported that in England and Wales 500,000 acres, and in Ireland 1,000,000 acres, were under cultivation for potatoes. Potato disease prevailed greatly in England, autumn of 1872. In consequence the value of potatoes imported in 1872 was 1,654,240l.; in 1871, only 225,732l.; in 1877, 7,964,840 cwt., value, 2,348,749l.; in 1883, 5,149,509 cwt., value 1,585,260l.; in 1887, 2,763,357 cwt.; in 1889, 1,864,426 cwt.; in 1890, 1,940,100 cwt.; in 1900, 8,910,932 cwt.; in 1902, 5,699,090 cwt.; Temporary alarm respecting the American Colorado beetle or bug, autumn, 1876. Acres cultivated for potatoes in Great Britain in 1867, 492,217; 1871, 627,691; 1877, 512,471; 1883, 543,455; in 1887, 559,652; in 1890, 529,661; in 1902, 573,880; Ireland, 1902, 629,304.

[Mr. W. Carruthers considers that the disease did not appear in Britain before 1844; Mr. Thistelton-Dyer thinks that it did.]

POULTRY COMPTER (London) was one of the most noted of the old city prisons. The compter of Wood-street belonged to the sheriff of London, and was made a prison-house in 1555. This latter and Broad-street compter were re-built in 1667. The Giltspur-street prison, built to supply the place of the old city compters, was pulled down in 1855. POYNINGS' LAW, named after sir Edward Poynings, lord deputy of Ireland at the time of its passing, at Drogheda, 13 Sept. 1494. By this law all legislation in the Irish parliament was confined to matters first approved of by the king and the English council. The act was repealed, together with the English Declaratory act of the 6th of Geo. I. and other obnoxious Irish statutes, April, 1782.

PRÆMONSTRATENSIAN ORDER, or **WHITE CANONS**, founded in 1120 by Norbert, a monk, at Pré Montré, near Laon. Its first house in England was founded by Peter de Gousla or Goussel, at Newsham, in Lincolnshire, 1143.—*Tanner*; according to others in 1146. The order spread widely through England soon after. The house at Newsham was dedicated to St. Mary and St. Martial.—*Levis.*

PRÆMUNIRE, LAW OF. This law (which obtained its name from the first two words "*Præmoneri*," or "*Præmuniri facias*," "Cause to be forewarned," which is applied to any offence in the way of contempt of the sovereign or his government) derived its origin from the aggressive power of the pope in England. The offence introduced a foreign power into the land, and created an *imperium in imperio*. The first statute of Præmunire was enacted 35 Edward I. 1306.—*Coke.* The pope bestowed most of the bishoprics, abbeys, &c., before they were void, upon favourites, on pretence of providing the church with better qualified successors before the vacancies occurred. To put a stop to these encroachments, Edward III. enacted a statute in 1353. The statute commonly referred to as the statute of Præmunire is the 16th of Richard II. 1392. Several similar enactments followed. The assertion that parliament is independent of the sovereign was declared a *præmunire*, 1661.

PRÆTORIAN GUARDS, instituted by the emperor Augustus (13 B.C.); their numbers enlarged by Tiberius, Vitellius, and their successors. At first supporters of the imperial tyrants, they eventually became their masters, actually putting up the diadem for sale (as in March, 193 A.D., when it was bought by Diósius Julianus). They committed many atrocities, and were finally disbanded by Constantine in 312.

PRÆTORS, Roman magistrates, afterwards termed consuls (*which see*), were elected at the

establishment of the republic, 509 B.C. In 366 the *prætor urbanus* was appointed for the city, and the *prætor peregrinus* for foreigners, 246 B.C. Two prætors were appointed for the provinces, 227, and two more, 197. Sylla, the dictator, added two, and Julius Cæsar increased the number to 10, which afterwards became 16. After this, their number fluctuated, being sometimes 18, 16, or 12; till, in the decline of the empire, their dignity decreased, and their numbers were reduced to three.

PRAGA, a suburb of Warsaw, where a bloody battle was fought, 4 Nov. 1794; 30,000 Poles were killed by the Russian general Suwarrow. PRAGMATIC SANCTION, an ordinance relating to church and state affairs. The ordinances of the kings of France are thus called; in one the rights of the Gallican church were asserted against the usurpation of the pope in the choice of bishops, by Charles VII. in 1438. The Pragmatic Sanction for settling the empire of Germany in the house of Austria, 1439. The emperor Charles VI. published the Pragmatic Sanction, whereby, in default of male issue, his daughters should succeed in preference to the daughters of his brother Joseph I., 19 April, 1713; and he settled his dominions on his daughter Maria Theresa, in conformity thereto, 1723. She succeeded in Oct. 1740; but it gave rise to a war, in which most of the powers of Europe were engaged, and which lasted till 1748.

PRAGUE, the capital of Bohemia (*which see*). The old city was founded about 759; the new city rebuilt in 1348 by the emperor Charles IV., who made it his capital and erected a university. Prague has suffered much by war. Population, 1880, 162,323; 1890, 184,109; 1900, 359,741.

Prayer-book Revision Society, established 1854, for promoting a revision of the book of common prayer, and such liturgical reforms in the church of England as in the opinion of the society would strengthen its Protestant and scriptural character.

PRAYERS. "Then began men to call upon the name of the Lord" (*Gen. iv. 26*), 3875 B.C. The mode of praying with the face to the east was instituted by pope Boniface II. A.D. 532. Prayers for the dead, first introduced into the Christian church about 190, are advocated by some ministers of the English church. Prayers addressed to the Virgin Mary and to the saints are said to have been introduced by pope Gregory, 593. See *Liturgies*.

PREBENDARY, a clergyman attached to a cathedral or collegiate church, who receives an income termed *prebenda* for officiating at stated times. The office slightly differs from that of a canon.

PREDESTINATION (*Ephes. i.*). The doctrine concerning this is defined in the seventeenth article of the Church of England (*Ephes. i.* and *Romans ix.*). It was maintained by St. Augustin, and opposed by Pelagius, in the early part of the 5th century. In later times it has been maintained

by the Augustinians, Jansenists, the church of Scotland, and many dissenters (termed Calvinistic), and opposed by the Dominicans, Jesuits, and dissenters (termed Arminian), especially by the Wesleyan methodists.

PREHISTORIC ARCHÆOLOGY began in Sweden, and first systematised by Mr. Nilsson. Daniel Wilson's "Archæology and Pre-historic Annals of Scotland," published 1851. An international congress for treating prehistoric subjects met at Neuchâtel in 1866, and at Paris in 1867. At the third meeting at Norwich, Aug. 1868, it assumed the name of "International Congress for Prehistoric Archæology," and published its transactions in 1869. A meeting was held at Stockholm 7-14 Aug. 1874. See *Barrows, Man, Ancient Monuments and Lake Dwellings*.

Sir John Lubbock divides prehistoric archæology into four great epochs: 1. The Drift or Palæolithic or old stone age; 2. The Neolithic or polished stone age; 3. The Bronze age; 4. The Iron age, when bronze was superseded.

PRE-RAPHAELITE SCHOOL, a name given about 1850, to J. E. Millais, Wm. Holman Hunt, D. G. Rossetti, and other artists, who opposed the routine conventionality of academic teaching, and resolved to study nature as it appeared to them, and not as it appeared in the antique. For a short time they published "The Germ, or Art and Poetry," beginning in 1850. Their works have been much criticised, but their influence has been beneficial. Their principles are much advocated by the great art-critic, John Ruskin.

PREROGATIVE COURT, in which formerly all wills were proved, and all administrations taken, which belonged to the archbishop of Canterbury by his prerogative, a judge being appointed by him to decide disputes.* Appeals from this court, previously to the pope, were commanded to be made to the king in chancery, 1533; to the privy council in 1830-2. This court was abolished, and the *Probate Court* established in 1857. Sir John Dodson, the last judge, died in 1858.

PREROGATIVE, ROYAL. In England the sovereign is the supreme magistrate, and it is a maxim that he can do no wrong. He is the head of the established church, of the army and navy and the fountain of office, honour, and privilege, but is subject to the laws, unless exempted by name. The royal prerogatives were greatly exceeded by several despotic sovereigns, such as Elizabeth, James I., and Charles I. Elizabeth used the phrase "We, of our Royal prerogative, which we will not have argued or brought in question" (1591). James I. told his parliament "that as it was blasphemy to question what the Almighty could do of His power, so it was sedition to inquire what a king could do by virtue of his prerogative." These extreme doctrines were nullified by the revolution of 1688, and the exercise of the prerogative is now virtually subject to parliament; see *Lords*.

PRESBURG, the ancient capital of Hungary, where the diets were held and the kings crowned. On 26 Dec. 1805, a treaty was signed between

France and Austria, by which the ancient states of Venice were ceded to Italy; the principality of Eichstadt, part of the bishopric of Passau, the city of Augsburg, the Tyrol, all the possessions of Austria in Suabia, in Brisgau, and Ortenau, were transferred to the elector of Bavaria, and the duke of Würtemberg, who, as well as the duke of Baden, were then created kings by Napoleon. The independence of the Helvetic republic was also stipulated. A new iron and stone railway and passenger bridge over the Danube was inaugurated by the emperor, 30 Dec. 1890. Population, 1890, 52,444; 1900, 61,861.

PRESBYTERIANS are so called from their maintaining that the government of the church appointed in the New Testament was by presbyteries, or association of ministers and ruling elders, equal in power, office, and in order. "The elders (Greek, *presbyteros*) I exhort, who am also an elder (*synpresbyteros*)." I Peter v. 1. Presbyterianism was accepted by parliament in place of episcopacy in England in 1648, but set aside at the restoration in 1660. It became the established form of church government in Scotland in 1696. Its tenets were embodied in the formulary of faith said to have been composed by John Knox, in 1560, which was approved by the parliament, and ratified, 1567, and finally settled by an act of the Scottish senate, 1696, afterwards secured by the treaty of union with England in 1707. The first Presbyterian meeting-house in England was established at Wandsworth, Surrey, 20 Nov. 1572.

PRESS, LIBERTY OF THE. *The imprimatur* "let it be printed" was much used on the title-pages of books printed in the sixteenth and seventeenth centuries. The liberty of the press was severely restrained, and the number of master-printers in London and Westminster limited by the Star Chamber, 13 Charles I., July 1, 1637. John Milton published his noble work, "Areopagitica; or, a Speech for the Liberty of Unlicensed Printing," 1644. See *Fourth Estate*.

PRESTON (Lancashire). Near here Cromwell totally defeated the royalists under sir Marmaduke Langdale, 17 Aug. 1648. Preston was taken in 1715 by the Scotch insurgents, under Forster, who proclaimed king James VII. They were defeated in a battle on 12, 13 Nov. by generals Willes and Carpenter, who with the royal army invested Preston on all sides. The Scots laid down their arms, and their nobles and leaders were secured; some were shot as deserters, and others sent to London pinioned and bound together, to intimidate their party.—The stoppage of the cotton manufacture in 1861 and 1862, through the civil war in America, occasioned great suffering in Preston. PRIEST (derived from *presbyteros*, elder), in the English church the minister who presides over the public worship. In *Gen* xiv. 18, Melchizedek

king of Salem is termed "priest of the most high God." (1913 B.C.; see *Hebrews* vii.) The Greek *hierues*, like the Jewish priest, had a sacrificial character, which idea of the priesthood is still maintained by the Romanists and those who favour their views. Among the Jews, the priests assumed their office at the age of thirty years. The dignity of high or chief priest was fixed in Aaron's family, 1491 B.C. After the captivity of Babylon, the civil government and the crown were superadded to the high priesthood; it was the peculiar privilege of the high priest, that he could be prosecuted in no court but that of the great Sanhedrim. The heathens had their arch-flamen or high priest, resembling the Christian archbishop. For "Priest in Absolution," see *Ioly Cross*.

The rights of primogeniture abolished in France, 1790. "Primogeniture," by Mr. Evelyu Cecil, published Feb. 1895.

PRINTERS' PENSION SOCIETY, (now termed "Printers' Corporation"), founded 1827; chartered, 1865; almshouses instituted, 1841; orphan schools have been set up.

PRINTING. Block printing is said to have been invented by the Chinese about 593 A.D., movable types made in the 10th century. The honour of first printing with single types in Europe has been appropriated to Mentz, Strasburg, Haarlem, Venice, Rome, Florence, Basle, and Augsburg; but the names of the three first only are entitled to attention; the early history is very doubtful, and the subject of much controversy; see *Press*.

Adrian Junius awards the honour of the invention to Laurencez John Koster, of Haarlem, "who printed with blocks, a book of images and letters, *Spectaculum Humane Subtationis*, and compounded an ink more viscous and tenacious than common ink, which blotted, about 1438."

[The leaves of this book, being printed on one side only, were afterwards pasted together.]

[In 1859, Mr. Samuel Leigh Sotheby issued an elaborate work compiled by his father and himself, entitled "*Principia Typographica*," containing fac-similes, &c., of the block-books of the 15th century; and Mr. J. Russell Smith published a fac-simile of the *Biblia Pauperum*, a very early block-book.]

PRINTING-MACHINES.—William Nicholson, editor of the *Philosophical Journal*, first projected (1790-1), but Mr. König first contrived and constructed a working printing machine, which began with producing the *Times* of 28 Nov. 1814, a memorable day in the annals of typography.

In 1818, Mr. E. Cowper patented improvements.* König's machine printed 1800 an hour on one side; Cowper's improvements increased this number to 4000. This was raised to 15,000, by Mr. Applegath's machine, which printed the *Times*.

Hoe's American machine, introduced into London 1858, prints 20,000 an hour.

Marinoni's machine at Paris said to print 36,000 an hour; Dec. 1868.

Walter press, invented for the *Times* by J. C. Macdonald and Mr. Calverley, between 1862-9, prints about 17,000 an hour perfected; 1872.

American Campbell press said to print 50,000 sheets perfected in an hour, Feb. 1876.

ngram web rotary machine, invented by Mr. (later sir) W. J. Ingram, M.P., for printing illustrated papers; first used to print *Illustrated London News*, 4 Oct. 1877.

PRINTING IN COLOURS was first commenced by the employment of several blocks, to imitate the initial letters in MSS. (for instance, the Mentz Psalter of Fust, 1455, which has a letter in three colours). Imitations of chiaroscuro soon followed ("Repose in Egypt," engraving on wood after Louis Cranach, in 1519, in Germany; others by Ugo da Carpi, in Italy, 1518).

J. B. Jackson (1720-54) attempted, without success, to imitate water-colour drawings, and to print paper-hangings.

About 1783, John Skippe, an amateur, printed some chiaroscuros.

In 1819-22, Mr. William Savage produced his remarkable work, "Hints on Colour Printing," illustrated by imitations of chiaroscuro, and of coloured drawings, giving details of the processes employed.

In 1836, Mr. George Baxter produced beautiful specimens of Picture-Printing, and took out a patent, which expired in 1855. In some of the illustrations to the "Pictorial Album" (1836), he employed twenty different blocks.

It has been applied to Lithography (hence Chromolithography).

In 1849, Mr. G. C. Leighton produced imitations of water-colour drawings, by means of modifications and improvements of Savage's processes. In 1851 he commenced colour-printing by machinery, and has since availed himself of aqua-tinted plates, and also of electrotyped silver and copper surfaces to obtain purity of colour as well as durability; Mr. Leighton died, 8 May, 1895.

The large coloured prints of the *Illustrated London News* were first issued in Dec. 1856.

Mr. E. Meyerstein explained his process of printing many colours at one impression (steno-chromy), Society of Arts, 13 Dec. 1876.

Mr. Ivan Orloff's colour-printing machine, multi-coloured designs produced by one operation; one set up in London, July, 1899.

Printing surfaces. Vulcanised india-rubber was first employed for this purpose by Mr. John Leighton, F.S.A., about 1862, and patented in the name of Alfred Leighton, 1864. The application is much used for hand-stamps for books, &c.

Mr. Fred Wicks' type-casting machine (cheap), reported *Times*, 19 Nov. 1896, adopted 1900.

PRINTING EXHIBITION (of specimens, apparatus, materials, stationery, and machinery), at Agricultural Hall, London, include 5-17 July, 1880; 14 July et seq. 1881; and 30 July et seq. 1883.

PRIORIES, at first dependent on the great abbeys, are mentioned in 722 in England; see *Abbeys*, and *Monasteries*. *Alien priories* were seized by the king (Edward I.) in 1285, and in succeeding reigns on the breaking out of war with France; but were usually restored on the conclusion of peace. These priories were dissolved, and their estates vested in the crown, 3 Henry V. 1414.—*Rymer's Federa*.

PRIVATEER, a ship belonging to private individuals, sailing with a licence (termed a *Letter of Marque*), granted by a government in time of war, to seize and plunder the ships of the enemy. The practice, said to have been adopted by Edward I. against the Portuguese in 1295, was general during the war between Spain and the Netherlands in the 17th century, and during the last French war. Privateering was abolished by the great sovereigns of Europe by treaty, 30 March, 1856. The United States government refused to agree unless the right of blockade was also given up. The British government declined this, asserting "that the system of commercial blockade was essential to its naval supremacy." On 17 April, 1861, Jefferson Davis, president of the southern confederacy, announced his intention of issuing letters of marque, and on the 19th president Lincoln proclaimed that all southern privateers should be treated as pirates. This decree was not carried out: see *United States*. All the great powers forbade privateering during the American civil war (*which see*). By the treaty of Washington privateering was prohibited; and April, 1898, in relation to the Spanish-American war, a Spanish decree maintains liberty of action.

PRIVY COUNCIL. A council said to have been instituted by Alfred, 895. The number of the council was about twelve when it discharged the functions of state, now confined to the members of the cabinet; but it had become unwieldy amount before 1679, in which year it was remodelled upon sir William Temple's plan, and reduced to thirty members: Anthony Ashley, earl of Shaftesbury, being president. The number is now unlimited. To attempt the life of a privy councillor in the execution of his office was made capital, occasioned by Guiscard's stabbing Mr. Harley while the latter was examining him on a charge of high treason, 9 Anne, 1711.

"The Proceedings and Ordinances of the Privy Council of England from 10 Richard II. to 33 Hen. VIII., edited by sir H. Nicolas, 7 vols.," were published by the record commissioners, 1834-7.

IV. c. 41, 1833; amended by other acts in 1844, 1851, 1852.

JUDGES.—The lord president, lord chancellor, master of the rolls, vice-chancellor, lords justices in appeal, lord chief justice of the queen's bench and common pleas, lord chief baron, judges of the courts of bankruptcy, probate, and admiralty, and others appointed by the queen. In consequence of the increase of business, and consequent delay, the queen was empowered to appoint four new judicial members of the committee, by 34 & 35 Vict. c. 91 (21 Aug. 1871). The attorney-general, sir R. Collier, was made a judge of the Common Pleas, 7 Nov., and a member of the judicial committee 22 Nov. 1871.

These proceedings were considered contrary to the spirit of the act by several judges and the legal profession generally. A vote of censure on the Gladstone ministry was negated in the house of lords (89-87), 15 Feb.; in the commons (268-241), 19 Feb. 1872. Other changes were made by an act passed in 1876. The addition of judges from the colonies authorized by an act passed 6 July, 1895.

This seal is used by the king to all charters, grants, and pardons, signed by him before they come to the great seal. Richard Fox, bishop of Winchester, held this office in the reign of Henry VIII. previously to 1523, when Cuthbert Tunstall, bishop of London, was appointed. PROBABILITY, THEORY OF (termed by Butler, "the guide of life"; by Laplace, "good sense reduced to calculation"), was originated by Pascal, and taken up by Fermat, in their correspondence in 1654.

Its object is "the determination of the number of ways in which an event may happen or fail, in order that we may judge whether the chances of its happening or failing are greater."—*Jevons*.

It has been treated upon by the most eminent mathematicians, viz., the Bernouillis, De Moivre, D'Alembert, Euler, Lagrange, Laplace, and Quetelet. Isaac Todhunter's copious "History of Probability," published 1865.

Wilde (aft. lord Penzance) was appointed judge, 28 Aug. 1863; see *Supreme Court*. The president of the probate, divorce, and admiralty division, sir James Hannen (1872), succeeded by sir Charles P. PROVENCE (the Roman *Provincia*), S. E. France, was made a kingdom by the emperor Lothaire for his son Charles. It afterwards became part of the kingdom of Arles as a feudal fief, and was re-united to the German empire in 1032 by

PURGATORY, the middle place between heaven and hell, where, it is believed by the Roman Catholics, the soul passes through the fire of purification before it enters the kingdom of God. The doctrine was known about 250; was introduced into the Roman church in the 5th century, and made a religious dogma by Gregory I., 590-604. It was first set forth by a council at Florence, 1439; enforced by the council of Trent, Dec. 1563; see *Indulgences*.

PURITANS, the name first given, it is said, about 1564, to persons who aimed at greater purity of doctrine, holiness of living, and stricter discipline than others. Rubrics, but which were considered by their opponents to be of a Romish tendency. The term was derived from the name of the professor of Hebrew at Oxford, Dr. Edwd. Pusey. The heads of houses of the university of Oxford passed resolutions censuring Dr. Pusey's attempts to renew practices which are now obsolete, 15 March, 1841; and his celebrated sermon was condemned by the same body, 30 May, 1843; he died 16 Sept. 1882; see *Tractarians*, and *Ritualism*.

Its height is said to have been originally 431 feet, and its base 774 square feet. The second pyramid is ascribed to Chafra, or Chephren, 3666-3633 B.C. The third pyramid is said to have been built by Menkaura or Mycerinus, 3633 B.C. The pyramids have been visited and described by Belzoni, 1815; Vyse, 1836; C. Piazza Smith, and others, see *Egypt Exploration Fund*.

QUAKERS or **SOCIETY OF FRIENDS**, originally called Seekers, from their seeking the truth, and afterwards Friends (3 *John*, 14). Justice Bennet, of Derby, gave the society the name of Quakers in 1650, because George Fox (the founder) admonished him and those present to quake at the word of the Lord. This sect was commenced in England about 1646, by George Fox (then aged 22), who was joined by George Keith, William Penn, and Robert Barclay, of Ury, and others. Fox rejected all religious ordinances, explained away the commands relative to baptism, &c.; discarded the ordinary names of days and months, and used *thee* and *thou* for *you*, as more consonant with truth. The first meeting-house in London was in White Hart-court, Gracechurch-street.

Their principles are contained in "Extracts of minutes" (from the beginning) published 1782; revised 1802, 1861, and 1883.

QUALIFICATION FOR OFFICE ABOLITION ACT, passed May, 1866, rendered it unnecessary to make and subscribe certain declarations.

QUARANTINE, the custom observed at Venice as early as 1127, whereby all merchants and others coming from the Levant were obliged to remain in the house of St. Lazarus, or the Lazaretto, forty days before they were admitted into the city. Various southern cities have now lazarettos; that of Venice is built in the water. In the times of plague, England and all other nations oblige those that come from the infected places to perform quarantine with their ships, &c., a longer or shorter time, as may be judged most safe. Quarantine acts were passed in 1753 and in 1825. The system was abolished in England by an act passed 1806, and the old quarantine men-of-war in the Solent were broken up. Quarantine established throughout Europe, in consequence of the bubonic plague at Bombay (*which see*), 16 Jan. 1807. By order of council, 10 Nov. 1806, foreign cattle were made subject to quarantine.

QUARRIES. An act was passed for their regulation in 1894. See *State*.

QUARTER SESSIONS established 25 Edw. III. 1350-1. Days of sitting appointed, 2 Hen. V. 1413. In 1830 it was enacted that quarter sessions of the peace should be held in the first whole weeks after 11 Oct., 28 Dec., 31 March, and 25 June. Further regulated, 1842, 1848, and 1858. *Brewster Sessions* are regulated by the Licensing Act 1902.

QUARTERLY REVIEW, the organ of the Tory party. The publication was proposed to Mr. George Canning, and his support solicited by Mr. John Murray, the publisher, in a letter dated 25 Sept. 1807, in opposition to the opinions of the *Edinburgh Review*. Mr. Murray was assisted by Walter Scott, Robert Southey, John Gibson Lockhart (editor 1825-53), J. W. Croker, and other eminent persons. It first appeared Feb. 1809, with William Gifford, the celebrated translator of "Juvenal" as editor. He died 31 Dec. 1826. The rev. Whitwell Elwin, an able editor, 1853-1867, died, aged 84, 1 Jan. 1900. Dr. (aft. sir) William Smith, editor, from 1867 till his death, 7 Oct. 1893; succeeded by Mr. Rowland Prothero, Nov. 1893.

QUASI MODO, a name given to *Low Sunday* (the first Sunday after Easter) from the commencement of a hymn sung on that day.

QUATERNIONS, an important mathematical method or calculus, invented by Sir Wm. Rowan Hamilton, about 1843.

It is based upon the separation of multiplication from addition, and its fundamental idea is mental transference or motion by what he termed vectors. He attributed to addition motion from a point; to multiplication about a point. Four numbers are generally involved, hence the name quaternion. Hamilton's

"Lectures on Quaternions," was published 1853; his "Elements," 1866. Other works by professors Kelland and Tait, published since.

QUATRE-BRAS (Belgium). Here on 16 June, 1815, two days before the battle of Waterloo, a battle was fought between the British and allied army under the duke of Brunswick, the prince of Orange, and sir Thomas Picton, and the French under marshal Ney. The British fought with remarkable intrepidity, notwithstanding their inferiority in number, and their fatigue through marching all the preceding night. The 42nd regiment (Royal Highlanders) suffered severely in pursuit of a French division by cuirassiers posted in ambush behind growing corn. The duke of Brunswick was killed.

In fulfilment of a vow made before the engagement, the king built the monastery, palace, &c., the Escorial, considered by the Spaniards the eighth wonder of the world; see *Escorial*. During the Franco-German war the army of the north, under Faidherbe, was defeated here by the Germans after seven hours' fighting, on 19 Jan. 1871; total loss about 15,000: the German loss about 3100.

QUIBERON BAY (W. France). A British force landed here, Sept. 1746, but was repulsed. In the bay admiral Hawke gained a complete victory over the French admiral Conflans, and thus defeated the projected invasion of Great Britain, 20 Nov. 1759. Quiberon was taken by some French regiments in the pay of England, 3 July, 1795; but on 21 July, through treachery, the French republicans, under Hoche, retook it by surprise, and many emigrants were executed. About 900 of the troops, and nearly 1500 royalist inhabitants who had joined the regiments in the pay of Great Britain, effected their embarkation on board the ships.

QUICKSILVER, in its liquid state, mercury. Its use in refining silver was discovered, 1540. There are mines of it in various parts, the chief of which are at Almaden, in Spain, and at Idria, in Illyria; the latter, discovered by accident in 1497, for several years yielded 1200 tons. A mine was

discovered at Ceylon in 1797; and at New Almaden and other places in California. Quicksilver was congealed in winter at St. Petersburg, in 1759. It was congealed in England by a chemical process, without snow or ice, by Mr. Walker, in 1787. Corrosive sublimate, a deadly poison, is a combination of mercury and chlorine; see *Calomel*.

QUICUNQUE VULT, see *Athanasian Creed*.

QUIETISM, the doctrine of Miguel Molinos, a Spaniard (1627-96), whose work, the "Spiritual Guide," published in 1675, was the foundation of a sect in France. He held that religion consisted in an internal silent meditation on the merits of Christ and the mercies of God. Madame de la Mothe-Guyon, a quietist, was imprisoned in the Bastille for her visions and prophecies, but released through the interest of Fénelon, archbishop of Cambray, between whom and Bossuet, bishop of Meaux, arose a controversy, 1697. Quietism was finally condemned by pope Innocent XII. in 1699. See *Jansenists*, *Quakerism* and *Pietism*.

QUILLS are said to have been first used for pens in 553; authorities say not before 635.

It is a probable constituent of all genuine cinchona barks, especially of the yellow bark; see *Jesuits' Bark*. Artificial quinine was prepared (synthetically) by Mr. W. L. Scott, in Oct. 1865.—QUINOIDINE, see *Fluorescence*. John Eliot Howard, promoter of the cultivation of cinchona in India, and author of "Quinologia" (1862) died 22 Nov. 1883.

QUINQUAGESIMA SUNDAY. The observation is said to have been appointed by Gregory the Great (pope, 590-604). The first Sunday in Lent having been termed *Quadragesima*, and the three weeks preceding having been appropriated to the gradual introduction of the Lent fast, the three Sundays of these weeks were called by names significant of their position in the calendar: and reckoning by decades (tenths), the Sunday preceding *Quadragesima* received its present name, *Quinquagesima*, the second *Sexagesima*, and the third *Septuagesima*.

QUINTILIANS, heretics in the 2nd century, the disciples of Montanus, who took their name from Quintilia, a lady whom he had deceived by his pretended sanctity, and whom they regarded as a prophetess. They made the eucharist of bread and cheese, and allowed women to be priests and bishops. *Pardon*.

QUIRINUS, a Sabine god, whose name was given to Romulus after his death. L. Papirius Cursor, general in the Roman army, first erected a sun-dial in the temple of Quirinus, from which time the days began to be divided into hours, 293 B.C. *Aspin*. The sun-dial was sometimes called the Quirinus, from the original place in which it was

Since then violent shocks, but not so disastrous, occurred; till one, on 22 March, 1859, when about 5000 persons were killed; see *Earthquakes* and *Equator*.

QUIXOTE, see *Don Quixote*.

QUOITS, a game said to have originated with the Greeks, and to have been first played at the Olympic games, by the *Idæi Dactyli*, fifty years after the deluge of Deucalion, 1453 B.C. Perseus, the grandson of Acrisius, by Danaë, having inadvertently slain his grandfather, when throwing a quoit, exchanged the kingdom of Argos, to which he was heir, for that of Tirynthus, and founded the kingdom of Mycenæ, about 1313 B.C.

QUOTATIONS. Athenæus's "*Deipnosophistæ* or *Banquet of the Learned*" (compiled about 228), and Burton's "*Anatomy of Melancholy*" (1621), contain masses of extracts. Henry Ainsworth's "*Communion of Saints*" (died 1622), is a mosaic of Scripture quotations.

RACES, one of the ancient games of Greece. Horse-races were known in England in very early times. Fitz-Stephen, in the days of Henry II., mentions the delight taken by the citizens of London in the diversion. In James I.'s reign Croydon in the south, and Garterly in the north, were celebrated courses. Near York there were races, and the prize was a little golden bell, 1607. *Camden*. In the end of Charles I.'s reign, races were performed at Hyde Park. Charles II. patronised them, and instead of bells, gave a silver bowl, or cup, value 100 guineas. William III. added to the plates (as did queen Anne), and founded an academy for riding.

He died in 1741, aged 26 years.

RACK, an engine of torture, for extracting a confession from criminals, mentioned by Demosthenes, *de Corona*, B.C. 330, and in later times an instrument of the Inquisition. Lord Coke states from tradition that the duke of Exeter, in the reign of Henry VI., erected a rack of torture (thence called the duke of Exeter's daughter, now seen in the Tower), 1447. In the case of Feiton, who murdered the duke of Buckingham, the judges of England protested against the proposal of the privy council to put the assassin to the rack, as contrary to the laws, 1628; the use of the rack was abolished 1640. See *Ravilliac* and *Torture*.

RACQUETS (Arabic *ra'hat*, "palm of the hand"). A game played in an open (now but seldom) or close court (60 ft. long, and 30 ft. wide and 40 ft. high, with high walls surrounding it, the floor being divided into two principal areas by the "short" line) with a bat resembling that used in tennis, and a small hard ball. 15 usually constitutes the game. Racquets first came into vogue during the early part of the 19th century, and Chas. Dickens refers to the game in "Pickwick" in connection with the Fleet prison, where insolvent debtors enlivened the monotony of their existence by playing this game against a single wall. In 1853, a racquet court was erected at Prince's Club, and since then courts have become common at the universities and public schools. On the sale of Prince's Club grounds in 1886, the Queen's Club, Kensington, became the headquarters of the game, and here the championship and the universities and public school matches take place. RADICALS or "**RADICAL REFORMERS**," persons who professed to aim at procuring a thorough reformation in the government and policy of England, became prominent in 1816, when Hampden clubs were formed, of which sir Francis Burdett, lord Cochrane, major Cartwright, and William Cobbett were prominent members. Samuel Bamford's "Life of a Radical," published in 1842, gives much information; he died 13 April, 1872. Many radicals were severely punished, 1817-20. Wm. Harris's "History of the Radical Party," published early in 1885.—The "Radicals" in the United States were the party headed by Thaddeus Stevens, bitterly opposed to the policy of president Johnson, as too favourable to the subdued Southern States.

The *Radical Programme*, advocated by the rt. hon. Joseph Chamberlain, widely circulated, first appeared July, 1885, in the *Fortnightly Review*;

it included reform of the land laws, free education, increased local government, reform in taxation and finance, improvement of condition of agricultural labourers and of the poor, and religious equality and dis-establishment of national churches.

RAGGED SCHOOLS, free schools for out-cast destitute ragged children, set up in large towns. The instruction is based on the scriptures, and most of the teachers are unpaid. John Pounds, a cobbler of Portsmouth, who died in 1830, opened a school of this kind; and one was set up by Andrew Walker, in "Devil's Acre," Westminster, in 1830. *King's College*. They did not receive their name till 1844, when the "Ragged school union" was formed, principally by Mr. S. Starey and Mr. Wm. Locke (afterwards his secretary). The earl of Shaftesbury was chairman. In 1856 there were 150 Ragged school institutions. Sunday ragged schools reported in London in 1867, 226; in 1898, 231; day schools, in 1867, 204; in 1878, 58; week evening schools, in 1867, 207, in 1878, 147; 44 industrial schools in 1868. Ragged school buildings were exempted from rates, secured by those established by the London school board, 1869. The day schools have now been super-board; but the Sunday and night schools, mother meetings, &c., are still maintained in very great efficiency (1903). The union reported 212 federated schools (1895). Dr. Guthrie, a founder of ragged schools in Edinburgh, &c., died 24 Feb. 1873. The earl of Shaftesbury an ardent supporter of the movement, died 1 Oct. 1885. Jubilee celebrated, 20 April, 1894. Annual meetings; the union was styled Shaftesbury society in May, 1898; total members 127,087, 1902. See *Shoebuck*.

REGISTERS. The registering of deeds and conveyances disposing of real estates was appointed to be effected in Yorkshire and in Middlesex, 2 Anne, 1703, *et seq.* Greater security was thus given to purchasers and mortgagees; and the value of estates increased in those counties. Wills have been for a series of years kept and registered, in London, at Doctors' Commons; see *Wills*. The registering of shipping in the Thames was commenced, 1786; and throughout England, 1787; and several acts and amendments of acts have since followed for keeping and improving registers.

The duties and payments of the Lord Clerk Register of Scotland and his deputy were regulated by 42 & 43 Vict. c. 44 1879

REGISTERS, PAROCHIAL, were established by Cromwell, lord Essex, by which the dates of births, marriages, and burials, became ascertainable, Sept. 1538. This measure was opposed by the people, who feared some new taxation. A stamp-tax was laid on registers in 1784. Laws for their better regulation were enacted in 1813 *et seq.* The great Registration act (introduced by lord John Russell), 6 & 7 Will. IV. c. 86, passed 17 Aug. 1836, see *Bills of Mortality*, &c.

A new registration act for births and deaths, passed 7 Aug. 1874; another passed in 1901.

REGIUM DONUM (Royal gift), an allowance from the sovereign for the maintenance of the Presbyterian ministers in Ireland, commenced by Charles II. in 1672, and revived by William III. in 1690, was commuted by the Irish Presbyterian Church act passed June, 1871. The allowance to certain protestant dissenting ministers in Ireland was given up by them in 1857, in deference to the wishes of English dissenters.

REGULATION OF PUBLIC WORSHIP, see *Public Worship*.

REGULATION OF THE FORCES ACT passed 17 Aug. 1871. See *Army*.

REICHENBACH (Prussia). Here Duroc was killed during the conflicts between the French and the allies, 22 May, 1813; see *Bautzen*. Here was signed a subsidy treaty between Russia, Prussia, and England, whereby the last engaged to provide means for carrying on the war against Napoleon I. on certain conditions, 14, 15 June, 1813. Austria joined the alliance soon after.

REICHSRATH, the representative council of the empire of Austria, reconstituted by decree 5 March; met on 31 May, 1860. In May, 1861, the upper house consisted of 17 spiritual, 55 hereditary, and 39 peers. The lower house consisted of 136 elected deputies. No representatives came from Hungary, Transylvania, Venetia, the Banat, Slavonia, Croatia, and Istria. The Reichsrath was abolished by a rescript, 21 Sept. 1865, with the view of restoring autonomy to Hungary and other provinces. It again met 20 May, 1867. The Reichstag of Germany, the imperial parliament or diet, first met at Berlin, 21 Mar. 1871.

REIGATE (Surrey), sent two members to parliament in the reign of Edward I.; lost one by the Reform Act of 1832, and was wholly disfranchised for corruption by that of 1867. Population, 1881, 18,662; 1891, 22,046; 1901, 25,993.

REIGN OF TERROR. Maximilien Robespierre headed the populace in the Champ de Mars in Paris, demanding the dethronement of the king, 17 July, 1791. He was triumphant in 1793, and numbers of eminent men and citizens were sacrificed during his sanguinary administration. Billaud Varennes denounced the tyranny of Robespierre in the tribune, 27 July, 1794. The next day he suffered death, with many of his companions; see *France*. This has been termed the *Red Terror*. The reaction after the restoration of the Bourbons,

1815, disgraced by many atrocious acts of wanton cruelty, has been termed the *White Terror*. The Jesuits were then conspicuous in the destruction of their adversaries.

REIGNS OF SOVEREIGNS. The average duration, according to Newton, is 19 years each; according to Hales 22½ years; that of the sovereigns of England being 23½ years, and that of the popes, 7½ years. Pius IX. was the first pope who reigned above 25 years, 1846-78.

The church was constituted as the "presbytery of relief," 22 Oct. 1761. The Relief and Secession churches were united as the United Presbyterian Church, 13 May, 1847.

RELIGION (from *religo*, I bind again, in the sense of a vow or oath) comprehends a belief in the being and perfections of God, and obedience to his commandments. The Jewish religion is set forth in the Old, and the Christian religion in the New Testament. Departure from these scriptures has been the origin of all corrupt forms of religion, as foretold in them. Buddhism differs from this. See *Mahometanism*, and other religions and sects under their names. The population of the globe with reference to religious worship, is given by Balbi (who assumed the total population to be 1,050,000,000), and Dieterici (who assumed it to be 1,288,000,000), as follows: A gallery of religions at the British museum, Bloomsbury, opened 19 Feb. 1894.

REMONSTRANCE, THE GRAND, drawn up by the house of commons, and presented to king Charles I., 1 Dec. 1641. It consisted of 206 articles, dwelt bitterly on all the king's illegal and oppressive acts, and was printed by order of the house.

REMONSTRANTS, see *Arminians*.

RENAISSANCE, a term applied to the revival of the study of classic literature and art in the 15th and 16th centuries, under the patronage of the Medici and others; see *Painters*, and *Sculptors*. Mr. John A. Symonds' "History of the Renaissance in Italy," with supplements, 7 vols., published 1875-86. He was born 1840 and died 19 April, 1893. "The Renaissance," vol. i. of the Cambridge Modern History, published Jan. 1903.

RENSBURG (Holstein), was taken by the imperialists in 1627; by the Swedes in 1643; and by the Prussians and confederate troops in 1848. The first diet of Schleswig and Holstein met here 3 April, 1848. It was re-occupied by the Danes in 1852, and taken by the Prussians after a serious conflict, 21 July, 1864.

RENNES (capital of Brittany, N. W. France). Here was established by Henry II., in 1553, the parliament so celebrated for its independence, especially in its struggle with the court, 1788-89. On 20 May, 1788, it declared infamous every one who should take part in the *cour plénière* then proposed, but afterwards suppressed. Population in 1901, 74,006.

RENTS said to have been first made payable in money, instead of in kind, about 1135. Numerous statutes have been enacted in various reigns to define the relations and regulate the dealings between landlord and tenant. 8 & 9 Vict. c. 106 (1845) regulates leases. By the act 8 Anne, 1709, no goods are removable from tenements under an execution until the rent shall have been paid to the landlord by the sheriff, 1709. The rental of England, including land, houses, and mines, was 6,000,000*l*. about the year 1600, and twelve years' purchase the value of land. About 1690, the rental amounted to 14,000,000*l*., and the land was worth eighteen years' purchase. *Davenant on the Revenues*. The rental of the United Kingdom was estimated during the nineteenth century at 127,000,000*l*.; Great anti-rent agitation in Ireland, 1879, *et seq.*; see *Land, Ireland*, and *Irish Land Act*, 1903.

REPEAL OF THE UNION, IRELAND. An Irish association was formed with this object under the auspices of Mr. O'Connell, in 1829. See *Home Rule and Ireland*.

A proclamation of the lord lieutenant prohibited the meetings of a society "leagued for the purpose of procuring a repeal of the union, under the name of the Irish Society for Legal and Legislative Relief, or the Anti-Union Society" . 18 Oct. 1830

The commons, by a majority of 484, reject Mr. O'Connell's motion for repeal . . . 27 April, 1834

A new association in 1841, 1842, and 1843 became more violent. Assemblies of the lower classes of the people were held in the last-named year, in various parts of Ireland, some of them amounting to 150,000 persons, and called "monster meetings."

A great meeting at Trim, 16 March; other meetings were held at Mullingar, Cork, and Longford, on 14, 21, and 28 May, respectively; at Drogheda, Kilkenny, Mallow, and Dundalk, on 5, 8, 11, and 29 June; at Donnybrook and Balinglass, 3 and 20 July; at Tara, 15 Aug.; at Loughrea, Clifton, and Lismore, 10, 17, and 24 Sept.; and at Mullaghmast . . . 1 Oct. 1843

A meeting to be held at Clontarf, on 8 Oct. was prevented by government; and Mr. O'Connell and his chief associates were brought to trial for political conspiracy, 15 Jan. 1844; and convicted 12 Feb.; but the sentence was reversed by the house of lords, 4 Sept.; see *Trials*.

The association for the repeal of the union continued for some time under the direction of Mr. John O'Connell, but was little regarded.

The total "repeal rent" is said to have amounted to 134,379*l*.

A fruitless attempt was made in Dublin to revive repeal agitation . . . 4 Dec. 1860

REPORTING. The publication of the debates in parliament is forbidden as a breach of privilege, but was virtually conceded, after a severe struggle, in 1771.* Reporters' galleries were erected in the houses of parliament after the fire of 1834. To the unfettered liberty of reporting we doubtless owe much of our freedom and good government; see under *Law*. By the verdict for the defendant in the case of *Wason v. The Times* (for libel) reports of parliamentary debates were decided to be privileged, Nov. 1868. For the attempted exclusion of reporters, see *Parliament*, 1875. A commons committee on reporting recommend continuance of Hansard's debates with improvement, May, 1879.

The publication of Hansard's parliamentary debates began 1803 and closed in 1888. Latterly a subsidy was granted. The publication of the debates was taken up by Messrs. Macrae, Curtrice & Co., Feb. 1889; and continued by the Hansard Publishing Union, limited, 1889; the Union ordered to be wound up, 13 May. See *Trials*, 1892-93.

Mr. Thomas Curson Hansard, formerly editor of the "debates," aged 78, dies . . . 12 Nov. 1891

Government contract with Reuter's Telegram company for printing and publishing reports of parliamentary debates, &c., 21 Dec. 1891; published 26 Feb. 1892

A select committee of the commons on parliamentary reporting, sir J. T. Hibbert chairman, met . . . 10 April, 1893

Tenders invited for three schemes of reporting, about 20 Dec. "

Tender accepted for 1895, by Waterlow, Sons & Co. . . . Jan. 1895

* Very inaccurate reports of parliamentary debates were inserted in the *Gentleman's Magazine* and other periodicals in the middle of the last century. Miller, printer of the *London Evening Mail*, was arrested in the city of London, by order of the house of commons, for publishing the debates, but was discharged by the lord mayor, who for doing this was sent to the Tower, where he remained until the end of the session. No opposition was made to the publication of the debates in the next session, 1772.

REPRESENTATION OF THE PEOPLE ACT FOR ENGLAND, passed 15 Aug. 1867; for Ireland and Scotland, 13 July, 1868; a new act passed, 6 Dec. 1884. See *Reform*.

The *Representative*, a daily Tory paper, was started by Mr. John Murray, the bookseller, in opposition to the *Times*, in 1826. Although he was assisted by Mr. Benjamin Disraeli and other eminent persons, the project was unsuccessful; the first number appeared 25 Jan., the last . . . 29 July, 1826

"REPTILE BUREAUCRACY," term applied in Germany to certain journalists writing for government pay, 1871, *et seq.*

REPUBLICANS, see *Democrats*. The name adopted by the Northern party in the United States, N.A., opposed to the democrats in the South. It is stated that the first delegate-nominating convention in the United States that adopted the name Republican party, was held in Strong, Franklin county, Maine, 7 Aug. 1854. Sir Charles Dilke, M.P. professed himself a republican at public meetings and was much applauded, Nov. 1871; but at some places his appearance led to riotous proceedings. His motion for returns respecting the expenditure of the civil list by the queen was negatived in the house of commons (2-276), 19 March, 1872. A national republican conference of delegates was held at Sheffield, 1 Dec. 1872, when a national flag was adopted.

REQUIEM, a solemn mass, sung for the dead, so called from the introit "Requiem Æternam," &c. Palestrina's Requiem was printed at Rome, 1591; Vittoria's at Madrid, 1605; Mozart's last work was a requiem, 1791.

REREDOS, the screen or decorated portion of the wall behind the altar in a church.

A highly sculptured reredos, designed by sir G. G. Scott, was erected in Exeter cathedral, by subscription . . . 1873

Prebendary Philpotts, the chancellor, and others who objected, brought their objections before the bishop's visitation court, on 7 Jan.; it was decided that the bishop had jurisdiction in the matter, and he ordered the reredos to be removed, 15 April, 1874. Dean Boyd appealed to the court of arches, and sir R. Phillimore reversed the previous decision . . . 6 Aug. 1874

Prebendary Philpotts appealed to the judicial committee of the privy council, who decided that the reredos should remain . . . 24 Feb. 1875

The magnificent reredos set up in St. Paul's Cathedral, London, was protested against as idolatrous by some of the London clergy, April, 1888. An action against the dean having been stopped by the bishop, the queen's bench division ordered the bishop to withdraw his veto upon the prosecution, 1 June, 1889. After further litigation, the house of lords sustained the bishop's veto . . . 20 July, 1891

RESERVE FORCES. In the summer of 1859, acts were passed to provide for the establishment of a military reserve force of men who have been in her majesty's service (not to exceed 20,000), and a volunteer reserve force of seamen not to exceed 30,000. These acts were consolidated and amended in 1867, 1882 and 1896. The reserve forces called out by proclamation, on account of possible war with Russia,

2 April, 1878. About 35,000 good soldiers appeared, and were commended. They were disbanded 31 Aug. 1878. Again called out on account of war in Egypt, 25 July, 1882, and prospect of war with Russia, 27 March, 1885. Average of army reserve: 1888, 55,068; 1890, 56,082; 1893, 76,874; 1896, 78,057; 1898, 80,000. Important changes to be made to meet exigencies during war time, act passed, 1 July, 1898.

The annual form of prayer, with thanksgiving, then appointed, was ordered to be disused by 22 Vict. c. 2, 25 March, 1849. See *France*, 1814, 1815.

RESTORATION CAMPAIGN, see *Zionists*.

RETREAT OF THE TEN THOUSAND GREEKS, who had joined the army of the younger Cyrus in his revolt against his brother, Artaxerxes Mnemon. The Greeks were victors, but Cyrus was defeated and slain at the battle of Cunaxa, 401 B.C. Artaxerxes having enticed the Greek leaders into his power and killed them, Xenophon was called to the command of his countrymen. Under continual alarms from sudden attacks, he led them across rapid rivers, through vast deserts, over the tops of mountains, till he reached the sea. The Greeks returned home after a march of 1155 parasangs or leagues (3465 miles), which was performed in 215 days, after the absence of fifteen months. This retreat has been immortalised by the account given by its conductor, in his "Anabasis Cyri" (Expedition of Cyrus).

* Revised in relation to army, navy, and India.

The weekly instead of the quarterly publication of the public revenue and expenditure was begun by Mr. Robert Lowe, the chancellor of the exchequer, 16 Feb. 1870. By an act passed 31 July, 1868, revenue officers are permitted to vote for the election of members of parliament. Above 100 statutes relating to inland revenue fell into disuse 1 Jan. 1871.

The revenue friendly societies, and national debt act, 45 & 46 Vict., c. 72, passed 18 Aug. 1882. New revenue act passed, 1884.

REVEREND, an honorary appellation given to the clergy, since the middle of the 17th century.

In Tamworth parish register the minister is first styled "reverend," in 1657, occasionally afterwards; but regularly so after 1727. It first appears in the registry of All Hallows, Barking . . . 1732

The prefix on a family tombstone was refused to Mr. Keet, a Wesleyan preacher, by the bishop of Lincoln, but given by the archbishop of Canterbury . . . 1874

On trial, Mr. Walter G. F. Phillimore, the chancellor of Lincoln, decided against Mr. Keet, who gave notice of appeal, 3 June. Sir R. Phillimore gave a similar decision in the court of arches, 31 July, 1875

On appeal to the privy council these decisions were reversed. It was decided that there is no law or usage restricting the epithet to ministers of the Church of England; it is merely laudatory.

REVIEWS. The *Journal des Savans*, published on 5 Jan. 1665, by Denis de Salo, under the

name of Hédouville, was the parent of critical journals. It was soon imitated throughout Europe, and was itself translated into various languages. It is still published. George III. spoke of this publication to Dr. Johnson, in the private interview with which he was honoured by his majesty, in the library of the queen's house, in Feb. 1767. *Boswell*. The *Bibliothèque Anglaise* came out in 1716-27; the *Revue Britannique*, founded 1825, ceased Dec. 1901. For Military REVIEWS, see *Aldershot, Army, and Volunteers*. For Naval REVIEWS, see *Navy*.

REVISERS, see under *Bible*.

REVISING BARRISTERS' COURTS, to examine the lists of voters for members of parliament, were instituted by the Reform Act of 1832.

REVISION, see under *Bible*. Advocates of the revision of the French constitution, chiefly Bonapartists or Jeromists, termed *Revisionists*, Feb. 1884.

REVIVALS on the subject of religion arose in the United States in 1857. In the autumn of 1859, they began in Scotland, the north of Ireland (particularly Belfast), and England. Many meetings were held for prayers and preaching throughout the week, as well as on Sundays. The "twelve days' mission," a series of revival services, took place in many London churches during advent, 1869.

Mr. Moody, preacher (born 1837, died 22 Dec. 1899), and Mr. Sankey, singer, American Revivalists, visited many towns in the United Kingdom, 1874-5. Their meetings in London began at the Agricultural-hall, 9 March, about 15,000 present; at the Queen's theatre, Haymarket, 12 April-31 May; farewell meeting, 12 July, 1875. Moody and Sankey again in London, 6 Oct. 1881; 3 Nov. 1883-23 June, 1884. See *Salvation Army*.

REVOLUTIONARY CALENDAR, see *French Revolution, and Calendar*.

REVOLUTIONARY TRIBUNAL, established at Paris, Aug. 1792.

Up to 27 July, 1794, when Robespierre was deposed, it had put to death 2774 persons, including queen Marie Antoinette, the princess Elizabeth, and a large number of nobility and gentry, male and female. The oldest victim was counsellor Dupin, aged 97; the youngest, Charles Dubost, aged 14. From 27 July to 15 Dec. 1794, only Robespierre and his accomplices (about 100) suffered by it.

Revolutions have been frequent in the South American republics.

[See the countries respectively.]

Among the results of the *Revolution* of 1688 in Great Britain, were the toleration act, the establishment of the presbyterian kirk of Scotland, the power of granting supplies limited to the house of commons, the purification of the administration of justice, and unlicensed printing.

REVOLVERS, see *Pistols*.

REVUE DES DEUX MONDES, the French literary and historical periodical published on the 1st and 15th of each month, first appeared in 1831. It includes among its contributors the most eminent writers in France.

REYNARD THE FOX, "REINEKE FUCHS," a satirical epic in low German, in which beasts are actors and speakers, was first printed as Reineke Vos, at Lubeck in 1498, and professes to be written by Hinreck van Alkmer. It has been frequently translated. Goethe's version in High (or literary) German hexameters appeared in 1794. Jacob Grimm has shown that the subject-matter of this "Thier-sage" or "beast-fable" is very ancient, many incidents being found in Pilpay and other oriental writers. The early French had a "Roman de Renart," and "Renart le Nouvel." A poem, entitled "der Reinaert," in Flemish, was known in the 11th century; Caxton's translation in English prose was printed 1481; a poetic English translation of Goethe's version, by T. J. Arnold, appeared in 1855.

REZONVILLE, BATTLE OF, 18 Aug. 1870, see *Metz*.

RHÆTIA (or RÆTIA), an ancient Alpine country, comprising the modern Grisons, Tyrol, and part of Lombardy, inhabited by a wild rapacious people, after a long struggle was conquered by Drusus and Tiberius, B.C. 15.

RHÉ, ISLE OF, see *Ré* and *Rochelle*.

RHEA, see *China Grass*.

RHEGIUM (now Reggio), S. Italy, a Greek colony, flourished in the 5th century, B.C. It was held by the Campanian legion, 281-271, afterwards severely punished for its rebellion. Reggio was taken by Garibaldi, Aug. 1860.

RHEIMS (N. France). The principal church here, built before 406, rebuilt in the 12th century, is now very beautiful. The corpse of St. Remy, the archbishop, is preserved behind the high altar, in a magnificent shrine. The kings of France were

crowned at Rheims; probably because Clovis, the founder of the French monarchy, when converted from paganism, was baptized in the cathedral in 496. Several ecclesiastical councils have been held here. The city was taken and retaken several times in the last months of the French war, 1814. University founded by cardinal Lorraine, 1547, suppressed about 1790. Strike of the workmen of Mr. Jonathan Holden, mill owner, a great benefactor to the town, May, 1890. Population, 1891, 104,186; 1901, 107,773.

RHEOMETER, see under *Electricity*.

RHETORIC. Rhetorical points and accents were invented by Aristophanes of Byzantium, 200 B.C. Rhetoric was first taught in Latin at Rome by Photius Gallus, about 87 B.C. He taught Cicero, who said "We are first to consider what is to be said; secondly, how; thirdly, in what words; and lastly, how it is to be ornamented." A regius professor of rhetoric was appointed in Edinburgh, 20 April, 1762, when Dr. Blair became first professor.

RHINE (Latin, *Rhenus*; German, *Rhein*; French, *Rhin*), a river, about 760 miles long, rising in Switzerland, receiving the Moselle, Main, Meuse, Neckar, and other rivers, terminating in many arms in Holland, and falling into the German ocean. On its banks are Constance, Basel, Strasbourg, Spire, Mannheim, Cologne, Düsseldorf, Utrecht, and Leyden. The possession of the banks of the Rhine has been the cause of many wars, and it has been crossed by the French above twenty times in a century. In the beginning of the revolutionary war, Custine invaded Germany by crossing it in 1792; and at the close of the war in 1815, France retained the left bank, but lost it at the close of the Franco-Prussian war, 1870-1 (*which see*). A navigation treaty with other powers was signed by France, 17 Oct. 1868. A central committee for the navigation exists, formed by members for Alsace, Lorraine, Baden, Bavaria, Hesse, Holland, and Prussia. Very great damage (about 4,000,000*l.*) and loss of life, caused by the rising of the river through excessive rain, end of November and December, 1882; relieved by government grants.

Becker's German song "They shall not have it, the free German Rhine;" and Alfred de Musset's reply, in French, "We have had it, your German Rhine," appeared in 1841. Max Schneckenburg, author of "The Watch on the Rhine," died 1851. All were popular during the war, 1870-71.

RHINOPLASTY, an operation performed by dissecting a flap of skin from the forehead and placing it over the nose.

RHODE ISLAND (N. America), settled by Roger Williams about 1636, was taken in the war of independence by the British, 8 Dec. 1776; but was evacuated by them, 25 Oct. 1779. Capitals, Providence and Newport. Population in 1880, 276,531; 1890, 345,506; 1900, 428,556; see *United States*.

RHODES, an island on the coast of Asia Minor, is said to have been peopled from Crete, as early as 916 B.C. The Rhodians were great navigators, and institutors of a maritime code afterwards adopted by the Romans. The city was built about 408 and flourished 300-200 B.C.; see *Colossus*. Rhodes, long an ally of the Romans, was taken by the emperor Vespasian, A.D. 71. It was held by the Knights Hospitallers from 1309 to 1522, when it was conquered by the Turks, who still retain it. The knights retired to Malta (*which see*). Rhodes suffered severely by an earthquake on 22 April, 1863.

RITCHIE'S ACT, see under *Local Government*.

RITUALISTS, a name given in 1866 to a party in the church of England, formerly termed Puseyites, who endeavoured to give a more imposing character to public worship, by the use of coloured vestments, lighted candles, incense, &c., professing to go back to the practices of the church in the time of Edward VI. An exhibition of these things was held during the church congress at York in Oct. 1866, but was not officially connected with it. The practices of the ritualists (said by Mr. Disraeli to be symbolical of doctrines they were bound to renounce), were censured in several episcopal charges in Dec. 1866; in two reports of the ritualistic commission, 19 Aug. 1867, and April, 1868, and by the judicial committee of the privy council on appeal, 23 Dec. 1868. See *Church of England* and *Trials, 1867-9*. At a general convocation of the American episcopal church at Philadelphia, 27, 28 Oct. 1868, after a warm discussion on ritualism, the discussion was adjourned. It was renewed at the convocation 10 Oct. 1874, and the ritualists were defeated by the evangelical party, a stringent canon on ceremonies being passed 27 Oct. The "Public Worship Regulation Act" was passed 7 Aug. 1874, for the repression of ritualism in England. Clerical declaration on ritual, see *Times, 13 July, 1903*. RIVOLI (near Verona, N. Italy). Near here the Austrians defeated the French, 17 Nov. 1796; and were defeated by Bonaparte 14, 15 Jan. 1797. Massena was made duke of Rivoli for his share in the actions.

ROAD CLUB, established in the autumn of 1874 in London, by gentlemen interested in the revival of coaching.

ROAD MURDER. On the night of 29-30 June, 1860, Francis Savile Kent, four years old, was murdered, and his body hid in a garden

water-closet at Road. His step-sister Constance Kent (aged sixteen), and the nurse Elizabeth Gough (the first suspected), were discharged for want of evidence. The coroner was severely blamed for charging the jury improperly, but the court of queen's bench, in Jan. 1861, refused to issue a writ for a new inquiry. Constance Kent, on 25 April, 1865, before sir Thomas Henry at Bow-street, and at her trial at Salisbury, on 21 July following, confessed herself to be guilty of the murder. Her punishment was commuted to penal servitude for life. Let out on ticket-of-leave, 18 July, 1885. Road is near Frome, Somerset.

ROADS, see *Roman Roads*. The first general repair of the highways of this country was directed about 1285. Acts were passed for the purpose in 1524 and 1555, followed by others in Elizabeth's and succeeding reigns. Roads through the Highlands of Scotland were begun by general Wade in 1726. Loudon M'Adam's roads were introduced about 1818. Wooden pavements were tried with partial success in the streets of London: at Whitehall in 1839, and in other streets in 1840; asphalt pavement soon after. An act "for the better management of the highways" was passed in 1862 after much opposition; another, 16 Aug. 1878; also regulated the use of locomotives on roads. Steam road-rollers were tried in 1867; used in London 18 March, 1868: see *Macadamising, Tolls, and Wooden Pavements*. Committee on Highways appointed, 18 March, 1903, report issued, 29 Sept. 1903.

ROAD STEAMERS. Mr. R. W. Thomson, of Edinburgh, in 1868, by adding india-rubber to the tires of the wheels of locomotives is considered to have solved the question of steam traction on common roads. Road steamers have been successfully employed in Edinburgh and Leith for drawing heavy waggons up inclined planes, and are adaptable to any draught work. They were tried at Woolwich, 1 Oct. 1870, and reported successful by eminent authorities; and their application to ploughing by lord Dunmore was exhibited 1 Feb. 1871.

ROANOAKE, an island off N. Carolina, U.S., discovered by sir Walter Raleigh, 1584, and settled by him, 1585, without success. Other settlers also failed.

ROASTING ALIVE. An early instance is that of Bocchoris, king of Egypt, by order of Sabacon of Ethiopia, 737 B.C. *Lenglet*. Sir John Oldcastle, lord Cobham, was thus put to death in 1418, and Michael Servetus for heresy at Geneva, 27 Oct. 1553; see *Burning Alive, and Martyrs*.

ROBBERS were punished with death by Edmund I's laws, which directed that the eldest robber should be hanged. Remarkable robbers in England were Robin Hood, 1189 (see *Robin Hood*), and Claud Du Val, "executed at Tyburn," says an historian quaintly, "to the great grief of the women," Jan. 1670. In Ireland, the famous Mac-Cabe was hanged at Naas, 19 Aug. 1691. Galloping Hogan, the rapparee, flourished at this period. Freney, the celebrated highwayman, surrendered himself, 10 May, 1749. The accomplished Barrington was transported, 22 Sept. 1790. See *Trials*.

ROBIN HOOD, captain of a band of robbers, in Sherwood forest, Nottinghamshire; traditionally reported to have been the earl of Huntingdon, disgraced and banished the court by Richard I. at his accession (1189): Robin Hood and Little John and

their band are said to have continued their deceptions till 1247, when Robin died. *Stow*. Lord Tennyson's drama, "The Foresters; Robin Hood and Maid Marian," first represented at New York on account of the American copyright law, end of March, 1892.

"ROBINSON CRUSOE," by Daniel De Foe; the first part appeared in 1719. See *Juan Fernandez*. Three old ladies, Mary Ann, Jane Amelia, and Sarah Frances De Foe, lineally descended from De Foe, pensioned by queen Victoria, May, 1877.

ROBURITE, a German explosive invented by Dr. Carl Roth, reported 1888.

ROCHDALE, Lancashire. A charter was obtained for a market by Edmund de Lacy, 1241, and the grammar school was founded 1564. Rochdale canal was opened 1804. The new town was commenced in 1865. Rochdale first sent a member to parliament in 1832. The woollen manufacture was carried on in the 16th century. The first cotton mill was erected in 1795. Theatre royal and opera house, built in 1867, destroyed by fire, 27 Jan. 1894. Population, 1881, 68,866; 1891, 71,458; 1901, 83,112.

ROCHEFORT (W. France), a seaport on the Charente. The port was made by Louis XIV. in 1666. In Aix-roads or Basque-roads, near Rochefort, capt. lord Cochrane attacked the French fleet and destroyed four ships, 11-12 April, 1809. Near Rochefort, the emperor Napoleon surrendered himself to capt. Maitland of the *Bellerophon*, 15 July, 1815.

ROCHELLE (W. France), a seaport on the Atlantic, belonging to the English for some time, but finally surrendered to the French leader, Du Guesclin, in 1372. As a stronghold of the Calvinist party, it was vainly besieged by the duke of Anjou in 1573; and was taken after a siege of thirteen months by cardinal Richelieu in 1628. The duke of Buckingham was sent with a fleet and army to relieve it; but the citizens declined to admit him. He attacked the isle of Rhé, near Rochelle, and failed, 22 July, 1627. He was repulsed 8 Nov. following. A conspiracy here in 1822 caused loss of life to sergeant Bories and others.

to beseech. Extraordinary prayers and supplications for these three days are said to have been appointed in the third century, as a preparation for the devout observance of our Saviour's ascension on the next day succeeding to them, denominated Holy Thursday or Ascension-day. The whole week in which these days happen is styled Rogation week; and in some parts it is still known by the other names of Crop week, Grass week, and Procession week. The perambulations of parishes have usually been made in this week.

ROHAN, an illustrious family, descended from the ancient sovereigns of Brittany. Henri de Rohan, son-in-law of the great Sully, after the death of Henry IV. (14 May, 1610), became head of the Protestant party, and sustained three wars against Louis XIII. He eventually entered the service of the duke of Saxe-Weimar, and died of wounds received in battle in 1638. Of this family was the cardinal de Rohan; see *Diamond Necklace*.

ROHILCUND, a tract of country, N.E. India, was conquered by the Rohillas, an Afghan tribe, who settled here about 1747. After aiding the sovereign of Oude to overcome the Mahrattas, they were treated with much treachery by him, and nearly exterminated. Rohileund was ceded to the British in 1801. After the great mutiny, Rohileund was tranquillised in July, 1858.

On the banishment of the Jews in 1290 the buildings now called the Rolls, and the chapel, were annexed by patent to the office of the keeper or master of the rolls of chancery, from which circumstance they took their name. A number of public records from the time of Richard III., kept in presses in this chapel, have been removed to the Record Office (*which see*). The Rolls chapel was pulled down in July, 1892.

ROMAGNA, a province of the papal states, comprised in the legations of Bologna, Ferrara, Forli and Ravenna. It was conquered by the Lombards; but taken from them by Pepin, and given to the pope, 753. In 1859 the Romagna threw off the temporal authority of the pope, and declared itself subject to the king of Sardinia, who accepted it in March, 1860. ROMAN LAW, see *Codes*; ROMAN LITERATURE, see *Latin*.

ROMAN ROADS IN ENGLAND. Our historians maintain, but are mistaken, that there were but four of these roads. *Camden*. "The Romans," says Isidore, "made roads almost all over the world, to have their marches in a straight line, and to employ the people;" and criminals were frequently condemned to work at such roads, as we learn from Suetonius, in his life of Caligula. They were commenced and completed at various periods, between the 2nd and 4th centuries, and the Roman soldiery were employed in making them, that inactivity might not give them an opportunity to raise disturbances. *Beae*.

1st, WATLING-STREET, so named from Vitellianus, who is supposed to have directed it, the Britons calling him in their language *Guetlain* (from Kent to Cardigan Bay).

2nd, IKENILD, or IKENILD-STREET, from its beginning among the *Icenii* (from St. David's to Tynemouth).

3rd, FOSSE, or FOSSE WAY, probably from its having been defended by a fosse on both sides (from Cornwall to Lincoln).

4th, ERMIN-STREET, from *Irmunsul*, a German word, meaning Mercury, whom our German ancestors worshipped under that name (from St. David's to Southampton).

ROMAN WALLS. One was erected by Agricola (79 to 85) to defend Britain from the incursions of the Picts and Scots; the first wall extended from the Tyne to the Solway firth (80 miles); the second from the firth of Forth, near Edinburgh, to the firth of Clyde, near Dumbarton (36 miles). The former was renewed and strengthened by the emperor Adrian (121), and by Septimius Severus (208). It commenced at Bowness, near Carlisle, and ended at Wallsend near Newcastle. It had battlements and towers to contain soldiers. The more northern wall was renewed by Lollius Urbicus, in the reign of Antoninus Pius, about 140. Many remains of these walls still exist, particularly of the southern one; Dr. J. C. Bruce's "*Roman Wall*," published 1853-1868.

ROMANCE, originally a composition in the Romance or Provençal idiom. The term in the middle ages was extended to narrative poetry in general. Heliodorus, a bishop of Tricea, in Thessaly, about 398, was the author of *Æthiopia* (relating to the loves of Iphigene and Charicleia), the first work in this species of writing. The first part of the "*Roman de la Rose*" was written by Guillaume de Lorres (1226-70); the second, a separate poem, by Jean de Meung (1285-1314), the Decameron of Boccaccio was published, 1358; Don Quixote, by Cervantes, 1605; Gil Blas, by Le Sage, 1715. Duplois's "*History of Fiction*," published 1814. See *English Language*; "*Reynard the Fox*."

ROME. The foundation of the city, by Romulus, was laid on the 20th April,* according to Varro, in the year 3961 of the Julian period (753 years before the birth of Christ, and in the fourth year of the sixth Olympiad. Other dates given: Cato, 751; Polybius, 750; Fabius Pictor, 747; Cincius, 728 B.C.). The Romans conquered nearly the whole of the then known world. In the time of Julius Cæsar, the empire was bounded by the Euphrates, Taurus, and Armenia on the east; by Æthiopia on the south; by the Danube on the north; and by the Atlantic on the west. Numerous ecclesiastical councils have been held at Rome, from 197 to 1869-70. Population, 1872, about 240,000; 1877, 250,000; 1881, 300,467; 1890, 423,217; 1901, 463,000. Chiefly through the exertions of Mr. John Henry Parker of Oxford, the Roman exploration fund was established, for the preservation of ancient architectural remains. His "*Archæology of Rome*" (with many photographs) published, 1874-8. Professor J. H. Middleton's works on "*Ancient Rome*," published 1885, 1888, and 1892. The Italian government votes 1200*l.* a year for a similar purpose. The early history of Rome is legendary, and the dates *purely conjectural*. It has been greatly elucidated by the researches of B. G. Niebuhr, whose Roman history was published 1811 and 1827-30, and still further by Dr. Mommsen in his history of Rome, 1854. He died 1 Nov. 1903.

* In its original state, Rome was but a small castle on the summit of mount Palatine; and the founder, to give his followers the appearance of a nation or a barbarian horde, was obliged to erect a standard as a common asylum for criminals, debtors, or murderers, who fled from their native country to avoid the punishment which attended them. From such an assemblage a numerous body was soon collected, and before the death of the founder, the Romans had covered with their habitations the Palatine, Capitoline, Aventine, and Esquiline hills, with Mounts Cælius and Quirinalis.

RÖNTGEN RAYS, see *Surgery*, 1896. Prof. W. C. Röntgen while experimenting with a Crooke's vacuum tube, electrically excited, and enveloped in a black covering, observed that some rays proceeding from the tube passed through the black paper and affected a fluorescent screen at a distance of two yards, 8 Oct. 1895. See *Vacuum*.

The continued researches proved that many substances opaque to ordinary light were transparent to these rays, as flesh, wood, &c.; the shadows of such objects thrown on a screen can be photographed; the interior of a dead monkey was photographed with great distinctness, *Lancet*, March, 1896.

The movements of the bones in living animals were exhibited by these rays by means of a cinematograph, in 1897 *et seq.* These rays have the power of dis-electrifying electrified bodies.

The rays are much utilized in surgery; 416 cases at St. Thomas's hospital were reported in 1897; very successful in military surgery in 1898 *et seq.*

The Röntgen society founded, prof. Silvanus P. Thompson, president, June; first meeting in London, 5 Nov. 1897 (see *Radiographs*).

Experiments by dr. Heineke in Leipzig show röntgen rays exert a harmful effect on the internal organs of the body, reported, 9 Dec. 1903.

ROSE, see under *Flowers*. The rose, a symbol of silence, gave rise to the phrase *sub rosa*, "under the rose;" said, by Italian writers, to have risen from the circumstance of the pope's presenting consecrated roses, which were placed over the confessionals at Rome, to denote secrecy, 1526. The pope sent a *golden rose* to the queen of Spain, which was given to her with much solemnity, 8 Feb. 1868. ROSE'S ACT, 33 Geo. III. c. 54 (1793) brought benefit societies under the control of government.

ROSES, WARS OF THE, between the Lancastrians (who chose the red rose as their emblem) and the Yorkists (who chose the white rose), 1455-1485. It is stated that in the Wars of the Roses there perished 12 princes of the blood, 200 nobles, and 100,000 gentry and common people. The union of the roses was effected in the marriage of Henry VII. with the princess Elizabeth, daughter of Edward IV. 1486.

Richard II., who succeeded his grandfather Edward III. in 1377, was deposed and succeeded in 1399 by his cousin Henry IV. (son of John of Gaunt, duke of Lancaster, the fourth son of Edward III.), in prejudice to the right of Roger Mortimer (grandson of Lionel, duke of Clarence, Edward's third son), who was declared presumptive heir to the throne in 1385

Roger's grandson, Richard duke of York, first openly claimed the crown in 1449
 Attempts at compromise failed, and the war began in 1455

The Lancastrians were defeated at St. Albans; the protector Somerset was slain; a truce was made, and Richard was declared successor to Henry VI. 23 May, 1455

The war was renewed, and the Yorkists defeated the Lancastrians at Bloreheath 23 Sept. 1459
 The Yorkists eventually dispersed, and the duke was attainted.

He defeated his opponents at Northampton, took Henry prisoner, and was declared heir to the crown; but fell into an ambush near Wakefield, and was put to death 31 Dec. 1460

His son (Edward) continued the struggle; was installed as king 4 March, 1461
 Defeated the Lancastrians at Towton 20 March, "
 Was deposed by Warwick, who restored Henry VI. Sept. 1470

Edward defeated the Lancastrians at Barnet, 14 April, and finally at Tewkesbury 4 May, 1471
 The struggle ended with the defeat and death of Richard III. at Bosworth 22 Aug. 1485

ROSETTA (in Egypt), taken by the French in 1798; and by the British and Turks, 19 April, 1801. The Turks repulsed the British here, 22 April, 1807. Near Rosetta was fought the battle of the Nile, 1 Aug. 1798; see *Nile*. Mehemet Ali rendered great service to his country by constructing a canal between Rosetta and Alexandria.

The *Rosetta Stone*, discovered by the French in 1799, was brought from Rosetta in a French vessel, from whence it was taken by Mr. Wm. R. Hamilton, who deposited it in the British Museum. In 1841, Mr. Letronne published the text and a translation of the Greek inscrip-

tion. It is a piece of black basalt, about 3 ft. long and $2\frac{1}{2}$ ft. wide, with an inscription in three languages, viz., hieroglyphics, modified hieroglyphics (demotic or enchorial), and Greek, setting forth the praises of Ptolemy Epiphanes (about 196 B.C.). It was studied by Dr. T. Young and especially by J. F. Champollion, whose works were published 1814-1845. Champollion's method was adopted by Rosellini, and extended by Lepsius, Bunsen, Birch, Brugsch, and others. Champollion discovered that the hieroglyphs represented sounds by an initial letter, and after studying the "Ritual of the dead," published a grammar and dictionary.

ROSICRUCIANS, a sect of mystical philosophers who appeared in Germany in the 14th century. It is asserted that their founder was a noble German monk named Christian Rosencreutz, born 1378, who travelled in Arabia, Egypt, Africa, and Spain; returned to Germany and founded the fraternity of the Rosy Cross, and died aged 102. The *Fama Fraternalitatis* and the *Confessio Rosæ Crucis*, 1615, the latter attributed to Johann Valentin Andreas and others, are important works. They swore fidelity, promised secrecy, and wrote hieroglyphically, and affirmed that the ancient philosophers of Egypt, the Chaldeans, Magi of Persia, and Gymnosophists of the Indies, taught the same doctrine.

Mr. Arthur E. Waite's elaborate work "The Real History of the Rosicrucians" published in 1887.

ROSS, Cork (S. Ireland), a bishopric founded, it is supposed, by St. Fachnan, in the beginning of the 6th century. It was united to Cork in 1340, and Cloyne to both, by the Irish Church Temporalities act (1833); see *Bishops*; *New Ross*.

ROSTRUM (plural *rostra*), a beak, the name given to the prows of ships, which were affixed to the front of the platform (hence termed *rostra*), erected between the comitium and the forum in Rome, whence the tribunes addressed the people. The custom is said to have begun with the ships of Antium, taken during the Latin war, which ended 33 B.C.

ROTA CLUB, a society who met at Miles's Coffee-house in New Palace-yard, Westminster, during the administration of Oliver Cromwell; their plan was that all the great officers of state should be chosen by ballot; and that a certain number of members of parliament should be changed annually by rotation, from whence they took their title. Sir William Petty was one of the members in 1659. *Biog. Brit.*

Population, 1881, 8,329; 1891, 9,034; 1901, 9,383.

ROTHESAY CASTLE, see *Wrecks*, 1831.

ROTHSCHILD FAMILY. Meyer Am-schel, or Anselm, was born at No. 148, Judengasse (Jew-lane), Frankfort, in 1743. In 1772 he began business as a money-lender and dealer in old coins, in the same house, over which he placed the sign of the red shield (in German, Roth Schild). Having had dealings with the landgrave of Hesse, that prince entrusted him with his treasure (said to have

been 250,000*l.*) in 1806, when the French held his country. With this sum as capital, Anselm traded and made a large fortune, and restored the 250,000*l.* to the landgrave in 1815. At his death his sons continued the business as partners. His son, Nathan, began at Manchester in 1798, removed to London in 1803; and died immensely rich, 28 July, 1836. ROYAL ACADEMY. A society of artists met in St. Peter's-court, St. Martin's-lane, about 1739, which Hogarth established as the society of Incorporated Artists, who held their first exhibition at the Society of Arts, Adelphi, 21 April, 1760. From this sprang the Royal Academy, in consequence of a dispute between the directors and the

fellows. On 10 Dec. 1768, the institution of the present Royal Academy was completed under the patronage of George III.; and sir Joshua Reynolds, knighted on the occasion, was appointed its first president. *Leigh*. The first exhibition of the academicians (at Pall-Mall) was on 26 April, 1769, when 136 works appeared. In 1771 the king granted them apartments in old Somerset-house, and afterwards, in 1780, in new Somerset-house, where they remained till 1838, when they removed to the National Gallery. Among the professors have been Johnson, Gibbon, Goldsmith, Macaulay, and Hallam. Turner, the painter, gave funds to the academy for the award of a medal triennially for landscape-painting, which was awarded to Mr. N. O. Lupton in 1857. A commission of inquiry into the affairs of the academy, appointed in 1862, recommended various changes in July, 1863, which were carried into effect. The hundredth anniversary of the foundation of the academy was celebrated to Dec. 1868. The Royal Academy held its first exhibition in Burlington-house, Piccadilly, 3 May, 1869. The annual exhibition of pictures by the old masters, with some British, began 3 Jan. 1870. The money received has been devoted to the establishment of a professorship of chemistry and a laboratory, &c. In 1874 the exhibition included many of Landseer's pictures.

Sir Francis Chantrey, sculptor, died 25 Nov. 1841. At the death of his wife Jan. 1875, in conformity with his will, about 3000l. a year accrued to the Academy for the purchase of works of art for the nation, and other purposes.

The court of appeal upholds Mr. justice North's decision that the works of sculpture purchased must be finished in marble or bronze, and not models, June, 1889.

The gallery containing the sculptures of John Gibson, bequeathed by him, was opened free, 27 Nov. 1876.

ROYAL HUMANE SOCIETY (London), see *Humane Society*.

ROYAL INSTITUTION OF GREAT BRITAIN, the earliest of the kind in London, was founded 9 March, 1799, by count Rumford, sir Joseph Banks, earls Spencer and Morton, and several other noblemen and gentlemen. It received the immediate patronage of George III., and was incorporated 13 Jan. 1800, by royal charter, as "The Royal Institution of Great Britain, for the diffusing knowledge, and facilitating the general introduction of useful mechanical inventions and improvements, and for teaching, by courses of philosophical lectures and experiments, the application of science to the common purposes of life." It was enlarged and extended by an act of parliament in 1810; the original plan, as drawn up by count Rumford, in 1799, having been considerably modified. The members are elected by ballot, and pay ten guineas on admission, and five guineas annually, or a composition of sixty guineas. "The Royal Institution, its Founder, and its first Professors," by Dr. Bence Jones, hon. sec., published 1871.

The **HOUSE** (in Albemarle-street, Piccadilly) was purchased in June, 1799, and the present front was added by subscription in 1838. The Lecture theatre was erected in 1800-1, under the superintendence of Mr. T. Webster.

The **LABORATORY** established in 1800; was rebuilt, with the modern improvements, 1872.

The **LIBRARY** was commenced in 1803, by the munificent subscriptions of the proprietors of the institution. It now comprises about 60,000 volumes. Classified catalogues (by W. Harris) were published in 1809 and 1821; new ones (by B. Vincent) in 1857 and 1882.

The **MUSEUM** contains original philosophical apparatus of Young, Cavendish, Davy, Faraday, and De la Rue. The first **LECTURE** was delivered 4 March, 1800, by Dr. Garnett, he being the first professor of natural philosophy and chemistry.

In Aug. he was succeeded by Dr. Thomas Young, so celebrated for his researches in optics, resulting in the discovery of the interference of light, and the establishment of the theory of undulation. His "Lectures on Natural Philosophy and the Mechanical Arts," first published in 1807, are still considered a text-book of physical science. His works on antiquarian literature (hieroglyphic inscriptions, &c.) are highly esteemed.

In Feb. 1801, Mr. (afterwards sir Humphry) Davy was engaged as assistant lecturer and director of the laboratory, and on 31 May, 1802, he was appointed professor of chemistry. His lectures were eminently successful, and his discoveries in chemistry and electricity have immortalised his name, and conferred honour on the institution. By him the alkaline metals potassium and sodium, were discovered in 1807; the nature of chlorine was determined in 1810, and the safety-lamp invented in 1815.

William Thomas Brande succeeded sir Humphry Davy as professor of chemistry in 1813, and held that office till his resignation in 1852, since which time, till his death (Feb. 1866), he was hon. professor. From 1816 to 1850 he delivered, in the laboratory of this institution, his celebrated chemical lectures to students.

In 1813 Michael Faraday (born 22 Sept. 1791), on the recommendation of sir H. Davy, was engaged as assistant in the laboratory, and in 1825 as its director; in 1827 he became one of the permanent lecturers of the institution. In 1820 he commenced those researches

in electricity and magnetism which form an era in the history of science. In 1823-4 he discovered the condensability of chlorine and other gases; in 1831 he obtained electricity from the magnet; in 1845 he exhibited the two-fold magnetism of matter, comprehending all known substances, the magnetism of gases, flame, &c.; in 1850 he published his researches on atmospheric magnetism: died, 25 Aug. 1867.

In 1804, sir J. St. Aubyn and other gentlemen proposed to form a SCHOOL OF MINES at this institution; but the plan, although warmly supported by the members, was withdrawn for want of encouragement by the government and by mining proprietors.

THE WEEKLY EVENING MEETINGS, on the Fridays, from January to June, as now arranged, commenced in 1826. Discourses (of which abstracts have been printed, 1851 *et seq.*) are given at these meetings by the professors of the institution and other eminent scientific men.

ENDOWMENTS. In 1833, John Fuller, esq., of Rosehill, endowed two professorships, of chemistry and physiology; the former bestowed on Mr. Faraday for life; succeeded by Dr. Wm. Odling, 1868-73; by Dr. John Hall Gladstone, 1874, died 7 Oct. 1902; by James Dewar, 1877. In 1843 the establishment of a school of practical chemistry in the institution approved by profs. Faraday and Brande was proposed but failed.

On 2 July, 1894, the scheme was revived by Mr. Ludwig Mond, F.R.S. and M.R.I., who presented to the institution the house adjoining, with a proposal for its transformation into a laboratory, to be termed the DAVY-FARADAY RESEARCH LABORATORY. He supplied the funds necessary for the incidental expenses of the work, and also gave an endowment sufficient to maintain a staff of professors and assistants, and to supply everything necessary for the prosecution of scientific

research, especially in pure chemistry and physical science. The laboratory is an adjunct to the Royal Institution, and is open, conditionally, to independent private research. The conveyance and deed of trust dated 8 June, 1896. The laboratory is subject to a committee appointed by the managers of the institution, the first directors being lord Rayleigh and prof. James Dewar. Dr. Alexander Scott appointed superintendent, 1896. The laboratory was opened by the prince of Wales, after an historical address by Dr. Ludwig Mond, followed by experiments in liquid air, by prof. Dewar, 22 Dec. *Times*, 23 Dec. 1896.

ROYAL SOCIETY (London). In 1645 several learned men met in London to discuss philosophical questions and report experiments; the *Novum Organon* of Bacon, published in 1620, having given great impulse to such pursuits. Some of them (Drs. Wilkins, Wallis, &c.), about 1648-9, removed to Oxford, and with Dr. (afterwards bishop) Seth Ward, the hon. Robert Boyle, Dr. (afterwards sir) W. Petty, and several doctors of divinity and physic, frequently assembled in the apartments of Dr. Wilkins, in Wadham college, Oxford. They formed what has been called the Philosophical Society of Oxford, which only lasted till 1690. The members were, about 1658, called to various parts

of the kingdom, on account of their respective professions; and the majority coming to London, constantly attended the lectures at Gresham college, and met occasionally till the death of Oliver Cromwell, 3 Sept. 1658; see *Societies, and Scientific Papers*. "Record of Royal Soc." issued 1897.

The society was organised in 1660, and constituted by Charles II. a body politic and corporate, by the appellation of "The President, Council, and Fellowship of the Royal Society of London, for improving Natural Knowledge," 22 April, 1662.

Henry Oldenburg, the first secretary, an eminent philosopher, a native of Bremen, a friend of Milton, Boyle, Wilkins, Wallis, and Petty, died Sept. 1677.

Evelyn records the first anniversary meeting, St. Andrew's-day, 30 Nov. 1663.

The *Philosophical Transactions* begin 6 March, 1664-5.

In 1668 Newton invented his reflecting telescope (now in the possession of the society), and on 28 April, 1686, presented to the society the MS. of his *Principia*, which the council ordered to be printed. This was done under the superintendence and at the expense of Halley the astronomer, at that time clerk to the society.

The society met for some years at Gresham College, and afterwards at Arundel House (1666), where it came into possession of a valuable library, presented by Mr. Howard, grandson of its collector, the earl of Arundel. After various changes the fellows returned to Gresham College, where they remained till their removal to Crane-court, in a house purchased by themselves, 8 Nov. 1710.

The Croonian lecture was founded in 1701; the Bakerian lecture by Henry Baker, 1774.

The first Copley medal was awarded to Stephen Gray in 1731; the royal medal to John Dalton, 1826; the Rumford medal (instituted in 1797) to count Rumford himself in 1800.

The society remove to apartments granted them in Somerset-house, 1780; to apartments in Burlington-house, Piccadilly, 1857.

Parliament votes annually 4000*l.* to the Royal Society for scientific purposes; raised to 5,000*l.* in 1895.

Regulations made by which only fifteen fellows are to be annually elected, who pay ten pounds on admission, and four pounds annually, or a composition of sixty pounds, March, 1847. In consequence, the number of fellows was reduced from 839 in 1847, to 626 in 1866; to 567 in 1875; to 552 in 1877; to 523 in 1888; 511 in 1893.

The entrance fee abolished, and the annual payment reduced to 3*l.*, announced, Nov. 1878.

The "Royal Society Scientific Fund" was founded in imitation of the "Literary Fund" in 1859; see *Scientific Fund*.

The Davy medal (*which see*) first awarded, Nov. 1877.

The Darwin medal (*see Development*) first awarded, 1890.

The Croonian lecture given by prof. Virchow, of Berlin, 16 March, 1893.

Sir Wm. Mackinnon bequeaths over 16,000*l.* to the society, announced Dec. 1897.

RUBICON, a small river flowing into the Adriatic sea, separated Cisalpine Gaul from Italy proper. Roman generals were forbidden to pass this river at the head of an army. Julius Cæsar did so, Jan. 49 B.C., and thereby began a revolt and deadly civil war.

RUBIDIUM, an alkaline metal, discovered by Bunsen by means of the spectrum analysis, and made known in 1861.

RUBRICS, directions in church offices, often printed in red. New ones for the English service agreed to by convocation, 4 July, 1879.

RUBY MINES OF BURMAH, Tavernier (middle of the 17th century) describes it as a place where rubies and other precious stones are largely obtained, in a country difficult of access. Similar accounts were given by Father Giuseppe d'Amato, about 1830. The largest stones were royal property. Mr. Bredemeyer had charge of these and other mines in 1868. Revenue about 1855, from 12,500*l.* to 15,000*l.* per annum. These mines are now British property (see under *Burma*, 1885), and for the use of them a revenue is paid by the Shan tribes, 1887. RUFFLES became fashionable about 1520; and went out about 1790.

RUGBY SCHOOL (Warwickshire), was founded in 1567 by Lawrence Sheriff, a London tradesman; its arrangements were affected by the Public Schools act 1868. Dr. Thomas Arnold, the historian, entered on the duties of head-master here in August, 1828, and under him the school greatly prospered. He died 12 June, 1842. His successors

were Drs. Tait, Goulburn, Temple, Hayman, Jex Blake, Percival and H. A. James (since 1895). See *New Rugby*.

Dr. H. Hayman was opposed by the masters of the school, and after much dissension and discussion, was dismissed by the trustees, Dec. 1873, and Dr. Jex Blake elected in his room, Feb. 1874. Succeeded by Rev. J. Percival, Nov. 1886 (created bp. of Hereford, 1895); the rev. H. A. James elected, 21 March, 1895. Vice-Chancellor Malins decided against Dr. Hayman in his attempt to set aside his dismissal, but expressed his own opinion on "the grievous hardship of Dr. Hayman's case," 21 March, 1874.

Mr. Disraeli, the premier, presented Dr. Hayman to the living of Aldingham, Lancashire, April, 1874. Population of Rugby in 1881, 9,891; 1891, 11,262; 1901, 16,830.

"RULE, BRITANNIA." The words are by James Thomson (altered by Mallet); the music, ascribed to Dr. Arne, is said by Schœlcher (in his life of Handel) to have been taken from an air in Handel's "Occasional Oratorio" composed 1746, but the song and music were really printed in Dr. Arne's masque of "Alfred," 1740. *Grove*.

RULE-OF-THE-ROAD, see *Seas*.

RULING MACHINES, used for ruling paper with faint lines, for merchants' account-books, &c. They were invented by an ingenious Dutchman, resident in London, in 1782, and were subsequently greatly improved by Woodmason, Payne, Brown, and others. They were improved in Scotland in 1803. An invention has lately rendered account-books perfect by the numbering of the pages with types, instead of the numbers being written by a pen, so that a page cannot be torn out from them without being discovered. The late Herr F. A. Nobert devised a ruling machine in 1845 for the production of microscopical test plates, diffraction gratings, and micrometers, specimens of which were exhibited in 1851. The test plates contain bands of lines in a graduated series of fineness from 10000 to 200000 of a Paris line.

RUM (French *rhum*), ardent spirit distilled from sugar lees and molasses, deriving its peculiar flavour from a volatile oil. Rum is principally made in the West Indies. The duty (since 1900) on rum imported into the United Kingdom is 11s. 4d. per gallon, 1s. additional per gallon if imported in bottle (since 1899).

RUSSELL TRIAL. William, lord Russell's trial for complicity in the Rye-house plot was marked by a most touching scene. When he requested to have some one near him to take notes to help his memory, he was answered, that any of his attendants might assist him; upon which he said "My WIFE is here, and will do it for me." He was belated in Lincoln's-lun-Fields, 21 July, 1683. Lady Russell survived him forty years, dying 29 Sept. 1723, in her eighty-seventh year. His attainder was reversed, 1 Will. III. 1689.

RUSSIA, the eastern part of ancient Sarmatia. The name is generally derived from the Roxolani, a Slavonic tribe. Ruric, a Varagian chief, appears to have been the first to establish a government, 862. His descendants ruled amid many vicissitudes till 1598. The progress of the Russian power under Peter the Great and Catherine II. is unequalled for rapidity in the history of the world. The established religion of Russia is the Greek church, with toleration of other sects, even Mahometans. By an imperial ukase, in 1802, six universities were established, viz., at St. Petersburg, Moscow, Wilna, Dorpat (in Livonia), Chareov, and Kasan; but literature made little progress till the present century, the native publications being very few, and the best books being translations. The Russian language, though not devoid of elegance, is, to a foreigner, of very difficult pronunciation; the number of letters and diphthongs is forty-two. The Anglo-Russian Literary Society, with library, &c., set up at the Imperial Institute, 1893. The population of the empire in 1867, 82,159,630; in 1872, about 85,685,945; in 1877 (estimated), 86,952,347; in 1885, 108,843,192; 1st general census of the empire, total, 129,211,113, 9 Feb. 1897. By the first Russian budget (1862), the estimated revenue was 34,500,000*l.*; expenditure, 37,850,000*l.*; 1892, revenue, 118,025,000*l.*; expenditure, 112,549,000*l.*; 1897, revenue (estimate), 142,823,037*l.*; expenditure the same; 1902, total debt, 690,107,109*l.* Besides about 500 cathedrals, about 35,000 churches (Greek church, *which see*). Total armed strength of Russia, estimated at 3,460,000, 1903. Railways, 1803, 19,441 miles; 1902, 35,079 miles open.

RUSSO-TURKISH WAR.* The Russian and French governments having each taken a side in the dispute between the Greek and Latin

* In 1844, when the czar was in England, he conversed with the duke of Wellington and lord Aberdeen (whom he had known many years) respecting the dissolution of the Turkish empire ; and on his return he embodied his views in a memorandum drawn up by count Nesselrode, which was transmitted to London, but kept secret till March, 1854. In January and February of that year the czar had several conversations on the subject with the British envoy at St. Petersburg, sir G. H. Seymour, in one of which (Jan. 14) he compared Turkey to a "sick man" in a state of decrepitude, on the point of death, and made proposals to the British government as to the disposal of his property. He stated frankly that he would not permit the British to establish themselves at Constantinople ; but said in another conversation, he would not object to their possessing Egypt. The purport of these conversations was conveyed in despatches to lord John Russell, who replied that the British government declined to make any provision for the contingency of the fall of Turkey. The czar made similar proposals to the French government with the same result.

churches as to the exclusive possession of the *Holy Places* (which see) in Palestine, the Porte advised the formation of a mixed commission, which decided in favour of the Greeks, and a firman was promulgated accordingly, 9 March, 1853: to this decision the French acceded, although dissatisfied.

The Russians make further claims, and prince Menschikoff (who arrived at Constantinople 28 Feb. 1853), by various notes (between 22 March and 18 May), demands that a convention should be signed by the sultan granting to the czar such a protectorate over the Greek Christians in Turkey, as the sultan considered inimical to his own authority . . . 22 March-18 May, 1853

RYE-HOUSE PLOT, a plot (some think pretended) to secure the succession of the duke of Monmouth to the throne in preference to the duke of York (afterwards James II.), a Roman catholic. Some of the conspirators are said to have projected the assassination of the king, Charles II., and his brother. This design is said to have been frustrated by the king's house at Newmarket accidentally taking fire, which hastened the royal party away eight days before the plot was to take effect, 22 March, 1683; see *Newmarket*. The plot was discovered 12 June following. Lord William Russell on 21 July, and Algernon Sidney on 7 Dec. following, suffered death for being concerned in this conspiracy. Both were illegally convicted. The name was derived from the conspirators' place of meeting, the Rye-house at Broxbourne, Hertfordshire.

S.

SAALFIELD (Saxony, N. Germany). Here the Prussians, under prince Louis of Prussia, were defeated and their leader slain by the French under Lannes, 10 Oct. 1806.

SAARBRÜCK, the Roman *Augusti Muri* or *Sara pons*, an open town on the left bank of the Saar, in Rhenish Prussia, founded in the tenth century, long subject to the bishops of Metz, afterwards ruled by counts (about 1237), and by the house of Nassau about 1380. It was captured by the French and retaken by the Germans 1676, reunited to France 1794-1814, and ceded to Prussia, 1815. On 2 Aug. 1870, it was bombarded by the French under Frossard (between 11 and 1 in the daytime), and the Prussians in small force were dislodged, and the town occupied by the French general Bataille. The mitrailleuses were said to be very effective. The emperor Napoleon, who was present with his son, said in a telegram to the empress, "Louis has gone through his baptism of fire. He has not been in the least startled. We stood in the foremost rank, and the rifle balls were dropping at our feet, and Louis picked up one that fell near him. His bearing was such as to draw tears from the soldiers' eyes." On the 6 Aug. the Prussian generals Gøben and Von Steinmetz, with the first army, recaptured Saarbrück, after a sanguinary conflict at the village of Spicheren. The heights taken by the French on the 2nd are in Germany, those taken by the Germans on the 6th are in France, and both battles were fought between Saarbrück and the town of Forbach, which was captured, and has given a name to the second conflict. The loss was great on both sides. The French general François was killed, and the 2nd corps under Frossard nearly destroyed. The French retreated to Metz. They were greatly superior in numbers at the beginning of the fight, but were badly commanded.

SABBATARIANS. Traces exist of Sabbatarii, or Sabbathaires, among the sects of the 16th century on the continent. Upon the publication of the "Book of Sports" in 1618, a violent controversy arose among English divines on two points: first, whether the Sabbath of the fourth commandment was in force among Christians; and secondly, whether, and on what ground, the first day of the week was entitled to be distinguished and observed as "the Sabbath." In 1628, Theophilus Brabourne, a clergyman, published the first work in favour of the Seventh-day or Saturday, as the true Christian Sabbath. He and several others suffered great persecution for this opinion; but after the restoration there were three or four congregations observing the last day of the week for public worship in London, and seven or eight in the country parts of England. In 1851 there were three Sabbatarian or Seventh-day Baptist congregations in England; but in America (especially in the New England states) they are more numerous.—Joseph Davis suffered imprisonment in 1670. He and his son bequeathed property to maintain the sect; and litigation respecting its disposal was settled by vice-chancellor Stuart in conformity with their intentions in June. 1870. Very few Sabbatarians then remained. The rev. Wm. Mead Jones,

an eminent seventh-day Baptist in London, a profound scholar; died 22 Feb. 1895.

SABBATH: ordained by God. *Gen.* ii.; *Exod.* xx. 8; *Isaiah* lviii. 13. Jews observe the seventh day in commemoration of the creation of the world, and of their redemption from the bondage of the Egyptians; Christians observe the first day of the week in commemoration of the resurrection of Christ from the dead, and the redemption of man; see *Sunday*.

SABBATH SCHOOLS, see *Sunday Schools*.

SABBATICAL YEAR: a Jewish institution, 1491 B.C. *Exodus* xxiii. During every seventh year the very ground had rest, and was not tilled; and every forty-ninth year all debts were forgiven, slaves set at liberty, and estates, &c., that were before sold or mortgaged, returned to their original families, &c.

SABELLIANISM, from Sabellius (of Ptolemais in Egypt), who flourished in the 3rd century and who taught that there was but *one* person in the Godhead, the other persons of the Trinity being but different names of the same person. This doctrine was condemned at a council at Rome, 260.

SABINES, an ancient people of central Italy, from whom the Romans, under Romulus, took away their daughters by force, having invited them to some public sports or shows on purpose. When the Sabines determined to revenge this affront, the women became mediators to their fathers in behalf of their husbands, the Romans, and a lasting peace was made between them, 750 B.C. The Sabines, who had supported the Samnites in their war with Rome, were thoroughly defeated by M. Curius Dentatus, and their lands annexed 290 B.C., and eventually the Sabines were combined with the Roman people. One of the ecclesiastical provinces is still called Terra Sabina; chief town, Magliano.

SACKVILLE INCIDENT, see *United States*, Oct. 1888.

SACRAMENT (from *sacramentum*, an oath, obligation, also mystery). The Christian sacraments are baptism and the Lord's Supper. The council of Trent, in 1547, affirmed the doctrine of the schoolmen that there are *seven* sacraments: baptism, the Lord's Supper, confirmation, penance, holy orders, matrimony, and extreme unction. The name was given to the Lord's Supper by the Latin fathers. The wine was restricted to the clergy about the beginning of the 12th century. Communion in one kind only was authoritatively sanctioned by the council of Constance, 15 June, 1415. Henry VII. of Germany was poisoned by a priest by the consecrated wafer, 24 Aug. 1313. The sacramental wine

was poisoned by the gravedigger of the church at Zürich, by which sacrilegious deed a number of persons lost their lives, 4 Sept. 1776. In 1614 members of both houses of parliament were ordered to take the sacrament, as a guard against the introduction of Roman Catholics. In 1673 the test act was passed; repealed in 1828; see *Transubstantiation*.

"Society of the Blessed Sacrament" (English churchmen), London, founded, 1860; "Confraternity of the Blessed Sacrament," founded 1862; the two united, 1867.

SACRAMENTARIANS, followers of Zwingle (1487-1531), who differed from the Romanists and Lutherans in regard to the sacrament.

SACRAMENTO, ST., a Portuguese settlement in S. America, claimed by Spain in 1680, but relinquished in 1713; several times seized; ceded in 1777; acquired by Brazil in 1825, see *California*.

SACRED BAND, see *Thebes*.

SACRED BOOKS OF THE EAST. The publication of translations of the sacred books of the religion of the Brahmans, Buddhists, and Mohammedans, and of the followers of Khung-fu-tze and Lao-tze, edited by professor Max Müller, began in 1879. About 30 volumes have been published.

SACRED HARMONIC SOCIETY, see *Music*.

SACRED HEART OF JESUS; a form of devotion said to have been instituted in England in the seventeenth century, and much promoted by Marguerite Marie Alacoque, an enthusiastic French nun, who asserted that Christ had appeared to her, and taken out her heart, placed it in his own, glowing in flame, and then returned it. She died in 1690.

Her book "Dévotion au Cœur de Jésus," published in 1698, much advocated by father Joseph Gallifet about 1726; and introduced into France, by request

A pilgrimage from England, specially blessed by the pope, and headed by the duke of Norfolk, went to the shrine of Marguerite, at Paray-le-Monial, and returned

SACRED WARS.—I. Declared by the Amphictyons against Cirrha, near Delphi, for robbery and outrage to the visitors to the oracle, 595 B.C. Cirrha was razed to the ground, 586.—II. Between the Phocians and Delphians for the possession of the temple at Delphi, 448, 447.—III. The Phocians, on being fined for cultivating the sacred lands, seized the temple, 357. They were conquered by Philip of Macedon, and their cities depopulated, 346. See *Crusades*.

SACRIFICE was offered to God by Abel, 3875 B.C. Sacrifices to the gods were introduced into Greece by Phoroneus, king of Argos, 1773 B.C. Human sacrifices seem to have originated with the Chaldeans, from whom the custom passed into other Eastern nations. All sacrifices to the true God were to cease with the sacrifice of Christ, 33 A.D. *Ileb*. x. 12-14. Pagan sacrifices were forbidden by the emperor Constantius II. 341.

SACRILEGE. In 1835, the punishment (formerly death) was made transportation for life. By 23 & 24 Vict. c. 96, s. 50 (1861), breaking into a place of worship and stealing therefrom was made punishable with penal servitude for life.

SACRIPORTUS (Latium, Italy). Here Sylla defeated the younger Marius and Papirius

Carbo with great slaughter, B.C. 82, and became dictator, 81.

SADDLES. In the earlier ages the Romans used neither saddles nor stirrups. Saddles were in use in the 3rd century, and are mentioned as made of leather in 304, and were known in England about 600. Side-saddles for ladies were introduced by Anne, queen of Richard II. in 1388. *Stow*.

SADDUCEES, a Jewish sect, said to have been founded by Sadoc, a scholar of Antigonus, about 200 B.C., who, misinterpreting his master's doctrine, taught that there was neither heaven nor hell, angel nor spirit; that the soul was mortal, and that there was no resurrection of the body from the dead. The Sadducees rejected the oral law, maintained by the Pharisees. See *Matt*. xxii. 23; *Acts* xxiii. 8.

SADLER'S WELLS (N. London), so called after Mr. Sadler, who built an orchestra to entertain the invalids who used the waters medicinally, 1683. In time the orchestra was enclosed, and the building became a place for dramatic performances. The theatre was opened in 1765. SAFES. A National Safe Company, London, opened vaults for storage of valuables, 1876.

SAFETY LAMP. One was invented in 1815 by sir Humphry Davy, to prevent accidents which happen in coal and other mines. The safety-lamp is founded on the principle that flame, in passing through iron-wire meshes, loses so much of its heat as to be incapable of igniting inflammable gases. The father of all safety-lamps was Dr. Reid Clanny, of Sunderland, whose invention and improvements are authenticated in the *Transactions of the Society of Arts* for 1817. The "Geordie," constructed by George Stephenson, the engineer, in 1815, is said to be the safest. A miner's electric light, by MM. Dumas and Benoit, was exhibited in Paris on 8 Sept. 1862. On 14 Aug. 1867, safety-lamps were rigidly tested by several mining engineers, and serious doubts thrown upon their complete efficacy. Col. Shakespear's safety lamp (light extinguished by opening) exhibited at Royal Institution, &c., May, 1879. Messrs. Fleuss and Foster's new safety mining lamp approved, Jan. 1884.

Mr. J. Wilson-Swan's electric safety lamp, weighing 6½ lb. exhibited at Aberdeen meeting of British Association, Sept. 1885.

Mr. Charles D. Aria's safety lamp reported successful the supply of mineral oil is isolated from the burner 1889.

The Thornbury miners' lamp tried at Aldwarke Main Collieries by Mr. C. E. Rhodes, and subjected to experiments by prof. Dewar and sir Frederick Abel, who declare that this lamp fulfils the conditions required by the royal commission in 1886. Paraffin and other mineral oils may be used in this lamp, reported Nov. 1889.

SAFFRON (*saffran*, French; *saffrano*, Italian) the flower of crocus, was first brought to England in the reign of Edward III. by a pilgrim, about 1339, probably from Arabia, as the word is from the Arabic *sapphar*. *Miller*. It was cultivated in England in 1582.

The loss of the victors was most severe, amounting in killed, wounded, and missing, to nearly 6000 men. Marmont left in the victor's hands 7141 prisoners, 11 pieces of cannon, 6 stands of colours, and 2 eagles. This victory was followed by the capture of Madrid. Population, 1887, 22, 199.

This law, introduced into Spain by the Bourbons 1700, was formally abolished by decree 29 March, 1830; and on the death of Ferdinand VII. his daughter succeeded as Isabella II., 29 Sept. 1833; see *Spain*. By this law also Hanover was separated from England, when queen Victoria ascended the English throne, 1837.

SALISBURY (Wilts), founded in the beginning of the 13th century, on the removal of the cathedral thither from Old Sarum. National councils or parliaments were repeatedly held at Salisbury, particularly in 1296, by Edward I.; in 1328, by Edward III.; and in 1384. Henry Stafford, duke of Buckingham, was executed here by order of Richard III., in 1483.—On **SALISBURY PLAIN** is Stonehenge (*which see*). This plain was estimated at 500,000 acres. On it were so many cross roads, and so few houses to take directions from, that Thomas, earl of Pembroke, planted a tree at each milestone from Salisbury to Shaftesbury, for the traveller's guide. The autumn military manoeuvres took place on Salisbury Plain, Aug., Sept. 1872; again 31 Aug., 1898; see under *Army*.—The first seat of the BISHOPRIC was at Sherborne, St. Aldhelm being prelate, 705. Herman removed the seat to Old Sarum, about 1072; and the see was removed to Salisbury by a papal bull, in 1217. It has yielded to the church of Rome one saint and two cardinals. The building of the cathedral commenced 28 April, 1220, and was completed in 1258. This edifice is reckoned one of our finest ecclesiastical erections. Its spire, the loftiest in the kingdom, was considered in danger in April,

1864, and subscriptions were begun for its immediate repair. The choir was re-opened, after restoration by sir G. G. Scott, 1 Nov. 1876; spire and turrets restored under sir Arthur Blomfield, March, 1893. SALONICA, see *Thessalonica*.

SALT (chloride of sodium, a compound of the
 gas chlorine and the metal sodium) is procured from
 the rocks in the earth, from salt-springs, and from
 sea-water. The famous salt-mines of Wielitzka,
 near Cracow in Poland, have been worked 600
 years. The salt-works in Cheshire, called the
 WICHES (Nantwich, Northwich, and Middlewich),
 were of great importance in the time of the Saxon
 heptarchy. The salt-mines of Staffordshire were
 discovered about 1670. Salt duties were first ex-
 acted in 1702; they were renewed in 1732; re-
 duced in 1823; and in that year were ordered to
 cease in 1825. During the French war the duty
 reached to 30*l.* per ton. For the salt-tax in France
 see *Gabelle*. The government salt monopoly in India
 was abolished in May, 1863, by sir C. Trevelyan.
 Since 1797 salt has been largely employed in the
 manufacture of chloride of lime or bleaching
 powder (by obtaining its chlorine), and soap (by
 obtaining its soda). On this are based the chemical
 works of Cheshire, Lancashire, and other places.
 See under *Alkalies*.

Much distress in the salt districts of Cheshire through
 the subsidence of land, 1837-8. The proprietors of

the Cheshire salt mines combined to form a "trust" or syndicate in the autumn of 1888; central office, Northwich; the trade being nearly ruined by great competition, first meeting 27 Sept. 1888.

SALT LAKE, see *Mormonites*.

SALT-PETRE (from *sal petree*, salt of the rock), or Nitre, is a compound of nitric acid and potash (nitrogen, oxygen, and potassium), and hence is called nitrate of potash. It is the explosive ingredient in gunpowder, many detonating powders, and lucifer matches. Boyle in the 17th century demonstrated that salt-petre was composed of aqua fortis (nitric acid) and potash; the discoveries of Lavoisier (1777) and Davy (1807) showed its real composition. Its manufacture in England began about 1625. During the French revolutionary war, the manufacture was greatly increased by the researches of Berthollet.

SALUTE AT SEA. It is a received maxim at sea, that he who returns the salute always fires fewer guns than he receives, which is done even between the ships of princes of equal dignity; but the Swedes and Danes return the compliment without regarding how many guns are fired to them. The English claim the right of being saluted first in all places, as sovereigns of the seas; the Venetians claimed this honour within their gulf, &c. The admiralty issued a code of rules for salutes, Dec. 1876. See *Flag*, and *Naval Salutes*.

Tardieu published his "Dictionnaire de Hygiène," 1852-54. Sanitary commissions were appointed in 1838 and 1844. To Dr. Southwood Smith is mainly attributable the honour of commencing the agitation on the subject of public health in England about 1832; his "Philosophy of Health" having excited much attention. Since 1838 he has published numerous sanitary reports, having been much employed by the government. Professors of hygiene are now appointed. See *Health, Public Health, and Hygiene* (Congresses). SANSKRIT, the language of the Brahmans of India, spoken at the time of Solomon, has been much studied of late years. Sir Wm. Jones, who published a translation of the poem Sakuntalá, in 1783, discovered that a complete literature had been preserved in India, comprising sacred books (the Vedas), history and philosophy, lyric and dramatic poetry. Texts and translations of many works have been published by the aid of the East India Company, the Oriental Translation Fund, and private liberality. The professorship of Sanskrit at Oxford was founded by colonel Boden. The first professor, H. H. Wilson, appointed in 1832, translated part of the Rig-veda Sanhitá, the sacred hymns of the Brahmans, and several poems, &c. Professor Monier Williams (elected 1860, knighted 1886, died 11 April, 1890) published an English and Sanskrit dictionary, 1851. Professor Max Müller published his history of Sanskrit Literature in 1859, and has edited the original text of the Vedas (he died 28 Oct. 1900). Philologists have discovered an intimate connection between the Sanskrit, Persian, Greek, Latin, Teutonic, Slavonian, Celtic, and Scandinavian languages. Prof. Buehler, eminent Oriental scholar, professor of Sanskrit at Vienna, drowned in the lake of Constance, 8 April, 1898; Dr. Peter Peterson, of Bombay, an eminent Sanscritist, died Sept. 1890. The order of Santiago, or St. James, was founded about 1170 to protect pilgrims to the shrine of St. James the Greater (Acts, xii. 2), said to be buried in the cathedral. SAPPHIC VERSE, invented by Sappho, the lyric poetess of Mitylene. She was equally celebrated for her poetry, beauty, and a hopeless passion for Phaon, a youth of her native country, on which last account it is said she threw herself into the sea from Mount Leucas, and was drowned, about 590 B.C. The Lesbians, after her death, paid her divine honours, and called her the tenth muse. Some consider the story fabulous.

SAPPHIRE, a precious stone of an azure colour, and transparent; in hardness it exceeds the ruby, and is next to the diamond. One was placed in the Jewish high priest's breast-plate, 1491. Thamas Kouli Khan is said to have possessed a sapphire valued at 300,000*l.*, 1733. Artificial sapphires were made in 1857 by M. Gaudin. Equal parts of alum and sulphate of potash were heated in a crucible. Mr. Pierpont Morgan presents two sapphires, one reported to be the largest and the other the most beautiful in the world, to the Nat. Hist. museum, New York, July, 1902.

Here Philip V. was defeated by the archduke Charles, 20 Aug. 1710. On 17 Dec. 1778, 400 of the inhabitants perished in a fire at the theatre. Saragossa, after successfully resisting the French in 1808, was taken by them after a most heroic defence by general Palafox, 20 Feb. 1809. The inhabitants, of both sexes, resisted until worn out by fighting, famine, and pestilence. Population, 1887, 92,407; 1897, 100,000.

SARDIS, see under *Seven Churches*.

SARMATIA, the ancient name for the country in Asia and Europe between the Caspian Sea and the Vistula, including Russia and Poland. The Sarmatæ or Sauromatæ troubled the early Roman empire by incursions. After subduing the Scythians they were subjugated by the Goths, in the 3rd and 4th centuries. They joined the Huns and other barbarians in invading Western Europe in the 5th century.

SARNO (S. Italy). Near this river, Teias, king of the Goths, was defeated and slain by Justinian's general Narses, March, 553.

SARUM, OLD (Wiltshire), an ancient British town, the origin of Salisbury (*which see*). Although completely decayed, it returned two members to parliament till 1832.

SASSANIDES, descendants of Artaxerxes or Ardshir, whose father, Babek, was the son of Sassan. He revolted against Artabanus, the king of Parthia; defeated him on the plain of Hormuz, 226; and re-established the Persian monarchy. This dynasty was expelled by the Mahometans, 652; see *Persia*.

SATAN, see *Devil Worship*.

SATELLITES, see *Planets, Jupiter, Mars, Saturn*.

SATIRE. About a century after the introduction of comedy, satire made its appearance at Rome in the writings of Lucilius, called the inventor of it, 116 B.C. *Livy*. The Satires of Horace (35 B.C.), Juvenal (about A.D. 100), and Persius (about A.D. 60), are the most celebrated in ancient times, and those of Churchill (1761) and Pope (1729), in modern times. Butler's "Hudibras," satirizing the presbyterians, first appeared in 1663. *Satire Menippée*, a celebrated satirical pamphlet, partly in verse and partly in prose, attacking the policy of the court of Spain and the league, written in the style of the biting satires of the cynic philosopher Menippus. The first part, "Catholicon d'Espagne," by Leroy, appeared in 1593; the second, "Abrégé des Etats de la Ligue," by Gillot, Pithon, Rapin, and Pusserat, appeared in 1594. *Bouillet*.

SATRAPIES, divisions of the Persian empire, formed by Darius Hystaspes about 516 B.C.

SATTARA (W. India) was long a flourishing state, founded by Sevajee about 1646; subjugated by the Mahrattas about 1749; conquered by the British, 1818; ruled by a rajah under the protection of the company. The last rajah died without issue in 1848; when the country was annexed.

SATURDAY (the last, or seventh day of the week; the Jewish Sabbath; see *Sabbath*). It was so called from an idol worshipped on this day by the Saxons, and according to Verstegan, was named by them Saterne's day. *Pavdon*. It is more probably from Saturn, *dies Saturni*. *Saturday Review*, an independent literary weekly journal, was first published, 3 Nov. 1855. See *Hospital and Lifeboat*.

SATURN, the planet, ascertained to be about 900 millions of miles distant from the sun, and its diameter to be about 77,230 miles. One of the 9 satellites was discovered by Huyghens (25 March, 1655); four by Cassini (1672-84); two by

William Herschel (1789), one by Bond and Lassell (1848), and one by prof. Pickering in Arizona, U.S. (18 March, 1890). The ring was observed by Galileo, about 1610; its annular form determined by Huyghens, about 1655. The notion that the discovery of the two-fold character of the ring was by the Messrs. Ball, 1665, is exploded. Cassini discovered that the ring consisted in fact of two concentric rings, the inner brighter than the outer, in 1675. An inner ring was detected in 1850 by Daves in England (29 Nov.), and by Bond in America. The ring, or series of concentric rings, is now considered to be composed of a multitude of small satellites. A bright spot observed by prof. Hall, Dec. 1876; spots seen by Mr. Denning 24 June, 9 July, 1903.

SATURNALIA, festivals in honour of Saturn, father of the gods, were instituted long before the foundation of Rome, in commemoration of the freedom and equality which prevailed on the earth in his golden reign. Some, however, suppose that the Saturnalia were first observed at Rome in the reign of Tullus Hostilius (673-640 B.C.), after a victory obtained over the Sabines: whilst others suppose that Janus first instituted them in gratitude to Saturn, from whom he had learned agriculture. Others assert that they were first celebrated after a victory obtained over the Latins by the dictator Posthumus, when he dedicated a temple to Saturn, 497 B.C. During these festivals no business was allowed, amusements were encouraged, and distinctions ceased. *Langlet*.

SAVAGE CLUB, instituted by various literary men, in 1857, facetiously terming themselves "savages," on account of their freedom from conventionalism. On some occasions they gave a war-whoop. *Sala*. Mr. W. E. Gladstone was present at the 22nd anniversary, 14 June, 1879, and the king, then prince of Wales, was a visitor in 1882.

SAVAGE ISLAND was discovered by capt. Cook in 1774, and so named because of the fierce attack made by the natives on his party. The island has long been a field of missionary enterprise, the inhabitants, about 5,000, are now Christians, and it was ceded to Great Britain by the Samoa agreement, Nov. 1899.

SAVANDROOG or SEVERNDRROG (My-sore, S. India), a strong fortress, was captured by the British, 2 April, 1755, and 21 Dec. 1791.

SAVANNAH, a city and port of Georgia on the river Savannah, U.S.A., founded in 1733, and incorporated, 1789; it was taken by the British in the American war in 1778, and by gen. Sherman, the northern general, 21 Dec. 1864. Pop. 1880, 30,709; 1890, 43,189; 1900, 54,244.

SAVINGS' BANKS. The first of these was instituted at Berne, in Switzerland, in 1787, by the name of *caisse de domestiques*, being intended for servants only; another was set up in Basel, in 1792, open to all depositors. The rev. Joseph Smith, of Wendover, began a benevolent institution in 1799; and in 1803-4, a "charitable bank" was instituted at Tottenham by Miss Priscilla Wakefield. The rev. Henry Dncean established a parish bank at Ruthwell in 1810. One was opened in Edinburgh in 1814. The benefit clubs, among artisans, having accumulated stocks of money for their progressive purposes, a plan was adopted to identify these funds with the public debt of the country, and an extra rate of interest was held out as an inducement; hence were formed savings' banks to receive small sums, returnable with interest on demand.

Rt. hon. Geo. Rose developed the system, and brought it under parliamentary control, 1816.
In 1840 there were 550 banks; 766,354 depositors; amount, 22,060,904*l*.

Acts to consolidate and amend previous laws relating to savings' banks were passed in 1828 and 1847; extended to Scotland in 1835; again consolidated and amended in 1863, 1880, and 1887.

On 20 Nov. 1851, the number of savings' banks in Great Britain and Ireland was 574, besides above 20,000 friendly societies and charitable institutions. SAVONA (a manufacturing town, N. Italy, long held by the Genoese) was captured by the king of Sardinia in 1746; by the French in 1809, and annexed; restored to Sardinia at the peace. Pope Pius VII. was kept here by Napoleon I., 1809-12. Soap is said to have been invented here, and hence its French name *savon*.

SAVOY, the ancient *Sapaudia* or *Sabaudia*, formerly a province in N. Italy, east of Piedmont. It became a Roman province about 118 B.C. The Alemanni seized it in A.D. 395, and the Franks in 490. It shared the revolutions of Switzerland till about 1048, when Conrad, emperor of Germany, gave it to Humbert, with the title of count. Count Thomas acquired Piedmont in the 13th century. Amadeus, count of Savoy, having entered his dominions, solicited Sigismund to erect them into a duchy, which he did at Cambray, 19 Feb. 1416. Victor-Amadeus, duke of Savoy, obtained the kingdom of Sicily from Spain, by a treaty, in 1713, but afterwards exchanged it with the emperor for the island of Sardinia, with the title of king, 1720. The French subdued Savoy in 1792, and made it a department of France, under the name of Mont Blanc, in 1800. It was restored to the king of Sardinia in 1814; but with Nice annexed to France in 1860, in accordance with a vote by universal suffrage, 23 April, 1860. Savoy was visited by the emperor and empress of the French in August, 1860. The annexation was censured in England.

SAVOY PALACE (London), was built by Peter of Savoy, uncle of Eleanor, queen of Henry III., in 1245, on land granted to him. He gave it to the fraternity of Mountjoy (Monte Jovis), from whom it was purchased by queen Eleanor for her son Edmund. Here resided John, king of France, when a prisoner, 1357 *et seq*. The Savoy was burnt by Wat Tyler and his followers, 1381. It was restored as an hospital of St. John the Baptist by Henry VII. about 1505. The fruitless CONFERENCE of bishops and eminent puritans for the revision of the liturgy was held at the Savoy, April-July, 1661. The hospital was dissolved in 1702. The buildings (used as a military prison) were removed to make way for Waterloo-bridge and its approaches, 1817-19. The privilege of sanctuary which the ancient *Chapel* formerly possessed, and which was much abused, was abolished by parliament in 1607. The *Chapel* after several restorations, was destroyed by fire, 7 July, 1864, and was rebuilt at the queen's expense, and re-opened 26 Nov. 1865. The rev. SAW. Invented by Dædalus. *Pliny*. Invented by Talus. *Apollodorus*. Talus, it is said, having found the jaw-bone of a snake, employed it to cut through a piece of wood, and then formed an instrument of iron like it. Saw-mills were erected in Madeira in 1420; at Breslan in 1427. Norway had the first saw-mill in 1530. The bishop of Ely, ambassador from Mary of England to the court of Rome, describes a saw-mill there, 1555. The attempts to introduce saw-mills in England were violently opposed, and one erected by a Dutchman in 1663 was forced to be abandoned. Saw-mills were erected near London about 1770. The excellent saw-machinery in Woolwich dockyard is based upon the invention of the elder Brunel, 1806-13. The circular saw was introduced into England about 1790. The *saw-gin* for separating cotton wool from the pod, invented by Eli Whitney, an American, in 1793, led to the immense growth of cotton in the southern states of the Union. Powis and James's band-saw was patented in 1858.

SCREW, was known to the Greeks. The pumping-screw of Archimedes, or screw-cylinder for raising water, invented about 236 B.C., is still in use. It is stated that with the assistance of the screw, one man can press down or raise up as much as 150 men can do without it.—The **SCREW-PROPELLER** consists of two or more twisted blades, like the vanes of a windmill, set on an axis, running parallel with the keel of a vessel, and revolving beneath the water at the stern. It is driven by a steam-engine. The principle was shown by Hooke in 1681, and since by Du Quet, Bernouilli, and others. Patents for propellers were taken out by Joseph Bramah in 1784; by Wm. Lyttelton in 1794; and by Edward Shorter in 1799. But these led to no useful result. In 1836 patents were obtained by Francis Pettit Smith (knighted July, 1871; died, 12 Feb. 1874) and captain John Ericsson (died, aged 86, March, 1889); and to them the successful application of the screw-propeller must be attributed. The first vessels with the screw were the *Archimedes*, built on the Thames in 1838 by H. Wimshurst, and the *Rattler*, built in the United States (1844), and tried in England in 1845. Double screw-propellers are now employed. A new form of screw-propeller invented by col. W. H. Mallory, of U.S.A. army, was tried on the Thames and reported successful, Aug. 1878.

Assistance to missions; 4. Circulation of tracts; 5. Provision for destitute orphans, see *Orphan-houses*. Without application, Mr. Müller, since he began, up to 26 May, 1895, had received by voluntary contribution, 1,373,348*l.* *Gs.* 2*d.*

SCROFULA, see *King's-evil*.

SCRUTIN (French for ballot). In *scrutin de liste* the voter writes on his paper as many names as there are persons to be elected, for instance for the whole department. In *scrutin d'arrondissement*, the members are elected separately. The adoption of one of these modes was much discussed in France in 1875. The conservatives prefer the latter, the radicals the former. See *France*, Nov. 1875. The *scrutin de liste* was adopted in the elections of 1848, 1849, 1871, and 1875.

M. Bardoux's bill for adopting the *scrutin de liste* (warmly advocated by M. Gambetta), was passed by the chamber of deputies (243-235), 18 May, 1881; rejected by the senate (148-114), 9 June, 1881; again rejected, Jan. 1882.

M. Welbeck Rousseau's bill for the *scrutin de liste* passed by the deputies (412-99), 24 March, finally passed, 8 June, 1885.

The bill for the restoration of the *scrutin d'arrondissement* passed by the chamber 11 Feb. and senate 13 Feb. 1889.

The *scrutin de liste* was adopted by the Italian chamber, 14 Feb. 1882.

SCULLABOGUE, see *Massacres*, 1798.

SCULPTURE is said to have begun with the Egyptians. Bezaleel and Aholiab built the tabernacle in the wilderness, and made all the vessels and ornaments, 1491 B.C., and their skill is recorded as the gift of God. *Exod.* xxxi. 3. Dipœnus and Seyllis, statuarys at Crete, established a school at Sicyon. Pliny speaks of them as being the first who sculptured marble and polished it; all statues before their time being of wood, 568 B.C. Alexander gave Lysippus the sole right of making his statues, 326 B.C. He left no less than 600 pieces, some of which were so highly valued in the age of Augustus, that they sold for their weight in gold. Sculpture did not flourish among the Romans, and in the middle ages with some fine exceptions, was generally degraded. With the revival of painting, it revived also; and Donato di Bardi, born at Florence, A.D. 1383, was the earliest professor among the moderns. An institute of sculptors was established in 1861. See *Royal Academy* and *Statues*.

SCUTAGE or **ESCUAGE**. The service of the shield (seutum) is either uncertain or certain. Escuage uncertain is where the tenant by his tenure is bound to follow his lord; and is called Castleward, where the tenant is bound to defend a castle. Escuage certain is where the tenant is set at a certain sum of money to be paid in lieu of such uncertain services. The first tax levied in England to pay an army, 5 Hen. II. 1150. *Cowel*.

SCUTARI, Asiatic Turkey, opposite Constantinople, of which it is a suburb. It was anciently called *Chryseopolis*, golden city, in consequence, it is said, of the Persians having established a treasury here when they attempted the conquest of Greece. Near here Constantine finally defeated Licinius, 323. The hospital was occupied by the sick and wounded of the Anglo-French army, in 1854-5, whose sufferings were much alleviated by the kind exertions of Miss Florence Nightingale and a band of nurses under her, aided by a large fund of money (15,000*l.*) subscribed by the public and placed in the care of the proprietors of the *Times* newspaper; see *Times*. Explosion of powder magazine by lightning, about 150 killed, 8 June, 1883. Population, 1901, about 82,400.

SCYTHIA, situate in the most northern parts of Europe and Asia. The boundaries were unknown to the ancients. The Scythians made several irruptions upon the more southern provinces of Asia, especially 624 B.C., when they remained in possession of Asia Minor for twenty-eight years, and at different periods extended their conquests in Europe, penetrating as far as Egypt; see *Tartary*.

SEALS or SIGNETS. Engraved gems were used as such by the Egyptians, Jews, Assyrians, and Greeks; see *Exod. xxviii. 14*. Ahab's seal was used by Jezebel, 899 B.C. (*1 Kings xxi. 8*). The Romans in the time of the Tarquins (about 600 B.C.) had gemmed rings. They sealed rooms, granaries, bags of money, &c. The German emperor, Frederick I. (A.D. 1152) had seals of gold, silver, and tin. Impressions of the seals of Saxon kings are extant; and the English great seal is attributed to Edward the Confessor (1041-66). "A seal with armorial bearings before the 11th century, is certainly false," *Fosbroke*. The most ancient English seal with arms on it is said to be that of Richard I. or John. White and coloured waxes were used. Our present sealing-wax, containing shellac, did not come into general use in Germany and England until about 1556. Red wafers for seals came into use about 1624; but were not used for public seals till the 18th century. A seal acquired by the British Museum made of black hematite, thought to be Hittite, found at Yuzgat in Asia Minor, announced Nov. 1886. *Seal Society*, for publication of fac-similes of ancient seals, was established in 1883.—For **SEALED LETTERS**, see *Great Seal* and *Lettres de Cachet*.

SEAMEN. In consequence of the great loss of life by wrecks of merchant vessels, attributed to bad ships and overloading, a commission of inquiry was agreed to by parliament on the motion of Mr. S. Plimsoll (who published "Our Seamen: an Appeal"), 4 March, 1873. The duke of Edinburgh was on the commission; the duke of Somerset, chairman. Mr. Plimsoll has been censured for exaggeration.

The report issued in September tended to justify the public apprehensions, but suggested no remedy. The report presented to parliament, 2 July, 1874, condemned the present insurance system, and recommended increased responsibility of owners and others, and strengthening the powers of the Board of Trade for investigation.

The Merchant Shipping Survey bill was rejected (173-170) 24 June, 1874
After much excitement, an act was passed to give further powers to the Board of Trade to stop unseaworthy ships 13 Aug. 1875

SEAS, SOVEREIGNTY OF THE. The claim of England to rule the British seas is of very ancient date. Arthur is said to have assumed it, and Alfred afterwards supported this claim. It was maintained by Selden, and measures were taken by government in consequence, 8 Chas. I. 1633. The Dutch, after the death of Charles I., made some attempts to obtain it, but were roughly treated by Blake and

other admirals. Russia and other powers of the north armed to avoid search, 1780; again, 1800; see *Armed Neutrality and Flag*. The international rule of the road at sea was settled in 1862; (new rules were issued in 1879 and 19 Aug. 1884), yet near Great Britain alone there have been 13,000 collisions in six years. Mr. Wm. Stirling Lacon proposed to reduce the rules from 749 words to 144, for simplicity and security. His form had been nine times before parliament, 1873. Revised rules issued by the admiralty in a "Fleet Circular," Nov. 1885.

The British Board of Trade appointed a committee, consisting of admirals N. Bowden Smith, sir Robert Molyneux, sir George S. Nares, and others, to consider measures for the establishment of a "new rule of the road at sea"; first meeting 1 Aug. 1890

The committee adopted the regulations recommended by the Washington conference in 1889 (see *Navigation Laws*), in spite of much opposition from the Chamber of Shipping of the United Kingdom, the General Shipowners' Society of London, the committee of Lloyd's, and other kindred bodies; reported Dec. 1894.

Committee appointed by the board of trade: sir Francis H. Jeune (chairman), and others, March, 1895; report issued, the new rules supported but simplification recommended, April, 1896; another committee appointed respecting collisions at sea, May, 1897; final report concluded 13 May; rules to be enforced 1 July, 1898

SEA SERPENT, GREAT, the name given to an animal popularly believed to exist, especially in deep tropical seas, but much controverted by zoologists, sir Richard Owen and others.

Capt. M'Quhae described the appearance of such an animal in the South Atlantic ocean in 1843. Other descriptions have been since published, and many explanations have been suggested. "The Great Sea Serpent," by Mr. A. C. Oudemans, published in 1893, contains reports of 187 appearances, with 82 illustrations.

SEBASTIAN, ST. (N. Spain), was taken by the French, under the duke of Berwick, in 1719. It was besieged by the British and allied army under Wellington. After a most heavy bombardment, by which the whole town was laid nearly in ruins, it was stormed by general Graham (afterwards lord Lynedoch), and taken 31 Aug. 1813.—On 5 May, 1836, the fortified works, through the centre of which ran the high road to Hernani, were carried by the English auxiliary legion under general Evans, after very hard fighting. The British naval squadron, off St. Sebastian, under lord John Hay, lent very opportune aid to the victors in this contest.—A vigorous assault was made on the lines of general De Lacy Evans, at St. Sebastian, by the Carlists, 1 Oct. 1836. Both parties fought with bravery. The Carlists were repulsed, after suffering severely. The loss of the Anglo-Spanish force was 376 men and 37 officers, killed and wounded. General De Lacy Evans was slightly wounded. See

under *Leagues*. The queen regent of Spain meets queen Victoria here, 27 March, 1889. Population, 1887, 29,047.

SEBASTOPOL or **SEVASTOPOL**, a town and once a naval arsenal, at S.W. point of the Crimea, formerly the little village of Aktiar. The buildings were commenced in 1784, by Catherine II. after the conquest of the country. The town is built in the shape of an amphitheatre on the rise of a large hill flattened on its summit, according to a plan laid down before 1794, which has been since adhered to. The fortifications and harbour were constructed by an English engineer, colonel Upton, and his sons, since 1830. The population in 1834 was 15,000. This place underwent eleven months' siege, by the English and French in 1854 and 1855. Immediately after the battle of the Alma, 20 Sept. 1854, the allied army marched to Sebastopol, and took up its position on the plateau between it and Balaklava, and the grand attack and bombardment commenced 17 Oct. 1854, without success.* After many sanguinary encounters by day and night, and repeated bombardments, a grand assault was made on 8 Sept. 1855, upon the Malakhoff tower and the Redans, the most important fortifications to the south of the town. The French succeeded in capturing and retaining the Malakhoff. The attacks of the English on the great Redan and of the French upon the little Redan were successful, but the assailants were compelled to retire after a desperate struggle with great loss of life. The French lost 1646 killed, of whom 5 were generals, 24 superior and 116 inferior officers, 4500 wounded, and 1400 missing. The English lost 385 killed (29 being commissioned and 42 non-commissioned officers), 1886 wounded, and 176 missing. In the night the Russians abandoned the southern and principal part of the town and fortifications, after destroying as much as possible, and crossed to the northern forts. They also sank or burnt the remainder of their fleet. The allies found a very great amount of stores when they entered the place, 9 Sept. The works were utterly destroyed in April, 1856, and the town was restored to the Russians in July; gen. Todleben, the able defender, died 1 July, 1884, and was buried here; his monument uncovered 28 June, 1890. See *Russo-Turkish War*. Population of Sebastopol, 1885, 33,803; 1897, 50,710. Made a naval port, Sept. 1895; new dock, opened, 18 May, 1898. Monument to adm. Nakhimoff unveiled by the czar, 30 Nov. 1898.

* In consequence of the sufferings and disasters of the army in the winter of 1854-5, the Sebastopol Inquiry Committee was appointed, and the Aberdeen administration resigned, Feb. 1855. The committee sat from 1 March to 15 May, Lord Aberdeen being the last person examined. Its report was presented 18 June. Mr. Roebuck, the chairman, moved on 17 July that the house should pass a vote of severe reprobation on every member of the Aberdeen administration. On 19 July his motion was lost by a majority of 107 against it. In 1855 the government sent sir John M'Neill and col. Tulloch to inquire into the state of the armies in the Crimea. Their report was presented to parliament in Feb. 1855. A commission was appointed to consider the statements in the report (which were very unfavourable to many officers), but the substance of the report was unshaken.

SECRET SOCIETIES, *Assassins, Fenians, Ribbonism, Vehmick Tribunal, Rosicrucians, Illuminati, Carbonari, Mary-Anne, Nihilists*.

SECRETARIES OF STATE. The earliest authentic record of a secretary of state is in the reign of Henry III., when John Maunsell is described as "*Secretarius Noster*," 1253. *Rymer*. Towards the close of Henry VIII.'s reign, two secretaries were appointed; and upon the union with Scotland, Anne added a third as secretary for Scotch affairs; this appointment was afterwards laid aside; but in the reign of George III. the number was again increased to three, one for the American department. In 1782 this last was abolished by act of Parliament; and the secretaries were appointed for home, foreign, and colonial affairs. When there were but two secretaries, one held the *portefeuille* of the Northern department, comprising the Low Countries, Germany, Denmark, Sweden, Poland, Russia, &c.; the other, of the Southern department, including France, Switzerland, Italy, Spain, Portugal, and Turkey; the affairs of Ireland belonging to the elder secretary; both secretaries then equally directed the home affairs. *Beatson*. There are now six secretaries—home, foreign, colonial, war, (in 1858) India, and (in 1885) Scotland, all in the cabinet. Secretary of State for Scotland act passed 14 Aug. 1885, amended 1887, explained 1889. See *Administrations*, and separate articles.

The *Institute of Secretaries* was started at a meeting in London, 4 July, 1850, to collect information respecting the position, duties, and responsibilities of secretaries to be applied for their benefit. First dinner, 24 June, 1852. Annual meetings.

SECTS, RELIGIOUS, see under *Worship*, and their respective titles.

SECULAR GAMES (*Ludi Sæculares*), very ancient Roman games, celebrated on important occasions. Horace wrote his "*Carmen Sæculare*" for their celebration in the reign of the emperor Augustus (17). They took place again in the reign of Claudius (47), of Domitian (88), and for the last time, of Philip (248), believed to be 2000 years after the foundation of the city.

SECULARISM, a name given to the principles advocated by G. J. and Austin Holyoake, about 1846, and subsequently by Mr. Bradlaugh. He died 30 Jan. 1891.

Its central idea is free, not lawless thought, and it considers scepticism to be scrutiny. It advocates liberty of action without injury to others. It is not against Christianity, but independent of it. Its standard is utilitarianism; it is the religion of the present life only; teaching men to seek morality in nature, and happiness in duty. Mr. Austin Holyoake and other secularists repudiated atheism.

SECURITY FROM VIOLENCE ACT, passed in 1863, appointed whipping as part of the punishment for attempts at garrotting.

SEDAN, an ancient fortified city in the valley of the Meuse, N.E. of France, the seat of a principality long held by the dukes of Bouillon. On 6 July, 1641, a victory was gained at La Marcière, near Sedan, by the count of Soissons and the troops of Bouillon and other French princes, over the royal army supporting Richelieu; but the count was slain on 23 June, 1642. The duke was arrested in the midst of his army, and was made to cede Sedan to the crown. The protestant university was abolished after the revocation of the edict of Nantes, 22 Oct. 1685. Around this place a series of desperate conflicts on 29, 30, and 31 Aug. between the French

army of the north, under marshal MacMahon (about 50,000 men) and the greater part of the three German armies under the king and crown-prince of Prussia and the crown-prince of Saxony (about 250,000 men) was brought to a close on 1 Sept. 1870.

The battle began with attacks on the French right and left about 5 a.m., and was very severe at 2 p.m. At 4 p.m. the Germans remained masters of the field, and the crown-prince of Prussia announced a complete victory, the chief part of the French army retreating into Sedan.

The emperor Napoleon was present during the battle, and, it is said, stood at Iges, near Sedan, exposed for four hours to the German grenades. The impossibility of further resistance was then evident. The Germans had contracted their circle close round Sedan; their formidable artillery held all the heights, from which they could at pleasure wholly destroy the town and the army, and only 2000 men were in a condition to respond to their commander's call, and to make a supreme effort to break through the enemy with the emperor and escape to Montmédy.

At first general de Wimpffen (called to the command when MacMahon was wounded) indignantly rejected the terms offered by the victor, and the emperor had a fruitless interview with count Bismarck to endeavour to mitigate them.

On 2 Sept. the emperor wrote in autograph to the king of Prussia, "Mon frère, n'ayant pu mourir à la tête de mes troupes, je dépose mon épée au pied de votre majesté. NAPOLEON." A capitulation of Sedan and the whole army therein was signed by generals Von Moltke and De Wimpffen at the château of Bellevue, near Frenois, at 11.30 a.m., and at 2 p.m. an interview took place between the king and the emperor, who was downcast but dignified.

The conflict was principally carried on by the artillery, in which (according to the emperor) the Germans had the advantage, not only in number (600 to 500), but also in weight, range, and precision. The carnage was awful, and the field the next day was a mass of shattered bones, torn flesh, and coloured rags.

About 25,000 French prisoners were taken in the battle, and 83,000 surrendered the next day, together with 70 mitrailleuses, 400 field-pieces, and 150 fortress guns. About 14,000 French wounded were found lying in the neighbourhood, and about 3000 escaped into Belgium and laid down their arms. The great army of the north had ceased to exist. Among the killed was lieutenant-col. Pemberton, a correspondent of the *Times*, who had approached too near the conflict.

The French emperor and his suite arrived at Wilhelmshöhe, a castle near Cassel appointed for his residence (formerly inhabited by his uncle Jerome, when king of Westphalia), in the evening of 5 Sept.

On 1 Sept. the village of Bazeilles was stormed by the Bavarians and burnt, it was said, because the inhabitants fired on the ambulances; many women and children perished. The French denied the provocation. The place had been previously twice bombarded and stormed by the maddened combatants.

In a letter dated 12 May, 1872, the emperor Napoleon took upon himself the whole responsibility of the surrender of Sedan.

SEDAN CHAIRS (so called from Sedan), were first seen in England in 1581. One used in the reign of James I., by the duke of Buckingham, caused great indignation, and the people exclaimed that he was employing his fellow-creatures to do the service of beasts. Sedan chairs came into London in 1634, when sir Francis Duncomb obtained the sole privilege to use, let, and hire a number of such covered chairs for fourteen years. They came into very general use in 1649.

SEDANGS, a tribe dwelling on the borders of Annam. M. de Mayrena, an ex-officer of the French navy, having made himself their king, came to Paris. He was set aside, and the Sedangs were brought under French protection by the French resident-general in Indo-China; reported Oct. 1889.

SEDGMOOR (Somersetshire), where the duke of Monmouth (natural son of Charles II. by Lucy Walters), who had risen in rebellion on the accession of James II., was completely defeated by the royal army, 6 July, 1685. The duke was made a prisoner in the disguise of a peasant, at the bottom of a ditch, overcome with hunger and fatigue. He was tried and beheaded on 15 July following.

SEDITION. Sedition acts were passed in the reign of George III. The proclamation against seditious writings was published May, 1792. The celebrated Sedition bill passed Dec. 1795. Seditious societies were suppressed by act, June, 1797. The Seditious Meetings and Assemblies' bill passed 31 March, 1817. In Ireland, during the Roman Catholic and Repeal agitation, acts or proclamations against seditious and seditious meetings were published from time to time until 1848.

SELEUCIDES, ERA OF THE, dates from the reign of Seleucus Nicator. It was used in Syria for many years, and frequently by the Jews until the 15th century, and by some Arabians. Opinions vary as to its commencement. To reduce it to our era (supposing it to begin 1 Sept. 312 B.C.), subtract 311 years 4 months.

SELF-DENYING ORDINANCE, which ordained that no member of parliament should hold any civil or military office or command conferred by either or both of the houses, or by authority derived from them, after much discussion, was passed 3 April, 1645, by the influence of Cromwell, who thus removed the earl of Essex and other Presbyterians out of his way. A somewhat similar ordinance was adopted by the parliament at Melbourne in Australia, in 1858. The name was given to an arrangement made respecting British naval promotions and retirements in 1870.

SENATE (*Senatus*). In the ancient republics the government was divided between the *senatus* (from *senis*, old; in Greek, *gerousia*, from *gerōn*, old), an assembly of elders, and the popular assembly (*comitia*, Latin; *ecclesia*, Greek), the king being merely the executive. The Roman senate, said to have originally been composed of 100 members, was raised to 300 by Tarquinius Priscus; to about 600 by Sylla, about 81 B.C.; and to 900 by Julius Cæsar. It was reformed and reduced to 600 by Augustus; and gradually lost its power and dignity under the emperors. The mere form existed in the reign of Justinian. A second senate, formed at Constantinople by Constantine, retained its office till the 9th century. S. P. Q. R. on the Roman standard stood for "Senatus Populusque Romanus," "the Roman senate and people." A *senatus consultum* was a law enacted by the senate.

The French senate was created by the constitution of the year 8, promulgated 24 Dec. 1799, to watch over the administration of the laws. The number of senators was raised gradually from 60 to 137. The senate was replaced by the chamber of peers in 1814; re-established, 5 Sept. 1870. Its re-establishment was proposed in 1873. Establishment of a senate of 300 voted; 225 to be elected for 9 years by the departments; 75 (for life) by national assembly, 22 Feb. 1875.

SEPTEMBER, the seventh Roman month
 reckoned from March (from *septimvs*, seventh). It
 became the ninth month when January and
 February were added to the year by Numa; 731
 B.C. The Roman senate would have given this
 month the name of Tiberius, but the emperor
 opposed it; the emperor Domitian gave it his own
 name Germanicus; the senate under Antoninus Pius
 gave it that of Antoninus; Commodus gave it his

surname, Hercules; and the emperor Tacitus his
 own name, Tacitus.—“September 4 government,”
 see *France*, Sept. 1870.

SEPTEMBRIZERS. In the French revolu-
 tion a dreadful massacre took place in Paris, 2-5
 Sept. 1792. The prisons were broken open, and the
 prisoners butchered, among them an ex-bishop, and

 4000. The agents in this slaughter were named
 Septembrizers.

 In the 4th Edward III. it was enacted, “that a
 parliament should be holden every year once.”
 This continued to be the statute-law till 16th
 Charles I. 1641, when an act was passed for holding
 parliaments once in three years at least; repealed
 in 1664. The Triennial act was re-enacted in 1694.
 Triennial parliaments thence continued till the
 2 Geo. I. 1716, when, in consequence of the allega-
 tion that “a popish faction were designing to renew
 the rebellion in this kingdom, and the report of an
 invasion from abroad,” it was enacted that “the
 then parliament should continue for seven years.”
 This *Septennial act*, entitled “an act for enlarging
 the continuance of parliaments” (1715 in the
 statutes, 4to, given as 1 Geo. I. stat. 2, c. 38), was
 passed 7 May, 1716; see *Parliaments*. Several

SEWING-MACHINE. It is said that Thomas Saint patented one for boots and shoes in 1790. Similar inventions are ascribed to Duncan (1804); Adams and Dodge (American, 1818); Thimonnier (French, 1834); and Walter Hunt (1834). The first really practical sewing-machine was the invention of Elias Howe, an American mechanic, of Cambridge, in Massachusetts, about 1841, who died at Brooklyn, 2 Oct. 1867, aged 47. It is now known under an improved form as Thomas's shuttle machine, by whom it was introduced into England in 1846. Many improvements have been since made and new machines invented.

* The utilisation of disinfected sewage as manure is now much advocated. Great success is said to have been attained at Edinburgh, Carlisle, Croydon, and other places. Much hot controversy has arisen respecting this disposal of the London sewage. On 15 Nov. 1864, the Metropolitan board accepted a contract for its disposal from Messrs. Hope and Napier. Sewage Utilisation acts were passed in 1865 and 1867, and the Metropolitan Sewage and Essex Reclamation acts were passed in June, 1865. The sewage farm, near Barking, Essex, was reported to be flourishing in 1863: good grass and corn crops raised.

SHAKERS, an English sect, now chiefly found in America, arose in the time of Charles I. and derived its name from their voluntary convulsion. It existed for a short time only, but was revived by James Wardlaw in 1747, and still more by Ann Lee (or Standsell), expelled quakers, about 1757. The sect emigrated to America, May, 1772, and settled near Albany, New York, 1774. They denounce marriage as sinful, regard celibacy as holy, oppose war, disown baptism and the Lord's supper, and use dancing as part of their worship. *Marsden*. One of their elders, Fred. W. Evans, lectured in London, Aug. 1871.

SHAKSPEARE'S PLAYS. William Shakspeare was born at Stratford-upon-Avon, Warwickshire, (23) April, 1564, and died 23 April, 1616. [An act to incorporate the Trustees and Guardians of Shakspeare's birthplace was passed 26 March, 1891.] The first collected edition of his works is dated 1623 [a facsimile of this edition was published, 1862-5]; the second, 1632;* the third, 1664; the fourth,

1685; all in folio. Critical editions of the text, edited by Alexander Dyce, were published in 1857 and 1864-6; Boydell's edition, with numerous plates, was published in nine vols., folio, in 1802. Ayscough's Index to Shakspeare was published in 1790; Twiss's Index, in 1805, and Mrs. Cowden Clarke's Concordance, 1847, she died, aged 88, 12 Jan. 1898; "Key to Shakspeare," 1879; Shakspeare-Lexicon, by Alexander Schmidt, 1874-5; "A Life of Wm. Shakspeare," by Sidney Lee, illustrated, published, Nov. 1898; new edition, portion of Macmillan's "Eversley Series," to be in 10 crown 8vo vols., editor, prof. C. H. Herford, published, Feb. 1899.

Shakspeare's first plays were probably produced about 1590, and soon after represented, himself frequently taking a part at the "Theatre," or the "Curtain," near Shoreditch, E. London, and after 1594, at the new "Globe" theatre, Bankside, Southwark, of which Shakspeare himself was part proprietor. It was of a horse-shoe form, partly covered with thatch. After it was licensed, the thatch took fire, through the negligent discharge of a piece of ordnance, and the whole building was consumed, 29 June, 1613. The house was crowded to excess, to witness the play of *Henry VIII.*, but the audience escaped unhurt.

SHAKSPEARE'S JUBILEE, projected by David Garrick, was celebrated at Stratford-upon-Avon, 6-8 Sept. 1760. A similar festival was kept 23 April, 1836. The *tercentenary* of Shakspeare's birth was celebrated, with many festivities, at Stratford-upon-Avon, 23-29 April, 1864.

SHAKSPEARE'S HOUSE. In 1847, a number of persons of distinction interested themselves for the preservation of the house in which Shakspeare was born, then actually put up for sale; they held a meeting at the Thatched-house tavern, London, 26 Aug. in that year, and took measures for promoting a subscription set on foot by the Shakspearian Club at Stratford-upon-Avon; and a committee was appointed to carry out their object. In the end Shakspeare's house was sold at the Auction Mart in the city of London, where it was "knocked down" to the United Committee of London and Stratford for the large sum of 3000*l.* 16 Sept. 1847. In 1856, a learned oriental scholar, John Shakspeare (no relation of the poet), gave 2500*l.* to purchase the adjoining house, that it might be pulled down, in order to ensure the poet's house from the risk of fire.

His wife's (Anne Hathaway) cottage and furniture purchased for 305*l.*, 5 May, 1893.

The hon. Ignatius Donnelly, an American, reports his discovery of a cryptogram of Francis Bacon in the text of one of the plays in the folio of 1623, and thereon asserts his belief that Bacon was the author of the Shakspeare plays, autumn 1887. His book entitled "The Great Cryptogram: Francis Bacon's cipher in the so-called Shakspeare Plays" was published in 1888. Mr. Donnelly died, 2 Jan. 1901; controversy renewed, see *Times*, 6 Jan. 1902.

The SHAKSPEARE LIBRARY, at Birmingham, was founded

* In 1849, Mr. J. P. Collier, editor of an edition of Shakspeare, purchased a copy of the second folio, on which was written in pencil a number of corrections, supposed to have been made soon after publication. At first he thought little of these marks; but in 1853 he was induced to publish "Notes and Emendations" derived from this volume. Much controversy ensued as to the authenticity of these corrections; and in 1859 it was generally agreed that they were of modern date, and so of little value. Mr. Collier died, aged 94, 17 Sept. 1883. New Variorum edition by H. Howard Furness, vol. ii., 1898.

Their exportation was prohibited on pain of fine and imprisonment, 1522. The number of sheep in the United Kingdom has been variously stated—by some

at 43,000,000, by others at 49,000,000, and by more at 60,000,000, in 1840. In 1851 there were imported into England 201,859 sheep and lambs; in 1858, 184,482; in 1864, 496,243. See under *Cattle*. In Aug. and Sept. 1862, many sheep in Wiltshire died of smallpox; and on Sept. 11, government declared for enforcing the act for the prevention of contagion. The evil soon abated. In April, 1866, the disease reappeared and the regulations were re-issued.

SHERIFF, or *shire-reeve*, governor of a shire or county. London had its sheriffs prior to William I.'s reign, but some say that sheriffs were first nominated for every county in England by William in 1079. According to other historians, Henry Cornhill and Richard Reynere were the first sheriffs of London, 1 Rich. I., 1189. The nomination of sheriffs, according to the present mode, took place in 1461. *Stow*. Anciently sheriffs were hereditary in Scotland, and in some English counties, as Westmoreland. The sheriffs of Dublin (first called bailiffs) were appointed in 1308, and obtained the name of sheriff by an incorporation of Edward VI. 1548. Thirty-five sheriffs were fined, and eleven excused in one year, rather than serve the office for London, 1734; see *Bailiffs*. The high sheriffs of the counties of England and Wales, except Middlesex and Lancaster, are nominated on the morrow of St. Martin, Nov. 12. This somewhat vice-regal office, of Saxon origin, has gradually lost much of its importance.

The sheriffs' act passed . . . 1887

SHIBBOLETH, the word by which the followers of Jephthah tested their opponents the Ephraimites, on passing the Jordan, about 1143 B.C. *Judges* xii. The term is now applied to any party watchword or dogma.

SHILLING. The value of the ancient Saxon coin of this name was fivepence, but it was reduced to fourpence about a century before the conquest. After the conquest the French *solidus* of twelve pence, in use among the Normans, was called *shilling*. The true English shilling was first coined, some say, in small numbers, by Henry VII., 1504. *Ruding*. A peculiar shilling, value nine pence, but to be current at twelve, was struck in Ireland, 1560; and a large but very base coinage in England for the service of Ireland, 1598. Milled shillings were coined 13 Chas. II. 1662; see *Coins*.

SHIP-BUILDING, &c., according to the Greek legends, began with the Egyptians, and

ancient drawings of their rude vessels are extant. The Greeks, Phœnicians, and Carthaginians were skilful shipbuilders, and Solomon's "navy of ships" (1 *Kings* ix. 26), was doubtless constructed by Tyrians, 992 B.C. The ships of Tarshish (probably in Spain), are mentioned in *Psalms* xviii. 7, *Isaiah* ii. 16, &c. The Romans built their first fleet of boats, by copying a Carthaginian vessel wrecked on their coast, 260 B.C. The dangers of navigation are described in *Psalms* cvii. 23-30 and *Acts* xxvii. Strong vessels were constructed by the Norsemen for invasion and piracy in the 5th century A.D. *et seq.*, and by the Venetians and other Italians, for commerce and war in the Middle Ages. The first double-decked ship built in England was of 1000 tons burthen, by order of Henry VII., was called the *Great Harry*, and cost 14,000*l.* *Stow*. Port-holes and other improvements were invented by Descharges, a French builder at Brest, in the reign of Louis XII., about 1500. Ship-building was treated as a science by Hoste, 1606. Iron and steel are now greatly used in ship-building.

A prehistoric ship cut out of solid oak, 48 feet long, 4 feet 4 inches wide, and 2 feet deep, was found by the Brigg gas company while excavating near the river Ancholme in Lincolnshire, April, 1885. Mr. Justice Chitty decided 6 July, 1886, that the ship was the property of the owner of the land, Mr. Elwes.

The *France*, a great sailing ship, was built on the Clyde by Messrs. Henderson for a Bordeaux firm; five masts, 360 feet long, 48 feet wide, bowsprit 50 feet long; carrying power over 6,000 tons

Sept. 1890

Ships, originally made of wood, and latterly of iron, are now frequently made of steel.

SHIPKA, see *Schipka*.

SHIP-MONEY was first levied about 1007, to form a navy to oppose the Danes. This impost, levied by Charles I. in 1634-6, was much opposed, and led to the revolution. He assessed London in seven ships, of 4000 tons, and 1560 men; Yorkshire in two ships, of 600 tons or 12,000*l.*; Bristol in one ship of 100 tons; Lancashire in one ship, of 400 tons. Among others, John Hampden refused to pay the tax; he was tried in the Exchequer in 1636. The judges declared the tax legal, 12 June, 1637. Ship-money was included in the grievances complained of in 1641. The five judges, who had given an opinion in its favour, were imprisoned. Hampden received a wound in a skirmish with prince Rupert, at Chalgrove, 18 June, and died 24 June, 1643.

SHIPPING, BRITISH. Shipping was first registered in the river Thames in 1786; and throughout the empire in 1787. In the middle of the 18th century, the shipping of England was but half-a-million of tons—less than London now. In 1830, the number of ships in the British empire was 22,785. The merchant shipping act of 1854 was amended in 1867; see *Merchant Shipping Act, Navy, and Navigation Acts. Trials*, 1893.

SHIP-RAILWAY, see *Railways*, Oct. 1839.

SHIPWRECKS, see *Wrecks*.

SHIRES, see *Counties* and under *Horse*.

SHIRTS are said to have been first generally worn in the west of Europe early in the 8th century. *Du Fresnoy*. Woollen shirts were commonly worn in England until about 1253, when linen, but of a coarse kind (fine coming at this period from abroad), was first manufactured in England by Flemish artisans. *Stow*.

SHODDY, a kind of soft woollen goods, manufactured from old woollen rags, or the refuse, to which new wool is added, is stated to have been first manufactured about 1813, at Batley, near Dewsbury, Yorkshire.

SHOEBLACK SOCIETY Brigades (Blue, Red, and Yellow) were established at various times, especially in 1850, by Mr. John MacGregor, "Rob Roy," in connexion with the Ragged School Union. In 1855, 108 boys had cleaned 544,800 pairs of boots and shoes, and thus earned 227*0*l.; of which 123*5*l. had been paid to the boys, 51*9*l. to their bank, and 51*6*l. to the society. The brigades earned 454*8*l. in 1859; 11,031*1*l. in 1871; 10,936*1*l. (in nine districts) in 1886. Ragged School Union reported 319 boys earning 677*0*l., 1895. There were eleven shoeblack societies in the metropolis in 1888.

SHOEBURYNESSE (Essex). Some ground here, purchased in 1842 and 1855, by an act of parliament in 1862 was set apart as "ranges for the use and practice of artillery," and a school for gunnery was established; see *Canon*, note. Experiments with Mr. Whitworth's projectiles on 12 Nov. 1862, showed their great improvement in form and material. Shells were sent through 5½ inch plate and the wood-work behind it. It was objected, that they might not do this with ships in motion. The National Volunteer Artillery Association began their annual meetings here in July, 1865.

During shell experiments with a new sensitive fuse, col. Francis Lyon (the inventor), col. Fox-Strangways, capt. Francis M. Gould-Adams, and four others were killed, 26 Feb. 1885.

SHOES, among the Jews were made of leather, linen, rush, or wood. Moons were worn as ornaments in their shoes by Jewish women. *Isaiah* iii. 18. Pythagoras would have his disciples wear shoes

made of the bark of trees; probably that they might not wear what were made of the skins of animals, as they refrained from the use of everything that had life. The Romans wore an ivory crescent on their shoes, and Caligula enriched his with precious stones. In England, about 146,2 the people wore the beaks or points of their shoes so long that they encumbered themselves in walking, and were forced to tie them up to their knees; the fine gentlemen fastened theirs with chains of silver or silver gilt, and others with laces. This was prohibited, on the forfeiture of 20*s*. and on pain of being cursed by the clergy, 7 Edw. IV. 1467; see *Dress*. Shoes, as at present worn, were introduced about 1633. The buckle was not used till 1668. *Stow*; *Mortimer*. The buckle-makers petitioned against the use of *shoe-strings* in 1791. A strike of London shoemakers respecting wages, April, 1884.

SHOP-TAX enacted in 1785; caused so great a commotion, particularly in London, that it was deemed expedient to repeal it in 1789. The statute whereby *shoplifting* was made a felony, without benefit of clergy, was passed 10 & 11 Will. III. 1699. This statute has been some time repealed.

SHORE, JANE, the mistress of Edward IV. and afterwards of lord Hastings. She did public penance in 1483, and was afterwards confined in Ludgate; but upon the petition of Thomas Hymore, who agreed to marry her, king Richard III., in 1484, restored her to liberty; and sir Thomas More mentions having seen her. *Harleian MSS*.

SHOT. In early times various missiles were shot from cannon. Bolts are mentioned in 1413;

and in 1418 Henry V. ordered his clerk of the ordinance to get 7000 stone shot made at the quarries at Maidstone. Since then chain, grape, and canister shot have been invented, as well as shells, all of which are described in Scoffern's work on "Projectile Weapons of War, and Explosive Compounds," 1858; see *Bombs and Cannon*. For Palliser's chilled shot, see *Cannon*.

His patent was revoked soon after the accession of George I., 29 Oct. following, when the earl of Halifax became first lord of the treasury; see *Halifax*. The office of lord treasurer has been executed by commissioners ever since.

SHREWSBURY (Shropshire), arose after the ruin of the Roman town Uriconium (see *Wroxeter*), and became one of the chief cities of the kingdom, having a mint till the reign of Henry III. Here Richard II. held a parliament in 1397.—On 21 July, 1403, was fought a sanguinary *batlle* at Hateley field, near Shrewsbury, between the army of Henry IV. and that of the nobles, led by Percy (surnamed Hotspur), son of the earl of Northumberland, who had conspired to dethrone Henry. Henry was seen in the thickest of the fight, with his son, afterwards Henry V. The death of Hotspur by an unknown hand gave the victory to the king. *Hume*.—Shrewsbury grammar school was founded by Edward VI. in 1551, endowed by Elizabeth, and opened 1562. SIBYLS, Sibyllæ, women believed to be inspired, who flourished in different parts of the world. Plato speaks of one, others of two, Pliny of three, Ælian of four, and Varro of ten. An Erythrean sibyl is said to have offered to Tarquin II. nine books containing the Roman destinies, demanding for them 300 pieces of gold. He denied her; whereupon the sibyl threw three of them into the fire, and asked the same price for the other six, which being still denied, she burnt three more, and again demanded the same sum for those that remained, when Tarquin conferring with the pontiffs was advised to buy them. Two magistrates were created to consult them on all occasions, 531 B.C.; see *Quindecimvirs*.

SICILIAN VESPERS, the term given to the massacre of the French (who had conquered Sicily, 1266), commenced at Palermo, 30 March, 1282.

On Easter Monday conspirators assembled at Palermo; and while the French were engaged in festivities, a Sicilian bride passed by with her train. One Drochet, a Frenchman, used her rudely, under pretence of searching for arms. A young Sicilian stabbed him with his own sword; and a tumult ensuing, 200 French were instantly murdered. The populace ran through the city, crying out, "Let the French die!" and, without distinction of rank, age, or sex, slaughtered all of that nation they could find, to the number of about 8000. Even the churches proved no sanctuary, and the massacre became general throughout the island.

SILICON or **SILICIUM** (from *silex*, flint), a non-metallic element, next to oxygen the most abundant substance in the earth, as it enters into the constitution of many earths, metallic oxides, and a great number of minerals. SILISTRIA, a strong military town in Bulgaria, European Turkey. It was taken by the Russians, 30 June, 1829, and held some years by them as a pledge for the payment of a large sum by the Porte; but was eventually returned. In 1854 it was again besieged by the Russians, 30,000 strong, under prince Paskiewitch, and many assaults were made. The Russian general was compelled to retire in consequence of a dangerous contusion. On 2 June, Mussa Pacha, the brave and skilful commander of the garrison, was killed. On 9 June, the Russians stormed two forts, which were retaken. A grand assault took place on 13 June, under prince Gortschakoff and general Schilders, which was vigorously repelled. On the 15th, the garrison as-

sumed the offensive, crossed the river, defeated the Russians, and destroyed the siege works. The siege was thus raised, and the Russians commenced their retreat as Omar Pacha was drawing near. The garrison was ably assisted by two British officers, capt. Butler and lieut. Nasmyth, the former of whom, after being wounded, died of exhaustion. They were highly praised by Omar Pacha and lord Hardinge, and lieutenant Nasmyth was made a major. Population, 1888, 11,414; 1900, 12,133.

SILK. Wrought silk was brought from Persia to Greece, 325 B.C. Known at Rome in Tiberius's time, when a law passed in the senate prohibiting the use of plate of massive gold, and also forbidding men to debase themselves by wearing silk, fit only for women. Silk was at first of the same value with gold, weight for weight, and was thought to grow in the same manner as cotton on trees. Silk-worms were brought from India to Europe in the 6th century. Charlemagne sent Offa, king of Mercia, a present of two silken vests, 780. The manufacture was encouraged by Roger, king of Sicily, at Palermo, 1146, when the Sicilians not only bred the silk-worms, but spun and wove the silk. The manufacture spread into Italy and Spain, and also into the south of France, a little before the reign of Francis I. about 1510; and Henry IV. propagated mulberry-trees and silk-worms throughout the kingdom, about 1600. In England, silk mantles were worn by some noblemen's ladies at a ball at Kenilworth castle, 1286. Silk was worn by the English clergy in 1534. Manufactured in England in 1604; and broad silk wove from raw silk in 1620. Brought to perfection by the French refugees in London at Spitalfields, 1688. A silk-throwing mill was made in England, and fixed up at Derby, by sir Thomas Lombe, merchant of London, modelled from the original mill then in the king of Sardinia's dominions, about 1714. He obtained a patent in 1718, and died 3 Jan. 1739. Six new species of silk-worm were rearing in France, 1861.*

SILKWORM DISEASE. In 1853 the annual produce of sericulture in South France was estimated at about 4,680,000*l*. Soon after a disease broke out in the worms, which reduced the value of the silk crop to about one-third that amount. In 1858 a commission was appointed to inquire into the nature of the disease, then termed *pèbrine*; and M. Quatrefages, in 1860, proved that it is hereditary, contagious, and infectious. M. Filippi discovered in the blood of the diseased worms a multitude of cylindrical corpuscles, since named *panhistophyton*, which Pasteur, who took up the study in 1865, has demonstrated to be parasitical, and the cause of the disease. He has since devised a way by which, it is hoped, the organic germs may be got rid of, and the disease extirpated.

The manufacture of a fabric from wood pulp, invented by count Hilaire de Chardonnet about 1863, and carried on at Besançon, reported very successful; dress and other fabrics of this material sold in London, summer of 1895.

SILURES, a British tribe, occupying the counties of Monmouth and Hereford, was subdued

* In 1858, M. Guérin-Meneville introduced into France a Chinese worm termed the *Cynthia Bombyx*, which feeds on the *Ailanthus glandulosa*, a hardy tree of the oak kind. The *cynthia* yields a silk-like substance termed *Alantine*. It was brought to Turin by Fantoni in 1856.

by the Roman general Ostorius Scapula, 50; see *Shropshire*. From this tribe is derived the geological term "Silurian strata," among the lowest of the palæozoic or primary series, from their occurrence in the above-mentioned counties. *Murchison's "Siluria"* was published 1849.

SILVER exists in most parts of the world, and is found mixed with other ores in various mines in Great Britain. The silver mines of South America are far the richest. A mine was discovered in the district of La Paz in 1660, which was so rich that the silver of it was often cut out with a chisel. In 1749, one mass of silver weighing 370 lbs. was sent to Spain. From a mine in Norway, a piece of silver was dug, and sent to the Royal Museum at Copenhagen, weighing 560 lbs., and worth 168*ol*. In England silver plate and vessels were first used by Wilfrid, a Northumbrian bishop, a lofty and ambitious man, 709. *Tyrrell*. Silver knives, spoons, and cups were great luxuries in 1300; see *Mirrors*. The act of 1816 restricted the use of silver as legal tender to 40*s*. In 1855, 561,906 oz., in 1857, 532,866 oz., in 1865, 724,856 oz., in 1870, 784,502 oz.; in 1876, 483,422 oz.; in 1882, 372,544 oz.; in 1887, 320,345 oz.; in 1888, 321,425 oz.; in 1889, 306,149 oz.; in 1890, 291,724 oz.; 1893, 274,100 oz.; 1895, 283,826 oz.; 1899, 191,927 oz.; 1900, 187,842 oz.; 1901, 173,724 oz. were obtained from mines in Britain. Estimated annual production of silver throughout the world, 1477 tons; value, 37,360,000*l*. (1892). Pattinson's process for obtaining silver from lead ore was introduced in 1829. SIMONIANIANS, a sect named after the founder, Simon Magus, the first heretic, about 41. A sect of social reformers called **ST. SIMONIANIANS**, after their founder, Claude H. comte de St. Simon (born 1760), sprang up in France in 1819, and attracted considerable attention; the doctrines were advocated in England, particularly by Dr. Prati, who lectured upon them in London, 24 Jan. 1834. St. Simon died in 1825, and his follower, Père Enfantin, died 1 Sept. 1864.

SIMONY (trading in church offices) derives its name from Simon desiring to purchase the gift of the Holy Spirit (*Acts* viii. 18, 19). It is forbidden in England by the canon law, and by statute 31 Eliz. c. 6, "for the avoiding of simony and corruption in presentations, collations, and donations of and to benefices," &c., 1588-9; and by statute of 12 Anne 2, stat. 12 (1713). The rev. James John Merest was convicted of simony, 26-29 Nov. 1869, and deprived.

The bishop of Peterborough (Dr. Magee), moved for a committee on the laws relating to simony; appointed 21 April, 1874

SIMPLON, a mountain road, leading from Switzerland into Italy, constructed by Napoleon in 1801-7. The new Simplon tunnel boring operations began 13 Nov. 1898; Herr Brandt, the chief engineer, died, Nov. 1899. The tunnel to be completed, 1 July, 1905.

SINKING FUND. First projected by sir Robert Walpole to redeem the debt to the bank of England; act passed in 1716. The act establishing the sinking fund of Mr. Pitt, devised by Dr. Price, was passed in March, 1786. A then estimated surplus of 900,000*l.* in the revenue was augmented by new taxes to make up the sum of 1,000,000*l.* which was to be invariably applied to the reduction of the national debt. The fallacy of the scheme was shown by Dr. Hamilton in 1813. In July, 1828, the sinking fund was limited to one-fourth of the actual surplus of revenue.

A new sinking fund was established by act passed 2 Aug. 1875. The annual charge of the national debt of the year ending 31 March, 1877, to be 27,700,000*l.*; subsequent years to be 28,000,000*l.* This act was temporarily suspended in 1897; again during the S. African war in 1900 and 1901; restored 1902.

SINOPE, an important Greek colony on the Euxine, after resisting several attacks was conquered by Mithridates IV., king of Pontus, and made his capital. It was the birth-place of Diogenes, the cynic philosopher. On 30 Nov. 1853, a Turkish fleet of seven frigates, three corvettes, and two smaller vessels, was attacked by a Russian fleet of six sail of the line, two sailing vessels, and three steamers, under admiral Nachimoff, and totally destroyed, except one vessel, which conveyed the tidings to Constantinople. Four thousand lives were lost by fire or drowning, and Osman Pacha, the Turkish admiral, died at Sebastopol of his wounds. In consequence of this act (considered treacherous) the Anglo-French fleet entered the Black Sea, 3 Jan. 1854.

SION COLLEGE AND HOSPITAL, situated on the site of a nunnery, which, having fallen to decay, was purchased by William Elysnge, a citizen and mercer, and converted into a college and hospital, called from his name Elysnge Spital. In 1623, Dr. Thomas White having bequeathed 3000*l.* towards purchasing and building a college and alms-house on the ancient site, his executors erected the present college. It is held by two charters of incorporation, 6 Chas. I. 1630 and 16 Chas. II. 1664. It contains a valuable library (easily accessible to the public), and an almshouse for ten men and ten women. SLAVERY IN ENGLAND. Laws respecting the sale of slaves were made by Alfred. The English peasantry were commonly sold for slaves in Saxon and Norman times; children were sold in Bristol market like cattle for exportation. Many were sent to Ireland and to Scotland. Under the Normans the vassals (termed villeins, of and pertaining to the *vill*) were devisable as chattels during the feudal times.

Severe statutes were passed in the reign of Richard II., 1377 and 1385: the rebellion of Wat Tyler, 1381, arose partly out of the evils of serfdom.

A statute was enacted by Edward VI. that a runaway, or any one who lived idly for three days, should be brought before two justices of the peace, and marked V with a hot iron on the breast, and adjudged the slave of him who bought him for two years. He was to take the slave and give him bread, water, or small drink, and refuse meat, and cause him to work by bearing, chaining, or otherwise; and, if with'n that space, he absented himself fourteen days, was to be marked on the forehead or cheek, by a hot iron, with an S, and be his master's slave for ever; second desertion was made felony. It was lawful to put a ring of iron round his neck, arm, or leg. A child might be put apprentice, and, on running away, become a slave to his master . . . 1547

SLAVE TRADE. The slave trade from Congo and Angola was begun by the Portuguese in 1481. The commerce in man has brutalised a tract fifteen degrees on each side of the equator, and forty degrees wide, or of 4,000,000 of square miles; and men and women have been bred for sale to the Christian nations during the last 250 years, and war carried on to make prisoners for the Christian market. The Abbé Raynal computed (1777) that, at the time of his writing, 9,000,000 of slaves had been

consumed by the Europeans. The slave-trade is now approaching extinction.

In 1768 the slaves taken from Africa amounted to 104,100. In 1786 the annual number was about 100,000. In 1807 it was shown by documents, produced by government, that since 1792 upwards of 3,500,000 Africans had been torn from their country, and had either perished on the passage or been sold in the West Indies.

A species of slave trade arose in the South Seas consequent upon natives being enticed on board certain British vessels and shipped to Queensland, Australia, and the Fiji isles; the subject was brought before parliament (see *Melanesia*), 1871-2.

The ship *Carl* (owner, Dr. James P. Murray; master, Joseph Armstrong) left Melbourne for South Sea isles; it anchored off Malokolo, Solomon's and Bougainville isles and kidnapped many natives as labourers for the Fiji isles; while about 20 miles from land, the prisoners rose and attempted to set fire to the ship; were fired on; about 50 killed and 20 wounded were cast into the sea. At Melbourne Murray gave evidence, and Armstrong was committed for trial, 16 Aug.; the master and mate sentenced to death, Nov. 1872.

SLAVONIA or **SCSLAVONIA**, a province of Austria, derives its name from the Slavs, a Sarmatian people who replaced the Avars in Pannonia early in the 9th century. In 864 Cyril and Methodius, Greek missionaries, preached here, and adapted the Greek alphabet to the Slavonian language; the letters of which have since been a little altered. The country, after having been held at times by the Greeks, Turks, and Hungarians, and the cause of sanguinary conflicts, was ceded finally to Hungary in 1699, at the peace of Carlowitz. Deputies from the Slavonian provinces of Austria were entertained at Moscow and St. Petersburg, May, 1867. The Croatian-Slavonian diet, at Agram, was dissolved, May, 1867. It protested against incorporation with Hungary. The Slavonian family of languages includes Russian, Polish, Servian, Bohemian, Bulgarian, Wendic, Slovak, and Polabic. SMALLPOX, *variola* (diminutive of *varus*, a pimple), a highly contagious disease, supposed to have been introduced into Europe from the East by the Saracens. Rhazes, an Arabian, described it accurately, about 900. From Europe it was carried to America, soon after its discovery, and raged there with great severity, destroying the Indians by thousands. In 1694, queen Mary of England died of smallpox, as did in 1711 and 1712 the emperor of Germany, the dauphin and dauphiness of France and their son, in 1730 the emperor of Russia, in 1741 the queen of Sweden, and in 1774 Louis XV. of France. It is stated that in the middle of the last century two millions perished by it in Russia. In London in 1723 one out of fourteen deaths was caused by smallpox, and in France in 1754 the rate was one in ten. For the attempts to alleviate this scourge, see *Inoculation*, introduced into England in 1722, and *Vaccination*, announced by Dr. Jenner in 1798. *Smallpox Hospital*, established 1746. The Vaccination act of 1868, which remains in force until 1 Jan. 1904, modified in many important particulars the law previously existing. It provides for domiciliary vaccination, the use of glycerinated calf lymph (supplied by the Local Government board), and exempts the conscientious objector from penalties, see *Vaccination*.

On appeal, the decision was in favour of the "poor Smiths," 12 Feb. 1878.

SMITHFIELD, WEST, in the heart of London, was once a favourite walk of the London citizens, outside the city walls. Sir W. Wallace was executed here, 23 Aug. 1305. On 15 June, 1381, Wat Tyler was met by Richard II. at this place, and was stabbed by Walworth the mayor. Many tournaments were also held here. In the reign of Mary (1553-8), many persons perished by fire; and Bartholomew Leggart, an Arian, was burnt here, 18 March, 1612.—Bartholomew fair was held here till 1853.—This place is mentioned as the site of a cattle market as far back as 1150. The space devoted to this purpose was enlarged from about three acres to four and a half, and in 1834 to six and a quarter. The ancient regulations were called the "statutes of Smithfield." In one day there were sometimes assembled 4000 beasts and 30,000 sheep. The annual amount of the sales was about 7,000,000*l.*

Sold here 226,132 beasts, 1,593,270 sheep and lambs, 26,356 calves, 33,531 pigs. (About 160 salesmen) 1846

The contracted space of the market, the slaughtering places adjoining, and many other nuisances, gave ground to much dissatisfaction, and after investigation, an act was passed appointing metropolitan market commissioners with powers to provide a new market, slaughtering places, &c.; and to close the market at Smithfield. 1 Aug. 1851
Smithfield was used as a cattle market for the last time on 11 June; and the new market in Copenhagen-fields was opened on 13 June (see *Metropolitan Market*) 1855

New poultry market, inaugurated by lord mayor Cotton 30 Nov. 1875

New central fruit and vegetable market determined on 14 July, 1879

A new poultry and provision market was opened in Farringdon road by lord mayor Isaacs, 11 Dec. 1880; the new fruit and vegetable market opened by lord mayor Evans 13 June, 1892

The *Smithfield Club*, to promote improvements in the breed of cattle, was established 17 Dec. 1798; first president, Francis, duke of Bedford; first secretary, Arthur Young. The members established an annual cattle show, held first in Dolphin-yard, Smithfield, Dec. 1799; next in Barbican, 1805; in Goswell-street, 1806; removed to Baker-street, 1830; and to the new Agricultural hall, Liverpool road, Islington, 1862.

The show, suspended in Dec. 1866, on account of the cattle plague, was partially resumed Dec. 1867; wholly, Dec. 1868.

Three of the highest prizes were awarded to queen Victoria; 110,000 visitors, 10-14 Dec. 1883. Large show opened, 330 cattle, 221 sheep, no pigs through swine fever, 10 Dec. 1894; the show is held annually in December.

SMITHSONIAN INSTITUTION, "for the increase and diffusion of knowledge among men," a handsome building at Washington, U.S., was founded in 1846, by means of a legacy of above 100,000*l.* bequeathed for the purpose to the United States government by James Smithson, illegitimate son of sir Hugh Smithson, who became duke of Northumberland in 1766. It includes the U.S. national museum, the zoological park, and the astrophysical observatory, and publishes and freely distributes scientific memoirs and reports. The library was burnt on 25 Jan. 1865. Professor Joseph Henry, the first secretary, died, 13 May, 1878; succeeded by Mr. Spencer F. Baird, died, 19 Aug. 1887; succeeded by Professor S. P. Langley. The Hodgkins medal (first gold medal given by the institution for scientific work) awarded to prof. James Dewar for his discoveries in the liquefaction of air, April, 1899.

SMOKE NUISANCE. An act was passed in 1853 to abate this nuisance, proceeding from chimney shafts and steamers above London bridge. In 1856 another act, obtained for its further application to steamers below London bridge, and to potteries and glass-houses previously exempted, came into operation, 1 Jan. 1858; enactments have been made for all the kingdom.

SMOLENSKO (Russia). The French in most sanguinary engagements here were three times repulsed, but ultimately succeeded in entering Smolensko, and found the city, which had been bombarded, burning and partly in ruins, 16, 17 Aug. 1812. Barclay de Tolly, the Russian commander-in-chief, incurred the displeasure of the emperor Alexander because he retreated after the battle, and Kutusoff succeeded to the command.

SMUGGLING. The customs duties, instituted to enable the king to afford protection to trade against pirates, afterwards became a branch of public revenue, and gave rise to much smuggling. The Smugglers' act was passed in 1736, and its severity was mitigated in 1781 and 1784. A revision of these statutes took place 1826 and 1835. Lieut. the hon. H. N. Shore's "Smuggling Days and Smuggling Ways," published 1892.

SNEEZING. The custom of saying "God bless you" to the sneezer originated, according to Strada, among the ancients, who, through an opinion of the danger attending it, after sneezing made a short prayer to the gods, as "Jupiter, help me." The custom is mentioned by Homer, the Jewish rabbis, and others, and is found among savages. Polydore Vergil says it took its rise at the time of the plague, 558, when the infected fell down dead sneezing, though seemingly in good health.

SNUFF-TAKING took its rise in England from the captures made of vast quantities of snuff by sir George Rooke's expedition to Vigo in 1702, and the practice soon became general. In 1839 there were imported 1,622,493 lbs. of snuff, of which 196,395 lbs. were entered for home consumption; the duty was 88,263*l.*; see *Tobacco*. In 1853, 2,573,925 lbs. of snuff and cigars, in 1861, 2,110,430 lbs.; in 1871, 3,852,236 lbs.; 1877, 3,762,831 lbs.; 1883, 3,121,174 lbs.; 1887, 3,595,071 lbs.; 1902, 137 lbs. SOANE MUSEUM, &c. No. 13, Lincoln's-inn-fields, was gradually formed by sir John Soane, the architect, who died in 1837, after making arrangements for its being open to the public by an act passed in 1833. It contains Egyptian and other antiquities, valuable paintings, rare books, &c. 150*l.* are distributed annually to distressed architects or their widows and children.

One of two sealed closets in the museum was opened 29 Nov. 1886; chiefly private legal documents discovered.

SOAP is a salt, a compound of a fatty acid with an alkali, soda or potash. The Hebrew *bôrith*, translated soap, is merely a general term for cleansing substances. *Job* ix. 30; *Jer.* ii. 22. Pliny declares soap to be an invention of the Gauls, though he prefers the German to the Gallic soap. Nausicaa and her attendants, Homer tells us, washed clothes by treading upon them with their feet in pits of water. *Odyssey*, book vi. The Romans used fuller's earth. *Savon*, the French word for soap, is ascribed to its having been manufactured at Savona, near Genoa. The manufacture

of soap began in London in 1524, before which time it was supplied by Bristol at one penny per pound. The duty upon soap, imposed in 1711, after several reductions from 3*d.* per pound, was totally repealed in 1853. It then produced, according to the chancellor of the exchequer, Mr. Gladstone, about 1,126,000*l.* annually. Exported from the United Kingdom: 1876, 254,853 cwts.; 1880, 391,808 cwts.; 1885, 402,112 cwts.; 1890, 496,930 cwts.; 1896, 719,700 cwts.; 1900, 874,214 cwts.

SOBRAON (N.W. India). The British army, 35,000 strong, under sir Hugh (afterwards viscount) Gough, attacked the Sikh force on the Sutlej, 10 Feb. 1846. The enemy was dislodged after a dreadful contest, and all their batteries taken; and in attempting the passage of the river by a floating bridge in their rear, the weight of the masses that crowded upon it caused it to break down, and thousands of Sikhs were killed, wounded, or drowned. The British loss was 2338 men.

SOCIALISM, which proposes the re-organisation of society for the benefit of the community, and advocates the doctrine of the equal right of all to the material conditions of existence, was warmly advocated in London, 24 Jan. 1834, by Robert Owen. He had, beginning at New Lanark, in Scotland, about 1801, established a settlement at New Harmony in America in 1824. He died 17 Nov. 1858, aged 90. The French socialists, termed *Communists*, became a powerful political body in that country, were implicated in the revolution of 1848, and made an insurrection at Paris, 1871. See *France*, *Germany*, 1878 *et seq.*, *Positive Philosophy*, and *Working-men*. See *Individualism*. Socialism in England is represented by the Social Democratic federation, the Fabian society, and the Independent Labour party, and in a modified form, by the Christian Social union; in Germany by the Social Democrats; in France by the Workmen's party and the Republican socialists. Socialism is also active in Austria, Italy, Belgium, Denmark. The subject of municipal socialism is at the present time (1903) receiving considerable attention.

SOCIETIES AND INSTITUTIONS, LITERARY AND SCIENTIFIC, in Great Britain. Further details of many of these will be found under their respective heads. All in the list below are in London, except otherwise stated. An act was passed, 11 Aug. 1854, "to afford facilities for the establishment of institutions for the promotion of literature and science," by grants of land, &c.; and for their regulation. The Royal and London Institutions were exempted from the operation of the act. See *Scientific Papers*.

SOCIETY ISLANDS, Pacific Ocean, discovered by De Quiros in 1606; re-discovered by capt. Wallis, 1767, who gave Otaheite or Tahiti the name of King George's Island. Capt. Cook, who visited them in 1769 and 1777, named them Society Islands in honour of the Royal Society; they now belong to France. An insurrection in Raiatea suppressed, 3 Jan. 1897. Destructive hurricane and huge wave; about 1000 natives killed and islands devastated, 13 Jan. 1903. See *Otaheite*.

SOCINIANS, persons who accept the opinions of Faustus Socinus (died 1562), and his nephew Lælius (died 1604), Siense noblemen. They held — 1. That the Eternal Father was the one only God, and that Jesus Christ was no otherwise God than by his superiority to all other creatures; 2. That Christ was not a mediator; 3. That hell will endure for a time, after which the soul and body will be destroyed; 4. That it is unlawful for princes to make war. *Hook*. The Socinians established a church at Rakow, in Poland, and made proselytes in Transylvania, 1563. They were expelled from Poland in 1658. The Rakovian catechism was published in 1574; see *Unitarians*.

SOCIOLOGY, a term applied by Comte to the study of mankind in their social relations; it

recommends the prevention of national wars by arbitration, and the settlement of the war of classes by boards of conciliation. Schools or departments for the study of sociology are in operation in Edinburgh, Paris, and the United States.

In the summer of 1878, it was said to have been given up to the British; formally annexed, Nov. 1886. The island explored by Mr. Theodore Bent and Mr. E. N. SODIUM, a remarkable metal, first obtained in 1807 by sir Humphry Davy, from soda (which was formerly hounded with potash, but proved to be a distinct substance by Duhamel in 1736). This metal, like potassium, was obtained by the agency of the electric battery. In consequence of Deville's improved processes, sodium manufactured by Bell Brothers, of Newcastle, at 10s. a pound (1868). It is an important agent in the modern production of aluminium. Common salt (chloride of sodium) is a compound of sodium and chlorine. Mr. H. Y. Castner's (of New York) new process for the enlarged production of sodium, and through sodium of aluminium and magnesium, announced in June, 1887. His works were set up at Oldbury, near Birmingham; he died Oct. 1899. See *Alkalies* and *Aluminium*.

It was held by Syagrius, after his father Ægidius, till his defeat by Clovis, A.D. 486. Several councils have been held at Soissons (in 744, 1092, 1122). Its academy was established in 1674. During the Franco-Prussian war, Soissons, after three weeks' investment and four days' bombardment, surrendered to the Germans under the grand-duke of Mecklenburg, 16 Oct. 1870. 99 officers, 4633 men, 128 guns, &c., were said to be taken. The Germans thus obtained a second line of railway from Châlons to Paris.

SOLAR SYSTEM, nearly as now accepted, is said to have been taught by Pythagoras of Samos, about 529 B.C. He placed the sun in the centre, and all the planets moving in elliptical orbits round it—a doctrine superseded by the Ptolemaic system (*which see*). The system of Pythagoras, revived by Copernicus (1543), is called the Copernican system. Its truth was demonstrated by sir Isaac Newton in 1687. See *Planets*.

SOLFERINO (in Lombardy), the site of the chief struggle on the great battle of 24 June, 1859, between the allied French and Sardinian army commanded by their respective sovereigns, and the Austrians under general Hess; the emperor being present. The Austrians, after their defeat at Magenta, gradually retreated across the Mincio, and took up a position in the celebrated quadrilateral, and were expected there to await the attack. But the advance of Garibaldi on one side, and of prince Napoleon and the Tuscans on the other, induced them to recross the Mincio and take the offensive, on 23 June. The conflict began early on the 24th, and lasted fifteen hours. At first the Austrians had the advantage; but the successful attack of the French on Cavriana and Solferino changed the fortune of the day, and the Austrians, after desperate encounters, were compelled to retreat. The French attribute the victory to the skill and bravery of their emperor and the generals MacMahon and Niel; the Austrians, to the destruc-

tion of their reserve by the rifled cannon of their adversaries. The Sardinians maintained a fearful contest of fifteen hours at San Martino, it is said against double their number. Loss of the Austrians, 630 officers, and 19,311 soldiers; of the allies, 8 generals, 936 officers, and 17,305 soldiers killed and wounded. This battle closed the war; preliminaries of peace being signed at Villa Franca, 12 July. On 24 June, 1870, on the site of the battle, three ossuaries, containing the bones of thousands of the slain, were consecrated in the presence of representatives of Austria, France, and Italy. The Ossuary tower inaugurated, and a colossal statue of king Victor-Emmanuel, unveiled by king Humbert, 15 Oct. 1893.

SOMERSET-HOUSE (London), formerly a palace, founded on the site of several churches and other buildings levelled in 1549, by the protector Somerset, whose residence fell to the crown after his execution, 22 Jan. 1552. These were bought for 11,000*l.* by 73 English gentlemen, with the view of first exhibiting them to the public, and afterwards selling them to the government (who gradually purchased them between 1858 and 1865). They formed part of the "Art Treasures" exhibited at Manchester in 1857.

SOUND, see *Acoustics*.

SOUND DUTIES. Till the year 1857 no merchant ship was allowed to pass the Sound (a narrow channel separating Zealand from Sweden) without clearing at Elsinore and paying toll. These duties had their origin in an agreement between the king of Denmark and the Hanse towns (1348), by which the former undertook to maintain lighthouses, &c., along the Cattagat, and the latter to pay duty for the same. The first treaty with England in relation to this was in 1450; other countries followed. In 1855 the United States determined to pay the dues no more; and in the same year the Danish government proposed that these dues should be capitalised; which was eventually agreed to, the sum being 30,476,325 rix-dollars. In Aug. 1857, the British government paid 10,126,855 rix-dollars (1,125,206*l.*) to the Danes as their proportion.—The passage of the Sound was effected, in defiance of strong fortresses, by sir Hyde Parker and lord Nelson, 31 March, 1801; see *Baltic Expedition*.

SOUNDINGS AT SEA. Captain Ross, of H.M.S. *Ædipus*, in 1840, took extraordinary soundings at sea. In the latitude 33° S. and longitude 9° W. about 300 miles from the Cape of Good Hope, 2266 fathoms were sounded; the weight employed amounted to 450 lbs. On 13 July, 1857, lieut. Joseph Dayman, in the North Atlantic Ocean, lat. 51° 9' N., long. 40° 2' W., in sounding, found a bottom at 2424 fathoms. The deepest sounding known (3875 faths.) was taken by the *Challenger*, capt. Nares, 24 March, 1873, in the North Atlantic, north of St. Thomas's. See *Deep Sea Soundings*.

SOUTH AUSTRALIA was visited by capt. Sturt in 1830, and explored shortly after by capt. Parker and Mr. Kent, the former of whom was killed by the natives. The boundaries of the province were fixed by 4 & 5 Will. IV. c. 95 (1834); and it was occupied 26 Dec. 1836, by capt. Hindmarsh, the first governor. It was colonised according to Mr. E. Gibbon Wakefield's scheme, which was carried out by the South Australian Colonisation Association. The colony for several years underwent severe trials through the great influx of emigrants, land-jobbing, building speculations, &c., which produced almost universal bankruptcy in 1839. In five years after, by the energy and liberality of Sir George Grey, the colonists had overcome their difficulties, and the prosperity of the colony appeared fully established. In 1842 the highly productive Burra Burra copper mines were discovered, and large fortunes were suddenly realised; but in 1851 the discovery of gold in New South Wales and Victoria almost paralysed this province by drawing off a large part of the labouring population. Very little gold was found in South Australia; but a reaction took place in favour of the copper mines and agriculture, &c. Before the discovery of gold, little trade existed between Adelaide (the capital of South Australia) and Melbourne; but in 1852 gold was transmitted from the latter to the former to the amount of 2,215,167*l.* principally for bread-stuffs, farm produce, &c. The bishopric of Adelaide was founded in 1847. Discovery of alluvial gold at Tatulpa, Waukaringa, Oct.; favourable report Dec. 1886. Sir Dominic Daly, appointed governor in Nov. 1861, died 19 Feb. 1868; succeeded by sir James Fergusson, Dec. 1868; by Anthony Musgrave, Jan 1873; by Wm.
