CHEEVER DIATOM SLIDE INDEX

FARLOW REFERENCE LIBRARY

53774

AUG 20 1975

7897
31-2

Clarence A. Cheever MD (1858-1947) a successful Milton, Massachusetts physician and amateur botanist built up in his life time one of the most complete diatom collections in the Western Hemisphere. Dr. Cheever first developed his interest in diatoms as an undergraduate student of Dr. W.G. Farlow, at the Bussey Institute of Harvard University. Though he later chose to go on to medical school and became a practicing physician, Dr. Cheever never lost interest in botany. In fact for many years he was the editor of *The New England Farmer*.

Interestingly enough the study of diatoms always remained a hobby to Dr. Cheever, despite the fact that he was continually adding to his collection and keeping abreast of the scientific literature on the subject. Although he had obviously become well qualified he never published a single work on the subject of diatoms.

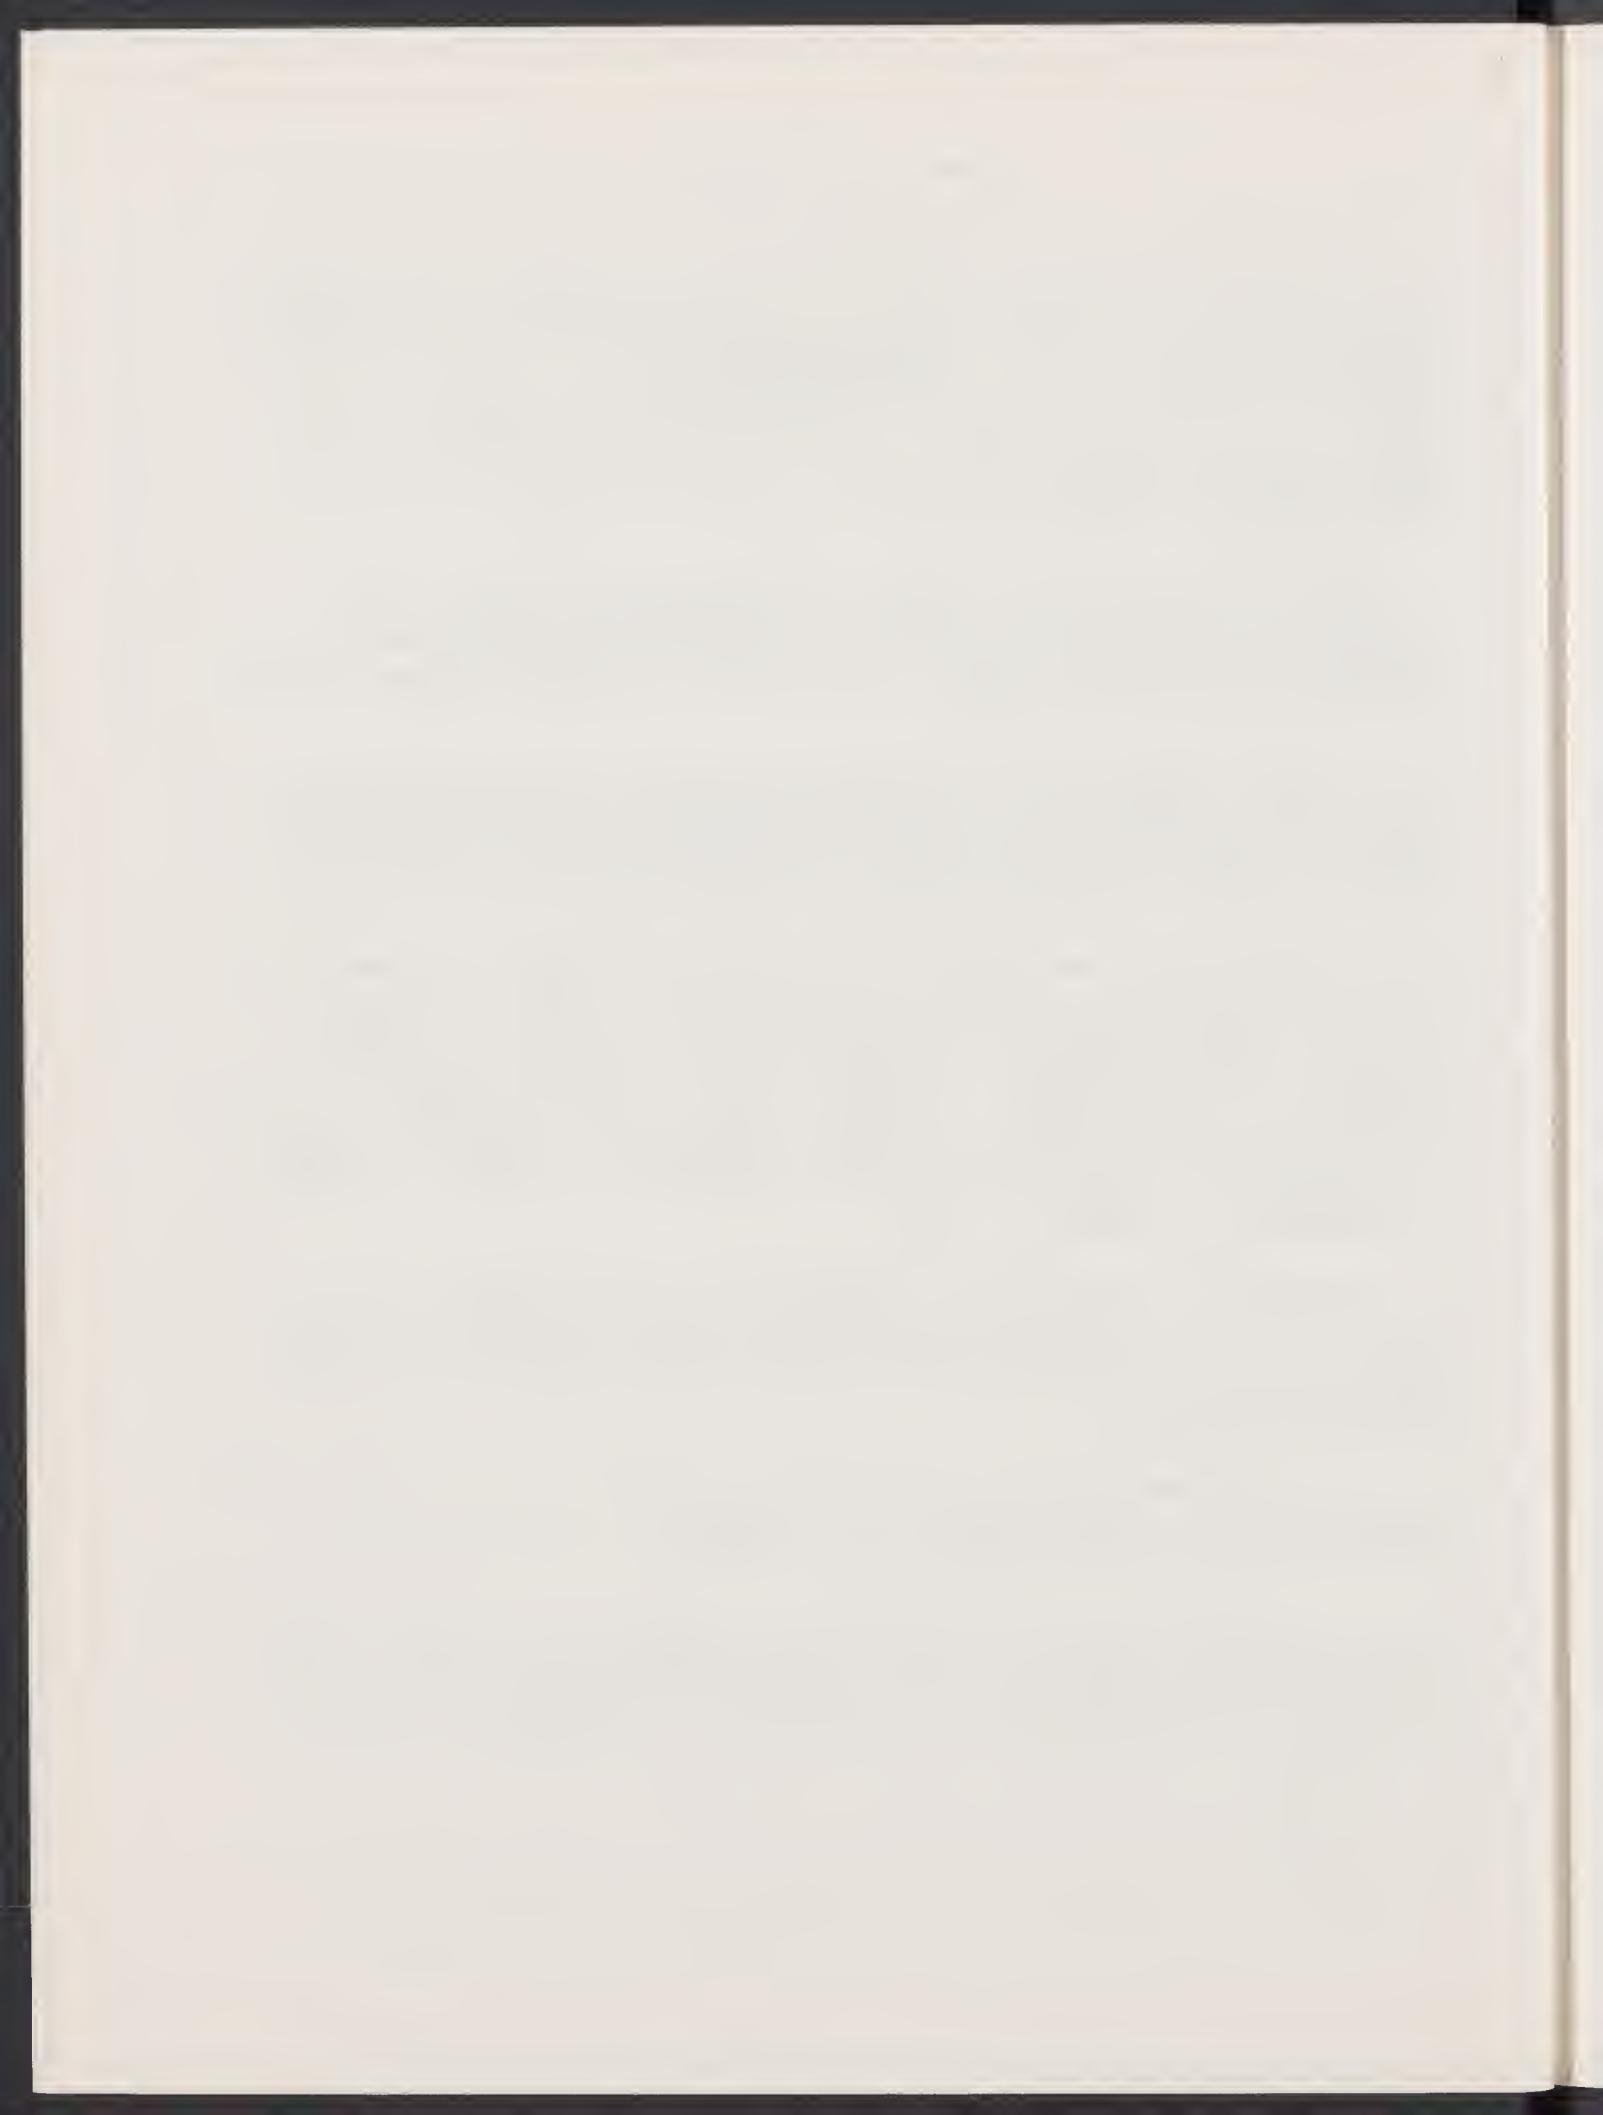

The bulk of Cheever's Diatom Herbarium consists of over 10,000 prepared slides, representing a world wide gathering of thousands of species and over two hundred freshwater and marine diatom genera. Acquired mainly through purchases, there are dozens of collectors and authors, both prominent and obscure, represented in Dr. Cheever's collection. Among these are:

F. Habirshaw, H. van Heurck, Wm. H. Pratt, H.H. Chase, D.B. Ward, H.L. Smith, Wm. A. Terry, J.D. Moller, P.F. Cleve, G.A. Fisher, C. Febiger, Wm. A. Poyser, Tempere DeBrebisson, T. Eulerstein, F.F. Forbes, P. Klavsen, C.L. Petricolas, C.H. Kain, O. Kendall Jr., R.P. Durkee, E. Thum, G. W. Morehouse, J.P. Wintringham, T. Chalkley Palmer, J.R. Bartholomew, J.L. Cloud, H. Reichett and W.C. Walker, M.A. Booth, H.S. Lauder, L. Leger, A. Newman, A.C. Wheeler, R.S. Warren, F.W. Lewis, C. Stodder, M.A. Grunow, E. Samuels, J.W. Bailey, J.D. King, N.A. Mason, L. Woolman, F.S. Morton, E. Weissflog, C. Bourgogne, W.H. Harvey, J. Pain.

In addition to the slides the Herbarium also includes 500 vials each of W. A. Terry's and F. Habirshaw's cleaned and dried diatoms; a copy of Schmit's *Atlas der Diatomacee* through plate 336; an extensive card index to species, collection localities and diatom literature and several of Dr. Cheever's note books.

The Cheever Diatom Herbarium was received in part as gifts in 1941 and 1943 from Dr. Cheever himself. The remainder of the collection was later donated by his son Austin Cheever in 1953.

The restoration organization and indexing of the Cheever Diatom slide Herbarium was begun in June 1974 and completed February 1975. The restoration and organization of the collection was carried out by Shirley Mah, Dan Plas, Ann Faulkner and Jerry Cacavio. The index was prepared by Ann Faulkner and Jerry Cacavio and typed by Alice Panossian.

In organizing Dr. Cheever's collection it was decided that the slides be divided into four groups, sections A, B, C and D. Into Section A were placed all those slides which bore determinations. Into Section B was placed all those slides which were undetermined, but which bore collection localities. Also included in Section B was a number of slides, which turned up after the major reorganization had taken place and which are treated in the adenda. Section C was catch all for those slides which were not identified and which bore no collection localities. Section D was set up to contain the following three diatom exsiccati: *Diatomacearum species typicae* (no. 1-700); Cleve and Moller's Diatoms (no. 1-300); and *Synopsis Des Diatomees de Belgique* (no. 1-550).

Section A Boxes A-1 to A-41

Determined slides are indexed alphabetically according to genus and then according to species. The actual location of the slides are given by letter number combinations located on the extreme right handside of the page following each species entry. For example the letter number combination of *Alloineis antillarum* is A-3: 24. The letter number sequence A-3 indicates box 3 of Section A. The number "24" following the colon in that sequence indicates the slot number.

During the organization of the collection, all slides which listed more than one species were without exception inserted in the collection under the first name listed on the slide. All the species were then listed in the index giving the same letter-number combination. Thus a given slide may be found listed under more than one diatom species and likewise the letter-number combinations given after a species may on occasion appear to be out of sequence.

Section B Boxes B-1 to B-41

All undetermined slides bearing collection localities are divided into two groups. Those collections made in the United States are in Group I and are arranged alphabetically by state. Those collections made outside the US are in the Group II World division. The slides in the Group II are divided into geographic areas and arranged alphabetically by country or locality within each area.

The locations of the slides in Section B are as Section A given in the index by the letter-number combinations following each entry.

Section C Boxes C-1 to C-5

The slides in this section are probably of culturing experiments. They are undetermined and bear no collection data; they are therefore not indexed.

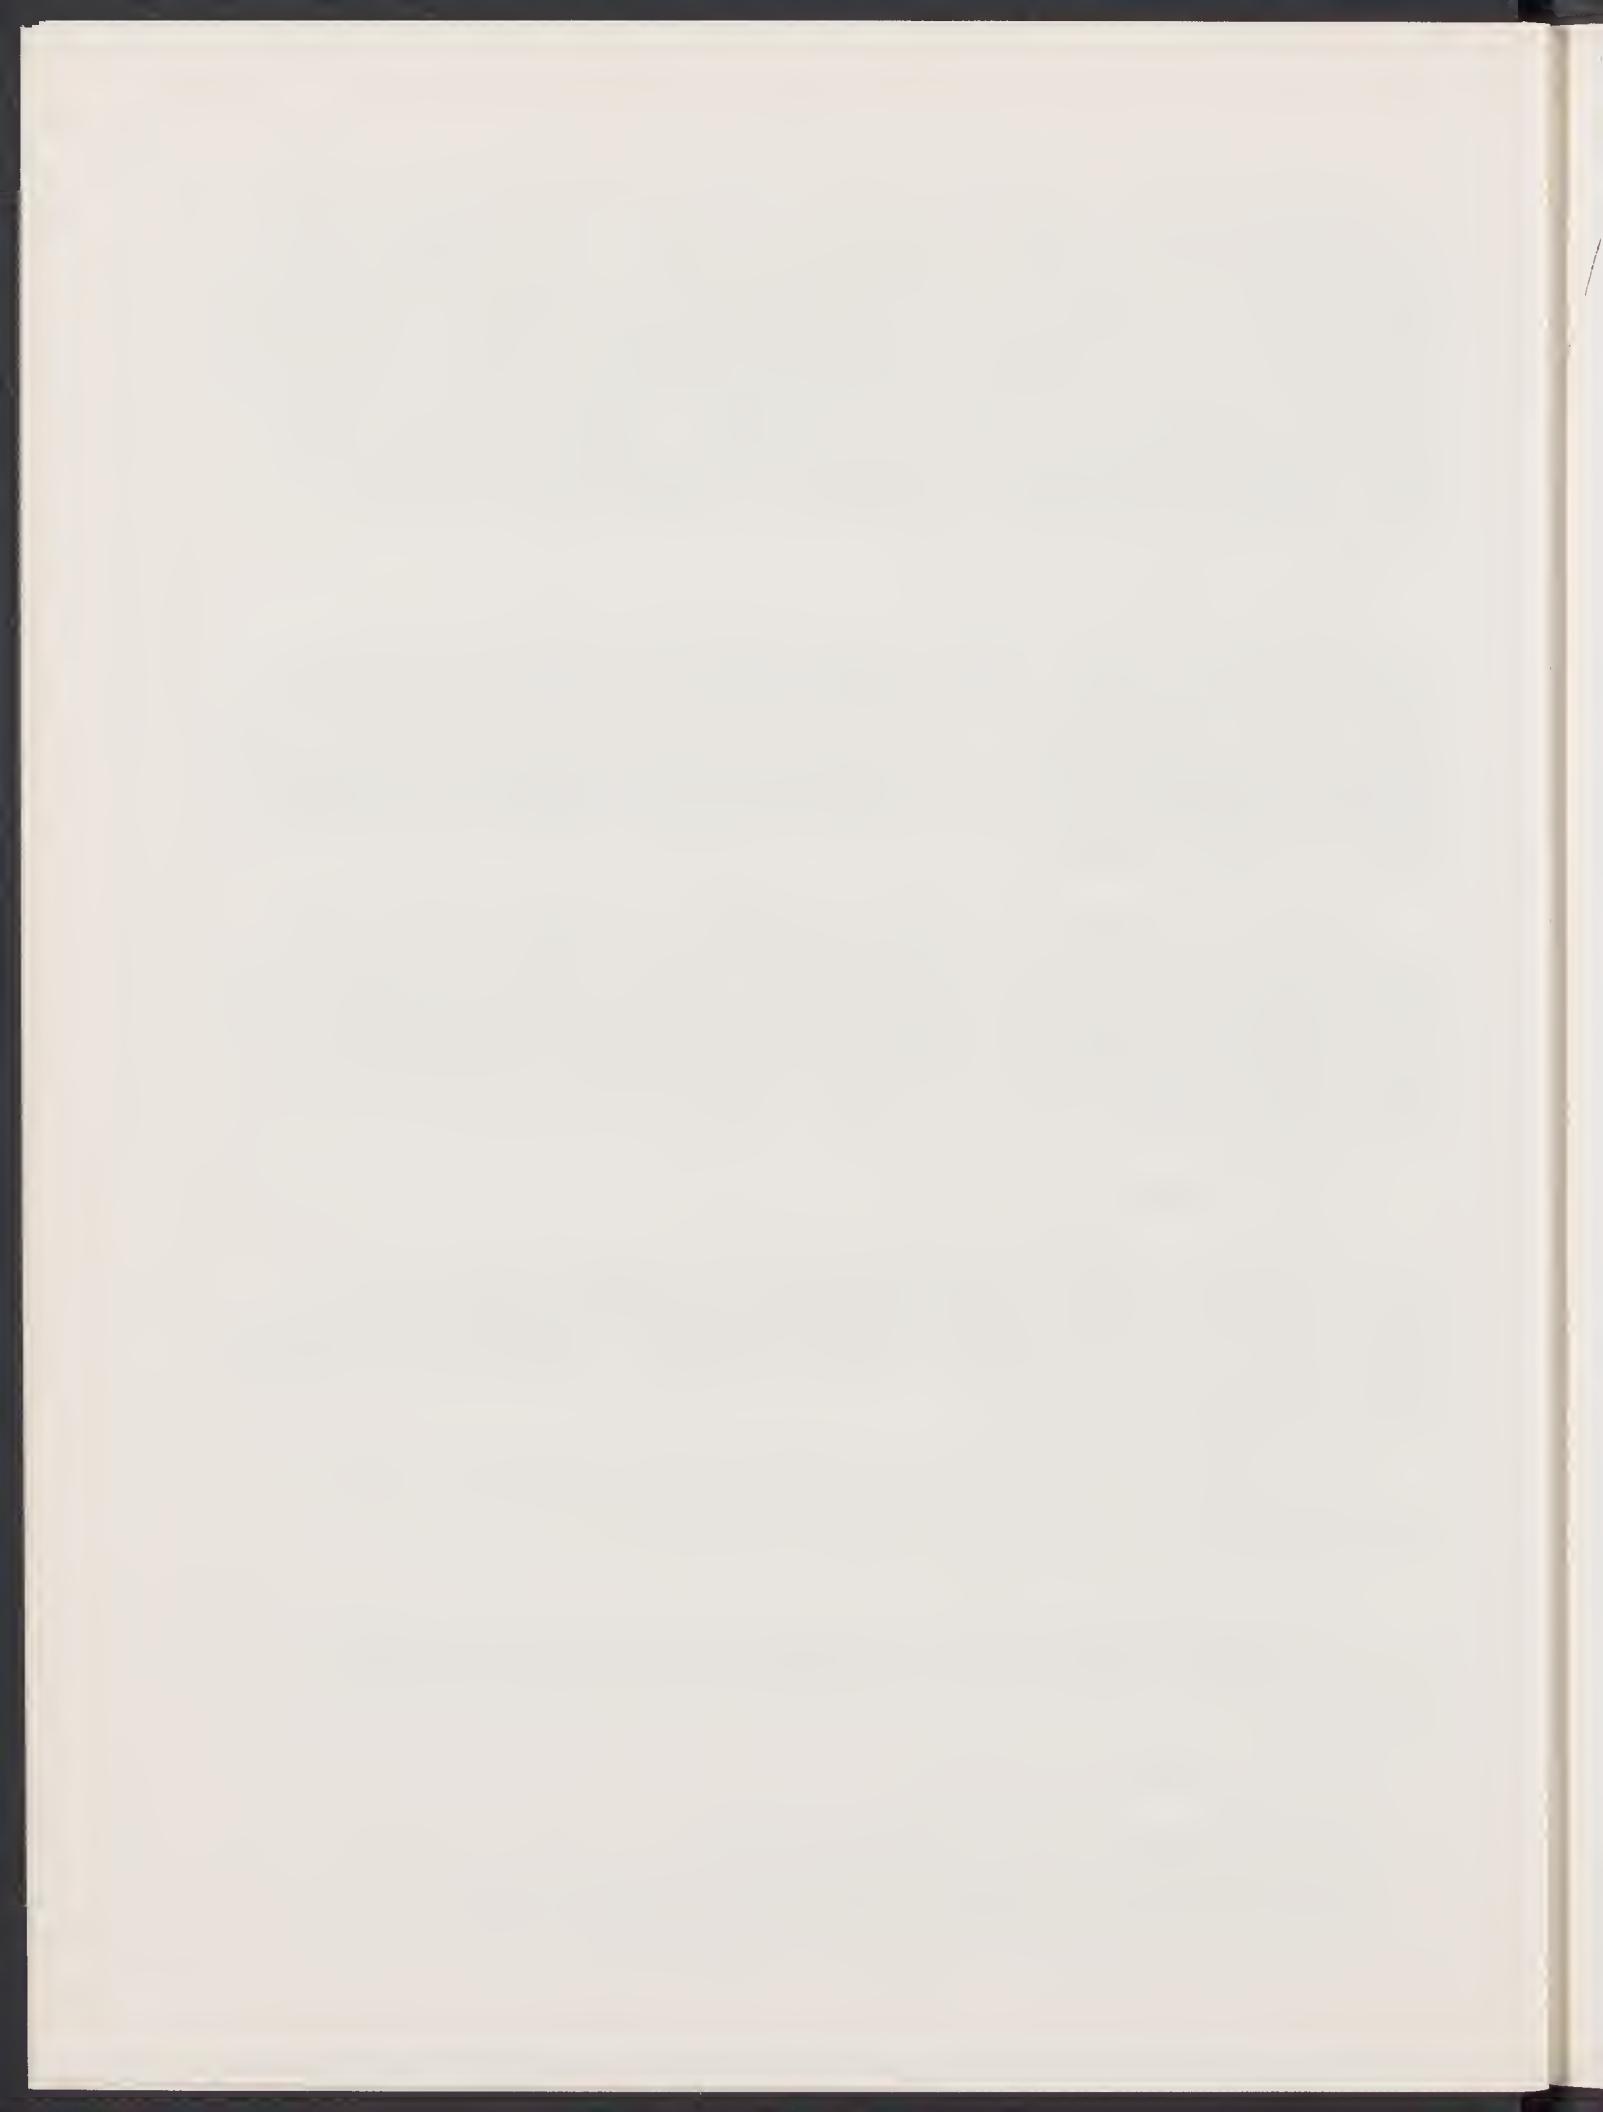

Section D Boxes D-1 to D-18

Diatomacearum species typicae D-1 to D-7

Cleve and Moller's Diatoms D-8 to D-10

Cleve and Moller's Diatoms Incomplete set D-11 to D-12

Synopsis Des Diatomees de Belgique D-13 to D-18

Because of the special nature and value of intact exsiccati collections, the three found in the Cheever Herbarium have been kept intact, and together treated as a separate section. The species therefore were not included in the index which follows, but will be found in a separate "Index to the Exsiccati of the Cheever Herbarium."

Addendum Boxes B-36 to B-41

The addendum at the end of this index contains a fair number of slides belonging to both Group I and Group II. These slides were discovered after the collection had been organized and could not be included in the index A or B.

Addendum Section A

- B-41: 71 *Pleurosigma* sp.
- B-41: 72 *Synedra goulardi* Bres.
- B-41: 73 *Toxonidea gregoriana*
