At the time the mobs were so destructive in the city of Philadelphia, in May, 1844, a meeting was notified by public advertisement to take place in the Park with a view to pass resolutions sympathising with the sufferers in Philadelphia. The cruelties perpetrated in Philadelphia were so great that it became dangerous to collect together a multitude here for fear of the consequences which might grow out of a public recital of the bloodshed by the mob, and the meeting was accordingly given up, but two of the city papers had announced the meeting for a day previous to the time fixed upon and no sufficient time intervened to give notice of the mistake. Great numbers began to collect in the Park in the afternoon of the 9th of May, and the accounts of the Philadelphia butcheries was operating on the minds of some of the crowd when we applied to Mayor Harper on the subject. He at once addressed to us a note of which the following is a copy:

"Thursday Afternoon,
May 9th, 1844.

"Dear Sir,

"In reply to your note, I beg to say that there will be no authorised meeting of the American Republican Party in the Park this week. In haste.

Your obt. servant,
JAMES HARPER."

"To E. Meriam, Esq.

Mayor Harper had not then been sworn into office, but the position in which he stood toward the American Party gave him a commanding influence. This letter was read on the steps of the City Hall to the crowd and they dispersed immediately. Mayor Harper's doctrine is that "prevention is better than cure," and his views in this, are in accordance with those of all intelligent, deliberate men. The city has been quiet under the administrationof Mayor Harper, notwithstanding the great excitements which have prevailed elsewhere.

PUBLISHING OF PROCEEDINGS OF THE CITY BOARDS.

The Board of Aldermen and Board of Assistant Aldermen are very remiss in the publication of their proceedings. Citizens whose interests are to be affected by the acts of the Common Council should have knowledge immediately of the introduction of these proceedings into one Board, before they are consumated in the other. This would give persons interested, two opportunities for redress: the first with the concurring Board, and the second, with the Mayor.

This is not only the spirit but it is the mandatory provision of the Charter. We were in the room of the Board of Aldermen a few days ago, when a sewer proceeding involving an assessment, was being acted upon. It went through both Boards with railroad speed the same evening without any publication of the ayes and noes. We felt sorry to see the Natives thus hurrying through assessment proceedings. The other proceedings passed upon the same evening seemed to have the same projectile force.

MAP OF A STORM.

The snow storm which occurred on the 28th and 29th of September, 1844, illustrates a peculiar state of atmosphere in certain localities differing entirely from that of others of the same latitude.

I met with a gentleman yesterday, who states to me that he was, during those two days, in New Castle District, Upper Canada, and no snow fell in that vicinity. The weather, however, was cold and stormy; and I also seen a gentleman who was in Montreal those two days, and he informs me that no snow fell in that city.

By the accounts published in the newspapers at various places, it appears that the storm was confined to a narrow path.

At Portland, Maine, which is in latitude 43 9, the rain fell abundantly on the 29th; and at Utica, N. Y., which is in lat. 43 10, snow fell nearly all day on the 29th.

At New-York, which is in lat, 40 42, and at Baltimore, Md., which is in lat. 39 17, rain fell abundantly on the 29th.

At Richmond, Va., which is in lat. 37 32, there was a severe frost on the 29th Sept.

At Cumberland, Md., in lat. 39 38, snow was visible upon the mountains.

At Boston, Mass., lat. 42 22, there was rain on the 28th and 29th, but at 4 o'clock P. M. of the 29th, it cleared up to beautiful fair weather.

At Mifflinton, Pa., lat. 40 45, and in Lycoming, lat. 41 20, snow fell abundantly on 29th.

On the hills of Berkshire County, Mass. and of Schoharie county, N. Y., snow fell on the 29th.

Capt. Sherman, of the Brig Emily, arrived at New-York on Monday morning the 30th of Sept. from Charleston, S. C., experienced nothing of the gale on the 28th or 29th.

Travellers from Portland to Quebec, met with snow on the highlands, as low down as Aubect Gallion, six inches deep, but no snow was visible on the mountains north of Quebec from that city. Rain fell at Quebec on the 29th.

I have an account of the fall of rain from Com. Crane, as per the register kept at the Hydrographical Office, Washington city, which gives a fall of one inch and 30-100, on the 28th, but no rain on the 29th or 30th. Washington is in lat. 38 52 and 45 seconds.

Thus we have a partial map of the storm. The snow extended south of lat. 40 in particular localities, but was absent in higher northern latitudes, and again made its appearance in lat. 47. Rain fell in the intermediate latitudes in the same localities, and in others snow; and south of lat. 37 was fair weather, but cool.

These facts are instructive and carry us back to the ancient Record which speaks of the wind as beyond the power of research, for 'none can tell whence it cometh or whither it goeth.'

E. MERIAM.

UNITED STATES SENATOR.

The city of New-York is by its commercial importance, certainly entitled to a representative in the Senate of the United States. Other portions of this State have furnished members from the State to that body for years, and the city should now have a voice by the selection of one of its prominent citizens to fill the office of Senator. Stephen Allen is the very person who ought to be selected. Mr. Allen has filled many public stations with advantage to the people and with credit to himself, and has in all been found faithful and capable. Mr. Allen was three years Mayor of the city of New-York, was four years a member of the Senate of this State, was a member of the Convention which framed the amended City Charter, has held the office of Croton Water Commissioner for several years and was President of the Board; was at one time the depository of all the funds of the government of the United States collected at this Port, and has been a member of the city Councils. Mr. Allen, although not bred to the legal profession, delivered some opinions in important causes in the Court for the Correction of Errors, which were profound and elaborate, and discover a mind of extraordinary powers. It is in accordance with the doctrines of the American Republicans, as we understand their doctrines, to support Mr. Allen, and we presume there are enough high-minded democrats and high-minded Whigs in the State Legislature to make up a majority for Mr. Allen in that body. Perhaps politicians may say that Mr. Allen has had his share of public office. To such we reply that offices were not made for men, but men were created of ability and worth to fill public office. John Quincy Adams has held office during the whole of the mature years of a long life with honor to himself, and credit and advantage to the Republic, and we could make the same remark in reference to Henry Clay, and many others.

CONDITION OF MAIDEN LANE.

The surface water from the waste of the Croton, is in Maiden Lane a great nuisance. We have been informed by Henry Andrew, Esq., that there is a sewer under Maiden Lane. It would seem to be only necessary to make receiving basins at Gold, Pearl, Water and Front Streets, with culverts and strainers to relieve the surface.

MASSACHUSETTS LEGISLATION.

The vote of the towns of Massachusetts determine how many Representatives each town will send to the Legislature each year, within certain limit, or whether it is necessary to send any representative. It is frequently the case that a town votes that it is not necessary to incur the expense, as that is paid out of the town Treasury. The principle will sometimes apply in this city, both as to the Legislature and Common Council, if we take what is done for particular wards in the Common Council, and what is done by the delegation in the legislation for the city. The mill tax is a *memento*.

COMMITTEES OF THE BOARD OF ASSISTANTS.

Special Committee on the Chapel Street Outrage.

Assistant Ald. Tucker of 15th Ward, Chairman.
" " Blackstone, of the 8th Ward.
" " Divver, of the 4th Ward.

Special Committe on the unauthorised application to the Supreme Court for the appointment of Commissioners of Estimate and Assessment iu the Streets and avenues up to and including 42d Street, laid down on the Commissioner's map, and not opened prior to February 16th, 1837.

Assistant Ald. Tucker Chairman.
" " Blackstone,
" " Divver.

BOARD OF SUPERVISORS.

Committee on Annual Taxes.

Alderman E. G. Drake, 5th Ward, Ch'n.
Alderman Mott. 9th Ward.

COMMON COUNCIL.

Committee on Streets.

Alderman Devoe,	Assistant Ald.	Ward,
" Cozzens,	"	" Taylor,
" Gale.	"	" Divver.

CLEANING STREETS.

Alderman Miller,	Asst. Ald.	Tucker,
" Bunting,	"	Charlick,
" D. T. Williams.	"	Smith.

FINANCE.

Alderman Drake,	Asst. Ald.	Tucker,
" Miller,	"	Taylor,
" Gale,	"	Horn.

The correcting of Erroneous Taxes belongs to the Board of Supervisors. The Chairman of the Tax Committee is at the office of the City Trust Company, 48 Wall Wall Street.

DIAGRAMS.

We shall present several new diagrams of splendid Assessments, that of John Duffie's estate, on 38th Street, between 2d and 3d Avenue—that upon John Schuyler's estate on the corner of 28th Street, and Seventh Avenue—that on land of Assistant Alderman Townsend, on Seventh Avenue, near 50th Street; also on that of the land of General Striker, and among the rest the Salt Meadow Assessment, and also of the Sewer built on piles in 122d Street and Chapel Street Sewer, &c. &c.

THE MUNICIPAL GAZETTE

Is forwarded to the Executive, Legislative and Judiciary Officers of the Government of the United States—to the Governors of States composing the Union—the Mayor of all the cities in the United States—to the Presidents of the several Banking Institutions in the several States composing the United States—to the members of the New-York State Legislature and heads of Departments—to the high Judiciary Officers of this State and distinguished citizens in this City, State, and United States.

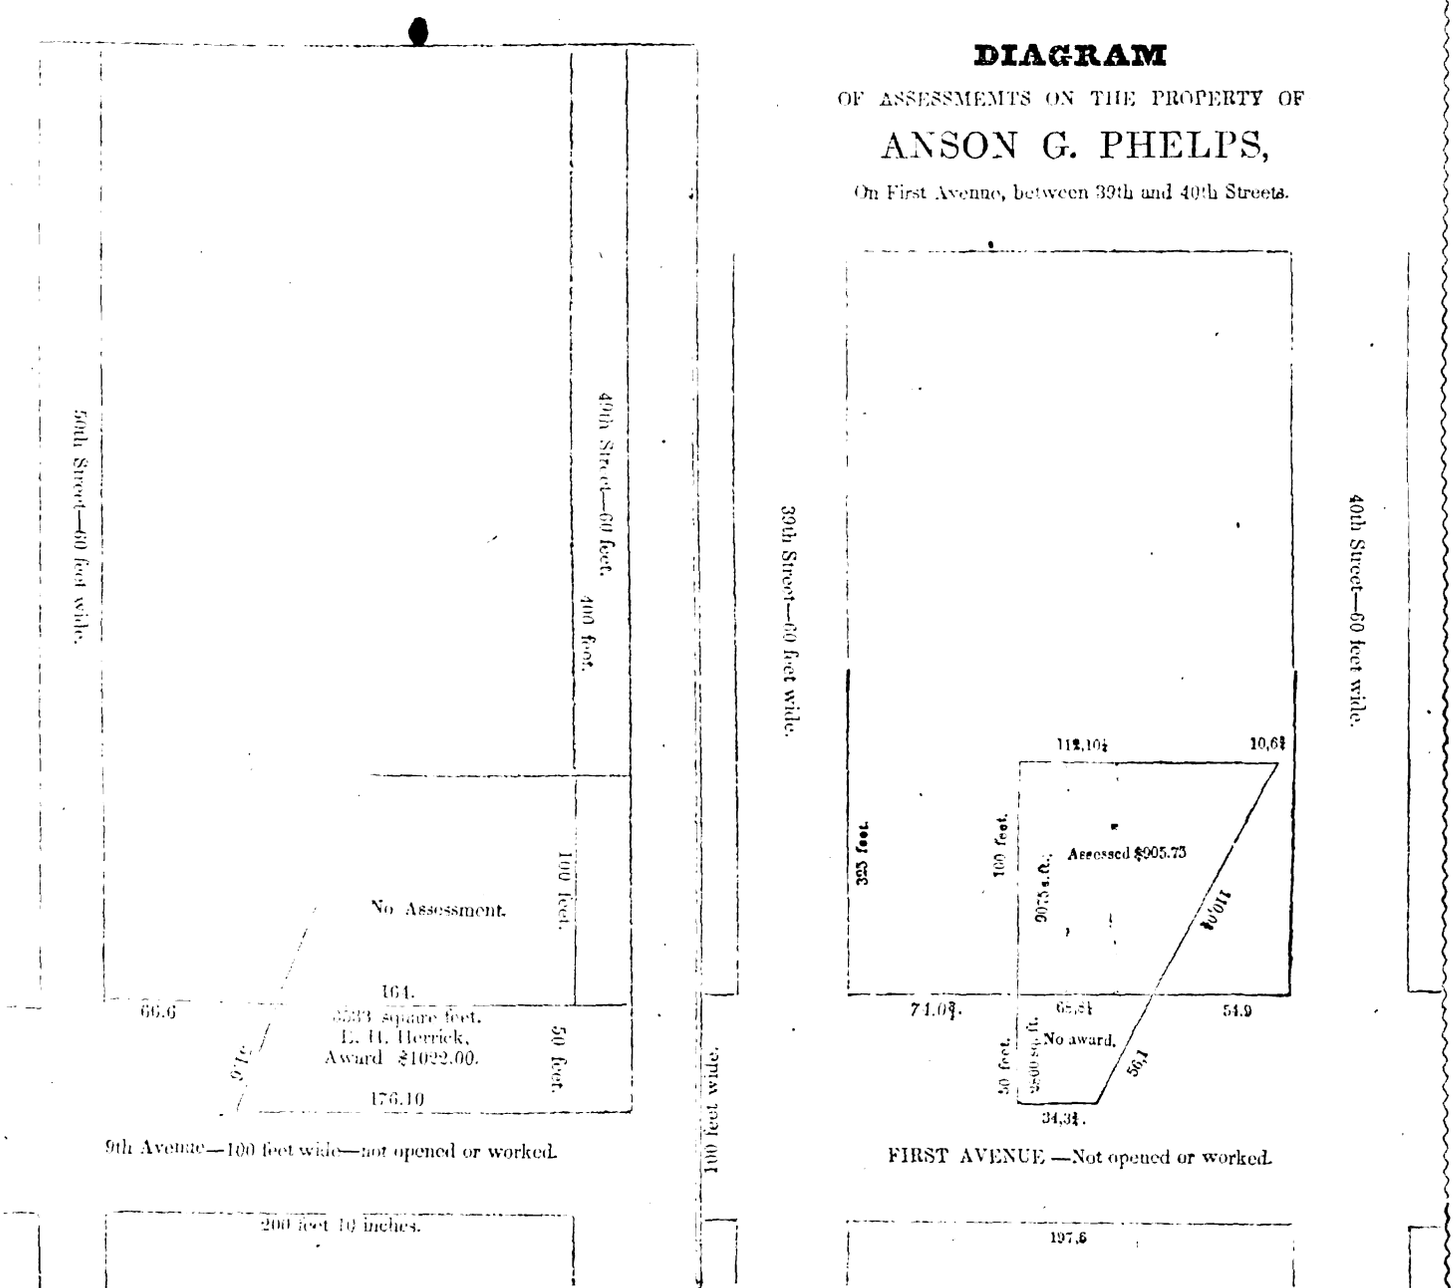
RUINOUS ASSESSMENTS ILLUSTRATED BY DIAGRAMS.



The award for the Land taken from Mr. E. H. Herrick in the Ninth Avenue, for that road, compared with the assessments upon the land of Anson G. Phelps, for his land in the First Avenue, taken for that road, presents an illustration which demonstrates abuses of a serious character. The land taken from Mr. Phelps for the First Avenue in proportion to what is left, is about in the same ratio as that taken from Herrick for the Ninth Avenue in comparison with what is left, and shows the total absence of all system, rule, equity or justice, in making assessments and awards. Mr. Herricks award, compared with the assessment on the land of Assistant Alderman Townsend, taken for the Seventh Avenue, presents another illustration. The land extending back to a line running half way between the Eight and Ninth Avenue should have been assessed a small sum for the land taken from Mr. Herrick, and Mr. Herrick should have been awarded say $50 or $100. Mr. Phelps whose land is situated precisely as that of Mr. Herrick, should have been awarded for what was taken, instead of being assessed on what was left, and the same as to Mr. Townsend's land. The difference between paying an assessment instead of receiving an award, is very great. Whether a person receives $1000. or has that sum to pay is a difference to such person of $2000. The land of Mr. Herrick was assessed for opening 50th Street $10. Mr. Phelp's land was assessed for opening 40th Street $575. That such proceedings as these should be corrected, is a matter of such common sense propriety, that we doubt if there could be found an intelligent man in the world who would oppose such a proceeding, and that Courts of Justice should have their legal vision so obscured as not to be able to see these matters in their proper light, is a sad commentary upon the Judiciary department of the State Government. The 9075 feet contained in Mr. Phelps's land is valued by the Ward Assessors at $150.00, which is not much more than the interest of the assessment, and but a trifle more than half the assessment imposed upon it, thus it is an absolute confiscation of the land, or taking private property without just compensation. A pretty proceeding—"*a judicial power exercised in a judicial way.*"

The fees of Counsel, Commissioners, and Surveyors, for street openings in the city of New-York, confirmed by a justice of the Supreme Court in 1839, amounted to the sum of $100,131.26, and these diagrams show how these fees were assessed, viz. Counsel $31,196.47; Commissioners $39,143.79; Surveyors $22.517.00; Collectors $7,274.00.

The two Diagrams on this page are copied from the Maps of the Commissioner's of Estimate and Assessment.

DIAGRAM NO. 1.

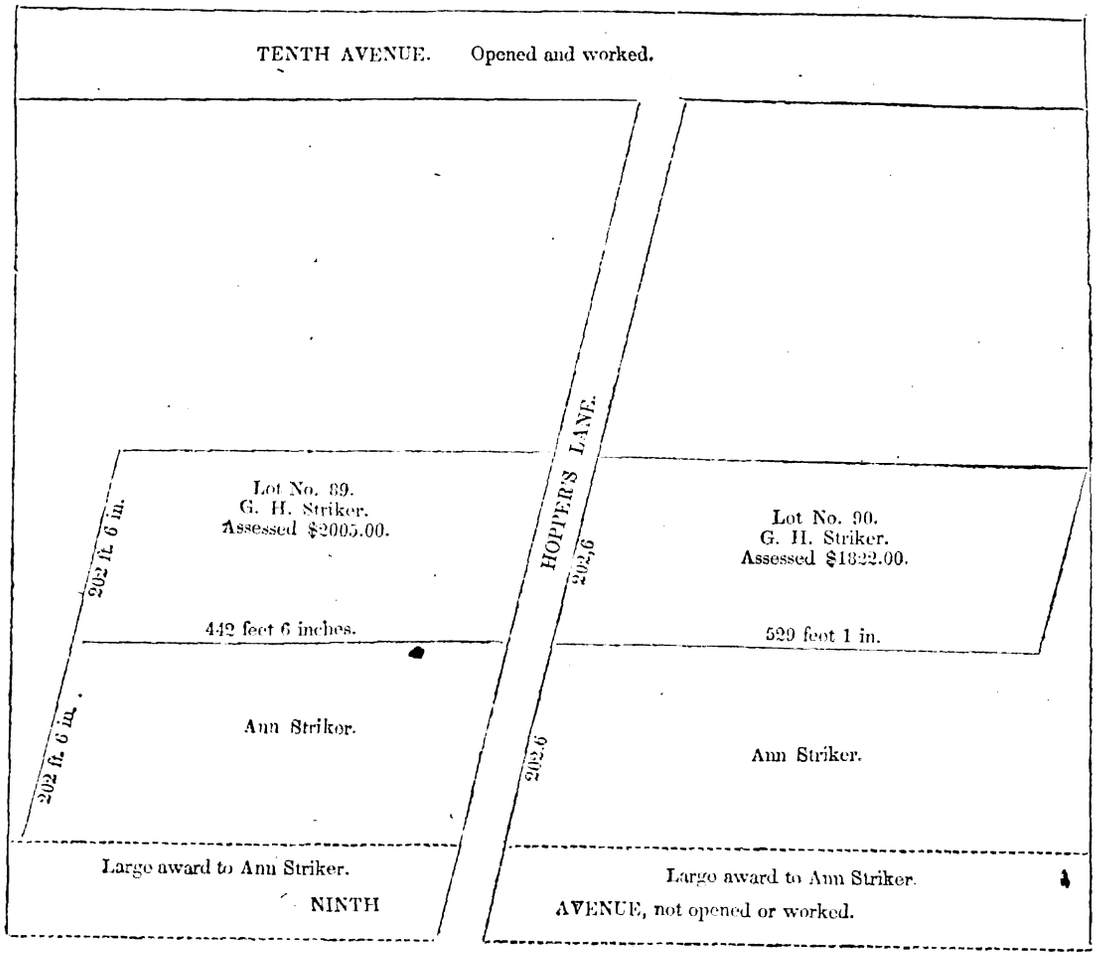


DIAGRAM NO. 2.

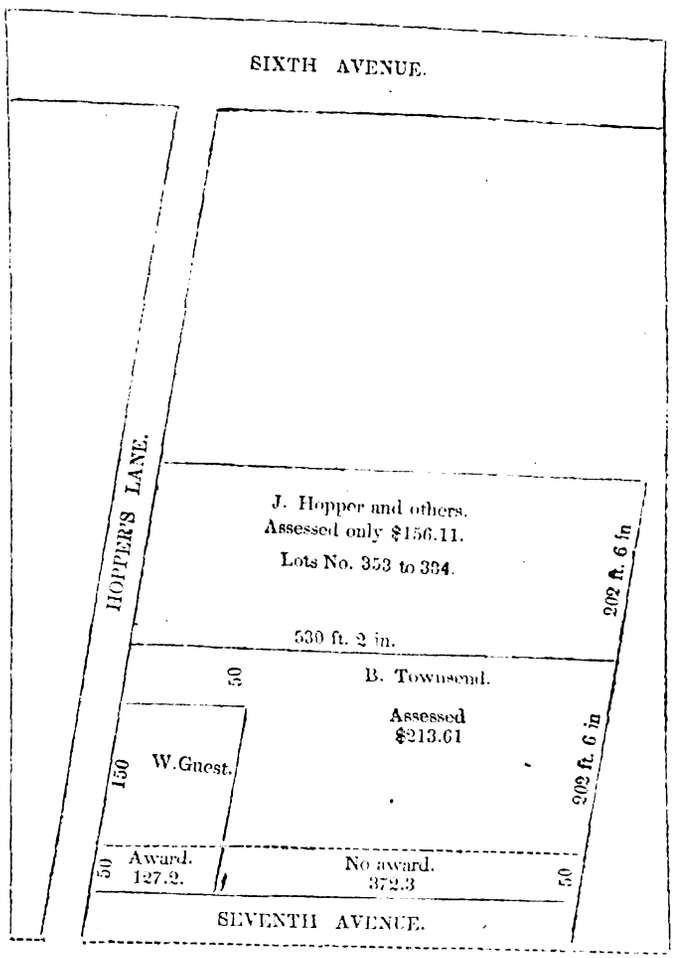
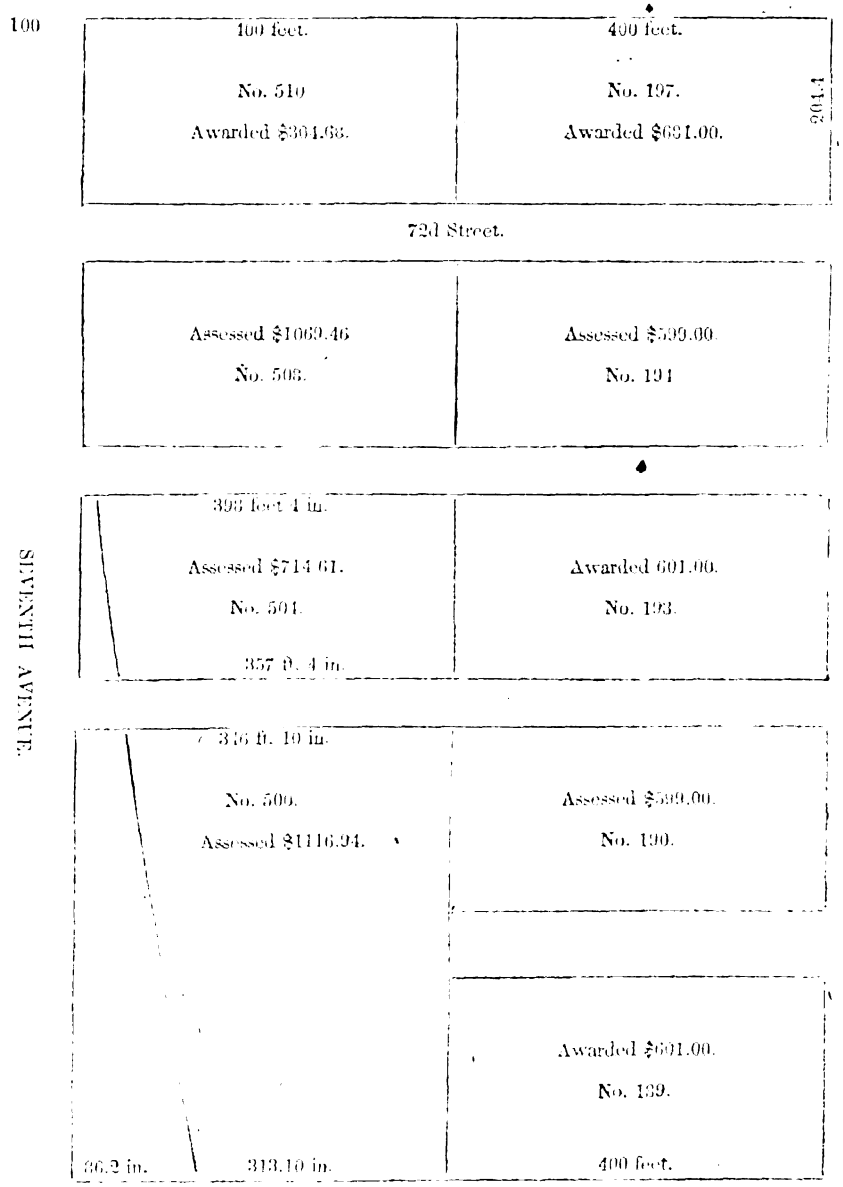


We present upon this page, two Diagrams, illustrating the inequality of Assessments, and the loose manner in which these extraordinary impositions have been made. The Land assessed as the property of Garret H. Striker, and designated as Lots No. 89 and 90, were assessed for benefit for the prospective opening of the Ninth Avenue, the large sum of $3,827.00. The Land assessed as the property of Jasper Hopper, T. J. Nelson and C. T. Newcomb, and designated as Lots Nos. 353 to 364, J. Hopper and others, and which are Nos. 353 to 356—360 to 363, and 361 to 364, on the Commissioners map, of the Seventh Avenue Assessment, are assessed in the whole for benefit, only $156,11. This piece of ground is the same distance from the line of the Seventh Avenue that General Striker's land is from the line of the Ninth Avenue. The Lot No. 90, for which G. H. Striker is assessed $1822.00, does not contain as many square feet as the piece of ground for which J. Hopper, Nelson and Newcomb are assessed only $156.11. General Striker's Assessment is more than eleven times as much as that of Hopper, Newcomb and Nelson. The two pieces of ground are bounded on Hopper's Lane, and are 2300 feet apart and are both of about equal value. General Striker's Lot, No. 90, should not have been assessed $100.

These Diagrams also present an illustration of the system of making awards for land required to be taken for public avenues. The land of Assistant Alderman Townsend, lying within the lines of the Seventh Avenue as laid out and opposite his other ground fronting on the same avenue was taken for the said avenue, to the extent of 18,683 square feet and instead of making an award therefor, the Commissioners assessed him $213,61. Mr. Guest whose land adjoins that of Assistant Alderman Townsend, and of the same quality was awarded $137.00 for 647+ square feet. In the Ninth Avenue assessment, Ann Striker's property, on the westerly side of the centre of the Avenue extended back from that line 250 feet, from which the Commissioners took a strip 50 feet in width, the entire length, and awarded here about four thousand dollars.



AMORY ESTATE ASSESSMENT ILLUSTRATED.

An opinion may be formed of the labor of Commissioners, Surveyors, and Counsel, in Street openings from the annexed Diagrams, of 6th and 7th Avenues, and the statement of fees, &c., which accompany the same. The Sixth Avenue proceeding includes 190 blocks like the block designated No. 192. The property of the Amory estate makes 11 of these blocks. The fees of the Commissioner's, Surveyor's, and Counsel are $10,563.77, which is $55.02½ for each block; therefore for 11 blocks it is $611.67½. A competent person could make the survey of these 11 blocks in one day, and the Commissioners could make the assessment of these 11 blocks in one hour, and the labor of the Counsel in the matter should be but a few shillings at most.

The Seventh Avenue proceeding embraces 216 blocks like that designated No. 503. The Commissioner's fees in this avenue are $1,920, which is pay at four dollars per day, for 416 working days for each Commissioner, which is equal to about fifteen months solid time. The Amory estate has 5 blocks of this 216. Of course the share of the expense of the Commissioners on these 5 blocks is $111.55 making 9 days that all these three Commissioners must have been engaged upon these 5 blocks to perform less than an hour's labor. The room hire of these three Commissioners is $240, which is equal to the rent of a splendid mansion in the country for one year. Their Clerk hire, $250; Carriage hire, $30; stationary $43. The Surveyor's fees are $2,301, which at $4.00 per day is pay for 700¾ working days, equal to 146 weeks and upwards, or two years and nearly three months, which for 216 Blocks is three days labor on each block, and fifteen days labor on the 5 blocks in the 7th Avenue. What would farmers in the country say to having their farms surveyed at this rate. The Counsel fees in this avenue are $3,376.77, which is equal to the pay of the High Chancellor of the state for one year, seven months and three days.

Here is an assessment upon the farming land belonging to a widow lady and her children amounting to $5525.33, and the interest upon it to the present time to about $23,300.00, making in all about $7,300.00, for that which is not a farthing of benefit, for they own the land in front of their lots and can open their own street. Such proceedings as these are of the most odious character, a disgrace to the City Government and a shame upon the public officers who have committed these glaring and most reprehensible abuses.

The Surveyor's fees in both these Avenues are $5,213.00, which is, at four dollars per day, pay for 1329¼ days, or 4 years, 3 months and a quarter of a day. The Counsel fees for the two avenues exceeds the salaries of the entire bench of the Supreme Court for one year.

NEW-YORK MUNICIPAL GAZETTE.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, JAN. 1, 1845. [VOL. I....No. 26.

THE NEW YEAR.

The *primitive* year, which commenced the annals of time, was that in which the great ancestors of our race first became inhabitants of earth.

The infant year was cradled in the first solar day, which was the fourth in the series of the days of creation.

Vegetable *life* had existed a portion of an entire period prior to the day dawn of the solar orb, and came into being on the third day of creation.

The celestial luminaries shone first upon earth when animated life was yet uncreated.

The solar orb rose and set upon local surfaces, which were then an uninhabited world.

What a period to contemplate! The human mind becomes lost in amazement when passing on the wings of thought to that period which terminated with the commencement of time!

There is a veil which curtains the periods which preceded the beginning of time, behind which the human imagination cannot penetrate, for the curtain is as close as that which hides from human vision, that period, when time shall be no more.

The second solar day in the order of time, the Fish of the sea and the Fowls of the air, were introduced upon earth.

The third solar day was that on which the animals were introduced, followed by our great ancestors, and these two human beings were at that time the only intelligent beings upon the whole terrestrial surface.

The second day of the existence of our two primitive ancestors, *was a day of rest*, the holy Sabbath.

These facts are stated with great particularity by the inspired pen which was moved by a hand that was obedient to the source of all knowledge, and although the human mind is not endowed with the powers of understanding the means used by the CREATOR of the universe to put the earth in motion and to fill it with life and animation, yet notwithstanding the result is seen, confirming all that is declared in the volume of inspiration.

The power to create a world and fill it with myriads of living beings, is an INFINITE POWER, and the bounteous provision made for the support of living creatures, witnesses of the goodness of that Almighty Being, who both creates and sustains life.

The revolving year is a continuation of the same order of time which had its beginning with the first solar day, with the exception of two remarkable events, noted in Scripture, in the first of which the Sun and Moon stood still and hasted not to go down for nearly a whole day, and the second in which the Sun went back on the dial of Ahaz, 15 degrees.

There was a period which constituted the primitive day, which was cradled in eternity. At that period there was neither Sun or Moon, to be for signs, for seasons, for days and for years; but there was light, and there was darkness, which were separated by the CREATOR, and the one succeeded the other, until three days of unmeasured duration were completed and ended. The work of each distinct period is recorded with great minuteness, but the enquiring mind asks what were the means used to accomplish so great a work? The answer is beyond the powers of a pen moved by a hand of flesh, except to repeat the declaration of the inspired pen, which is: "And God said let there be light: and there was light. And God saw the light, that *it was* good: and God divided the light from the darkness," and this was, when "the spirit of GOD moved upon the face of the waters."

"In the beginning GOD created the Heaven and the earth."

This brief but comprehensive declaration of the inspired penman unfolds to man a page in history, long, long anterior to the existence of his race, and long anterior to that period when the first day of creation ended with the primitive morning.

The second day of creation, God said "let there be a firmament in the midst of the waters, and let it divide the waters from the waters. And God made the firmament and divided the waters which were under the firmanent from the waters which were above the firmanent: and it was so. And God called the firmament Heaven. And the evening and the morning were the second day."

The third day of creation the waters under Heaven were gathered unto one place and were called seas, and the dry was called earth, and the earth was made to bring forth grass and herbs, yielding seed and fruit trees yielding fruit, "and the evening and the morning were the third day." At the termination of this period—time—had its commencement.

THE HOUR GLASS.

By Ex-President JOHN Q. ADAMS.

Alas! how swift the moments fly!
How flash the years along!
Scarce here, yet gone already by!
The burden of a song.

See childhood, youth, and manhood pass;
And age with furrowed brow—
Time was—time shall be—drain the glass—
But where in time is *now?*

Time is the measure but of change!
No present hour is found,
The past, the future, fill the range
Of Time's unceasing round.

Where then is now? In realms above,
With GOD'S atoning LAMB,
In regions of eternal love,
Where sits enthroned I AM.

Then, Pilgrim, let thy joys and tears
On Time no longer lean;
But henceforth all thy hopes and fears
From earth's affections wean.

To GOD! let votive accents rise;
With truth—with virtue live;
So all the bliss that Time denies,
Eternity shall give.

—

The lines we have given above, were written by the venerable JOHN QUINCY ADAMS, Ex-President of the United States, and were sung by the Choir of the First Congregational Church in Quincy, Massachusetts, on the occasion of the celebration of the 200th anniversary of the settlement of the first congregational minister in that town, and for which occasion they were written. The first minister settled in Quincy was WILLIAM TOMSON, great ancestor of the venerable Jonathan, and A. G. Thompson, of New-York. The Rev. William Tomson, is highly spoken of by the historians of his time. He was much beloved while living and has been greatly honored in his posterity. The grave of the Rev. Wm. Tomson is in the Roxbury burying ground near Quincy. I was in Quincy, in November, 1844. Early in the morning after my arrival in that ancient town, I visited the grave yard which has been in use as a place of sepulture for more than two hundred years. It is enclosed by a durable and substantial stone wall, and the entrance to it is through a large iron gate. The first tomb that I saw after passing the gate, was a new tomb on the left, on the front of which is the name of "JOHN QUINCY ADAMS," chisseled upon the granite caption of the terrestrial chamber which is to become the narrow house in which are to repose the mortal remains of

the great statesman. It was a dark and gloomy morning and the sable drapery of the clouds reached to the ground, and curtained the monuments of the dead. I was enveloped in a cloud and breathed the vapour of the cloud—it was a fit morning to visit the terrestrial resting place of mortals. Within a few hundred feet of the untenanted tomb of John Quincy Adams, repose the remains of John, the father, and those of the mother of Ex-President Adams.

The Quincy burial ground is a monument of praise to its inhabitants. The care which here the living evince for the grave of those who repose in silence, is more impressive upon the mind of a visiter, than the most gigantic monument of architecture that could be reared by the art of man. I also visited the house in which the elder President Adams was born, and the room in which he first became an inhabitant of earth. The house is a frame building, and although old is in good repair. The room in which the second President of this Republic was born, is on the lower floor of the house and what in old times was called "the best room." It is lighted by three windows which are glazed with squares of glass measuring 6 by 8 inches. The house is so located that the cradle of the infant Patriot was lighted by the rays of the Sun on its first entrance from its eastern chambers, and thus the infant bosom was inflated with an atmosphere filled with the golden rays of celestial light. I felt when pressing my footsteps upon the floor of this room, and breathing its atmosphere, that there was a charm still pervading the apartment which is perceptible, to a contemplative mind. The child born in this plain room on the 30th of October, 1735, on the 4th of March, 1795, became the President of a great Republic, and the Chief of a Nation that, at the period of his birth was chronicled only in the unopened volume of future time. This new inhabitant of earth on the 4th of July, 1776, signed the Declaration of Independence of the United States, and in exactly half a century from that very day, he returned again to the world from which he came. At a few yards distant from the venerable mansion, I have mentioned, stands another venerable frame house. In this house, John Quincy Adams, the sixth President of these United States, was born in 1767.

This house I also visited, and was politely shown the room in which the sage of Quincy first saw the light of the solar day. This room is what was called the "best room," and is upon the lower or ground floor, and is lighted by three windows, glazed by glass the squares of the same size of the others I have described.

A circle containing 1 acre of ground, will enclose both the buildings in which the second and sixth Presidents of the United States were born, and a circle of nearly the same dimension will probably enclose their mortal remains.

Quincy has the honor of furnishing the cradle of one of the great Apostles of Freedom—here he was born—here he lived, and here he died.

QUINCY.

The town of Quincy is nine miles south by east of Boston. It is beautifully improved and contains a population of 3486, inhabitants, four Churches, and but one public house which is the hotel kept by Mr. French. The accommodations at this hotel are excellent, and the charges exceedingly moderate. The improvements in Quincy—the dwellings, gardens, &c., bear testimony of the industry, economy and prosperity of the inhabitants. I did not see in my extensive peregrinations, a broken window or a hingeless door in the town. Persons who make northern tours in the summer season will be richly repaid in a visit to Quincy (which can be reached every hour of the day by stage, from No. 9 Elm Street, Boston) for the labor of the journey.

Quincy contains extensive granite quaries, which in 1836 produced $248.000, and gave employment to about 600 men.—I visited these quaries and will notice them particularly, hereafter.

PERIODICAL RISE AND FALL OF THE GREAT LAKES.

The opinion is very extensively entertained on and near the shores of the great lakes, that "*the lakes rise and fall every seven years.*"

The waters of the great lakes have their extreme sources as high north as north latitude 50 degrees, and in their course to the Gulf of St. Lawrence, where they discharge in North latitude 50 degrees, describe a curve on the sphere of the earth. These waters rise from toward the North Pole, and run back again toward the artic circle.

The waters of the Mississippi, the king of rivers, rise in North latitude 50°, and within a few miles of the place from which the waters of the great lakes begin to flow. The Mississippi courses toward the equator, 21 deg. of latitude and runs up the swell of the earth and discharges into the Gulf of Mexico in North latitude 29 degrees. The Channel of the Mississippi, compared with the channel of the great lakes, is narrow; but the area of surface drained by the Mississippi is vastly larger than that drained by the great lakes. A body of water flowing into the Mississippi that would cause it to overflow its banks would have but little influence upon the great lakes if discharged into these inland seas, for the reason that the lakes have a vastly greater extent of surface. The continued rise of the waters of the great lakes for years together, followed by a continual receding of these waters for years together, is a phenomenon as yet unexplained, but my examinations have led me to the conclusion that the rise and fall is not periodical but occasional. That the crust of our earth expands and again contracts in high northern latitudes, I have no doubt, and the same fact has been noticed near the equator, for a great extent of sea coast. Such a cause would produce the effect apparent in the surface of the waters of the lakes. In my examination upon the shores of Lake Ontario, I commenced at Coburg. At this place I found the bituminious lime stone filled with fossils extending from a few feet below the surface of the ground into the lake. This lime stone is intersected by both horizontal and vertical seams. The water in winter freezes on and near the shores of this lake, and these stratas become imbedded in the ice. The heavy winds which frequently prevail upon the lake, produce a swell which raises both the ice and the rock imbeded in it, and the whole are floated away together, and when the ice becomes melted the rocks fall to the bottom. Gull Island is about three miles from Coburg. It is formed of the bituminous fossiliferous lime stone, and to the action of the frost and wind I attribute the depression of this island by the excavation of its surface at the highest stage of the water of the lake. Mr. Ousten, the keeper of the light house, had been instructed by the British Government to keep a record of the rise and fall of the waters of the lake and he was so polite and obliging as to allow me the use of his register. This light house is built upon the ledge about two miles from the shore. Mr. O. in going out to the light in his boat, runs the boat into an opening left in the building for that purpose, and then with ropes and blocks hoists the boat and himself up into the building. The level of the surface of the water of the lake is taken in this building. It is therefore an accurate Lakeometer. On the 26th day of September, 1842, and the following day, Lake Ontario fell one foot, and did not rise again. During this depression a very heavy gale was blowing. The lake continued to fall until April 12th, 1844, during which time (with the fall of the 26th and 27th Sept. 1842,) the depression was three feet and six inches. From April 12th 1844 to July 25th, which latter was the date of my examination, Lake Ontario had risen twenty inches. In the year 1800, and 1801, there was an intermission of the annual inundation of the Mississippi, and the same phenomenon has occurred with the river Nile, in Egypt, which for the year produced in Egypt a failure of the crops. It is true that the fall of water from the clouds varies greatly in different years in the same locality, but the lakes are depressed when there is abundance of water from the clouds. I will resume this subject in another number of this paper.

E. MERIAM.

LIGHTNING.

The advantage of polished or bright surfaces for lightning conductors over dark colored rods, I think, cannot be doubted. Electricians prefer bright points to lightning rods, and so far admit the superiority of the bright surfaces. Bright surfaces do not absorb heat, but reflect it. Dark bodies absorb heat, but do not reflect it. The lightning entered a house in North Moore St., N.Y. in the summer of 1842. A brass kettle which had been used and the outside crusted with soot, lay in the garret and was passed over by the lightning. The bright

surfaces were not affected, but the black surface absorbed the heat and fused the metal and soldered the bail to the kettle. Two shoe brushes which had been threaded with brass wire and the wire corroded and blackened, attracted the lightning. The bristles in the brushes were thrown out of the wooden handles and the wire melted into globules. From this the lightning proceeded to the tin leader of the house, which it descended without melting the solder, and from that passed to the iron hinges, hasp and nails of the outside cellar door, and then dispersed. A house struck in Pine-Apple Street, Brooklyn, the same summer, was protected by the tin spout, through which the lightning descended without melting the solder. This thunderbolt was a heavy one, for on its leaving the tin spout which terminated above the pavement, it forced in the basement hall door, by breaking in the casings, to reach a copper bell wire, which it followed and prostrated a lady passing thro' the basement hall with a tumbler of water in her hand which was thrown over her in falling. The water revived her. This is a two story frame house, standing in a block of houses. The next adjoining house is a three story brick house, which escaped .I examined the house a few minutes after the ligntning had struck it. I will in the next number of the Gazette or the next succeeding, detail an extraordinary case of damage by lightning, which I also examined very minutely.

E. MERIAM.

AMERICAN INDUSTY.

In the last number of our paper we noticed a tax law enacted by the colonial Legislature of Massachusetts Bay, in 1753, for the encouragement of industry. Theobject of the law was most meritorious and praiseworthy. Industry, in this Republic, is the fountain, under heaven, of wealth. An illustration demonstrating the fact is seen in the prosperity of the people of the New-England States. New-England with her sterile soil and industrions and enterprising population is the most prosperous Country on the globe, and there is no country where the inhabitants enjoy so many comforts and so many blessings as the people of the five New-England States. The wealth of New-England is the product of industry. Her commerce has enriched her citizens, and this commerce grew out of the enterprise of her population. Thirty years ago, New-England imported from the East Indies the White Cottons, which were the product of the India looms for nearly the whole population of the United States. The Emmerties, the Mammoodies, the Sannas, the Gurrahs and the Baftas were then goods of great consumption in the United States, and sold at high prices; but the enterprise of New-England has changed the course of trade, and she now manufactures white cottons of a far superior quality, at a less price. She now exports white cottons to the East Indies; and also to the southern sections of the United States in exchange for the raw material, the growth of the southern soil.

SENATE REPORT.

The following Report will come before the State Legislature which commences its session on Tuesday the 7th of January, 1845.

STATE OF NEW-YORK.

IN SENATE—April 9th, 1842.

REPORT

Of the SELECT COMMITTEE on the memorial of PETER A. JAY, and others, citizens of New-York, relative to Assessments.

The SELECT COMMITTEE of the SENATE, consisting of Gabriel Furman, Gulian C. Verplanck and John B. Scott, Senators attending the Senate, elected from the first Senate district, to whom was referred the memorial of Peter A. Jay, Robert C. Cornell, Peter Lorillard, and a great number of others, citizens of the city of New-York, complaining of various alledged abuses in relation to the assessment laws of the city of New-York, and among other things, "that it is the practise of Commissioners and Assessors to describe property by an arbitrary map number, instead of the known street number, by which the owners of property are misled in knowing that Assessments have been imposed; that it very often happens that property is assessed as that of unknown owners, and many times in a wrong name; and in consequence of this practise property is often sold, and the first information the owner has of the assessment is obtained from the purchaser of the property at a sale for unpaid assessments, when he comes to take possession; that "by the act of 1816, Commissioner's were authorized to extend their assessments for improving streets, &c. as far as they judge the property benefitted; but no provision was made by that act to give notice to the distant owners of the property thus affected; by which means such owners are deprived of the opportunity of making objections to the assessments in sufficient time to be available." "Another serious objection to the present system, in making Assessments for public improvements, is the extravagant charges made by Commissioners, Assessors, Surveyors and Corporation Counsel: it will be seen by the public documents herewith submitted that for one street less than 3000 feet in length, this class of charges amounted to near $12,000, and that when "property is sold at Public Auction for unpaid assessments the corporation sell the property for a term of years, which in many cases, is equivalent to selling the fee simple absolute. Very many of the lots so sold are purchased by corporation officers, who being employed by the corporation to make the surveys, collect the assessments, &c. &c., acquire information of the absence, &c. of the owners and by that means possess themselves of the estate; and the memorialists ask the Legistature to pass a law to remedy the evils complained of, and also to suspend the sale for unpaid assessments, until the termination of the next session of the Legislature, and to make such further and other enactments in relation thereto as the Legislature in their wisdom shall deem needful and right. And to whom was also referred sixteen other memorials, signed by a very large number of the most respectable inhabitants of the city of New-York, praying the Legislature to examine the whole question in relation to the assessment laws in operation in that city, and into the various abuses charged to have been committed in their execution; and asking that the same, with the various other memorials and documents presented, should be referred to a select committee to examine into the same, with power to send for persons and papers. There were also referred to this Committee the annual reports of the Comptroller of the city of New-York, exhibiting a view of the funds of that corporation for the years ending Dec. 31st, 1839, and Dec. 31st, 1840; including accounts of its revenues, and expenditures in detail, and of the receipts and investments of the Commissioners of the sinking fund during the same periods. Also the report of the Street Commissioner of that city, to whom was referred a resolution requiring him to report a list of public places and streets which have been opened in the several years from 1830 to March 1839, presented to the Board of Aldermen March 25th, 1839, and known as Document No. 45, of that Board. Also a list of property advertised for sale for the payment of Assessments, by the officers of the corporation, by which it appears that 1145 lots were assessed, for sums less than 5 dollars each, and by which list it appears that 7000 lots have been advertised at such sale.

"To the same committee were also committed the several remonstrances which had been heretofore presented in the Senate against the application of the Mayor and Common Council of that city, to be authorised to purchase lands sold for assessments after the same should have been offered at public auction, and no bidder found for the same; and also for funding certain debts of said city.

On the first reference of these several memorials and documents, this committee were not invested with the power of sending for persons and papers, as was desired by the petitioners; but subsequently, on the renewed application of the memorialists, the Senate, on the 22d day of May last, passed the following resolution.

"'Resolved, That the prayer of Robert Jones, John A. Underwood, Robert Smith and others, that the committee to whom was referred the several memorials, remonstrances and public documents in relation to the assessment laws in the city of New-York, may have power to send for persons and papers, and be authorised to sit after the termination of the present session, and report to the next Legislature, be granted."

Subsequently to the committee proceeding in the investigation thus committed to their charge, and during the present session of the Senate, six several memorials were presented and referred by the Senate to this

committee, within the last four weeks, signed by Stephen Allen, Hiram Walworth, James Boorman, Jonathan Thompson, Peter Schermerhorn, Stephen Whitney, and 300 others, inhabitants of the city of New-York, praying the Legislature to take the subject of assessments in that city into their serious consideration, and to make such provisions as will protect the owners of real estate from the disastrous consequences which they apprehend from the abuses of the system of assessments in that city.

In addition to these general memorials, several memorials have been presented by individuals, as Garret H. Stryker, Winifred Mott, Daniel Van Reed and Martha Amory, and detailing cases of hardship and loss of property, arising, as the petitioners charge, from abuses or defects in the mode of opening streets and avenues in that city, and making improvements in public avenues and squares, and in assessing the expense thereof; all of which have been submitted to the consideration of this committee since the first day of February last. And also several public documents connected with that matter, have been, since the opening of the present session, committed to this committee for examination.

Upon all which several memorials and remonstrances and documents, thus submitted to their charge and examination, this committee beg leave to submit the following

REPORT.

In the investigation of the matters thus committed to their charge, the committee were occupied during almost the whole of the last autumn, in the city of New-York, and also in the month of December, and to the period of meeting of the present Legislature. Previous to the first meeting of the committee, they directed the committee who appeared on behalf of the petitioners, to notify the Mayor of the city of New-York of the time and place of their first meeting, to the end that the corporation of that city might be apprised of the proceeding, and take such course therein as they might deem best calculated to conduce to the interest of those whom they represented. On the 18th of September last, the committee received a communication from the memorialists, on whose application the investigation was ordered, tendering to their use the commodious lecture room in Clinton Hall, New-York, free of expense or charge to the State, which was accepted.

In this investigation the committee were attended by the committee appointed on behalf of the memorialists, with their counsel, who conducted the examination on the part of the complainants; and by the counsel of the corporation and the street commissioner of the city, who conducted the examination on behalf the corporation. And during its progress, several of the most respectable inhabitants of that city, with the street commissioner, the comptroller, and the collector of assessments of that city; also city surveyors, with gentlemen who had formerly discharged the duties of commissioners of estimate and assessment in the opening and improving streets and avenues, and filled the office of assessors in apportioning the expense of regulating streets and constructing sewers in that city, and several other persons connected either remotely or directly with the subject matter of the assessments, were examined under oath before this committee; and their examination reduced to writing, and signed by the witnesses, are annexed to this report for the information of the Legislature.

In the course of their examination, the most prominent matters complained of appeared to be, *First*, In the manner of opening streets, avenues and public squares in that city; in the appointment of the commissioners of estimate and assessment; in the expenses of those commissioners, and the time spent in the discharge of their duties. *Secondly*, The imposition of heavy and oppressive assessments for improvements never actually made, except upon paper; and which assessments were frequently ruinous, being more than the value of the property assessed; and the great difficulty which owners of real estate in that city, and particularly in the upper and unimproved portions of it, experienced, from the fact of using arbitrary map numbers instead of street numbers and farm numbers. And, *Thirdly*, The great difficulty which the citizens had encountered in obtaining a review and correction of any errors committed by the commissioners and assessors in making any of such awards or assessments for the opening of said streets, avenues or public squares, from the fact that, although the Court of Chancery at first assumed jurisdiction of such cases on the ground that such assessments being made by a statute, a lien upon real estate was a cloud upon the title, and might, if unjust and inequitable, be removed in equity, it has since denied having cognizance of such matters; and the Supreme Court have in some instances denied a certiorari, to remove such proceedings, and others where the writ had been granted, had afterwards quashed the same and refused the parties any relief, referring them to an action at law for trespass against the individual members of the common council, or against the officers of the corporation personally, who should attempt the collection of such assessment.

The committee will examine these several propositions which contain the substance of the long and tedious investigation through which they have progressed, and will submit to the consideration of the Legislature the conclusions to which they have arrived upon these several heads.

First. The manner of opening streets, avenues and public squares, in that city, in the appointment of the commissioners of estimate and assessment, in the expenses of those commissioners, and the time spent in the discharge of their duties.

That there have been great and serious abuses in the mode of opening streets and avenues in the city of New-York, and in the expenses attending the same, cannot be doubted by any person who has examined the subject; and these evils have mainly arisen from the loose and unguarded manner in which that important branch of authority has been exercised. For while in England, in city of London, in Birmingham and other places, whose proper municipal regulations would seem to require as liberal extension of power to their local coporate governments as that of New-York, streets cannot be opened or widened without an act of Parliament specially passed for that purpose, upon a due examination of all the circumstances of the case; yet, in the city of New-York they are opened or widened, and that in large numbers together, by a single resolution adopted by the two boards of the common council, without any control, as was the case in opening all the streets and parts of streets not previously opened up to and including 42d street, by a resolution of April 6, 1835; and subsequently, September 12, 1836, another resolution was adopted to open all the streets from 42d street to 57th street. The reservoir on Murray's Hill in the city of New-York, is on 42d street. This loose practise has grown up in modern times, for the more guarded one of an application to the supreme legislative authority was in existence in that city, subsequent to 1792, when to authorize the first widening of John Street an application was made to the Legislature, then in session in that city, and before either house would act upon the petition, they sent a committee to examine the ground; upon the report of which committee, they enacted that the damages to the owners whose lands were taken, should be appraised by a jury who should be composed of merchants, showing how careful they were in former legislation on this important subject. This appraisement is now made by three commissioners, appointed by the Supreme Court, who are generally nominated at the instance of the counsel of the Corporation, although there have been instances where one of those commissioners has been selected by the court from names proposed by the corporation counsel, and by the opponents to the application, and another has been named by those opponents. It is difficult now to comprehend how the expenses in opening streets and avenues in that city could have been so great as they are represented to have been, but of the fact of their being so very great, there can be no doubt; it is established by the receipts of the commissioners for the same exhibited before the committee. In the opening of the 7th avenue, from 21st to 129th st., which was confirmed in Feb. 1839, the amount awarded to the owners for land taken for the avenue, was $28,141.41, while the fees and expenses of that opening amounted to the large sum of $12,435.70, and if to that is added the collector's fees for collecting the assessments, $1,115.00, it will show a total of expenses paid by the owners of land on that portion of the seventh avenue for its formal opening, amounting to $13,550.70.

The amount paid to the commissioners on that avenue for their services, at the rate

of four dollars per day, which is the highest sum allowed by the statute, is pay for *sixteen month's* services for each commissioner, in making the estimate of the land [taken for opening that avenue, and assessing that value back again upon the land] on each side of the avenue; and in opening this one street, of one hundred and eight blocks of about 270 feet each, the commissioners were each engaged three times the whole period that the Legislature is employed in legislating for the State, and each of them received about three times the compensation that is paid to a legislator for passing the whole winter from his home in attneding to the public business. And in addition to that it was shown to the committee that commissioners were frequently engaged on several streets or avenues at the same time, taking their four dollars per day on each of those improvements; and that they received and were paid that compensation in some instances where they did not attend to the duties of their appointment, and in others where they attended but once or twice. If the case of the seventh avenue had been a solitary instance the committee might have supposed that it had taken place through some mistake; but they found the same principle of enormous expenses to extend throughout the whole system of street openings in that city, and that to such an amount that the surprise should be not that the inhabitants now complain of it, but that they had not done so at a much earlier period.—The evil has now spent itself; there are no more streets or avenues to be opened; the resolutions opening all the streets up to and including 42d Street, and from that to 57th Street, mainly disposed of the whole subject. The manner in which the opening of these streets was effected has been the subject matter of complaint to the committee. Assistant Alderman Townsend, who introduced the report in favor of opening all the streets up to and including 42d Street, testified that it was his intention to have all of them opened in one proceeding, and thus save to the citizens an enormouos expense; and for that reason his report did not conclude with the ordinary direction in such cases, that the corporation counsel should take the necessary legal measures to carry the same into effect. But through some misapprehension the ordinary proceedings were taken for opening each street separately by itself, and a set of commissioners appointed for each street instead of one set for the whole series; and by that means the expenses to be paid by the owners of real estate upon the same was increased at least $95,000.

Another and a most serious evil seems to have arisen from the circumstances of there being no fixed and settled principles used by those commissioners in making their awards and assessments. In some instances where individuals have furnished their full proportion of land for a street or avenue, and should in justice have been assessed only their proportion of the expenses attending the proceedings, and of any buildings which were to be removed from that street or avenue, they have been assessed some thousands of dollars beyond that amount.

The complaints which have arisen from this want of settled principle in the action of those commissioners have been very numerous, and have been urged upon the consideration of this committee with great earnestness. During the session of the committee in New-York, Peter Lorillard, Esq., submitted to them a communication on this subject, in which he stated that "in many cases the injustice was so great that he had firmly made up his mind to sell all his property in this State and remove where his property would be protected and placed on an equality with other citizens; and was only prevented from so doing by reason that it would not bring the prices of 1830, thereby was forced to stop the sale, having made some sacrifice."

If the citizens of New-York are laboring under an erroneous impression in believing that they have been greatly oppressed and injured by the course pursued by those commissioners, that belief is, in the judgment of the committee, very extensive.

These evils and abuses might have been obviated in a great degree, in the judgment of the committee, by having established a permanent board of commissioners, in place of appointing a set of commissioners for each improvement; which board would necessarily have an uniform principle in determining questions that arose before them; and from their knowledge of the subject, would be enabled to dispose of the same in half the time that ordinary commissioners would be necessarily engaged.

The *second* prominent objection made before this committee, was, as to the imposition of heavy and oppressive assessments for improvements never actually made, except upon paper; and which assessments were frequently ruinous, being more in amount than the value of the property assessed.

This point has been a very prolific subject of inquiry, and many witnesses were examined before the committee, detailing what they esteemed grievances arising from an abuse of the laws on this subject.

On that branch of the complaint as to the imposition of heavy and oppressive assessments never actually made, the committee ascertained that a very large portion of the streets and avenues formally opened from 1836 to 1839, were not actually opened; that nothing has been done beyond making awards and assessments by the commissioners and the confirmation of their reports by the Supreme Court; and that although the assessments have been collected for such improvements in many instances, and in others the lands charged are either sold or advertised to be sold for the payment of those assessments, yet the lands forming those streets and avenues remain in the same condition as they were before the taking of any proceedings for their opening: and in some cases such lands remain in the occupancy of their original owners notwithstanding they have been paid for the same. And in numerous other instances where the streets and avenues have been actually opened, nothing has been done towards their regulation, so as to make the same useful to the public, or available to the owners of real estate, who have paid for the same by assessments on their property.

Out of a list of eighty-one streets, and avenues, or parts of such highways, the reports for opening of which had been confirmed in 1837, 1838, and 1839, fifty-seven have not been in any way regulated or improved; and of the remainder, twenty-four in number, in some instances only portions thereof have been regulated a few blocks; and in others a road has been worked through the centre of the street or avenue; and in others again, it is not deemed necessary to work such road, as the natural grade of the ground is such as to make it passable without regulation. This attempt to collect assessments not only by voluntary payment but by enforced sales of the lands charged, without actually opening the streets or avenues for which such assessments have been imposed, has been a strong cause for the excitement in that city on subjects of street matters. The committee therefore submit this subject to the consideration of the legislature.

Several instances were shown to the committee where property had been offered for sale for the payment of assessments at two or three successive sales without being able to get a bid, the amount of the assessments being more than the estimated value of the property. These large assessments operate against the interests of the city, for the owner will not pay the assessment or improve the property, and no person will buy it, and the corporation cannot realize their money by a sale of the assessed premises, and the amount must be taxed upon the city; and thus the improvement of the upper part of the city which is covered with these great assessments must be stayed for many years, and now apparently for an indefinite period of time, unless the land should be in some manner relieved from the charge of those assessments. It did appear reasonable to the committee that in analogy with a judgment, the lien of which ceases on real estate after the termination of ten years, the lien of those assessments should be at an end after the lapse of some definite period; what that should be, the committee submit to the discretion of the Legislature. Now the mere fact of the confirmation of the report, makes it conclusive upon all the parties assessed; and the assessment becomes a lien on the lands assessed from the date of the confirmation. Such however was not always the practise; for the act of 1792, required an action of debt to be brought on the assessment, although it was declared a lien and prior encumbrance so that the party assessed could test the validity and legality of the assessment on the trial of this action of debt; and the land could not be sold until judgment was obtained in that action, and an execution issued on that judgment. Which course or something similar to it, would afford the most expeditious course of trying

the questions in relation to those assessments; and would be more equitable and just both to the corporation and the parties assessed than to leave each individual who considers himself aggrieved to bring an action of trespass against individual members of the corporation, or its officers or agents acting under its orders, as has been recently intimated by the Supreme Court.

On the third branch of this subject, the great difficulty which the citizens have encountered in obtaining a review and correction of alleged errors committed by commissioners and assessors in making awards and assessments, in opening streets, avenues, and public squares, and in making other improvements in that city; the committee have been compelled to the belief that some remedy should be proposed and adopted. When these questions first arose, the Court of Chancery affirmed its jurisdiction, entertained bills of complaint, and granted injunctions to stay proceedings in the sale for those assessments, until the alleged errors could be examined, on the same ground that it always asserted its jurisdiction in cases of fraudulent judgments, and that although the judgment was illegal, yet it being a lien upon real estate was a cloud upon the title, and should be removed by the intervention of a court of equity. So these assesments, although stated to be illegally imposed, were declared by statute to be a lien upon the lands assessed, and would appear to be equally a cloud upon the title, and for the same reason that a judgment is so regarded, they both being equally liens upon real estate. But that court has since denied, that it had jurisdiction in those matters, and referred the applicants to the courts of law.

The Supreme Court also, in the first instance, seemed to entertain these complaints, and allowed the writs of certiorari to issue for the purpose of bringing up the proceedings before them. But subsequently they intimated that such writ could only bring up the record of the commissioners' report, and not the proceedings before or connected with it; they again held that in analogy with a writ of error the certorari should be governed by the same limitation; although it has been previously held, by good authority, that a common law certiorari, (which was the nature of the writ in those cases,) was not subject to such limitation; and it was afterwards intimated by the same court, and with a precision which would seem to give it the authority of a decision that a certiorari could not be directed to the corporation. And again, the Chief Justice, in delivering an opinion, in a case of assesment, in the Court for the Correction of Errors, since the decisions above referred to, held that the remedy of the parties was in action of trespass against the individual members of the corporation who enforced the collection of those assessments, or against the officers or agents of such corporation who should, under their orders, attempt the collection of such assessment.

In view of all the embarrassments which now surround this subject, and the differences of opinion which have heretofore existed in the Court of Chancery and the Supreme Court on the question of jurisdiction in matters relating to the opening of streets and avenues or public squares, and the assessments consequent thereon, the committee think that the Legislature should interfere and by statute law settle that jurisdiction in the Supreme Court; which would be in accordance with the principles adopted by the Court for the Correction of Errors in the case of the Mayor and Common Council of the city of Brooklyn vs. Gertrude Meserole et. al. in December last. And to cover all the doubts heretofore expressed by the Supreme Court in their decision in several cases which have recently been decided by them on assessment cases from the city of New-York, the Legislature should give that court full power to examine into all the matters preceding that assessment, as well as the acts of the common council, as of the commissioners of estimate and assessments; and for that purpose the certorari should bring up all the matters connected with those proceedings as well as the report of the commissioners.

It is well known that the Judges of the Supreme Court in confirming those reports in street openings do not act as a court, but as commissioners under the statute; it may therefore be well to authorize the court to examine their proceedings as commissioners.

If it shall be thought best to extend the statutes of limitations to the common law certiorari, it should not be left to judicial decision or analogy for determination, but should be ascertained by legislation.

Under the act of 1839, the costs of the proceedings in opening streets, &c. are required to be taxed before payment. But the committee cannot discover any instance in which such costs have been taxed except in that of opening Cherry Street, which was discontinued. Those expenses have always been heretofore paid upon a mere abstract of the report of the commissioners, containing the sums total of the awards and assessments, and of the costs of the commissioner's counsel, &c. But the street commissioner avers that since he has become acquainted with the existence of that law, no bill of such expenses has been paid without such taxation; and that he had supposed that the Supreme Court in passing upon the confirmation of the commissioners report, taxed and confirmed all the expenses, statements of which were appended to such report.

To obviate all the difficulties which arise from this view of the case, or from a difference of construction which may be given to that law, it is suggested that the Supreme Court, either as a Court or as Commissioners, should not confirm any report until after the costs have been taxed and certified in the manner required by that law. And while on this branch of the subject, the committee would observe that many complaints were made, that those commissioners of estimate and assessment having several streets or avenues under their charge, at one and the same time, would merely meet for a few minutes and then adjourn, charging their four dollars for a day's service. This objection might be obviated by requiring the commissioners to sit at least three hours on such streets, before they should be enabled to charge for a day's service.

The committee are satisfied that nothing can be expected from legislation during the few days that remain of the present session they therefore commend this subject to the serious consideration of the next Legislature, as being well worthy their attention.

All which is submitted.

THE ASSESSMENT QUESTION.

We now proceed to discuss this question at length, and to review the opinion of Chief Justice Nelson, and Mr. Justice Beardsley, given in the Striker case, having premised our remarks by giving the Report of the Honorable the Select Committee of the Senate appointed by that body to examine into the assessment abuses committed in the city of New-York and show by this official document a state of things which are of a most alarming and dangerous character, not only in amount of property affected, but also in the great principles involved. The sacredness of private property, and also the distribution of powers in the different branches of Government are among the most important provisions which in part form the Constitutions of our National and State Governments.

The Constitution is the fundamental law, the paramount law, and such was the determination manifested in reference to its inviolability and that it should be properly regarded by all those who should thereafter be called upon in their official stations to enact laws, or administer those enacted, that an oath to conform to the provisions of the Constitution of both the National and State Governments is made a condition precedent to the assuming of the duties of office, by every person assuming a public trust, before he enters upon that trust.

The powers which have been exercised by the persons holding the office of Justices of the Supreme Court of this State, form one branch of this review and will have precedence in the examination and remarks we are now making.

The powers exercised are of an extraordinary character and can be best described by taking up this subject at the foundation and giving a history of their origin, pro-

gress and conclusion. We will therefore take a starting point so far back as to leave nothing behind it.

In 1606, the island of New-York was inhabited by the uncivilized sons of the forest. These people were the owners of the soil by right of possession, going back beyond the memory of man. These people had no law or practise which authorised the taking of private property for public use without making just compensation at the time of taking such property and before it was removed from the owner. The Dutch subsequently became possessed of the island of New-York and retained possession until 1664, when it was surrendered to the English by capitulation and was afterwards retaken by the Dutch and finally restored to the English in 1673. The laws by which New-York was governed, was a code known as the laws of the Duke of York. In 1683, Col. Dongan arrived at New-York, as governor of the colony of which the Duke of York was at that time Proprietor. The Common Council after his arrival, made to the Governor and Council a written petition, (see Ante p. 25) setting forth their ancient privileges and rights which the Governor and Council required to be explained in writing. In the following year the first Legislative Assembly ever convened in the colony assembled in N. York and passed several laws, none of which were printed, but the manuscript copies are still extant, and we have carefully examined these several acts. In 1686, Governor Dongan granted a written charter to the Mayor and Common Council of the City of New-York, which was forwarded to the Duke of York, for confirmation. The Duke of York having in the mean time ascended the throne of England, as James II, his proprietory right became merged in the crown. The charter granted by Dongan, the King refused to confirm. This charter prohibits the taking of private property for a public street against the consent of the owners, nor does it authorise the imposition of a local Assessment. (See Ante p. 35 §2.) King James was but a short time the incumbent of the throne, and was succeeded by WILLIAM and MARY. In 1692 the Mayor and Common Council passed a resolution (see Ante p. 38) for an application to the King and Queen for the confirmation of Dongan's charter, the application was made but was unsuccessful.

On the 22d Sept. 1691, a petition of the Mayor and Common Council of New-York, was presented to the Colonial Legislature then in session, in reference to Streets, &c. on the reading of which, it was ordered that a bill be brought in accordingly, and on the 24th of Sept. a bill entitled "A Bill for regulating the buildings, streets, lanes, wharfs docks and alleys of the city of New-York," was brought in, read a first and second time, and ordered to be engrossed, and on the 25th of Sept. was read a third time, and passed, and ordered to be sent to the Governor and Council for their assent and a committtee appointed to carry it to the Governor and Council. On the first of Oct. the bill was returned to the Assembly without the assent of the Governor and Council, but was accompanied by an amendment, called a '*proviso*,' which is in these words:

"Always provided and be it further enacted, &c. that nothing herein contained shall be construed to change, alter, shorten, lengthen, narrow or enlarge any of the streets, alleys and lanes within this city, as they are now laid out and remain at the publication thereof, nor to break through any persons grounds now in fence or enclosed, or to take away any persons house or habitations, any thing herein contained to the contrary hereof, in any wise notwithstanding."

This amendment was appended to the bill and was adopted by the Assembly and in that shape the bill was subsequently assented to by the Governor and Council, and was on the 11th of May, 1697, confirmed by King William. This was the first exercise of the veto power by any New-York governor, and is peculiar in its character and instructive to a remarkable degree.

This bill contained an authority for the Mayor and Common Council to treat and agree with the owners of grounds required for a public street, and when the grounds were unimproved and the owners refused to treat and agree, then and in such case the law provides as follows:

"And if there shall be any person that shall refuse to treat in manner aforesaid, that in such case the Mayor and Aldermen in their court are hereby authorized, by virtue of this act, to issue out a warrant or warrants to the sheriff of the said city, who is hereby required to empannel and return a jury before the said court of Mayor and Aldermen, which jury upon their oath, to be administered by the said court, are to inquire and assess such damages and recompense as they shall judge fit, to be awarded to the owners and others interested, according to their several and respective interests and estates in the same as shall be judged by the said Mayor, Aldermen, and Common Council shall be adjudged fit to be converted to the purposes aforesaid; and such verdict of the jury and judgment of the said court of Mayor and Aldermen thereupon, and the payment of the said sum, or sums of money so awarded and adjudged to the owners or others having estates, or interest, or tender or refusal thereof, shall be binding to all intents and purposes, against the said parties, their heirs, executors, administrators, and assigns, and all others claiming any interest or title to the said ground, and shall be a full authority to the said Mayor, Aldermen and Common Council to cause the said ground to be converted and used for the purposes aforesaid, anything contrary herein or any other law to contrary hereof, in any wise notwithstanding." (See Ante p. 4, and the Colonial laws of 1691, and 1697.

The above recited law continued in force during the remainder of the entire period of the duration of the colonial government, and was in force when the former constitution of this State was adopted in 1777, and continued in force until 1787.

The Constitution adopted by the People of the State of New-York in 1777, contains the following:

"XXXV. And this convention doth further, in the name and by the authority of the good people of this State, ORDAIN, DETERMINE and DECLARE, that such parts of the common law of England and of the statute law of England and Great Britain, and of the acts of the Legislature of the colony of New-York, as together did form the law of the said colony on the 19th day of April in the year of our Lord 1775, shall be and continue the law of this State, subject to such alterations and provisions as the Legislature of this State shall, from time to time, make concerning the same."

"XLI. And this convention doth further ORDAIN, DETERMINE and DECLARE in the name and by the authority of the good people of this State, that trial by jury, in all cases in which it hath heretofore been used in the colony of New-York, shall be established and remain inviolate forever. AND FURTHER, that the Legislature of this State shall at no time hereafter, institute any new court or courts, but such as shall proceed according to the course of the common law."

"XXV. That the Chancellor and Judges of the Supreme Court shall not, at the same time, hold any other office, excepting that of Delegate to the general Congress, upon special occasions; and that the first Judges of the County Courts, in the several counties shall not, at the same time hold any other office excepting that of Senator, or Delegate to the general Congress. But if the Chancellor, or either of the said Judges be elected or appointed to any other office, excepting as before excepted, it shall be at his option in which to serve."

"XXVII. And be it further ordained, that the Register and Clerks in Chancery be appointed by the Chancellor, the Clerks of the Supreme Court, by the Judges of said court, and all Attornies, Solicitors and Counsellors at law, hereafter to be appointed, be appointed by the Court," &c.

"XXIII. That all officers, other than those who, by this constitution, are directed to be otherwise appointed, shall be appointed in the manner following, to wit: the Assembly shall, once in every year, openly nominate and appoint one of the Senators from each great district, which Senators shall form a Council, for the appointment of the said officers, of which the Governor for the time being or the Lieut. Governor, or the President of the Senate, (when they shall respectively administer the Government) shall be President, and have a casting voice, but no other vote; and, by and with the advice and consent of the said Council, shall appoint all the said officers; and that a majority of the said council be a quorum: And further, The said Senators shall not be elegible to said council for two years successively."

"XIII. And this convention doth further, in the name and by the authority of the good people of this State, ordain, determine, and declare, that no member of this State shall be disfranchised, or deprived of any of the rights or privileges secured to the subjects of this State by this Constitution, unless by the law of the land or the judgment of his peers."

"XXXI. That the style of all laws shall be as follows, to wit: 'Be it enacted by the people of the State of New-York, represented in Senate and Assembly,' and that all writs *and other proceedings* shall run in the name of the People of the State of New-York, and be tested in the name of the Chancellor, or the Chief Judge of the Court from whence they shall issue."

We have thus given the provisions of the Constitution, of 1777, which are applicable to the present issue.

In 1787, the Legislature of the State of New-York repealed the act passed by the colonial Legislature in 1691, entitled "an act for regulating the buildings, streets, lanes, wharfs, docks and allies of the City of New-York," and on the 16th of April, 1787, enacted a law as a substitute containing in substance the same provisions for taking ground for a public street, as was contained in the act of 1691. (See Ante, p. 4.)

In 1792, the Legislature of the State of New-York passed an act for continuing Roosevelt and Frankfort Streets. (See Ante p. 5.) This act provides for the appointment of four persons to wit: Richard Furman, A. Rhinlander, Jos. Stringham, Geo. Stanton and John Stagg, Commissioners. The act authorises the Common Council to continue Roosevelt Street of such breadth as they shall think proper," *Provided always*, That before the laying out and continuing the said Street to the East River as aforesaid, the said Mayor, Aldermen, and Commonalty, shall, for that purpose, first have and obtain the consent of the proprietor or proprietors, his, her, or their legal representatives of such houses, and lot or lots of ground, through which the Street may pass.

"V. And be it further enacted, That it shall be the duty of the commissioners in this act above named, upon a full and equitable consideration and estimate of all the circumstances attending the same, to determine what part or proportion of all and every the sums of money which shall be expended by the common council of said city, for opening and continuing Roosevelt Street to the East River, as aforesaid, ought to be borne and paid by the said common council, in consideration of the general convenience to the citizens of the said city, occasioned by opening and continuing that street as aforesaid, and what part or proportion thereof, specifying the sum, ought to be borne and paid by individual citizens, in the tract of land called the Meadows, and in Roosevelt Street, continued as aforesaid, and in the vicinity thereof, whose estates have become advanced or increased in value by such improvements and that it shall also be the duty of the said commissioners, to make a just and equitable assessment of the last mentioned sum, among the owners of all the said houses and lots of ground, which shall appear to them to be benefitted as aforesaid, in proportion as nearly as may be to the advantage which each shall be deemed to have acquired respectively, and that they the said commissioners, or any three or more of them, shall make a certificate in writing of such assessment, under their hands and seals, and return the same to the common council of the said city, which assessment shall be binding and conclusive upon the owners of such houses and lots of ground so to be assessed respectively, and the sum or sums of money, at which each such house and lot of ground shall be so assessed, shall be deemed a debt due from the owner or owners thereof, his, her or their representatives, to the mayor, aldermen and commonalty of the said city, and shall be payable to them within three months from the date of such assessment, and shall moreover become and be a charge or lien, and prior incumbrance upon such respective house and lot of ground, into whose hands or possession soever the same shall then be, or at any time thereafter may come or descend; and the respective owners of such houses and lot or lots of ground respectively, at the time of such assessment, shall thereupon become and be liable and chargeable, and they are hereby required, to pay to the treasurer or chamberlain of the said city for the time being, who is hereby authorised to receive the same, to the use of the said corporation, the sum at which each such house and lot or lots of ground shall be so assessed as aforesaid, and in default of payment, the same shall and may be recovered at the suit of the said treasurer or chamberlain, in any court of record within this State, with interest at six per cent., to accrue after the said three months from the date of such assessment, with costs of suit. And no such action or suit shall be abated or discontinued by the death of the treasurer or chamberlain of the said city, or by his resignatiou or removal from office, but shall and may be continued and prosecuted to effect, by his successor in office.

"VI. And be it further enacted, That it shall and may be lawful to and for the Mayor, Aldermen and Commonalty of the city of New-York, in common council convened, to cause Frankfort Street to be continued to Queen Street, in the manner and under the restriction herein before provided respecting the continuance of Roosevelt Street; and the said Mayor, Aldermen and Commonalty and the commissioners herein before named, shall have the like powers and authority, for the purpose of continuing Frankfort Street as aforesaid, and paying the expenses thereof, as are herein before given to them respectively for continuing Roosevelt Street.

In 1793, an act was passed by the Legislature for widening John Street. This act is very special, and directs what ground is to be taken, and how much. Provides that the Mayor, Aldermen, &c., in Common Council, may treat and agree with the owners for the land, and if any refuse to treat and agree, then it shall be lawful for the Mayor, or Recorder, and any two or more Aldermen, to issue a precept under their hands and seals, to command the Sheriff to return a jury of *merchants*, being freeholders, to inquire and assess the damages, and fourteen days notice to be given the owners. The verdict of the jury and the judgment of the Mayor's Court thereupon is made conclusive upon the owners, on being paid, or tendered, the money awarded by the jury.

Commissioners are appointed by this act, to ascertain what proportion ought to be borne by the Common Council, in consequence of the general convenience derived by the citizens, and also to estimate what benefit is derived by the owners of houses and lots in that vicinity, and assess such benefit upon such owners; and such assessments when signed by such Commissioners, or a majority of them, shall be conclusive upon the owners of such houses and lots, and declared to be a debt due the Mayor, &c., for which they are authorised to levy a warrant of distress upon goods and chattels, in case of refusal to pay, and if no goods or chattels be found, then the assessment to be a debt due the Mayor, &c., for which a suit is authorised to be brought in any court in this State.

In this case the Common Council are authorised to ratify the assessment, and in doing so, perform precisely the same duties that the Supreme Court now perform, in confirming reports of Commissioners of estimate and assessment.

The next act in Chronological Order, is an act passed in 1795, for extending Banker Street, and widening Beaver Lane. The provisions of this act are substantially the same as that relating to John Street, except that the jury are only required to be freeholders, and the whole benefit is assessable upon the persons benefitted by the improvement, and nothing upon the Corporation.

The Act of April 3d, 1807, is the next in the order of time. This act appoints three Commissioners by name to lay out numer-

ous streets avenues, and public squares, in a farming district. Their duty was a mere plotting of the ground, with the extraordinary exception of a provision, which amounts to a sequestration of private property, for public use, without compensation, as the owner is prohibited from building on the ground included within any contemplated public square, street or avenue, or rather, if he does improve it, he shall not be allowed for his improvements.

The next provision of the act of 1807, which we shall notice, is that which provides, that in case the Mayor, &c., shall be desirous to open any of these streets, &c., so plotted out, they may agree with the owner for the land. In case of disagreement, or in case of the owner being under disability to treat, or absent, then and in such case it shall be lawful for the *Justices of the Supreme Court*, or any *one* of them, on the application of *either* party, to nominate and appoint three disinterested persons, Commissioners, to view the said land, &c., and estimate the damage which the owner will sustain in relinquishing the land so required, and in cases where the benefit exceeds the value of the land required, to estimate the benefit after deducting the value of the land, and to report thereupon to the *said Court*, and on the confirmation of the said report, the Mayor &c., shall proceed to assess the benefit by appointing five freeholders assessors, who shall make an estimate and assessment, and return the same to the Common Council, which shall be binding and conclusive, be a lien upon the land, and a warrant of distress may be issued under the hands and seals of the Mayor or Recorder, and two or more Aldermen, and levied upon the goods and chattels of the owners, &c. &c. A further provision is made in said act, which is, that in case the owners of the land fronting on any of the streets delineated on the map, shall apply to the Mayor, &c., to have the street opened, the Mayor, &c., shall take such proceedings as above. *Act of April 9th, 1813, as follows:*

"CLXXVII. And be it further enacted, That whenever and as often as the mayor, aldermen and commonalty of the city of New-York, shall be desirous to open any street, avenue, square or public place, or any particular part or section of any street or avenue laid out by the commissioners of streets and roads in the city of New-York, under and by virtue of the act, entitled 'an act relative to improvements touching the laying out of streets and roads in the city of New-York, and for other purposes,' passed April 3d, 1807, and also whenever and as often as so many proprietors of lands fronting on any such street, avenue, square or public place, or any particular part or section of any such street, avenue square or public place as shall together own three fourth parts of all the lands fronting on such street, avenue, square or public place, or on such part or section of any such street, avenue, square or public place, shall, by petition desire the said mayor, aldermen and commonalty to open any such street, avenue, square or public place, or any such particular part or section of any such street, avenue, square or public place, and the said mayor, aldermen and commonalty shall deem the opening thereof to be necessary or useful, it shall be lawful for the said mayor, aldermen and commonalty to cause the same to be opened, and the lands, tenements and hereditaments that may be required for the purpose of opening the same, may be taken for that purpose, and compensation and recompense made to the parties and persons, if any such there shall be, to whom the loss and damage thereby shall be deemed to exceed the benefit and advantage thereof, for the excess of the damage over and above the value of the said benefit, in the manner hereinafter for that purpose directed and prescribed. [2 R. L. 1813, p. 408.]

"CLXXVIII. And be it further enacted, That whenever and as often as any lands, tenements, hereditaments or premises whatsoever shall be required for the said purpose of opening any such public square, place, street or avenue, or part or section of a street or avenue, in the said city of New-York, laid out by the commissioners aforesaid, under and by virtue of the act aforesaid so to be opened, or for the said purposes of laying out and forming, or extending, enlarging, straightening, altering or otherwise improving any street or public place, so to be laid out and formed, or opened, or so to be extended, enlarged, straightened, altered or otherwise improved, in any part of the said city not laid out into streets, avenues, squares and public places, by the commissioners aforesaid, under the act aforesaid, or for any or either of the said purposes, it shall be lawful for the said mayor, aldermen and commonalty, to make application or to cause application to be made to the Supreme Court of judicature of this State for the appointment of Commissioners; and it shall be lawful for the said court to whom such application shall be made, on any such application to nominate and appoint three discreet and disinterested persons, being citizens of the United States, commissioners of estimate and assessment, for the purpose of performing the duties hereinafter in that behalf prescribed, which said commissioners before they enter upon the performance of the duties of their appointment shall severally take and subscribe an oath or affirmation, before some person authorised by law to administer oaths, 'faithfully to perform the trust and duties required of them by this act,' which oath or affirmation shall be filed in the clerks office of the city of New-York.

"And upon the coming in of the said report signed by the said commissioners or any two of them, the said court shall by rule or order, after hearing any matter which may be alleged against the same, either confirm the said report or refer the same to the same commissioners for revisal and correction or to new commissioners, to be appointed by the said court, to re-consider the subject matter thereof, and the said commissioners to whom the said report shall be so referred, shall return the same report corrected and revised, or a new report to be made by them in the premises, to the said court without any unnecessary delay; and the same, on being so returned, shall be confirmed or again referred by the said court in manner aforesaid, as right and justice shall require, and so from time to time, until a report shall be made or returned in the premises, which the said court shall confirm; and such report, when so confirmed by the said court, shall be final and conclusive, as well upon the said mayor, aldermen and commonalty of the city of New-York, as upon the owners, lessees, persons and parties interested in, and entitled unto the lands tenements, hereditaments and premises mentioned in the said report; and also upon all other persons whomsoever; and on such final confirmation of such report by the said court, the said mayor, aldermen and commonalty of the city of New-York, shall become and be seised in fee of all the said lands, tenements, hereditaments and premises in the said report mentioned, that shall or may be so required for the purpose of opening the said public square or place, street or avenue or part or section of a street or avenue so to be opened, or for the purpose of laying out and forming the said street or public place so to be laid out and formed, or for the purpose of extending, enlarging or otherwise improving the street or public place so to be extended, enlarged or otherwise improved, as the case may be, the same to be appropriated, converted and used to and for such said purpose accordingly; and thereupon the said mayor, aldermen and commonalty, or any person or persons acting under their authority, may immediately, or at any time or times thereafter, take possession of the same, or any part or parts thereof, without any suit or proceeding at law for that purpose: *In trust nevertheless*, That the same be appropriated and kept open for, or as part of a public street, avenue, square or place forever, in like manner as the other public streets, avenues, squares and places in the said city are and of right ought to be.

"*And provided also*, That it shall be lawful for the said mayor, aldermen and commonalty, at any time or times, either before or after the appointment of commissioners in the premises, for any of the purposes aforesaid to agree with the owners, lessees, parties and persons entitled unto or interested in the lands, tenements, hereditaments and premises, that either will be benefitted by or may be required, for the purpose of making the operation and improvement intended to be made, or with any or with either of such owners or other parties interested therein, for and about the cession of the lands, tenements, hereditaments and premises required of him, her or them respectively, for the purpose of making such said intended operation and improvement. (2 R. L. p. 409, 413, 414, 415, §188.

"CLXXXII. *And be it further enacted*, That the said commissioners of estimate and assessment to be appointed under and by virtue of this act, for any of the purposes aforesaid, after completing their said estimate and assessment, and at least fourteen days before they make their report to the said court, shall deposit a true copy or tran-

script of such estimate and assessment in the clerk's office of the city of New-York, for the inspection of whomsoever it may concern, and shall give notice by advertisement, to be published in at least two of the public newspapers printed in the city of New-York, of the said deposit thereof in the said office, and of the day on which their report will be presented to the said court; and any person or persons whose rights may be affected thereby, and who shall object to the same or any part thereof, may, within ten days after the first publication of the said notice, state his, her or their objections to the same, in writing, to the said commissioners; and the said commissioners or such of them as shall make such estimate and assessment, in case any objections shall be made to the same, and stated in writing as aforesaid, shall reconsider their said estimate and assessment, or the part or parts thereof so objected to, and in case the same shall appear to them to require correction, but not otherwise, they shall and may correct the same accordingly." Ib. p. 417.

"And the same or the excess and balance thereof, if any such excess and balance thereof there shall be, over and above the amount of the sums or assessments that may be assessed upon the parties and persons, lands and tenements, assessed by the commissioners in the premises for the benefit of such public square or place, street or avenue, or part or section of a street or streets so to be opened, or of such street or public place so to be laid out and formed, or of the extension, enlargement or other improvement of the street or public place so to be extended, enlarged or otherwise improved, as the case may be, together with the charges of the after-mentioned assessment and collection thereof, shall and may be estimated and assessed upon, and among all the owners, occupants and parties seised or possessed of, or interested in all the lands, tenements, hereditaments and premises not assessed by the said commissioners of estimate and assessment, nor included in their said report, that may be benefited by the said public square or place street or avenue, or part or section of a street or avenue, so to be opened or the said public square or place so to be laid out and formed, or the extension, enlargement or other improvement of the public street or place so to be extended, enlarged or otherwise improved, as the case may be in proportion, as nearly as may be, to the advantage which each shall be deemed to acquire thereby; and the said mayor, aldermen and commonalty, shall appoint three disinterested freeholders to make such estimate and assessment, who, before they enter upon the duties of their appointment, shall severally take an oath before the mayor, recorder, or one of the aldermen of the said city, to make the said estimate and assessment fairly and impartially according to the best of their skill and judgment; and the said freeholders or any two of them, after having made such estimate and assessment, shall certify the same and make a return thereof in writing to the said mayor, aldermen and commonalty, in common council convened, and the same when ratified and confirmed by the said common council, shall be binding and conclusive upon the parties and persons so to be assessed respectively, and upon all other persons whomsoever." (2 R. L. p. 419, 420, § 185.

"CLXXXVI. *And be it further enacted*, That as well the respective sums so to be assessed by the said assessors upon the owners, occupants and parties seised or possessed of or interested in the lands, tenements, hereditaments and premises mentioned in the said certificate and return of them the said ssessors, as also the respective sums or assessments so to be assessed and reported by the said commissioners of estimate and assessment as and for the allowance to be made by the parties and persons respectively in the said report mentioned and referred to and intended as owners and proprietors of, or parties interested in, lands and premises deemed to be benefitted for the benefit and advantage of the public square or place, street, avenue or part or section of a street or avenue, or of the extension, enlargement or other improvement of the street or public place mentioned in the said report, shall be a lien or charge on the lands, tenements, hereditaments and premises in the said certificate and return of the said assessors, or in the said report of the said commissioners mentioned, or upon the estate and interest of the respective owners, lessees, and parties interested in such said lands, tenements, hereditaments and premises for or on account of which the said respective sums shall be so assessed by the said commissioners or assessors, as the case may be, upon the said respective owners and proprietors thereof, or parties interested therein, and as well the said owners and proprietors thereof and parties interested therein, and also the occupants and every one of them shall moreover be respectively liable to pay on demand the respective sum or sums or assessments mentioned in the said certificate, and return of the assessors, or in the said report of the commissioners, as the case may be, at which the respective lands, tenements, hereditaments and premises so owned or occupied by him, her or them, or wherein he, she or they are so interested, or at which the owners and proprietors thereof shall be so assessed, to such person or persons as the said mayor, aldermen and commonalty shall appoint to receive the same; and in default of the payment thereof, it shall be lawful for the said mayor, aldermen and commonalty, or any five of them, of whom the mayor or recorder shall be one, by warrant under their hands and seals, to levy the same with lawful interest thereon from and after the expiration of thirty days from the time of the confirmation of the said report of the commissioners by the court, or of the said return of the assessors by the common council, as the case may be, and together, also with all the charges and expenses of the proceedings to be had for the collection thereof, by distress and sale of the goods and chattels of such owner or owners, occupant or occupants, or party or parties interested so refusing or neglecting to pay the same; rendering the overplus, (if any overplus there shall be) after deducting all just charges, to such owner or owners, occupant or occupants, or party or parties interested, or the said respective sums or assessments with such lawful interest as aforesaid, may be recovered with all costs and charges by the said mayor, aldermen and commonalty, from and against the parties assessed, or the owner or owners of the respective lands, tenements, hereditaments and premises whereon or in respect of which the same may be assessed, or set forth in the said report of the commissioners, or return of the assessment, as the case may be, or from or against any or either of the said parties or owners, without joining any other or others of them the said parties or owners therein, by action of debt or assumpsit, in which it shall be sufficient to declare generally, for so much money due by virtue of this act to the said mayor, aldermen and commonalty, and any matter may be given in evidence under such general declaration." (2 R. L. p. 420, 421.)

"CLXXXVII. *And be it further enacted*, That in case of the death, resignation or refusal to act of any such commissioner, of estimate and assessment, to be appointed under and by virtue of this act for any such aforesaid purpose, it shall and may be lawful for the court aforesaid, or any one of the justices thereof, on the application of the mayor, aldermen and commonalty of the city of New-York, as often as such event shall happen, to appoint a discreet and disinterested person, being a citizen of the United States, in the place and stead of such commissioner so dying, resigning or refusing to act, and that the surviving or acting commissioners, as the case may be, shall have full power to proceed in the execution of the duties of their appointment, until a successor of the commissioner so dying, resigning or refusing to act, shall be appointed." (2 R. L. p. 422.)

The next legislation which is pertinent to this issue is the act passed April 12th, 1816, and being an important law, and one which our readers will have need to refer to, we therefore give it entire.

"AN ACT *for the more effectual Collection of Taxes and Assessments in the City of New-York*—Passed April 12, 1816.

"§ 1. *Be it enacted by the People of the State of New-York, represented in Senate and Assembly*, That whenever any tax, of any description, on lands or tenements in the said city, shall remain unpaid on the day upon which the collectors are limited by law to account for the collection of the same, and the collector of the ward in which the same shall be charged, shall make such affidavit in relation to the said tax as is specified in the eleventh section of the act entitled 'an act for the assessment and collection of taxes,' passed April 5th, 1814, it shall be lawful for the mayor, recorder and aldermen of the said city, or any five of them, of whom the mayor or recorder shall be one, to issue a warrant under their hands and seals, directed to, and requiring some proper person to levy the said tax, by distress and sale of the goods and chattles of the owner or own-

ers of such lands or tenements respectively, wheresoever the said goods and chattels may be found in the said city, together with the costs and charges of such distress and sale, rendering the overplus, if any, to the person or persons whose goods and chattels shall be so distrained and sold.

"§ 2. *And be it further enacted*, That whenever any such tax shall remain unpaid as aforesaid, and the collector shall make such affidavit as is above; and also wherever and whenever any assessment upon any lands or tenements, in the said city, hath heretofore been or hereafter shall be made and confirmed according to law, and the amount of such assessment hath not been or shall not be collected: the collector shall make affidavit of his demanding the money two several times of such owner or owners of the said lands or tenements as may reside in the said city, and that they have neglected or refused to pay the same, or shall make affidavit that the owner or owners of any such lands or tenements cannot, upon diligent inquiry, be found in said city, then and in any such case it shall be and may be lawful for the mayor, aldermen and commonalty of the city of New-York, to take order for advertising the said lands and tenements, or any of them, for sale, in two or more of the public newspapers, printed in the said city, for three months, once in each week; and by such advertisements the owner or owners of such lands and tenements respectively, shall be required to pay the amount of such tax or assessment so remaining unpaid, together with interest thereon, at the rate of seven per cent. per annum (the interest on said tax to be calculated from the time of making the above mentioned affidavit, and the interest on such assessment to be calculated from the time of the confirmation of the said assessment) to the time of payment, with the charges of such notice and advertisement, to the treasurer or chamberlain of the said city; and notice shall be given by such advertisements, that if default shall be made in such payment, such lands and tenements will be sold at public auction, at a day and place therein to be specified, for the lowest term of years at which any person or persons shall offer to take the same, in consideration of advancing the said tax or assessment, and the interest thereon as aforesaid, to the time of sale, and together with the charges of the above mentioned notice and advertisement, and the hereinafter mentioned certificate, lease and advertisement, and all other costs and charges accrued thereon: And if, notwithstanding such notice, the owner or owners shall refuse or neglect to pay such tax or assessment, with interest as aforesaid, and the charges attending such notice and advertisement, then it shall and may be lawful to and for the said mayor, aldermen and commonalty, to cause such lands and tenements to be sold at public auction, for a term of years, for the purpose and in the manner expressed in the said advertisements; and such sales shall be made on the day for that purpose mentioned in the said advertisements, and shall be continued from day to day, if necessary, until all the lands and tenements, so advertised, shall be sold: And the said mayor, and commonalty shall give to the purchaser or purchasers of any such lands and tenements, a certificate, in writing, describing the lands and tenements so purchased, the term of years for which the same shall have been sold, the sum paid therefor, and the time when the purchaser will be entitled to a lease for the said lands and tenements: And the mayor, aldermen and commonalty of the city of New-York, shall at least six months before the expiration of two years after any such sale, cause an advertisement to be published, at least once in each week for four weeks successively, in the newspaper printed by the printer to this state, and in one of the public newspapers printed in the city of New-York, in such form as they shall deem best calculated to give notice of such sale; and that unless the lands sold be redeemed by a certain day they would be conveyed to the purchaser: And if the person claiming title to the said lands and tenements, or some one on his or her behalf, shall not within two years from the date of the above mentioned certificate, pay to the street commissioner of the city of New-York, for the use of the purchaser, his executors, administrators, or assigns, the sum mentioned in such certificate, together with the interest thereof, at the rate of twenty per centum per annum, from the date of such certificate, the mayor, aldermen and commonalty of said city, shall at the expiration of the said two years, execute to the purchaser, his executors, administrators or assigns, a lease, under the common seal of the said city, of the lands and tenements so sold, for such term of years as the same shall have been sold; and such lease shall be conclusive evidence that the sale was regular, according to the provisions of this act: And such purchaser or purchasers, his, her, or their executors, administrators and assigns, shall, by virtue thereof, and of this act, lawfully hold and enjoy the said lands and tenements, in the said lease mentioned, for his, her or their own proper use, against the owner or owners thereof, and all claiming under him, her or them, until such purchaser's term therein shall be fully complete and ended: And the said purchaser or purchasers, his, her or their executors, administrators and assigns, shall be at liberty to remove all the buildings and materials which he, she or they shall erect or place thereon, during the said term, within one month after the expiration of the said term, but leaving the lands and tenements, with the streets fronting the same, in the order required by the regulations of the common council: *Provided always*, That no such proceedings by advertisement and sale, as aforesaid, shall take place under any assessment heretofore made and confirmed, unless in cases where the same now is a lien or charge on the lots assessed.

"§ 3. *And be it further enacted*, That the above mentioned proceeding by advertisement and sale, may take place in any case of such unpaid tax, as is above mentioned, notwithstanding a warrant of distress may have been issued for the collection thereof, in the manner above mentioned, in case the whole or any part of such tax shall be uncollected thereupon.

"§ 4. *And be it further enacted*, That this act shall not be construed to prevent the collection of any assessment or assessments by distress and sale of the goods and chattels of the owner or owners, occupant or occupants of any lands or tenements therein or thereby assessed.

"§ 5. *And be it further enacted*, That all the provisions herein before made, relative to the sale of lands and tenements, within the city of New-York, for unpaid taxes, shall apply to all such taxes charged on lands and tenements, within the said city, as shall appear by the returns of the respective collectors, at any time heretofore to have been in arrear.

"§ 6. *And be it further enacted*, That whenever the arrearages of any tax shall be collected, in manner aforesaid, the same shall be carried to the credit of the ward in which it shall be charged.

"§ 7. *And be it further enacted*, That the one hundred and fifty-sixth, one hundred and fifty-seventh, one hundred and fifty-eighth, two hundred and fifty-ninth and two hundred and sixtieth sections of the act entitled 'An act to reduce several laws relating particularly to the city of New-York, into one act,' passed April 9th, 1813 be and the same hereby are repealed: *Provided however*, That such repeal shall not effect any act done, or proceedings had or commenced under the said sections hereby repealed; but every such act and proceeding shall remain as valid as if the said sections had remained in full force: *And provided particularly*, That the proceedings for the sale of certain lands and tenements, for certain unpaid assessments, which are now pending, shall and may proceed, be continued and completed in the same manner as if this act had not been passed, but the said two hundred and fifty-ninth section of the said act had remained in full force."

The next act of the Legislature which we shall notice, is that of April 5th, 1816.

"AN ACT *relative to the Duties and Powers of Commissioners of Estimate and Assessment on Opening Streets and Avenues*—Passed April 5, 1816.

"WHEREAS the mayor, aldermen and commonalty of the city of New-York, have by their memorial to the legislature, represented that so much of the existing law in relation to the opening and improving streets in the said city, as confines the commissioners' assessments for the benefits within certain limits, is inconvenient in its operation, and have prayed that the said law may be amended in that particular; *And whereas*, The said prayer appears proper to be granted: Therefore,

"§ 1. *Be it enacted by the People of the State of New-York, represented in Sen-*

ate and Assembly, That whenever commissioners of estimate and assessment may hereafter be appointed by the supreme court of judicature of this state, or by any one of the justices thereof, for the purpose of opening any street or avenue, or any part or section of any street or avenue."

We now come to the provisions of the Constitution of 1821, which are as follows:

ART. I.

"§ X. No member of the Legislature shall receive any civil appointment from the Governor or Senate, or from the Legislature during the term for which he shall have been elected.

ART. IV.

"§ VII. The Governor shall nominate by message, in writing and with the consent of the Senate, shall appoint all judicial officers except Justices of the Peace.

"§ IX. The Clerks of Courts, except those Clerks whose appointment is provided for in the next preceding sections, shall be appointed by the Courts of which they respectively are clerks;

ART. V.

"§ IV. The Supreme Court shall consist of a Chief Justice, and two Justices, any of whom may hold the Court.

"§ VII. Neither the Chancellor, nor Justices of the Supreme Court, nor any Circuit Judge, shall hold any other office or public trust."

ART. VI.

"§ I. Members of the Legislature, and all officers, executive and Judicial, except such inferior officers as may by law be exempted, shall before they enter upon the duties of their respective offices, take and subscribe the following oath or affirmation: I do solemnly swear (or affirm, as the case may be) that I will support the Constitution of the United States and the Constitution of the State of New-York, and I will faithfully discharge the duties of the office of ——— according to the best of my ability.

ART. VII.

"§ I. No member of this State shall be disfranchised, or deprived of any of the rights or privileges, secured to any citizen thereof unless by the law of the land or the judgment of his peers.

"§ II. The trial by Jury, in all cases in which it has been heretofore used shall remain inviolate for ever, and no new court shall be instituted, but such as shall proceed according to the course of the common law, except such courts of Equity as the Legislature is herein authorised to establish.

The last clause of Section VII is in these words, "No person shall be subject," &c., "nor be deprived of life, liberty, or property without due process of law, nor shall private property be taken for public use without just compensation."

"§XIII. Such parts of the common law, and of the acts of the Legislature of the colony of New-York, as together did form the law of the said colony on the 19th day of April 1775, and the resolutions of the Congress of the said colony, and of the Convention of the State of New-York in force on the 20th day of April, 1777, which have not since expired, or been repealed or altered; and such acts of the legislature of this State, as are now in force shall be and continue the law of this State subject to such alterations as the legislature shall make concerning the same. But all such parts of the common law, *and such of the said acts, or parts thereof, as are repugnant to this Constitution are hereby abrogated.*"

The next legislative provision which we shall notice is the act of April 7th, 1830, from which we copy the following sections:

"§ 7. The boards shall meet in separate chambers, and a majority of each shall be a quorum to do business. Each board shall appoint a President from its own body, and shall also choose its clerk and other officers, determine the rules of its own proceedings, and be the judge of the qualifications of its own members. Each board shall keep a journal of its proceedings, and the doors of each shall be kept open, except when the public welfare shall require secrecy: And all resolutions and reports of committees, which shall recommend any specific improvement involving the appropriation of public moneys, or taxing or assessing the citizens of said city, shall be published immediately after the adjournment of the board, under the authority of the common council, in all the newspapers employed by the corporation; and whenever a vote is taken in relation thereto, the ayes and noes shall be called and published in the same manner.

"§ 12. Every act, ordinance, or resolution which shall have passed the two boards of the common council, before it shall take effect, shall be presented, duly certified to the mayor of the city, for his approbation: if he approve, he shall sign it; if not, he shall return it, with his objections, to the board in which it originated, within ten days thereafter; or if such board be not then in session, at its next stated meeting. The board to which it shall be returned, shall enter the objections at large on their journal, and cause the same to be published in one or more of the public newspapers of the city.

"§ 13. The board to which such act, ordinance, or resolution, shall have been so returned, shall after the expiration of not less than ten days thereafter, proceed to reconsider the same. If, after such reconsideration, a majority of the members elected to the board shall agree to pass the same, it shall be sent, together with the objections, to the other board, by which it shall be likewise reconsidered; and if approved by a majority of all the members elected to such board, it shall take effect as an act or law of the corporation. In all such cases, the votes of both boards shall be determined by yeas and nays; and the names of the persons voting for and against the passage of the measure reconsidered, shall be entered on the journal of each board respectively.

"§ 14. If the mayor shall not return any act, ordinance or resolution so presented to him, within the time above limited for that purpose, it shall take effect in the same manner as if he had signed it.

"§ 15. Neither the mayor nor recorder of the city of New-York shall be a member of the common council thereof, after the second Tuesday of *May*, one thousand eight hundred and thirty-one."

The next Legislative proceeding in chronological order is the act of April 20th, 1839.

The 9th, 10th, and 12th sections of that act are as follows:

"§ 9. All motions (except as hereinbefore provided) made under and by virtue of the act hereby amended, before the said court or any court to which an appeal may have been made, shall be upon giving previous notice of the time, place and object of such motion, to be published for at least fourteen days in four of the public newspapers, and by copies of said notice in handbills, to be posted up for the same space of time in the manner hereinbefore directed.

"§ 10. No real estate or other property shall be sold or advertised for sale, for the non-payment of any assessment or tax laid upon real estate, unless notice in writing shall have been left at the residence of the owner or owners, if residing in the city of New-York, or if upon diligent enquiry, such owner or owners cannot be found, then at the residence of the tenant or tenants upon the said premises, at least twenty days previous to such advertisement; and if such owner or owners do not reside in said city, or upon diligent inquiry cannot be found and the premises are without a tenant or tenants, then such notice in writing shall be put up for the same space of time, in some conspicuous place on the premises so assessed or taxed.

"§ 12. No cost or charges to the said commissioners, their attorney, counsel or others, shall be paid or allowed for any services performed under this act, or the act, hereby amended, unless the same shall be taxed by the said court, who are required to make rules to apply to the said bills of costs, the existing laws in relation to the taxation of costs and the nature and proof of the services rendered and disbursements charged, as far as the same can be made applicable; and no unnecessary cost or charges shall be allowed.—Public notice of the time and place of the taxation of costs shall be given, for the same time and in the same manner as notices are required to be given by the above ninth section; and a copy of the bill of costs, containing items and particular services performed, shall be deposited in the office of the street commissioner at the time of the first publication of such notice."

The next provision of the law, which we shall notice, is the act of May 14th, 1840, from which we copy the following section:

"§ 10. It shall not be necessary to give any further publicity of any intended sale of property for unpaid assessments and

taxes than is contemplated by the last preceding section; and in giving the further notice required by section second of the act entitled, "An act for the more effectual collection of taxes and assessments in the city of New-York, passed April 12, 1816, of the sale of property six months previous to the expiration of the time of redemption, it shall only be necessary to publish the same in one daily newspaper printed in the city and county of New-York, twice in each week for six weeks successively, and so much of the said section as is inconsistent with this section and the preceding sections, is hereby repealed." Session Laws of 1840.

The last statue provision which we shall state, is from the act of May 25th, 1841, from which we copy the following section:

"§ 3. Whenever any land or tenement sold for assessments or taxes in the city of New-York and conveyed in the manner provided by law, shall at the time of conveyance be in the actual occupancy of any person, the grantee, to whom the same shall have been conveyed, or the person claiming under him shall serve a written notice on the person occupying such land or tenements, and the person last assessed as owner stating in substance the sale and conveyance, the person to whom made, and the amount of consideration money mentioned in the conveyance, with the addition of forty-two per cent. on such amount as the said lands or tenements were struck off for at the time of the sale, and the further addition of the sum paid for the lease *and advertisements*, and stating also that unless such consideration money and the said forty-two per cent. together with the sum paid for the lease, shall be paid to the street commissioner for the benefit of the grantee, in case the said premises shall have been sold for assessments, or to the Comptroller if the same shall have been sold for taxes within six months after the service of such notice that the said conveyance will become absolute, and the occupant and all others interested in the land or tenements be barred from all right or title thereto during the term of years for which such lands or tenements shall have been conveyed." Session Laws of 1841.

Having gone through with a statement in which we have included copies of the law enacted by the Colonial Assembly, the provisions of the Constitution of 1777, the acts of the Legislature under that Constitution, the provisions of the Constitution of 1821, and the acts of the Legislature subsequent thereto; we come now to state the particular assessment proceeding which was the matter of adjudication by the Supreme Court in the case of Striker vs. Kelly. We will premise this by saying that our object in presenting these provisions of the Constitution of 1777, and of 1821, and those of the statutes, in so much detail, is to give our readers abroad who may not have the copies of the New-York Constitution of 1777 and 1821, and of the Statutes, to refer to.

This proceeding in the Supreme Court involved the question of the right of the Justices of the Supreme Court to act as Road Commissioners, in the appointment of Commissioners of estimate and assessment, and confirming their reports, and also other constitutional questions; and also the question whether the common council acquired jurisdiction in the premises in the commencement of the proceeding for opening the Ninth Avenue, and the legality of their proceedings subsequent to the assessment, and likewise of the *legality* of the sale, and of the proceedings subsequent to the sale.

A brief history of the proceedings which preceded the application to one of the justices of the Supreme Court for the appointment of Commissioners, the proceedings relating to the appointment of Commissioners, the confirmation of the assessment, and those subsequent thereto, accompanied by a diagram of the avenue and assessed premises, will give the reader a pretty full view of this *paper improvement* or assessment.

On the 20th of April, 1835, a petition for the opening of the 9th Avenue, was presented in the Board of Aldermen. The following is a copy:

"To the Hon. Mayor and Common Council of the city of New-York.

"The undersigned owners of Real Estate on the Ninth Avenue and its vicinity, respectfully pray your Honorable Body to cause the Ninth Avenue to be opened from 45th Street to its intersection with the Bloomingdale Road. They would respectfully represent to your Honorable Body the expediency of opening this Avenue, as the property thereon is now coming into market, and is not at present accessible; and that from the shape of the ground, it will with very little cost, be a good and easy road, which would be very necessary and convenient for the growing population along the lower part of this avenue, as well as those above.

New-York, April 15th, 1835.

F. B. Cutting, D. A. Cushman, James N. Wells, N. Martin, J. Bowman, Norman Peck, D. Wiry, George Rapilje, by his Att'y D. C. Colden. John Parr, W. Van Houton, H. Embiere, E. B. Glenn, C. Arras, Geo. Wheeler, James Gallon, P. Maguire, C. Wesley, James Otter, James Pollock."

The signers of this memorial were none of them owners of land upon that portion of the Avenue they desired to have opened, nor were they owners of any of the land which was assessed for the proceeding.

A Remonstrance was presented to the Board of Aldermen against the opening of the 9th Avenue, signed by persons who were the owners of the greater part of the land, through which this portion of the avenue was plotted out. The following is a copy of the remonstrance:

"To the Hon. Mayor and Common Council of the city of New-York.

"The undersigned, citizens and land-holders, residing on the Ninth Avenue and its vicinity, respectfully represent to your Honorable Body that they feel in duty bound to remonstrate against the opening, at present, of the Ninth Avenue, from 45th Street to the intersection of the Bloomingdale road, agreeable to a petition lately laid before your Honorable Body. They conceive that there is not at present any absolute necessity or public convenience in having said avenue opened; that the 8th and 10th being opened and in good condition for travelling, it is, in the opinion of your petitioners, inexpedient to open the 9th at present.

"They would further respectfully call the attention of your Honorable Body to the extreme difficulty and damages they would incur by its being thrown open at this time.

"The lands along the line of this avenue are now generally in productive use, which would be lost to the owners; and the necessity of fencing on both sides would be a heavy expense. Many other weighty arguments might be produced; but we trust your Honorable Body will take all into consideration and do us justice; and we most respectfully pray that you will not grant the prayer of the petitioners for opening said Avenue at present.

New-York, Dec. 19, 1834.

David Cargill, F. C. Havemeyer, Peter Fietner, Hannah Titus, Jacob Harsen, Charles Fietner, P. A. Hageman, P. A. Hageman, Agent for S. Stake, Henry Ulrick."

The petition and remonstrance were both referred to the Street Committee, which committee made the following Report:

"The Street Committee of the Board of Aldermen to whom was referred the annexed petition of sundry persons asking the Common Council to take the necessary measures to have the Ninth Avenue opened from 45th Street to the Bloomingdale Road, together with a remonstrance against the same,

"Beg Leave to Report, That the proposition above named has been published in the daily papers, and that a remonstrance against the measure was presented, signed by several of persons interested.

"The remonstrants state in their memorial, that they are the owners of property which would be affected by the opening of the Ninth Avenue; and give as a reason why

the same should not be done at this time, that at present the land is in productive use, which would be lost to them, and that they would be put to the expense of erecting fences on each side of the Avenue, if the same be opened.

"But your Committee can see no good reason why a measure of so much importance, not only to the petitioners (who are owners of the property on the line of the avenue), but in which the public are also interested, should be retarded for the reasons given in the remonstrance.

"Your Committee, therefore, viewing this subject as one of great importance, and believing that it is highly expedient to afford additional facilities of communication in that section of the city, recommend for adoption the following resolution:

"Resolved, That the 9th Avenue be opened from 45th Street to the Bloomingdale Road, and the Counsel of the Board is hereby directed to take the necessary legal measures to carry this resolution into effect.

FRAS. FICKET,
EDWARD TAYLOR,
SAML. PURDY,
} Street Committee."

"The Committee on Roads and Canals of the Board of Assistant Aldermen, to whom was referred the petition of sundry persons for the opening of the Ninth Avenue from 45th Street to the Bloomingdale Road, and a Remonstrance against the same,

"Respectfully Report, That the propriety of opening all avenues leading from the city has been repeatedly stated by the Committee in former reports, and they deem a repetition of the reasons in favor of such a course unnecessary, at the present time.

"In the remonstrance submitted to the Committee, there is no other reason given against the measure than that the land now employed in a productive manner would be taken away, and they would be put to heavy expense for fencing.

"This reason your Committee think should not prevent the opening of the Avenue, inasmuch as the land taken for this purpose will be fully paid for, and the interest of the owners of property on that avenue will be promoted by its being opened.

"Your Committee therefore recommend a concurrence with the Board of Aldermen in the Resolution adopted on this subject.

D. P. INGRAHAM,
JOHN V. GREENFIELD,
A. STEWART,
} Committee."

The Remonstrance is endorsed as follows:

"Remonstrance against opening 9th Avenue from 45th Street to the Bloomingdale Road, presented by I. L. VARIAN.

"Board of Aldermen, Dec. 22d, 1834.

"Referred to the Street Committee.

"J. MORTON, Clerk.

"Report of the Street Committee on the Petition of sundry persons to have the 9th Avenue opened from 45th Street to the Bloomingdale Road.

"Board of Aldermen, July 20, 1835.

"Adopted,

"J. MORTON, Clerk.

"Board of Assistants, July 22, 1835.

"Referred to Road Committee.

"WM. HAGADON, Clerk.

"Report of the Committee on petition for opening Ninth Avenue from 45th Street to the Bloomingdale Road, concurring with the Board of Aldermen, &c.

"Board of Assistants, July 27, 1835.

"Concurred and agreed to.

"WILLIAM. HAGADON, Clerk.

"Approved July 29, 1835.

"C. W. LAWRENCE,
"R. EMMETT."

By the testimony of D. T. Valentine, Assistant Clerk of the Board of Aldermen, before the Circuit Court:

"The approval of the Mayor appears to be written on the Remonstrance, and bears date July twenty-ninth, one thousand eight hundred and thirty-five."

The Mayor, on the 3d of August, 1835, sent a Message to the Board of Aldermen, of which the following is a copy:

"*Mayor's Office, Aug.* 3, 1835.

"Gentlemen of the Board of Aldermen of the city of New-York:—I have approved and signed the resolution for opening 9th Avenue from 45th Street to the Bloomingdale Road.

"C. W. LAWRENCE."

The next proceeding we shall notice, is the application to "the Justices of the Supreme Court," for the appointment of Commissioners of Estimate and Assessment, to make an estimate and assessment for opening the Ninth Avenue from 45th Street, to the Bloomingdale Road. The following is a copy of the Petition:

"To the Justices of People of the State of New-York, of the Supreme Court of Judicature of the same People.

"The Petition of the Mayor, Aldermen and Commonalty of the city of New-York, RESPECTFULLY SHEWETH,

"That your petitioners in Common Council convened, have deemed it desirable for the public convenience to open the Ninth Avenue between Forty-Fifth Street and the Bloomingdale Road, in the Twelfth Ward of the said city, the same being an Avenue in that part of the said city laid out into Streets, Avenues, Squares and public places, under and by virtue of the act entitled, "An Act relative to improvements touching the laying out of Streets and Roads in the city of New-York, and for other purposes," passed the third day of April, in the year of our Lord one thousand eight hundred and seven, by taking for that purpose the land and premises hereinafter mentioned and described, and removing therefrom the buildings situated and being thereupon, which said lands are situated, located and bounded as follows, to wit:

"All that certain lot, piece or parcel of land situate, lying and being in the said Twelfth Ward of the said city, and bounded and containing as follows, to wit: Beginning at a point on the northwesterly line or side of the Ninth Avenue, as the same is to be opened, distant eighty-three feet nine inches from the northwesterly corner of Forty-Fifth Street as established by law, and the Ninth Avenue as the same is to be opened, and running thence northeasterly along the northwesterly line or side of the Ninth Avenue, as the same is to be opened, four thousand nine hundred and ninety-one feet three inches, to the westerly line or side of the Bloomingdale Road, thence southwesterly along the same, four thousand eight hundred and sixty-four feet eleven inches, to a point on the southwesterly line or side of Ninth Avenue, as the same is to be opened, distant forty feet nine inches from the southeasterly corner of Forty-Fifth Street, as established by law, and Ninth Avenue, as the same is to be opened, and running thence northerly, one hundred and eight feet ten inches to the place of beginning.

"And your petitioners further represent, that they have accordingly ordered the said above mentioned Avenue to be opened as aforesaid, and they therefore pray this Honorable Court will, in pursuance of the Act of the Legislature of the People of the State New-York, entitled "An Act to reduce several laws relating particularly to the city of New-York, into one Act," passed the ninth day of April, in the year of our Lord one thousand eight hundred and thirteen, nominate and appoint three discreet and disinterested persons, being citizens of the United States, Commissioners of Estimate and Assessment, for the purpose of performing the duties relative to the premises prescribed in and by the Act last mentioned, and in and by the Act entitled, "An Act relative to the duties and powers of Commissioners of Estimate and Assessment on opening Streets and Avenues," passed the fifth day of April, in the year of our Lord one thousand eight hundred and sixteen, and also in and by the Act entitled, "An Act relative to opening and enlarging streets in the city of New-York," passed the twelfth day of April, in the year of our Lord one thousand eight hundred and eighteen.

"And your Petitioners, &c.

"By the Common Council.

[L. S.] J. MORTON, Clerk."

[Endorsed.]

"SUPREME COURT.

"In the matter of opening the Ninth Avenue, between 45th street and the Bloomingdale Road, in the Twelfth Ward of the city of New-York.
} PETITION.
R. EMMETT, Attorney.

"Filed 18th Dec. 1835."

The petition it will be seen is without date, and is also without the signature of the Mayor of the City of New-York. There were no buildings in the line of the avenue.

The Clerk of the Supreme Court entered an order under the direction of one of the Judges of that Court, of which the following is a copy:

"IN SUPREME COURT.

"In the matter of the application of the Mayor, Aldermen and Commonalty of the city of New-York, relative to the opening of 9th Avenue, between forty-fifty street and the Bloomingdale Road, in the 12th Ward of said city. } 18th December, 1835. Rule for the appointment of Commissioners R. EMMETT, Attorney.

"The Mayor, Aldermen and Commonalty of the city of New-York, in pursuance of the act of the Legislature of the people of the State of New-York, entitled "An Act to reduce several laws relating particularly to the city of New-York into one Act," passed the ninth day of April in the year of our Lord one thousand eight hundred and thirteen, by Robert Emmet their Attorney, presented to the Supreme Court of the Judicature of the people of the State of New-York, on the eighteenth day of December, in the year of our Lord one thousand eight hundred and thirty-five, their certain petition, under the common seal of the said city, setting forth that they have deemed it desirable for the public convenience to open Ninth Avenue, between Forty-Fifth Street and the Bloomingdale Road, in the Twelfth Ward of the said city, the same being an avenue in that part of the said city laid out into streets, avenues, squares and public places, under and by virtue of the act entitled "An Act relative to improvements tonching the laying out of streets and roads in the city of New-York, and for other purpose," passed the third day of April one thousand eight hundred and seven, by taking for that purpose the lands and premises hereinafter mentioned and described, and removing therefrom the buildings situated and being thereupon, which lands and premises are situated and bounded as follows, that is to say—"All that certain lot, piece or parcel of land lving and being in the said Twelfth Ward of the said city, and bounded and containing as follows, to wit: Beginning at a point on the northwesterly line or side of Ninth Avenue as the same is to be opened, distant eighty-three feet nine inches from the northwesterly corner of Forty-Fifth Street, as established by law, and ninth avenue, as the same is to be opened, and running thence northwesterly along the northwesterly line or side of the ninth avenue, as the same is to be opened, four thousand nine hundred and ninety-one feet three inches, to the westerly line or side of the Bloomingdale Road, thence southerly along the same, one hundred and ninety-six feet eight inches to the southeasterly line or side, to the ninth avenue as the same is to be opened, thence southwesterly along the same, four thousand eight hundred and sixty-four feet eleven inches to a point on the southeasterly line or side of ninth avenue, as the same is to be opened, distant forty-feet nine inches from the southeasterly cor-Forty-Fifth Street, as established by law, and ninth avenue, as the same is to be opened, and running thence northerly one hundred and eight feet ten inches to the place of beginning.

"And your petitioners, in their said petition, further set forth that they have accordingly ordered the aforementioned ninth avenue to be opened in manner aforesaid, and they therefore pray that this Honorable Court will be pleased in pursuance of the above mentioned act of the Legislature of the people of the State of New-York, to nominate and appoint three discreet and disinterested persons, being citizens of the United States, Commissioners for the purpose of performing the duties relative to the above mentioned premises prescribed to Commissioners of estimate and assessment in and by the last mentioned act, and also in and by the act entitled "An Act relative to the duties and powers of Commissioners of estimate and assessment on opening streets and avenues," passed the fifth day of April, in the year of our Lord one thousand eight hundred and sixteen, and also in and by the act entitled "An Act relative to the opening and enlargening streets in the city of New-York," passed the twentieth day of April, in the year of our Lord one thousand eight hundred and eighteen, which said petition is filed. Now, on reading and filing the said petition, and on motion of Robert Emmet of Counsel for the said petitioners, it is ordered that Robert Ainslie, William W. Holly and Lovell Purdy, being three discreet and disinterested persons, and citizens of the United States, be and they hereby are nominated and appointed by the said Court Commissioners of estimate and assessment for the purposes and matters aforesaid, and that they make a report without unnecessary delay, &c."

One of the Commissioners appointed is a son of one of the street committee of the Board of Aldermen, which made the report in favor of opening the avenue.

In the appendix to the report of the select committee of the Senate appointed by that body to examine into the assessment abuses in the city of New-York, is the following stated testimony, on p. 80, of printed Senate Document No. 100, of 1842:

"There is a book permanently kept in the Street Commissioners office, and witness recognizes the book upon its being shown to him, which contains a list of the names of the persons for commissioners of estimate and assessment in opening Streets, &c. They are placed on that list in the following manner: pretty soon after the annual election, the Aldermen call and enquire for that book, and each Alderman inserts three names for commissioners for the ensuing year." *Testimony* of P. Perrine, a clerk in the street commissioner's office, before the Senate Committee."

The following is from Senate Doc. No. 100, pg. 278 and 279.

"New-York, Nov. 12th, 1840.

"To WILLIAM ADAMS, ESQ.
Asst. of the 5th Ward.

"SIR—I have received a copy of a resolution offered by you and passed by the board of assistants on the 9th inst., requiring me to furnish that board with the items of the bill for counsel fees and court charges, in the matter of opening the Seventh avenue, also a bill of the charges of the commissioners of estimate and assessment and the surveyor's bill in the same matter. I had determined to send back the copy of the resolution, enclosed in a short communication, to the president of the board of assistants, respectfully denying the right of that board, or of the common council, to require any such information from me; but being informed that the resolution was not drawn by you, and believing that you might not have well considered its fitness or propriety, when you introduced it, I have thought it due to you, to make this personal communication to yourself on the subject.

"A very brief statement will, I think, satisfy you that as a matter of *strict right* the common council are not entitled to make any such demand; and I can hardly suppose that any member of that body could desire that its aid should, *without right*, be made subservient to the investigating spirit, however laudable it may be deemed, which may have suggested this resolution in any other quarter.

"The proceedings for opening the Seventh avenue, were conducted and concluded under the act of April 9th, 1813, the 189th section of which provides that the commissioners of estimate and assessment (who are appointed by, and are the officers of the Supreme Court,) shall be entitled to receive the sum of not more than four dollars for each day actually employed by them in their duties, besides all reasonable expenses for maps, surveys and plans, clerk hire and other necessary expenses and disbursements.—The law directs that these expenses shall be paid by the corporation, and included in the assessment, by the subsequent collection of which, it was intended that the corporation should be reimbursed. There is no provision in this act for the taxation of these expenses, or for regulating them by any other rule than the discretion and good faith of the commissioners who are authorized to incur them. But even admitting them to have been extravagant in any case, they could not affect the corporation, who were the mere agents, required by law to pay the money and refund themselves by the collection of the assessments; and whatever right the parties assessed may have had to inquire into the necessity or reasonableness of those expenses, or to object to them, should have been exercised while the matter was before the commissioners or the Supreme Court.

"If the law was defective in this respect, the Legislature have endeavored to remedy it by an act passed April 20th, 1839, which, among other alterations, requires a rigid taxation of all costs, charges and expenses in cases of this kind before they can be paid; but I know of no law which made it my duty to preserve and exhibit to the common council, or to any other party, or even to make out a bill with items of the costs, fees and court charges in the matter of opening the Seventh avenue, or in any other of the

numerous street cases which I had charge of, and which were terminated before the act of 1839 was passed; and I might with just as much propriety be now called upon to furnish the items of the expenses of any estimate and assessment confirmed ten years ago, or of all which have been confirmed since that time.

"If the inquiry contained in this resolution is to be viewed as a mandate of the board of assistants, I must be permitted to say that it is inquisitorial. If it was made *through that body*, to gratify curiosity in any other quarter, I pronounce it impertinent in those with whom it originated.

"I shall at times cheerfully give any information in my power, upon this or any other subject, to any one authorized to require it; but I shall disregard any attempt, made under cover of the common council, or otherwise, to obtain it, by those whose right to call for it, or whose motives in so doing I may not be aware of.

"I have only to add, that no disrespect is intended towards you, or any member of the board of assistants, by this communication, and that you are at liberty to make such use of it as you may think fit.

"I am, sir, very respectfully,

"Your obdt. servt.

"R. EMMET."

"October 14, 1841.

"At the request of the committee of citizens on the assessment laws of the city of New-York, this committee met this day at the call of the chairman, in the committee room of the Senate chamber in the city of Albany, having previously, (October 10th inst.,) written to said committee of citizens, and directed them to notify the mayor of the city of New-York and the counsel for the corporation of said city of this meeting.

"*Present*—Mr. FURMAN,
Mr. VERPLANCK, and
Mr. SCOTT.

"*John Keyes Paige* being called and duly sworn on the part of the memorialists, says, he is clerk of the Supreme Court in the city of Albany. Witness produced the report and additional report of the commissioners of estimate and assessment in the matter of opening Sixth avenue in the city of New-York, which was filed in his office June 6, 1839, and appears by endorsement to have been confirmed on that day. It appears by affidavits annexed to said report, that notice of presenting said report for confirmation was published daily in the New-York Evening Star and Evening Post, respectively, commencing on the 18th day of May, and continuing to the 3d day of June, 1839, inclusive, Sundays excepted; and in the New-York Times and Commercial Intelligencer daily, from the 20th day of May to the 3d day of June, 1839, inclusive, Sundays excepted. There does not appear to be any evidence that said notice of presenting such report for confirmation was published in handbills, annexed to said report, or additional report. Witness never knew any bill of items of the expenses in opening streets or avenues, or public squares in the city of New-York, presented to the Supreme Court for taxation when the reports of the Commissioners of estimate and assessment were presented to that court for confirmation, though it is possible when such confirmation was opposed, such bills of items may have been presented to the court with the report and other papers, and the judge may have passed upon them: but the witness never saw any such bills, and none have fallen under his observation in his office. There is an endorsement on this report to the following effect: 'Deposited in county clerk's office 18th May, 1839.'

"There is a charge upon each opening, street, avenue or square, for the extended rule, including the whole report of the commissioners of estimate and assessment, with a certified copy thereof, which extended rules have not yet been entered in many cases, and in making witness' return to the Comptroller he would not include the fees for the prospective services in making out such extended rule and the certified copy thereof.

"Witness produced the reports of the Commissioners of estimate and assessment in the opening of the Seventh Avenue from Twenty First to One Hundred and Twenty-ninth Street, which is on file in his office, filed and confirmed February 9, 1839. There does not seem to be any endorsement upon it of having been filed in the county clerk's office in New-York. Witness never knew a case of opening a street or avenue where the proof of publication did not accompany the presentation of the report; such proof is not attached to this report; but witness has no doubt it is upon some other paper in his office. There is no abstract or summary accompanying said reports so far as the witness has examined the same. The report of estimate and assessment in the Seventh Avenue contains, as numbered, eleven hundred and ninety-six pages. Sixth Avenue about nine hundred pages.

JOHN KEYES PAIGE.

"Upon closing the examination of the preceding witness, John Keyes Paige, the committee adjourned to meet at Clinton Hall, in the city of New-York, on such day as shall be fixed by the Chairman thereof in his notice to the members of said committee.—[Senate Report, Doc. No. 100, of 1842, p. 85.]

We copy from the report of the Senate Document No. 100, of 1842, and from p. 43 and 44, of the appendix of that report the testimony of John Ewen, [who held the office of Street Commissioner, from May 4th, 1836, to May 1844,] the following:

"The commissioners' fees, counsel fees, and other expenses on said avenue, were principally paid by Richard I. Smith, the assistant street commissioner, whose duty it is by an ordinance of the common council to apply for the warrants for these moneys, and to pay over all moneys on assessments. That ordinance is an old one of fifteen years standing. The witness paid some of the items in those during the absence of the assistant street commissioner; he paid the commissioner Robertson's fees to Mr. Fickett, who had an assignment of the same, and the expenses of the surveyor to Mr. Sage.—The witness produced a copy of the original receipts for the expenses on Second avenue, on file in his, witness's, office, which are marked A, and signed G. F. The present counsel of the corporation was appointed two years last May. The notice which that counsel gave to witness's office, not to pay such bills unless taxed, was after the payment of the above bills. The bills which the witness so paid were not taxed to his knowledge. The abstract of the report signed by the commissioner, containing the aggregate amount of the expenses, awards and assessments, is the only voucher on which such payments were made; the claimants for such expenses were never in the habit of presenting any bills. Taxed bills for such proceedings have been paid in witness's office, but he cannot say that he has been paid them, because it is not his duty to do so. The witness thinks such taxed bills in the case of Cherry Street, Anthony Street, William Street and the Bloomingdale Road. Witness is not certain as to Anthony or William Street, or the Bloomingdale Road. Such, however, is his impression. They were all cases in which the proceeding were discontinued and the report not confirmed. The witness has no knowledge of taxed bills in case where report was confirmed; his assistant has charge of that branch of the business; they might have been paid and the witness not know it. These expenses are paid upon the abstract of the commissioners' report; no bills of particulars are required further than is stated in that abstract. The witness does not know whether any bill for taxation in the matter of the second avenue was filed; it might be filed in his office without his knowing it; there are three or four rooms in his office.

"The witness supposed that upon presenting the abstract of the report of the commissioner the expenses therein mentioned had been taxed by the Supreme Court as required by law, and that the officers of the corporation had no power to withold their payment. The first knowledge witness had such bills had not been taxed and the legal requirements complied with, he had from the present counsel of the corporation, [the witness does not recollect the time when he received such information, he recollects the circumstance,] since which the witness does not believe that any such charges have been paid without taxation."

We next introduce, from the testimony of John Leonard, a commissioner of estimate and assesment, as taken before the Senate committee, and contained in pages 32, 33, 38, and 40, of Senate Doc. 100, of 1842, the following:

"John Leonard being duly sworn, says—

he was one of the commissioners of estimate and assessment, in opening second avenue from 28th to 86th streets; was associated with Henry P. Robertson and Andrew Mills. Mr. Robertson and the witness were the only two who did any work on such estimate and assessments. Mr. Mills was there once or twice. Mr. Mills may have been there oftener than that, but he never did any thing, except to sign the report. Mr. Mills may have been there three or four times, but witness does not recollect distinctly of his being there more than twice; there was work enough for him to do, if he had attended to it, and had been capable of doing it. Mr. Mills signed the report. He made the same charge for his services that was made by the other commissioners; he received the amount of his charge from the comptroller of the city, through the witness. The witness was the chairman of the commissioners, and it was usual for the chairman to receive the whole of the compensation.

"The witness thinks the amount charged by each commissioner to be paid to the purchase was over seven hundred—took for four w about seven hundred and fifty dollars. The charge for room hire was a separate charge. The allowance to the commissioners is four dollars per day. None of the fees of the commissioners or surveyors were taxed previous to being paid to the witness's knowledge.—Those fees were assessed upon the property supposed to be benefitted by the improvement.

"The witness ascertained the fees of the corporation counsel, included in the assessment from his suggestion; the counsel furnished merely the sum total of the amount of his services; the witness does not recollect any instance where he furnished items of such charge; he was merely asked how much his bill would be; it was towards the last of the commissioners' calculations, and before preparing the report, that the corporation counsel was asked such question; the witness did not see any bill of such counsel for his services in such matter taxed or certified by any officer.

"The witness arrived at the amount of surveyor's fees by the surveyor's bill, which was generally handed to the commissioners and carried back when the report was done. That bill was generally an aggregate amount. The commissioners knew the extent of the work, but they were no judges of the value of services. They received the surveyor's bill from the corporation counsel, and when they did not receive it that way they would ask the corporation counsel whether it was correct. This surveyor's bill was not audited or certified by any officer to witness's knowledge. The witness does not know who selected the surveyor. The commissioners did not select the surveyor.

"For each day the commissioners charged four dollars; and although but one commissioner met, and no business could be done, yet the commissioners each charged four dollars, as for a days' service.

[From Senate Doc. No. 100, of 1842.]

"Anthony L. Robertson, having been called on the part of the memorialists, and duly sworn, says—He is a counsellor at law and resides in the city of New-York; he was one of the commissioners of estimate and assessment in the opening of the Seventh avenue from Twenty-first to One hundred and twenty-ninth streets.

"When witness applied for his fees as commissioner he got a warrant from the street commissioner's office, from Mr. Gaines he thinks, or the comptroller; at the time of getting that warrant he deposited in the street commissioner's office an abstract of the estimate and assessments, with the expenses in gross amounts as commissioners' fees, $4,920, surveyors, $2,801, &c., the Supreme Court having passed upon the accuracy of the items contained in their report, he did not consider the corporation or any of its officers authorized to question their right to the amount charged by them, they being the mere depository of moneys paid by persons assessed, to be paid to those to whom it was awarded by their report. Witness believes the expenses are stated in a paper annexed to the report, and the Supreme Court *passed upon that report* He has been a commissioner on other streets; he believes the amount of their charges are such as commissioners have stated in their report; they are stated in gross. The persons interested in that avenue could have ascertained the amount of expenses by deducting the amount of awards from assessments; the balance would show the amount of those expenses. To ascertain that, they must add up the items on each page, which are probably not more than three in number on each page, and are carried out on the margin for facility of reference. Thinks the report must have contained two hundred leaves, but that is a guess; it was very thick, and asked if it might not contain one thousand pages, witness says he can't tell; at a mere guess he should say there was about one thousand persons assessed.

"The witness being asked if he viewed the ground when he made the assessment, answers, he went over the ground and took a view of it in the eye of the law, but did not go over the hedges and ditches and ponds which lay in the way.

"The witness being asked what services Mr. Emmet rendered for that amount, ($3,977.76,) he answers, preparing the petition for the appointment of commissioners, (witness thinks he has seen petitions like those shown him;) going to Albany, making the motion for appointment of commissioners, advising with the commissioners upon legal questions as the ownership of lands, and as their duties in assessing; the drafting and preparing copies of the report to be filed in the county clerk's office, and to be presented to the court; drafting and copies of advertisement of notice of presenting report for confirmation; advising with the commissioners in relation to objections, if any are presented; preparing affidavits to oppose objectors; preparing drafts and copies of final rule for confirmation of report, which included the whole report, counsel fee upon moving report for confirmation; being prepared to meet objectors, and printer's bills, with clerk's fees for filing report and entering long rule including substance of report, and which is longer than the report itself.

"*Cross-examined by the street commissioner on the part of the corporation.*—After the commissioners were appointed on the Seventh avenue, the services rendered by Mr. Emmet, he rendered as counsel of the commissioners. The commissioners are not under the control of the corporation in any way. The commissioners audit the surveyor's bill for making maps. Witness took charge of Mr. Emmet's general unfinished legal business when he was appointed counsel of the corporation, but had no connection with him in his corporation business or as connected with said reports of commissioners."—[pg. 110, 120, 122, and 125.

REMARKS.

The Commissioners appointed by the Supreme Court proceeded to make their Estimate and Assessment, and on the 18th of May, 1836, gave notice that they had completed the same, and that they had filed a copy of their Report in the Clerk's Office of the city of New-York, for the examination of the parties interested, and that objections in writing would be received by the Commissioners during ten days, and that on the 9th of June, 1836, the Report would be presented to the Supreme Court of Judicature of the State of New-York, for confirmation.—The Report was presented to the Court of the *Special* Term held by one of the Judges, and was opposed by Marcus T. Reynolds, Esq., counsel for General Striker, on the ground that he had no actual notice of the filing of the Report in the Clerk's Office.—The Court sent the Report back again to the same Commissioners, and General Striker made objections in writing to the Assessment of $3900 upon his property, but the Commissioners refused to alter their former report, and Mr. Emmet again presented the Report for confirmatian, and at the August Special Term of the Court, and the Court confirmed the same, notwithstanding the objections. We copy the written objections of General Striker, as follows:

"To Messrs. Ainslee, Holly and Purdy, Commissioners, Ninth Avenue.

"Gentlemen,—In your assessment for the 9th Avenue, you have allowed by far too much for the ground taken for that street.—You have allowed $900 per house lot taken for the street, although the lots that were sold by Messrs. Franklin and Jenkins (being part of the Webbers' estate) on the 19th of November last, fronting on the 9th Avenue, for $830 (the highest). The lots were 25 feet front by 100 deep, which would make the lots that were not in the corner 150 feet deep, and those on the corner 55 feet front by 150 feet deep. By paying the owners for the ground in front of their lots, they will, according to your assessment, pocket 450 dollars by the operation. The piece of ground

paid for, that is in the 9th Avenue, opposite to their respective lots, reduces the price of the lot very considerably (say one-half). To the Fietner estate you ought not to have allowed more than one-half what you did.—Instead of 10,000 dollars * * * * * and to Ann Striker, you ought, I think, not to have allowed any thing, as she owns on both sides of the avenue (through the Hoppers' farm), two hundred feet deep on each side, which makes her lots valuable, yet you give her 7,000 dollars. Had I been so fortunate as to have owned her ground, I would have been willing to have given the street, if no assessment would have been put upon the lots adjoining the avenue owned by her.

"The difference of the amount given to the Feitners and Ann Striker, would have obviated such a very heavy assessment upon me of 3900 dollars. You know, gentlemen, that my ground lays completely shut up from the Ninth Avenue, there being no cross street open; and if there was, I am 200 feet from the said avenue, and further, if either of the cross streets should be opened; but they are not, and not the least prospect of their being opened, and probably will not be for some years. If I were to sell eight lots of ground, which is half of the number I should have by the opening of a cross street, the prices that I should get for them would barely pay my assessment.

"I should therefore be under the necessity of sacrificing half of my ground to pay my assessments. I cannot see the benefit accruing to me from opening the Ninth Avenue, being completely blocked in on all sides, and no passage way out; and if I were to sell lots on the cross streets, which I most assuredly must do to pay my assessment, I shall be under the necessity of giving half the street; therefore I cannot be so fortunate as the owners of the property on the Ninth Avenue. As I shall have to pass the title to those that I shall sell to—and, gentlemen, you do know that, if I wish the street opened, I must cede it or give half the street to those I sell to; and further, if I should cede it to the corporation, Ann Striker, who owns the ground on the Ninth Avenue, in front of my ground, will be opposed to it, as she will not sell; and Jordan Mott, who owns ground between me and the Tenth Avenue, will probably oppose its opening. You see, then, that my ground is completely blocked up between the Ninth and Tenth Avenues; yet I must sell to pay the assessment. I wish I could say that I could be so fortunate as those that own ground fronting on the Ninth Avenue, to receive pay for it; yet I do think that if I could keep it until it is forced open, I should be paid for the street. The Commissioners I think told me that they were guided by the sales at auction of the Webbers' estate, which consisted of 188 lots, part lying on the Ninth Avenue (say twelve lots). They were sold by Messrs. Franklin and Jenkins on the 19th of November, just four weeks previous to the great fire, when property was higher than it has been since.

"I subjoin a statement of the 12 lots sold, fronting on the Ninth Avenue, at the above mentioned line, and the Commissioners entered upon their duties in January following.

(Two lots were sold together.)

"Your obed't servant,
"G. H. STRIKER."

The Diagram which we shall present at the close of this review, will illustrate the principle upon which this assessment was made.

We next proceed to the testimony given before the Circuit Judge, and copy from the case, as made by the counsel for plaintiff, and defendant, and certified by the Judge, and from page 40, of that case, as follows:

"Robert Emmett was then called and sworn as a witness on the part of the defendant, and said that he held the office of Counsel for the Corporation of the city of New-York from the year 1829 to 1837, that he acted in all the proceedings in the opening of Ninth Avenue, as Counsel for the Corporation, First I prepared a petition.—This testimony was objected to by the plaintiff's Counsel, on the ground that defendant had not shown any authority authorizing witness to prepare the petition. Objection overruled by the Court, and the witness allowed to proceed; he presented the petition to the Supreme Court, and made a motion as Counsel for the Corporation for the appointment of Commissioners; he presented the Report of the Commissioners of Estimate and Assessment as Counsel for the Mayor, Aldermen, and Commonalty of the city of New-York. Mr. Marcus T. Reynolds of Albany objected to the confirmation of the Report as the Attorney and Counsel for the plaintiff in this suit, in June, 1836—that was on the first application. General Striker complained that he had not notice. It was put off for him to make his objections, and the final application was made by me in August, 1836, and opposed by M. T. Reynolds, Esq., in like manner for General Striker, when the Report was confirmed, notwithstanding such objection."

David T. Valentine, Assistant Clerk of the Board of Aldermen, and Assistant Clerk of the Common Council, was examined as a witness, his testimony. on page 60, of the printed case, is as follows:

"Direct examination.—The message is in Mr. Williamson's handwriting; he has an Assistant Clerk of the Common Council; the resolution is the same referred to in my previous examination. The resolution does not appear to have been ordered to be published from any entry in the minutes. If it had been usual to call the ayes and noes, it would so have appeared on the minutes.—When the ayes and noes are called, it is so entered on the minutes; and when all the members present vote in the affirmative it is usually entered on the minutes as unanimous. When the ayes and noes are called, it would so appear on the minutes, although the vote was unanimous."

REMARKS.

The lands [redacted]ging to General Striker, were [redacted]nted to be sold on the 24th of December, 1838, and were bid off by one George Lovett, for the term of 1000 years. One gore was bid off by Daniel Ewen, a City Surveyor, and brother of the Street Commissioner. A certificate of the sale was given to these bidders of the sale, to the effect that unless the lots were redeemed within two years from the date of the sale, a lease would be executed to the purchasers. Previous to the expiration of the two years, General Striker applied to the Hon. Murray Hoffman, Assistant Vice Chancellor, for an injunction to restrain the Corporation from executing or delivering the said leases, and that Eminent Equity Judge, one of the most enlighted and independent minded Jurists of our State, granted the injunction. We have not the opinion which he gave in this case on granting the injunction before us, but we have the opinion of the same Equity Judge in a similar proceeding, in which he says: "The Bill is brought before me as an Injunction Master. I have been obliged from my sense of duty, to grant an injunction in this and several other cases on the eve of the sale advertised to take place on the 27th inst. I am sensible of the inconvenience to the city, from an interference at this time, and do it with unfeigned reluctance. But I am thoroughly satisfied that a more *palpable* and *pernicious disobedience of the law*, has never marked the course of any corporate body."

The Complainants in some of these cases were James G. King, Peter G. Stuyvesant, John Haggerty, Anson G. Phelps, Wm. W. Chester, Henry Andrew, James Fellows, Samuel Marsh, and numerous other gen-

tlemen of high standing in this community.

Subsequently, the Chancellor, or Vice Chancellor, dissolved the injunction for alledged want of Jurisdiction, although the Chancellor had previously entertained Jurisdiction in similar cases.

The case of Oakley vs. The Trustees of Williamsburg, reported in 6 Paige's Ch. Reports, p. 262, and printed in this volume on p. 164, was one of this character, in which he entertained jurisdiction, as did also the Vice Chancellor of the first Circuit.

The lease was finally delivered to the bidder, and the copy thereof is set forth in the printed case on pages 48, 49, 50, 51 and 52 of that document, states it was executed on the 14th day of Feb. 1842. This lease recites as follows: "And whereas the Mayor, Aldermen and Commonalty of the city of New-York, did, at least six months before the expiration of two years after such sale, cause an advertisement to be published at least once in each week for four weeks successively in the newspaper printed by the printer of this State." This recital is not true; no such notice was published in the newspaper printed by the printer of the State, nor was any notice in the premises published by such printer. We add,

This cause was tried in the Circuit Court before Judge KENT. The Judge charged the Jury in favor of the validity of the assessment, but six of the Jury were not willing to be instructed in the law of the case, and refused to find such a verdict, and the Jury were therefore discharged. The Jury stood 6 to 6—therefore, a case was made, and argued before the Supreme Court, at the May Term of that Court, 1844. The names of the Jurors are as follows:

Washington Wheelwright, 42 Third st., Robert H. Ludlow, 171 Tenth st., A. W. Anderson, Franklin House, John Jackson, 8th Avenue between 31st and 32d st., Smith Keeler, 133 Anthony st., John Valentine, 54 2d Avenue, James H. Wilgus, 27 Coentes Slip, John Harris, 7th st., between 1st and 2d Avenue, Warren S. Doty, 58 John st., Peter Amerman, 381 Greenwich st., William Hollingsworth, 238 Bowery.

REMARKS.—We have made quotations from the constitution of 1777, and 1821, and from the statutes, &c. &c., and also from the testimony taken before the HON. the SENATE COMMITTEE, and now proceed to take up the opinion of the Supreme Court as delivered by Justice Beardsley, and concurred in by Mr. Chief Justice NELSON, and DISSENTED FROM by Mr. Justice BRONSON, in the assessment case involving the validity of a ruinous assessment upon the farm of General STRIKER, a grey-headed citizen, his patrimonial estate, which estate has not changed hands since the title was in the red men of the forest by right of possession. It is a case of most extraordioary character, and occurring so early in the history of a free government, is alarming to those who have looked with confidence to the stability and sacredness of free institutions. The wresting from a citizen, his house, his habitation, the home of his anccstors, and the land which grows the bread to feed his little family,—their home—their all—in his declining years—is a spectacle too powerful to contemplate when viewed in connection with the proceedings which we have recited. That eminent Statesman, ALEXANDER HAMILTON, in one of the productions of his pen on the pages of the "Federalist," under the signaturs of a "Constitutionalist," said:

"Do we imagine, that our assessments operate equally? Nothing can be more contrary to the fact. Whenever a discretionary power is lodged in any set of men over the property of their neighbours, they will abuse it. Their passions prejudices, partialities, and dislikes will have the principal lead immeasuring the abilities over those over whom their power extends; and assessors will ever be a set of petty tyrants—too unskillful, if honest, to be possessed of so delicate a trust,—and too seldom honest to give them the excuse of a want of skill.—The genius of liberty reprobates every thing arbitrary or discretionary in taxation. It exacts that every man, by a definite and general rule, should know what proportion of his property the State demands. Whatever liberty we may boast of in theory, it cannot exist in fact, while assessments continue. The admission of them among us, is a new proof how often *human conduct reconciles the most glaring opposites;* in the present case, the most vicious practice of despotic governments with the freest institutions and the greatest love of liberty."

That eminent jurist, Mr. Justice STORY, who now honors the bench of the Supreme Court of the United States by holding a seat in that Court, in his admirable Commentaries upon the Constitution, in speaking of the sacredness of private property says:

"The concluding clause, is, that private property shall not be taken for public use without just compensation. This is an affirmance of a great doctrine established by the common law for the protection of private property. It is founded in natural equity, and is laid down by jurists as a principle of universal law. Indeed, in a free government, almost all other rights would become utterly worthless, if the government possessed an uncontrollable power over the private fortune of every citizen. One of the fundamental objects of every good government must be the due administration of Justice; and how vain it would be to speak of such an administration, when all property is subject to the will or caprice of the legislature andthe rulers."

With these remarks we proceed with the opinion of the Court, which is as follows:

"OPINION OF THE COURT.

"STRYKER, } *vs.* KELLY. }

"Beardsley J. This is an action of covenant, to recover one quarter's rent of a piece of land in the Twelfth Ward of the City of New-York, demised by the plaintiff to the defendant, and which rent, according to the terms of the defendant's covenant, was payable on the first day of April, 1842. The lease is in the usual form; bears date on the tenth of July, 1839, and demised the premises for five years from the first day of April then next, the rent to be paid quarterly. It contains a covenant on the part of the lessor, for the quiet enjoyment of the demised premises, and on the part of the lessee that he would pay the rent.

"The defence interposed is that a part of the land demised had, before the lease was given, been charged by an assessment to pay the expense of opening a section of the Ninth Avenue in the Twelfth Ward of the City of New-York, between Forty-Fifth Street and the Bloomingdale Road, and which assessment not having been paid, the premises so charged were sold according to law, and thus the lessee having lost all right to the land sold, was no longer bound to pay rent.

"This charge upon the land sold, is said to have been created in 1836, and the sale to satisfy it was made in December 1838. A conveyance, or lease, as it is called in the statute, to the purchaser at the sale was executed in February, 1842, and suit was brought after the rent payable on the first day of April in that year had fallen due.

"It does not appear that the tenant has been at all disturbed in the possession and enjoyment of the demised premises. No actual eviction is set up or pretended. But it was not objected on the argument, nor do I see that the point was distinctly taken on the trial of the cause at the circuit, that the matters set up in bar of the recovery were, even if true in fact and valid in law, insufficient to constitute such bar.

"As the point has been raised by the counsel, I shall not start it, but shall assume that the facts relied upon, if proved, and in their nature free from any constitutional objection to their validity, constitute an effective bar to the action.

"It appears by evidence offered and received on the trial. that in December, 1835, the Mayor, Aldermen, and Commonalty of the City of New-York presented their petition to the Supreme Court, in which they state that they had deemed it desirable for the public convenience, to open that part of the Ninth Avenue referred to, by taking for that purpose the land and premises mentioned and described in said petition, and they had accordingly ordered the same to be opened; wherefore the petitioners prayed the Court

to appoint three Commissioners of Estimate and Assessment, to perform the duties prescribed by the several acts of the Legislature on the subject."

[NOTE.—BY THE EDITOR—The petition referred to by the Court is set forth in full on p. 390 of this review, the original of which is on file in the office of the Clerk of the Supreme Court at Albany. This petition is not signed by the mayor of New-York, and is therefore invalid, and although a most important document, has no date, of either year, month, or day affixed to it. The petition is addressed to the *Justices* of the court, and recites the dates of the acts of 1807, 1813, 1816, and 1818, in pursuance of the provisions of which the application is made. The act of 1813, authorised the appointment of Commissioners by the Supreme Court of Judicature of this State, (see sec. 188, Ante, p. 385.) and §187 of the same act (see Ante, p. 386,) provides for the appointment of Commissioners in certain cases to fill vacancies by "the court aforesaid or any one of the Justices thereof," and the act of 1816 makes provision for both cases, viz. as to the proceedings of those Commissioners "appointed by the Supreme Court of Judicature of this State, or by any one of the Justices thereof." It is clear that a distinction is here made. Vacancies may be filled by one Judge, but the three Commissioners in the first place must be "appointed by the Supreme Court of Judicature of this State." This petition signed by the Clerk of the Common Council states that "your petitioners in Common Council convened have deemed it desirable for the public convenience to open the ninth avenue from 45th Street to the Bloomingdale road."

The petition of the clerk of the Common Council does not set forth the proceedings of the Common Council as a foundation of that petition which proceedings were upon the petition of 19 persons, who state in their petition to the Common Council, thus:

"The undersigned owners of real estate on the ninth avenue and its vicinity, respectfully pray your Honorable Body to cause the ninth avenue to be opened from 45th Street to the Bloomingdale Road," and they add, "as the property thereon is now coming into market."

This petition was opposed in the Com. Council by a remonstrance signed by persons who were actual owners of large farming tracts on both sides of the ninth avenue, between 45th St. and the Bloomingdale road. It will be seen by a careful reading of the 177th section of the act of April 9th, 1813, which is set forth on page 385 of this review—that the law contemplates two modes of proceeding by the mayor, &c. One is where the mayor, &c., "shall be desirous to open" any street or part of Street, &c.; and the other, when the owners of *three fourths* of the lands fronting on any street, or part of a street, shall by petition desire the opening thereof, &c. The Court, most certainly, should see that a petition of the important character of the one in question, was properly signed, that it was of that class provided for by Statute, and if the Statute made provision for more than one class, to which class the particular application belonged. Something was necessary to give the Court jurisdiction of this particular proceeding.—the reports of the Street Committee of the Board of Aldermen in this case recite that the proceeding was on petition and closes with these words: "Your Committee," &c. "recommend for adoption the following resolution: *Resolved*, That the ninth avenue be opened from 45th Street to the Bloomingdale road, and the counsel of the Board is hereby directed to take the necessary legal measures to carry this resolution into effect." This petition of the clerk, is not 'the necessary legal measures.' There is no ordinance or resolution of the Common Council to authorise him to sign such a paper, or to affix the seal of the Corporation, thereto. *That the opening of this Avenue from 45th Street to the Bloomingdale Road, was not necessary is evident from the following message of the* HON. ROBERT H. MORRIS, *to the Board of Assistant Aldermen, transmitted to that body on the 19th of July*, 1841, *which is as follows*:

"To the Board of Assistant Aldermen of the city of New-York:

"GENTLEMEN—I have had transmitted to me, for my approval, from the Board of Aldermen, a Report and Resolution which was originated in your Board.

"The resolution is as follows:

"*Resolved*, That a road twenty-five feet in width be worked through the Ninth Avenue, from Forty-second Street to its intersection with the Bloomingdale Road, under the direction of the Street Commissioner at an expense not exceeding Two Thousand Dollars to be defrayed from the fund appropriated for roads for the current year."

"There are two petitions accompanying the papers transmitted to me, one of which bears date the 26th July, 1839, signed by six persons asking to have the Ninth Avenue opened and regulated from Forty-Second Street to the Bloomingdale Road, so that it may be convenient and passable for carriages. The other petition is dated 1st November, 1839, and signed by four persons, three of whom are the same persons who signed the first petition; this petition also asks that 'the Ninth Avenue be opened and regulated from Forty-second street to the Bloomingdale Road,' and also states 'a petition for the same has been laid before your Honorable Board, and your petitioners have been informed that it was passed, but by some means or other had been mislaid.' This last statement fully accounts for the same names appearing on both petitions.

"The resolution passed by your Honorable Body does not in accordance with the prayer of the petitioners, direct the avenue to be opened and regulated, but merely provides for the construction of a road twenty-five feet wide. The Report of your Honorable Board states that 'the Committee have carefully considered the proposition and are satisfied from the improvements and population in that vicinity, south of Forty-second street, of the propriety of granting the owners and inhabitants further facility in their intercourse with the outer part of the Island. They believe that such facilities can be accomplished at small expense by simply working a road through the avenue about twenty-five feet in width, conforming pretty much to the present surface of ground, which would admit of all the necessary travel on that part of the avenue, for many years to come, at an expense not exceeding two thousand dollars.'

"It is perfectly apparent that the Report of the Committee of your Honorable Body is founded upon the desire to give to the individuals living below Forty second street 'facilities in their intercourse with the outer part of the island.' The contemplated road cannot give the inhabitants any greater facility than they now possess. The Eighth and Tenth Avenues are open, and so is Forty-second Street. The distance between the Eighth and Tenth is a quarter of a mile—persons on the Ninth Avenue, below Forty-second Street, if desirous to go to Bloomingdale have then but an eighth of a mile to travel along Forty-second Street to the Tenth Avenue, which is the same distance they would have to travel along the Bloomingdale Road to arrive at the same point, if the Ninth Avenue was opened.—The distance to travel is therefore precisely the same; and the contemplated road will afford no facility to the inhabitants.

"I have received a remonstrance against *the resolution* from eleven estates on and near the Ninth Avenue, through which lands the contemplated road will run. This remonstrance states that the lands through which said road will pass, are now cultivated as farms, and for those purposes the road would be an injury.

"These statements show me that the road will not only be of no benefit to the public generally, but will be injurious to the interest of individuals through whose lands it will be constructed.

"The public has and should have the right to take private property (giving full compensation for it) when the public interest requires it.

"The examination I have given to the matter under consideration shows me there is no public interest requiring either the expenditure of the money from the Treasury, or the injury to the interests of individuals, which the opening of the road will cause.

"For these reasons I return the Report and Resolution to your Honorable Body, together with the Remonstrance I have received.

"Very respectfully,
"ROBERT H. MORRIS."

The remonstrance referred to in this message is in the words following:

"To the Hon. Robert H. Morris, Mayor of the city of New-York.

"The undersigned, owners &c. of land between 45th Street and the Bloomingdale Road, on and near the Ninth Avenue, most respectfully ask your Honor to examine the proceedings of the Common Council in passing a resolution on the 28th inst. by the Board of Aldermen, to open a road through the Ninth Avenue, from 42d Street to the Bloomingdale Road.

"The undersigned represent that neither public necessity nor public convenience require such road to be opened; and the owners of the land affected by it are opposed to the proceeding. Bloomingdale road and the 8th and 10th Avenues are open, and afford all facilities for travelling which are needed. The lands on the 9th Avenue, from 48th Street to the Bloomingdale Road, are farming lands, and cultivated as such; and it would be an injury and expense to the owners to have a road opened, and also a needless burden to the tax-paying citizens, to have the city expenses by this proceeding greatly increased.

"The undersigned ask that the petition on which the proceedings are founded may be *scrutinized*, and all proceedings subsequent thereto may be *investigated*, and that if you find that the persons owning the lands through which it is to pass have not asked for it, that you will exercise the powers vested in you in the premises, and return the papers to the Board in which the same originated. The undersigned were not aware that any proceedings were being had in this matter by the present Common Council, and are therefore taken by surprise: and it may be proper for them to state that legal proceedings are pending in two of the Courts in reference to the Assessments for opening the 9th Avenue.

"And in duty bound &c., your petitioners will ever pray.

"John O. Fay and Catharine his wife, heirs at law of the estate of Jacob Harsen and Catharine Harsen, per E. Meriam, Att'y in fact.

"Garret H. Striker,	S. C. Mott,
John Low,	States Wilkins,
George Park,	John Park,
W. Mott,	John H. Tallman,

"Jemima Dikeman, widow of Matthew Dikeman, by R. Mott her Att'y.

"H. A. Ten Broeck, executor of David Cargill deceased."

The opinion here expressed by Mayor Morris. was acquiesced in by the Common Council.

On the 3d of September, 1844, the Hon. James Harper sent a message to the Board of Aldermen of which the following is a copy:

"Mayor's Office,
New-York, Sept. 3, 1844.

"To the Honorable the Board of Aldermen of the City of New-York:

"Gentlemen—I return herewith for your re-consideration a resolution adopted by the Board of Aldermen, and concurred in by the Board of Assistant Aldermen, appropriating the sum of fifteen hundred dollars for working a road twenty-five feet wide through the Ninth Avenue, from Forty-Second Street to the Bloomingdale Road.

"My objections to this resolution are set forth below.

"A resolution for the same object passed both Boards in 1841, but was returned to the Board in which it originated by the then Mayor, with his objections, which were acquiesced in by the Common Council. His message, with a remonstrance against the proposed work, from owners of property to be affected by it, is on file. The reasons therein assigned still exist, and nothing has occurred to remove them, or weaken their force.

"The legality of the proceedings had, in reference to the opening that portion of the Ninth Avenue, has been contested before the Supreme Court, which has the subject still under advisement. Until its decision is given and in favor of the proceedings, it would be obviously improper to go on with the work, unless there were pressing reasons of necessity for the immediate prosecution, which does not appear to be the case; the Eighth and Tenth Avenues being open to the Bloomingdale Road, and affording means of access to it from the Ninth, through Forty-Second Street, by a short communication.

"The expenditure of the fifteen hundred dollars now asked for, would be far from adequate to the cost of the undertaking, and would only furnish an argument for new appropriations, probably to four or five times that amount. Burdened as the city now is with expenses, of which the citizens complain loudly, and with reason, especially of those occasioned by improvements, it is the part, both of wisdom and of duty, to avoid the imposition of additional burdens, unless for the most cogent and satisfactory reasons.

"I am decidedly of opinion that the completion of the Ninth Avenue, to the Bloomingdale Road, may, without impropriety or inconvenience, be deferred until the city finances are in better condition to meet the cost, and other circumstances render it more expedient. "JAMES HARPER."

The opinion expressed by Mayor Harper *in this message was acquiesced in by the Common Council. The Anti-Assessment Committee printed six copies of this message upon white satin, which they presented to the* Lady Mayoress *of the city of New-York*, Mrs. James Harper.]

We again copy from the opinion of the Court. Mr. Justice Beardsley says:

"This Avenue, as is stated in the petition, was laid out under and by virtue of an Act passed the third day of April, 1807, (5, laws of N. Y., W. & S. Ed. p. 125,) and the authority of the Mayor, Aldermen, and Commonalty, to open streets and avenues thus laid out, if any such authority exists, is derived from the "Act to reduce several laws, relating particularly to the City of New-York, into one Act," and amendments thereof which have since been made.

(2 R. L. of 1813, p. 344. Laws 1816, p. 77, 113, 1818, p. 96.—1839, p. 182.)"

[Note.—By the Editor.—The act of April 3d, 1807, provides that whenever the owners of land fronting on any street or part of a Street shall apply to the Mayor, Aldermen and Commonalty to have the same opened, they, the Mayor, Aldermen and Commonalty, shall cause the same to be done, but the act of April 9th, 1813, makes a change in this particular, and provides that if the mayor, &c. deem the opening thereof to be necessary or useful it shall be lawful for the said Mayor, &c. to cause the same to be done, &c.

The court say:

"These statutes (there may be some in addition to those referred to) were intended to form a complete system of law on this subject. I shall not state in detail the various provisions of this system, nor the changes made in it, from time to time, but shall merely glance at its outline.

"By the Act of 1813, whenever, and as often as the Mayor, Aldermen and Commonalty of the city of New-York shall be desirous to open the whole or any particular section or part of an avenue laid out under the act of 1807, "it shall be lawful for the said Mayor, Aldermen and Commonalty, to cause the same to be opened, and the land, tenements, and hereditaments that may be be required for the purpose of opening the same, may be taken for that purpose, and compensation and recompense made" therefor, as is provided (§ 177.)"

[Note.—By the Editor.—Our remarks at the close of the seventh paragraph of this opinion are applicable to this last preceding paragraph.]

Again the court say:

"By section 178, whenever lands are so required to be opened, the Mayor, Aldermen, and Commonalty, are authorised to make application, or to cause application to be made to the Supreme Court of Judicature of this State, for the appointment of Commissioners, and it shall be lawful for the said court to whom such application shall be made to nominate and appoint three discreet and disinterested persons, being citizens of the United States, commissioners of Estimate and Assessment, for the purpose of performing the duties hereinafter in that behalf prescribed, and who are to report to the court without any unnecessary delay."

[Note.—By the Editor.—The application to be made to the Court for the appointment of Commissioners as referred to by the learned Judge, is an application altogether *exparte.*

This application to the Court is the commencement of the proceeding in that tribunal and the proceeding by which the Court acquire jurisdiction, and their first act is to appoint three important officers. The Supreme Court are precluded by sections 23, and 27, of the Constitution of 1777, from appointing any officers, other than their clerks, attorneys, and counsellors at law. The provisions of section 27, direct what officers they may appoint, and section 23, prohibits the court from appointing any other, and vest the power of appointment solely in the council of appointment, of which the Justices of the Supreme Court, form no part.—There is no obscurity in the language of these two sections of the Constitution and when taken in connection with section 25 and 41 of the same constitution leave no room for construction, for the construction is declared by the plain language of the fundamental law itself. These sections of the constitution are to be found on page 383 and 384, of this review. The court say:

"These Commissioners are to take an oath faithfully to perform their duty. They are to view the premises, cause all necessary maps and surveys to be made, and make their estimate and assessment. This is to be an estimate of the loss and damage to the owners of the land so required to be taken for such avenue, and an estimate and assessment of benefit and advantage, which the opening of such avenue will be to certain lands not required to be taken for such avenue, but contiguous or adjacent thereto. A copy of their estimate and assessment is to be deposited by the Commissioners in the office of the Clerk of the City and County of New-York for examination, at least fourteen days before making their report, and of which due notice is to be given. The Commissioners are also to give notice in two public newspapers of the city, of the day on which their report will be presented to the court. Any person whose rights may be affected, may state to the Commissioners his objections. and they are required to reconsider their said estimate and assessment, and correct the same if they shall deem it proper so to do. (§178, 182.)"

[Note.—By the Editor.—The court have, we believe, made an error in reference to the "due notice," "and also to give notice in two newspapers" as above. We have carefully examined the sections noted by the court and have been unable to find but one provision, which is the last. It is not surprising that the Court should have made this error for one of the sections referred to contains seven pages, and but two periods in the whole seven pages, and one of these is at the end of the section. With regard to what the court say in the above paragraph we must with all due respect for the opinion of the learned judge, call his attention to some of the testimony taken before the committee appointed by the Honorable the Senate of the State of New-York, to examine into assessment abuses in the city of New-York. With regard to the opportunities of the parties interested to examine the report and make objections thereto, &c. We will reserve our remarks until we have given the whole of the opinion of the court and will then in making those remarks accompany them with some extracts from the testimony of some of the commissioners of estimate and assessment as taken by the Senate committee, and reported to the Legislature pertinent to this question. Again the court say.

"The duty may be performed by the three Commissioners, or any two of them. (§188.) They are finally to report to the Court, in which is to be stated the names of the respective owners of the lands mentioned therein, where the same can be ascertained. The land to be taken and those deemed to be benefited are to be aptly and sufficiently described; and the amount of compensation to be allowed for the lands taken, and of benefit and advantage to be paid by the owners of the lands, as estimated, are also to be specified in the report. (§ 178.)

"On the coming in of the report, the court is to hear any matter which may be alleged against it, and may by rule or order confirm the same, or refer it back to the Commissioners who made it, or appoint new ones, and send it to them for re-examination; and so from time to time, as right and justice may require, 'until a report shall be made or returned in the premises, which the said court shall confirm; and such report, when so confirmed by the said court, shall be final and conclusive' upon all persons and parties whatsoever. (178-)

"The amount thus required to be paid by land adjudged to be benefitted, becomes a lien or charge thereon, and may be collected by a summary execution or by action, and ultimately by a sale of the land thus charged. (§ 186, Laws 1816, p. 113.)"

[Note.—By the Editor.—By section 186 of the act of 1813, referred to, the assessment is made a lien upon the land, but not in the nature of a judgment, for without this special provision, the assessment would not be a lien under the general provision of the the statutes, which make all judgments of the Supreme Court, liens, &c. The section, quoted by the Court they will find on a careful reading, does not give the Court the right to issue an execution, nor to enforce the collection of the assessment, but the power is given in loose language (see Ante p. 386,) to the Mayor, Aldermen, and *Commonalty*, or any five of them, to issue a warrant and to destrain goods and chattels, and in case of non-payment, to bring an action of debt, or assumpsit, in a court, and in the Supreme Court. A singular species of *Judicial* proceeding, this, to have to be finally enforced by suit before a valid *judgment* can be obtained. Mr. Chief Justice Nelson gave a written opinion in the John Street assessment case, which is to be found on page 179, of this volume, in which he says: "I do not see how a party could be permitted to question collaterally the conclusiveness of the Judgment of confirmation by going behind it. While that stands he is *estopped* upon the act, and if so, were the resolutions of the Board annulled directing the institution of these proceedings, they would still be left in full force, as much as a *judgment* rendered in a suit commenced by attachment or writ, when the latter only are set aside." This opinion of the Chief Justice, accords but poorly with the provisions of section 168 of the act of 1813. The court say:

"The defence set up in this case is, that a part of the demised premises were sold and conveyed under an order of confirmation duly made by this court, in proceedings instituted and carried on under the authority of these statutes, and the defendant was then deprived of all his interest in a part of the demised premises.

"But we are met, *in limine*, by the objection that these statutes, in some of their vital provisions, are in direct violation of the Constitution, and therefore invalid; and consequently, the system provided by them, being incomplete, is incapable of being carried into execution.

"The main objection of this character is, that whatever the Supreme Court may do under these statutes, must necessarily be void. This is argued on the ground that the statutes, if effective, would confer upon the Justices of this court a distinct office, which under the Constitution, they cannot hold, and therefore it is argued whatever the court may do under these statutes, must be without authority and void."

[Note.—By the Editor.—We deem it proper to here introduce that part of the argument of that eminent statesman, Daniel Webster, one of the counsel of Mr. Striker, in the argument of this cause before the Court, which goes to this branch of this case, which the learned Judge has referred to:

Mr. WEBSTER said:—"May it please your honors, I suppose this cause may be regarded as a cause between the plaintiff in his hereditary right, and corporation of New-York, as to his right in that estate, of which he has been divested by proceedings relating to assessments. It may be of importance in the argument, to consider that this case arises not between third parties, but between the two parties concerned in the whole transaction.

"The plaintiff's rights are clear. It is his property by title from his ancestors. Therefore the burden to maintain those proceedings by which it is attempted to take that title away, is on the side of the corporation. Any doubt in law or in fact, would ensue to the benefit of the party having title. They say that the plaintiff's title has been taken by proceedings authorized by the government of New-York for the application of private property to public uses.

"It has been observed by this court, that the facility with which corporations obtain ownership of property, has become somewhat remarkable. The same observation has occurred to every man, and attracted the opinion of jurists in this and other countries. Since I have been in the city, I have read a discussion in the house of parliament in England, where a judicial character complained of the facility brought about by this age of zealous energy, distinguished, as it is, by a rage for improvements. It is known that the corporations in England

have not the authority which is possessed by ours, and I doubt if there is any power vested in the corporation of the city of London to take down any house whatever, —it can only be done by the house of parliament. The facility spoken of in the discussion, was the manner in which property is taken for railroads, and other improvements of the kind, and which is against the rights and security of property; and the ex-chancellor, on that occasion, said that private rights must go against public; that persons, in speaking of such affairs, say that where the public requires it, the individual must make the sacrifice: and yet, if the same individual making such a remark asks to be graciously heard when his own rights are spoken of, and prays that he may be permitted to enjoy those rights, and that his property may not be taken till it has been fairly and legally assessed, his request is not granted.

"May it please your honors, apart from what is due to my own professional character, I need not undertake to discuss the system which has existed here; and still less am I disposed to bring into question any thing relating to the tribunals of this city, except as to measures of this court on one of the cases which has been decided before it; but I may be permitted to remind the court, that in a proceeding where a man's inheritance is to be taken away without process of law, by a stern proceeding,—that in drawing the attention of the court, to the construction of those statutes, and the proceedings under them, it is a fair line of argument that every security for the protection of private right, should be rigidly maintained, and that their general or occasional effect under the name of benefit, confers loss and brings on private ruin; that this system in New-York is peculiar to New-York, and exists no where else. The idea of incorporating public use with private benefit, to take land for a supposed public advantage, to say that public use confers remotely benefit on other land, and then to tax that land for the benefit, is a New-York idea. But I will not argue that question, as it is not before the court. The court is to decide the law as it is, not as in my opinion or in that of others, would be right. I may have occasion, however, to refer again to this part of the case.

"This land, it is said, is taken for the public use. I may confess, may it please your honors, that in this sense, I know no term more difficult to be defined, than the word public! What public? What portion of the community? A public road is spoken of, a road taken for public use, that is the exigency. Was the road wanted? That was the allegation ten years ago, and still no road is there yet. There is not a track of man or quadruped along the whole line of the 9th avenue even to this day, and yet Mr. Striker has been deprived of his property to pay for that avenue. There are nineteen gentlemen applying to have the road laid out, and they say for the public use. If so, it is for that part of the public who had land on the north or south side of the avenue. Is that the public? I suppose in all countries there may be cases where it may be proper to open roads, where every individual in the country is not interested, and there can be no objection to its being done. I only say there is great danger every where, where such authority exists, and that private property is taken for public use by persons representing the public, who have in fact no interest with the public.

The first position of law is, that this proceeding being derogatory to common right, anything neglected to be done which is prescribed by the statute must be satisfactorily proved, step by step, and not one single thing must be taken for granted, without proof.—This doctrine is certainly supported by reason, as it is by the decisions of this court, and by the authority of the books. Every power granted by particular statutes, by the exercise of which a man's property is taken away without his consent or default, is a power to be construed strictly, and severely and rigidly. That is the rule of law, and if the legislature has declared that certain regulations shall be observed, every single step, from first to last, must be proved. I need hardly say that nearly the very words in which I address the court, are used in the judgment of this court, in the case of Sharp against Spear, in 4th Hill, 76, a unanimous judgment of this very court. Various cases relative to this matter, will be found by the court in that decision. The statute under which this case comes, goes upon the ground that the proceeding is in the character of a benefit to the individual whose property is taken. If so, it forces a benefit, and then judges against his opinion or will. It begins in grace but ends in infliction, for he disclaims the benefit and denies it. Yet he has, under the provisions of this statute, no right to be heard on the question, whether the proceeding is benficial to him or not. A most extraordinary decision, I must think—and in a decision where there is no property, it is right to call upon the court. It is said he is benefitted. He does not agree to it. No person to whom he refers does so, for he refers to no one. There is no person before whom he has an opportunity to be heard.—He is not allowed to make a brief, and there is no choice to those who are said to have this benefit. They are not to be heard on the subject at all, but when the thing is done, and the report of the commissioners made, when it lies before your honors for confirmation and he complains, what is he to do? He is sent to those very commissioners to ask for a re-hearing of the case. If they do rehear it they decide in the same way again, and if you send the report back, it goes to the same hands, and is returned and confirmed. And for this benefit a debt is forced upon the individual which becomes a lien.

"Now, if it please your honors, this is the general proceeding out of which this question arises. I have always said, I propose to argue only as to what the authorities have settled. I will say, however, that the law of 1813, so far it allows private property to be taken without the intervention of a jury, or without notice, or trial, or hearing, is irreconcilable to the constitution, and I shall say somewhat further. I shall be prepared to maintain, that the proceedings in this case so far as concerns Mr. Striker, is no such thing as taking private property for public use. He was not the owner of the land which was wanted for a road. That land was taken from his neighbor, and the road does not go through his land, yet his land is assessed. For what! for what!—Our learned opponents have told us, that by the laying out of that road, by awards to the persons through whose property the road passes, the city contracted a debt of $20,000! and for what? for the use of the public! for public use! It incurs a debt for the public use, and proposes to assess Mr. Striker's property, who they say, it benefits, to pay a public debt on the imaginary idea that he is somehow or other interested in the improvement more than others. I shall submit that the whole proceeding is erroneous. Suppose a man owns an estate through which a public road goes, and it is thereby enhanced in value, does that go to his own advantage? Is it not to be considered his good fortune that a road should be run there? Is he not, as owner, entitled to the benefit, if it accrues, just as much as he is obliged to submit to loss if the road is made another way, and injures his property by taking the travel from it? If he complains, he is told that it is his misfortune in having that locality. It is just as proper that he should enjoy the enhanced value of the property, if public improvement turns business in another direction, and he is injured. I think I have understood that formerly such cases here were tried by a jury. I am sorry that the principle does not prevail. It is so in the part of the country where I have resided. It is the great magna charta principle, that a man should not be deprived of his property without process of law. An eminent judge of Massachusetts, Chief Justice Parsons, has said, that experience shows that these kind of prerogatives in popular governments, are quite as dangerous as prerogatives in monarchial goverments. In monarchial governments it is the cause of one against the many, and the many are always ready to unite against it—they have a common sympathy—but in free governments the prerogative right is the many against the one, and the sympathy of the many does not long uphold the individual strength of the one.

Again. Mr. Webster, in another part of his argument, says:

"I now consider a high question—the constitutional character of the law of 1813, which confers the power in question upon this court. It has been my fortune in the course of a professional life, not a very short one to have had on frequent occasions to discuss the legality or illegality of the law on constitutions of the states or the United States, and I always regret to see them arise;

but where there are written constitutions—where there are written restrainst on legislatures and as legislators are liable to err like other human beings, they should be observed. The law of 1813 conferring this power, is older than the present constitution of the state. It was passed under the constitution of 1777. That constitution declares that the Chancellor and the Judges of the Supreme Court shall not hold any other office. The words in the constitution of 1821, are, that neither the Chancellor nor the Judges shall hold any other office or public trust. I suppose it is very reasonable to entertain the opinion that public trusts, is rather a more comprehensive form of phraseology than office. Suppose the law of 1813, was repugnant to the constitution of 1777, it never had existence. Suppose it might have stood under the constitution, but not under that of 1821, the consequence will be that when the constitution of 1821 was established, this law ceased to be of effect. The constitution speaks of office and public trust. I propose particularly to have reference to the existing constitution, with the words office and public trust.

"In the first place, what is an office? I think it is plain that it has two meanings.—In the first place an office means a station, a situation of dignity, of power, and emoluments. It is in this sense we use this term when we say that certain duties may be performed by persons in certain offices of official duty. Such as powers given to judges in England to act also as justices of the peace. But in another sense an office is nothing but an authority to exercise some authority or power. A public office is nothing but an authority to exercise a public duty or trust. That is the essence of the whole matter, and you will find that Justice Blackstone so defines it. In this sense it is nearly synonymous with trust. The words in the second section of the present constitution are clearer and more comprehensive than the first constitution, if the words office or trust be confined to station. My learned brother who addressed the court last, referred to the particular words of the constitution, that the judges should hold no other office. That, he says, is appeal tenure. Applied to office in the first sense, his observation is correct, but when you apply the same words to a mere authority, a mere function, it is evident that you must use it synonymous with possession or exercise; and when we say, a judge shall not hold any public trust, we do not mean that he shall not exercise any other than his judicial functions. In an authority where there is tenure, that is another sense of office—offices of friendship and good neighborhood. By it we mean merely the obligations ordinarily imposed on men. —But the office meant in the first constitution is merely the exercise of a public function. Now, then, in the first place, I remark that in my construction the words mean that no judge shall hold any other public trust.—It is quite unimportant what name is given to that trust, or whether it has any name at all. There are many functions existing without a name, and in order to decide what they are you must refer to the statute. Secondly, a judge shall hold or exercise no other trust. A question arises, and that is the gist of the case. Other than what? Other than those which appropriately belong to him, and which in their nature are judicial. That is the meaning of the words. In this part of the case I wish your honors to consider this point. I say, therefore, that it is no matter whether there be a new style, title, or name of office or not, or whether the trust is to be under the old name—no matter whether a new appointment to an election, or whether the trust be performed, under an existing appointment. If the trust be other than judicial, the judge cannot exercise it under the old or new constitution. If it be in its nature not judicial, it is that other public trust which the constitution prohibits. I think, sir, very strongly, that it is not easy to discover or draw the line between the powers and duties of one department and another. It has been a source of argument ever since Montesquieu. The distinction has prevailed better in this country than elsewhere, and yet the experience of every day shows that it is not easy to decide whether a power is executive, administrative, or judicial. If black and white mingle and unite, is there not black and white still. Although they are shaded into one another, there are judicial powers, and there are powers clearly not judicial, as clearly as there are animals and fishes and birds of different descriptions, though approximating so near to each other as to make it not very easy to draw the line. Some think certain powers judicial, and others not. But when we can clearly see what they are, it is for us to say what are well fixed distinctions. To ascertain whether the judges of the court, in performing the duties of this statute, are acting a judicial part, the first thing which occurs is, that the same duty may evidently be performed by any body not judicial, and it is not in its nature or of a character necessarily judicial. The legislature may employ any other persons, may distinguish the judge from these commissioners, and the commissioners do the whole that your honors do, yet they would not be conferring a judicial power. It may be remarked that this very act of 1813, is applicable to another suit of cases, done exactly as this thing is. It confers precisely the same power on the citizens. When assessments are to be made for paving, grading, and such, the commissioners are to be appointed by the corporation. How commissioners are to make their report to the corporation. and the corporation has the same authority that your honors have in the other case. It is not, therefore, necessarily judicial, and if it were so the legislature could not confer it on the corporation. Let us go somewhat further. Let us see if the employments possess any thing in the nature of judicial. They do not make the least approach to any judicial purview ever heard of in any court of law. It is said to be the duty of a judge to adjudge disputed questions of law. In other cases it is the duty of a judge to apply the principles of law, to ascertain facts, and in some cases the courts proceed according to common law, as this court does, and proceed, by judicial acts, to ascertain those facts. There is not in the whole of this proceeding one particle that applies, or ascertains a state of facts in relation to law.

"What is there in the world that is judicial in this? Your honors are applied to appoint a commissioner of assessment. You appoint him. Is the power of such employment in its nature judicial? Far from it.—Appointment of an officer connected with the administration of justice is common.—You appoint your clerk, and criers, and others to take part in the judicial duties of the court. It may be made so by statute; but the appointment to an office not connected with the administration of justice in the least degree—to be performed for pay out of court for a distinct body, with which your honors have no connection, and no concern at all, the employment is not judicial in its nature or character. The legislature retains the power to appoint in such cases. These commissioners, thus appointed, perform no judicial business. What do they do?—When it is seen what they do, it will be seen what your honors do. They do nothing but express an opinion of the value of certain lands, and the supposed amount of benefit which the construction of such a road will bring to the neighborhood. There is nothing but opinion and judgment as to the value of property, and when it comes to your honors you adjudge in the same way. If they under-value it, or over-value it, you send it back; and is there any thing under heaven done but to form a valuation of land. It is as indefenssible as to say the valuing of ships or stocks are appropriate judicial duties to be performed in this court. The two things which your honors are called on to do is to make an appointment of persons to give an opinion, and when they make a report, for your honors to judge whether they have estimated too high or too low, and I say this with the utmost respect and submission to the remark of Chief Justice Savage. He says that these commissioners are officers of the court, subject to the orders of the court, and subject, if disobedient, to removal. I am not disputing that view. I agree if this law be constitutional, and the proceeding is a judicial proceeding, and your honors are acting as a court, and these persons are appointed under law, and to assist your honors, they may be regarded as officers of the court. The Chief Justice, in speaking of the officers, supposes the law to be constitutional, and I am speaking of it according to the nature of their functions. What I complain of is, the law making persons in this way makes them appendages to a court of justice. There are other things in relation to the duties imposed. There are certain criters by which we judge of judicial duties of a court—a court of law. The general power which one has issues process original or appellative to bring persons before it.—Your honors have issued no process whatever. A court, in the common understand-

ing of the term, is where pleas are heard, criminal or civil, and I was struck, in hearing ancient provisions of law, at the statute conferring on this court the power of hearing pleas. In these, were the whole power conferred on the court. They are to decide on any points in controversy in courts of law. There is another power in courts of law to call all persons before them to assist the jury in its decisions. There is no jury and no witnesses in this case. I am not about to say that the court holds this as a judicial proceeding, but they have power to do what they think right, but I do say that these things do not call upon your honors to do what is ordinarily done in courts of justice. The oath of the appraisers is taken just as well elsewhere as here. There is nothing approaching judicial in it. If it declares no law, and ascertains no fact, applies no principle of law, summons no jury, issues no process, keeps no regular record, what features of a common law court is there?—Our learned friend has referred to other cases in which the court holds jurisdiction, which are said to resemble what is done in this particular duty. Partition is made!—What authority has the chancellor for making partition? The origin of partition lay at common law. Before the statute of Edward I., it was by suit bronght in the common pleas at Westminster. Afterwards the process of partition went into the court of chancery. Authorized by statute of Henry VIII., the court of chancery now makes it, and has done so for 200 years. There is not a state in the Union where such might not be made. The writ of mandamus was also very early allowed, being in the 43d Elizabeth. All these are regular judicial proceedings, and have been so for two or three centuries. In the case of the acknowledgment of a deed and the taking of proof of an instrument, are also judicial. In taking the acknowledgment of a deed it is taking proof of execution; and where the signer refuses to acknowledge a deed in the part of the country where I am better acquainted, application is made to a court to take testimony, which is recorded as proof of the fact. The practice of requiring married women to sign is to ascertain whether it is her voluntary act or not. There are other clear, well known principles of judicial usage. But there are cases similar to this existing which it would be unbecoming in me to name as you are better acquainted with them than I am—which are spread on the history of the court for 30 years, beginning with the case which my learned friend thinks was the first and fatal error, that of Stafford vs. the Mayor of Albany in 1811. An opinion was given by Chief Justice Spencer in 1811. The sentiments expressed, are that the duties now called upon your honors to perform were not judicial. My learned friend agrees that the justices in that case were not the court. But I believe the case did not turn on that point. I will not suggest that in regard to the remarks of my learned friend on which your honors have expressed an opinion. He insists that your honors always sit as a court, and says he will take you at your words.—This was in 1811. In 1820 came on the case ef Beekman street—then there are nine or ten cases in which every judge on the bench has expressed an opinion by his own mouth that these proceedings were not judicial, or contended for such when the cases were brought before the court of Errors.—Names are not important in cases of this sort. It appears to have been the practice of the court to say that in these street matters the court has acted as commissioners. Commissioner is a very general term of office.—There are commissioners judicial,—there are commissioners of all kinds and sorts. The question is not that your honors have been called commissioners—it is not what names should best describe persons who act in that capacity—the question is whether they are judicial acts. I think the term supervisors would apply better than commissioners, or the term referees might apply—but I say the business done by them is not judicial.

"It is said this question is raised late. I wish it had been raised earlier. If it had been raised in 1821, there would have been no dispute. I wish it had been raised at that time, and yet I neither make no remark in this respect. Nothing has happened to give a new aspect to it, except this, that the more it has been considered, the more strong professional opinion seems to be going on and gathering strength, that it is unconstitutional. Every time that your honors have occasion to speak, you say that the court are not acting as a court, but as commissioners; and an idea has been suggested that even such act is unconstitutional. There is one case only to which I will call the attention of the court. [The reporter could not hear the authority.] The strength of the case is, that this court has acted as if it had its original character before 1813. and was a court, and as if in its supplementary character after 1813, it was not a court. When it has occasion, in these cases, to revise its acts, it addresses itself as if it had been no court at all. The Justices of the people of the Supreme Court address their decisions to the Justices of the Supreme Court. Is not that proof that your honors, in acting in these street cases, were not acting as a court? If you had been, the records would have been before you, and. as a court, you would have revised yourselves. The two duties are distinct. The street business is not the judicial function of the Judges. If the decision is right, in my humble judgment, there is an end of the case; because if your honors have adjudged that these were not official duties, and your honors have performed them not as a court, then I say under the law of 1813 the Judges have been performing another public trust. If the Judges perform these, the legislature may give them other high duties at their discretion, as it chooses. The other public trusts mean public trusts of another character, those not appropriate to a Judge. If your honors have decided that you were not acting as a court, the constitution seems to be clear that you were acting as as a trust, then the law imposed that upon you in violation of the constitution."

The Court say:

"I must admit that I am unable to perceive the truth of the premises or the justness of the conclusion in this argument, for I cannot admit that these statutes assume to confer any office, new or old, upon the members of this court individually. In terms the statutes are that *the court*, not the persons who hold it, shall posses and exercise certain powers; and to me it seems the inquiry should be, are these powers, in their nature, such as the Legislature might devolve upon the court rather than whether another office is thus assumed to be conferred on the Justices of that court.

"By the present Constitution of this State, neither the Chancellor, nor Justices of the Supreme Court, nor any Circuit Judge, shall hold any other office or public trust.—(Art. 5, § 7.)

"The former Constitution contained a similar clause, for it declared "that the Chancellor and Judges of the Supreme Court shall not, at the same time, hold any other office, excepting that of delegate to the general Congress, upon special occasions." (Art. 25.)

"These inhibitions were aimed at the individuals who, for the time being, might fill the offices referred to, and not at the courts which they were authorized to hold. The person who is Chancellor can hold no other office or trust, and so of Justices of the Supreme Court and Circuit Judges. But this, I believe, has never been supposed to restrain the legislative power so that it could not enlarge and extend the powers of the Court of Chancery or of the Supreme Court, nor impair the capacity of those courts to take and exercise new and enlarged powers.—Certainly, in practise such has not been the effect of this constitutional provision, for these courts have undergone frequent changes and modifications, by which their powers have in many respects, been greatly amplified and extended."

Note.—By the Editor.

The inhibitions of the Constitution which the learned judge says were aimed at the individvals who might fill the offices referred to, and not at the courts which they were authorised to hold, is a very plain and common sense restriction. The Supreme Court is composed of individuals and the individual, who hold the office of Judge of the Supreme Court, is the Court. Section 29 of the Constitution of 1777, provides that the "Lieut. Governor shall by virtue of his office be president of the Senate," and section 21 provides that in certain cases the Senate shall have power to fill "the office of President." The performance of the duties of President of the Senate by the Lieut. Governor, is another office, it is another and distinct duty, and that constitutes it another office, and one which the constitution authorized him to hold, and the same Lt. Governor, is by the same constitution authorized to perform the duties of the office of Governor, duties which in certain cases, are executive and being incompatible with

his holding a seat in the Senate, he ceases to be President when he acts as Governor, by the provisions of the Constitution. Another office is the performance of another duty, and the Constitution has so defined it, in its various provisions.

It is a matter of no kind of importance in construing an express provision of the constitution, whether the Legislature have passed other unconstitutional laws, nor how many, nor whether "to an almost unlimited extent."

In the former constitution of the State of New-York a preamble to section III, says: "And whereas laws inconsistent with the spirit of this Constitution, or with the public good may be hastily and unadvisedly passed," &c., and Mr. Justice Cowen in the opinion he delivered in the 37th Street case, in July 1843, in reference to these Street powers conferred upon the court says that 'had the question been made as I admit it should have been, a reconsideration by the Legislature would have probably ensued, and the evil of the interruption of the regular business of the Court been prevented." The Legislature have in some cases made the judges of the Supreme Court, Trustees of Colleges. This duty, of course, according to the doctrine of the court, as laid down in this opinion, "*is strictly judicial.*"

The act of 1813, section 178, authorises the Supreme Court of Judicature of this State to appoint Commissioners of estimate and assessment, on the application of the Mayor, Aldermen and Commonalty of the city of New-York, and section 186, of the same act authorises any one of the Justices of the Supreme Court to fill any vacancy which may occur by death, resignation, or refusal. Section 193 of the same act provides as follows: "That the mayor, aldermen and *commonalty* of the city of New-in Common Council convened, and their successors, shall continue to be commissioners to keep in repair such other public roads or highways as shall hereafter be laid out or opened in the said city or county." By the Revised Statutes of 1830, it is provided, that each town shall annually elect three commissioners of highways. See vol. I, R. S. new ed. p. 333, §4.

This power given to the Supreme Court to appoint commissioners for the city of New-York, is the same power that is given by the Statute to the electors in the various towns of this State.

It is evident that the framers of the Constitution of 1777, never intended giving any power of appointment to the Supreme Court but that of appointing their clerks, attornies and counsellors, for by section 27 of that constitution, it is provided that "the clerks of the Supreme Court shall be appointed by the judges of said court, and all attornies, solicitors and counsellors at law hereafter to be appointed by the court, &c. Section 23, of the same constitution, provides as follows: "That *all officers*, other than those who, by this constitution are directed to be otherwise appointed, *shall be appointed in the manner following to wit:* The Assembly shall once in every year openly nominate one of the Senators from each great district, which Senators shall form a council for the appointment of *the said officers.*" *Again* the same section provides as follows: "The said Senators shall not be eligible to the said council two years in succession." Mr. Justice Story, in his commentaries on the Constitution, says:

"One of the most common maxims of interpretation is (as has been already stated) that as an exception strengthens the force of a law in cases not excepted, so enumeration weakens it in cases enumerated."

The section of the constitution of 1777, quoted by Mr. Justice Beardsley, declares the holding of a seat of a delegate in the general congress, to be another office. Suppose the Legislature had said, that the delegates to the general Congress shall be nominated and appointed by the Supreme Court of Judicature of this State, or by any one of the Justices thereof" it would be doing precisely the same thing as is attempted in section 178 and 186, of the act of 1813, in giving the appointing of Commissioners for a local district which were before elected by the people to the same court or one of its members. By section 13, of art. 7, of the Constitution of 1821, the street act of 1813, is, we say, repealed. The following is the provision referred to, and contains these words: "and such acts of the legislature of this state as are now in force shall be and continue the law of this State subject to such alterations as the legislature shall make concerning the same. *But all such parts of the common law, and such of the said acts or parts thereof, as are repugnant to this constitution are hereby abrogated.*"

We shall here, with a brief premise, introduce a letter from the illustrious GEORGE WASHINGTON, President of the United States, to the Chief Justice, and Associate Justices, of the Supreme Court of the United States, and their reply thereto. These documents are from the pens of men who are no longer inhabitants of earth—they have left us—they have departed, but the opinion of each as written down during their respective administration of public affairs, for our instruction, for our guidance, are left to us. Opinions that are the emanation of mind which has been transferred to another world, are clothed with a solemnity in the remembrance of the declaration of the inspired pen, "*that although in dust he speaketh.*" The decision of the lamented COWAN, in this very question on which the court have pronounced this opinion, which we are now reviewing, was, as we before observed, about the last act of his useful and virtuous life—and ere the grass had grown upon the sods which covered his ashes—the cause in which that decision was pronounced, is by this court ordered for reargument. The court in ordinary cases, under such circumstances have a clear right to order a reargument and they might believe it a matter of duty and it truly might be so—but the closing paragraph in the opinion of the court in this case then pronounced was: "It follows from what we have said, that we can make no order, either one way or the other, on the motions for the confirmation of these reports." The court preceded this closing paragraph with this remark, among others: "Since an appeal has been made to the fundamental law, it is no longer the mere question whether we will consent to accept the office and execute the Statute. The farther enquiry is now presented, whether we have any power to act in the matter. Upon that question I cannot entertain a doubt." The court refused to act, and it was right, most clearly so, as we think it will be ultimately held—there was a responsibility in acting.

This opinion of the court which we are now reviewing was delivered at the October term which was a delay of one term from the argument, the cause of the delay was unavoidable but admonitory.

Mr. Justice Story, in his commentaries on the Constitution says: "If the oppression be in the exercise of unconstitutional powers, that the functionaries who wield them, are amenable for their improper acts to the judicial tribunals of the country, at the suit of the oppressed."

The letters we have referred to above are as follows:

"*United States, April 3d*, 1790.

"Gentlemen: I have always been persuaded, that the stability and success of the national government, and consequently the happiness of the people of the United States, would depend, in a considerable degree, on the interpretation of its laws. In my opinion, therefore, it is important, that the judiciary system should not only be independent in its operations, but as perfect as possible, in its formation.

"As you are about to commence your first circuit, and many things may occur in such an unexplored field, which it would be useful should be known, I think it proper to acquaint you, that it will be agreeable to me to receive such information and remarks on this subject as you shall from time to time judge it expedient to make.

GEO. WASHINGTON.

"*The Chief Justice and Associate Justices of the Supreme Court of the United States.*"

"Sir:—We, the Chief Justice and Associate Justices of the Supreme Court of the United States, in pursuance of the letter, which you did us the honour to write, on the third of April last, take the liberty of submitting to your consideration the following remarks on the "Act to establish the Judicial Courts of the United States."

"It would doubtless have been singular, if a system so new and untried, and which was necessarily formed more on principles of theory, and probable expediency, than former experience, had, in practice, been found entirely free from defects.

"The particular and continued attention, which our official duties called upon us to pay to this act, has produced reflections, which at the time it was made and passed,

did not, probably occur in their full extent either to us or others.

"On comparing this act with the constitution, we perceive deviations, which, in our opinions, are important.

"The first section of the third article of the constitution declares, that "the judicial power of the United States shall be vested in one *Supreme* Court, and in such inferior courts, as the congress may, from time to time ordain and establish."

"The second section enumerates the cases, to which the judicial power shall extend. It gives to the Supreme Court original jurisdiction in *two* cases, but in all the others, vests it with *appellate* jurisdiction; and that with such exceptions, and under such regulations, as the congress shall make.

"It has long and very universally been deemed essential to the due administration of Justice, that some national court, or council should be instituted, or authorized to examine the acts of the ordinary tribunals, and ultimately, to affirm or reverse the judgments and decrees; it being important, that these tribunals should be confined to the limits of their respective jurisdiction, and that they should uniformly interpret and apply the law in the same sense and manner.

"The appellate jurisdiction of the Supreme Court enables it to confine inferior courts to their proper limits, to correct their involuntary errors, and, in general, to provide, that justice be administered accurately, impartially, and uniformly. These controlling powers were unavoidably great and extensive; and of such a nature, as to render their being combined with other judicial powers, in the same persons, unadvisable.

"To the natural, as well as legal incompatibility of *ultimate* appellate jurisdiction, with orginal jurisdiction, we ascribe the exclusion of the Supreme Court from the latter, except in two cases. Had it not been for this exclusion, the unalterable, ever-binding decisions of this important court, would not have been secured against the influences of those predilections for individual opinions, and of those reluctances to relinquish sentiments publicly, though perhaps, too hastily given, which insensibly and not unfrequently infuse into the minds of the most upright men, some degree of partiality for their official and public acts.

"Without such exclusion, no court possessing the last resort of justice, would have acquired and preserved that public confidence, which is really necessary to render the wisest institutions useful. A celebrated writer justly observes, that "next to doing right, the great object in the administration of public justice should be to give public satisfaction."

"Had the constitution permitted the Supreme Court to sit in judgment, and finally to decide on the acts and errors, done and committed by its own members, as judges of inferior and subordinate courts, much room would have been left for men, on certain occasions, to suspect, that an unwillingness to be thought and found in the wrong, had produced an improper adherence to it; or that mutual interest had generated mutual civilities and tendernesses injurious to right.

"If room had been left for such supicions, there would have been reason to apprehend, that the public confidence would diminish almost in proportion to the number of cases, in which the Supreme Court might *affirm* the acts of any of its members.

"Appeals are seldom made, but in doubtful cases, and in which there is, at least, much appearance of reason on both sides; in such cases, therefore, not only the losing party, but others, not immediately interested, would sometimes be led to doubt, whether the affirmance was entirely owing to the mere preponderance of right.

"These, we presume, were among the reasons, which induced the convention to confine the Supreme Court, and consequently its judges, to appellate jurisdiction. We say "consequently its judges," because the reasons for the one apply also to the other.

"We are aware of the distinction between a court and its judges; and are far from thinking it illegal or unconstitutional, however it may be expedient, to employ them for other purposes, provided the latter purposes be consistent and compatible with the former. But from this distinction it cannot in our opinions, be inferred, that the judges of the Supreme Court may also be judges of inferior and *subordinate* courts, and be at the same time both the *controllers and the controlled.*

"The application of these remarks is obvious. The Circuit Courts established by the act are courts inferior and subordinate to the Supreme Court. They are vested with original jurisdiction in the cases, from which the Supreme Court is excluded; and to us it would appear very singular, if the constitution was capable of being so construed, as to exclude the court, but yet admit the judges of the court. We, for our parts, consider the constitution, as plainly opposed to the appointment of the same persons to both offices; nor have we any doubts of their legal incompatibility.

"Bacon, in his Abridgment, says, that "offices are said to be incompatible and inconsistent, so as to be executed by one person, when from the multiplicity of business in them, they cannot be executed with care and ability; or when their being subordinate, and interfering with each other, it induces a presumption they cannot be executed with impartiality and honesty; and this, my Lord Coke says, is of that importance, that if all offices, civil and ecclesiastical, &c. were only executed, each by different persons, it would be for the good of the commonwealth and advancement of justice, and preferment of derserving men. If a forester, by a patent for his *life*, is made justice in Eyre of the same forest, *hac vice*, the forestership is become *void;* for these offices are incompatible, because the forester is *under the correction* of the justice in Eyre, and he cannot *judge himself.* Upon a mandamus to restore one to the place of town-clerk, it was returned, that he was elected mayor and sworn, and, therefore, they chose another town-clerk; and the court were strong of opinion, that the offices were incompatible, because of the *subordination.*— A coroner, made a sheriff, ceases to be a coroner; so a parson, made a bishop, and a judge of the Common Pleas, made a judge of the King's Bench," &c.

"Other authorities on this point might be added; but the reasons, on which they rest, seem to us to require little elucidation, or support.

"There is in the act another deviation from the constitution, which we think it incumbent on us to mention.

"The second section of the second article of the constitution declares, that the president shall nominate, and by and with the advice and consent of the senate, "shall appoint judges of the Supreme Court, and *all* other officers of the United States, whose appointments are not *therein* otherwise provided for."

"The constitution not having otherwise provided for the appointment of the judges of the inferior courts, we conceive, that the appointment of some of them, viz. of the Circuit Courts, by an act of the legislature, is a departure from the constitution, and an exercise of powers, which constitutionally and exclusively belong to the president and senate.

"We should proceed, sir, to take notice of certain defects in the act relative to expediency, which we think merit the consideration of congress. But, as these are doubtless among the objects of the late reference, made by the house of representatives to the attorney-general, we think it most proper to forbear making any remarks on this subject at present.

"We have the honour to be most respectfully,

"Sir your obedient and humble servants.
"The President of the United States."

The court say:

"By the act to incorporate the Utica and Schenectady Railroad Company, the Chancellor was authorized to appoint Commissioners to appraise lands which might be needed in the construction of that road, and who were required to report to the Court of Chancery. It was made the duty of the Chancellor to examine their report, hear the parties interested, and increase or diminish the amount awarded as might be deemed just. (Laws 1833, p. 465, § 7.) Similar powers have repeatedly been thrown upon the Circuit Judges. (L. 1832, p. 417, 502, 517. Laws 1833, p. 439.) Writs of *ad quod damnum* may be issued by the Court of Chancery, under the Revised Statutes, a power not before possessed by that Court. (2 R. S. 588.) Appeals may be taken to Circuit Judges from certain decisions of the Surrogates. (2 R. S. 66, § 55.) The Supreme Court has summary jurisdiction over the election of Corporation officers in many cases; (2 R. S. 603, §5, ib. 598, §47 to 50,) and may compel the production and discovery of books, papers and documents, in cases to which its power did not formerly extend. (2 R. S. 199, §21.) And this court

may also, on petition, discharge certain persons from imprisonment. (2 R. S. 31, §1.)

"These are instances in which new powers have been conferred upon the Court of Chancery and the Supreme Court, and upon Circuit Judges. They might be multiplied by references to an almost unlimited extent; and yet I am not aware that it has been held or supposed that the statutes conferring these powers devolved new offices upon the Chancellor, Justices, or Judges named, or were in any respect incompatible with the Constitution.

NOTE.—BY THE EDITOR.—See remarks on p. 402, second paragraph of the first column.

"I know it has been said that the powers exercised by this court under the New-York statutes relative to opening streets, avenues, &c., are not exercised as a court, but as commissioners. This form of expression is found in several cases.

"By an Act passed the 4th of April, 1801, (2 Kent and Rad. ed. Laws N. Y., 153, §13) when the ground of any person was required by the Corporation of the city of Albany, in laying out any street, the damages and recompense sustained by and due to the owner of the ground were to be inquired of and assessed by a jury summoned to appear before the Mayor's Court of the city; and the Act declares that "the verdict of such jury and the judgment of said Mayor's Court thereon, and the payment of the sum of money so awarded and adjudged to the owner or owners thereof, or the tender and refusal thereof, shall be conclusive and binding."

"A case arose under this provision, in which the damages were assessed, and judgment of confirmation was given by the Mayor's Court; but subsequently the proceedings were set aside by that court for irregularity, before any formal record thereof had been made. The effect of this *vacatur* came before the Supreme Court, (7 John. 451, Stafford vs. Mayor of Albany,) and it was held to be unauthorized. *Spencer*, J., who gave the opinion of the court, observed, "The authority under which the Mayor's court acted was specifically derived from the Legislature, and must be strictly pursued; when, therefore, the assesment was confirmed, the court had no further powers: they were *functus officio*. (11 East. 200, 201, 202.) There is no analogy between this proceeding and the judicial proceedings of a Court of Record in the progress of a cause. The power grantedby the Legislatureto the Mayor's Court in the present instance, may not inaptly be compared to the power given to a Court of Common Pleas to discharge an insolvent from his debts.—In both cases the court act *quasi* Commissioners.'"

'In the matter of *Beekman Street*, in the City of New-York, which arose under the act of 1813 already referred to, *Spencer*, Chief Justice, said, 'The powers possessed by this court, in appointing Commissioners, in reviewing their report, in referring it back to the same Commissioners, or substituting new ones, and in finally confirming their report, are derived wholly from the statute. None of these powers exist independently of the legislative authority; and they are not incident to our judicial duties. It might be a question how far the Legislature can impose such duties upon the judges; but it does not admit of a doubt, that if we do consent to act, we act under a limited and circumscribed authority; and our only power to act being derived from the statute, we possess no powers but such as are expressly given; and those powers must be exercised in the manner designated by the act. It is true we act collectively, and in term time, and a majority present control the proceedings; but we act as Commissioners, and in the same way and manner as we used individually to do under the insolvent act.'

"The statute is our guide, and we must proceed by the rules and in the manner it prescribes. The general powers and jurisdiction of this court as regards the application now before us, cannot be brought into exercise. (20 John. 271.)'

"In the matter of *Third Street*, in the City of New-York, (6 Cow. 571, *Savage*, Chief Justice observed, "We do not act as a court in these matters, but as commissioners appointed by the legislature, and such proceedings have been very aptly compared by the cases, to those of a Commissioner or Court of Common Pleas under the insolvent act.'"

"Remarks to the like effect, and in much the same terms, have been made in other cases."

"And proceeding upon the idea that what we do in street cases, is done in a limited and subordinate capacity *as Commissioners*, writs of certiorari have been allowed by this court as the Supreme Court of the State, directed to the Justices thereof as *Commissioners*, in order to bring the proceedings before the court as a court, and thus obtain its judgment in that capacity, to the end that such judgment may be carried to the Court of Errors for revision. (13 Wend. 661.—Patchin vs. The Mayor of Brooklyn. 8 Wend. 85. Livingston vs. The Mayor of New-York. 7 Cow. 158. Bogart vs. The Mayor of New-York.)"

"I do not understand any thing said or done in the cases on the subject, as intended to deny that the power of appointing Commissioners of Estimate and Assessment, and revising and confirming their proceedings, is strictly judicial in its nature. The cases proceed on the broad distinction between the exercise of general and special judicial powers, between what this court may do in the exercise of its general common law jurisdiction, as the Supreme Court of the State, and what it may do under a special and limited authority conferred upon it by the statute."

"The power exercised in these street cases, is compared to that of Commissioners under the insolvent laws. But such Commissioners, although not clothed with any general judicial authority, are still judges, and within the limits of their jurisdiction act judicially. (8 Cow. 178 Cunningham vs. Bucklin.) They act as an inferior court of special and limited authority, and their acts may be pleaded as such. (1 John. 91. Service vs. Heermance. 7 John. 75. Tracy vs. Dakin. 19 John. 34. Mills vs. Martin.)"

"Proceedings in street cases are removable by cetiorari. (2 Wend. 377. Patchin vs. The Trustees of Brooklyn. 8 Wend. 47. Same case in error, 7 Cow. 158. 8 Wend. 85. 13 Wend. 664, cited before.) But a certiorari lies only to bring up judicial proceedings. (2 Hill. 9. The People vs. The Mayor of New-York.)"

"But these powers are in their nature strictly judicial."

"The Corporation of New-York having determined to open a street or avenue, apply for the appointment of Commissioners of Estimate and Assessment. These Commismissioners are but *aids to the court*, whose judgment at last is to settle the rights and fix the liability of the parties. The Commissioners are to ascertain the value of the land which may be taken for or affected by the improvement to be made, and determine the amount of damage and benefit which the respective parties will sustain. These are to be reported to the court with all needful explanations, and any person conceiving himself aggrieved, may appear and urge his objections to what has been done. If the court is dissatisfied with the report, it may be sent back for revision, and this is to be repeated until the court shall be satisfied that it is according to the justice of the case, when judgment of confirmation is to be given. Thus the report becomes in effect the act of the tribunal by which it is confirmed, and the judgment rendered is declared to be an effective lien upon the land thus adjudged to be benefitted. Upon this a summary execution may be issued to collect the amount of the judgment, *or an action may be brought upon it*, and finally it may be enforced by a sale of the land thus charged."

NOTE.—BY THE EDITOR.—*The Supreme Court cannot issue a summary execution until a suit has been brought and judgment recovered in the Supreme Court upon the assessment in an action of debt or assumpsit.—(See Ante, p. 385, and sec. 186, of the act of April 9, 1813,) It therefore lacks the very essence of a judicial proceeding, and the confirmation is not a judgment, for the statutes authorize the Supreme Court to issue execution upon its judgments.*

The court say:

"If such powers and proceedings are not in the strictest sense judicial, it would be difficult to conceive what authority or acts can be of that character.

NOTE.—BY THE EDITOR.—Mr. Justice Story quotes Sargent on the Constitution thus "that the Constitution in speaking of courts and judges means those who exercise all the regular and permanent duties, which belong to a court in the ordinary popular signification of the terms."

The court say:

"These powers then are judicial, whether exercised by the court as a court, or 'quasi Commissioners.' Undoubtedly they are not

exerted by the court as a court of general jurisdiction; it acts in some other capacity, if at all as a court. "The general powers and jurisdiction of this court," says Chief Justice Spencer, "as regards the application now before us, cannot apply to such a subject."

"The case of Patchin vs. The Trustees of Brooklyn, came up by certiorari from the Common Pleas of Kings County, which court was authorized by statute, to exercise powers similar to those thrown upon this court in the New-York street cases."

NOTE.—BY THE EDITOR.—*The judges of the court of Kings County are not precluded by the present Constitution of this State from holding any other office.*

The Court say:

"In giving the opinion of the Supreme Court, Chief Justice Savage said, 'It has also frequently been held that the Judges *act as Commissioners*, but they, in some respects at least, act as a court during the pendency of the proceedings." (2 Wend. 384.) This case went to the Court of Errors, when the Chancellor thus expressed himself:—'This is a specially delegated power to the *Court of Common Pleas as such court*, and not to the judges as an *ex officio* duty; and when such power is committed to a *court*, all the ordinary powers of such court, as far as they are applicable to the discharge of the particular duty, may be exercised as in ordinary cases. The court may compel the sheriff to return the precept; may impose fines upon the jurors for not attending; may issue process to compel the attendance of witnesses; may award a tales, swear witnesses, and compel them to testify; may appoint triers on a challenge of a juror; and may adjourn the hearing of the cause upon sufficient cause shown. Thus in England, the jurisdiction of the Lord Chancellor in bankruptcy is a specially delegated jurisdiction committed to him as the keeper of the great seal, but in the particular cases in which this jurisdiction is exercised, all the powers of his court become applicable to the discharge of his duty; he issues injunction and attachment to compel the performance of his orders; makes references to masters to inquire as to facts, awards, issues, &c. See *ex parte* Cowan, 3 B. and Ald. 123. But no appeal lies from his decisions in bankruptcy, because no law has been passed authorizing an appeal in such cases. So in the street cases in the City of New-York, a specially delegated jurisdiction is committed to the Supreme Court, but I believe it never has been contended that the court was bound to determine cases of this kind at the first term, and it had not the power of deciding them at any subsequent term of the court."

"This case was decided in the Court of Errors in 1831; and in 1834, in the *matter of Canal Street*, Chief Justice Savage thus expressed himself: "But though the court, in these proceedings, act *quasi* Commissioners in reviewing and confirming the proceedings below, yet we act also *as a court*, in *many respects*, and I think in all respects except in reviewing our own decisions. We act as a court in the appointment of the Commissioners. If they misbehave, we may punish them by attachment, as we might referees, in a cause committed to them.—If, for any cause, persons appointed as Commissioners are shown to be improper, we may by virtue of the power of appointment, remove them and appoint others; we are not the mere conduits of conveying authority to the Commissioners. They become officers of this court; the proceeding is a proceeding in our court, the effect of which is the transfer of the title to real estate to an immense amount; and it would be extraordinary, in such a case, that this court should be mere automata. It has been decided that we cannot reconsider our own decisions; but beyond that our power as a court has not been questioned."

"Our decisions are judgments, which are subject to review in the Court of Errors, (11 Wend. 156,) and in a late case, (4 Hill. 19,) in the matter of Mount Morris Square, Cowen, J., said, 'Our award is like that of any inferior magistrate having a limited jurisdiction.'"

"I fully concur in these views, understanding them, as I do, to mark the distinction between courts of general and special authority. It is readily seen that one and the same person can at the same time hold two offices, as Lord Hardwicke did for a short period those of Chancellor and Chief Justice of England."

[NOTE.—BY THE EDITOR.—The court will find a case nearer home than that of Lord Hardwick. Mr. Hallet, of New-York, held nine offices, and very many of these at one and the same time, viz: The office of Clerk of the Supreme Court which he held by appointment of the Supreme Court of Judicature of this State, also the office of commissioner of estimate and assessment on the proceeding for widening Beaver Street, Wooster Street, William Street, Anthony Street, extending William Street, opening 10th Avenue, 32d Street, and Mount Morris Square, which eight offices he held under the appointment of one of the Justices of the Supreme Court. The Commissioner's fees in these eight streets were $11,678.66, as appears by the receipts of Commissioners and by the public documents of the Corporation. [See Comptroller's Report of 1840, p. 108.] The room hire, &c. &c. is stated at more than $1500.00. Mr. Hallet's share of the fees is $3892.00. This sum at a compensation of four dollars per day, which is the highest sum allowed by law, for *a full day's service*, is pay for 973 days, which, counting 26 working days to the month is pay for 37 months, and 11 days, equal to three years, one month and eleven days.

These eight separate and distinct appointments were made by a single judge. The 27th section of the Constitution of 1777, gives to the court the appointment of their clerks. By section 9 of article 4, of the Constitution of 1821, it is provided, that "The clerks of Courts, except those clerks whose appointment is provided for in the preceding section, shall be appointed by the courts of which they respectively are clerks," and by section 4 of article 5, "The Supreme Court shall consist of a Chief Justice and two Justices, any of whom *may hold* a court." The clerks are appointed by three Judges, and not by one Judge. In the July term of 1839, the Supreme Court made a rule under the 12th section of the act of April 20th, 1839, [see Ante, p. 388, sec. 12,] in which it is provided that the Commissioners fees, Counsel and Attorney's fees, Surveyor's fees, &c., shall be taxed by the Circuit Judge, Recorder or Clerk of the Supreme Court. Mr. Hallet consequently was the person who taxed what few bills there were taxed, but most of the commissioners reports were "confirmed by one of the Justices of the Court without any taxation of the costs and to the extent of a great number of Streets. These offices are incompatible. To appoint Mr. Hallett a commissioner on a street, and then to authorise him by virtue of his office of clerk, to tax the fees of the commissioners on that very street, and also to tax the fees of the officers who nominated him for the office of commissioner to the court, for these Commissioners are nominated by the Counsel of the Corporation, as appears by the Report of the Senate Committee. (See Ante, p. 380.) There is also another objection, which is, that the Court have been profuse in this patronage; and still another which is contained in the letter of the Chief Justice and Associate Justices of the Supreme Court of the United States, to President WASHINGTON, (see Ante. p. 403,) and from which we here make the following brief abstract: 'Bacon, in his abridgement, says, 'that offices are said to be incompatible and inconsistent, so as to be executed by one person, when, from the multiplicity of business in them, they cannot be executed with care and ability.' It appears, by the testimony of Assistant Alderman Townsend, before the Senate Committee, (see Senate Doc. No. 100 of 1842, p. 95,) that errors were committed, growing, no doubt, out of the multiplicity of business. The following quotation is an illustration:

"The witnesses' property was assessed

$52 for opening Mount Morris Square; witness examined the Assessment Map in that case, and found it to contain nine blank numbers, which had no Assessment carried out against them, which formed nearly a whole block which was not Assessed. The Fifth Avenue was the centre of the Square; on the easterly side, the property from 118th Street is assessed, and the property on the westerly side is not assessed at all. The lots not assessed, are within the limits of the Assessment district; lots beyond these lots not assessed, are assessed. Mount Morris Square is a cone of rock about 150 feet above the Harlaem Plain."

There was a similar error in the Beaver Street Assessment, as appears by the printed documents of the Common Council, and we could name others, but it is needless. There are other cases similar to that of Mr. Hallets in some respects. M. D. L. Gaines, who is brother-in-law of the Street Commissioner of 1836 to 1844, and was a Clerk in the Street Commissioner's Office, and received a salary of $1000, and was the person who paid Commissioner Robinson his fees of the Seventh Avenue, a large amount, as appears by Mr. Robertson's testimony, (see Ante pg. 393,) held the office of Commissioner of Estimate and Assessment on Eight Streets, and the office of Clerk of the Street Commissioner at the same time. Mr. Gaines was Commissioner on 33, 34, 45, 46, 48, 54, 57, 59, in which the Commissioner's fees are $6458,00.

Mr. Andrew Warner, a Deputy or Clerk in the Office of the County Clerk, and brother of Mr. Warner, who was Assistant Street Commissioner, and whose duty it was to pay the Attorneys, Commissioners and Surveyor's fees, was Commissioner on seven Streets, viz: 11, 19, 26 and 89 streets, and Avenues A, 1 and 5, in which the fees were $4,234.00.

The services of these persons we have named, were all the time required in their respective offices, and the diagram of the 1st Avenue Assessment on Mr. Phelp's land, between 39th and 40th Streets, is another illustration. That proceedings of the importance which these are, should be incapable of being examined into, seems more than unreasonable. It will be seen by the City Comptrollers for 1840, p. 108, that the Commissioners fees for opening the Eighth Avenue throughout, was $760.68—Counsel fees, $745.47—Surveyor's charges, $310.50. This Avenue was opened in 1811. In 1839, the Commissioner's fees for opening a parallel Avenue of less length, was $4,920. Counsel fees, $3,976.77. Surveyor's fees, $2,801.—A comparison of the charges of fees in these proceedings, together, is an illustration.

The Court say:

"But to me the idea is incomprehensible, that *a court* can, at the same time, and upon the same subject, act in a double capacity, that is, not only as a court, but in the separate office of Commissioners. But if this, in the nature of things, is possible, which is not granted, I am unable to see how it can occur under the street laws of New-York. This court possesses the powers and exercises the jurisdiction which belonged to the Supreme Court of the Colony of New-York, with the exceptions, limitations, and additions created and imposed by the Constitution and laws of this State. (2 R. S. 196, §1.) The street statutes, in explicit terms, devolved the power, in street cases, upon "the *Supreme* Court of Judicature of this State," and make it lawful for the said court, not the Justices thereof individually, to perform the duty. [2 R. L. of 1813, p. 409, § 178.]

[NOTE.—BY THE EDITOR.—The learned Judge has overlooked the provisions of the Act of April 3d, 1807, Section 186 of the very Act he refers to, and Sec. 2, of the Act of April 5, 1816, which he refers to in another part of this opinion, the latter of which contains these words: "That whenever Commissioners of Estimate and Assessment may hereafter be appointed by the Supreme Court of Judicature of this State, *or any one of the Justices thereof.*"

The learned Judge, in giving the opinion of the Court, says:

Chief Justice Spencer says, "the powers thus possessed by *this court* 'are derived wholly from the statute;' 'we act under a limited and circumscribed authority;' the general powers and jurisdiction of the court cannot be brought into exercise; 'we act as Commissioners.'"

These different phrases seem to me to have been used to express the same idea, to indicate the character and extent of the powers possessed by the court in these cases; in brief, that the court possess such powers as pertain to Commissioners, that is, the powers of a court of special and limited authority, and not that it holds the separate and distinct office of Commissioners. The opinion of the Chancellor cannot be mistaken; he holds that the power is thrown upon the *court*, and not upon the Judges individually; and *Cowen*, J., as we have seen, says emphatically, that 'our award is like that of any inferior magistrate having a limited jurisdiction."

[NOTE.—BY THE EDITOR.—The Chancellor discussed the constitutionality of a proceeding altogether unlike this case, now being considered—it is not like this, we respectfully suggest, in any respect whatever.

The Court say:

"While acting in its ordinary capacity as court of general jurisdiction, the authority of this court will be presumed.

"But when exerting its powers under the special provisions of a statute, this presumption does not attach. It is then *quoad hoc* an inferior or limited court, and the facts to give jurisdiction must be proved. This is the rule as to subordinate and limited tribunals, and is equally applicable to this court when acting in that capacity. [3 Hill. and Cowen's Notes to 1 Pvil. Ev. 946, 988, 1013. Notes 681, 694. 19 John. 35. Mills vs. Marin. 11 Wend. 647. Dunning vs. Comin. 8 Cow. 361, 370. Galatin vs. Cunningham.]

Regarding this, as I do, as a new power thrown upon the Supreme Court, and not as a new office conferred upon the justices of that court, the constitutional inhibitions is wholly inapplicable, and can have no bearing on the question to be determined.

[NOTE.—REMARKS BY THE EDITOR.—The Court speak of this being a new power thrown upon that tribunal, and not as an office conferred upon the Justices of that Court. This view of that power thus taken by the Court, is wholly at variance with the express provisions and plain language of the Statute, as well as of the Constitution. The act of April 9th, 1813, and the act of April 5th, 1816, (see Ante pg. 385,) gives the exercise of these powers to any ONE of the Justices of the Court. The powers conferred, are extraordinary powers, and such as are unknown in judicial proceedings The power of appointment—one of the most dangerous powers in the whole machinery of Government, is here given in violation of the express prohibitions and plain language of the constitution, (see Ante pg. 384, §XXIII,) without limit or control. The Statutes of New-York, prior to the Constitution of 1821, do not authorize the Justices of the Supreme Court to hold A COURT, unless a majority of the five Judges are present. The power here given may be exercised by one Judge, any where in the State, on any day of the year, except the Sabbath, and without the advice of his associates, and against the advice of a majority of the Judges. The Constitution as quoted, (see Ante pg. 384, § XXXI,) says: "That all writs OR OTHER PROCEEDINGS shall run in the name of the People of the State of New-York, and be tested in the name of the Chancellor, or Chief Judge of the Court from whence they shall issue." The street proceedings were never so tested under the old Constitution, for the plain reason that the Judges did not consider these matters AS BEING PROCEEDINGS in the Supreme Court. The Street power was a new office conferred upon the justices, viz., that of Road Commissioners. The Court say, that this is "A NEW POWER," and here the court are right—it is "A NEW POWER"—not an enlargement of the powers of the Court, nor an extension, for they never had had jurisdiction of these Street matters. The Mayor's Court of the city of New-York, in the Colony, and afterwards in the State of New-York, had a power in Street matters, but it was confined to the confirmation of the verdict of a jury by the judgement of the Court. In executing THIS "NEW POWER"—the Supreme Court cannot issue an execution, nor any "summary process," to enforce the payment of the assessment. The Court say: "Regarding this not as a new office conferred upon the Justices of that Court, the Constitutional provision is wholly inapplicable." Suppose the act of 1813 and 1816, instead of making a justice of the Supreme Court "ROAD COMMISSIONER," had provided that the command of the Militia of the State of New-York should devolve upon the Supreme Court of Judicature of this State, or upon any of the Justices of the Supreme Court—would it, we enquire, be "a new office," or only an enlargement of the powers of the Court? The taking command of the Militia by one of the Justices, is as much a judicial act, as the appointment of Street Commissioners under the act of 1813 and 1816. The new Constitution contains this provision: "Neither the Chancellor, nor Justices of the Supreme Court, nor any Circuit Judge, shall hold any other office OR PUBLIC TRUST." This language is plain and explicit, and if it means any thing, it means what its language imports.

We cannot do better in this part of our review, than to introduce some extracts from a very profound opinion delivered in the Court for the Correction of Errors, by one of the ablest Jurists in our land, in a case involving the construction of a section of the Constitution of this State. The learned Judge remarked:

"We live under a government of laws, reaching as well to the Legislature as to the other branches of the government; and if we wish to uphold and perpetuate free institutions, we must maintain a vigilant watch against all encroachments of power, whether arising from mistake or design, and from whatever source they may arise."

Again, the learned Judge in another part of his opinion, states:

"We are not at liberty to presume that the framers of the constitution, or the people who adopted it, did not understand the force of language."

"If we may get round this clause of the constitution because it stands in our way, or we do not like it, we may in the same man-

ner get round any other clause in that instrument; and thus all hope of fixing the boundaries of power by written instruments will be at an end."

In another part of the opinion of the same learned Judge, he remarks:

"In this way a solemn instrument, for so I think the constitution should be considered, is made to mean one thing by one man, and something else by another, until in the end it is in danger of being rendered a dead letter; and that too, where the language is so plain and explicit, that it is impossible to make it mean more than one thing, unless we first lose sight of the instrument itself, and allow ourselves to roam at large in the boundless field of speculation. For one, I dare not venture upon such a course."

"Written constitutions of Government will soon come to be regarded as of little value, if their injunctions may thus be lightly overlooked and the experiment of setting a boundary to power will prove a failure."

In a paragraph of this opinion the learned Judge uses this language:

"If the clause can be so construed," (here he refers to a particular case) "it may then, I think, be set down as an absolute fact, that the English language is too poor for the framing of fundamental laws which shall limit the powers of the legislative branch of the government."

Senator Ruger, in an opinion which he delivered in the same case in the same court, among other things, said:

"To maintain the Constitution, is our first duty; and if the Legislature has, for any cause, encroached upon that sacred instrument, or if an erroneous construction has been given to it, we are imperatively called upon to declare its meaning, and to assert its supremacy. Nothing can be more dangerous to our free institutions, or to the rights of the people, than to encourage doubtful interpretations of the Constitution, contrary to its more plain and natural import, as understood by the great body of its readers. The view taken of this question, by Mr. Justice Bronson, should be attentively read by every individual in our State, who considers the Constitution worth preserving." 4, Hill 418.

Senator Paige, in the same case and the same Court, said:

"For me, I cannot consent to 'patter in a double sense' with any part of the Constitution; especially not, with the Section under consideration. Through no agency of mine shall it be made to 'keep the word of promise to the ear, and break it to the hope. I trust that, in reference to the present case this Court will not hesitate to array itself in favor of the old and revered doctrine of strict construction; the only sound and safe doctrine for the governance of either Judges or Legislators. If Courts are allowed to depart from it, and venture upon the perilous experiment of substituting, for the clear language of the instrument, their own notions of what it ought to have been, or what its framers intended, there will be an end of written Constitutions, and of all attempts to fix limits to Legislative and Judicial power." Hill, 4, 383.

We quote from the opinion of Mr. Justice Cowen, in the matter of 39th Street, delivered in July, 1843—thus:

"*It is indeed difficult to see what the provision in the Constitution against a Judge holding any other office is worth to the people of the State, if it can be avoided by turning him into a Commissioner of highways, a Trustee of Colleges, &c.*, as the Legislature have in several instances done. We have also I believe been declared members of the Police Courts in the City of New-York. The office of Sheriff for that city or indeed any county in the State, might perhaps with as much constitutional propriety have been imposed, *as some of the duties I have attended to;* and had the question been made as I admit it should have been, a reconsideration by the Legislature would probably have ensued, and the evil of interruption in the regular business of the Court been prevented."

Mr. Justice Beardsley, in giving the opinion of the Court, says:

"The course of the federal judiciary in relation to an act of Congress of March 23, 1792, was pressed upon us to maintain the position that the statute of 1813, assumed to make the Justices of this Court Road Commissioners of the city of New-York.

"But the instances are far from being parallel. The Act of Congress was held to appoint the Judges of the Courts, *individually*, Commissioners to perform certain duties, and those duties not of a judicial nature, nor to be performed judicially. (See Hayburn's case and note, 2 Dallas 409.)

[Note.—By the Editor.—The Court are greatly in error in reference to this case.—We have the act of Congress of March 23d, 1792, before us, also the 2 of Dallas pg. 409, containing the opinions of the Federal Judges: The act of Congress is in 2d vol. laws of U. S., pg. 28. We copy from § 2 of that act, as follows: "That any commissioned officer" &c., "shall be entitled to be placed on the pension list" &c., "**as the Circuit Court,** of the districts in which they respectively reside may think just, and every applicant shall attend the **Court** in person, and every **Circuit Court,** upon the proofs aforesaid shall" &c. There is nothing in this language of the act of Congress that makes a difference in the conferring power upon the Judges of the Court **individually** as Commissioners, any more than in the New-York State law, if we understand the English language. We here quote from the opinions of the three benches of Federal Judges, which are stated at length in 2 Dall. 409 and 10, as follows: Iredell Justice, and Sitgreaves, District Judge, say:

"The power appears to be given to the Court only, and not to the Judges of it."

Chief Justice Jay, Justice Cushing, and Duane District Judge say:

"The act can only be considered as appointing *Commissioners* for the purposes mentioned in it, by **Official** instead of *personal* designation."

Wilson and Blair, Justices, and Peters, District Judge, say:

"It is a principal important to *freedom*, that in government, the *Judicial* should be distinct from, and independent of, the Legislative department."

The opinions of the Federal Judges thus quoted, are in direct opposition to the views expressed by the New-York Supreme Court, in their opinion in this case. [Their opinions are in full on pages 286 and 287 of this volume.

The Supreme Court at the January term of 1844, in the 39th Street and other Street cases, decided, that the Justices of that Court in appointing Commissioners of Estimate and Assessment, and in confirming their reports, act as *Commissioners*, and not as a *Court*. Mr. Justice Bronson delivered the opinion of the Court, and says:

"Bronson, J.—The Statute in relation to the opening and laying out of Streets, Avenues, Squares and public places, in the city of New-York, has been in operation thirty years; (2 *Revised Laws*, 342, 408, § 177 192;) and the question is now distinctly made, for the first time, whether we have the constitutional right to exercise the powers which the Legislature has attempted to confer upon us. But it is never too late to appeal to the fundamental law; and the question is none the less entitled to a careful examination because it touches our own authority. If, by common consent, and without having our attention called to the subject, we have heretofore taken cognizance of matters which did not rightfully belong to us, that cannot be a good reason for going on in the same way after our authority has been plainly drawn in question.

"The Constitution declares, (*Art.* V. § 7,] that "the Justices of the Supreme Court shall hold no other office or public trust," and the question is, in what character do we act in these street cases. Although the power to appoint Commissioners of Estimate and Assessment, and to review their proceedings, is, by the words of the Statute, conferred upon the "Supreme Court," it has been fully settled that we do not act as a Court, but as Commissioners, to discharge this special trust or office. The question was considered in the *Matter of Beekman Street* [20 *John*, 269,] which was decided within a few years after the law was passed. It was there held, that our powers were derived wholly from the Statute, and were not incident to our judicial duties; that we do not act as a Court, but as Commissioners; and that the general powers and jurisdiction of the Court could not be brought into exercise. The

case was likened to that of a judge sitting as a Commissioner under the insolvent laws. The same doctrine had been laid down before this Statute was passed, under the act of the Legislature conferring similar powers upon the Albany Mayor's Court. *Stafford* vs. *Mayor of Albany*, [7 *John*, 541.] It was there held, that the proceedings were not of a judicial nature; that there was no analogy between them and the judicial proceedings of a Court of Record in the progress of a cause; that the Court acted as Commissioners, and when an assessment had been confirmed, the Court was *functus officio*, and had no power to set aside the proceedings. In the *Matter of the Mayor of New-York*, [6 *Cow.* 571,] it was again remarked that we do not act as a Court in these cases, but as Commissioners appointed by the Legislature; and this doctrine has uniformly prevailed down to the present day. [*Matter of Canal Street*, 11 *Wend* 154; *Matter of Mount Morris Square*, 2 *Hill* 14.) There have been other cases to the same effect, which, as they contained nothing new, have not been reported. The principle has been fully carried out, by refusing to set aside the proceedings in Street cases under any circumstances, on the ground that while sitting as Commissioners we had no power to re-call that which had once been done. When the parties have desired a review in a street case the Supreme Court has issued a *certiorari* to the Justices of that Court as Commissioners; and after having thus got the matter before us as a Court, and affirmed what we had previously done in another character, a writ of error has been brought in the Court of Errors. In these and all other forms in which the question has arisen, it has been uniformly held, that in executing the Street law of 1813, we are but Commissioners discharging a special trust. The principle has been settled more than thirty years, and it is now quite too late to call it in question.

"The same doctrine has been laid down by the Federal Judiciary. By an Act of Congress passed March 23, 1792, [2 *Bis.* 259,] the Circuit Courts of the U. S., were directed to inquire into and decide upon the claims of certain persons to be placed on the pension list. The note to *Hayburn's case*, [2 *Dall.* 409,] shows that several of those Courts declined to execute the law, on the ground that the duties which had been assigned to them were not of a judicial nature. There was no disqualifications to hold other offices, as there is under our Constitution. The Circuit Court for the District of New-York, composed of Chief Justice Jay and Judges Cushing and Duane, said the Act could only be considered as appointing Commissioners for the purposes mentioned in it, by *official* instead of *personal* description; that the Judges regarded themselves as being the Commissioners designated by the Act, and therefore as being at liberty to accept or decline that office. As the object was a benevolent one, and the Judges wished to manifest their respect for the Legislature, they accepted the trust. The Justices of this Court seem to have acted upon the same principle when they accepted the office of Street Commissioners, under the New-York law. Chief Justice Spencer, in delivering the opinion of the Court in the *Matter of Beekman Street*, (20 *John*, 169,) said, "it might be a question how far the Legislature can impose such duties on the Judges." But he entirely overlooked the constitutional inhibition against holding any other office, which was substantially the same then as it is now, (*Const. of* 1777, *Art.* 25.) Since an appeal has been made to the fundamental law, it is no longer the mere question whether we will consent to accept the office, and execute the Statute. The further inquiry is now presented, whether we have any power to act in the matter. Upon that question I cannot entertain a doubt. The Constitution having declared that the Justices of this Court shall not hold any other office or public trust, we cannot accept this appointment, however willing we may be to carry out the wishes of the Legislature. If we can execute the office of Street Commissioners for the city of New-York, the like powers may be conferred upon us in relation to any other town or county; or the duties of the office of Comptroller, Treasurer, or Sheriff, may be assigned to us; and thus the constitutional disqualification would be rendered a dead letter. For one, I can never give such a construction to the fundamental law as will amount to practical nullification of its provisions. Indeed there is little room for construction in the case. If, in executing this Statute, we act as Commissioners appointed by the Legislature, and that point has already been settled, it is then almost too plain for discussion, that we are exercising another office or public trust, than that of the Justices of the Supreme Court."

[Note.—By the Editor.—Mr. Justice Cowen concurred in this opinion, and it was among the last acts of the life of that good man, he died four days thereafter—a Judgement thus settled should never have been disturbed—the order for re-argument was wrong."

Mr. Justice Cowen, in the matter of 37th Street, in the July Term of 1844, gave a very strong opinion against the Constitutionality of the Street law which we have already made extracts from.

The Court next say:

"But if I am correct in what has already been advanced, the Statute of this State devolved nothing upon the Justices of this Court as individuals, but *delegated* Judicial powers to the Court to be exercised in a *judicial* way."

[Note.—By the Editor.—But the Court is not correct in what it has already advanced, as we most respectfully suggest, and as we think we have clearly shown, and as for the "*delegated* judicial powers," we do not understand the meaning of the phrase, in the sense in which it is used.

The Court have said in the former part of this opinion, that "The *Corporation* of New-York having determined to open a Street or Avenue, apply for the appointment of Commissioners of Estimate and Assessment.—These Commissioners are but "aids to the Court." Is Road making the legitimate buness of a Court of Justice? Is that tribunal to send out its "*aids*" to make high ways? Surely it is a new business for a Court of Justice to perform, and so far from being Judical, that we should term the proceeding extra Judicial.

In Massachusetts, the Town Laws provide that a man who has entered into wedlock, subsequent to the next preceding annual Town Meeting, shall, for the following year, be, by virtue of said marriage, one of the Hog Reeves of the town, and the practice is so strict, that no station, high or low, exempts the incumbent from the performance of the duties of Hog Constable, when called upon by the humblest citizen. A Judge of the Court, if he has entered into wedlock, within the next preceding twelve months, is a Hog Reeve, by virtue of the marriage, and must perform the duties of it for one year, but if he refuses to perform this duty, we do not apprehend that he would thereby make himself obnoxious to impeachment, for the duty of a Hog Reeve, is not judicial, neither is it an enlargement of the Judicial powers of the Judge, but it is in the language of the Court 'a new office.' The illustration is a humble one, but nevertheless a good one.

As to the appointment of aids by the court we not understand exactly what is meant by the term. The Governor appoints military aids, and the appointment is more a compliment, than the imposition of a duty. Military commandants appoint aids, and the duty of all these aids is military duty, they are therefore military officers. Thus the aids of the Court it would seem from the opinion of the Court to be judicial officers, and their duty judicial, and therefore must be appointed by the governor and senate under section 7 of article 4 of the Constitution. [See Ante p. 388.] The aid that these commissioners render to the Court would seem to require examination. They aid the court in determining the value of the property to be taken for public use, for making a road—property which the Court never see, and perhaps never heard of. What does the court know of the value of the property to be taken?—We answer, the court is totally ignorant of its value, for the diagrams which accompany this review and the testimony taken before the Senate Committee show that the commissioners were governed by no rules or principles of valuation, that they make large awards to one person on one avenue for land taken, when that person owned all the land fronting on the avenue each side of it and two hundred feet back from each line, and therefore had nearly all the benefit, while on another, a person owning half the avenue in front of his land and his land running back but one hundred feet from the line of the avenue, is assessed more than his land is worth. Now both these assessments were confirmed by the court, and on the principle upon which these assessments were made illustrates the opposite extremes. The High

CHANCELLOR of our state, in a case which was brought before him in the matter of the estate of Mr. Messeroles infant children, who were assessed out of house and home, said:

"It is pretty evident in this case, that an assessment has been made on the lands of the complainants, which must probably produce a total sacrifice of the property assessed, unless they can obtain relief, either in this court or the Legislature. Judging from the facts before me, I cannot see how it was possible for the Commissioners of estimate and assessment, to have come to the conclusion that the lands assessed, could have been benefitted to the amount of about $14,000 by the contemplated improvement; even upon the principles upon which they proceeded relative to the Bedford Road as a public highway, already laid out and established."

Chief Justice Nelson who gave an opinion in this case in the court for the correction of errors, voted to reverse the decision of the Chancellor, who had taken jurisdiction in this case, and said that the Chancellor had been carried away by the peculiar hardship of the particular case, and added that "these hard cases make bad precedents." What a commentary upon the acts of these "aids of the Court"! Is it to be wondered at that the hardship of this particular case operated upon the mind of the Chancellor, who is himself the father of a family—that he should be moved to pity in such a case? The wonder is that every mind that was acting in this matter in the high court had not been similarly influenced, for it may in truth be said that public sentiment was shocked by the vote given in the Court for the Correction of Errors to reverse the decision of the Vice Chancellor of the first circuit which had been sustained by the Chancellor, and a great surprise was manifested that the Chancellor should have expressed a subsequent opinion that his decision first made, was wrong, and we think this expression of the great Equity Judge, influenced the vote of themembers of the Court, although we make the suggestion with the most profound respect.

The Court say.

"It was objected, that by these proceedings private property would be taken for public use without making just compensation, which is forbidden by the Constitution, (Art. 7. Sec. 7.) But no property belonging to the plaintiff was taken directly for the use of the public; his land does not **even adjoin the avenue** to be opened."

NOTE.—BY THE EDITOR.—The taking of private property for public use is restricted in the section of the Constitution quoted by the learned judge, and that restriction is without any qualification. We addressed an enquiry to a very learned and able jurist, three or four years ago, asking his views upon this provision of the Constitution, and upon the practice under it. His reply is a private letter, and is therefore sealed up against quotations for this public review. We shall therefore give our own views upon this provision of the Constitution, and in doing so, we will remark that they are wholly our own. "Private Property" means all that is called "real and personal estate," or "real and personal property," and the statutes have defined what these phrases mean in the various acts in which they have been used. It is not the mode or manner in which "*the forbidden thing is not to be done*," that the Constitution restricts—but it is that it shall neither be done "directly or indirectly;" that it shall not be done at all—*at all*. The attempt in this case to take General Striker's land, and give it to Ann Striker, the Fietners, the Counsel of the Corporation, the Surveyor, the Commissioners, &c., &c., is doing indirectly what the Constitution forbids, for in this case the Corporation pay these parties we have named, and George Lovett repays the Corporation, and the Corporation gives Lovett a lease (more extensive than any known fee) of General Striker's patrimonial estate, for a lease reaching so far into futurity that it is impious to anticipate it (and while speaking of this we may add that the Corporation have sold land for assessments for the term of two million of years. What trifling with futurity). Now this proceeding of paying the money by the Corporation and taking the money back again from Lovett, and giving Lovett the land of General Striker, is only one proceeding, and the same proceeding, *sealed up*, as the Court have suggested by the *conclusiveness of the lease to Lovett*, for such is the gist of this whole opinion as we gather it. NAPOLEON, in the days of his most extended power in the administration of the civil government, never acted thus, and the humble dwelling of the humble inhabitant of France is still remaining a MONUMENT of the sacredness of private property in that empire, and of the inviolability of the laws of the realm made for its protection; but in the martial operations of that distinguished military chieftan, himself and his aids, both, disregarded the rights of private property. The penalty of this violation is written in the history of the downfall of the Military Emperor, *for the Emperor and the General were one and the same man.*

We have already in this review quoted the remarks of Mr. Justice Story, in his Commentaries, on a provision of the same import contained in the Bill of Rights.

The account of a proceeding in the High Court in the Kingdom of Prussia, not long since, deserves a place in this part of our review, and for which we are indebted to the Albany Daily Advertiser. It is as follows:

"Some time since an effort was made to get rid of a windmill, the close approximation of which to the Royal Palace rendered it in some degree a nuisance, and certainly an eyesore. Overtures were accordingly made to the sturdy yeoman for the purchase of the obnoxious property; but whether it was that the man was possessed of a strong spirit of obstinacy, or was really too deeply attached to his old family habitation, the result was that the offers, though tempting, were again and again refused.

"There are generally some individuals attached to a court who are ready to suggest remedies, direct or indirect, for inconvenience or annoyances offered to royalty. Accordingly, upon a hint from some minion, a lawsuit was commenced against the obstinate miller for the recovery of certain sums alleged to be due for arrears of an impost on that portion of the crown land which it was suggested was occupied by the mill in question. The sturdy holder of the "toll dish" was not wholly without friends or funds, and he prepared vigorously to take his stand in defence of his rights. The question came in due time before the courts of law, and the plaintiff, having completely failed to establish any right on behalf of the crown the miller obtained a verdict in his favor, with a declaration for payment of his costs in suit. This was certainly no small triumph, and merrily went round the unfurled sails of the old mill, and well pleased, no doubt, was the rough owner with the sound as they went whirling and whizzing under the influence of the gale, which certainly seemed to blow strongly in his favor. But he was not the first who has found that when drawn into a lawsuit, particularly with so formidable an opponent, a man is more likely to "gain a loss" than escape scot free. What with extra expenses, interruption of business, and rejoicings after the victory, the miller found himself pressed by considerable difficulties, and after in vain struggling a few months against the pressure, he at length took a manly resolution, gained access to the monarch's presence, and, after roughly apologising for having thwarted His Majesty's wishes, frankly admitted that his wants alone had rendered him compliant, but that he was prepared to accept the sum originally offered for the property. The King, after a few minutes conversation handed a draft for a considerable amount to the applicant, and said, "I think, my honest friend, that you will find that sufficient to meet the emergency; if not come and talk to me again on the subject. As to the mill, I assure you, I will have none of it. The sight of it now gives me more pleasure than it ever occasioned pain; for I see in it an object which assures me of a *guarantee for the safety of my people, and a pledge for my own happiness by its demonstration of the existence of a power and principle higher than the authority of the crown*, and more valuable than all the privileges of royalty."

The same respect for the sacredness of private property is manifested by the King of Belgium, for in the vicinity of the palace of the King is a dwelling which obstructs the view from the windows of the audience room; but that monarch will not tolerate any proceeding to annoy the occupant, to induce or compel him to part with his house, which is his home.

The taking of the property of one citizen, and giving it to another, is not a proceeding recognized by any civilized code, and we trust never will be, and although such a proceeding may meet with temporary favor, yet we trust it will never find advocates in a land which boasts of a written Constitution—of a free government.

Despotism is despotism, in any and every country, whether the government is administered by a King, or a President. The flower which adorns the cultivated garden and gives out its aroma to the morning atmosphere, is as sweet and lovely when called by one name as when called by another, and that bane of civilization, despotism, is oppression and injustice, whether it comes at the hands of Commissioners of Estimate and Assessments, or at the hands of the invading chieftain decked in his tinselled adornings and ornamented plumes.

The court say:

"Upon the assumption that the opening of this avenue would enhance the value of his property, a charge was imposed upon it to pay a part of the expenses thus incurred.

This was local taxation for a local purporse, and to be applied as a legitimate and ordinary exercise of the taxing power. (8 Wend. 101. Livingston *vs.* The Mayor of New-York. 3 Paige 45. Beekman *vs.* The Saratoga and Schenectady Railroad Company.)

NOTE BY THE EDITOR.—Mr. Justice Beardsley says: "Upon the assumption that the opening of this Avenue would enhance the value of his *property*, a charge was imposed upon it to pay a part of the expenses thus incurred." Is this not indirectly taking private property, if the value was not enhanced by the charge, and this charge was imposed by the "aids" of the

court in their judicial capacity, "exercised in a judicial way."

Again the court say: "This was local taxation for a local purpose, and to be applied as a legitimate and *ordinary* exercise of the taxing power." The imposition of taxes is the exercise of a power that does not pertain to a Court. Local, unequal taxation, for making a public highway is a new proceeding, and this avenue is intended for such a road—a great highway to connect New-York with Albany; and to pay for the ground over which it is to pass, the farming land of a citizen is taxed more than its value. This is "local taxation," with a vengeance. It will be seen by the diagram which will be found at the end of this review, that the land of General Striker, did not come within two hundred feet of the avenue, and that it wes entirely shut out from the avenue except by an entrance through a narrow lane. The opening of this avenue was not needed, neither public necessity nor public convenience requires it to be opened. The learned judge himself says in reference to General Striker's land, which is assessed $3,927.00, that:

"His land does not even adjoin the avenue to be opened."

What a commentary this argument of the Court to excuse one proceeding, at the expense of the whole equity of the case. We are very glad to use this piece of argument of the learned judge to illustrate the assessment, and repeat in the language of the court that "his land did not even adjoin the avenue to be opened," and yet is assessed $3,927.00, by "the aids of the court."

The court say:

"There is no constitutional impediment to the imposition of such local taxes. Indeed in most instances the burthens of taxation come in this form.

"In towns, individuals are taxed to make and repair the town highways, and in cities to grade and pave streets. Each town has its local tax to pay town expenses, as also has each county to meet county charges.

NOTE BY THE EDITOR.—The learned judge seems to have lost sight of the very recent decisions of the court on this very point, in which the whole court were agreed. The case we allude to is that of *Sharp* vs. *Speir*, in a Brooklyn case, decided at the January Term of 1843, where the court say: "Our laws have made a plain distinction between taxes which are burdens or charges imposed upon persons or property to raise money for public purposes, and *assessments*, for city and village improvements, which are not regarded as burdens, but as an equivalent or compensation for the enhanced value, which the property of the person assessed has derived from the improvement." This distinction had been made in several statutes long before Brooklyn was incorporated, and was fully exemplified in the matter of the mayor of New-York. (11 Johnson 77.) There several churches in the city of New-York had been assessed for the supposed benefit which they would derive from the enlargement of Nassau Street, and they denied the legality of assessment because it has been expressly enacted that no church or place of public worship "shall be taxed by any laws of this State." But the objection was overuled and the exemption claimed by the churches was denied, on the ground that the assessment could not properly be regarded as a tax. This case apparently goes the whole length of deciding the one now before us. The authority is to sell for a tax, and the defendant shows nothing but an assessment for a village improvement. In *Bleecker* vs. *Ballow*, 3 Wend. 263, the question was upon an assessment for patching and paving a Street, and *Savage* Chief Justice, said "There is no doubt the assessment in question was not a tax, that being a sum imposed, as is supposed for some public object."—*This case is fully reported on p. 249 of this volume.*

If the learned judge had, when practising at the bar, been called upon by a client to draw a lease with covenants for the lessee to pay taxes, he would have used the words ordinary, and *extraordinary*; and why the *extraordinary* if he recognizes every proceeding in assessments and taxes as "ordinary"?—This amount when imposed on the 6th of August, 1836, amounted to the sum of $3,927.00, the interest from that time to the day of sale, was $656,66. The charge of advertising $15; of certificates of sale to the bidder $9; charge of leases executed to the bidder, $12. Interest on the assessment, and interest calculated upon the interest thereon, to the pretended sale, at the rate of 20 per cent. per annum, and interest also on the charge for advertising, certificate and lease at the same rate being for two years $1,847.80, making $6,467,46, Two per cent. interest on the amount of pretended sale, from the expiration of the two years to the present time, $92.36; total, $6,559.82. The land is not worth this sum. Is this, we enquire "*ordinary taxation*"?

We notice in the proceedings in this suit an error in the advertisement for redemption, as stated in the printed case for one of these lots which was the particular property in dispute, is set forth as having been sold for the term of one thousand years for an assessment, interest, and charges, altogether amounting to $2,053.32, when it should have been $2,354.84.

The learned judge has also overlooked the provisions of the very act under which Gen. Striker's land was sold, viz. act of April 12th, 1816, for that act makes a clear and accurate descrimination between a tax and an assessment, a distinction that cannot be mistaken by any person who carefully reads the act, also in Sec. 7 of Chap. 122 of the laws of 1830, in which the words taxing or assessing are used as meaning two distinct proceedings.

The Court say:

"These are all modifications of the taxing power, and quite as obnoxious to a constitutional objection, as is the assessment of lands benefitted by opening a street, to meet the charge of such an improvement."

[NOTE.—BY THE EDITOR.—The learned Judge, we respectfully suggest, errs greatly in the views he expresses in the last preceding paragraph, and discovers a want of accurate knowledge of the odious and abominable character of New-York Assessments.—The accompanying diagram of the land of Anson G. Phelps, Esq., on the 1st Avenue, where both his land is taken and an assessment put upon him; and that of Assistant Alderman Townsend, in the 7th Avenue, is an illustration of taking private property without compensation, and of the exercising of what he terms the **Taxing Power**, which requires no comment, for we cannot make black blacker. County and Town taxes are imposed by per cent. equally on all the property liable to taxation—it is not taking one mans' property and giving it to another, as in these New-York Assessment proceedings.

The Court say:

"These constitutional objections were elaborately argued at the bar. I am aware that adverse judicial opininions have been expressed upon one of them. The objections have received the best reflection I could bestow upon them, and the result in my mind is that neither objection is well taken, and they should be overruled.

"To establish his defence the defendant was bound to prove—

"1. A valid judgement confirming the report of the Commissioners, and thus imposing a charge on the land sold.

"2. A regular sale of the land so charged under the authority of the judgment.

"*First.* The rule as to all courts of limited and special authority is, that the facts necessary to give jurisdiction must be established by proof. No presumption that the court has jurisdiction is indulged, proof of the facts is indispensable.

"In order to give jurisdiction in this case, it was necessary that the Corporation of New-York should have decided to open that part of the Ninth Avenue which has been mentioned, and should thereupon have made, or caused application to be made, to the Supreme Court, for the appointment of Commissioners. Upon such application the court was authorized to act upon the subject, and make the appointment as desired.—(2 R. L. 1813, p. 408, 409, § 177, 178.)

[NOTE.—BY THE EDITOR.—There is a provision in the Revised Statutes, as follows: "Every public highway already laid out, that shall not have been opened and worked, within six years from the time of its being so laid out, and every such highway hereafter to be laid out, that shall not be opened and worked, within the like period, shall cease to be a road for any purpose whatever. (R. S. Vol. 1, p. 517, § 102, and 99.) This section is a re-enactment of the Revised Laws of 1813, (2 R. L. 277.) The Revised Laws contained exceptions to the operation of this provision, but we have not seen any such exceptions in the Revised Statutes, although it is possible and even probable that there are such exceptions—but there ought not to be.

The Court say:

"Testimony of various kinds were given to establish these facts.

(1.) The defendant's counsel offered an exemplified copy of a rule of the Supreme Court, entered in the Clerk's Office at Albany, on the eighteenth of December, 1835, appointing Commissioners of Estimate and Assessment, in the matter of the application of the Mayor, Aldermen, and Commonalty of the city of New-York, relative to the opening of the Ninth Avenne, between Forty-fifth Street and the Bloomingdale Road, in the Twelfth Ward of the said city. This rule recites that the said Mayor, Aldermen, and commonalty, presented their petition to the court by Robert Emmet, their Attorney, which petition is set out in substance, and states that said Corporation had deemed it desirable to open said Avenue, the same being an Avenue laid out under the Act of 1807, describing the same, and that said Corporation had accordingly ordered the same to be opened, and thereupon praying the appointment of Commissioners; the rule then states, that on motion of Mr. Emmet, of counsel for the petitioners, three persons named were appointed such Commissioners. The exemplification was in due form by the Clerk of the court, at Albany. To the reading of this in evidence, the counsel for the plaintiff objected on several grounds:—that it was not the original order of the court; that if made, the court acted as Road Commissioners, and not as a court, and none of their acts can be proved in this manner. These objections were overruled, and the paper read in evidence, to which the counsel for the plaintiff excepted.

"The defendant's counsel also offered in evidence a like exemplification of said petition, which thereby appeared to have been filed with said Clerk on the said 18th day of December, 1835.

"This was objected to on the ground that the original should be produced, and its execution proved, which it was urged could not be proved by the Clerk's certificate.—This was overruled, and the testimony was received, to which an exception was taken. The substance of the petition has been stated."

Mr. Webster again in his argument in this case, says:

"I now, may it please your honors, proceed to the points in the case; I will say, in

the first place, that some of them I shall leave as having been already alluded to.—The point was raised about the regularity as to the exemplification of the papers, It strikes me that the question is involved in the largest sense. If the court in these assessments, act as a court, and these papers are before them as a court of record, in the custody of their clerk, his exemplification of them is regular. If not, it is proper that the original paper should be produced."

The Court say:

"(2.) Robert Emmet testified that he was counsel for the said Corporation, and acted as such in all the proceedings in the opening of said Avenue; that he first prepared a petition, to which testimony the plaintiff's counsel objected, as it had not been shown that the witness had any authority to prepare it. The witness was allowed to proceed, and testified that he presented the petition to the court, and as the counsel for the Corporation, moved the appointment of Commissioners.

"(3.) Certain resolutions were offered to be read from a book, but the plaintiff's counsel objected, 'that there was no evidence that the book was printed by the authority of the Common Council.'

"Mr. Emmet gave testimony on that subject, and the resolutions were read without further objection. One was approved by the Mayor the 29th of July, 1835, and resolved that the said Avenue be opened, and directed the counsel of the Corporation to take the necessary legal measures for that purpose.

"The other was approved on the 16th of November, 1835, and directed that the opening of said Avenue be carried into effect on the first day of April then next.

"Copies of these resolutions, certified by the Clerk of the Common Council, were also read in evidence, without objection.

"A witness called and examined on the part of the plaintiff, testified that he was Assistant Clerk to the Common Council, and had with him all the papers in relation to opening said Avenue, which were filed with the Clerk of the Common Council, which were a petition, remonstrance, reports of committees, and the aforesaid resolutions.—These papers were read in evidence. It appeared that the approval by the Mayor of the resolution of 29th July, 1835, was written on the remonstrance, but all the papers were attached together, and in that form sent to the Mayor, and came back with his endorsement, "Approved, July 29, 1835," signed by the Mayor, written on the remonstrance, as has been stated. But on the 3d of August, 1835, the Mayor sent a formal message, giving notice that he had approved the said resolution. This witness stated that it did not appear from any entry in the minutes that the resolution had been ordered to be printed, nor that the resolution was passed by ayes and noes.

"An objection was made to the resolution of the 29th of July, 1835, on the ground that it had never been approved by the Mayor, and so was invalid; that the Mayor's approval must be deemed to have been an approval of the remonstrance on which it was written, and not of the resolution thereto attached.

"This objection is merely formal; the papers were together, and the true meaning of the endorsement of the Mayor could not be mistaken. But if it could have been, the message left no doubt on the subject, and was alone sufficient for the purpose."

NOTE BY THE EDITOR.—The learned Judge says: "This objection is mere formal." If written Constitutions and mandatory Statutes are thus to be construed, then there is no use of legislation, and both the Constitution and the Statutes are, to all intents and purposes, a dead letter.

By the 7th section of the first art. of the Constitution of the United States, it is provided that, "Every bill which shall have passed the House of Representatives and the Senate, before it become a law, shall be presented to the President of the United States.—If he approves of it, he shall sign it," &c.

By the 12th section of the first art. of the Constitution of this State, it is provided that, "Every bill which shall have passed the Senate and Assembly, shall, before it becomes a law, be presented to the Governor, if he approve it, he shall sign it," &c.

By the 12th section of the amended Charter of New-York, it is provided as follows: "Every act, ordinance or resolution which shall have passed the two Boards of the Common Council before it shall take effect, shall be presented duly certified to the Mayor of the city for his approbation. If he approve it, he shall sign it," &c. (Chap. 122 of Laws of 1830.

The three provisions above stated can have but one construction, and this a strict construction. If the President of the United States, instead of signing the bill passed by Congress, should sign the Remonstrance presented against its passage, the Constitution would not be complied with, and the bill, if returned before the expiration of ten days, would be a nullity, and the same would be the consequence of a similar proceeding in the Legislature of this State, or in the Common Council of this city. Should the President afterwards transmit a message to Congress, saying that he had signed this particular bill, it would be most certain that he was mistaken. A merchant who sends his customer's Note to the Bank for discount, and should, instead of endorsing his name upon the Note, endorse his name upon the envelope, he would not, by any man of business, be considered as having endorsed the Note, nor do we think the learned Judge would, as a Director of the Bank, consider the name written on the wrapper as a valid endorsement upon the Note, to be discounted on the credit of the endorser. Chief Justice Savage says: "When the Statutes point out a form, that form must be followed, or the Statutes are not complied with." It is true, the Mayors of New-York, between 1834 and 1840, were in the habit of writing their approval of ordinances upon the wrapper, or envelope instead of the ordinances, but difficulties grew up, which showed that this slovenly and unauthorized practice would not do, for the ordinances and wrappers did not always agree. Practice, however long indulged, will not repeal a Constitution, or a Statute. The learned Judge seems to favor the validity of this endorsement of the Mayor's name upon the Remonstrance, as being a valid approval of the Resolution, which Resolution, it would appear, from his not signing it, that he never saw it. Mr. Valentine, in his testimony before the Circuit Judge, says, that the Mayor's message was in the hand-writing of Mr. Williamson, an Assistant Clerk in the Common Council, therefore, we add, he was not a Clerk in the Mayor's Office. This makes the matter still worse, for had the Mayor's Clerk written the message, it would have had some more plausibility about it. The learned Judge will find on pg. 60, of Senate Document No. 100, of 1842, in the appendix of the Report of the Senate Committee appointed by that body to investigate assessment abuses in the city of New-York, several cases where the Mayor approved the confirmation of assessments which had never been signed by the Assessors, and one of them amounted to $43,922.25 The Mayor's name was written on the outside.

What is the presumption in such a case? Would the learned Judge allow the Books kept by an individual to be read in evidence in any suit in support of his claim, after the fact was established that such books were full of errors? We think not.

The Court say:

"It may be that the resolution for opening this Avenue should have been passed by ayes and noes.—(Laws, 1830, p. 126, § 7.) But the statute on the subject is directory, and the act of the Corporatiou is not a nullity because it was not passed in that form. The essence of the thing was that the Corporation should so determine; the manner of ascertaining or expressing that determination was not essential to its validity.—(2 Hill. 20. In the Matter of Mount Morris Square, 9 Paige, 24. Wiggin *vs.* the Mayor of New-York.) And as to the necessity of publishing the ayes and noes, resolutions, &c., as is directed by the above section of the statute it is enough to say, that whether published or not, cannot be material to the question of jurisdiction. Had they been published, the fact need not have been shown to the court when application was made for the appointment of Commissioners. Indeed that application might have been made immediately on the adoption of the resolution, and before a publication could have been made. But the fact is irrevalent to the question of jurisdiction. (See the cases last above.")

Mr. Webster, in reference to this part of the case in his argument, says:

"There is another question respecting the legality of seizing, arising out of the charter, which I cannot omit stating. By the 7th section of the amended charter, it is provided that the boards shall meet in separate rooms, choose clerks, &c., and each board shall keep a journal of its proceedings. The doors shall be open, except when the public welfare requires secrecy, and all resolutions or reports of committees which shall direct any improvement involving an appropriation of public money, or taxing or assessing citizens, shall be published immediately after the adjournment of the board, in all the papers employed by the corporation; and it goes on to say that the question, in all such cases, shall be taken by ayes and nays.

"There has been some difficulty in the conclusion of a separate provision. I confine myself to this one,—the matter of publishing the report or resolution appropriating public money, levying tax, or laying assessments. It is agreed that this was not done. There is no proof that it was so, and it is said it was never done. Here was a resolution and a report, recommending this improvement. Why was it not published?—Here was a solemn injunction on the city government, emanating from the highest authority of the state. Two answers were given. It is said this report and resolution did not fall into the category—because the report recommends a distinct improvement,—it does not mean to apply to cases where public money is paid out of the treasury, or to assess the whole of the people to replenish that treasury. I have two answers to that, in either of which I may rest this part of the

case. One is allowed by the counsel himself, because he said in his argument that this improvement did involve the appropriation of public money, for the moment the report of the commissioners awarding the owners was made, that moment they had a claim on the public treasury. This city itself is liable for the sum awarded to the owners for land taken for public improvements, and an action may lie for it. It could only be paid by an appropriation out of the public money, because the man to whom an award is made is not obliged to wait a day for it, although to be finally paid out of his neighbor's property. The moment the report is confirmed, it necessarily involves an appropriation of public money. This answer, then, I trust, is a good one, for I am indebted to the learned counsel for it. But I have another, equally respectable, but higher in authority. I mean your honorable court. Your honors say taxing is not assessing. In the Brooklyn case of Sharp v. Spear, this court said it is a matter of settled law that there is a difference between the term tax and assessment; that one was peculiar to the improvement, and never applied to public tax. If the term assessing be used, and there be a settled signification to it, it is to be presumed it will be allowed, for sure, sure, your honors, why should we refuse this to another part of the case. They say it is important to the public to know how taxes are placed, not the individuals, who are taxed out of their fortunes. This tax, every body finds out, by some means or other, as soon as he desires. But this assessment, which is laid on behind a man's back, he has no interest in its being made public! Strange! Strange, that that object should be the one, according to the argument, which the statute does not include. Then this is involving appropriations, and the proceeding means just what the statute says, and the resolution should have been passed as the statute requires. But there is another point. It is said that these injunctions are only directory! not made to be considered peremptory as to conduct, but only directory. It would be very strange if in laying down a statute of rules which permit others by summary process to take away a man's property the most vital of those rules should be observed, or not observed, by those interested. What is the value of this provision in the charter if only directory? What was the object? Was it merely as a matter of curiosity that the public might see the proceedings? and as to the ayes and nays was it only to read, as we would the proceedings in congress, to learn the opinions of the members. I have read the discussions of those who have formed that charter. They said it was that the individual interested may know what is done affecting his interests. The propositions in this part of the charter were drawn and prepared by the citizens of New-York. They sought security against those assessments, and they found their security in these ayes and nays, so that they might have a chance to be heard. The whole argument has proceeded on a hypothesis which overlooks the main ingredient in the case. They are to be published to give notice when it is done. The provision in the statute is perfect, that while these things are under consideration of the council they shall be published. Any resolution or report recommending expenditure involved in an improvement shall be immediately published on the adjournment of the board. It could not be acted upon as a principal of law, and finally disposed of, unless it be published for the benefit of those interested. This report was adopted on the 20th of July. It lay without having received the sanction of the Mayor till the 29th of July. The requirement of the statute is, that the report and resolutions proposing it should be published immediately, and Mr. Striker was entitled, among the rest, to these nine days to know how he might protect himself. If the case were doubtful, 10,000 reasons stand up to demand that the proclamation should be made. The man has no notice. He is proceeded against to the forfeiture of his freehold. In the act of 1813 he has no other notice. Is not this to be construed favorably, particularly where those who are interested should have the earliest notice. In the 1st Burroughs, respecting the appointment of overseers of the poor. In this case the 43d Elizabeth related to the number of persons who should be appointed overseers. Among other remarks the ground was taken this provision of the statute was merely directory, and might be disobeyed, but the court said not. They said the 43d Elizabeth is the great magna charta of the poor law system, and lays down a course of proceeding which must be observed. I do not think we are allowed to consider any one of these provisions as merely directory. They are all essential to be observed, and all requisites of law, because they arise under the law. This is one of the great fundamental maxims of the regulations of the corporation, and it would be dangerous on general accounts to disregard such regulations, on the ground that they are not requisite, but only a bye law. And what realization of the sentiment entertained by the convention will it be to say that they should not be published after all. Another ground in that case, was the court holding that the parish had an interest in paying less rather than paying more, and as it was an interest to which others were concerned, it was not directory but binding.

"My learned friend argued, in the next place, these proceedings must be regarded as having been confirmed by your honors—that we could not go beyond the order by which your honors accepted and confirmed the report. I suppose a great deal of time need not be consumed in that part of the case. Acting upon the report has nothing at all to do with the proceedings of the common council. They were never brought to you for confirmation. No law requires them to be submitted to the court at all. The first that the court knows of such a proceeding is that the improvement has been decided upon, and that the assessment has been voted to be made, and your honors are asked to execute the statute duty of appointing commissioners. That is all. The petition says that it is necessary for the public convenience to open the avenue, and after some other recitals they say that they have ordered the said avenue to be opened, and they therefore ask this honorable court to appoint commissioners of valuation and estimate to assess the property. The court has nothing to do in the world with the appointing of these commissioners. How can your honors approve? How can your honors approve what the legislature of this city has done? They proceed as a legislature and expect their acts, even if invalid, to be passed by this tribunal. These observations dispose of that branch of the argument which respects the right to sell, the validity of the proceedings, and supposing the law as constitutional under which Mr. Striker lost his patrimonial inheritance."

NOTE BY THE EDITOR.—We will illustrate Mr. Webster's argument by giving some of the debates in the Convention, and some extracts from the address of the Convention to the Citizens, and will premise these by saying that Judge Beardsley introduces on this point some extraordinary doctrine and refers to cases which he names. All these cases are to be found in this volume, but we are not aware that any of them favor his conclusions, or "*that an application might have been made immediately on the adoption of the resolution, and before any publication could have been made.*"

We are familiar with all the New-York Assessment Laws, and those which regulate the proceedings of the two separate Boards, which compose the Common Council, and we know of no means of making such a speedy application, without trampling down all law and order in the matter.

If the learned Judge will look at the proceedings of the City Convention, in 1829, which formed the amended charter, he will find the following:

"In the month of May, 1829, the citizens of New-York, at an election held in the different Wards, elected by the ballot sixty-five delegates (five from each ward,) to form a convention to amend the City Charter.—These delegates met in convention in June, 1829. In the Journal of their proceedings, as published with Kent's notes on the Charter are the following doings as to *Assessments and Taxes.* These deserve a careful reading.

"IN CONVENTION, July 23d, 1829.

"Mr. John Duer offered the following additional section to come in between sections 9 and 10, as reported by the committee.

"Every law, ordinance or resolution, which shall be introduced in either Board, and also every report of a committee recommending any public improvement, or any appropriation of public monies, *shall be published without delay in all the newspapers employed by the corporation.*

"Mr. M. M. Noah offered the following amendment:

"And all reports of committees which shall recommend any specific improvement, involving the appropriation of public monies, or taxing or assessing the citizens of said city, shall be published immediately after the adjournment of the Board, under the authority of the Common Council, in the daily newspapers.

"Mr. Whiting moved that the further consideration of the 9th section be, for the present, postponed.

"The chairman having put the qnestion on the motion, it was determined in the negative.

"Mr. Duer then moved, that the consideration of the additional section offered by him, and also of the amendment thereto, offered by Mr. Noah, be postponed.

"The chairman having put the question on Mr. Duer's motion for postponement, the same was determined in the affirmative."

JULY 29, 1829.

Mr. Noah made a motion, that the committee of the whole do re-consider the 6th section of the report of the committee of fourteen; and the chairman having put the question on Mr. Noah's motion, the same was determined in the affirmative.

"On motion of Mr. Noah, the committee of the whole then proceeded to cousider the said 6th section offered by him in convention on the 23d instant.

"Mr. Hedley made a motion to amend the amendment of Mr. Noah, by adding after the word 'Board' in the third line thereof, the words, '*in one or more of the daily newspapers*,' and to strike out in the last line the words '*in the daily newspapers.*' Whereupon Mr. Noah assented to the said amendment for striking out.

"Mr. Stephen Allen made a motion to amend the amendment offered by Mr. Noah, by adding after the word '*all*' in the first line, the words '*resolutions and.*'

"And the chairman having put the question on Mr. Allen's amendment, the same was determined in the affirmative.

"Mr. Van Buren made a motion to amend the amendment of Mr. Noah, by adding at the end thereof the words '*in all the newspapers employed by the corporation.*'

"Whereupon Mr. Hedley withdrew his amendment.

"Mr. John Hone made a motion to amend the said amendment of Mr. Noah, by adding at the end thereof the words '*and whenever a vote is taken in relation thereto, the ayes and noes shall be called and published in the same manner.*'

"The chairman having put the question on Mr. J. Hone's amendment, the same was determined in the affirmative.

"The chairman then read the 6th section as amended in the following words:

§ 1. "6. *The Boards shall meet in separate chambers*, and a majority of each *shall* be a quorum to do business. Each board *shall* appoint a president from its own body, and *shall* also choose its clerk and other officers, determine the rules of its own proceedings, and be the judge of the qualifications of its own members. Each board *shall keep a journal of its proceedings*, and the doors of each *shall* be kept open, except when the public welfare shall require secrecy; *and all resolutions and reports of committees which* SHALL *recommend any specific improvement involving the appropriation of public monies, or taxing or assessing the citizens of said city,* SHALL *be published immediately after the adjournment of the board, under the authority of the Common Council, in all the newspapers employed by the Corporation; and whenever a vote is taken in relation thereto, the ayes and noes shall be called and published in the same manner.*"

"SEPT. 28, 1829.

"Mr. Philip Hone offered the following resolution:

"Resolved, That the committee appointed under the third resolution of the proceedings of this day, be *instructed to prepare an address to the people, explaining the provisions of the act now to be adopted*, and urging their sanction to the same."

"The President put the question, shall this Resolution pass? and it was determined in the affirmative."

We make the following extract from the address of the Convention, signed by Stephen Allen, Peter A. Jay, Gulian C. Verplanck, Philip Hone, John Duer, John M. Bradhurst, Saul Alley, John Morss, and 49 others, which is to be found on pages 241 to 244 of this volume, as follows:

"*It is designed to prevent the hasty or careless hurrying through of measures involving important interests of the city, of individuals, upon partial representations and imperfect information, before either those Citizens interested in the subject, or the public, know that such measures were in contemplation. This has heretofore repeatedly occurred; and been a well grounded cause of serious complaint.* By requiring the successive sanctions of two separate boards, public opinion will have time to operate upon every measure, *private interest will be deliberately weighed and protected*, information will be communicated, and the careless or ignorant decisions to which all legislation is subject, if they occur in either body, may be corrected on maturer deliberation in the other.

"As a still further guard against such evils, it is proposed to exclude the Mayor from the ordinary deliberations of either branch, but that *all acts of the Common Council*, when passed by both boards, shall be presented to him for his approval, which, if he does not sign, he shall return with his objections in writing; and after an interval sufficient for the consideration not only of the Corporation but the Citizens at large, on the validity of his objections, the act or ordinance is to be re-considered, and cannot become a law unless a majority of all the members elected to each board *shall record their names publicly in its favor.* Thus the Mayor may become a most useful sentinel, not only against corruptions and private views (should such at any time infest our city councils,) but against, what is of more frequent occurrence, the inconsiderate adoption of ill-advised measures, on the authority of a Committee, or on the partial representation of interested individuals. Checks of the same or a similar nature have been provided in many of our constitutions, and experience has shown their effect to be most salutary.

"*Another guard of the City Treasury is provided by recommending that all bills or resolutions involving the appropriation of public monies or imposing burdens on the Citizens, either by general tax or local assessment, shall be immediately published in the newspapers; and whenever a vote shall be taken thereon, the Ayes and Noes shall be called, and the Names of the members, with their Votes, shall be Published.*

"*This, it is trusted, will secure at once due publicity and notice to all concerned, and the strong influence of personal responsibility on the vote of every individal member.*

"Thus, should those amendments be accepted, all laws and ordinances must successively pass the Board of Aldermen and that of Assistants, and then receive the consideration of the Mayor. All matters of executive administration and disbursement of public monies, will be managed by experienced and responsible officers, specially charged with such business, *acting under the direction and supervision of the Mayor and Common Council. All propositions involving assessments or burdens upon individuals, will be brought to the knowledge of those interested, so as to give them a chance of being heard.* All other expenditures and appropriations of the common funds and property of the city, or to be met by city taxes, will be guarded against abuse, and regularly made public, by all the precautions which the experience of this and other cities, and the example of our state and that of the federal government could suggest.

"If, therefore, these amendments are attentively and candidly considered, they will be found to be simple and consistent, keeping always in view one great object—that of preserving the principle of republican representation pure and unimpaired by excluding from the city councils all inducements to the adoption of any measure for personal objects; all temptations to waste or profusion, or abuse of power. The aim at imposing strict accountability on all officers, at preventing hasty or ill-formed decisions, and above all, at continually bringing all the measures of the city government, its management of the city revenues, and of the various interests, private and public, within its control, under the constant inspection of the people themselves. Careful and deliberate legislation, strict accountability, judicious economy, *and perfect publicity*—these are the remedies which the Convention have sought against the evils and abuses to which all wealthy city governments are subject, *of which this City has felt its share, and of which the public voice has, at different times, loudly complained.*

"In the trust that the proposed amendments will accomplish these desirable ends, they are now respectfully and earnestly recommended to the adoption of the people.

"On all foregoing points, the Convention were nearly unanimous; but upon the question of the term of service of the Alderment, the members were much divided in opinion. They therefore considered it proper to submit that question to the people for their decision, on the separate vote of "one year" or "two years."

"The Convention respectfully recommend to the Citizens to hold meetings in their respective wards, before the approaching elec-

tion, to express their views in regard to the proposed amendments, and to take such measures as may be expedient for their adoption."

"In CONVENTION—SEPTEMBER 28, 1829.

"Resolved, That the Members of this Convention who are present, and also those who are absent, who approve the amendments to the City Charter, sign the same as engrossed.

"Done in Convention, at the City Hall, in the city of New-York, the twenty-eighth day of September, in the year one thousand eight hundred and twenty-nine, and of the independence of the United States of America, the fifty-third.

"In Witness Whereof, We have hereunto subscribed our names.

"WILLIAM PAULDING, President,
and Delegate from the Fifth Ward."

NOTE BY THE EDITOR.—What a commentary these extracts from the address of the Convention, are upon that portion of Mr. Justice Beardsley's opinion! Yes—what a commentary!!

We now come to an important judicial opinion given by one of the ablest Equity Judges in this land. The extracts which we make from this opinion, the whole of which is to be found on p. 67 to 77, inclusive, of this volume, are a valid endorsement to our commendation, as follows:

"The part of the 7th section involving the question is as follows: 'All resolutions and reports of committees, which shall recommend any specific improvement involving the appropriation of the public moneys, or taxing or assessing the citizens of the said city, shall be published immediately after the adjournment of the board, in all the newspapers employed by the Corporation. And whenever a vote is taken in relation thereto, the ayes and noes shall be called and published in the same manner."

"It is necessary to settle the precise meaning of this clause not only by a philiological dissection, but by examining the object of those who adopted it. I shall break it into all the propositions of which it seems susceptible. There are two distinct branches of it. In the first place it may mean, that all resolutions as well as all reports, recommending an improvement involving the application of public moneys, shall be passed and published in the mode directed. This construction has this difficulty: that a resolution properly does not *recommend* an improvement, which a report of a committee does, but enacts it, or directs an inquiry.—It is, however, in exact conformity with the section as originally introduced into the convention. [See p. 156 Kent's Charter.

"A second reading is this: *First*, all *reports* recommending a specific improvement involving the appropriation of public moneys must be so passed and published. *Next*, all resolutions involving the application of public moneys, must be in like manner passed. If this is the true meaning, then a resolution respecting a specific improvement not leading to the expenditure of public money is not within the clause; but a resolution, whether relating to such improvement or not, is within it, if such expenditure is involved.

"The second branch relates to taxing or assessing the citizens. Here, also, there may be several interpretations. One is, that the clause refers to resolution, or report, or both, recommending an improvement involving [*the*] taxing *or* assessing the citizens. Another, that it refers to a resolution involving such taxing or assessing, irrespective of any improvement. And a third that it relates only to a resolution directly taxing or assessing citizens."

"The last construction cannot be sustained. I have before shown that the power to tax is nowhere specially granted, and that the Bill of Rights forbids it without the assent of the Legislature. An assessment directly laid, is similar in its nature to an imposition within the Bill of Rights. The annual application to the Legislature, and the annual law passed authorizing a general tax, show conclusively that this action was not referred to.

"But if it is interpreted to mean a resolution *involving* the taxing or assessing the citizens, there are several cases in which it would apply in a broad extent.

"For example, to the annual resolution to apply for a tax law which specifies the sum to be raised. And two striking illustrations may be adduced of this—one before the new charter, and one afterwards. A resolution was adopted in March, 1821, for erecting a public market between Fulton Street and Crane wharf—that $15,000 be raised annually for ten years by tax, which, with the income of the market, should be applied to pay the debt created for the purpose, and that the Legislature be applied to for a law authorizing it. [See Corp. Ordinances, 149 Ed: 1839.] Another was after the Corporation had obtained the Fire Indemnity act, an ordinance was adopted that application be annually made for power to raise $25,000 by tax, for the redemption of the stock.

"It may be remarked, that there is certainly less reason for such a provision, where the Legislature is to be applied to for the specific purpose of authorizing a general tax upon all the citizens, than where the Corporation is acting under its ordinary powers. Publicity is obtained in the former instance by the notice required by the act of the Legislature of 1818, re-enacted 1 R. S. 150, § 1.

"Nor does it seem consistent with the provision, or the object of its makers, to hold it applicable to cases only of such a general tax upon all the citizens. In the address of the members of the convention, they speak of it thus: "All propositions, involving assessments or burthens upon individuals, will be brought to the knowledge of those interested, so as to give them a chance of being heard."

"But in fact, if we adopt the most limited meaning which can be reasonably urged, viz: that the clause applies to resolutions involving the expenditure of public money, or the taxing or assessing the citizens at large for specific improvement, then there is not a case in which in contemplation of law and consequently in fact, an opening or alteration of a street, or pitching and paving it, or the making of a sewer, may not involve such an expenditure or such a charge. In opening streets, if the improvement is below the line of the map of 1807, one third of the value of all buildings on the premises may be assessed upon the Corporation, and if within the map one third of the value of such buildings as existed before it was filed. In every case, property belonging to the city is assessed, where that of individuals would be.

"It strikes my mind as too plain for cavil, that the provision covers every resolution relating to an improvement for which public money may be requisite through the effect of an existing law, and every resolution through which the citizens, or any class of them, may be assessed for improvements.—I know of no other construction adequate to the object, or cosnsitent with the spirit of the section.

"What was the object? In the language of the address before cited, 'careful and deliberate legislation, strict accountability, judicious economy, and perfect publicity. These are the remedies which the convention have sought against the evils and abuses to which all wealthy city governments are subject, of which this city has felt its share, and of which the public voice has at different times loudly complained."

"And for the securing this object, they provided, that in the cases of such resolutions, they were to be immediately published in all the newspapers employed, and that whenever a vote was taken relating to them, the ayes and noes should be called and published in the same manner. And thus they deemed, "would be secured at once publicity and notice to all concerned, and the strong influence of personal responsibility upon the vote of every individual member."

"The framers of this charter had, it is to be supposed, the constitution of the United States in view in adopting this provision as to the ayes and noes. By that, the ayes and noes shall, at the desire of one fifth of those present, be entered on the journal.—In our own constitution, if a bill is returned with objections, the votes of both houses shall be determined by ayes and noes, and the names shall be entered on the journal. By a rule of the Assembly, upon a division, the names of the voters shall be entered on the minutes upon the requisition of any ten members.

"In speaking of this provision of the constitution Judge Tucker says, 'In a representative government it is of the utmost importance that the people should be informed of the conduct of their delegates, individually as well as collectively. This purpose is fully answered by the rule spoken of. But to prevent a call of the ayes and noes too frequently, as is said to have been practised in the former Congress, the constitution has set reasonable limits to the exercise of the power, by requiring one-fifth, of the members to concur in it.' (1 Tucker's Black. 205 App.]

"Thus the convention and Legislature were not content with requiring the call, and the usual entry on the minutes which follows; but they also prescribe that the names shall be published. Now can it be possible that this provision was introduced thus expressively and imperatively, only to declare that in these instances the ayes and noes should be called if any member chose to demand them? Is it to be imagined that in these two selected cases, and in these alone, those grave bodies, the convention and the Legislature, meant no more than an admonition to do the act? Again, when this charter thus ex-plicity directs that every such resolution shall be published in all the newspapers employed by the Corporation, what did it mean? Did it mean that this need not be done unless demanded; that the performance or neglect of it was a matter of pure indifference; that if any member required it, it might be done, and if no demand was made, it might be omitted? Nay further, that if the requisition was made, it might be denied; for the right to refuse stands on the same basis of construction as the right to neglect? Can it be within the range of imagination, much less of argument, that the convention passed through this idle pageantry of legislation, in prescribing this act to be done, and then left its performance at the mercy of custom or caprice? They knew the summary process given by the law for taking away the citizen's property. They knew the vast powers of the Corporation over the subject.—They anxiously adopted these provisions as safeguards against neglect, as securities for caution, as methods of publicity, and as restraints upon recklessness: and yet the construction is that they left them to be broken down and contemned by that very body against whose heedlessness or encroachment they were reared. The supposition shocks every doctrine of the common law. It violates ever principle governing the action of municipal Corporations, clothed with speeial power for special purposes. It tends to the perpetual encroachment of those constituted and inferior bodies upon legislative authority; and it generates disregard and contempt for private property and interests. It begins in convenience, grows into a custom, and terminates in the defence of usurpation as a right.

"But it is urged that the clause is only directory. The meaning of this phrase is said to be, that while a particular direction of a statute is proper to be observed, its neglect is not fatal to the act done under it. The omission then not being material, the direction need not be pursued. As has been justly observed by counsel, it is then discretionary. This is a solecism in law as well as in terms. The true solution of the matter is this. Provisions are sometimes not essential, where the statute in question has itself upon a reasonable construction shown that it was not intended by its makers that the direction should be strictly and to the letter obeyed; that some equivalent act, or some substituted act, would suffice; or it is a case where the parties to the neglect seek to profit by it, or where the rights of innocent strangers are to be prejudiced.

"But before proceeding to the cases upon this subject, two important principles must be noticed. Each of them bears strongly upon the point.

"*First*,—The political and municipal power conferred upon the Corporation must be strictly pursued. It must be restricted to what is expressly granted, or necessarily implied; and the mode of executing a power prescribed in any statute must be rigidly followed. I shall advert to only a few cases upon this point. The language of Chief Justice Thompson in *The People vs. The Utica Ins. Co.* [18 John, 382,] is the text in our courts upon this topic. 'Incorporated companies have no rights except such as are specially granted, and those that are necessary to carry into effect the powers so granted. The specification of certain powers operates as a certain restraint to such objects only, and in an implied prohibition of the exercise of other powers.' This has been sanctioned by Chief Justice Savage in *The Firemen's Ins. Co.* vs. *Ely*, (2 Cowen, 709,) and by Chief Justice Nelson in the The *People* vs. *The Manhattan Co.* (9 Wendell, 384) "A Corporation can make no contracts and do no acts except such as are authorized by its charter, and those acts must also be done by such officers or agents, *and in such manner*, as the charter authorizes.' (Bank of Augusta vs. Earle, 13 Peters, 587.)

'Corporations created by statute must depend for their powers, and the mode of exercising them, upon the true construction of the statute.' (Runyon vs. Coster, 14 Peters, 122) In *Williard* vs. The *Warden &c. of Killingsworth*, (8 Con. Rep. 247,) it was said, "The borough and the town are confessedly inferior corporations. They act not by an inherent right of legislation, like the Legislature of the state, but their authority is delegated, and their powers therefore must be strictly pursued. Within the limits of their charter their acts are valid, without it their acts are void." Hence a vote of a town abridging the right of taking shell-fish in a free fishery was void, unless the meeting at which such vote was passed was specially warned for that purpose.—(See also 5 Con, Rep. 391.)

The case of The *Dublin Corporation* vs. The *Attorney General*, (9 Bligh, N.S. 395,) is a striking example of the rule that corporations must be restricted within the definite limits of the statute giving them power.—The Corporation of Dublin seized of a water course, was authorized by acts of Parliament to impose water rates on the inhabitants for the purpose of improving the supply. It was held that such rates could not be applied in discharge of debts incurred under a by-law for improvements made before the passage of the acts, although for the improvement of the course, nor in compensation of new or old officers. The case of The *Attorney General* vs. The *Corporation of Galway*, (1 Beatty, 298,) is similar.

"A second rule, equally inflexible, is that every act which is to divest an owner of his property without his consent, must be construed strictly, and rigidly pursued.

"In *Van Horne's Lessee* vs. *Dorrance*, (2 Dall. 316,) Patterson, J., said, "A statute should never have an equitable construction in order to overthrow or divert an estate: and every statute derogatory to the right of property, or that takes away the estate of a citizen ought to be construed strictly."

"In *Van Winkle* vs. The *Railroad Co.* (2 Green's N. J. Rep. 162,) the court say, 'A special authority delegated by an act of the Legislature to particular persons, to take away a man's property and estate against his will, must be strictly pursued, and must appear to be so upon the face of the order.'

"Upon the subject of such provisions as are termed directory, Justice Story observes, 'That some of the provisions of the Charter and by-laws may well be deemed directory to the officers, and not conditions without which their acts would be utterly void, will not be disputed. What are to be deemed such regulations must depend upon the sound construction of the nature and object of each regulation, and the apparent legislative intention. If a regulation be merely directory, then a deviation from it, though it may subject the officers to responsibility both to the government and to the stockholders, *cannot be taken advantage of by third persons.*' *(Bank U. S.* vs. *Dandridge* 12 Wheaton, 81.) There the charter prescribed that the cashiers should give a bond satisfactory to the Board of Directors. A bond was given, the subject of the suit, by a cashier and sureties. He had long acted as cashier. It was objected that there was no record of such satisfaction, and held untenable. This position was approved of by Justice Cowen, in *The Matter of M. & H. R. R. Co.* (19 Wendell, 136,) where it was held that the taking of an oath '*well* and faithfully to perform the duties of the office of inspectors,' instead of the oath prescribed by statute, 'to execute the duties with strict impartiality, and according to the best of their abilities,' was not ground to set aside an election. This oath is prescribed in the general statute, [1 R. S. 605,] not in the charter. The court appear also to adopt the position that if the oath had been omitted, it could not have been taken advantage of; citing several cases where it was held that such an omission shall not prejudice strangers, nor be taken advantage of by strangers. Justice Story says in another case, "that it is an established rule, that where the Legislature mean to impose a positive and absolute duty, and not merely to give a discretionary power, the word *may* should be construed *must.*" [1 Peters, U. S. R. 64.] In Plowden 206 b, it is said, "when a staute limits a thing to be done in a particular manner, it includes in itself a negative, viz. that it shall not be done otherwise."

"In the *King* vs. *Bagshaw*, [7 T. R, 363,] it appeared that power was given to

trustees of a turnpike company incorporated by act of Parliament to widen and turn any part of the road through private grounds making satisfaction to the owners, with whom they might contract and agree. The statute then enacted, that if any person interested in such lands, *upon notice* to him given, should, for twenty days, neglect or refuse to treat, or should not agree, then the trustees shonld cause the damage to be inquired into by a jury, and upon the ascertainment by a jury. the amount so assessed was to be paid to the owners," &c. The trustees made a new road through the close of the defendants. They tendered the sum of £100, which was refused, and then summoned a jury, who assessed the damage at £100; upon which the trustees made their order, reciting the dispute. &c., that under the act a jury had been empannelled, who had heard counsel and evidence, and had assessed the damage at £100, which they therefore ordered to be paid to the parties. The proceedings were removed by certiorari. Upon a motion to set the assessment and verdict aside, the court said, that notice to the parties interested was the foundation of the proceedings below; and that, therefore, it should have been stated; for if no notice were given, the trustees had no jurisdiction; and with respect to counsel having been heard, it did not appear that counsel for the defendants had been heard. The rule was made absolute.

"In the *King* vs. *The Mayor of Liverpool*, [4 Burr, 2244,] the application was made upon a certiorari to quash an inquisition of a jury, under "an act to enable the Corporation of Liverpool to make a grant to Sir Charles Moore for liberty to bring fresh water into the town." The jury had determined that there should be paid to the owners and occupants of the lands mentioned in the inquisition, the sum of £176 in the proportions therein mentioned. The assignee of Sir Charles Moore was the prosecutor. It was objected, among other things that there was no notice appearing to have been given on the face of the proceedings. The three judges, *Mansfield*, *Aston*, and *Willes*, expressed the clear opinion, that *notice* ought to have been given to the parties interested, and that it ought to have appeared upon the inquisition to show that there was a jurisdiction. Without notice there was none. The inquisition was unanimously quashed. The statute under which this corporation acted, directed that notice should be given twenty days before the inquisition. See also *The King* vs. *The Norwich and Walton Road*, [5, Adol and Ellis, 563.]

"In *Rex* vs. *Cooke*, (Cowper, 26,) an act of Parliament had given power to the Corporation of London to make a road from Blackfriar's Bridge across St. George's Field's. In case of the owners of the soil refusing to treat, a jury was to be summoned to assess the value of the lands, &c. Proceedings were had, and a verdict given, on which the Court of Quarter Sessions gave judgment for a certain sum as the value of the premises and for payment. The judgment was quashed on certiorari on the grounds chiefly, first, that the statute prescribed that "the Mayor, Aldermen, and Commons, in Common Council assembled, had not declared the land to be necessary, as directed in the act, but the Mayor, Commonalty, and citizens. No evidence was admissable to show that the latter were the proper persons. Next that the statute had prescribed a notice in writing, to be given, while the record stated that due notice had been given. Lord Mansfield said "This is a special authority delegated by act of Parliament to particular persons to take away a man's property and estate against his will; therefore it must be strictly pursued."

"In *Wispard* vs. *Wilder*, (1 Burr, 330,) it was held, that under the statute 12 Geo., 1 c. 29, the declaration on a bail bond deed not set forth that there was an affidavit of debt, or that the sum sworn was endorsed on the writ. That the provision in the statute was not in the nature of a condition precedent, but only directory to the sheriff; so that, though the sheriff might be answerable, yet the bond was not void.

"But in *Hill* vs. *Heale*, (2 Bos. & Pull, 196,) Sir James Mansfield, speaking of this case, says, "I should have great difficulty in agreeing with the doctrine imputed to the Court of the Kings' Bench, that the Statute of 12 Geo. 1, is merely directory. I cannot help entertaining great doubts respecting the dictum. The sheriff must see by the writ whether it be endorsed or not; and I cannot think he could justify an arrest without it. But this was merely a dictum, and not necessary to the opinion of the Court."

"In *Hill* vs. *Heale*, [2 Bos. & Pull. 196, N. S.] the question arose under the Bankrupt act, 6th Geo. 2 cap. 30 sec. 23. The act provides that no commission shall issue upon the petition of any creditor "unless the single debt of such creditor shall amount to £100 or upwards, or unless the debt of two or more creditors shall amount to £150 or upwards, or unless the debt of three or more creditors so petitioning, shall amount to £200 or upwards. Then the statute proceeded that the creditor or creditors petitioning for such commission, shall make affidavit of the reality of the debt or debts. This direction is not introduced by the word *unless*, but by the word *and*. In an action by the assignee of a bankrupt, the trading and act of bankruptcy was established, *also debts due* to the petitioning creditors, who were four in number, to the amount of above £200. But in defence the affidavits were produced, in which the petitioners swear respectively; one to a debt of £50 and upwards, another to the same sum and upwards, a third in £60 and upwards, and the fourth £39 and upwards; thus making £199 expressly sworn to; and it was insisted that the commission was void. But it was held that the existence of the debts was a condition precedent, while the provision as to the affidavit was only to regulate the conduct of the Chancellor in issuing the commission. It was irregularly issued, and on that account an application to the great seal could have been made, but it did not render the commission void. The requisition as to the affidavits was but by way of caution, to prevent commission being hastily issued.

"In *Exparte Sneyds* and *The Bank of Ireland*, (1 Molleys, 261,) it was decided that a Corporation might become a petitioner for a commission in bankruptcy, and that the bond might be given by the petitioner, an officer of the company, but the affidavit be made by another officer.

"The statute in force in Ireland is the same as that upon which *Hill* vs. *Heale* was decided. The Lord Chancellor adverted to the impossibility of a Corporation doing some of the things required by the act, such as making the affidavits, and yet that did not prevent them suing out the commission. That the case of Hill vs. Heale was an authority in point, there being a difference between the clauses; one being indispensable and the other merely formal, which the Chancellor might correct if important. He held the irregularity here unimportant.

"I look upon these two cases as plainly illustrating one of the distinctions I have taken. The Statute itself, by the change of its phraseology, in the same section, with respect to two matters, pointed out that the irregularity was not to be fatal, but was the proper subject of correction by the Chancellor.

"In *McCall* vs. *The Bryam Co.* [1 Conn. Rep. 428,] the general rule was recognized, that an officer elected for a year continues in office until another is elected in his place. That the time prescribed for such an election is generally not imperative, but directory, except where there is the expression or implication of a negative.

"In the *People* vs. *Rankle*, (9 John Rep. 156,) it was held that where a Statute directed that one third of the Trustees should be elected annually, and that the election should be at least six days before the vacancies should happen; an election on a moveable holiday was valid, though not a day certain, and it might happen that the election would not be six days before the vacancy.

"In the case of Wicks vs. the town of Lancaster, (1 Rolls. ab. 512,(was cited, deciding that where an election was to be held within eight days after death or removal, yet an election afterwards was good, for the power of election within eight days did not take away the implied power. So a case from Strange [625] is cited with approbation, that though certain aldermen were to be annually chosan, the words were only directory, and the Aldermen held over. But the distinction was noticed where the Statute was, that the officers should hold for one year only, or the election should be on such a day annually. It was doubted whether, under the peremptory word employed, the one third of the Trustees could hold over.—The ground, or the decision was, that the two thirds remaining, the Corporation was not dissolved.

The two cases last cited, *McCall* vs. *The Byram Co.*, and *The People* vs. *Runkle*, obviously rest upon one of the principles I have stated; that the Statute itself fairly admitted the construction that the act, or the mode of doing the act was not prescribed as imperative. The appointment in a Satute of the day of election is presumed to be subject to the known law of holding over, and there must be express words to make the case an exception.

"In *The People* vs. *Allen*, (1 Wend. 489,) the act regulating the militia directed that the commanding officer should, on or before the 4th of June in every year, appoint a brigade court martial. A court martial was not appointed until July, and the defendant was then fined an amount which the suit was to recover. The general rule was held to be, that where the Statute prescribed a time for doing any official act, regarding the rights and duties of others, it was *directory* only, unless the contrary was to be gathered from the Statute. The court rely upon *Jackson* vs. *Hooker*, (5 Cowen,) and *Pond* vs. *Negus*, (3 Mass. 230.) The Chief Justice observes, "There was nothing in the nature of the power showing that it might be as effectually exercised after the 1st of June as before; there was no prohibition to exercise it after that period, and the naming the day was a mere direction to the officer. There is nothing in the nature of the power given, or in the manner of giving it, that justifies the inference that the time was mentioned as a limitation."

"Test the present case by this principle of the learned Judge. Is there nothing in the direction in question, and nothing in the manner of presenting it, that leads to the inference that it was meant as a limitation? It is too clear for discussion, that it was introduced, canvassed, modified and enacted for that purpose—and that alone.

"In the case of *Johnson* vs. *Hooker*, (5 Cowen, 269,) the court held, that a purchaser at a Sheriff's sale who had got his deed, was not to be defeated by the omission of the Sheriff to file a certificate of the sale as prescribed by the Statute. The judgment debtor himself appears to have set up the objection. It is plain, from the Statute, that the intention was to give an opportunity to his creditors, more than himself, to redeem, and to ensure the facility of information to them. He must be presumed cognizant of the proceedings. I apprehended the case would have been different if a creditor, a mortgagee for instance, had got into possession. The answer to the case is, that may justly be inferred the judgment debtor was not the object of the protection given by the section.

"In the case in Massachusetts, (*Pond* vs. *Negus*, Mass. Rep. 230,) assessors were directed to assess a tax for building a school house, within thirty days after a certificate of a clerk that a vote for the purpose had been passed was delivered. An assessment was made for such a purpose after the expiration of the thirty days from the reception of that certificate. It was held valid. The Chief Justice said: "Although the assessors are directed to assess the tax within thirty days after the certificate, yet there are no negative words restraining them from making the assessment afterwards, and accidents might happen which would defeat the authority, if it could not be exercised after the expiration of thirty days. The naming of the time must, therefore, be considered as directory to the assessors, and not as a limitation of their power."

"Thus it could be gathered from the statute itself, (as the law-makers may have forseen the possibility that the direction could not be literally fulfilled) that they meant it as a mere regulation in matter of form, not essential to the imposition.

"No case can more fully illustrate this distinction than that of *The King* vs. *The Inhabitants of Birmingham*, (8 B. & Cresswell, 29.) The consent to the marriage of parties under a certain age, was required to be given by certain persons. The language of the section is explicit. But other sections declared the marriage void where certain other provisions of the Statute were not regarded. The want of consent was not among them. Thus the Statute itself exhibited what was meant for the officiating clergyman to require, and what rendered the marriage illegal.

"And the case of the *The King* vs. *The Justices of Leicester*, (7 Bard Cress. 11) proceeds upon the distinction that the power to fix the time for holding courts belonged to the Sessions, and an act directing the court to be held at specific times was affirmative and not exclusive.

"I have gone through all the important cases cited on the part of the defendants to this point, or which I have discovered.—They fall short of establishing that the provision in question was one that could be neglected without rendering the proceedings illegal. They are all distinguishable upon one or other of the grounds I have mentioned. They arise where there is an implication of a power, and the Statute has not expressly abridged it; where there is just reason for the construction that the Legislature did not mean an imperative rule; or where that body itself, which sets up the omission, was chargeable with the performance.—There are, however, a few very important decisions yet to be noticed.

"And first there is the case of *Thurston* vs. *Little*, (3 Mass. 430,) decided by the Supreme Court within two months after its decision of *Pond* vs. *Negus*. A Statute had directed that assessors of taxes were to make a list for invoice and valuation of the property upon which the taxes were to be imposed, and to keep the same in a book for inspection. The amount of tax was stated in such a book without the list of the items and proportions of the tax. It was held void, and judgment given for the defendant who was sued for his tax. The case deserves attention, for it was urged that the defect arose from the party's own act, who was directed by Statute to deliver a list of his taxable estate; that the uniform practice of the town was here pursued; that the law was merely directory to the officers; that a decision against the custom would throw the Commonwealth into confusion.

"In *Gilbert* vs. *The Col. Turnpike Co.* [3 John. Co. 107,] an inquisition was quashed for not showing on its face a disagreement between the company and the owner of the land taken, and that the judge who appointed the appraisers was not interested; all which was required by the act to give jurisdiction. The Court say 'that this was the case of a special power granted by Statute, and affecting the property of individuals, which ought to be strictly pursued, and appear on the face of the proceedings to have been pursued. This was an established rule, and especially to be maintained in cases which so materially interfered with private rights.'

"In *Van Winkle* vs. *The Railroad Co.*, [2 Green's N. J. Rep., 126,] the statute authorizing lands to be taken, directed notice to be given in a specified manner. The order stated that the commissioners had proceeded upon proof of *due notice* having been given. It was held insufficient. The power was delegated to persons to take away private property without consent, and must be, and appear to be strictly pursued.

"In *Parker* vs. *Rules Lessess*, [9 Cranch, 64,] the question arose upon an ejectment between a purchaser under a sale of land for taxes and the former owner. The case involves the examination of various sections of the act of Congress of July, 1798, [See Story's Laws, vol. 1, p. 549,] and is a strong case to show the necessity of pursuing rigorously the directions of a statute which authorises the sale of property for taxes. It was admitted, says the Chief Justice, that if the preliminary requisites of the law have not been complied with, the collector could have no authority to sell, and the conveyance can pass no title. The advertisements prescribed in some sections were held to be essential before the sale could be made.

"In *Williams* vs. *Peyton Lessee*. [4 Wheaton, 77,] the same doctrine was declared, and the marshal's deed was held not even *prima facie* evidence that the prerequisites required by law had been complied with.

"It should be noticed that in the statute there is nothing but the ordinary directing words, not a clause avoiding the sale, if the provisions are not complied with.

"We must also look at the great distinction prevailing in the books between the case of a company defending itself against a meritorious claim upon the ground of irregularity in its own proceedings, and that company seeking to enforce a demand, the existence and legality of which depends upon the due exercise of its powers. Of the former class are the cases of *Clarke* vs. *The Imperial Gas Company*, (4 Bar & Adol, 315,) *Marshall* vs. *The Corporation of Queensborough*, (1 S. & St. 519,) and *The Queen* vs. *The Trustees of Swansea*, (Reports of cases, &c., 1 Jurist Ed., N. York, p. 126.) The argument of Sir W. Follett in the latter case, contains the true principle well expressed, and is adopted by Chief Justice Denman.

"'With respect to the cases that have been cited, there is one simple answer to them all, that they were cases of a party setting up a particular claim of right or exercising a particular jurisdiction, of which on its being complained of by another party the strictest proof has been required. But in the present case the Trustees put the act of Parliament in motion, and now turn round and refuse the payment on account of some alleged informality." Lord Denman said, "It appears that the Trustees are the persons to set the law in motion under this act, and consequently they ought not to be allowed to take the advantage of objections of this nature. I am not prepared to say the proceedings are not sufficiently set out."

"The case was this. By an act of Parliament power was given to the Trustees to purchase certain lands of T. and S. Benson for the purposes of the charter, and all questions were to be submitted to a jury.—The order recited the summons to the jury, the attendance before them of counsel of the Trustees and of Benson, their verdict in a certain sum, and proceeded to award and adjudge the payment. The objection taken was that it did not appear on the face of the order, that a difference had existed, in which case alone the jury could be summoned.—The answer of Sir W. Follett was this: As the jury could only have jurisdiction in such a case, the existence of a difference must be intended. Justice Littledale adopted this in substance.

"Now what can be more striking than the comparison of this case with that of *Gilbert* vs. *The Turnpike Co.* before cited. The identical objection that the disagreement did not appear on the record, was taken in each case. In the one it was sustained because the Corporation was proceeding against the owner to enforce the order; in the other it was disallowed, because the Corporation sought to profit by the irregularity, See also Green vs. Klienhans, (3 Greens, N. J. Rep. 476.)

"And lastly, a glance at other portions of the statute of 1830 will show the extreme danger of tampering with words so express as these. The direction to meet in separate chambers is part of the same section, made in the same form of words, no more prohibitory than the clause in question, of any other manner of exercising power. No one has yet dreamed that an ordinance passed by the boards assembled together would be valid. I know of no right and of no reason to believe that the convention looked upon this security to the public for wise deliberation, as of more importance than upon the provision in question, as a safeguard for the citizens' property. And the necessity of obeying those mandates of the statute, before an assessment for a qublic improvement can be lawfully made, is established, in my judgment, upon such an immovable foundation that no ability can overthrow or even shake it."

We add to this the Veto Message of Mayor Morris, *which emanated from that intelligent and independent public officer, almost immediately on his entering the mayorality—an act which gained for him great popularity, for it witnessed that he possessed intelligence to discover the path of duty and integrity and firmness of purpose to pursue it:*

VETO OF MAYOR MORRIS.

Document No. 9—Board of Aldermen, June 14, 1841. —The following Message was received from his Honor the Mayor, and ordered on file—Samuel J. Willis, Clerk.

Mayor's Office,
New-York, June 14, 1841.

To the Board of Aldermen of the City of New-York:

Gentlemen—I return to your body the accompanying reports and resolutions and ordinances, viz: Report of the Street Committee in favor of flagging, &c., in Seventeenth Street, between Irving Place and Union Place, and resolution. Report of same committee in favor of paving Ninth Street from avenue C to avenue D and resolution. An ordinance to regulate and pave Washington Street. An ordinance to build a sewer in Morris Street. An ordinance for deepening Storm's basin. An ordinance to pave, &c., southerly sidewalk of Twenty-eighth Street, between the Third and Fourth Avenues. An ordinance for a well and pump in Twenty-third Street.

These were originated in your Board; they have been concurred in by the Board of Assistant Aldermen; and by that body sent to me for my approbation. These direct improvements involving an expenditure of public moneys, or requiring assessments upon citizens, and have been passed without calling or taking the ayes and noes in either branch of the Municipal Legislature. For this omission I am constrained to withhold my approval of them, although there is no objection to the improvement contemplated.

The seventh section of the amended Charter of the city of New-York requires, that, "all resolutions and reports of committees which shall recommend any specific improvement involving the appropriation of public moneys, or taxing or assessing the citizens of the said city, shall be published immediately after the adjournment of the board, under the authority of the common council, in all the newspapers employed by the corporation; *and whenever a vote is taken in relation thereto, the ayes and noes shall be called and published in the same manner.*"

Although some of the legal tribunals of the State have decided that the omission to take the ayes and noes upon the passage of such reports and resolutions, and ordinances does not make them void, while others have maintained a contrary doctrine, still the directions contained in the section of the charter referred to are obligatory upon the Common Council, and under no circumstances should they be disregarded.

These provisions were intended to protect the interests of the citizens, by ensuring deliberation and integrity in their representatives, upon subjects involving either taxation assessment, or an appropriation of public moneys. The authors of the section referred to, wisely determined that the most effectual method to ensure deliberation and honest action on the part of the agent, was to compel him to record and publish his vote; thereby giving to the constituent knowledge of the agent's acts, and exposing each agent to the animadversion of his constituents, when he voted incorrectly.

These provisions of the Charter, if strictly enforced, cannot but prove beneficial to the citizen. It cannot be denied that there are individuals, who may be elevated to office, so singularly constituted as to be influenced in their conduct more by the fear of public censure than by an internal conviction of right, who will vote improperly, and even corruptly, if they can do so without detection and exposure.

To protect the public against the acts of such persons, and to inform the constituents of such acts of the representative, the seventh section of the amended Charter was framed. I conceive it to be the duty of all of us, strictly to enforce observance of every requirement of the City Charter, that uniformly correct precedents may be established; and we may avoid all measures which we have not a clear right to effectuate.

That community is most scrupulous in its obedience to the laws, whose officers and legislators are strict in their observance of constitutional and legal requirements.

Example from those in authority is more important than their adjudications or their precepts.

We therefore should not only enforce, but obey the law.

The City Charter is a Constitution, which we as agents of the people, are bound to obey strictly, not only in its letter, but in its spirit.

Robt. H. Morris.

We deem it proper here to repeat that the application to one of the Justices of the Supreme Court for the appointment of Commissioners of Estimate and Assessment is wholly *exparte*. The compliance with the seventh section of the charter was therefore most important and necessary and without which the proceedings are *absolutely void*.

We are disappointed in not finding in this portion of Mr. Justice Beardsley's opinion some mention of what was said in the matter of 37th Street, in reference to the *ayes* and *noes* in an opinion in which Judge Cowan says: "It has been suggested on several occasions, that the omission to publish the ayes and noes &c. was not vital, but merely the disobedience of a directory provision, *though that question has never been decided*, nor is it necessary now to decide it."

This opinion of Judge Cowen in 37th Street, was given in 1843, and the Mount Morris opinion by Judge Cowen some two or three years previous.

Mr. Justice Bronson, at the May Term of 1843, in the matter of 37th, 39th Street, &c., says:

"The Report and Resolutions of the Committees recommending the opening of these Streets were not published pursuant to the act of 1830, nor were the ayes and noes called when the resolution to open the streets was adopted by the Common Council, Statute 1830, p. 226, §7. These are plain violations of the amended charter, and it is not improbable that they may in some form affect the proceedings of the Corporation."

We have here given the opinion of the court as delivered by Mr. Justice Beardsley, upon the requirements of the *seventh section* of the amended charter, the unanswerable argument of Mr. Webster upon that provision of law, the proceedings of the City Convention showing the why and wherefore it was adopted, the opinion of Assistant Vice Chancellor Hoffman in a proceeding involving that question, and the Veto Message of Mayor Morris to the Board of

Aldermen, in which he states his unwillingness to violate that law.

A careful reading of that section as it now exists, and of the amendments made to it, and of the explanation of its purpose in the address of the Convention to the citizens of New-York, will afford a complete KEY to its construction if a common sense construction of language so plain as that which forms this section should fail to convince.

The first mover of this section in the convention, was Mr. John Duer, one of the revisers of the New-York Statutes. The first amendment proposed to this section was by Mr. M. M. Noah, a man of learning and talent, a citizen of New-York who was familiar with complaints made against certain assessment proceedings without notice; other amendments were proposed by Mr. Stephen Allen, who had previously held the office of Mayor of the City, and who was, at the time the seventh section became a law, a member of the Senate of this State Mr. John Hone, an intelligent merchant of this city, also proposed amendments. The amendments which provided for the greatest publicity, were adopted and those which proposed a more limited publicity, were *defeated*. The class of cases designated by the word "*specific*," instead of the more general word "public" were agreed upon. The *time* the notice was to be given was also specified, viz. *immediately* after the adjournment of *the* board—and that the notice should be under the *authority* of the Common Council, and in *all* the newspapers employed by the Corporation.

We feel a delicacy in discussing a provision so plainly and so clearly expressed and must apologize to the gentle reader by referring to the opinion of the Court on this point as above.

The gentlemen who voted for this section as amended, were men of understanding—men of experience in public affairs—men who were familiar with the English language—and many of them were men of very distinguished legal acquirements. Peter A. Jay and Gulian C. Verplanck voted for this very section, as amended, and also signed the address to the people explaining the provisions of the seventh section.

Mr. Justice Story in his commentaries on the Constitution says:

"§ 400. I. The first and fundamental rule in the interpretation of all instruments is to construe them according to the sense of the terms, and the intention of the parties. Mr. Justice Blackstone has remarked, that the intention of a law is to be gathered from the words, the context, the subject matter, the effects and consequence, or the reason and spirit of the law. He goes on to justify the remark by stating, that words are generally to be understood in their usual and most known signification, not so much regarding the propriety of grammar, as their general and popular use; that if words happen to be dubious, their meaning may be established by the context, or by comparing them with other words and sentences in the same instrument; that illustrations may be further derived from the subject matter, with reference to which the expressions are used; that the effect and consequence of a particular construction is to be examined, because, if a literal meaning would involve a manifest absurdity, it ought not to be adopted; and that the reason and spirit of the law, or the causes, which led to its enactment, are often the best exponents of the words, and limit their application.

"§ 401. Where the words are plain and clear, and the sense distinct and perfect arising on them, there is generally no necessity to have recourse to other means of interpretation. It is only, when there is some ambiguity or doubt arising from other sources, that interpretation has its proper office.—There may be obscurity, as to the meaning, from the doubtful character of the words used, from other clauses in the same instrument, or from an incongruity or repugnancy between the words, and the apparent intention derived from the whole structure of the instrument, or its avowed object. In all such cases interpretation becomes indispensable.

"§ 402. Rutherforth has divided interpretation into three kinds, literal, rational, and mixed. The first is, where we collect the intention of the party from his words only, as they lie before us. The second is, where his words do not express that intention perfectly, but exceed it, or fall short of it, and we are to collect it from probable or rational conjectures only. The third is, where the words, though they do express the intention when they are they are rightly understood, are themselves of doubtful meaning, and we are bound to have recourse to the like conjectures to find out in what sense they are used. In literal interpretation the rule observed is, to follow that sense in respect both of the words, and of the construction of them, which is agreeable to common use, without attending to etymological fancies or grammatical refinements. In mixed interpretation, which supposes the words to admit of two or more senses, each of which is agreeable to common usage, we are obliged to collect the sense, partly from the words, and partly from conjecture of the intention. The rules then adopted are, to construe the words according to the subject matter, in such a sense as to produce a reasonable effect, and with reference to the circumstances of the particular transaction. Light may also be obtained in such cases from contemporary facts, or expositions, from antecedent mischiefs, from known habits, manners, and institutions, and from other sources almost innumerable, which may justly affect the judgment in drawing a fit conclusion in the particular case."

Here is a key to the construction—not what the Convention *intended*, but what they accomplished, and the remarks made by Mr. Chief Justice Savage, in the Court for the Correction of Errors in the Lorillard case in reference to resorting to the Revisor's Notes, in construing the trusts of the Revised Statutes, will apply equally and with the same force of opinion in this case. The doctrine of Mr. Justice Beardsley, in this case is, as we understand him, that "*shall*" means "*may*," or that the word "*shall*" has no meaning or force to it whatever, for such is the result of the conclusion which he comes to.

The proceedings of the Convention were "confirmed" by a vote of the People at the next annual election, and the Legislature passed the Bill which the Convention framed, into a law, and the Governor approved the same. The confirming of the doings of the Convention by the subsequent vote of the People did not make this act of the Convention a "judgment" like as contended for in the confirmation of a Report made by commissioners, by one of the Justices of the Supreme Court.

The Court say:

"Thus the resolutions of the Corporation to open this section of the Avenue, and directing counsel to take legal measures for that purpose, were well proved. Mr. Emmet testified that he, as counsel for the Corporation, presented the petition and made application to the court for the appointment of Commissioners; this fact, therefore, was in evidence, without the aid of the documentary proof offered and received. That rules and orders of court may be proved by copies thus authenticated, cannot be doubted.—(2 R. S. 403, §59, 60. 1 Phil. Ev. 388.)

"The order appointing Commissioners was, therefore, correctly received in evidence.

"It seems unnecessary to inquire whether the petition of the Mayor, Aldermen and Commonalty, as an original document, could in strictness, be proved by an exemplified copy, for independently of that piece of evidence, all the facts necessary to give jurisdiction to the court, were fully established.

"1. The resolutions of the Mayor, Aldermen, and Commonalty to open this section of the Ninth Avenue, and authorizing counsel to take the necessary legal steps for the purpose.

"2. The application of said Mayor, Aldermen, and Commonalty, by their counsel, to the court, to appoint Commissioners.

"3. The court entertained the application and made the appointment accordingly.

"Thus the jurisdiction of the court was proved.

"To show that the judgment of confirmation had been rendered, an exemplified copy of the order of the court, for that purpose was offered in evidence by the defendant. This order sets forth an original report by the Commissioners, and an additional, and further additional report made by them. Lot number ninety is designated and described therein; the plaintiff is named as owner, and the assessment with which it is charged is stated to be two thousand and five dollars; various other matters are contained in these reports, and the rule concludes by stating that, "On motion of Robt. Emmet, of counsel for the Mayor, Aldermen, and Commonalty of the City of New-York, Marcus T. Reynolds, Esq., being heard in opposition thereto, it is ordered that the estimate and assessment be and the same is hereby confirmed." The counsel for the plaintiff objected to reading this exemplification of the order, and of the affidavits set forth in the order. The exemplification was certainly admissable to prove the order, although it may not have been evidence of the authenticity of the affidavits emboddied in the order, nor was it material their authenticity should be proved. There was no error in receiving this piece of evidence.

"The course of the trial virtually admitted that a report had been made as was set forth in the order of confirmation, for the fact does not appear to have been denied or called in question, nor was it objected that the report was defective in form or substance.

"Here then was the proper evidence of a judgment of confirmation.

[NOTE BY THE EDITOR.

This important word "confirmation" cannot be understood by the reader, who is not conversant with New-York Assessments without some explanation. It will be seen by a careful reading of the extracts from the Statutes which we have given in the preceding pages, that the application is to one of the Justices of the Supreme Court, for the nomination and appointment of Commissioners of Estimate and Assessment, and from the Report of the Committee appointed by the Senate of this State to investigate assess-

ment abuses, it appears the nomination is made by the Corporation Counsel who is one of the principal *beneficiaries* in the proceeding, (See Ante. page 380.) the Corporation Counsel nominates these Commissioners from a list made up after the Spring election and kept in the Street Commissioners office. (See Mr. Perrines testimony, Ante. page 391.)—The Judge appoints the men nominated.

This proceeding, as we have before said, is wholly *exparte*. The same counsel subsequently presents to the Court a voluminous Report of these Commissioners, a great proportion of which is a repetition of the same words in almost every paragraph, and this Report, most generally on an *exparte* application, undergoes "confirmation." The confirmation is by one Judge, who, if enquired of, an hour afterwards, could not tell the name of a single person whose assessment he had confirmed, for he neither reads the report, nor does he hear it read, and this Report is put in the Clerk's Office, and kept in a very loose way, as will be seen by the testimony taken before the Senate Committee, (p. 85 of their report,) and by the testimony of John K. Paige, the former clerk of the Supreme Court. (See Ante p. 392.)

The court say:

"We have seen that the court had acquired jurisdiction of the case, and made an appointment of Commissioners, who duly reported on the subject. It does not appear, nor was it pretended, the proceedings had been discontinued, or that the court had in any way lost its jurisdiction of the case.—We need not inquire whether the proceedings of the Commissioners in the performance of their duty, were in all respects regular and in conformity with the directions of the statute. These are not points of jurisdiction. They may have been irregular, so that the judgment of confirmation ought not to have been rendered, or the judgment, for that cause, might have been erroneous.

"But there is a wide difference between an erroneous and a void judgment. If irregularities occurred, they would not render the judgment void, and it is wholly unimportant to inquire whether such irregularities existed or not.

"It was proved not only that the plaintiff in this action made objections before the Commissioners, but that on the final hearing he opposed the confirmation of the report by his counsel, Mr. Reynolds. He was, therefore, to all intents and purposes a party to the proceeding, and bound by the judgment rendered. As to lot number ninety, and so far as respects this suit, the proceedings were *in rem;* but the plaintiff appeared and was an actual party to the litigation; the judgment was therefore binding *in personam.*

"*Second.* The judgment of confirmation was an effective lien on lot number ninety, and a valid authority for its sale; the only remaining inquiry, therefore, is as to the regularity of the sale which was made.

"The principles which accordingly apply to and govern such cases, cannot be better stated than they are by *Bronson*, J. in 4 Hill. 86.—(*Sharp* vs. *Spier.*) Every statute authority, in derogation of the common law, to divest the title of one and transfer it to another, must be strictly pursued, or the title will not pass.

"This is a mere naked power in the Corporation, and its due execution is not to be made out by intendment; it must be proved. It is not a case for presuming that public officers have done their duty, but what they in fact have done must be shown.

"The recitals in the conveyance are not evidence against the owners of the property, but the fact recited must be established by proof *aliunde.* As the statute has not made the conveyance *prima facie* evidence of the regularity of the proceedings, the fact that they were regular must be proved, and the *onus* rests on the purchaser. He must show, step by step, that every thing has been done which the statute makes essential to the due execution of the power.

"It matters not that it may be difficult for the purchaser to comply with such a rule.—It is his business to collect and preserve all the facts and muniments upon which the validity of his title depends.—(Rex *vs.* Croke, Cowp. 26. Williams *vs.* Puyton, 4 Wheat. 77. Rochendorf *vs.* Taylor, 4 Peters, 369, Jackson *vs.* Shephard, 7 Cow. 88. Atkins *vs.* Kurnan, 20 Wendell 241. Thatcher *vs.* Powell, 6 Wheat. 119. Jackson *vs.* Esty, 7 Wend. 148. The People *vs.* The Mayor, &c., of New-York, 2 Hill. 9. Matter of Mount Morris Square, Id. 14, (c.)—These cases, and those to which they refer, will be sufficient to justify all that has been said concerning the necessary requisites for making out a title in the defendant.

"But the application of these principles to this case is, in most respects, precluded by a provision in the statute.

"The lot was sold by the Corporation on the 24th of December, 1838, and the purchaser was *entitled* to his conveyance at the end of two years from that time.

"A conveyance, called a lease, and dated the 14th of February, 1842, was given in evidence. No objection appears to have been made to it on the trial, and the statute declares that "such lease shall be conclusive evidence that the sale was regular, according to the provisions of this Act."—(Laws, 1816, p. 115, § 2. 7 Cow. 88. Jackson *vs.* Shephard. 7 Wend. 149. Jackson *vs.* Esty. 16 Wend. 553, 4. Bush *vs.* Davison. 4 Hill. 86. Sharp *vs.* Spier. 13 Savg. & R. 209. Birch *vs.* Fisher Ib. 370. Stewart vs. Shornfelt. 10 Watts, 208. Peters *vs.* Heasley.)

"The lease proves the *sale* to have been regular, under the authority of the judgment, and but little remains to be supplied by other testimony. Something, however, does remain; for after the sale, and before the expiration of two years from that time, a notice is to be published, as is particularly directed in the statute, (L. 1816, p. 141, §2) as modified by the act of 1840. (L. 1840, p. 274, § 10.) The publication of this notice was essential to the perfection and validity of the title of the purchaser, and it was not proved by the lease. (7 Wend. 148. Jackson *vs.* Espy. 16 Wend. 533. Bush *vs.* Davison.)"

Mr. Webster in his argument says:

"There are two points which it is impossible to get over. The first is the want of all proof at the trial in the court below, that the assessment remained unpaid at the time the proceeding of sale commenced; and secondly the want of all evidence to show the proof of an existing unpaid assessment. The statute requires proof that the assessment is unpaid before the city is authorized to take order for the advertisement and sale of property. That proof was called for and not given, and the judge ruled that the subsequent proceedings were conclusive against plaintiff, and showed the defendant's title. The trial below went on by bill of exceptions and ruling of the judge. I have not found it necessary to go into a previous examination of the rule, because it may be said in general that the judge ruled that the provision in the statute as to the lease being evidence, precluded all question as to previous matters. Now, by the law of 1813, these assessments, when legally made, constituted a lien on the estate, and give a right and use of occupation to any body who would take the land for a certain time and pay the assessment. But the sale takes place, and did take place, under the law of 1816, and I now call the attention of your honors to that law. The 2d section says that whenever and wherever an assessment on any land has been confirmed, and the amount has not been collected, the collector shall make affidavit of his demanding such two several times, and that the party has neglected to pay, or shall make affidavit that the owner could not be found, and then, and in such case, it shall be lawful for the mayor, aldermen and commonalty to take order for advertising the land for sale. In the trial below, these affidavits were called for, or proof that there had been such affidavit, and it was not given. I say that the authority to sell arises in the fact that there is an unpaid assessment. That is the only authority to sell. My learned friend admitted, if there is no tax, there is no foundation for the sale proceeding. Every lawyer knows that the claim there has been unpaid tax. The existence of an unpaid tax is the foundation and if there is no such tax, the proceedings are utterly void. The ruling of the judge below went to the extent that if we had had ten witnesses in court to prove the payment of the tax, they would not have been heard. He said the subsequent proceedings are conclusive. The lease shuts up the whole matter. I contest that altogether. No cases have been found to support such a decision; no symptom of authority in the books has gone the length of entertaining any such proposition as that. I repeat, that this affidavit for the non-payment of the tax, is the statute requisition. It has never been complied with. I know no answer to this but one, and that one will be found to be unsuppported by the rules of law, and the answer is founded on the lease. After the sale comes a lease to the purchaser, Mr. Lovett. That recounts the proceedings in common form. I need not say to your honors. the lease there could be no foundadation. It does not affect the rights of Mr. Striker in any degree. You must look at the statute, and see if the forms have been complied with; and if a mere piece of

paper without legal acquirement can take away the rights of a man in his property.—The statute allows no such thing. Again, if this provision of the statute were unreasonable or ambiguous—if it were capable of two constructions—then this part, like all the rest, if it has two meanings, the one most favorable to the owner is that which must be received.

"What is the expression of the statute? It says that this lease, when duly executed, shall be conclusive evidence that the sale was regular according to the provisions of the act. Well, what is meant in that term sale? Does it mean that the lease itself shall prove an authority to sell? Our learned friend says that they do not insist on such an idea that the sale proves the legality of the assessment: but they may as well argue in my humble judgment, that it is so, as touching the authority to sell.

"The lease is no more conclusive than the fact that the assessment is unpaid. They both touch the authority to sell. My friend asks, what do you mean by sale? What do you mean by sale! Is it the mere act of standing up and asking who will pay this assessment for the lowest term of years—let us have a bid? Oh, no! I say the term sale embraces fairly, and only so, the proceedings when the tax is unpaid. The statute itself makes that clear. The provision to sell succeeds, does not precede, what is said as to the necessary proof of unpaid assessments. It says whenever assessments on land, &c,, and the collector makes demand, and it is unpaid afterwards. The statute goes on as to when sales begin. It says, in that case, &c., your assessments are legal—you have got statute evidence—then in that case it may be lawful to take order for advertising the land in two or more papers, and then go through the process of sale. I say, every thing done by the board of aldermen, or others who are concerned, belong to the sale, the advertisement, and the giving notice, and all such. The case of Clark against Morse, 18 Johnson, in this court, decides that point, and it is but common justice to say that it is a precisely similar case to this. That case was the case of a tax on land. The property assessor of the township had certified to the comptroller that the tax was unpaid, and a sale was made. The party who owned the land sued the purchaser to recover, and the purchaser set up the sale. The law of the state gave the same effect to the lease or deed in precisely the same language that the law gives to this case, but it shall be conclusive evidence of the regularity of the sale, yet the judgment of this court was unanimous in the opinion that the lease proves the regularity of the sale, after the act of selling, but it does not say the proceedings were regular before. It is sufficient authority, prima facie, of the comptroller to execute the deed, that he had a return from the proper officer that the taxes are unpaid. If we had found an oath of the collector, that he had made the demand, and we could show not only that he had not made demand, but that he had been paid, yet the judgment of the court below is that we could not bring in proof, and they, on the other side, are called on for no proof. I suppose the words in the lease are in no way effective.

"My learned friend referred to several cases in the Pennsylvania Reports. I have looked at them. There are two cases in 13th Sargent, which are in point. In one of them the court lays down the law with respect to the necessity of making out regularly, step by step, in all these proceedings. In the other case, the court are called on to consider a statute of 1815, relative to certain lands stated in the law. The law says in express terms that the sale shall be proof not only of regularity of the proceeding, but of the assessment, and yet Judge Duncan did not agree with it. He said it was a great encroachment on private right, as it shuts out the power of giving evidence.

NOTE BY THE EDITOR.—We examined the printed copy of the lease without finding the following clause which originally was incorporated therein, that "*if any mistake or irregularities occur in the proceedings for assessment, collection or sales, on the part of the corporation the sale shall be void, and the purchase money returned to the purchaser.*"

A lease, with such a condition, to be declared "*conclusive,*" is a contradiction on the face of the instrument.

This word "conclusive," seems to be laid hold of with great avidity in all these assessment cases, and if that force should be given to this word of ten letters, that the gentlemen who sustain assessment proceedings insist upon, then the Constitution would become a dead letter.

A very learned counsellor said to us some time ago that in arguing one of the Corporation depredation cases involving the validity of an odious assessment before one of the New-York City Courts that he suggested to the Court a case in which the Corporation in giving a lease should make a mistake and instead of conveying the ground of A, which had been assessed and sold, should convey the land of B, which had not been assessed, or sold; and enquired if the lease in such a case would be held to be *conclusive?* If the lease is conclusive in one case, it is in every case.

We have come near to the close of this opinion without coming to any decision upon an important point in the case, which was argued at length by Mr. Webster, as will be seen by referring to p. 420 of this review. On referring to the points of the counsel for the plaintiff we find the fifth of the series as follows:

"That there was no evidence whatever to show that the Collector, had ever demanded the assessment of the plaintiff, or any other persons, pursuant to the second section of the act for the more effectual collection of taxes and assessments in the city of New-York, passed April 12, 1816," (see Ante p. 386) "or that the plaintiff had ever refused to pay the assessment." Why this ommission. It is noticed by Mr. Justice Bronson in the dissenting opinion given by him in this case.

There is another matter which is important in these proceedings which is in our opinion very material. The Statutes, the court say, make the lease conclusive evidence that the sale was regular according to the provisions of this act (see act of April 12th, 1816, Ante. p. 386.) Now then what are the provisions of that act now in force? It will be seen by a reference to page 389 of this volume that the greater portion of that act has been repealed, and by a reference to page 148 of this volume, that the Legislature have done away with the conclusiveness of the lease (see Ante. p. 389.)

By sections 3, 4, 5 and 6, of chap. 230 of the Session Laws of 1841, leases for lands sold for assessments in the city of New-York, do not become of any force in the hands of the purchaser until the purchaser performs certain acts and section 7 of the law requires of the purchaser the filing of certain papers in the Street Commissioners office. Will the learned judge who delivered the opinion of the court in this case be able to reconcile his views of the conclusiveness of the lease with the subsequent statute of 1841, requiring certain things to be done and providing a further time of redemption.

The court say:

"A Corporation notice under the statute, bearing date the 16th of June, 1840, was given in evidence, and testimony, written and oral, was adduced, to prove its publication.

"No objection was made to the form or substance of the notice, or that the proof of its publication was deficient, except that it had not been published in the State paper, which the law did not require.—(Laws, 1840, p. 274, §10.)

"No ground therefore appears on which the regularity of the sale can be questioned, and as far as this case discloses the facts, the purchaser has a valid title."

Again, Mr. Webster in his argument, says:

"There is a provision in the act of 1841, which takes away from the purchaser the right of entering into his purchase, where his tenant is in possession, without giving to that tenant six months notice. My opinion is, that the law does apply to cases like this, where land had been sold, as well as to future sales, and I think the court will be of that opinion. If so, the defendant could not set up the defence that he did. But that, and the more important question I have spoken of, I shall leave to be disposed of by the court."

Mr. Webster in conclusion says:

"There remains but another point to be considered, and I believe the cause may rest. It seems to be the opinion of a majority of the judges of the court, in the matter of 39th street, that though the law is unconstitutional, yet what has been done under it must stand. I had not prepared myself to discuss that question, because, until I came here two or three days ago, I did not know that view had been taken by the court. It would become me to address myself very guardedly, if I should venture to give an opinion, that that part requires re-consideration by the court. I do not know that in this court I should venture at all, but as it has been intimated that that is the case, I submit to the court that there is great doubt that any thing done under an unconstitutional law, could ever be valid. We have had many controversies as to the constitution, and unconstitutional law in the United States and State Courts. We have had questions of the validity of laws in almost every state in the Union, and some of the state laws, and those of the United States have been declared unconstitutional, yet this will be the first case where it has been declared, that although a law is unconstitutional, whatever has been done under it divesting persons of property, should be held to be valid. I know of no case where such has been held, but a great many where they have been held to be altogether void. It appears to me there is no color of right in the case of an unconstitntional law. See how they differ from the common cases. A clerk in your honors' court, who has not

taken the oath, may certify to papers. They had not been objected to in another court, and the objection is as to his personal disqualification. It is a disqualification, but I understand the court to have said, in the case of Sharp v. Spear, that in these proceedings, where title is to be divested, on pretence of steps by statute, the purchaser is answerable to see that every one of the proceedings have been legal and if that is important, what is more important than the question of authority to be exercised in that proceeding? I suppose there is no color of title, when it has been obtained under an unconstitutional law. I suppose one unconstitutional law is as unconstitutional as any other. The unconstitutionalty of the law may be as flagrant in one case as in another, but suppose your honors should decide in this case that, although it may have come up late, and a great many things done unconstitutional, we will hold, notwithstanding what has been done is valid. Suppose something more plainly unconstitutional were to pass now, and a man was in prison under it, would your honors not release him? In that case, you would say, this being a recent act, we will interfere. May I be permitted to submit to your honors, how will it be possible to entertain such doctrine consistently with the rights of parties? May not a man hold the constitution as a shield against the power of the legislature? What would you do with aliens or strangers, or a man who has been out of the country for thirty years, and comes to ask for his patrimony? Will you tell him that he comes too late?—He says, I know the constisution, and I knew the legislature could not pass such a law by the terms of the constitution. Will your honors not allow that he would be entitled to redress? If the power is not proper to be exercised now, it has always been void. The object and intention of the law is to impose a duty on your honors which the constitution does not permit. Is it not a void law? It is a law, or it is not a law!—a valid enactment or mere waste paper! If valid, your honors must go on till repealed. If void, and always has been void, then no man can obtain a right, or lose a right, by such a law. I place my view on that, and your honors can take it for what it is worth. I do not see how it is possible to sanction all that is done, and yet not make your honors proceed still under the law. I have not intended to comment on the opinion of this court, but to refer to those general principles, and in that in all the cases, none of them arises in a view alleged to be void; there were cases where officers were acting illegally in places where they were incapacitated. Let me call your honors' opinion to that whole class of cases which has been decided by the United States Court, on the validity of the law. It seems to be argued that the enactments of a law, gives prima facie authority that it is correct; if so, how is it, than in more than fifty cases, which the United States Supreme Court have heard, they did not succeed in justifying themselves under acts which the United States Supreme Court hold void. That, for instance, of the Bank of the United States against Osborn. Osborn was treasurer of the state, at the time the legislature of Ohio assessed taxes, and gave authority to the treasurer to go into the bank and take out $40,000; the treasurer did so, and was sued, and justified under the law. He had exactly done what the law required, but the chief justice said a void law gives no authority.—There was no de bene esse. It was void or good, and although he had this shield he was adjudged to pay the money. So in many other cases individuals have acted on judgments obtained under such laws, and all the consequences which I have named followed. Such laws have been regarded as mere blank paper. In this part of the case it is necessary to consider again that the claim is between the original parties—Mr. Striker and the city. Put the parties in this case in a situation to refer to, where the interest of third parties come up. Is it not pertinent to ask if the corporation did not know that these assessments had been complained of, and said to be void, yet they took the risk.—They were ready to pay out of the city funds, and to make Mr. Striker repay them if they could. If your honors came to the conclusion that this assessment cannot be sustained, no such consequences would arise to the city as those which have been spoken of.—There is no great danger of all the litigation alluded to taking place. It was said, yesterday, that the cases amounted to about a hundred, and that the city has been guarded in the leases. But suppose that it were otherwise, and there were more than a hundred, the emphatie declarations of your honors in the Brooklyn cases, that if there are many such cases of wrong, will truly apply.

"This controversy is actually between parties assessed for improvements and the city—the great enterprising city of New-York. If your honors should be of opinion that Mr. Striker and others have been sufferers, and it would take $100,000 or $200,000 to right all the wrong that has been done, is there a man of character or reason that would wish to avoid paying his share of it? Is there one who would not contribute that justice may be done? Is there one who would wish to keep his property at the sacrifice of a great constitutional question? I believe there would not be one found, or if there was, he would not manifest himself among a class where he would find so few associates."

The Court say:

Some objections and exceptions were taken on the trial, which are not noticed on the written points handed to the court, nor were they by counsel on the argument.

"Such have not been considered.

"Under the stipulation in the case the defendant should have judgment.

"Nelson, Ch, J., concurred.

DISSENTING OPINION.

"*Bronson, J.*—There are some points in the case upon which I am unable to concur with my brethren.

"If the New-York street law could be regarded as enlarging our jurisdiction, by conferring new judicial powers to be exercised as a court, then I agree that the statute would be free from constitutional objection. But it has been long settled, that the powers conferred by this and other laws of the same general nature, are not strictly judicial; and that in carrying them into execution we do not act as a court, but as Commissioners appointed by the Legislature.—(Stafford *vs.* The Mayor of Albany, 7 John. 541. Matter of Beekman Street, 20 John. 269. Matter of Mayor of New-York, 6 Cow. 571.—Matter of Mount Morris Square, 2 Hill. 14.) Acting on this principle, we have uniformly refused to set aside the proceedings in street cases, under any circumstances: holding, that while sitting as Commissioners, we had no power to recall that which had once been done. And when the parties have desired a review in a Street case, the Supreme Court has issued a certiorari to the Justices of that court as Commissioners; and having thus got the matter before us as a court, and affirmed what had previously been done in another character, a writ of error has been brought in the Court of Errors.—(See Livingston vs. Mayor of New-York, 8 Wend. 83. Patchin vs. Mayor of Brooklyn, 13 Id. 664.)

"In these, and all the other forms in which the question has arisen, it has been uniformly held, that in executing the street law of 1813, we act as Commissioners appointed by the Legislature, and not as a court. The same doctrine has been laid down by the federal judiciary. By an act of Congress, passed in 1792, (2 Bis. 259,) the Circuit Courts of the United States were directed to inquire into and decide upon the claims of certain persons to be placed upon the pension list. Several of those courts declined to execute the law, on the ground that the duties assigned to them were not of a judicial nature. The Circuit Court for the District of New-York, with Chief Justice Jay at its head, held that the Act of Congress could only be considered as appointing Commissioners for the purposes mentioned in it, by *official* instead of *personal* description; that the Judges regarded themselves as being the Commissioners designated by the Act, and therefore as being at liberty to accept or decline that office.

"As the object was a benevolent one, and the Judges wished to manifest their respect for the Legislature, they accepted the trust.—(Note to Hayburn's Case, 2 Dall. 410.) The Justices of this court seem to have acted on the same principle when they accepted the office of Street Commissioners under the New-York law.—(Matter of Beekman Street, 20 John. 269.)

"But the constitutional inhibition against holding any other office, which was substantially the same then as it is now, was entirely overlooked.—Const. of 1777, Art. 25. Ditto 1821, Art. 5, §7.) Since an appeal has been made to the fundamental law, it is no longer the mere question whether we will consent to accept the office, and execute the statute.—The further inquiry is now presented, whether we can rightfully act in the matter? And the Constitution having declared that the Justices of this court shall not hold any other office

or public trust, I think we cannot accept this appointment, however willing we may be to give effect to the wishes of the Legislature. If we can execute the office of Street Commissioners for the City and County of New-York, the like powers may be conferred upon us in relation to any other town or county in the State; or the duties of the office of comptroller, treasurer, or sheriff, may be assigned to us; and thus the constitutional disqualification to hold any other office, would be completely evaded. Following out the principles which have already been settled in relation to this law, I think it conflicts with the Constitution, and cannot therefore be supported. And in this opinion I had the full concurrence of the late Mr. Justice Cowen.*

"The Act of 1813 made the assessment a lien upon the land, but gave no power to sell. By the second section of the Act of 1816, [Stat. of 1816, p. 114, it is provided that *whenever* any assessment upon lands in the city of New-York shall not be collected, *and the collector shall make affidavit* of his demanding the money two several times of such owners as may reside in the City, and that they neglected or refused to pay; or shall make affidavit that the owners cannot, upon diligent inquiry, be found in the City, *then, and in any such case*, it shall be lawful for the Corporation to take order for advertising and selling the land for a term of years; and the lease to be executed to the purchaser, "shall be conclusive evidence that the *sale* was regular, according to the provisions of this Act," I take it to be entirely clear, as well upon the words of the statute as the reason of the thing, that the Legislature did not intend to authorize a sale of the land except in cases where the prescribed affidavit should be made.

"There must be an upaid assessment *and* an affidavit of the collector. The latter is made just as necessary as the former, and we might as well dispense with the one as with the other. The Corporation can take no order in reference to a sale, not even for advertising, until the affidavit has been made.

"It is familiar doctrine in relation to these statute sales, that it lies on the purchaser to show a strict compliance with the statute.—He must make out his case affirmaiively, showing step by step, the existence of all the facts on which the right to sell is made to depend.—(Sharp vs. Spier, 4 Hill. 76, and cases cited.)

"Under this statute the lease is evidence of the regularity of the sale; but not of the right to sell.

"No affidavit was produced, though the want of it was distinctly made a point upon the trial. This was a fatal objection to the defence, which was set up under the Corporation lease.

"It is well known that men acting in a body, especially when under the cover of corporate privileges, will often do what no one of them would be willing to do if acting alone, and upon his individual responsibility. And they will sometimes say aye, or permit a matter to pass *sub silentio*, when they would not venture to record their names in favor of the measure. To guard against such evils, and protect the citizens against the imposition of unnecessary burthens, it was provided by the seventh section of the amended charter, that the ayes and noes should be called and published, whenever a vote of the Common Council should be taken on any proposed improvement involving a tax or assessment upon the citizens. (Stat. 1830, p. 126.) The language is imperative—the ayes and noes *shall* be called. When the particular mode in which the Corporation is to act thus specially declared by its charter, I thinkit can act only in the prescribed form.—The contrary doctrine wants the sanction of legal authority, and is fraught with the most dangerous consequences. It would place corporations above the laws, and there is reason to fear that they would soon become an intolerable nuisance."

Remarks.—Thus we have placed before the reader the entire opinion of the Supreme Court in this assessment case, as delivered by Mr. Justice Beardsley; and we have also given entire the *dissenting* opinion of Mr. Justice Bronson. The opinion of Mr. Justice Bronson is brief and comprehensive and needs no criticism.

We have given in full the able argument of the Hon. Daniel Webster, made before the Court.

There is, in this history of the case, numerous provisions of the Constitution and of the Statutes introduced which were not referred to by the Counsel, and therefore not presented to the Court, and some of these we think very material. The attention of Mr. Webster, we presume, was not called to these provisions, and although he is a man possessing a herculean mind yet he could not be expected to have a particular knowledge of local laws which are of themselves, or at least some of them, a nondescript, unless brought specially to his notice.

It is understood that Mr. Webster is to argue this cause before the Court for the Correction of Errors, and he will then have an opportunity of presenting these provisions of law to the consideration of that Court, if in his judgment they have a bearing upon the points in the case.

We have made our review very lengthy—had we not been limited in time we would have made it more brief. We will hereafter present a brief review in the compass of two or three pages.

As an illustration of the system of making assessments in the city of New-York by the Commissioners appointed by one of the Justices of the Supreme Court we will present a case in the Seventh Avenue, confirmed by one of the Justices of the Court in February, 1839, which we find in the appendix of the Report of the Select Committee from the Senate appointed to investigate assessment abuses, on p. 92 of that Report as follows:

"*November* 2, 1841.

"The Committee met pursuant to adjournment.

Present—Mr. Furman,
Mr. Verplanck, and
Mr. Scott.

"*Benjamin Townsend* having been called on the part of the memorialists and duly sworn, says: That he resides in the city of New-York, and was formerly an assistant alderman of the said city; that as to the assessment for opening Seventh avenue from Twenty-first to One hundred and twenty-ninth street, while the same was pending before the commissioners, he was sick, and remained so for about eighteen months. Some three or four years elapsed between the resolution of the common council for opening said avenue, and the confirmation of the report. He supposed it was abandoned, and heard nothing about it until he was called on for the payment of the assessment on his property. When the bill was presented, he called at the street commisioner's office, obtained names of the commissioners, and examined the maps. In examining the maps and abstract, he saw the property adjacent to his, and owned by Baltus More, awarded at $293 and some cents. The division fence between More and witness runs through the centre of the avenue; the adjoining land below witness belonged to the estate of Thomas Addis Emmett, deceased, and he was awarded $205 and some cents. Mr. Guest for adjoining land above witness, was awarded $274 and some cents; and witness was assessed $213 and some cents, and awarded nothing. Witness owned to the centre of the streets on all sides of his property, except in the rear, and more land was taken from witness for said avenue than either said More or said Guest. Witness then made application to Mr. Murray to see his notes, and he said if he saw the map he could tell witness how it was. Witness then carried him a map of the property of witness and that adjacent, and he then said to witness, that to tell him the truth, he knew nothing about the maps, and had no knowledge by which he could judge or estimate the value of the property; that Mr. Harris made up the assessment, and if there was any mistake in it he presumed Mr. Harris would give explanations, and it would be corrected. Witness then called on Mr. Robertson, one of the other commissioners, who was in an office opening with folding doors into that of the then corporation counsel, Mr. Emmet, and he found Mr. Emmet and Mr. Robertson both present in that office, and witness asked Mr. Robertson in regard to that assessment, how such a mistake could be made; and witness described the situation of his property on the Seventh avenue. He answered witness that he knew nothing about it; he was never there; he believed the avenue was some five or six miles long; that he was never on the premises; that Mr. Harris made the assessment and witness should apply to him. Witness then asked Mr. Robertson where Mr. Harris lived, and he replied that he lived in Harlem, and that he did not know that he kept any office in the city. Mr. Emmet observed that Mr. Harris was frequently in the Times office, in the lower part of the same or an adjoining building; and witness wrote a note directed to Mr. Harris, and left it at the Times office, and called there once or twice, some little time afterwards, and there met Mr. Harris, and asked why he should have made such a difference in the awards and assessments for property taken for that avenue and adjacent to each other; and he told witness that the property was very accurately surveyed and examined into, and the value of the land in the awards made up by the square foot; that the land taken from Mr. More and other persons for the said avenue; that his minutes of making up his report would show that fact: and that if it was not so in the report, and such award made to the witness, it had been altered by the counsel of the board; and witness then asked him what authority the counsel of the board had to alter a commissioner's report, and he answered witness, that the counsel had done so sometimes.*

"Witness then petitioned the common council, and in the board of aldermen it was referred to the committee of which Aldermen Benson was chairman; and in the assistants, to the Committee of which Assistant Alderman Underwood was the Chairman; and that neither of said committees made any report. The witness attended the committee on assessments on notice, and the chairman told him that he had sent for the commissioners, and they had not attended; the witness was then dismissed, and never heard any more about it. During the last summer or fall, a special committee in aldermen, and committee of assessments in assistants, was appointed to hear complaints as witness understood; and Assistant Aldermen Underwood requested witness to make out his complaint in relation to opening the Seventh avenue; and in his

* This question was before the court in the Matter of Thirty-Ninth Street, and several other streets, on motions to confirm the Reports of the Commissioners of estimate and assessment, when Cowen, J. agreed with *Bronson J.* that the statute was unconstitutional. A re-argument was subsequently ordered, and the matter was discussed in connection with the principal case of Striker vs. Kelly.

* Whatever alteration is made, is done so before the report is signed, and such alteration is the act of the commissioners, not of the counsel or the clerk who writes out the report.—Ed.

petition he told said committee that the maps in the street commissioner's office would show, by the location of the property, that a mistake had been made and that it was an award due to the witness in place of an assessment against him for such opening. Witness told Mr. Underwood that Mr. Harris the commissioner had told him that his Harris's notes would show that it was an award, and that Mr. Emmet the then counsel of the board in the matter of the Seventh avenue had those notes. Mr. Underwood told witness that he had twice made application to Mr. Emmet for these notes of the commissioners, and he once promised to give them to him, but had not done so, so that Mr. Underwood could not have them to assist him in making out his report on the petition of the witness."

We remark—In order that the reader may be able to judge of the political patronage appertaining to the exercise of Street powers by the justices of the Supreme Court, we here set forth the fees of the Counsel, Commissioner's, Surveyor's and Collectors for the proceedings terminated in one single year, viz. 1839.

	Counsel fees and Court charges.	Com'rs fees and room hire.
7th Avenue,	3,976.77	5,580.00
6th "	3,589.77	3,339.00
2d "	2,033.55	2,644.72
1st "	390.00	823.25
Avenue A,	250.00	207.00
Manhattan Square,	1,449.13	1,781.00
Mt. Morris do.	938.00	850.00
John Street,	1,936.92	1,432.00
Art Street,	1,896.75	1,626.00
12th Street,	120.00	420.02
24th "	225.00	96.00
25th "	737.40	1,197.00
33d "	768.00	1,382.00
34th "	1,030.83	1,476.00
35th "	905.09	1,247.00
36th "	560.00	653.00
38th "	768.00	945.00
40th "	553.90	1,033.00
50th "	472.00	1,002.00
51st "	612.00	935.00
52d "	687,40	848.00
55th "	497.00	790.00
83d, 84th and 85th St.	360.00	770.00
90th Street,	580.00	738.40
94th "	450.00	731.40
Anthony Street,	2,786.00	3,577.00 }
William Street,	2,073.00	3,000.00 }
	$31,196.47	$39,143.79

It will be seen that the Counsel fees and Court charges amounted to $31,196.47, Commissioner's fees and Room-hire $39,143.79. Surveyor's fees, $22,517,-00. Collector's fees $7,274.00; in all $100,131.26.

A comparison of this sum with the salaries of the civil officers appointed by the Governor and Senate will illustrate the provision of the Constitution which has made a restriction to the exercise of the appointing power.

The amount paid out of the Treasury of the City of New-York to the Counsel of the Corporation for one single year ending Dec. 31st, 1839, as appears by the City Comptroller's Report, for that year, amounted to the large sum of $45000, and upwards.

The Counsel fees in the Brooklyn Reports confirmed by one of the Justices of the Supreme Court compared with those of N. York in 1839, will afford an illustration of the extraordinary extravagance of the latter. These Reports confirmed subsequent to May 1st, 1839, came under the law of April 20, 1839, (see Ante. p. 383.) requiring the fees &c, to be taxed, but the Justice who confirmed the Reports in 1839, made the "confirmation," notwithstanding the omission.

As respects the Commissioner's labors we will introduce the testimony of a practical man who was several years a clerk in the Street Commissioner's office, which testimony was taken before the Hon. the Select Committee, appointed by the Senate to investigate assessment abuses in the city of New-York, and is to be found on pages 81, 82 and 63 of their Report, Senate Doc. No. 100 of 1842.

"Witness made about four-fifths of the computations upon those assessments on which the street commissioner, assistant street commissioner, and chief clerk, were appointed assessors. The assessment made up by witness, if accurate, would produce the same result as they would if made by the assessors themselves. Witness has never acted as commissioner; but he would suppose, that to compute an assessment for paving or regulating a street or avenue was quite as much work, if not more, than to make an assessment for opening a street or avenue; he would think it was more work as there are many more items. Witness has discovered inaccuracies of addition in the estimate and assessments of Commissioners in opening Streets."

As respects Surveyor's fees, we will state, that the Island of New-York was laid out into Streets and avenues in 1807 to 1811—or rather that portion of it not previously laid out—maps were made and the streets and avenues laid down upon these maps which are upon a large scale, say about one inch to the 100 feet. The lands with the owner's names are also upon the map—a copy of the whole is in the office of Secretary of State at Albany, and another copy in the office of the Street Commissioner in New-York. In addition to this there is a small card in the office of the Street Commissioner, containing a complete table of measurement of the Streets, Avenues, and Blocks, and we have made a brief synopsis of a part of it, as follows:

The blocks from 11th to 16th Street are 206 feet 6 inches deep; from 16th to 21st Street, 184 feet; from 21st to 42d Street, 197 feet 6 in.; from 42d to 71st Street, 200 feet 10 in.; from 71st to 86th, 204 feet 4 in.; from 86th to 96th Street, 201 feet 5 inches; from 96th to 125th Street, 201 feet 10 inches; north of 125th Street, 199 feet 10 inches. The Blocks between the avenue are as follows: Between 6 and 12, 800 feet each; between 6 and 3, 920 feet; between 2 and 3, 610 feet; between 2 and 1, 650 feet; between A and 1, 603, &c. All the avenues north of 23d Street are 100 feet wide, and all the Streets 60 feet wide excepting 15 streets, which are each 100 feet wide, and these wide Streets are every tenth Street.

The detail of this card is on p. 311 of this volume. As to the fees of Surveyor's a comparison of 1839 with 1820 will be most convincing. The venerable Jonathan Thompson, of New-York, formerly collector of the Port a very estimable citizen was examined as a witness before the Senate Committee, (see page 47 of their Report,) as follows:

"*September* 25, 1841.

"The committee met pursuant to adjournment.

"Present—Mr. FURMAN,
Mr. VERPLANCK, and
Mr. SCOTT.

"*Jonathan Thompson* being called and duly sworn, on the part of the memorialists, says—that formerly, between 25 and 30 years ago, the witness was personally acquainted with all the assessments of the city of New-York, being the collector of the internal revenue of the United States. Afterwards, the witness in 1819, or 1820, at the request of the common council valued all the property of the city of New-York with Mr. Targee and Mr. Smith. Witness has been a commissioner upon forming and grading the third avenue, and upon a number of other improvements. Witness knows the labor and time necessary in making out assessments, as he has spent several weeks at it, or rather months. Witness has examined the commissioners' map of Second avenue, from Twenty-ninth to Eighty-sixth Streets, and also the abstract of the commissioners' report, showing the number of persons to whom awards and against whom assessments were made, in the matter of opening said Second avenue. He can only estimate the time necessary to be spent in making the assessment of said Second avenue, by comparing it with Third avenue from the Bowery road to Harlem bridge, which was six miles and a quarter in length, and on which the witness made the assessment for regulating and grading. The expenses of the commissioners on said Third avenue, (which was in May, 1819.) The assessment roll contained about a quire and a half of paper closely written, was as follows:

Total expense of working and regulating,		$97,514.00
To which add:		
For advertising	$8.00	
For Surveying	244.00	
Collector 3 per cent on $33,280.31,	998.41	
Assessors for assessing, stationery, &c.	886.56	
Contingencies (paid street commissioner,)	190.03	
		2,327.00
Total		$99,841.00

"The witness produces the surveyor's bill above referred to, which is sworn to Aug. 3, 1820, by the affidavit of Mr. Daniel Ewen the surveyor, which is "surveying, compiling, collecting information, and drawing maps of the Third avenue from its commencement at the Bowery to Harlem bridge, 61 days at $4 per day, $244." The assessment on the Third avenue, extended one-half way to the next block same as Second avenue. The Second avenue is parallel to the Third avenue and about 610 feet distant, and there is not much difference in their situation and grounds, and he thinks it was as easy to make the maps of Second avenue as to make that of the Third avenue; in fact he thinks it was much more labor to make the map for the Third avenue, for the same distance, that it was to make that of Second avenue; it was a new thing when that of Third avenue was made, and there were many more assessments. The witness should not say there was one-tenth of the labor in making out the estimate and assessment of the Second avenue, that there was in making out the assessment which witness made out on Third avenue. The assessment which the witness referred to, as being a quire and a half of paper, on the Third avenue contained descriptions of all the property assessed. The abstract of the commissioners' report on the Second avenue is made out on two sheets of paper. The witness knows what services used to be rendered in cases of street improvements by the corporation counsel. The commissioners or assessors would make out their report or assessment roll, and hand it to the counsel who would put it into legal form.

JONATHAN THOMPSON."

The expenses taxed upon assessment proceedings were not *one-tenth* the rate when Mr. Thompson was conversant with assessments, as are now charged.

In order that the reader may judge of the enormous abuses in these matters as now practised we will make an estimate per block of the Seventh Avenue, remarking at the same time that this avenue runs through farming land nearly its whole length.

The Senate Committee in their report state that this avenue consisted of 108 blocks of about 270 feet each. The Commissioners fees were $1640, for each Commissioner, exclusive of "*Room Hire*." This is pay for 410 full days.

Each block is consequently charged three and three quarters of a day's labor, of each and all the Commissioners. The land in most of these blocks is owned by one and the same person and requires no estimate whatever.

The attorney's fees to each of these blocks is $36.81, and the surveyor's fees $25.93, or about five dollars per acre.

We will here introduce before presenting the DIAGRAMS, some quotations from the Federalist, No. 78, as pertinent to this issue, as follows:

"The complete independence of the courts of justice is peculiarly essential in a limited constitution. By a limited constitution, I understand one, which contains certain specified exceptions to the legislative authority; such, for instance, as that it shall pass no bills of attainder, no *ex post facto* laws, and the like. Limitations of this kind can be preserved in practice no other way than through the medium of the courts of justice; whose duty it must be to declare all acts contrary to the manifest tenor of the constitution void. Without this, all the reservations of particular rights or privileges would amount to nothing."

Again:

"There is no position, which depends on clearer principles, than that every act of a delgated authority, contrary to the tenor of the commission, under which it is exercised, is void. No legislative act, therefore, contrary to the constitution, can be valid.—To deny this, would be to affirm, that the deputy is greater than his principal; that the servant is above his master; that the representatives of the people are superior to themselves; that men, acting by virtue of powers, may do, not only what their powers do not authorise, but what they forbid.

RUINOUS ASSESSMENTS ILLUSTRATED.

The two Diagrams on this page are copied from the Maps of the Commissioner's of Estimate and Assessment.

DIAGRAM NO. 1.

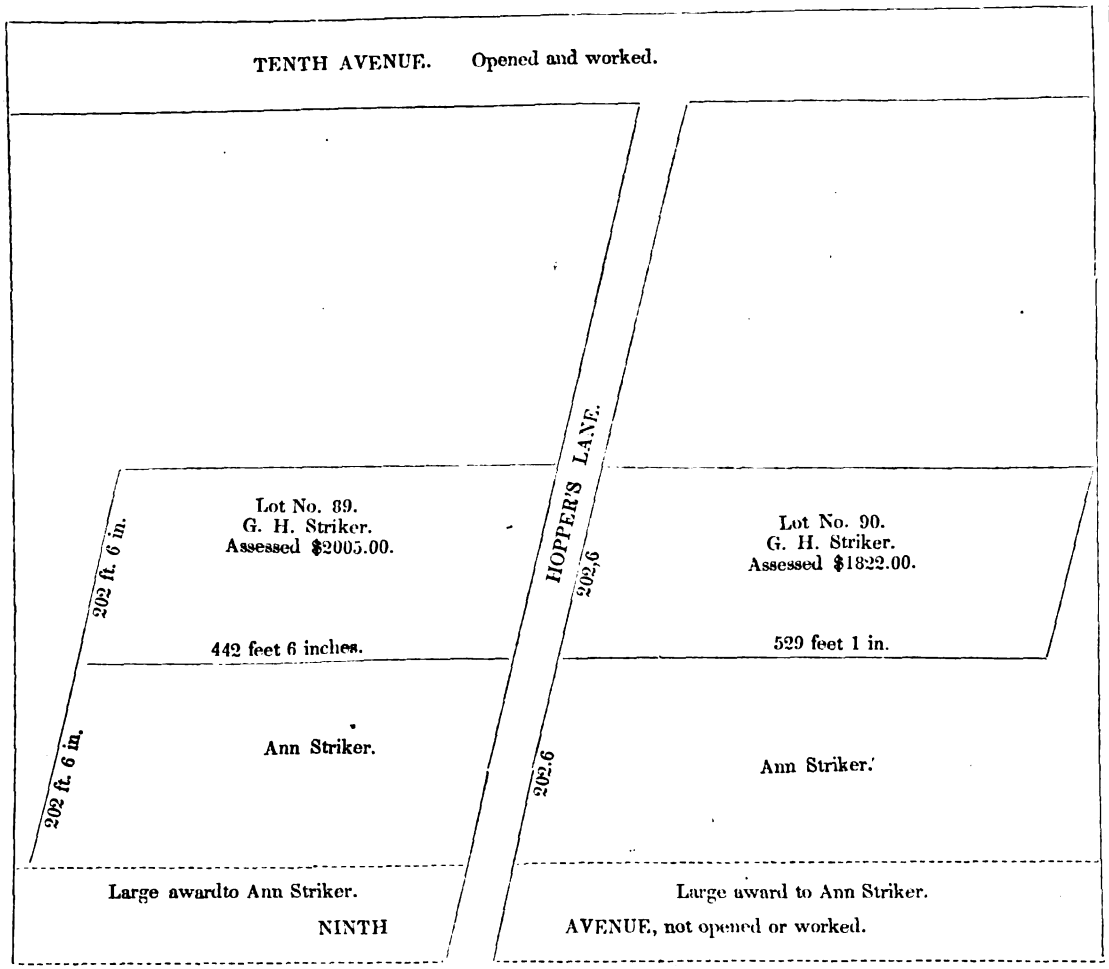

DIAGRAM NO. 2.

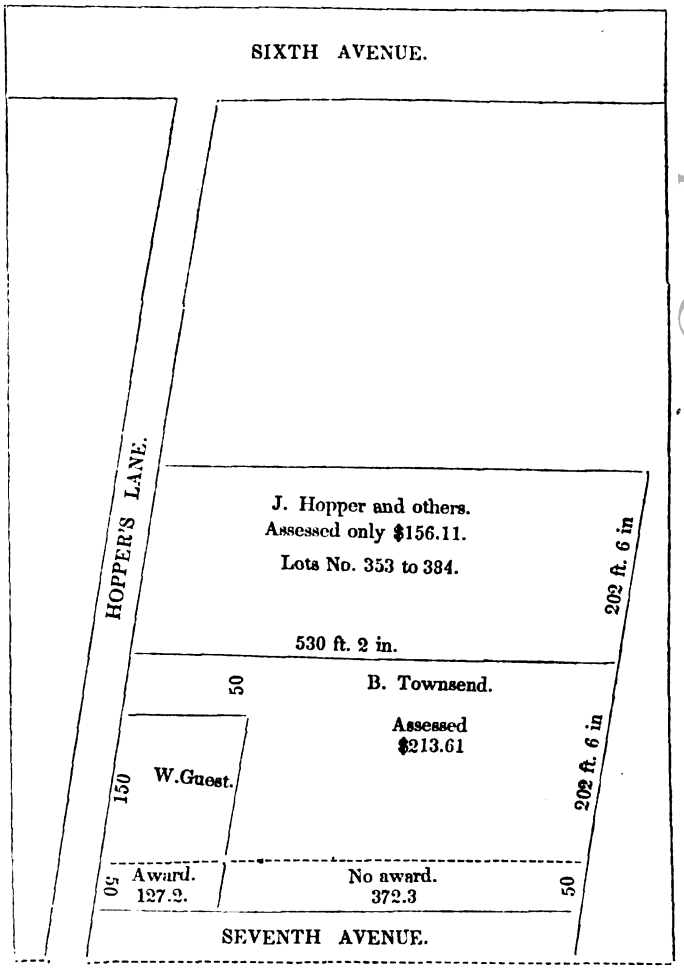
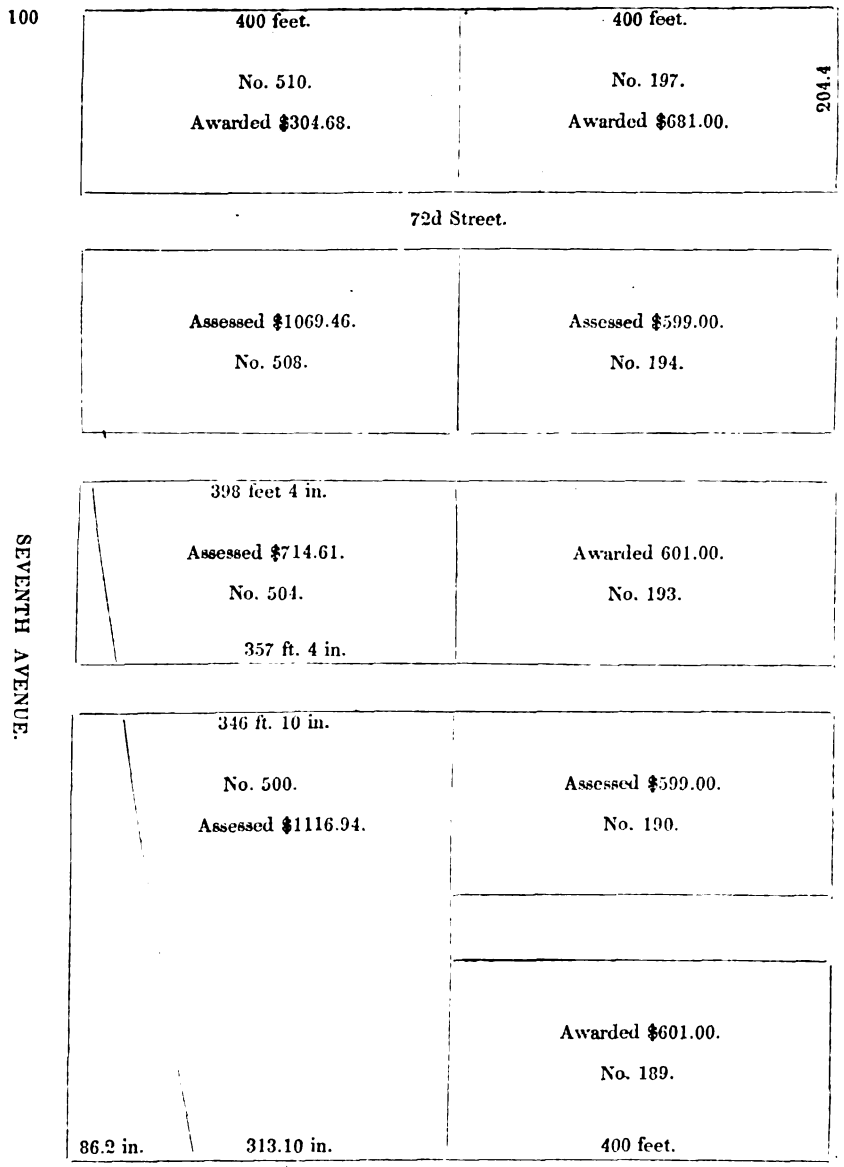


We present upon this page, two Diagrams, illustrating the inequality of Assessments, and the loose manner in which these extraordinary impositions have been made. The Land assessed as the property of Garret H. Striker, and designated as Lots No. 89 and 90, were assessed for benefit for the prospective opening of the Ninth Avenue, the large sum of $3,827.00. The Land assessed as the property of Jasper Hopper, T. J. Nelson, and C. T. Newcomb, and designated as Lots Nos. 353 to 384, J. Hopper and others, and which are Nos. 353 to 356—360 to 368, and 381 to 384, on the Commissioners map, of the Seventh Avenue Assessment, are assessed in the whole for benefit, only $156,11. This piece of ground is the same distance from the line of the Seventh Avenue that General Striker's land is from the line of the Ninth Avenue. The Lot No. 90, for which G. H. Striker is assessed $1822.00, does not contain as many square feet as the piece of ground for which J. Hopper, Nelson and Newcomb are assessed only $156.11. General Striker's Assessment is more than eleven times as much as that of Hopper, Newcomb and Nelson. The two pieces of ground are bounded on Hopper's Lane, and are 2300 feet apart and are both of about equal value. General Striker's Lot, No. 90, should not have been assessed $100.

These Diagrams also present an illustration of the system of making awards for land required to be taken for public avenues. The land of Assistant Alderman Townsend, lying within the lines of the Seventh Avenue as laid out and opposite his other ground fronting on the same avenue was taken for the said avenue, to the extent of 18,688 square feet and instead of making an award therefor, the Commissioners assessed him $213,61. Mr. Guest whose land adjoins that of Assistant Alderman Townsend, and of the same quality was awarded $137.00 for 6471 square feet. In the Ninth Avenue assessment, Ann Striker's property, on the westerly side of the centre of the Avenue extended back from that line 250 feet, from which the Commissioners took a strip 50 feet in width, the entire length, and awarded here about four thousand dollars.



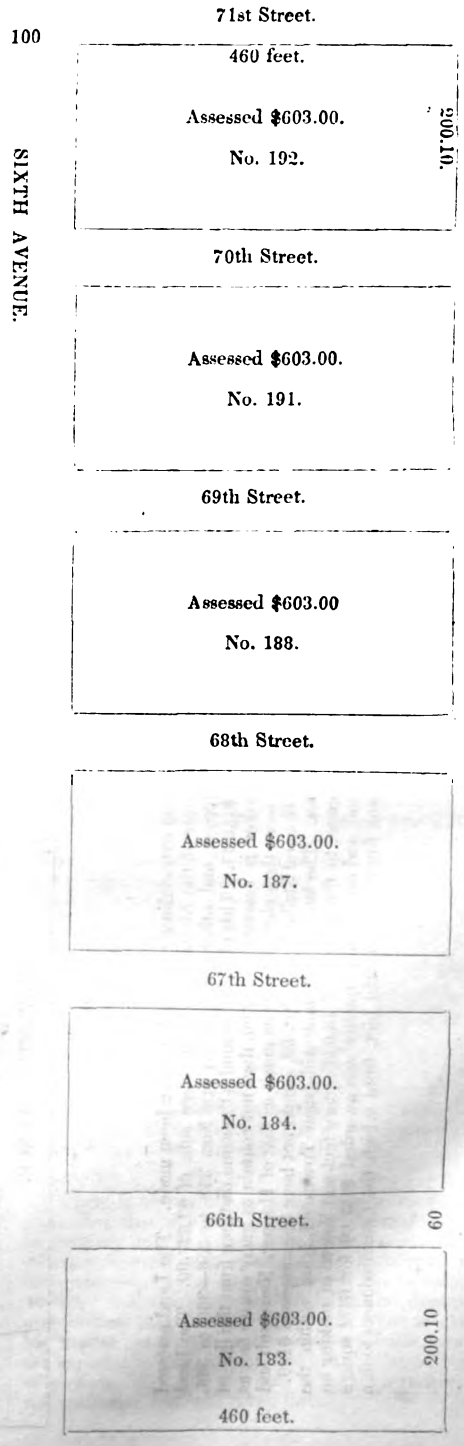
DIAGRAM

OF SIXTEEEN BLOCKS OF LAND,

BEING A PART OF THE FARM AND ESTATE OF

JAMES AMORY,

ON THE ISLAND OF NEW-YORK.



AMORY ESTATE ASSESSMENT ILLUSTRATED.

An opinion may be formed of the labor of Commissioners, Surveyors, and Counsel, in Street openings from the annexed Diagrams, of 6th, and 7th Avenues, and the statement of fees, &c., which accompany the same. The Sixth Avenue proceeding includes 190 blocks like the block designated No. 192. The property of the Amory estate makes 11 of these blocks. The fees of the Commissioner's, Surveyor's, and Counsel are $10,568.77, which is $55.62½ for each block; therefore for 11 blocks it is $611.87½. A competent person could make the survey of these 11 blocks in one day, and the Commissioners could make the assessment of these 11 blocks in one hour, and the labor of the Counsel in the matter should be but a few shillings at most.

The Seventh Avenue proceeding embraces 216 blocks like that designated No. 508. The Commissioner's fees in this avenue are $4,920, which is pay at four dollars per day, for 410 working days for each Commissioner, which is equal to about fifteen months solid time. The Amory estate has 5 blocks of this 216. Of course the share of the expense of the Commissioners on these 5 blocks is $111.55 making 9 days that all these three Commissioners must have been engaged upon these 5 blocks to perform less than an hour's labor. The room hire of these three Commissioners is $410, which is equal to the rent of a splendid mansion in the country for one year. Their Clerk hire, $250; Carriage hire, $30; stationary $48. The Surveyor's fees are $2,801, which at $4.00 per day is pay for 700¼ working days, equal to 116 weeks and upwards, or two years and nearly three months, which for 216 Blocks is three days labor on each block, and fifteen days labor on the 5 blocks in the 7th Avenue. What would farmers in the country say to having their farms surveyed at this rate. The Counsel fees in this avenue are $3,976,77, which is equal to the pay of the High Chancellor of the state for one year, seven months and three days.

Here is an assessment upon the farming land belonging to a widow lady and her children amounting to $5528.33, and the interest upon it to the present time to about $2,300.00, making in all about $7,800.00, for that which is not a farthing of benefit, for they own the land in front of their lots and can open their own street. Such proceedings as these are of the most odious character, a disgrace to the City Government and a shame upon the public officers who have committed these glaring and most reprehensible abuses.

On the next page will be found more upon this particular assessment.

Mrs. Amory petitioned the Common Council in 1843, in reference to this assessment, and on the 31st of July, of that year, the Street Commissioner, John Ewen, Esq., made a lengthy report thereon, which among other things contains the following:

"In the matter of opening the seventh avenue, the estate of Amory is awarded on lots 162 and 163 for land taken for the avenue, the sum of $304.63. The estate is assessed for benefits in the same matter, on lot No. 500, situated between 68th and 70th streets, and within about a hundred feet of the avenue, $1,116.94; on lot No. 504, situated between 70th and 71st Streets, and within about thirty feet of the avenue, $714.61, and on lot No. 508, situated between 71st and 72d Streets, and extending into the avenue, $1,069.46. A portion of this last named assessment is for the part of the ground extending into the avenue, and taken for the same, which belonged to the estate, but for which an award of $392.05, was made to the Corporation under a presumption that it belonged to the city.—The ground belonging to the estate of Amory on this avenue was formerly a part of the common lands, and was purchased by Amory from the corporation. The conveyance to him included all the land which the Corporation possessed in the Avenue at that place, it being the westerly boundary of the common lands. The Corporation would not be entitled to an award for the land in the avenue, even if it had not been formerly conveyed to Amory; the Supreme Court having long since determined that where land is conveyed as bounding upon a street or avenue, the grantor by such Act virtually appropriates the land belonging to him in the street or avenue in front of the land so conveyed. The Corporation therefore having wrongfully received this award, it is undoubtedly proper that it should be passed to the credit of the estate to which it belongs. The sum of the assessments against the estate of Amory over and above the award in its favor, on this avenue, by the assessment, is $2,596.33; which being credited with the award of $392.05, erroneously made to the Corporation, will be reduced to $2,595.33.* This is undoubtedly a very erroneous assessment upon about 186 unproductive lots of land for the mere purpose of divesting the owners of land in the avenue, of the fee, and placing it in the Corporation in trust for public use; and like most other assessments made during a period of high speculation in unproductive real estate, is excessive, as before stated, from an over valuation of the land taken for the avenue, which has caused a corresponding assessment for benefit upon the lands in this vicinity. The sum allowed on a lot of land in this vicinity as nearly as can be ascertained from an examination of the assessments, is about $300; which is probably more than three times its value for any purposes whatever.

"The valuation of the land taken in the opening of the 6th avenue appears to have been estimated at a still higher rate,—the sum of about $400 per lot having been allowed by the Commissioners for the rocks and swamps in that vicinity; and it is against the assessment for the opening of this avenue, that the Petitioner has the greatest cause of complaint not only from the over valuation referred to, but from gross errors as the undersigned believes, on the part of the Commissioners in making their assessments, which errors he will attempt to explain.

"The Estate of Amory embraces a number of blocks of land on each side of the Sixth Avenue, between 65th Street and 73d Street which formerly constituted a part of the common land street, sixty feet in width, laid out anterior to the laying out of the present avenue; its eastern side corresponding with the present easterly side of the avenue, leaving a space between its westerly side and the westerly side of the avenue, of forty feet in width.

"In some cases the Corporation, in conveying to Amory, bounded him on each side of this old street, by which he received a conveyance of a forty feet strip of land in the avenue, between the line of the old sixty feet street and the westerly line of the avenue. In other cases the Corporation in conveying to Amory, bounded him by the lines of the avenue, but reserved in the conveyance the forty feet, a piece in front between the westerly side of the old common lands street and the westerly side of the avenue, for the avenue, intending thereby to furnish the entire avenue between the premises conveyed, for avenue purposes. In the former case, where the forty feet space in the avenue was conveyed to Amory, the Estate has been awarded on that side of the avenue, as damages over benefits for this strip of land taken for the avenue, the sum of $601, and assessed on the land on the opposite side for benefits, the sum of $603, by which the benefit and damage is but equal; and in this case the estate has no cause of complaint, as the ground on each side of the avenue belonging to it should furnish the avenue between; but in the other case where the ground in the avenue had already been furnished to the estate by the Corporation, there being no award for the land in the avenue, there should be no assessment upon the adjoining property, except for its proportional part of the expense. There has been assessed upon the block, on the westerly side of the avenue between 69th and 70th Street, the sum of $599, and on the easterly side of the avenue directly opposite, the sum of $603; also upon the block on the easterly side of the avenue between 71st and 72d streets, where the entire avenue also had been furnished, and for the land in which no award has been made in the proceedings, the sum of $599, when ALL THAT THE COMMISSIONERS COULD HAVE PROPERLY CHARGED UPON THESE BLOCKS WOULD HAVE BEEN THEIR PROPORTIONAL PART OF THE EXPENSES, WHICH WOULD HAVE BEEN ABOUT $55 UPON THE THREE BLOCKS, INSTEAD OF THE SUM OF $1801 CHARGED IN THE ASSESSMENT."

* If the first sum is right this should be $2,204.28. —Ed.

IMPORTANT BILL.

We lay before our readers the following important Bill, in relation to the assessment of Taxes.

[Document No. 128.]

IN ASSEMBLY,

February 11, 1845.

Reported by Mr. Wheeler, from the committee on the judiciary—read twice, and committed to the committee on the whole.

An Act relative to taxes and jurors in the city of New-York.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

Section 1. All lands situated in the city of New-York, and all personal property within said city, whether owned by individuals, corporations, monied or stock associations, shall be assessed for taxes now or hereafter to be imposed or authorized by law to be raised or collected in said city, subject to the exemptions specified in title first, part first, and chapter thirteenth, of the Revised Statutes.

§ 2. Every person residing in the city of New-York, shall be assessed in the ward where he resides or does business, at the time such assessment is made, for all personal estate owned by him or in his possession, or under his control, or held by him in any representative or other capacity, and the temporary residence of such person in any other ward or place, or the temporary absence of such person from said ward or city at the time the assessment is made, shall not free such personal estate from taxation.

§ 3. The real estate of all incorporated companies, and of all monied or stock associations in the city of New-York liable to taxation, shall be assessed in the ward where it is situated, and all the personal estate, including surplus moneys or funds, of every incorporated company, and of every monied or stock association liable to taxation, shall be assessed in the ward where the principal office or place of business of said company, monied or stock association is, and any individual or company owning a bridge, shall be assessed for it in the ward where the tolls of said bridge are collected.

§ 4. The persons elected assessors in the city and county of New-York, shall be sworn into office on the second Monday of May in each year, and immediately thereafter commence their duties as such assessors; and it shall be lawful for the said assessors, at any time before they shall have delivered the assessment roll as required by the Revised Statutes, and of the board of supervisors of the city and county of New-York, at any time after said assessment roll shall have been delivered to them, to correct the same by adding thereto the name of, and assessing any person or persons, body corporate or monied or stock association, that said assessors shall have omitted to assess to such an amount as to said assessors or said board of supervisors shall seem just and proper, the same being subject to be corrected by those thus assessed, as now provided by law.

§ 5. It shall be the duty of the assessors in each ward, when they have made out a list of the person, in their respective wards qualified to serve as jurorss to notify such persons to be and appear before them, at a day and place certain in the ward, to show cause (if any they have) why they should not be returned as jurors. Such notice shall be served at least five days before the day of showing cause, by delivering the same to the person so selected or by leaving it at his dwelling house with a person of suitable age and discretion, and if the person so notified does not appear, or if he appears and does not show good cause, he shall be returned as a juror, and the person showing good cause shall not be so returned.

§ 6. The assessors are hereby authorized to administer an oath to the persons appearing and claiming exemption from jury duty, and to examine them as to their excuse. In case of the death or inability to act, of one of the assessors in any ward, the other assessor may perform such duties, and in case of the death or inability of both assessors to act, the alderman and assistant alderman of such ward shall perform such duties, and the return of jurors shall be made under oath.

§ 7. The provisions of the third section, of title one, the fifth section of title two, article one, and the eighth section of the last mentioned title, article two, chapter thirteen, of the Revised Statutes, so far as the same are inconsistent with the provisions of this act, are hereby declared inapplicable to the city and county of New-York.

§ 8. This act shall take effect immediately.

Remarks.—We shall examine this bill with care, and give our views of its provisions in our next number, and in the mean time it will be printed on a letter sheet, and forwarded to those persons whose interests are to be affected by its provisions.

FREE BANKS

We have received from the Hon. D. R. Floyd Jones, State Senator, the following important letter:

"Albany, Feb. 18, 1845.

"My Dear Sir,

"I would state in reply to your letter that the case of the "Board of Supervisors of the county of Niagara, *vs.* The People, *ex rel*, Wm. G. McMaster," came before the Court for the Correction of Errors upon a writ of Error brought from the Supreme Court ordering that a peremptory writ of mandamus issue to the Supervisors of Niagara County, commanding them to restore to the assessment rolls of the town of Lockport, the assessment of the Canal Bank of Lockport, and the Lockport Bank and Trust Company. The only important question involved in the decision of the case was, "Were the two Institutions above named, *monied or stock Corporations?*" If they should be denied to be such by the Court for the Correction of Errors, then the reversal of the decision of the Supreme Court would necessarily follow. The judgment of the Supreme Court however was affirmed as follows:

"For Affirmance—Messrs. Bartlett, Corning, Johnson, Lawrence, Lester, Mitchell, Porter, Scott, Scovil, Smith, Varney.

"For Reversal—Messrs. Backus, Bockee, Jones, Platt, Rhoades, Sherman, Varian, Works.

"Yours, very respectfully,

"D. R. FLOYD JONES.

"E. Meriam, Esq.

RECEIVER OF TAXES.

The office of Receiver of Taxes has been crowded full, and also the avenues to it, for a number of days with persons to pay their taxes before the 15th of February. This is the ill management of the Corporation functionaries in 1843. It will be seen by reference to the Tax Bill in No. 16 of this volume that the anti assessment committee prepared a remedy for the inconvenience by a proviso to allow a deduction on all taxes paid between the 1st of January and the 15th of February as well as taxes paid prior to January 1st, but the Corporation opposed this in order to screw money out of the citizens before the ballancing day, 31st December, so that they could cover up the delinquent ballance sheet.

LEGISLATIVE POWER.

The Constitution of the United States contains this provision:

"ARTICLE 1, § 1.—All legislative power herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

The Constitution of the State of New-York contains these provisions.

"§ 1. *The Legislative power of this State shall be vested in a Senate and Assembly.*"

Can the Senate and Assembly of the State of New-York delegate the right or power to pass penal laws to any other body of men?

By *Art.* 1, *Sec.* 12. Con. "Every bill which shall have passed the Senate and Assembly, shall, before it become a law, be presented to the Governor; if he approve, he shall sign it; but if not, he shall return it with his objections to the house in which it originated," &c. The Constitution then proceeds to say, that the objections of the Governor shall be entered "at large on their Journal, and they shall proceed to reconsider it. If after such reconsideration two thirds of the members present shall agree to pass the Bill, it shall be sent together with the objections to the other house, by which it shall be reconsidered: and if approved by two thirds the members present, it shall become a law. But in all such cases, the votes in both houses shall be determined by *yeas* and *nays*, and the names of the persons voting for, and against the Bill, shall be entered on the Journal of each house respectively. If any bill shall not be returned by the Governor within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law in like manner as if he had signed it, unless the Legislature shall by their adjournment, prevent its return, in which case it *shall not become a law.*"

The Governor is thus vested by the Constitution with a negative upon the acts of the Legislature, but this negative is greatly qualified, inasmuch as the vote of two thirds of a bare quorum can pass a Bill after his refusal to sign it, notwithstanding such refusal.

The Constitution provides that the members of the Senate and Assembly shall respectively be elected on a certain day, at a certain place, by persons possessing certain qualifications, and that they shall convene, &c. on a certain day, &c.

Thus the Constitution provides in what manner laws shall be enacted, and details with great precision the form and time. No Bill whatever can become a law of this State, unless enacted in the manner and form prescribed in the power thus given in the Constitution by the People, who are Grantors of the Power.

The Constitution contains no power of substitution, no authority, or permission to the Senate and Assembly to delegate the power of making laws to any other body of men. The power is special, limited and restricted in every respect.

The Act of the Legislature of the State, passed April 7th, 1830, which is called the Amended Charter of the city of New-York, contains this provision:

"§. The Legislative power of the Corporation of the City of New-York shall be vested in a Board of Aldermen and Board of Assistants, who, together, shall form the Common Council of the City."

The question then arises, can the Common Council of the City of New-York pass laws? Can the Legislature of the State grant to the Common Council, or vest in that body the power to pass laws?

To the first quiery, we answer in the negative, and add, that the city of New-York is a part of the State of New-York, and is governed by the laws of the State.

The reply to the second enquiry here propounded, is, that the Legislature of the State cannot in any manner or form, either direct or indirect, delegate the Legislative power vested in that body, that no power of substitution whatever, is contained in the Constitution.

A citizen who executes a written power to another citizen to act for him, and in his name, if he intends the power thus given to be exercised by another, inserts a special clause authorizing his said agent and attorney, to substitute another, or others in his place and stead, &c.; but in the Constitution, the grantors of the power make no such provision in that instrument which contains the grant, and none can be presumed, or implied.

If the Common Council desire an ordinance to have the force of a law within the bounds of the city, that ordinance should be made into the shape of a Bill, and be passed by the Legislature of the State, and approved by the Governor, in the manner and form prescribed by the Constitution.

The Common Council might with as much propriety pass an ordinance to regulate the rate of interest on money, as to pass an ordinance to regulate other matters than those which pertain to the management of the corporate property. The Common Council have no more right to pass an ordinance imposing a penalty on a citizen for a violation of their so-called laws, than a government of an incorporated bank has, and the passage of such ordinances are a violation of the Constitution of this State, and will be so held when taken to the high courts for adjudication, and this objection raised.

No one will for a moment doubt that there should be special laws relative to the City, but all such laws should be passed by the Legislature of the State, and not by the Common Council of the city.

The Common Council of the city of New-York is not the Corporation of the City, but the powers of the Corporation are vested in the Common Council, to be exercised by that body in a certain manner, &c. And what, or who is the Corporation of New-York? It is the citizens and inhabitants of New-York, in whom is vested certain property which has been granted to them by the name and style of the Mayor, Aldermen and Commonalty of the city of New-York, and the management of this Corporate property is committed to the Common Council and particular officers.

The Common Council have the management of this Corporate property for the citizens and inhabitants, the same as the President and Directors of a Bank have of the Capital Stock which is the property of the Stockholders.

If this Corporate property consists of market-houses, they have the right and power to say at what rate the stalls shall be leased and what hours the Market shall be opened, but they have no right to say that the citizen who owns a store shall not sell Pork, Beef, or Poultry in that store, nor can they pass any valid ordinance, making it a penalty for a citizen to sell meat on his own premises. We know that such ordinances have been passed by the Common Council, and that some of the Courts have held such ordinances valid, but such a decision would not be held valid by the Supreme Court of the United States.

There is a vast difference between the powers which may be vested by a Charter in a Political Corporation granted by an absolute government possessing unlimited power, and these which are possessed by our free Government exercising the limited and restricted powers conferred by the Constitution.

No one conversant with the provisions of our Constitution, will for one moment pretend to deny that even the Legislature of the State, is greatly restricted and limited in its power; and yet there are others, and some of them members of the Common Council, who pretend to say that the Common Council, a mere creature of the Legislature, can do that which the Legislature of the State dare not attempt to do—this is, in effect, making the creature greater than the creator.

Hume, De Lolme, Sidney, Tucker and others, who have written much upon Legislative power, speak of it only in such cases as where its exercise is unlimited and unrestricted.

In our free country, this power is possessed by the people, and they are the grantors of power in all cases—the people are sovereign. The legislatures are mere grantees.

The Legislative power, is, by able writers, said to be arbitrary, overwhelming power, and for this reason it was restricted, limited, and defined, in our Constitutions.

If it is necessary that municipal corporations, created by the Legislature of this State, should possess legislative power over a portion of this State, then the Constitution of the State should be amended, and this provision incorporated in that instrument; or if it is desirable that the Senate and Assembly should be authorised to delegate the legislative power vested in these bodies by the Constitution, then, in that case, a suitable clause to that effect should be embodied in that instrument.

If the Legislature were to frame a bill containing all necessary general provisions for the incorporation of all cities, towns and villages in this State, and frame a code of laws which should have a special application to the districts embraced within the chartered limits of each, it would reduce the labors of legislators greatly.

LAWS RELATIVE TO THE CITY.

The Common Council of New York have applied to the Legislature for the passage of several laws, among which are the following:

1 Respecting Gambling Houses and Houses of ill-fame.

2 Respecting the License system, raising the price of a license to twenty-five dollars, and providing a penalty of fine or imprisonment not exceeding forty days, for selling liquors without license.

3 Respecting taxing nonresidents, and relating to the return of jurors.

4 As to betting on elections.

5 For power to enact Penal laws, which is asking for a vesting in that body of the Sovereign power of the State.

6 Relating to unpaid taxes.

The Common Council before applying for a Law, should submit the bill to the People, and any act which they may ask for, which affects a particular private interest, must be presented on notice of six weeks in the State Paper under the provision of Sec. 1 and 2 of page 142 of Vol. 1 of the Revised Statute.

The Common Council will apply for a law to raise money by tax.

Allso for a law to raise $200,000 by Debt to build a poor house.

Also for money to be raised by Debt to complete the High Bridge.

The money to erect the High Bridge, should be placed in the hands of the State Croton Board for disbursment This board consists of Stephen Allen, Saul Alley, W. W. Fox and Thomas T. Woodruff, all of whom are business men, in whom the public have the most implicit confidence.

The two hundred thousand dollars for the poor House should not be granted. Gentlemen in whose opinions we have implicit comfidence say that it will entail on the city an outlay of a million of dollars and an annual outlay of one hundred dollars besides.

It is high time for the city Government to retrench expenditures, but the Alms house project is beginning at the wrong end. The present members of the Common Council were elected to office to reform abuses and not to practice them.

We received a few days ago, a letter from a most estimable citizen on this subject, which is as follows:

"Mount Washington, Jan. 31, 1845.

"DEAR SIR,—

"Indisposition will prevent me from meeting the Mayor by appointment, in relation to matters in general, relating to the Alms House Department.

"I regret that it has been determined to remove the establishment to Randals island, and that the buildings on a most extensive scale are in the course of erection, and for this purpose an application is about to be made for permission to raise a large amount.

"My opinion is that this is the commencement of a most disastrous state of things, reaching, in their consequences, far beyond any considerations of money.

"I sincerely believe that it will add at least one million of dollars more to our already alarming debt and that it will increase the annual tax one hundred thousand dollars, and in a short time a far greater amount.

"I suggest the propriety of making an effort to resist the raising of any money for the object.

Yours Respectfully, JOHN M. BRADHURST.

To E. MERIAM.

Mr Bradhurst is a practiced business man of great experience, and he is a large tax payer. He held the office of Alms House Commissioner for two years, and resigned the office in preference to making extravagant outlays for buildings which the Common Council insisted upon.

Other gentlemen who are familliar with our City affairs and who have had great experience in public life express the same opinion as that expressed by Mr. Bradhurst.

NEW-YORK MUNICIPAL GAZETTE.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, FEB. 12, 1845. [VOL. I....NO. 27

MAYOR'S OFFICE,
January 20th, 1845.

To the Hon. the Board of Aldermen:

With much regret, and after careful deliberation, accompanied by an earnest desire to add my official sanction to the measure, I find myself compelled to return to your Honorable Board, without my signature, the resolution granting a lease of the Rotunda, (or building now occupied as the Post Office,) to the "New-York Gallery of the Fine Arts," at the nominal rent of one dollar per annum.

I appreciate as highly as the Committee of your Honorable Board by which the resolution was reported, the claims of the institutiou on the public regard and countenance; and the long list of petitioners for the lease, including, as it does, the names of some of our most estimable and distinguished citizens, adds a powerful motive to those already existing in my own miud, for wishing that I could sanction the resolution, consistently with my sense of duty.

But I cannot see that the City Government has the right to make such disposition of a valuable property. The vast and increasing expenses which the citizens have to meet, admonish us that we should not only practise rigid economy in expenditures, but also put to the most profitable use all the city's property and means of revenue. I was chosen to office under this profession and pledge, and I feel myself bound to act up to the profession and redeem the pledge.

Already there is a want of office accommodation for officers connected with the City Government, and the want is likely to increase. The Rotunda, occupying a most suitable and convenient position, might be fitted up at no great expense, so as to furnish several offices which we are now obliged to hire; and if such use of it should not be deemed expedient, there is no doubt that it could be let, at an annual rent of from three to four thousand dollars, which we should be careful not to lose from the public treasury.

The resolution proposes no term for the duration of the lease. If it is intended to grant the building for only one year, the institution might be subjected to the serious inconvenience of having to remove at the end of that time. If a perpetual lease is contemplated, I confess that the propriety of thus binding the city governments that may come after us, appears to me extremely questionable.

Whether a great number of our citizens might not be benefitted by a location farther up in the city than that proposed, is a question for others to decide. As I have already said, my feelings toward the New-York Gallery of the Fine Arts (of which I am a member) are most friendly and of my own property I would cheerfully be liberal to an institution so laudable, and promising such benefits to the citizens; but in dealing with the property of the people I think it is our duty to be careful and economical, not generous, especially at this time, when the expenditures are so large, the taxes so heavy, and the prospects so remote in consequence of the enormous outlays with which we are threatened for the support of schools and of the Alms House establishment—outlays that are continually increasing with no apparent means of prevention.

With these views, I think it my duty to return the resolution without my signature; and I do it with some diminution of reluctance because I know that if my views are wrong, the Common Council still have it in their power to consummate the measure.

JAMES HARPER.

We have given as above, a copy of the VETO MESSAGE of HIS HONOR MAYOR HARPER, and below, we give the opinion of several of our most estimable and intelligent citizens of this act, expressed in a memorial addressed to the Common Council.

To the Honorable the Common Council of the City of New-York.

The undersigned Citizens of the City of New-York, approve of the objections made by His Honor the Mayor, to the passage of the Resolution appropriating the Rotunda, a building belonging to the City, for the purpose of being used as a gallery for the display of paintings, &c., and ask your Honorable Body to sustain the Mayor in the course he has taken in this proceeding.

And your memorialists, &c.

New-York, Feb. 8th, 1845.

MAYOR SPRAGUE.

The message of this clear headed and independent public officer to the Common Council of Brooklyn, deserves a careful reading, and the citizens of New-York should contrast this message with the statement of the New-York City Finances, which follows this message.

GENTLEMEN OF THE COMMON COUNCIL.

"I deem it a matter of importance to communicate to this common council, and to all concerned, some facts in relation to the taxes and current expenses of 1844.

"An inquiry is often repeated—Why are the taxes more onerous this year than last? Why, say the tax-payers should they not diminish in proportion to the great increase of houses, property and population? A brief and satisfactory answer to this question is due to all who pay taxes.

It appears that an additional sum of $17,721.16 has been raised for 1844, more than was raised for 1843, as follows:

The increase of lamps required that the Corporation should add - - - - - -	$1,100.00
By an act of the last Legislature was added for the Common School Education -	1,321.16
Also for County purposes to build an Insane Asylum -	13,000.00
The State called for 1-10 of a mill additional on the mill tax, say - - - - -	2,300.00
	$17,721.16

Thus may be seen the amount of increase by whom and for what purpose. It is a common remark, that the rapid growth of the city will tend to diminish the taxes; but it will be borne in mind while the State and three organized bodies are annually increasing in wants irrespective of each other, the advance of the city will probably be anticipated if not greatly exceeded.

Since the year 1833, the current expenses of this city have exceeded the amount raised on tax account, about $70,000; to which, if we add many incidental expenditures, the excess over receipts from taxes, for the last ten years, cannot fall much short of $10,000 a year, and met by the sale of bonds of $500,000, all of which were disposed of long ago.

It is a painful reflection that the same system is still progressing, and if continued, must inevitably lead to serious consequences, such as no discreet individual would allow to interfere in his private affairs. It is not possible to arrive at an accurate statement of what will be the actual deficencies of the several appropriations for 1844, until the financial year shall be closed by all the bills presented and audited. Enough, however,

is ascertained to satisfy any reasonable mind that it is time to pause, and to adopt some system by which this city may hereafter be guided within its legitimate means.

Some of the deficiencies that may be safely estimated for the present year are as follows:

There will be paid out in the shape of salaries, more than raised, - - - - -	$950.00
There will be paid out to watchmen, more than raised. -	2000.00
For repairs of wells and pumps,	600.00
Municipal Court, - -	800.00
Repairs streets and roads, -	700.00
Cleaning streets, - - -	675.00
Interest less receipts from South Ferry (docks claimed by individuals), - - - - -	1400.00
	$7,125.00

There are many incidental expenses, of which Law is a large item, that will swell the amount of deficiencies to $10,000 for the present year, not to say anything of heavy assessments in and about the Park, as is already seen in the assessment list for the sewer, which will probably be followed for regulating and paving Navy Street, and all similar work.

There is what is termed a Sinking Fund, created by a law, for which $5,000 is annually raised by tax to sink the public debt; but there is also what may be, not unaptly, termed an anti-sinking fund, by the Corporation, which has and is sinking the city deeper and deeper in debt.

Every successive Mayor and Common Council find it much easier to increase expenses and Corporation patronage, than to diminish either. They can seldom devote their time and attention to the financial affairs of the city; hence it is natural for men in a corporate capacity to do what they would not do as individuals. I admit, if we had bonds to meet the deficiencies, as usual, the city affairs might go smoothly on, until the interest, instead of absorbing nearly half the taxes now raised, would, in process of time, require the whole amount, and leave nothing for current expenses. Every year must add to the amount of *contingent interest*, to be paid on monies borrowed in anticipation of taxes. The more the city is suffered to run behind on tax account, the more will be required to be borrowed from year to year, and for a constant increase of time, until it shall be necessary to hypothecate the taxes of next year to meet the wants of this, and so onward.

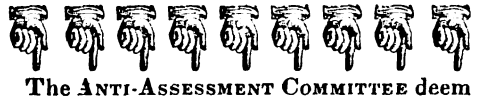
It should be remembered that many of the deficiencies will fall upon the first seven wards, on a settlement with the 8th and 9th, and its importance will increase when called upon to pay up.

Six years previous to 1833, the public expenditures were held sacredly within the means raised by tax. It may be said we were then a village; but I know not why the same principle of finance is not applicable to a city. With this brief view of the city affairs to what conclusions shall we come? Shall we proceed as for the last ten years, and confirm an example for our successors, or shall we at once set about devising the best means in our power to put an end to the anti-sinking fund for which no taxes can be levied, and no bonds be applied? To over-run the appropriations, as has been the practice is a sure road to bankruptcy and unauthorized by law. The remedy is simple: either retrenchment, or an act of the Legislature to increase the taxes; or both seem to me inevitable. The former should be well considered before a resort to the latter especially as we have already approached too near the percentage levied in our sister city.

Thus I have been urged by a consideration of duty to make this communication in the belief that it is much better to know the worst, and speedily to apply a remedy.

All of which is respectfully submitted.

J. SPRAGUE, Mayor.



The ANTI-ASSESSMENT COMMITTEE deem it of great importance to place before the Tax-paying Citizens, some facts in reference to the peculiar state of the City Treasury, at the close of the fiscal year, from 1839, to the present time. In the first place, they place before you the official admission, of the actual amount of the arrears on the 31st of Dec., 1839, as follows:

"To the Honorable the Legislature of the State of New-York.

"The memorial of the Mayor, Aldermen and Commonalty of the City of New-York, *Respectfully represents*,

"That by reason of the great expenses which they have incurred in consequence of the various improvements in the said city, they have found the ordinary revenues of the Corporation altogether inadequate to meet the demands which these expenses have produced, and that they have therefore from time to time been obliged to issue their bonds under their Corporate Seal, to defray some of these expenses, as a means of mere temporary relief. The amount of this floating debt on the 31st of December last amounted to ONE MILLION SEVEN HUNDRED THOUSAND, FOUR HUNDRED AND SIXTY DOLLARS, and can probably be reduced from anticipated sources of revenue to *one million three hundred thousand*.

"The amount to be raised by the annual tax bill will be required for the *ordinary expenses that will accrue pending its collection*, and will therefore furnish no relief in liquidation of the floating debt.

"Your memorialists therefore pray your honorable body will grant *to them authority* to fund such amount of the said floating debt as they may deem expedient, not exceeding *one million three hundred thousand dollars*, by the creation of a six per cent. stock, redeemable in annual installments of $100,000 each.

ISAAC L. VARIAN, Mayor.

THOS. BOLTON, Clerk of C. Council.

Endorsed.—Board of Aldermen, January 13th, 1840. Board of Assistants, Jan. 13th, 1840. Approved, Jan. 14th, 1840.

ISAAC L. VARIAN.

Presented in Senate, Jan. 17th, 1840.

The Legislature authorized the funding of $400,000, payable $50,000 per annum, by general tax on the Real and Personal Estate of the inhabitants and freeholders of the county of New-York.

The state of the City Treasury, as per Comptroller's reports, is as follows:

December 31st, 1840.

Temporary Bonds outstanding,	$1,115,500 00
Overdrawn account in bank,	2,650 42
Tax money of 1841, collected and used in 1840,	102,545 11
	$1,220,695 53

December 31st, 1841.

Temporary bonds outstanding,	$847,947 00
Overdrawn the Bank,	247,437 12
Tax money of 1842 collected and used in 1841,	193,283 80
	$1,288,667 92

December 31st, 1842.

Temporary Bonds outstanding,		$887,433 04
Tax money of 1843, collected and used in 1842,	$765,823 26	
Less bal. in bank,	359,365 43	
	$406,457 83	406,457 83
		$1,293,890 87

December 31st, 1843.

Temporary Bonds outstanding,	$510,000 00
Overdrawn the Bank,	77,690 74
Tax money of 1844, collected and used in 1843,	739,089 48
	$1,326,770 22

It will be seen by the very brief statements above, that the Temporary indebtedness, has increased, notwithstanding the payment of $50,000 annually by tax for its reduction.

The change in the unpaid checks outstanding and undrawn in 1842, to a balance in the bank to the close of that year, as compared with former years, was in consequence of the provision incorporated as an amendment to a tax law of 1842, procured to be made by the Legislature on the application of the anti-Assessment Committee, by the substituting of voluntary payment of Taxes in advance, and deducting of the Interest from the tax paid.

The Receiver of Taxes has, up to 3 o'clock P. M., of Dec. 31st, 1844, received of the Tax of 1845, in advance, the sum of $881,678 34. The outstanding temporary Bonds on the 31st Dec., 1844, the anti-Assessment Committee have not the means of ascertaining until the printed Report of the Comptroller comes to hand, nor will the State Bank Books show the balance in the City Treasury, as that Institution has

no account of Checks drawn and outstanding, which have not been paid before the termination of Bank hours this day.

The balance of the Tax of 1845, to be collected, will not be sufficient to pay the interest of the City debt, the temporary bonds falling due, and the City expenses "*pending its collection*," consequently, the old unauthorized system of issuing temporary bonds must be continued to meet these payments.

This temporary indebtedness should be funded, payable by tax at the rate of $100,000 per annum, until all is extinguished, and the Legislature should also require the Receiver to deposit the money collected from the Mill Tax to the credit of the State Treasurer—that collected from the Croton Tax, to the credit of the State Croton Water Commissioners—that for the support of Schools, to the credit of the proper department, &c., &c. A Committee to investigate the Fiscal concerns of the Corporation, should be appointed by the Legislature, and a Board of Auditors of public accounts, should be created by State authority. The Department of assessing Taxes, building Sewers, opening and improving Streets, &c., should also be created by the State Legislature. The assessment of Taxes should be made by a permanent Board, which Board should have the power to correct erroneous Taxes.

TAXATION.

A friend has sent us the Albany Knickerbocker, of 1844, containing an article on TAXATION, which we give below. It is from the pen of a practical business man of very high standing in the community in which he resides. We omit the bill which is a part of the article

"TAXATION OF BANKS.

"A few reasons are offered in favor of a law embracing the above principles of taxation, together with a few remarks on the taxation of real estate.

"First—Taxation to be just ought to be equal—and to be equal ought to reach all species of real and personal property.

"Secondly—It is a conceded fact that real estate pays too much tax in proportion to personal property. It therefore follows that our laws ought to be so framed as to reach, if possible, all personal property, as it will not be denied, that personal property which can generally be vested at 7 per cent. is more profitable than real estate on an average; but in our zeal to reach personal estate, do not let us be unjust. Some years ago a tax was laid on all incorporated Banks. At that time banking was a monopoly, and most of their charters when obtained were worth from 10 to 25 per cent., and but few could be obtained—but since the passing of the Free Banking Law the monopoly has entirely passed away, and there is now no good reason why a Bank stockholder should pay any more tax on Bank stock than on the same amount of other personal property, or that because it was in Bank stock he should be deprived of his right of swearing it off in case he owes enough to balance it and all other personal property. It is hardly supposable that a man would take a solemn oath to reduce his assessment and makes himself liable to the laws of God and the penalty of perjury.

"It is the opinion of some, if not all the learned counsel of the state, that Bank stock held under the Free Banking Law is free from taxation—should that be so, is not the above Law required?

"Many hard cases in respect to taxation of real estate might be cited; but as most of the cases are well known to you, I will merely name one—a mechanic or other person has a vacant lot on which he wants to build a house—he goes to some insurance office or money lender and mortgages the lot and contracts to have a house built and insured, and the policy to be transferred for security, and he then takes his money as the building progresses, so that when completed he owes about all his property is worth. Yet as the law stands he must pay the tax on it and the insurance office pays a tax on their mortgage on the same property and there is no way for the owner to escape—unless he should be taxed for personal property; in that case he could swear off the amount of the bond; but generally such men are not taxed for personal property.

"Would it not be just for the owner of real estate to say to the assessor when he calls on him to assess his house, which is admitted to be worth $12,000, I owe $10,000 on this house. To Mr. A. $5,000,—to Mr. B. $5,000, and would it not in such case be just for the assessor to assess to A $5,000, to B. $5,000, and the balance to the owner of the house—the non-resident of the town or ward of such bondholder could be reached the same as non-resident stockholders of Banks in section 2 of the above bill by authorizing the mortgagor to pay the tax and deduct it out of the interest on his bond."

PUBLIC SEWERS.

We have laid by for examination, an essay on sewers, by J. B. JERVIS, Esq., of this city. Mr. Jervis is a worthy gentleman of high standing as a civil engineer.

We do not agree with Mr. Jervis in many of his conclusions as to sewers which terminate under water. Such sewers cannot so easily be kept clear by water collected in a large body at the head of the sewer for that purpose, for the foul air in the sewer would not be absorbed by the water, but would be forced by the water into the surface atmosphere.

A gentleman who is familiar with our city affairs, has recently returned from Europe. In October he examined a sewer which was being laid down in Bow Street in London, at the depth of 20 feet. The Church, called the "Bow Bells," had its walls cracked by the excavations for this sewer, and it became necessary to prop up the building. This gentleman expresses the opinion that the use made of sewers in London for conveying off animal excrements, is highly objectionable. Our informant is a practical man and highly intelligent, and his opinions are entitled to great weight for these are formed from personal observation.

That sewers for drainage are extensively required in the city of New-York is undisputed, but the use of these subterranean conduits for other purposes, is too serious a question to be determined by any other means than a thorough investigation, by persons whose minds are not influenced by pre-formed opinions. In narrow Streets like Beekman Street, there is not room for a sewer between the house vaults, unless the sewer is laid low, and then it will endanger the foundations of the houses.

The State Croton Water Board, is composed of practical men, whose opinions on this subject we should rely upon with great confidence, and this question should be referred to that Board, for their opinion.

A friend has put into our hands a small pamphlet on sewerage, the writer of which is a very worthy citizen who is very zealous in favor of universal sewerage. The writer, with great candor, in his preface, says:

"The article originally prepared for Hunt's Magazine was republished in the present form without any pretension on the part of the author to more knowledge about the matter it treats of than might be acquired by almost any citizen with very little labor."

The discussion of the subject will do much good, and the writer we have referred to, has improved himself in this matter. We have before us several essays on sewerage, from his pen, and the last essay on this subject is a very valuable paper.

Some of our best citizens favor his plans, and others, equally deserving and worthy, oppose them.

In changing the grades of Streets much mischief has been done by shaping the surface so as to form artificial basins, thus accumulating the surface water in places from which before it had a great descent. This is clearly illegal, and the public officer who thus acts, lays himself liable to damages in actions against him by the injured party.

If sewers were to discharge above low water into the East and North Rivers, the gases in those conduits will deteriorate the atmosphere air that is reposing within the reach of the sewers, and these conduits of bad air, in case of pestilence, will become conduits of infection. If the sewers terminate under water, the bad air cannot be discharged except on the surface of the streets. The Rector Street difficulty in 1822, and also that of Warren Street, with the old sewer, during the yellow fever, are matters of record. We will examine these records, transcribe and publish them. We should be glad to find ourselves wrong in this, and find our opponents right. We will endeavor if possible to take an impartial view of this subject. The opinion of Mr. Wells, the Superintendant of Sewers in Boston, which we published in our paper of Dec. 1844, is entitled to great weight. He has held the office of Superintendant for seven years, with approbation.

CHAPEL STREET SEWER.

We shall in one of our future numbers, review the Report of the Special Committe upon the Chapel Street Sewer, made in April, 1844, and dissect that printed document, and place the papers in the order in which they were originally arranged for to be printed, and show how these have been dis-arranged, what omissions have been made, what has been added that did not belong to the papers—what dates have been suppressed, &c. &c. &c. It is high time that this matter had a thorough, complete, and final sifting, that the public may know the whole matter. We will endeavor to do this, most thoroughly.

PUBLIC STREETS AND PUBLIC PRINTING.

These two subjects are in the same unmentionable condition as when we referred to them last which was in December of last year. This is inexcusable.

The little girls with their brooms keep a strip clean about two feet wide across Broadway, at the intersection of each street, without difficulty, and collect toll from foot passengers who are willing to compensate them for this labor.

The possibility of keeping this street clean is thus demonstrated, and it is thus shown that the Corporation do not do their duty in this case.

As to the public printing, the Committee to whom the subject was referred last May, have never yet reported, and probably never will.

JUDGE HOPKINSON.

In the argument before the High Court of Impeachment in the trial of Mr. Justice Chase, Mr. (now Judge) Hopkinson used this language.

"The pure and upright administration of justice is of the utmost importance to every people; the other movements of the Government are not of such universal concern. Who shall be President, or what treaties or general statutes shall be made, occupies the attention of a few busy politicians; but these things touch not, or but seldom, the private interests and happiness of a great mass of the community.—But the settlement of private controversies, the administration of law between man and man, the distribution of justice and right to the citizen in his private business and concern, comes to every man's door, and is essential to every man's prosperity and happiness. Hence, I consider the judiciary of a country most important among the branches of government, and its purity and independence of the most interesting consequence to every man."—*Notes to Mr. Justice Story's Commentaries.*

TERRIFIC THUNDERBOLT.

On Sunday morning, the 2d of August, 1844, at an early hour, a thunder-storm passed over Brooklyn. I was at the time noticing the brilliant corruscations of the lightning, and the deafening peals of the thunder, with much attention, in order to be enabled to judge of the nearness of the descent of the different bolts, as these were successively discharged from the bosom of the storm. A terrific bolt came with a continuous crash so close upon the light, that I judged it reached the earth at a point not far distant. On inquiry, I found that three dwellings, and also the *track* of the rail cars, had been struck about a mile distant, which would give a measure of time of about eleven seconds between the light and the sound at my place of observation. It is difficult to measure time by seconds within the sound of the crash of the elements—and most of such measures are at best but guess work.

I visited each of the dwellings which were struck, and made minute and most particular examinations; and after making my memorandums, I re-visited these dwellings to make accurate measurements, &c. The dwelling of Mr. Speck in Warren Street, which is one of the houses struck, is a two story wooden house, painted white. This house adjoins another of the same material, &c. The lightning struck the chimney of Mr. Specks's house, and entirely demolished all that portion of it which projected above the roof, broke the gable-end weather-boarding and ceiling of the front attic bed room, in which were several Canary birds, none of which were killed, but several of them escaped through the opening made by the concussion. One of the timbers of this apartment which I examined was broken. A gilt portrait frame stood upon the floor in this room; the lightning passed over one side of it, and removed some of the gilding, but did not disturb the glass, although the same bolt had broken a timber 3 inches by 4. From this room it descended into the front chamber. In this chamber the glass in one of the lower sashes of a window was all broken, and some other damage done. From this room it passed down into the parlor in two places, making two holes through the plastering of the room: one of these was about the size of a pipe-stem—the other about the size of a small musket-ball. These holes were round. One of these perforations was over the mantel-piece at the end of the room, and the other over the looking-glass at the front of the room.

Thus it appears that the lightning divided, or else the clouds discharged several bolts at the same moment, and these of different sizes. The bolt which came down over the mantel-piece, first struck upon a brass headed nail, on which a portrait in a gilt frame was suspended by a brass ring. The whitewash around the nail was a little discolored, and appeared as if gunpowder had been burnt upon it. The gilt frame was uninjured, but a little of the gilding was removed. Two metallic girandoles stood upon a polished marble mantel shelf, each holding a sperm candle; one of these candles was broken, but the candle was not affected by the heat of the lightning. From the girandole the lightning passed over the surface of the marble mantel shelf, and over the surface of the mantel piece, leaving a discoloration as the record of its path. This discoloration was unequal in width, and uneven on both edges—the widest being less than an inch, and the narrowest over one-fourth of an inch. From this the lightning passed to the grate in the fire-place. The bolt which came down at the front of the room, struck the corner of the frame of a mantel looking-glass, which was then used as a pier-glass. The gilding on the corner of the frame was some of it removed; the lightning left the gilding of the frame, preferring the silvering of the glass, passing between the glass and the wooden back over the surface of the quicksilver flattened into a sheet, discovering elasticity in its body, and passed out at the bottom of the glass in two places, about six inches apart. The glass was in three pieces—that is a main or centre glass, and two end pieces, the points of which were covered over with a piece of gilded wood; at these joints there was a discoloration—showing, I think, that combustion or decomposition was going on during the whole time the lightning was travelling over the surface. The lightning which passed out near the centre of the bottom of the glass, came in contact with the surface of a highly varnished mahogany table and travelled over the surface of this, taking off a little of the polish for half an inch or less, in width, across the top and leaf of the table.

The lightning which came out of the corner of the glass, came in contact with a white muslin window curtain which hung in a fold over a large curtain pin—made a rent in the curtain, and stained it of a purple color, the subliming of the gold leaf used in gilding—and from this passed out of the front window, which was open, breaking the window blinds, which were shut, where the hinges and hasps were attached, and transferring some of the gilding of the looking-glass frame to the window blinds; from these it passed into the front area, breaking the front door-steps. A room communicates with the parlor by folding-doors, which were partly open, and a bed-room extended from this latter room into a wing or projection in the rear of the house near the cistern. Mr. Speck and his wife and child were in bed in the middle room, and Mrs. Speck was awake at the time, and saw a ball of fire pass through the room. Two panes of glass at the head of their bed were broken. The bed-room which extended to the rear, the lightning passed through, shattering the window in the rear, and throwing some of the wood work back towards the middle room. In the basement, the lightning made several excursions. A looking-glass plate without any frame, which stood upon the mantel, was visited, but not injured. A parrot in a tin cage was stunned a little, and the next day bled at the nostrils. A stone jar containing dry crackers, and which stood in the pantry of the basement, covered with a tin pan, was entered by the lightning, and a round hole made in the side of it, measuring seven-sixteenths of an inch in diameter. The tin pan was not knocked off, and it is probable that the lightning passed under it; but rather than travel the same road twice, it made its exit through the side of the jar, and without cracking it. It did not enter that way, it is evident—for the piece cut out would in that case have remained inside.

The outside of the house I will next notice. A wooden gutter receives the rain water from the roof, in front, from which a tin leader extends to the rear, uniting with the tin spout from the rear gutter; these descend from the rear roof to the roof over the rear bed room. I have noticed one from thence to a cemented cistern, in which there is a pump. The tin leader, in passing from the front to the rear of the house, was fastened to the weather-boarding, a few inches below where the lightning broke in the gable end of the house to the attic, where the birds were confined. The lightning passed down this leader, but whether in the inside or outside, or both, it is impossible to say. There were two elbows in the leader in the rear, and in the spout below each elbow, is a rent in the spout made by the lightning, and each of these rents show that the lightning passed from the inside to the outside of the spout, as the fracture made in the tin 1 3-8 inch by one inch show, as the tin was bent outward, and the pieces parted in the centre and held to one edge on each side, like the opening of a folding-door in the centre. The distance between the two open edges was less than half an inch. At the pump in the cistern, the lightning broke the woodwork of the curb, and passed out of the spout through a gutter, outside the fence, in the open lots, where it killed a hog. The lightning followed the rear tin leader of the adjoining house, and to the cistern in the yard of that dwelling, and there broke the pump, curb, &c. The persons in the houses were not injured. The lightning in passing from the front through the middle room into the rear bed room, went out of its nearest way to the atmosphere; for had it taken the nearest route it would have passed over the bed in which Mr. Speck, his wife and child, were reposing. Their escape is, therefore, providential. When the lightning reached the frame of the looking-glass it left the gilding and descended over the silvering of the plate and divided in the distance of the length of the glass into two parts, without affecting the glass or the coating of it, as neither was in the least affected.

This record, made by this thunderbolt, is the most minute of any that I have ever met with, for it witnesses the preference of the lightning for particular surfaces, having here had the opportunity of making a selection, also that it will pass over a thin surface, which is bright, without disturbing the most delicate substance on which the bright coating rests, and also that a bolt will divide into several distinct bodies—and that the track of the path of each is very narrow, it is closer, and will flatten where it is necessary. In the midst of the raging tempest, where the hard breathing of the storm comes in furious blasts, when the coruscations of the lightning illuminate the dark chambers of the storm, and the thunder is rolling with fearful crash from cloud to cloud, it is difficult to watch with accuracy the operations of the lightning, but when the storm has passed, and made its record—that record can be examined with calmness, and care, and found highly instructive, and besides it is impressive, for the writing is with the pen of fire guided by a thunderbolt.

LIGHTNING.

The various theories which have been put forth in reference to the laws of electricity are calculated to perplex mankind, and afford but little information to persons who wish merely to protect life and property from destruction by lightning.

Experience is, in all things, the best schoolmaster, and the lightning in this latitude is so frequent that the diligent and careful observer, has abundant opportunity of obtaining information from the records of the lightning itself, as to its habits and disposition. These records are very numerous.

It matters not whether we consider lightning a fluid or a solid. Records of the lightning are written by the thunderbolt upon material substances with which it comes in contact. The language of the lightning is universal, and it is intelligible to every mind that gives diligent application to endeavor to understand it from its own record. It is from facts that we are to gather knowledge, and not from the opinions of men. Facts that are ascertained and recorded for a series of years, of the operations of lightning afford more information than all the other sources put together. In an old file of newspapers, printed in 1758, which we have before us, we find the following notice from the pen of BENJAMIN FRANKLIN.

"Those of our readers in this and the neighboring Provinces who may have an opportunity of observing, during the present summer, any of the effects of Lightning on Houses, Ships, Trees, &c. are requested to take particular notice of its course and deviation from a straight line, in the Walls or other matter affected by it, its different operations or effects on Wood, Stone, Brick, Glass, Metals, Animal Bodies, &c., and every other circumstance that may tend to discover the nature and complete the history of that terrible meteor. Such observations being put in writing and communicated to BENJAMIN FRANKLIN, in Philadelphia, will be thankfully accepted and acknowledged."

MEMORIAL TO THE LEGISLATURE.

The memorial to the Legislature for the passage of a Law for taxing Incorporated Companies on their actual, instead of their nominal capital, is signed by his Honor Mayor Harper, by the Presidents of the following Banks, viz. Manhattan, Merchant's, American, Leather Manufacturers, American Exchange, City, Mechanic's, Union, State of New-York, Merchant's Exchange; by the President's of the New-York, Life and Trust, and Farmer's Loan Company; by the Presidents of the following named Fire Insurance Companies, viz. Mutual, Howard, Manhattan, United States, Fireman's, Contributionship, Equitable, North America, North River, and City Trust, by the Vice President of the New-York Marine Insurance Company, and the Secretary of the Eagle Fire Insurance Co., by the following named Banking Houses, viz. Prime, Ward & King, and Brown, Brothers, & Co., and several large capitalists of the city of New York.

THE MAYOR'S VETO.

The memorial to the Common Council for sustaining the Veto of the Mayor is signed by three gentlemen who have held the office of Mayor of the city of New-York, and several other distinguished citizens, without reference to politics.

The Mayor has reason to feel gratified that his acts are sustained by gentlemen who stand so deservedly high in this community.

There are several most excellent men who petitioned for the use of the Rotunda, for the use of the Gallery of Fine Arts, who approve the course of His Honor the Mayor, in this.

TAX ON INCORPORATED COMPANIES.

The following is a copy of one of the memorials to the Legislature of this State for the passage of a Law providing for equal and uniform taxation. As the law now is, under the construction put upon it by the Court for the Correction of Errors, Stockholders in Banks are put upon a different footing as to taxation from other citizens.

To the Hon. the Legislature of the State of New-York:

The undersigned most respectfully represent to your Honorable Body that a construction has been put upon the law providing for taxing Incorporated Companies which implies the right to impose a tax upon capital which has been irrecoverably lost.

The undersigned most respectfully suggest that such an imposition is inequitable and that it contravenes the great principle that taxation shall be uniform and equal.

Individuals are not taxed in this way, and the widow and the orphan who are often stockholders in Incorporated companies should not be thus assessed through the institution upon their stock.

The undersigned ask that the bill introduced into Senate by Mr. Bockee in 1843, a copy of which is hereto annexed, may be passed into a law.

And your memorialists, &c.

Jas. Van Nostraud,

"IN SENATE—MARCH 29, 1843.

[Brought in by Mr. Bockee.]

"An act to amend the Revised Statutes in relation to the exemption of incorporated companies from taxtion, and for other purposes.

"*The People of the State of New-York, represented in Senate and Assembly, do enact as follows:*

"Sec. 1. Section 9, of Title 4 of Chapter 12, of Part 1 ef the Revised Statutes, which authorize the exemption of incorporated companies in certain cases from taxation, is hereby repealed.

"§ 2. All banks established under the act entitled 'An act to authorize the business of banking,' passed April 18, 1838, shall be subject to taxation on the amount of capital paid in, or secured to be paid in, in the same manner as incorporated banks. And the proper officer or officers of such banks shall make an annual statement to the Comptroller and the assessors in the manner provided by the 2d section, Title 4, Chapter 13, of the first part of the Revised Statutes.

"§ 3. The provisions of the 15th Section of the 2d Title of the 13th Chapter of the first part of the Revised Statutes shall be extended to all incorporated companies and other associations subject to taxation: and the affidavit in such case may be made by the president, cashier, secretary or treasurer thereof, and such companies or associations shall be assessed on the actual value of their real and personal estate existing at the time the assessment may be made.

"§ 4. This act shall take effect immediately.

JOSEPH GRINNEL.

Mr. Grinell who is now a member of the House of Representatives of the Congress of the United States, was formerly a merchant of this city, and a member of the Commercial House of Fish & Grinnel. His residence is now in New Bedford, Massachusetts, from the district of which he has twice been elected to Congress. As a citizen, as a man, as a merchant, Mr. Grinnel is highly respected and greatly and deservedly beloved. It would be a happy circumstance for our country if our Congress was composed wholly of such men as Mr. Grinnel. Intelligent and honest members of National Councils are a public blessing.

The following is a copy of a Bill, to be presented to the Legislature to be passed into a law. This Bill has been drawn up under the direction of some of the Banks in the interior of the State. Most of the Institutions in the city of New-York, object to it, and these Banks propose, as a substitute, the Bill reported by Judge BOCKEE, of the Finance Committee, in the Senate, in 1843, which is to be found in another column of this page.

§ 1. The Cashier of each Bank, and banking Association now established, or which may hereafter be established in this State, shall, in the month of May in each year, prepare a list of stockholders in such bank, or banking association, and shall extend opposite the name of each stockholder, the amount and cash value, as he shall estimate the same under oath, of such stock owned by each stockholder, as they stood on its books on the first day of May, in the same year, and shall file the same in the office of the Comptroller.

§ 2. Such Cashier shall, in the month of May in every year, furnish from said list, to the assessors of each town or ward, in which said Bank or Banking Association may be located; the name of each Stockholder residing in such town or ward, with the amount of stock and cash value thereof, also the name of each stockholder residing out of this State, with the amount of stock owned by them, and the cash value thereof: and it shall be the duty of the Assessors of such town or ward, to assess as personal property to each stockholder, who shall reside in such town or ward, the amount, or cash value of his stock: and to such Bank or Banking Association, the amount or cash value of the stock owned therein, by persons residing out of the State.

§ 3. It shall be the duty of each Cashier in the month of May, in ever year, to furnish from said list, prepared as aforesaid, to the Treasurer of the County where any stockholder may reside, out of the town or ward in which such Bank or Banking Association may be located, a list of each stockholder residing in such county, with the amount of stock and cash value thereof: and such County Treasurer shall, on receiving such list, notify the Assessors of the towns or wards in which such stockholders may reside: and the Assessors of such towns or wards where such stockholders may reside, shall assess to each stockholder as personal property, the amount or cash value of his stock.

§ 4. In case the tax assessed upon stockholders residing in this State, and out of the town or ward in which the Bank or Banking Association may be located, shall not be paid or collected by any Collector of any town or ward, where the same may have been assessed, and shall be returned by such Collector unpaid: the County Treasurer to whom the same shall be returned, shall return the same to the Comptroller, who shall pay the same, and who shall have the same power to enforce the collection of such unpaid tax, from the Bank or Banking Association, whose stock shall have been thus assessed, as now authorized by law.

§ 5. Each Bank and Banking Association shall pay all taxes assessed to it, on stock owned therein by persons residing out of this State: and on all stocks owned therein where such taxes shall be returned unpaid, as provided in the fourth section thereof—but it shall be lawful for such Bank or Banking Association to retain or deduct the amount of any tax paid by such Bank or Banking Association, or paid by them as above provided, for unpaid taxes returned from the dividends on such stock.

SAMUEL YOUNG.

We regret to notice that this individual has not been re-appointed to the office of Secretary of State. Col. Young is a man of stern integrity and possesses a mind well stored with useful knowledge We have heard several citizens of the City of New-York, who are of different politics from the Hon. Ex-Secretary, express great regret that he was not continued in office. Those who know him best esteem him most.

UNITED STATES SENATORS.

The members of the Legislature of this State, on the 18th ult., gave their votes for two Senators to represent this State in the Senate of the United States. Lieut. Governor D. S. Dickinson and John A. Dix, Esq., formerly Secretary of State, were chosen.

Jonathan Thompson, Esq., formerly Collector of the Port of New-York, and W. B. Cropsey, Esq., of Richmond County, received the votes of the American Republican members.

Willis Hall and Millard Fillmore, received the votes of the Whig members.

WEATHER IN CANADA.

We have a letter from a gentleman residing in Upper Canada, dated January 30th, 1845, which states thus—"The winter so far has been mild. We had a fall of snow in November, which soon disappeared. At present, the sleighing on the frontier is poor enough, but passably good further back in the country, although the snow is no great depth."

THE SNOW STORM.

A great snow storm commenced here on Tuesday the 4th inst., at about 1 o'clock in the morning, and continued through all Tuesday and Tuesday night, and a short time on Wednesday morning. The depth of snow which fell is about 20 inches. On Friday night, the 31st of January, the temperature of the atmosphere began to decrease, and on Saturday my Thermometer denoted 8 degrees, as the lowest point to which it has reached, the present season. At the time the storm commenced, my thermometer denoted a higher temperature than usual at the commencement of snow storms, and denoted 30 degrees. Most snow storms, on the commencement of which, I have noticed the thermometer, denoted a temperature of about 24 to 28 degrees, The wind, on Tuesday afternoon was heavy, and came in fitful blasts.

The Boston papers state the snow commenced falling there on Tuesday, at 12 o'clock, M. The storm was, therefore, eleven hours in travelling from New-York to Boston.

The New-Haven papers state that the snow storm commenced there at 4 o'clock on Tuesday morning, the Newark, New-Jersey papers state that the snow storm commenced at that city, about 12 o'clock on Monday night. At Philadelphia, rain fell abundantly. At Albany, on Monday afternoon, the weather was cold, but the sun shone brightly.

At Hartford, Springfield, and other places in the interior, the snow storm continued throughout Wednesday. The duration of the storm was, therefore, about equal at the different places we have heard from, as the commencement of the fall of snow was not as early as at New-York, but continued an equal number of hours afterwards.

Some time since, we made a map of the snow storm of the 29th of September. Snow storms oftentimes make a narrow path, and it is very instructing to note down the journey of a storm. Cold air passes over the surface of the earth in veins This is demonstrated in the paths of hail-storms in Summer, which leave on Vegetation, a testimony of the visit.

THE SEVENTH SECTION OF THE AMENDED CHARTER.—"The rules of legal interpretation are rules of *Common sense*, adopted by the courts in the construction of the laws. The true test, therefore, of a just application of them, is its conformity to the source from which they are derived."—*Federalis', No.* 83,

"It can be of no weight to say, that the Courts, on the pretence of a repugnancy, may substitute their own pleasure to the constitutional intentions of the Legislature. This might as well happen in two contradictory statutes; or it might as well happen in every adjudication upon any single statute. The courts must declare the sense of the Law; and if they should be disposed to exercise WILL instead of *judgement*, the consequence would equally be the substitution of their pleasure to that of the legislative body."—*Federalist, No* 78.

NEW-YORK SALINES.

Mr. Wright, the Superintendant of the New-York Salines, has made his annual Report to the State Legislature by which it appears that the quantity of Salt manufactured at the Onondago Salines in 1844, is four millions three thousand five hundred and fifty-four bushels.

The quantity of Salt imported into the port of New-York in 1844, from all quarters was but 1,578,347 bushels, of 56lb. Of this qantity 725,667 bushels was fine salt.

The quantity of coarse salt made at the Onondago Salines in 1844, was 332,418 bushels, and that of Dairy, or Ground Salt, 312,896 bushels.

The quantity of common fine salt made, is 3,258,240 bushels.

The common fine salt made at the Onondago Salines was soldat the Port of New-York in 1844, as low as seventy-five cents per barrel, of five bushels, including the barrel. This is fifteen cents per bushel, and is lower than salt can be imported from England at the present rate of duty.

It should be the policy of the State to encourage the making of a greater proportion of coarse salt, which is produced by solar heat.

The coarse salt of Onondago is of a most excellent quality, and the fine salt cannot be distinguished from Liverpool salt of the same kind. We have placed Liverpool salt in a paper, and also Onondago salt in a paper of the same kind, and on putting these together without marking, we were unable to distinguish the one from the other.

We learn from John Townsend, Esq., of Albany, that the provisions packed with Onondago coarse salt for the United States Government, for the Army and Navy, to be used in warm climates, has been found of excellent quality and well preserved.

The amount of duties collected by the Government of the United States upon salt imported into the Port of New-York in 1844, is $126.268,76.

The amount of duties collected by the Government of the State of New-York upon salt manufactured at the Onondago Salines in 1844, is $240,305.10, of which the drawbacks are $92,533.38.

No duty should be imposed upon salt made in this State that is destined to be consumed in another State.

The State of New-York might with as much propriety tax goods in transit, passing from Ohio to Massachusetts.

A Tariff, is a Tariff, whether imposed by the general or State Governments, and we are often led to look at the inconsistency of the argument of politicians when discussing the importance of separating the public monies of the General Government from the Bank, and at the same time these very politicians made a State Bank a City Treasury.

The duty on foreign salt is made a *bug-bear*, although the equal proportion of each inhabitant of the United States to pay of that imposition is less than four cents, and here the State of New-York is exacting from the labor of the people of Onondago almost a quarter of a million of dollars annually. It is a tax upon the sweat of the laborer. The State duty should be forthwith abolished.

The extent of this mineral deposite which feed these salines has never been properly examined, and probably never will be. It is a great error in the public officers of the State thus to proceed in the dark. During the extreme cold of winter, while Lake Onondago is covered with ice, the stratas which form the bottom of that Lake should be perforated and thoroughly examined. The expense would be a mere nothing, and the advantages immeasurably great.

The hydrometers used at these salines are not a sure guide of the specific gravity of the water. If the Superintendent should cause a vessel to be prepared holding exactly twenty gallons, and a balance beam attached with weights, he would be able to determine more accurately the specific gravity of the water than with his hydrometers. The importance of determining the fact as to the quality of the water remaining permanent, is very great.

I have in my Cabinet, saline waters from most of the salines in the United States and these have been raised at different times from beneath the surface—they are therefore instructing.

The inhabitants of Onondago are making application to the Legislature for the continuance of the drawback law of 1843. The continuation of that law will be highly beneficial to the trade of the city of New-York, and will also enable the coal dealers of Pennsylvania to obtain a supply of Onondago salt at a low price as a return freight for their coal boats, and this facility will cheapen the price of anthracite coal to the inhabitants of the city of New-York.

We have before us the Superintendent's Reports of 1840, 1841, 1842, 1843, and 1844. On referring to the table of the hydrometer for Syracuse, 1840, we find the specific gravity of the water varied from 67° to 72°, averagiing less than 69°. In 1841 the specific gravity was 77° throughout the year. In 1842, the same. The Report for the year 1843, is without this necessary table. In 1844, the highest is 74°, and the lowest 72°, averaging 73½°. When we visited Syracuse in the summer of 1844, we noticed this change in the quality of the water and stated the fact to Mr. Townsend, of Albany.

In 1842, the Liverpool Wells furnished water testing from 70 to 78°. In 1844, from 66 to 71°.

The Saltville wells in Washington county, Virginia, yield water of unequalled purity, testing, uniformly, 92°. The quality of this water does not vary, and is the extent of saturation of cold water with salt.

The waters of Kanhawha test from 32 to 52°. Some of the fossil salt from the Saltville mines, we placed in the Geological Cabinet at Albany for the inspection of citizens who may feel an interest in examining this mineral.

On the Saline Creek, in the State of Illinois, the saline waters are found between stratas of bituminous coal.

At Saltville, in Virginia, a strata of sulphate of lime of 40 feet in thickness overlays the mineral salt, and this salt extends to an unknown depth beneath.

That the waters of Onondago salines come from mineral salt near by, I have no doubt, and that Onondago Lake has been furnished with a basin to repose in from the dissolving of mineral salt, is more than probable. My examinations of that Lake and the reasons I assign for the appearance of the Lake in that locality are to be found in the previons pages of this volume.

THE COMET.

Another of these mysterious bodies has made its appearance in the southern chambers of the heavens, making three of these stranger visitors which have been visible in our latitude within the short space of two years.

These comets are of a class of members of our solar system of which we know comparatively nothing. Of the density of the comets, we have no knowledge whatever.

It is said by some Astronomers, that stars can be seen through the nebluæ of a comet, by others that comets have come in contact with the sun, and that such a collision took place on the visit of the comet of February, 1843.

Our knowledge of material bodies is confined to substances on the surface of our earth. Beneath this surface, but few explorations have been made, and these are limited to less than two thousand feet in depth—beyond this all is a blank page to us.

Of the heavenly bodies much knowledge has been acquired by observation, and that knowledge enables us to determine their motions, size, &c., but of the comets we have not arrived at that degree of knowledge although the return of comets have, in some cases, been predicted with tolerable accuracy; but we arrive at perfect accuracy in regard to the motion of the planets, even to a second of time.

Of the influence of comets upon our system we have no data. In 1811, during the visit of the comet of that year, the Vintage was extraordnary, and the quality of the Wine excellent. The Wine of the "comet brand," in the Wine Cellars bears a high price owing to this fact.

A collision of a comet with onr planet will not in human probability ever happen. Such an event is not in accordance with the harmonies of nature, and I am more inclined to believe that the observers were mistaken in reference to the comet of 1843, than to believe that the comet reached the body of the Solar Orb.

That some of the fixed stars have left the places occupied by them in the heavens is a fact which I presume will not be disputed. The number of these bodies which have absented themselves, is very considerable, and probably equal to the number of all the comets of which we have any knowledge.

When we look at our earth and compute its size and its motions, and then at the heavenly bodies, and compare our planet with others, we become lost in the immensity of the field presented to our view and overwhelmed by the sublime and the stupendous harmonies of Nature, as witnessed in the motion of these members of the mighty firmament.

We imagine that Mars, from its proximity to the solar orb, must have an atmosphere of intense heat, while that of *Georgium Sidus* which is remote from the Sun, has an atmosphere intensely cold; but the converse of this may be the fact. We have no means of determining the fact, and conjecture in such a case is out of place.

The comet of 1843 was first noticed at noonday, in latitude about 44° north, by the naked eye, and the comet of 1845 was first seen in this country in latitude about 30°.

THE SWEETS OF COLD.

The clear cold air is one of the phenomena of Nature which the inhabitants of this section of the globe have an opportunity of witnessing frequently every year, and sometimes for several days together, and further north, for weeks, and still further north, for months. The effect of cold upon every material substance is very great, and the extent but little known. As a purifier of the atmosphere its operations are more extensive than that of heat.

In the sultry months of Summer a cool breeze is one of the greatest luxuries. Often do we see persons laboring with a paper or feather fan to give motion to the atmosphere and thus decrease its temperature. The same atmosphere which is considered cool in summer would be considered warm in winter. In summer the atmosphere of a cellar feels cool to a person entering it from the air heated by a summer sun, but in winter the converse of this is experienced in passing into the same apartment from the atmosphere resting upon a surface covered with snow, or one locked up with frost.

Ice has within a few years become an extensive article of commerce. It is sold by the merchant by weight, and exchanged with the inhabitants of the torrid zone for the precious metals, and there are some sections of the world where a pound of Ice exceeds in market value a pound of Iron. We are accustomed to see ice formed and forming, and sometimes with a rapidity that is truly astonishing, but the frequency of this phenomena has divested it of its novelty.

We survey the rocks that lay in piles, and wonder how these could have been formed. The same Almighty Being who by his power changes a fluid to a solid, formed these rocks by a process as simple as that which transform water into ice.

Ice forms in the atmosphere above our heads and falls in little crystal pebbles upon the ground; these dissolve and rise again in vapor and continue ascending and descending at unequal intervals, and in most cases rise in one place and fall in another. The inhabitants of cities in low southern latitudes where pestilence wastes at noon-day, appreciate a visit of the frost as one of heavens richest earthly blessings—they can understand the meaning of the brief heading of this essay.

The writer of the ancient book of Job enquires:

"Hast thou entered in the treasures of the snowe?
Or hast thou seen the treasures of the haile?
Who hath ingendered the frost of the heaven?
The waters are hid as a stone,
And the face of the deep is frozen."

This quotation we have made from an ancient copy of Scripture, imprinted at London in 1599, two hundred and forty-six years ago.

The ancient history of the cold, penned more than 3300 years ago corresponds with this climate at the present day.

TAX UPON BANKING ASSOCIATIONS.

The Court for the Correction of Errors have decided that associations formed under the general banking law are Incorporations in the view of the law imposing taxes upon the capital stock of incorporated companies paid in or secured to be paid in.

The Legislature will be applied to for the passage of an act placing owners of Bank Stock on an equal footing with persons owning other personal property. Taxation must be equal otherwise violence is done to the fundamental law.

WINTER BIRDS.

The last day of January of the present year which was Friday of last week, I received a first visit since the commencement of cold weather, from the Ground Sparrows, which were my visitors during the whole of the previous winter commencing the 16th of December, and continuing until the middle of May. The latter part of June, these birds came on a visit of a few days with their young. I was glad to see these feathered acquaintances, and am glad to record the remembrance of my kind treatment to these little creatures. The previous winter the Sparrows were attended by fourteen Snow Birds. This winter the Snow Birds have paid me but about a dozen visits, and the first of these was on the last Sabbath in December. The cold has not been so intense the present season, as to prevent these birds from finding food at their usual places of stopping, but on Friday, a change of weather admonished them of the necessity of resorting to their old quarters. They come full of gratitude and full of cheerfulness, and I can read in the expression of the eyes of these little feathered visitors, a language which the shadow of a thought. This is the third winter which I have fed a flock of snow birds in my yard, and it is instructing te the human mind to watch their movements.

They present a picture from the hand of nature full of loveliness Sweet creatures, I admire them, and I prize their visits highly. Instinct and intelligence are both from the hand of nature. Birds are said to possess instinct—they possess intelligence, and many of them discover more knowledge than is possessed by some of the human species.

THE SOLEMNITY OF SILENCE.

Perfect silence is awfully impressive. There are very few who have the opportunity of experiencing the sensation produced in the human mind by profound silence. I have stood upon the mountain top towering above the clouds at the hour of midnight in the midst of silence so intense as to be overwhelming. I have stood beneath the earth's surface in far remote subterranean chambers, where silence and darkness had been constant companions for ages—and there silence was awfully sublime, for it was absolute—it commanded the homage of the human mind, for it controlled the pulsations of the human heart. The arctic navigators, in the highest northern latitudes which they were able to reach, found in the stillness of the air in that uninhabited region, a silence so profound as to be awfully impressive.

I have endeavored to transcribe my thoughts when my hand which guided my pen was shaken by the reverbation of the thunders of the waters of the greatest cataract on earth—and I have made the same endeavor when I was in the midst of perfect stillness, and found the result. in both cases, the same.

There is in silence a living teacher that opens to the human mind vast treasures of knowledge before undiscovered, the apartment of which cannot be unlocked by any other key. There is to be found in silent patient waiting, volumes of instruction, such as no written language ever has conveyed to the human mind, affording to the human heart that light which illuminates the dark chambers of thought, illuminating the path to futurity with its undescribable corruscations, the light of which reaches to the remotest chambers of the celestial world.

LONGEVITY.

The early ages of the world present some extraordinary cases of the prolonged duration of human life. Adam became an inhabitant of earth on the second solar day of the first year of solar time. and lived to the age of 930 years. His death occurred in the year 930.

Methuselah was born in the year 687, and died in the year 1655, at the age of 969.

Noah was born in the year 1056, and died at the age of 950, three hundred and fifty years after the flood had covered the face of the whole earth.

Methusalah was 234 years old when Adam died, and Noah 599 years old when Methusalah died. Thus these three individuals were enabled to transmit from one to the other, a history of the great events of early time, bringing it to a period which covered 2006 years. The aggregate ages of these three individuals was 2849 years.

The persons born prior to the deluge were very long lived compared with those born subsequent to that great event. Noah, although comparatively an aged man when he entered the Ark, lived more years than any individual born after the flood. The great age to which mankind attained prior to the deluge must have given to the earth at the period when the deluge commenced, an overwhelming population.

The change in the duration of human life, which took place at the same period that the earth was covered to an immense depth with water, is as extraordinary as the occurrence of the deluge itself, and both were the special acts of the Creator. Shem, the son of Noah, and the great grand-son of Methusalah, was 98 years of age the year the great flood took place. Shem lived to the age of 602, which brought down a history of the world to a period of 154 years subsequent to the death of Noah. The children, grand children, and great grand children of Shem lived to a less age than himself by near two hundred years, and their children and grand children lived to about half the age of their parents.

A COLD WINTER NIGHT.

It was in the month of January, more than thirty years ago, during intense cold weather, that I encamped, with several others, in a Northern Forest near the base of a mountain, far from any human habitation. The snow covered the ground to the depth of six feet upon a level.

The shantee in which we took shelter had been erected years before, and abandoned. We were able with a few hours labor to render it comfortable, that is comfortable compared with lodging in a snow bank. One end of the shantee was open to the atmosphere, and at this end we kept a large fire burning continually. Night came upon us in a little while after we had lighted our fire. Not a cloud was to be seen, nor a sound of wind to be heard—the air was clear and the cold increased as the night advanced, and before midnight the trees of the forest commenced cracking with the severity of the frost, and during the remainder of the night the sound was like that produced by the discharge of volleys of musketry. It seemed as if the whole forest would be torn in pieces with the severity of the cold. The stillness of the air, the intensity of the cold, and the remoteness of the scene from the bustling noisy world, gave greater force to the sound upon our organs of hearing. Once during the night the ice of a distant Pond cracked, from one extremity to the other, with a force and concussion like that of the heaviest thunder. It was impossible to sleep during this severe attack of the frost upon the forest trees, as the land was heavily timbered, and the detonations were so constant and so loud that the one could only be distinguished from the other by the distance and the greater or lesser detonation.

A WILDERNESS RECORD.

In an extensive wilderness tour, I came to a ravine in the forest. made by a hurricane. It presented a winrow of timber torn from the earth by the fury of the storm in one of its resistless blasts as it journeyed over this local surface, marking the width of its track by the prostrate trees which it left in its path, as the witness of its visit. The point of commencement was noted by the first prostrate tree, and its termination by another mute witness of the same order. What a record this—and what testimony—written by the hand of a Tornado in the bosom of a Forest. I have travelled in the wilderness path of the whirlwind, but its record of its journey was unlike this—the whirlwind breaks the trees above the surface, but the tornado tears them up by their roots.—The edges of a path made by a tornado are well defined, and quite even. This ravine was about forty rods in width. It opened to the ground quite a strip of sunshine. I have seen the whirlwind in the commencement, the germ of a tornado.

This was an instructive page in the great volume of nature, and the wilderness is a wonderful place to study this great volume. A ravine like this when intersecting a bridle path presents an impassable barrier to the traveller. Trees piled on trees form a fence too high and too wide to be leaped by a horseman, and he has no choice but to travel up or down the edge of the path of the mighty wind. The record of the storm when written by its own pen, is in a language which is universal, presenting no difficulty of construction. It chronicles the width and length of its path with unerring exactness.

A MAY MORNING.

There is in the atmosphere of a brilliant May morning, an essence which is exhilirating to the human mind. It has a sweet which can be tasted, a beauty which can be seen, and a charm which can be felt, be enjoyed—be realized.

The human breast, when inflated with such an atmosphere. expands with the emotions of delight, which are kindled up in the bosom, and the human countenance becomes illuminated by that feeling thus produced, which gives it an expression that is almost superhuman—a smile which is the offspring of happiness.

I have watched the approach of the orb of day on a May morning, as it gradually arose above the horizon in its entrance from its Eastern Chambers, with an emotion that no pen can express—its magnificence—its splendor—its glory, no pen can portray, nor language describe—the atmosphere was warmed by its presence, adorned by its brightness, and made refreshing by its powers of life. What a treasure this world of light, for it is one of the fountains (under heaven) of life.—

THE FIFTIETH, AND THE FIFTH YEAR.

In 1826 Ex-President Adams and Ex-President Jefferson died.

In 1831, Ex-President Monroe, died.

In 1836, Ex-President Adams, departed this life.

In 1841, President Harrison, died.

1846, remains in the unopened volume of time, and its events are known only to him who put the wheels of time in motion. There is both admonition and instruction in these periodical markings of Providence.

This Republic is yet in its infancy, and this extraordinary marking of regular periods of time—every fifth year, commencing with the 50th year from the Declaration of American Independence, is a solemn warning, and if unheeded by our rulers may bring down awful judgments upon the land.

THE FROST.

There is knowledge to be obtained by reading the beautiful lessons of this Great Teacher. The inscriptions made by this, one of Nature's penmen, upon the surface of the glass of the windows of dwellings and stores, are well worth reading, and will amply repay transcribing, for the language is perfectly accurate, not an error can be found in the beautiful page.

The side-walks of our streets in cold mornings that succeed moist and temperate days present upon the pavements beautiful drawings of plants, &c., and some of these chrystalizations might, if they remained permanent, be mistaken for the tracks of birds, for thousands of these fanciful embossings of the frost present precisely the same figure, illustrating the same order of arrangement with regard to expression as men make in the use of letters to form words, and words to form sentences. Chrystalization, is not always the offspring of frost—it is produced also by heat—but the same uniformity and exactitude characterize both, and it is often, I determine a fact, by the close study of the lessons of this great teacher.

PETITION FROM THE SOCIETY OF FRIENDS.

To the Senate and the House of Representatives of the United States of America, in Congress assembled.

The Memorial and Remonstrance of the Religious Society of Friends, in the States of New-York and Vermont, and parts adjacent, respectfully sheweth:

That your memorialists learn, with regret, that it is proposed to annex the state of Texas to, and incorporate it with, the states of this Union:—and, believing as they do, that the consummation of this measure would extend and perpetuate slavery, and place in jeopardy that peace and harmony which now exist among the nations of the earth, they feel it to be an incumbent and religious duty respectfully but earnestly, to remonstrate against such annexation.

The views and opinions of your memorialists, in relation to slavery, are well known. They are not of recent origin—nor are they connected, in any degree with party or sectional feelings.

The greater part of a century has elapsed since the predecessors of your memorialists—influenced by what they believed to be the will of Him who is no respector of persons—and who, it is declared, "made

of one blood all the nations of men," emancipated their own slaves, at what then appeared to be, a great pecuniary sacrifice. At a still earlier period, and near by half a century before the foreign slave-trade was declared by law to be piracy, the religious Society of Friends forbade all participation in it;—and impelled by the same sense of religious duty which now prompts it to approach the national Legislature ceased not to importune those in authority to prohibit the unrighteous traffic.

Slavery originated in a dark, and comparatively barbarous age; at a time when the political and civil rights of men were little understood, and less regarded; when civil and ecclesiastical tyranny oppressed the nations, and subjected the people to grievous and cruel sufferings. Against these violations of human rights, the members of this religious society have ever sustained a peaceable, but a firm and unwavering testimony—and they even sealed that testimony with their blood.

In the progress of time, it pleased the King of Kings —by the spread of the Gospel of his Dear Son—to soften the hearts of rulers, and to enlighten the minds of the people, until we have seen, even in the despotisms of the old world, a greatly meliorated condition of the subject, and the shackles rapidly falling from the limbs of the slave.

That the example of the free political institutions of this country has exerted a powerful influence in improving the condition of mankind, will scarcely admit of a doubt;—and yet your memorialists have to deplore that it is in danger of being the last to extend the benefits of her own beneficent and righteous principles to all who may justly claim an interest in them—to all who are made in the image of Him, who, we have solemnly declared, "created all men equal, and endowed them with certain inalienable rights"—including "liberty and the pursuit of happiness!" Against every measure which may deepen and fasten this foul stain upon the character of our beloved country, and retard the progress of free institutions throughout the world, by the contradiction it involves and the imputation it would seem to justify, that our love of liberty is selfish and exclusive—your memorialists earnestly and solemnly remonstrate.

If it be conceded that the colored man is comprehended in the plan of redemption accomplished by Him who died for all men;—if he be a man, in the sense signified in the divine injunction—"Whatsoever ye would that men should do unto you, do you even so unto them," then the fact of our depriving him of freedom, and preventing his "pursuit of happiness," is as gross a violation of the spirit and precepts of our holy religion, as it is incompatible with our boasted Declaration of the rights of man.

Your memorialists are aware that this subject is one of great delicacy; they are not insensible to the obstacles to general emancipation; but being fully persuaded that He, to whom "nations are but as the dust of the balance," and who will "judge them in righteousness," calling for this sacrifice at the hands of the American people; and believing that to nations, as to individuals, who sincerely seek his aid, he will "provide a way, where there seemeth no way," and will sustain them by his outstretched arm in every honest effort to discharge an incumbent duty, your memorialists cannot hesitate in urging the commencement of the great and noble work of universal freedom. They do so with the less hesitation because they believe that even the temporal interests of the master will ultimately be promoted by it; and they are impelled by a serious apprehension that, *if not performed in mercy*, the work *will be accomplished in judgment*, and attended by an awful retribution; for they coincide in opinion with one of the most eminent of American statesmen, that it will be found, should such a conflict occur, that the Almighty has no attribute which can take sides with "the oppressor."

Your memorialists apprehend, moreover that the annexation of Texas will involve this country in war.

They have indulged the hope that correct views of the benign religion of the Prince of peace were hastening the day when "nation should no longer lift up sword against nation, nor learn war any more."

History furnishes ample evidence that wars have mostly risen from the pride of princes and their lust of empire; that nations have often been deluged with blood, and subjected to the most dire calamities, by causes and considerations, regarding which, the people —those upon whom the burdens and the miseries of war devolve—had little knowledge and felt less interest; that wars have frequently been waged by unprincipled rulers, to divert the attention of an oppressed people from their own sufferings. But the mitigation of despotic sway which modern times have witnessed, has produced a repose, which awakens a cheering hope in the mind of the christian philanthropist. Should a country, upon which the gracious Giver of every good and perfect gift, has shed the choicest of his blessings;—a country every way fertile and extensive beyond the possibility of speedy occupation, be the first to interrupt this repose, and to unsheath the sword for the acquisition of additional territory, great and fearful indeed must be the responsibility it assumes—and awful the retribution it may justly apprehend.

Whatever may be thought of the opinion entertained by your memorialists—that war under any and every circumstance, is forbidden to the followers of Christ, they respectfully urge—what they apprehend few will deny—that if there be any one great and prominent principle clearly inferable from the example and precept of the Author of our holy religion—of Him, whose advent was announced by the heavenly anthem, "On earth peace, and good will towards men"—it is a principle of love and forbearance which would prevent war, except upon the supposed existence of a stern and imperious necessity.

If this be admitted as a sound view of christian doctrine, does it not present a strong inducement for the Representatives of the American people to pause, and deliberately to weigh the motives which prompt, and the consequence which may follow, the annexation of Texas to the states of this Union.

Signed by direction and on behalf of a meeting of representatives of the yearly meeting of the religious society of Friends aforesaid, held in the city of New-York the 26th day of 12th month, 1845.

HENRY HINSDALE, Clerk.

THE MEMORIAL OF THE SOCIETY OF FRIENDS.

We have given in this days' paper, the memorial of a Religious Society, in reference to the acquisition of Slave Territory by the Government of the United States.

The same argument which is urged in favor of annexing Texas to this Republic, may be urged with equal plausibility, in favor of all the Territory on the American Continent, not embraced within our limits. The memorial is an able document, and it comes from a right quarter. It is a deliberate act, and is its own witness of good.

ICE IN THE EAST AND NORTH RIVERS.

The floating ice has become abundant in the East and North Rivers. We noticed on Friday morning, in crossing the East river that great numbers of Crows were flying over the floating ice, and occasionally alighted upon the broken pieces, and were thus carried forward by the tide, and these birds appeared to enjoy the sport.

DESECRATION.

The venerable building in Nassau street, between Cedar and Liberty street, which was erected for a place of worship, and which has been occupied as such for a great number of years, has been transformed into a Post-Office.

DESTRUCTION OF FISH.

It is said that a great number of dead fish have been thrown upon the south shore of Long-Island by the surf, and a writer in one of the Southern papers, attributes the destruction of the fish, to the cold weather in December. The water of the Ocean, in our latitudes, was not affected by that cold, and if it had been frozen over, the fish would not have suffered in the least. In the Northern regions, fish are taken from the water and thrown upon the ice, and left exposed to the cold until frozen stiff, and then thrown back into cold water, and again become as active as before. Mankind are not such careful observers, as to understand all the phenomena of nature.

AZARIAH C. FLAGG.

Mr. Flagg has been re-appointed State Comptroller by the Legislature of this State. Mr. Flagg is a very popular public officer and deservedly so. The Citizens of the city of New-York of both political parties are gratified that Mr. Flagg retains the office which he has filled for years, with honor to himself and great advantage to the state.

VETO MESSAGE.

The Veto Message of Mayor Harper is a very satisfactory documont. That worthy public officer could have gone further in his objections by stating that whatever rent or income comes from the Rotunda, is solemnly pledged to the sinking fund, which fund is sacredly pledged for the redemption of the Public Debt, and His Honor is one of the Commissioners of that sinking fund, and the misapplication of it would be a contravention of that trust.

Among our most intelligent citizens of both political parties, we hear but one opinion of the Veto Message. We have met with some gentlemen who are great admirers of the plan of a public gallery of the Fine Arts, who equally admire the Veto.

Mayor Harper was waited upon by some of the gentlemen who are anxious to obtain the Rotunda for the gallery, and pressed hard to approve of the act of the Common Council, but these gentlemen on hearing him state his objections were frank and candid in admitting that the Mayor was right in these objections.

Taxes are continually increasing and it is the duty of the Common Council to reduce the expenses of the city and moreover faithfully to apply every dollar of the public funds pledged to the discharge of the public debt with the strictest exactitude.

THE MUNICIPAL GAZETTE.

No. 26 of the Municipal Gazette contains 52 pages. The last four pages of that number contains Diagrams, printed in colors, of ruinous Assessments. Number 26 will be put in a printed cover and stitched, and distributed in this form to those who have not received the sheets as they were issued weekly from the press. This course was preferred on account of the connection of the subject matter. No. 26, contains the opinion of the Supreme Court of this State, in General Striker's assessment case, as delivered by Mr. Justice Beardsley—and also a review of that opinion by the Editor of this paper. It also contains the opinion of Mr. Justice Bronson, in the same case, in which he dissents altogether from the opinion expressed by Mr. Justice Beardsley. The argument of the Hon. Daniel Webster, is also coupled with Judge Beardsley's opinion. The review is accompanied with extracts from the New-York State Constitution, of 1777, and of 1821, and also copious extracts from the New-York Statutes. It presents, we believe, a complete history of the Street question, as connected with the exercise of the *Highway* powers, by the Justices of the Supreme Court of this State. The Presidents of Colleges, who forward to us a list of the Professors of their Institutions, shall have forwarded free of expense, a copy for each Professor.—The subject is one of great importance, and besides, it illustrates the fluctuations of Judicial decisions to so great an extent, as to be alarming as well as admonitory.

JUDICIAL DESPOTISM.

The concentration of power in any one body of men, is dangerous in the greatest degree. It matters not what name they may be called by, the act is the same, whether it emanates from a Judge upon the bench, or a King upon the throne. Judicial Despotism is the most insinuating, and far the most dangerous exercise of arbitrary power, and much more so than that emanating from any other branch of Government.

Judges should be as learned in the science of the law, and able to decide according to its intent and meaning, and with as much accuracy as a Professor of Chemistry analyzes a substance and ascertains its parts —or a Professor of Astronomy calculates the motion of terrestrial bodies moving through space. It is not the opinions of professors that is to determine the result, but it is an examination of the subject matter by a competent mind.

NEW-YORK MUNICIPAL GAZETTE.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, FEB. 20, 1845. [VOL. I....No. 28.

TERRIFIC THUNDERBOLT.

I continue and conclude the memorandum of the operations of the "TERRIFIC THUNDERBOLT" *of August 2d, the commencement of the account of which is on page 432 of our last number:*

There are no lightning conductors within a quarter of a mile of Mr. Speck's house. About ten feet from his house, and from that part of it which the lightning first visited, is a small building from which a stove pipe projects within ten feet of the lightning's path, yet this pipe was not visited. About 100 feet from Mr. Speck's house is a building, on the chimney of which is a sheet iron Espie, which was not touched by the lightning. Mr. Clark's house, about 600 feet from Mr. Specks dwelling, was struck by the same electric discharge. The force of the thunderbolt came upon the rear of the house, and upon that part of the roof near the eaves—the shock broke in the plastering of the attic bed-room. Some children were in bed in the chamber next story below, and underneath this place, but were not injured. The lightning descended the tin leader to the cistern, broke the cistern pump, and escaped into an open lot. The cistern is made of cement. The same electric discharge from the clouds struck the dwelling of Dr. Henry, in Clinton Avenue, less than one mile distant from Mr. Speck's dwelling, and in the opposite direction from Mr. Clark's. Several of the bricks were knocked off the chimney, and a hole made through it near the roof, from which the lightning passed down to the tin leader, and down it to the cistern, breaking the cistern-pump. None of the tin leaders of the four houses were affected by the lightning, and in every instance proved to be good and sufficient conductors. The cisterns, four in number, were of cement, and the lightning did not enter either of them.

Professor *Olmstead*, of Yale College, in a letter to me, of July 25, 1843, says:

"The termination of your rod in the cesspool is well, unless the pool is made of Hydraulic Lime.—This being a worse conductor than the earth itself, presents an impediment to the *fluid* at its termination. *M. Argo* gives an instance of a rod terminating thus, which failed."

Those four cisterns are all of Hydraulic Lime, and are good witnesses in this case, to the accuracy of the suggestion of the great French Astronomer, M. Arago, as noticed by the learned Professor I have quoted, and the testimony of the lightning in all these four cases agree, and seem to be entirely conclusive.

Professor Olmstead, in a letter to me, dated Oct. 12, 1843, says:

"Lightning possesses greater power of *driscrimination*, selecting in its course the best conductors with great *precision*. Lightning does not exhibit its peculiar violence except when its passage is opposed by imperfect conductors."

Dr. Franklin stated, in a newspaper published in 1753, the particulars of a thunder-storm in Philadelphia, of June 12, of that year, as follows:

"Philadelphia, June 12.—On Sunday, early in the morning, a dwelling house and kitchen, on the western side of second street, were struck by lightning and considerably damaged; but being untenanted, no person was hurt. The great Fondness that the Matter of lightning has for Metals, was perhaps never more conspicuous. In its passage downwards, it went considerably out of its nearest Way to the Earth, for the sake of the Leads of the Windows, and Iron Hooks, Staples, &c., in the Window Frames, which were all in many places, much melted and stained thereby; several Panes of Glass were also a little melted and stained thereby in a beautiful Manner, round the edges, near where the Leads surrounded them, and those parts of the Leads being thin and not sufficient to conduct the whole of the Flash, were melted; but the thick parts of the Leads (which separate the panes from each other,) conducted it freely, and without being the least damaged."

I omitted to mention in my previous remarks that a miniature ship, with glass rigging, stood upon the parlor table, over the top of which the lightning passed on leaving the looking-glass in Mr. Speck's house, and was not injured in the least.

A milk-man coming into the city during the storm, saw the lightning passing along one of the iron rails of the railroad, as far as the road was within the reach of his vision. The rails extend between Mr. Speck's and Dr. Henry's dwellings. I am inclined to believe that buildings covered with a coat of metallic paint are not liable to such extensive injury as unpainted buildings.

The lightning in many of these operations which I have narrated in the former and present communication, has left a record of its unwillingness to travel over the same surface twice. This was demonstrated in the case of the metallic girandoles, the tin-pan upon the biscuit-jar, and the portait frames, and I have found the same testimony from the same witness, (the lightning) that it does not ascend. I have found no case, in my very extensive observations, of the lightning ascending any substance.

SWEET SLEEP.

Undisturbed sleep is a suspension of the exercise of the human mind.

The animal frame also reposes during quiet sleep, although the machinery of animal life is kept in motion notwithstanding the suspension of mental exercise.

This state of inactivity is not extraordinary—it is of daily experience with almost every human being who is regular in his hours of labor and rest—but it is mysterious and incomprehensible.

The human countenance often wears a peculiar expression during sleep, and this may be the offspring of a thought which possessed the mind when sleep came.

What a state of existence for a human being to contemplate—to meditate upon—to behold a fellow mortal locked in the embrace of quiet sleep wholly unconscious of what is passing in the wide world in which his body reposes—and yet how rarely do we call to mind a thought upon this subject.

The fond mother watches the countenance of her sweet babe while it sleeps, and dwells with delight upon its sweet expression, but she rarely thinks that she sees but the outward tabernacle—the mental occupant is not in view—and shall I say, has departed for a little time, or that it also sleeps? No—thought cannot sleep—we cannot conceive the materiality of a thought.

Thought cannot sleep—for thoughts are but temporary tenants of the mind, and leave it when sleep has obtained complete undisturbed possession and the last thought which occupied the mind when sleep came, is not in possession when the individual again awakes—but a new thought comes, or perhaps a former one is recalled.

Sleep is made necessary; it belongs to the harmonies of Natue and forms a part of its laws—to the violation of which is affixed a penalty.

The influence of refreshing sleep upon the animal frame is great, and more powerful than is generally considered, for in truth mankind consider very little upon the subject.

The quiet repose of the body after refreshing sleep qualifies the mind for profitable exercise, and the flow of thought when thus coming undisturbed into the chambers of the mind is of that freshness and originality, which is highly instructive to the inner man.

It is sometimes that thoughts which come into the mind at such periods, make but a short stay, and leave no permanent record of their visit. Could the hand be busy on such occasions to lithograph such thoughts they could be preserved in comparatively durable shape, but such an employment of the hand might sometimes drive away such thoughts, for they are the offspring of quiet.

The lightning sleeps, until awakened by the voice of the thunder—the wind sleeps until awakened by the heat or cold.

Vegetation sleeps, and its stated periods of repose, correspond with its periods of labor—it is heat which awakens vegetation from sleep, and it is light which awakens animal life to activity and energy.

Thought has an expression besides that conveyed by oral and written language—thought has a brightness which can oftimes be seen lightning up the human countenance with a glow—with a smile—and sometimes casts a shade, like that of the shade of the shadow of a cloud, which can be both seen and felt.

Sleep, sweet sleep, is one of the richest bounties of nature—one of the blessings of Heaven, and the gift of GOD.

VALENTINE'S DAY.

A snow storm began its work ere the sun had risen from behind the curtains of the eastern clouds, and near an hour before its arrival my winter birds came to see me in great numbers, full of cheer and activity. My ground Sparrows have increased in numbers. and I have seen four of these sweet vistors at one time — Their near resemblance to each other is so great that I am unable to discriminate so accurately as to determine whether there are not more than four. One of these birds is unlike all the rest, and is larger; this bird is comparatively an old acquaintance. One of the little snow birds comes to the window sill and eats his seed within eighteen inches of my pen, and has therefore the opportunity of inspecting this paragraph for I discover from its actions that its vision is of that kind which enables it to see through glass. I have never noticed a quarrel among these feathered visitors, they are therefore good instructors in this.

THE NEW-YORK FARMER AND MECHANIC.

This paper is published weekly on Thurs lays by Messrs. Fleet and Star, No. 135 Nassau Street, New-York. It is devoted to the interest of Agriculture and the Mechanic Arts and contains much reading matter of great value. The price of the paper is Two Dollars per annum. Parents will find in a file of that paper a fund of useful knowledge for their children, and the very care used in preserving the weekly papers for an annual file will be that practise that will tend to system, care and economy, three lessons in the school of human life which should be well learned and rigidly practised. Agriculture is an ancient science, and was the first which was brought into use, and the primitive husbandman, our great common ancestor, was a farmer, and one of his sons, a mechanic.

Man with all his knowledge has never yet produced or been able to originate a grain of sand, but he is vested with ability to search out and understand the ability of a grain of sand to contribute toward the support of his animal life by giving to that grain of sand a nourishment which this material atom will reciprocate. Newspapers which are devoted to such uses are more profitable to the reader than political journals, and besides, such newspapers, if preserved, form a useful library, and will afford instruction to succesive generations. The Farmer has more leisure to read, and more time to reflect and meditate upon what he reads than men of almost any other occupation, and besides this his bodily exercise qualifies him for the exercise of his mental powers in that calm deliberation which has a tendency to good. The farmer is a thinking man—he has new pages of the great volume of nature continually opening to his inspection which are instructing. The shepherds in ancient times were intelligent, for they read the pages of the Book of Nature with deliberate calmness.

The son's of Farmers will find the New-York Farmer and Mechanic a source of rational employment in winter, and so will the apprentice of the Mechanic. Farmers and Mechanics are among the most learned of our population; they are well learned, for their study is that of deliberate application, watching the results as the test of the well learning of the lesson.

From the leading Editorial of the Journal of Commerce of Saturday last.

GIVING AWAY THE CITY'S PROPERTY.

Is this the business for which our Common Council was elected? Is the city so free from debt, and the Treasury so flush, that there is no other way to dispose of accruing revenue, but to make a donation of it to individuals or associations? Are our taxes so light, that there is no need of husbanding our resources? If these questions can all be answered in the affirmative, then we say, begin with the most needy, who are also deserving. Do not begin with wealthy men who have each subscribed *one dollar* to the new Gallery of Fine Arts, and then call upon the city to give $3,000 or $4,000 *a year*, for an indefinite period. The Mayor expresses his belief that the Rotunda, if rented in a business way, will yield the above sum.—If we say $3,500, this is the interest, at 7 per cent., of $50,000. And it is well to understand, that if once the Rotunda is granted as proposed, it cannot be got back; or if it can, it will not. The way is, now that it is fairly in the city's possession, to keep it so. If it is right to tax the citizens (for this is the operation of the thing,) for busts and pictures, why not for libraries, public lectures, and all that? If the principle of giving away money for such purposes, is tolerated, where will it end?

Since Mayor Harper's Veto of the resolution leasing the Rotunda for a nominal sum to the Gallery of Fine Arts, the Board of Aldermen have again passed it, by the requisite majority of two-thirds.* It now rests with the Assistants to defeat or sanction this waste of the public money, which is so much needed for city purposes. We hope they will do themselves the honor to say decidedly, "It shall not be done. We were not sent here to give away the public revenue, but to expend it economically for objects strictly municipal: and we will act accordingly." Let them not be deterred by the string of respectable names which have been published as petitioners for the boon. They know how easy it is to get signatures to petitions. Probably half these gentlemen would not have gone across the street to sign the petition, and some of them very probably would be glad to see it rejected. But be this as it may, there is another set of men equally respectable, who have signed a remonstrance against such a use of the public money. Among them are such names as Stephen Allen, Jonathan Thompson, C. W. Lawrence, James Brown, James Boorman, Jonathan Goodhue, James G. King, Wm. B. Crosby, Walter Bowne, George Newbold, John Haggerty, and many others of the best names which the city can boast. The memorial was presented in the Board of Aldermen before the vote was taken and after being read a motion was made to lay it upon the TABLE, and the motion prevailed. Why do they remonstrate? Because they are insensible to the value of intellectual improvement? Far from it. Some of them are distinguished patrons of all such objects in a proper way. But they know that the city is burdened with an enormous debt,—that the taxes are heavy,—that there is need of the utmost economy of the public money, in order to meet existing engagements. Perhaps also they doubt the propriety, under any circumstances, of giving away the public money for objects not strictly municipal. Perhaps they think it a dangerous precedent. At any rate, we do.

When we united with 24,000 of our fellow citizens in putting the American Republicans into power, one leading motive which influenced our minds was—to stop the leaks in the Treasury. We know that the same motive influenced thousands of others. The American Republicans in the Common Council, by accepting the office, virtually pledged themselves to be economical, and to try to reduce the taxes and debt. We now hold them to their pledge. Mayor Harper has redeemed his,—we respectfully call upon the Assistants to redeem theirs. Shall we call in vain?

* A majority, repasses a proceeding, which the Mayor returns with objections.—ED.

ALMS HOUSE APPROPRIATION.

We have received a letter from John M. Bradhurst, Esq., in which he expresses an opinion that the Legislature ought not to authorise the raising of two hundred thousand dollars to build a palace on Randall's Island. We give the letter entire in another part of this paper. Mr. Bradhurst is right in this.

THE ROTUNDA.

We met with Jonathan I. Coddington, Esq., formerly Post Master of New-York, a man who possesses a great abundance of that intelligence called common sense and enquired of him in reference to the value of the Rotunda. He states that while he was Post Master he paid seventeen hundred dollars rent per annum for that building, and he considered it was a cheap rent. We enquired of him his opinion as to its present value, the tenant to make all repairs, and he replied: from $2000 to $2500, would be a fair price for it.

John M. Bradhurst, Esq., who is a large owner of real estate in the city of New-York, and well acquainted with the value of city property expresses the opinion that the Rotunda would bring four thousand dollars per annum on a long lease.

The establishment of a gallery is very generally approved, and the worthy gentlemen who have been active in the measure could easily procure a subscription from the public spirited citizens of New-York, sufficient to purchase that building or some other equally as good.

The worthy gentlemen who have urged the members of the Board of Aldermen to gainsay the Mayor's Veto Message, should have investigated the fact as to the value of this property to the city and as to the sacredness of *that trust* which appropriates this income to the sinking fund which is solemnly and sacredly pledged to the payment of the public debt.

The dollars and cents of the rent is not the question—it is the principle—it is diverting a fund appropriated to a *trust*—to a purpose which contravenes it. Some of the gentlemen who voted for the gift are commissioners of the sinking fund—how they can thus vote, is to us a mystery. The gallery is approved of by all who we heard speak of it—but the *right* of the Common Council to vote away public property does not exist.

Thousands on thousands of signatures could have been obtained to sustain his Honor the Mayor, in his course in this, but it was deemed unnecessary. Sound discriminating judgment is the offspring of intelligent minds, and not to be measured by the greater or lesser number of names on a petition. On page 425 is presented the names of men whose opinions cannot be outweighed in this community, and we here place the names of the worthy members of the Board of Aldermen, who voted away the Rotunda, notwithstanding the Mayor's objections.

Richard L. Schieffelin,	J. J. Dickinson,
William S. Miller,	Jabez Williams,
Wm. Gale,	David S. Jackson,
Wm. B. Cozzens,	Thomas Winship,
Elias G. Drake,	Stephen Hasbrouck,
John A. Bunting,	W. C. Seaman,
William Tucker,	Charles Devoe.

On Monday evning the 17th inst., the Board of Assistants took up the proceedings of the Board of Aldermen had at their previous meeting upon the Mayor's Message vetoing the Rotunda Resolution, and agreed to concur with the Board of Aldermen in passing the said resolutions, notwithstanding the Mayor's objections, by the following vote, viz:

Affirmative 10. Negative 7.

Assistant Alderman Charlick moved a reconsideration, which motion prevailed, and he then moved that the whole subject be referred to a special committee, which motion also prevailed, and the Chairman appointed Messrs. Blackstone, Bayles and Taylor, said Committee.

INDEPENDENCE.

THE ROTUNDA.

We copy the following communication from the New-York Eve. Post, of the 17th inst.

GALLERY OF FINE ARTS.

To the Editor of the Evening Post.

It is not of much consequence to the public, what I may or may not have signed, but as I myself admire consistency, I wish to give my reasons, why my name appeared first for and then against the request of the Gallery for Fine Arts from the Corporation. I was given to understand it was of no kind of use to the public, and would likely be pulled down. Under these views I lent my feeble aid in their behalf; but when I saw the Mayor's objections with his reasoning, I was convinced of my error and retracted by signing the memorial to the Corporation to sustain him.

SAUL ALLEY.

Feb. 17, 1845.

THUNDER STORM IN WINTER.

On last Sabbath morning, within a few minutes of one o'clock, a thunder storm passed over the cities of New-York and Brooklyn. I had, before retiring to rest on Saturday night, been engaged in correcting the proof sheet of the first form of our Gazette, upon the 425th page of which is the conclusion of my account of the thunderbolt which fell upon the house of Mr. Speck, in Brooklyn, on the morning of the first Sabbath in August last, which account had been commenced in our paper of Wednesday last, and which we sent to the Hon. Moses H. Grinnel, that day. The subject of the lightning, and that of the mystery of sleep, was one of the last subjects I had in my mind when retiring to rest, and in about three hours after I was awakened out of my sleep by a vivid blaze of lightning. I had been awake but a few moments, when I heard an explosion that was very loud, and accompanied by a great glow of vivid light. The explosion had no echo, or reverberation, that I could distinguish, and appeared in a direction exactly west from my place of observation. The concussion was so heavy that it shook the house, and seemed more like the explosion of an aerolite in the air, than like a thunderbolt. Mr. Grinnel's house is about the same distance from my place of observation to the north west that Mr. Speck's house is to the south east. The difference in these two electric discharges, which were a few days more than six months apart, was very great. That of August was a continuous crash, but that of February was an abrupt explosion, in its commencement and also in its termination. The latter sound came across the river, and also over a surface of snow more than a foot in depth, and the former came over solid ground. After remaining awake a short time, listening to the storm and watching the brilliant coruscations of the lightning, I arose to ascertain the hour, and found it to be twenty minutes past one o'clock. The thermometer at that time denoted a temperature of 40 deg. of Farenheit. At sunrise it was the same, and at 12 o'clock was at 42 degrees. On Monday morning at 5 o'clock, my thermometer denoted a temperature of 32 degrees. At 8 o'clock, three hours after, I dug a hole about a foot deep in a snow bank, placed the thermometer in this hole, wrapped in a paper cover, and filled the hole up with snow. After the lapse of an hour, I opened the snow-bank, took out the thermometer and found it denoted 32 degrees as the temperature of the snow. When the thunder storm occurred the ground was covered with snow to the depth of about one foot. On Monday morning I visited the house of the Hon. M. H. Grinnel, No. 6 College Place. It is a three story brick house, with a deep basement, and dormant windows in the roof, and is the middle house of a block of seven houses, all of about the same size.—

The house fronts the open grounds of Columbia College, which are extensive and surrounded by a massive iron fence, with points projecting upward every four or five inches. This fence is less than 100 feet from Mr. Grinnel's house. About 130 feet from Mr. Grinnel's house, and to the south, is a brick house, upon the chimney of which is a sheet iron Espie. I went upon the roof of Mr. Grinnel's house, and found a small perforation in one of the bricks of the chimney, but I could not get sufficiently near it to ascertain if it extended into the chimney's flues. Directly under this part of the roof and within ten feet of it are stowed away two large iron grates with brass mounting. This mass of metal the lightning first struck upon, and from thence descended into the attic bed room in which Mr. Grinnel's man servant was in bed: here it broke through the ceiling and plastering and got upon the bell wire, which is copper, as is evident for it left a smoky stain upon the plastering, with which it was in contact, and part of it appears to have left the bell-wire about three feet from the floor, as it made a track of smoke upon the plastering of several inches in length from which it passed to the under surface of a tin covering to a dormant window, which it tore up, at the same time bursting out the window, window frame and sash, and throwing some of the casings entire into the College yard more than 200 feet distant. I examined one entire piece of casing, which was uninjured and all the nails left in the board. I also found fragments of slate lying on the snow close to this piece of casing. I should think there were more than a hundred pieces of broken slate within the compass of a hundred feet, measuring north, south, east and west. The lightning appears to have gone from this dormant window to the gutter or eave trough, which is but a few inches distant, and which has a metallic lining and connects with the tin spout, of four inches in diameter, which descends to the pavement. The dressing table which was close by the dormant window had a looking glass upon it, which was thrown down, and also the window blinds inside were thrown upon the floor inward, while the casings were thrown outward more than two hundred feet. I noticed eight small holes in the plastering in the front part of the bed room. Six of these are in one row and the distance from one extreme to the other measured 14 inches. One hole was made seven inches below this line of perforations, and one hole about two inches above. These extended entirely through the plastering to the lath, and appear precisely like shot holes. The glass over the door, which opens into this bed room was broken.

The lightning left in this room a record which is very instructing. The bell wire passes down below the floor, near a right angle made by the plastering, and here I found a stain of the lightning on the wall on both surfaces, showing that the lightning did not follow an air line, but followed the surface of the wall, turning the corner, and making a right angle with the wall with the utmost precision, and here it came within 8 feet of the tin covering of the dormant window, to which it is reasonable to presume, from the knowledge we have of its habits, that it was attracted by that metal. The surface of this tin was equal to three square yards, and if we allow that a point to a lightning conductor will attract double the distance the rod projects above the surface of the roof it is designed to protect, we may, upon the same principle, account for its leaving the bell wire for a brighter surface, and one of greater extent. The glass in the basement windows were all broken, but the inside shutters which were closed, were not injured. This evidences that the destruction of the glass was by the concussion, and not by the immediate contact with the lightning. The looking-glass in the attic, which was a small dressing glass, was broken into fragments by the force of the explosion, which burst out the dormant window, for the lightning, however powerful the bolt, would pass over the surface of the silvering of a looking-glass without breaking it, and it is found of such surfaces, and will give these a preference, as was the case with several of Mr. Speck's looking-glasses, which I noticed in the last number of our paper. In 1843, a thunderbolt fell upon a house in Cranberry street, Brooklyn. I examined the premises a few minutes after the occurrence, for I was observing the storm, and within 30 rods of the building when it was struck. The lightning was very quiet until it met with resistance on the pavement after it had descended the tin leader to its termination, and there it exploded, bursting in the basement door, breaking the casing, and then leaped to the copper bell wire. The matter of lightning, when striking a hard and extensive surface, frequently explodes, like as many fulminating compounds are known to do. The area in front of Mr. Grinnel's house is provided with a heavy iron railing, and the marble door-steps have ornamental iron-mountings, of several feet in heighth. There is a vast quantity of iron in the railings, fences, &c., in front of this house, and it would seem to have had an influence upon the thunderbolt, for it did but little damage, notwithstanding it was so heavy as to shake dwellings two miles distant. The room in which the servant was sleeping, measures 9 feet high, 12 feet wide, and 18 feet long. The bed upon which the servant slept, is a straw palliaster, with a hair mattrass and feather bed on top. He was not injured, but rather amazed for a few momens. It would seem probable, from the fact that the window blinds were thrown inside, and the window casings thrown outside, that there was an explosion of lightning between the two. I cannot be mistaken in the route the lightning took, after it left the bell wire, for its track is as distinctly marked as any I have ever seen, and I have examined several of these records. The bell wire has a worsted tassel to the lower end of the wire, and this may have had an influence in causing the lightning to leave it. The bolt exploded in the air, (as I think), before it reached Mr. Grinnel's house, for the concussion was so great that, had the explosion all taken place with the dwelling, it would have rent it into atoms. The Journal of Commerce, in giving an account of the bolt, closes the paragraph in these words. "The house was filled from top to bottom with a strong smell of sulphur. The family, of course, were instantly up, but after a careful examination, Mr. Grinnel found that all his family were safe, and they retired to rest again, THANKFUL *that the bolt had been guided with such* MERCIFUL ACCURACY." Last summer, four members of one family were instantly killed by a thunderbolt, which fell upon the house. Thunder storms in winter are rare. I witnessed a terrific thunder storm in the month of January, 1814, in lat. 36 degs. I had left the cliffs of Cumberland, for a house three miles distant, at a little after sun set, on horseback and alone, the path was through a wood the whole distance, a black cloud overspread and made the darkness terrible, and my path was only made visible by the corruscations of the lightning, but every flash of fire was accompanied by a terrific peal of thunder, and these were so constant and so heavy, that I was kept in constant emotion. So severe was the storm, that I was three hours travelling three miles, but the lightning of the clouds was a lamp to my path, without which, I could not have found my way, with such a cloud suspended over me in the night, and in the wilderness.

A lightning rod of one-fourth of an inch iron wire, which can be purchased for one dollar, will protect a dwelling from damage by lightning, and it is a small tribute, but one which nature requires, although the requisition is mysterious, yet so it is. The declaration of the sacred text, is, that the Almighty made a way for the lightning of the thunder. The lightning, the fire from heaven, was the chosen witness to the delivery of the Statutes of Sinai. On pages 121 to 126, inclusive, of this volume, will be found a full account of lightning, both in this country and in Europe.

Since writing the foregoing remarks, I have re-visited Mr. Grinnel's house, to make further examination. The lightning left the bell wire about three feet from the floor of the attic bed-room, in which the man servant was sleeping—it traversed the surface of the plastered wall (which is painted,) 11 inches, leaving a stain of smoke a quarter of an inch wide, in a perfectly straight line, to where it reached an angle in the wall, which it turned with great accuracy, and proceeded 8 inches in the next corner, making a straight line of stain from smoke this distance. Here it left the corner of the wall, and proceeded diagonally across the room to the window, where it met with an obstruction in reaching the metallic gutter, which was on about the same level with the smoke line on the attic bed-room wall. Here an explosion took place. I have seen several such cases, but the explosive force was less than here. The tin spout is 4 inches in diameter, with two surfaces of about 12 inches each, in both 24 inches. The spout was disjointed by the explosion at its termination, which explosion broke *all* the glass of the basement windows. The solder of the joints of the spout was not fused. The windows in the front area are protected by window blinds outside, and window shutters inside. Nothing here was injured but the glass. The lightning here did not ignite any of the wood works or furniture of the house, and left no traces of heat, except the line of 19 inches on the wall, and the mark of a flash where the plastering came in contact with the bell wire.

HELPLESSNESS.

Statements have recently been made that the number of persons dependent on charity in the city of New York is immensely great. These statements are erroneous—the gentlemen who make them are mistaken in their estimate. The number of persons who are the objects of Charity are comparatively small.

In 1832 the Safety Fund Banks of the State of New York made returns to the Legislature of the amount of specie in their vaults which, was in all of them together about two millions and a half of dollars. We have not the returns before us, but we have a distinct recollection of this one extraordinary fact which was that the little Savings Bank in Chamber street made a return of the amount of the deposits of Savings in that Institution, and it exceeded the specie in all the Banks of the State by more than a million of dollars. Here is a most material demonstration. The books of that Institution in times of sickness and pinching cold show a great withdrawal of funds of the depositors. Here is substantial relief in a time of need.

"Necessity" is said to be the "mother of invention," and the maxim is true—the revolution of 1775 produced suffering which gave energy to human mind and the result of suffering made more statesmen and patriots which but for those trying scenes would have been almost unknown.

The infirm and sick need aid—but the healthy and the able bodied need only to be aided to help themselves.

It has been repeatedly stated (and never to our knowledge contradicted) that there is not a member of the society of Friends in any poor house.

If every religious society carried out their professions in practice in helping the needy a very different state of things would be seen in the great results which would be developed.

The fact speaks volumes.

While our Corporation license shops to make paupers, they will increase—if they plant the seed the harvest will come. Every year the Aldermen and assistant Aldermen of the various Wards spend days in granting licenses to men to sell poison and they issue a paper, licensing this mode of filling the poor house, and take pay for it, and this money is put into the public chest, and there it cankers every thing around it.

Ask the pauper where he first drank of the cup of misery, and he will point to the grog shop, and ask the keeper of the grog shop where he got authority to do the wrong, and he will show you a splendid paper license over the signature of a public functionary.

No money should be taken for a license, for none should be granted—it will not help the matter to raise the price of the liquor, but rather aggravate it, and make rum selling a monopoly. Take away the power from the Mayor and Aldermen to do this naughty thing. That would be making a right beginning.

The license system is repugnant to the doctrines of civil liberty, and should not be practised in a country which boasts of being the land of freedom.

To license a man to do an act which if he does it without a license subjects him to indictment and imprisonment, seems to argue that the sin is not in selling the drink which poisons both the body and the mind, but it is in not paying the Honorable, the Corporation. A FEE.

It is not long since that a plan was broached for to metamorphise the Corporation of the City into a body of public under writers, and the next thing we may hear of, is to turn the city into a mammoth grog shop. Then the whole city will be needed for an Alms House.

BOARD OF PERMANENT ASSESSORS.

The Legislature will be applied to for the passage of a law to create a permanent Board of Assessors whose duty it shall be to supervise the assessments made by the Ward Assessors, and to bring into the assessment rolls a greater amount of personal property.

THE DELUGE.

This extraordinary event took place in the year 1655, or 1656. The cause of the deluge is particularly stated, and its occurrence accomplished a special purpose of the Almighty.

On the 17th day of the 2d month, of the 600th year of the life of the Patriarch Noah, all the fountains of the great deep were broken up in the same day and the windows of Heaven were opened.

At the end of 40 days all the high hills were covered, and the mountains were also covered.

The waters were upon the earth 150 days, and a wind was made to pass over the earth, and the waters assuaged, and the fountains also of the deep, and the windows of heaven were stopped and rain from heaven was restrained. And the waters returned from off the earth continually, and on the 17th day of the seventh month, the ark rested upon the mountains of Ararat.

The waters decreased continually until the tenth month, on the first day of the tenth month, were the tops of the mountains seen.

In the 601st year, of the life of Noah, on the 1st day of the first month, Noah removed the covering of the ark and the ground was dry.

In the same year on the 27th day of the second month of that year, Noah and his family left the ark.

The day of the month on which the flood commenced, and the particular month, is stated, but the year is that of the life of Noah, it therefore becomes necessary to search the sacred volume to ascertain in what year Noah was born. Adam became an inhabitant of earth in the second solar day of the first solar year. Methusalah the grand-father of Noah, was born when Adam attained his 687th year. In the 874th year Lamech, the son of Methusaleh, and father of Noah was born, and when Lamech arrived at the age of 102, Noah was born and the flood took place in the 600th year of the life of Noah. Thus we arrive at the year in which the flood covered the face of the earth.

We need not look for any natural cause for this great event, for the plain reason that it was a special judgment upon the inhabitants of the earth, at that day, and the fact is plainly and clearly stated.

It was a judgment pronounced long before the event, and the day fixed on which it should be put in execution, and it was executed in the very time and in the very manner that it was purposed by God that it should be.

Noah lived three centuries and a half after the deluge, and his son Shem, who was with him in the ark, lived more than five centuries after that event to hand down to posterity an account of that mighty flood.

There was a period when a mist ascended from the earth, and watered the whole face of the ground.

Hills and mountains existed before the deluge took place, for within a few days after the flood had commenced the hills and the mountains were covered.

Rivers existed before the deluge, for Eden was watered by a river which resulted from a mist, which produced rain, and this rain was so extensive as to water the whole face of the ground.

From the commencement of the deluge to the day on which Noah and his family left the ark, was one year and ten days.

The change which this extraordinary body of water caused upon the surface of the earth must have been very great, and the wind which was caused to pass over the earth, added to this, must have produced changes which are not easily estimated by human calculations.

The knowledge of this event was preserved in the remembrance of one of the tenants of the ark, for about five hundred years, for Shem, one of the sons of Noah, was about 93 years of age when he was in the ark, and he lived to the age of 602 years. His life was prolonged to a greater length than that of any individual of whom we have any account who lived subsequent to the deluge except his father and he survived his father about 150 years.

The age of the world is regarded by some writers as greater than represented in Scripture, but such theories are without the shadow of a foundation. The Scripture history is the only true history extant, and as to the theory of some Geologists which gives to the earth a greater age than the Bible represents it, are entitled to no consideration whatever.

The falls of Niagara are computed to have been 10,000 years in reaching their present location. This calculation has nothing whatever to sustain it but the presumption that if a thousand feet is worn down in one year that in ten years, ten thousand feet will have worn away. The cliffs of Niagara were once in a soft state, and in that state a score of miles may have been worn off in a single week. I examined the Falls very minutely during the summer of 1844, and in a future number will give a description of them

Above the great cataract I saw a *memento* of the deluge. It was suspended in the air and presented the rich and brilliant tints of the solar pencil, painted in the bosom of a cloud. What a painting! and what a place to suspend it! what a testimony! A declaration of the Almighty to his creature man, that the world shall not be drowned. The painting is in the colors of the Rain Bow—it is the Bow in the cloud—a cloud formed by the falling of a mighty river over a gigantic precipice into the bosom of an unfathomed gulf boiling with unceasing commotion and like the heaving of a fearful tempest, and with a roar that shakes the very rocks on which the river breaks. What a place this for a human being to meditate, standing upon rocks shaken by the thunder of the waters—beholding at his feet the foaming billows of a crushed and mangled river, and above it, a painting of the most lovely and beauteous adorning, suspended in the air and which no human being can approach—a testimony of the Great Jehovah, written with the pen of celestial fire in the bosom of a cloud, and expressed in a language which is universal.

In the rocks which form these cliffs, and those which form the precipice over which the Niagara falls, repose in fossilized sleep myriads of animals which lived ere the deluge came, and here they present themselves as mute witnesses of that great event. The Scriptures, the Rain-bow, the fossils—all witnessing together, sustaining each the other—what conclusive testimony! These falls are the offspring of the Deluge—ere the Deluge came the Falls of Niagara had no existence.

FOSSILS.

In my examinations of the rock formations of the northern shore of Lake Ontario, in the summer of 1844, I found at Ogden Point, which is about equadistant between Toronto and Kingston, a bituminous fossiliferous lime stone formation, quite extensive, which underlaid the surface earth and extended into the waters of the lake. This rock formation has a surface some four feet or more above the present surface of Lake Ontario, and is washed by the surf.—The rock is intersected by both vertical and horizontal stratas, and this make it of easy excavation by the force of the surf of the lake, aided by the frost. This excavation is performed after this manner, the frost crystalizes the water of the lake on and near to the shore—which incrusts with it the rock which is in contact with the water; a heavy storm sets in which breaks up the ice into large pieces and these lift the rock which the ice adheres to and the whole are floated away together, and either driven by the force of the storm upon the fast rocks and broken to pieces or driven into the deep lake in which the ice melts and drops the rocks to the bottom. Thus an inroad is continually making on the shore. Before I was aware of the fretfulness of the lake, and while busily engaged some twenty feet or more from the water, excavating fossils, a heavy surf come and threw the water over me. This made me careful to watch the water and avoid the watering. I found in this bed of rock numerous fossils, and among the rest one which I have not been able to find any description of in any published geological works. I have carefully examined the transactions of the British Geological Society without finding any thing that is like this, and there is nothing in the geological collections of this State, at Albany, like it. This fossil lay imbedded in the rock in a strata inclined in the angle of about 30 degrees toward the lake, and the water had cut off one end of it, and left the residue projecting a little above the surface. The chissels which I used were of thick blades, and I broke the fossil in pieces in removing it. It is hard but brittle. The pieces which I have, measure 18 inches in length and weigh 3½ pounds. The width at the widest part is 6 inches and two inches in thickness.

On each side of this body were teeth near an inch long and near three quarters of an inch wide at the root running to a sharp point and coming to an edge in the centre on the upper surface. These teeth filled the sides from one extremity of this piece of fossil to the other and must have made a terrible weapon of attack or defence. At the large end this fossil was joined on to a body like the small part of a gourd to the swell of that vegetable, but the part of the body which remained was so brittle that I could get no piece of large size, I therefore dug it out in order to have a view of its bed, and thus ascertain its shape and form by the cavity its removal left in the rock.

In company with this fossil are numerous other fossils which have before been described, and therefore we must judge of this particular fossil by the company in which it was found, for it had with these a contemporaneous existence.

This is a wonderful witness of past ages otherwise buried and gone, a mute witness, but giving testimony which cannot be controverted—here it had its bed in a strata above the surface of the lake and which now forms one of the solid rock formations of the land, and itself, a rock—it is a writing laid in the rock and expressed in a language which is universal. When this mass in which it reposed for ages, was semi fluid, this fossil was in the flesh—what a change! The land in which this is found which forms a part of a great continent, was unknown to civilized man three centuries ago, but here is a witness of one of its inhabitants ere the flood came which deluged the whole surface of the earth.

I watched with care the machinery of this lake—in some places it kept the fragments of rocks in constant motion, and wearing the pieces into smooth shining pebbles. Numerous fossils which I examined had thus been worn. In other places, I found the fragments of rock in angular shapes, and rough, and in the state in which they came from the hands of the aqueous quarrier, and these in some places lay in piles along the shore, and looked much like the workshop of men who had been breaking rock for McAdamizing roads, for these fragments were about the size used for that work. At other places I found embankments of earth and stone several feet high thrown up against the mouth of a creek which effectually dammed up the creek and compelled its waters to seek another outlet. In one of these places I found an extensive woodland drowned by the water, and the trees killed.

When I surveyed the rock strata at Ogden's Point, and examined the numerous animals which there repose in one common bed, in a fossilized sleep, my thoughts travelled back in time to that period when they were in a state of activity. What a scene they must have presented—and now they possess an equal interest for they witness to the occurrence of that event which is recorded in the volume of inspiration of the destruction of all animal life, with the solitary exception of those preserved in the ark during a period of one year and ten days. I gathered at this point nearly half a bushel of fossils in a short time, and these are now my companions while I write—what company—what associations they kindle in the mind—they seem almost to guide my pen, for mind is impressed with that feeling or sensation which come from associations.

SMOKEY CHIMNEYS.

Chimneys which are constructed outside of a dwelling exposed to the cold damp air acquire a temperature that unfits them for conductors of smoke, and the same remark will apply to chimneys in the walls of brick buildings, where there is but a thin partition between the smoke and the atmosphere. Very high chimneys are subject to the same objection, unless the walls of such chimneys are thick.

Sometime since I received a letter from Doctor John Croghan, proprietor of the Mammoth Cave, of Kentucky, in which he says: "The great desideratum is to get rid of the smoke which collects about the chambers whenever the external and internal temperature is the same, 58 deg. Farenheit. The only certain means of getting rid of the annoyance, is to sink a shaft in the vicinity of the inner village. An orifice six inches in diameter, Professor Locke thinks, would act as a powerful ventilator."

The temperature of the earth through which this shaft should be made to pass, I think, would determine the ability of such a shaft to take away the smoke. The persons residing in the cave by the use of fires produce the smoke of which Doct. Croghan speaks.

NEW-YORK MUNICIPAL GAZETTE.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, MARCH 6, 1845. [VOL. I....No. 29.

THE ANNUAL TAX BILL.

We have delayed issuing this number for a whole week in order to present our readers with the proceedings of the Common Council, and of his Honor the Mayor, upon the annual Tax Bill. The Board of Aldermen passed this Bill on Monday night the 24th ult., and on Wednesday night the 26th ult. the Board of Assistants concurred with the Board of Aldermen in the passage of the Bill, and it was sent to His Honor Mayor Harper on Thursday morning, the 27th ult., for his approval. Up to Monday, March 3d, at 2 o'clock the Mayor had not signed this Bill, and we hope he will not, and that he will return it to the Common Council for reconsideration, and reduction. The appropriation Bill, which is to be found on page 445, was also passed, at the same time, with the annual Tax Bill, and also sent to His Honor Mayor Harper, for approval. On Saturday, we are informed, that the appropriation Bill was on the application of the City Comptroller, *approved* by the President of the Board of Aldermen in the capacity of acting Mayor. This may be in accordance with the letter of the provisions of the City Charter, but not with its spirit. The Mayor was not absent from the city, nor was he prevented by sickness, from attending to the duties of his office, and we regret that so excellent, and so worthy a citizen, as the President of the Board of Aldermen, should have thus established a bad precedent. This appropriation is a premature measure, altogether. The tax had not yet been authorised by the Legislature, which is to provide the means to meet this wholesale appropriation.

The Veto power is an important check upon hasty or arbitrary legislation, but it was never intended to be exercised by a member of the same body who had already given his vote upon the measure to be approved, or disapproved, unless in ap articular contingency. The exercise of the two powers, under ordinary circumstances, by the same individual, involves an absurdity.

CITY COMPTROLLER'S REPORT.

We are in possession of a printed copy of the City Comptrollers Report, for the fiscal year ending December 31, 1844. This Report covers 87 pages. We shall reprint this document entire, in order that we may have a complete key to the expenditures for public printing, and at the same time present our readers with a copy of the Report and of the Bill for Printing, Paper and Stationary, in order that they may compare the prices paid for public printing, by the Anti-Assessment Committee, with the prices paid for the same work by the Corporation functionaries. The Comptroller's Report illustrates a fact that amounts to a mathematical demonstration and which is to be found on numerous pages of the Report, which is, that bills are kept back until after the balancing day. In Philadelphia, these things are managed differently, as will appear by the following quotation from the Report of the City Commissioners of that City:

From Philadelphia City Commissioners Report.

1841.

Feb. 1.	John B. Kenney, pay of watch and police, January, 1841,	$3,657.00
Feb. 27.	Do. pay of watch and police, February 1841,	3,391.57
Mar. 31,	Do. do. do. March, 1841,	3,820,00
Jan. 5,	T. W. Morgan, & Co., 4560 gallons winter oil, $1,01½, deducting one cent per gallon for casks returned	4,582.79
Mar. 2.	T. W. Morgan, & Co., 2757 gallons winter sperm oil, at $1,01½, deducting for return casks one cent per gallon,	2,770.79
Mar. 19,	T. W. Morgan, & Co., 514 gallons winter sperm oil $1,01½, deducting for return casks one cent per gallon, and adding premium on draft on New-York, 23.24.	539.81
May 11.	T. W. Morgan, & Co. 2574 galls. spring strained sperm oil, 91½ cts. per gall. less one cent for casks returned,	2,329.47
Jan. 13,	Robert Paton, cleansing south district by contract, 2 weeks,	180.00
	John McIntire, cleansing north district 2 weeks by contract,	190.00
June 9,	Henry Buckley, cleansing city 2 weeks by contract,	275.00
Nov. 2.	Charles Miller, 5 tons coal, S. E. Watch-house, 6.50,	32.50
April 6.	M. Weaver & Son, 311lb flam wick at 16cts, 50½ lbs. lamp wick at 22 cts. and Porterage,	62.37

This system of stating disbursements of public money shows the dates, the prices, the quantity, and the names of the persons furnishing, and these accounts are stated in semi-monthly payments so that tax paying citizens can see what use is made of their money.

NEW TAX BILL.

The ANTI-ASSESSMENT COMMITTEE call public attention to a very important bill which has been reported to the House of Assembly in this State, which makes an entire change in the mode of assessing Taxes upon personal property, and which will have the effect to drive business and capital away from the city. The Bill is here given in full, and also the sections of the Statutes which it seeks to repeal.

An alteration in the mode of assessing the Croton, the Watch, cleaning Streets, Lamp and Police Taxes is needed, but this bill as it now stands, is altogether out of the question. A delegation will be sent to Albany to oppose the passage of this Bill and to propose such amendments as will give to the city a permanent Board of Assessors, and extend the time of making the assessments and provide an adequate notice to the persons assessed.

You will see by the first section of this Bill that all balances, or funds in the hands of Bankers, or Commercial Houses, belonging to their correspondents abroad or elsewhere, are assessable, and Merchandize, Produce, &c., arriving for sale, is also assessable, and the proceeds thereof, if the same shall have been sold.

The citizens interested are requested to scrutinize this Bill.

Extracts from the Statutes referred to in Section 1 and Section 7 of the Bill, and sought to be repealed by this bill.—[Title 1, Part 1, Chapter 13.

"§ 4. The following property shall be exempt from taxation:

"1. All property, real or personal, exempted from taxation by the constitution of this state, or under the constitution of the United States:

"2. All lands belonging to this state, or the United States:

"3. Every building erected for the use of a college, incorporated academy, or other seminary of learning; every building for public worship; every school-house, court-house and jail; and the several lots whereon such buildings are situated, and the furniture belonging to each of them:

"4. Every poor-house, alms-house, house of industry, and every house belonging to a company incorporated for the reformation of offenders, and the real and personal property belonging to, or connected with the same:

"5. The real and personal property of every public library:

"6. All stocks owned by the state, or by literary or charitable institutions:

"7. The personal estate of every incorporated company not made liable to taxation on its capital, in the fourth Title of this Chapter:

"8. The personal property of every minister of the gospel, or priest, of any denomination; and the real estate of such minister, or priest, when occupied by him, provided such real and personal estate do not exceed the value of one thousand five hundred dollars: and,

"9. All property exempted by law from execution.

"§ 5. If the real and personal estate or either of them, of any minister or priest, exceed the value of one thousand five hundred dollars, that sum shall be deducted from the valuation of his property, and the residue shall be liable to taxation.

"§ 6. Lands sold by the state, though not granted, or conveyed, shall be assessed in the same manner as if actually conveyed.

"§ 7. The owner or holder of stock in any incorporated company liable to taxation on its capital, shall not be taxed as an individual for such stock.—Title 1.

"§ 3. The terms "personal estate," and "personal property," whenever they occur in this Chapter, shall be construed to include all household furniture; monies; goods; chattels; debts due from solvent debtors, whether on account, contract, note, bond or mortgage; public stocks; and stocks in monied corporations. They shall also be construed to include such portion of the capital of incorporated companies, liable to taxation on their capital, as shall not be invested in real estate.—Title 2, Art. 1.

"§ 5. Every person shall be assessed in the town or ward where he resides when the assessment is made, for all personal estate owned by him, including all such personal estate in his possession, or under his control as trustee, guardian, executor, or administrator; and in no case shall property so held, under either of those trusts be assessed against any other person.—Title 2, Art. 1.

"§ 8. Between the first day of May and July, in each year, they shall proceed to ascertain by diligent inquiry, the names of all the taxable inhabitants in their respective towns or wards, and also the taxable property, real or personal, within the same."—Title 2, Art. 2, Chap. 13.

IMPORTANT TAX BILL.

We republish, in order to again lay before our readers, the following important Bill, in relation to the assessment of Taxes. This bill is objected to by the owners of real estate, and gentlemen engaged in Commerce, abominate its provisions. See page 442.

[Document No. 128.]

IN ASSEMBLY,

February 11, 1845.

Reported by Mr. Wheeler, from the committee on the judiciary—read twice, and committed to the committee on the whole.

An Act relative to taxes and jurors in the city of New-York.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

SECTION 1. All lands situated in the city of New-York, and all personal property within said city, whether owned by individuals, corporations, monied or stock associations, shall be assessed for taxes now or hereafter to be imposed or authorized by law to be raised or collected in said city, subject to the exemptions specified in title first, part first, and chapter thirteenth, of the Revised Statutes.

§ 2. Every person residing in the city of New-York, shall be assessed in the ward where he resides or does business, at the time such assessment is made, for all personal estate owned by him *or in his possession, or under his control, or held by him in any representative or other capacity*, and the temporary residence of such person in any other ward or place, or the temporary absence of such person from said ward or city at the time the assessment is made, shall not free such personal estate from taxation.

§ 3. The real estate of all incorporated companies, and of all monied or stock associations in the city of New-York liable to taxation, shall be assessed in the ward where it is situated, and all the personal estate, including surplus moneys or funds, of every incorporated company, and of every monied or stock association liable to taxation, shall be assessed in the ward where the principal office or place of business of said company, monied or stock association is, and any individual or company owning a bridge, shall be assessed for it in the ward where the tolls of said bridge are collected.

§ 4. The persons elected assessors in the city and county of New-York, shall be sworn into office on the second Monday of May in each year, and immediately thereafter commence their duties as such assessors; and it shall be lawful for the said assessors, at any time before they shall have delivered the assessment roll as required by the Revised Statutes and of the board of supervisors of the city and county of New-York, at any time after said assessment roe shall have been delivered to them, to correct the samll by adding thereto the name of, and assessing any person or persons, body corporate or monied or stock, association, that said assessors shall have omitted to assess to such an amount as to said assessors or said board of supervisors shall seem just and proper, the same being subject to be corrected by those thus assessed, as now provided by law.

§ 5. It shall be the duty of the assessors in each ward, when they have made out a list of the person, in their respective wards qualified to serve as jurors to notify such persons to be and appear before them, at a day and place certain in the ward, to show cause (if any they have) why they should not be returned as jurors. Such notice shall be served at least five days before the day of showing cause, by delivering the same to the person so selected or by leaving it at his dwelling house with a person of suitable age and discretion, and if the person so notified does not appear, or if he appears and does not show good cause, he shall be returned as a juror, and the person showing good cause shall not be so returned.

§ 6. The assessors are hereby authorized to administer an oath to the persons appearing and claiming exemption from jury duty, and to examine them as to their excuse. In case of the death or inability to act, of one of the assessors in any ward, the other assessor may perform such duties, and in case of the death or inability of both assessors to act, the aldermen and assistant alderman of such ward shall perform such duties, and the return of jurors shall be made under oath.

§ 7. The provisions of the third section, of title one, the fifth section of title two, article one, and the eighth section of the last mentioned title, article two, chapter thirteen, of the Revised Statutes, so far as the same are inconsistent with the provisions of this act, are hereby declared inapplicable to the city and county of New-York.

§ 8. This act shall take effect immediately.

To the Honorable the Legislature of the State of New-York:

The undersigned, citizens of the city of New-York, and owners of real estate in said city and county, Remonstrate against certain provisions contained in the bill known as Assembly Bill No. 128, and those provisions which authorize the taxing of Funds, Merchandize, Produce, &c., belonging to persons residing without the bounds of the County, State and United States.

The undersigned represent that real estate in the city of New-York is valuable on account of the Commerce and Trade of the said city and port, and the more the Commerce and Trade is increased, the more valuable real estate will become.

The undersigned ask that their memorials and Remonstrances heretofore presented in the Legislature in relation to Taxes and Assessments may be acted upon at the present session of the Legislature.

The undersigned ask that a Permanent Board of Assessors may be created by law for the more equal assessment of Taxes, and that persons assessed may have due notice of Assessments when imposed, and that the Board of Permanent Assessors may have power to correct erroneous Taxes.

And your Memorialists, &c.

[From the Journal of Commerce.]

PAYMENT OF JURORS.

A good deal has been lately said favoring the payment of Jurors in our State Courts. It is not apparently known to the citizens of this county, that the practice of allowing to all Jurors attending the county and Circuit Courts a compensation of from 75 cents to 1.50 per diem, exclusive of mileage, is *universal* throughout the State, with the solitary exception of this county, and perhaps two others. The Revised Statutes leave the amount of compensation, within certain limitations, to the several boards of supervisors; but for some unexplained reason, those of the county of New-York are excluded from giving to their citizens any compensation for services rendered upon a Jury panel. When this fact was stated to the Assembly in 1841, an amendment in these words was attached, at the instance of a delegate from the city, to an appropriate bill then on its passage:

"So much of Sec. 38, of Title 3, of Chapter 10, of part 3, of the Revised Statutes, as excepts the city of New-York from the provisions thereof, is hereby repealed"

After a hasty explanation from the mover, it received nearly the unanimous approval of the House. In the Senate, however, the "wire pullers" from the city contrived to convince Messrs. Varian and Scott that this was too great a discretion to be placed in the power of the Supervisors of the city, although it was granted to their brethren of nearly every other county,—and at the instigation of the Senators from *this* district, this salutary amendment was quashed.—It is obvious that with the power given to our Board of Supervisors, which is now withheld for no apparently satisfactory reason, the whole difficulty can at their option be obviated: and I hope the gentlemen who have moved in this matter in the present Legislature, will, by a simple enactment, of the nature here suggested, place the question at rest, believing, with your other correspondents, and persons experienced on juries, that the respectability and intelligence of juries will not be diminished, from the fact of their receiving a partial remuneration for their services.

A MERCHANT.

DISCONTINUANCE OF ONE-HALF OF THE MILL TAX.

The law of 1842 imposing the Mill Tax, provided that one-half of it should cease when the Canal revenue, without aid from the Tax, should exceed one-third the anuual interest on the Canal Debt. That contingency has now happened, and the fact has been duly certified by the Commissioners of the Canal Fund. The Comptroller has accordingly issued a Circular to the County Treasurers, notifying them that hereafter only one half of the Mill Tax will be assessed. The Tax assessed in 1844, which was for a whole Mill, and which falls due this day (1st March) is to be collected in full. A half Mill Tax is still to be assesed, in aid of the General Fund for the support of government. There is also to be assessed, under a law of 1844, one-tenth of a Mill for the use of the Canal Fund, making a total, hereafter, of *six-tenths* of a Mill on the dollar of taxable property.—*Journal of Commerce, March 1st*, 1845.

BANKS, &c.—TAXATION.

We have been furnished with the following statement of the taxes this year by the Banks and the other principal money corporations in this city:

Albany City Bank, $5,844.32; Mechanics' and Farmer's Bank, $4,355.05; Exchange Bank, $3,900.96; State Bank, $4,047.54; Canal Bank, $3.765.89; Commercial Bank, $3,384.49; Bank of Albany, $2,730,68; Albany Insurance Company, $3,225.62; Merchant's Insurance Company, $1,622·88; Fireman's Insurance Company, $1,387,02; Albany Water Works, $982.67; Total, $35,359.12.

The entire tax levied on the city this year for State, County, and City purposes, is $142,257.74. It thus appears that the Corporations above named, pay about one-fourth part of our whole tax, on both real and personal estate.

Money corporations are taxed on their entire capital at its full amount, while real and personal estate, generally is not taxed at more than about fifty per cent. of its estimated value. The consequence is that the burden of taxation falls more heavily on banking and insurance capital than on other property. It is believed that the whole banking capital of the city has not for several years past paid on the average more than about six per cent. dividends, and as two institutions have lately suspended dividends, the average now is less than six per cent.—*Albany Argus.*

The Banks and Incorporated Companies, in the City of New-York are assessed in Taxes for 1845, the large sum of $249,094,81, which is a fraction short of a quarter of a million, which is equal to the whole amount of the Tax levied in the city of New-York, for the year 1820. The increase of Taxes is not the mere dollars and cents involved in the largeness of the Tax, but it is the very germ of corruption. The lavish expenditure of public money is indirectly finding its way into the fountains of Justice in the administration of the different branches of the Government.

The greater the amount of Taxes the more corrupt the government and the less trust worthy the public functionaries; and it is now high time that a calm, deliberate, persevering and successful effort should be made in the city of New-York to stay the desolation that is making such ruinous strides in this great metropolis. The State is reducing its tax burdens, and the city is increasing these impositions. The fault is in the Citizens. The intelligent, well informed citizens have it in their power to correct this glaring evil. A Committee of good men of all parties should be chosen to investigate the state of public affairs, and application should be made to the Legislature to vest such Committee with ample powers in the premises.

DESTRUCTIVE TAXATION.

We present the Report of the Finance Committee of the Board of Aldermen, and Board of Assistants, upon the proposed application to the Legislature for authority to raise money by tax. Their financial reports are generally very unsatisfactory documents.—The taxes are being continually increased, and yet they talk of reform and retrenchment.

This report proposes a tax for: (1845.)

Contingent expenses,	$940,987.00
Watch,	248,500,00
Lamps,	150,000.00
	$1,3339,487.00

In 1844 the Tax Bill was as follows:

Contingent expenses,	912,034,85
Watch,	266,000.00
Lamps,	120,887.36
	$1,298,922.21

In 1843, the Tax Bill was as follows:

Contingent Expenses,	668,000.00
Watch,	212.000,00
Lamp,	110,000.00
	$990,000.00

It will be seen by comparing these three statements together, that the Tax to be asked for, in 1845, exceeds that of 1843, by the large sum of $349,487.00. This is a large increase, and wholly unnecessary.—The financial reports of the city of New-York, as compared with the financial reports of the city of Philadelphia are sadly defective. We have both reports before us, and the difference is immense. The Philadelphia Reports are methodical, simple, plain, and intelligible to every man of common understanding. The New-York Reports are vague, obscure and misshapen, and require to be journalized and posted before they can be understood at all, and even then but imperfectly, for the accounts are stated so general as to afford no means of determining the extra prices, which are paid.

The Report concludes with the following extraordinary resolution:

"*Resolved*, That the Counsel prepare a suitable memorial and draft of law, and the *Mayor* and the Clerk be authorized to authenticate the same for presentation to the Legislature."

The Mayor is an independent executive officer, and derives his power from the Statute, and not from the Common Council, and if he should disapprove of the *big tax*, he has the right, and it is his duty to return the proceeding to the Common Council for their reconsideration.

A Committee composed of such men as SAUL ALLEY, JOHN M. BRADHURST, and ABRAHAM G. THOMPSON, should be appointed by the Legislature to examine into the accounts, and past disbursements of the City Treasury for the last ten years, and report the amount of deficiencies, and this amount should be funded, redeemable $50,000 per annum, payable by tax.

The Financial Committee, in their report say, that the Alms House buildings are not to come into the tax, but that a DEBT is to be created! The City debt should be decreased, instead of increased.

The Committee say that the per centage of the Tax will be less in 1845, than 1844. This proposed application for the annual Tax bill shows an increase. This is a mathematical demonstration against the decrease of per centage.

The Mill Tax will be lessened one half of that decimal part of a cent, but this not to be credited to the City Finance department, nor should such a system of increase of per cent. be excused under this contingency.

The expenses of the City Watch in 1843, was limited by law to $212,000.

A new Municipal Police is now added, and still the Financial Committee want $36,500.00 more for City Watch, than in 1843, besides the expenses of the City Police. It is no argument to say that the Police cost so much in a previous year, unless the Watch expense is also stated in connection with that of the Police.

The Lamps in 1843 were limited to $110,000.00, and now $40,000 increase is wanted. This is a "*per cent*" which comes up with railroad speed.

The item for Printing and Stationery is put in the Schedule at $20,000. On referring to the Tax Document of the Board of Aldermen of Feb. 13th, 1843, and to page 57, of that Report, it will be seen that all that was asked for that year for "Printing and Stationery," was $20,000.

Some of our good friends have said to us that we were in error, in relation to Public Printing. We replied—wait until the estimate of the Tax Bill comes, and compare the items of the present with the past.

Here are two financial documents, viz. of 1843, and of 1845, now on the table before us, and the estimate for Printing and Stationary are identical, each for $20,000. Where is the difference? Why have not the Finance Committee to whom the subject of contracting for the Public Printing in May, 1844, made a report? These things are not creditable to the Finance Committee, and although these Committees have good men in them, yet notwithstanding, in this they have erred, and greatly erred. We had supposed that the economy and system of the city of Boston would have been introduced here, but in this we are wholly disappointed. The City Comptroller and two members of the Financial Committee made a journey to Boston, as we understood, for that purpose. These gentlemen took the Tuesday evening boat for Albany, and arrived opposite that city in time to take the Wednesday morning cars of the Western Railroad and arrived in Boston that evening. They remained in Boston that night, and the next day, Thursday and Thursday night, and left on Friday morning, via Long Island Railroad, &c., and reached New-York Friday evening. They were absent three days and three nights, travelled over an extent of about 600 miles, and no doubt had a very pleasant journey, but the brief stay they made in the city of Boston, afforded them but little opportunity to learn economy in public business, at least we infer as much, for we have since then looked diligently for the fruits of the lesson without being able to find even a trace of such a result.

The great difficulty in the management of city affairs for years has been that the public functionaries were looking to the succession of the party in power, and the energies of the public chest have uniformly been directed to that result. Hence the sad picture which the public finances present. Contrast the management of the City Fiscal's, with that of the State Fiscal department, and the difference is immense. It may be read by the citizens on the face of their Tax Bills.

Mayor Harper in the management of city affairs has entitled himself to the thanks of the good men of all parties.

The Common Council, taken together as a body, are a better class of men than we had in that body before for years, but they have not economized the city expenditures to the extent they should have done.—They have, like their predecessors, been party men instead of Anti-Politicians. It is true they were elected as such, and here is the error. Men independent of all parties should have been elected.

We hope that Mayor Harper before he gives countenance to this application to the Legislature will scrutinize this Report and return it to the Common Council for reconsideration. We shall pursue this subject in our next number. We here give the report in full, as follows:

Document No. 54.

BOARD OF ALDERMEN,

February 17, 1845.

The Finance Committee, to whom was referred the Communication of the Comptroller, with an Estimate of the Annual Appropriations and Tax Levy for the year 1845, *presented the following Report and Draft of an Ordinance in relation thereto; which was laid on the table, and directed to be printed for the use of the members.*

CHARLES A. WHITNEY, *Clerk.*

The Committees on Finance, to whom was referred a communication from the Comptroller, with schedules of the amount required for taxation for 1845, also the appropriations for the same time, respectfully

REPORT:

That they have entered fully into this matter, they have examined in detail, the statement of the Comptroller, with the estimates submitted to him by the Departments, and will take up the schedule by which the amount of tax is to be asked for.

1. Aqueduct Repairs by State Commissioners, $10,000. This amount cannot be altered, as they are the judges of what will be wanted on the works.

2. Alms House, Penitentiary, &c. This estimate is much less than it cost last year, and as the Commissioners appear to be of opinion that they will be able to support the establishment under their charge with this amount, your Committee will not ask its increase, $196,950, less receipts $30,200.

3. Buildings, &c., at Randall's Island. This amount is merged in the application to the Legislature for a loan, and no tax required therefor at present.

4. Board of Health, $450. This will cover all the expenses under the present system.

5. Coroner's Fees The Comptroller proposed $4,500. The Board of Supervisors have reduced the compensation of the Coroner for taking an inquest, from $5.00 to $3.00, consequently this item is reduced $1,000.

6. Cleaning Corporation Docks and Slips. The Street Commissioner proposes $7,500. Your Committee are of opinion that this amount will be wanted; the accommodations for vessels must be kept up, although we receive a small income on the outlay.

7. County Contingencies. The Comptroller proposes $35,000. In looking over the account of last year it will be seen that from 14th May, to Jan. 1st, 1845, the amount expended by the present Common Council, taking out the amount paid to perfect the title to Blackwell's Island, and the amount paid late Counsel of the Board, was about $10,000, and your Committee have therefore set this down at $20,000.

8. Contingent expenses of Common Council. The Comptroller proposes $5,000, to cover the expenses of books, stationery, &c., for the members, carriage hire and expenses of committees out of the city, hospitalities of the city to distinguished strangers, and the celebration of national holidays. Your Committee have no doubt that this is sufficient, refreshments at the City Hall being entirely done away with.

9. Cleaning Streets. The Comptroller proposes the amount of the contracts, $45,437. This is right, and your Committee proposes a further sum of $5,000, to meet any contingencies that may occur in the non-

performance of said contracts. This is a saving of $1,000.

10. Donations, $8,000. This is predicated on the resolutions of the Common Council and requirements under the law of the State.

11. Docks and Slips, Extending and Repairing.—The Street Commissioner estimates for this account $30,000; and your Committee are under the impression that this sum will be required to make new piers and repair those already made.

12. Elections. $10,000. This amount cannot be diminished, as the actual cost of the same is fixed by ordinance, with the exception of extra officers.

13. Fire Department. The Comptroller proposes $27,500; your Committee proposes $18,000. The Department, since the coming in of the present Common Council, to the 1st of January, has cost only $12,388, and a spirit of economy will keep the expenditure within $18,000.

14. Intestate Estates. A judgment has been recovered against the city for an estate paid into the treasury in 1836, amounting to $16,859. Less the estimated returns for the year, and will require about $15,700 by way of tax.

15. Lands and Places. The Street Commissioner has estimated $2,750, for labor, trees, &c., which your Committee believe will be required.

16. Officers' Fees. The Comptroller estimated $173,100, in which he includes the Municipal Day and Night Police, just established, this your Committee think best to place as an item by itself. $55,570, was expended for this account last year, and they propose to put it down to $50,000, as the amount paid to officers attending boats, &c., amounted last year to $6,000, which duty is now to be done by the Municipal Police.

17. Printing and Stationery. The Comptroller proposes $20,000. The amount last year was over $25,000: as he gets the work now done at reduced prices, this amount will be sufficient to meet the expenditures.

18. Repairs and Supplies. The Comptroller proposes $40,000. Expenditure in 1840 was $51.000. Your Committee think that the removal of the public yard to a more central position, and having the repairs to public buildings done by contract, will, or ought to, lessen this cost to $40,000.

19. Rents. The sum of $1,250, is required for this purpose, by the leases of the premises taken.

20. Roads and Avenues. The Street Commissioner proposes $20,000. Your Committee are in favor of getting much of the work on the roads, particularly breaking stone, &c., for 3d Avenue and other roads, done by the convicts from Blackwell's Island. It will lessen the expense, be good for their health, and $16,000, will be enough to spend on the roads.

21. Real Estate, (assessments on.) This account comprises a variety of items; and generally averages about the sum proposed by the Comptroller, $5,000.

22. Street Expenses. The Street Commissioner estimates $30,000, and gives as a reason, that by the present mode of doing the work, and also in consequence of the Corporation assuming the repairs of all the streets, as they have done, it will amount to $80,000. Your Committee are opposed to the present mode of doing the work. They are in favor of having the same done by contract, at so much the square yard, and no work to be done except by the direction of the Alderman and Assistant, the details of which are now before the Board in an ordinance offered for adoption; and it is believed if that plan can be carried out, the expense can be kept down to $30,000, which is the sum your Committee ask a tax for.

23. Sewers. Repairing and Cleaning. This account has been heretofore merged in the expenditures for Repairs of Streets, and paid from the Street Commissioner's office, under general account. Your Committee think with the Comptroller and Street Commissioner, that it should be a separate account. The sum wanted is estimated at $5,000, which is about the mark for this expenditure.

24. Salaries of all Department. The sum expended last year was $217,332. The amount paid Sunday Officers, Day Police Officers, Keepers of Public Places, and Superintendent of Stages, the last year amounted to $17,975, and was in this account; consequently this expenditure can be set down at $200,000, if these officers are dispensed with, as they now are, and the duty performed by the Municipal Police.

25. Water Pipes. In this account is included the whole expense of the city part of the Water Department, including pipes, laying down, digging trenches, proving pipes, &c., every thing except the salaries of the officers. Your Committee are of opinion that, there need not be so many pipes purchased this year as the President of the Water Board estimates; and if the pipes are not purchased, there will not be the amount required from labor and others. They have therefore determined to bring this sum down from $72,650, to $50,000, for the reasons above stated; and the expenditure will of course be kept within this limit.

The amount estimated for Interest on Bonds, charges on Arrears of Taxes, Errors and Delinquencies, and Markets, are founded on actual necessities, and cannot be safely reduced.

The last item of Contingent Account, is the Municipal Police, This account is entirely new, and your Committee think, although at an outlay of considerable money, if properly managed it will be a great protection to our citizens from the depredations of the swarms of foreign rogues, thieves, &c., daily cast upon our shores, as well as against the more depraved portion of our native population.

The Expense in Salaries to this Police force, is for one Superintendent of Police,.....		$1,250.00
Eight Captains, ...	$700	5,600.00
Eight Assistant Captains, ...	600	4,800.00
Sixteen Sergeants,.....	550	8,360.00
Two hundred Men,.....	500	100,00.00
		$120,510.00
From which deduct amount paid to Sunday Officers, Day Police, Officers, Keepers of Public Places, and Sup. of Stages, which has been deducted from salaries,	$17,975.25	
Officers to attend Steamboats, &c. which has been deducted from Officers fees	6,171.13	
Also, 100 men discharged from the Watch, and the Municipal Police put in their stead, equal to 50 each night in the year.....22,812.50		46,968.98
		$73,541.02
As the Comptroller understood the law, and so he made his calculation for the Watch Department, that 100 men each night were to be taken from the Watch, which would have made the expense, by deducting their pay,.....		22,812.02
For the Municipal Police only.....		$50,728.52

At all events your Committee understood that 100 men were to be taken from the Watch, which is 50 each night; consequently the sum of $120,000 is to be added to the list of contingent expenses of the city for the year 1845. Your Committee would here remark that from the accounts exhibited by the Comptroller for 1844, the expenses of the present Common Council have considerably decreased, except where it was unavoidable, either by the acts of our predecessors, or the necessity of cases springing up by debt contracted by acts of former Common Council.

The aggregate of these sums is $940,987 (see schedule,) and is only $28,942.15 more than was asked for last year from the Legislature on account of contingent expenses of the city, and we have an efficient Day and Night Police in addition, for the protection of the persons and property of our fellow-citizens.

WATCH DISTRICT.

The Comptroller's calculation for this was	$225,581.76
But it was under the impression that 100 men each night was to be taken from the number directed by ordinances, but as only 50 men each night are to be taken from the Watch Department. an additional sum is required of.....	$22,812.50
Making.....$248,394.26	

to be asked for the tax in the Watch District; which is $17,705.74 less than was asked for last year. The amount expended last year was $4,329.76 above the tax asked for, and was principally incurred in the upper District of the city.

LAMP DISTRICT.

The estimate for this account, from the Superintendent of Lamps and Gas, is $152,820. and is a large increase on last year's expenditures and taxation.—Our extending city, and the citizens asking for the protection of Light and Watch has been carefully considered. The extension of the District is the consequence—the high price of oil, and the necessity of using gas where mains are laid, make an outlay for gas posts necessary, and consequently a large item of this account, say $15,000, for the year. The tax for this account last year was $120,887.36, the expenditure $129,021.87. The large number of streets directed by the Common Council to be lighted with gas, on petition of the citizens, has made the amount to be asked for, very large. They have concluded to recommend that $150,000 be asked for, for this item of account for 1845.

This is the whole amount which is to be asked for from the Legislature for taxation. The other accounts, authority, now exists to levy the amounts that have to be taxed for, viz: Common Schools, interest on City Debt, and Floating debt Redemption, while on the Trust Accounts the appropriations are only to provide for the payment from the Treasury of moneys raised by loan or from assessments, and does not affect the taxation for the year. Your Committee have also framed an Appropriation Bill, in accordance with the foregoing Report and recommendation of the Comptroller. They think they can safely say to their fellow-citizens, that the per centage for taxes will be less for the year 1845, than in 1844; that no just and proper means or manner will be withheld to prevent the lavish expediture of the public moneys; that economy in every way shall be their rule of action.

It must be borne in mind, however, that the financial affairs of this city are of more magnitude than four or five of our small States; that this is a growing city, both in wealth and population; and it is impossible to keep certain expenses within the amounts of former years from these very causes.

The following Resolutions are offered for consideration:

Resolved, That application be made to the Legislature for authority to raise by tax on the real and personal estate of the inhabitants of the city and county of New-York, for the contingent expenses of said city, the sum of $940,987 for the year 1845.

Resolved, That application be made to the Legislature for authority to raise by tax on the real and personal estate of the inhabitants of said city within the Watch District, the sum of $248,500, for the purpose of watching and guarding the property in said District.

Resolved, That application be made to the Legislature for the authority to raise by tax on the real and personal estate of the inhabitants of the city and county of New-York, within the Lamp District the sum of $150,000, for the purpose of lighting the streets in said District.

Resolved, That the Counsel prepare a suitable memorial and draft of law, and the Mayor and the Clerk be authorised to authenticate the same for presentation to the Legislature.

They also recommend the adoption of the ordinances making appropriations on all accounts for the year 1845. Respectfully submitted.

ELIAS G. DRAKE,	*Committee on Finance Board of Ald.*
WM. S. MILLER,	
WM. GALE.	
DAVID S. JACKSON,	
MOSES TUCKER,	*Finance Com. Board of Assistants.*
WILLIAM TAYLOR,	
JAMES HORN,	

REMARKS.

The amount proposed to be raised by Tax for the City Watch is,.....	$248,394.26
Lamps and Gas,.....	150,000.00
Contingencies,.....	940,987.00
	$1,339,381.26

In addition to these sums are as follows:

Croton Tax,.....	$
School Tax,.....	
Floating Debt Tax, ...	
State Tax,.....	

The new Police and the Watch together are put down as will be seen by examination at $368.894.26

We give on this page the schedule of the Finance Committee showing what items constitute the Contingent Tax.

SCHEDULE

Of Amounts estimated for Appropriations, also the Receipts from corresponding sources, and the Balance to be raised by Tax, for support of City Government.

On account of	Estimated Appropriation.	Estimated Receipts.	Balance to be raised by Tax.
Aqueduct Repairs,	$10,000		$10,000
Alms House,	196,950	$30,200	166,750
Board of Health,	450		450
Coroner's Fees,	3,500		3,500
Cleaning Corporation Docks and Slips	7,500		7,500
County Contingencies	20,000		20,000
Contingent Expenses of Com. Council,	5,000		5,000
Cleaning Streets (as per contract,)	45,437		45,437
CleaningStreets (contingent),	5,000		5,000
Donations,	8,000		8,000
Docks and Slips,	30,000		30,000
Elections,	10,000		10,000
Fire Department,	18,000		18,000
Intestate Estates,	18,000	2,000	18,000
Lands and Places,	2,750		2,750
Printing and Posting Licenses,	100		100
Officers' Fees,	50,000		50,000
Printing and Stationery,	20,000		20,000
Repairs and Supplies,	40,000		40,000
Rents,	1,250		1,250
Roads and Avenues,	16,000		16,000
Real Estate,	5,000		5,000
Street Expenses,	30,000		30,000
Sewers, repairing and cleaning,	5,000		5,000
Salaries of all Departments,	200,000		200,000
Water Pipes,	50,000		50,000
Interest on Bonds for Tax,	48,000		48,000
Charges on arrears of Taxes,	1,500		1,500
Errors and delinquencies,	5,000		5,000
Markets,	250		250
Municipal Police,	120,500		120,500
Balance to be raised by Tax for support of city Government			$940,987

AN ORDINANCE.

The Mayor, Aldermen and Commonalty of the City of New-York, in Common Council convened, do ordain as follows:

That the following sums be and the same are hereby appropriated for the support of the City Government, for the year from January 1st to December 31st, 1845, less whatever sums may have been paid on account of the following accounts, by virtue of an Ordinance making temporary appropriations for the year 1845, passed December 26th, 1844.

Aqueduct Repairs by State Commissioners,	$10,000 00
Alms House,	196,950 00
Board of Health,	450 00
Coroner's Fees,	3,500 00
Cleaning Corporation Docks and Slips,	7,500 00
County Contingencies,	20,000 00
Contingent Expenses of Common Council,	5,000 00
Cleaning Streets (as per contract,)	45,437 00
Cleaning Streets (contingent),	5,000 00
Donations,	8,000 00
Docks and Slips,	30,000 00
Elections,	10,000 00
Fire Department,	18,000 00
Intestate Estates,	18,000 00
Lands and Places,	2,750 00
Printing and Posting Licences,	100 00
Officers' Fees,	50,000 00
Printing and Stationery,	20,000 00
Repairs and Supplies,	40,000 00
Rents,	1,250 00
Roads and Avenues,	16,000 00
Real Estate,	5,000 00
Street Expenses,	30,000 00
Sewers, Repairing and Cleaning,	5,000 00
Salaries of all Departments,	200,000 00
Water Pipes,	50,000 00
Interest on Bonds *in anticipation of Tax!!*	48,000 00
Charges on Arrears of Taxes,	1,500 00
Errors and Delinquencies,	5,000 00
Markets,	250 00
Municipal Police,	120,500 00
Watch,	248,394 26
Lamps and Gas,	150,000 00
Common Schools,	180,884 73
Interest on City Debt,	388,804 40
Floating Debt Redemption,	50,000 00

AN ORDINANCE

The Mayor, Aldermen and Commonalty of the City of New-York, in Common Council convened, do ordain as follows:

That the following sums be and the same are hereby appropriated for the payment of Claims on Trust Accounts, for the year from January 1st to December 31st, 1845, less whatever sums may have been paid on account of the following accounts, by virtue of an Ordinance making temporary appropriations for the year 1845, passed December 26th, 1844.

Water Commissioners,	$150,000
Buildings on Randall's Island,	40,923
Redemption of Temporary Water Loan,	387,121
Redemption of Revenue Bonds,	600,700
Street Opening, Awards, &c	15,000
Street Paving, Regulating, &c	100,000
Wells and Pumps,	750
Fencing Lots,	1,500
Interest on Assessments,	14,000
Liens on Lots,	12,000
Charges on Arrears of Assessments,	2,000

From the Brooklyn Star.

GREAT FERRY MEETING.

Pursuant to a public notice, a meeting was held on Monday evening, February 24th, 1845, at Hall's Exchange Buildings, Brooklyn, to hear the Report of Committee of Citizens heretofore appointed, and to take such other measures as might be necessary to establish the rights of Brooklyn and Long-Island, in relation to the Ferries between Brooklyn and New-York.

On motion, Henry Young was called to the chair, George Hall and Adrian Hegeman chosen Vice Presidents, and William M. Harris and J. A. Perry, Secretaries.

Hon. John Greenwood being called upon by the meeting, made a full report of the transactions of the committee of citizens, since their appointment.

Alden J. Spooner, Secretary of the Committee, being called upon, read the Memorial prepared by the Committee, and sent by them to the Legislature, with the Resolutions of the meeting of May 8th, 1844, thereto appended.

On motion, the report of the Committee was accepted and adopted, and the thanks of the meeting returned to the committee.

On motion, the Committee was requested by the meeting to continue their duties.

J. M. Van Cott, Esq., offered the following resolutions, which were unanimously adopted:

Resolved, That the act of residing in the city of Brooklyn, instead of the City of New-York, violates no one of the Ten Commandments, and is innocent in law and in morals; and is not, therefore, a crime which the municipal authorities of the city of New-York, should be allowed to visit with a fine and penalty of twenty-five thousand dollars per annum, or any other fine or penalty whatsoever.

Resolved, That the city of Brooklyn, holds no right of the city of New-York, on a feudal or other tenure which should subject her, as a vassal, to the payment of an annual tribute.

Resolved, That the river flowing between Brooklyn and New-York, is an arm of the sea; not constructed by the skill or pecuniary resources of New-York, but by the skill and bounty of the Great Creator.

Resolved, That such river is a great natural highway, created for the free use and enjoyment of all good people who have occasion to pass over it to the territories whose shores are washed by its waves, and not for the purpose of enriching the Corporation of a very small portion of such territories.

Resolved, That the power conferred by charter, and otherwise, upon the Corporation of New-York to regulate Ferries across the East River, is a political and not a private franchise; created for public and not for private purposes; to be exercised for the benefit of all persons having occasion to use such Ferries, and not as a source of private revenue; and that the use of such power as a means of retarding the growth of the city of Brooklyn, and levying a tax upon its citizens, is illegitimate and oppressive, and such a palpable and gross perversion of the purpose for which the franchise was granted, as to render it manifest that the power can no longer remain with, and will not be justly exercised by such Corporation.

Resolved, That the Corporation of New-York ought to have exercised such power as it would have been exercised if it had remained in the Legislature,—beneficiently, and not oppressively; that is revocable in its nature, and ought to be revoked; and that to secure it from abuse, it should hereafter be exercisad by the Legislature, or by a competent Board of Commissioners, to be constituted for the purpose.

Resolved, That we appeal to and rely upon the justice of the supreme legislative power of the State, to relieve the city and the citizens of Brooklyn from the exactions and oppressions which they have so long suffered.

Resolved, That our members of Assembly, and the Senators from the First Senate District, be requested to lay these resolutions before the Senate and Assembly, and urge upon the Legislature some measure to secure to us speedy relief and justice in the premises.

Resolved, That a Finance Committee of six be appointed by the chair to raise the necessary funds for effecting the objects of this meeting.

William M. Harris, Adrian Hegeman, Geo. Hall, D. A. Wesson, J. A. Perry, and J. M. Van Cott, were appointed such committee.

The following resolutions were then offered, and unanimously adopted:

Resolved, That we the citizens of Brooklyn adopt the memorial presented to the Legislature and reiterate the sentiments and views of the meeting of May 8th 1844 in relation to the Ferries between Long Island and New-York, and rely upon the Legislature of the State at its present session to carry out those views.

Resolved, That our Representatives in the Senate and Assembly of this State, be requested to use their utmost exertions to procure the passage of an act during the present session vesting the control of the Ferries in an independent Board of Commissioners or some other impartial tribunal.

Resolved, That our Representatives in the Senate and Assembly of the State be also requested to oppose the principle embraced in a bill at present before the Legislature on behalf of the city of New-York which seeks to tax the personal property of non-residents which said bill is entitled "An Act relative to taxes and jurors in the city of New-York."

On motion it was unanimously resolved that Judge Greenwood be solicited by this meeting to proceed to Albany, to use his influence in forwarding the application to the Legislature.

The meeting then adjourned.

HENRY YOUNG, Chairman.

GEORGE HALL, ADRIAN HEGEMAN, } Vice Presidents.

William M. Harris, J. A. Perry. } Secretaries.

STATE TAX.

The Receiver of Taxes should be required by law to deposit money collected by him for the State Tax, to the credit of the State Treasurer. Of the quarter of a million State Tax levied in the county of New-York, much of which was collected prior to the first of January, and was used to balance the City Fiscals account of 1844, *but about* $39,000, *has been deposited to the credit of the State Treasurer, and this was paid about the middle of February, and this is all that has been paid up to the time of our going to press. The City Treasury is represented as flush, but this shows a lack.*

AN ANCIENT COPY OF THE BIBLE.

During a visit to Upper Canada, in the summer of 1844, a beloved daughter was presented by a relative with a copy of the Bible printed in 1599, two hundred and forty-six years ago. The paper is of good quality and the typographical execution is good. The Volume is imperfect as some of the pages at the commencement, and also some of the conclusion of the Volume, are gone, but the residue is in good condition. This copy is of a translation prior to that which was made by order of King James, in 1607, eight years after the date of the imprint of this copy. On the title page of the New Testament is the following:

"THE NEW TESTAMENT of our LORD JESUS CHRIST, Translated out of Greeke, by *Theo. Beza*, with briefe Summaries and expositions upon the hard places by the said Authour, *Isaac Camer*, and P. Laseler Villenius.

"Englished by L. TOMSON. *Together with Annotations of Fr. Iunius upon the revelations of S IOHN* IMPRINTED AT LONDON by the Deputies of Christopher Barker, Printer to the Queenes most excellent majestie, 1599."

This copy originally cost 50 guineas. At that time 50 guineas was a large sum of money, and would purchase in London as much corn as one thousand guineas would command at the present time. The Bible has not decreased in value since then, although the great multiplication of copies have lessened the price to a few cents per volume.

At the time this copy was printed the city of New-York was not in exisence, nor had the thought of founding this city entered in the mind of any human being. The Island of New-York was then covered by a dense forest, and inhabited by a nation of people, not a drop of whose blood probably now runs in any human veins. What a change—and in a short period of time compared with that which the pages of this volume covers. The language of this copy of the Bible is peculiar and that of the particular time in which it was written.

We brought this ancient volume across the gulf into which the Niagara falls from the giant precipices which form the greatest cataract on earth, It was a fit companion for that brief and thrilling voyage. When this Bible was imprinted in the city of London, the Falls of Niagara were unknown to civilized man.—They were then in the bosom of a Forest.

Above the cataract of this extraordinary river is the *memento* recorded in this sacred Volume of the promise to all flesh that the world shall no more be drowned The Bow of the cloud is suspended above the mighty vortex into which a mangled river is precipitated from the top of gigantic walls, and is beautiful to behold. It is painted with all the rich colors of the solar pencil, and is brilliant in appearance as well as lovely and sublime in testimony. What a witnessing together of the eternal truths of the Bible—this ancient volume, and this painted cloud! What a place to contemplate the picture! Seated in a frail boat, tossed upon the foaming and agitated waters of an unfathomed gulf, amid the roar of the thunder of the waters of a broken river, the echo of which shakes its adamantine banks. Yes, what a place to meditate—to contemplate—a fit place to pay the tribute of the homage of adoration to the fountain of all good.

SIX THUNDERBOLTS IN ONE HOUR.

The Barque Ann Louisa, bound from Vera Cruz, in Mexico to the Port of New-York, in latitude 38° 30′, longitude 72 W., on the 11th February instant, at 10 o'clock in the morning encountered a thunder storm. The vessel was loaded with dry hides, cochineal, and some ten thousand dollars in silver. On Saturday last I went on board this vessel in the harbor of New-York, and copied the following from her log-book:

"Feb. 11th, 10 o'clock A.M., the ship was struck by lightning and knocked down nearly all hands, raised the deck around the main-mast, tipped the partners, and took the top sail sheet bits up. One man burnt in the leg, and nearly all hands knocked down six times."

The copper plating around the main-mast, near the deck which is covered with a coat of green paint was partially fused and six small globules of copper which had been melted, hung pendant like drops of crystallized water from the lower edge of the copper plate, which is one fourth of an inch in thickness. Some of the iron work near the mast-head which is bound around with leather, is also partially fused and perforations like those made by shot are now numerous in the leather. I had a conversation with the mate. He informed me that he was knocked down and remained insensible some minutes and subsequently he was three times knocked down upon his knees by as many successive bolts. His pantaloons were scorched on both legs on that part which covers the ankles, and his stockings were also scorched. The first shock, I have no doubt, affected his knee joints and made him fall each successive shock. The ship was filled with smoke, which the mate states had the smell of wet gunpowder burning. The heat, which the copper and iron bear indisputable testimony of, I think was owing to the paint and to the leather. Had these surfaces been bright, no heat would have been experienced. Mr. Grinnel's house has a tin spout, the out side of which is painted and the inside left bright. The lightning descended the inside, and I have noticed the same selection made by the thunder-bolt, in every tin-spout which I have examined. Here then is the testimony of the lightning, left upon record which cannot be disputed. The solder has not been fused in any case which I have ever met with, where the lightning descended a tin spout. I came to the conclusion therefore, that tin tubes are the best lightning conductors which can be used, for these present two surfaces of great comparative extent, one of which is always bright. Bright surfaces reflect heat, and dark surfaces absorb the heat. All buildings furnished with tin spouts should have a metalic connection with the termination of the spout, entering several feet in the ground, and should also have a strip of tin leading from the comb of the roof to the top of the spout.

THUNDER IN WINTER.

On the fourth Sabbath in February, (the 23d,) thunder was heard occasionally during the day. The temperature of the weather, as denoted by my thermometer, was 44°. At 4 o'clock in the afternoon, 43°, and at 7 o'clock in the evening, it rose to 44°. Rain fell abundantly, and the drapery of the clouds rested a part of the time upon the ground.

THUNDER STORM IN WINTER.

"This city was visited by a regular thunder storm yesterday afternoon, the 23d inst., a rather unusual occurrence for the season of the year. There were a number of vivid flashes of lightning, accompanied by loud and sharp claps of thunder. A cloud, very heavily charged with the electric fluid, passed over the district of Southwark, along the Washington Stree t railroad and Second and Front Street, abreast of the Navy Yard. The school house, in Newton Street, was struck and set on fire in the roof, the earth was torn up for several yards between the rails on the rail road, opposite Merrick & Towne's Foundry, a row of small brick dwellings, in Second Street, below Marion, was struck, and the roof and gable end of one of them, which was occupied by a barber, were considerably damaged; the large shears in the Navy Yard were also struck, but not injured. Many persons were shocked, and some badly stunned. The electricity played some singular freaks. In one house a stove was twisted completely around, and in another a frying pan was knocked out of the hand of a woman who was cooking. The rain at the time of these occurrences poured down in torrents."—[*Journal of Commerce, Feb.* 25.

[From the Journal of Commerce.]

A CURIOUS SPRING.

There is a great natural curiosity in Delaware co., Ohio. The manner of discovery is thus related:—Some time about the year 1818, two men, by the names of Davis and Richards, salt boilers by profession, commenced boring for salt water in the bed of the Scioto river, near the place mentioned. After having bored about 20 feet through a solid rock, they came upon a stream of white sulphur water of the strongest kind. The augur with which they were boring suddenly sunk something like two feet, which is probably the depth of the stream—but such was the pressure of the water that the auger was forced up again and large weights had to be attached to it in order to keep it to its place and enable them to bore further. They continued to bore on, however, until they got about 400 feet below the sulphur stream, when they struck upon salt water. The size of the augur was about 2¼ inches in diameter. When they took it out, the jet of sulphur water rose up to the height of 20 feet above the surface of the river. In order to obtain access to the salt water beneath, they procured a strong copper pipe and attempted to force it down to the place where it was to be found. But whenever it reached the sulphur stream, such was its force and pressure, that the pipe was completely flattened, so as entirely to prevent the passage of water through it. All subsequent attempts to insert a pipe proved abortive, and after prosecuting the work at intervals for several years, the project was entirely abandoned. After enlarging the orifice made by the augur at the top, a wooden stock 20 feet in height was inserted—yet even at the top of this, such was the force of the stream, that it required the strength of two or three men to put a plug in it.—From this stock a pipe conveys the water to the spring house, on one of the bluff banks of the river. The stream has been running for 26 years, yet its strength and force are unabated. Those who have recently examined it, say, that it is capable of throwing up a stream ten inches in diameter from 80 to 90 feet high; and that water can be thus obtained to turn a large mill.

The place in which it is situated is a fine healthy region, and the country round about is beautiful and rolling, and admirably adapted to fishing and hunting; and will, no doubt, become a fashionable resort.

THE HUDSON RIVER.

The following table shows the date of the opening and closing of the Hudson River at Albany, and the number of days that navigation was suspended for a series of years from 1831 to the present time:

Winters.	River closed.	River opened.	Days closed.
1831-2	Dec. 5, 1831	Mar. 25, 1832	111 days.
1832-3	21, 1832	21, 1833	83 "
1833-4	13, 1833	Feb. 24, 1834	73 "
1834-5	15, 1834	Mar. 25, 1835	100 "
1835-6	Nov. 30, 1835	April 4, 1836	125 "
1836-7	Dec. 7, 1836	Mar. 28, 1837	111 "
1837-8	14, 1837	19, 1838	94 "
1838-9	Nov. 25, 1838	21, 1839	116 "
1839-40	Dec. 18, 1839	Feb. 21, 1840	65 "
1840-1	5, 1840	Mar. 24, 1841	109 "
1841-2	19, 1841	Feb. 4, 1842	47 "
1842-3	Nov. 28, 1842	April 13, 1843	135 "
1843-4	Dec. 10, 1843	Mar. 18, 1844	98 "
1844-5	17, 1844	Feb. 24, 1845	68 "

THE FAITHFUL DOG.

The Dog is the emblem of Fidelity—a demonstration of Nature itself—of the supremacy of its laws—and of the harmony of all its attributes. The Dog yields to the corrections of his master, with a humility that would in the human character be a gem of great adorning.

I have noticed a little Dog in my neighborhood who has no master, and no permanent home, and I feel inclined to notice him in order that the friends of his master may make provision for him. His master was a young man who was recently found dead, with his gun lying beside him, and the little dog was with the corpse watching over it with unyielding constancy, and when the Coroner's Jury held an inquest over the body the dog was still present watching the cold body of his master. The young man is supposed to have been killed by the accidental discharge of his own gun, while on a hunting excursion. A gentleman admiring the fidelity of the little dog purchased the little creature at the price of ten dollars. The dog is unwilling to stay with him and seems to be still looking for his master. The dog manifests gratitude for kindness and retains a remembrance of injury. This little animal of which I have here spoken is admired by all who see him and who are informed of his history.

What a demonstration of fidelity—worthy of being copied by the King upon the throne—a virtue which when possessed by a human being would be one of the brightest adornings of his mind, one of the excellencies of his character, and a treasure of untold and incomputable value.

GRASSHOPPERS

Capt. Hagar, of the bark Marcella, brought home a preserved grasshopper, of the size of a man's thumb, as a sample of an immense field through which he sailed for five days. He fell in with the field off the Western Islands, and the presumption was, that they were blown off from Africa. The water was heavily crusted with them; the grasshoppers filling the surface to the depth of some inches, and extending in the course of the bark for four hundred miles. Such an army must be worse than the Goths and Vandals to contend with. They would eat up every green thing for breakfast, and change the most beautiful fields to a desolation in one hour. We regret that there are no newspapers in Africa, to relate the line of march of this terrible army, until, by some strong wind or some want of geographic knowledge in their leaders, they were drowned in the broad blue sea.—[Journal of Commerce, Jan. 21st 1845.

Extract from a letter dated Fayal, Azores, Dec. 8.

"A singular phenomenon occurred here about the middle of last month; during a strong southerly wind an innumerable quantity of large red insects, resembling grasshoppers, fell on the island, and on the sea around. On examining them, they were found to correspond exactly with the descriptions of the Egyptian locusts. All the other islands were visited in a like manner, and a vessel which arrived a few days since, reports having sailed through them during six days, such vast quantities having fallen and perished. They must have come from Africa. They are fast disappearing.—[Boston Courier.

We have an account of Locusts in early times.—The Egyptians were visited by these insects more than forty three centuries ago as one of the judgements upon the people of that nation for holding their fellow men in cruel bondage. The expression of the sacred record is in these words:

"If thou refuse to let my people go, behold tomorrow I will send the locusts into thy coasts." And they shall cover the face of the earth, that one cannot be able to see the earth, and they shall eat the residue of that is escaped, which remaineth unto you from the hail, and shall eat every tree that groweth unto you out of the field. And they shall fill thy houses, and the houses of thy country, and the houses of all the Egyptians; which neither thy Fathers, or the fathers fathers have seen, since the day they were upon the earth, unto this day."

It appears from this account that locusts were numerous before they came in the execution of a judgment, but not to the extent or any thing like it that was witnessed in that day.

The abundance of these insects as described by the two newspaper accounts we have quoted,—show what an immensity of animal life can be at once embodied in a locality, at the same time setting all human estimate at defiance, and presenting a page in nature of its great Volume that excites both wonder and surprise—but the fact is demonstrated, and we need not go to form any new theory to account for an operation of nature, which is beyond our reach.

The Western Islands stretch along a line of about 300 miles between North latitude 35° 50′ and 39° 44′ and 31° 7′ and 25° 10′ West longitude. These locusts, if from the African Continent, must have traversed the atmosphere for several hundred miles, and come from the regions of the Great Desert. In 1457, the Western Islands were entirely uninhabited and covered with forests. It is almost as reasonable to suppose that these myriads of Locusts came from some other quarter as to suppose they came from the coast of Africa. The resources of nature are vast, beyond all human conception.

Near thirty years ago I travelled in a forest path through an army of locusts in the Western wilds.—The district which they occupied was about half a mile wide and was soft ground, how far they extended to the right and left I had no means of ascertaining, but every leaf seemed to have a tenant, and the air was filled with the music of their voices.

LIGHT.

The rays of Light pass in straight lines in every direction, when unobstructed. If obstructed by a bright surface, the light is reflected, and even by dark surfaces, for we find that when a fire takes place in a cloudy night, the light of the fire is greatly increased by the reflection of its rays from the surface of the clouds.—Light from terrestrial fires during cloudless nights is dimmed by the solar light which remains in the midst of the surrounding atmosphere, and by that which is reflected from the planets, and also by that which is sent forth by the stars of the firmament. There is but little economy practised in the use of what is termed artificial light. The lamps which are placed in the public streets to give light upon the pavements, are miserable contrivances for the purposes intended, and instead of lighting the Streets, illuminate, to a small extent, the higher atmosphere. A lighted taper placed on the point of a holder, made in the shape of the letter A, would be free from the shade of such holder, but reverse the holder made in the shape of the letter A, and give it the figure of the letter V, placing the taper in the centre and it will cast two shadows upon the surface upon which the holder is fixed, or above which it is suspended, hence a wide mouth lamp prevents the light from illuminating the surface on which it stands. The City Lamps are placed double the height above the pavement which is necessary, or useful, and one-half the lamps at one half the elevation from the pavement would give greater light than those now in use, at a saving of one-half the expense. Compare the lamp posts on the corner of Centre and Pearl Streets. with those in Broadway, and you will have an illustration. Place a printed page of varlous sized letters upon the pavement under these lamp posts and you obtain an accurate photometer for measuring this light.

It is said that if lamps are placed low they will be more frequently broken. This has not been the case with the lamps on the corner of Centre and Pearl Street, and here the Street was raised about four feet after the lamp posts were placed in the ground. The lamp posts in New-York are placed a certain number of feet apart without regard to other circumstances.—This is a great error and shows conclusively that no science is displayed in reference to this great expenditure of public money, which for the coming year is estimated at about 1-13th the entire tax to be assessed on the real and personal property of the inhabitants and freeholders of the county of New-York. All the rays of light which pass from a lamp in an upward direction afford no illumination to the pavement whatever, and it is only those which are thrown upon the pavement and reflected which gives light in the Street. If the lamp has a broad bottom, that bottom shades the street surface below it to a greater or lesser extent, and this extent corresponds with the height of the lamp post. An illustration which demonstrates most satisfactorily may be had by placing a flat bottom candlestick upon the table with a lighted candle in it—raise the candlestick and candle six inches and then measure the diameter of the shadow—again raise it 18 inches, and measure the increased diameter of the shadow, and you have a convincing demonstration.

ACCIDENT BY LIGHTNING.

The Nashville Gazette states, that during the thunder storm, on Wednesday night, February 19th, the driver of the Murfreesboro' stage, was stunned and knocked from his seat by lightning. The horses being alarmed, randown an embankment, upsetting the stage and severely wounding several of the passengers. Mr. George W. Lillard, was seriously wounded, and his shoulder dislocated, and his body crushed. Messrs. J. W. Leiper, George W. Bacton, and J. W. McElroy, were badly hurt, the latter only being able to proceed to Murfreesboro. Mr. Barkley, the driver, after remaining some time insensible, recovered from the shock.—*Journal of Commerce, March*, 3, 1843.

MISSIONARIES.

It was remarked by an aged clergyman at the annual meeting of the American Bible Society some years since, that our sailors made the best of missionaries to foreign and unenlightened countries. Give to the sailor the precepts of the bible, and his life and conduct wherever he goes will make him a preacher in every language and in every tongue where his good conduct and good examples are seen. The ignorant Asiatic can better understand the influence of the Bible as seen in the life and walk of a christian than he can understand its doctrines from the lips of a preacher educated in the schools of learning.

From the Brooklyn Star.

POST OFFICE REFORM.

At a large and respectable meeting of the citizens of Brooklyn, held at Hall's Buildings, on the evening of the 24th February, 1845, on the subject of Post Office Reform, HENRY YOUNG, Esq. was appointed President, ADRIAN HEGEMAN and GEORGE HALL, Vice Presidents, Joseph A. Perry and William M. Harris, Secretaries.

Alderman T. G. Talmadge, after a few remarks explanatory of the objects of the meeting, presented the following preamble and resolutions, which were seconded, and ably and eloquently sustained by Barnabas Bates and John Greenwood, Esq.

Whereas, the present exhorbitant and burdensome rates of postage have long been a source of complaint to the inhabitants of the United States; and whereas, petitions in great numbers have been addressed to Congress, asking for a reduction of these rates, without any success; and whereas, several of the State Legislatures have passed resolutions unanimously in favor of reducing the same and the abolition of the franking privilege; and whereas, the Senate of the United States has passed a bill highly liberal in its provisions and satisfactory to the people; and whereas, this bill has been some time before the House of Representatives without any action having been taken upon it, except to substitute the House bill in lieu of the same; and whereas, it is highly probable that at this late period of the session, if the Senate bill is not adopted without alteration or amendment, the measure of cheap postage will inevitably fail at this session: therefore,

Resolved, That we are in favor of the immediate reduction of the present rates of postage and the abolition of the franking privilege, which has been so much abused in years past, and thus burdened the mails so as to impair their speed and injure the department.

Resolved, That the experiment of Cheap Postage has been successfully tried in Great Britain, so that there can be no doubt any longer of its being as well adapted to this country as to Great Britain, and that the increase of the revenue of the Post Office has been so great as to encourage the belief that its adoption will be highly beneficial to the people of the United States.

Resolved that we respectfully recommend to the members of the House of Representatives, to the Post Office Committee, and especially to our Representatives in Congress, the Hon. Mr. Murphy, to use their exertions to effect the immediate passage of the bill passed by the Senate, for the reduction of the rates of postage to a uniform rate of *five cents*, without alteration or amendment, believing that should it be returned to the Senate, the shortness of the session would defeat the passage of the bill at the present session.

Resolved, That the information just received by the mails from England, showing an increase of the revenue of the Post Office of nearly $400,000 in 1844, over that of 1843, when, after paying the expenses of its management, it yielded a surplus of upwards of three millions of dollars, furnishes snfficient reason to satisfy us of the beneficial effects of cheap postage in the United States.

Resolved, That our thanks are due and are hereby tendered to the Senate of the United States, for the passage of a bill for reducing the rates of postage to an uniform rate of five cents upon single letters, and we are satisfied that this rate will yield a larger income than is now collected by the Post Office department. We cordially accept this boon as the harbinger of a more perfect measure, calculated to remove the oppressive tax upon our correspondence—a boon that will essentially advance the interest and happiness of all classes of our citizens throughout the United States.

Resolved, That a copy of the proceedings of this meeting and the resolutions be signed by the Chairman and Secretary, and forwarded to each of the members of Congress.

HENRY YOUNG, Ch'n.

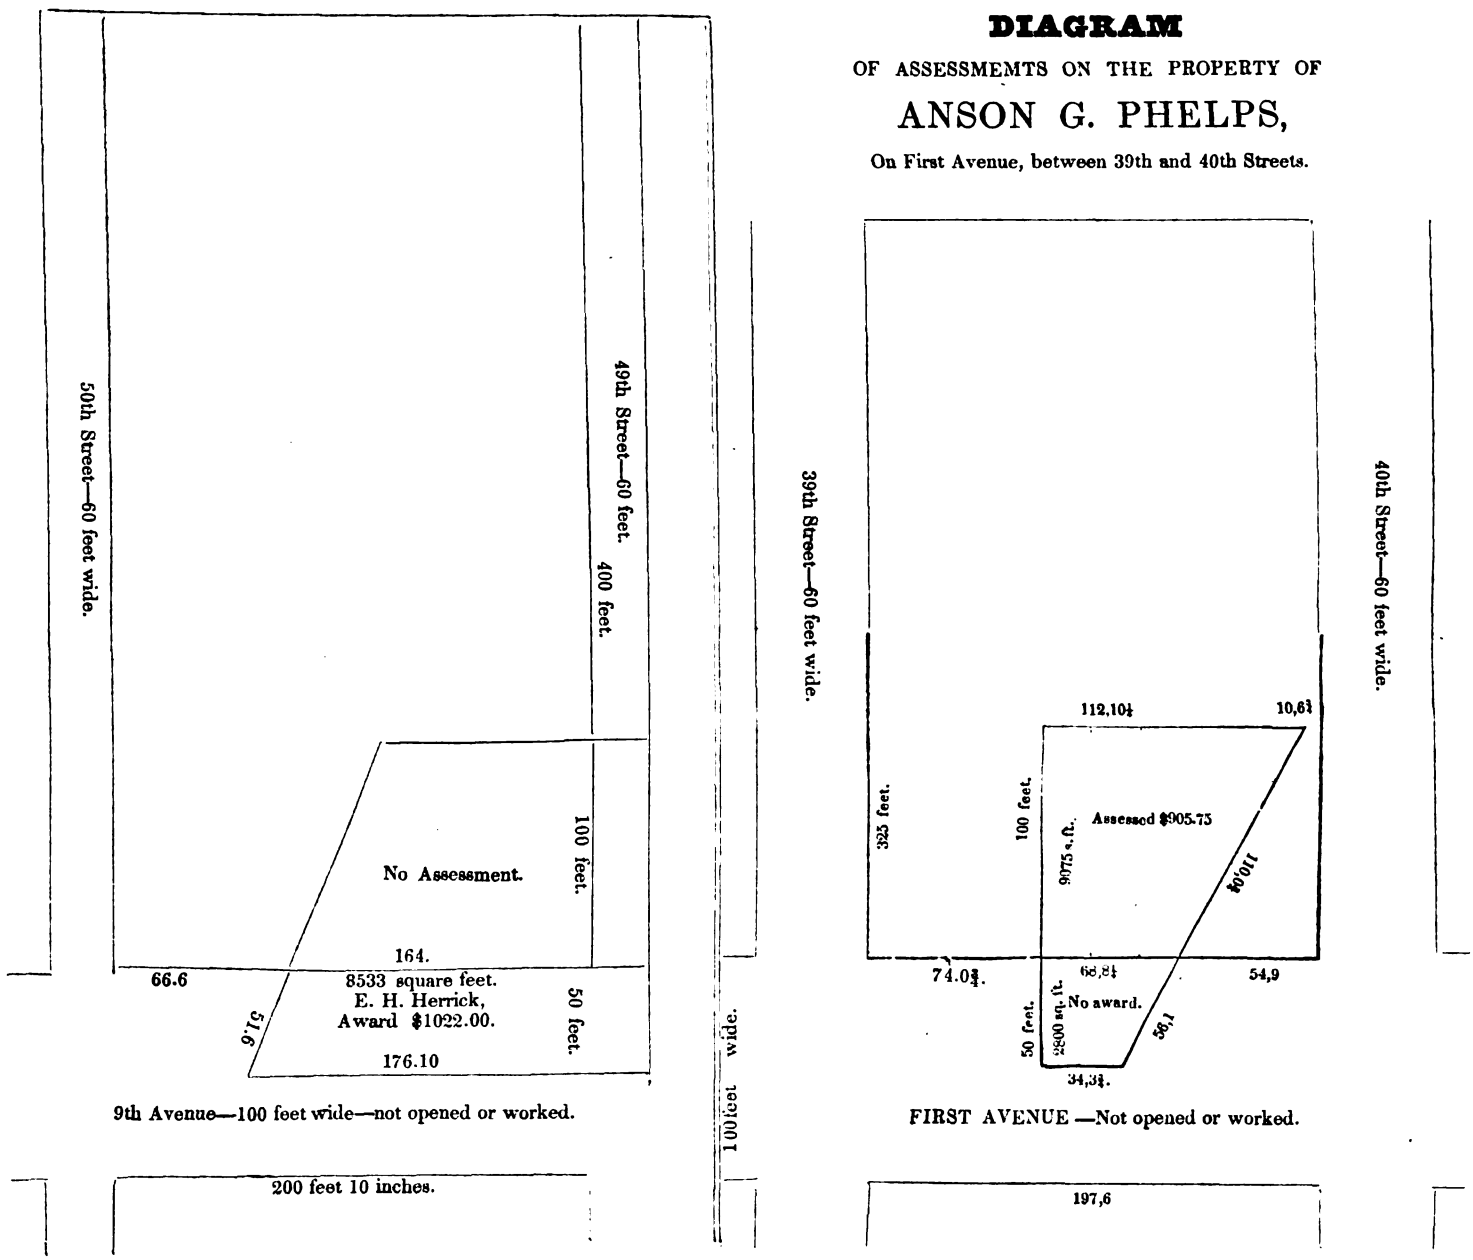
JOSEPH A. PERRY, Sect.

NOMINATION FOR MAYOR.

MAPOR HARPER has been renominated to the Mayoralty by the Native Americans by a unanimous vote.

Mayor Harper is a most eficient public officer and has given satisfation to all parties, and he has accepted the nomination, and will no doubt be elected by a large majority.

RUINOUS ASSESSMENTS ILLUSTRATED BY DIAGRAMS.



The award for the Land taken from Mr. E. H. Herrick in the Ninth Avenue, for that road, compared with the assessments upon the land of Anson G. Phelps, for his land in the First Avenue, taken for that road, presents an illustration which demonstrates abuses of a serious character. The land taken from Mr. Phelps for the First Avenue in proportion to what is left, is about in the same ratio as that taken from Herrick for the Ninth Avenue in comparison with what is left, and shows the total absence of all system, rule, equity or justice, in making assessments and awards. Mr. Herricks award, compared with the assessment on the land of Assistant Alderman Townsend, taken for the Seventh Avenue, presents another illustration. The land extending back to a line running half way between the Eight and Ninth Avenue should have been assessed a small sum for the land taken from Mr. Herrick, and Mr. Herrick should have been awarded say $50 or $100. Mr. Phelps whose land is situated precisely as that of Mr. Herrick, should have been awarded for what was taken, instead of being assessed on what was left, and the same as to Mr. Townsend's land. The difference between paying an assessment instead of receiving an award, is very great. Whether a person receives $1000. or has that sum to pay is a difference to such person of $2000. The land of Mr. Herrick was assessed for opening 50th Street $10. Mr. Phelp's land was assessed for opening 40th Street $575. That such proceedings as these should be corrected, is a matter of such common sense propriety, that we doubt if there could be found an intelligent man in the world who would oppose such a proceeding, and that Courts of Justice should have their legal vision so obscured as not to be able to see these matters in their proper light, is a sad commentary upon the Judiciary department of the State Government. The 9075 feet contained in Mr. Phelps's land is valued by the Ward Assessors at $450.00, which is not much more than the interest of the assessment, and but a trifle more than half the assessment imposed upon it, thus it is an absolute confiscation of the land, or taking private property without just compensation. A pretty proceeding—"*a judicial power exercised in a judicial way.*"

The fees of Counsel, Commissioners, and Surveyors, for street openings in the city of New-York, confirmed by a justice of the Supreme Court in 1839, amounted to the sum of $100,131.26, and these diagrams show how these fees were assessed, viz. Counsel $31,196 47; Commissioners $39,143.79; Surveyors $22.517.00; Collectors $7,274.00.

STATE TAX.

(DOCUMENT No. 64.)

IN ASSEMBLY—February 7, 1845.

REPORT

Of the Comptroller in answer to a resolution of the Assembly, respecting the valuation of Real Estate, and the amount of State Tax.

COMPTROLLER'S OFFICE, }
ALBANY. Feb. 7, 1845. }

TO THE ASSEMBLY.

The Comptroller, in answer to a resolution of the Assembly, a copy of which was received on the 5th inst., requesting him to furnish the amount of real estate, as assessed in the different counties of this State, for the years 1841, 1842, 1843 and 1844, respectively; also, the amount of State tax assessed on each county for said years, submits in the annexed table, marked A, full answers to the requirements of the resolution.

The total valuations of real estate, and of the state tax for the years referred to, are as follows:

Years.	Total valuations of real estate.	Total tax.
1841,.....	$531,987,886.....	none
1842,.....	504,254,029.....	$616,693 81
1843,.....	476,999,430.....	592,008 57
1844,.....	471,127,327.....	645,909 17
		* $1,857,611 55

A. C. FLAGG.

*Or $1,854,611 55.—[ED.

REMARKS.

The State Tax assessed in the city of New-York in 1844, *was* $259,556 05. *This is about two-fifths of the Tax of the State.*

BANK TAX.

JUDGE PORTER presented in the Senate of this State, on the 20th of February, a Memorial of the Presidents of New-York Banks, in relation to the Tax upon Bank Capital, which was referred to the Finance Committee, which Committee the next day made the following

REPORT.

(DOCUMENT No. 95.)

IN SENATE—February 21, 1845.

Reported by Mr. Bockee, from the committee of Finance.

AN ACT

To amend the Revised Statutes in relation to the exemption of incorporated companies from taxation, and for other purposes.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section nine of title four, of chapter thirteen, of part one of the Revised Statutes, which authorizes the exemption of incorporated companies in certain cases from taxation, is hereby repealed.

§ 2. All banks established under the act entitled "An act to authorize the business of Banking," passed April 18, 1838, shall be subject to taxation on the amount of capital paid in or secured to be paid in, in the same manner as incorporated banks; and the proper officer or officers of such banks shall make an annual statement to the Comptroller and the assessors, in the manner provided by the second section of title four, chapter thirteen, of the first part of the Revised Statutes.

§ 3. The provisions of the fifteenth section of the second title of the thirteenth chapter of the first part of the Revised Statutes, shall be extended to all incorporated companies and other associations subject to taxation, and the affidavit in such case may be made by the president, cashier, secretary, or treasurer thereof; and such companies and associations shall be assessed on the actual value of their real and personal estate at the time of making such assessment.

THE NATIVE PARTY.

The Natives abolished the Banqueting Hall—for this they deserve credit. They retained General Kiersted, a worthy and faithful public officer, in office, and for this they deserve credit. They retained Mr. Dikeman, the worthy Bond Clerk in the City Comptrollers Office, and for this they deserve credit. They did not frolic on the 4th of July, and for this they deserve credit. They abolished the booths, for this they deserve credit. They corrected the nuisances at the Steamboat landings, and for this they deserve credit, and they repealed the Street Patching Ordinance, and for this deserve credit.

AUCTION DUTIES.

By the returns of Auctioneers it appears that the amount of fees they have paid to the State on goods sold at auction, amount to $172,500.00.

The number of auctioneers are sixty-one.

6	Auctioneers paid	$128,082.00, or	$22.338.00, each.
8	do.	do. 34,879.00, "	4.983.00, "
10	do.	do. 9,101.00, "	910,00, "
37	do.	do. 912.00, average less than	$25

The Mock Auctions should be abolished, and the City Treasury should have the benefit of the fees, instead of the State. The Mock Auctions are a nuisance.

POSTAGE REFORM.

Congress have made some progress toward reform in the mail establishment of the United States. An act has been passed which reduces the rate of Postage on single letters or letters weighing less than half an ounce, for distances less than 300 miles, to five cents, and letters for places beyond 300 miles are to be charged ten cents. It would be better for letters under a certain weight to go free, and newspapers also. Government is not an organization for the transaction of business to obtain compensation therefor, but is an organization designed for the good of the people, and for their protection.

CLERK OF THE BOARD OF SUPERVISORS.

The Clerk of the Board of Supervisors receives a salary of two hundred dollars a year. It is an *ex officio* duty and is performed by the Clerk of the Common Council, who receives as such clerk a large salary. The Records of that office should be kept with the utmost care.

LAMPS.

In 1841 the appropriation for lamps was but $120,000. It will be seen that in January and February, 1841, the City Commissioners of Philadelphia paid one dollar and one and a half cents per gallon for oil. The Common Council now ask for an appropriation of $150.000 for lamps. Better remove every other lamp-post, and lower the lamps of those which remain one-half, and keep the lamp glass clean. This is the way to both increase the light and reduce the tax.

MOUNTED WATCHMEN.

Twenty-five mounted Watchmen with trumpets, to patrole the streets, two and two, would be equal to five hundred footmen, and besides, if they found one of the *Charley's* asleep they could blow a trumpet and rouse him to action. The expense of a mounted man would be less per annum than that of two Watchmen, and as affective as twenty.

TAXATION.

The great question is, how shall the public expenditures be economised to avoid ruinous taxation? and not, how shall property be found between the arctic and antartic to collect a tax to defray profligate expenditures?

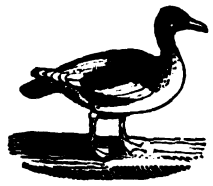
The most ancient Tax of which we have record was that of Egypt, which was to the extent of one fifth of the product of the corn. This although apparently a heavy burden, was light compared with the Taxes of this Metropolis, and it was an equitable tax for it was imposed on the actual product, was in equal proportion thereto, and was in exact proportion with the ability of the Tax payer.

It is the office holders who are manufacturers of Taxes. They use this as a means of bestowing the gift of public patronage to increase or maintain political power of retaining office, and it is like the old mode of killing bees for the sake of the honey that these industrious insects had made, and without any regard for the destruction of their future industry.

STENOGRAPHIC REPLY

To an article in the American Republican of the 18th ult.

"JUSTICE"



is a

THE OFFICE OF ALDERMEN OF NEW-YORK.

An Alderman of a city Ward is a member of the Common Council, ex-officio Judge of the Court of Oyer and Terminer, County Court, and Court of Sessions, member of the Board of Health, and also a member of the Board of Supervisors, &c. &c. It is evident that all these various duties cannot be well performed by one individual, and the same remark that was made by the Chief Justice and Associate Justices of the Supreme Court of the United States, in a letter addressed to GEORGE WASHINGTON, President of the United States, as to Judicial Officers exercising the powers pertaining to more than one office, will apply equally to a New-York Alderman. The learned Judges quoted Bacon, with approbation, in which he says that, "*Offices are said to be incompatible and inconsistent, so as to be executed by one person, when from the multiplicity of business in them, they cannot be executed with care and ability; or when their being subordinate and interfering with each other they cannot be executed with impartiality and this my Lord Coke says, is of that importance, that in all offices, civil and ecclesiastical, &c., were only executed, each by different persons, it would be for the good of the Commonwealth and advancement of Justice, and preferment of deserving men.*" Those who penned these sentiments have long since gone to rest, and those who thus reiterated them, also sleep; but their thoughts have found a place upon record and should endure throughout all time.

TAXATION IN SOUTH CAROLINA.

A friend has sent us the law of assessing and collecting Taxes in Charleston, S. C. Our friend approves of many of the provisions of this law. We cannot coincide with him in opinion in this, believing that such a law would be most unpopular in our City, and most injurious as well as disastrous and ruinous to its trade and commerce. It is a little singular that while the sovereign Government of South Carolina are advocating the doctrines of FREE TRADE that they should in this Tax act present the very converse of that doctrine. It is our purpose to present in the columns of the Municipal Gazette the system of Taxation in the various cities of the United States that the objectionable features of the one may be contrasted with the unobjectionable features of the others.

State of South-Carolina. }
City of Charleston. }

AN ORDINANCE,

To regulate the collection of the City Taxes, prescribing the duties of certain City Officers, and for other purposes.

Taxes how to be paid.—To be rated by the City Assessor,

1. Be it ordained by the Mayor and Aldermen of Charleston, in City Council assembled, and it is hereby ordained by the authority of the same, That taxes and Assessments for the use and service of the city, shall be paid in specie or the notes of the specie paying Banks, established in the City of Charleston, and shall be ascertained and rated by the City Assesser, according to the best of his knowledge and information.

By whom to be payable.—Horses taxable if used within the city during the year.—Coaches, &c. taxable if used for one month.

2. The taxes on landed or personal estate, declared now to be or which may hereafter be rendered liable to a city tax, and assessment, by an Ordinance of the City Council, in the present year, or at any time or times hereafter to be passed, shall be payable by the persons, who on the first day of January in each and every year, were the respective owners or representatives thereof; and the taxes and assessments on buildings, houses, and improvements, owned, erected or held under lease, from any religious, charitable, or literary Society, shall be payable by the persons, who on the first day of January in each and every year, were the lessees thereof. And every horse shall be liable to the tax imposed by any Ordinance of the City Council to be passed as aforesaid, that shall be owned, used, or kept in the city, at any time during the year in which such Ordinance shall be ratified; and every coach, or other carriage used within the city, for one month, except in cases of coaches and carriages employed for hire, by virtue of licenses ob. tained from the City Treasurer, shall be liable to the tax imposed upon such objects, in any such Ordinance; and if not returned by the owner or person using the same, shall be liable to a treble tax, one-half of the extra tax to go to the informer.

Returns for property taxable when to be made.—Form of Oath. Slaves to be named and described on back of return.—No return to be made of property of another, unless his legal agent.

3. Any person owning or possessing any property or income, liable to the payment of a City Tax, as aforesaid, as well as on his own account, or as executor, administrator, guardian, trustee, attorney, agent, or otherwise. having the charge or management of any taxable property within the city, or of any person deceased, absent, or under age, or otherwise, shall, on or before the twentieth day of April, in each and every year, deliver a true and just return of all such property, with a correct description of lands and tenements, the numbers, situation, and dimensions thereof, to the City Assessor, at his office, and then and there to take the following oath before the City Assessor, or a Magistrate duly qualified to administer such oath—"I, A. B., do solemnly swear, (or affirm, as the case may be,) that the return which I now give in, contains a just and true account, and correct representation of all the real, leasehold, and personal estate subject to taxation, which on the first day of January, in the then current year, was or were in my possession, for or on my own account, or on account of any other person or persons whomsoever, either as executor, administrator, guardian, trustee, attorney, agent or otherwise; and that no more of said property than is represented, is in anywise belonging to any persons resident in a foreign country.—So help me God." And every person taking such oath, shall subscribe the same on each return, made by him or her, and deliver the same to the City Assessor. Every slave liable to taxation under any Ordinance hereafter to be passed, to raise supplies for the present or any future year, shall be named on the back of each return, with the age, sex, and complexion, whether black or colored. And no return shall be received from any one, of the property of another person, except in the character of executor, administrator, guardian, trustee, attorney, or agent, and the return be made conformably with this Ordinance.

Double Tax on all who make no return or a false one.

4. If any person being the owner, or having the charge of, or holding any taxable property within the City aforesaid, and who may, or shall be required by this or any ordinance hereafter to be passed, to make a return thereof, on failure or neglect to make such a return at the time, and in the manner therein prescribed; or if any person shall, in any return to be made as aforesaid, omit any house, building, lot or wharf, landed or leasehold estate, slave or slaves, with the names of such slaves; coach or other carriage, horse or horses, profit, income, or other property liable to a tax, as may be prescribed in such Ordinance as aforesaid; or shall by a false return, prevent a full assessment to which such property, or profit, or income, if duly and fairly returned would have been liable; every such person shall be doubly taxed. The City Assessor on the fifteenth day of August, in each and every year, shall make out and deliver to the City Treasurer, a list of all persons liable to be double taxed under this clause; and the City Treasurer shall forthwith issue an execution against the goods, chattels, and other property of said persons, to be executed in the same manner, as is herein provided for the recovery of other assessments.

Taxes to be paid by 1st Jan.; in default executions how to issue.

5. All assessments made on real, leasehold, or personal property, sales and income or other property, rendered taxable under this Ordinance, or any Ordinance hereafter to be passed by the City Council, to raise supplies for the present or any future year, (except when otherwise provided) shall be paid to the City Treasurer, at his office, on or before the first day of June, in each and every year; and if any person shall fail or neglect to pay his, or her assessment, when due as aforesaid, an execution shall forthwith be issued against any goods or chattels, to such persons belonging, and the same shall be seized and publicly sold by the City Sheriff, and so much deducted from the amount of such sale or sales, as may be requisite to pay the amount of such assessment, and other legal charges; and the overplus, if any be left, shall be paid to the person whose goods and chattels have been so seized and sold, or to such other person as may have lawful claim thereto: but if no goods or chattels can be found, belonging to any such person, or if such as have been found be insufficient to defray the whole amount of the assessment and charges, the Sheriff shall levy upon, and sell at public auction, any of the landed or leasehold property of such person, within the limits of the city, on a lease not exceeding five years, for the purpose of discharging what may be due as aforesaid, and shall dispose of the surplus, if any be left, in the same manner as above directed. And if any person failing, or neglecting to pay his or her assessment, should have neither landed nor leasehold property, nor goods and chattels, within the city, or if the proceeds of the sales of such as may belong to him or her, should not be adequate to the full payment of what is due by him or her, as aforesaid, then the City Sheriff shall enforce the execution against the body of such person, and commit the same to the jail of Charleston District, there to be detained until full payment be made, or until discharged according to law.

Country residents allowed further time to make returns and pay taxes.

6. Every inhabitant of this State, owning or possessing any taxable property within the City, but residing therein at no other time than between the months of June and November in any year, or residing altogether in the country, shall be at liberty to make his or her return, on or before the 20th day of June, in each and every year, and to pay his or her assessment on or before the 20th day of July, then next ensuing, subject, however, to the regulations and penalties herein before prescribed and imposed in every other respect, except as to the time of making returns, and paying such assessments; and with the foregoing exceptions, in point of time, the City Assessor, the City Treasurer, and City Sheriff, shall be bound to observe, in regard to every such person, the same rules and proceedings respectively, as above prescribed in other cases.

A person residing three months in the city deemed an inhabitant thereof.

7. Every inhabitant of this State, residing within the City for three months in the year, shall be considered and deemed an inhabitant thereof, and all such of his or her personal property, held, possessed, used, or enjoyed in the city, as may come under the description of taxable property, specified in any of the Ordinances, shall be liable to assessment, and be proceeded with agreeably to the foregoing provisions of this Ordinance, if brought into and used within the city, during such residence, although not within the city on the first day of January preceding.

Slaves brought into the city after 1st January, in each year and held for three months taxable.—How to be returned and paid for.

8. All slaves brought into the city after the first day of January in each and every year, and held and possessed therein for three months in the year, shall be liable to the same assessment and tax, as if within the city on the first day of January preceding; and the owner or possessor of such slaves, if not included in his annual return, shall at the expiration of the said three months, return the same under oath to the City Assessor, and pay the Assessment and Tax thereon to the City Treasurer, within ten days after making the return; and on default of such return or payment, the owner or possessor of such slaves shall be subject to the same penalty and execution, and be proceeded against in the same manner, as provided for by Ordinance, for the return and collection of city assessments and taxes.

Property owned in the city, by residents out of the United States liable to a double tax.

9. All such taxable property within the city, as may belong to any person residing without the United States, shall be liable to a double tax; but this clause shall not be construed to extend to the property of any person or persons, sent or gone abroad, in the employment of the State, or of the United States, until one year after the expiration of his or their mission.

Taxes constitute liens for one year.

10. The taxes which in the present year, or at any time or times hereafter, may be imposed by any Tax Ordinance of the City Council on any lands, slaves, or other goods and chattels, shall respectively constitute specific liens on the said lands, slaves, goods and chattels, for one year from the time, when the liability for the said taxes attaches upon the owner or proprietor thereof; and the said lands, slaves, goods and chattels, may be levied on within the period aforesaid, and sold for satisfaction respectively of such taxes, notwithstanding any alteration of the same by the owner in possession thereof, subsequently to the time when the liability for the said taxes attached upon the said owner or proprietor, and the proceeds of the sale of such lands, slaves, goods and chattels, shall be applied to the payment of such taxes thereon respectively, prior to and in preference of all judgments, mortgages, debts, or other liens on the same, but nothing herein contained, shall be construed to affect or impair the ordinary general lien of executions for taxes duly lodged in the office of the city Sheriff.

Sales of lands and negroes after 1st Jan. annually to be reported to Assessor.

11. It shall be the duty of every taxable inhabitant of this city, who shall, since the first day of January in the year past, have sold any lands or negroes, liable to city tax, to give information thereof at the time of making such return, and the name of the person to whom sold, to the City Assessor.

Assessor to enter all such sales in a book.

12. It shall be the duty of the City Assessor, to inquire of every person making a tax return, whether he, or she, or the person they may represent, have sold any taxable property since the last return of taxes, and he shall enter the same in a book kept for

that purpose, with the name of the person to whom such sales have been made, and shall take the proper measures to collect the taxes on all such property.

Assessor to make diligent inquiry and secure accurate returns.

13. It shall further be the duty of the City Assessor to make diligent enquiry as to all property liable to taxation—to put the necessary questions, and make the required explanations and take all proper measures for the purpose of obtaining full and accurate returns, and to make the assessment on a scale that will bear equally on all, and to collect the taxes according to the true intent and meaning of the Ordinance in such case made and provided.

To return an alphabetical list of tax payers and amount of taxes

14. The City Assessor shall so soon as the returns are completed, make out an alphabetical list of all the persons making such returns, or liable to pay taxes in the city, with the amount of their respective assessments under the proper heads; and shall forthwith report the same to Council, to be published whenever Council shall direct.

Tax on dogs.—Collars to be worn by dogs.—Dogs going at large to be killed.

15. On every dog kept by any white person, or on his premises, there shall be paid a tax of three dollars to the city, in each and every year; and any dog or dogs kept as aforesaid, shall be included in the tax return of the owner and keeper thereof, or the head of the family or keeper of the house, where such dog is kept or harbored. And on the payment of the said tax, the owner or keeper of such dog or dogs, shall be entitled to receive from the City Treasurer a license for such dog to run at large for one year. Provided a collar shall be constantly worn by such dog, having the name of the owner legibly written, stamped, or engraved thereon; and provided also, that if at any time it shall be deemed unsafe to permit dogs to go at large, it shall be the duty of the Mayor to issue a proclamation forbidding the same. And any dog found going at large, after such notice and until such proclamation is revoked, shall be killed, and the keeper or owner thereof, shall be moreover liable to a fine of ten dollars. And any dog found in any lot or going at large, contrary to this ordinance may be lawfully killed. Any person keeping a dog contrary to this ordinance shall be liable to a fine of ten dollars, for every such offence; and for failing to make a return of every dog liable to a double tax, as in other cases.

Oath in tax returns as to dogs.—Penalty for keeping dogs when tax is not paid.

16. The following oath, in addition to the oaths now prescribed by Law, shall be taken by all persons making a return of taxable property in the city, viz: "And I, A.B., do further swear, that there is no dog kept by me, or on my premises;" to which shall be added the following, where a dog or dogs may have been returned, "except such as have been duly returned,—so help me God." And it is hereby ordained, that any dog brought into the city, shall be immediately reported to the City Treasurer and the tax paid, and a license taken out for the remainder of the year, under a penalty of ten dollars, on the owner or keeper of said dog, or the person on whose premises the said dog may be found; and any dog at any time found in the city, shall be deemed and taken to be kept therein, and liable to the tax aforesaid. And it shall be the duty of the City Marshals to ascertain all such persons as have failed to make their returns required by this clause; for which the said Marshals shall be entitled to one half of the penalties herein mentioned.

Slaves, &c. prohibited from keeping dogs.

17. No slave or free person of color, shall be permitted to keep any dog in the City of Charleston, under the penalty of five dollars for every such offence; and every slave or free person of color charged with keeping any dog or dogs, contrary to this ordinance, shall be brought before the Mayor, at the Police Court, and on failing to pay such fine, shall be committed to the Work-House for a period not exceeding one week, or flogged, not exceeding twenty lashes, at the discretion of the Mayor; and any slave or free person of color residing on any lot where no white person resides, shall be deemed and taken to be the keeper of any dog found on the premises, unless he or she can show who is the owner or keeper of the same; and any white person residing on any lot where slaves, or person of color also reside, shall be deemed and taken to be the owner of any dog, found on the premises, unless he or she, when called upon for that purpose, shall show who is the owner and keeper of the same.

Penalty on owners of lots not having pumps and wells, or cisterns in their lotss.

18. Every owner of a lot, sub-divided lot, or piece of ground within the city, enclosed and occupied, and which has not a good and sufficient well or cistern, capable of containing at least three hundred gallons of water, and built of brick or stone, with a pump to the same, fit for use, shall be liable to a penalty of forty dollars, for every such lot, sub-divided lot, or piece of ground, found without such sufficient well or cistern, and pump, to be recovered in the City Court, in the name of the City Council of Charleston, (their assent being first obtained,) one half to the use of the informer, and the remainder to the use of the City; and it shall be the duty of the City Assessor, to enforce the provision of this clause.

Masters, supercargoes, &c. not permitted to vend goods from vessels at wharves without paying a tax and a license to City Treasurer.

19. That it shall not be lawful for any master, supercargo, or other person attached to any vessel in the Port of Charleston, to vend on board any such vessel, or on the wharves, any goods, wares, merchandize, or produce, either on his, or their own account, or as agent or consignee, until he or they shall have obtained from the City Treasury, a license to sell such goods, wares, merchandize, or produce as aforesaid, for which license he or they shall respectively pay to the City Treasurer the sum of hundred dollars, together with the aforesaid tax upon the amount of his or their sales, the said license to continue of force for one year; and if any master and supercargo, or any other person, attached to any vessel in the Port of Charleston, shall sell on board of any vessel, or on any of the wharves, any goods, wares, merchandize, or produce, without a license, contrary to this ordinance, he or they shall forfeit and pay for each and every such offence, the sum of two hundred dollars, to be recovered by suit in the City Court, in the name of the City Council of Charleston, one half thereof for the use of the city; and it is hereby made the duty of the Marshals to enforce the provisions of this ordinance.

Punishment on free negroes for not paying city taxes.

20. If any free negro or person of color, shall neglect to pay his, or her tax to the city, as imposed by any ordinance hereafter to be passed, to raise supplies for the present or any future year, an execution shall be issued against the property and person of such free person of color, directed to the City Sheriff, requiring him to seize and sell the property of any such free negro or free persons of color, and deduct so much from the sale thereof as shall be sufficient to pay the tax due by him or her as aforesaid, as also the cost and charges of such seizure and sale; but if no property can be found belonging to such free negro or free person of color, then it shall be the duty of the City Sheriff forthwith, by virtue of the same execution, to seize and take the body of any such free negro or free person of color, and bring the same before the Mayor, at the Police Court, whose duty it shall be to inquire into the cause of neglect, or refusal to pay the said tax; and the Mayor, is hereby authorised and empowered, if he, after the said inquiry shall deem fit, to order and direct such free person or persons to be confined in the Work-House, and placed on the Tread Mill for any time not exceeding one month, unless his or her tax due as aforesaid, with costs and charges shall be sooner paid. And every free negro or free person of color, as aforesaid, shall, on or before the 15th day of May, in each and every year, make a return of his or her name and age, of the name and age of his or her child, or children, and of his or her place of abode and occupation, to the City Assessor, who shall enter the same in a register; and if any free negro or free person of color shall neglect or refuse to make such return within the time and in the manner before prescribed, or shall give a wrong name or names, with intent to deceive the City Assessor, he or she shall, in either case, be doubly taxed, and proceeded against in the same manner as above directed, with regard to free negroes or free persons of color, whose tax is not duly paid as aforesaid.

Ratified in City Council, this twelfth day of March, in the year of our Lord one thousand eight hundred and forty-four, and in the sixty-eighth year of American Independence.

JOHN SCHNIERLE, *Mayor.*

By the Mayor,
JOHN R. RODGERS, *Clerk of Council.*

BOARD OF ASSISTANTS.

The following is a copy of the Report of the majority of the Committee to whom the Rotunda proceedings were referred.

REPORTS IN RELATION TO THE ROTUNDA.

The Committee to whom was referred a Resolution in relation to the Rotunda, RESPECTFULLY REPORT—That they have examined the accounts of the Comptroller's Reports against this building, made since the year 1830 and in that year there was paid fifteen hundred dollars for fitting it up for a Court of Sessions. That in 1831, there was paid to the creditors of John Vanderlin, for amounts due them for materials and labor, etc., three thousand five hundred and eighty-eight 44-100ths dollars. That in 1834, another amount of four hundred and one 4-100ths dollars, was paid for work done on the building while in possession of the said Vanderlin, the Lessee. That in 1836, the building was let to the United States for a Post Office, at fifteen hundred dollars per year, and an expenditure of three thousand five hundred and forty-five dollars was needed for alterations, etc.; and in 1837, a further sum for repairs and fitting up of twenty-five hundred and eighty-four 13-100ths dollars, also, a gratuity in lieu of the lease; and in 1838 a further sum of fifteen hundred dollars was paid Vanderlin, or his creditors. And for additonal repairs and alterations, five hundred and four 71-100ths dollars; and in 1839, there was three hundred and ninety dollars paid for additional repairs, making in all fifteen thousand five hundred and thirteen 23-100 dollars, to January 1, 1840. Since which time, all the repairs and alterations have been charged to the general account of public buildings, without being particularly designated. On the credit side there has been received for rent, from the first of April, 1836, to January 1st, 1845, eight years and nine months, at fifteen hundred dollars per year, which is thirteen thousand seventy-five dollars; leaving it now indebted, (with a dilapidated building on hand) in the sum of twenty-four hundred and thirty-eight dollars.

Signed. J. C. BAYLES, } Committee.
WM. TAYLOR, }

The vote, upon passing the resolution bestowing the use of the Rotunda upon the Academy, notwithstanding the objections of His Honor MAYOR HARPER, was 10 to 3.

The gentlemen, who sustained His Honor MAYOR HARPER, are
MOSES TUCKER,
J. C. BAYLES,
WM. TAYLOR,

Mr. Tucker has been renominated to the Common Council, but he refuses absolutely. His place in the Board cannot be filled. He is a most worthy and most excellent citizen, and an independent public officer.

We heard a distinguished citizen who is a prominent member of the democratic party, remark yesterday, that the Natives will loose the Common Council at the approaching election, in consequence of not sustaining His Honor the Mayor in his care of the public property.

LIGHT.

When I write by morning candle-light, I use two tapers of unequal elevation, and thus obtain a union of the rays of each, and I find by this means an increased illumination upon the page upon which my pen is discharging from the fountain of thought.

I have examined the rays of light far beneath the earth's common surface, and far remote from the light of the solar orb. About thirteen miles from the entrance from the earth's surface to the Mammoth Cave, I have, in the gigantic Halls of that nether palace, stood motionless, with the exception of that of the pulsation of the heart, and the respiring of air, holding in my hand a flaming torch, waiting for its rays of light to reach the roof of the apartment in sufficient numbers to enable me to discover the surface. Light travels with immense velocity, but not in that abundance which enables a person entering a field of darkness, instantly to illuminate that darkness. I have stood waiting for minutes to see the upper surface of a dome in the cave of near 300 feet elevation. An illustration may be had by entering a large church edifice in the night with a lighted candle. A light at a great distance ahead may be seen instantaneously, for darkness through which it is seen is transparent, but it requires time for a light of limited dimensions to illuminate a large area of surface covered by darkness. Darkness in the distant apartments of the Mammoth Cave, is profound and awfully impressive—it may be seen—it may be felt, for the laws of ——— here are supreme. The reader will find an account of the cave, covering eight entire pages of this volume, from pg. 317 to pg. 324, inclusive, and I think it probable that we may attach a few maps of that wonderful cavern to this volume, to go along with the Assessment Diagrams, that the preservation of the one may be an aid to that of the others.

Solar light is peculiar, and is accompanied by heat. A few years since, I filled a globular flint glass lamp with clear water, and placed it in the window at about nine o'clock of a summer morning, exposed to the rays of the sun, and through this water and glass I brought the suns rays to a focus, and ignited a piece of black silk. It was a nice and pretty experiment, and very instructing. With the same fixture I made another experiment. I placed several glass beads of different colors upon a string, and suspended these in the water, and thus brought the different colors upon a sheet of white paper placed on the side of the glass opposite the sun. The paper should be so placed as to present a surface at an inclination of about 30 degrees. In a wilderness I have found in the night, a blazed tree to give sufficient light to discover the path, when the blaze, as it is termed, is a fresh cut, and what is termed light-wood is frequently met with in forests, which is sometimes very bright, giving a white light. This is light without heat, and I have noticed the same species of light in the body of a dead fish. I have taken fossils which are very ancient, and exposed them to intense heat, and afterwards saturated the calcined animal remains with a carbonated alkali, then evaporated the moisture, and afterwards placed this preparation at the termination, of a funnel-shaped tube, through which the suns' rays were made to pass, and thus obtained a glow of light too intensely bright to look upon. It is a very difficult experiment, but is such a corruscation, that I felt when beholding this illumination that I was awakening that light which had shone upon earth ere the flood had deluged its surface. The color of light in the use which is to be made of that mysterious property, is a matter of great importance, and but little attended to. Nature has blended with the light of the summer sun abundance of green, and with that of winter, the white of the snow, both upon the surface and in the atmosphere. The influence of light upon numerous substances is various, hence, we find the Cricket in the Mammoth Cave, of flesh color. These Crickets when exposed to the rays of the sun and the atmosphere air, become black. In the high northern latitudes, the Weasel which is red in summer, is white in winter, and I believe I have seen this change as far south as 44 deg. I once possessed a bird which had a beautiful green plumage in summer, but one of a dull grey in winter. Light, is made subservient to the organs of sight where it is needed—hence we find eyeless fish in the waters of the Mammoth Cave, and the same has been noticed in the fish which come up in the water of the Artesian Well at Paris, which, from its great depth, is quite warm.

TAXATION ON INSURANCE.

We give entire the report of the Committee of the House of Assembly, on Banks and Insurance Companies with the tables annexed. Also the Report of the minority of the Committee. These are important documents, and we have felt it to be our duty to present them entire.

These Reports are full, and able, and with the tables, will be found useful to the Insurer, as well as the insured. It would be well for the people of this State, if every important subject presented to the consideration of the Legislature could receive as careful an examination and as elaborate a discussion of the subject matters as is here presented in relation to the Tax upon Insurance.

Document No, 80.

IN ASSEMBLY,—February 11, 1845.

REPORT

Of the Committee on Banks and Insurance Companies on the Memorial of INSURANCE COMPANIES of the Cities of New-York and Brooklyn.

The Committee on Banks and Insurance Companies, to whom was referred the memorial of seventeen insurance companies of the cities of New-York and Brooklyn, praying for an increase of the existing tax on premiums for insurance, received by the agents of companies not chartered by this State, doing business in the counties of New-York and Kings; and also remonstrances from the city of New-York against granting the prayer of said memorial,

REPORT:

The ground on which the application of the memorialists is urged, is that the insurance companies of other States have advantages over those of New-York and Brooklyn, on account of their being subject to less taxation; and that therefore they can afford to take risks for less premiums, and thus obtain an equal portion of the business of insurance.

Until the year 1814, this business was left entirely open to all who chose to undertake it, whether citizens of this State, or other States of the Union, or foreigners. About that time, the Phœnix Fire Insurance Company of the city of London established an agency in the city of New-York. The United States and Great Britain being then at war, a bill was introduced into the Legislature of this State, entitled "An Act to suppress *foreign influence* in this State," which, after an amendment of its title so as to indicate the real object of the bill, was passed, excluding entirely the agencies of foreign insurers, on the ground that contracts with alien enemies could not be enforced. (Sen. Journal, 1814, p. 99. Assem. Journal, 1814, p. 295. Laws, 1814, p. 52,) Chancellor Kent dissented from the bill in the council of revision. This law passed when the feeling of the people and the Legislature was highly exasperated against England; was the foundation of all our subsequent legislation on the subject of foreign insurance; but it was not designed to reach the agencies of companies chartered by other States of this Union.

This is further evident from the circumstance that in 1824, and while the law of 1814 was still in force, Mr. Warren of Rensselaer, introduced a bill into the Assembly, on notice, to lay a tax of *ten per cent.* on all premiums received by the agents of fire insurance companies of other States, doing business in this State. The bill appears to have excited no particular attention, not having been referred to any standing or special committee in the house; and having been simply reported to the Senate, without amendment, by the committee on finance. (Assem. Journal, 1824, p. 653. Sen. Journal, 1824. p. 336.) This reference to the committee on finance, however, may be regarded as an indication that the measure was considered rather in connection with revenue than in relation to the effect it was likely to have in preventing competition in a matter so important to the community as the business of insurance.

The provisions of these two acts, with some modifications, were subsequently incorporated into the Revised Statutes. (I R. S. 714.)

Afterwards, in 1837, a bill was introduced into the Senate, and unanimously passed, (Sen. Journal, 1837, p. 111,) the object of which was to *reduce* the tax on premiums, imposed by the act of 1824, from *ten per cent* to *two per cent.* It went to the Assembly, and was there referred, as a measure concerning the revenue, to the committee of ways and means. The great fire in the city of New-York having occurred but a year or two previously, and having prostrated the fire insurance companies of that city, the impoli cy of throwing obstacles in the way of securing the property of our citizens against a recurrence of the great losses caused by that conflagration, was probably the more palpable; and the committee of ways and means reported strongly in favor of the passage of the bill, not only as a measure of good public policy, but as likely to increase the revenue derived from foreign insurances effected in this State. (Assem. Doc. 1837, No. 177.)

In 1841, the fire insurance companies of New-York, applied to the Legislature to *increase* the tax on foreign insurance to seven per cent. Their petition was referred to the committee on banks and insurance companies, which reported against it in strong terms, and it was denied. (Assem. Doc., 1841, No. 221.)

The course of the Legislature in 1837 and 1841, evinced a determination to remove all unreasonable impediments in the way of the insurance Companies of other States, and at the same time indicated a disposition to subject them to equal burthens with our own.

The tax of 1837 was fixed *at two per cent.* because that appeared, from official information, to be an equivalent, and a little more than an equivalent, to the rate of taxation alleged to be imposed on the New-York Companies, and yet not so onerous as to be prohibitory or exclusive as to the foreign insurer, and was supposed to place both on a just footing for fair competition.

The application now before the committee seeks an increase of the tax to *ten per cent.*, but confines it to the agencies of companies of other States *doing business in the cities of New-York and Brooklyn.* It seeks a *local* advantage only; and it seeks it on the ground that the home companies in those two cities, actually pay, *with reference to their income*, a larger tax than the other companies referred to pay on theirs.

At this particular time, considering the New-York companies aggregately, this is true, although in 1841, the same allegation was not true, and it may not be true five years hence. In order, therefore, fully to meet the difficulty complained of, it is evident that legislation must ebb and flow continually, or it will from year to year be very unequal.

Although the memorial itself prays for a tax of *ten per cent.*, yet the persons representing the memorialists before the committee avow their only object to be a *fair equalization* of burthens between the home and foreign companies. This seems to be reasonable; and the only question that can perplex the committee is, How to *equalize* them!

The fundamental difficulty in adjusting a tax to the satisfaction of all effected by it, (and the whole community is affected by it as well as the insurance companies,) consists in the circumstance that the home companies are taxed on their capital, and the companies of other States on their *income* or *premiums.*—Capital is fixed; income is fluctuating. It is obvious, therefore that a tax on the premiums of the foreign insurer can in no way be adjusted so as to be always an exact equivalent for a tax on the capital or property of the home insurer. In some cases, it is more; in some less. The evidence of this is afforded, most abundantly and in every variety, with regard to the business of insurance, by the various statements, compiled from official returns, submitted to the committee and hereto annexed. From these it appears that the New-York fire insurance companies (not including the mutuals) are taxed at *different rates* at the *same time*, on their capital, varying according to the assessments made in different wards of the city, (Statement B.); that their taxation bears no general relation to their earnings, good management, or prosperity; (Statement A.); that it varies from year to year, (Statement C.); and that while income for various assignable causes, is, on the average, *decreasing*, taxes are, on the average, *increasing.* This decrease of income depends somewhat, probably, upon foreign competition; but vastly more upon the rapidly extending business of the mutual companies of New-York, which seem likely to swallow up, at no distant day, the main insurance business of the city, and perhaps of the interior.

It is an anomaly in our legislation to lay a tax on *income* as distinguished from *capital* or *property.*—

We do not tax the income of individuals; but we tax their property, whether productive or unproductive. A man without property may have an income; and a man without income may have property.—The one escapes taxation, while the other has to bear its burthens. A thousand dollars' worth of wild lands, yielding nothing, pays just as much tax in proportion to its assessed value, as a thousand dollars worth of stock in an insurance company which divides ten or fifteen per cent per annum. The capital of the home companies is taxed at the usual rate of taxation, as *property;* just like any other property of the same assessed value; just as the same amount of money or lands, distributed amongst the several owners of the capital, would be taxed as their individual property. It is more conveniently taxed in gross, than in detail, and is therefore taxed in gross. But the *income* of it, as such, pays no tax. It may go to swell estates, and thus fall into the ordinary channel of taxation, but not as *income*. The only absolute infraction, that occurs to the committee, of this general principle which pervades our legislation, is this very case of taxing the income of insurance companies not chartered by ourselves, as *income*, in a different ratio from that which is applied to *capital*. An uncertain standard of taxation has thus been resorted to, instead of the fixed and equal one otherwise invariably recognized by our laws, and by the feelings of the people.

The impossibility of adjusting the tax on the principle of the law of 1837, will be evident from an examination of the statements accompanying this report. From these it clearly appears,

1. That insurance companies of equal capitals, paying equal taxes, receive very unequal incomes; so that, as between those companies, income or premiums as compared with capital, would be an unequal basis of taxation. (Statement A.)

2. That the New-York companies, considered separately, have as much need of protection against each other, as, considered aggregately, they have against foreign insurers; for greater inequalities exist among them, separately, than between them aggregately and foreign insurers. (Statement B.)

3. That the New-York companies received *one-third* of their gross annual income from *investments* and not from *insurance;* so that it is fallacious to assume premiums *alone* for the purpose of comparison with the foreign insurer. (Statement A.)

4. That to proportion a tax according to the *average* of income taking all the New-York companies together, would operate unjustly, by casting a *greater* proportional tax on companies having small receipts, and a *less* upon those having large receipts. (Statement A.)

5. That while *some* of the companies pay a tax on *capital* more than equivalent to a tax of *two per cent* on *premiums*, *others* pay a tax about equal to, or less than that amount. (Statements A. and B.)

6. That the *average* per cent of taxes on the nominal capital for the year 1843 was about 69 cents per $100, and on the *actual valuation* about 78 cents per $100; being equivalent to an *average* tax on income of about $4 per $100. (Statement B.)

7. That the average tax upon property in the city of New-York for the years 1840, 1841, 1842 and 1843, was 67½ cents per $100; being equivalent to an average tax, on the income in 1843 of the companies referred to, of about $2.80 per $100. (Statement C.)

8. That the average of dividends of the same companies, in the year 1843, was upwards of *eleven per cent.* (Statement B.)

9. That the mutual insurance companies of New-York, so far as their returns have been obtained, pay a trifling tax compared with the other companies, and in some cases, no tax at all; the highest being equivalent to less than 50 cents per $100, on the premiums received; and that they make an average dividend of about *thirty per cent.* (Statement D.)

10. That the average dividend of *all* the fire insurance companies of the city of New-York, including mutuals taking fire risks, which have made returns or published statements for the year 1844, is upwards of *fifteen per cent.* (Statement F.)

If we analyze the Abstract of Returns made by *eleven* fire insurance companies in New-York for the year 1843, (being the only companies which have filed complete returns for that year, and the returns for 1844 not having all come in,) a strong light will be thrown on some of the positions above taken. (Statement A.)

The Merchant's Fire Insurance Company has a capital of	$500,000.00
The Howard Insurance Company of.... or *two-fifths less* than the Merchants'.	300,000.00
The Merchants *capital* pays a tax of....	$3,426.78
The Howard's,	1,758.44
The Merchant's *more* than the Howard's,	$1,668.34
The premiums received by the Merchant's during that year were,	$30,373.34
By the Howard, or more than *three* times as much as the Merchant's.	93,869.54

So the Howard, paying a tax on *two-fifths less* capital than the Merchants', has more than *three* times the income, from premiums, than the Merchant's has.

Now if the tax were imposed on *premiums*, the Howard would pay three times more tax than the Merchant's, with *two-fifths less* capital.

The very same reason which demands a tax on foreign insurers to protect the New-York companies against them, demands also that the Howard Company should pay a heavier tax to protect the Merchant's.

The tax on *capital* paid by the Merchant's Company is equivalent to about $11 per $100 on its premiums; and the tax paid by the Howard is equivalent to about $1.90 per $100 on its premiums.

So that while a tax of *two per cent.* on foreign insurers abundantly protects the Howard, it would require a tax of more than eleven per cent to protect the Merchant's.

But to apply taxation on this basis would be simply to declare that the more an insurer extends his business, cheapens his rates, and conducts his affairs with thrift and skill, the more severely he should be taxed.—Then it is no longer *property* which is burthened, but *skill, good management and success.*

It is a point deserving of consideration, that the law makes no distinction of locality in favor of the foreign insurer. His premiums may be received wholly in the interior where the rate of taxation is low, and yet they bear the same burthen as if they were all received in New-York, where the rate is high. The present standard is fixed on the New-York ratio of 1837; and while it is sought to be raised as to premiums received there, it would seem reasonable that it should be lowered elsewhere; a consideration which involves the adjustment of the tax in fresh difficulties.

By a statement annexed to this report, submitted to the committee in behalf of the memorialists, it appears that the whole amount of capital employed in the business of insurance by the New-York companies exclusive of the Mutuals, is less than six millions of dollars. (Statement G.) It appears by Statement A. that the companies therein named, with a nominal capital of $2,760.000 covered risks, during the year 1843, to the amount of nearly fifty-one millions of dollars. It may therefore be fairly assumed that all the companies together, exclusive of the Mutuals, cover risks to the amount of one hundred millions; an amount vastly disproportionate to the capital employed, and intimating very strongly the good policy of allowing a free competition for the purpose of dividing the hazard. Taking the returns to the Comptroller, made by the agents of foreign insurers, as an index of the amount of foreign insurers, as an index of the amount of foreign insurance in the whole State, (Statement E,) it appears that the companies of other States cover only about twenty millions of property, or one-fifth of the amount covered by the home companies. Good policy, and the security of our property, would seem to require that so slight a competition as this should not be checked by adverse legislation, nor does it appear to the committee that any reasonable complaint can be made of it as seriously affecting the home companies. The whole amount of premiums received by the foreign insurers averages annually about one hundred and sixty thousand dollars. This is less than the receipts of *three* of the city companies which took the most risks in the year 1843; *three* companies out of *twenty-one*. It is equal to an average of about thirteen thousand dollars of premiums received by each of the twelve foreign agencies in the city of New-York, which is less than the lowest receipts of any New-York company which filed a report for the same year.

With regard to the mutual companies which join in the memorial, it is evident from their annual statements that the existing tax on foreign insurance is abundant protection for them. Their own tax is less than one-half of one per cent on their income, and most of them pay no tax at all. (Statements D. and F.) It is against the attractions of these companies, with their average dividends of thirty per cent, that the other New-York companies most need to be guarded. An utter exclusion of foreign agencies would not prevent most of the latter companies from ultimately falling before the rapid advances of the Mutuals of this city, which have such superior advantages and such inferior burthens.

The measure of increasing the tax, as prayed for, deserves also to be seriously regarded with reference to its effect upon the revenue of the State; and the more so, because past legislation indicates that an increase of revenue has been heretofore considered as an important point. A statement (E.) submitted to the examination of the committee, and hereto annexed, compiled from the treasurer's books, shows that the State has received an average of over $800 per annum more under the two per cent tax than it did for the same number of years under the ten per cent tax. It also shows, as an inference from this fact, that about nineteen millions more of the property of the people of this State is covered by insurance companies of other States, than there was under the ten per cent tax; a larger amount by ten or twelve millions than the united capitals of the New-York city companies could pay in case of loss. It also shows, as another inference, that all this property is covered at less expense and with greater security; at less expense, by the difference of at least eight per cent on the premiums; and with greater security, in consequence of the distribution of risks amongst more competitors. To increase the tax would, therefore, not only injuriously affect the revenue, but also the interests of all our citizens who are concerned in the cheapness and safety of insurance. It is better that they generally should enjoy the benefit of low rates, than that a few stockholders of insurance companies should have the benefit of high ones. A tax on foreign insurance, is in effect, and not very indirectly a tax not only upon those who insure with foreign companies, but upon all who insure with any.

The obvious predeliction of our citizens, all other things being equal, will be in favor of the home companies; and if they are not well supported voluntarily, legislation will use its restrictive and compulsory powers in vain. It might as well tax the bank notes or coin of other States and countries circulating here, for the protection of the local banks; or the income of those who sell foreign goods on commission, for the protection of the home merchant. An eastern pedlar can dispose of his untaxed wares in this State as freely as any citizen of it in the same vocation; each pays the same fee for his license; but the citizen is frequently compelled to be content with very small profits by the superior bargaining powers, activity and thrift of his foreign competitor; and might ask that his rival's income should be taxed sufficiently to equalize the results of the competition, with as much apparent reason as the memorialists have for asking the Legislature to tax the income of the foreign insurer. The cotton mills of this State are subject to heavier local burthens than those of Lowell, and are obliged to compete with the latter in the New-York market; but a legislator would hardly think it expedient or politic to impose a tax on Lowell goods in that market to benefit our own manufacturers.

The committee, therefore, conclude, that upon the principle assumed in the memorial, no standard of taxation can be fixed which shall protect all the memorialists,, without being so high as to amount to an exclusion of the companies of other States, and which would infringe upon the proper liberty of our citizens to effect insurance with such insurers as they may prefer.

For these and various other considerations, heretofore stated, the committee have come to the conclusion that it would be unwise and inexpedient to increase the tax upon the income of foreign insurance companies, and in accordance, offer the following resolution:

Resolved, That the prayer of the memorialists should not be granted.

ALEXANDER H. BUELL,
ANDREW BILLINGS,
JOHN PIERCE, 2d,

(A.)

AN ABSTRACT

Of the Annual Reports made to the Comptroller by incorporated Fire Insurance Companies of the city of New-York for the year 1843, embracing all the returns on file for that year, excepting from the Equitable Insurance Company, whose return is defective.

Name of Company.	Capital.	Amount insured.	Dividends.	Premiums received,	Other rec'pts (interest. &c)	Total rec'pts.	Valuation of property.	Tax assess'd
New-York Fire Insurance Company,	$200,000	$3,587,095.00	7 per cent.	$23,544.80	$12,971.66	$36,516.46	$164,202.57	$1,200.60

(E.)

Compiled from the Treasurer's books, showing the amount paid into the Treasury by the Agents of Foreign Insurance Companies, during sixteen successive years.

Tax 10 per cent.

1829	$621.24
1830	1,779.30
1831	2,567.16
1832	3,212.94
1833	3,142.94
1834	3,753.25
1835	2,443.48
1836	2,419.53
	$18,959.84
Average per annum for above years,	$2,369.98
Average amount of premiums received during above years, to yield the average tax at ten per cent	$23,699.80
Amount of risks required to pay $23,699.80 premiums, at an average rate, throughout the State of $7 per $1,000	$3,385,685.71

N. B. The rate of premiums was higher during the above years in consequence of the greater tax and the amount covered therefore less.

Tax 2 per cent.

1837	$3,204.73
1838	3,926.57
1839	2,121.25
1840	3,235,01
1841	3,776.96
1842	3.335.35
1843	3,332.46
1844	2,407.15
Add, since paid, for 1844,	126.00
	$25,464.78
	18,959.84
Difference in favor of 2 per cent.	$6,504.94
Average tax per annum for above years,	$3,183.09
	2,369,98
Average annual difference in favor of 2 per cent.	$813.11
Average amount of premiums received during above years, to yield the average tax at 2 per cent	$159,154.50
	23,699.80
	$135,354.70
Average amount of risks required to pay $159,-154.50 premiums, at an average rate, throughout the State, of $7 per $1,000,	$22,736,357.14
	3.385,685.71
Increase of risks,	$19,350,670.43

(F.)

STATEMENT

Showing the capital, premiums and other income, valuation of property, taxes, dividends, proportion of tax to income, &c. of the several Fire Insurance Companies therein named, located in the city of New-York, compiled from returns made to the Comptroller, and from published official statements for the year 1844.

IN ASSEMBLY—February 27, 1845

REPORT

of the minority of the committee on banks and insurance companies, in favor of INCREASING THE TAX ON FOREIGN AGENCIES.

The undersigned, minority of the committee on banks and insurance companies, to whom was referred the petition of officers of insurance companies in the cities of New-York and Brooklyn, to increase the tax upon foreign insurance companies doing business in said cities, being obliged to differ with the majority of the said committee, and believing that the tax upon foreign insurance companies ought to be increased, so as, at least, to make it equal with that imposed upon our own companies, begs leave to present his views upon the subject, and some of the reasons which have led him to this conclusion.

When Great Britain and other commercial countries began to emerge from a barbarous state, and direct their attention to trade and commerce, the business of insurance first began to be practised. "The first underwriters were individuals doing business on their own account, and not in a corporate capacity; and, consequently, many frauds were practiced upon the insured by irresponsible persons, who received large sums as premiums, by representing themselves to be possessed of means sufficient to discharge any claims upon them for losses which might arise. This evil grew to such a magnitude that the Legislature of England interfered, to protect a business which they saw was intimately connected with the welfare of the country, in respect to the extension of its commerce, and accordingly in the preamble to the acts incorporating the first insurance companies in England, passed in the year 1720, the above reasons were set forth at length."

"The utility of this description of business is now abundantly confirmed. To enter upon a detail of the various advantages which mankind have derived from this species of contract would be a waste of time, because they are obvious to every understanding; the great help which they afford to individuals who conduct business on their own account, by dividing a loss in case of a fire, or shipwreck among many persons, is sufficiently demonstrated by experience. The benefit rendered by it to commerce was well understood, even in early times, as may be seen by the following extract from a preamble to an act of Parliament, passed in the 43d year of the reign of Queen Elizabeth:"

"By means of which policies of assurance it cometh to pass, upon the loss or perishing of any ship, there followeth not the undoing of any man, but the loss lighteth rather easily upon many, than heavy upon few, and rather upon them that adventure not, than upon those who do adventure; whereby all merchants, especially those of the younger sort, are allowed to adventure more willingly and more freely."

The benefit marine insurance renders to trade and commerce, by protecting the merchant when his property is on the water, will, with equal force, apply to fire insurance upon the land. "It also gives greater security to the fortunes of private people, and by dividing, among many, that loss which would ruin an individual, makes it fall light and easy upon the whole society." (*Judge Park on insurance.*)

Our own Legislature, as well as the English Parliament, have always been fully awake to the importance of encouraging this important aid to commerce and means of security of private property; and from the granting of the first charter to the present time, they have also guarded with scrupulous care the interests of those who might become insured. In every charter of a stock insurance company, granted by this State, the amount of capital, the number of directors, mode of their election, the manner in which the capital shall be secured, an affidavit of the officers to be filed, stating that all the terms of the charter has been complied with; are all provided for by the Legislature, and, after business is commenced, the directors must cause to be filed annually with the Comptroller, a statement signed and sworn to, showing the amount of the capital stock, how it is invested and secured, how much has been consumed and expended in the payment of losses, and how much is safe and unimpaired, the amount of premiums received and surplus on hand, and many more items of information of like character.

The interest of the companies, also, is to have their affairs conducted by men who have the confidence of the community; and, by looking over the names of their directors, it will be seen that they consist, with hardly an exception, of men who have a high standing as merchants, men of wealth, who have retired from business, or citizens who, having filled important public trusts, and withdrawn from public life, occupy their time and talents in judiciously managing the property and interests of those who have committed it to them.

There is one fact which the undersigned begs leave to call the attention of the House to, which is conclusive proof, in his opinion, of the upright manner in which the fire insurance companies of New-York city have heretofore been conducted. It is, that, in the whole history of these institutions, not a cent has been lost by the insured through fraud, or mismanagement of their directors, or from any other cause, if you except the losses sustained by some of the insured whose property was consumed by the great fire of 1835. This occurrence which, according to all probability, will not take place again in centuries, caused some of the companies to be unable to pay in full the entire amount of their policies, but no man will urge this as an argument against their ability to meet casualties which, in the ordinary course of things, are likely to occur.

If we go back to the history of the period of that fire, we will see much to admire in the conduct of the stockholders of those institutions. We would see them cheerfully giving up not only the capital, but surplus profits which they happened to have on hand, and also dividends which had been previously declared.

The undersigned has been led into this statement of the manner of their organization, and defence of the character of the New-York insurance companies, because it has been boldly stated by those who oppose the laying of an equal tax, that the reason why companies from other States received an undue share of this business, was on account of their superior character, and soundness, and the honorable manner in which they conduct their business.

This libel upon the character of our State institutions, and the honorable men who conduct them, led us to inquire whether what they stated was true respecting themselves, and as the Connecticut insurance companies are the ones which principally interfere with ours, and as their agents only appeared before the committee, and cast these reflections upon New-York, we had recourse to the statutes of Connecticut to ascertain what kind of security was required by their several charters for the safe investment of their capitals, and, to the great surprise of the undersigned, instead of finding a requirement in their laws that their capitals should be paid in and safely secured, as is required of every company chartered by this State, they are without exception allowed to engage in the business of insurance by paying into the treasury of the company a sum varying from 5 to 10 per cent. in cash, and for the balance they are permitted to receive *promissory notes*, which shall meet the approval of their own officers. We refer the House to the local laws of Connecticut, which can be found in our State Library.

This developement, which was new to the minority of this committee, is doubtless equally new to the members of this House and to the community generally, and we would respectfully suggest the propriety of passing a law which will prohibit the agents of companies of this character, from receiving the money of the people of this State, under the pretence that that they are willing and able to indemnify them against loss in case of fire.

All that was asked for by the New-York and Brooklyn companies, of the committee, was, that the tax might be equal, and the request was deemed so reasonable, that when we separated, it was understood that the only thing that remained to be done, was to procure the necessary information to ascertain the precise amount of tax. The first intimation had, that the minds of the majority of the committee had undergone a change, was the reading of the report adverse to the prayer of the petitioners by the chairman.

The minority of this committee have not been put in possession of any facts, nor have they heard any arguments to cause them to deviate from the opinion at one time so unanimously held, but, upon more mature reflection, they are convinced that the citizens of this State should be permitted to participate in all lawful business, upon at least equal terms with the citizens of other States, and if any difference is made, it should be in favor of those we represent, but as the petitioners ask for no preference, but only desire *equal rights* and *free trade*, there ought, in the opinion of the undersigned, to be no objection on the part of any one to granting their prayer.

The majority, in their report, have given a history of this tax from an early period, and by that report it appears that for a series of years down to 1837, the tax upon foreign agencies was ten per cent. upon the amount of premiums received. Then, as appears by said report, an act was passed rducing the tax to two per cent., and. as is therein confessed, impliedly at least, not because our State institutions were monopolizing the business and fleecing the public, but because, as that report states, the great fire in New-York swept away a large amount of capital, and left not enough behind to do the business. There were no remonstrances against the passage of that law by individuals or companies, but all were in favor of it at that time, because it was rendered necessary by the peculiar exigency of affairs. We have every reason to believe that the law was passed for a temporary purpose, and that it was expected by the Legislature it would be repealed, when the causes which procured its passage should have passed away.

The companies which are chartered by this State are taxed upon the capital in the county where they are located, in the same manner and to the same amount as real estate or other taxable property; and this tax is paid by the stockholders for the privilege of doing the business of insurance, for while by the incorporation of one of these companies not a single dollar of wealth is added to the State, yet the taxable property is increased to the amount of the capital of the company. Why, then, do persons who engage in this business consent to pay an additional tax when their property is not increased? Because they are permitted to engage in the business of insurance, and this is a bonus given to the State and county for this privilege. How can we ascertain then the amount of tax paid by the New-York fire insurance companies for this privilege? Why simply by adding together the total amount of their receipts for insurance, and the total amount of their taxes, and by a simple arithmetical process the per cent. of tax paid by them will be shown. By a statement appended to the report of the majority, it appears that there are in the city of New-York twenty-one fire insurance companies, with a fixed capital amounting in the aggregate to $5,710,000, upon which they pay a tax to the city and State of 86 cents on the 100 dollars, which amounts to $49,106. The amount of premiums received by the said companies during the year 1844, was $837,000; hence their tax amounts to 5⅞ per cent. on their receipts for premiums, and this it should be borne in mind is nearly 6 per cent. on the *total* amount of their premiums, whether received in this State or out of it. Now as they are obliged to pay into the treasury of other States a tax upon the business they do there, and as we only lay a tax on the premiums received by foreign insurance companies in this State; therefore, in calculating the amount of tax paid by our own institutions, their premiums received for insurance in this State only should be taken into the calculation, and when this is done we shall find that, to make the amount paid by each equal, more than 6 per cent will be required, but as the information called for by a resolution of the House has not yet been furnished, the undersigned have not at present the means of ascertaining how much more than 6 per cent. the agents of foreign insurance companies should pay to make their tax equal with that paid by our own institutions.

There is one other statement made by the majority, "that by the withdrawal of these agencies the State would lose a revenue which it now receives." A very simple illustration will show the incorrectness of this statement. There is in the city of New-York one agent who received last year $40,000 for premiums, on which he pays a tax to the State of $800. That amount of premiums would be considered a handsome business for a company with $300,000 capital, which would pay to the city and State together a tax of $2,580 at the present rate of taxation; being a difference in favor of encouraging our own capital of $1,780.

The majority also state, that to increase the tax would have the effect of driving away these agencies. The undersigned cannot see how it would, were it made equal, as their burdens would be no heavier than those borne by the institutions of this State.

The undersigned, therefore, begs leave to present the following bill, and recommend its passage.

EDWARD EDWARDS.

NEW-YORK MUNICIPAL GAZETTE.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, MARCH 27, 1845. [VOL. I....No. 31

MAYOR HARPER.

James Harper is again a candidate for the Mayoralty. On this occasion it is proper to refer to his public acts as chief magistrate of the most populous and most wealthy city upon the face of the American continent—a city second to none upon the face of the habitable globe in its prospective importance. In the administration of the executive department of the city government Mayor Harper combines those qualities which constitute a good officer. Where persuasion was better than coercion, he has had recourse to the former, and where firmness of purpose and energy of action were required, he has been prompt and determined. Mild and conciliatory in his manners, he has won the good will of those with whom business or opportunity has brought him in contact, and having been educated to active employment in an extensive business house, he had acquired that business knowledge which enables him to despatch a great amount of public business in a brief space of time.

The ordinance for repealing the Street Patching nuisance, was approved by Mayor HARPER immediately upon its passage, at his residence, at a late hour in the evening and a short time before retiring to rest, and with a promptness which gave great satisfaction to our citizens and relieved the city government from a great scandal in at once stopping the shameful abuses which had been practised in Street Patching depredation for years.

The resolution passed by the Common Council for working that portion of the Ninth Avenue for the opening of which a worthy family are threatened with ruin by a shameful assessment, was promptly VETOED by Mayor Harper, and this VETO was an act which met a ready response in the bosom of every good citizen.

The putting a stop to the erection of Booths on the 4th of July, was an act of the Mayor, and for which the citizens are greatly obliged, and by which the people were greatly benefitted.

The abuses which were practised at the Steamboat landings for years, on the arrival of boats have been remedied by Mayor Harper, and every person who has had the opportunity of contrasting the past, with the present are convinced that he has accomplished what his predecessors in office deemed an impossibility.

Mayor Harper in vetoing the Rotunda Resolution done himself great credit, and rendered the city a great service, and although he was overuled by the Common Council in this, yet this proceeding illustrates the formidable difficulties he had to encounter in producing reform; for there were but three members in the Common Council which sustained him and those in the Board of Assistants, viz. MOSES TUCKER, J. C. BAYLIS, and WM. TAYLOR. But other intelligent citizens of the highest respectability, without reference to party, publicly expressed their unqualified approbation of this act of the Chief Magistrate.

Mayor Harper is a strictly temperance man, and the advantages growing out of this fact extend far into the future, as well as affect to a great and growing extent the present state of things.

The Mayor has no control over the financial department of the city—nor has he a seat or a vote in either board which compose the Common Council. All he has the power to do is to make proclamation to the people when they omit to do right or when they do wrong—and this is a most delicate duty.

COMPTROLLER FLAGG.

The Hon. ABRAHAM G. THOMPSON, Jr., presented in the House of Assembly of this State, on the 11th and 13th instant, two Remonstrances against the reduction of the salaries of the State Comptroller and Secretary of State, in which was contained an expression of approbation of the PUBLIC SERVICES of the State Comptroller. These Remonstrances, &c., are signed by several of the most distinguished citizens of the city of New-York. Among the names of the signers is that of His Honor the Mayor, also several gentlemen who belong to the Whig party. It must have been gratifying to the State Comptroller to receive so flattering a testimony of the estimation in which his public services are held by gentlemen who are among the most respectable and intelligent citizens of the State. The difficulties which have been experienced in other States in the payment of the interest of the public debt has been avoided in the State of New-York by the good management of Comptroller Flagg. Mr. Thompson, a son of the venerable Jonathan Thompson, was honored in the presentation of these memorials, and the State Comptroller was also honored in this service by the selection of Mr. Thompson. The fact that a public officer who performs his duties with ability and firmness of purpose, will receive the approbation of his political opponents is here demonstrated.

We here give the memorials from the Journal of Commerce of March 13th.

To the Honorable the Legislature of the State of New-York:

The undersigned, citizens of the city of New-York, most respectfully remonstrate against the passage of the act entitled, "An act to reduce the salaries of the Secretary of State and Comptroller."

The undersigned believe that the duties of the Secretary of State and Comptroller are of that importance to the people of this State, that men whose talents qualify them for the performance of the important duties should alone be selected, and such should receive a fair compensation for their services.

The undersigned take leave most respectfully to express to your Honorable body their approbation of the public services of the present Comptroller, and ask in case any change is made in reference to his compensation, that the same may be increased to three thousand dollars per annum.

And your memorialists, &c.

New-York, March 8, 1845.

JAMES KENT.

In the Commentaries on the Constitution, Mr. Justice STORY, in speaking of that provision of the Constitution of New-York which limits the judiciary, and makes the age of 60 a disqualification for the office of Judge, appends a note which is highly complimentary to the distinguished individual whose name heads this article. The compliment is well deserved, and the source from which it emanates gives it additional value.

"The limitation of New-York struck from its bench one of the greatest names that ever adorned it, in the full possession of his extraordinary powers. I refer to Mr. Chancellor Kent, to whom the jurisprudence of New-York owes a debt of gratitude that can never be repaid. He is at once the compeer of Hardwicke and Mansfield. Since his removal from the bench, he has composed his admirable Commentaries, a work which will survive, as an honor to the country, long after all the perishable fabrics of our day shall be buried in oblivion. If he had not thus secured an enviable fame since his retirement, the public might have had cause to regret that New-York should have chosen to disfranchise her best citizens at the time when their services were most important, and their judgment most mature.

"Even the age of 70 would have excluded from the public service some of the greatest minds which belonged to our country. At eighty, said Mr. Jefferson, Franklin was the ornament of human nature.—At eighty Lord Mansfield still possessed in vigor almost his unrivalled powers. If 70 had been the limitation of the Constitution of the United States, the nation would have lost seven years of as brilliant judicial labors as ever have adorned the annals of jurisprudence of any country."

AMBROSE SPENCER, is another of the great men. His gigantic intellect gives to his noble frame a polish that makes him at the age of about four score years, a nobleman. Ambrose Spencer was for many years a Chief Justice of the Supreme Court of this State, and now, at his advanced age, he has not his superior in mental qualifications and bodily health combined, for a high judicial station, in this Republic.

Judge Spencer would make a splendid Ambassador to the Court of St. James. The government would in such a minister, be honored in their representative.

JOHN SAVAGE is another of the great men whom the tramels of the Constitution have lost to the Bench of the Supreme Court of this State. An able Judge, an honest man. In his retirement upon his plantation in Washington Co., he occupies a conspicuous place in the eyes of a free people. A good man in retirement is truly great, and continually acquires new lustre.

The three ex-Chief Justices of the Supreme Court now living in retirement, would together form a Bench unsurpassed in the aggregate of talent and ability in the habitable globe.

THE TAX BILL.

The New-York County Tax Bill recently passed by the Legislature, authorises the raising of $1,339.487.00. This is too much by more than a third of a million of dollars.

THE FALLS OF NIAGARA.

I surveyed this wonderful cataract, first by moonlight on a summer evening—next, at an early morning hour, ere the sun had made its entrance from behind the curtains of the eastern sky; again, at noonday, when the sun was shining in all the glory of meridian splendour; and again, at the near close of the day, when the sun was approaching the western shades of the terrestrial surface upon which I stood. I reposed the first night of my visit upon a bed shaken by the reverberation of the thunders of the waters of the greatest cataract on earth, in a dwelling founded on the rocks of the western cliffs which border the mighty chasm into which the waters of the great Niagara plunge with a roar and an echo which shakes the very bed on which the river falls. Yes, I was rocked to sleep by the thunders of the waters of of the great Niagara.

I penned a memorandum of that wonderful place with a pen shaken by the echoes of the thunder of the waters of a mighty river. There was a time when these falls had no existence. Ere the deluge these falls were not in being—they are the offspring of the flood, and now, on every day of brilliant sunshine, may be seen the *memento* of an awful judgment in the pillar of a cloud which rises from the bosom of the broken waters of this mighty river. It is also a memento of the promise of Jehovah to all flesh that the world shall never more be drowned. It is inscribed in brilliant colors and drawn by the solar pencil in the bosom of the cloud and forms what the sacred penman has denominated the bow of the cloud. What a testimony! and what a place to inscribe it! what a place this to survey the *memento!* Amid the roar of the aqueous thunders of the Niagara, resulting from the melting of the frosted summits of the gigantic mountains which stretch their borders to almost the verge of the arctic circle. I approached this wonderful locality from the borders of Lake Ontario which forms the vast basin in which the broken waters of Niagara find repose. The sun had withdrawn behind the curtains of the west ere I landed at the foot of the heights of Queenstown, and when the stage coach in which we took passage for the falls first commenced ascending the hill which leads to the plain, the moon was sending forth its silvery rays and gave a soft lustre to all around us. When we reached that portion of the heights on which the battle of Queenstown was fought, the horses were stopped to afford the passengers a better opportunity to see the place. I cast my eyes across the vast chasm cut through the rocks by the Niagara, to the village af Lewiston. It was across this chasm that members of the same great human family hurled at each other the instruments of death. It presented a picture that I had no desire to contemplate. The horses were again put in motion and soon we arrived opposite the monument of General Brock, a twofold *memento*. The rays of the Queen of Night illuminated the column, and discovered to our view, a Ruin. This monument was broken by the torch of an incendiary who had placed gunpowder beneath it with a view to its destruction. A monument when viewed at night makes upon the human mind a powerful impression, especially when it is connected with events of a painful nature, which are yet fresh in the memory of the observer. From this locality we proceeded across a plain for several miles toward the falls, to where it was announced to us that we were upon the battle ground of Lundy's Lane. The furious barking of a dog who seemed vexed and angry at our approach, seemed in keeping with the atmosphere of the place, and I began to reflect upon the length of time since the sanguinary battle was fought upon this ground, in order to determine the probability or possibility of the master of this dog having fallen a victim to the fates of war, for dogs will frequently for a long time watch the grave of a kind master. There was a fearful solemnity in the atmosphere of the place, for the ground which was then pressed by the wheels of our carriage had been drenched with human gore. Here the groans of the wounded and dying mingled with the thunders of the cataract, and here the pillar of the cloud which rises from the falls, is visible, and its tops and sides were silvered with moon-beams. Here was fought a most savage—most sanguinary battle. The ground was covered thick with the wounded, the dying and the dead. What wretchedness! what misery! what grief! What heart-rending emotion did the events of this battle-field produce—without even a single consolation. It was of no consequence which gained the battle, for it was a murderous scene, and conquest was most inglorious. The killing of the human species by their brother mortals in the sight of High Heaven is an awful crime.

It was over a path thus made impressive, that I approached the gigantic cliffs which border the gulf into which the great Niagara pours its agitated and broken waters. The human mind should, in approaching these falls, be in a state of deliberate calmness in order to enjoy the sweets of the sublimities of nature here displayed in all the majesty of splendor. When in my meditations at midnight on a gigantic mountain top I attempted to measure silence, and at the midnight hour in the greatest known cavern beneath the earth's surface I attempted to measure darkness, I found that notwithstanding a studied composure of mind that even the attempt was an impossibility, for I found both were so profound as to be overwhelming—so with this mighty cataract. The room which I occupied at the Clifton House was lighted by a window from which I could see the precipice over which that part of Niagara river which runs east of Goat Island, falls. When I retired to rest I could, by raising my head a little from the pillow, have a full view of this stupendous fall, for the moon shone brightly and illuminated its surface. This view was to me a strange companion of the midnight pillow and but for being weary with the journeying of the day which was just then passing away forever, I should have found it difficult to have closed my eyes for the windows of my room rattled with the force of the concussion produced by the falls. Unwilling to trust to my own impressions in this new scenery I enquired of my host if my feelings and impressions in this, had not misled my judgment, and he satisfied me that the circumstances I had noticed were a reality and that the windows rattled throughout the house when all else was still and quiet, and even the doors were sometimes shaken from the latch. Although I was weary when I retired to rest, yet my sleep was somewhat broken as the rattling of the windows awoke me, for the scene was new to me. I had a view of the falls from various points, both below, and above the cataracts on the western cliffs, and from Goat Island, and also of the river which runs east of Goat Island, from the Bridge which leads to this isolated rock sprinkled over with earth and covered with trees the roots of which are shaken with the reverberations of the thunders of the waters. With these prefatory remarks I will here rest, and in another number give a detailed account of this river, Goat Island, the Falls, and also of the burning spring above the Horse Shoe rapids.

THE APPLE SEED.

The apple seed is but a little kernel—but it is destined to a change. The warmth of the bosom of the mother earth causes it to germinate, to send forth a tender sprout, which in the progress of time becomes a little scion, and at length after a term of years attains to its full growth, and becomes a gigantic tree, in the branches of which the pretty robin builds her nest. I have, with folded arms, stood for minutes at a time surveying the apple tree in full blossom, and again, when its limbs were bending with delicious fruit. The apple tree with its beautiful blossoms, and its ripe and luscious fruit, presents a wonderful display of that mysterious power which is the fountain of life—the source of all good, and it also presents a beautiful and brilliantly illuminated page in the great volume of nature, and one that is full of instruction and encouragement to the mind that meditates and contemplates, that delights in that devotion which consists in the tribute of thought, offered up in the lofty temples of the mind, the homage of the immortal soul, where the pride of mortal man is humbled.

The apple seed presents to the eye of the chemist a most beautiful demonstration of wonderful combination, for its acid separated from the milk of nature with which it is so nicely combined changes the transparent and colorless solution of iron to a beautiful blue, and changes an alkaline compound to a soft and delicate chromate, and these united produce the green which is seen in the rich foilage of vegetation. These various properties brought into action by the rays of the solar orb, which is the great treasury of nature, produce the rich colouring which is seen upon the surface of the apple, and the gay adorning which is painted on the sweet blossom of the apple tree, by the soft touch of the solar pencil. When musing upon my pillow the remembrance of the apple seed and its extraordinary properties came into my mind. I arose to lithograph the thoughts which had thus been invited by calmness and quiet to the chambers of the mind, with the pen. The duration of life enjoyed by the apple tree is in proportion to its slow and steady progress from birth to maturity.

CIRCUIT JUDGESHIP.

William Kent who was appointed Circuit Judge by Governor Seward, resigned that office during the month of January last. Judge Kent is an only son of Ex-Chancellor Kent. The members of the Bar, on his retiring from the Bench, presented him with a piece of plate as an expression of the high estimation in which they held the donee, both as a man and a Judge. He discharged the duties of the office with ability, and in the short time he held the important station honored the venerable father, who was thus honored in the son. William Kent is (we understand,) about visiting Europe. He presents to the world in his life and daily walk, a beautiful specimen of human nature. His venerable father is in the enjoyment of good health, and is often seen in our public streets walking with as quick a step as most men at the age of 50. Ex-Chancellor Kent is in the eighty-second year of his age, and still retains the great powers of his mind unimpaired—a living commentary upon the absurdity of that provision of our constitution which deems experience and the greater acquirement of knowledge a disqualification for a judicial station.

CIRCUIT JUDGESHIP.

John W. Edmonds has been appointed by Governor Wright to fill the office of Circuit Judge, made vacant by the resignation of William Kent. The selection is a good one. Judge Edmonds will fill the office with advantage to the public, and with credit to himself. Judge Edmonds is a very humane man and such alone are qualified for Judicial officers. He has been for four years a member of the Court for the Correction of Errors, and he has also held the office of Recorder of the city of Hudson. The appointment made by the Governor is highly approved by our well informed citizens.

ABBOT LAWRENCE.

Abbot Lawrence whose name has appeared several times within a few years as the liberal benefactor of useful institutions, is the son of Deacon Lawrence of Groton, Middlesex County, Massachusetts. His father was a farmer, and a most excellent and worthy citizen. Deacon Lawrence, had four or more sons, viz. Luther, William, Amos and Abbot. Luther was educated to the law, and the other three I have named, settled in Boston and became merchants. Luther was killed by the machinery of one of the large mills in Lowell, or by a fall in one of those factories, a few years since. These four brothers were good boys when at home with their father, and were, in the language of the people of New-England, "well brought up," and have retained in manhood, in a remarkable degree, the precepts taught them in childhood. Abbot Lawrence was educated at Groton Academy, then under the care of Mr. Butler. In 1803, which is now 37 years ago, he was a school-mate of the writer of this paragraph.

"THE POWER OF THE CORPORATION TO PASS PENAL LAWS.

An application was made to the State Legislature now in session by the Corporation of New-York for authority to pass penal ordinances. The application was referred to a Committee, which Committee reported adversely to the application of the Corporation, and the report was unanimously accepted by the house, and the Committee discharged. A very right conclusion.

THE ROTUNDA.

We had no room in our last number for any remarks upon the Report of the minority of the Special Committee to which the Mayor's Rotunda Veto was referred. By this Report it appears that the Rotunda cost the city, for repairs, $3,523.84, and for the claims of Mr. Vanderlin, $5,439.48, and that it rented for 1,500 per annum. If the Mechanic's charged as extravagantly for their work in repairing the building as the prices paid for public printing it is no wonder that the rent was more than all absorbed. We have given the majority report of the Special Committee. We dissent from the doctrines of this minority report and in toto from the conclusions and also from the mode of blending together the statement of facts on which the conclusions are based. The appropriation of $1500.00 for a Court of Sessions should have credit for the occupancy of that building by the City Courts for a length of time. The Marine Court held its sessions in that building.

The amount paid Mr. Vanderlyn and his creditors was a large sum, and not for repairs, but for the construction of the building.

Persons who erect buildings for rent calculate the cost of erection as a permanent investment, and do not call this expense an item of repairs, nor is this the mode of estimate practised by Mr. Blackstone in his own business.

We give this Report a place, for two reasons, First, because our readers should hear both sides, and second, because we entertain great respect for the gentleman who made this Report. Mr. B. is a most worthy and excellent citizen, and is by no means the first good man who has made a great mistake.

REPORT.

"The Undersigned, one of the minority of the Committee to which was referred the Veto of his honor the Mayor, of the resolution of the Common Council appropriating the Rotunda to the use of the New-York Gallery of the Fine Arts, respectfully reports—

"That so far as the Veto is founded on the objection that the lease is perpetual, there is a manifest error, the resolution distinctly declaring that the occupation of the building is authorised during the pleasure of the Common Council, and not otherwise, and such is the understanding of the matter on the part of the Trustees of the Gallery.

Should the building be needed therefore at any time for public offices, it is within the power of the Common Council to terminate the lease and resume possession of the building.

The ground taken in the veto, that the building can be let for three or four thousand dollars, is also deemed extravagant and erroneous.

The city received from four to five hundred dollars only, for a number of years for the property opposite the rotunda, occupied for the Harlem railroad establishment, and never more than four hundred dollars per annum for the large and eligible premises within the park, occupied by the American Institute, and since March 1843, has given the Institute the use of it free from any charge whatever, as they now also do the Mechanics' Institute in the basement of the City Hall. The fact also that the building in the Park formerly called the New-York Institution contains many rooms unoccupied for offices, and much space that could be conveniently and cheaply arranged for public purposes, and now producing no rent, shows that the expectation of receiving any important amount of income from the building in the Park, is not sustained by any former experience.

The community do not expect, and will never permit the Park to be occupied for stores, manufactories, or other similar business purposes, and do not rely on any part of the public grounds, there, either by sale, or letting for such objects, to pay off the public debt.

"The park has always been used for two purposes, first for the accommodation of public offices: second, when not needed for public offices, for the use of institutions of a public nature.

"Before proceeding to show that the Rotunda is *not needed* for public offices, the course of the city for a long period of years in devoting the public buildings to the second class of objects will be referred to.—In the message of Gov. Clinton to the Legislature at the session of 1818, he thus refers to the building in the Park. 'The principal societies devoted to literature, science, and the arts, in the city of New-York, have by the liberal patronage of the *municipal* authorities, been collected in a spacious and accommodating edifice under the denomination of the New-York Institution. These associations are forming extensive and invaluable collections of the *works of the fine arts*, of our animal, vegetable, and mineral productions and of works and manuscripts illustrating our civil ecclesiastical and natural history, our geography, antiquities, and statistics. They are also zealously engaged in exploring the extensive field of natural science, in developing the principles of political philosophy, and in exalting the literature of our country.'

"'Whenever such institutions appear, they are entitled to the *countenance of government*, for there will ever be an intimate and immutable alliance between their advancement, and the glory and prosperity of the State.' In his message of the succeeding year he again refers to the "institutions devoted to literature, science and the arts as in every respect entitled to the public munificence." The ground occupied by the building in question, the Rotunda, was also devoted to purposes of a similar character; it was erected on ground heretofore forming a part of a street, on closing which the Corporation received about ten thousand dollars more for the land it sold, than was paid by the city in the proceeding for closing the street and obtaining the ground, since which time it has become by the act of 1831, and the subsequent ordinances, a part of the Park, to remain sacred from uses not of a public nature.

"The ground thus costing nothing to the city, was devoted by the city for the purpose of building by private subscription, and at private expense, the Rotunda, as a place for exhibiting works of the fine arts, and the question for the Corporation to decide is, what shall now be done with the building at present unoccupied, in bad repair, and unfit in its present shape, without an expenditure from four to five thousand dollars, to be used at all for the public offices.—The first question to be considered is, whether it is required for public offices, and is suitable for them.—Your Committee cannot suppose that there is any intention to make any large increase of public offices. For those already appointed, if abundant provision is not already made, there are many vacant and unappropriated rooms in the building in the Park on Chamber Street, as well the basement as the third story; and the City Hall, as well the basement as the upper part of the centre of the building. These rooms may be fitted at little expense and used for the public offices, as they are from time to time wanted, but the Rotunda cannot be so arranged without very large expense. It would be nearly, or quite as cheap, to put up a new building, as to reconstruct the Rotunda for the public use. On the other hand, for the exhibition of works of art, very little besides the side walls, a floor, and a roof are needed, and as the building is not required for public offices, no hesitation is felt in recommending the devotion of it during the pleasure of the Common Council to the use of the New-York Gallery of Fine Arts.

"In addition to the public objects of that Institution referred to in the report of the Committee on this subject, in the Board of Aldermen, the works of Art are to be exhibited on every Saturday to the children receiving education at the public schools, and charitable institutions; the schools to be taken in rotation to visit the exhibition.

Eminent artists have agreed, in the event of the building being so appropriated, to furnish the Gallery with paintings, free of charge, to become the property of the citizens who choose to become members for life by the payment of one dollar, to cover its expenses, and others of our citizens stand ready by contributions of money, to purchase paintings, and employ artists with the same object.

"No particular person is to be benefitted by the appropriation of this building to the use asked for.

"No private or selfish end can be gratified by it. On the contrary the public good is the sole end and aim of this institution, and should it ever cease to be wholly public, the Corporation may and should withdraw the use of the building from it. The question of want of power on the part of the Corporation, urged after years of experience to the contrary, cannot be deemed of any force, nor is there any force in the objection, that the Ordinaces pledged the property of the city to the payment of the public debt, and authorize its sale. The sale of the Park is not included within these Ordinances, and will never be made, while its corporate capacity continue.

"If this great city, with its enormous wealth, its immense business and activity—filled with strangers visiting it from all quarters of the world, and making large expenditures within its limits, is obliged by mistaken economical views, to prevent an institution of this character from occupying a building built by the friends of the Arts, and which cost the city nothing, or very little, and to let out the Park for some business purpose, it has reached a condition greatly to be deplored.

"Your Committee, therefore, recommend that the Board adhere to its former resolutions.

Signed,

"W. BLACKSTONE."

A TWOFOLD MEMENTO.

At the head of a cove which makes into the land from the Bay of Narragansett, is a small knoll in which is the grave of

THOMAS WILLET.

Two small stones with inscriptions upon each, mark the place where repose the remains of the

First Mayor

of the first city in commercial importance, upon the newly discovered continent. On one of these stones is the name, age, and year of sepultre, of Thomas Willet, and on the other it is recorded that he was the *first Mayor of the City of New-York, and that he twice attained to that office.*

Thomas Willet was born of English parents, was educated in Holland as a merchant, and emigrated to America in 1629, and in 1664 and 1665, he was Mayor of the city of New-York.

Marinus Willet, great grand-son of Thomas Willet, was Mayor of the same city, 143 years afterwards.

Rev. S. Chapin, of Providence, R. I., came to the city of New-York in June, 1844, with a letter of introduction from the Governor of Rhode Island to the Mayor of New-York, to communicate to the Executive of this metropolis the fact that the mortal remains of his earliest predecessor in office lay buried in a secluded spot near Narragansett Bay, and that the inscriptions which are upon the stones which mark the grave, are nearly obliterated by time, and also tendering his services to the Mayor and Common Council of New-York to procure the erection of a Monument to the memory of the First Chief Magistrate of this Metropolis, the cost of which he estimated at from $350 to 500. The subject was referred to a special Committee of the Board of Aldermen, consisting of Aldermen Drake, Miller and Gale, which committee reported in favor of the erection of a monument, and by so doing were greatly honored. The Report was adopted by the Board and sent to the Board of Assistants for concurrence.

The Board of Assistants by a deliberate vote refused to refer the subject to a committee, and also refused to concur with the Board of Aldermen.

The thanks of the citizens of the City of New-York are due to the

REV. S. CHAPIN, OF PROVIDENCE, R. I.

for the disinterested and praiseworthy effort to procure an official expression of remembrance of their ancient Mayor, from the Government of the greatest city in population and wealth upon the American Continent.

THE ANNUAL TAX BILL.

The Corporation have applied to the Legislature for the passage of the annual tax bill, and the same has been granted. We shall publish the acts in our next. The bill for taxing the property of strangers has not yet passed the Assembly, and it is hoped that it will not. The country members do not want to tax their own produce sent to New-York for sale to support the extravagance of the city expenditures.

LIGHT.

There remains yet to be discovered some easy method of refracting the rays of artificial light and thus cause a greater illumination upon the surfaces which are desired to be made more distinctly visible. There is no doubt but this can be ultimately accomplished. I intend in a few weeks to make some experiments upon light, with a view to this end. Nature has set a copy, and it requires but a careful and persevering study of this portion of its great volume, to begin to learn this important lesson. I have been much instructed in reference to the effect of artificial light upon space, in my frequent subterranean tours in the mammoth cave of Kentucky. A person travelling in this subterranean mansion with a lighted flambeau in his hand can see but a little way into thick darkness, but when I took the precaution to send a guide in advance of me with a lighted torch in his hand, and one followed in the rear carrying a lighted taper, the means of dispelling darkness from a given space was found adequate. This is a wonderful place to go to school, but I found that darkness is a most extraordinary and wonderful instructor.

THE VALUE OF WATER.

Many years ago I made a trip to the summit of a high mountain in company with some young men, for the purpose of encamping upon the pinnacle during one night, that we might be enabled to witness the beauties of an evening, the splendor of a morning, and the sweets of night in the quietude of the high atmosphere. Our route lay through a dense forest—the heat of the day was great, and we became very thirsty. We found no water in our path, and suffered excessively for the want of it. We had some excellent French brandy amongst our stores, but it was then of no use to us, for it would not quench thirst. We came to a deep ravine, in which was some moist earth. This we made into balls, and with our hands pressed out the little water it contained, and it gave us some relief. It was to me the most delicious fluid I ever tasted. We changed our route, and shortly after came to a little brook, which came down the mountain from near its summit. This we drank from, and at once commenced ascending the heights, which was abundant exercise to produce copious perspiration. This brook has its origin with the atmosphere condensed by the refrigerating rocks which form the top of this mountain, which lifts its head among the clouds. What a splendid laboratory—how delicious the pure water which flows from such a fountain, and how rich—how charming—how buoyant the atmosphere which surrounds it. It was pleasure to drink this pure chrystal flood, and breathe the pure atmosphere of the higher regions. Nature here is arrayed in all the stillness of her charms, for quiet is one of its sublimest harmonies.

SLEEP.

In our paper of the 20th ult., we made some remarks upon the mystery of sleep. We received a few days since, a letter from a lady, in which she remarks as follows:

"Your Gazette of the 20th ultimo, contained much matter of interest to me. The article upon "Sleep" was one upon which I particularly dwelt, as it is one upon which I have thought much as connected with the philosophy of dreams—for dreams are to me the *poetry of life*—and who can explain them? Why is it, that some of the mysterious faculties of the mind will still keep watch through the darkness and silence, and lethargy, which settle upon us, and still tell us we are spirits? And what is the chain, so poetic and so spiritual, whose mysterious links are wound so around our being, as to wrap our souls in the many colored mantles of the ideal and unearthly? The connection between dreams and night is wonderful and beautiful. One of the great purposes which night seems to have been intended to answer, is, that it tends to open to us a wider and more glorious region of spiritual realities, than we can discern by day—for, as the darkness brings the wonders of the visible heavens to the eye of the astronomer, so does it bring that fathomless invisible world of wonders to the *mind*, assuring it of an immediate existence, when Sirius and Pleiades shall be blotted from the firmament. This life was not designed by our CREATOR to be wholly a prosaic scene to us, for we have much to enjoy that is beautiful and poetic in our waking, as well as in our sleeping dreams. The musings of memory when the spirit looks through the mists of time, back to the dear wonder-land of childhood, when we live in airy castles, and in an ideal world of our own creation; or in the dark midnight when at the touch of slumber's magic wand we live again among the scenes of our early days, with the loved and the lost; still it is poetry, and who can explain its mysteries?"

COLD.

On the morning of the 15th of March, I noticed a body of water upon a flat roof made of zinc which was covered with ice, and at the same time a body of water lying upon a stone pavement ten feet below it, which was not in the least affected by the cold. The one was exposed to the wind, and the other not. A thermometer in each of these two positions would have denoted a difference of temperature at the same hour

WINTER BIRDS.

On the 11th of March, my winter birds paid me a visit, and were accompanied by a stranger bird, resembling in appearance and size the swamp Robin. I have noticed that birds practice hospitality with a care that discovers a bright trait in the character of the feathered race. Birds were tenants of earth ere man became an inhabitant of this terrestrial surface.

OLEOMETER.

Much enquiry is made as to the accuracy of the Oleometer as a test of the quality of oil. Cattle yield tallow, and hogs produce lard, but the quality of the tallow is dependent both upon climate and food. Tallow from the tropic contains more stearine and less elaine, than that from cattle nearer the poles. Hogs fed upon beach-nuts produce more elaine, than hogs fed upon corn. The melting point of these will be found to differ in exact proportion as the stearine is to the elaine, from the general standard, and the specific gravity is in the same ratio. Oils in a fluid state, hold substances in suspension, as well as in solution. The oil of the Benne seed, compared with that of the Olive, affords an illustration. I have placed these two oils on a plate of iron—heated the iron until the oil was expelled—that which was made from the benne seed, left a varnish on the plate, while that from the olive left no residium. The accuracy of the Oleometer, is a matter of great importance, and should be examined with care, before it is adopted as a standard, to determine the quality of oil. It is possible that Whales of the same species, differ less in the quality of the oil produced by each, than cattle and hogs, but it is not probable. In boring for salt water at Montezuma, at the depth of 604 feet, they obtained water testing by the salcometer 100 degrees, or full saturation. When this discovery was announced, and the specific gravity of the water stated, we remarked at once in the columns of the Journal of Commerce, that they were either mistaken in the quality of the water, or in the figures of the scale, for cold water would not take up or retain as much chloride of sodium as they had announced, and the result of subsequent experiments proved that we were correct.

PUBLIC PRINTING.

It is a matter of surprise and astonishment, that the Public Printing is not done by contract. Those who have had the benefits of the public printing, are vexed at the discussion of this question, because they hope to get it again; and those who enjoy it are vexed, because they are unwilling to part with a fat job. It is one of the most pernicious seeds of corruption in the city Government. Let a Committee of Citizens be appointed to examine the subject, and make a report to the people, and this practise of paying high prices will soon vanish away when a statement of the prices shall be all published to the people

THE NATIVE PARTY.

The natives have nominated for Aldermen in the Ninth Ward, the Hon. D. E. Wheeler. Mr. Wheeler is now a member of the House of Assembly of this State. They have made a good selection. Mr. W. is capable and honest and will be an acquisition to the Common Council.

Mr. W. E. Dodge, of the house of Phelps, Dodge & Co., has been nominated by the same party for Alderman of the Sixteenth Ward. This is a good nomination. Mr. Dodge is a highly respectable merchant, a practical business man, and will make a most excellent member of the Common Council.

Mayor Harper will no doubt receive the support of the substantial business men of the city of all parties. He has performed the executive duties to the satisfaction of the public and is a most worthy man, as well as a faithful and independent public officer.

Saul Alley, Esq., has been talked of for the Democratic candidate for Mayor. Mr. Alley will not accept of a nomination. Were he to fill the office of Mayor, we have no doubt he would veto half of the acts of the common council. If three-fourths of the acts of the common council for the last ten years had been treated in the same way, the citizens would have been better off.

AUCTION DUTIES.

The Resolution offered in the Assembly by the Hon. Abraham G. Thompson, Jr., on the 11th inst., requesting the State Comptroller to report the amount of duties paid into the State Treasury on sales at auction has met with a response from that officer.

The aggregate amount of duties from 1798 to 1844 both years inclusive is $7,420,434.98, of which the city of New-York has received for the Broadway Hospital, Foreign Poor, &c. $1,432,036,60.

The largest sum paid in duties in one year, was in 1327, $298,589.65, and the largest received of the duties for city purposes in one year, was in 1816, $73,705.80.

REDUCTION OF DUTIES ON SALES AT AUCTION.

A reduction of the rate of duty on sales at auction would increase the public revenue, and benefit trade. It is suggested that this dimunition should only apply to goods sold in original packages. This is recommended on the ground that it involves the same principles as cheap postage, and the same argument applies to a reduction of the rates of Toll on the Erie canal, and to making the public ferries entirely free.

MEAT SHOPS.

The Board of Aldermen have made a move to monopolize the sale of meat by permitting only two persons in each ward to sell this necessary article of food. Such kind of regulations belong to the dark ages, and are discreditable to the Board of Aldermen. It is ridiculous for the city government to attempt to put trammels upon trade. Better restrict their own expenditures for such a measure is imperiously called for.

APPOINTMENT OF INSPECTORS.

The most ludicrous practice has been for a long time indulged in by the appointing power in nominating persons for inspectors, who have no knowledge of the quality of the article they are called upon to examine. It is like applying to a shoemaker to mend a watch. We were some years ago very much amused in noticing a mistake made by a traveller who on entering Pittsburg on horseback found the brute on which he was riding had lost a shoe, and on alighting at a public house in the city of smoke and soot, he accosted a boy that stood near him, and requested the boy to ask his master to put a shoe upon the foot of his horse. The boy replied that his master was a Merchant Tailor. The smoke in Pittsburg gives to the countenances and dress of its inhabtants the appearance which a Blacksmith's employment would in a clear atmosphere.

Persons are appointed inspectors whose occupations are as much at variance with their new offices as that of the Tailor is to that of the Farrier. The Governors have in this made a greater mistake than the traveller.

RETRENCHMENT A SUBSTITUTE FOR TAXATION.

Governor Morton in a message to the Legislature of Massachusetts, recommended to that body to substitute retrenchment for Taxation.

MESSAGE OF THE MAYOR.

His Honor Mayor Harper has sent a message to the Common Council urging that body to take measures to remove the heaps of manure that now lies piled up on several of the Piers. The Mayor is right in this. Unless these accumulations are speedily removed the piers of New-York will soon present the same celebrity as the island of Ichaboe, which a Yankee sailor recently denominated the "King of Dunghills," and our harbor may become the resort of the Ichaboe flotilla.

MAYOR'S OFFICE, NEW-YORK,
March 17, 1845.

To the Hon. the Common Council:

GENTLEMEN:—Frequent and reiterated complaints have been made to me of the nuisances existing in several of the Slips in the lower part of the city, arising from the immense deposites of manure gathered from the streets and left there, and which have been accumulating for a long time, until the residents in those neighborhoods have found it necessary to make their complaints, and demand relief.

So loud, indeed, have these complaints become, of late, and they are grounded, I think, in so much justice and reason, that I feel it my duty to call your attention to the matter, with the confident expectation that you will take immediate action to remedy the evil and remove the cause of complaint.

You will allow me to suggest the propriety of procuring vessels to convey the manure already accumulated, and that which may hereafter be gathered from our streets, to Randall's Island, where it may be deposited without giving offence to any one, and disposed of at such time and in such manner as the common council may think proper.

Permit me, gentlemen, to urge the necessity of immediate action in the premises, both as a matter of justice to the complainants, and of duty as the conservators of the health and cleanliness of the city.

Respectfully,

JAMES HARPER.

NOMINATIONS FOR THE COMMON COUNCIL.

The Natives nominated for Aldermen in the Second Ward, Wm. Gale, Esq. and for Assistant, Wm. Everdell, Esq., both worthy and good men. Mr. Tucker and Mr. Blackstone have been renominated in the 8th Ward, and these gentlemen are also worthy good men. Aldermen Bunting has been renominated in the Seventh Ward. He is also a worthy good man. James Smith, Assistant Aldermen in the 5th Ward has been nominated for Aldermen of that Ward. Mr. Smith is a worthy and excellent man. It is proper here to mention that the Board of Assistants were in session when the ordinance was passed repealing the Street patching nuisance which had existed for years a disgrace to the city and source of annoyance to the citizens. The ordinance had passed both boards and was in the hands of the clerk of the Assistants, when an application was made by a delegation of the Anti-Assessment Committee to the Clerk of the Common Council to send the ordinance at once to His Honor the Mayor at his residence, but the Clerk declined. The delegation then applied to Assistant Aldermen James Smith of the 5th Ward, then in his seat, and requested him to procure the ordinance from the clerk for the examination of the Mayor. Mr. Smith obtained the ordinance and delivered it to the delegation which had been sent for it by the Mayor. The Mayor as soon as he had examined the ordinance promptly endorsed his approval upon it and the delegation returned with it to the Hall and delivered it to Mr. Smith and he passed it over to the Clerk and by this act of Mr. Smith it became of force that night. Alderman GALE, Alderman DRAKE, and Alderman BUNTING, were very active in pressing the repeal of this obnoxious street patching ordinance, and they each and all deserve great credit for their efforts in this important matter.

When we shall have learned the names of the other native candidates, we will publish them. We hope to be able to announce the name of EDWARD PRIME or LORA NASH as a candidate for Aldermen of the First Ward. Both of these gentlemen are in favor of reform, and should make the sacrifice of one years' services in aid of the government of the city. Both of these gentlemen are wealthy, and the loss of the time is therefore no inconvenient pecuniary sacrifice. Either of these gentlemen will be a great acquisition to the Common Council—one is a strong Whig, and the other equally a strong Democrat, but in the matter of City reform, both are of the same opinion.

CITY COMPTROLLER'S REPORT.

The Editors of the Journal of Commerce are reviewing the communication relating to the City Comptroller's Report, published in that paper of the 10th inst, which communication is in our columns. We will give their remarks in our next. We perceive that they refer to an extra *allowance* made to the Street commissioner, after midnight on the breaking up of the last Common Council. This "*extra allowance*," amounted to $2300.00 for extraordinary service. Mr. Ewen was paid a large salary, and should not have received a single dollar of this extra pay, but the Common Council had a sort of precedent for it inasmuch as the present City Comptroller before leaving office, in 1843, made a claim upon the Board of Supervisors for near $4,000, "extra allowance" for duties performed in the receipt of Taxes paid voluntarily to the city Comptroller prior to January 1, 1843, and the committee to whom it was referred, reported in favor of the claim, but some one of the Democratic members made objection, saying that the Receiver of Taxes is paid but $2,000 for a whole years services, and here was near double that sum, to be paid for about *six week's* services, and to a public officer who was also in receipt of $2,500 per annum, *besides*. The Board reduced the amount of the donation to $1000, which was precisely that sum too much. This was an act of a Whig common council, the other was the act of a Democratic, or rather, we should say, Locofoco common council. A strictly democratic common council would not have done this outrageous thing. It is due to the present Comptroller to say, that since he has held that office under the *Natives* he has performed the duties of Comptroller and also of Deputy Comptroller, for the pay of Comptroller, which is a *small compensation* for the labor required to be performed. If the Comptroller should retort upon the old street department he would make a smoke that would tingle in the eyes of the old Roosters and pensioners in that establishment. The surveyor's bills are an item in the expenditures of that office which would startle the citizens if they could but see the aggregate of these mammoth bills.

MEMORIALS TO THE LEGISLATURE.

The Hon. ABRAHAM G. THOMPSON, jr., member of the house of Assembly from this city has presented in that house numerous memorials in relation to Taxes and Assessments, signed by the most respectable citizens of the city of New-York, without reference to party. These memorials have been referred to the committee on ways and means. We have no doubt that great efforts will be made by certain persons to prevent an investigation into the proceedings relative to the passage of the bill authorising the Corporation to buy lands for assessments. In 1843, the Corporation of New-York paid the large sum of 1,007.63, for lobby services at Albany as appear by the city Comptroller's Report of that year, p. 36. Some of the same lobby members have been at Albany the present session, and we wore at one time so near one of them as to be able to see their shadows on the wall.

BOARD OF PERMANENT ASSESSORS

The County of New-York suffer greatly for the want of a permanent Board of Assessors of the annual tax. A Board of Assessors composed of three members which should have the supervision of the Ward Assessors would produce a more equal assessment of Taxes and bring into the Assessment Rolls a greater amount of property. This Board should have the correction of erroneous taxes and should also have the control of the list of jurors, and the supervision of the collection of the fines paid by jurors.

NOMINATIONS FOR THE COMMON COUNCIL.

The Natives, the Whigs and the Democrats have each nearly completed their nominations for the Common Council. The Natives have decidedly the best set of candidates.

DEMOCRATIC NOMINATION FOR MAYOR.

Mr. Havermeyer has been nominated as a candidate for Mayor by the Democratic Mayoralty Convention. Mr. Havermeyer is a merchant and highly respectable and worthy.

THE WATCH AND LAMP TAX.

The expense of the Watch and Lamps to the amount of $300,000.00 per annum should be assessed upon the owners and occupants of buildings, the contents of which are protected and benefitted by these two expenditures.

SINGULAR WORM.

During the last summer my little daughter discovered a singular and very curious worm. Its length was one inch and a half Its diameter three-fourths of an inch—its color was light green with a whitish cast, or semi-illumination. It had fourteen legs, which were of bright amber color, and transparent. All over its body there were little oval shaped cocoons about a sixteenth of an inch long, of pure white, and having the lustre of the richest satin. This worm was very inactive and refused food. I placed it in a box and made observation of it three times every day, when at length I discovered life in these cocoons, and occasionally I discovered the end of the cocoon fly open like a door with a hinge, and a beautiful little fly would emerge, and after a little time would take its flight. These flies had antenea longer than their bodies, their wings were very brilliant when viewed under a magnifying glass. One of the cocoons was broken off from the body of the worm, and the insect within it died, and I have this insect now preserved. I have also kept the worm, which is now reduced in size to less than half an inch in length, is inactive, and has never taken food. I have several species of worms or caterpillars in a chrysalis state, and all of these partook of food before the change, and some of them eat extravagantly. The caterpillars which I had in my cabinet in June and July last, passed through the entire change in fourteen days counting the time from the period when they first fasten the head to some solid substance until that period when they take the flight of a splendid and beautiful Butterfly.

The period of 48 hours elapses from the time the glutinous substance exudes from the head of the worm to the time when it sheds its worm coat, and becomes a chrysalis, and twelve days from the chrysalis to the butterfly. On the morning of the fourth of July I opened my cabinet and found I had eight beautiful butterflies. It was a lovely morning. The sun shone in all its splendor, and I at once gave these beautiful insects the full liberty which is their birth right, and as I took each upon one of my fingers and held it in the suns rays it would spread its little wings, give my finger a last embrace, and hie away among the sweet and beautiful flowers to pass a brief period of existence and then pass to another change.

What a page in the great volume of Nature these insects open to the view of mortal man—illustrating a change—yes, a change—not death, but a change both wonderful and mysterious, yet convincing—no doubt hangs upon this illustration, not even the shadow of a thought that contains a doubt. The hated, the despised worm which is often trodden under foot, becomes the beautiful, the splendid butterfly—full of cheerfulness, and activity—adorned with colors of the richest hue, spangled with gold almost too bright to look upon—and when I contemplate this charming insect, floating upon the bosom of the gentle zephyr, and look back to the worm crawling on the ground I feel instructed, humbled; and yet I feel an emotion arising in the temples of the mind which gives birth to the homage of adoration.

REVIEW OF CITY COMPTROLLER'S REPORT.

We give in this number of our paper a review of the City Comptroller's Report—it was put in type for our previous number, but was crowded out for want of room.

This review was written by an ex-officer of the Corporation, as we are informed. It is a plain and well expressed *document*, and although the writer is one of our most persevering assessment opponents, still we are glad at any time to quote him on the right side. The facts stated in this review as to *kept back bills*, have been frequently noticed by us, heretofore. It is an old practice, and a very bad one, and it is a pity that the Natives had not reformed this abuse, for the citizens had rather know the worst about the City Treasury than to see attempts made to varnish it over and thus attempt to cover the leaks.—We sent to the Binder the other day, the City Comptroller's Reports from 1837, to 1845, both years inclusive, to be bound up, and placed in the same volume Mayor Varian's Message to the Common Council of May 14, 1839, as a commentary upon these fiscal documents. We deemed it proper to put the text and the commentary together. We had intended to have re-printed the City Comptroller's Report, but this review shows that it is so imperfect that we deem it more useful to our readers to present the review instead of the Report. The City Comptroller and the ex-officer of the corporation who penned this Report, were the gentlemen who attended upon the Legislature in 1843, to procure the passage of an act authorizing the Corporation to purchase lands which that very Corporation had procured to be shamefully assessed. The City Comptroller has labored to make an argumentative report, to operate upon the minds of the Tax-paying citizens, as to the economy of the fiscal department, but this should have been made in the annual tax bill, by showing that the amount of the annual Tax is decreased. No argument that contradicts the footings of the Tax Bills, will be regarded by the people. We have been found fault with for commenting upon the city fiscal policy, but we must not heed these complaints. We know no difference between Democrats, Whigs and Natives.—The act is the same from whichever party it proceeds. We speak of public acts, and not the actors—of the officer and not of the man. It is of no consequence to the public what party a man hails from, his public acts are the test, and determine whether he is of the right party. The Natives, prior to the election of 1844, carried a Banner on which was inscribed "ANTI ASSESSMENT AND REFORM." This Banner was carried in the procession got up to celebrate the victory they achieved over their political opponents. We have looked for the fruits of this proclamation thus twice made to the people and have endeavored to publish them. We found the greater portion in the acts of Mayor Harper. The city financial department should be managed by an independent board, whose opportunity of leisure will afford them time to attend to the public business. Members of the Common Council are too much occupied with other duties to give their attention to finances of the magnitude to which the city fiscalities have attained to.

The business of the Common Council is all transacted at nocturnal sittings, and when it is proposed to change these to daily sessions, it is objected to on the ground that the members have their own affairs to attend to in the day time. What a commentary this plea! Yes, what a commentary!! The public business of this great city cannot be transacted except when the members have done their own work and are fatigued enough to be in their beds instead of spending half the night in hurrying through important affairs. Better call into departments competent men who neither want office nor its patronage. Such men will reduce the Taxes to one half the present rates.

From the Journal of Commerce of March 10, 1845.

THE CITY COMPTROLLER'S REPORT.

To the Editors of the Journal of Commerce:

Gentlemen: From your remarks in the Journal of Wednesday, upon an extract from the Comptroller's report in relation to the city expenditures, it would appear that you were under the impression that "the decrease of expenditure after the American Republicans came into power, compared with the previous year, was nearly a thousand dollars per day."

As such is not the fact, I desire to disabuse your minds and those of your readers of this erroneous impression.

In making the comparative Statement shewing this result, the Comptroller has included in the sum of $2,336,484 55, which he denominates as the total expenditure for the support of the city government, the payments made upon common schools, the floating debt, and the interest on the city debt, on which neither Common Council could exercise any control; the former being controlled by the Board of Education, and the two latter being a payment on the floating debt, and the payment of the annual interest on the city debt, and are therefore improperly called expenditures in the sense intended by the Comptroller. These items will be found in Schedule D, p. 12. Comptroller's Report. If you will turn to page 60 of said Report, you will find that the preceding Common Council paid, within the 4½ months comprising their term of the financial year, the instalment of the floating debt, amounting to $50,000, and $402,803.46 of the interest on the city debt, which amounted to $561,899.86. The present Common Council paying the balance of said interest within the 7½ months, amounting to but $159,096.46. These are fixed sums which must be paid within the financial year, no matter what Common Council may be in power. No discretion can be exercised in regard to them. Yet the Comptroller, from the mere circumstance of the previous Common Council's having paid the larger portion of the interest on the city debt, together with the instalment of the floating debt, within a short period of the year, leaving but a small portion of the interest to be paid within a larger portion of the year, in the time of their successors, has endeavored by drawing a comparison between these payments, with reference to the relative terms of the two Common Councils, to make it appear that there has been "an average *decrease* of expenditure for the support of the city government, by the present Common Council, of $96,164.53 *and eighty-two hundredths of a cent* per month," for per "seven and a half months a total decrease of $736,234.03 *and sixty-five hundredths of a cent.*" Now, from the foregoing statement it would appear, that the "decrease" in the amount of these payments, was not occasioned by "the present Common Council," as stated by the Comptroller; but was produced by the payment under the preceding Common Council, of the floating debt instalment, and nearly the entire amount of the interest on the City debt required to be paid within the financial year.—It will be perceived, therefore, that these payments have nothing to do with the action of either Common Council, in increasing or diminishing the expenditures of the city. It is of no importance whether they were paid in the first or the last of the year, a sum having been levied in the taxes to meet their precise amount. The calculation of the Comptroller, therefore, going to the 82-100 part of a cent, falls to the ground.

The statement contained in the other extract of the Comptroller's report, is equally fallacious in its results. The extract is as follows:—

"Total expense of support of the City Government for the year 1844, deducting the amounts paid on account of Floating Debt, interest on City Debt, and Common Schools, as will be seen on page 61, is $1,423,751,65, of which amount there has been expended by the late Common Council in four and a half months to May 15th, 1844,..... $616,643,09
There has been expended by the present Common Council in seven and a half months, to December 31st, 1844,..... 807,108.56

$1,423,751.65

Expenses four and a half months to May 15th, 1844, by the late Common Council, $616,643.09; the average expenditure per month, is.....$137,031.79
Expenses seven and a half months to December 31st, 1844, by the present Common Council, $807,108.56; the average expenditure per month is.... 107,614.47

Decrease,..... $29,417.32

Showing an average *decrease* of expenditure as per above, for support of the City Government by present Common Council, of $29,417.32 per month, being for seven and a half months, a total *decrease* of $229,679.92.

The above statement is exclusive of amounts paid on Floating Debt, interest on City Debt, and Common Schools,"

The above statement embraces all the objects of expenditure for the support of the City Government which are subject to be influenced by the action of the Common Council. The Comptroller, however, in making the comparison of expenditure between the late and present Common Council, with reference to the time of each within the financial year, has based his comparison upon false premises, and is therefore entirely fallacious in his conclusions, as I shall endeavor to show; and if I be in error in any of my statements, it will afford me pleasure to be corrected by the Financial Department

Bills incurred within the last three weeks in December are usually thrown over and paid in January, and February. Consequently the first 4½ months of the late Common Council included the expenses of three weeks of the preceding year, while the last three weeks of the succeeding 7½ months have been thrown into January of the present year. It follows, therefore, that the comparison should be as 5¼ months to 6¾ months, instead of as 4½ to 7½ months assumed by the Comptroller. On page 61 of Comptroller's report, the actual expenditure made within the 4½ months is set down at $564,678.84, and the sum of $616,643.09 assumed by the Comptroller as the expenditure within that period is made up by adding the sum of $51,964.25, paid by the present Common Council for expenditures said to have been incurred during the preceding Common Council, by which the 4½ months of their term is made to assume the payments of the succeeding fortnight, as well as those of the three weeks preceding that term; while the succeeding 7½ months under the present Common Council, has only been charged with the amount of the payments actually made therein, for a portion of the expenses incurred within the period; the sum of $51,964.25 being deducted from the payments made within that time, and added to the expenditures of the previous 4½ months, while the expenses incurred by the present Common Council within the 7½ months, which have been thrown into the present year, are not included in the sum stated as the expenditure of the 7½ months. I have personal knowledge of several bills which have been thrown over from November to Febuary for payment

There is another important element to be taken into consideration in making a comparative statement of the expenses of each portion of the financial year. All the monthly salaries for December are paid in January, and all the quarterly salaries in February; consequently these salaries should be deducted from the amount charged to the first 4½ months of the year, as having been paid for what was incurred and due the previous year, and they should be added to the amount paid within the last 7½ months, as having been thrown over into the present year for payment. That such is the fact I think I shall be able to prove pretty clearly from the Comptroller's report.

The total amount of salaries for twelve months (Compt. Report p. 12.) is $233,554,17, of which amount the previous Common Council paid $104,298.66, and the present Common Council but $113,582.40; whereas the proportion of salaries due to 4½ months, as any one may see by calculation, is only $87,583, and that for the succeeding 7½ months is $145.97; showing that the late Common Council paid $16,715.66 for salaries of previous year within the 4½ months and that the present Common Council have thrown over for payment in the present year $32,388.60, which should have been added to the stated expenditure for salaries during the 7½ months while the amount over-paid in the previous 4½ months should be deducted from the stated expenditure for salaries during that period, making a difference in the item of salaries alone of $49,104.26. Yet the Comptroller, as if he really did not comprehend the figures contained in his own report, attributes the large payments for salaries in the 4½ months and the comparatively small payments for the same in the succeeding 7½ months, to a reduction made during the latter by the present Common Council. On page 83, under the head of salaries, he says—"Upon this account there has been a considerable reduction, as will be seen by a comparison of the figures." The total reduction of salaries made by the present Common Council, after deducting additions, amounts for the year to but $5000, commencing from the first of June, which leaves but 7 instead of 7½ months. All the quarterly salaries, being those $1000 in amount and upwards, and all the monthly, salaries have been thrown over, as before stated, into the present year for payment; leaving but 4 months of the quarterly salaries and six months of the monthly salaries to have been

paid within the 7½ months. The average time upon which the reduction has been made so far as relates to the figures referred to by the Comptroller, is 5 months, —the reduction on which would be but little rising $2000. Yet the Comptroller's statement would make it appear that the reduction in the salaries by the present Common Council, has been at the rate of upwards of $49,000 per annum.

To prove the position which I have advanced, to the understanding of the most feeble comprehension, it is only necessary to go to the "figures" in the Comptroller's report. For this purpose I will refer to the salaries in the Street Commissioner's Department, which have not been altered, (page 51). The Street Commissioner has paid, prior to 15th May, $1250; subsequently, $122.28; making a payment to the Street Commissioner within the 4½ months of the preceding Common Council, of $1372.28, The payment to Street Commissioner for salary during the 7½ months succeeding is $1,127.00. The amount of salary actually to the Street Commissioner for the 4½ months, was but $955.61; but two months of the quarter of the previous year having been thrown into that period, swelled the amount to $1372.28; whereas the actual amount of salary due to the Street Commissioner for the 7½ months preceding was $1544.39,—two months of the salary amounting to $417.37 having been thrown over to the present year for payment.—The same will apply to the salaries of the other officers of this department, with but one trifling exception, as will be perceived by the following extracts: The assistant Street Commissioner received within the first 4½ months $499.99; within the last 7½ months $566.09; first clerk within the first 4½ months, $434.40 and within the last 7½ months only $436.04; second clerk; $333.-26 for the first 4½ months, and but $311.09 for the last 7½ months. Draughtsman and redemption clerk $511.76 first 4½ months; $529.09 last 7½ months. This salary was increased $250 from previous year. Superintendent of wharves, $419.35 first 4½ months, $393.35 last 7½ months, and so on with others. This "difference in the figures" has not been occasioned, as would be supposed, from the Comptroller's remarks, (page 33,) from a reduction in the salaries, but from the causes of which I have given a demonstration; none of these salaries having been reduced by the present Common Council.

The basis of the Comptroller's comparison of expenditure, involves other inaccuracies which may be gleaned from his report; and although those which have met my observation relating to the expenditures in the Street Commissioner's Department are not large in amount, they are nevertheless important, as showing the partial tendency of that report.

The late Street Commissioner on leaving Office, paid into the Treasury several unexpended balances on various accounts, amounting in aggregate to upwards of $6000. The Comptroller credits the expenditures on these accounts, with the balances thus returned in making up the actual expenditure of the year, as compared with the previous year; but gives no credit for them in comparing the expenditures under the respective Common Councils. For instance, on page 83, the Comptroller states, "From the expenditure of $30,885.51 (for Street expenses) should be deducted the amount of $2,375.56, paid into the Treasury by the late Street Commissioner." "This will make the actual cost for the year $28,509.98." On pages 45 and 6, in giving the comparative expenditures under the former and present Corporations, the expenditure of the former on this account is stated to be $8,138.45, whereas the sum of $2,375.56, acknowledged to have been paid in by the late Street Commissioner, should have been deducted from it, which would have shown the actual expenditure to have been but $5,762.88 for the 4½ months, which being added to the sum of $22,747.09, the expenditure stated to have been made during the 7½ months under the present Corporation, would show the actual expenditure to have been $28,509.98 as stated by the Comptroller on page 83.

To what extent similar inaccuracies run through the report, of course I am unable to judge from the short time I have occupied in examining the report; but enough has been shown, I trust, to controvert the statements contained in the extracts to which I have referred, and that the calculations have been made upon false premises, producing results erroneous and unworthy of credit.

The cases which I have given are but examples of the inaccuracies in relation to all the other branches of expenditure, of which the two sums assumed by the Comptroller for the comparison are composed. That there are other expenditures made within the 7½ months, not included in the Comptroller's statement of the expenditures for that period, I refer for proof to the report of the Superintendent of the Alms-house, (page 79 Comptroller's Report,) in which it is stated that the bills incurred by the Alms-house Department, remaining unpaid at the end of the year, amount to the sum of $19,494; and the same may be safely said of all the other Departments.

The only correct data upon which to make the comparison of the expenses of the two Common Councils, would be, to ascertain the exact amount of bills paid in the 4½ months belonging to the previous year, and deduct such amount from the expenditure charged by the Comptroller to that period, and the amount of bills incurred by the present Common Council within the succeeding 7½ months, which has been thrown into the present year, and add it to the amount charged by the Comptroller as the expenditure within that period. A more satisfactory comparison, however, would have been, to have compared the expenditures of the present Common Council with those of their predecessors, during the same period of the previous year. I have no doubt but that such comparison would be strongly in favor of the previous Common Council. I have reason to believe that an unusual amount of the expenditure of the 7½ months of the present Common Council, has been thrown into the present year for payment, not only to favor the comparison which has been presented to the public in the Comptroller's report, but to conceal the fact of a large increase of expenditure during the year 1844,—the same having exceeded the amount levied for the purpose, $177,115.05, and having exceeded in a large sum the amount expended the previous year. Where then is the saving or decrease in the City expenditures, to the amount of $220,679.9240-100ths for the seven months, referred to by the Comptroller? Where is the decrease of a thousand dollars a day? I submit the following statement made up from the Comptroller's report. Page 84 gives the information in relation to the watch, and lamps and gas, which being deducted from the sum of $1,423,747.65, given as the total expenditure, gives the expenditure for the County contingencies as I have stated them. The Comptroller, however, has not tated in his report the amount levied for County contingencies, including, also, cleaning and repairing streets. This amount fortunately has been obtained from Doc. No. 20 of the Board of Supervisors, who made the levy in October last.

	1844.		
	Levied.	Expended after deducting all receipts.	Excess of expenditure over tax.
Watch	$266,000.00	$270,329.76	$4,329.76
Lamps and Gas	120,887.36	129,021.87	8,134.51
County Contingencies, including cleaning and repairing streets	865,750.24	1,024,400.02	158,649.78
Total for support of city Government	1,252,637.60	1,423,751.65	171,114.05

The importance of this subject to the public must plead my apology for occupying so much space in your columns. E.

CITY COMPTROLLERS REPORT.

We give in connection with the above review of the City Comptrollers report, from the Journal of Commerce of the 10th instant, a reply to this review from the Journal of Commerce of the 17th inst. It is due to the city Comptroller, to give both, in the same number of our paper.

We purpose to post up the pages of the Comptrollers Report in order that our readers may see for themselves the items of the Report of 1845 with the items in the Report of 1843. A comparison of the two together will demonstrate in what items there is a difference, barring the accounts and bills kept back both years past the balancing day. The Comptroller's report should state the amount of bills suspended or unaudited at the close of the year.

REPLY.

From the Journal Commerce of March 17, 1845.

CITY COMPTROLLER'S REPORT.

Your correspondent E. has labored hard to bring distrust upon the Comptroller's annual report, and talks about "inaccuracies, false premises," &c., just as if the Comptroller, in this public document, had been playing the part of a political partizan, and would make a report "showing results unworthy of credit."

Now this whole matter is very simple. The Comptroller has made just such a report, and upon the same principle *as former reports*, giving a true statement of all payments and receipts during the financial year 1844. Had he done what E. desired, *he would have done what no previous Comptroller has ever done*, that is, make the separation between the last and first days of the year. If any former Comptroller has ever done this I am not aware of it, and would thank E. to point out any such case. Certain I am that no such thing was done in the report of 1843.

But the great cause of complaint arises from the fact that he has divided the financial year into two parts showing thereby that the People have saved money by their changing their City Rulers, and entrusting the management of the affairs of the City to the American Republican party. He thinks "a more satisfactory comparison would have been to have compared the expenditures of the present Common Council with those of their predecessors during the same period of the previous year." Mr. E. has this done at his hand, so far as it relates to the Alms House department, where there has been hitherto the greatest waste and prodigality. He will find his plan adopted in the Report of the Superintendent, pages 78, 79 and 80, and should silmilar results be the consequence of adopting the same plan by the Comptroller for the other departments, it would prove quite unpalatable to Mr. E. and his party. This report shows that the cost of supporting paupers and prisoners 7½ months, from 16th May to 31st December, 1843, by the former administration, was 16 cents per week more than it cost the *corresponding* 7½ months from 16th May to 31st Dec., 1844, by the present administration; which amounts to a saving on 3757 persons, at 16 cents per week, of $601.12 per week, and to $19,536 for 7½ months.

It appears by the same report, that it cost the late Common Council 102⅔ cents per week, to support 3933 paupers and prisoners from 1st Jan. to 16th of May, 1844, which is 28 cents more than it cost the present administration the residue of the year. Now I have good reason to believe that there will be all that difference in favor of the present administration for the first 4½ months in 1845; but will only put down the same as before, 16 cents per week on 3933 persons, and we have a saving for 4½ months or 19½ weeks of $12,271, which added to $19,536, makes the sum of $31,807 saved by the economical management of the present Commissioners of the Alms House, the Superintendent and Officers, all of whom, as I believe deserve credit for bringing about this result.

There is no escaping this result, for you are taken on your own ground. Your party is weighed in your own balance and found wanting. I pin this to your sleeve for you to look at until after election, and challenge you with fair play to take it off.

If you would like to know how such a result has been brought about, I will tell you, on condition that you keep it a profound secret until after election; or if it gets out, you deny it stoutly in your party papers. It appears by a late report of the Commissioners of the Alms House, that it took 551 barrels more flour to feed 128 less average number of persons, 7½ months of the former administration, than under the present, which by the rule of *loss and gain* makes 1102 barrels flour *wasted* in one year, at an average cost of $4.74, making a loss of $5,223.43; to which add $1.46 per barrel on 6,630 bbls. consumed during one year, being that much over its real value, amounting to $9,752, and you have the sum of $14,975.48 waste, and for bad purchasing in one year.

It also appears by the Commissioners' report, that with the same number of horses and carts, the former commissioners paid $114.31 for lighterage and cartage while the present commissioners paid only $16.25.

The public tables have been abolished at the Alms House and Penitentiary, which will save from $5,000 to $8,000 per year. There is now a commutation with most of the officers by which they support themselves at a stipulated sum, instead of receiving their support from the City Government. There has been a contract made to feed the Prisoners at the Penitentiary (200) at 6¼ cents per day. There is a saving in many other ways, which I have little doubt will equal $50,000 at the termination of the year.

In the other departments we will give Mr. E. a few items which he cannot dispute. The Tea Room which cost the former administration $2,065 in 4½ months or at the rate of $6,506 per year, was abolished by the present Common Council as soon as they came into power. Carriage hire, which cost under the former Common Council $946 in 4½ months, or at the rate of $2,522 per year, has cost the present Common Council $110 in 7½ months, or at the rate of $178 per year, making a saving of $2,344 for this item.

The present Common Council have collected of second hand dealers, for licenses, $1,550, when nothing had been collected by the previous Common Council for a year.

I will ask E. how it happens that, under the head of *sundries*, among the Almshouse items of the former administration, is put down the sum of $3,182.20? This is a large item for *sundries*, and the people ought to have a bill of particulars. Will E. also tell us how it happens that the former Common Council paid $12,861 for counsel fees and costs in 4½ months, from 1st Jan. to 16th May, 1844, while the present Common Council have paid only $1,894? I suppose that we shall be told that these are *hold over* bills; but when I look back into the previous year, 1843, I find there was paid in that year, $22,358 making the

enormous sum of $35,219 paid in 16½ months for counsel fees and costs by the former administration.

The truth is, that we the people of this city, have had a nightmare resting upon us, for years, in relation to the management of our city affairs, and many have been heard to say—"it is of no use; we can never hope for a better state of things." We have tried a new party for nearly a year, and without former experience, they have saved us tens of thousands, and, if continued in power, will no doubt save us still more in all the departments where it is practicable. In the Watch, and Lamp, and some other departments, no party can effect a reduction of expenditure, for the city is continually increasing.

We say, separate our city government from national politics; have it understood, we are to vote as we please without being called to account by party leaders, and all will be well; our city will be governed for the benefit of the *citizens*, and soon *stereotyped politicians* and leaders of cliques will find that "Othello's occupation 's gone." F——

TAXATION.

The increase of Taxation is injurious to any political party, such has been the experience of the world from the commencement of imposing public burdens from the earliest periods of these exactions to the present time. The Mamelukes in Egypt lost their power by that very measure. The increase of Taxes enable those in power to be more profuse in public patronage, but even the increase is not sufficient to satisfy all their office-seekers and operators, and the discontented soon become the disaffected, and thus the party is weakened, and besides this, the tax payers who are very numerous are made sensible by the presentation of their tax bills, that all is not right, and they will quietly and uinfluenced by polical preferences cast their votes in favor of a new candidate who promises to make retrenchment. At the termination of every election the great majority of the office-seekers are disappointed, for there is not offices for one in twenty of the applicants, and thus disappointment weakens the successful party at the next election.

EQUAL TAXATION.

President Jackson in his proclamation issued on the occasion of the nullification doctrines of the State of South Carolina being put in practice, remarked that "human ingenuity had never been able to frame a system of Taxation which operated with perfect equality.

INCREASE OF TAXATION IS DESTRUCTIVE.

In a speech recently made at a meeting held in Birmingham, England, before the Anti-Corn-Law League, by William Brown, Esq., of the Commercial House of Brown, Shepley & Co., of Liverpool, some facts were stated by Mr. Brown, which will be of service to put on record in this land of freedom,

Mr. Brown said: "Let us take warning in time of the fate of Cadiz, Venice, Augsburg, and other cities that were once important, and which are now no more."

Mr. Brown quoted Lord Chatham, in which he said:

"Give freedom to Commerce, and lighten the pressure of *Taxation* and you will have no complaining in your streets."

Again he says:

"A rigid and efficient system of *Retrenchment* enabling us to take off the Taxes upon salt, upon soap, upon leather, upon iron, and a few other articles of subsistence, our advantage from position, from coal mines, and from the skill and energy of our people, are so considerable, that were it not for *unwise* laws, and *overstrained Taxation*, Britain for ages to come might continue to be the great workshop of the world."

AGRICULTURE.

The experienced Agriculturalist is a man of science, his farm is his laboratory. The employment of the farmer tends to more real enjoyment than any other employment, for the the rewards of labor are sure, and in that proportion that neither stimulates the mind to excess, nor depresses it to injury.

The farmer from boyhood to old age is a student in the school of Agriculture and is always a learner.—The Book of Nature is an unending volume, and its pages are always open to those who are disposed to peruse them.

There is abundance to learn and nature is continually making new developements as the wants of the human family make these needful. The great Treasury of Nature is an inexhaustable store.

THE NATIVE PARTY.

The results of the election of Aldermen, and Assistants depend upon the quality of the candidates.—Mr. Jefferson, required as a qualification for public office, that the person who was to fill the place, should be both "capable and honest." The difficulty with members of the Common Council is, that they are called upon to perform duties which their experience has not qualified them to understand, but the greatest difficulty is, that all important measures are decided upon by a political "*Caucus*," which is the most incompetent body in existence. A member of the Board of Aldermen who had not acquired knowledge of a single note of music, might with as much propriety be called upon to perform the duties of chorister as some of the duties which are now required of them. If the democrats nominate their very best men, they will doubtless carry the election of members of the Common Council; but if they do not, and the natives select the best men as candidates, they will undoubtedly succeed. Mayor Harper will undoubtedly be re-elected, by a large majority, and the Democrats would do well to nominate him instead of any other candidate. Dudley Selden, Esq, has been nominated by the Whigs as their candidate for Mayor. Mr. Selden is a man of talents, an able lawyer, has been a member of Congress, and much in public life, is a worthy citizen, and if elected will no doubt discharge the duties of the office to the satisfaction of every body.

LAMP POSTS AND LAMPS.

On the north west corner of South and Fulton Streets is a lamp which should be dismissed from service. There is a wooden roof built under it, and the boards of which this roof is made, are an inch thick, and not transparent. On the north-west corner of Chamber Street and Broadway, and on the south-west corner of Read Street and Broadway, the lamp glasses are covered over with awning plates four inches thick, and 12 inches wide. These are not transparent On the North West corner of Harrison and Hudson Streets a hole is cut through a wooden awning to let the light through. On the north-west corner of Murray Street and Broadway is a lamp which is partially obscured by the awning beam, but a hole is made in this beam sufficiently large to enable the people at the City Hall to see one side of the lamp. These are specimens of the want of knowledge in the use of artificial light, and explains the why and wherefore of the largeness of the lamp tax.

RECEIVER OF TAXES.

The amount of Tax in 1845, collected by the Receiver, by voluntary payment, prior to the termination of December 31, 1844, was $881,661.56.

The amount of Tax of 1845, collected from Jan. 1, 1845, to Feb. 15. 1845, by voluntary payment to the Receiver was $649,484.07.

The amount received from the date of the delivery of the assessment rolls to Feb. 15, 1845, was $1,531,-145.63.

The amount assessed for 1845, was as follows:

Watch,	$265,995.72
Lamps,	120,877.69
Water,	469,340.40
Schools,	379,542.00
Streets,	95,393.01
Mutes and Blind,	2,494.10
County Charges,	388,321.05
State Tax,	259,556.05
	$1,981,520.12

Thus it will be seen that all of the tax but 450,-374.49 was collected before it fell due, by voluntary payment, which is the most satisfactory evidence of the advantage of one office of Receiver for collecting, over the old system of 17 ward collectors and of a saving to the Tax payers of more than Forty Thousand dollars per annum. This change was made by the Anti-Assessment Committee, with the aid of the Hon. Solomon Townsend, who was at that time a member of the House of Assembly.

THE MILL TAX.

The City Comptroller on page 10 of his Report, States as follows:

"Amount due State on Mill Tax,		281,607.66"
The balance in the Treasury is stated at,	56,730.03	
Warrants outstanding,	65,208.58	
		8,478.55
The Receiver collected of the Tax of 1845, prior to the close of Dec. 31, 1844, $881,661.56. (Ses page 13 of Comptrollers Report.) Of this sum about $120,-000.00 belonged to the State Treasury.		120.000.00
		$128,478.55

More than $200,000,00 was due to the State Treasurer on the first of the present month, which money had been collected and used by the City Treasury. and on the next day after our paper was sent to the City Hall, viz: on the 6th of March, which contained a paragraph stating that the mill tax had not been paid over—$95,000.00 was deposited to the credit of the State Treasurer as soon as the Banks were open.

ROCK MILLS.

Rocks and Sand reduced to powder by mills constructed for the purpose, will be found by the farmer a most important means of promoting the growth of vegetation. These require mixing and a knowledge of the properties of each is necessary to make the composition.

Some rocks are injurious to Vegetables and will destroy it in the same manner as the pummice of a cider-mill is seen to do when left upon the surface, or as sour apples do when left to rot under the trees.

MANURING LANDS.

Farmers who allow the manure destined to be put upon lands to remain in the barn yards, exposed to the frost and rains, loose nine-tenths of that which is useful to vegetation. It should be kept dry and warm in cellars under barns until required for use.

THE SPIDER.

The Spider is a wonderful insect and of extraordinary industry. I have been instructed in watching the labors of the Spider, and felt humbled by the teachings of that wonderful insect. From the Spider man learned the use of the diving bell, for this insect fills a ballon with a small volume of atmospheric air and descends to the bottom of deep water and rises again at its will.

I have watched the Spider weaving its net with a skill that surpasses human art and when it was broken have witnessed the same industry and the same skill in repairing the injury. Many of the threads of the Spider are as transparent as the atmosphere, and cannot be seen until the apartment in which they are suspended is filled with fine dust, and the dust adheres to the invisible thread and this brings it in view.—During a mountain excursion last October, I found in some rock specimens I was collecting from the mountain top, a most beautiful fabric of a spider and of most exquisite whiteness, and of great lustre. I was about bringing it away when I descovered a large spider emerging from it. Finding that it was his habitation for the winter, I returned, unwilling to deprive this industrious insect of so beautiful and so warm a covering, which it had prepared with so much labor for its winter habitation I have had a spider as a near neighbor to my writing table for two years, and have always been careful that no one disturbed it, for I found profit in the instructions of the hated insect. In the autumn it sheds its old coat and leaves it altogether and retires to a winter habitation.

NEW-YORK MUNICIPAL GAZETTE.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, APRIL 9, 1845. [VOL. I....NO. 32.

TAXTION.—FREE BANKS.—NEW BILLS.

We give below the copy of a Bill brought in by Senator CORNING. Mr. Corning is a practical business man, and it is therefore surprising that he should bring in a bill in this shape.

IN SENATE, March 4, 1845.

Brought in by Mr. CORNING, and reported by him, from the Committee on Banks and Insurance Companies.

AN ACT

To amend the act entitled "An act to authorize the business of Banking."

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Every banking association and individual banker, doing business under the act entitled, "An act to authorize the business of Banking," passed April 18, 1838, and the acts amending the same, is hereby declared to be subject to taxation on the capital of such association or individual banker, including the securities deposited with the Comptroller on obtaining circulating notes, in the same manner and to the like extent as incorporated banks are liable to taxation on their capital.

§ 2. It shall be the duty of every such individual banker, on or before the first day of September next, and annually thereafter to file in the Comptroller's office, and in the office of the clerk of the county in which the principal office or place of doing business of said individual banker is located, a statement specifying the whole amount of the capital used by said individual banker in the transaction of his business, and also the amount of securities deposited by him with the Comptroller, the place at which he transacts his banking business, and also the place of residence of said inidvidual banker, specifying the town village, or city, and the particular locality of said office and place of residence, which statement shall be verfied by the oath of said individual banker; and for every omission to file such statement, such individual banker shall be liable to a penalty of five hundred dollars, to be sued for and recovered by the Attorney-General in the name of the People of this State, and to be paid over when recovered, to the Treasurer of the State; and the Comptroller shall also in such case proceed to collect and sell the securities in his office belonging to such individual banker, and deposited for the purpose of redeeming the circulating notes furnished to such individual banker, in the same manner as if such individual banker had failed to redeem the circulating notes issued by him in the manner required by law. But the Comptroller, on receiving a satisfactory excuse, may remit said penalty and permit said banker to continue his business, provided such banker shall have paid all taxes unpaid on his capital as aforesaid, in the town village or city, and county in which his business is transacted, or shall have paid an equivalent amount to the proper authority of such town, village or city, and county, as the case may be, for the use and benefit thereof.

§ 3. If the collector or other proper officer of the town, village, or city, authorized to collect or receive any tax from any banking association or individual banker, shall not be paid the amount of such tax within the time allowed for the collection thereof, and if no property of such association or banker can be found by him to satisfy the same, in the manner required by law, he shall certify such fact to the county treasurer of the county, who shall report the same to the Comptroller, and the Comptroller shall thereupon proceed to collect and sell the securities in his office, belonging to such association or individual banker, for the purpose of redeeming the circulating notes issued by such association or banker, in the same manner as if such association or banker had failed to redeem said circulating notes; and if any surplus of said securities remains, after paying said circulating notes, the Comptroller shall out of the same pay any tax against said association or banker remaining unpaid as aforesaid. The said county treasurer may also, at the time of making said report to the Comptroller, issue under his hand and seal a warrant, in the nature and as nearly as may be, in the form of an execution on a judgment at law in a civil action, directed to the sheriff of any county in this State commanding him to collect the amount of said tax so remaining unpaid, with interest and the fees of said sheriff, out of the personal property of said association or individual banker, within the county of such sheriff, and to pay the amount of said tax, when collected, to the said county treasurer. The said execution shall be under the control and direction of the Supreme Court, in the same manner and to the same extent as executions in civil actions issued out of the said supreme court: and the sheriff shall be liable under the same, and return thereof may be compelled in the same manner as in cases of executions issued out of said supreme court.

§ 4. In case the securities deposited by any banking association or individual banker, shall at any time, in the opinion of the Comptroller, be inadequate security for the payment of the circulating notes issued to such association or banker, and shall not be equal in value to stock of this State bearing five per cent. interest, to the amount of said circulating notes, the Comptroller, in addition to the power now vested in him. shall have the right to requre such association or banker to deposit additional security in stock of this State with the Comptroller for such circulating notes, until such security shall in the judgment of the Comptroller be fully adequate, or until the same in all shall be equal to a stock of this State bearing five per cent interest, to the same amount as the said circulating notes; and in default of such additional security being placed in the Comptroller's office within thirty days after being so required by him, the Comptroller may proceed to collect and sell the securities of such association or individual banker in his hands, in the same manner as if such association or banker had failed to redeem their circulating notes according to law.

SPECIAL LEGISLATION.

We give below a Bill for the special taxation of a certain description of business This bill is objectionable in its principles, as well as in its provisions. The practice of putting trammels upon trade, is bad, and should not be indulged in. Indemnity against damage and loss by fire, and by the perils of the sea, should be adequate and full, and it would be far better for the community that all institutions created for this end, should be exempt from the burden of taxation.

This could be accomplished to a great extent, by requiring all Insurance Companies receiving premiums for underwriting to retain the amount of such premiums until the policies for which these were received for, had expired. This restriction would give to the assessed the security which the excess of business had brought to the company; whereas, a company doing a large business with a very small capital, which should divide the receipts before the expiration of the policy the insured might be without insurance in case of loss from the inability of the company to pay in consequence of dividing the monies received before these were earned, as insurance premiums are paid in advance.

The object which the Legislature has in view in granting charters to Insurance Companies, is to give to persons who wish to obtain indemnity in case of loss by fire or storm, the most adequate security, and not to enable the Insurers to make large dividends. We have given in our paper of the 17th ult., the reports of the majority and minority of the Committee on Banks and Insurance Companies of the House of Assembly, and two pages of valuable statistics, all of which are very full and conclusive.

The simple and easy way to make the Tax equal and equitable could be accomplished by repealing the existing law for taxing incorporated companies and pass a new act taxing all incorporated companies and Insurance agencies upon their premiums and income, without reference to capital, but if this premium is paid out for losses the tax should be abated.—Foreign agencies should be subject to legislative supervision, not as to their profits, but as to the security afforded to the insured by their capital.

TAX UPON INSURANCE AGENCIES.

IN ASSEMBLY, February 27, 1845.

Reported by Mr. Edwards, from the Committee on Banks and Insurance Companies—read twice, and committed to the committee of the whole.

An Act to increase the tax upon foreign insurance companies doing business in the cities of New-York and Brooklyn, and for other purposes.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

SECTION 1. There shall be paid into the Treasury of this State, on the first day of February in each year, by every person who shall act as agent for any individuals or companies not authorized or incorporated by the laws of this state, to effect insurances against losses by fire or against marine losses and risks, in effecting or procuring any insurance or insurances on property situate in the cities of New-York or Brooklyn, or when the owners of such property reside in said cities of New York and Brooklyn, although such individuals or companies may be incorporated by other states or countries, the sum of dollars upon the hundred dollars, and at that rate upon the amount of all premiums which during the year ending on the preceding first day of September shall have been received by such agent, or any other person for him, or shall have been agreed to be paid for any insurance effected, or agreed to be effected, or procured by him as such agent, against loss or injury by fire, or against marine losses or risks.

§ 2. Every person who shall act as agent for any individuals or association of individuals or corporation not incorporated and authorized by the laws of this state to effect insurances against losses by fire or marine risks, shall, before any premium is received or any contract for insurance effected upon any property in this state, make out and transmit to the comptroller a statement under the oath of such agent, similar to the statement required to be made out and transmitted by moneyed corporations incorporated by this state, according to the provisions of chapter eighteen, title two, part one of the Revised Statutes; and shall make such returns annually at the same time and in the same manner as is required of companies incorporated by this state, under the penalty of five hundred dollars, to be forfeited for the use of the poor of the county where the offence shall be committed, and shall be collected in the name of the people of this state by the district attorney of the county where the offence shall be committed, for the use of the poor thereof.

§ 3. All acts or parts of acts inconsistent with the provisions of this act. are hereby repealed.

FALLS OF NIAGARA.

The greatest cataract on the face of the earth is that of Ningara, and this is now in the bosom of a plain. The Niagara River is 36 miles in length and connects the waters of Lake Erie with those of Lake Ontario. The level of Lake Erie above that of Lake Ontario is 334 feet, and the level of Lake Ontario above the tide waters at the city of Albany is 231 feet. The Niagara River is in some places 6 or 7 miles wide, and in others less than half a mile in width. Grand Island which divides this river a part of its course above the falls is 12 miles in length, and seven miles in width in its widest part. Goat Island divides the River at the Falls. The Horse Shoe Falls, as the cataract on the Canadian side is called, is on the westerly side of Goat Island, and the American Falls are on the easterly side of this Island and these are 60 or 80 rods apart. The Horse Shoe cataract is 167 feet perpendicular fall, and the American cataract 158 feet fall. Lake Erie averages about 120 feet in depth, it is evident therefore that if the obstructions in the bed of Niagara River were removed that this lake would be entirely drained. Lake Ontario is on an average four times the depth of Lake Erie. Goat Island is on an average forty feet higher than Niagara River above the falls, and is covered with heavy timber, excepting some small spots under cultivation as gardens. This Island is connected with the main land and the village of Niagara by a bridge. The bridge is erected across that branch of Niagara River which forms the American cataract and but a few hundred yards above the precipice over which that portion of the Niagara falls with such fearful crash. The bridge is over the rapids and the water passes under it with great velocity. It was to me a most thrilling journey to pass over it. The novelty of a bridge in such a place induced me to enquire how it was possible to construct such a work in such a current. The plan adopted was to erect a crane upon the eastern shore and with this the pier and the first set of string pieces were placed: the crane was then removed to this pier and the bridge made that far and the second pier was formed in the same manner as the first and the residue of the piers were placed in the rock bottom in the same way until Goat Island shore was reached. This is a toll bridge.—The toll for a foot passenger going and returning is 25 cents. My *first* view of the falls was from the northern cliffs of Niagara River, near the Clifton House, from a point nearly opposite the American Cataract, at this point I was on a level with the surface of the water of the River above the fall. The branch of the Niagara which runs east of Goat Island falls over the south cliffs into the deep gulf below the Horse Shoe rapids, and appears at first view more like another river coming in at almost a right angle with the main stream, than like a branch of the same river. My *second* view was from the foot of the cliffs, 160 feet below my first place of observation, and exactly opposite the American fall, and distant from it but a few hundred yards. This was an interesting spot as was also the first. Between the rocks I stood upon near the water's edge and the gigantic precipice over which a mighty river was falling with a terrific crash, was an unfathomed gulf presenting an agitated surface heaved by a bosom kept in constant commotion into which the broken river was plunging with a roar the reverberations of which shook the cliffs which were above my head and rent the very atmosphere I breathed with the echoes of the thunders of the broken waters.

I observed three isolated rocks projecting above the surface of the water in the river between the northern shore on which I stood, and the perpendicular wall which formed the gigantic precipice over which that branch of the Niagara which runs east of Goat Island, falls. The rock farthest from me, could I have reached it, would have given me a nearer access—to a closer view of the stupendous cataract directly in front of my place of observation. About two hours after my first visit to this part of the river, the rock nearest the shore was accessable, and I stood upon it for some time—and in about an hour after, and still later, I reached the second rock, and in the afternoon of the same day, when I crossed the gulf in a row-boat I could have reached the third rock. The river had fallen five feet during the day. This is a common occurrence, the cause of which I will notice hereafter. The view of the great American Cataract from the rocks at the foot of the northern cliffs, and at but a few hundred feet distant, is awfully sublime, and yet beautiful beyond description. With a studied calmness I looked up and surveyed this wonderful waterfall, but not without emotion—it presented to my mind an array of magnificence and splendor that no pen can express. The sun was risen and in its rich morning dress, decked with summer smiles, the air was clear and filled with brilliant sunbeams—I was wrapped in sunshine and breathed an atmosphere filled with the brilliant rays of the solar orb—I stood upon the fragments of rocks filled with brilliant chrystals which carpeted a path once the bottom of the Niagara, which path it had chisseled through a bed of rock which underlaid the soil of a once extensive plain—I stood at the base of a gigantic cliff the rocks of which were hanging above my head and trembling at the voice of the thunder of this mighty cataract, which they echoed back with a deafening reverberation—the face of the majestic river in its depth of volume was in full view before me on its arrival at the summit of the gigantic precipice, a point which it journeyed to with a hurried motion—I saw its depth of volume when it reached the precipice, the top of which was 150 feet higher than the rock I stood upon—in a beauteous green of the softest hue—it fell, and became a pale—a whitened sheet—a mighty contrast—it plunged into an unfathomed gulf with a crash that shook the rocks, but rose again in sparkling gems of transcendant lustre. Millions of aqueous pearls and brilliant aqueous diamonds floated upon the surface of the mighty vortex forming a magnificent casket of unequalled brilliancy, resulting from the bowing down of the mighty water. Above this boiling gulf, in aqueous drapery, was suspended the curtains of a cloud, in graceful and beauteous folds, and on the surface, and within the body of this ethereal fabric the rich tints of the solar pencil were visible in the colors of the rainbow, that *memento* of the promise of Jehovah to all flesh that the world shall no more be drowned. This cloud with its memorable inscription, floated in the thin air, above the agitated waters of this mighty river, broken by a fall—vibrating with the agitation caused by the concussion produced by the fall of the mighty stream. I had walked from my lodgings to the foot of the cliffs in a path bordered by the green grass which was ornamented with brilliants resulting from the dew of evening—the green of vegetation intermixed with these chrystal gems, sparkling with mysterious life, is a lovely, beauteous and charming contrast, and was a pretty border for a path to travel in to view the greatest cataract on earth.

The music of the waters, chaunted in the deep tones of the aqueous thunders of this mighty river, impresses the human mind with awe.

The cliffs on the Canada side, opposite the American cataract resemble those of the Kentucky River. I have descended the cliffs of that river in four different places, and crossed that water course which runs deep in the bowels of the earth, but have never measured the height of the cliffs above the surface of the river, but am inclined to suppose them to be of greater altitude at some of the crossings than those of the Niagara. An observer stationed at the foot of the cliffs opposite the cataract has in view before him a perpendicular wall of near 160 feet besides the depth of that part of Niagara which runs east of Goat Island, and besides the base of the precipice which is covered with a solid column of water of an unfathomed depth. It is a wonder to look up at, for the top of it is near two hundred feet higher than the rocks the observer stands upon, and not more than 1000 feet from his place of observation, and between him and the falling river is an unfathomed gulf into the lap of which the great river pours its flood of waters, producing a concussion which shakes the rock he stands upon. Here I examined the rocks which lay scattered over the narrow margin between the river and the cliffs and found, in the lowest strata to which I could get, a beautiful sand stone of greenish cast, mottled or spotted with red, it was very pretty and when wet, presented the two colors of a brighter hue and in greater contrast. This strata is about upon a level with low water and underlays the cliffs. I had not the opportunity to examine its depth. It no doubt once formed the shore of an ancient ocean swept away by the general deluge and the sand which formed its shoals became covered by a deposite of the waters of the deluge to the depth of more than two hundred feet preserved it from the wet and it soon became aglutinated with the mineral substances of the water which were held in solution, and thus became a strata of rock or shale, I gathered several specimens of this rock for my cabinet, which are now the companions of my pen. From this place of observation I continued my walk over the broken fragments of rock along a cragged, rugged beach, frightfully narrow, toward the Horse Shoe cataract which is along side of Table Rock. The path was both difficult and dangerous to travel, and when I had reached the most distant point, at which I halted.—I cast a look above me and saw the overhanging rocks with their uncertain fastenings and soon retraced my steps with care, for the rocks I scrambled over were totterish, and with loose foundations. These rocks were richly stored with crystals, and I could have gathered tons of valuable specimens but it was a frightful place to labor. I saw many stains of blood upon these rocks which was fresh, but saw no mangled bodies in the path and could not conjecture from whence they came. It is probable that some animals or fowls had passed the cataract, and surviving the fall had dragged their mangled bodies upon these rocks to bleed. These stains were, comparatively speaking, numerous. There is danger in travelling this rugged path beneath the cliffs, where the path is narrow, and I think the danger great; the loose rocks which are spread upon the cliffs above, may fall, the rocks over which the traveller has to clamber may slip from their foundations, the river sometimes rises suddenly, several feet, and besides the human mind is in danger of becoming spell-bound in such a place as this, for it presents to the stranger visiter an untried scene that is thrilling beyond conception.

I made a second visit to the rocks below the northern cliffs, but did not venture in the narrow margin of the shore. I brought with me a hammer and chissel to break the rocks for the purpose of obtaining geological specimens, and filled my basket in a little time. In this work I bruised one of my fingers severely, which became very painful. I was at a loss to know what to do for the wound, but recollecting the numerous advertisements in the newspapers of the virtue of Connell's Pain Extractor, I went to a drug store and procured a box, bound up the wound in this preparation and obtained immediate relief.

The next place I visited was Table Rock, which borders the great cataract, and overhangs the mighty gulf into which the river plunges with a terrific crash This rock is rent and I measured the fissure it is seven inches in width and more than two feet in depth, it is an uneven and crooked fracture, and at no distant day will doubtless open and widen and the rock between the fissure and the outer edge fall into the unfathomed depths of the gulf below.—I did not pass below the sheet of water for I felt no ambition to be daring. My object was to see all that was curious and wonderful, to examine the various stratas and obtain specimens of each, and to study this wondrous page of nature with a calmness mixed with careful examinations of this locality with a view to form an opinion of the past, and to conjecture as to the future in reference to these mighty waters.

On the surface of Table Rock a hundred feet or more back from the verge of the terrific gulf over which it hangs, are little pools of muddy water collected in the indented places in the rock over which boards are laid for walking. I slipped upon one of these boards and got one foot into the mud and water, and was obliged to retrace my steps to my lodgings and change my stockings. This rock is made slippery by the spray arising from the falls and is dangerous to walk upon. The timid, as well as the foolishly bold, will do well to heed their steps when passing over this dangerous surface.

At about four o'clock, P.M., we crossed the Niagara from the foot of the path of the northern cliffs in an open row-boat, rowed by a colored man, and landed at a point on the opposite side within fifty feet of the edge of the great American Cataract. Had I not seen persons crossing constantly during the day nothing would have tempted me to have undertaken this brief and thrilling voyage, and as it was I felt an emotion during the whole time I was floating on the bosom of the agitated and boiling gulf which was far from being pleasant, but our boatman had learned well his occupation, and handled his oars with a skill and care that was to me a wonder. A musician playing with his bow upon the strings of a violin could not have been more skilled in the use of the fiddle bow than

was this sable boatman in the use of his oars. He would pause and hold his oars above the water while the boat was nearing a peculiar current, and then with a motion quick as thought would ply his oars, and then pause again, until at length with a studied motion of the oar he threw the boat on to two skids which projected into the water like a little railway and landed us and our baggage in safety at the foot of the stairs which formed the path we had to ascend to the top of the southern cliffs of the river. These stairs are a laborious ascent, but there are several resting places between the foot and the top, but I would advise all persons in feeble health to avoid the labor and fatigue of the ascent. The weather was hot when we ascended this tedious flight of stairs, and the journey was oppressive and fatiguing. At one of the resting places about midway we were within forty feet of the cataract and had a near view of that falling sheet of water in the light of the burning sun. It was a splendid sight. Our baggage was brought up these stairs by men who followed this kind of labor as an occupation. I paid seventy-five cents for taking up our baggage from the bottom to the top of these stairs, and the money was fully earned.

Our next business was to proceed with our baggage to a public house, where we took lodgings. We expected to have been visited by the officers of the Customs on crossing to the American side, but was spared this unnecessary visit. Without further delay we proceeded to the bridge which connects Niagara Village with Goat Island, and crossed this extraordinary structure. The water was running beneath our feet at a fearful rate and within a few hundred feet below made a single leap of 158 feet. This was a thrilling tour! We passed upon this bridge several Indian Females who were seated upon the plank and at work with beads in making fancy articles to sell to visitors. This was a wonderful place to traffic, and the singularity of the place added to the interest which the visitor felt in making the purchase. After reaching Goat Island we proceeded directly to its western shore in order to have a full view of the Horse Shoe Falls, the Rapids, and Little Island above the great and unequalled cataract. Goat island is heavily timbered and is profuse in its growth of vegetation. It has for its base a rock over which is a coating of earth, which latter supports the trees and vegetation which live upon it. It is a beautiful grove, and occupies a place exceeded by none other in the world for beauty and sublimity.

I stood upon the western shore of Goat Island near the gigantic cataract for some time and with folded arms surveyed the splendid scenery here presented to the view of a human being. The air was clear, the wind was sleeping, the sun was shining in all its glory, and had reached that position in the western chambers of the heavens that brought the solar rays in a line with the summit of the pillar of a cloud which rose from the broken river, and in this cloud it drew its bow in lovely colors. What a display of beauty! sublime, beyond conception. On my right, was a terrific gulf heaving with dread commotion and almost beneath my feet, but at a stretch of depth that required almost a second look to see its surface which sparkled with countless gems—the pearls of a broken river and the aqueous diamonds of this water fall all of the richest lustre, and as bright and sparkling as a pleasant thought. The roar of the fallen river was deafening, the reverberation of its thunders shook the ground on which I stood, and the gigantic trees which spread their limbs above my head trembled at every crash of the fallen water The birds of the grove were flying from limb to limb, chaunting their sweet notes and appeared happy in uniting their lively songs with the deep toned accents of the thunder of the waters. On my left, the western branch of the Niagara coursed its way; a mighty river, filled with crystal waters hastening with more than a race horse speed to the brink of a terrific precipice from which it fell into an unfathomed vortex. In the bed of this river at low water are projecting rocks which rise above the surface, some of which form little islands. A few hundred feet above this fall is the island on which a fellow mortal landed but a few months since—a miraculous escape from the horrors of the awful gulf to which he was hastening with a fearful speed. In attempting to cross the Niagara River at a considerable distance above the falls he lost one of the oars of his little boat, and shortly after broke the other oar. The current bore his little craft swiftly down the rapids and at length the boat struck upon the little island a few hundred feet above the Horse Shoe precipice. What a sensation must have possessed his bosom in this trying time. The human mind is rarely adequate to meet such a crisis, and often becomes a ruin in the very contemplation of the scene it is required to pass through. Numerous persons on the shores witnessed the distressing sight but were unable to render the least assistance, except in the aspirations of their souls which ascended up on high for the rescue of a fellow being from a horrid death. *He was saved.* In a little time, a boat put off from the Niagara side above Goat Island, containing but one man. It was a bold and daring enterprise, and great numbers were assembled to witness the attempt. The man who thus volunteered to save the life of a fellow mortal was an experienced boatman. With his frail craft he darted across the rapids and landed safely on the little isle, the man he went to rescue embraced him on his landing with emotions that can be more easily imagined than described. The next business was to return to the main land. By this time the news of the disaster had reached the ears of the wife of the man who had been thus cast upon the rocks and she hastened to the banks of the river and was a spectator of this bold attempt to rescue her husband. What an agony of suffering she must have endured in this trying moment. The boat put off from the little island and was in a twinkling in the midst of a fearful current, but skill and strength were at the same time exerted by both the navigators, and with an extraordinary effort, and the blessings of heaven, they were enabled to land upon Goat Island in safety. A shout rent the air—every heart moved with gratitude and every breast expanded with emotions too intense for language to unbosom. What a thrilling spectacle—no human being could desire to witness it, although it ended well.

I surveyed this little island as I stood upon Goat Island with a feeling that I cannot describe, for this occurrence was but a short time prior to my visit, and I trembled when I looked into the fearful chasm over which these two navigators guided their frail bark.

In a view from the western cliffs of Goat Island is a small building by the side of the Rapids on the Canada side which covers a *burning spring*. Water rises through a fissure in the rock, and with it Carburetted Hydrogen Gas, which can be ignited by a lighted taper. I visited this spring in the morning and examined it with care and also drank a glass of its water, which has a metalic flavor. The gas when ignited produces a flame of about 18 inches in heigth and burns very bright and clear. I regretted that I had not brought with me a tube containing a piece of sponge, made of *platinum*, that I could have ignited the gas without the use of fire. My opinion is that an immense body of hydrogen gas rises in the column of spray from the Horse Shoe Falls, and should I visit the falls again, I will endeavor to set this column on fire. The rock which lies next to the soil which supports the vegetation on Goat Island, is lime stone, and is about 200 feet in thickness, and this reposes upon a bed of red and green sand stone. This limestone rock is the obstruction between the waters of Lake Erie and Lake Ontario, and contains fossils, and bitumen yielding carbureted hydrogen. Remove this strata of lime stone and Lake Erie would become an extensive plain or a vast prairie. It is this obstruction which has formed Lake Erie by damming up the waters of the river until it has flooded the surface now covered by the waters of that lake. At what period this embankment was formed we have no means of determining, but we have means of determining when it did not exist, and therefore we can approximate toward the fixing of the probable origin of the falls.

This limestone strata contains animal fossils to the lowest portion of this formation. Animal life did not exist until after the creation of the solar orb, therefore this limestone was formed since the solar system was put in motion, and long subsequent to the termination of the three periods which preceded that event and which ended in the introduction of vegetation. Time commenced with the fourth day of the creation and animal life which had its beginning in the water, was introduced on the second solar day; from that time to the termination of the general deluge, a period of about 1657 years intervened. This was a great length of time, during which, and almost at its commencement a change took place in the face of the earth from the fall of water from the clouds, for we find it mentioned in the sacred volume that "the LORD GOD had not caused it to rain upon the earth, but there went up a mist from the earth and watered the whole face of the ground." We have no account of Rivers until subsequent to that time, but we have the account of seas, in that early period denominated the second day of creation, which was anterior to the commencement of time. We next come to the commencement of the general deluge, and have in the record of that event a detailed and particular account of its commencement, duration, extent and termination—from this termination to the present time, a period of 4191 years, has intervened. The deluge must have caused a vast and mighty change in the surface of the earth, for the flow of water shortly after the rain commenced must have been in tremendnous torrents, carrying every thing before it, and when it had reached its greatest height a mighty wind was caused to pass over it, which must have greatly agitated the surface on which the water reposed. It is estimated by some writers that ten thousand years have passed away since the falls have been receding from the cliffs at Queenstown to their present location, but such an estimate is contradicted by the inspired volume, and any thing which contradicts the scriptures is unworthy of examination.

In various sections of the world, at the present day, the absence of rain has continued for a series of years during which time the water upon the surface, and that which had been absorbed by the upper stratas, has been abstracted. This water and moisture has been transferred to other localities, and saturated other surfaces, and these effects are seen almost every year in our own latitude, but to a lesser extent—During the dry weather in summer, many local surfaces which had in the spring and autumn become covered with water, are left dry and become parched up with the effects of the solar heat. The lakes are subject no doubt, to the same influences, and also the surfaces which discharge the waters which fall from the clouds into these reservoirs. I see no reason why this particular surface should be exempt from the effects of evaporation and also from the same intermissions of rain from the clouds that other places are. The waters of the Erie Canal are fed by Lake Erie in the commencement of this artificial stream, and this water is carried through the various locks down a descent of 565 feet to the tide water at Albany. If the locks should be removed the current of water would soon wear a channel both deep and wide for the frost would aid it in its excavations, and the beautiful Hudson, instead of the St. Lawrence, would become the channel for the waters resulting from the melting of the snow in the high northern latitudes, and convey these floods to the ocean.

The depression of the surface of the bed of the Niagara below the present surface of Goat Island, has undoubtedly depressed the surface of the waters of Lake Erie, but when we come to compare the broad surface of the Lake with the narrow channel of Niagara River in its most confined channel, we must be convinced that it would require a great length of time to drain the Lake, unless we allow for an increased velocity of current equal to the difference in the width of surface and depth of volume. I remarked in the former part of this narrative, that during one day the river at the falls receded five feet. I have been informed that it has been known to rise fifteen feet. This is produced by the wind blowing over the surface of Lake Erie and forcing an immense body of water into the Niagara River.

From the western section of Goat Island nearest the Horse Shoe Cataract, we proceeded along its northern shore which is bounded by a frightful precipice at the foot of which is a profound gulf of unfathomed depth to the branch of the Niagara which runs east of Goat Island, and here we had another new view of the great American fall.

From this point we proceeded along the eastern border of the Island to the path in which we had crossed it, and thence to the bridge which we crossed and reached Niagara Village about sunset. I felt uneasy in returning on the bridge from the moment I again set foot upon it until I was safe again on land. A gentleman who visited the falls but a few days before us declined crossing this bridge, and the circumstance was spoken of at the falls as evincing

in the stranger great timidity. I think the gentleman discovered great prudence and caution.

It is enough to make one's head giddy to look down from the bridge into the current running between the piers of this fabric, especially when a glance is thrown at the tremendous precipice which is but a few hundred feet below it. No human being could stem this current. There is a pretty garden upon Goat Island and its groves are delightful and beautiful. I noticed the Sumac of large size, and numerous forest trees of large growth. The mandrake grows here in great abundance.

I copy from a letter which I addressed to the editor of the Brooklyn Star, and which was published in that paper of August 22, 1844, a description of Goat Island, for the spirit was in me then to write of that beautiful locality, from the inhaling the atmosphere of the beauteous grove which borders the great cataract.

Goat Island is, as I before remarked, founded upon a rock. How long a period of time has elapsed since it was built, it is impossible to say, but it is evident from the numerous fossils that are found in the lime stone strata which underlays the soil which supports its vegetation, that it is far from being primitive.

The strata of soil from decomposed vegetation, sand &c., is on an average, about twelve feet in thickness, and in this strata are embedded the roots of the trees which form the beautiful grove which shade the surface. The limestone formation is about two hundred feet in thickness, and reposes upon a strata of red sand stone, beautifully spotted with green. A beautiful foundation this, for so beautiful a superstructure, although an inward adorning.

This Island, with the exception of its northern border, is surrounded by cataracts; and this northern border overhangs a fathomless gulf, the surface of which is as brilliant as a casket of pearls, and is in constant commotion, like the incessant boiling of a cauldron. The admirer of the grand, sublime, has here a terrestrial observatory anchored in a cataract and shaken by a cataract, to stand upon.—He has a picture drawn by the pencil of nature to gaze upon —and the music of the waters, the deep toned thunders of the cataract to listen to—the sweets of nature.

Nature mingles the sublime with the beautiful.—What a place this for meditation—for contemplation! Admiration and delight are the spontaneous effervescense of the human breast, in the commingling of the sublimities and beauties of nature displayed in the magnificence—the beauty—the loveliness of this almost enchanted Isle — the soul becomes enraptured with nature's charms —methinks I could listen to the deafening peals of the thunder of the tempest, and survey the brilliant coruscations of the lightnings fire in its vivid tints, drawn by the electric pencil upon the sable page of the volume of nature, with emotions of awe, while listening to the deep toned thunder of the cataract and surveying the brilliant aqueous gems which irradiate the agitated surface of the broken waters of this lovely river and at the same time feel charmed by the concert for they are the harmonies of nature.

Silence is a stranger upon this Island—yet notwithstanding, solemnity pervades its atmosphere—sublimity surrounds it, beauty adorns it, and tranquility finds its fountain in the harmonies of nature which are constituted of the sublime and the beautiful, in all the sweetness of her charms.

I have gazed at the stranger world, the mysterious guest of our solar system, (in March 1843) and feelings of admiration and of awe fired my soul and led my thought onward to contemplate that period when this earth shall become ignited, its atmosphere expanded, and thus be forced from its orbit, and with a comet's speed flying through space, leaving in its path millions of leagues of brilliant light, the coruscations of its mighty fire, and passing onward in its course until it shall arrive within that repulsive circle in which it shall receive a new impetus, and be thrown into distant space to revolve and re-revolve, until it shall again acquire density, and at length resume its original orbit a new earth—a new creation. Yet this fire shall not consume, but shall purify and reduce this terrestrial globe to its primitive state, but the accumulations upon its surface since that period when time commenced her revolving years—shall be changed. I pause—

These rocks are shaken by the cataract; and well may they vibrate when resting upon a liquid base, and moved by such a force. Upward, but a few thousand feet, is the region of perpetual frost, beyond which that point is not far distant, where all fluids become solids; but downwards, a point may be estimated, where all solids become fluids. Upon the surface of that ocean of liquid fire, floats the foundation of these mighty cataracts, and a greater or less ebulition of this liquid mass may expand or depress this terrestrial surface, and silence or augment the roar of the broken waters of Niagara.

The terraced gardens of ancient Babylon had doubtless a thickness of loose earth greater than that upon this Island, and walls higher than those of the cataract, and these are wholly blotted out—have become a blank upon the terrestrial map, and that time will come when this Island and these Falls will be blotted out and become extinct. Babylon was the work of art, and this Island, and these walls the work of nature; but the materials of the walls of that ancient city, and that of the walls which form these cataracts, and the rock which forms this Island, were all orginally the same—and that which underlays the table land which separates Lake Erie from Lake Ontario is of the same materials, and comparatively speaking, a recent formation. This barrier removed, and Lake Erie would become a river, and cease to be a Lake. The sand stone which underlays this strata was formed by the retiring waters of a primitive ocean, leaving the marking of its ebbing tide upon the surface, where the little pebbles projected above the sand as a record of its path. This limestone formation which overlays the sand stone strata may be presumed to be the earthy matter held in suspension by the waters of the great deluge, and the depth of this deposite will not be considered too great for one subsidence, when we compare it with that of the waters of the Mississippi, in the streets of St. Louis, at two feet deep for one single flood of but a few days duration.

We need not look for organic remains in the stratum which formed the earth's crust prior to the first solar morning, for animal life had not been called into being. Vegetation preceded the creation of solar light, but animal life succeeded that event.

Beyond the first solar morning, we have no record of time, for that morning was its commencement; but there were three periods of untold duration, which existed prior to that great event, the first of which was constituted in part of a primitive evening which had no beginning.

Except from the page of nature, the history of this Island and these Falls, beyond two hundred years ago, is a perfect blank.

There is an impressiveness in all things here which is powerful; it is the voice of nature speaking to the inner man. It speaks a language which is universal, and in the deep toned accents of the thunders of the waters.

I stood upon this island border gazing at the brilliant waters—at the mighty leap of the aqueous fluid—listening to its deep toned sound as the orb of day was retiring below the western horizon; solemnity—deep solemnity pervaded the very atmosphere ere the curtains of night were drawn around—which could be seen, and felt, and realized.

There is a difference in the scenery here when viewed by the light of the rising and that of the meridian sun, compared with that of the retiring orb, which shows a mighty contrast. This is in reality, an isolated spot; the mind here partakes of the locality, and becomes isolated also, for it becomes absorbed.—Boston has its "Mount Auburn," Brooklyn its "Greenwood Cemetery," Amsterdam, on the Mohawk, its "*unfenced grave-yard*," Rochester its "Mount Hope," and Niagara Village can here have "The Cemetery of the Cataract."

What a lovely spot this for a place of sepulture, and it should be devoted to such an use. The island of the dead would lose none of its charms by such an occupation of the soil. The cataracts would not be lessened in their attractions, or the rainbows which hang above the boiling deep, become less beautiful, or the continued reverbrations of the thunder of the waters, less solemn, but all would be increased in a two fold degree by such an acquisition.

Mankind are prone to adorn the living, but, alas, are careless of that dust which is to be clothed upon with the brightness of the morning star when this earth shall have become a liquid mass. The untutored savage venerates the grave of his kindred, and treads lightly on the ground where the ashes of his race repose, but civilized man————

A few weeks after I visited the falls a young gentleman from Philadelphia, descended the cliffs under Table Rock and passed behind the sheet of water which falls over what is called the Horse Shoe precipice —in returning he was missed by the guide and never was seen afterwards. He fell into the chasm which is at the side of table rock which is of unfathomed depth and in constant commotion like the ebultion of a heated cauldron. A few days after this sad event, a young lady from Lancaster, Massachusetts, in attempting to gather a flower from the verge of the precipice opposite the Museum, which is on the northern side of the River, fell over the shelving rocks, uttering a shriek, and a cry "save me," and survived but a few minutes. These two melancholy occurrences were near together, and will be long remembered at the falls. Visitors are sometimes ambitious to be bold and daring, and approach to the very verge of table rock, which overhangs a fearful gulf. I noticed that several stranger visitors were anxious to go behind the sheet of water that falls over the Horse Shoe precipice, and were anxious to obtain a printed paper duly signed certifying to the fact, that the bearer A. B. had passed under the falls. This certificate costs a dollar. Oil cloth and India Rubber dresses are provided at Table Rock for visitors to pass under the falls.

Danger sometimes has a charm which over stimulates the mind and produces mental intoxication, and it is by no means a rare occurrence—the field of battle —the battle ship—the duelist—are all witnesses so strong in this respect, as to leave no doubt of such an influence. A sad delusion! Death is ill approached in such a path.

A motto, true in all its bearings—instructing in all its principles—that "*Discretion is the better part of valor*," is often forgotten, or rarely heeded when remembered.

CEMETERIES IN CITIES.

We copy from the volume of printed documents of the Board of Aldermen, volume 5, of the Common Council of 1839, the following:

CITY INSPECTORS OFFICE,
September 10, 1838.

The undersigned, to whom was referred the annexed resolution "To report on the propriety of continuing interments within certain limits, and his opinion of the effect which will be produced on the health of citizens by interments made in the Marble Cemeteries," respectfully

REPORTS:

That the matter referred for his consideration, being of great and vital importance to all large communities, and particularly to this city, on acconnt of its peculiar location, and the delicate and gloomy associations connected therewith, demand of him a serious and candid investigation.

Aware of the various opinions entertained of the propriety of interments in cities, he feels the responsibility devolving upon him for his opinions, and had thought of stating the reasons upon which they are founded; but they are not called for by the resolution, and therefore will briefly answer—

That he considers the propriety of continuing interments within certain limits, as solely dependent upon a few contingencies. The most prominent of which, the selection of suitable soil, the dryness or moisture of the same, holding an important relation therewith.

The offensive or dangerous effects of the decomposition of dead bodies, being influenced very materially by such causes, it often happens that dead bodies are unexpectedly met with after having been interred for years, with their form and features unchanged, and no offensive exhalations arising therefrom. This is explained by the nature of the soil in which they are found.

Two necessary agents must be present in the offensive change of the dead body, viz. heat and moisture; if one of them be absent this change does not occur.

The dead are generally deposited in the earth, where the heat is very uniform, but the dryness and moisture of the same vary materially.

Therefore, it follows, as the nature of the soil is so essentially different in distinct parts of this island, that these circumstances should have their due weight upon an enquiry of continuing interments within certain limits.

In regard to interments within vaults or cemetries, a custom new to us, but old to the world, the same importance must attach to the exclusion, however obtained of one of these agents.

The means taken to prevent the percolation of the surface water from penetrating into the interior, and the material of which they are composed, all have an important bearing upon this question.

The use of vaults for the interment of private families, requiring only to be opened, perhaps once in five or six years; or vaults for the accommodation of large numbers, perhaps open most of the time for the daily interment of bodies, require different details, but tending to the same point.

The enquiry embraces a most important field, requiring provision for the annual interment of from 8 to 10,000 bodies at the present time, in a population of nearly 300,000 people, to be increased in regular proportion with the growth of the population, and confined to limits of about eight miles in length, by a breadth varying from one to three miles; a portion of it covered with buildings, and of the vacant ground, probably not one-third of it suitable under any circumstances for interments, even if it were not wanted for other purposes.

He thinks that much of the difficulty now apparently environing us, might be met and obviated by suitable regulations easily made and enforced.

As to the second section of the enquiry—"the effect which will be produced on the health of citizens by interments made in the Marble Cemeteries," he answers, that the only two Cemeteries of this kind he is apprized of in the city, are situated between Second and Third Streets, the Bowery and Second Avenue, and between First and Second Avenues.

Their appearance above the ground is neat. The vaults below, where rest the *silent*, are dry, and as far as his observation extends, free from effluvia; although by the side of those that have been immured for years, lie bodies that have entered but months or days since. Care has been taken to select a deep, sandy and dry soil, and by cementing over the vaults to prevent the water from the clouds from penetrating; and by the selection of a stone peculiarly drying in its nature to accomplish these results.

The effects produced have advantages over the ordinary vaults constructed of brick, and some kinds of stone. In the arrangements there made, and the mode in which interments are there conducted, he does not think there is anything to interfere with the health of the Citizens.

Respectfully submitted.

HENRY G. DUNNELL,
City Inspector.

STATEMENT IN RELATION TO MARBLE CEMETERIES.

By E. Meriam.

On the 29th August, 1838, Dr. Francis, an eminent Physician of the City of New-York, Dr. Fay, and myself, visited the Marble Cemeteries in this city, constructed by Perkins Nichols, Esq.

One of these Cemeteries is situate in Second Street, between the First and Second Avennes. It is enclosed by a wall, built of marble, laid in lime mortar, twenty-two feet high from the foundation, and two feet thick. The enclosure is 450 feet in length and 92 feet in width, and contains 234 vaults. The vaults are beneath the surface of the ground; are built with marble, laid in lime mortar, arched over with the same material; and the outside of the arches are covered with cement. The floors, doors and shelves are of the kind of stone known by the name of silver gray flagging stone, and such as are used for flagging the sidewalks of some of the streets in our city.

The earth in which these vaults are constructed is a dry sand, to the depth of forty feet.

We examined these vaults with great care—found the atmosphere of them comparatively dry, and not offensive. The *roof* and *sides* of the vaults were dry; the *floors*, however were damp; but this damp is easily accounted for, upon philosophical principles. The temperature of the flagging stone differs from five to eight degrees from that of the marble, and consequently the dampness of the atmosphere, (produced by the decomposition of the bodies,) is condensed upon the surface of the floors; or perhaps this stone may also possess attractive properties, and the dampness may be caused in some degree by this property of the stone.

The coffins were mostly dry; the hinges and screws but slightly corroded. The bodies were in various states of decomposition, according to the condition in which the person was at the time of death. Some of these the flesh was hard and dry, and others in a state of decomposition; but the dry atmosphere of the vaults, caused by the surface water being excluded by the cement covering, and the chemical properties of the marble, of which the sides, ends and roof are made, have had a powerful effect upon the decomposition of the bodies; and retarded, and, to a considerable extent, prevented putrefaction.

The Cemetery, situate between the Second Avenue and the Bowery is enclosed by a wall of the same heighth and thickness, and built of the same materials as the other. It is 250 feet long and 83 feet wide, and contains 156 vaults, constructed of the same materials; but the ouside of the arches are not covered with cement. In these vaults we found stalactites hanging from the roof of the vault, like icicles from the eaves of a building. These stalactites are white, and formed of the minute particles of the marble, and lime mortar, and are caused by the surface water oozing through the arches. This surface water arises from rain and snow. The vaults in these two Cemetries are overlaid with earth to the depth of several feet. Had these vaults been constructed entirely of marble or limestone, laid in lime mortar, and the floors covered with a layer, one foot thick, of sand, previously well dried in the sun; and the rain and snow water carried off on the surface, in such a manner as that none of it should be allowed to penetrate the vaults, the only objection to interments in thickly populated cities would be removed, and the dead might be deposited in such vaults without the least danger to the health of the living. The human body, placed in such a vault after death, (in a coffin which should allow the moisture of the body to escape, and with the lid left open,) would not decompose rapidly, but gradually; and unless the corpse was that of a person very fleshy, or of a person dying of some peculiar disease, like dropsy, the flesh would dry and become hard. Limestone and marble possess very peculiar properties. The dampness which might settle upon the surface of these stone, in a vault used for interring human bodies, would form nitrate of lime, and be precipitated to the bottom of the vault and be absorbed by the dry sand.

I have seen bodies that had been deposited in lime stone caves, and the flesh was dried upon the bones and was hard, and the general features of the person remained. The nails, hair and teeth were in a perfect state of preservation. These caves were perfectly dry. I have also seen skeletons taken from mounds which must have lain there for centuries, and these skeletons were in a good state of preservation. The mounds were of conical form and high, and the bodies were several feet above the level of the surrounding land. The shape of the mound was such as not to allow the water, accruing from melted snow or rain, to penetrete it; consequently, the bodies which it contained were kept dry, and all the moisture which they contained drained from them through the sand below and left them dry.

The Reverend Mr. Stewart, missionary to the Sandwich Islands, states that he saw a great number of human bodies, in South America which had for years been exposed to the open air, above ground, and they had become perfect mummies, in consequence of the dryness of the atmosphere.

Clark, when he visited Egypt, found the atmosphere of the brick vaults, in which the dead had been deposited, *offensive;* but those constructed of limestone *were free from smell.*

Brick will absorb moisture, and a vault or tomb made of brick, will not only allow the surface water from rain and snow, (which, in our latitude, averages about thirty eight inches annually,) to penetrate, but will also absorb the moisture of the bodies, and retain the same in its putrid state unchanged. Take a brick from a vault in which dead bodies have been deposited, and pulverize it, lixiviate the powder, and the lixivium will be found to be putrid and offensive. Take a piece of marble or limestone, which has been in a like situation, and treat it in the same manner, and it will be found to yield nitrate of lime.

The ancients generally used limestone for constructing the resting places of the dead, and such was the material of the sepulchre of the Saviour of the World.

The Pyramid in which the body of Joseph was deposited, was made of limestone, and his bones were not removed from it for 150 years, when they were carried out of Egypt by Moses.

It is important that the burying places of the dead should be kept dry, that the rains and snow water should not be allowed to penetrate the ground occupied for graves or vaults.

Moisture and heat produce decomposition and putrefaction of both animal and vegetable substances. The earth, three feet below the surface, always contains heat. This is the reason why rain water cisterns, beneath the surface, do not freeze.

If you cut grass in summer, and expose it to the dry air, it can be preserved; but suppose you place it, green, into a damp brick vault, will it not rot?—But instead of a damp brick vault, suppose you place it in a dry marble or limestone vault, will it not dry? Any substance, either animal or vegetable, will putrify in a damp brick vault.

Objections have often been made to vaults under churches. They are often constructed of brick, and are damp; and a church which is drier than the vault will attract the moisture from the vault and render it unwholesome. But to limestone or marble vaults, constructed in the manner here directed, there cannot be a single well grounded objection urged. Such vaults might be constructed in any dry sandy soil, in the most populous city on the earth, without the least detriment to the health of its inhabitants. Upon the whole, I consider the Marble Cemetery in Second Street, nearest the Bowery, as decidedly and in every respect superior to brick vaults, or vaults constructed of any other description of stone than the limestone species, of which the marble is one; and the Cemetery between the First and Second Avenues, a great improvement of the first, (inasmuch as the surface water cannot penetrate the roofs;) and the Cemetery which Mr. Nichols contemplates building, if built according to the plan herein detailed, will be entirely unobjectionable, and will afford to the living an opportunity to dispose of the dead in a manner more satisfactory, and in a way more consistent with the enlightened spirit of the age. Instead of any impediments being thrown in the way of such an undertaking, every facility ought to be afforded, to enable him to accomplish the work, and be encouraged to continue his labors. I see no possible objections to constructing this description of vaults above ground, or at least making them two tiers deep. The lower vaults would be better protected from water, and the upper ones could be made secure from the atmosphere.

These remarks have been written in much haste, and during the hurry of business; but, in the main, they contain my full views upon the subject, although a little more leisure might have enabled me to have expressed my ideas more clearly.

Very Respectfully,

E. MERIAM.

New-York, September 5, 1838.

STATEMENT

By J. W. Francis, M. D.

New-York, Sept. 5, 1838.

To Perkins Nichols, Esq.

Dear Sir,—The statement of Mr. Meriam in relation to the Marble Cemetries is so ample and so accurate, as to supersede any further description of them at this time. I have repeatedly visited the Cemeteries since their first appropriation to the objects intended, and am most ready to assert from the nature of the soil in which they are built; the materials of which they are composed, and the masterly manner in which they have been erected, that they are admirably adapted to secure the great intentions of the projector. An acquaintance with the structure of vaults, and the manner in which decomposition goes on therein, derived from very many examinations, for a period of nearly thirty years, convinces me that the Marble Cemetries are wholly free from the objections usually urged against such establishments in populous cities, and that the evils which are alleged to be caused by this mode of interment as generally conducted in vaults, do not apply to those which you have erected. I have never found any noxious exhalations in the marble Cemeteries, they seem remarkable for their antiseptic properties, and their preservative powers are evinced in the extraordinary examples which they afford of sustaining the state of the physical features of the

dead so long, and in retarding the progress of those changes to which dead animal matter is inevitably doomed. It would swell this note to a greater length to assign my reasons and detail the facts upon which this decision is made up. You may fearlessly declare to all whom it may concern, that the Marble Cemeteries and their contents can never be assigned as a cause of pestilence and death. Most respectfully,

JOHN W. FRANCIS, M.D.

More attention is now being paid to laying out cemeteries, and I have for that reason introduced the three statements which are above. Doct. Francis, of the city of New-York who penned the last statement as above, is one of the most distingnished of medical and scientific men of our country.

Some time since, I visited the Greenwood Cemetery on Long Island, it is about two miles distant from Brooklyn. The grounds enclosed are quite extensive and handsomely laid out in avenues and walks, shaded by numerous trees forming beautiful groves. A high fence is built around these grounds. I noticed that the Birds were quite numerous, for here the unfeeling sportsman cannot pursue and distress and destroy these pretty creatures, which here chaunt their sweet notes over the graves of those who repose in dust. The fence protects the groves and the birds from the visits of the thoughtless and cruel gunners.

I noticed several tombs in this garden of graves which are ornamented. Care should be taken to select that species of stones for tombs which does not absorb moisture, for where moisture penetrates, frost will soon follow, and the expansion by freezing soon destroys the fabric.

Tombs to be durable, should be wholly below the surface and may be surmounted by an earthen mound to turn off the rain and snow water.

Death was but little known in our world for the first nine hundred years, but since the termination of that period the records of mortality have been abundant.

The Patriarch Abraham, as early as the year 2144, reckoning from the commencement of solar time, purchased the Cave of Macpelah for the last resting place of his beloved consort, and his mortal remains were also conveyed to the same resting place three years after. Jacob, the father of Joseph, who died in the solar year 2315, was placed in the same cave. Here we have a record of one burying place in early time for a period of 171 years. The knowledge possessed by Abraham was derived from the early inhabitants of the earth. Shem, the son of Noah was living at the time of the death of Sarah and of her husband Abraham. Shem lived near four hundred and fifty years on earth with his father Noah, and Noah lived near six hundred years on earth with his gaandfather Methuselah, and Methuselah was 242 years old when Adam, the primitive inhabitant of earth, died. Abraham therefore possessed that knowledge from one of the inhabitants of our race who survived the deluge, and this individual was near 100 years old when Methuselah, who had been a neighbor of Adam 242 years, died. This example of Abraham and his family independent of thousands of other considerations, should have an influence with the present inhabitants of earth to cause them to have care for the resting places of the dead. The dust which has worn an earthly crown is trodden under foot, and that dust which will be clothed with immortality and eternal life is treated in the same way. This should not be. What we term death is not an extinction of life—but a suspension of animation—a sleep—a rest. The living are careful to provide a habitation while living and this but for a temporary residence, surely they should be as careful to select a resting place for those ashes which are to sleep in dust till the resurrection morning. The graveyard is a useful place for the living to resort to—a profitable field for meditation. The records which are chisseled in the rock are full of instruction and witness to the brevity of time and the uncertainty of its continuance to him who treads the earth in which the ashes of the dead repose.

A SLEEP ABOVE THE CLOUDS.

There is a sweetness in a sleep above the clouds which give a charm to rest, and refreshment to midnight slumbers.

I have reposed in sweet, quiet, and refreshing sleep in the quietude of a high atmosphere, upon the mountain top, above the clouds.

Such stillness, so profound,—such quiet, so peaceful and impressive—that it seemed to me that all nature was at rest.

My pillow was made of the sweet foilage of vegetation—my couch of the tender branches and leaves of the mountain wood, and my habitation of the same material. In such a house and on such a bed it was a luxury to sleep. The damask drapery of the palace lacks the sweet *aroma* of the mountain wood, with the green branches of which the walls of my humble habitation were adorned.

What a pillow this to meditate upon, and what a place this to meditate—while breathing the air above the clouds, all producing emotions in the human breast which no pen can unbosom, no human language can express.

The solemnity of silence—so impressive—so instructive, so beautiful—and to be witnessed in an atmosphere so high as to be relieved from its greater pressure, in which man, is in reality, and not in fancy, in another state of existence—for it is in the breath of man in the language of the pen of inspiration that he is made a living soul, and the air he breathes is the very essence of his mortal life.

Night, in the high atmosphere is sublime, and it is beautiful—the spangled vault of the mighty firmament with its myriads of brilliant worlds dotting the unbounded ocean of space, present to the human vision a display of magnificence. of splendor, and glory, far, far beyond the comprehension of the finite mind—to the most distant of these shining worlds within the reach of vision *thought* travels with the speed of the lightnings fire, *for thought is electric*, but it finds no rest in the distant world, its atmosphere is inaccessible to the mind of man dwelling in the flesh, for its territories are a blank in the page of human knowledge. Thought travels back and descends to the lower terestrial surface which is beneath the dark volume of the clouds, and these piles of watery vapor in which the lightning reposes, it passes, and finds a resting place amid scenes which are familiar.

Sleep, kind messenger to the mortal frame, comes gently and quietly to the chambers of the human mind in these lofty regions and whispers it away, and occupies its place for a brief space of time, but departs at the waking hour, leaving a blessing in its place. How mysterious—how incomprehensible—how wonderful, and yet a reality—a solemn, beautiful reality.

In such a place as this it is a pleasure to go to sleep, —it is pleasure to sleep—for sleep is sweet—it is calm —it is undisturbed—it is quiet and refeshing.

No terrific dreams come in the midnight sleep of this pure atmosphere, for the air is full of life and buoyant and is filled with the sweets of ethereal fragrance.

A still higher atmosphere could be reached on more elevated mountain summits where sleep would be more lasting, and so durable that a human being who should reach the particular altitude in an aerial car would doubtless fall asleep and remain in its embraces until the car descended to a lower atmosphere where the lungs would become filled with air of a greater specific gravity.

There are two instances on record that came within the reach of my observation, where an aeronaunt fell asleep in the night time in the higher atmosphere and awoke when arriving near the earth. A human being floating in the air subject to the tossings of the various currents of the wind would not indulge in sleep unless it came unbidden to the chambers of the mind.

I witnessed the beauties of a charming morning upon the mountain top, I saw the golden orb as the terrestrial sphere on which I stood revolved and lifted me above the shadow of the broad Atlantic which curtained the eastern sky—I saw the ethereal ocean of vapor which constituted the clouds which formed a sable canopy above the heads of those who were upon the earth's common surface.—Yes, I saw clouds piled on clouds, far, far beneath me, and these changing continually, and upon their surface rested a flood of solar light as beauteous as it was brilliant. The vast surface of vapor resembled an ocean of spray crystalized by frost, but of such uneven surface that some portions appeared like gigantic cataracts, others like deep ravines and valleys, others assumed the shape of high hills, extensive plains, terrific precipices, and overhanging glaziers, and these were continually changing and presenting different shades of light and brilliancy in proportion to the depth of their respective volumes.

The high mountain top at midnight in summer, and also in an early morning hour, is an observatory which is well worthy the fatigues required to be endured in the upward and downward journey—it presents a picture in the great volume of Nature that forms one of the riches adornings of its pages.

Man, above the clouds, as I have said, is another being,—his vision is increased in a tenfold ratio, and his sense of hearing is changed, for there sound has no echo,—no reveberation strikes the ear.

The wind comes not here in its furious blasts, as is often noticed on the common surface. Such is the testimony of the high mountain forests—mute witnesses, but nevertheless their evidence is conclusive. I could not find a single tree upon this high mountain top uprooted by the storm. The trees are stinted in growth, twelve feet being the greatest extent of their altitude, and perhaps allowance should be made for this in estimating the force of the wind.

WATER SPOUTS.

The Rev. Isaac Anderson, in a letter published in the Murfreesboro' Telegraph, Tenn., states that on the evening of the 27th of July last, not less than one hundred water spouts descended from the clouds upon Chiloawee mountains, and that the water from each spout fell with such momentum as to force away into the earth ten or twelve feet, and tear out a large channel in its way down the mountain, carrying with it rocks, trees and roots, and depositing them at the base of the mountain.—*Journal of Commerce, March* 21, 1845.

WATER SPOUT IN 1813.

In the summer of 1813, I travelled through Washington County, in this State, on Horseback. The weather was exceedingly hot. To the left of the road I was travelling and at several miles distant I discovered a heavy black cloud hanging over the Rupert mountains, but no clouds were near me. On reaching the village of Salem, through which a small creek runs, I discovered the inhabitants a considerable distance ahead of me running in great confusion, on coming to the creek I discovered its banks were overflowing with a flood of water, fences, hog-pens, chicken-coops, and hay were floating down the creek which greatly surprised me for no rain had fallen where I had been travelling during the day.—On enquiry I found that a cloud had broken upon the Rupert mountain and discharged so much water as to produce this sudden and wonderful flood. I heard no more of this extraordinary water fall until 1837, when I was speaking of the occurrence to Chief Justice Savage, and he informed me that he resided at Salem at the time and recollected the flood and he had visited the spot upon which the cloud broke, and that it presented an extraordinary appearance. The water excavated a large hole in the ground to a considerable depth and circumference, and that rocks and earth were removed by the force of the water to a considerable distance. Judge Savage also informed me that before the creek began to rise at Salem Village, that a man on horseback came down upon the bank of the creek at full speed, and without hat or coat, hallooing at the top of his voice that the "water is coming—take care of your fences,—take care of yourselves," but those who heard and saw him supposed he was crazy, and paid no attention to what he had said until the flood came and confirmed his report.

In the summer of 1810. a cloud broke in the night time upon the Clarendon mountains, in Rutland Co., Vermont. The quantity of water discharged was immense, and produced such a flood that the family of Jonathan Parker, of that town, who resided in a large two story house upon the plain, were obliged to retreat from the chamber windows of the building which had been floated from its foundation by this extraordinary water spout. Rocks of immense size were rolled for great distances by the water, and the torrents cut a channel in the earth which remains now to be seen.

BIRDS.

We have here placed on the same page, three several notices of Birds, copied from the Journal of Commerce of last month. The first and third of these notices are from the pen of GERARD HALLECK, Esq., of New-Haven, Conn., one of the editorsof the Journal of Commerce.

THE PRETTY BIRDS.

The other day one of the editors of this paper received from a naval officer, formerly a pupil of his, who has recently returned from a voyage to South America and the Mediterranean, 23 birds and a butterfly, all perched upon one little tree, the body and branches of which are wound with moss and lichen, looking as natural as life. The birds comprise 22 varieties, many of them decked with splendid plumage, and all in excellent order. Looking at them from a little distance, a person would expect to hear them break forth into singing. Much as we were gratified with this generous token of remembrance from an esteemed friend, we could not help regretting that so many lives should have been taken, and so many harps silenced, for our sake. But we comforted ourselves that we were not accessories till after the fact, and that the same, also, was probably the case with our friend. And now, as the best amend we can make to the feathered tribe, we re-publish the following article, which first made its appearance in the Boston Courier a year or two ago, and which we hope will be heeded by every man and boy in the land.

"God heareth the ravens when they cry."

SPARE THE BIRDS.—The Courier lately copied an article on this subject from the New England Farmer, versus the birds. It certainly has some little appearance of reason, but it is all of the most selfish kind. The writer may be a philanthropist, so far, at least, as "himself and his family" are concerned; but he is an antiphilobirdist of the most inveterate class. His whole argument is, "They eat some of *my* cherries and other fruits, whereas *I* want every one of them for *my own* special enjoyment; ergo, let us murder all the birds." This reasoning is not altogether conclusive;—and besides, it is not very liberal, hospitable, or humane. He is exceedingly tenacious of his *own* rights;—but have not the birds their rights also? I think they have. They may be unwritten rights; but they are the sacred, original, unalienable rights of nature.

When God created the earth and its animals, he provided food for all, and gave them the right of taking it from his great store house. The trees and bushes, at his command, bore delicious fruits, suitable for man and his monkey brethren, and for certain kinds of birds. They were as much given to the latter as to the former. But man, assuming the right of the strongest, has cut down millions of these trees and bushes, reserving a few for his own special use. What natural or moral right had he to destroy the means of sustenance for hundreds of millions of animals, which God himself had provided for them, and freely given them? The birds not finding their own proper food in its wild and natural state, now take it where they *can* find it; and this too, *innocently*, from the instinct implanted in them by God himself, and fully believing they have a perfect right to it. The birds gather this food ignorantly, whereas man robs the birds of their means of sustenance *knowingly*, and with the clear perception that it was given them by the great Father of all. The birds might say to mankind, "You take our life, who take the means whereon we live." But man is not even satisfied with this *constructive* murder: This writer, who facetiously or ironically signs his name "*Justice*," is for positive, deliberate, bloody murder—for shooting all the birds in cold blood. He is not satisfied with robbery and starvation: nothing but the life-blood of the innocents will satisfy him. "Myself and my family" are all the world to him. They are so magnified in his microscopic view, that nothing else in nature is seen: all else is in eclipse.

"He leaves his carriage in the barn and it is defiled by the swallows." Then let him shut his barn-doors and windows; or, if a circulation of air is required, let him apply lattice-work doors, or something of the sort. But he complains that another kind of swallows build in his chimneys. This is easily prevented, by placing a coarse wire net-work over the chimney tops. Indeed, most of the evils he complains of, are easily prevented. He should consider, that if he has treated these little fellow-beings so ill, in robbing them, and taking away their just rights, he cannot complain if they retaliate by robbing *him*; and surely he should not grudge a little trouble and expense in keeping them off, without killing them.

"The birds sing." True, he says;—but he had rather hear "his family" sing and rejoice, while they are selfishly eating up ALL the fruits. Perhaps *he* may, but *others* do not. Other lovers of nature, and partakers of the delights enjoyed by all animals—the happiness of all God's creation—prefer the thankful and joy-inspired songs of the birds, to all the music of "his family," however charming the latter may be to *his* ears. *He* is only *one* in the creation. He should not arrogate to himself the privilege of making everything submit to *his* notions of right and of taste, and forget that others have equal rights with himself. If he never thinks of the rights of birds, nor delights in their songs, let him, notwithstanding, bear in mind the claims of others of his *own* race.

He is afraid our legislature will, by and by, make laws for the protection of birds. Bless his simple soul, they have already done so. It is a statute crime *now*, to kill birds at certain times of the year; and in some of the other States, it is forbidden to kill certain birds at any time of the year. I fear Mr. *Justice* does not live on the great road, to hear the news:—or he must be, at least, some twenty years behind the age. We wish him more light, more cultivation, more humanity, more philosophy, more consideration and respect for natural rights, bowels of compassion, more sympathy with all of God's animal creation; and, in addition, a pair of *periscopic* spectacles, by means of which he may *look* AROUND *and to a distance*, beyond the contracted limits of "MYSELF," and "MY LITTLE FAMILY."

"The merciful man (says holy writ) is merciful to his beast;" and why not to birds? I suppose the love and enjoyment of life may be as great in a bird as a man, and the agonies of death as excruciating.

> Even the poor beetle, that we tread upon,
> In corporal sufferance feels a pang as great
> As when a giant dies.

"Justice" should bear in mind, that when he shoots a bird, he not only takes the life of that *one*, but that it probably has a "family" of three or four, which are left to starvation, unsheltered from the cold dews and winds of the night, and from the drenching rain, suffering the tortures of a protracted death. Let him think of this, and when he is eating the cherries and strawberries thus preserved for "himself and his family," let him imagine his *own* three or four youngest children, in an upper room, stripped entirely naked, the roof and ceiling taken away, exposed to the cold and the rain, without food or drink, thus lingering, in prolonged agony for days and nights, till death relieves them; then, with his table loaded with delicious fruits, his children around him, and thinking of the mothers he has murdered, and the sufferings of their orphan families, let him go to supper with what appetite he may. MERCY.

March 12. 1845.

THE BIRDS.

MESSRS. EDITORS:—It is said that happiness is made up of agreeable sensations; that those who confer such sensations, confer happiness; and that happiness is the stuff that life is made of. I believe this, and therefore consider myself much indebted to you for the publication of an article in your paper today in defence of the rights of the BIRDS; and I thought that the best way I could repay you would be *in kind*, by letting you *know* the good you have done.

I believe that man has yet to learn that this beautiful creation was not designed for him alone, and that he will never enjoy that state of happiness of which he is susceptible, until he learns not only to respect the rights of his fellows, but those of every other portion of sensitive existence. As to the extent of these rights, it would not be proper for me to give my opinion through the columns of a commercial paper; but you may, if you please, publish this from

March 12, 1845. STEWART.

THE PRETTY BIRDS.

COMPLIMENT RETURNED.—Our readers will remember that we recently published a good article headed "Spare the Birds;" at the same time expressing a hope that it would be heeded by every man and boy in the land. It was an earnest plea in behalf of the feathered tribe, based upon their natural rights, their usefulness in the destruction of insects, the gratification to the eye afforded by their plumage and motion, and to the ear by their music. The claims of humanity were also urged.

This publication was made on Wednesday morning last; and in the course of the day it was scattered far and wide. The joy and gratitude which it diffused among the birds, may be estimated from the fact that on the following morning they waited upon the writer's family in a body, at his residence in New-Haven,—the number present being, as nearly as could be calculated, from 2500 to 3000. The blue-birds sent the largest delegation; next, the robins; then the canker-birds, snow-birds, &c. As it was impossible for so large a number to be received in person h e greater portion of them very considerately took their positions on the different trees and fences about the yard, while a sub-committee of about 250, comprising say 100 blue-birds, 75 robins, 40 canker-birds, and 35 snow birds, with perhaps small representations from other tribes, presented themselves near the window of the sitting-room, most of them gathering around, upon, or among the branches of a young cedar 25 feet distant; and such a chirping, fluttering, and cooing,—such pretty colors and motions,—have rarely been heard and seen before. Not only the sub-committee, but the whole delegation, from every tree and shrub and picket, raised a grand chorus, such as was never heard before, nor any thing in comparison to it, by any who witnessed the celebration. The only mortifying circumstance is, that the *writer was not present*, (otherwise we should probably have a speech to report,) having been engaged at his usual drudgery in New-York. The sub-committee were however entertained in the best manner which circumstances would permit; an ample repast being provided for them,—for the cedar was covered with berries,—which they partook of with an excellent relish, and appeared to enjoy the interview quite as much as did their honored guests. It continued for about two hours; when fearing that they should be burdensome, they withdrew, but repeated the visit on the following day, much in the same manner. The robins were uncommonly large and fat, and in fact the whole delegation, and especially the members of the sub-committee, were highly respectable in appearance, as we have no doubt they were in reality. They have our best wishes for their continued health and happiness.—*March* 18, 1842.

A BEAVER DAM.

In a tour across the plains of Upper Canada, between Lake Erie and the head waters of the River Trent, I was informed that a large Beaver Dam was within a mile of the path I was travelling. A kind friend residing in the neighborhood was so obliging as to offer to go with me to see this work of a race of animals which are now but little known among the settlements of white men. I gladly availed myself of his offer. He harnessed up a span of horses and attached them to a strong road wagon with which we set out. The road was rough and hilly, but we were prepared for such a path, and therefore found no difficulty in getting over the ground. When within a few rods of the dam we left the wagon and walked to a pretty little brook which ran through a valley and there found a dam seven feet in height and 310 feet in length which had been built by a little community of Beavers.

The settlers in this neighborhood cut a channel through the dam and let the water off, but the dam remains entire with the exception of this opening of about three feet

wide. The angles of the dam are obtuse, the locality well chosen, and as much science displayed in its construction as human ingenuity developes. The Indians had a great regard for the Beaver on account of their extraordinary skill. A settlement of the Onantonaba Indians is within eight miles of this place. From the top of this dam I obtained a large piece of fossiliferous rock resembling in appearance black marble. This I brought home with me as a relic of this ruin and as a valuable geological specimen.

I measured the length of this dam, with the angles, and both together are three hundred and ten feet. This dam is seven feet high at the highest part and when first erected must have exceeded ten feet. Some of the largest trees in the forest grow on this dam. I have inspected most of the ancient works in the far west, and there are few that exceed this dam in the skill of construction. I walked this dam for some minutes, with feelings of admiration mingled with regret. Of admiration at the skill and industry of the Beaver; and of regret that an animal, possessing such *intelligence*, should be destroyed by men who lay claim to be also intelligent. The Indians, ere the white man came, spared the Beaver; but since, both the Beaver and the Indian are fast becoming extinct, and ere long it will be said of the North American Indian, in the language of Logan, " that not a drop of their blood runs in the veins of any human being.

BABBOONS.

The Journal of Commerce of the 29th ult., states thus, " The following paragraph from Bombay papers are given in the Hong Kong Register. On the 2d ult., Taukeewall, a small town on the river Gambia, was stormed by a column of about two hundred Babboons, who assailed the natives with great ferocity, biting, and pelting with sticks and stones in their attempt to carry off what provisions they could find in the village.— The inhabitants made a stout counter assault with cutlasses and muskets, more deadly weapons than the monkey's could command. In a running contest near 100 were captured and since sold, several are here, and seem by their antics to have forgot the old cause of their captivity."

ELEPHANTS.

A few years since a town in Southern Africa was attacked in the night time by a herd of Elephants and nearly destroyed.— The natives had committed some depredations upon some young elephants and these animals came in the night time and took revenge.

PUBLIC AUDITOR,

In Boston, all bills paid out of the City Treasury are audited by an officer specially appointed for that purpose. In Philadelphia the accounts are audited by a Board of City Commissioners, and there should be such a board in the City of New-York.

TABLE OF DISTANCES.

The following table of distances shows the great extent of the interior with which the growing city of New-York is connected. The City of New-York is dependent upon its interior trade, for it is that which brings to its shores the commerce of other nations. In proportion as this trade is increased by cheap and abundant avenues, so will be its prosperity, but if the City Government assumes to put up turnpike gates on its borders to make a revenue to support politicians from the business of the country, New-York will suffer, and the interior trade made to run into other channels.

CITY COMPTROLLER'S REPORT.

We have no room for any remarks upon the city Comptroller's Reports in our present number, and besides it is so near election that is an improper time to discuss the City Financial documents. This Report is not made up in the old fashioned plain way that the Comptrollers report for 1830 was made up. We have both reports before us. That for 1844 requires to be posted up like the items of a blotter. It looks very much like the Report of the Committee on Annual Taxes of the Board of Supervisors of September last of which 10,000 copies were ordered to be printed.

ALMS HOUSE BILL.

The Corporation have laid an anchor to windward in reference to the Alms House appropriation, by including $350,000 in the Annual Tax Bill more than will be required for City purposes, and this Bill the Legislature have already passed, and it has become a law. Two of the Corporation functionaries went to Albany to urge its immediate passage, and besides the Corporation have a resident functionary at the Capitol.

THE MILL TAX.

Since our last paper was issued the State Treasurer has received nearly one hundred thousand dollars more of the Mill Tax from the Corporation of New-York which was collected by the Receiver prior to the 15th of last February.

DUTIES OF ALDERMEN.

The Journal of Commerce contains an article in relation to the duties of Aldermen with a schedule of different offices pertaining to the same individual functionary which number 11. The Legislature should require another duty to be performed by them, which is, to write their own reports. Aldermen who never learned a note of music might with as much propriety be called upon to play upon the clarionet as to perform some of the duties now required of them. Alderdermen should hold no other office but that of a member of the Common Council. A Merchant would not entrust the command of his ship to a man who never studied navigation, and yet will vote for a man to be the Judge of a Court who would not pass the examination which a schoolmaster must submit to who is a candidate for a teacher in a village school.

DISCRIMINATING TOLLS.

Unequal Taxation is unjust, and so are discriminating tolls, or duties.

CITY GOVERNMENT.

The whole power of the City Goverment is exercised by the Common Council, and it is therefore a legislative despotism.

Municipal Gazette.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, APRIL 23, 1845. [VOL. I....No. 33

NEW-YORK STATE CANAL DEBT

By a Report made to the Legislature by the State Comptroller it appears that the whole amount of Bonds issued by this State for the various Canals, is $27,108,122.22 of which amount there has been paid $6,394,216.64, leaving now outstanding $20,713,905.58

The following is a statement of the Canals and the amount of the cost of each work:

Erie and Champlain Canals	$8,079,245.51
Erie Canal enlargement	9,787,000.00
Oswego Canal,	437,000,00
Cayuga and Seneca Canal	237,000.00
Chemung Canal,	663,600.58
Crooked Lake Canal	120,000.00
Chenango Canal	2,420,000.00
Black River,	1,506,000.00
Genesee Valley Canal,	3,739,000.00
Oneida Lake Canal,	50,000.00
Oneida River improvement,	69,276.13
	$27,108,122.22

The Erie and Champlain Canal Debt has been reduced to $1,721,724.87.

The Erie Canal was commenced in 1817 and completed in 1825.

The State Bonds are signed by A. C. Flagg, Comptroller and countersigned by Jonathan Thompson President of the Manhattan Company. The transfer office is kept at the Manhattan Bank in the city of New-York.

The interest on the state debt is paid quarterly and more than a third of a million of dollars of this interest is paid annually to a single banking house in Wall Street, the oldest firm of bankers in the city.

The Comptroller states that $3,592,039.05 of the auction duties, paid by the auctioneers in the city of New-York, has been applied to the construction of the Erie and Champlain Canals. This duty comes ultimately out of the consumer, and therefore the Erie and Champlain Canals have been made by citizens of other states uniting with those of New-York who have been the purchasers of goods sold at auction.

Up to the first of January, 1845, there has been paid into the State Treasury as a duty upon Onondago Salt consumed within and without this State upwards of three millions of dollars, which money has mostly been applied to the construction of the Erie and Champlain Canals.

NEW-YORK CITY STOCKS.

			Amount on interest.
5 per cent stocks of 1820 and 1829,	due 1850	250,000	12,500.00
Public building stock	1856	515,000	25,750.00
Fire Loan stock	1851	500,000	25,000.00
Fire Indemnity Stock	1868	375,088	18,754.00
5 and 6 floating funded do.	1848	200,000	11,000.00
Water Loan Stock	1858	3,000,000	150,000.00
" " "	1860	2,500,000	125,000.00
" " "	1870	3,000,000	150,000.00
" " "	1880	978,354	48,917.70
" " "	1847	120,305	8,421.35
" " "	1852	890,207	62,314.49
" " "	1857	989,488	69,264.16
4, 5 and 6 temporary water loan	before 1847	1,158,544	69,512.64
		14,476,986	776,434.74

There is in addition to the above sum, a temporary city indebtedness amounting to near two millions of dollars.

There are no records kept of the City Bonds either in the office of the Mayor of the City, or in the office of the Clerk of the Common Council, and both these officers sign these Bonds. This is all wrong. All Bonds issued should be recorded in the office of each officer who signs these obligations.

THE HUDSON — MOUNTAIN GAP.

During the month of October, 1844, we made a geological excursion among the mountains of Rockland and Orange counties, during which we visited the top of the Dunderburgh mountain. It was a beautiful morning when we were upon that height, and here we had a fair view of a portion of the Hudson River, and of the Steamers and vessels passing through the narrow strait between the two mountains, through which the tides of the great Atlantic ebb and flow. We ascended a stunted tree and seated ourselves upon its expanded branches, and looked down into the chasm beneath the rocky precipice, but not without emotion. It is a wondrous place and the view here presented to the beholder was a rich reward for the labor of climbing this terrestrial observatory. In no place that we have ever been have we seen such a wonder as is here presented,— a mountain rent to give passage to the ocean's tides. What convulsion has rent this mountain range human records afford no information, but we have the record of the rocks and these mute witnesses give evidence of internal fire which has heaved the base of these mountain ranges. We found on the top of Dunderburgh a stone weighing about two pounds which on examination proved to be pummice stone, and we treasured it up as a valuable geological specimen. The steamers, we have said, pass through this narrow strait which is walled up on each side to the height of one thousand feet with solid rock. It is bounded by precipices and its volume of water is an unfathomed gulf. The wind in passing through this narrow path is compressed into so narrow a limit as to increase its force, and woe, woe to the steamer which is wrecked here unprovided with life boats. The shrieks of the affrighted passengers would reverberate from rock to rock and echo among the cliffs of these adamantine walls while time should last, and every whistling wind would bear on its wings the heart moving sound.

I am unable to account for the depth of water in the chasm between the Dunderberg and and Break Neck mountains. I have not examined the hydrography of the surface to the north of these mountains to enable me to determine if here was once a water fall, the falling water of which has chisselled out this vast chasm, but it is evident to my mind that some powerful force must have wrought this deep excavation.— The river below this race is not so deep. If it had been the effect of the wear from the falling water it would be reasonable to suppose that in the course of time the earthy matter held by the water in suspension during freshets would precipitate and fill up these deep indentations, but such is not the fact. If this chasm was originally the result of fire, there may be some active current of subterranean gases which prevent the bottom from becoming covered with new accumulations, or there may be stratas beneath the rocks which form the mountains base through which the waters of the distant surfaces find an outlet.

The rocks which form these mountains are granitic and of various proportions of composition, and it is more than probable that magnesia and limestone stratas underlay them, for both lime stone and magnesia rocks crop out but a short distance below, and the water which rises from under these heights is impregnated with lime, magnesia and common salt.

The top of Dunderburg affords the most splendid site for a public house for summer resort that is to be found upon the Hudson and can be reached by a carriage road. It is but about 46 miles from New-York.

LIGHTNING.

The brig Corsair bound from New-Castle, England to New-York, put in Halifax in distress. She had been out 84 days. On the 18th of March she was struck with lightning, two of the crew were instantly killed, and two are seriously injured, and are now sick. *Three lightning wires costing a dollar each would have protected this ship and her crew.*

THE STEAMER SWALLOW.

This race horse of the waters has become a wreck, and the rock on which she foundered has been made a grave stone in the bosom of the Hudson, and although unlettered, presents a record which makes it a monument of death—a monument which casts an additional shade upon the atmosphere of this locality in the mournful history which enshrouds it.

Upon this rock, when mantled with darkness and surrounded by the commotions of a cold and chilling storm, the Swallow, loaded down with human beings, made an awful shipwreck.

A terrific catastrophe, this, to chronicle, a painful scene to narrate upon paper, and to contemplate even at this distance, but to those who participated in its trials and its agonies, it was one of awful moment, for death was riding on the storm mantled in the robes of darkness.

The human mind is inadequate to the crisis which the passengers were here in an unexpected moment summoned to meet. Man in the hour of danger and of trial, is a frail being, and at best in such a scene but a child in the exercise of judgment.

The sacrifice of human life was great—but the wonder is that it was not greater, for the confusion must have been awful, and this added to the ignorance of the cause of the disaster, and the fear of the destruction of the steam boilers, superadding the horrors of fire to the perils of the deep, was enough to unman the stoutest heart and to unsettle the strongest mind.

We have had much opportunity of knowing something about the North River Steamers having passed up and down that river a very great number of times. During the spring of 1844 we were upon the river thirteen nights out of fifteen, and have become fully satisfied that there has been a culpable negligence in reference to a supply of small boats by the owners of these steamers.

There is not a LIFE BOAT on a Steamer upon the Hudson River.

It cannot be expected that passengers will be calm in case of accident. Persons who are strangers on the river do not and cannot know of its localities, will feel alarmed, and those who are acquainted with the North River know that its waters in some places are of vast depth and will feel equally alarmed unless the difficulty happens at the Overslaugh, where the bottom can be both seen and felt.

The Swallow was of great length, and the axles of the wheels obstructed the narrow passages between the bow and stern at an elevation of about four feet from the deck. The stairs to the tier of saloons on the roof of the boat was nearly in the middle of the boat and only wide enough for two persons and these were the only avenues of access to two tier of state rooms, occupying about one-half the length of the boat. There are three gang ways to the lower cabin, one through the Ladies' Cabin at the stern, one to the forward part of the cabin and another about midships.

It has frequently been the case when we were upon the river that the passengers were so numerous that the middle of the cabin was filled with temporary berths, erected two or three tiers high. An accident like that which befel the Swallow, happening to a boat stowed with passengers after this manner, would have been tenfold more awful.

The Steamers, as we have said, are too long. Boats of one-half the length would be much safer, and the same objection as to extreme length exists in some of the East River Steamers. We came through the sound in the month of November last during the night; the water was very rough, and the weather boisterous. When the steamer reached the North River, the boat, from her length, was unable to get into the dock, for the wind was blowing a gale, and her extreme length made a lever of the steamer upon the which wind bore with such force as almost to bend the boat as she lay midship against the end of

the pier. A boat of the shape of the Great Western would have got into the dock in three minutes without trouble.

The North River is an almost unobstructed navigation, but nevertheless it passes a chasm which is wonderful, and through which the wind is sometimes forced with the fury of a hurricane, and this chasm is of great depth and a comparatively narrow path. What confusion would fill the minds of passengers of a river raft steamer in such a place as this to meet an accident without a single life boat to cling to.

The strife between the cities of Albany and Troy is a difficulty which tends to harm, and the ambition of the Steamers of each to out do the other is great, and should be abated by legislative enactment.

The officers of the steamboat Swallow were uniformly attentive to their duties, so far as our observation extended, but the speed at which the steamers move on the North River in the night makes the voyage a lottery to passengers.

The best berths in the Swallow below deck, were those which are now under water, and these berths always had the preference with passengers, and were first taken up. We have frequently occupied No. 59 during the present season, which was among the first under water, and this berth we occupied but four days before the catastrophe.

The number of steamboat accidents upon the north river within a few days is singularly admonitory, In the near neighborhood of the same section of the river where 9 persons were recently run over by a steamer and drowned, another disaster painful and distressing in the extreme has occurred. At this season of the year the river is frequently either mantled with fogs or visited by squalls, the offspring of the change of the seasons, and at such times particularly, greater precaution should be taken for the safety of passengers. Every thing is done to make the boats splendid and showy, and of great speed, but what is done for the safety of passengers? Yes, we ask, what is done for the safety of passengers? Where are the life boats? We answer none are to be found upon this River. The East River steamers which navigate the sound carry life boats, and so should the North River Steamers. Passengers on board a boat amply provided with LIFE BOATS would in case of accident feel easy and act discreetly, having a confidence in this means of safety, but when a boat filled with passengers becomes the scene of confusion, and there is but one or two little Boats, these will be filled and swamped in a moment. We came down the North River some years ago, when the Sandusky was upon the River, in a steamer which had but one small boat which was stove during the night by coming in collision with the Sandusky. When we arrived at Tappan Bay the fog was so thick that we could not see four rods ahead, and the engineer had frequently to stop the engine. A little before 7 o'clock we arrived sufficiently near the city of New-York to hear the ferry bells ring, but until this we were unable to determine where in the river our boat was floating, and besides the last fuel on board the boat was upon the fire. We finally got along side some vessels lying by the piers in the upper part of the city.

Steamers should be by law required to carry as many life boats as would be sufficient to save every passenger and besides a sufficiency of small boats for other purposes.

The great speed of the North River Steamers at the present time is a serious evil, and should be the subject of legislative restriction.

We have passed up and down the North River since the opening of navigation and more frequently on board the Swallow than any other boat, and the arrival of that boat at the dock at Albany was uncommonly early.

On Friday evening the 4th inst. we came down in the Knickerbocker and reached the wharf in New-York between two and three o'clock in the morning.

Boats are often overloaded with passengers and in such cases in the event of accident the confusion would be great and the very fact being known that the steamer was but poorly supplied by small boats would create alarm among the passengers.

It is said that passengers can regulate this by refusing to go on board of boats that have not these requisites. The same remark would apply to boilers, which latter, the authorities have found it necessary to subject to official inspection. If accidents hereafter occur upon the Hudson for want of life boats, the responsibility rests upon the present legislature, and it is incumbent upon each individual member to weigh the responsibility calmly upon his pillow.

The Ferry Boats which navigate the north and east rivers, and the Bay, should have small boats in case of accident. As many as one thousand passengers have been together at one time upon a single Ferry Boat. When we were upon Lake Ontario in the summer of 1844, we had an opportunity to contrast these boats with those of the North River, and were satisfied that more strength is required in the North River Steamers than is found in their boats. The great length of the North River Steamers is an objection, and a serious one, for the boats are not strong in proportion. The Dewitt Clinton, when upon the river, was a noble boat, and we have frequently when on that boat spoken of the preference passengers gave to this boat on account of its great strength.

Many of the shores of the north river are bold and near such shores is the deepest channel. Should such a river be navigated by steamers carrying hundreds of human beings without the means of safety in case of accident?

Some time since we addressed a letter to the Hon. John McKeon, then a member of Congress, in relation to the North River Steamers, and during the winter of 1845, addressed the Hon. D. S. Dickinson, U. S. Senator upon the same subject, and we have that Senators reply now on the table before us, dated Washington City, January 23d, 1845. in which, among other things, he remarks as follows:

"I think your suggestion as to boats, &c., is entitled to much weight."

It is but a few years since (1834) that a vessel passing through the gap at the foot of Dunderburgh, loaded with Iron, was struck by a flaw of wind, capsized and sunk to the bottom and all on board perished.

The accidents on the North River the last four weeks have been so numerous as to be as we before observed, admonitory, and should not pass unheeded. Some years ago when the accidents were numerous by the explosion of steam boilers, the North River companies provided Safety Barges for Passengers which were taken in tow by the Steamers, but people soon forgot the disasters which at the time of their occurrence caused so much alarm, and the safety barges were discontinued. We here present several extracts from the Journal of Commerce of the perils of North River Steamers within three weeks, as follows:

ACCIDENT ON THE HUDSON.

The steamboat South America, on her passage down on Wednesday night last, accidentally run over a boat opposite East Camp landing, containing nine persons, all of whom were drowned, viz: George Rockefeller, wife, and daughter; Philip I. Saulpagh and daughter; Andrew Hawyer, Albert Rockefeller, Rufus Sasher and Coonrod I. Saulpagh. The latter leaves a wife and six small children, and most of the others leave families. They were all residents of Germantown, Columbia county. Mr. Rockefeller's family had been at Hudson to purchase articles for his daughter, who was recently married, and whose husband stood on shore awaiting their return, when they were suddenly hurried into eternity.—*Journal of Commerce of March* 31.

STEAMBOAT ACCIDENT.

In consequence of the accident to the Columbia, from collision with the Columbus, it was found necessary to put the North America on the line. This boat left New-York on Sunday evening, and when off Hampton her shaft broke close to the pillar block, which was followed by the breaking of the crank, when the whole of the machinery came down with a tremendous crash, spreading the utmost consternation among the passengers.

Most fortunately (says the Albany Atlas) and almost miraculously, no one was injured. The passengers of the North America were transferred to the Steamboat Splendid, and reached Albany at 11 o'clock on Monday morning. The damage done to the N. A. is very heavy, probably over $2,000.—*Journal of Commerce April 2d. We add,*

On Monday evening, April 7th, the Steamer Swallow on her way from Troy to New-York with between 250 and 300 passengers on board, struck upon a rock near the western Bank of the Hudson River opposite Athens and in a few minutes was a complete wreck. The boat left Albany at 6 o'clock and was at 8 o'clock, according to the statement of Mr. Pomeroy who looked at his watch a few minutes previous to the accident, opposite Athens, a distance of 30 miles from Albany. This makes a rate of 15 miles per hour—a mile in four minutes—eighty rods in one minute, and twenty-two feet in a second. The boat ran a considerable distance on the rock. The passengers were for some time ignorant of the cause of the shock the boat received, and therefore lost some minutes in making preparation to leave the boat, and when the difficulty became known the water was rising in the stern so rapidly that the utmost consternation and alarm filled the minds of all on board, and therefore all were not able to save themselves. The Steamer Rochester and Express were close behind the Swallow, and both of these boats came along side and took off near two hundred of the passengers —others went on shore at Athens and Hudson.—Boats put off from Athens and Hudson as soon as the catastrophe was known. The rock on which the boat struck is called the Brig—it lies about 60 feet from the shore, and at low water (which was the state of the river when the accident happened) presents a surface of about 40 feet by 25. The Boat was entirely out of her course. The night was dark and snow was falling at the time. The Steamers Express and Rochester came on to New-York. These two boats should have laid by the wreck until morning by all means, and their not having done so is highly reprehensible. It is impossible to know how many persons were on board and the number probably never will be known. The last accounts which we have seen state that 13 bodies had been recovered, and the body of one person known to have been lost, has not been recovered, and 41 yet remains to be accounted for by name, who were known to be on board. A Special Committee appointed by the Senate have proceeded to Athens to examine the wreck, and to investigate the particulars of the disaster.

THE GALE.

The steam tug Trojan, with barges in tow, was blown ashore on Tuesday night below Newburgh, and had her promenade deck blown off. The barge Ontario, in tow of Steamboat Commerce, had the greater part of her promenade blown off. Other boats found the gale as much as they could stagger under; passengers frightened, &c.

The Empire had her cutwater badly bruised,—we understand by coming in contact with the Catskill dock. She did not arrive here till yesterday noon. She was due early yesterday.

It blew very strong on the river Tuesday night. The South America was obliged to miss her landing at Caldwell's, although there were several passengers for that place, and also at West Point. When near Newburgh, a squall struck her, which almost capsized her. Although it was a rough night, and the passengers, whose nerves were strung to the highest possible tension by the disaster of the Swallow, were kept in a state of constant excitement.

The Eureka broke an arm in her larboard wheelhouse with a tremendous crash, tearing the whole structure away. She crawled back to the city to refit. —*Journal Com. April* 10.

It has been suggested that the State Legislature has no power in the premises. The restriction pertains to local navigation and not to foreign Commerce, and an act of the Legislature requiring inspection of boats brings the matter within the provisions of the Constitution of the United States.

The following is the copy of a memorial presented in the house of Assembly by the HON. ABRAHAM G. THOMPSON, jr., on the 11th inst.

To the Hon. the Legislature of the State of New-York:

The undersigned take leave most respectfully to call the attention of your Honorable Body to the necessity of some provision of law which shall compel steamers carrying passengers to provide as many small boats as will be sufficient in case of accident to convey the passengers to the shores, and that the boats shall be limited as to the number of passengers which they shall carry.

The undersigned deem it sufficient to bring this

subject directly to the notice of your Honorable Body and trust that the Legislature will take such action thereon as they in their wisdom shall deem meet.

And your memorialists, &c.

New-York, April 9th, 1845.

THE FROZEN CREW.

There are fearful wonders upon the ocean, wonders in the tempest and in the calm; in the tropical heat and in the cold of the frozen seas. Thousands and tens of thousands go down in the deep, and are no more seen forever. A more fearful fate has befallen a thousand sons of the ocean.

Long before the idea of the existence of a new world was contemplated by the Europeans, the northern seas had been traversed in every direction by the daring freebooters of the north, who often bore the title of *the kings of the sea*. They had discovered Iceland and the settlement there formed, became an asylum for the host of northern men who were driven from Scandinavia, by the gradual approach of southern civilization. In time Iceland also sent forth her colonies, and early in the tenth century effected a settlement upon the coast of Greenland. It long languished for want of sufficient population; at length, in 988, Erick Raude, an Icelandic chieftain, fitted out an expedition of twenty five gallies, at Snefell, and having manned them with sufficient crews of colonists, set forth from Iceland, bound to what appeared to them a more congenial climate. They sailed upon the ocean fifteen days, and they saw no land. The next day brought with it a storm, and many a gallant vessel sunk in the deep. Mountains of ice covered the waters as far as the eye could reach, and but a few gallies escaped destruction.

The morning of the seventeenth day was clear and and cloudless. The sea was calm and far away to the north could be seen the glare of the ice fields reflecting on the sky.

The remains of the shattered fleet gathered together to pursue their voyage. But the galley of Erick was not with them. The crew of a galley which was driven farther down than the rest, reported that as the morning broke, the huge fields of ice that had covered the ocean were driven by the current past them, and that they beheld the galley of Erick Raude, borne by a resistless force and with the speed of the wind, before a tremendous flake of ice. Her crew had lost all control over her—they were tossing their arms in wild agony. Scarcely a moment elapsed ere it was walled in by a hundred ice hills, and the whole mass moved forward and was soon beyond the horizon. That the galley of the narrators escaped was wonderful. It remained, however, uncontradicted, and the vessel of Erick Raude was never more seen.

Half a century after that, a Danish Colony was established upon the western coast of Greenland.—The crew of the vessels that carried the colonists thither, in their excursions into the interior, crossed a range of hills that stretched to the northward; they had approached perhaps nearer to the pole than any succeeding adventurers. Upon looking down from the summit of the hills, they beheld a vast and almost interminable field of ice, undulating in various places, and formed into a thousand grotesque shapes. They saw not far from the shore a figure in an ice vessel, with a glittering icicle in place of a mast rising from it. Curiosity prompted them to approach, when they beheld a dismal sight. Figures of men in every attitude of wo, were upon the deck, but they were icy things. One figure alone stood erect, and with folded arms, leaning against the mast. A hatchet was procured and the ice split away, and the features of a chieftan disclosed, pallid and deathly and free from decay. This was doubtless the vessel, and that figure the form of Erick Raude. Benumbed with cold and in the agony of despair, his crew had fallen around him. The spray of the ocean and the fallen sleet had frozen as it lighted upon them, and covered each figure with an icy robe which the short lived glance of a Greenland sun had not time to remove. The Danes gazed upon the spectacle with trembling. They knew not but the same might be their fate. They kneeled down upon the deck and muttered a prayer in their native tongue for the souls of the frozen crew, then hastily left the place for the night was fast approaching.—*Milwaukie Gazette.*

COMPARATIVE MORTALITY.

The two houses composing the Legislature of the State of New-York number in members about half as many individuals as the two houses which compose the Congress of the United States. The Legislature of New-York have been in session four months, and no case of death has occurred among the members. We frequently hear of the death of members of Congress during the session, and numerous duels have been fought by members of Congress during the sessions of that body. A calm and undisturbed state of mind tends to the preservation of health and the prolongation of life.

NIAGARA FALLS.

An anonymous correspondent suggests that carbonated hydrogen gas rising in the spray from the Horse Shoe Falls, would, if ignited, explode with great force. *Not so.* Hydrogen gas mixed with atmospheric air in the proportion of 1 to 1, is explosive, but not when the atmosphere air is in the proportion of millions of millions of cubic feet, to a single cubic inch of hydrogen. Such a mixture is not explosive A salt well at Kanhawha, which is a little less than a thousand feet in depth, discharges a column of hydrogen gas 18 inches in circumference and of great height, and with it a column of salt water. This column of gas when ignited burns freely, and without detonation, and is now used for heating the salt boilers. The gas rises through water, and so does the gas under the falls. I kindled a flame upon the spring about a mile above the horse shoe falls, and the gas burnt freely and quietly for some minutes.—The flame was about 20 inches in height, and two inches in circumference. The escape of hydrogen gas from numerous excavations in the western part of this State, is great. I collected it on the surface of the Erie Canal at Utica, in considerable quantities as it arose from the fissures in the bottoms of the Canal and escaped on the surface, and saw it rising in numerous places on the surface of that artificial water channel. There can be no doubt in reference to the carbonated gas rising with the spray at the falls, for it is a very deep excavation, and no more danger in touching a burning taper to it than there is in applying a burning taper to the wick of a tallow candle. In preparing oxide of Iron for particular purposes I frequently use Iron in grains or particles in a retort mixed with dilute sulphuric acid, and in these operations I burn the hydrogen as it escapes, taking care that the atmosphere air is all expelled from the retort before I apply the match. I was once a little too soon in applying the torch and the gas and air exploded throwing the retort around the laboratory in numerous pieces. Our anonymous correspondent also finds fault with our chronology. The measure of time was not created until the sun and moon were placed in the firmament, which were to be for signs, for seasons, for days and years, During the three periods which preceeded the fourth day of creation, time had no measure of duration, nor did they belong to time, for these periods were cradled in eternity. Man in his primitive state was in a state of innocence, and therefore both philosophy and religion belonged to that period which preceded the first Sabbath of rest. Religion does not require philosophy to support it, for it is independent of all human philosophy. Human philosophy is theory.

We take leave to refer our anonymous correspondent to the following pages of the first volume of the New-York Muncipal Gazette, viz: page 135, "Primitive Geology"—page 377, "The New-Year"—page 435, "Longevity"—page 440, "The Deluge"—page 446, "An ancient copy of the Bible," where he will find noticed the events of time, and also the periods which preceded the first solar morning.

TAX UPON ALIEN PASSENGERS.

The State law imposing a tax upon alien passengers arriving in our sea ports from foreign Countries is a violation of the Constitution of the United States. The principles involved in this question were discussed by the Supreme Court of the United States in the suit of Brown, vs. the State of Maryland.

TAX UPON WIGS.

We find in the minutes of the Colonial Assembly of the Province of New-York of 1732, an entry in the words following:

"*Ordered*, That the Treasurer of the Colony lay before this house on Thursday next the following accounts, viz: an account of what has been paid into the Treasury, on the TAX UPON WIGS, by virtue of an act entitled an "an Act to defray the charge of victualling his majesty's troops posted at Oswego, and for other purposes therein mentioned, since he delivered his last account thereof to this House."

On the following Thursday the Treasurer reported the amount received as a tax upon *wigs* at nine pounds seventeen shillings and five pence. Also the amount received from the fees of the WEIGH HOUSE in the city of New-York, at four pounds three shillings and eight pence.

PUBLIC PATRONAGE.

We notice in the Journal of Commerce of Tuesday last a statement of the amounts paid the publishers of the Evening Post by the Corporation of the city of New-York, as follows:

1840,	$10,840.63
1841,	10,062.19
1842,	4,291.57
1843,	4,709.87
Part 1844,	2,094.86
Total	$31,999.12

We presume that some of the other city papers have also received equally large patronage.

FIRE AT PITTSBURG, PA.

A great Fire broke out in the city of Pittsburg, Pa., on the 10th inst., which spread over 62 acres thickly covered with buildings. The length of the burnt district was about one mile, and the width 480 feet. About 1200 buildings were burnt, of which 700 were dwellings. Pittsburg is at the head of the Ohio river, and lies between the Alleghany and Monongahela Rivers, which here meet and form the Ohio.—In New-York, during the great fire of the 16th Dec., 1835, there were only two or three dwellings burnt out of the great number of buildings destroyed. The loss by that fire was estimated at $20,000,000.

It is estimated that at Pittsburg 4000 persons have been deprived of house and home. In New-York during the great fire the suffering was altogether pecuniary.

PITTSBURG SUFFERERS.

Mayor Harper has addressed a letter to the Mayor of Pittsburg, expressing his regret for the calamity which has befallen that city, and advising him that he has taken the preliminary measures for calling a public meeting of our citizens with a view to giving aid to those who have been bereft of house and home by the destructive conflagration.

The citizens will, we are confident, second the Mayor in this measure, called for by both humanity and duty.

ICE AT NIAGARA FALLS.

The Journal of Commerce of the 8th inst. contains a paragraph stating that the Niagara River is choked up with ice, and that one mile above the falls the ice is piled up to the height of 40 feet. This obstruction may produce some change with this wonderful locality, and we should think would endanger the safety of Gout Island Bridge.

COMPARATIVE METEOROLOGY.

COLD.

The temperature of the atmosphere at Montreal, Lower Canada, which is in North latitude 45° 30′, West longitude 73° 25′, was for the months of October and November 1832, a fraction less than a mean of 37° of Fahrenheit's scale.

The temperature of the atmosphere at Charleston, S. C., which is in North latitude 32° 46′ 33″, West longitude 79° 57′ 27″ was for the same time a mean of 59½° of the same scale.

Of the 61 days in the two months named above, there were 32 clear and fair days at Charleston, and 49 fair days at Montreal. There were eight rainy days at Charleston during the time named above, and 11 rainy days at Montreal, and one day on which snow fell. During the 61 days, rain fell but one day at both places at the same time.

The temperature of the atmosphere at the City of Savannah, State of Georgia, which is in latitude 32° 4′ 56′ and 81° 8′ 18″ West longitude, for the month of July 1832 was a mean of 84°; August, 82°; Sept. 77°; Oct. 71°; Nov. 64°; December, 54°; January, 1833, 56°; February, 59°; March, 62°; April, 69°; May, 79°; June, 82°. This gives a mean temperature for 12 months of a fraction less than 70°.

The mean temperature of the atmosphere at Concord, New-Hampshire, which is in north latitude 43° 12′, for the month of December 1832, was 26°; January 1833, 26°; March, 29°.

The mean temperature of the atmosphere at Waltham, Massachusetts, which is in north latitude about 43°, west longitude about 71°, for 1832 was 49°, and for each month as follows: January, 28°; February, 29°; March, 38°; April, 43°; May, 55°; June 66°; July, 69°; August, 71°; September, 63°; October, 54°; November 40°; December 32°.

The mean temperature of the atmosphere for the month of January 1833, at Columbus, Ohio, was 37½°, and for the month of February of the same year was 33¾°. Columbus, Ohio, is in north latitude 39° 47′, west longitude 83° 3′.

It appears by a notice of a journal kept by Governor Plummer of New Hampshire for 22 years that the mean temperature of the atmosphere of the year 1809 was 47°, and of 1812 was 42°. Seven years the mean temperature was 46°; two years 47; three years, 45°; five years, 44°; four years, 43°, and one year, 42°. Epping is in north latitude 43° 3′.

The temperature of the interior of the mammoth Cave in Kentucky is 59° of Fahrenheit throughout the year.

RAIN.

The fall of Rain upon the surface of our globe is reckoned at an average of about 34 inches annually. The quantity of rain varies greatly in different years and is more abundant in some sections of the same continent than in others.

The surface nearest the equator is more abundantly supplied with rain than farther toward the poles.—The number of rainy days in low latitudes are about equal to the number of snowy days in the high latitudes.

At Grenada, in north latitude		12°, —	126	inches
Cape Francais	"	19°, 47′	120	"
Calcutta	"	22°, 23′	81	"
Rome	"	41°, 54	39	"
Island of G. Britain	"	50°, 53′	31	"
St. Petersburgh	"	59°, 6′	16	"
Uleaberg	"	65°, 1′	13½	"

The average fall of rain in London for 7 years from 1775 to 1780, was 23 inches; Liverpool, 18 years 34 inches; Lancaster, 10 years, 45 inches; Keswick 7 years, 67 inches.

On the 21st and 22d of August 1843, the rain fell in a few hours at the city of New-York to the depth 9 13-100 inches and during the same time at Syracuse 300 miles distant, in the interior of the State only three-fourths of an inch.

Some of the Provinces of South America have been without rain for a series of years and so great has been the droughth that vegetation has wholly failed and the district thus affected has become desolate for where there is no water neither man or beast can long subsist.

THE FAITHFUL DOG.

It is said of the Roman General, Sabinas, who suffered death for his attachment to the family of Germanicus, that his dead body was exposed upon the precipice of the Germonece as a warning to all who should dare to befriend the house of Germanicus. No friend had courage to approach the body; one only remained true—his faithful dog. For three days the animal continued to watch the body. His pathetic howling awakened the sympathy of every heart. Food was brought him, which he was kindly encouraged to eat, but on taking the bread, instead of obeying the impulse of hunger, he fondly laid it on his masters mouth and renewed his lamentations, but did not quit the body. The corpse was at length thrown into the Tiber, and the generous creature leaped into the water after it, and clasped it between his paws, vainly endeavoring to preserve it from sinking. I was reminded of the account of this touching incident in receiving a visit early this morning from the little dog which was found in the woods in New-Jersey some time since lying by the dead body of his master.

Mayor Harper some time since related to me an account of a dog for which the master of the dog and his family had a great regard. One morning late in summer the Mayor's servant informed him that a person was waiting to see him at the door and was much excited and seemed very anxious for an immediate interview. The Mayor lost no time in seeing his visitor, but found him so distressed that it was difficult to learn from him the cause of his trouble.—At length however he learned from him that the Dog Banditti had killed his favorite dog, and that when he left his dwelling his wife was in hysteric fits, and his children were all crying in consequence of the brutal attack upon their favorite dog. The Mayor endeavored to calm and soothe the mind of his visitor but found it impossible, and finally directed him to call at the Mayor's Office at 10 o'clock, hoping by that time that his feelings would become calmed.

At ten o'clock the man came, and was in as much distress as before, and insisted on knowing the name and residence of the dog butcher, but the Mayor did not think it safe to inform him, fearing that he might take summary vengeance upon the unfeeling creature. He endeavored to calm the feelings of the man and expressed to him great regret for the occurrence and assured him that if it was in his power to restore his dog to him he would gladly do so. The man left the office in a better state of feeling than when he came in. Some little time after the Mayor saw his visitor returning with a countenance lighted up with smiles and gratitude, and quickly approaching the Mayor kindly thanked him for the feeling manner in which he had been treated, at the same time informing the mayor that he had obtained his dog again. and turning round gave a whistle, and his dog came toward him at almost a single jump, with his head bound up with a silk handkerchief. The dog man had knocked the dog on the head with a club as he came out of the store door upon the sidewalk, threw him in the dog cart, and dumped him in the River. The water restored him, and swimming to the shore he crawled home to his masters house. The man added to his own thanks those of his wife and children. The dog was a fine animal and so highly did the owner prize him that he paid for his board in the country during the time he supposed the dog law was in force, and had only brought him home the day before supposing the dog law had expired.

The owner of the dog assured the Mayor that his family were then all happy, that his wife had come to herself again and the children were delighted.

It is said of the dog killers in China, that the dogs howl after them when they see them in the street.

Owners of dogs should be required to keep them out of the streets, and fined if they violated the law in this, but no person should be employed to kill dogs.

FASCINATION.

In a forest journey about twenty-nine years ago, near the southern shores of Lake Erie I espied in the path some distance ahead of the horse I was riding, a large rattle-snake lying perfectly still, and a striped squirrel crawling slowly toward the serpent. I turned my horse in a moment, dismounted and cut a small sapling with my pocket knife and at once approached the snake and it immediately turned from me and retreated. It was of that species known as the ridge rattle snake, and was five or six feet long. The rattles shook as he left the path. It was the second rattle snake I had met with in very extensive forest journeys, and the last. The squirrel seemed to be nearly overcome by fear, or the fascination of the serpent, for it made no effort to run, and I took it in my hand, remounted my horse and carried it with me several miles, but it died in the course of a few hours. It is the only instance that I have ever seen of the charming of a serpent, and I felt no desire for a single moment to witness the operation but set myself at once at work to drive away the charmer and save the life of the little animal.

Near the banks of the Tuscarora River I was travelling in the woods and heard two birds crying very piteously and shortly after saw both of them flying about in great distress, I turned my horse from the path to see what troubled them, and discovered a large black snake killing their little ones which were in a nest and nearly ready to fly. I dismounted from my horse, picked up a stone and at the first throw struck the serpent in the head and he dropped from the tree and I killed him on the spot. The serpent had killed but one of the little birds and my timely arrival had saved the rest. The parent birds returned to the nest and seemed greatly relieved by my interference and I felt almost as much so, for the act has been a source of comfort to me ever since, when I call the occurrence to mind. The tree on which the snake had clambered was thirty or forty feet high and the nest was near the top.

INSTINCT AND INTELLIGENCE.

Who can draw the line of distinction between instinct and intelligence, and determine where the former ends, and where the latter commences? It is beyond the powers of the human mind to draw the line of distinction, for these faculties, as we may call them, are blended together like the day and night in the gradual approach of morning.

Man is sometimes endowed by the Great Creator with intelligence of a superior order,—by powers of mind that are gigantic, and gifted with an intellect that is brilliant and extraordinary.

The human mind is often stored with abundance of acquired knowledge, possessing talents which have been diligently and highly cultivated, but talents of the brightest order are oftimes spontaneous and spring up like the sweets of vegetation in a soil and in an atmosphere where both are congenial to its growth.

This ethereal essence is incomprehensible—it is the gift of that being whose attributes are all perfection, whose powers are unlimited, and whose knowledge is supreme

PINE TREES.

On the plains north of Lake Ontario, in the Province of Upper Canada, pine trees called the Norway Pine grow to a great height. During a tour in that region in the summer of 1844, I saw several trees which had been cut down which measured 170 feet. These trees are fastened in the earth by powerful roots which enable them to withstand the winds, and having but small leaves they do not present that resistance which trees of a different folinge offer to the winds. I saw several pine trees which were broken off by the wind at 100 feet from the ground. These trees grow in mixed forests.

On the top of Killington Peak in Vermont which is about 4000 feet high, I saw great numbers of trees of the evergreen species which measured from 10 to 12 feet in height and 12 inches through at the butt.—What a contrast.

THUNDER AND LIGHTNING.

In a meteorological account kept at at Medfield in Massachusetts in 1832 it is stated that thunder and lightning occurred on 21 days of that year. The earliest on the 12th of March, and the latest on the 29th of September.

BUNKER HILL MONUMENT.

I visited this monument in November 1844, and ascended to the highest apartment on the top of it by a flight of stone steps, 300 in number. The height of the monument is 220 feet. It is 30 feet square at the base. It is a laborious ascent. It was a cold day for the season, and I wore a cloth cloak which was rather cumbersome, yet notwithstanding the inconvenience I found a cloak necessary, for the labor of the ascent produced free prespiration which was liable to be checked by the cold atmosphere of the stone wall and steps. It is an ascent which I would not like to make again for it is not a healthful exercise. The top stone of this monument is of about two and a half tons weight. The block is four feet nine inches square at the base, and constitutes of itself the apex of the monument. The centre of the apex is three feet six inches in thickness. This monument is built of granite.

AMERICAN ANTIQUITIES.

I have visited and examined many of the ancient works which were to be found scattered over the far west on the settlement of that section of the United States. These works are constructed of earth and many of them were in the midst of dense forests and some of the largest trees were growing upon these artificial embankments. Some of these works are very extensive and evidence that great labor has been exerted in the formation of these earthen works. The rapid settlement of that section of the country, and the extensive cultivation of the land upon which these are located is fast erracing these terrestrial records of an age unchronicled upon the page of writen history, and the time is not far distant when these works of art will no longer be seen. The plough and the harrow of the farmers will in a few years reduce these structures to a level with the surface on which the base of these embankments rested. In the city of Cincinnati was once a large mound, which I have been informed has been levelled with the ground. At Chillicothe a large mound has been treated in the same way. At Circleville, on the Sciota River, extensive works were found. This town is built upon the Picaway Plains, and the town takes its name from the works within the walls of which it was built. At Marietta, at the junction of the Muskingum River with the Ohio, very extensive ancient works existed, and on Licking Creek, between Granville and Newark, were numerous works, both curious and interesting. I visited the works on Licking Creek nearly thirty years ago in company with Major Munson, and spent some time in examining the various structures. Major Munson had the year previous made a survey of the ground. The whole were at that time in the midst of a dense forest of heavy timber and as there was no road which led to the place, we travelled through the woods on horseback, after fording Licking Creek. One of these works was circular and contained about 120 acres. The walls, which were of earth, were eight or ten feet high. On the western side was a parapet of about fifteen feet high, and about fifty or sixty feet long and about 20 feet thick. There was formerly a subterranean passage under this parapet to the circular enclosure. On the eastern side and exactly opposite was another parapet like the first I have mentioned, with a subterranean passage which had been walled up with stone. This connected with another work of about half the size of the first. This work was either an Octagon or a Hexagon, I cannot remember which, for I now write from memory, having made no memorandum on the spot or at the time. This work consisted of two parallel lines having numerous obtuse angles with an opening at each angle, and these lines were about four rods apart and in each opening in the inner circle was a deep pit. This work connected with a work protected by two embankments, 64 feet apart, which extended in a southerly direction several miles. Near these works were several high mounds. There were extensive works on Paint Creek. I noticed several large mounds near the banks of Big Barren River in the State of Kentucky, several of these mounds were opened and were found to be filled with human bones. At Irville, on Licking Creek, a large mound was opened about thirty years ago, and found to contain two human skeletons one of which measured 8 feet 3 inches, and the other 8 feet 3 inches in length. It is impossible to form any correct opinion as to when or by whom these works were constructed for the history of this continent beyond 350 years ago is a perfect blank. In reference to the mounds we have an evidence in their existence of the possession of knowledge as to the best means of preserving the resting places of the silent from the action of the frost, wet, and heat, for the bodies which have thus been placed have undergone less changes than bodies placed beneath the common surface, and a care in this evinces a belief in a future state of existence, which is a matter of great interest, as it shows forth the teachings of the spirit in the absence of the written word.

MENTAL CULTIVATION.

The cultivation of the human mind tends to the promotion of the health of the human structure.—Many persons look upon the cultivation of the human mind in very early life as the most important portion of time during the existence of the individual, but I am inclined to the opinion that more mature years is the period best calculated for extensive mental cultivation. The cultivation of the mind should be attended with suitable and proportionate exercise of the body.

The powers of the human mind during the period of infancy, are feeble in the extreme, and it is not safe to task these feeble powers to the utmost limit, nor until they acquire suitable strength.

The Book of Nature is the most instructive volume extant, and is the most easily studied, and the lessons learned from its countless pages are longest remembered.

The industrious man who mixes exercise with study is always a learner to the outer limits of old age.—Deliberation and moderation in the acquirement of knowledge is very necessary. The mind which calmly investigates, acquires that even and useful habit of thinking and acting which enables it to secure useful knowledge. Useful knowledge is the offspring of diligent and patient labor. It should be sought with the same care and preparation that we would cultivate a garden or an orchard. The fruit depends upon the sowing of the seed, and the watching and care of the young plants.

The human mind should not be taxed with labor to cause it to be weary. The mind like the body requires rest, and this the creator has in infinite wisdom provided in the repose of sleep and also in the Sabbath of rest.

Extravagant anticipations which are not realized enfeeble and derange the human mind, and these are increased by neglecting those periods of rest and repose which nature has indicated in the economy of her laws.

It is a great study to learn to moderate one's thoughts—to discipline the human mind and bring it to regular habits—it is what tends to good health, promotes happiness and enjoyment, for in nature there is abundance to sweeten life. Nature is full of charms and full of loveliness. Employment is useful to every human being, rich or poor, bound or free. The man of active business habits who retires from active life requires employment if he desires to have health and long life—it is as necessary as his food.

TOMPKINS LIME STONE QUARIES IN ROCKLAND COUNTY.

During the month of October, 1844, I visited the lime stone quaries of Mr. Tompkins in Rockland county, and also the brick kilns in the same vicinity, The limestone quaries are about one mile below the brick-kilns and both are on the westerly bank of the Hudson River, near the Dunderburgh mountain and below this height. The lime stone contains no fossils that I could discover. Some of the specimens which I obtained here are very beautiful. One section of the quarry the stone is of nearly white, others red, and a greater portion is blue and intersected with lines of white, a beautiful satin spar. Some of these stratas are horizontal, others vertical, and others of every degree of inclination, and many of these are bent or contorted. The stratas of clay, which were near by, were of the same colors as the lime stone rock, and the stratas and inclinations are precisely the same.—These stratas are underlaid by stratas of coarse sand and gravel, and these stratas of sand are also contorted. Those on which the clay reposed and with which it is in contact is cemented and crystalized and is become, or becoming a rock formation. I discovered precisely the same operation going on at Syracuse, on the face of an excavation near one of the deepest Salt Wells. The fragments of Lime Stone rock near that part of the Tompkins Quarry where the limestone is red, which had been washed down by the snow water, had become agglutinated and cemented together, and this fact presents a very important consideration for investigation, for it discovers that water holding a small portion of the carbonate of soda in solution is capable of dissolving this rock, and when the water evaporates, of again crystalizing. Mr. Tompkins showed me some stalactites which the workmen obtained from fissures in the rocks. In this neighborhood are springs from which nitrogen gas issues. Stony Point is a short distance below these quaries.—

There is a spring of water near the base of Dunderburg which holds in solution *Chloride of Sodium, of Calcium, and of Magnesium.* The analysis was made some years ago by Dr. Chilton, but he does not state the proportion of each, nor does he state the specific gravity of the water. I have a bottle of water which weighs eleven pounds to the gallon, which holds these three substances in solution, which becomes instantly opaque and solid on the addition of dilute sulphuric acid. This water came from the depth of 604 feet in the earth. One pint of the water yields 1033 grains of solid matter. There are some stratas of talcose slate which make in between those of the lime stone. Verplanck's Point is on the opposite side of the River from Tompkins' Quaries, and here the limestone crops out again. At the foot of Dunderburgh mountain and on that side nearest Caldwells and a few hundred feet from the River is an excavation in the solid rock near fifty feet deep, and about eight feet in diameter, recently made. I obtained some pieces of this rock as specimens. I found in this excavation that the rock had the appearance of having been fractured and that the fractures widened as they deepened, and had been subsequently filled with quartz. In the sinking of this well several snakes were found embedded in the rock and in a state of activity. I saw two of these reptiles in the possession of A. G. Thompson, Esq., of New-York. One was about 10 inches long, and the other of less length, and about the size of a pipe stem—the under part is of a reddish cast, and the backs of a blueish slate color. I have never seen any of the same species before. Mr. Thompson has one of them now in his possession, the other died some months ago. These snakes no doubt found a retreat in the fissures of the rock which afterwards closed up with the crystalization of fluid which penetrated these fissures, and it is thus that animal life has been preserved for an unknown period of time.

PROFANITY IN PUBLIC MEN.

Men holding public office who are in the habit of using profane language set an example which the office gives force to with the ignorant and the vain, which is very pernicious, and the penal laws of the State should be put in force against such public officers, and thus shame them to regard the laws which they are bound to obey. We noticed two or three years since a public officer, a man of venerable years, who had been but a few months before on a bed of sickness and to the very borders of the grave indulge in profane language, a practise which ill becomes his station, and which evidenced that even the bed of sickness was forgotten. In the haunted room of the Mammoth Cave of Kentucky a curse uttered by a human being within its walls has an echo and a continued reverberation which returns to him the curse in the deep toned accents of those subterranean chambers which would resound in the ears of the blasphemer as long as life continued to dwell in his bosom and keep alive his memory.

TEMPERANCE.

The Journal of Commerce of March 31st, states that the Temperance Committee proceeded to Albany on Saturday evening with 20,606 signatures to their petition. The petition measured 287 yards, 861 feet more than one-seventh of a mile in length. Mayor HARPER signed the petition, and made a contribution toward the expense of the delegation.

MAYOR HARPER.

Mayor Harper has reason to feel gratified in the result of the election. The office of Mayor of New-York is a station of responsibility, notwithstanding the executive possesses but very little power, yet he must either be on bad terms with the Common Council, or bear the blame of their omissions of duty.

The powers of the City Government are vested wholly in the Board of Aldermen and Assistants. It is therefore a legislative despotism, and besides, the members of the Board of Aldermen exercise Judiciary powers, thus making a concentration of power at variance with the principles and doctrines of a free government.

Mayor Harper received the support of the most intelligent and worthy men of both parties, Whigs and Democrats, and this expression of approbation of his faithful services, is a rich reward for the labors he has performed.

NATIVE COMMON COUNCIL.

The Native Common Council erred greatly in their general measures in reference to the city Government. The extravagant expenditure made by both parties in the payments for public printing was loudly complained of, and the matter was brought distinctly before the Native Common Council on the commencement of their term and referred to the Finance Committee, but that Committee made no report, and all the satisfaction which could be obtained in the premises was that the Comptroller said the prices paid were cheaper than any others would do the same work for. The Comptroller was greatly in error in this, and such will be found to be the fact when the accounts come to be overhauled.

The Assessment abuses which had been so much and so loudly complained of were left wholly untouched, and not an effort made by any member of the Common Council to investigate the abuses or to remedy the evils which had caused so much dissatisfaction, and which alone placed the Natives in power in the Common Council.

The finances of the city were not managed by the finance department in a manner satisfactory to the people. The Report of the Committee on annual taxes published in September 1844, was a most unsatisfactory document and to aid the public finances, ten thousand copies were ordered to be printed at the expense of the City Treasury.

The City Comptroller's Report was a sort of second edition of this Fiscal document, and a very vague and mishapen statement.

This Report is not creditable to the fiscal departments and clearly illustrates the necessity of the creating by the State, of a Board of Auditors, to audit public claims. The Native Common Council deserve credit for abolishing the Tea Room profligacy, and for repealing the Street Patching nuisance, and for sundry other reformations.

Had the candidates for the Native party been elected to office the present year they would no doubt have reformed numerous abuses.

MAYORALTY VOTE.

The following is the result of the election for Mayor of New-York, on Tuesday the 8th inst.

James Harper,	16850
Wm. F. Havemeyer,	23071
Dudley Selden,	6331

The Board of Aldermen is composed of 15 Democrats and 2 Whigs.

The Board of Assistants is composed of 15 Democrats, and 2 Whigs.

The new Common Council have a fine field for earning popularity, and some of them of remedying abuses which were the acts of Common Councils, of which they had previously been members.

THE WEATHER.

The highest temperature attained by my thermometer in the month of March was 75°, and in the month of April the lowest 28°. No thunder and lightning has been noticed in March, nor in April thus far, in this vicinity. The Icebergs are on the Grand Banks.

THE BANKS OF THE WALLKILL.

I have made two geological excursions to the Wallkill township, in Orange County, through which the Walkill River has a channel.

It presents in its geological features a wonderful display. It was in this township that I examined the bones of the giant beast of antiquity that were exhumed in the digging of a marl pit, of which a full account is given on pages 130 to 133 of this volume. In the vicinity of the place where these bones were found the surface of the ground is covered with isolated rocks of a great variety, and boulders imbedded in the ground and lying upon its surface in great numbers. About twelve feet underneath this surface is a slate formation, and this extends to the high hills and to the deep vallies averaging about that same distance from the surface. I examined several wells which had been sunk and the slate which had been thrown out, and brought home numerous geological specimens. From this slate strata in several localities issues springs of water highly impregnated with sulphur. It is this description of water the Behemoth resorted to, in this vicinity, and besides, the rich pasturage which was here afforded by vegetation was an inducement for Behemoth to make this region his home.

The giant bones which have been found in this neighborhood are quite numerous, and if more extensive excavations were made no doubt immense numbers would be found, for the waters possess antiseptic properties which prevent the decomposition of the bones. The thinness of the covering of earth upon the slate formation is a singular illustration of the operations of nature. Remove this twelve feet of earth, which I have mentioned, and this whole locality would present a naked rock of slate for miles in extent. I am opinion that this slate was once a clay, and that the change has been produced by the action of subterranean gases and the waters which have absorbed these gases. I brought home with me a piece of indurated earth which on being exposed to the air, becomes so hard as to bear a polish. I ascended a height at the foot of which the bones of the Behemoth were found and from this elevation had an extensive view of the surrounding country.—The numerous high lands which project above the ordinary surface denoted that this region at some distant period was in great commotion, that beneath its surface the mighty mass was heaved by a force that the human mind is incompetent to estimate, that this portion of our globe was then in a semi fluid state, and heated to an intensity of an unmeasurable extent, or that the waters beneath this extensive surface holds rocks of every species in solution which were instantly chrystalized when in a state of commotion, or that the subterranean gases are the uncondensed nucleus of a mighty comet, which at the commencement of the morning of the creation of our earth, became compressed and then incrusted, and thus a surface formed for the occupation of newly organized life. The distant past is an unfathomed deep, too profound for the researches of the human mind in its present state of acquired knowledge,—The mind of man becomes amazed in calmly surveying this local terrestrial surface—In beholding the gigantic frames that have reposed for centuries in its bosom,—for it presents a record—full of mystery.

Within the reach of vision are the highlands which border the Hudson, overhanging its deepest chasms, standing sentry on each side of the narrow gulf, a strait through which the great Atlantic's tides pass in their inland journey, and through which they return to the bosom of the mighty deep.

Within the reach of vision on this terrestrial protuberance I surveyed that surface which was once the red man's home, and which now forms the red man's grave—peace, peace, to his ashes—in the dust of which is the germ of a celestial being destined to dwell amidst the glories and the beauties, and to enjoy the charms of a new, a bright, and a shining world.

The Wallkill has its head in the State of New-Jersey, and near its source during the last year a great number of bones of a large size were found in the drawing off of a pond, imbedded in the earth which formed the basin which held the water. Immense herds of these herculean animals must have frequented the Banks of the Wallkill, and the sides of the mountains which fringe this stream of water. The water of the Wallkill is now being extensively introduced into the city of New-York in Tin Milk Cans, via the New-York and Erie Rail Road.

QUINCY GRANITE QUARIES.

I visited the Quincy Granite Quaries in the month of October 1844. These quaries are both extensive and valuable and produce a large revenue to the owners and workers of the rock.

I examined the deepest excavations which have been made in this bed of rock. The strata is intersected by seams which are fringed with what the workmen call sap, being a less solid portion of the rock.

The seams intersect the rock in every variety of angle, and I noticed that the rocks were in some places separated by seams that were bent upward in the centre, and the upper rocks appeared to have been placed there in a semi-fluid state, after the lower rock had been formed, for its under surface was indented with the projecting points of the lower rock. I visited a large granite rock which now forms a surface of several feet in extent, which is as smooth as polished marble. This rock was once covered with earth and being rounding on the surface, the water resulting from rains and melting snow had run over its surface carrying particles of fine sand, which have during the progress of centuries of time worn away its rough surface and given the present polish.

The Quincy Granite contains hornblende, which gives it a singular appearance. I do not know whether the hornblende enters into all the rocks in these ledges but I noticed it in many of them.

Granite is generally composed of quartz, feldspar, and mica, and varies in the proportions of each, but the varieties of Granite are very numerous and differ greatly in quality.

The seams in the Quincy Granite Quaries are very narrow and appear of the same uniform width all the way down as far as the Quaries have been worked so far as my examinations and enquiries extended.

The opinion has been expressed that granite is a rock which has been formed by intense heat but it seems to me that such cannot be the fact, for I find the different materials, which constitute the rock are visible in minute particles and preserve to a great degree their individuality. If intense heat had been the agent which had been used to form these rocks they would partake of the appearance of glass so far as the texture and arrangement of the particles is concerned would present on breaking, a fracture very different from what we notice in this rock.

I have examined great varieties of rock which have undergone different degrees of heat and there is a peculiar arrangement in the order of chrystalization. The limestone rock often indents the granite stratas where these are near neighbors, and the granite often indents and runs into the limestone, and we find this the case among, what are called by geologists, secondary rocks.

Silex is the principal ingredient in most rocks and this forms a great proportion of Quartz, of Feldspar and Mica. The hornblende which enters into the composition of the granite rocks of Quincy is a species of shorle and its principal ingredient is silex.

The gneiss rock is a species of granite, but differs from it in the order of crystalization, and besides it has less feldspar than there is in the granite, and is coarser and more irregular in its structure. In granite the mica is scattered promiscuously, but in gneiss it is arranged in one direction through the rock.

The gneiss rock is very abundant upon the Island of New-York, and varies greatly in its quality. Some of this rock is valuable for building stone while much of it is of little worth for any purpose where strength and durability are required.

On the surface of the ground in the vicinity of the Granite Quaries at Quincy is the Pudding Stone or Conglomerate, and this stone is of great solidity.—I obtained specimens of this Conglomerate from a rock which weighed forty or fifty tons, which had been broken up by gunpowder and made into a stone fence. The aglutinating substance was so powerful that the fractures in the rock extended through the pebbles which were embodied in the rock. I am of opinion that this agglutinating or cementing fluid which entered into the conglomerate rock is the same which forms the cement of the granite.

On the surface of the ground underlaid by slate in Orange County the conglomerate rock is abundant, but the pebbles were mostly white. There is more of the Oxide of Iron in the conglomerate of Quincy than that of the Wallkill.

The Quincy Granite is called the Seinette rock from its near resemblance to that of some of the Quaries of Egypt.

REDUCTION OF POSTAGE.

We place before our readers the first three sections of the act recently passed by Congress for reducing the rates of Postage. This act will go into operation on the first of July 1845. The three sections we have here set forth in full, contain all the provisions which are important to the citizens generally.

NEW POST OFFICE LAW.

AN ACT to reduce the rates of postage, to limit the use and correct the abuse of the franking privilege, and for the prevention of frauds on the revenues of the Post Office Department.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That, from and after the first day of July next, members of Congress and delegates from Territories may receive letters, not exceeding two ounces in weight, free of postage, during the recess of Congress, anything to the contrary in this act notwithstanding; and the same franking privilege which is granted by this act to the members of the two Houses of Congress, is hereby extended to the Vice President of the United States; and in lieu of the rates of postage now established by law, there shall be charged the following rates, viz: For every single letter, in manuscript, or paper of any kind by or upon which information shall be asked for or communicated in writing, or by marks and signs, conveyed in the mail for any distance under three hundred miles, five cents; and for any distance over three hundred miles, ten cents; and for a double letter there shall be charged double these rates; and for a treble letter, treble these rates and for a quadruple letter, quadruple these rates; and every letter or parcel not exceeding half an ounce in weight shall be deemed a single letter, and every additional weight of half an ounce, or additional weight less than half an ounce shall be charged with an additional single postage. And all drop letters, or letters placed in any post office, not for transmission by mail, but for delivery only, shall be charged with postage at the rate of two cents each. And all letters which shall hereafter be advertised as remaining over in any post office shall, when delivered out, be charged with the costs of advertising the same in addition to the regular postage, both to be accounted for as other postages now are.

Sec. 2. *And be it further enacted,* That all newspapers of no greater size or superficies than nineteen hundred square inches may be transmitted through the mail by the editors or publishers thereof, to all subscribers or other persons within thirty miles of the city, town, or other place in which the paper is or may be printed, free of any charge for postage whatever; and all newspapers of and under the size aforesaid, which shall be conveyed in the mail any distance beyond thirty miles from the place at which the same may be printed, shall be subject to the rates of postage chargeable upon the same under the thirteenth section of the act of Congress approved the third of March, one thousand eight hundred and twenty-five, entitled "An act to reduce into one the several acts for establishing the Post Office Department;" and upon all newspapers of greater size or superficial extent than nineteen hundred square inches, there shall be charged and collected the same rates of postage as are prescribed by this act to be charged on magazines and pamphlets.

Sec. 3. *And be it further enacted,* That all printed or lithographed circulars and handbills or advertisements, printed or lithographed on quarto post or single cap paper, or paper not larger than single cap, folded, directed, and unsealed, shall be charged with postage at the rate of two cents for each sheet, and no more, whatever be the distance the same may be sent; and all pamphlets, magazines, periodicals, and every other kind and description of printed or other matter, (except newspapers,) which shall be unconnected with any manuscript communication whatever, and which it is or may be lawful to transmit by the mail of the United States, shall be charged with postage at the rate of two and a half cents for each copy sent, of no greater weight than one ounce, and one cent additional shall be charged for each additional ounce of the weight of every such pamphlet magazine, matter or thing, which may be transmitted through the mail, whatever be the distance the same may be transported; and any fractional excess of not less than one-half of an ounce, in the weight of any such matter or thing, above one or more ounces, shall be charged for as if said excess amounted to a full ounce.

TRADE WITH THE CANADAS, &c

We give in full, for the information of our readers, the act recently passed by Congress allowing the same drawback on Goods exported to the Canadas, as is now allowed on goods exported to foreign countries. This is a very important bill, and much credit is due to the Hon. J. P. Phœnix, of New-York for urging forward this important bill to its completion. This bill will greatly benefit the city of New-York.

AN ACT

Allowing drawback upon foreign merchandise exported in the original packages to Chihuahua and Santa Fe, in Mexico; and to the British North American provinces adjoining the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any imported merchandise which has been entered, and the duties paid or secured according to law, for drawback, may be exported to Chihuahua, in Mexico, or Santa Fe, in New Mexico, either by the route of the Arkansas river, through Van Buren. or by the route of the Red river, through Fulton, or by the route of the Missouri river, through Independence.

Sec. 2. *And be it further enacted,* That all the merchandise so exported shall be in the original packages as imported, a true invoice whereof, signed by the exporters, shall be made, to the satisfaction of the collector, describing accurately each package with its contents and all the marks upon it, exclusive of the name of the exporter, the place of destination and the route by which it is to be exported; all which shall be inscribed thereon, upon which invoice the collector shall certify that he is fully convinced the same is true, that the goods are in the original packages as imported, that they are duly entered for drawback, and to be exported by the owner, (naming him,) to either of the places aforesaid, (naming it,) and by one of the aforesaid routes, (naming it.)

Sec. 3. *And be it further enacted,* That upon the arrival of such goods at either of the places in Arkansas or Missouri above named, they shall be again inspected and compared with the invoice and certificate aforesaid, by an officer of the United States, who shall, if fully convinced that the several packages are identical, having remained unbroken and unchanged, also certify on said invoice the facts, in such form as the Secretary of the Treasury shall prescribe.

Sec. 4. *And be it further enacted,* That upon the arrival of any such goods at Santa Fe or Chihuahua, they, with the invoice and certificates aforesaid, shall be submitted to the inspection of the Consul of the United States, or such agent as the President may appoint for that purpose: who, if fully convinced thereof, shall, in such form as the Secretary of the Treasury shall prescribe, certify upon said invoice that the goods have arrived there in the original packages as imported, without change or alteration; and have been exported from the United States in good faith, to be disposed of and consumed in a foreign country.

Sec 5. *And be it further enacted,* That if the exporter shall give bond, with satisfactory sureties, in thrice the amount of duties, that the said merchandise by him exported, has been delivered at either of the places aforesaid without the United States, in good faith, to be sold and consumed there, and shall also produce said invoice, with the regular certificate thereon, the collector shall thereupon pay to him the usual drawback allowed by law.

Sec. 6. *And be it further enacted,* That the Secretary of the Treasury shall appoint inspectors to reside at each of the following places, to wit: Van Buren, Fulton and Independence, above named, or such other places in Missouri as the Secretary of the Treasury shall designate; who shall each have a salary of two hundred and fifty dollars, and make a full report of all the trade that passes under their inspection, to the Secretary of the Treasury, semi-annually, giving an account of all the number of packages, the kind of goods, the value, and the names of the exporters.

Sec. 7. *And be it further enacted,* That any imported merchandise which has been entered, and the duties paid or secured according to law for drawback, may be exported to the British North American Provinces, adjoining the United States; and the ports of Plattsburg, in the District of Champlain; Burlington, in the District of Vermont; Sacketts Harbor, Oswego, and Ogdenburgh, in the District of Oswegatchie; Rochester, in the District of Genesee; Buffalo and Erie, in the District of Presq'isle; Cleveland, in the District of Cuyahoga; Sandusky and Detroit, together with such ports on the seaboard from which merchandize may now be imported, for the benefit of drawback, are hereby declared ports from which foreign goods, wares, and merchandize, on which the import duty has been paid, or secured to be paid, may be exported to ports in the adjoining British Provinces, and to which ports foreign goods, wares, and merchandise may be transported inland, or by water, from the port of original importation, under existing provisions of law, to be thence exported for benefit of drawback; *Provided,* That such other ports situated on the frontiers of the United States, adjoining the British North American Provinces, as may hereafter be found expedient, may have extended to them the like privileges, on the recommendation of the Secretary of the Treasury, and proclamation made by the President of the United States, specially designating the ports to which the aforesaid privileges are to be extended.

Sec. 8. *And be it further enacted,* That all laws now in force in relation to the allowance of drawback of duties upon goods imported into the United States, and exported therefrom, and in relation to the conditions and evidence on which such drawback is to be paid, shall be applicable to the drawback allowed by this act. And in addition to existing provisions on the subject, to entitle exporters of goods to the drawback allowed by this act, they shall produce to the collector of the port from which such goods, wares and merchandise were exported, the certificate, under seal of the collector or other chief revenue officer of the port to which the said goods, wares and merchandise were exported in the said adjoining provinces; which certificate shall be endorsed upon a duplicate or certified copy of the manifest granted at the time of such exportation, and shall state that the same identical goods contained in the said manifest had been landed at such foreign port, and duly entered at the custom house there, and that the duties imposed by the laws in force at such ports upon the said goods had been paid, or secured to be paid, in full; and the said exporters shall also produce the affidavit of the master of the vessel in which the said goods were exported, that the same identical goods specified in the manifest granted at the time of such exportation had been carried to the port named in the clearance or manifest, and had been landed and entered at the custom house, and that duties imposed thereon at the said foreign port had been paid, or secured to be paid; and that the goods referred to in the certificate of the collector or chief revenue officer of such foreign port herein mentioned were the same identical goods described in the manifest aforesaid, and in the said affidavit.

Sec. 9. *And be it further enacted,* That no goods, wares, or merchandise, exported according to the provisions of this act, shall be voluntarily landed or brought into the United States; and on being so landed or brought into the United States, they shall be forfeited; and the same proceeding shall be had for their condemnation, and the distribution of the proceeds of their sales, as in other cases of forfeiture of goods illegally imported. And every person concerned in the voluntary landing or bringing such goods into the United States shall be liable to a penalty of four hundred dollars.

Sec. 10. *And be it further enacted,* That from the amount of duties upon goods, wares, and merchandise imported into the United States, and which shall be exported according to the provisions of this act, there shall be deducted two and a half per centum of such amount, which shall be retained by the respective collectors for the use of the United States, and the residue only shall be the drawback to be paid to the exporters of such goods, wares, and merchandise.

Sec. 11. *And be it further enacted,* That the Secretary of the Treasury is hereby further authorized to prescribe such rules and regulations, not inconsistent with the laws of the United States as he may deem necessary to carry into effect the provisions of this act, and to prevent the illegal re-importation of any goods, wares, or merchandise which shall have been exported as herein provided; and that all acts or parts of acts inconsistent with the provisions of this act be, and the same are hereby, repealed.

CITY SURVEYOR'S FEES.

[Document No. 61.]

BOARD OF ALDERMEN,

March 31, 1845.

The following Report was received from the Street Commissioner in answer to a resolution calling for information relative to the amount paid the City Surveyors, which was laid on the table, and directed to be printed for the use of the members.

CHARLES A. WHITNEY, Clerk.

In compliance with the following resolution which was adopted by the Board of Aldermen on the 21st inst., viz.:

Resolved, That the Comptroller and Street Commissioner, report to this Board at its next meeting, the amount of fees paid City Surveyors from the City Treasury, from the 1st day of January, 1836, to the 1st day of January, 1845; specifying the amount in each year, and the amonnt paid each Surveyor in each year, and the name of such Surveyor.

The Street Commissioner respectfully

REPORTS:

That the following amounts have been paid to the several City Surveyors through his department, as nearly as the same may be ascertained from the books which have been kept in this office within the dates mentioned in the resolution, viz.: to

Daniel Ewen,	$25,005.61
Edward Ewen,	3,413.47
John Ewen,	635.00
Thomas R. Ludlum,	13,092.84
Silas Ludlum,	7,903.89
Isaac T. Ludlum,	5,433.92
Joseph F. Bridges,	13,126.91
Edward W. Bridges,	2,825.68
Edwin Smith,	8,268.97
George B. Smith,	537.12
George W. Smith,	1,229.43
Gardner A. Sage,	11,381.64
Francis P. Vidal,	4,912.79
Francis Nicholson,	6,400.48
J. J. Serrel,	2,614.33
W. H. Whitlock,	851.03
Edward Doughty,	2,087.51
William B. Doughty,	763.85
Samuel S. Doughty,	3,657.56
Roswell Graves,	1,534.99
George C. Schaffer,	420.03
William Dewey,	215.63
John Pollock,	856.88
	$117,169.55

For greater detail reference is made to the annexed statements.

Respectfully submitted,

SAMUEL S. DOUGHTY,

Street Commissioner.

New-York, March 31st, 1845.

The following statement we have compiled from details of the Report of S. S. Doughty, Street Commissioner.

AUCTION DUTIES.

IN ASSEMBLY, March 31, 1845.

REPORT

Of the Comptroller, in answer to a resolution of the Assembly, of the 11th February, in relation to auction duties.

COMPTROLLER'S OFFICE,
Albany, March 31, 1845.

TO THE ASSEMBLY.

The Comptroller, in answer to a resolution of the Assembly of the 11th instant, requesting him to report "the amount of auction duties which have been annually paid into the treasury from the passage of the law requiring such payments to the present time," respectfully submits the following

REPORT.

The first act for the collection of revenue on sales at auction, was passed in 1784. (Chapter 64 of Session Laws of that year.) This act authorized licenses to be granted to vendue masters by the mayors of the cities of New-York, Albany, &c., and required the payment into the State Treasury of 2½ per cent. on the amount of sales at vendue. From 1784 to 1791, the payments into the treasury by vendue masters averaged about $7,300 for each year, which revenue appears to have been used for the ordinary expenditures of the State government.

The sixth section of the act chapter 27, of the laws of 1791, distinctly appropriates the duties derived from sales at auction, "for the support of the civil government of this State."

In 1792, an act was passed, (chapter 67, of the Session Laws of that year) appropriating two thousand pounds annually from auction duties, to the "Society of the Hospital in the city of New-York."

In 1795, an act was passed (chapter 37 of the Session Laws) which appropriates four thousand pounds annually to the Society of the Hospital in the city of New-York, and repeals the appropriation of the preceding year; and also reduces the duties to 2 per cent.

In 1798, an act was passed (chapter 89) which adds one per cent to the duties on sales at auction, and appropriates the sum received on account of this additional duty, to the support of foreign poor in the city of New-York.

In 1801, an act was passed (chapter 116) which appropriates one-third of the amount received on sales at auction in the city of New-York, for the support of foreign poor in that city, and it appropriates the residue of the duties collected there, and the whole received in other parts of the State, "for the support of the civil government of this State."

In 1817, when the act was passed for constructing the Erie and Champlain Canals, various revenues were set apart and pledged for the payment of the money borrowed, and in the 5th section of the act referred to, it was provided that "all the duties upon sales at auction, after deducting thereout twenty-three thousand five hundred dollars annually appropriated to the Hospital, the Economical School, and the Orphan Asylum Society, and ten thousand dollars hereby appropriated annually for the support of foreign poor in the city of New-York," should belong to the Canal Fund.

These sums were apportioned as follows:

To the hospital,	$22,500
To the economical school,	500
To the orphan asylum,	500
For the support of foreign poor,	10,000
	$33,500

The economical school has not been in operation for many years, and the sum of $500 which was originally paid for the use of this school, is now paid to the Prince Street Orphan Asylum, under the act chapter 69, of the Laws of 1834.

A statement is annexed, which shows the sums paid out of the Treasury for auction duties in each year, from 1784 to 1844, and also the sums paid out of the Treasury for the same period for the use of the hospital, foreign poor, and other objects. The total sum paid into the Treasury on account of sales at auction for 60 years, is $7,660,291.88

Total paid from the Treasury for the use of hospital, &c. 1,811,774.75

Retained in the Treasury, $5,848,517.13

Of the amount thus retained in the Treasury, the sum of $3,592,039.04 has been appropriated to the construction of the Erie and Champlain Canals, and the sum of $2,256,478.08 has been used for the ordinary support of the government.

Respectfully submitted,

A. C. FLAGG.

STATEMENT

Of the amount of duties paid into the Treasury during each fiscal year, from 1784 to 1844, inclusive; and of the amount charged upon such duties and paid from the Treasury during the same time for the support of the New-York Hospital, Foreign Poor, Economical School, and Orphan Asylum in the city of New-York, viz:

Municipal Gazette.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, MAY 8, 1845. [VOL. I....NO. 34

PITTSBURG SUFFERERS.

The meeting convened at the Mayor's office on the 19th ult., to consult as to preliminary measures for calling a public meeting in reference to the calamitous fire at Pittsburg, was attended by the following named gentlemen.

Wm. F. Havemeyer, Esq., Mayor elect, Hon. Joseph Sprague, Mayor of the city of Brooklyn, Ex-Mayor's Stephen Allen, Philip Hone, and Cornelius W. Lawrence, James Brown, of the banking house of Brown, Brothers, & Co., George Griswold, of the house of N. L. & G. Griswold, Adam Norrie, of the House of Boorman, Johnson, & Co., Anson G. Phelps of the house of Phelps, Dodge & Co., Caleb Swan, of the house of Stone, Swan & Co., George Newbold, President of the Bank of America, Ex-Aldermen Peter Cooper, Henry Andrew, and Mr. Havens.

Mayor Harper was called to the Chair, and Mr. Havemeyer, the Mayor elect, was appointed Secretary. Hickson W. Field, Abraham G. Thompson, and John R. Murray Esqrs. sent messages to Mayor Harper stating that sickness prevented them from attending, and at the same time expressing their approval of the objects of the meeting. It was a meeting of good men.

When we looked upon this group of citizens assembled in the Mayor's Office, we could not help contrasting this body of men with those which have for years composed our City Councils, and felt a wish that the affairs of this great City Government could be confided for a single year to these same individuals.—What a blessing such an investment of power would be to the people.

The contributions which have grown out of this meeting exceed $21,000. Messrs. WOOLSEY & WOOLSEY, the proprietors of the very extensive sugar refinery in New-York, gave $600. BROWN, BROTHERS, & Co. gave $500, NATHANIEL and GEORGE GRISWOLD $500. JAMES LENOX Esq., $500. There were other donations of a similar amount. We have not a list of all the donations. The application to the citizens, more generally, would have greatly increased the amount. MAYOR HARPER is entitled to thanks for moving in this good work, and also the gentlemen who aided him by their ready response to his call.

THE FERRY QUESTION

Public Ferries and public Roads are both designed for the same end, viz. to accommodate the people.—Ferries are not a property in the corporation of a city any more than a weigh house or a public street, but ferries require regulations by a general law. The statutes of this State make provision for ferries where the land is owned on the shore adjoining the water, but such a ferry as the Brooklyn and New-York ferries come not within this regulation for at each end the ferry terminates in a public highway. Fulton Street in Brooklyn and Fulton Street in New-York are of this class.

The Legislature should provide that any ferry boat which is sufficient for the transportation of passengers and carriages, carts, &c., should have liberty to land at any public wharf in New-York or Brooklyn free of charge, on condition of transporting passengers for one cent, and carts and carriages for three cents. The East River is a public highway, and so is Fulton Street in New-York and Brooklyn. There is no private property between these two cross roads. It is said the Legislature cannot interfere with North River Steamboats for the safety of Passengers.—North River Steamers are mere ferry boats, although they are licensed by the Government of the United States, and so can the Fulton Ferry boats obtain licenses from the government of the United States, and the boats are already subject to the inspection of the United States officers as to the boilers, tiller ropes, &c.

TAXES IN THE CITY OF NEW-YORK.

The amount of Taxable property returned by the assessors in 17 Wards of the City of New-York in 1844. is as follows:

Real Estate,	$171,936,591.18
Capital of Incorporated Companies,	28,964,512.45
Personal Property,	35,058,944.15
	$235,960,047.78

The amount of this property in the Croton Water District is $224,108,713.98.

The amount in the Watch District is $228,283,-316.98.

The amount in the Lamp District is $227,770,293.98.

The amount of property returned by the Ward Assessors as not being subject to the Croton Tax is that which is situate north of a line running from the North River through the centre of 23d Street to Lexington Avenue, through the middle of Lexington Avenue to 28th Street, and through the middle of 28th Street to the East River, and of persons residing to the North of that line, and is $11,856,334.00. The northern line of the Croton Water District is a geographical limit, and therefore an arbitrary line.

There is no justice in taxing a resident on the south side of 23d Street for the Croton and exempting his neighbor who lives but 100 feet from him on the north side of that street.

The tax should be assesed upon those who enjoy the benefits of the Croton without regard to geographic lines.

Land should not be taxed for the Croton, but buildings and merchandise should be taxed to the extent of the benefit enjoyed.

The tax should be so imposed as not to injure the value of property in the city by driving wealthy citizens out of it. We know of one dwelling in New-York which rented for fifteen hundred dollars per annum, but the occupant is unwilling to rent it any longer in consequence of the high taxes on personal property which he will be subjected to.

If the entire tax was imposed upon real estate the additional per cent would be trifling. The Taxable property as returned by the assessors including incorporated companies, and excluding the personal property of Individuals, is in round numbers about two hundred millions of dollars. The amount of the annual tax last year, say $1,960,000.00 in round numbers.

This sum assessed upon two hundred million of dollars, would amount to a per centage of 99 cents upon the one hundred dollars.

A permanent Board of Assessors who should be vested with the power of Assessing the Croton tax upon buildings and merchandize, and of supervising the Ward Assessors in their assessments upon individuals for personal property, would produce a reform in the system of Taxation of incalculable advantage to the city.

Something should be done in the matter of Taxes by the citizens independent of the Corporation. It is now a most difficult subject and requires a careful and deliberate discussion and thorough examination.

This subject if attended to early may be made the subject of special attention of the New-York delegation at the commencement of the next Legislature, and individuals should be selected as candidates for this especial purpose.

The amount of Taxable property in the First Ward in 1844, by the assessors' return was $54,029,602.89

Fifteenth Ward, 26,033,044.22

The personal property assessed in the 11th Ward but $99,200.00, and in the 13th Ward is but $252,-485.26,

STATE SENATE.

The following named individuals compose the Senate of the State of New-York, viz:

ADDISON GARDINER, President.

FIRST DISTRICT.

Isaac L. Varian, ... 1845.
John A. Lott, ... 1846.
David R. Floyd Jones, ... 1847.
George Folsom, ... 1848.

SECOND DISTRICT.

Abraham Bockee, ... 1845.
Abraham A. Deyo, ... 1846.
Joshua B. Smith, ... 1847.
Robert Denniston, ... 1848.

THIRD DISTRICT.

Erastus Corning, ... 1845.
John C. Wright, ... 1846.
Stephen C. Johnson, ... 1847.
John P. Beekman, ... 1848.

FOURTH DISTRICT.

Edmund Varney. ..... 1845.
Thomas B. Mitchell, ... 1846.
Orville Clark, ... 1847.
Augustus C. Hand, ... 1848.

FIFTH DISTRICT.

George C. Sherman, ... 1845.
Carlos P. Scovil, ... 1846.
Thomas Barlow, ... 1847.
Enoch B. Talcott, ... 1848.

SIXTH DISTRICT.

James Faulkner, ... 1845.
Calvin T. Chmaberlain, ... 1846.
Clark Burnham, ... 1847.
George D. Beers, ... 1848.

SEVENTH DISTRICT.

William Bartlit, ... 1845.
John Porter, ... 1846.
Albert Lester, ... 1847.
Henry J. Sedgwick, ... 1848.

EIGHTH DISTRICT.

Gideon Hard, ... 1845.
Harvey Putnam, ... 1846.
Frederick F. Backus, ... 1847.
Carlos Emmons, ... 1848.

The term of office of a Senator, is four years, and the terms of office of the respective Senators named above, expire with the last moment of the year set opposite their names respectively.

The Lieut. Governor is, by virtue of his said office. President of the Senate, except when he acts as Governor, and then, and in that case, he ceases to be President of the Senate. The two offices being incompatible.

The members of the Senate, together with the Chancellor, and Justices of the Supreme Court, form the Court for the correction of Errors.

Isaac R. Elwood, is Clerk of the Senate, and also Clerk of the Court for the Correction of Errors.

Charles Bryan, is Sergeant-at-Arms.

Senators are required to be freeholders—property, instead of mental qualification.

The salary of the Chancellor is $3000 per annum, and the Justices of the Supreme Court, have each the same compensation. Reuben H. Walworth, is Chancellor. Green C. Bronson, is Chief Justice of the Supreme Court. Messrs. Jewett and Beardsley are Assistant Justices. The per diem pay of a Senator is $3 per day, and mileage to and from his home to the capitol, or the place of holding court. The President of the Senate receives $6 per day for actual service.

RAILROAD STOCKS.

Railroad incoporations without this State present a difficult question as to taxation. Railroads are real estate according to Sec. 2 of page 379, of the Revised Statutes, which declares "that the term 'land' as used in this Chapter, shall be construed to include the land itself, all buildings or other articles erected upon or affixed to the same, and the term 'real estate' and 'real property,' whenever they occur in this Chapter, shall be construed as having the same meaning as the term land thus defined." The cars and funds belonging to a railroad are personal property.

The stock of an incorporated Company is deemed personal property in the disposition and distribution of estate of persons who have deceased, and in our statutes regulating the descent and distribution of estates are so treated.

An incorporated Company has the right by law to deduct their real estate from the amount of their capital stock, and a stockholder has the right to deduct the amount of the stock that he holds in any institution in this State from the amount of his personal property, but he has not the right to deduct stocks in monied institutions without this State.

The Attorney General, Mr. Van Buren, informed us that he has been applied to by the Supervisors of several counties bordering upon Canada, as to the liability of the stock held in the Banks of Canada, and owned by citizens of this State to taxation as personal property.

We do not know that he has yet given an answer, but we presume that he will be governed in this by the provisions of section 3 of page 379, and section 15 of page 383 of the first volume of the Revised Statutes which declares what property is subject to taxation. as follows:

"§ 3. The terms 'personal estate,' and 'personal property,' whenever they occur in this chapter, shall be construed to include all household furniture; monies; goods; chattels; debts due from solvent debtors, whether on account, contract, note, bond or mortgage; public stocks; and stocks in monied corporations.—They shall also be construed to include such portion of the capital of incorporated companies, liable to taxation on their capital as shall not be invested in real estate."

"§ 15. If any person whose real or personal estate is liable to taxation, shall at any time before the assessors shall have completed their assessments, make affidavit that the value of his real estats does not exceed a certain sum to be specified in such affidavit; or that the value of the personal estate owned by him, after deducting his just debts, *and his property invested in the stock of incorporated companies, liable under this chapter to taxation on their capital*, does not exceed a certain sum to be specified in the affidavit, it shall be the duty of the aseessors to value such real or personal estate, or both, as the case may be, at the sums specified in such affidavit and no more." See Sec. 7 on this page.

"§ 4. The following property shall be exempt from taxation:

"1. All property, real or personal, exempted from taxation by the constitution of this state, or under the constitution of the United States.

2. All lands belonging to this State, or the United States:

3. Every building erected for the use of a college, incorporated academy, or other seminary of learning; every building for public worship; every school-house, court-house and jail; and the several lots whereon such buildings are situated, and the furniture belonging to each of them:

4. Every poor-house, alms-house, house of industry, and every house belonging to a company incorporated for the reformation of offenders, and the real and personal property belonging to, or connected with the same:

5. The real and personal property of every public library:

6. All stocks owned by the state, or by literary or charitable institutions;

7. The personal estate of every incorporated company not made liable to taxation on its capital, in the fourth Title of this Chapter:

8. The personal property of every minister of the gospel, or priest, of any denomination; and the real estate of such minister, or priest, when occupied by him, provided such real and personal estate do not exceed the value of one thousand five hundred dollars: and,

9. All property exempted by law from execution:

§ 5. If the real and personal estate, or either of them, of any minister, or priest, exceed the value of one thousand five hundred dollars, that sum shall be deducted from the valuation of his property, and the residue shall be liable to taxation.

§ 6. Lands sold by the state, though not granted, or conveyed, shall be assessed in the same manner as if actually conveyed.

§ 7. The owner or holder of stock in any incorporated company liable to taxation on its capital, shall not be taxed as an individal for such stock." See § 15

LEGISLATION.

The very frequent assembling together of Legislative bodies to enact laws, is highly injurious to the public interest and extremely detrimental to the welfare of the people.

Laws to be salutary and useful, should be permanent. It sometimes happens that it is impossible to foresee the effect which a particular statute will have until it is put in practise, and such cases are sometimes exceptions to any general rule, but there are great principles which should form the basis of all statute laws.

The rights of persons and the rights of property should be the subject of constitutional law, and no legislature should alter or change such laws by becoming the violators of these important provisions.

One great difficulty exists in reference to legislative bodies, and this difficulty arises from hasty legislation.

Many laws are hastily passed and approved by the Executive without careful examination, which if properly scrutinized would be returned to the house in which the bill originated, and would never encumber the statutes and involve individuals in litigation.

It was a common practice with the colonial Legislature of the Province of New-York to refer important bills to the Attorney General for examination, and such a reference was a great aid to the Governor and Council whowere to give, or refuse their assent thereto.

Under the constitution of 1777 the Governor and Council were allowed to retain a bill passed by the Legislature near the close of the session, and if objectionable, to return it to the next Legislature, with objections. This was a most salutary provision, and should never have been abrogated.

Under the present Constitution, a bill retained by the governor until after the adjournment of the Legislature becomes a nullity, and therefore the executive must sign it if passed the last day, as great numbers of bills are, without reading or understanding its contents properly.

In 1844 Col. Young, the Secretary of State, sent a communication to the house of Assembly of this State informing that body that a law which had been enacted by the Legislature was in such a shape that it could not be executed. The Legislature were under the necessity of passing a resolution to amend the act. What a commentary this upon Legislation.

JUDICIARY.

The judiciary department of a government is more important than either the legislative or the executive.

A government so organized that one man, or one body of men possess all its powers, is called absolute.

In the organization of our government it is intended that the powers of the government shall be separated. That the legislative shall be distinct from the executive, and that both shall be distinct from the judiciary, but the difficulty exists in defining what are Legislative, Executive, and Judiciary powers. If the judges of the courts through ignorance or design set up their will as a substitute for the law, they exercise all the powers enumerated above and thus become despots.

In the organization of the Court for the correction of Errors, one of the Legislative branches of the government constitutes the Court. The Chancellor and Justices of the Supreme Court are members of that Court, but the number of these judiciary officers is but four, while the Legislative members number thirty-two.

The great number of decisions of the Supreme Court and Court of Chancery which are reversed by the Court for the Correction of Errors, is a mournful commentary upon human judgment.

The members of the Court for the Correction of Errors, with the exception of the Judiciary members, are not required to give a reason for the decision which each member pronounces.

AMENDMENT OF THE CONSTITUTION.

The adoption of a fundamental Law by a Free People is a solemn act of those who will be selected to discuss its provisions and to agree upon its details but few will remain many years to witness its operations, it therefore will be made for the guidance and government of those who are yet unborn.

There are great principles in government which are unchangeable and these principles should form the basis of the Constitution.

In the administration of a government under a written Constitution local difficulties will frequently occur which could not be forseen by the framers of the fundamental law, hence the difficulty of framing a general law to reach every particular case.

Difficulties of a serious nature frequently grow out of the peculiar phraseology of the various provisions of a Constitution, therefore care should be taken in the framing of so important a law to have the language so plain that it cannot be misinterpreted.

The great distinction which is claimed by the citizens of the United States as existing between our form of government and those of many of the civilized nations of Europe, is, that in the United States the Executive, Legislative and Judiciary powers are separated and exercised by distinct bodies and the Constitutions of the individual States composing the Union must be in conformity with these great principles.

In the Constitution of the State of Massachusetts it is provided that the Judiciary shall not exercise the powers of the Legislative department of the government. This is a very important provision and should by all means be incorporated into the Constitution of this State.

It is but very recently that a solemn question was raised in reference to the exercise of an extraordinary power by the Justices of the Supreme Court of this, State. The exercise of this power, we have remarked was extraordinary, and besides it involved immense patronage and moreover vast pecuniary liabilities of individual citizens.

At the time this question was raised the Supreme Court bench was composed of Samuel Nelson, Chief Justice, and Esek. Cowen and Green C. Bronson, Assistant Justices. The two Assistant Justices after hearing argument of counsel decided that this exercise of power was a violation of the Constitution. The Chief Justice dissented. Shortly after the decision Mr. Justice Cowen departed this life, and Samuel Beardsley was appointed to fill the vacancy. The question was ordered to be re-argued, and Mr. Justice Beardsley gave the casting vote, reversing the decision of the previous bench. Mr. Beardsley delivered the opinion of the Court which was that of the Chief Justice and himself in a very lengthy written document which we have published and reviewed on the same pages. Mr. Justice Bronson also wrote a brief opinion invalidating, we think, most clearly the soundness of the opinion of his learned associates. This will be found also on the same pages together with the argument of Daniel Webster before the Court.

This was a case in which Judicial officers had assumed to exercise a power which it is insisted is not only unauthorised by the Constitution, but is, moreover, prohibited by that instrument, and these very officers are the tribunal which is to determine the constitutionality of the acts of its own members, thus presenting the extraordinary position of a judge deciding his own case.

Mr. Justice Beardsley holds that the power exercised by the Justices of the Supreme Court in the highway proceedings, which are the proceedings involved in this question, are a judiciary power, and that very view of it involves an absurdity, for it would follow that any power confered upon a judiciary officer becomes a judiciary power from the fact of its being conferred upon an individual holding a judicial office; hence, if the Justices of the Supreme Court of this State were vested by law of the legislature with the command of the militia of this State, such a command would be the exercise of a judiciary power, being only an extension or enlargement of the power by the Court, and not a new power.

This presents a matter for the deliberate investigation of each individual member of the contemplated convention, and being one of vast importance we shall furnish each individual with the Municipal Gazette containing these matters in a connected form.

EXTENDING CANAL STREET.

The destruction of the Bowery Theatre has opened anew the proposition to extend Canal Street. The law passed by the Legislature in 1839, is a restriction on any new proceeding for opening Streets in the city of New-York, independent of the difficulty in the exercise of highway powers by the Justices of the Supreme Court.

Judge JEWETT the newly appointed Justice of the Supreme Court, is said to be one of the ablest real estate lawyers in the State, and it is therefore to be presumed that he will not consent to perform the office of Highwaymaster while he holds the office of Justice under the Constitution of this State now in existence. Chief Justice BRONSON has already expressed his opinion as to the prohibitory provision of the Constitution in respect to the exercise of street powers by the Judges, and in so clear and unanswerable a manner as to place the question beyond all doubt.

Whatever is needful to be done in reference to Canal Street will require to be proceeded in by the State Legislature independent of the Supreme Court, or Chancellor of this State.

The law of 1839 gives the control of the proceeding as to the confirmation of the Commissioner's Report to two classes of persons, viz. those composing a majority of the awards, or a majority in the amount of the assessments, may appear and object, or both, and if either to the extent of a majority in amount do so object, the court are compelled to discontinue the proceedings in toto.

The application for the appointment of Commissioners must be on giving 20 days notice, of a certain form, and in certain places, of the intention to apply for the appointment of Commissioners. The application must be made to the Court in Albany or New-York, and in certain months of the year.

The act passed March 7, 1793, in relation to John Street, is a good pattern bill for Canal Street. This act appointed Henry Rutgers, John Broome, Daniel McCormick, John Stagg, and George Goffman, Commissioners a majority of whom were authorised to act, and also provides for a jury of merchants to assess the damages for the land required to be taken. We here give the act entire, as follows:

CHAPTER 42.

"*An act for improving John Street in the third Ward of the city of New-York, and for vesting the Right of the People of this State, to the lands left for Streets, in the City of New-York, in the Corporation of the said City.*—Passed 7th March, 1793."

"WHEREAS it has been represented to the Legislature that it is necessary that the lower end of John Street, in the third ward in the city of New-York, commonly called Golden-Hill Street, should be enlarged and widened; Therefore,

"1. *Be it enacted by the people of the state of New-York, represented in Senate and Assembly,* That from and after the tenth day of May, which will be in the year of our Lord one thousand seven hundred and ninety-four, the said Street which now is only twelve feet four inches wide, at the intersection thereof with Queen Street between the houses of Moses Rogers and Thomas Pearsall, shall be enlarged and widened as follows, to wit: beginning on Queen Street aforesaid, at a point eight feet eight inches east of the south-west corner of the front of the house of the said Thomas Pearsall, and running thence by a straight line to a point three feet two inches east of the north-west corner of the rear of the same house of the said Thomas Pearsall, and from thence in a straight line to the north-west corner of the lot of ground of the said Thomas Pearsall on Golden-Hill Street aforesaid. And that on the south-west side of the said street, the same shall be enlarged and widened, by a direct line to be drawn from the north-west corner of the new house, lately built by the said Moses Rogers, through the houses and lots of ground of Daniel Tooker, John Harrison and John Sproson, to the south-east corner of the dwelling house of Alexander Crawford; and to the end that reasonable satisfaction may be made for such parts of the said lots as may be necessary for the purposes aforesaid, the mayor, aldermen and commonalty, of the city of New-York, in common council convened, shall and may treat and agree with the respective owner or owners thereof, or with the person or persons respectively interested therein, or with his, her or their respective agent or agents, or legal representative or representatives; and if such person or persons, either any or all of them shall refuse to treat and agree in manner aforesaid, then, and in such case, it shall and may be lawful, to and for the mayor or recorder, and any two or more aldermen, by virtue of this act, by a precept under their hands and seals, to command the sheriff of the said city and county of New-York, to impannel and return, and he is hereby commanded to impannel and return a jury of merchants, being freeholders, to appear before the mayor's court of the said city, at any term thereof, not less than three weeks from the date of such precept, to enquire of and assess the damages due, or that shall accrue to such owner or owners respectively, of such houses and lots of ground, and to notify him, her or them, by notice, to be left at his, her or their most usual place or places of abode, if they respectively shall reside in the said city and county, but if not, then on the premises respectively, that may be supposed to be in charge to such jury, at least fourteen days before the return of the said precept, to appear before such mayor's court, at the day and at the place in such precept to be specified, which jury being first duly sworn, faithfully and impartially to inquire into and assess the damages in question, and having viewed the premises, if necessary or required by any or either of the owner or owners, agent or agents, or legal representative or representatives thereof, shall enquire of and assess such damages, and recompense respectively, as they shall, under all the circumstances, judge fit to be awarded to the owner or owners, of such respective houses or lots of ground, for their respective losses or damages, according to their several and respective interests and estates therein, and the verdict of such jury, and judgment of the said mayor's court thereupon, and the payment of the sum or sums of money, so awarded or adjudged to the owner or owners thereof, or tender or refusal thereof shall be conclusive and binding to all intents and purposes, against the said owner or owners, his, her, and their respective heirs, executors, administrators and assigns, claiming any estate or interest of, in, or to the said houses or ground. And it shall be thereupon lawful, to and for the said mayor, aldermen and commonalty, of the city of New-York, and their successors, to cause the same ground to be converted to and for the purposes aforesaid.

"2. *And be it further enacted,* That it shall and may be lawful, to and for Henry Rutgers, John Broome, Daniel M'Cormick, John Stagg, and George Goffman, or a majority of them, upon a full and equitable consideration of all the circumstances attending the same, to determine what part or portion of all and every of the said sums of money so to be paid, ought to be borne by the said common council, in consideration of the general convenience to the citizens of the said city; and what part or portion thereof, specifying the sum, ought to be borne and paid by individual citizens, whose estates in the said street and vicinity thereof, will become advanced or increased in value by such improvements, and to make a just and equitable assessment of the last mentioned sum, among the owner or owners of all the houses and lots in the vicinity thereof, according to the benefit they may respectively be deemed to acquire or receive thereby, and that the said persons respectively, before they shall enter upon the execution of their trust be duly sworn, before the said mayor or recorder, to make the said estimate and assessment, fairly and impartially, according to the best of their skill and judgment, and a certificate in writing, of such estimate and assessment being returned in writing, subscribed by the said persons so appointed, or a majority of them, or a majority of the survivors of them to the said common council, and ratified by them, shall be binding and conclusive, upon the owner or owners of such houses and lots, so to be assessed respectively, and the said owner or owners respectively, shall thereupon become and be liable and chargable, and they are hereby required, upon demand, to pay to such person, as shall be authorized by the said common council to receive the same, the sum at which each such respective house or lot, shall be so assessed, to be employed and applied for and towards the payment of such losses and damages, as may have arisen in consequence of the enlargement and alterations hereby intended to be made, to the owner or owners thereof respectively, so as aforesaid, by the jury respectively to be assessed, and in default of payment thereof, or of any part thereof, it shall and may be lawful, to and for the said mayor, recorder, and aldermen, of the said city, or any three of them, of whom the mayor or recorder, always to be one, by warrant, under their hands and seals, to levy the sum and sums of money so assessed, by distress and sale of the goods and chattels, of the owner or owners of such house and lot so assessed, and refusing or neglecting to pay the same, rendering the overplus, if any there be, after deducting the sum assessed, and the charges of distress and sale, to such owner or owners respectively, or his or their legal representative or representatives; and if it should so happen, that such owner or owners, shall have no goods or chattels to satisfy the assessment aforesaid, that then and in such case the same shall be deemed a debt due, from the owner or owners thereof, his, her, or their lawful representative or representatives, to the mayor, aldermen and commonalty, of the said city, and shall be payable to them within three months after such assessment, and moreover shall become a charge or lien and prior incumbrance upon such house and lot of ground, into whose hands or possession the same shall then be, or at any time thereafter shall come or descend; and the respective owner or owners of such houses and lots of ground respectively, at the time of such assessment, shall thereupon become and be respectively liable and chargable, and they are hereby required to pay to the treasurer or chamberlain, of the said city for the time being, who is hereby authorized to receive the same, to the use of the said corporation, the sum at which such houses and lots of ground shall be so so assessed as aforesaid, and in default of payment thereof, the same shall and may be recovered at the suit of the said treasurer or chamberlain, in any court of record, within this state, with costs of suit, and no such action or suit, shall be abated or discontinued by the death of the treasurer or chamberlain, of the said city, or by his resignation or removal from office. but shall be continued and prosecuted to effect by his successor in office.

"3. *And be it further enacted,* That all the estate, right, title, interest, claim and demand whatsoever, of the people of this state, of, in and to all lands at any time heretofore left for streets or highways, in the city of New-York, by any person or persons whomsoever, shall be, and hereby is vested in the mayor, aldermen and commonalty, of the city of New,York. and their successors, for the use of streets and highways."

THE ROCK FORMATIONS OF MANHATTAN ISLAND.

We have before us a statement of the depth of several wells which have been sunk in the city of New-York and of the distance at which rock was reached from the surface.

At the corner of Perry and Factory Street a well was sunk to the depth of 200 feet. The rock was reached at the depth of 70 feet, and the boring continued in the rock 130 feet.

Near 16th Street and the 7th Avenue a well was sunk to the depth of 120 feet. The rock was reached at the depth of 20 feet, and the boring continued in the rock 100 feet.

At the Deaf and Dumb Asylum near 50th Street a well was sunk to the depth of 112 feet, all the way in the rock.

The Manhattan well in Mercer Street near Bleeker Street was sunk to the depth of 448 feet. The rock was reached at the depth of 42 feet.

At the corner of Avenue D and 5th Street a well was sunk to the depth of 100 feet, and rock struck at the depth of 95 feet.

At the City Hall the well has been sunk to the depth of 90 feet without reaching the rock.

At Trinity Church Yard a well has been sunk to the depth of 26 feet, and terminates on a rock.

At the low tide the rock is bare at the lower side of the Battery.

At Union Place the rock is even with the present surface.

The well sunk at Washington Market reached the rock at the depth of 70 feet.

The well sunk at Holt's Hotel reached the rock at 126 feet and the boring was continued in the rock 500 feet. At Fulton Market the rock was reached at the depth of 130 feet. At Columbia College the rock was reached at the depth of 80 feet.

It appears from these perforations made at various places in the city of New-York, that the Island of New-York has for its base a rock formation. It is a gneis rock.

CHALK FORMATIONS.

The extensive chalk formations found in France and England are a wonderful display of the geological features of our earth.

I have examined several large masses of chalk which have been imported from Europe. and have numerous nodules of flint which I have taken from large lumps of chalk. Those which come from chalk brought from the Isle of Wight, are dark, and these from chalk brought from France are of a light color. Some of these fl nt nodules are very hard, and others less so, and the chalk appears to have penetrated the nodules of the latter description an eighth of an inch or more.

I obtained from a lump of chalk a nodule of Iron weighing nine ounces. This Iron has the same shape as the flint nodules and is pure metal.

I have also three fossils which I obtained from large lumps of chalk. One of these fossils is perfect, the others were broken before the body became fossilized. The one which is perfect measures 2 inches in width, 2¼ inches long, and 1¼ inch thick. It is a perfect head, and weighs 2¾ ounces. The shell of this head is a perfect enamel, and is about one-sixteenth of an inch thick, and when broken shows a glossy fracture. The inside is filled with solid chalk. I have been unable to discover in this head the organs of sight. The mouth is small and there is but one nostril which is in the centre above the mouth. The throat is visible where the head connected with the neck.—The embossing on the original surface of this head is retained in great perfection, and resembles that which is seen upon the skin of the Dog Fish. The whole is perfectly white. On the top of the head are five depressions about half an inch in length, and one-eighth of an inch in width, and one sixteenth of an inch in depth in the centre; each of these are intersected at right angles by 33 groves ¼ of an inch long, and about the one hundredth part of an inch deep. These 5 indentations meet at the centre on the top of the head. One runs toward the neck, and each of the others describe the points of the compass midway between the cardinal points. I am inclined to the opinion that this fossil is only a part of the animal and that it was connected with a body like that of the head of the tortoise, but nevertheless it may be the entire animal for nature presents such a vast variety that we cannot determine the fact by comparison with what are now alive on the earth. The other fossils which are broken, present the shells only, and retain only a part of the original shape, and appear to have been bruised.

One of these is like a common turtle shell. By what process the beds of chalk have been deposited we are unable to conjecture, and the extensive examinations of these stratas seem to have thrown no light upon the subject. It is probable that the condensation of carbonic acid gas is the origin of the chalk formation, and the fossils which are found embedded in chalk, present the same illustration that vegetable substances do that are found embedded in stone coal. The former being condensed carbonic acid gas, and the latter, being condensed hydrogen gas.

I have among my collections a bottle of Petrolium from one of the western mineral tar springs. This fluid could be forced into the pores of wood and that wood afterwards becoming crystalized would form a bituminous coal. Petrolium is found quite abundant in some sections of the United States. About thirty years ago it was met with in boring for salt water at Kanhawha in Virginia, at the depth of three or four hundred feet, and often several barrels of it was collected from one well. Recently none has been met with in these borings, but the wells which have been sunk to the depth of near one thousand feet give vent to an immense body of carburetted hydrogen which rises with the salt water in a column near one hundred feet above the surface. Seams of bituminous coal are passed in these borings. A particular description of these will be found in this volume.

THE COPPER MINES OF LAKE SUPERIOR.

It is represented that vast stores of copper underlay the surface of the country bordering upon Lake Superior. Lake Superior is north of latitude 46°, and occupies a deep basin, Its surface is about 75 feet above that of Lake Erie, and about 640 feet above the surface of the bay of New-York, but its bottom is about 250 feet lower than the surface of tide water. If the falls of St. Mary and those of Niagara, were entirely removed, still Lake Superior would remain the greatest Lake on the face of the globe. The depth of the waters of Lake Superior are estimated at 900 feet. The barriers which confine the waters of the great lakes in their respective basins are narrow and may undergo changes in the process of time which may produce vast revolutions on the surface of the earth in that section of the Globe. If the rocks which compose the falls of Niagara were removed the falls of the Sault of the St. Mary, would be proportionably increased, and the great cataract thus change its location. The St. Croix river which empties into the Mississippi through Lake St. Croix below the falls of St. Anthony heads in a boiling spring of about two acres in extent, and the river Brule which has its head in the same spring, runs into Lake Superior.

What a fountain this to furnish its fluid at the same time the to Gulf of Mexico and the Gulf of the St. Lawrence. This boiling spring is in north latitude about 46° 30′, and west longitude about 91° 45′. The climate on the shores of Lake Superior is cold, and therefore a favorable section of the world for the production of minerals to supply the more temperate agricultural districts, which will create an exchange of commodoties which will be the basis of an extensive trade in the process of time. If copper is as plenty in this section of the world, as represented, it will soon become as cheap as iron.

WILD RICE.

I have a small quantity of wild rice presented to me by a kind friend in Upper Canada during my visit to that country in the summer of 1844. This grew in Rice Lake in which the river Trent has its head. This wild rice is collected by the Onotanaba Indians and brought into the white settlements and sold. At the dinner table of the house of a friend it was served up as a desert, and was a most delightful dish. This wild rice is a very abundant product of the lakes in the high northern latitudes, and gives sustenance to wild geese which are seen every spring shaping their course in their flight to that region of the globe, to pass the summer. The Indians in gathering this rice run their bark canoes through it, and with a pole turn the heads of the rice over to the inside of the bark canoe and with a stick beat out the grain which falls to the bottom of the canoe.

Some of the grains of the wild rice are near ¾ of an inch in length and are of a dark color, almost black. Nature has provided in the extensive region where the wild rice is most abundant the means of sustaining the lives of the numerous wild fowls which feed upon it. and even the human species when traversing these regions find it almost their sole dependence.

The wild rice takes root in the mud at the bottom of Lakes and ponds of water where the mud is deep, and grows to a great height under water and several feet after it rises above the water.

AN ANCIENT TOWN.

On the southerly bank of Big Barren River, near Bowling Green, State of Kentucky, is the remains of an ancient town. I visited this locality in 1814, and examined this ancient site. At this place the River makes a bend describing an obtuse angle which gives to the observer standing upon this ancient site a view of the river for half a mile up its stream and an equal distance, down. The site forms the surface of a bluff which is about 100 feet above low water. This surface of the bluff is a few hundred feet broad, and declines gradually as its distance from the river increases.—On the opposite side of the river the land is flat and not elevated more than fifty feet above low water.—When I visited this place it was enclosed within the boundaries of a large farm. I stopped for breakfast at the house of the owner, who was an old settler, and spent some time with him, and he accompanied me over the grounds. The foundations of buildings were visible on both sides of a street near 100 feet wide. In the rear of the site the owner had planted an orchard which he afterwards attempted to improve by ploughing up the ground to a considerable depth, in doing which he discovered immense quantities of human bones which appeared to have been placed there in bulk, and which were reposing immediately under the surface. When I crossed the river it was quite low, and I forded the stream on horseback and on reaching the southern shore I looked up to the fork of a Sycamore tree 30 or 40 feet above the ground where the roots of a tree were hanging which had lodged there during a great fresh. On the opposite side of the River I examined several ancient mounds some of which were opened and found filled with human bones. There is no written history which presents any record of the rise or downfall of this ancient town. Itself, alone, is its historian and discovers the trace of a ruin.

THE ROLLING FORK OF SALT RIVER.

It was on a summer day that I was travelling on horseback in the near vicinity of the rolling fork of Salt River at a time when rain showers were frequent when I met a traveller who had but a few minutes before crossed the river, the banks, of which I was then approaching. He accosted me, saying, that unless I put forward with all speed I would be too late to ford the river, as it was rising rapidly when he crossed. only ten minues previous. I adopted his advice and urged my horse forward. reached the river, and forded the stream without difficulty, and travelled on its opposite bank for a considerable distance as the road led that way. Before I had travelled half a mile from the ford, the river was ten feet deep. This fork is a fitful, fretful stream and has a rocky bed; it rises among the mountains and is often a most impetuous mountain torrent, but it soon runs out. It is rightly named, but its title has a most imposing sound in the ears of a stranger traveller who is journeying toward it in the bosom of a forest.

MULDOW'S HILL.

This highland is crossed by the great road leading from Danville, Ky., to Nashville in Tennessee. It is on the easterly side of green River. I have crossed it often on horseback and generally dismounted and filled my pockets with curious petrefactions which are plentiful on its surface. The wonder is how came they in such a place, and upon the surface of the ground. Every thing is wonderful,—how little do things that are constantly in view attract our notice or interest our minds.

HUDSON RIVER.

We have before us Hasler's Chart of the Hudson River, opposite New-York.

The depth of the water in a line drawn from the foot of Courtlandt Street to the Rail Road Pier at Jersey City gives us the least depth on the Jersey City side, 16 feet, and as the greatest depth near the New-York side, 50 feet. Beginning at the first sounding stated, on the New-York side, as follows: 28, 30, 31, 32, 37, 44, 50, 49, 44, 34, 33, 32, 31, 30, 28, 27, 26, 25, 23, 21, 18, 16, 18.

A line drawn from Canal Street to the nearest part of the Jersey shore would pass the same depth of water in the same distance from the New-York shore as from the foot of Courtlandt Street.

A line drawn across the river from the Great Kill Road to the Jersey shore exactly opposite would pass over water 66 feet in depth, about half way and in the middle of the River.

Between the foot of Rector Street, Morris Street and Battery Place, and the Jersey shore opposite these Streets respectively, the deepest water is 56 feet, and is near the New-York side. Between Castle William, and Gibbet Island, the deepest water noted is 77 feet.

EAST RIVER.

Between Fulton St. in New-York and Fulton St. in Brooklyn, the deepest water in a straight line is 43 feet, and 30 feet the least depth in the soundings noted.

Between Whitehall, in New-York, and the foot of Atlantic Street, Brooklyn, the deepest water noted is 37 feet, and the shallowest, 12 feet.

The deepest water in the River between Main Street in Brooklyn and Catharine Street, New-York is 53 feet, and between Main Street, Brooklyn, and Market Street, New-York, is 71 feet.

Nearly opposite Rivington Street there is one place in the river 72 feet deep.

Between Governor's Island and Whitehall the deepest water is 43 feet, and the shallowest 9 feet.

A BRILLIANT MORNING.

At an early hour I took a walk on Brooklyn heights to enjoy a morning view from that silicious cliff, the base of which is washed by the tides of the Atlantic, which visit our pretty Bay.

The trees which shade the path in which I walked to this charming place were newly dressed in green foliage, the young buds were gently expanding, displaying their white and crimson tints surrounded by deep green borders, the blossoms were also upon the trees in great profusion, giving out to the moistened amosphere their sweet fragrance in the odour of a rich perfume. In this atmosphere there was an aqueous vapor floating and it was as thin as air, and possessed the brightness of a crystal gem I inhaled this balmy fragrant atmosphere—it had a sweet which could be tasted—it was a gentle stimulant, a pure beverage—and I drank the ærial aqueous fluid at every breath, and felt revived, for I had passed a night in sleep so profound that during its continuance my mental faculties were all suspended.

The sun was not yet risen but the eastern horizon was lighted up by its near approach, and the curtains of the new born morning presented an array of magnificence and beauty in every fold of the resplendant aqueous drapery, tinged with golden purple, spangled with red and fringed with a deep border of the mysterious light of celestial fire.

The waters of the pretty bay were still—were quiet—all nature seemed to be at rest, and engaged in her devotions—for silence was visible—and silence is the essence of spiritual homage. It is the tribute of a morning thought that bows down in the heavenly temple, that takes the lowest seat in the celestial court, which is the homage of adoration. It is only the inner man that is the true worshipper.

Two pretty birds broke silence and commenced their sweet singing upon a pretty tree filled with pretty flowers,—it was a pretty place to sing a pretty song, and it was a song of love—a morning anthem. This feathered pair were happy. I judged so, for their song was cheerful—their lively notes were charming music, and were inscribed upon an atmosphere of balmy fragrance, to be gathered to the celestial archives, presenting an illuminated page in the heavenly record. I asked myself, who learned the birds to sing? There is but a single answer to this query. It is written in the volume of inspiration, illuminates its earliest page, reaches back to a time ere man was formed, to a day beyond that on which his body became the tenement of a living soul, and to the *second* in the annals of time. On that day the celestial luminary paid its *second* visit to this terrestrial surface, and it was then the feathered race possessed this earth in harmony and love, and it was then when its morning shone with intrinsic brightness that the feathered songsters chaunted their first morning anthem in sweet hallelujahs to the praise of the King of Kings. It was the first song on earth, and it was full of praise, for it was full of harmony. No human eye beheld the beauty of that morning—yet it was not unseen—nor unchronicled. A pen—the pen of Inspiration—dipped in the fountain of all knowledge—inscribed its record upon a virgin page, a precious treasure, a regal gift. and we possess the copies of that record.

While looking around me upon the broad field within the reach of human eyesight, I beheld a distant grove—a lovely woodland dressed in lively green—it is "GREENWOOD," a city of the dead,—there silence reigns in solemn stillness—the treasures of the dead are there—the loved and the blessed are there—and when the resurrection morning shall kindle up its light, a morning anthem will ascend from this city of the dead in a song of praise to Him who made the world,—to him who planted the germ of that brilliant morning.

DARK SPOTS UPON THE SUN.

Several large spots upon the sun's disc have recently been noticed which are estimated to be 20,000 miles in diameter. Science affords no means of determining the cause, or the nature of these obscurations, nor are we able to determine what influence they have upon the climate of our earth. The solar orb is computed to be about 96,000,000 miles from us, and the moon one four hundredth part of that distance, and we are as ignorant of the nearer, as of the more distant luminary. Some eminent astronomers express the opinion that the moon is without an atmosphere, and others, that its mountains are volcanic, but we have no means at present of determining the correctness of either of these conjectures. Even the knowledge of the interior of our own planet one mile below its surface is a perfect blank in written history. We reckon that the fixed stars are suns and several of these bodies have disappeared within the last 200 years, for they are no longer visible from our earth. If my recollection serves me right in this, La Place, states, that one of the fixed stars was seen to be in a state of combustion for about six months, and then entirely disappeared leaving its place a perfect blank in the heavens. What an event to contemplate! The human mind is filled with wonder and with awe when dwelling upon the contemplation of such a spectacle,—beholding the mighty conflagration of one of the great luminaries of the firmament, so vast in extent that there is scarce space enough between our earth and the sun for it to pass through, were it to take such a path for its orbit.

We understand but little of what we see, and although knowledge is progressive in many branches of science from long continued, careful observation, yet all we learn seems to make us sensible of the vastness of our ignorance. Since the commencement of the present century we have discovered four terrestreal bodies moving through space that the inhabitants of earth were wholly ignorant of 50 years ago, and these are called the Asteroides. A very learned geologist has suggested that the ærolites, or meteoric stones, which occasionally fall from the atmosphere, come from some one of these asteroides. This cannot be. Others conjecture that the meteoric stones come from volcanoes in the moon. We are by no means certain that there are volcanoes in the moon, and if there are it is by no means probable that the projectile force of these convulsions is sufficient to throw a such body beyond its own surface.

On our own earth as far south as south latitude about 80°, is a volcanic mountain about 12,000 feet high.—Could the light of this terrestrial antarctic taper reach the surface of a body moving through space within the reach of vision, we might possibly discover the reflected light under certain circumstances, and the illuminated surface would, like an evening shadow, have a length of surface and a breadth of path corresponding with the mouth of the crater. In one of the Islands in the Pacific Ocean is a volcano having a crater nine miles in circumference. Persons who are in the habit of traversing high mountains are familiar with the phenomena of the appearance of their own figures in the vapor which curtains the surface forming a cloud on which the morning sun draws the human figure with the solar pencil and paints it in the bosom of the cloud, and of gigantic stature.

We are wholly ignorant of what materials constitute the body of the solar orb, and also of its atmosphere. Under a vertical sun the highest mountains are covered with perpetual frost, and distant from it in the high northern latitudes at the period of our winter solstice, is experienced the greatest cold.

We survey a burning body surrounded by flame—the whole appears to us to be a mass of fire—extinguish the flame and the body which sustained it is as black as jet. Such for example, as a pine knot set on fire. Solar light is wholly different from terrestrial light, but in one respect it is similar, it is accompanied by heat. Phosphoric light has no heat.

I have collected the rays of the sun through water sufficient to kindle a blaze, and I believe that I could do the same through a globe of ice without dissolving the crystalization.

THE BIRD'S NEST.

A friend made me a present of the nest of a pretty bird—it is that of a humming bird. The inside is as soft as velvet and is filled with a substance that looks like floss silk. Its outside surface is ornamented with a vegetable that adheres to rocks. Some of these are as large as silver spangles, and others of the size of a half dime. These are nicely fastened to the outside and forms its outer surface, and seems to have been cemented by some aglutinating substance. It was built upon a little limb of less than an inch in diameter, and its under side is hollowed out so that it sets firmly upon the wood. Since I have owned the nest it has been occupied by a little butterfly in a chrysalis state.

I have also another bird's nest. It was made by the Golden Robin and was supended from a limb.—This is made of linen, and cotton thread and twine, and among the threads is one in a sewing needle. This thread and needle are both nicely arranged in the nest. This nest is lined with hair, and was made near my paternal dwelling a few years since, and the family noticing that the bird was busy collecting the materials for its nest threw ont little fragments of twine and thread, and with these the pretty architect contrived to build the little house in which to rear its young. The Golden Robin is a pretty bird, and sings sweetly in loud but mellow notes.

THE HUMAN MIND.

It is often in extreme old age that the faculties which pertain to the human mind become enfeeblod, and sometimes the mind becomes a perfect wreck—a Ruin. It is a painful spectacle to behold the human mind in ruins while the animal part of the mortal structure remains strong and vigorous, yet such a connection of body and mind sometimes exist. The connection of soul with body is mysterious,—of the ethereal with the material, and the union of the issues of the heart with those of the brain is equally mysterious, yet notwithstanding such is the reality—and of this every intelligent human being has the witness within himself in the testimony of his own bosom. The impulse of the heart is not always seconded, and often subdued by the stronger power and the result of the controversy is often fatal.

Man in his best estate is but a frail being, and it is often that we see a man in prosperity vigorous and confident, when overtaken by adversity a bowed down, feeble, incompetent person.

The human mind requires rest and repose when assiduous cares press heavily upon it.

Man often becomes intoxicated by sanguine anticipations, and it is more often that these end in disappointment and sorrow.

In very old age we rarely find that energy of mind which pertains to lesser years, and it is frequently the case that the strength of body and mind sink gradually together.

A human being in journeying through life from the cradle to the grave is liable to arrive at the termination of his life at every passing moment, for he is ignorant of the extent of the orbit in which he has begun to move. His commencement of life is always a state of helplessness and dependence, a lesson early taught, but poorly learned,—his end, is often preceded by the same state.

THE ANT.

This insect presents a page in the great volume of nature which should be carefully studied. The wise man of the ancients selected this insect as a teacher of wisdom to the sluggard,—an humble schoolmaster, yet notwithstanding, a great practical teacher.

On Tuesday morning, April 29th, at an early hour I noticed great numbers of small ants collected on the flat stones. The gathering appeared to be a general convention, a very active one, and about one-fourth of the members were newly winged and awaiting the approach of the morning sun to give them a buoyancy to fly. Many of those with wings were unable to rise into the air and seemed to have less strength than those without wings, for I noticed that these were aided by the others back to their dwelling. The unwinged Ant possesses great strength as may be most readily discovered in the labor they employ to remove their food to their homes.

This was a parting scene among these insects, for many of the winged insects will be no more seen by those they left behind. The ant is a hated insect, but notwithstanding, is very useful, for they feed upon that which in warm weather would become noxious by decomposition and putrefaction, It is a wonderful display of nature, this change in the little ant that lives beneath the surface of the ground for while night casts its shade, it emerges from beneath the surface to salute the orb of day—to soar upon its rays and traverse the wide atmosphere—the path of the forked lightning—the bosom on which the thunder sleeps—it is thus the most minute as well as the most gigantic unite in displaying the power of the Creator.

MAYORALTY ELECTION.

The votes polled in the different Wards at the Mayoralty election in 1845, are as follows:

First Ward,	2026
Eleventh Ward,	3101
Thirteenth Ward,	2888
Fifteenth Ward,	2577

The Beginning of a Change.

We are indebted to the Hon. ABRAHAM G. THOMPSON, Jr., for the following highly interesting papers:

IN ASSEMBLY, February 24th, 1787.

"A Petition of John Fitch, praying an exclusive privilege for a limited time of constructing vessels to be propelled through the water by the force of steam. Read and referred to Mr. Sickles, Mr. Jones and Mr. Hamilton.

February 27th, 1787.

Mr. Sickles Reported. See the report annexed.—A bill was brought in pursuant to the prayer of the Petition.

"To the Honourable the Legislature of the state of New-York in Senet and assembly convened:

"The petition of John Fitch of Bucks county in the State of Pennsylvania humbly sheweth

"That your petitioner has lately invented a method of propelling vessels through the water by the force of steam which he flatters himself is reduced to a moral certainty and will be a very great improvement on navigation. and that he has a boat nearly compleated to navigate on the river Delaware by the agency thereof.

"That the states of New-Jersey and Delaware have patronized his scheme so far as to give him an exclusiue right for said boats for the term of fourteen years, and the state of Pennsylvania have passed a law for public consideration thereto,—That your petitioner has invented a method of rowing boats by oars worked by cranks which was never heretofore used which applies not only the force of steam but the strength of a horse or any other power to equally as good advantage as men with oars whereby inland navigation must be benefitted nearly as much as the labour of horses is cheaper than the labour of men. Your petitioner therefore humbly prays that your honourable body will take into their consideration said improvement and grant your petitioner such encouragement as in their wisdom shall seem proper. And your petitioner as in duty bound shall ever pray.

JOHN FITCH.

New-York, Feb. 21st, 1787."

REPORT OF THE COMMITTEE.

The Committee to whom was referred the petition of John Fitch, of Bucks County, in Pennsylvania,

REPORT:

That having examined the certificates and other papers presented to your Committee by the said John Fitch they are of opinion that in order to encourage a further improvement in so useful an art, that a bill be brought in for the purpose of granting to the said John Fitch an exclusive right of navigating boats by the force of steam or fire for a certain time, agreeable to the prayer of his petition.

Thomas Sickles of Albany County was the Chairman of the Committee, and Samuel Jones of Queens, Alexander Hamilton of New-York, members.

The above is copied from the original documents. An act was passed March 19, 1787, which will be found on page 31 of this volume.

A petition of James Rumsey on the same subject without date, presented to the Legislature in 1783, and a copy of a letter from General WASHINGTON, recommending the same, dated town of Bath, County of Berkeley, State of Virginia, Sept. 7, 1784.

Rumsey in his petition does not claim to use *steam*, but "MECHANICAL POWERS."

There is annexed to Fitch's letter a printed 18mo., pamphlet entitled "The original steamboat supported or a reply to Mr. James Rumsey's pamphlet, shewing the true priority of John Fitch, and the false datings, &c-, of James Rumsey."

"Philadelphia, printed by Zechariah Poulson, jr., on the west side of Fourth Street, between Market and Arch Streets. MDCCLXXXVIII."

By certificates dated Philadelphia, October 18th, 1788, it appears that Fitch's boat was 60 feet in length and that she went from Philadelphia to Burlington, 20 miles, in 3 hours and 10 minutes, entirely by the force of steam, on the 12th Oct., 1788. These certificates are signed by John Ewing, Robt. Patterson, Andrew Ellicott, Smilie, David Redick, James Hutchinson, F. Y. Matlack, Charles Pittit, J. B. Smith, David Rittenhouse, John Poor, John Ely, Jonathan Heart, Capt. U. S. Regt.

We have met with on account of the misfortunes and the commencement of the enterprise of Mr. Fitch, in a manuscript Volume, in the Library of the Hon. GABRIEL FURMAN, *from which we give the extract below.*

"FITCH AND FULTON.

"Some five or six years ago while searching for materials shewing the history of the introduction of Steam in the navigation of our country, and the effect which it had in causing the rapid settlement of large portions of our territory, and particularly that lying west of the Alleghany Mountains, I, of course, had my attention drawn to the project of Fitch, and in following up that part of American Steamboat History the following interesting account of Fitch's life, as connected with his endeavors to introduce the steamboat upon our waters, fell in my way. It is substantially from Hazard's Register of Pennsylvania, vol. 7, page 91.

"While Robert Fulton was engaged in London under the patronage of his celebrated countryman West, John Fitch, clock maker, was contriving schemes in Philadelphia for the propelsion of boats by steam.—He conducted his mysterious operations at a projection on the shore of the Delaware at Kensington; which among the wise and prudent of the neighborhood, the scores of magicians and their dark works, soon acquired the ominous and fearful title of '*Conjurer's Point.*'

The writer of the article then proceeds to say:—"I often witnessed the performance of his boat in 1788, '89 and 90. It was propelled by paddles in the stern, and constantly getting out of order. I saw it when it was returning from a trip to Burlington, from whence it was said to have arrived in little more than two hours. When coming too, off Kensington, some part of the machinery broke, and I never saw it in motion afterwards. I believe it was the last effort. He had up to that period been patronized by a few stout hearted individuals, who had subscribed a small capital in shares of, I think, £6, Pennsylvania currency, or $16 each; but this last disaster so staggered their faith and unstrung their nerves, that they never again had the hardihood to make other contributions. Indeed they had already rendered themselves, the subjects of ridicule and derision, for their temerity and presumption, in giving countenance to this wild projector, and infatuated madman. The company therefore gave up the ghost,—the boat went to pieces,—and Fitch became bankrupt and broken hearted. Often have I seen him stalking about like a troubled spectre, with downcast eyes, and lowering countenance; his coarse soiled linen peeping through the elbows of a tattered garment.

"During the days of his expiring hopes, two mechanic's were of sufficient daring to work for him—aye, and they suffered in purse, for what was esteemed their confidence and folly. These were Peter Brown, shipsmith, and John Wilson, boatbuilder, both of Kensington. They were worthy, benevolent men, well known to the writer, and much esteemed to the city. Towards Fitch, in particular, they ever extended the kindest sympathy. While he lived, therefore, he was in the habit of calling almost daily at their workshops. to while away time; to talk over his misfortunes, and to rail at the ingratitude, and cold neglect of an unfeeling, spiritless world. From Wilson I derived the following anecdote. Fitch called to see him as usual. Brown happened to be present. Fitch mounted his hobby, and became unusually eloquent in the praise of steam, and of the benefits which mankind were destined to derive from its use in propelling boats. They listened of course, without faith, but not without interest, to this animated appeal; but it failed to rouse them to give any further support to schemes, by which they already suffered. After indulging himself for some time, in this never-failing topic of deep excitement, he concluded with these memorable words,—

"*Well, gentlemen, although I shall not live to see the time, you will, when steamboats will be preferred to all other means of conveyance, and especially for passengers; and they will be particularly useful in the navigation of the River Mississippi.*"

"He then retired, on which Brown turning to Wilson, exclaimed in a tone of deep sympathy, "Poor fellow! what a pity he is crazy!"

"Fitch died in 1893. Brown and Wilson were more prosperous. The both lived to retire from business in easy circumsstances. The former, indeed, became rich, and set up his carriage. That his wealth made no difference with his feelings and disposition, and that he was still the same man who sympathized with poor Fitch, is shown by his subsequent conduct. He was of too noble a spirit to indulge either in luxurious pride or ostentation. The coat-of-arms on the pannels of his carriage, was of his own contriving, and consisted of a muscular hand grasping a sledge-hammer, suspended over an anvil. Motto, "By this I got you."

MORE STEAMBOAT DISASTERS!!

The Steamer Empire, from Albany for New-York, struck on the pier at the foot of 19th Street, and damaged her bows. The passengers were greatly alarmed, and were taken off by the Knickerbocker. The accident occurred on Friday morning the 25th inst., during the heavy fog, and at a very early hour in the morning. No Life Boat on board the Steamer.

Steamer Robert L. Stevens, when near Caldwells Landing, straits of Dunderberg, on her downward passage in the night, broke her engine, throwing her walking beam completely through the pilot house.—The pilot narrowly escaped by jumping out of the window. No Life Boat on board this Steamer.

The straits of Dunderberg is called the "Race," and is an unfathomed gulf, walled up on each side to the height of 1000 feet. It is hoped the echo of the details of these disasters will reach the halls of legislation and reverberate from mind to mind until some action is produced in that body which shall give adequate security against a recurrence of such disasters.

The Knickerbocker on Monday evening the 28th ult., ran foul of some of the River Craft in the night and damaged her upper works. No life boat on board.

The Legislature should provide by law for Life Boats on board of Steamers.

THE RAISING OF THE SWALLOW.

It seems to us that unnecessary delay has been caused in raising the steamer Swallow. The power of one man in raising a body under water is very great. I was interested in a boat sunk several years ago in one of the Western Rivers, and we found no difficulty in raising it, and with despatch too, and the boat after being so raised proceeded with the cargo on board direct to New Orleans. This boat was 70 feet long, 16 feet wide, and 6 feet deep, and had a cargo of about 140,000 lbs weight, consisting of Pot and Pearl Ashes, and Flour. On hearing of the disaster I set out in company with one of my partners in a log canoe, which was paddled by one man, descended the river 60 miles, and on arriving at the place where the disaster occurred we found the boat six feet under water with her cargo. The country around where the accident happened was thinly settled, but in all such places there is a willingness to give aid, and we at once procured two large keel boats run one along each side of the sunken boat, and across these we rigged two Spanish windlesses, one at the stern and one at the bow, and with ropes and chains made fast to the boat below, we raised it to the top of the water, fastened it, and then commenced pumping and baling out the water and soon found where the leaks were and immediately filled them with tow until we could get at the break and repair it. I found in this operation that with a common pike pole I could raise a barrel of Ashes to the top of the water and as soon as it came to the surface two men laid hold of it and raised it on skids and rolled it on shore. In this way we discharged the boat, then repaired, and reloaded, and she proceeded on her voyage to New Orleans and arrived safely without any further accident. The River was much swollen when the accident happened, and the water was running outside the banks where a strong current drew the boat against a large tree, on which the bow struck, immediately filled and sunk. As soon as the boat was reloaded my partner and myself set out through the woods on foot to return. This was on the 17th of March, and, for a wonder in that country, the snow fell during the greater part of the day, yet notwithstanding this we were able by the hour of nine in the evening to walk forty miles, and here we met a man coming with horses to relieve us of walking on foot.

In the western waters the raising of boats is a speedy operation, and necessarily so, for it is often that the river is on the rise or fall, hence it is necessary that what is to be done should be done quickly.

Had the Swallow struck the rocks which border the race at the foot of the Dunderberg, nearly all on board must have perished.

Every steamer should by law be compelled to carry LIFE BOATS.

WRECKS, NAVIGATION OF RIVERS, &c.

The Revised Statutes contain a provision in relation to wrecks. Is it not as competent for the Legislature to provide against the wrecking of Steamboats as it is to enact the laws in question. In the first volume of the Revised Statutes, page 681 is an act entitled "Of the navigation of Rivers and Lakes, and abstruction of certain waters." This act needs amending by requiring steamers to carry life boats.

THE CANAL BRIDGE ACCIDENT.

Some years ago we were at Albany when the draw of the Canal Bridge fell into the Basin and drowned 20 or 30 persons. We were on board of a steamer lying at the dock when the bridge fell, and several persons who had taken passage in the boat were among the persons drowned. The Steamer came away from the dock in the midst of this scene of distress and brought away a lady passenger who on leaving the wharf ascertained that her husband was not on board. She was frantic with the distress she felt at the probability of his having fallen with the bridge into the basin. The Captain of the boat was unwilling to return with her, and the passengers learning this fact demanded that the boat should land her immediately, which was done, and she obtained a carriage and returned to Albany, and there found her husband in the crowd at the Bridge. They were from the State of Ohio. We met them two days after in the Streets of New-York. Such haste should not be tolerated.

From the Philadelphia Chronicle.

HARRISBURGH, Pa., April 11.

"THE BABES IN THE WOODS."

A touching incident occurred among the mountains in the upper end of this county, last week, while the fire was raging in that vicinity. A Mrs. Lupold has been somewhat deranged occasionally, for some time past, but was not considered much out of the way, until, one day last week in the absence of her husband, she left her infant in the cradle, and taking with her two other children, one about five years of age, the other only three, fled to the mountains, and nothing could be discovered of them until Saturday last, when she was found almost famished and nearly naked; but the children were missing. The neighborhood soon turned out to scour the mountains in search of them, but in vain until Monday last, when some men providentially happened to come upon them in one of the wildest regions of that wild country, where no one would have dreamed of looking for them. They had been out four days and four nights,—cold nights, too,—barefooted and half naked otherwise, their clothes being nearly torn off them by the undesbrush, and their little legs blackened by the ashes of the conflagration through which they had wandered, and their flesh a good deal lacerated. They had cried themselves sick, and one of them had taken off its dress to make a bed of; and there they lay, at the root of a tree locked in each other's arms, unable to speak, having eaten nothing, it is supposed, since they left home. The poor little sufferers were taken to the nearest house and comfortably provided for, and said to be doing well. They were found ten miles distant from the place at which their mother was first discovered, and that they did not perish is altogether providential, and almost miraculous.

LIGHTNING.

The House of F. Young, in Hagerstown, Maryland, was struck by lightning on Thursday evening, April 19th, the inmates struck down, and a cradle containing an infant overturned. A stove was also overturned. No one was injured. The rafters and timbers under the floor were much torn. *A lightning rod costing a single dollar would have protected this building.*

A negro woman was killed by lightning on Saturday night the 5th of April, in Perry County, Ala.

On the 5th of April the lightning struck a hickory tree in the front of a house in Westville, Miss., and killed three persons, one aged 11, another 15, and another 19 years, who had taken shelter under the piazza to avoid the rain. Several other persons who were there, were struck down, but were restored by the free use of cold water thrown plentifully upon them.

A barn belonging to A. Van Tyle, in Manchester, Mich., was struck by lightning on Thursday, April 17th, and with its contents, including a span of horses was desttoyed.

On Thursday the 17th of April a barn was struck by lightning in Dickinson township, Cumberland Co. Pa., and with its contents entirely consumed.

On the fourth of April, Wesley Joy was killed by lightning in Macoupia County, Illinois.

The storm on Friday the 25th of April passed Hunting Creek, near Alexandria at between five and six o'clock in the afternoon. In passing the creek it raised a column of water twenty feet into the air. Trees, chimneys, &c., were blown down, and a carriage was overturned and broken to pieces, and some ladies who were in the carriage were bruised and injured.

At about seven o'clock on Friday evening, says the National Intelligencer, Washington City was visited by a thunder storm. The lightning struck the dwelling of Mr. Quigley, at the Navy Yard, descended the chimney, and shivered a mantle piece and the china which was upon it to atoms. A son and daughter of Mr. Quigley who were in the room at the time were severely stunned. The young lady so much so that she did not recover until the next day. The young man recovered in a few hours.

A Cow, near the residence of Mr. Quigley, was killed instantly. Here is an evidence of the division of the electric discharge in the destruction of the mantle piece and china and killing of the cow.

A rain storm mixed with hail, accompanied by heavy thunder and vivid lightning passed over the city of Baltimore from west to east about 6 o'clock on Friday evening. The lightning struck the dwelling house of R. B. Richardson, Esq., on Monument Street. Damage not stated,

The barn of Mr. Jacob Hoff, of Straban township, Pa., was struck by lightning on Friday evening and consumed with all its contents.

Also a barn in Cordues township, Pa., was struck the same evening and burnt.

The barn of Col. Lewis, in Hagerstown, Md., was struck by lightning on Friday evening.

The storm passed in the neighborhood of Anapolis, Maryland, on Friday evening, the wind doing great damage.

At York, Pennsylvania, the storm was violent. The office of A. & E. Denmead & Co., was struck by lightning; in the shed for framing bridges were several persons, one named William Wilson was killed, and another person stunned.

This storm passed over the city of New-York abont half past 8 o'clock on Friday evening, accompanied by thunder, lightning and rain.

Baltimore is in latitude 39°, 17′, 23″, longitude 76° 37′, 20″; New-York is in latitude 40°, 42′ 40″, longitude 74°, 1′, 8″. The speed of the storm was therefore greater than that of a locomotive.

At Southfield, Mass., a barn was struck by lightning on Friday evening, and with its contents of hay, cattle, &c. destroyed. A new house in Long Meadow was struck the same evening and injured, and also the Rail Road Bridge at Enfield, a few minutes after the cars had passed over it. These three towns are in the same vicinity.

At Cookesville, Md., a house was struck, and two persons killed. Also at Hanover, Pa., a house was struck and one person killed; and Fitzwilliam, N.H., the large meeting house was struck, the rod broken to pieces, and the house injured, all on the evening of the 25th ult.

ICEBERGS, &c.

The ship Sheridan on the 4th of April in north latitude 45°, west longitude 46°, 45′, fell in with large quantities of field ice, extending as far as the eye could reach. On the 5th, in latitude 45°, longitude 48°, 38′, fell in with a number of large icebergs.

Ship Gladiator, April 2, latitude 44°, 40′, longitude 47°, 20′, run into some fields of ice during a thick fog, sailed to the south east and in latitude 40°, 30, was surrounded by ice.

Ship Flordinta, April 9th, latitude 44°, longitude 49°, fell in with large fields of ice. April 10, latitude 43°, 30, longitude 51, saw several large icebergs.

Snow fell at Chicago on the 7th of April. Snow fell at Hudson on the 7th of April. There was a north east snow storm at Quebec on the 8th of April. Snow fell abundantly at Dover, State of Maine, on the 8th of April. A snow storm commenced early on the 4th of April, at Quebec and lasted until noon. Snow fell at Albany on the morning of the 4th of April between the hours of one and two o'clock.

In 1842 the icebergs run every month from March to September, both months inclusive.

In 1843 no ice was seen by vessels crossing the Atlantic, until late in July, and but three vessels reported seeing icebergs during the spring and summer of that year.

In 1842 the ice in the Hudson River broke up on the 4th of February, and in 1843 on the 13th of April and the present year on the 24th of February.

The first icebergs reported in 1842 was on the 14th of March, and in 1845 on the 2d of April.

Quebec is in north latitude 46°, 48′ 49″; west longitude 71°, 10′, 45″.

Chicago is in north latitude about 42°; west longitude about 87°.

Hudson is in north latitude 42°, 14′; west longitude 73°, 86′.

Dover Maine, north latitude about 45°, longitude about 69°.

EARTHQUAKE.

On Friday the 7th of April, at about 52 minutes past 3 o'clock P. M., an earthquake was felt at the city of Mexico which lasted from two to four minutes. Mexico is in latitude 19°, 25′, 40″ north; longitude 101°, 25′, 30″ west, and is 7426 feet above the sea. It has a mean temperature of about 65° Farenheit's scale, which is 5°, less than that of Savannah, Ga. and about 16° greater than that of the city of New-York, which latter we assume to be about 50°.

On referring to our meteorlogical notices of April, in this number of our paper, it will be seen that on 7th of April, there was a snow squall on the Hudson River on the 7th of April, and also at Chicago, Ill., there was a severe snow storm on the same day and on the 8th a snow storm was raging at Quebec, in Canada, and Dover, in Maine, and the icebergs were floating in latitude 44° north, longitude 48° west.

The ground on which Mexico is built is wet and swampy, the original city was called Tenochtitlan, and was built upon a group of island in Lake Tezcuco. Some of the large buildings of Mexico are erected upon piles. The water of this lake is salt. From the Lakes in the same neighborhood sulphuretted hydrogen gas issues abundantly. There are several volcanic mountains in the neighborhood of Mexico and of great height.

There were less severe shocks felt between 6 and 8 o'clock the same evening. Several large buildings were reduced to ruins by the first shock and several lives were lost.

Is our country disposed to go to war with a people whose capitol is shaken by the commotion of the elements? Shame on such a spirit.

THE DISTANT PAST....THE MYSTERIOUS FUTURE.

The distant past, except the brief records on the page of the volume of inspiration, is a blank on the page of history.

The events of future time remain sealed up and hidden from the view of mortals, and will only be developed as the earth revolves and opens each successive diurnal page in the mighty volume.

The human mind is incompetent to estimate the annual revolutions which yet remain to be performed by this Youthful Planet, the temporary dwelling place of the human race, and the great cemetry in which their ashes are to repose, until the last moment of time shall be completed.

Human knowledge is limited and imperfecct, and we have no scale by which to measure the faculties of the human mind or to determine its qualities.

Man is an etherial being, inhabiting a material frame so nicely organized that he is unable to comprehend that union of body and soul which exists in his own person.

Man cannot comprehend himself—he cannot estimate the powers of his own mind, nor sum up the gifts which have been bestowed upon him by the author of his existence, but when circumstances place him in a situation to require the exercise of extraornary power, he finds that he possesses faculties that before were undiscovered and which only require to be cultivated and improved to be made useful.

F. R. TILLOU.

Alderman Tillou of the Fifth Ward was a member of the Common Council in 1843 and 1844. In the Board of Aldermen he pursued an independent course and rendered a service in this, which will be long and kindly remembered. Alderman Tillou should be applied to forthwith to become a candidate for the Legislature, and means should be forthwith taken to ensure his election. Alderman Tillou is both honest and capable. His services in the Legislature for a single session would be invaluable.

CHAPEL STREET SEWER.

The Chapel Street sufferers have had another report made in their favor and it is like the three preceding reports of 1839, a unanimous Report. This Report fully sustains Alderman TILLOU's Report of 1844, and silently but most severely rebukes that of Mr. Brady and Mr. Lee, which was not borne out by the premises upon which they founded their conclusions.

[Document No. 22.]

BOARD OF ASSISTANT ALDERMEN.

April 24th, 1845.

The following Report from the Special Committee on the subject of the Chapel Street Sewer was received, laid on the table, and ordered to be printed.

THOMAS R. WHITNEY, Clerk.

The Special Committee to whom was referred the annexed memorial, &c., in relation to the Chapel Street Sewer, respectfully

REPORT:

That they have investigated the subject referred to them, both personally and by an examination of witnesses, and the voluminous testimony taken before a former committee, and from all these sources they have ascertained the following facts:

That there have been two sewers built in Chapel Street at the expense of the owners of the adjoining property. That the present sewer does not answer the purpose for which it was built, and that the owners of property have been heavily assessed without receiving a corresponding benefit.

Your Committee cannot but think that the Common Council should partially remedy some of the evils complained of, as an act of mere common justice, and recommend the adoption of the following resolution:

Resolved, (If the Board of Aldermen concur), That the Street Commissioner is hereby directed to take the proper measures for constructing a sewer in Chapel and Thomas Streets, suitable to the wants of that section of the City, (the present sewer to be taken up,) said sewer to be built at the expense of the city.

MOSES TUCKER,
W. BLACKSTONE,
JOSEPH A. DIVVER, } Committee.

UNITED STATES JUDGE.

Chief Justice Nelson, of the New-York Supreme Court, was nominated by President Tyler, one of the Judges of the Supreme Court of the United States, and unanimously confirmed by the Senate.

CLERK OF THE U. S. CIRCUIT COURT.

Mr. Gardner, brother-in-law to Ex-President Tyler, has been appointed Clerk of the Circuit Court of the United States, by Judge Nelson.

U. S. CONSUL FOR LIVERPOOL.

William Paxson Hallett, Esq., Clerk of the Supreme Court of this State was nominated by President Tyler, Consul for the Port of Liverpool in England.

U. S. DISTRICT ATTORNEY.

Robert Emmet, Esq., was an applicant for the office of United States District Attorney. B. F. Butler, Esq., was appointed.

SOLOMON TOWNSEND.

The praise of a man is in himself,—and his works are the record. The Individual whose name heads this humble column, was a member of the house of Assembly of this great State, and the active member in the passage of the act which restrained the assessment depredations in this great city and saved to its Citizens hundreds of thousands of dollars. We allude to the law of May 14th, 1840, in relation to the assessment of real estate for visionary improvements.

The same individual was the active member in the passage of the law which makes every tax-payer his own Collector, a law which saves fifty thousand dollars per annum to the city and which demonstrates the fact that the more simple the machinery of government is, the more useful and beneficial its administrations, to the people. We often hear the remark, what can one man do alone?—here is the reply—a conclusive answer.

THE NATIVE PARTY.

The native party have gained strength by their recent defeat in the city of New-York. Adversity is an excellent schoolmaster. The natives mistook their own strength, and made the same mistake that each of the other great parties have done. The Native party as rigid reformers, are strong, but as politicians, are of no force. In their appointments to office they should have selected the best men in the community without reference to political distinctions. Such a course would have given ability and confidence to the departments of the city government. We said before the election, that the energies of the public chest have uniformly been directed to the succession of the party in power. The result of such a course is never problematical. The watch expenses should have been reduced by the natives to one half the expenditure, and the assessment abuses should have been remedied. They should have published monthly statements of their expenditures and contracted for the public printing at the lowest rates. These measures of reform would have given satisfaction to the greatest number of the good men of both parties. The Native party have now the opportunity of watching the acts of the present Common Council and of selecting their candidates to the Legislature with a care and caution that will ensure success. The nomination should not be given to persons who want the place, but they should be made in a body, and present such names as both Democrats and Whigs will approve of, for it is evident that they have hereafter, as heretofore, to look to the good men of other parties for support. If thirteen good men are selected to form a ticket, each man selected will consent to be candidates on the condition that the consent of all those nominated can be obtained. Good men will be willing to be candidates, provided you give them good men for associates.

ANCIENT BUILDINGS.

There are but few buildings in the city of New-York that can be called ancient. The Walton House in Franklin Square was at the time it was built considered a splendid dwelling, and many persons visited it on that account. It stands now a monument of the changes which have taken place in the style of building in New-York, and also of the change in the commerce of the city, for this building was built of brick imported from Holland.

WALL STREET.

This Street has been entirely rebuilt within a few years. In 1680 this Street was called Cingal Street.

A METEOR.

A Meteor of great brilliancy is noticed by the Cherokee Advocate as having been seen on the night of the 16th March. After it disappeared an explosion was heard like the discharge of a large cannon, and which jarred the houses in the neighborhood. It was no doubt a meteoric stone or aerolite, and but for the thinness of the population in that part of the country could no doubt be found.

The light of the fire of the Bowery Theatre, which was consumed on Friday evening, 25th ult., gave to the clouds for a limited extent a color of a bright and beautiful tint, and resembled that produced by the solar rays in a cold atmosphere.

Municipal Gazette.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, MAY 24, 1845. [VOL. I....NO. 35.

TAX LAWS.

We give on the second page of this day's paper the entire tax laws now in force for the Assessment of Taxes. We have published it thus early for the examination of Tax Payers.

The law in relation to incorporated companies is also contained in the series.

NEW BOARD OF ASSISTANTS.

John S. Gilbert,	1st Ward.
J. C. Albertson,	2d "
G. M. Ogden,	3d "
George H. Purser,	4th "
Lyman Candee,	5th "
John Foote,	6th "
Nathaniel Pierce,	7th "
A. MaClay, Jr.,	8th "
Wm. Quackenbush,	9th "
Neil Gray,	10th "
Jacob Miller,	11th "
Thomas Spofford,	12th "
Nathan Roberts,	13th "
Edward Nichols,	14th "
James D. Oliver,	15th "
James I. V. Westervelt,	16th "
Wm. H. Cornell,	17th "

BOARD OF SUPERVISORS.

The Board of Supervisors of the City and County of New-York is composed of the following persons

Wm. F. Havemeyer, Mayor.
F. A. Tallmadge, Recorder.

Oliver Charlick,	Aldermen	1st Ward.
James C. Stoneall,		2d "
Egbert Benson,		3d "
Joseph A. Divver,		4th "
Emanuel B. Hart,		5th "
Thomas S. Henry,		6th "
Thomas Connor,		7th "
Richard T. Compton,		8th "
Theodorus Van Tine,		9th "
Bernard J. Messerole,		10th "
Charles I. Dodge,		11th "
David S. Jackson,		12th "
David D. Briggs,		13th "
Thomas B. Tappan,		14th "
Wm. V. Brady,		15th "
William Seaman,		16th "
Crandal Rich,		17th "

OLD BOARD OF SUPERVISORS.

Alderman Drake, Chairman of the Committee on Annual Taxes, reported in favor of paying D. D. Williamson, Comptroller, the sum of $2,132.00 for receiving tax monies in 1842, The Comptroller was less than six weeks employed in receiving tax money during which time he was paid an annual salary of $2,500 per annum, for his services. The Receiver of Taxes is only entitled to 2,000 for a whole year's services.

In 1843, the Board of Supervisors allowed Mr. Williamson $1000 for the same services. This sum is an addition, or $3132.00 for six weeks service, equal to $27,144.00 per annum, a sum which exceeds the salary of the president of the United States. The report of the tax committee was adopted.

TAX ASSESSMENTS THIS YEAR.

The Ward Assessors elected in April were sworn into office on the 13th of this month, and are required by law to complete their assessment on or before the 15th of August. Between the 15th and 20th of August the Board of Assessors are required by law to convene and at this meeting may increase the assessment of any individual on personal property.

On the 20th of August the Ward Assessors are required by law to give public notice that they have *completed* their assessments and that a copy of their assessment roll has been deposited with one of their number for the inspection of persons assessed where it will remain open for 20 days, during which time any person assessed may make objections to the assessment. If a person assessed for real estate deems the valuation too high he can make oath to the true value, and the assessors are bound by law to assess it at the sum sworn to by the owner.

If a person assessed for personal property deems the amount too high, he can require the same to be reduced to such sum as he is willing to make affidavit to as being over and above his just debts, deducting therefrom any personal estate exempt from taxation.

The New Tax Bill.

The Bill for taxing funds, produce and merchandize belonging to strangers, and for taxing surplus funds belonging to incorporated companies, and for taxing citizens of other counties of this State in the city of New-York for personal property passed the house of Assembly, but was not acted upon in the Senate. It therefore has not become a law. Hon. A. G THOMPSON, jr., of the Assembly did not vote for this bill.

THE FERRY BILL.

The Ferry Bill passed the Senate by a vote of 26 to 3, and the house by a vote of 86 to 22, and was promptly signed by the Governor.

The width of the East River at the Brooklyn Fulton Street Ferry, is 2193 feet. If a tier of piers and docks should be extended into the river from both New-York and Brooklyn, 450 feet on each side, to a width of 500 feet, the length of the Ferry would be reduced to 1193 feet, and both the Ferry and the navigation would be improved, and the value of the property thus acquired would supply both New-York and Brooklyn with Croton Water free of expense. Splendid docks could be thus made for the Liverpool Packets and store houses could be placed upon these piers which could be used free of the expense of cartage.

OLD BOARD OF ASSISTANTS.

The old board of Assistants adjourned at 12 o'clock at midnight on Monday the 12th of May. At that moment their term of office expired.

CHAPEL STREET SEWER.

The Board of Assistants adopted the Report of the Special Committee recommending the removal of the Chapel Street Sewer and the constructing of a new Sewer at the city expense.

OLD BOARD OF ALDERMEN.

The old Board of Aldermen held over till noon on the 13th of May. twelve hours after the term of office of the members had expired. Mayor Harper also held over and administered the oath of office to the mayor elect. We regret the necessity of recording this act of our most worthy and excellent Ex-Mayor.

TAXES OF 1845.

The Croton, Watch, Lamp and Contingent Tax, will this year be 84 cents on the one hundred dollars. The State Tax will be but 6 cents, upon the hundred dollars, making in all 90 cents on the $100. Increase of City Tax, 9 cents, decrease of State tax, 5 cents. This will be the largest Tax ever assessed in the city of New-York.

WARD ASSESSORS FOR 1845.

Wards.	
1	John C. Allsteadt, Joseph S. Palmer.
2	James B. Garretson, Samuel Waterbury.
3	James E. Wood, Thomas C. Bartine.
4	William Corbitt, John D. Keating.
5	Sampson Moore, Samuel Dixon.
6	John Green, Matthew Murray.
7	David Lyon, David P. Arnold.
8	George Paulding, Daniel Wilson.
9	Joseph D. Baldwin, James L. Miller.
10	Edward D. Drummond, Edmund Anderson.
11	Chistopher McGary, Andrew R. Jackman.
12	John Flynn, John P. Dodge.
13	Cornelius B. Timpson, James H. Cooke.
14	Thomas Raven, Thomas Hassett.
15	George Riley, Joseph Britton.
16	Jehu Mott, James Casidy.
17	George Brown, George H. Ross.

NEW CORPORATION OFFICERS.

David T. Valentine, Clerk of Common Council,
John T. Stewart, Receiver of Taxes.
James T. Brady, Counsel of the Mayor, &c.
John Ewen, Comptroller.
Elias L. Smith, Street Commissioner.
Richard I. Smith, Assistant Street Commissioner.

CHAMPLAIN CANAL.

This Canal is 64 miles long, 40 feet wide at the top, 28 feet wide at the bottom, four feet deep, has 21 locks and cost $1,179,872.00. From the summit level of this Canal there is a fall toward Lake Champlain of 54 feet, to tide water in the Hudson River, 134 feet, this brings the surface of Lake Champlain, 80 feet above tide water.

The Champlain Canal has been paid for by the auction duties, and the Onondago salt duties. The State has been the fiscal agent to collect and disburse the money but the great public irrespective geolographical lines have supplied the means. The consumers of Onondago Salt, and of goods sold at auction, are the contributors to the expense.

The packet boats on this canal leave Troy at 11 A. M., and arrive at Whitehall at about six o'clock next morning, travelling all night. The fare is one dollar and twenty-five cents, besides thirty-seven and a half cents for meals. The rock formation through which the canal passes, is slate or black shale, and I noticed some lime stone near the canal.

LIGHTNING.

In our last paper we noticed the transactions of the thunder storm of the 25th of April and to that account we have to add that a barn in Washington County in this State, was struck by lightning and consumed. At Newton, Sussex County, New-Jersey the dwelling house of a methodist clergyman was struck the same evening and injured. These two cases show a great width of the path in which the storm travelled.

rated company liable to taxation on its capital, shall not be taxed as an individual, for such stock.

TITLE II.

Of the place and manner in which Property is to be assessed.

Art. 1.—Of the place in which property is to be assessed.
Art. 2.—Of the manner in which assessments are to be made, and the duties of the assessors.
Art. 3.—Of the equalization of the assessments, and the correction of the assessment rolls.

ARTICLE FIRST.

Of the place in which Property is to assessed.

Sec. 1. Persons to be assessed in town or ward where they reside, for lands in such town.
§ 2. If land be occupied by another person, it may be assessed in name of either.
§ 3. Unoccupied lands, not owned by residents, denominated "lands of non-residents."
§ 4. Where land to be taxed, when divided by division line of towns.
§ 5. Persons to be assessed where they reside, for all their personal property.
§ 6. Real and personal property of incorporated companies, where assessed.

Land where taxed.

§ 1. Every person shall be assessed in the town or ward, where he resides when the assessment is made, for all lands, then owned by him within such town or ward, and occupied by him, or wholly unoccupied.

§ 2. Land owned by a person residing in the town or ward where the same is situated, but occupied by another person, may be assessed in the name of the owner, or occupant.

§ 3. Unoccupied lands, not owned by a person residing in the ward or town where the same are situated, shall be denominated "lands of non-residents," and shall be assessed as hereinafter provided.

How if divided by town line.

§ 4. When the line between two towns or wards divides a farm, or lot, the same shall be taxed, if occupied, in the town or ward where the occupant resides; if unoccupied, each part shall be assessed in the town in which the same shall lie; and this, whether such division line be a town line only, or be also a county line.

Personal estate where taxed.

§ 5. Every person shall be assessed in the town or ward where he resides when the assessment is made, for all personal estate owned by him, including all such personal estate in his possession, or under his control as trustee, guardian, executor, or administrator; and in no case shall property so held, under either of those trusts, be assessed against any other person.

Property of corporations.

§ 6. The real estate of all incorporated companies liable to taxation, shall be assessed in the town or ward in which the same shall lie, in the same manner as the real estate of individuals. All the personal estate of every incorporated company liable to taxation on its capital, shall be assessed in the town or ward where the principal office, or place for transacting the financial concerns of the company, shall be; or if such company have no principal office, or place for transacting its financial concerns, then in the town or ward where the operations of such company shall be carried on. In the case of toll bridges, the company owning such bridge shall be assessed in the town or ward in which the tolls are collected; and where the tolls of any bridge, turnpike, or canal company, are collected in several towns or wards, the company shall be assessed in the town or ward, in which the treasurer or other officer authorized to pay the last preceding dividend, resides.

ARTICLE SECOND.

Of the Manner in which Assessments are to be made, and the Duties of the Assessors.

Sec. 7. Assessors may divide their town or ward into districts
§ 8. To ascertain number of taxable inhabitants and amount of taxable property.
§ 9. Form of assessment roll.
§ 10. Manner in which persons are to be assessed as trustees, &c.
§ 11, 12, and 13. Manner in which lands of non-residents are to be designated in roll.
§ 14. When necessary, assessors to have survey made of non-resident lands.
§ 15. Persons liable to taxation may make affidavit as to value of their property; its effect.
§ 16. Trustees &c. may make the like affidavit.
§ 17. Where such value is not specified by affidavit, assessors to estimate it, and how.
§ 18. Last section applies to all assessments under this Chapter, unless otherwise directed.
§ 19. Assessment rolls when to be completed, where to be left; notices to be put up.
§ 20. What notice to specify.
§ 21. Assessment roll may be inspected during the twenty days specified in notice.
§ 22. Assessors to meet and review assessment; assessments how reduced.
§ 23, Persons may show, other than by their own affidavit, error in assessment.
§ 24. Persons holding personal property as agents, not to be taxed in certain cases.
§ 25. Affidavits under this Article to be made before assessors; where filed.
§ 26. Assessors to sign assessment roll and attach certificate; form of certificate.
§ 27. When and to whom assessment rolls are to be delivered.
§ 28. Assessors to follow instructions of comptroller.
§ 29. Penalty of $50 upon assessor for neglect of duty.
§ 30. If any assessor shall omit to perform his duties, other assessors to perform them.

Assessment districts.

§ 7. The assessors chosen in each town or ward, may divide the same by mutual agreement, into convenient assessment districts, not exceeding the number of assessors in such town or ward.

Inquiry to be made.

§ 8. Between the first days of May and July, in each year, they shall proceed to ascertain by diligent inquiry, the names of all the taxable inhabitants in their respective towns or wards, and also all the taxable property, real or personal, within the same.

Assessment roll.

§ 9. They shall prepare an assessment roll, in which they shall set down in four separate columns, and according to the best information in their power:

1. In the first column, the names of all the taxable inhabitants in the town or ward as the case may be:
2. In the second column, the quantity of land to be taxed to each person:
3. In the third column, the full value of such land, according to the definition of the term land, as given in the first Title of this Chapter:
4. In the fourth column, the full value of all the taxable personal property owned by such person, after deducting the just debts owing by him.

Trustee, guardian, &c.

§ 10. Where a person is assessed as trustee, guardian, executor, or administrator, he shall be assessed as such, with the addition to his name of his representative character, and such assessment shall be carried out in a separate line from his individual assessment; and he shall be assessed for the value of the real estate held by him, in such representative character, at the full value thereof, and for the personal property held by him in such representative character, deducting from such personal property the just debts due from him in such representative character.

Lands of non-residents.

§ 11. The lands of non-residents shall be designated in the same assessment roll, but in a part thereof separate from the other assessments, and in the manner prescribed in the two following sections.

§ 12. If the land to be assessed, be a tract which is subdivided into lots, or be part of a tract which is so subdivided, the assessors shall proceed as follows:

1. They shall designate it by its name, if known by one, or if it be not distinguished by a name, or the name be unknown, they shall state by what other lands it is bounded:
2. If they can obtain correct information of the subdivisions they shall put down in their assessment rolls, and in a first column, all the unoccupied lots in their town or ward, owned by non-residents, by their numbers alone and without the names of their owners, beginning at the lowest number and proceeding in numerical order to the highest:
3. In a second column, and opposite to the number of each lot, they shall set down the quantity of land therein, liable to taxation:
4. In a third column, and opposite to the quantity, they shall set down the valuation of such quantity:
5. If such quantity be a full lot, it shall be designated by the number alone; if it be a part of a lot, the part must be designated by boundaries, or in some other way, by which it may be known.

§ 13. If the land so to be assessed be a tract which is not subdivided, or if its subdivisions cannot be ascertained by the assessors, they shall proceed as follows:

1. They shall enter in their roll the name or bounds

ries thereof, as above directed, and certify in the roll that such tract is not subdivided, or that they can not obtain correct information of the subdivisions, as the case may be;

2. They shall set down in the proper column, the quantity and valuation as above directed;

3, If the quantity to be assessed be the whole tract, such a description by its name or boundaries will be sufficient; but if a part only is liable to taxation, that part or the part not liable, must be particularly described;

4. If any part of such tract be settled and occupied by a resident of the town or ward, the assessors shall except such part from their assessment of the whole tract, and shall assess it as other occupied lands are assessed; and if they can not otherwise designate such parts, they shall notify the supervisor of the town, who shall cause a survey and two manuscript maps to be made, for the purpose of ascertaining the situation and quantity of every such occupied part;

5. One of those maps shall be delivered by the supervisor to the county treasurer, to be by him transmitted to the comptroller, and the other shall be delivered in like manner to the assessors;

6. The assessors shall then complete the assessment of the tract, and shall deposite the map in the town clerk's office, for the information of future assessors. And the expense of making such survey and maps shall be immediately repaid to the supervisor, out of the county treasury; and it shall be added by the board of supervisors to the tax on the tract, distinguishing it from the ordinary tax.

Survey of non-resident lands.

§ 14. Whenever it shall be deemed necessary by the assessors of any town, to have an actual survey made, to ascertain the quantity of any lot or tract of non-resident lands which is divided by the town line, they shall notify the supervisor, who shall cause the necessary surveys to be made at the expense of the town.

Affidavit of value of property.

§ 15. If any person whose real or personal estate is liable to taxation, shall, at any time before the assessors shall have completed their assessments, make affidavit that the value of his real estate does not exceed a certain sum, to be specified in such affidavit; or that the value of the personal estate owned by him, after deducting his just debts, and his property invested in the stock of incorporated companies, liable under this Chapter to taxation on their capital, does not exceed a certain sum to be specified in the affidavit, it shall be the duty of the assessors to value such real or personal estate, or both, as the case may be, at the sums specified in such affidavit, and no more.

Ib. by trustees, &c.

§ 16. If any trustee, guardian, executor or administrator, shall specify, by affidavit, the value of the property possessed by him, or under his control, by virtue of such trust, after deducting the just debts due from him, and the stock held by him in incorporated companies liable to taxation, in that capacity, the assessors shall in like manner value the same, at the sum specified in such affidavit.

Rule of valuation.

§ 17. All real and personal estate liable to taxation, the value of which shall not have been specified by the affidavit of the person taxed, shall be estimated by the assessors at its full value, as they would appraise the same in payment of a just debt due from a solvent debtor.

Qualification.

§ 18. The preceding section shall be followed in all assessments made under this Chapter, except where the assessors shall be specially required by law to observe a different rule.

The following sections have been modified by section 1 of the act of April 11th, 1842. See page 494 of this paper.

Roll when to be completed; notice.

§ 19. The assessors shall complete the assessment rolls on or before the first day of September in every year, and shall make out one fair copy thereof, to be left with one of their number. They shall also forthwith, cause notices thereof to put up at three or more public places in their town or ward.

Contents of notice.

§ 20. Such notices shall set forth that the assessors have completed their assessment roll, and that a copy thereof is left with one of their number to be designated in such notice, at some place to be specified therein, where the same may be seen and examined by any of the inhabitants of the town or ward during twenty days; and that the assessors will meet on a certain day, at the expiration of such twenty days, and at a place to be specified in such notice, to review their assessments, on the application of any person conceiving himself aggrieved.

Inspection of roll.

§ 21. The assessor with whom such assessment roll is left, shall submit the same, during the twenty days specified in such notice, to the inspection of all persons who shall apply for that purpose.

Assessors to meet and review assessments.

§ 22. The assessors shall meet at the time and place specified in the notice, and on the application of any person conceiving himself aggrieved by their assessment, shall review such assessment. And when the person objecting thereto, shall not previously have made affidavit concerning the value of his property, pursuant to the fifteenth and sixteenth sections of this Title, the assessors shall, on the affidavit of such person, made as provided in those sections, reduce their assessments to the sum specified in such affidavits.

Ib..10 Wend. 195.

§ 23. If the person objecting to the assessment, can show, by other proof than his own affidavit, to the satisfaction of the assessors, or of a majority of them, that such assessment is erroneous, the assessors shall review and alter the same, without requiring any such affidavit.

Affidavit by agent..See § 3, Title 5, post and Title 1.

§ 24. Where any person, in possession of personal property liable to taxation, shall make affidavit, that such property, or any part thereof, specifying what part, is possessed by him as agent for the owner thereof, and shall disclose in such affidavit the name and residence of the owner, the assessors, if it shall appear that such owner is liable to be taxed under this Chapter, shall not include such personal estate in the assessment of the property of such possessor.

Affidavits before whom made.

§ 25. The affidavits specified in this Article, shall be made before the assessors, or one of them, either of whom is hereby authorized to administer an oath for that purpose; and the assessors shall cause all such affidavits to be filed in the office of the town clerk.

Certificate to assessment roll.

§ 26. If no objection be made to their assessments, or immediately after the assessors shall have disposed of the objections, the assessors, or a majority of them, shall sign the assessment roll, and shall attach thereto a certificate, in the following form, which shall also be signed by them: "We do severally certify, that we have set down, in the above assessment roll, all the real estate, situated in the [town or ward, as the case may be,] according to our best information; and that, with the exception of those cases in which the value of the said real estate has been sworn to, by the owner or possessor thereof, we have estimated the value of said real estate, at the sums which a majority of the assessors have decided to be the true value thereof, and at which they would appraise the same in payment of a just debt due from a solvent debtor: and also that the said assessment roll contains a true statement of the aggregate amount of the taxable personal estate of each and every person named in the said roll, over and above the amount of debts due from such persons respectively, and excluding such stocks as are otherwise taxable; and that with the exception of those cases in which the value of such personal estate has been sworn to by the owner or possessor, we have estimated the same according to our best information and belief."

The following section has been modified by the first section of the act of April 11th, 1842. See page 494 of this paper.

Roll to be delivered.

§ 27. The roll, thus certified, shall, on or before the first day of October in every year, be delivered by the assessors of each ward, in the city of New-York, to the clerk of the city, and by the assessors of every other town or ward, to the supervisor thereof, who shall deliver the same to the board of supervisors at their next meeting.

Duty of assessors.

§ 28. The assessors in the execution of their duties, shall use the forms, and pursue the instructions, which shall from time to time be transmitted to them by the comptroller.

Ib..6 Cowen 480.

§ 29. If any assessor shall wilfully refuse or neglect to perform any of the duties required of him, by this Chapter, he shall forfeit, to the people of this state, the sum of fifty dollars.

Ib.

§ 30. If any assessor shall neglect, or from any cause omit to perform his duties, the other assessors, or either of them, of the town or ward, shall perform such duties, and shall certify to the supervisors with their assessment roll, the name of such delinquent assessor, stating therein the cause of such omission.

ARTICLE THIRD.

Of the Equalization of the Assessments, and the Correction of the Assessment Rolls.

Sec. 31.—Assessment rolls to be examined by board of supervisors of county.
32.—Board may alter the description of the lands of non-residents.
33.—To estimate the tax to be paid on valuations of real and personal estate.
34. To add up and set down the aggregate valuations of real and personal property.
35. To cause a copy of corrected assessment roll to be delivered to each supervisor.
36. To cause a copy to be delivered to collector of every town, &c.
37. Warrant of supervisors to be annexed to copy delivered to collectors; its form.
38. Account of rolls and warrants delivered to collectors, to be sent to county treasurer.
39. Warrant to be varied so as to conform to the laws respecting cities.

Supervisors to examine assessment roll.

§ 31. The board of supervisors of each county in this state, at their annual meeting, shall examine the assessment rolls of the several towns in their county, for the purpose of ascertaining whether the valuations in one town or ward, bear a just relation to the valuations in all the towns and wards, in the county; and they may increase or diminish the aggregate valuations of real estates, in any town or ward, by adding or deducting such sum upon the hundred as may, in their opinion, be necessary, to produce a just relation between all the valuations of real estates in the county; but they shall, in no instance, reduce the aggregate valuations of all the towns and wards, below the aggregate valuation thereof, as made by the assessors.

Lands of non-residents.

§ 32. The board of supervisors shall also make such alterations in the descriptions of the lands of non-residents, as may be necessary to render such descriptions conformable to the provisions of this Chapter; and if such alterations cannot be made, they shall expunge the descriptions of such lands, and the assessments thereon, from the assessment rolls.

Tax to be set down.

§ 33. They shall also estimate and set down in a fifth column, to be prepared for that purpose, in the assessment rolls, opposite to the several sums set down as the valuations of real and personal estates, the respective sums in dollars and cents, rejecting the fractions of a cent, to be paid as a tax thereon.

Aggregate valuations.

§ 34. They shall also add up and set down the aggregate valuations of the real and personal estates in the several towns and wards, as corrected by them; and shall cause their clerk to transmit to the comptroller by mail, a certificate of such aggregate valuations, showing separately, the aggregate amount of real and personal estate in each town or ward, as corrected by the board.

Corrected assessment roll.

§ 35. They shall cause the corrected assessment roll of each town or ward, or a copy thereof, to be delivered to each of the supervisors of the several towns or wards, who shall deliver the same to the clerk of their city or town, to be kept by him for the use of such city or town.

Corrected assessment roll.

§ 36. The boards of supervisors of the several counties in this state, shall cause the corrected assess-

omitted to be furnished, the sum of two hundred and fifty dollars: and it shall be the duty of the comptroller to furnish the attorney-general with an account of all companies that shall neglect to render such lists, that he may prosecute for the penalties hereby imposed.

Suit therefor.

§ 5. If any company, that shall be prosecuted for any such penalty, shall pay the costs of prosecution and furnish the statement required, the comptroller, if he shall be satisfied that the omission was not wilful, may, in his discretion, discontinue such suit.

Companies how assessed.

§ 6. The assessors shall enter all incorporated companies from which such statements shall have been received by them, and the property of such companies, and the property of all other incorporated companies, liable to taxation in their respective towns, in their assessment rolls, in the following manner:

1. They shall insert in the first column of their assessment rolls, the name of each incorporated company in their respective towns or wards, liable to taxation on its capital, or otherwise: and under its name, they shall specify the amount of its capital stock paid in, and secured to be paid in; the amount paid by such company for real estate, then belonging to such company, wherever the same may be situated; and the amount of its stock, if any, belonging to the state, and to incorporated literary and charitable institutions.

2. In the second column, they shall enter the quantity of real estate owned by such company, and situated within their town or ward; and in the third column, the actual value thereof, estimated as in other cases.

3. In the fourth column, they shall enter the capital stock of every incorporated company, (excepting manufacturing and turnpike corporations, and marine insurance companies,) paid in, and secured to be paid in; after deducting the sums paid out for all the real estate of such company, wherever the same may be situated, and then belonging to it, and the amount of stock, if any, belonging to the people of this state, and to incorporated literary and charitable institutions.

Valuation of stock.

§ 7. The assessors shall insert in the column mentioned in the preceding section, the cash value of the stock of all manufacturing and turnpike corporations, (to be ascertained by the assessor, by the sales of the stock, or in any other manner,) deducting therefrom the items mentioned in the preceding section: which value, thus ascertained, together with the value of the real estate of such corporations, shall constitute the amount on which the tax of such corporations shall be levied.

Preceding section extended.

§ 8. The provisions of the fifteenth section of the second Title of this Chapter, shall be, and are hereby extended to the incorporated companies in the two preceding sections named; and the president, secretary, or other proper officer, may make the affidavit required by said section.

Company when to be exempted.

§ 9. If the president or other proper officer of any incorporated company named in the assessment roll, shall show, to the satisfaction of the board of supervisors, at their annual meeting, within two days from the commencement thereof, by the affidavit of such officer, to be filed with the clerk of the board, that such company is not in the receipt of any profits or income, the name of such company shall be stricken out of the assessment roll, and no tax shall be imposed upon it. And the assessment of every monied or stock corporation, authorized to make dividends on its capital, from which no such affidavit shall be received, shall be conclusive evidence, that such corporation was liable to taxation, and was duly assessed.

Stock how assessed.

§ 10. The capital stock of every company liable to taxation, except such part of it as shall have been excepted in the assessment roll, and by the previous sections of this Title, shall be assessed and taxed in the same manner as the other real and personal estate of the county, unless such company shall be entitled to commute under the next section, and shall elect so to do; in which case, no tax shall be imposed by the board of supervisors on the property of such company.

Commutation.

§ 11. All companies employed wholly or principally in manufacturing, and all marine insurance companies, whose nett annual income shall not exceed five per cent on the capital stock paid in, and secured to be paid in, shall be entitled to commute for their taxes, by paying directly to the treasurer of the county in which the business of the company is transacted, five per cent upon all such nett income made by such company during the preceding year.

Certain companies exempt.

§ 12. All turnpike, bridge, or canal companies, whose nett annual income shall not exceed five per cent on the capital stock paid in, and secured to be paid in, shall be exempted from taxation.

Requisites to exemption.

§ 13. To entitle any such company to the exemption aforesaid, the president and secretary, or some two officers of the company, shall make affidavit, stating the capital stock paid in, and secured to be paid in, together with the income and profits, and the total expenditures, during the preceding year, of such company; which affidavit shall be delivered to the assessors of the town, at the time of making their assessments.

Ib.

§ 14. The president, or other proper officer of each company electing to commute, shall make affidavit before some officer authorized to take affidavits, stating the amount of such nett income; and on filing the same with the clerk of the board of supervisors, at their annual meeting, within two days from the commencement thereof, accompanied by the receipt of the county treasurer, acknowledging the payment of the proper commutation, such board of supervisors shall impose no tax on the property of such company.

Taxes to be stated and collected.

§ 15. The amount of taxes assessed on all incorporated companies liable to taxation, and not electing to commute, shall be set down by the board of supervisors, in the fifth column of the corrected assessment roll, and shall form a part of the monies to be collected by the collector.

Duty of supervisors.

§ 16, The board of supervisors having completed the assessment, shall transmit to the comptroller, with the aggregate valuations of the real and personal estate in their county, a statement, showing the names of the several incorporated companies liable to taxation in such county; the amount of the capital stock paid in, and secured to be paid in, by each; the amount of real and personal property of each, as put down by the assessors, or by them; and the amount of taxes assessed on each. In those counties in which there is no such company, the boards of supervisors shall certify such fact to the comptroller, with their returns of the aggregate valuations of real and personal estate.

Duty of collector.

§ 17. The collector shall demand payment of all taxes assessed on incorporated companies, from the president, or other proper officer, of such companies, and if not paid, shall proceed in the collection and payment thereof, in the same manner as in other cases, and shall be liable to the same penalties for the non-payment of monies collected by him. And the collector's receipt shall be evidence of the payment of such tax.

Taxes how paid.

§ 18. Such taxes shall be paid out of the funds of the company, and shall be rateably deducted from the dividends of those stockholders whose stock was taxed, or shall be charged upon such stock, if no dividends be afterwards declared.

Proceedings if taxes cannot be collected.

§ 19. If the collector shall not be able to collect any tax assessed upon any incorporated company, he shall return the same to the county treasurer, and at the same time, make affidavit before the county treasurer, or some other officer authorized to administer oaths, that he had demanded payment thereof from the president, or other proper officer of the company, and that such officer had refused to pay the same, or that he had not been able to make such demand, as the case may be; and that such company had no personal property, from which he could levy such tax.

Ib.

§ 20. The county treasurer shall thereupon certify such facts to the comptroller, who shall pass to the credit of such county treasurer the amount of all

taxes so returned and certified, as in the cases of taxes on the lands of non-residents.

Attorney-general to file bill in chancery.

§ 21. The comptroller shall furnish the attorney-general, with the names of all companies refusing or neglecting to pay the taxes imposed on them, with the amount due from them respectively; and the the attorney-general shall thereupon file a bill in the court of chancery, for the discovery and sequestration of its property.

Powers of chancellor.

§ 22. The chancellor on the filing of such bill, or on the coming in of the answer thereto, shall order such part of the property of such company to be sequestered, as he shall deem necessary for the purpose of satisfying the taxes in arrear, with the costs of prosecution; and he may also, at his discretion, enjoin such company, and the officers thereof, from any further proceedings under their act of incorporation, and may order and direct such other proceedings, as he shall deem necessary, to compel the payment of such tax and costs.

Further remedy.

§ 23. The attorney-general may also recover such tax, with costs, from such delinquent company, by action in any court of record in this state.—*Revised Statutes, vol. 1, page 402 to 406.*

TITLE VII.

Provisions to subject certain debts due to non-residents to taxation.

Sec. 1. Certain debts due to non residents, deemed personal property, and liable to taxation.
2. Assessors to ascertain them; to make preparatory roll; its contents.
3. To inspect books of records, &c. without charge.
4. May administer oaths and examine witnesses.
5. To deliver preparatory roll to county treasurer by 1st July in each year.
6. Agents of non-resident creditors to furnish list of debts to assessors.
7. Penalty of $500 for refusal.
8. County treasurer to transmit lists of non-resident creditors for other counties.
9. To prepare lists of debts owing to non-residents by inhabitants of his county and transmit them to assessors of towns.
10. Assessors to complete their rolls from these lists; entries how to be made.
11. Time for completing rolls extended to 1st September; when to be delivered to supervisors.
12. How creditors or their agents may have rolls corrected.
13. Rolls to be laid before supervisors; debts contained therein liable for taxes.
14. When duplicate lists to be delivered; supervisors may correct rolls.
15. Collector may receive tax on such debts from the debtor; to be a set-off, &c.
16. If not paid, may be raised by distress and sale of goods of non-resident.
17. If not collected by collector, county treasurer to issue warrant to sheriff.
18. What taxes warrants may include.
19. Schedule annexed to warrant; their contents.
20. Warrants a lien from time of levy; duty and authority of sheriff.
21. Proceedings against sheriff for neglect to return warrant.
22. If warrant unsatisfied, bill in chancery may be filed.
23. Court to sequester property to pay tax and costs.
24. Several county treasureas may unite in one bill.
25. Subpœna when served on agents of non-residents.
26. Compensation of county treasurers; how paid; do. of assessors.
27. When debts due by residents of other states may be deducted.
28. Debts owing to Connecticut school fund exempted from the act.

Debts of non-residents taxable.

§ 1. All debts owing by inhabitants of this state, to persons not residing therein, for the purchase of any real estate, or secured by mortgage on real estate, shall be deemed personal property within the town and county where the debtor resides, and as such, shall be liable to taxation in the same manner, and to the same extent, as the personal estate of citizens of this state.

Assessors to ascertain them, and make preparatory roll.

§ 2. The assessors in each town and ward, while engaged in ascertaining the taxable property therein, and before the first day of June in each year, shall, by diligent enquiry, ascertain the debts of the description mentioned in the first section of this act, owing by the inhabitants of their several towns and wards to non-residents of this state, and in a preparatory assessment roll, to be made by them for that purpose, shall state and designate the said property according to their best information, in four separate columns, as follows:

Its contents.

1. In the first column, the names of the creditors respectively to whom such debts are owing:

2. In the second column, the names of any known agents of such of the said creditors, with the places of residence of such agents respectively:

3. In the third column, the amount of every debt owing to such creditor, of the description mentioned in this section, stating separately the amount owing by each debtor:

4. In the fourth column, the names of the persons by whom such debts respectively are owing, and the town and county of their residence.

Assessors to search clerk's office without fee.

§ 3. For the purpose of making such statement, and for the purpose of making any assessment required by law, the assessors of any town or ward shall be permitted, without being required to pay any fee or charge whatever, to inspect the books kept by the clerk of their county, or in the city of New-York, by the register thereof, in which mortgages are registered or recorded, or in which any contracts for the sale of land are recorded; and to inspect all unrecorded mortgages and contracts left with such clerk or register, and to take such extracts therefrom as they shall deem necessary.

Assessors may administer oaths.

§ 4. The assessors of any town or ward, or any of them, may administer an oath to any person whom they may think proper to examine, to make true answers to such questions as shall be put by such assessors touching the subjects of inquiry directed by this act; but this section shall not extend to those cases where a list of debts shall have been furnished by the agent of any non-resident creditor, according to the provisions of this act.

To prepare roll for treasurer.

§ 5. As soon as the assessors shall have completed their preparatory assessment rolls, and on or before the first day of July in each year, they shall cause a fair copy of the same to be made out, which shall be certified by them, or a majority of them to be correct, according to the best information they can obtain, and shall deliver the same to the county treasurer of their county.

Agent to furnish list of debts...Its contents.

§ 6. If there shall reside in any county of this state, an agent of any non-resident creditor, having debts owing to him of the description mentioned in the first section of this act, he shall, on or before the first day of June in each year, furnish to the county treasurer of his county a true and accurate list of debts of the description mentioned in the first section of this act, which were owing on the first day of January preceding, to the principal of such agent by any inhabitant of this state, arranging such list according to the town and county of the residence of the debtor, specifying therein the name of each debtor, the town and county in which he resides, and the amount owing by him; which list shall be verified by the oath of such agent, to be taken before any commissioner of deeds or justice of the peace.

Penalty for refusal.

§ 7. Any such agent who shall refuse or neglect to furnish such list, shall forfeit the sum of five hundred dollars to the use of the county in which he resides, to be sued for by the treasurer of such county in his name of office, and to be recovered upon proof that the principal of such agent had debts owing to him by inhabitants of this state, of the description mentioned in the first section of this act, and that the existence of such debts was known to such agent.

List of debts to be made by the county treasurer...Its form and contents...To be certified...And sent to treasurer of other county.

§ 8. The county treasurer who shall receive the certified statements of the assessors of his county, shall immediately make out from the said statements so furnished to him by the assessors, and from the lists received by him from the agents of non-residents, a list of the debts appearing on such statements and lists to be owing to persons not residing in this state, by inhabitants of any other county than that of such treasurer, for each county in which any such debtor resides; the said list shall be a transcript of so much of the original statements and lists furnished as above provided, as relates to the debts herein required to be stated, and the particulars thereof shall be arranged in the said lists, in the same manner as herein directed in respect to the preparatory assessment rolls of the assessors. In case it shall appear that the same debt has been returned by any assessors in their preparatory assessment rolls, and also in any list furnished by an agent of any non-resident, the county treasurer shall transcribe only one of such entries in the lists herein directed to be made by him. The lists thus made shall be certified by such county treasurer to be correct abstracts from the statements and lists furnished to him according to the provisions of this act. The list made for each county shall be transmitted by or before the fifteenth day of July in each year, by mail, to the county treasurer of such county.

Treasurer when and how to prepare list for town assessors in his own county.

§ 9. Every county treasurer shall, as soon as he shall have received such abstracts from the other county treasurers, prepare from the said abstracts, and from the preparatory assessment rolls furnished to him by the assessors of his country, and the lists furnished him by the agents of non-residents, a list of all debts appearing from the documents aforesaid to be owing to persons not residing in this state, by inhabitants of any town of his county, for each town in which such debtors reside; the said list shall be a transcript of so much of the said documents as relates to the debts herein required to be stated, and the particulars thereof shall be arranged in the said lists in the same manner as herein directed in respect to the preparatory assessment rolls of the assessors. If it shall appear that the same debt has been returned by any assessors in their preparatory assessment rolls, and in any list furnished by an agent of any non-resident, or in any abstract furnished by another county treasurer, the county treasurer shall transcribe only one of such entries in the abstracts herein directed to be made. Such lists shall be certified by such county treasurer to be correct abstracts from the documents furnished to him according to the provisions of this act. The list for each town shall be transmitted by or before the tenth day of August, in each year, to the assessors of such town or one of them.

Assessors to complete roll and enter therein debts of non-resident creditors.

§ 10. From the list thus furnished them by their county treasurer, the assessors of every town and ward shall correct and complete their assessment rolls, by entering in the same the debts appearing by such list to be owing to persons not residing within this state, by any inhabitants of their town or ward; which entries shall be made under the names of the respective non-resident creditors, and the amount owing by each debtor shall be entered in a separate line, and the particulars of such entries shall be arranged in the same manner as herein before directed in respect to the preparatory assessment rolls of the assessors.

The following section is modified by section one of the act of April 11th, 1842. See page 494 of this paper.

Time extended for completing and delivering rolls to supervisors.

§ 11. The time prescribed by law for completing assessment rolls in the several towns and wards in this state, is hereby extended from the first day of August to the first day of September in each year; and upon the assessment rolls being completed, the assessors shall proceed in the manner now required by law, in respect to giving notice thereof, the leaving the rolls with one of the assessors and their meeting together to correct such rolls; and the time prescribed by law for delivering such certified rolls to the supervisors, is hereby extended to the first day of October in each year.

Creditor relieved by showing debts not collectable.

§ 12. At the meeting of the assesors to correct their rolls, pursuant to the notice given by them, any creditor whose name shall be inserted in such rolls, or his agent, may, by his own affidavit or other proof, adduce testimony to the said assessors to show that any error exists in the said rolls, or that any part of any debt therein stated is desperate and not collectable; and the said assessors shall review and alter the said rolls according to the facts so established; but no reduction of the amount of any debt shall be made at the instance of any non-resident creditor whose agent shall have refused or neglected to furnish the list herein required of him.

Supervisors to assess taxes on non-resident debts.

§ 13. The assessment rolls thus completed shall be

an actual levy shall be made upon any property by virtue thereof; and the sheriff, to whom such warrant shall be directed, shall proceed upon the same, in all respects, with the like effect and in the same manner as prescribed by law in respect to executions against property, issued by a county clerk upon judgments rendered by a justice of the peace, and shall be entitled to the same fees for his services in executing the same, to be collected in the same manner.

When Sheriff may be proceeded against.

§ 21. In case of the neglect of any sheriff to return such warrant, according to the directions therein, or to pay over any money collected by him in pursuance thereof, he shall be proceeded against in the supreme court by attachment, in the same manner and with the like effect, as for similar neglects in reference to an execution issued out of the supreme court in a civil suit, and proceedings thereon shall be the same in all respects.

When treasurer to file a bill in chancery.

§ 22. If any such warrant shall be returned unsatisfied in whole or in part, in respect to any non-resident, the county treasurer, under the directions of the board of supervisors of his county, may file a bill, in his name of office, in the court of chancery, whatever may be the amount so remaining unsatisfied, against such non-resident and his agents, and any other person having the care or possession of any property of such non-resident, for the discovery and sequestration of such property.

Chancellor may order property sequestered.

§ 23. On the filing of such bill, or on the coming in of the answer thereto, or upon such bill being taken as confessed, or the allegations therein being established, the court of chancery shall order such part of the property of such non-resident to be sequestered, as shall be necessary for the purpose of satisfying the taxes in arrear, imposed as aforesaid, upon the debts owing to such non-resident, with the costs of prosecution, and may order and direct such other proceedings as may be necessary to compel the payment of such tax and costs.

Several treasurers may unite in one bill.

§ 24. The county treasurers of several counties may, under the direction of their respective boards of supervisors, unite in one bill against the same party, for the collection of taxes imposed on debts owing to non-residents, although such taxes may be payable to different county treasurers.

Subpœna may be served on agent.

§ 25, Where non-residents who are parties to any bill filed according to the provisions of this act, shall have any known agent residing in this state, for the sale of their lands, or for receiving the purchase money on such sales, the court of chancery may, in its distinction, make an order that the service of the subpœna issued on the filing such bill, upon such agent, shall be deemed sufficient to entitle the complainant to an order for the principal of such agent to appear and answer such bill.

What county, and what town charges.

§ 26. The expenses of county treasurers, and such compensation as their board of supervisors shall allow them for their services, in executing this act, shall be county charges, and the expenses and charges for the services of assessors, under this act, shall be town charges, and audited and paid as such.

When inhabitants exempt from assessment on debts taxed in other states.

§ 27. Whenever it shall satisfactorily appear to the assessors of any town or ward, by the oath of any inhabitant of this state, or by other proofs, that any debts due to such inhabitant, by residents in any other state, are by the laws of such state subject to taxation, and have been actually taxed in such state within twelve months preceding, it shall be the duty of such assessors to deduct the amount of such debts from the personal estate of such inhabitant.

Duty of comptroller.

§ 28. The comptroller shall prepare instructions and forms for the execution of this act, and shall cause a sufficient number of copies thereof and of this act to be printed and distributed to the assessors, county treasurers and clerks of the boards of supervisors of the state.

Connecticut school fund exempted from act.

§ 29. [Orig. sec. 1.] The act entitled "An act to subject certain debts owing to non-residents to taxation," passed April 27th, 1833, shall not be so construed as to subject any debt owing to the school fund of the state of Connecticut to taxation under the provisions of the said act.—*Revised Statutes, vol.* 1, *pg.* 411 *to* 417.

Section 14 *of pg.* 411 *vol.* 1 *of the Revised Statutes.*

What cities deemed towns.

§ 14. (Sec. 8.) Every city not divided into wards, for the purpose of choosing Supervisors and Assessors, shall be deemed to be a town within the provisions of this Chapter.

Extract from act of 1842:

"*An Act respecting the collection of Taxes in the city and county of New-York.*"—Passed April 11, 1842.

"§ 1. The Assessors annually chosen in each ward of the city of New-York, shall on or before the fifth day of June next, after being chosen, proceed to assess the property in their respective wards according to law, and shall complete the assessment according to law on or before the fifteenth day of August next following, and make out one fair copy thereof to be left with one of their number on or before the twentieth day of August next following, and shall thereupon according to law give notice of having completed such assessment, and that a copy thereof is left with one of such assessors, (naming him,) where the same may be seen and examined by any of the inhabitants from the said twentieth day of August to the tenth day of September following, both inclusive, and that they will meet at the expiration of the said tenth day of September at a place in said notice to be specified to review their assessment on the application of any person conceiving himself aggrieved, and such proceedings shall thereupon take place as is by law provided. And such assessors shall sign the said assessment roll, and deliver the same on or before the twentieth day of September next ensuing to the Comptroller of the said city, who shall deliver the same to the supervisors of the said city at their next meeting, and that for any neglect, omission, or refusal to perform the requirements of this section, the party offending shall be liable to the penalties mentioned in the eleventh section of the Act passed April 23, 1823, entitled, 'An act for the assessment and collection of taxes.'

Extract from the act passed May 2*d*, 1844, *providing for the collection of erroneous taxes:*

§ 2. The Board of Supervisors in and for the city and county of New York, may at any meeting of said Board, at which the Mayor or Recorder shall be present correct any erroneous assessment which may have been made by the Assessors of either of the wards of the said city for the year 1843, and may also correct any erroneous assessment which shall hereafter be made by any such assessors as aforesaid, provided application for such relief shall be made upon assessments in 1843, within three months after the passage of this act, and in all other cases within the period of six months after the assessment rolls shall have been returned as required by law, and provided also proof is made to the satisfaction of such board of Supervisors, by the affidavit of the applicant or other legal evidence that the said erroneous assessment did not result from any neglect on the part of the person or persons applying for relief.

The following is the copy of an act passed May 14*th*, 1845.

An Act to enable the Receiver of Taxes in the city New-York and the Comptroller of the said city to collect the taxes remaining unpaid.—Passed May 14th, 1845, by a two-third vote.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

§ 1. It shall be the duty of the Receiver of taxes in the city ot New-York to collect all arrearages of taxes due and payable prior to the first day of October, one thousand eight hundred and forty-three, with interest thereon, and to enforce the payment thereof by distress and sale of the goods and chattels of the person against whom said tax has been assessed; and the provisions of the act entitled "An act for the collection of taxes in the city of New-York," passed April 18, 1843, so far as the same relates to distress and sale of goods and chattels for the payment of

taxes, shall be in full force, and applicable to the collection of such taxes under this section.

§ 2. In all cases where the said Receiver shall proceed by distress and sale of the goods and chattels of any person, for the payment of any tax due and payable as well before as after the said first day of October, one thousand eight hundred and forty three, it shall be lawful for him to authorize and empower the officer making such distress and sale, to collect in addition to the tax and interest thereon, the costs of such distress and sale.

§ 3 It shall be lawful for the Comptroller of the city of New-York to sell any lands or tenements in said city for the payment of any tax due thereon. prior to the first day of October one thousand eight hundred and forty-three, and all the provisions of article third of the said act entitled "An act for the collection of taxes in the city of New-York," passed April 18, 1843, shall be applicable to such sale, and the prior proceedings to effect the same.

§ 4. All acts and parts of acts inconsistent with the provisions of this act, are hereby repealed.

§ 5. This act shall take effect immediately.

State of New-York, }
Secretary's Office. }

I have compared the preceding with an original act of the legislature of this State on file in this office and do certify that the same is a correct transcript therefrom and of the whole of said original.

ARCH'D. CAMPBELL.
Dep. Sec. of State.

Albany, May 16, 1845.

THE ADIRONDACK MOUNTAINS.

I have recently made a tour among these mountains which are the highest lands in this State. There is but little difference in the elevation of the highest peaks of the White Mountains in New-Hampshire above the highest peaks of the Adirondack Mountains of New-York. The North River, which empties itself into the bay of New-York, has its head in the Adirondack Mountains, in a meadow which is elevated about 4,750 feet above the level of the Ocean. The Au Sable in its south branch heads in the same meadow with the North River, and discharges its waters through Lake Champlain into the River and Gulf of St. Lawrence. The peaks of the Adirondack are now covered with snow. The highest of these peaks is 5,467 feet above tide water.

These mountains are doubtless more ancient than time, and probably have had a greater elevation than at present, for they have been in use and subject to the constant wear of the elements for about 6000 years.

The first mention made of mountains by the inspired penman, is in the brief record of the deluge. The waters of the deluge it is stated covered the hills and afterwards the mountains, and after the waters subsided the Ark rested upon the mountains of Ararat. It is therefore evident that the mountains were not the offspring of the deluge.

There is no marks of subterranean convulsions in the high lands of the Adirondack, nor is there any thing in the appearance of the surrounding country but what may be presumed to have resulted from the great changes produced by the deluge.

I intend to explore these mountains as soon as the warm weather has removed the snow from the high peaks. During the day time there is not so great a difference in the temperature of the atmosphere on high mountain peaks as compared with the common surface, as in the night.

THE AU SABLE RIVER.

This River empties into Lake Champlain a short distance north of Port Kent. The west branch heads to the west of the highest peak of the Adirondack Mountains and the south branch to the east of the same height. The south branch heads in the same meadow with the North River, and at an elevation of about 4,750 feet above the level of the sea. The south and west branches unite at a place called the Au Sable Forks, five miles west of Clintonville. At and below Keeseville, the Au Sable runs deep in the bowels of the earth. The rock in which it has cut a deep and narrow channel is a sand stone formation. In some places the chasm which the river passes through is 150 feet deep, and not to exceed fifty wide. I noticed in a great number of places that these chasms are intersected by deep and narrow fissures in the rocks, and at first view appear to have been rent by some terrible convulsion, but on close examination I am satisfied that these fissures have been cut by sand and water.

Among these sand rocks are grooves of an inch in depth, evidently made by the water. This process is still going on. I noticed a strata on the river bank near the shore, the surface of which was grooved and the water from a spring was coursing down these grooves to the river, and deepening them continually. While at Sampson Pond examining the white sand beach, I stepped upon a timber that extended into the water ten or twelve feet to examine the pebbles and sand thrown up, and in this sand about four inches under water, I noticed the same grooves in the sand as I saw in the sand rock at Keesville, and the shape of them seemed to correspond with the curve of the waves on the surface of the water which were formed by the wind. Much of the water holds agglutinating substances in solution sufficient to cement the sand and form it into rock. About a mile and a half below Keesville the Au Sable falls over a rock precipice, about forty feet. At the side of this fall is a curve in the rock fifty feet deep cut in the rock nearly in the form of a semi-circle, and about thirty feet across. About 100 rods or more further down the River, is another fall, of 60 feet. It was about 5 o'clock P. M. when I came to the part of the river. The spray was rising to a height of near 200 feet in the atmosphere, from the narrow chasm into which the river plunged. I passed over a bridge above the fall, and crossed a pasture fence to a point on the cliffs about 200 feet lower down the river, and from this point the first glimpse I got of the prismatic colors produced by the sun upon the ascending spray, was of that portion which composed the red ray—it was a most beautiful painting—it appeared like a belt of ornamented fire—it was too resplendant for mortal eyes to look upon, and I felt amazed and almost overwhelmed in beholding this beautiful color for I saw it through a narrow and deep chasm in the rock by which I was at first view prevented from seeing but the one color.

From these falls I continued my walk along the bank of the river for half or three quarters of a mile to a place called the natural bridge. At this point there is a flight of stairs leading from the top of the rocks to the water. I descended them a few steps and found they were much broken and out of order, and as I was alone I thought it most prudent to avoid testing the strength of them. Here there is a fissure in the rock which comes to an apex at the top and widens as it increases in depth. I passed over this fissure and along the river bank until I found my path terminated in the lower end of an Island which was separated by a wide fissure at its lower extremity, I therefore retraced my steps and recrossed the chasm where I came upon the Island.

At this place the river is very narrow, not exceeding 20 feet. On a level with a flat rock at the foot of the stairs I have spoken of, is a sort of second bank, forming one side of a rock chasm through which the river passes. Over this chasm some boys who were daring, laid two poles of about five or six inches in thickness, and crossed over upon them to the opposite side of the chasm. A clergyman from Whitehall came here during last summer with two young ladies and undertook to cross on these poles. He passed over with one young lady safely, but the other refused to go. He then returned to conduct the lady back, and had proceeded with her a part of the way when he became spell bound, fell into the chasm, and was no more seen alive. The young lady by some unaccountable and mysterious means saved herself from falling and reached the place she set out from in safety. Her escape was miraculous—providential. The body of the clergymen was found three days after the accident a few rods below the poles. It was raised from the bottom by the discharge of fire arms into the chasm.

I have followed up the west branch of the Au Sable to the High Falls. These falls are in the bosom of a forest, at the base of a mountain peak which has a snow capped head reared 4,855 feet above the level of the sea—it is in a mountain gap, called the narrows. These falls are over granite rock and the chasm into which the water plunges is fringed with trees of evergreen species and they are therefore almost a stranger to sunshine. It is about seven miles to the nearest house to the west and two miles to a house to the east, to the north and south are mountains piled high in the air. The falls are therefore in a secluded spot. The water breaks over a precipice of about 60 feet in height and falls into a chasm the walls of which are more than vertical, for they lean over, and when I approached near the verge I laid hold of a green sapling and held fast by that while I surveyed the broken sheet of water. The sound of such a water fall in such a place has a charm, for it is a wild and romantic spot for such a cataract. Lake Placid is six miles distant from this cataract—that is a quiet sheet of water and well deserves its name and contrasts widely in its habits with its noisy neighbor, the forest cataract. We travelled along the rocky banks of the Au Sable down the stream below the fall for half a mile some of the time under the cliffs and at others, on its brow. The river this distance is a broken current and full of falls, among which I noticed one of peculiar beauty. A rock having three rounded sides projects down stream about the middle of the river in a a plate of about two feet in thickness, and about ten feet above the water while its upper side is joined to the rock bottom, and on this the water runs and falls in an undivided sheet from its three sides. It looks like an artificial fountain. These falls have an elevation of 1427 feet above the level of Lake Champlain. I examined the strata of rock which the water had cut through in this mountain gap and found it to be granite. Some parts of the chasm made by the water is worn into fanciful shapes by round stones which have been put in motion by the water and which have for a great length of time been kept in motion by it. I examined the fragments of rock brought down by the water and also the stratas in the rock severed by the river in cutting its channel, and found no metallic veins visible. About two hundred feet below these falls, I came to a large cake of ice laying upon the rocks—it was very clear and I broke off a piece of it to quench my thirst.

The temperature of the water of the Au Sable as denoted by my thermometer immersed in the river was 52° of Farenheit. At 5 o'clock of the morning of the 14th of May the atmosphere was 50°, and the river two degrees warmer. At 12 at noon on the 13th of May, the atmosphere air had a temperature of 88° and the river water at that hour 52°, being 36° cooler. The High Falls have a very hard rock for a wall and a hard rock for the river to cut a channel through, it is owing to this fact that it does not present the deep gorges that are seen in the sand stone rock below Keesville. The sand stone being softer is more easily cut away by water carrying minute grains of sand along with it.

THE SARANAC RIVER.

The Saranac River heads west of Mount Seward, in the upper and lower Saranac Lakes, and in the near neighborhood of Racket River and Long Lake. The upper and lower Saranac Lakes are full of little islands. This is what is called the south branch; another branch of the river heads among the mountains in Franklin and Belmont townships. I crossed this river about two miles above the Forks on a raft which we constructed of five logs, which we paddled over to the opposite shore. The rock formation as developed by the trees blown down by the wind in the excavations made by the broken roots at the point we crossed, is sand stone. About five miles below this is the Bedford Glass works, but these are not now in operation. This species of sand stone was used for making glass and was found to be of an excellent quality for that use. The Saranac enters into the Lake at Plattsburg. Above Union Falls, which are three miles above where we crossed the river, the Saranac is navigable for several miles, by canoes. The upper Saranac Lake has an elevation of 1554 feet above the waters of Lake Champlain. The river affords abundant water power, and as this region of country is richly stored with iron ore the means of reducing it is ample. In all my equiries for salt licks in this region, I heard of but one, and that is doubtless more of a sulphur than a saline water. I met with several hunters and trappers who have traversed the wilderness region at the heads of this river, and they inform me that there are no salt licks hereabouts.

MINERAL DEPOSITS.

The mineral deposits in the vicinity of the Au Sable and Saranac Rivers have been but little examined.

Yellow and White Birch, Rock and Soft Maple, Bass, Elm, Pine, White Cedar, Tamarack, Fir Balsam, Balm of Gilead, Spruce and Hemlock are the principal timber here. On the pine plains between the Au Sable and the Saranac the Norway pine grows to a great height. This pine plains land is not esteemed here for agricultural purposes but it seems to me that they are wrong in this. The pine plains of Upper Canada were formerly considered poor lands but now are extensively cultivated and found productive, and therefore, valuable. The great height of the Norway pine upon these lands, I think, indicate a good soil. On the plains near Black Brook I visited a lime kiln, built upon a lime stone formation. I obtained several pretty geological specimens here which I have not yet examined. The carburet of Iron is here found imbedded in the rock; there is also sulphate of Iron and mineral amianthus, &c. &c. This lime stone quarry belongs to Mr. Wilkins. We have not room in our present number for farther remarks, and as I shall revisit this section of this State, I will in a future number describe this locality more in detail.

LAKE CHAMPLAIN.

This Lake is 110 miles long, and from half a mile to twenty miles wide, in one place it is less than 40 rods wide, and is estimated to contain 567 square miles. The shores of this lake present a variety of scenery. Mountains lift their venerable heads high in the air both to the east and west, while on the north the country is a dead level at and beyond the termination of the lake. There are several Islands in this Lake, some of which are well cultivated and productive. When I passed down the lake a strong north wind prevailed, and the water of the south end of the lake was very turbid and filled with clay held by it in suspension. When the water becomes quiet this clay will be precipitated and thus a new deposit of earth formed. From the appearance of the water, I should judge that a column of twenty inches in height would, on remaining quiet for ten days, deposit one inch of compact sediment. It is thus clay is piled up. Near Essex, on the New-York side is a rock which extends out into the lake, called "The Split Rock." This rock has a large fissure in it of great depth through which the water flows. It is supposed to have been rent by some great convulsion, but I do not see any thing in its appearance which indicates a greater change than is visible in the sand stone in the banks of the Au Sable, below Keesville, which are no doubt the result of the action of sand and water. The competition in the steam navigation of Lake Champlain is a very spirited. I passed down the Lake from Whitehall to Port Kent in the very commodious steamer Whitehall, for 25 cents, and had I continued on to St. Johns in Lower Canada, only the same fare would be charged for the whole distance. This is a beautiful boat, and its Commander deserving of all praise. His kind attentions to passengers—his industry and attention to his business, make his boat a pleasant and safe conveyance. He has his family with him on the boat. I noticed a lady passenger on board the boat with several small children. When the boat arrived at Whitehall the captain took one of the children in his arms and carried it to the stage. Such kind attentions, deserves mention. Stages are in waiting when the boat arrives at Whitehall to take passengers to the hotels, and at the hotels to convey them to the packet boats free of charge, and only twenty-five cents is charged for breakfast. Such was the charge at the American, where I took breakfast. The same course was pursued at Port Kent. The Francis Saltus, a new boat upon the Lake, is extensively patronized. Heretofore the boats on the lakes charged five dollars, and this high price brought out the Saltus. The Saltus is a fast boat, and I have no doubt a very good boat. The geological formations on the western, New-York side of Lake Champlain, may be stated as follows. Commencing at the south end of the Lake with Post Tertiary, then Calciferous Sand Rock, next Pebbly Beach, Potsdam Sand Stone, Gneis, Potsdam Sand Stone, Gneis, Potsdam Sand Stone, Trenton Lime Stone, *Crown Point.*

Postdam Sand Stone, Calciferous Sand Stone, Primitive Lime Stone, Gneis, Post Tertiary, Potsdam Sand Stone, Post Tertiary. *West Port.*

Redish Porphyry, Slate, Chazy Lime Stone, Trenton Lime Stone. *Essex.*

Slate, Hyperthene and Dykes, Potsdam Sand Stone, *Port Kent.*

Post Tertiary, Slate, Trenton Lime Stone to Canada line.

The mountains back from the Lake abound in minerals, the most valuable of which is Iron.

During my tour I collected about two hundred pounds of geological specimens of various kinds some of which are beautiful.

THE ROADS IN ESSEX, CLINTON, AND FRANKLIN COUNTIES.

The Roads in these counties are but tolerable. From the Lake to Keesville, is four miles—from that to Clintonville, six miles, thence to New Sweden two miles, and from that to the Forks of the Au Sable, three miles. From the forks of the Au Sable to Union Falls on the Saranac, is fifteen miles. From the Forks of the Au Sable to the High Falls in the mountain notch, is 12 miles. Beyond Hasbrook's forge there are no inhabitants for nine miles. From Hasbrook's forge to Long Lake is about 30 miles. The path to Long Lake is by marked trees. Long Lake is the head of Racket River, one of the most noisy streams in this section of the country.

I travelled several miles with Major Baker of Keesville on his return from the wilderness in which he had been travelling about four weeks, collecting furs. He passed through the Lakes, Ponds, and Rivers in a Cedar Canoe weighing 70 lb. His canoe, he and the man he had with him transported by hand over the carrying places, together with their provision, furs, &c. They encamped in the woods at night, and he informed me that he did not see or hear a wolf or a panther during the whole tour. There is less danger in the woods at night in this wilderness region than on board a North River Steamer as the boats have been recently managed. Major Baker obtained one Beaver Skin in the tour. The Beavers are rapidly disappearing. There are a few Moose in in this region, and now and then the hunters and trappers get hold of a panther. The Deer are plenty and seem to increase in proportion as the Wolves decrease. During the last year, a young man who was employed to attend upon several sable traps lost his way in the woods, and became bewildered, and it was about four days before he was found. When a person once loses the way in the woods he is very apt to become bewildered and then reason seems almost to cease its guidance. The human mind is wonderfully constituted, and man is often bewildered when not in the woods.

There is in the mountain atmosphere and mountain water of this region a gentle stimulant—it is powerful, for it is full of life. In breathing the air and drinking the water of this region of country, I found a newness of life—exercise here is medicine to the body, and it is food for the mind, for every step opens a new leaf in the volume of nature, full of instruction, and full of charms. From one of the lofty peaks of the Adirondack may be counted more than thirty lakes and ponds, and also the heads of six rivers which are born in these mountains which are a great store house of the clouds.

The lightning is not very destructive here. I have not during my tour met with a tree in the forest which has been scathed by lightning. The mountain tops here have an influence upon the clouds in discharging the electric fires.

In the woods on the north side of the Saranac I met with several little patches of winter snow.

There is a large business done in lumbering in this region. Lumber is a crop that requires an age to produce it, and when exhausted, the country is impoverished, for the price it bears is but a poor compensation for the labor bestowed upon it. The returns of agriculture are annual and the benefits of these products to the farmer, and also to the country, are great, and are continuous.

A stage runs daily from the lake to and from the Au Sable Forks. The fare is 75 cents. Beyond this there are no public conveyances. The roads are worn deep into the sand by the numerous wagons which travel these roads with iron, lumber, ore, nails, &c. This is an interesting portion of the State and will become rich and important. It has not had its share of public improvements. Public improvements made here would add greatly to the value of the lands in this section of the State, would increase its population, augment its wealth and bring into use the vast mineral stores deposited here which now lie almost dormant.

FREE BANKING.

We place before our readers the opinion of the Supreme Court of this State in relation to free Banking Associations formed under a general law of the Legislature of this State passed in 1838. This opinion is from the pen of Mr. Chief Justice BRONSON.

There have been three adjudications upon the question which is involved in this case, in three different proceedings in the Court for the Correction of Errors, but a quere is raised whether, that court was properly constituted at the time judgment was pronounced.

The Constitution is as follows:

"The Court for the trial of Impeachments, and the Correction of Errors, shall consist of the President of the Senate, the Senators, the Chancellor, and the Justices of the Supreme Court, or the major part of them; but when an impeachment shall be prosecuted against the Chancellor, or any Justice of the Supreme Court, the person so impeached, shall be suspended from exercising his office, until his acquittal; and when an appeal from a decree in Chancery shall be heard the Chancellor shall inform the Court of the reasons for his decree, but shall have no voice in the final sentence; and when a writ of error shall be brought, on a judgment of the Supreme Court, the Justices of that Court shall assign the reasons for the judgment, but shall not have a voice for its affirmance or reversal." Sec. 1, Art. 5, Constitution of 1821.

In two of the three cases referred to, the vote taken was a very small one. In the case of the Exchange Bank of Albany, we believe but 11 Senators were present.

In the case of the Lockport Canal Bank, and Lockport Trust and Banking Company, but 19 Senators were present.

On page 417 of this volume, is a copy of a letter addressed to us by Senator Jones, a member of the Court for the Correction of Errors. We here give this letter entire as follows:

"ALBANY, Feb. 18, 1845.

"My Dear Sir,

"I would state in reply to your letter that the case of the 'Board of Supervisors of the county of Niagara *vs.* The People, *ex. rel.*, Wm. G. McMaster,' came before the Court for the Correction of Errors upon a writ of Error brought from the Supreme Court ordering that a peremptory writ of mandamus issue to the Supervisors of Niagara County, commanding them to restore to the assessment rolls of the town of Lockport, the assessment of the Canal Bank of Lockport, and the Lockport Bank and Trust Company. The only important question involved in this decision was, 'Were the two institutions above named, *monied or stock Corporations?*' If this should be decided as such by the Court for the Correction of Errors, then the reversal of the decision of the Supreme Court would necessarily follow. The judgment of the Supreme Court, however, was affirmed as follows:

"For Affirmance—Messrs. Bartlett, Corning, Johnson, Lawrence, Lester, Mitchell, Porter, Scott, Scovil, Smith, Varney.

"For Reversal—Messrs. Backus, Bockee, Jones, Platt, Rhoades, Sherman, Varian, Works.

"Yours, very respectfully,

"D. R. FLOYD JONES."

"E. MERIAM, Esq.

The case of the Exchange Bank of Albany, only involved a question touching the regularity or legality of a replevin.

These are the cases which the learned Chief Justice, BRONSON refers to in his opinion, and in which he says that he had not seen the opinion given in these cases, and he was not probably aware that the Court was thus constituted, as the letter of Senator Jones states.

The vesting of power in a body composed of several classes of officers, is of frequent occurrence.

In England, the Mayor, Recorder, Aldermen and Common Councilmen are often empowerod to do certain things, or to determine certain questions in their assembly, when convened as a body—but should only the Aldermen and Common Councilmen meet in the Council Chamber, althongh forming a majority of the persons composing the assembly, the assembly would not be deemed as organized without the attendance of the other two, unless some special statute allowed of the organization of a part in the absence of the other classes.

This section of the Constitution is too plain to admit of any other construction than the one we here give it and such is the language and the spirit of the clause.

It is not our purpose to discuss the question of constitutionality or unconstitutionality of the general banking law; or to discuss the restriction contained in the tenth section of the first article of the Constitution of the United States; nor to discuss the question involved in the passage of the law authorising contracts between the State and the Free Banks in reference to State stocks and the registry of bank notes, in consideration of stipulated guarantee, &c.

In the case of *Striker* vs. *Kelly*, recently decided in the Supreme Court, involving the validity of the seizure and confiscation of lands for a visionary paper improvement, the Court held what we conceive to be a very different doctrine from that here put forth. Mr. Justice Beardsley in that case delivered the opinion of the Court. Mr. Justice Bronson dissented.

It was urged by Mr. Webster, Counsel for General Striker, that the proceedings in question were void.

Mr. Webster said:

"There is another question respecting the legality of seizing, arising out of the charter, which I cannot omit stating. By the 7th section of the amended charter, it is provided that the boards shall meet in separate rooms, choose clerks, &c., and each board shall keep a journal of its proceedings. The doors shall be open, except when the public welfare requires secresy; and all resolutions or reports of committees which shall direct any improvement or involving an appropriation of public money, or taxing or assessing citizens shall be published, immediately after the adjournment of the board, in all the papers employed by the corporation: and it goes on to say that the question, in all such cases, shall be taken by ayes and nays."

The learned judge Beardsley in delivering the opinion of the Court in reference to this point says:

"*It may be that the resolution for opening this avenue should have been passed by ayes and noes: laws of* 1820, *p.* 125 § 7. *But the statute is directory, and the act of the Corporation is not a nullity because it was not passed in that form.*"

Now let us compare this provision of the City Constitution, that is to govern and control the Common Council, with the provision of the State Constitution, which is to govern and control the State Legislature.

The ninth section of the sixth article of the State Constitution, is as follows:

"The assent of two-thirds of the members elected to each branch of the legislature shall be requisite to every bill appropriating the public moneys, or property for local or private purposes; or creating, continuing, altering, or renewing, any body politic or corporate."

We apprehend that but few persons can be found that would give any other than the same construction to each and both these provisions, and yet Mr. Justice Beardsley gives to each provision a different construction—one is deemed by the court to be directory, and the other mandatory.

Courts in their decisions should be governed by settled principles, otherwise they will find endless difficulties and evils growing out of their adjudications.

The question here is are the free banks bodies "politic or corporate," and if they are so, whether the assent of two thirds, &c., is required?

Fluctuations in judicial decisions in our State have become alarmingly numerous of late, and the numerous judicial opinions which are contained in this volume, contrasted together, are a sad *memento* of the feebleness of human judgment.

IMPORTANT DECISION OF THE SUPREME COURT OF THE STATE OF NEW-YORK ON THE GENERAL BANKING LAW.

DE BOW VS. THE PEOPLE.

Error to Ontario General Sessions. De Bow was indicted in the court below for passing, and having in his possession with intent to pass certain forged and counterfeit bank notes. In some of the counts the charge was that he intended to defraud the Bank of Warsaw. The defendant pleaded not guilty. On the trial, the district attorney gave evidence of the defendant's acts; and also gave in evidence certain articles of association, entered into by several individuals on the 28th December, 1838, in pursuance of the "act to authorize the business of banking," by which the associates proposed to establish a bank in the county of Genesee by the name of the Bank of Warsaw. The association never went into operation or issued any bills. The defendant insisted that the act under which the association was formed was unconstitutional and void, because it was not passed by a vote of two thirds of the members of the legislature; and that the Bank of Warsaw was not a body capable in law of being defranded.

The court decided that the association was capable in law of being defrauded, and admitted the articles in evidence. The defendant requested the court to charge the jury, that the defendant could not be convicted of having counterfeit money in his possession with intent to pass the same with intent to defraud the Bank of Warsaw, and to charge that there was nobody existing in law by the name of the Bank of Warsaw capable of being defrauded. The court refused so to charge. The defendant excepted to the several decisions of the court, and the jury found him guilty. The court sentenced the defendant to five years in the state prision, and a record of the judgment having been filed, the defendant now brings error.

A *Worden*, for the prisoner.

T. M. Howell, district attorney, for the people.

By the Court, BRONSON, Ch. J.—It is a part of the crime charged upon the defendant, and of which he has been convicted, that he intended to defraud the Bank of Warsaw. That was an association formed under the general banking law of 1838; and if the law was not a constitutional exercise of power on the part of the Legislature, it follows that there was no such legal being as the Bank of Warsaw to be defrauded, and the defendant has been improperly convicted. The objection was taken on the trial that the law did not receive the assent of two thirds of the members of the Legislature, and was consequently void. The question of validity is directly and necessarily presented, and we cannot, if we would, turn aside from considering it. As we have thus cast upon us the most delicate and important duty which we are ever called upon to discharge, and as of consequences of unusual magnitude may hang on our decision, I do not regret to find that the question before us has already been virtually settled; and that too, by the court of last resort. I do not mean that the precise point in relation to the validity of this law has been decided; but I do mean that every step in the argument on which the question turns has been directly and necessarily adjudged by the Court for the Correction of Errors.

By the fundamental law the people have declared, that the "assent of two thirds of the members elected to each branch of the Legislature shall be requisite to every bill" "creating, continuing, altering, or renewing any body politic or corporate." [Art. 7, §9.] And no bill can be deemed to have been passed in that manner unless so certified by the presiding officer of each house. (1 R. S. 156, § 4.) Knowing, as we do from the inspection of the original engrossed bill on file in the Secretary's office, that the general bank law was not passed as a two-thirds bill, it would seem not to be necessary to go beyond the inquiry, whether associations formed under the law are bodies politic or corporate—for if they are, the law was not passed in such a manner as to give it validity. But beyond the question of corporation or not, two other points have been discussed in the course—first, whether the constitution extends to all corporations; and second, in what way should the question be tried whether the law received the requisite number of votes. Should it be matter of averment to be tried by a jury, or is it the business and duty of the court to ascertain and declare whether any supposed law was duly enacted? I shall not go into a general discussion of these questions, for the reason that I have done so on former occasions, and because I deem the questions now settled.

It was never doubted that the two-thirds clause of the constitution extended alike to all corporations, until it was said in *The People* vs. *Morris*, (13 Wend. 325,) that it did not extend to *public* corporations such as cities and villages. When the license had

assent of two-thirds of the members shall be requisite to every bill creating *any* corporation.

The second question which remained for some time unsettled was, how shall it be ascertained whether bills falling within the two-thirds clause of the constitution were passed by the requisite number of votes. (*See Thomas* vs. *Dakin*, 22 *Wend.* 9; *Warren* vs. *Beers*, 23 *ib.*. 103; *The People* vs. *Purdy*, 2 *Hill* 31.) But that doubt has been resolved by the court for the correction of errors, and it is now settled that it is the business of the court to determine what is statute, as well as common law; and for that purpose the judges may and should, if necessary, look beyond the printed statute book, and examine the original engrossed bills on file in the office of the Secretary of State; and it seems that the journals kept by the two houses may also be consulted, (*Purdy* vs. *The People*, 4 *Hill*, 384.) I do not refer to the mere *dicta* of those who delivered opinions. The point was directly and necessarily involved in the decision which was made. The court did look beyoud the printed statute book, and, on finding that a law altering the charter of the city of New-York was not certified as having passed by a two-thirds vote, it was deemed not to have been so passed, and was for that reason adjudged null and void.

If the two-thirds clause of the constitution extends alike to all corporations, and if it is the business of the court to inquire and determine whether laws falling within the clause received the requisite number of votes, then knowing as we do that the general banking law was not passed as a two-thirds bill, nothing remains of this case but the inquiry whether these banking associations are bodies politic or corporate. It has never been doubted by this court, or by any member of it, either before or since the decision in *Warner* vs. *Beers*, that they are corporations; and that they are as completely so as any other body which was ever brought into existence. (*Thomas vs. Dakin*, 22 *Wend.* 9, *Delafield vs. Kinney*, 34 *id.* 345. *The People vs. The Assessors of Watertown*, 1 *Hill* 616. *Willoughby vs. Comstock*, 3 *id.* 339. *The People vs. The Supervisors of Niagara.* 4 *id.* 20. *Matter of the Bank of Dansville*, 6 *id.* 370.) And although some attempts have been made to controvert this doctrine, no judicial officer, whether lawyer or layman, has ever yet ventured upon the unqualified assertion that these companies are not corporations.

Some have first reasoned themselves into the belief that the convention did not mean—as its language plainly imports—to reach all corporations; and have then concluded that these general law banks are not corporations, *within the spirit, intent, and meaning of the constitution.* These, or some other qualifying words have constantly been employed by those who wish to take this class of banks out of the influence of the fundamental law. In *The People vs. The Assessors of Watertown*, (1 Hill 616) I attempted to bring this question to the very plain and simple test of comparing one of the general law banks with one of the safety fund banks having a special charter; and I hazard little in saying, that any intelligent and right-minded man who will make the comparison for himself will come to the conclusion, that so far as relates to the essential attributes of a corporation there is not a shadow of difference between the two. If one is not a corporation, the other is not; indeed we have no corporations.

But I will not again enter in the discussion of the question. It is enough that it has been expressly decided by the court of last resort that the general-law banks are corporations. and as such are subject to taxation on their capital like other monied corporations. (*The Supervisors of Niagara vs. The People, December*, 1844. *Albany Exchange Bank vs. Boardman, December*, 1844.) I have not seen the opinions which were delivered in the Court of Errors; but I know that in the first case, if not in the last, the point must have been directly and necessarily adjuged, that the general-law banks are corporations.*

It is said that the Court of Errors only decided that these banks are corporations *within the meaning of the tax law*, and not that they are such within the meaning of the constitution. There is nothing in this argument. The court decided that these banks are corporations of the particular kind or species mentioned in the tax law; to wit, "monied or stock corporations deriving an income or profit from their capital or otherwise." (1 R. S. 414, § 1.) That necessarily affirmed that they were corporations; and the constitution is not confined to any particular kind or species of corporations; but includes the whole genus. The words are "any body politic or coporate." No judge could ever respect himself after holding that these banks are corporations within the meaning of the tax law, and yet that they are not corporations within the meaning of the constitution.

It is also said that the Court of Errors decided in (*Warner vs. Beers*, 23 *Wend.* 103,) that these banks are not corporations within the spirit and meaning of the constitution. That case was not argued in this court: but judgment passed as a matter of course on the authority of *Thomas vs. Dakin*, (22 Wend. 9,) which presented the same questions. It was there held—1. That these banks are corporations, and that a two-thirds vote was essential to the validity of the laws under which they had their existence. 2. That the Legislature might by general laws provide for the creation of an indefinite number of corporations; and, 3. That was to be presumed on the record before us that the general banking law had been passed by a two-thirds vote. On these grounds judgment was rendered for the plaintiff, and that judgment was affirmed by the Court of Errors.

It is impossible to maintain that this judgment of affirmance could amount to a decision against the corporate capacity of the banks. It comes much nearer affirming, what this court had decided, that the banks are corporations. It is true that two or three members of the court of review gave different reasons for the conclusion at which they arrived, from the reasons which had conducted this court to the same result. But who can now say what reasons operated with the nineteen or twenty other members of the Court of Errors who voted to affirm our judgment? For aught that appears, they thought as we did, that these banks were corporations; but that the question whether the law had passed by a two-thirds vote did not arise.

I am well aware that a resolution was passed more than two weeks after the case had been decided, declaring that these banks "are not bodies politic or corporate *within the spirit and meaning* of the constitution." This proceeding was noticed in *The People vs. The Assessors of Watertown*, (1 Hill, 616.) And for the present occasion I think it enough to say, that neither the court for the correction of errors, nor any other court, can settle a point of law by passing a resolution, when there is no case before it for adjudication. The case was decided by affirming our judgment on the seventh of April; and it was not until fifteen days afterward, on the twenty second of April, that the resolution was adopted. It was brought forward for the very reason that the case itself decided nothing to the purpose. The resolution was an extra-judicial proceeding, and is entitled to no higher consideration than though it had been passed by the same individuals in any other place, instead of the Senate chamber. It is entitled to some weight as expressing the views of several gentlemen of great respectability on a question of public importance;—but I protest against it being brought forward as a judicial decision, to govern as a precedent in other cases.

But suppose the resolution is to stand as the judgment of the court. Then, taken in connection with the opinions which were delivered, the court evidently conceded that these banks are corporations; but on the authority of *The People vs. Morris*, denied that they came within "*the spirit and meaning* of the constitution." Now the whole of this legal heresy was, as I humbly conceive, directly overruled in *Purdy vs. The People*, (4 Hill, 384.) There was much greater difficulty in saying that these monied corporations were not within the constitution, than there was in holding that public corporations were not within it. And since the court of last resort has decided, not by an extra judicial resolution, but by an adjudication precisely on the point—that public, as well as well as private corporations are within the constitution, it is in vain to talk any longer about

the authority of *Warner vs Beers* on this question. If that case decided at the first any such thing as is claimed for it, the precedent has since been plainly overuled by the same court which made it. And I repeat the constitution is now restored to its original reading.

One word more upon this case of *Warner v. Beers*. If it decides that these banks are not corporations, it was directly overruled by the judgment of the same court in *The Supervisors of Niagara v. The People*. If it decides the court can disregard the explicit language, and go upon what it chooses to consider the "intent and meaning" of the constitution, and thus save some corporations from the influence of the two thirds clause, then it was directly overruled by the judgment of the same court in *Purdy v. The People*.

We are then brought to the following results, all founded—not upon mere *dicta*—but upon the express adjudications of the court for the correction of errors. 1. It is the business and duty of the court to examine and decide whether any law falling within the two-thirds clause of the constitution, received the requisite number of votes to give it validity. If it did not, the supposed law is utterly void. 2. Associations formed under the general banking law are corporations. And 3. The constitution extends to all corporations. The conclusion is obvious. Having examined and ascertained that the general banking law did not have the assent of two-thirds of the members of either house, it follows that so far as it authorized the forming corporations or associations, it is utterly void: and the banking companies which have been organized under it have no legal existence.

The counsel for the people spoke with great earnestness of the consequences which must result from holding this law unconstitutional. It is easy to see that results of vast moment hang on our decision; and did I entertain a single doubt, I would pause and reflect still further. But I have never for a moment supposed that the law and the constitution could both stand together. If others can reconcile them, I shall not regret it. But if they find it necessary to trifle with the constitution in order to uphold the law, I cannot be a co-laborer in such a work, whatever consequences may follow. We are of opinion that the law cannot be supported, and consequently that the defendant was improperly convicted.

Judgment reversed.

SUPREME COURT.

Cleaning Street Contract.

In 1842 the Common Council of New-York contracted out the cleaning of the streets of the city for five years at the rate of about 64,500 per annum.

Other offers were made by responsible individuals to clean the streets for about one-third that sum, and by others for about two thirds that sum, and also by others for sums greater than the one accepted.

It was the duty of the Common Council to take the lowest bid provided that the persons offering to contract were able to fulfill, as was the fact.

The contract was entered into at $64,500 and to the great dissatisfaction of good men of all parties irrespective of party, who were to contribute in taxes for the payment.

The succeeding Common Council repealed the ordinance authorising the contract and refused to pay the Contractors and for that wrong the contractors brought this action against the corporation; their counsel P. A. Cowdrey, Esq., interposed several demurrers which were argued before the supreme court, and the demurrers were sustained as appears by the opinion of the court delivered by Ch. Justice Nelson which we here give after premising the same with some remarks which we deem called for under the peculiar language which forms this opinion.

By reference to page 4 of this volume it will be seen that as early as October 1, 1691, the Colonial Legislature passed an act in relation to cleaning streets in which they recite in the preamble that "And for as much as the filth and soil of the said city lying in the public streets thereof doth often prove a common nuisance unto the inhabitants and traders to and from the said city." This act was repealed in 1787, and a new act passed in its place, containing nearly the same recital, and on the 9th of April 1813, a third act was passed on the same subject. The act of 1787 see Ante. p. 5, authorised the cleansing of the Streets. The act of 1813 which is now in force, see Ante. p. 6, provides for cleansing the streets under proceedings which are to be preceded by an estimate of the expense, and an assessment of the benefits upon the owners and occupants of all the houses and lots deemed to be benefitted thereby, &c., and such proceedings are to be had by the Mayor, Aldermen and Commonalty, which the counsel of the corporation holds, is represented by the act of the Common Council.

Now the question arises, is the execution of this law by the Common Council, the exercise of a legislative power?

The opening, amending, pitching, cleansing, &c., of Streets are authorised by the same act of the Legislature and directions are given in this act how the Mayor, Aldermen and Commonalty shall proceed.

The Supreme Court have repeatedly been called upon to adjudicate upon questions arising under this law and their opinions in great numbers thereupon will be found in this volume, showiug a fluctuation of judicial decisions, or rather *dicta*, which is alarming in the extreme.

At one time the Court held the act of the Common Council under this act to be Legislative, at another time, to be judicial, and at another time it is something else.

The opinion given by Chief Justice Nelson in the Elmendorf Chapel Street case, where the Corporation made a contract under the very same law in reference to that particular street and paid the contractor five prices for the work, contrasts widely with this opinion of the Court, which is below. That opinion will be found in this volume 'p. 177. The opinion given by the supreme court in the Striker case, written by Mr. Justice Beardsley, in which Chief Justice Nelson concurred, and from which Mr. Justice Bronson, dissented, will be found on pages 393 to 422 of this volume.

The question, touching the New-York and Brooklyn ferries, is discussed briefly in the opinion of the Court which we give below. We do not see what that question has to do with this street contract, and the crowding it in here is very queer—but is put on the same footing as *fowling*, fishing and hunting, and that footing is the right position beyond all doubt.

The best commentary we can make upon the adjudications of the supreme court touching street questions is to put their opinions together, side by side in the same volume.

If the power vested in the Mayor, Aldermen and Commonalty by the 175th and 176th sections of the act of April 9th, 1813, is a legisiative power we should like to know if the same power which is given to the Supreme Court of Judicature of this State by the 177th section of the same act, can be deemed a *judicial* power?

The Common Council in making this contract for cleansing the streets of the city of New-York performed precisely the same duty that the Supreme Court of Judicature of this State performed in appointing Commissioners, &c. The former, for *cleansing*, the latter for *opening* Streets.

The Court say, the sweeping of the streets in the city of New-York is a part and parcel of the *legislative* and *executive* power of its officers.

This view of the particular character of the power must be tested by the opinion of the *Striker case*, delivered by Mr. Justice Beardsley and concurred in by Chief Justice Nelson. In the Striker case the Court say: "Regarding this, as I do, as a new power thrown upon the Supreme Court, and not as a new office conferred upon the Justices of that Court." *And again the Court say:* "But if I am correct in what has already been advanced, the statute of this State devolved nothing upon the Justices of this Court as individuals, but delegated judicial powers to the Court to be exercised in a judicial way. The power here given to the Court was to appoint commissioners of estimate and assessment and to confirm their report. The same act gives power to the Mayor, Aldermen, and Commonalty to appoint assessors and to confirm or ratify their assessment. Both perform the same kind of duties, but that of the one is termed judicial and that of the other, legislative. According to this doctrine if the Supreme Court of this State were vested with the command of the militia of this State, the new office would be deemed only an enlargement of the powers of the Court.

OPINION OF THE COURT.

The Mayor, Aldermen, and Commonalty of the City of New-York

ad.

Joseph Britton and others.

NELSON, Ch. J. The Charter of the City of New-York confers upon the defendants many powers and privileges that belong to them in common with private companies or individual citizens, which they hold and enjoy in the capacity of a private corporation. Thus they are declared to be able in law, and capable to sue and be sued, implead and be impleaded, &c., in all manner of actions, suits, complaints, pleas, causes, &c., in as full and ample a manner as any citizen; and shall be persons capable and able in law to purchase and hold, messuages, houses, buildings, lands and tenements, in fee or for life or years, or in any other manner; and also, goods and chattels, and all other things of what kind or quality soever; and shall and may give, grant, demise. assign, sell, or otherwise dispose of the same as to them shall seem meet and proper.

"The Charter also conferred upon them the ferries on both sides of the East River, and all others then or thereafter to be erected, and established all round the island, and all fees and perquisites appertaining and belonging thereto; also, all the ground between high and low water mark within given distance on Long Island, and all the waste unpatented and unappropriated land within the limits of the city, together with the rights of dockage, wharfage, and all rents, issues and profits arising or growing out of the same; also all rivers, creeks, coves, ponds, &c., fishing, fowling, hunting, &c., and all mines, minerals, &c., within the limits of the city.

"These grants and many others that might be enumerated, constitute a large mass of private rights and interests, in various descriptions of property, real and personal, corporeal and incorporeal, held and enjoyed by the city in the same way, and in common with any citizen upon whom like property and franchises might have been conferred; and within the limit of the grant the defendants may deal with the property, in their management and disposition of the same, in any way that would be lawful for an individual owner; and any contracts or engagements, entered into in the course of such management and disposition, would be as obligatory upon them as upon an individual.

We had occasion to examine this subject more at large in the case of Baily *vs.* These defendants (3 Hill 531,) in which case we held that the grant of the Legislature authorising the city to furnish the inhabitants with pure and wholesome water by means of the Croton Aqueduct, was the grant of a special private franchise, made as well for the private emolument and advantage of the city, as for the public good; and that the defendants *quoad hoc* were to be regarded as a private company, and to be dealt with accordingly. That they stood upon the same footing in this respect as would any person or body of persons, upon whom the like special franchise had been conferred.

The rights and privileges thus granted, are altogether distinct and different from those with which the defendants are invested under the Charter as a municipal body. The latter class comprises a large body of political powers, granted solely for public objects and purposes, with which the private interest and estate of the defendants, strictly speaking, have no concern; these powers are conferred for the benefit of the city as a community, and the end sought to be attained, its good government.

On looking into the Charter it will be found to embrace an extensive grant of political power, legislative, executive and judicial, which, so far as granted, represent these great departments of the State government, and which are lodged with the defendants in their capacity as a municipal corporation. The legislative power is conferred upon the Common Council. That body is empowered "to frame, constitute, ordain, make, and establish, from time to time, all such laws,

In the case of the Presbyterian Church *vs.* These defendants, (5 Cow. 538,) it was expressly determined that the Corporation could not abridge its legislative powers by contract. That was an action for breach of a covenant of quiet enjoyment, which the city had entered into in leasing a lot of land to the plaintiffs. An ordinance had been afterwards passed by the Common Council concerning the health of the city, by which the plaintiffs were prohibited from the use and enjoyment of the property for the purpose for which it had in part been conveyed. This was relied on as a branch of the covenant. The Court say they (the Corporation,) had no power, as a party, to make a contract which should control or embarrass their legislative powers and duties; that their enactments in their legislative capacity were to have the same effect upon their own individual acts as upon those of any other persons or the public at large.

Again, the Court remark there is a seeming inconsistency in maintaing that the ordinance constituted no breach of the covenant, where both were made by the same party. But the solution was, that the defendants had no powers to limit their legislative discretion by covenant, and they were estopped from giving that answer.

The same doctrine was laid down in the case of Gorlie *vs.* The Corporation of Georgetown (6 Wheaton, 593). "A Corporation," Marshall, Ch. J., observes "can make such contracts only as are allowed by the acts of incorporation. The power of this body to make a contract which should so operate as to bind its legislative capacities forever thereafter, and disable it from enacting a by-law which the Legislature enables it to enact, may well be questioned. We rather think that the Corporation cannot abrogate its own legislative powers." See also 7 Cow. 588, Stuyvesant *vs.* The Mayor, &c. of New-York.

If the foregoing view be correct, of which I cannot entertain a doubt, then the pleas constitute a complete defence to the action. Take the covenant in question in any point of view presented, either as proceeding from and founded upon a public ordinance of the Common Council, or as private contract entered into between them and the plaintiffs, involving subject matters belonging to their legislative duties, the subsequent legislative act of that body had the effect to repeal the one, and abrogate and annul the other. The remaining question is one of pleading. The third and fourth counts I am of opinion are defective, in not averring the performance of the covenants and stipulations on the part of the plaintiffs, assumed by them to be kept and performed as a condition precedent to any right or claim to the stipulated compensation for their services.

Judgment for the defendants on all the demurrers.

*Note by the Editor.—The learned judge has omitted to recite the following section of Montgomery's charter:

"And whereas, divers questions, doubts, opinions, ambiguities, controversies and debates have arisen and been made as well upon and concerning the validity and force of said recited grant of writing," &c. &c. &c. &c. "by reason of the variety of names," &c. &c. &c. "and reason of the before recited grant or instrument," &c. &c. "made in the governor's own names respectively, when they should have been made in the respective names, stiles and titles of former Kings and Queens," &c., and he has also omitted to state that Montgomery's charter was made in Gov. Montgomery's own name, instead of the name of the King, and that said charter was never ratified by the King, or by any of his predecessors, nor by any of his successors.

ASSESSMENT SALES

For Assessments made under Sec. 175 and 176 of act of April 9th 1813, 2 R. L. p. 407.

The first law passed by the Legislature of this State authorising the sale of land for assessments in the city of New-York is the act of April 12, 1816, which is to be found on page 386 of this volume.

By the second section of this act it is provided that whenever any assessment upon lands or tenements, which shall have been made and confirmed according to law, shall not have been collected, and the collector shall have made affidavit that he has demanded the money two several times of the owner or owners residing in the said city and that they have either neglected or refused to pay the same as the fact may be; or shall make affidavit that the owner or owners cannot upon diligent enquiry be found in said city, then and in such case only, it shall and may be lawful for the Mayor, Aldermen and Commonalty to take order for advertising the said lands and tenements, or any of them for sale, in two or more public newspapers, printed in said city for three months, once in each week, and by such advertisement the owner or owners of such lands respectively shall be required to pay the amount of such assessment, so remaining unpaid together with interest thereon, at the rate of 7 per cent per annum to be calculated from the time of confirmation to the time of payment with charges of such notice and advertisement to the treasurer or chamberlain of said city, and notice shall be given by such advertisements, that if default is made in such payment that the lands and tenements will be sold at public auction on a day and place therein to be specified, for the lowest term of years at which any person or persons shall offer to take the same in consideration of advancing the said assessment and the interest thereon as aforesaid to the time of sale together with the charges of notice and advertisement and the thereafter mentioned certificate, lease and advertisement, and all other costs and charges accrued thereon.

We have here the foundation of the legislation in reference to the sale of lands for assessments. Here then is the starting point of examination into the law in reference to assessment sales.

This act only authorises sales for unpaid assessments in such cases in which the assessment has been made and confirmed according to law.

This act provides for two classes of owners, viz. 1. Owners residing in the city of New-York; and 2. Owners who cannot upon diligent enquiry be found in the said city.

The Mayor, Aldermen, and Commonalty on the affidavit of the Collector that he has demanded the assessment at two several times of the owner residing in said city and that such owner has refused or neglected to pay the money, shall take order for advertising in the cases provided for in the first class, and in reference to the second they shall take the same order in reference to these owners which the collector makes affidavit that they cannot upon diligent enquiry be found in said city.

The law, we here repeat applies to but two classes of persons, viz.: owners of whom the collector has made two several demands, and who have refused to pay—or who have neglected to pay—and also owners who cannot upon diligent enquiry be found in the city.

Should an assessment be made to a person not the owner, then such an assessment cannot be collected by a sale of the land for it is not one of that class provided for by this act as being "made and confirmed according to law."

The act authorising assessments for sewers, and cleansing and scouring, and pitching and paving streets, making wells and fencing lots, requires that the assessors shall make a just and equitable assessment among the owners and occupants of all the houses and lots intended to be benefitted thereby in proportion as nearly as may be to the advantage which each shall be deemed to acquire. (§ 175 of 2 R. L. p. 407.)

The Legislature have in the act of 1816 guarded the owner of the land against the sale of his premises for an assessment made upon the tenant for it is evident that cases may occur in which both the owner and occupant may be benefitted and especially as Sec. 175 of the act of April, 1813, authorises an assessment for sweeping, (cleansing) scouring the street, as well as pitching and paving, for says the preamble of the act of April 16, 1787, of which the act of 1813 is a re-enactment, "whereas the dirt and soil lying in the streets doth often prove a common nuisance, and very prejudicial to the health of the inhabitants of the same city." The assessment although made upon the tenant, becomes a lein upon the land of the landlord who is owner, but the land cannot be advertised for sale until the money has been demanded twice of such owner, (not of the tenant or occupant) and he has refused or neglected to pay, or that the owner cannot upon diligent enquiry be found in the said city, and an affidavit to that effect has been made by the collector. The affidavit of the collector must be a substantial and bonafide compliance with these two requirements of the statute. The affidavit of the collector is the foundation of the order for advertising.

The next step is the sale which is to take place on the day and at the place named in the notice of advertisement. After the sale the Mayor, &c., are to give the purchaser a certificate in writing describing the lands and tenements so purchased the term of years for which the same have been sold, the sum paid therefor, and the time when the purchaser will be entitled to a lease. Subsequent to granting this certificate at least six months before the expiration of two years from the day of sale, the Mayor, &c., shall cause an advertisement to be published once in each week for four weeks successively, in a newspaper printed by the printer of this State, and also in a public newspaper printed in the city of New-York that unless the lands be redeemed by a certain day they will be conveyed to the purchaser. And if the person claiming title to the lands shall not within two years of the above mentioned certificate pay to the Street Commissioner for the use of the purchaser the sum mentioned in such certificate together with the interest thereof at the rate of 20 per cent. per annum from the date of the certificate the Mayor, &c. shall execute to the purchaser a lease of the said premises under the common seal of the city for such term of years for which they shall have been sold, "and such lease shall be conclusive evidence that the sale was regular according to the provision of this act."

The lease is only evidence that the sale was regular, that it took place on the day, and at the place named in the advertisement and notice, and is not even prima facie evidence of an assessment having been made, or any demand upon the owner, or of any legal proceeding being had after the sale. It is the sale alone that the lease is evidence of.

The assessment roll should set forth all the proceedings on which it is founded, and should state whether the persons assessed are owners, or occupants, or both. The collector is bound to find the owner of the land or to make affidavit that he has made diligent search and that he cannot be found in the city. A compliance with this provision is imperative. If the assessment should be made to a person not the owner, a demand of such person so improperly assessed, would not authorize a sale, nor would a sale under such circumstances be valid.

The sales by the street commissioner for assessments were only conditional, declared so to be by his published printed conditions of sale. The decision that a lease in such a case is conclusive evidence, &c. is a palpable absurdity.

SALES FOR ASSESSMENTS

For opening Streets, Avenues and Public Squares and for extending, enlarging, altering or improving any Street or Public Place.

It will be seen by the act of April 9, 1813, Sec. 177—that an assessment for paving or altering or setting curb or gutter in a street or flagging the sidewalks on a street must be proceeded in by Commissioners appointed by the Supreme Court.

These assessments are by sec. 178 of the same act required to be made to the respective owners, lessees, parties and persons respectively, entitled unto or interested in the said respective lands, tenements, &c.

In cases where the owners are unknown, or not fully known, the commissioners are required to state generally, &c.

Here it will be perceived is a marked difference as to the manner of assessing from that provided for in the 175th section as to cleansing, scouring, pitching and paving of streets, building of sewers, &c. &c., but there is no distinction made in the law as to proceedings which are to form the basis of the proceedings for taking order of sale for unpaid assessments, and the other proceedings subsequent to the sale.

The money must be demanded by the collector of the owner two several times, and although the owner may refuse to pay on the first demand, yet notwithstanding such refusal, a second demand must be made and then the collector must make an affidavit that he has demanded the money of the *owner* (not of the person assessed as owner or occupant,) but of the owner.

This law is definite and particular and it must be strictly construed for it is the only actual notice to the owner.

If the owner neglects to pay, the collector must make an affidavit to that fact, and the affidavit must be particular. A general affidavit will not answer, it must be a particular return that the money was demanded twice and that he neglected to pay.

If the owner cannot be found then the collector must make affidavit that he has made diligent enquiry for the owner and that he has been unable to find him.

If the collector on being called to the witnesses stand should state that he was mistaken in the ownership of the property, then his return would be void and a new demand would have to be made of the actual and bonafide owner at the time of the demand.

This power to sell for an assessment is one of the most extraordinary powers known in our laws, and one which has so great a stretch of authority that it tramples down the fundamental law.

The collector is bound to be as careful in finding the right and the true owner and in making his return as a sheriff would in serving a writ and making a return thereon.

We cannot believe that our government is to be overthrown by departing from the strict construction of our statute laws. On strict construction alone depends the security of the foundation of civil liberty.

We cannot believe that our Courts will sustain a single assessment sale in the city of New-York, for we do not believe that there is one in which the officers have complied with the law.

The statute has imposed a particular duty on the person appointed to collect assessments, This duty is to seek the owners of the property—such owners as he cannot find, and those he can find, constitute the whole. There are but two classes, and these embrace all, and it is no compliance with the law to leave a notice of demand at the dwelling of the owner or person last assessed, for the law requires two separate and distinct demands and states particularly of whom it shall be made and that it shall be twice made, and, says Chief Justice Savage, where the statutes point out a mode that must be strictly pursued or the statutes is not complied with. Property often changes owners after an assessment is made, and it would not be a compliance with the statute to demand the money of the person who had been owner—he must demand of the then owner and if he cannot find him on diligent enquiry, he must so state in his return on the assessment.

It is a proper question to put to a collector, what measures did you take to ascertain the ownership of the property?

A sheriff might with as much propriety levy an execution on lands once belonging to an individual against whom he has an execution, and which that individual has sold before the judgment was obtained, as for a collector to demand the assessment of a man because he had owned the land, or because he was assessed as owner. An assessment is not a lien until it is confirmed according to law, the date of confirmation fixes the period when the lien commences.

An assessment sale may be void and the assessment good, but if the assessment is void the sale is void of course.

An assessment made to an estate must be demanded of the executor or executors if more than one, or of the heirs each and every one having any interest as owner in the lands, or of the devises, as the case may be.

It is often that assessments are imposed upon land belonging to several owners in the name of one of the owners—such an assessment is not made according to law, for the Commissioners are required to do one of two things in one class of proceeding, viz. to assess to the parties or persons respectively entitled unto or interested in the said respective lands, tenements, &c., or to state generally if the interest cannot be ascertained. With regard to assessors in certain other improvements they are to assess to owners and occupants and such assessment becomes in both cases a lien upon the land of the owner, and both assessments must be demanded of the owner before the corporation can take order to sell.

KANHAWHA SALINES.

We addressed a letter to the Post Master, at Kanhawha, Va., in reference to the Kanhawha Salines, and have in reply received a newspaper printed at Charleston, county of Kanhawha, Va., edited by E. W. Newton, Esq., containing a printed copy of our letter and the printed reply of the editor,—for which courtesy and attention we are much obliged.

From the Kanhawha Republican, June 11, 1845.

KANHAWHA SALINES AND GAS WELLS.

"NEW-YORK, May 1, 1845.

"*Dear Sir:* I send to three addresses in your place some newspapers, containing accounts of the salt formation, gas springs, &c., and also several to yourself, hoping that they may be found useful.

"I am extremely anxious to ascertain the temperature of the water which rises in your deepest wells, for the aid of science. Can you name to me any individual in your place to whom I can address a letter upon that subject?

"The abundant gas which underlays your place, presents a very interesting and important fact—for I presume it is entirely covered by water; and such being the fact, there is no danger to be apprehended from the electric discharges from the clouds. In Kentucky, near the banks of Green River, a body of hydrogen gas was reached in boring for salt water, which was ignited by a torch, and being mixed with atmospheric air in the cavities below, it exploded, throwing up rocks, and uprooting large trees. This happened in a limestone region, and no water overlaying the gas. You have no limestone, unless that rock has been reached in recent deep borings.

"During my travels in the Canadian forest last summer, I found that the hydrogen gas underlays an extensive range of country in these northern latitudes, but it is in all cases covered by water.

"Many scientific gentlemen express the opinion that the temperature of the earth increases in the increase of depth. My investigations hitherto have not convinced me of that fact, for I find a variation on this continent which seems to contradict that theory. In Europe, an increase of heat has been found, and on that continent there may be local causes to produce this result.

"The newspapers represent some of your wells at 1,500 feet; I presume this is an error. 1,000 feet is the extent of the former borings. If the depth of 1,500 feet has been reached, it would follow according to the theory of increased heat, that the water should test by the thermometer near 80° of Fahrenheit's scale. The estimate is that the increase of temperature is 1° for every 55 feet descent. Assuming the surface at 53° of mean temperature, the depth of 1,500 feet would give even greater heat than 80°—and at this rate, at the depth of 225 miles, the heat would be sufficient to fuse iron—giving to the centre of our globe a heat of almost inconceivable intensity. We know that above our heads, the cold is intense at a given elevation. I have found in my mountain tours that the decrease was about 1° to 130 or 140 feet. This decrease is demonstrated by the perpetual frost on high mountains.

"I have been informed that the gas at the Kanhawha Salines encrusts the surface it strikes upon, forming a species of enamel. Have you any information upon this point?

"I shall feel very grateful for a reply.

"Yours, with great respect,

EBEN. MERIAM."

"POST MASTER, Kanhawha Salines, Va.

—

"In answer to the inquiries contained in the above letter, which has been placed in our hands by the gentleman to whom it was addressed, we remark: There has been no misrepresentation in the newspapers in relation to the depth of the salt wells. Several of them are from 1,200 to 1,600 feet. Mr. C. REYNOLDS assures us that his well is 1,650 feet, and that below the *surface of the rock*, which is nearly twenty feet below the surface of the earth. One of Messrs. DICKINSON & SHREWSBURY'S, by accurate measurement, is 1,500 feet.

"As to the increase of temperature, we answer, it has never been tested; and we believe cannot be by putting down the thermometer. But there are abundant evidences that there is no increase of the temperature at the depth reached in any of the wells. First, the water that is driven or forced up from all the wells is very cold. At one, of the depth of 1,500 feet, and which is tubed 700 feet, so as to exclude all the water, fresh or salt, to that depth—and it is quite certain that all the water comes from the depth of 1,500 feet, for at that depth the stream of salt water was struck—the water is as cold as that of the very coldest spring water, such as gushes out from the base of our mountains. Second, the workmen at the furnaces in warm weather, are in the habit of filling jugs with river water, and immersing them in the cisterns of salt water, as it is thrown up. The water in the jugs soon becomes, not quite so cold as ice water, but as cold as the coldest spring water. Third, the gas which comes from the lowest depths of the wells, with the water, if not, according to the supposition expressed in the above letter, from beneath the water, is as cold as a northern blast in winter. To be exposed to even a moderate stream of this gas, in tubing the wells, is extremely disagreeable to the workmen. In the hottest day it chills them through in a short time.

"These facts every body here considers conclusive, that the temperature does not increase in proportion to the depth below the surface of the earth.

"That the gas forms incrustations resembling enamel on the surface against which it strikes, we think is all a mistake.

"The formations on the sides of the furnaces in which gas alone is burnt, are certainly curiosities. These furnaces, we stated in a former account, are generally 100 feet long, 6 high, and 4 wide. The whole of this place, when gas is burnt, is filled with a pure flame. In a short time are formed on the sides concresences, firmly adhering to the stone, in appearance like soot, but increasing in the form of moss or sponge, to such an extent as to choke up the furnace. When disengaged in large pieces from the wall, it is found to be a hard, porous body, with veins or fibres running through it, of lighter color than the main body, and which it is almost impossible to pulverize. Whether, if submitted to a chemical analysis, it would prove to be any thing more than common cinder, we do not know."

We remark upon the above reply of the editor of the Republican as follows:

The temperature of the bottom of the well is determined by immersing a thermometer in the salt water as soon as it is raised to the surface, although it may be said that the temperature of the brine is thus determined, and not that of the interior. This mode is practised with the Artesian Well at Paris, the water

If the Court for the Correction of Errors was not constituted as provided by sec. 1, of Art. 5, of the Constitution, then the judgment pronounced was not binding, and these cases still remain undecided.

The former Constitution contained substantially the same provision as to the classes which are to form the Court for the Correction of Errors, as is contained in the present Constitution. It is not necessary to enquire what was the practise under the former Constitution, for practise cannot, however long indulged in, annul that instrument. Amendments to the Constitution cannot be made in that form, and if they could, in the language of Chief Justice Bronson in another case, "written Constitutions of government will soon come as of little value if their injunctions may thus be lightly overlooked and the experiment of setting a boundary to power will prove a failure."

If the Senate alone constitute the Court for the Correction of Errors, and seventeen members of that body form a court, then it follows that although an act is passed by a two-third vote of both branches of the Legislature, a majority of a quorum of the Senate, being but 17, may by a vote of nine members repeal the act, for a decision against its constitutionality, by 9 of 17 in such a case is a repeal, and that nine may be the same persons who recorded their *nays* on the passage of the act by the Legislature. Jurors who have formed opinions upon a question, are excused from serving, and the same difficulty arises in reference to a judge or other person who has already expressed an opinion, and the framers of the Constitution have thus viewed the difficulty and provided for it by requiring that in case of appeal, that the Chancellor shall have no voice, and yet if the Senators form the Court these legislative officers act a second time on a question upon which they had previously acted.

The new Constitution requires the presence of executive and legislative officers together with one equity and two law judges to form a court. The reasonableness of the provision is plain and requires no argument to illustrate its importance. It is a common sense requirement.

The 10th section of the first article of the constitution of the United States restrains the States from emitting bills of credit,—it therefore follows that what the State cannot itself do, it cannot authorise others to do,—the quere then is, can Free Banking Associations be deemed "bodies politic and corporate?"

ICEBERGS.

The last account we gave of the icebergs was in our paper of May 8th. We continue that account by adding as follows:

Brig Crusader, 42 days from Liverpool arrived at New-York, May 21. Saw large quantities of ice upon the bank.

Ship St. George fell in with islands of ice on the 7th of May in lat. 45° 30′, long. 49°. Lat. 43°, long. 51 saw the last ice, run along side the ice for seventy miles.

Ship Indiana, from Liverpool, May 6th and 7th, lat. 44° 10′, long 45° 10, saw an immense number of icebergs.

Ship Iowa, on May 5th, lat. 40° 15′, long. 46, saw an island of ice.

Ship Quebec, from London, on 2d May, saw large fields of ice, some of which was 150 feet high.

Ship Mississippi from London saw a large quantity of ice.

Ship Victoria, from Havre, long. 48° and 49′, lat. 44° 10, passed large quantities of ice.

Ship Rochester, from Liverpool, lat. 43° 19, long. 42° 56′, May 1, passed islands of ice.

Ship Roscius which arrived at Liverpool 21st of April from New-York, passed numerous icebergs, islands and fields of ice from lat. 42° to 46° on the 2d, 4th, 6th and 8th of April.

THE APRIL THUNDER STORM.

We perceive that the thunder storm of Friday the 25th of April reached the Province of New-Brunswick, and that a boat with six persons on board in passing from Trinity Harbor to St. John's was capsized in the storm and all on board perished. This storm travelled with great rapidity, and was no doubt neutralized when it reached the ice crossing down from the arctic seas.

GREAT BROOKLYN MEETING CONCERNING THE FERRIES.

Pursuant to a call circulated through the city papers, a meeting was held of the citizens of Brooklyn, at Half's Exchange Buildings, on Wednesday evening, the 8th of May, 1844, to take into consideration the interests of Brooklyn, in relation to the Ferries of the East River.

On motion, His Honor, JOSEPH SPRAGUE, Mayor of the city was called to preside; William M. Harris and Geo. Hall, appointed Vice-Presidents, and Eben. Meriam and Henry E. Pierrepont, Secretaries.

The Mayor, on taking the Chair, addressed the meeting, explaining its objects.

RESOLUTIONS.

The following resolutions were offered by Hon. JOHN GREENWOOD, which were seconded and unanimously adopted:

Resolved, That the strait or arm of the sea, between the city of New-York and Long Island, commonly called the East River, is a natural highway, which the inhabitants of both have an equal right to use; and that there is no just principle by which we can be required to apply to that city for the privilege of using it, or which can authorize the latter to make it in any manner a source of revenue.

Resolved, That this highway ought to be, and is, of right, as free to all, as the air and light of heaven; and that as ferries constitute the most convenient mode of rendering it subservient to the public accommodation, every facility ought to be extended for their establishment and maintenance. That the proprietors of ferry boats should at the most be required to pay only a reasonable compensation for the use of landing places, and that a liberal policy would require that even these should be provided free of charge, in order to render the rates of ferriage as low as possible—that so far as the use of the highway itself is concerned, there would, in the opinion of this meeting, be more propriety in taxing the inhabitants of Westchester county for entering the avennes of New-York, which have been constructed at the expense of that city, than there is in obliging those of Long Island to pay for the privilege of crossing the natural highway of the East River.

Resolved, That the Ferries between New-York and Brooklyn are alike advantageous to the former as to the latter, in affording the means of supplying her markets with produce, and transporting persons and merchandize from thence to our shores; and that it is an unjust as well as narrow policy which seeks to make a ferry the instrument of burdensome exactions from the people.

Resolved, That the monopoly as claimed by the city of New-York under her royal charter, and now exercised by her, to establish Ferries between that city and Long Island, is not only inconsistent with the spirit of our institutions, but has no foundation in right—that the power which she possesses was correctly determined by the Assembly of this State in the year 1835, to be not a monopoly for the purpose of raising revenue, but a public power delegated to a public body to be exercised for public purposes, in the same manner in which the Legislature would themselves exercise it; and one which the latter may at any time regulate, control or wholly retract.

Resolved, That in the opinion of this meeting it is unjust to the inhabitants of this city, that the power in question should be exercised exclusively by the city of New-York—that the landholders of the upper portions of New-York are opposed to the growth of Brooklyn, and that in view of these rival interests and feelings, the prosperity of our city ought not to be jeopardied by being subjected to the control of a New-York Corporation—that there are strong temptations, under such circumstances to abuse power; and that experience has shewn, in the selfish and illiberal course pursued by New-York towards us, that such abuses will be committed.

Resolved, therefore, That the city of Brooklyn ought to be allowed to participate in the power to establish ferries between the two cities, or that such power should be lodged in some independent and impartial body.

Resolved, That an application be made to the Legislature of this State, to effect the object stated in the last resolution, and that we will persevere in such application until our just rights are established.

Resolved, That a Committee of ten be appointed

by the Chairman, with full powers to take all necessary measures to carry the foregoing resolutions into effect, and that the Common Council of this city be requested to pay the necessary expense which may be incurred in so doing.

Mr. J. M. VAN COTT offered the following resolution which was seconded and adopted:

Resolved, That for any citizens of Brooklyn, from motives of private gain, directly or indirectly to promote the views of the Corporation of New-York, in the mal-administration of their power over the ferries, will be a gross violation of their duty as citizens, and deserve the severest reprobation of the people of Brooklyn.

Mr. WM. M. HARRIS offered the following resolution, which was seconded and adopted:—

Resolved, That we, citizens of Brooklyn, in general meeting assembled, do hereby protest against the lease now contemplated to be made by the city of New-York, and do hereby, in this public manner give notice to all persons who may take such lease, that application will be made to the Legislature of this State, to revoke the authority of New-York in the matter, and to appoint a more fit, equal and impartial tribunal of our relative rights.

Mr. GEORGE HALL offered the following resolution, which was seconded and adopted:

Resolved, That the trustees of the Union Ferry Company, who have for the past five years managed the Brooklyn Ferries, deserve the thanks of the citizens of Brooklyn and Long Island, for their zeal, fidelity and disinterestedness.

The President then named the following as the Committee of ten, pursuant to the resolutions of Judge GREENWOOD, viz:

JOHN GREENWOOD, GEORGE WOOD, WILLIAM M. HARRIS, GEORGE HALL, EBEN. MERIAM, JONATHAN TROTTER, ALDEN J. SPOONER, HENRY E. PIERREPONT, CYRUS P. SMITH, GEO. S. HOWLAND.

At the suggestion of citizens, his Honor the Mayor, and HON. GABRIEL FURMAN were added to the Committee. It was then

Resolved, That the proceedings of this meeting be published in the papers of this city and of the city of New-York. The meeting then adjourned.

JOSEPH SPRAGUE, *President.*

WM. M. HARRIS, GEO. HALL, } *Vice Presidents.*

Eben. Meriam, Henry E. Pierrepont, } *Secretaries.*

The following able argument was drawn up by Judge GREENWOOD, *Chairman of the Brooklyn Ferry Committee, printed and a copy furnished each member of the Legislature.*

NEW-YORK AND LONG-ISLAND FERRY BILL.

There are only two questions in this matter:

1. *Can the Legislatare interfere?*
2. *Ought it to interfere?*

1. The Corporation of the city of New-York claim, under her charters, not only the exclusive authority to establish ferries all around that city to the opposite shores, but, as a franchise, which is the subject of property, all ferries, with their profits which can be established within those bounds.

The right of the Legislature to vest the power over these ferries in a body other than that city, was considered a settled question in 1835, when a bill similar to that now proposed, passed the Assembly, and also the Senate in Committee of the Whole; but failed in the latter branch of the Legislature, for the reasons stated in the Memorial—reasons wholly unconnected with the question of power. There seems to be no cause for entertaining a different opinion at the present time.

But suppose it to be an open question. What are the rights of the city of New-York in relation to these ferries? The Corporation of that city is a PUBLIC, POLITICAL Corporation. Her charters were granted for political purposes, viz: the GOVERNMENT OF A COMMUNITY, *not* to create a *franchise of a private nature*. Grants to such a body are governed by entirely different rules from those applicable to private Corporations or individuals. Where a portion of the sovereign power or prerogative is conferred upon them, it passes as a *public trust*, and is to be regarded as held in the same way as if it were still possessed by the grantor. The grantee is a mere subordinate agent. [16 Peters, 367 Martin v. Waddell.] It seems also to be well settled, that since MAGNA CHARTA, even the King of England cannot grant an exclusive right of fishery in navigable waters, and that such a franchise is void, as being in derogation of the common right. Is not an exclusive right of ferriage over two navigable streams, comprising a distance of twenty-three miles, in the most populous part of the State, where all the facilities for public intercourse are required, even more objectionable? These streams are natural highways, and *ferries are the appropriate means of using them*. It is no answer to say that every man may provide his own boat. This is impracticable. The right to use these waters in the mode best adapted to subserve the general convenience in the way of passage, is a public right in its nature, and as such, unalienable. [*Schultz on Aquatic Rights*, 10.—*Law Library, Vol.* 24.

Grants of property may no doubt be made to a public political Corporation. The inhabitants of the city of New-York had, at their own expense, erected a Stadt House, or City Hall, a Market House, a bridge, and some docks, and *established a ferry*, which they had provided with boats and other accommodations, and were keeping in operation. These, it was proper to vest in them in their corporate capacity, and the charters accordingly contain a grant of them. This ferry is there called "the Old Ferry." Its landing place on the New-York side has, however, been changed, and the subject of the grant is, therefore, probably extinct; for a ferry is such in respect to the landing place, and not the water. But if it still exists, the saving clause in the proposed bill will protect any rights which the city of New-York may have in it.

But she claims, also, the right, by virtue of her charters, to establish any and all other ferries. Now suppose it to be conceded, for the argument sake, that a grant of this broad character is good, and that the right to establish ferries and take toll may, in the case of a public political Corporation, become a private franchise, on the ground that the permanency of profits is an interest which is the subject of property:—still, it must be borne in mind that the right to take toll does not attach, until the ferry is actually put in operation, and continues no longer than it is kept so. No such right exists, without the foundation or consideration arising from the grantees maintaining the subject of the franchise. Without this, the grant is absolutely void. [2 *Bl. Com.* 38. 2 *Inst.* 220.] The right of toll, which constitutes the interest, is, therefore, wholly dependent upon the establishment and maintenance of the ferries, and has no existence without them. The utmost therefore, that New-York can, in any view of the case, claim under this unexecuted grant, is, that when she establishes a ferry, and provides the landing places, and necessary means for accommodating and transporting passengers, she becomes, as to these, vested with them in her corporate capacity. Such, also, is the only intelligible and practical construction of the grant to her of all ferries established and to be established. The mere right to establish ferries, while unexecuted, is but a derived public power, and is of the same nature as if it were still possessed by the sovereign authority. Its exercise, and the furnishing the consideration or foundation of the right to take profit, constitute the only ground of interest or property. So far, then, as this general grant remains unexecuted, it should be regarded as a mere power, *delegated* to the Corporation of New-York, to avoid the necessity of repeated applications to the sovereign authority, and to be exercised the more readily in cases where the public convenience dictates that a ferry is required; but not divesting the Legislature of their authority.

The fact that a grant was made to New-York, of (what was alleged to be) the waste or unappropriated land between high and low water mark on the Brooklyn shore, does not alter the case. It does not constitute the establishment of a ferry. The professed object, however, as recited in the charter, for which this grant was sought, was the better accommodation of "the old ferry." It is absurd to suppose that a strip of land three miles in length was needed for this purpose. It was intended, no doubt, to make "the old ferry" a more profitable monopoly, by acquiring, as far as possible, the control of all other landing places. But the alleged reason for the grant is sufficient to show that it was not intended to be connected with other ferries; and whenever the public convenience calls for the land, the right of eminent domain of the State, is sufficient to authorise the taking it for this purpose.

The only rent, profit, or emolument, then, of any kind which New-York can claim under this unexecuted grant in relation to ferries, is a fair rent or compensation for the use of her landing places, and of these there is no intention to deprive her. The proposed bill makes ample provision for its payment. The establishment of a ferry is an exercise of public power. When it is established, New-York will, under this bill, receive the emolument to which she is justly entitled. She can claim no profit from the use of the water, much less from ferries which she has not established, and which have no existence.

That the Legislature has not the power to interfere in this matter, must be regarded as a strange ground to be taken by the Corporation of New-York at the present time, when it is known that ever since the year 1717, the former have regulated the ferries between New-York and Long-Island, and established the rates of ferriage; and that in 1813 the Corporation of that city recognized the entire control of the Legislature over these ferries, by accepting an act *authorising them to establish and keep one or more of them.*—[2 *R. L.* 1813, p. 359, § 47; and see L. relating to N. Y. City, Gould and Banks ed. of 1833, p. 248 in note.] This act must be presumed to have been passed on the application of that Corporation, and is a limitation of any power previously existing under the charters of that city, and an express recognition of the power of the Legislature.—[12 J. R. 125, Mayor, &c. v. Ordrenan.]

But New-York, as has been already said, is a public political Corporation, and when contemplated as such, the true nature of the grant in question may be readily seen and defined. That city constituted the chief place in the Colony, in point of population and importance, and it is not strange that she succeeded in obtaining the most ample grants for the accommodation of her citizens and the advancement of her general prosperity. But still, these grants, it must be recollected, were for political purposes, and the powers conferred by them are therefore of that character. Her charters do not constitute a private franchise or contract, as the creation of a private corporation does. It is a well settled doctrine that there can be no such thing as vested political powers, as against the State. The Legislature can at pleasure modify or sweep away. [13 Wendell, 321. The People v. Morris.] The charters of the city of New-York, (assuming that they ever had validity, as to which, the most serious doubts may be entertained,) although impliedly saved by the constitution from the wreck of political revolution, are not exempted from this rule—She must necessarily, in this respect, be subordinate to the sovereign authority. Her charters are to be regarded in the same light, as if they had been granted by our own State Government, through the proper instrument—the Legislature. What, then, would become of the grant to that city in relation to ferries, so far as it is unexecuted, if all her political functions were suspended, and her existence thus, to all intents, annihilated? The subject of it would of course revert to the Legislature, to be again granted out, if it should be thought proper. A *private* corporation could not be thus dealt with, without reserving the power to do so; but a public political one—one created to administer government—might be—[4 Wheaton, 629 at foot of page, case of Dartmouth College—Op. of Ch. J. Marshall.]—and if this be so, is it not clear that the grant in question is one of public power, and as such within the control of the Legislature?

II. *Ought* the Legislature to interfere? It ought, for two reasons.

First—The course of New-York towards Brooklyn, has been both illiberal and unjust. She has withheld facilities for intercourse between the two places, which were loudly called for by the public convenience, until they were actually forced from her. She is now burthening that intercourse with heavy exactions, for the purpose of filling her coffers, instead of adopting a policy by which to render communication as free as possible. To effect this object, she is receiving an enormous amount annually, for the privilege of using a public navigable arm of the sea, over and above the value of her slips. This is particularly the case with the Fulton and South ferries, the two most

§ 4. Whenever the grantee or grantees of any such ferry or ferries shall not own, or be entitled to the use of the wharves, slips, landing places, adjacent grounds, or other property, at either or both extremities of such ferry or ferries, which may be required, and determined by the said commissioners, or a majority of them, to be necessary for the accommodation thereof; the said grantee or grantees, shall notify the persons or corporations owning the same, or interested therein, or their agents, or legal representatives, that the same are so required and determined to be necessary; and the said grantee or grantees shall thereupon treat with such owners or persons interested, for the same, and for the rent or compensation to be paid therefor; and if such owners or persons interested shall refuse so to treat or the parties shall be unable to agree in relation thereto, the said grantee or grantees shall apply in writing, to the Vice Chancellor of the Second Circuit, to issue a precept under his hand and seal, to the Sheriff of the county of Westchester, who shall thereupon issue such precept, commanding said Sheriff to summon and return a jury, of twelve men from said county of Westchester, to be named in said precept, to appear before the said Vice Chancellor, at such time and place as he may deem proper, to require and assess the damage and recompense which ought to be paid to such owners or persons so interested as aforesaid, for the use of such wharves, slips, landing places, grounds, or other property, and at the same time to summon such owners, or persons interested, or their agents or legal representatives, by notice to be served personally, or left at their usual place of abode, or served in such other way as the said Vice Chancellor may direct, to appear before said Vice Chancellor, at the time and place therein mentioned; and the said jury shall be sworn faithfully to inquire and assess such damage and recompense; and having viewed the premises, if the said Vice Chancellor shall deem such view to be necessary, shall assess the damages and recompense to be awarded to the owners or persons interested in such premises, according to their several interests or estates therein, and the said Vice Chancellor may thereupon render judgment confirming the same, or may set it aside and award a new trial. The verdict of such jury, and judgment of the said Vice Chancellor thereupon, and the payment by the said grantee or grantees within sixty days after final judgment, of the sum or sums of money so awarded, or the tender and refusal thereof, shall be conclusive and binding upon such owners and persons interested; and the estate of such owners and persons interested, shall thereupon vest in such grantee or grantees, for the term of such license or grant, who may then cause the said premises to be converted to and used for the purposes aforesaid. The said Vice Chancellor shall have power to adjourn such proceedings before him, for such time or times as in his opinion justice may require.

§ 5. All ferries hereafter established under this act shall be subject to the laws of this State, already passed, and now in force, or hereafter to be passed.

§ 6. The grantee or grantees of any such ferry or ferries as shall be established under this act, may cause such wood or other buildings and erections, or accommodations, as the said commissioners or a majority of them may deem proper, for the purposes of said ferry or ferries, to be constructed and maintained upon the wharves or adjacent grounds of the extremities of said ferry or ferries, which may become vested in them as aforesaid; and such buildings, erections and accommodations, shall belong to said grantee or grantees at the end of the term for which said ferry or ferries shall be granted.

§ 7. The said Vice Chancellor shall receive five dollars for every day he shall be employed in his duties under this act, which together with the fees and expenses of every kind incident to said proceedings, shall be paid by the grantee or grantees of said ferry or ferries.

§ 8. The sheriff, jurors, and witnesses in such proceedings, shall receive the like fees as are now provided by law in cases pending in the Supreme Court of this State, and the jurors shall receive each two dollars per day.

§ 9. In order to enable the Legislature of this State from time to time to regulate the rates of ferriage, it shall be the duty of the owners or superintendents of all ferries which shall be best established under this act, between New-York and Long-Island, whether owned or held by private persons, or bodies politic and corporate, to make annual returns under oath, to the Comptroller of this State, of the amount of the tolls and ferriage received at their said respective ferries during the preceding year, and also of the expenses attending the conducting and management thereof, and of the amount of capital employed therein, on pain of forfeiting their leases or licenses on failure so to do.

§ 10. Nothing herein contained shall be construed to annul, impeach or in any wise impair the rights of the Mayor, Aldermen and Commonalty of the city of New-York, and their lessees, their executors, administrators and assigns of, in, or to any ferry or ferries heretofore established by them, or of, in, or to the rents reserved in any lease of any such ferry or ferries, or of, in, or to any other private benefits, emoluments, or advantages incident to the same, or arising therefrom; and nothing herein contained shall be construed to supersede or annul the privileges, powers and emoluments of a private nature, which have been granted to the corporation of the city of New-York, by charters and legislative acts.

§ 11. All provisions in charters and legislative acts conferring public powers and privileges upon the corporation of the city of New-York, which are inconsistent with or repugnant to the provisions of this act, so far as such powers remain unexecuted by the said corporation, are hereby repealed.

State of New-York, }
In Senate, April 25, 1845. }

This bill having been read the third time, two-thirds of all the members elected to the Senate voting in favor thereof, Resolved that the bill do pass.

By order of the Senate.

A. GARDINER, President.

State of New-York, }
In Assembly, May 14, 1845. }

This bill having been read the third time, two-thirds of all the members elected to the Assembly voting in favor thereof, Resolved that the bill do pass.

By order of the Assembly.

WM. C. CRANE, Speaker *pro tem.*

Approved this 14th day of May, 1845.

SILAS WRIGHT.

THE ADIRONDACK MOUNTAINS.

There are several of these mountain peaks which have an altitude of more than 5000 feet and these high peaks are near neighbors. The heads of eight rivers are found in this cluster of mountain tops, they are therefore a great fountain of water in the condensation of the atmosphere upon their surfaces. The Hudson, Au Sable, Saranac, Racket, Black, St. Regis, Grass and Oswegachee Rivers have their sources in the Adirondack Mountains. and notwithstanding that this great State is so extensively watered by these mountains, the mountains are nevertheless but little known and their surfaces present a pathless forest to the explorer.

The mountains of New-Hampshire, and the mountains of North Carolina, have a little higher altitude than the Adirondack. That these mountains possess great mineral wealth there can be no doubt and their streams furnish water power to an almost unlimited extent.

In looking from these mountains to the north an extensive level country presents itself. To the west and north and north of west, vast lakes spread out upon the surface. The mountains levelled with the common surface and the surplus earth and rocks stored away in the lakes and we should have an ocean tide greatly elevated—our rivers would become extinct and our earth would then possess another climate. Lake Champlain is but 80 feet above the level of the ocean. This barrier removed and the waters of New-York Bay and the gulf of the St. Lawrence would become one body. When we look at our mountains and our lakes and rivers we perceive that what space is occupied by the latter has been made by removing the solid material and piling it up in mountains and hills. The average surface of our continent above that of the ocean is not great and much less than has usually been imagined.

Although the Adirondack Mountains are covered with forests and but few white men are to be found upon them, still the Indians do not frequent them. The St. Regis Indians are the only natives that remain in this region of country.

Municipal Gazette.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, JANUARY 1, 1846. [VOL. I....No. 36

THE NEW YEAR.

Another year has run its round and midnight has closed its mighty volume, and stamped its last page with a seal bearing the imprint of Eternity.

Midnight too has opened the record of another year, and each succeeding midnight ere its end, will open a new page in its mysterious volume, and proclaim in each succeeding moment, events of mighty import.

Time is continuous—years, months, weeks and days are but an apportionment of Time.

The primitive day commenced with evening. The three first days in the series of the days of creation were measured by the successive events of those momentous periods, and not by the celestial time-keeper, which was not until the fourth day of the series of the days of creation placed in the firmament of the heavens to give light upon the earth—to be for signs and seasons, for days and years.

Midnight is the last moment of lovely evening, and the first moment of charming morning.

Six midnights preceded the existence of man as a living soul, yet but three solar mornings shone upon the earth ere his body was fashioned from the dust.

How impressive the truth—how impressive the solemn reality—that time must have an end. Each successive year as it closes the mighty page of its last moment and transfers it to the archives of the eternal world, proclaims the continuance of the approach and the greater nearness of the termination of time—a termination ending in an eternal morning with those who sleep in peace.

The Grave—the great treasury of precious dust—of dust that will be kindled into light and life, and clothed with immortality—is the end of time with every human being that reposes in its bosom, but it is the gate of the celestial world, although an humble, and oftimes, a dreaded entrance.

THE STATE CONVENTION.

The Anti-Assessment Committee herewith present each member of the Legislature of this State with a copy of the Constitution of the United States, and the amendments thereto; also a copy of the present Constitution of this State, adopted in 1821, and the amendments thereto; and also a copy of the Former Constitution of this State, adopted in 1777, with the amendments subsequently made to that instrument.

As soon as the election for members to form the State Convention has been completed and their names ascertained, copies will be forwarded to each of them respectively, and when that body shall have convened, a full copy of the MUNICIPAL GAZETTE, in a plain bound volume, will be delivered to each member.

The State Officers and numerous Citizens in the cities of New-York and Brooklyn, and in other sections of the State will also be furnished with copies.

The various provisions of the Former Constitution of this State will be fully reviewed in this paper, and these contrasted with those of the present Constitution.

The provisions of the Constitution of the United States will be commented upon.

The Constitution of the States of Massachusetts and Connecticut will be examined and such of them as appear to be of more useful import than those contained in the New-York Constitution, will be fully set forth.

The declaring what are executive, what are legislative and what are judiciary powers, seem to be a very necessary provision in the framing of the new Constitution.

The delegation of Legislative power, by the Senate and assembly, requires examination.

The Assessment question will be fully discussed, and some plan suggested to confine Judiciary officers to their legitimate duties, and to the performance of these in their own seats and not elsewhere.

The imposition of Taxes direct or indirect is another very important matter, and should receive a careful and deliberate examination.

The Tax the present year in the city of New-York will exact from the citizen a greater share of his income than King Pharoah, in the plenitude of his power, ever exacted from his subjects.

The copies of the Constitution of the United States, and of the present Constitution of this State are to be found in No. 2, of this series, and to those who have not before received that number it is herewith sent. Should any of the copies of that number have been mislaid, they will be replaced gratuitously on application to the editor by a note addressed to him at New-York, through the New-York Post Office.

We here present a copy of the Former Constitution of this State.

FORMER CONSTITUTION
OF THE STATE OF NEW-YORK.

Approved.

AND WHEREAS this convention, having taken this declaration into their most serious consideration, did, on the ninth day of July, last past, unanimously resolve that the reasons assigned by the continental congress, for declaring the united colonies free and independent states, are cogent, and conclusive; and that, while we lament the cruel necessity which has rendered that measure unavoidable, we approve the same, and will, at the risk of our lives and fortunes, join with the other colonies in supporting it.

Powers of the convention.

By virtue of which several acts, declarations, and proceedings, mentioned and contained in the aforerecited resolves or resolutions of the general congress of the United American States, and of the congresses or conventions of this state, all power whatever therein hath reverted to the people thereof, and this convention hath, by their suffrages and free choice, been appointed, and among other things, authorized to institute and establish such a government as they shall deem best calculated to secure the rights and liberties of the good people of this state, most conducive of the happiness and safety of their constituents in particular, and of America in general:

All authority derived from the people.

I. This convention, therefore, in the name and by the authority of the good people of this state, DOTH ORDAIN, DETERMINE AND DECLARE, That no authority shall, on any pretence whatever, be exercised over the people or members of this state, but such as shall be derived from and granted by them.

Legislative power.

II. This convention doth further in the name and by the authority of the good people of this state, ORDAIN, DETERMINE AND DECLARE, That the supreme legislative power within this state, shall be vested in two separate and distinct bodies of men; the one to be called the Assembly of the state of New-York; the other to be called the Senate of the state of New-York; who, together, shall form the legislature, and meet once at least in every year for the despatch of business.

Council of revision.

III. AND WHEREAS laws inconsistent with the spirit of this constitution, or with the public good, may be hastily or unadvisedly passed: BE IT ORDAINED, That the governor, for the time being, the chancellor and the judges of the supreme court, or any two of them, together with the governor, shall be, and hereby are, constituted a council to revise all bills about to be passed into laws by the legislature. And for that purpose shall assemble themselves, from time to time, when the legislature shall be convened; for which, nevertheless, they shall not receive any salary or consideration under any pretence whatever. And that all bills which have passed the senate and assembly, shall, before they become laws, be presented to the said council for their revisal and consideration; and if upon such revision and consideration, it should appear improper to the said council, or a majority of them, that the said bill should become a law of this state, that they return the same, together with their objections thereto in writing, to the senate or house of assembly, in whichsoever the same shall have originated, who shall enter the objections sent down by the council, at large, in their minutes, and proceed to reconsider the said bill. But if after such re-consideration, two-thirds of the said senate or house of assembly, shall, notwithstanding the said objections, agree to pass the same, it shall, together with the objections, be sent to the other branch of the legislature, where it shall also be re-considered, and if approved by two-thirds of the members present, shall be a law.

Bills to become laws if not returned in ten days.

And in order to prevent any unnecessary delays,

BE IT FURTHER ORDAINED, That if any bill shall not be returned by the council within ten days after it shall have been presented, the same shall be a law, unless the legislature shall, by their adjournment, render a return of the said bill within ten days impracticable; in which case, the bill shall be returned on the first day of the meeting of the legislature, after the expiration of the said ten days.

The assembly.

IV. That the assembly shall consist of at least seventy members, to be annually chosen in the several counties, in the proportions following, viz:

Representation apportioned to each county.

For the city and county of New-York,	Nine.
The city and county of Albany,	Ten.
The county of Dutchess,	Seven.
The county of Westchester.	Six.
The county of Ulster,	Six.
The county of Suffolk,	Five.
The county of Queens,	Four.
The county of Orange,	Four.
The county of Kings,	Two.
The county of Richmond,	Two.
*The county of Tryon,	Six.
*The county of Charlotte,	Four.
†The county of Cumberland,	Three.
†The county of Gloucester,	Two.

*Names afterwards altered, and the territory of which they consisted, divided into several counties.

† Ceded to Vermont.

Number of senators, and by whom chosen

X. And this convention doth further, in the name, and by the authority of the good people of this state, ORDAIN, DETERMINE AND DECLARE, that the senate of the state of New-York shall consist of twenty-four freeholders, to be chosen out of the body of the freeholders, and that they be chosen by the freeholders of this state, possessed of freeholds of the value of one hundred pounds, over and above all debts charged thereon.

Their term of election, and rotation in office.

XI. That the members of the senate be elected for four years, and immediately after the first election, they be divided by lot into four classes, six in each class, and numbered, one, two, three, and four; and that the seats of the members of the first class shall be vacated at the expiration of the first year; the second class the second year, and so on continually, to the end, that the fourth part of the senate, as nearly as possible, may be annually chosen.

Manner of choosing.—Census, and apportionment of the senators.—A quorum.—To be judges of their own members.—Other counties and districts may be erected.

XII. That the election of senators shall be after this manner; that so much of this state as is now parcelled into counties, be divided into four great districts; the southern district to comprehend the city and county of New-York, Suffolk, Westchester, Kings, Queens, and Richmond counties: the middle district to comprehend the counties of Dutchess, Ulster and Orange: the western district, the city and county of Albany, and Tryon county; and the eastern district, the counties of Charlotte, Cumberland and Gloucester. That the senators shall be elected by the freeholders of the said districts, qualified as aforesaid, in the proportions following, to wit: in the southern district, nine; in the middle district, six; in the western district, six; and in the eastern district, three. AND BE IT ORDAINED, that a census shall be taken as soon as may be, after the expiration of seven years from the termination of the present war, under the direction of the legislature; and if, on such census, it shall appear that the number of senators is not justly proportioned to the several districts, that the legislature adjust the proportion as near as may be, to the number of freeholders, qualified as aforesaid, in each district. That when the number of electors within any of the said districts shall have increased one twenty-fourth part of the whole number of electors, which by the said census shall be found to be in this state, an additional senator shall be chosen by the electors of such district. That a majority of the number of senators, to be chosen as aforesaid, shall be necessary to constitute a senate sufficient to proceed upon business; and that the senate shall, in like manner with the assembly, be the judges of its own members. AND BE IT ORDAINED, that it shall be in the power of the future legislatures of this state, for the convenience and advantage of the good people thereof, to divide the same into such further and other counties and districts, as shall to them appear necessary.

No person to be disfranchised but by law.

XIII. And this convention doth further, in the name and by the authority of the good people of this state, ORDAIN, DETERMINE AND DECLARE, that no member of this state shall be disfranchised, or deprived of any of the rights or privileges secured to the subjects of this state by this constitution, unless by the law of the land or the judgment of his peers.

Adjournments of both houses.

XIV. That neither the assembly or the senate shall have power to adjourn themselves for any longer time than two days, without the mutual consent of both.

Conference between them.—Doors to be open, and Journals how kept and published.

XV. That whenever the assembly and senate disagree, a conference shall be held in the presence of both, and be managed by committees to be by them respectively chosen by ballot. That the doors, both of the senate and assembly, shall at times be kept open to all persons, except when the welfare of the state shall require their debates to be kept secret. And the journals of all their proceedings shall be kept in the manner heretofore accustomed by the general assembly of the colony of New-York; and, except such parts as they shall, as aforesaid, respectively determine not to make public, be from day to day, if the business of the legislature will permit, published.

Number of the senate and assembly limited.

XVI. It is, nevertheless, provided, that the number of senators shall never exceed one hundred, nor the number of the assembly three hundred; but that, whenever the number of senators shall amount to one hundred, or of the assembly to three hundred, then, and in such case, the legislature shall, from time to time hereafter, by laws for that purpose, apportion and distribute the said one hundred senators and three hundred representatives among the great districts, and counties of this state, in proportion to the number of their respective electors, so that the representation of the good people of this state, both in the senate and assembly, shall forever remain proportionate and adequate.

Executive power vested in a governor.—When and how to be chosen.

XVII. And this convention doth further, in the name and by the authority of the good people of this state, ORDAIN, DETERMINE, AND DECLARE, that the supreme executive power and authority of this state shall be vested in a governor; and that statedly, once in every three years, and as often as the seat of government shall become vacant, a wise and discreet freeholder of this state shall be, by ballot, elected governor, by the freeholders of this state, qualified, as before described, to elect senators, which shall be always held at the times and places of choosing representatives in assembly, for each respective county; and that the person who hath the greatest number of votes within the said state shall be the governor thereof.

His power.

XVIII. That the governor shall continue in office three years, and shall, by virtue of his office, be general and commander in chief of all the militia, and admiral of the navy, of this state; that he shall have power to convene the assembly and senate on extraordinary occasions; to prorogue them from time to time, provided prorogations shall not exceed sixty days in the space of any one year; and, at his discretion, to grant reprieves and pardons to persons convicted of crimes other than treason or murder, in which he may suspend the execution of the sentence, until it shall be reported to the legislature, at their subsequent meeting, and they shall either pardon, or direct the execution of the criminal, or grant a further reprieve.

And duty.

XIX. That it shall be the duty of the governor to inform the legislature, at every session, of the condition of the state, so far as may respect his department; to recommend such matters to their consideration as shall appear to him to concern its good government, welfare and prosperity; to correspond with the continental congress, and other states; to transact all necessary business with the officers of government, civil and military; to take care that the laws are faithfully executed, to the best of his ability; and to expedite all such measures as may be resolved upon by the legislature.

Lt. Governor to be president of the senate.

XX. That a lieutenant-governor shall, at every election of a governor, and as often as the lieutenant-governor shall die, resign, or be removed from office, be elected in the same manner with the governor, to continue in office until the next election of a governor; and such lieutenant-governor shall, by virtue of his office, be president of the senate, and, upon an equal division, have a casting vote in their decisions, but not vote on any other occasion.

His further power and duty.

And in case of the impeachment of the governor, or his removal from office, death, resignation, or absence from the state, the lieutenant-governor shall exercise all the power and authority appertaining to the office of governor, until another be chosen, or the governor absent or impeached, shall return or be acquitted. *Provided*, that where the governor shall, with the consent of the legislature, be out of the state, in time of war, at the head of a military force thereof, he shall still continue in his command of all the military force of this state, both by sea and land.

In his absence a president to be chosen by the senate.—His power and duty.

XXI. That whenever the government shall be administered by the lieutenant-governor, or he shall be unable to attend as president of the senate, the senators shall have power to elect one of their own members to the office of president of the senate, which

he shall exercise *pro hac vice*. And if, during such vacancy of the office of governor, the lieutenant-governor shall be impeached, displaced, resign, die, or be absent from the state, the president of the senate shall, in like manner as the lieutenant-governor, administer the government, until others shall be elected by the suffrage of the people, at the succeeding election.

Treasurer.

XXII. And this convention doth further, in the name and by the authority of the good people of this state, ORDAIN, DETERMINE, AND DECLARE, that the treasurer of this state shall be appointed by act of the legislature, to originate with the assembly. *Provided*, that he shall not be elected out of either branch of the legislature.

Council of appointment.

XXIII. That all officers, other than those who, by this constitution, are directed to be otherwise appointed, shall be appointed in the manner following, to wit: The assembly shall, once in every year, openly nominate and appoint one of the senators from each great district, which senators shall form a council, for the appointment of the said officers, of which the governor for the time being or the lieutenant governor, or the president of the senate, (when they shall respectively administer the government,) shall be president, and have a casting voice, but no other vote; and, with the advice and consent of the said council, shall appoint all the said officers; and that a majority of the said council be a quorum; AND FURTHER, The said senators shall not be elegible to the said council for two years successively.

Tenure of certain offices.

XXIV. That all military officers be appointed during pleasure; that all commissioned officers, civil and military, be commissioned by the governor; and that the chancellor, the judges of the supreme court, and first judge of the county court in every county, hold their offices during good behanior, or until they shall have respectively attained the age of sixty years.

Certain judicial officers not to hold other offices.

XXV. That the chancellor and judges of the supreme court shall not, at the same time, hold any other office, excepting that of delegate to the general congress, upon special occasions; and that the first judges of the county courts, in the several counties, shall not, at the same time, hold any other office, excepting that of senator, or delegate to the general congress. But if the chancellor, or either of the said judges be elected or appointed to any other office, excepting as is before excepted, it shall be at his option in which to serve.

Sheriffs and coroners.

XXVI. That sheriffs and coroners be annually appointed; and that no person shall be capable of holding either of the said offices more than four years successively; nor the sheriff of holding any other office at the same time.

Registers, clerks, and marshals, by whom appointed.

XXVII. AND BE IT FURTHER ORDAINED. That the register, and clerks in chancery, be appointed by the chancellor; the clerks of the supreme court, by the judges of the said court; the clerk of the court of probates, by the judge of the said court; and the register and marshal of the court of admiralty, by the judge of the admiralty. The said marshal, registers, and clerks, to continue in office during the pleasure of those by whom they are to be appointed as aforesaid.

Attornies, solicitors, and counsellors, by whom appointed.

And all attorneys, solicitors, and counsellors at law, hereafter to be appointed, be appointed by the court, and licensed by the first judge of the court, in which they shall respectively plead or practice; and be regulated by the rules and orders of the said courts.

XXVIII. AND BE IT FURTHER ORDAINED, That where, by this constitution, the duration of any office, shall not be ascertained, such office shall be construed to be held during the pleasure of the council of appointment: *Provided*, that new commissions shall be issued to judges of the county courts, (other than to the first judge,) and to justices of the peace, once at least in every three years.

Town officers.

XXIX. The town clerks, supervisors, assessors, constables, and collectors, and all other officers, heretofore elegible by the people, shall always continue to be so elegible, in the manner directed by the present or future acts of legislature.

Loan officers, county treasurers, &c.

That loan officers, county treasurers, and clerks of the supervisors, continue to be appointed in the manner directed by the present or future acts of the legislature.

Delegates to Congress.

XXX. That delegates to represent this state in the general congress of the United States of America be annually appointed, as follows, to wit: The senate and assembly shall each openly nominate as many persons as shall be equal to the whole number of delegates to be appointed; after which nomination they shall meet together, and those persons whose names are not on both lists, one half shall be chosen by the joint ballot of the senators and members of assembly, so met together as aforesaid.

Style of laws, and form of process.

XXXI. That the style of all laws shall be as follows, to wit: "Be it enacted by the people of the state of New-York, represented in senate and assembly," and that all writs and other proceedings shall run in the name of the people of the state of New-York, and be tested in the name of the chancellor, or chief judge of the court from whence they shall issue.

Court for the trial of impeachments and the correction of errors.

XXXII. And this convention doth further, in the name and by the authority of the good people of this state, ORDAIN, DETERMINE, AND DECLARE, that a court shall be instituted for the trial of impeachments and the correction of errors, under the regulations which shall be established by the legislature, and to consist sist of the president of the senate for the time being, and the senators, chancellor and judges of the supreme court, or the major part of them; except that when an impeachment shall be prosecuted against the chancellor, or either of the judges of the supreme court, the person so impeached shall be suspended from exercising his office, until his acquittal; and in like manner, when an appeal, from a decree in equity, shall be heard, the chancellor shall inform the court of the reasons of his decree, but shall not have a voice in the final sentence. And if the cause to be determined shall be brought up by writ of error, on a question of law, on a judgment in the supreme court, the judges of the court shall assign the reasons of such their judgment, but shall not have a voice for its affirmance or reversal.

Power of impeachment, and manner of proceeding.

XXXIII. That the power of impeaching all officers of the state, for mal and corrupt conduct in their respective offices, be vested in the representatives of the people in assembly; but that it shall always be necessary that two third parts of the members present shall consent to and agree in such impeachment. That, previous to the trial of every impeachment, the members of the said court shall respectively be sworn, truly and impartially to try and determine the charge in question, according to evidence; and that no judgment of the said court shall be valid unless it shall be assented to by two third parts of the members then present; nor shall it extend farther than to removal from office and disqualification to hold or enjoy any place of honor, trust, or profit, under this state. But the party so convicted shall be, nevertheless, liable and subject to indictment, trial, judgment, and punishment according to the laws of the land.

Party accused to be allowed counsel.

XXXIV. AND IT IS FURTHER ORDAINED, That in every trial on impeachment, or indictment for crimes or misdemeanors, the party impeached or indicted shall be allowed counsel, as in civil actions.

Law of the state.

XXXV. And this convention doth further, in the name and by the authority of the good people of this state, ORDAIN, DETERMINE, AND DECLARE, that such parts of the common law of England and Great Britain, and of the acts of the legislature of the colony of New-York, as together did form the law of the said colony on the nineteenth day of April, in the year of our Lord one thousand seven hundred and seventy-five, shall be and continue the law of this state, subsubject to such alterations and provisions as the legislature of this state shall, from time to time, make concerning the same. That such of the said acts as are temporary, shall expire at the times limited for their duration respectively. That all such parts of the said common law, and all such of the said statutes and acts aforesaid, or parts thereof, as may be construed to establish or maintain any particular denomination of christians or their ministers, or concern the allegiance heretofore yielded to, and the supremacy, sovereignty, goverument or prerogatives, claimed or exercised by the king of Great Britain and his predecessors, over the colony of New-York and its inhabitants, or are repugnant to this constitution, be and they hereby are, abrogated and rejected. And this convention doth further ORDAIN, that the resolves or resolutions of the congresses of the colony of New-York, and of the convention of the state of New-York, now in force, and not repugnant to the government established by this constitution, shall be considered as making part of the laws of this state; subject, nevertheless, to such alterations and provisions as the legislature of this state may, from time to time, make concerning the same.

Grants by the king after a certain period, void.—Charter rights and former grants preserved.

XXXVI. AND BE IN FURTHER ORDAINED, That all grants of land within this state, made by the king of Great Britain, or persons acting under his authority, after the fourteenth day of October, one thousand seven hundred and seventy-five, shall be null and void; but that nothing in this constitution contained, shall be construed to affect any grants of land, within this state, made by the authority of the said king or his predecessors, or to annul any charters to bodies politic, by him, or them, *or any of them*, made prior to that day. And that none of the said charters shall be adjudged to be void, by reason of any nonuser or misuser of any of their respective rights or privileges, between the nineteenth day of April, in the year of our Lord one thousand seven hundred and seventy-five, and the publication of this constitution. AND FURTHER, that all such of the officers, described in the said charters respectively, as, by the terms of the said charters, were to be appointed by the governor of the colony of New-York, with or without the advice and consent of the council of the said king, in the said colony, shall henceforth be appointed by the council established by this constitution for the appointment of officers in this state, until otherwise directed by the legislature.

Purchases of lands from the Indians.

XXXVII. AND WHEREAS it is of great importance to the safety of this state that peace and amity with the Indians within the same, be at all times supported and maintained: AND WHEREAS the frauds too often practiced towards the said Indians, in contracts made for their lands, have, in divers instances, been productive of dangerous discontents and animosities: BE IT ORDAINED, that no purchases or contracts for the sale of lands mrde since the fourteenth day of October in the year of our Lord one thousand seven hundred and seventy-five, or which may be hereafter be made with or of the said Indians, within the limits of this state, shall be binding on the said Indians, or deemed valid, unless made under the authority and with the consent of the legislature of this state.

Free exercise of religion.

XXXVIII. AND WHEREAS we are required, by the benevolent principles of rational liberty, not only to expel civil tyranny, but also to guard against that spiritual oppression and intolerance wherewith the bigotry and ambition of weak and wicked priests and princes have scourged mankind: this convention doth further, in the name and by the authority of the good people of this state, ORDAIN, DETERMINE, AND DECLARE, that the free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever hereafter be allowed within this state to all mankind: *Provided*, that the liberty of conscience hereby granted shall not be so construed as to excuse acts of licentiousness, or justify practices inconsistent with the peace or safety of this state.

No minister or priest to hold any office.

XXXIX. AND WHEREAS the ministers of the gospel are, by their profession, dedicated to the service of God and the cure of souls, and ought not to be diverted from the great duties of their function; therefore no minister of the gospel, or priest of any denomination whatsoever, shall, at any time hereafter, under any pretence or description whatever, be elegible to or capable of holding, any civil or military office or place within this state.

Militia.—Magazines.

XL. AND WHEREAS it is of the utmost importance

Number of senators reduced to 32, and the manner of reducing.

III. That from the first Monday in July next, the number of senators shall be permanently thirty-two, and that the present number of senators shall be reduced to thirty-two in the following manner, that is to say: The seats of the eleven senators composing the first class, whose time of service will expire on the first Monday in July next, shall not be filled up: and out of the second class the seats of one senator from the middle district, and of one senator from the southern district, shall be vacated by the senators of those districts belonging to that class, casting lots among themselves; out of the third class the seats of two senators from the middle district, and of one senator from the eastern district, shall be vacated in the same manner; out of the fourth class the seats of one senator from the middle district, of one senator from the eastern district, and of one senator from the western district, shall be vacated in the same manner; and if any of the said classes shall neglect to cast lots, the senate shall in such case proceed to cast lots for such class or classes so neglecting. And that eight senators shall be chosen at the next election in such districts as the legislature shall direct, for the purpose of apportioning the whole number of senators amongst the four great districts of this state, as nearly as may be according to the number of electors qualified to vote for senators, which shall be found to be in each of the said districts by the census above mentioned; which eight senators so to be chosen shall form the first class.

Mode of increasing the assembly till it arrive to 150, and the legislature to apportion senators and assemblymen.

IV. That from the first Monday in July next, and on the return of every census thereafter, the number of the assembly shall be increased at the rate of two members for every year, until the whole number shall amount to one hundred and fifty; and that upon the return of every such census, the legislature shall apportion the senators and members of the assembly amongst the great districts and counties of this state, as nearly as may be, according to the number of their respective electors: *Provided*, That the legislature shall not be prohibited by any thing herein contained, from allowing one member of assembly to each county, heretofore erected within this state.

True construction of the 23d article of the constitution declared.

V. And this convention do further, in the name and by the authority of the people of this state, ORDAIN, DETERMINE AND DECLARE, That by the true construction of the twenty-third article of the constitution of this state to nominate all officers other than those who by the constitution are directed to be otherwise appointed, is vested concurrently in the person administering the government of this state for the time being, and in each of the members of the council of appointment. By order,

A. BURR,

President of the Convention, and Delegate from Orange County.

Attest,

JAMES VAN INGEN, JOSEPH CONSTANT, } Secretaries.

CHAP. 252.

AN ACT recommending a Convention of the People of this State.

Passed May 13, 1845.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

[The first five sections of this act are applicable to the proceedings of the November election, of 1845, which is already passed. The following sections apply to what remains to be accomplished.

§ 6. In case the said canvassers shall certify and declare a majority of such ballots or votes to be for a convention, it shall and may be lawful, and it is hereby recommended to the citizens of this state, on the last Tuesday of April, eighteen hundred and forty-six, to elect by ballot, delegates to meet in convention for the purpose of considering the constitution of this state, and to make such alterations in the same as the right of the people demand, and as they may deem proper.

§ 7. The number of delegates to be chosen to such convention shall be the same as the number of members from the respective cities and counties in this state. All persons entitled to vote for members of Assembly, shall be entitled to vote for such delegates. Such election shall in all respects be conducted as is now provided by law for the election of members of Assembly—the polls opened and held in the same manner, and the canvass and other proceedings to determine the election of such delegates as is now prescribed by law for electing members of Assembly.

§ 8. The delegates so chosen, shall meet in convention at the Capitol in the city of Albany, on the first Monday of June, eighteen hundred and forty-six. They shall, by ballot, elect one of their number president, and may appoint one or more secretaries, a printer, and such door-keepers and messengers as their convenience shall require—and such delegates and the secretaries of the convention shall be entitled to the same mileage for travel and the same per diem allowance, as is now paid to the members of the legislature, and the printer, door-keepers and messengers shall receive the same compensation as is provided by law for similar services and attendance upon the Assembly. The amount of pay shall be certified by the president of the convention, and shall be paid by the treasurer of the state, on the warrant of the comptroller, in the same manner as members of the legislature are paid. It shall be the duty of the secretary of state to attend said convention at the opening thereof, and he and all public officers shall furnish such convention with all such papers, statements, books or other public documents in their possession as the said convention shall order or require—and it shall be the duty of the comptroller to furnish the members with all such stationery as is usual for the legislature while in session.

§ 9. The proceedings of the said convention shall be filed in the office of the secretary of state, and the amendments to the constitution agreed to by the said convention, shall be recorded in his office—the said amendments shall be submitted by the convention to the people for their adoption or rejection at the annual election to be held on the Tuesday next succeeding the first Monday in November, one thousand eight hundred and forty-six—and every person entitled to vote at the election may vote thereon, in the election district in which he shall then reside, and not elsewhere. The said amendments shall be so prepared and distinguished by numbers or otherwise, that they can be voted upon separately, and they shall be so voted upon, unless the convention shall be of opinion that it is impracticable to prepare them so that they can be voted upon in that manner—and if the said convention shall by resolution declare that in its judgment the said amendments cannot be prepared so as to be voted upon separately, they shall be voted upon together. In either case, the convention shall prescribe the form of the ballot, the publication of the amendments, and the notice to be given of the election. In case the said amendments shall be voted upon separately, every person entitled to vote thereon, may vote for or against any one or more of them. At the election mentioned in this section, the inspectors in every election district shall provide a suitable box to receive the ballots given upon the said amendments, which ballots shall have the word "constitution" written or printed, or partly written or printed, upon them, so that when they are folded it will appear on the outside of the ballot—and all provisions of the laws of this state in relation to the election of officers at the general election, shall apply to the voting upon the said amendments, so far as the same can be made applicable thereto, and the votes given upon the said amendments shall be given and canvassed, and all the proceedings shall be had in regard to them, as nearly as practicable in the manner prescribed by law in respect to the votes given for Governor. Each of the said amendments which shall receive a majority of all the votes given upon it at the election mentioned in this section, shall be deemed and taken to be a part of the constitution of this state, and shall take effect from and after the thirty-first day of December in the year one thousand eight hundred and forty-six, unless the said convention shall prescribe some other time on which the same shall take effect—and each of the said amendments which shall not receive a majority of all the votes given upon it at the said election, shall be void and of no effect.

§ 10. All wilful and corrupt false swearing in taking any of the oaths prescribed by this act, or by the laws of this state made applicable to this act, or any

other mode or form in carrying into effect this act, shall be deemed perjury, and shall be punished in the manner now prescribed by law for wilful perjury.

§ 11. It shall be the duty of the Secretary of State, to cause this act to be published once a week for twelve successive weeks previous to the election, in not less than two or more than four of the public newspapers published in each of the several counties in this state in which two or more public newspapers are published—and in the public newspaper in all those counties where only one public newspaper is published—and shall also cause to be transmitted to the several clerks of counties in this state such number of copies of this act, with the necessary forms and instructions, as shall be sufficient to supply the several officers who are to perform the duties prescribed by this act—and the said clerks of counties shall distribute the same to such officers, and the expense of publishing and distributing the same and all other legal expenses incurred in printing for the convention shall be audited by the Comptroller, and paid by the Treasurer according to law.

§ 12. The copy of the certificate of the state canvassers shall in no case be directed to the clerk of a county, unless the office of sheriff of such county shall then be vacant, nor to the first judge, unless the office of sheriff and clerk shall both be vacant.

§ 13. The county of Hamilton and the county of Fulton, shall jointly elect one delegate to the convention in the same manner, and the votes shall be canvassed and transmitted in the same manner as now provided by law in reference to members of Assembly.

EXTRACTS FROM GOV. WRIGHT'S MESSAGE.

"The people of the state have, with a unanimity almost unknown in the history of elections, decided in favor of the proposition to hold a convention 'to consider of alterations and amendments to the constitution' of the state. This decision will relieve the present legislature from a mass of responsible labor, which has consumed much time, for several of the past years. Important propositions to amend that instrument have held prominent places upon the calenders of business of both houses for many consecutive sessions, and have given occasion for elaborate investigations and protracted debates. This whole subject has now been referred, by the people themselves to a convention; and it would be highly improper in me to attempt to press upon your consideration questions thus wisely disposed of, so far as our agency is concerned.

"Upon this legislature, however, is devolved the constitutional duty of re-apportioning the representation in the legislature, according to the returns of the state census just completed; and as the election to choose delegates to the convention is to be held on the last Tuesday in April next, justice to the people of the counties, the representation of which is to be increased by the change of population, would seem to require that the apportionment should be made in season to permit this election to take place under it. No injustice will be done, by this proceeding, to the counties, the representation of which is to be lessened by the new appointment, as they will still have, in the convention, that representation to which their population entitles them, while the other class of counties will have no more.

"Justice to the whole population equally requires this action at the hands of the legislature. The same people who have voted upon the question of a convention are to be represented in that body, and they have a right to be equally represented. I will not, however, occupy your time in the discussion of a point about which I feel sure there can be no diversity of opinion, but will content myself with recommending that this subject occupy your early attention, so that the law may be passed in time to prepare for the election in April."

LONG LEASES, AND GREATER THAN A FEE.

Judge Edmonds in his able opinion in an assessment case on this page, mentions an assessment lease for **800** years. In the case of Gen. Striker, in which the opinion of the Hon. John Porter, Senator from the Seventh Senate District, is given, the lease to Lovett by the New-York Corporation officers was for **1000** years. Some sales were made for **2,000,000** years. His Excellency, the Governor, has not referred to these in his message and probably was not aware of them. The Convention will no doubt look to this new mode of confiscating estates.

ASSESSMENT DECISION.

Supreme Court.. Before Judge EDMONDS.

DOUGHTY *vs.* HOPE.

This was an action of Ejectment brought upon a Corporation Assessment lease. The plaintiff bid off the defendant's house and lot at a Corporation Assessment sale, and the Corporation executed to him a lease of the premises in question, upon which he brought a suit to recover possession of the thus demised premises.

The counsel for the defendant insisted that the assessment was illegal and void, also that all the proceedings of the corporation and their officers in the premises subsequent to the sale, were also illegal and void, and that the lease was of no account whatever.

The plaintiff's counsel insisted that the assessment lease was conclusive evidence, that all the proceedings were regular and according to law.

In place of going into a detailed statement of the objections made by the defendant's counsel, we will content ourselves with reciting a part of a proceeding of the mayor and common council, as to the particular and general character of these assessments, and our readers will doubtless agree with us that this document is more than conclusive—for it is awfully alarming. It is as follows:

"*Preamble and resolutions for paying Contractors and applying to the Legislature for act to buy under sales for assessment.*

"WHEREAS, there are large amounts due several persons, contractors for building sewers, regulating streets and avenues, and paving and setting curb and gutters, and also for filling low and sunken grounds, as set forth in the original schedule. prepared by the street commissioner, and which improvements were made, and work done in pursuance of the several respective ordinances of the Common Council, and which were to be paid for by assessments on the property benefitted, and as soon as the amounts of said assessments were collected.

"AND WHEREAS, the assessments levied in pursuance of said ordinances have been for some time confirmed, but collection of the same only in part made, and most of them returned as unpaid and uncollectable, and the property liable thereto, and on which, the same were a lien, agreeable to the laws of the state advertised, and offered for sale by the street commissioner, at the recent sale of property for assessments; ***but the amount due on said assessments could not be realized, by reason of there being no bids at such sales for said property, the amount of said assessment being more than the present market value of said property so liable,*** in consequence whereof the said contractors are still unpaid."

The preamble and resolutions from which the above is extracted, were adopted by the Board of Aldermen on the 22d of February, 1841; concurred in by the Board of Assistants the 25th of February, 1841, and approved by the acting Mayor the same day, and are to be found in the volume of printed proceedings of the Common Council, known as volume 8, pages 121 and 122, and also to be found in the documents accompanying the report of the Select Committee from the Senate appointed to investigate assessment abuses in the city of New-York, in Senate Document No. 100, of 1842. page 278, of that report.

JUDGE EDMONDS after fully examining the merits of the case, delivered the opinion which goes to sustain the dignity of the man in the decision of the judge. It is as follows;

NEW-YORK ASSESSMENT DECISION.

DOUGHTY *vs.* HOPE.

BY THE COURT—EDMONDS, JUDGE.

EJECTMENT.—The plaintiff seeks in this suit to obtain possession of a lot in the Twelfth Ward, which he bought for eight hundred years at a corporation assessment sale, and the whole question is, whether that sale and the proceedings out of which it grew, have been regular and valid?

A corporation must show a grant either in terms or by necessary implication for all the powers it attempts to exercise, especially when it claims the right to divest individuals of their property without their consent. The exercise of this franchise being restrictive of individual rights cannot be extended beyond the letter and spirit of the grant, and being a high prerogative, should not be exercised, where the right is doubtful. *Beatty vs. Knowler*, 4 *Peters* 152. *Vanhorne's lease vs. Dorrance*, 2 *Dall.* 316. *Sharp vs. Spier*, 4 *Hill.* 83.

Every statute authority in derogation of the Common Law to divest the title of one, and transfer it to another, must be strictly pursued, or the title will not pass. The power under which the plaintiff claims, is a mere naked power in the corporation, and its due execution cannot be made out by intendment—it must be proved. He must show step by step that every thing has been done, which the statute makes essential to the due execution of the power, and he must therefore be careful to collect and preserve all the facts and muniments on which the validity of his title depends. *Williams vs. Peyton*, 4 *Wheat.* 77. *Rorkindorf, vs. Taylor*, 4 *Pet.* 349. *Jackson vs. Shepard*, 7 *Cowen*, 88. *Atkins vs. Kinnan*, 20 *Wend.* 241, *&c.*

Testing this case by these rules, it is objected to the legality of the sale,

I. That the resolution authorising the improvement out of which the assessment grew, was not published, nor were the ayes and noes published. It is insisted that this is not a mere idle ceremony; a mere direction to the Common Council, which they may disregard at pleasure, but was designed by the statute for a wise and beneficent purpose, namely—that of giving to the parties interested, notice of the threatened invasion upon their individual property—that it was devised as the mode of putting all upon their guard, and giving to all the opportunity of defending themselves.

No principle is more familiar to the Common Law than that which secures to every one due notice and a full opportunity of defence against all invasions of life, liberty or property; and it would seem that publication of the resolution and the votes, being the only notice which the statute requires, should be indispensably necessary to the validity of the proceedings under it. But that question is not now open for discussion, at least before me, because the Supreme Court have held that the part of the statute which requires this publication is merely directory—that the Common Council may disregard it at their pleasure, and that therefore a compliance with its requirements is not essential to the validity of a title acquired under it.

II. It is objected that the estimate of the expense of the improvement, and the assessment of the amount thereof were not made out before the improvement was made, but afterwards. It is evidently, the whole scope and object of the statute, that an estimate of the expense shall be made out before the work is done; and, that the estimated amount shall be collected prior to the same event. The corporation, who are the actors, being possessed of a mere naked power, and having no interest in the matter, the object was to protect the parties really interested: those, for instance, whose lands are to be burdened, and whose money is to make the improvement, against an improvident expenditure of that money, and to insure them that due economy shall be regarded in making it. The whole machinery devised by the statute of estimates, assessments, and collections, can have no other object in view than to insure to those at whose expense the improvement is made, that it be done in the cheapest manner, and that is, to have the money collected beforehand, and to have the work done for cash. If this is not the sole object of that machinery, all its parts are exceedingly cumbersome and clumsy; but if it is the object, they are well calculated, if fairly carried out, to answer the end in view.

This object was entirely disregarded in this case. The form of the law was attempted to be followed, but its spirit neglected. The work was done by contract before the money was collected, and at a price necessarily enhanced by the credit which the contractor was obliged to give for his labor. The augmentation is not at the expense of the corporation, through whose acts the plaintiff claims title, but of the owners, whose

the year 1841, the Hon. Murray Hoffman, then Assistant Vice Chancellor, granted an injunction to General Striker, against the Corporation of the City of New-York, restraining that body and its officers from delivering the lease of Gen. Striker's land to Lovett. . His Honor the Chancellor dissolved this injunction, and we think in this the Chancellor was decidedly in error. Vice Chancellor Hoffman, in giving his opinion on granting the injunction applied for by Peter G. Stuyvesant and others, uses this strong and very appropriate language:

"*I am sensible of the inconvenience to the city from an interference at this time, and do it with unfeigned reluctance, but I am thoroughly satisfied that a more palpable and pernicious disobedience of law has never marked the course of any corporate body than characterises the proceedings complained of. I have a deep rooted conviction that ultimately the decision must be against the Corporation.*"

We add, so it has been, by a vote of 16 to 1.

The case of Gen. Striker is of the same character as that of Stuyvesant and others.

This case was argued before the Court for the Correction of Errors by Samuel Stevens, Esq., of Albany, and Richard Mott, Esq., of New-York, for General Striker; and P. A, Cowdrey, Esq., of New-York for Kelly, the Corporation of New-York, and Bidders at Assessment Sales.

We have received two letters from Mr. Mott, of which the following are copies.

Albany, Dec. 29, 1845.

The Case of *Striker vs, Kelly*, has been reversed by a vote of vote of 16 to 1. SenatorJones voted for affirmance.

There were several opinions given. Sen. Porter gave an opinion for reversal in toto. The Lt. Governor, Lott, Bockee, and Jones were for sustaining the coustitutionality of the Law in favor of the Supreme Court Justices acting as a Court in every respect, and not as Commissioners or in any limited capacity. The decision is to be settled by resolution to-morrow. The Senators were all clear that the lease was not evidence of the right to sell, and that the Collector's affidavit must be produced, made according to the act of 1816, that the assessment had not been paid.

The case now stands Reversed 16 to 1.

Yours, &c. R. MOTT.

Albany, Dec. 31st, 1845.

To E. Meriam, Esq.

Dear Sir—The case of *Striker vs. Kelly*, is finally disposed of by the Court of Errors. When the case came up before the Court for the decision, Senator Porter gave a written opinion for Reversal. Senator Jones said he had prepared a short opinion for affirmance, the substance of which he said was that the judgment of the Supreme Court should be confirmed upon the ground that the Lease was conclusive evidence to *his mind* that all the requirements of the statute had been complied with and that the purchaser ought not to be put to the trouble and expense of examining the proceedings previous to the giving of the lease. The Lt. Governor gave a written opinion that the judgment of the Supreme Court ought to be confirmed in one point, to wit: That the Justices of the Supreme Court acted in these Street matters as a Court of general jurisdiction, and not as mere Commissioners under the statute. But that on the point that the lease was evidence of the regularity of the previous proceedings, he thought the judgment of the Supreme Court ought to be reversed.

Senator Lott then offered a resolution declaring the Law of 1813, giving power to the Supreme Court to act in the Street matters, to be constitutional. Several Senators rose and opposed the resolution, and said they could not vote for the resolution. The resolution was disposed of, as appears in the copy, which I here send you:

"IN THE COURT FOR THE CORRECTION OF ERRORS

Garret H. Striker, }
vs. }
Thomas Kelly. }

Senator Lott offered the following resolution:

Resolved, That in the appointment of Commissioners of estimate and assessment in relation to the opening or altering of Streets in the city of New-York, the Justices of the Supreme Court act as a Court and not as mere statutory Commissioners, and that the power conferred upon that Court by the act of the 9th of April, 1813, to reduce several laws relating to the City of New-York into one act is constitutional in this raspect.

Senator Wright moved to lay the same on the table and the said motion was adopted. Ayes 7, nays 6.

J. R. ELWOOD, Clerk."

This resolution taken in connection with the able opinion of Senator Porter for the Reversal of the judgment of the Supreme Court, I think will end this long contested controversy, and leave the rightful owners in the quiet possession of their own property.

Yours with much respect,

RICHARD MOTT.

We shall give the opinion of Lieut. Governor Gardner in the case of Striker vs. Kelly, delivered in the Court for the Correction of Errors, in our next; also the copy of a resolution passed by the Court for the Correction of Errors, in reference to the lease and affidavit, which is very broad, covering all other cases of assessments.

OPINION OF SENATOR PORTER,

Delivered in the Court for the Correction of Errors, Dec. 29th, 1845.

GARRET H. STRIKER *vs.* THOMAS KELLY.

The important questions presented in this case are,

1st. Do the Justices of the Supreme Court in performing the duties assigned to them by the New-York Street Laws, "hold any other office or public trust" than as Justices of that Court.

2d. Was the demand of the tax, and an affidavit of the demand an indispensable prerequisite to the sale of the property, and necessary to be proved.

3d. Was the lease itself sufficient evidence of the right to sell; and did it prevent all inquiry, whether the provisions of the Statute had been complied with.

1st. In respect to the first proposition, the destinction, I apprehend is, whether the new power conferred upon the Supreme Court, is one of a nature that properly belongs to the office of Judge of that Court, or whether it is not one that belongs to another office, or other public trust.

In order to arrive at a satisfactory conclusion upon this question, it is necessary to understand the nature of the office of Judge of the Supreme Court, and of the office of which the New-York Street Laws have bestowed in this respect. By repeated decisions, the Supreme Court have determined that in all this class of cases they act as commissioners, and wholly under the power derived from the statutes that these powers do not exist independently of legislative authority; and are not incident to their judicial office.

In the matter of Beekman Street, (20 John. 271,) Spencer, Ch. J., in delivering the opinion of the Court, said, "It is true we act collectively and in term time, and a majority present control the proceedings; but we act as commissioners, and in the same way and manner as we used, individually, under the insolvent act. The statute is our guide, and we must proceed by the rules, and in the manner it prescribes. The general powers and jurisdiction of this court, as regards the application now before us, cannot be brought into exercise." Here we have the Supreme Court saying, not only that they act in these cases as Commissioners, but that they cannot act as a Court; that although the matter is brought by the statute within their jurisdiction; yet that it is a special delegated power, to be exercised according to the statute and not subject to their general judicial powers, as the Supreme Court, they possess no control over the proceedings. Their high powers to be used according to the provisions of the common law, for the protection of the life, liberty and property of the citizens, and for the direction and control of all subordinate jurisdiction and tribunals have no analogy to those of Street Commissioners. The directions of the Statute are to be followed as far as they go, and when they cease, the powers and duties of the judges cease. The case of Stafford vs. Mayor, &c., of Albany, (7 John. 541) proceeds upon the same principle. In that case the statute had granted to the Mayor's Court of Albany, powers similar in many respects to those conferred upon the Supreme Court, in regard to the Streets in New-York. An assessment had been made and confirmed by the Court, and afterwards they attempted to act judicially, as if the subject matter had been under their control like other matters pending in their Court, they set aside the proceedings for irregularity.

The effect of this order annulling the proceedings in the Mayor's Court, came up in the Supreme Court and in their opinion they say, "The proceedings in question do not partake at all of the judicial proceedings. The authority under which the Mayor's Court acted was specially derived from the Legislature, and must be strictly pursued; when, therefore, the assessment was confirmed, the Court had no further powers; they were *functus officio*."

There is no analogy between this proceeding and the judicial proceeding of a Court of Record in the progress of a cause. The Court act quasi Commissioners. In 6 Cowen 572, in the matter of Third Street in New-York, Savage Ch. J., giving the opinion of the court, says, "The Report being once confirmed becomes irrevocable, unless it be voluntarily waved by all parties concerned. We do not act as a Court in these matters, but as Commissioners appointed by the legislature:" And the matter of Canal Street (11 Wend. 155), Savage, Ch. J., again says, "When we are reviewing the proceedings of the Commissioners of estimate and assessment, we act as Commissioners. and when once their report is confirmed by this Court it cannot be opened and reviewed again in the same Court. we cannot set aside those proceedings upon the merits any more than arbitrators can do so, after having signed and published their award."

In the matter of Mount Morris Square, (2 Hill 19) Cowen J., in giving the opinion of the court, and after repeating and confirming the principle above quoted from "matter of Beekman Street," adds, "our powers are likened to those of a Commissioner under the insolvent act. Our award is, therefore, like that of an inferior magistrate having a limited jurisdiction; and who have no power to review it on motion any more than a justice would have to open a summary conviction before him." These cases with others that might be cited, show clearly that the Supreme Court have, from the first time the question arose, deemed themselves as acting as Commissioners in these cases; and the argument by which that conclusion is sustained, appears to me to be conclusive.

But it is said that the acts of the Supreme Court in all the proceedings under the laws in question, are strictly judicial in their nature; and that the cases all proceed upon the broad distinction between what the court may do in the exercise of its common law jurisdiction, as the Supreme Court of the State, and what it may do under a special and limited authority, conferred upon it by the statute. I do not feel that there is any necessity for combatting the position that the court acts in this respect judicially; for I do not perceive how an admission of that fact furnishes any aid to the argument of the Supreme Court. It is not sufficient that it be shown that the judges act judicially in these cases, for there are many judicial proceedings that cannot constitutionally be embraced within the powers and functions of the judges of the Supreme Court. The proceedings of a Surrogate, or a Recorder's Court, or Courts Martial, are judicial proceedings, yet it will not be pretended that judges of the Supreme Court could be authorized by statute to hold either of those courts. Could the legislature give the judges power to hold the courts of justices of the peace and try the issues now confined to those courts without conferring upon them "another office or public trust? Or could it authorise them to hold the Court of Common Pleas in any county? If it can be said, that because the power is judicial in its nature, it is therefore properly conferred upon the judges, it must also be said that the judicial power in the cases I have mentioned may also be conferred upon them. This will hardly be pretended. The constitution did not confer upon the Supreme Court all manner of judicial power. The general common law powers and jurisdiction of a Supreme Court of judicature of the State are recognised by the Constitution; and it appears to me that when that instrument declares that the judges of that Court shall "hold no other office or public trust," it intends to confine their powers and duties to those that appropriately belong to that high tribunal, and forbids their holding any other office or trust. be the same judicial or otherwise. The design obviously was to confine the labors, services and responsibilities of those who set in that court sacredly and inviolably to those judicial duties and powers which are inherant in that Court, or which from analogy appropriately belong there, as the highest court in the state of original common law jurisdiction, those powers and duties are well understood. They are sufficiently ample and sufficiently burdensome in themselves without adding thereto other judicial powers. I do not deny that the Legislature may apply those powers to new cases; but they must be such as come within the acknowledged scope of its general jurisdiction. It cannot enlarge or abridge its powers. It may authorize the court to perform particular duties that it had never before performed, but they must be duties belonging to its department of the government; to the Supreme Judicial Court in the exercise of its common law powers. They must not only be judicial duties, but they must be such judicial duties as appertained to that court, in the exercise of the jurisdiction of the Supreme Court of Judicature. The clause of the constitution in question is inhibitory, and forbids that any other powers shall be conferred upon the Judges, and that any other duties shall be required of them, than such as belong strictly to the Supreme Court of Judicature. A natural jealousy is therein expressed, and also a wish to confine those high offices of the government to the exercise of their appropriate power and duties. If the Legislature can authorize and require the Supreme Court to perform these duties of Commissioners under the street law. because they are judicial in their nature, what hinders from requiring them to perform a large portion of the duties of the Canal Board, for they are clearly judicial in their nature.

Again, the admitted fact, that these proceedings are not of such a character, that they can be revised until they are brought before the court by a certiorari, and are again passed upon by the Court, and made a matter of record in that Court; proves to my mind that these judges are performing some other trusts and duties than such as belong to the Court. Indeed the prevailing opinion in the Supreme Court seems to conclude that while performing the duties in question, the Court is then acting as "an inferior and limited Court." This is also necessarily implied from the fact that it is subject to the command contained in the certiorari to make return of their proceedings into the Supreme Court. This subjection to a review in the Supreme Court can only exist in the case of a subordinate tribunal, and of itself proves that it is a distinct subordinate tribunal. If then the Judges while performing those duties of Commissioners, form a distinct, inferior and subordinate tribunal it follows necessarily that it must be another tribunal than the Supreme Court. If another tribunal, and the officers composing it are in fact the Judges of the Supreme Court, how can it be said that they hold no "other office or public trust"? While executing that commission, they are compelled to lay aside their character, and divest themselves of their power as judges, and assume that of Commissioners clothed with special and limited powers.

There is no difficulty in the same individual holding two offices at the same time. The same person may be first Judge of a county, and also Surrogate of the same county; and he may hold the different courts and exercise the different powers without causing any confusion of ideas, or of business. In the same manner, the judges of the Supreme Court, if not forbidden by the constitution, might sit in and exercise all the powers of any inferior judicial tribunal. But while performing those duties, it would be a misnomer to call that tribunal the Supreme Court. It would be inferior to it, and subject to its supervisions, and of course not the same tribunal. It cannot in any proper or admissable sense be said to be executing the same "office or public trust." It is possible that these commissioners may possess many of the attributes of a Court, as is supposed by the Chancellor in the case of the President, &c. of Brooklyn, vs. Patchen, (8 Wend. 47,) but the question does not turn upon that fact but rather upon this, whether it is inferior and subordinate, and therefore another.

I cannot, therefore, come to any other conclusion than that the statutes which confer upon the judges of the Supreme Court the powers in question do profess to give them another office or public trust than the Judges of that Court, and that, as in this respect, they violate the constitution, and are void.

2nd. The statutes (sess. laws of 1816, p. 114, sec. 2) provides that when an assessment shall not be collected "and the Collector shall make affidavit of his demanding the money two several times of such owners as may reside in the city, and that they have neglected or refused to pay, then and in any such case, it shall be lawful to sell." The legality of the sale was objected to on the trial. Among other things for the reason that there was no proof of a demand of payment before proceeding to sell, nor any evidence that the collector had made the affidavit required by the statute. The objection was overruled, and it is now insisted that this defect was fatal to the defence. The answer is, that the same act declares that the lease to be executed to the purchaser "shall be conclusive evidence that the sale was regular according to the provisions of this act." The question then is: Suppose there was in fact no demand or affidavit as required by the act? Does the giving of the lease cure the defect? There are certain cardinal rules on this subject which I find no where better expressed than by Bronson J., in Sharp vs. Spier, (4 Hill 86). He says, "every statute authority in derogation of the common law, to divest the title of one and transfer it to another, must be strictly pursued, or the title will not pass. This a mere naked power in the corporation and it its due execution is not to be made out by intendment. It must be proved. It is not a case for presuming that public officers have done their duty, but what they have in fact done must be shown." The cases there cited abundantly sustain those positions. The section of the act above cited, is the one that gives the power of sale; and that confers the power only upon a *condition*. The language is express, "Whenever the Collector shall make affidavit of his demanding the money two several times, and there is neglect or refusal to pay, then and in such case it shall be lawful," &c. The object of the law was that there should be not only a regular assessment and non-payment, but also that the owner should have personal and official notice of the assessment and demand of payment, and that should be repeated to give him ample warning that he was in danger of losing his land. These were not meant to be an idle ceremony to be dispensed with or not at the pleasure of the corporation, but as a substantial protection against surprise, and this provision of the act shows how cautious and guarded the law is, when the title of the owner of land is to be divested. This act is in derogation of the common law right of the owner, and is therefore to be construed strictly, and strictly followed. By the terms of the act no sale could take place until the affidavit of the collector had been made. The affidavit is made as necessary as the assessment. The statute has made it a condition upon which the corporation may proceed to sell, and the courts have no power to dispense with it. It is no answer, that the act has declared that the "lease shall be conclusive evidence that the sale was regular." It is not regularity of the proceedings at the sale, or immediately connected with the act of selling that is sought to be impeached. The objection is that the foundation of the right to sell at all, however regular the proceedings at the sale, has not been sustained by the proof. I cannot consider this part of the statute as dispensing with the proof of a demand and affidavit any more than with the proof of assessment, or any other important step in these proceedings. In my opinion the defendants failed to show a power to sell in the corporation, and for this reason also, the judgment should be reversed.

I have not thought it important to examine the other points made at the argument, for the reason that they have not been passed upon by the majority of the Supreme Court who concurred in the decision then given; but on both points above considered I am of the opinion that the judgment of the Supreme Court should be *reversed*.

The vote for Reversal, was as follows:

Lt. Governor, Senators Backus, Beekman, Beers, Bockee, Deyo, Emmons, Hand, Hard, Lester, Lott, Porter, Sedgwick, Smith, Varney and Wright.—16.

For Affirmance.—Senator Jones.—1.

The vote on Senator Wright's motion to lay Senator Lott's resolution to sustain the Justices of the Supreme Court in holding another office *(for such is its bearing)* on the table, was as follows:

Ayes—Senators Hand, Lester, Porter, Sedgwick, Smith, Varney and Wright.—7

Noes.—Lt. Governor, Senators Backus, Beekman, Bockee, Folsom and Lott.—6.

On the introduction of this resolution the Chancellor made a speech in favor, although he had not heard the argument. This speech we shall review (on paper) before the State Convention, to assemble in June, in reference to some suitable provision being made in the Constitution to restrain a Judge from expressing opinion in Court in any case in which he has not heard the argument.

ister an oath to any person, concerning any matter submitted to the board, or connected with their powers of duties.

"§ 9. Each board of supervisors shall, as often as may be necessary, appoint some proper person to be their clerk, who shall hold his office during their pleasure, and whose general duty it shall be,

"1. To record in a book to be provided for the purpose, all the proceedings of the board:

"2. To make regular entries of all their resolutions or decisions, on all questions concerning the raising or payment of monies:

"3. To record the vote of each supervisor on any question submitted to the board, if required by any member present: And,

"4. To preserve and file all accounts acted upon by the board.

"§ 10. The clerk shall receive a reasonable compensation for his services, to be fixed by the board of supervisors, and to be paid by the county.

"§ 11. The books, records and accounts of the boards of supervisors, shall be deposited with their clerk, and shall be open, without reward, to the examination of all persons.

"§ 12. It shall be the duty of the clerk to designate upon every account upon which any sum shall be audited and allowed by the board, the amount so audited and allowed, and the charges for which the same was allowed; and he shall also deliver to any person who may demand it, a certified copy of any account on file in his office, on receiving from such person six cents for every folio of one hundred and twenty-eight words contained in such copy.

"§ 13. It shall be the duty of the several boards of supervisors, as often as shall be necessary, to cause the court-house and jail of their respective counties to be duly repaired, at the expense of such counties; but the sums expended in such repairs shall not exceed five hundred dollars in any one year.

"§ 14. They shall also cause to be prepared within the jails of their respective counties, or elsewhere, at the expense of such counties, so many solitary cells for the reception of convicts who may be sentenced to punishment therein, as the court of common pleas of the county may direct.

"§ 15. Each member of the board of supervisors shall be allowed a compensation, for his services and expenses in attending the meetings of the board, at the rate of two dollars per day.

"§ 16. If any supervisor shall refuse or neglect to perform any of the duties which are or shall be required of him by law, as a member of the board of supervisors, he shall, for every such offence, forfeit the sum of two hundred and fifty dollars.

"§ 17. The mayor, recorder and aldermen of the city of New-York, shall be the supervisors of the city and county of New-York; and all the provisions of this Article shall be construed to extend to them respectively, except where special provisions inconsistent therewith, are or shall be made by law, in relation to the city and county of New-York."

ANNUAL PUBLICATION BY SUPERVISORS.

§ 1. It shall be the duty of the board of supervisors in each county in this state, annually to publish in one or more public newspapers in such county, the name of every individual who shall have had any account audited and allowed by said board, and the amount of said claim so allowed, together with the amount claimed, and also their proceedings upon the equalization of the assessment roll.—*Session Laws of* 1839, *chap.* 369.

CORRECTION OF ERRONEOUS TAXES BY THE BOARD OF SUPERVISORS.

"§ 2. The board of supervisors in and for the city and county of New-York, may at any meeting of said board, at which the mayor or recorder shall be present, correct any erroneous assessment which may have been made by the assessors of either of the wards of the said city, for the year 1843, and may also correct any erroneous assessment which shall hereafter be made by any such assessors as aforesaid, provided application for such relief shall be made upon assessments in 1843, within three months after the passage of this act, and in all other cases within the period of six months after the assessment roll shall have been returned as required by law, and provided also proof is made to the satisfaction of such board of supervisors, by the affidavit of the applicant or other legal evidence that the said erroneous assessment did not result from any neglect on the part of the person or persons applying for relief."—*Session Laws of* 1844, *page* 384.

PENAL STATUTES APPLICABLE TO PUBLIC OFFICERS.

From 2d Vol. of Revised Statutes, page 581.

"§ 44. (Sec. 38.) Where any duty is or shall be enjoined by law, upon any public officer, or upon any person holding any public trust or employment, every wilful neglect to perform such duty where no special provision shall have been made for the punishment of such delinquency, shall be a misdemeanor, punishable as herein prescribed.

"§ 45. (Sec. 39.) When the performance of any act is prohibited by any statute, and no penalty for the violation of such statute is imposed, either in the same section containing such prohibition, or in any other section or statute, the doing such act shall be deemed a misdemeanor.

"§ 46. (Sec. 40.) Every person who shall be convicted of any misdemeanor, the punishment of which is not prescribed in this or some other statute, shall be punished by imprisonment in a county jail not exceeding one year, or by fine not exceeding two hundred and fifty dollars, or by both such fine and imprisonment.

"§ 47. (Sec. 41.) The court before which any person shall be convicted, of an offence punishable by imprisonment in a county jail, may sentence such person to be imprisoned in a solitary cell in such jail, if any such be erected; but such imprisonment shall in no case exceed thirty days in the whole."

REEFS OF ROCKS IN NEW-YORK HARBOR.

Copy of Memorial to Congress:

To the Honorable, the Senate of the United States:

The undersigned, citizens of the city of New-York, represent to your Honorable Body that the Harbor of New-York is obstructed by two dangerous Reefs of Rocks, for the particular locality and depth of each below the surface at low water, the undersigned refer to the published Charts in the archives of the Navy Department.

The undersigned ask that these dangerous rocks, in the very bosom of so important a harbor as New-York, may be removed, and that an appropriation may be made by Congress for that purpose. And your Memorialists, &c.

New-York, Dec. 31, 1845.

EDITED BY E. MERIAM.] NEW-YORK, FEB. 2, 1846. [VOL. I....No. 37

STATE CONVENTION.

In No. 2 of this volume we have given the entire copies of the Constitution of the United States, and the amendments thereto,—also the present Constitution of this State, and the amendments which have been made to that Instrument, and in No. 36, we have given a copy of the Constitution of 1777, and the amendments adopted in 1801.

It is but forty-four years from the adoption of the former Constitution, to the formation of the Constitution now in force, and but twenty-five years have elapsed since this new Constitution was approved, to the time fixed for the assembling of a convention for the formation of a *third* Constitution. Thus in a period of seventy years the people of the State of New-York will have changed the fundamental law no less than three times.

Human government, in its origin, was patriarchical, and from this form in the beginning, changes have been continually in progress, but human ingenuity has never yet been able to invent a form or frame of government that was perfect, nor never will; but the difficulty is not in the framing of fundamental laws, but it is in enforcing obedience thereto.

The great division of power in government has been allotted into three branches—the executive, the legislative, and the judiciary, and this division constitutes the essence of a republican form of government. These powers have not been so clearly defined in written Constitutions. Hence disputes arise, and these are of difficult determination.

Take the New-York assessment question for an illustration. In this case it is insisted that the justices of the Supreme Court cannot act under the street law of 1813, in nominating and appointing Commissioners of Estimate and Assessment, for the plain and obvious reason that it is another "office or trust," and therefore comes under the inhibitory provisions of the constitution which declares that the justices of the Supreme Court shall hold no other office or trust. See Constitution of 1821, article 4 sec. 7. Article 25 of the constitution of 1777 contains also an inhibition as to the same functionaries, but with a qualification that justices of the Supreme Court may hold the office of Delegate to the General Congress, but the word "trust" was not contained in that provision of the former Constitution. The appointing power has ever been one of much difficulty, and the people have always expressed a great anxiety in reference to its impartial exercise, more particularly in regard to the great preponderance it gave in the government to the officers exercising this power. Hence we find that in 1801, a convention assembled, the business of which was among other things to settle the construction of the twenty-third article of the Constitution of 1777 as to the appointment of officers.

The preamble is as follows:

"WHEREAS the legislature of this state by their act, passed the sixth day of April last, did propose to the citizens of this state, to elect by ballot delegates to meet in convention, "for the purpose of considering the parts of the constitution of this state, respecting the number of senators and members of Assembly in this state, and with power to reduce and limit the number of them as the said convention might deem proper; and also for the purpose of considering and determining the true construction of the twenty-third article of the constitution of this state relative to the right of nomination to office;"

The Convention determined as follows:

"V. And this convention do further, in the name and by the authority of the people of this state, ORDAIN, DETERMINE AND DECLARE, That by the true construction of the twenty-third article of the constitution of this state to nominate all officers other than those who by the constitution are directed to be otherwise appointed, is vested concurrently in the person administering the government of this state for the time being, and in each of the members of the council of appointment."

Now then we have a precedent here of great importance, and correctly adapted to the subject matter before us.

We have also a construction, for the convention declare in words so plain as not to admit of but one construction, that "the right to nominate all officers other than those who by this constitution are directed to be otherwise appointed, is vested concurrently in the person administering the government of this state for the time being, and in each of the members of the council of appointment." Commissioners of Estimate and Assessment are not among those "directed to be otherwise appointed," and therefore could only be appointed by the Governor and Council of appointment. Another inhibitory provision is to be found in section 41 of the constitution of 1777, declaring that no "new court or courts but such as shall proceed according to the course of the common law, and that trial by jury in all cases in which it hath heretofore been used in the colony of New-York shall be established and remain inviolate forever." A new power unknown to the course of the common law, in this Street law of 1813, is conferred upon the Supreme Court, and Judge Beardsley says this power "is a special power," and therefore a new court of limited jurisdiction, according to his reasoning. The right of trial by jury in all cases of taking land for a street was in use under the colonial government. See street law of 1691, and ante. p. 4. first full paragraph in second column.

Having thus briefly disposed of that provision that applies to the appointing power and the right of trial by jury, we come down to the present constitution. By section 7, of art. 4, it is provided as follows: "The Governor shall nominate by message in writing, and with the consent of the Senate appoint all judicial officers except justices of the peace." Section 9 of the same article provides and specifies what officers the Courts may appoint, and this disposes of the whole appointing power, under the new constitution so far as the courts are concerned.

The street law of 1813 is repealed by section 13, of art. 7, of the present constitution by these words: "and such acts of the legislature of this state subject to such alterations as the legislature may make concerning the same. But all such parts of the common law, and such of said acts or parts thereof, as are repugnant to this constitution ARE HEREBY ABROGATED." This disposes of the New-York street law of 1813.

We have been brief in this because we wish to bring the argument within the limits of a single page.

The appointing power is dangerous on account of its patronage—its great patronage. We feel confident that we shall surprise some of our readers when we quote from the Report of the Select Committee of the Senate, appointed by that body, on the memorial of P. A. Jay, and others, to investigate assessment abuses in the city of New-York, as per Senate doc. No. 100, of 1842, p. 12, 13 and 14. The Committee say:

"That there have been great and serious abuses in the mode of opening streets and avenues in the city of New-York, and the expenses attending the same, cannot be doubted by any person who has examined the subject; and these evils have mainly arisen from the loose and unguarded manner in which that important branch of authority has been exercised. For while in England, in the city of London, in Birmingham and other places, whose proper municipal regulations would seem to require as liberal extension of power to their local corporate governments as that of New-York, streets cannot be opened or widened without an act of Parliament, specially passed for that purpose, upon a due examination of all the circumstances of the case: yet in the city of New-York, they are opened or widened, and that in large numbers together, by a single resolution adopted by the two Boards of the Common Council, without any control, as was the case in opening all the streets and parts of streets not previously opened up to and including 42d street, by a resolution of April 6, 1835; and subsequently, September 12, 1836, another resolution was adopted to open all the streets from 42d to 57th streets. The reservoir on Murray's Hill, in the city of New-York, is on 42d street. This loose practice has grown up in modern times, for the more guarded one of an application to the supreme legislative authority which was in existence in that city, subsequent to 1792, when to authorise the first widening of John Street, an application was made to the Legislature then in session in that City, and before either house would act upon the petition, they sent a committee to examine the ground; upon the report of which committee, they enacted that the damages to the owners whose lands were taken, should be appraised by a jury who should be composed of merchants—showing how careful they were in former legislation on this important subject. This appraisement is now made by three commissioners, appointed by the Supreme Court, who are generally nominated at the instance of the counsel of the corporation, although there have been instances where one of these commissioners has been selected by the court from names proposed by the corporation counsel, and by the opponents to the application, and another has been named by those opponents. It is difficult now to comprehend how the expenses in opening streets and avenues in that city could have been so very great as they are represented to have been, but of the fact of their being so very great, there can be no doubt; it is established by the receipts of commissioners for the same, exhibited before the committee. In the opening of the 7th Avenue, from 21st Street to 129th Street, which was confirmed in February, 1839, the amount awarded to the owners for land taken for the avenue, was $28,141.41, while the fees and expenses of that opening amounted to the large sum of $12,435.70, and if to that is added the collector's fees for collecting the assessments—$1,115.00, it will show a total of expenses paid by the owners of land on that portion of the Seventh Avenue for its formal opening, amounting to $13,550.70.

"The amount paid to the commissioners on that avenue for their services, at the rate of $4 per day, which is the highest sum allowed by the statute, is pay for *sixteen months'* services for each commissioner, in making the estimate of the land taken for that avenue, and assessing the value back again upon the land on each side of the avenue; and in opening this one street, of one hundred and eight blocks, of about 270 feet each, the commissioners were each engaged three times the whole period that the Legislature is employed in legislating for the State, and each of them received about three times the compensation that is paid to a legislator for passing the whole winter from his home in attending to the public business. And in addition to that, it was shown to the committee that commissioners were frequently engaged on several streets or avenues at the same time, taking their four dollars per day on each of those improvements; and that they received and were paid that compensation in some instances where they did not attend to the duties of their appointment, and in others where they attended but once or twice. If the case of the Seventh Avenue had been a solitary instance, the com-

a communication on this subject, in which he stated that "in many cases the injustice was so great, that he had firmly made up his mind to sell all his property in this State, and remove to where his property would be protected and placed on an equality with that of other citizens; and was only prevented from so doing by reason that it would not bring the prices of 1830, thereby was forced to stop the sale, having made some sacrifice."

"If the citizens of New-York are laboring under circumstances oppressive in believing that they have been greatly assessed and injured by the course pursued by these commissioners, that belief is, in the judgment of the committee, very extensive. The committee entertain the conviction that these errors on the part of the commissioners, have mainly arisen from the want of settled rules or principles in making their awards and assessments, and that such want of settled principles must always be experienced so long as those commissioners shall continue to be appointed for each individual case."

We will next refer to the Report made to the Senate by two of the clerks of the Supreme Court, viz.: Albany and New-York, and known as Senate document No. 31, of 1843, of vol. 3, p. 23 to 27, both inclusive.

We will next refer to Senate Document No. 109, of 1842, p. 27 and 273, to the letter addressed by Robert Emmet, Esq., recently appointed by the Chancellor, to the office of Assistant Register of the Court of Chancery, to Assistant Alderman Adams.

Having thus briefly passed over the question of princely patronage, we come next to the question of *Trustee*. The Revised Statutes, vol. 1, p. 721, sec. 45, abolishes all existing trusts, and subsequently creates three special trusts in section 55 of p. 723. By referring to the New-York Street Law of 1813, sec. 178, it will be seen that in the taking of land for a Public Square, Avenue, Street or Public Place, the Mayor, Aldermen and Commonalty, are declared to be seized of the same "*in trust*." This provision is repealed and here is therefore another abrogation of Street powers.

SUB-MARINE ASSESSMENT.

New wonders are continually presenting themselves. Wonders in the ocean—wonders in the atmosphere—in the storm—in the calm—in the frozen continents at the poles, and in the burning sands of the equator—but here is a new wonder, a nondescript of the temperate zone—a marine monster hatched upon the land—it is an assessment for a sewer in 13th Street and Second Avenue. This assessment is levied in part upon the bottom of the deep—upon the lower surface of an arm of the sea, known as the East River. The assessment extends 1000 feet from the shore to where the water is 50 feet deep. The ocean thus assessed has been advertised for sale, and bid off by the Corporation for the term of 1000 years. The Collector of the assessment has been unable to demand the assessment of the occupants, and a newspaper notice is of no avail, as no public journals that are printed on terra firma circulate among the finny tribes who occupy the assessed territory. A doubt too is raised as to the mode of relief it not being a matter of equitable cognisance, inasmuch as the assessment cannot be a cloud while a denser body intervenes, being that of condensed clouds. Ships of the largest class float upon the water that covers the assessed surface, and it has been in the same navigable state for about 1000 years. At the sale for the assessment no human being dare bid off the sea, lest he might leave it as an inheritance to those who are to have his estate, a paper title, that would be a cloud upon his memory as an awful testimony to posterity. It is barely possible that some subterranean convulsion may upheave the assessed premises, or that the sea may become depressed, or the land become elevated, but it is by no means possible that posterity will recognize the validity of a New-York assessment lease, made to themselves under an act of the Legislature which leaked out all its substance while in transit.

This assessment exceeds the aerial conceit erected in 122d Street, for an improvement called a sewer, built upon stilts above the surface—and is equal to the expense assessed for building a little drain in 17th Street, for which Mr. Henry Parish was charged $550, on 50 feet, fronting on the street.

UTICA MOVEMENT....STATE CONVENTION.

During the last summer several essays upon the STATE CONVENTION appeared in the "*Utica Democrat*" from the able pen of A. B. JOHNSON, Esq., of that city. In the month of December last, a letter was addressed to Mr. Johnson by the Hon. WARD HUNT, Formerly Mayor of the city of Utica, and several other gentlemen, requesting him to collect these essays together with a view to their republication in a pamphlet form, for more convenient use. Since the commencement of the present year we have received one of these pamphlets of 51 pages, and reprinted from it on this page one of the essays. In our next number we shall give, extracts from, Mr. Johnson's introductory. We now present the following in relation to Assessments under the head of

"MUNICIPAL CORPORATIONS.

"Our Constitution permits the infliction of special burdens, as well as the grant of special privileges. What would farmers think, should every man be compelled to macadamize the road in front of his farm; or even to repair it in an ordinary way, except by a rateable contribution with all the other inhabitants of his road district? Still in cities, persons whose lands lie along any street, are compellable by the city authorities, to pave and flag it, for the use of the public. And these exactions are often less disastrous to land owners than kindred requirements to fill up low streets, dig down high ones, open new streets, and drain wet ones; hence, in perhaps every city, hundreds of acres (especially of suburbs) remain with the owners at the sufferance of the local corporation, who can compel expenditures on the land that will induce its abandonment; while in some cities the option of abandonment will not avert liabilities which, in known cases, have deprived the owner of not the assessed property merely, but of all his possessions. Such extremes are of course not frequent, but so inherently vicious is the authority in question, that a member of almost any municipal corporation will display great resistance of temptation if he can pass through his civic year without sanctioning some wrong that would merit a penitentiary punishment if practised without the sanction of law. Even in Utica, of which the writer would speak kindly, it having generally borne its terrible municipal faculties as inoffensively as powers so perverse can be borne, yet in Utica the writer has purchased property in fee for a much less sum than the seller paid on it years previously, in assessments for grading and extending Columbia Street. But, as respects Utica, the writer, to avoid every suspicion of personality, excludes her from all the preceding and following remarks, except to the extent only in which they refer to her by name.

If the paving, flagging, &c., concern those alone who own adjacent land, with them alone should rest the option of paving or continuing unpaved; but if the paving concerns the whole city (and on no other principle can a city government claim authority over the question) on the property of the city at large should rest ratably the expense of the improvement. Any different proceeding exhibits the anomaly of power in one set of men to decree improvements another set are to pay for; since experience shows that costly improvements are seldom ordered when the real estate that is to be burdened with the expense is owned by the members of the corporation who decree the improvement. They are more usually in the position of the law-givers of whom 1800 years ago was said reproachfully: "Ye lade men with burdens grievous to be borne, and ye yourselves touch not the burdens with one of your fingers." To thus ward off onerous improvements from one's own real estate constitutes one of the benefits which makes a seat desirable in a city's councils; while another benefit consists in the ability to cause improvements to be made at the expense of others that will benefit some proximate property of one's own. So naturally corrupting are powers which permit such results that a person well acquainted with local interests, can usually foresee after every municipal election, where costly improvements will be ordered during the incoming civic year, and especially where costly improvements will be forborne, except such as are to be made at the common expense; and of so demoralizing public

sentiment is such legalized privateering on private property that when an officer is expert in the practice of it he is only deemed, by many, a shrewd man of enviable tact and thriftiness.

Nor are the foregoing the only temptations to evil. The system permits discriminations, which are sometimes used to revenge personal wrongs, sometimes to deplete specially over rich or absentee land-holders; hence, nothing is more common than the most abject petitions, private and public, direct and indirect, (through influential friends,) to avert meditated improvements which in contemplation of law are to benefit the remonstrants, who by virtue of such contemplation are to pay the expense. And still worse; nearly every corporation is surrounded by a multitude of retainers, who live by performing the labor and furnishing materials for corporate improvements. Like camp followers they are ready to rifle the slain and wounded whether the fallen be friends or foes; and being usually the belligerents most relied on for success at elections, every existing officer who is ambitious of a re-election propitiates them by his zeal in supplying them with spoils; and hence his chance of continuance in office is in an inverse proportion to the regard he exhibits for economy and resistance of expenditures. And nearly every city is afflicted with not merely one such army in possession, but with another in reversion, dependent on the success of a rival set of city officers at the incoming civic year; and as anticipators are ever more numerous than participators, the army of hope are generally able to change annually the city government, which comes into new hands tremulous with gratitude to partizans who press around for remuneration with an appetite sharpened by a year's abstinence, and made impatient by the consciousness that the time to make hay is while the sun shines. Even Utica has not always been exempt from the foregoing vices, that seem not the fault of individuals, but rather of the bad organization of which she participates; for one of her aldermen has said that when he once boggled about the expediency of some projected costly improvement he was told explicitly by the "wheel within a wheel" of his day, that if such was his course his career would be short. We have not, however, approached the point arrived at in some older city, when an alderman sometimes becomes so suddenly rich that it reveals a forgone secret iniquity as unmistakably as the sudden expansion of a spinster's waist.

But our concern is not with evils, which, like collusion with contractors, depend for their cure on a reformation of public morals, but on such as the State Convention may remedy. Every city improvement of a street must necessarily benefit some person specially, in addition to the general benefit. The like can be said whenever a country road district improves a highway, or our State constructs a canal, or the general government a harbor; but no where except in our cities, is the incidental beneficiary compelled to pay the *whole expense* of the improvement, so that the public which orders the improvement may obtain it free from charge. In thus reversing the principle which, in our general and State governments, looks to the public benefit only, and disregards incidental private advantage, we, in effect, take private property for public use without adequate compensation satisfactory to the owner, and concentrate ruinously on a few persons an expense which if borne ratably by all the property of the city would seriously afflict none. Men who congregate in cities may be supposed willing to bear all burdens that on known principles are incident to a dense and luxurious population; but we need not suppose them willing to see principles reversed and to suffer as morally right in cities what would be morally wrong in other places. Nothing exists analogous to the foregoing city code, except the former postage system that is now generally execrated, and mainly for the feature in which the analogy resides, namely: for making the incidental private benefit to individuals in employing the post office as a means of extorting from them all the expense of the mail system, thereby enabling the public to use it free of expense for all the lavish purpose of all the departments of government, just as the incidental private benefit to a man living on a paved street is made the pretext for extorting from him all the expense of the pavement, which is thereafter to be used free of expense by the community, with all the vehicles they may choose.

City assessments, which produce these results, are founded on a clause that exists in city charters directing the expense of civic improvements to be assessed on the real estate benefitted thereby, and on every piece of real estate in proportion to its respective benefit. The provision contains a pernicious fallacy in assuming that the benefit is only local, that it is confined to real estate, and that the local benefit is always pecuniarily equal to the improvement; while, practically, the filling up in front of a lot may cost a thousand dollars, and the lot subsequently be not saleable for half the money. Such inequalities, varying in degree, attend every improvement, and always to the impoverishment of the land holder, because no improvement is worth to any given lot more than its utility to the person who resides on the lot; but the improvement is not graduated to subserve his use alone, but it is made sufficiently extensive in dimensions for the public at large, and sufficiently elegant to gratify the public taste.

But were civic improvements to become a general charge on the city, we may be told that a constant struggle would ensue for their location, as we see in Congress when rivers are to be improved, and in our legislature when a penitentiary is to be constructed. Such struggles are, however, only for location, not for the construction of useless works. So in cities, the struggles would not be for useless improvements while the eyes of an interested community were gazing on the fraudful advocates. And, as an additional guard, every city should be limited in its annual expenditures to a given sum, to be annually ascertained by the vote of the people, as is now practised in country towns; or if the sum is to be determined by the legislature, it should be so small a per centage on the taxable property within the city as to leave no range for extravagance. Utica is limited now to an annual general tax of eight thousand dollars; but the power to burden by special tax is unlimited. This feature alone of our charter shows glaringly the inherent protective tendency of a common liability, and the inherent licentious tendency of withdrawing such protection from any portion of community: hence the cogency of the crafty maxim, "divide and conquer," for every whole can command justice by controlling at elections, and by remodelling, if necessary, the charter; but the specially oppressed can appeal only to sympathy and abstract justice, while the principle that afflicts them (special taxation for public improvements) bribes all the rest of the community to stifle sympathy and disregard justice. Even a knowledge by every man, that he may in turn suffer the like oppression, moves but feebly where the impending evil is contingent and may be remote: hence usually municipal legislators are left to an undisturbed control over the land holders whom they may choose to victimize, while others look on with the philosophic calmness that is proverbial to men in the contemplation of others' woes. The evil is fast detracting from the value of city property every where, while in places that are not vigorous in prosperity, real estate, in many locations is worse than valueless; still so few men are much effected by abstract considerations that special grievances are the last to find redress. The great source of hope consists in the possibility that the evil may fall within the correction of some wholesome general principles that the coming State Convention may think proper to adopt: as, for instance,

First: that no land shall be compulsorily taken for any street, rail-road, canal, public highway, or other purpose, without full compensation to the owner for his land and damage, irrespective of any benefit that may accrue to him or his remaining property by reason of the use to which the land is to be apportioned; and

Secondly: that no person or property shall be compulsorily assessed or taxed for any object, except ratably in common with all the persons or property within the community who shall order the tax or assessment.

A. B. JOHNSON.

☞ Mr. JOHNSON has rendered the people of the city of New-York, a service in this publication which is suitably appreciated. The Mayor of every city in the United States will be furnished with a copy of this paper by which they will be able to compare the views here expressed with their own city organizations. Municipal Corporations have grown into power so rapidly that the people look on with amazement, without knowing how to restrain the evils which they are bringing about.

WM. F. HAVEMEYER.

Mayor Havemeyer, as Chief Magistrate of the city, has sustained the public expectations of his ability and fidelity. Mr. Havemeyer is a practical business man, of business habits, and such learning is always useful to a public officer.

As a POLITICIAN Mr. Havemeyer was but little known: as a merchant and citizen, well known, and highly respected.

At the meeting held at the office of Mayor Harper for the relief of the sufferers by the great fire in Pittsburgh, the HON. MAYOR elect attended—STEPHEN ALLEN, Esq., was also there—seeing them sitting together in silence, it occurred to us that perhaps these two distinguished individuals were strangers to each other, we accordingly enquired of Mr. Havemeyer if he was acquainted with Mr. Stephen Allen; he replied that he was not. We had then the honor of making these two individuals (who have both distinguished themselves) acquainted with each other. We mention this occurrence as an illustration of the unmixedness of Mayor Havemeyer with public matters before he came into the executive chair.

Mayor Havemeyer has vetoed several acts of the Common Council, and in this he has done well, and had he vetoed more of them, he would have done better, and with these one-half the warrants drawn upon the City Treasury.

SUPERIOR COURT.—ASSESSMENT DECISION.

By the full Bench. Chief Justice JONES, and Judges OAKLEY and VANDERPOOL.

Platt vs. Stewart. Action of ejectment.

The Plaintiff bid off at a New-York assessment sale a house and lot belonging to defendant, which had been assessed for regulating the 5th avenue, a public highway. The assessment list was not signed by any of the assessors, and as is usual in these cases, they never had any meeting to make the assessment. (See Senate doc. No. 100, of 1842, p. 60.) The whole assessment was $43,922.25,—no small sum, surely; but this is the way the New-York assessment system is carried on. The corporation officers trusted to the conclusiveness of the lease to cover up the iniquity and as being a barrier to all investigation. This assessment, although not signed by the assessors or made by them, was confirmed by the Common Council by passing it through the hands of the clerks of each board, with a red tape tied around it, and without any examination, and then the Mayor approved it by writing his name on the wrapper. The defendant in this case is a colored woman, who supports herself and an invalid child by taking in clothes to wash. Her husband was a shoe blacker, and had by this business earned as much money as purchased him a lot, and with further savings built a small house which he left at his death to his widow and helpless child. The court decided that the assessment was void for not being signed and the sale therefore void. Mrs. Stewart had no money to pay for defending her rights, but some philanthropic individual sent to Judge Tallmadge a fifty dollar note as a fee for the poor woman and her helpless child. It was a noble act, and when we learn his name we will put it in capitals at the head of one of our columns. The Superior Court have done their duty in this matter.

CANDIDATES FOR THE STATE CONVENTION.

It is high time to call public attention to the selection of candidates for the State Convention, as members of that body from the county of New-York. We present the following list of names selected from the three political parties, viz.: James Kent, Albert Gallatin, Jonathan Thompson, Stephen Allen, Saul Alley, Jonathan Goodhue, John M. Bradhurst, Solomon Townsend, Peter Cooper, James Harper, Wm. F. Havemeyer, Bartis Skidmore, Richard Mott, Lea [illegible], F. R. Tillou, Luther Bradish, George Douglass, Abraham G. Thompson, Abraham Van Nest, Gulian C. Verplanck, Wm. B. Crosby, Charles H. Russell, Peter Schermerhorn, James I. Jones, Robert Smith, Murray Hoffman, David Hale, Philip Hone, Jona. I. Coddington, Theodore Sedgwick, Samuel Thompson, James Donaldson, Peter Lorillard, jr. Henry Grinnel, Richard S. Williams, Thomas T. Woodruff, Elisha P. Hurlbut John David Wolfe.

REVIEW OF PRESIDENT GARDNER'S OPINION.

In reviewing the opinion delivered in the Court for the Correction of Errors by the learned President of that tribunal, we have changed our plan and instead of taking up the opinion of the learned jurist, section by section in the order of its delivery, we proceed at once to examine the New-York Street powers which he discusses, and trace them step by step from the commencement to the present time, and in doing this we shall probably travel a path not noticed by any of the very learned counsel who argued this case before the courts.

On the first of October, 1691, a street law in relation to the city of New-York, was passed by the Colonial Legislature. It was sent to the Governor and Council for their assent, and by them returned with a *proviso*, which proviso was appended to the bill, as an amendment, and in that shape it became a law. *See ante. p.* 4. That act provided that in all cases of the taking of land for a street, that a jury should be summoned, and their award should be paid or tendered to the owner, before the land could be converted to public use. This act remained in force during the continuance of the Colonial Government, and was by the general provision of the Constitution of 1777, article 35, made a law of this State. By art. 41 of the same constitution, the right of trial by jury in all cases where it existed under the Colonial Government was *continued*, and the same provision is made in sec. 2 of art. 7, of the Constitution of 1821. In 1786 the colonial act of 1691, was repealed, and a new act, very similar in its provisions was enacted. *See ante. p.* 6.

On the 6th of April, 1792, the Legislature passed an act for extending Roosevelt Street and Frankfort Street in the city of New-York, in which they appointed five persons, viz. Richard Furman, Abraham Rhinlander, George Stanton, Joseph Stringham and John Stagg, Commissioners of Estimate and Assessment. The assessment after being made by these Commissioners and signed by a majority of them, and sealed with their respective seals, and returned to the Mayor, Aldermen and Commonalty, was binding and conclusive upon the owners, a lien and prior incumbrance upon the land assessed, and the Treasurer of the city was authorised to sue for the amount in case of non-payment, in any court of record in this state.

In 1793, a similar act was passed in relation to John Street, in which Commissioners were appointed by the Legislature.

In 1795, an act of the same purport was passed in relation to Beaver Street, and Banker Street.

On the 6th of April 1787, *(see ante. p. 4)* the Legislature passed an act for the regulation of streets, building of sewers, &c. in the city of New-York, and authorized the Mayor, Aldermen and Commonalty to appoint five freeholders to make estimate and assessment, which assessment, in writing, on being returned to the Common Council and ratified by them, shall be conclusive upon the owners of houses and lots assessed. In the Chapel Street cases in which the Supreme Court quashed the certioraries, which they had previously granted, they say: "The powers exercised by the Common Council of the city of New-York, are for the most part, either legislative, executive, or ministerial, and a *certiorari* only lies to inferior courts and officers who exercise judicial powers." *See ante. p.* 181. In this opinion Mr. Chief Justice Nelson concurred. These are precisely the same powers that the Justices of the Supreme Court exercise as Street Commissioners—the one for regulating—the other for opening Streets. The distinction between the two is without a difference.

These powers were not judicial then. The Commissioners could not issue execution, nor could such a precept be issued until a suit had been commenced in a Court of Record and a judgment obtained, and a similar provision in the act of 1813, is contained in section 186 of that act. The Supreme Court in assessments cannot issue execution until a suit is subsequently brought in a court and judgment obtained.

An act was passed on the 2d of April, 1807, authorising application to be made to the Supreme Court or one of the Justices thereof for the appointment of Commissioners of Estimate and Assessment, and the Court were empowered to confirm their reports.

On the 9th of April, 1813, an act was passed authorising application to be made to the Supreme Court, of Judicature of this State for the appointment of Commissioners, and the Court were authorised to *nominate* and *appoint* any person being citizens of the *United States*. *See Section* 178. By section 187 it is provided that in case of death, refusal to serve, or resignation, that application may be made to the Supreme Court, or *one* of the Justices thereof, and by the act of 1818, it is provided that whenever commissioners shall thereafter be appointed by the Supreme Court or *one* of the Justices thereof, &c. We have thus given a brief history of the origin of this street power, and its transfer from one set of persons to another. It is a "*special power*" and besides its exercise is confined to a LOCAL DISTRICT. Now we most respectfully ask the learned PRESIDENT how he is to get over this difficulty? It is not an enlargement of the general jurisdiction of the Court for it is confined to a LOCAL DISTRICT, and by the act of April 20, 1839, it must be exercised at particular terms, and not otherwise, and in particular places. The Justices of the Supreme Court under the act of 1813, perform precisely the same duty that was performed by Richard Furman and his associates, in the confirmation of the report under the act of 1792, and in neither case could the judgment be enforced until a suit shall be first commenced and a *judgment obtained in a court of law*. The transfer of power of the *nominating* and appointing, from the Legislature to the Court, or one of the Justices thereof, does not make the executing of the power a *judicial* act because it is confered upon a court or one of its justices, and the transfer of the confirming of the assessment, which was by the respective signing and sealing of the commissioners and delivery to a particular class of officers, to the Supreme Court or one of the Justices thereof, does not alter the character of the duty to be performed. By the act of April 20, 1839, the corporation are to nominate one commissioner, the owners of the property another, and the court a third. *Is this "general jurisdiction?"*

"Having shown, as we conceive, most clearly both the origin and character, of the New-York Street power, and that it is a matter of decidedly local character and therefore the justices of the Supreme Court exercising it are in this mere local functionaries, and not a court of general jurisdiction, it follows that we should now look at the constitutional inhibitions and to the construction which the convention which framed amendments to it, put upon the powers of the Supreme Court, and upon the power of appointment of officers. By Art. 25 of the Constitution of 1777, it is provided that the judges of the Supreme Court shall not at the same time hold any other office, except that of delegate to the general Congress. Art. 27 provides that the courts shall appoint their clerks, attorney, solicitors and counsellors; and art. 23 provides that *all* officers except those specified shall be appointed by the council of appointment; and art. 5 of the amendment of 1801, is expressly declatory of that power. By the Constitution of 1821, sec. 7 of art. 5. it is provided that the justices of the Supreme Court shall hold no other office or trust, and the elegibility for delegate to the general congress is taken away. By sec. 9, of art. 4, the power is given to the courts to appoint their clerks, and by sec. 7 of art. 5, it is provided that the appointment of all judicial officers shall be made on the nomination of the governor to the senate in writing, and in sec. 13 of art. 7, it is provided that all state laws then in force which conflict with the provisions of the new constitution are null and void.

The nominating of Commissioners of Estimate and Assessment for the performance of specific duties of a most extraordinary character, with a princely patronage for the exercise of powers unknown to the constitution, is the performance of the duties of another office, than that of a Justice of the Supreme Court. It is a little remarkable, and is also worthy of particular notice here, that an application was made at the December Special Term of the Supreme Court in 1840, held by Chief Justice Nelson, by Mrs. Winifred Mott, sister of General Striker, for relief in the matter of the assessment for the pretended opening of the same avenue for which her brother was assessed. The motion was opposed by Mr. Cowdrey, counsel of the Corporation, on the ground that in the appointment of the Commissioners and in confirming their Report, the Justices of the Supreme Court acted as Commissioners and not as a Court, and they had exhausted their power in the premises. The Chief Justice sustained this objection and refused relief. The same learned counsel in the case of Mrs. Mott's brother, General Striker, in the same assessment proceeding, took the opposite ground and insisted that the Justices in all respects, as to the appointment of Commissioners, and confirming their reports, acted as a

If by the statute the authority is not conferred upon the court in its corporate capacity, it is not in the power of language to do it. n

And in the second place if the power is not judicial then the authority to hear, try and judge, is not of that character. o

I am aware that the act of 1813 declares that the application may be made to the justices of the Supreme Court, or one of the justices, &c., but it was not seriously contended that these statutes being in *pari materia* intended to provide distinct tribunals to perform the same services. p

The justices of the Supreme Court in legal language mean the Court, and one of them may discharge the duties under the act, because by the Constitution one may hold the court.

The statute relative to referees confers powers upon the Supreme Court in many respects similar to the present. q

They are authorized without the consent of parties to appoint referees, who shall hear the evidence and in the first instance determine the question of law and fact. r

Those decisions may be reviewed (at the instance of either party who has any thing to allege against them) by the Supreme Court, who may send the cause back or enter judgment on the report. s

It might be objected in this case with equal plausability that the appointment of the referees was not a judicial but an executive act, and the legislative encroachment might proceed step by step until the Supreme Court would be compelled to appoint the State officers. t

Should it be said that in the case of referees, the parties litigant were in Court. I answer that the Supreme Court exercises the same power of review in cases of arbitration upon the mere agreement of the parties under the statute. u

The referees are officers of the court, and so are the commissioners *quasi* officers, and may be compelled like them to perform their duty by attachment. [Matter of Canal St.] v

The mode of acquiring jurisdiction varies in each of the cases. w

The suit may be commenced by declaration in the case of a reference, by the agreement of the parties, and petition in that of arbitration, and in the present by application to the Court, followed by the appointment of the commissioners.

That the legislature have the right to confer jurisdiction upon the Supreme Court by proceedings of the nature designated, and cannot, it appears to me, be questioned. x

It is analagous to proceedings in admirality, where the proceedings are in rem, and where the only notice to the parties interested in the property is by advertisement in the newspapers. y

Again the practice under the statute in this case shows that the justices must have acted as a court. z

The commissioners are appointed by rule, entitled in, and entered in the records of the Supreme Court, reciting a petition presented to the *court* and the order made by the *said court*. *aa*

The report is made to the court, and the order of confirmation is made by it and entered in the same book, and with an effect at least equal to a record of the Supreme Court for final judgment in other causes. *bb*.

In addition to this, the papers are placed upon *their* files and certified by *their* clerk, under *their* seal. *cc*.

The practice in this controversy is the same with all other proceedings under this act, and it has occurred to me as a feature in all these cases most extraordinary and peculiar, that mere Road Commissioners should not merely use the office, books, clerk and seal of the Supreme Court, but should also assume the official designation and act in the name of that high tribunal. *dd*.

This practice, however, is entirely consistent with the provision of this law, and the inference from both is the truth of the proposition. *ee*.

That by the statutes I have referred to, new judicial powers have been conferred upon the Supreme Court to be exercised by that court, and not otherwise. *ff*

It follows that the authority thus given must be exercised by the Supreme Court as a court of general jurisdiction. *gg*

I am unable to conceive how powers thus explicitly court, and not as commissioners, and Chief Justice Nelson, and Mr. Justice Beardsley sustained him. Mr. Justice Bronson dissented. If for nearly forty years parties applying for relief are denied because the act complained of is not judicial, and when at last resort is had to the constitution and the plea of lapse of time is set up—it surely comes with a very bad grace.

Mr. Justice Bronson, in the matter of 39th Street said: "It has been fully settled that we do not act as a court, but as commissioners under the statute to discharge the special trust or office." Mr. Justice Cowen in the matter of 37th Street said: "It has been, however, so often held that our powers are summary, those of a mere special commissioner, like the powers of commissioners under the act of insolvency that we are perhaps hardly warranted in having the question debated." Chief Justice Savage, in the matter of Third Street in the city of New-York, said, "We do not act as a court in these matters, but as commissioners appointed by the Legislature." Chief Justice Spencer in the matter of Beekman Street, said, "It might be a question how far the Legislature can impose such duties on the judges." In 1814 a memorial was presented to the Legislature for the repeal of the New-York Street Law, on account of its unconstitutionality. *See ante. p.* 253 The Select Committee appointed by the Senate of this State in 1841, to investigate assessment abuses in the city of New-York, in their Report, p, 20, of Senate Document No. 100, of 1842, say: "It is well known that the judges of the Supreme Court in confirming these reports in street openings, do not act as a court but as Commissioners under the Statute." Mr. Justice Cowen, in the matter of 37th St., said: "On the words we are a *Court*, it is said, and may act as such on the matter in all respects, including the hearing of motions to set aside proceedings on the merits for irregularity, defect or nullity." Suppose the Statute had said the Supreme Court shall execute process for the city and county, would it have been the less turning us *quasd hoc* into Sheriff because of the title? It is difficult, I apprehend, to combat the argument of Spencer, Ch. J., in the matter of Beekman Street, that by whatever name we may be called in the delegation of power, this cannot vary the nature of the thing, and so long as we act at all, we act as Road Commissioners." Mr. Justice Bronson in the matter of 11th Avenue and other streets, said, "In executing the street law of 1813, we are but commissioners discharging a special trust. The principle has been settled more than thirty years, and it is now quite too late to call it in question. The principle has been fully carried out, by refusing to set aside the proceedings in street cases under any circumstances, on the ground while sitting as commissioners we had no power to recall that which had once been done. If we can execute the office of street commissioner for the city of New-York, the like powers may be conferred upon us in relation to any other town or county, or the duties of the office of Comptroller; Treasurer or Sheriff may be assigned to us, and thus the constitutional disqualification would be rendered a dead letter. For one I can never give such a construction to the fundamental law as will amount to a practical nullification of its provision. Indeed there is little room for construction." In another part of the very able opinion of Mr. Justice Bronson, he says, "It is never too late to look at the fundamental law."

The act of April 9th, 1813, authorises an application to the Supreme Court of Judicature of this State, or one of the Justices thereof, by the Mayor, Aldermen, and Commonalty of the city of New-York. At that time the Mayor, Recorder, Aldermen and Assistant Aldermen, formed the City Council, and formed one board for the transaction of business. In April, 1824, ante. p. 58, the Legislature passed a law for the reorganizing of the city government, in which it was provided that all the powers theretofore vested in the Mayor, Aldermen and Commonalty, should be vested in the Common Council, under the new organization. This act was conditional, viz: that it should be submitted to the people at an election to be held for that purpose, and if accepted by a majority of the voters, then it should become a law, *and not otherwise*. At the election but 667 votes were given in favor, and the act therefore became a nullity. This act was reenacted in April, 1828, in nearly the same form, and again submitted to the people, and again *rejected*, 3753 votes only being cast in its favor.

In 1829, the following year, a city convention was assembled, and agreed upon a bill, which was on the 7th of April of the next year, passed into a law for reorganizing the city government, by which the Mayor and Recorder were deprived of seats in the Common Council, and the Aldermen and Assistants were vested with the legislative powers of the corporation, and formed into two boards with concurrent powers and required to meet in separate chambers, and all reports and resolutions recommending any specific improvement, involving a tax or assessment, was required to be published in all the newspapers employed by the Corporation immediately after the adjournment of the Board, and whenever a vote should be taken, the *ayes* and *noes* shall be taken and published in the same manner. The Common Council were only vested with the *legislative powers* of the Corporation, hence a question arises whether the Common Council could make application to the Supreme Court, or one of the Justices thereof, for the appointment of Commissioners, not being the body named in the act of 1813. It will be seen by the Report of the Select Committee of the Senate appointed to investigate assessment abuses in the city of New-York, p. 14 of Senate Doc. 100 of 1842, that application was actually made (and granted) for the appointment of twenty-eight sets, or eighty-four Commissioners, when no authority was ever given by the Common Council for the application, as appeared by the testimony of Assistant Alderman Townsend, Chairman of the Street Committee of the Board of Assistant Aldermen, in 1835 and 1836. See the same Senate document, p. 102. The conclusiveness of confirmation provided for in sec. 178, of act of 1813, is taken away by the act of April 7, 1830, requiring he previous publication of the report and resolution, and the calling and publication of the ayes and noes, in taking the vote; and then again the question arises as to the right of the Aldermen and Assistants to execute a power given to the Mayor, Aldermen and Commonalty. Where several persons, or classes of officers, are vested with a power, all must unite in the execution, or else the power is not duly executed. The petition in this case was merely signed by the clerk of the Common Council, and did not recite what was done as a compliance with the law of April 1830, by which alone the justice of the Supreme Court could under any circumstances entertain the petition, independent of any constitutional inhibition. The proceedings complained of in these assessments are of a most flagrant character. The Senate of this State have in their archives bundles of petitions asking for an investigation into the abuses, and for relief from the depredations that had been committed in assessment proceedings. These memorials are signed by nearly all the leading men in the city of New-York, of both political parties.

Mr. Justice Bronson in this same case, in the Supreme Court, said, "Following out the principles which have already been settled in relation to this law, I think it conflicts with the Constitution, and cannot therefore be supported, and in this opinion I had the full concurrence of the late Mr. Justice Cowen." In another part of the same opinion, the same learned judge says, "In these and in all other forms in which the question has arisen, it has been uniformly held, that in executing the street law of 1813, we act as Commissioners appointed by the Legislature, and not as a Court." The same doctrine has been held by the Federal judiciary. By an act of Congress, passed in 1792, (2 Bis. 259) the Circuit Courts of the United States were directed to enquire into and decide upon the claims of certain persons to be placed upon the pension list. Several of these Courts declined to execute the law on the ground that the duties assigned to them were not of a judicial nature. The Circuit Court for the district of New-York, with Chief Justice Jay at its head, held that the act of Congress could only be considered as appointing Commissioners for the purposes mentioned in it, by official instead of personal designation, that the Judges regarded themselves as being the Commissioners designated by the act, and therefore as being at liberty to accept or decline that office."

The Constitution of the United States contains no inhibition against a judge holding another office, but it may be said that this was not holding another office, but merely an enlargement of the general jurisdiction of the Circuit Court. The act of Congress referred to is in the 2d vol. of Laws of the United States, page 28. We copy from it as follows: "Any commissioned officer," &c., "shall be entitled to be placed on the pension list," &c., "as the *Circuit Court* of the district in which they respectively reside, may think just, and every applicant shall attend the *Court* in person, and every *Circuit Court*, upon the proofs aforesaid shall," &c.

Hence the proceedings were to be had in the *Court*—that power was given to the *Court*, and the *Circuit Court* were to take the proofs. The appointment of Boat Commissioners by the Supreme Court, or one of the Justices thereof, is no more a judicial act than the taking the proofs, and placing of the names of the applicants upon the pension list under this act of Congress.

Mr. Justice Cowen on the matter of 87th Street, said: "It is indeed difficult to see what the provision in the constitution against a judge holding any other office is worth to the people of this State, if it can be avoided by turning a judge into a Commissioner of highways, a trustee of Colleges, &c., as the Legislature have in some few instances done. We have also, I believe, been declared members of the Police Courts in the city of New York. The office of Sheriff for that city, or indeed any other county in the State, might perhaps with as much constitutional propriety have been imposed as some of the duties I have attended to, and had the case been made as I assert it should have been, a reconsideration by the Legislature would have ensued, and the evil of the intervention of the peculiar business of the court been prevented."

Mr. Justice Bronson in giving an opinion in the Court for the Correction of Errors, in a case involving a constitutional question, said:

"We have under a government of laws now (as well to the Legislature as to the other branches of the Government; and if we wish to uphold and perpetuate free institutions, we must maintain a vigilant watch against all encroachments of power, whether arising from mistake or design, and from whatsoever source they may proceed." *Again he says:* "We are not at liberty to presume that the framers of the constitution, or the people who adopted it, did not understand the force of language." *And again he said,* "If we may get around the clause of the constitution, because it stands in our way, or we do not like it, we may in the same manner get around any other clause in that instrument, and this all hope of fixing the boundaries of power by written instruments will be at an end. In this way a solemn instrument, for such I think the constitution should be considered, is made to mean one thing by one man, and something else by another, until in the end it is in danger of being rendered a dead letter, and that where the language is so plain and explicit, that it is impossible to make it mean more than one thing, unless we first lose sight of the instrument itself, and allow ourselves to roam at large in the boundless field of speculation. For one, I have not venture on such a course. Written Constitutions of Government will soon come to be regarded as of little value if their injunctions may be first flatly overlooked, and the experiment of setting a boundary to power, will prove a failure. If this clause can be so construed it may then, I think be set down as an absolute fact, that the English language is too poor for the framing of fundamental law, which shall limit the powers of the legislative branch of the government." This reasoning of Mr. Justice (now Ch. Justice) Bronson is unanswerable and irresistible.

Mr. Senator Rogers, in the same case said, "To preserve the Constitution is our first duty: and if the legislature has for any cause encroached upon that sacred instrument; or if an erroneous construction has been given to it we are imperatively called upon to declare its meaning and assert its supremacy. Nothing can be more dangerous to free institutions, or to the rights of the people, than to encourage doubtful interpretations of the Constitution, contrary to its more plain and natural import as understood by the great body of its readers. The view taken of this question by Mr. Justice Bronson, should be attentively read by every individual in our State who considers the Constitution worth preserving."

Alexander Hamilton, in reference to assessments said: "Do we imagine our assessments operate equally? Nothing can be more contrary to the fact. Whenever a discretionary power is lodged in any set of men over the property of their neighbors, they will abuse it. Their passions, prejudices, partialities, and dislikes will have the principal lead in measuring the abilities of those whom their power extends; and assessors will ever be a set of petty tyrants—too unskillful, if honest, to be possessed of so delicate a trust, and too seldom honest to give them an excuse of want of skill. The genius of Liberty reprobates every thing arbitrary or discretionary in taxation. It exacts that every man, by a definite and general rule, should know what proportion of his property the State demands. Whatever liberty we may boast of in theory, it cannot exist in fact if assessments continue. The admission of them amounts is a new proof how often human conduct reconciles the most glaring opposites: in the present case the most vicious practice of despotic governments with the freest institutions and the greatest love of liberty."

It was a matter of immense concern in the framing of the fundamental law, to separate the judiciary from every other department of the government. Judges should be kept unbiased. In reference to the judiciary, Judge Hopkinson very appropriately remarked, that "The pure and upright administration of justice is of the utmost importance to every people; the other movements of the government are not of such universal concern. Who shall be the President, or what treaties, or general statutes shall be made, occupies the attention of a few busy politicians; but these things touch not, or but seldom, the private interests and happiness of the community; but the settlement of private controversies, the administration of law between man and man, the distribution of justice and right to the citizen in his private business and concern, come to every man's door, and is essential to every man's prosperity and happiness. Hence I consider the judiciary of a country the most important among the branches of government, and its purity and independence of the most interesting consequence to every man."

In this case the question of taking private property for public use, is involved, for the assessment sought to be collected from General Steiker, the plaintiff in this suit, was in effect, and in fact, taking private property for public use, without compensation, for the land was taken for the Ninth Avenue, and he was called upon to pay for it, and his money was as much private property as the land he was indirectly required to purchase. In reference to that branch of the subject Mr. Justice Story in speaking of the U. S. Constitution, says: "the concluding clause is, that private property shall not be taken for public use without just compensation. This is an affirmance of a great doctrine established by the common law for the protection of private property. It is founded in natural equity, and is laid down by jurists as a principle of universal law. Indeed, in a free government alone of all other rights would be comparatively worthless, if the government possessed an *uncontrollable* power over the private fortune of every citizen. One of the fundamental objects of every good government must be the due administration of Justice; and how vain it would be to speak of such an administration when all property is subject to the will or caprice of the legislature and rulers."

The Constitution of the State of New-York contains the same provision.

We have taken a wide range here, but it will be borne in mind that we are arguing this matter before the highest authority known in the government—before the people, and before the CONVENTION of the People—before the high dignitaries of the Commonwealth, who are shortly to assemble to form a fundamental law for the government of a body of freemen, for posterity—for millions yet unborn.

SENATOR PORTER'S OPINION.

We printed 6000 copies of the opinion of the Hon. John Porter, Senator from the Seventh Senatorial District, delivered in the Court for the Correction of Errors, in the last number of this paper, but there were some typographical errors in it which were not noticed until the whole number were struck off and the type distributed. We have set them up again with the correction, and it seemed to us that it was very important not to do so, independent of the correction, as the opinion of the Hon. the PRESIDENT of the Court and that of the HON. SENATOR should go together in this connection be given to the public, in order that both should be passed upon together by the people. We shall in a subsequent number continue our review of the opinion of the learned President and for that purpose have appended at the end of each paragraph of his opinion a letter of reference.

The letter of Counsellor Cowdrey to his Honor, Mayor Havemeyer, we said in our last we would try to give in the present number, but we lack space for that purpose, inasmuch as it requires a lengthy review.

OPINION OF SENATOR PORTER.

Delivered in the Court for the Correction of Errors, Dec. 29th, 1845.

GARRET H. STRIKER *vs.* THOMAS KELLY.

The important questions presented in this case are,

1st. Do the Justices of the Supreme Court in performing the duties assigned to them by the New-York Street Laws, "hold any other office or public trust" than as Justices of that Court.

2d. Was the denial of the tax, and an affidavit of it to be made an indispensable prerequisite to the sale of the property, and necessary to be proved.

3d. Was the lease itself sufficient evidence of the right to sell, and did it prevent all inquiry, whether the provisions of the Statute had been complied with.

1st. In respect to the first proposition, the distinction, I apprehend is, whether the new power conferred upon the Supreme Court, is one of a nature that properly belongs to the office of Judge of that Court, or whether it is not one that belongs to another office, or other public trust.

In order to arrive at a satisfactory conclusion upon this question, it is necessary to understand the nature of the office of Judge of the Supreme Court, and of the office which the New-York Street Laws have bestowed in this respect. By recorded decisions, the Supreme Court have determined that in all this class of cases they act as commissioners, and wholly under the power derived from the statutes; that these powers do not exist independently of legislative authority; and are not incident to their judicial office.

In the matter of Beekman Street, (20 John. 271.) Spencer, Ch. J., in delivering the opinion of the Court, said, "It is true we act collectively and in term time, and a majority present control the proceedings; but we act as commissioners, and in the same way and manner as we would, individually, under the insolvent act. The statute is our guide, and we must proceed by the rules and in the manner it prescribes. The general powers and jurisdiction of this court, as regards the application now before us, cannot be brought into exercise." Here we have the Supreme Court saying, not only that they act in these cases as Commissioners, but that they cannot act as a Court; that although the matter is brought by the statute within their jurisdiction; yet that it is a special delegated power, to be exercised according to the statute and not subject to their general judicial powers. As the Supreme Court, they possess no control over the proceedings. Their ample powers are to be used according to the provisions of the common law, for the protection of the life, liberty and property of the citizens, and for the direction and control of all subordinate jurisdiction and tribunals and have no analogy to those of Street Commissioners. The directions of the Statute are to be followed as far as they go, and when they cease, the powers and duties of the judges cease. The case of Stafford vs. Mayor, &c., of Albany, (7 John. 511) proceeds upon the same principle. In that case the statute had granted to the Mayor's Court of Albany, powers similar in many respects to those conferred upon the Supreme Court, in regard to the Streets in New-York. An assessment had been made and confirmed by the Court, and afterwards they attempted to act further, as if the subject matter had been under their control for other matters pending in their Court, they set aside the proceedings for irregularity.

The effect of this order annulling the proceedings in the Mayor's Court, came up in the Supreme Court, and in their opinion, they say, "The proceedings in question do not partake at all of the judicial proceedings. The authority under which the Mayor's Court acted was specially derived from the Legislature, and must be strictly pursued: when, therefore, the assessment was confirmed, the Court had no further powers: they were *functus officio*."

There is no analogy between this proceeding and the judicial proceeding of a Court of Record in the progress of a cause. The Court act quasi Commissioners. In 6 Cowen 572, in the matter of Third Street in New-York, Savage Ch. J., giving the opinion of the court, says, "The Report being once confirmed becomes irrevocable, unless it be voluntarily waived by all parties concerned. We do not act as a Court in these matters, but as Commissioners appointed by the legislature:" And the matter of Canal Street (11 Wend. 155), Savage, Ch. J., again says, "When we are reviewing the proceedings of the Commissioners of estimate and assessment, we act as Commissioners, and when once their report is confirmed by this Court it cannot be opened and reviewed again in the same Court. We cannot set aside those proceedings upon the merits any more than arbitrators can do so, after having signed and published their award."

In the matter of Mount Morris Square, (2 Hill 19) Cowen J., in giving the opinion of the court, and after repeating and confirming the principle above quoted from "matter of Beekman Street," adds, "our powers are likened to those of a Commissioner under the insolvent act. Our award is, therefore, like that of an inferior magistrate having a limited jurisdiction: and we have no power to review it on motion any more than a justice would have to open a summary conviction before him." These cases with others that might be cited, show clearly that the Supreme Court have, from the first time the question arose, deemed themselves as acting Commissioners in these cases: and the argument by which that conclusion is sustained, appears to me to be conclusive.

But it is said that the acts of the Supreme Court in all the proceedings under the laws in question, are strictly judicial in their nature: not that the cases all proceed upon the broad distinction between what the court may do in the exercise of its common law jurisdiction, as the Supreme Court of the State, and what it may do under a special and limited authority, conferred upon it by the statute. I do not feel that there is any necessity for combating the position that the court acts in this respect judicially: for I do not perceive how an admission of that fact furnishes any aid to the argument of the Supreme Court. It is not sufficient that it be shown that the judges act judicially in these cases, for there are many judicial proceedings that cannot constitutionally be embraced within the powers and functions of the judges of the Supreme Court. The proceedings of a Surrogate, or a Recorder's Court, or Courts Martial, are judicial proceedings yet it will not be pretended that judges of the Supreme Court could be authorized by statute to hold either of those courts. Could the legislature give the judges power to hold the courts of justices of the peace and try the issues now confined to those courts without conferring upon them "another office or public trust?" Or could it authorise them to hold the Court of Common Pleas in any county? If it can be said, that because the power is judicial in its nature, it is therefore properly conferred upon the judges, it must also be said that the judicial power in the cases I have mentioned may also be conferred upon them. This will hardly be pretended. The constitution did not confer upon the Supreme Court all manner of judicial power. The general common law powers and jurisdiction of a Supreme Court of judicature of the State are recognized by the Constitution: and it appears to me that when that instrument declares that the judges of that Court shall "hold no other office or public trust," it intends to confine their powers and duties to those that appropriately belong to that high tribunal, and forbids their holding any other office or trust, be the same judicial or otherwise. The design obviously was to confine the labors, services and responsibilities of those who sit in that court sacredly and inviolably to those judicial duties and powers which are inherent in that Court, or which from analogy appropriately belong there, as the highest court in the state of original common law jurisdiction.

Those powers and duties are well understood. They are sufficiently ample and sufficiently burdensome in themselves without adding thereto other judicial powers. I do not deny that the legislature may those powers to new cases: but they must be such as come within the acknowledged scope of its general jurisdiction. It cannot enlarge or abridge its powers. It may authorize the court to perform particular duties that it had never before performed, but they must be duties belonging to its department of the government; to the Supreme Judicial Court in the exercise of its common law powers. They must not only be judicial duties, but they must be such judicial duties as appertain to that court, in the exercise of the jurisdiction of the Supreme Court of Judicature. The clause of the constitution in question is inhibitory, and forbids that any other powers shall be conferred upon the Judges, and that any other duties shall be required of them, than such as belong strictly to the Supreme Court of Judicature. A natural jealousy is therein expressed, and also a will to confine those high offices of the government to the exercise of their appropriate power and duties. If the Legislature can authorize and require the Supreme Court to perform these duties of Commissioners under the street laws, because they are judicial in their nature, what hinders from requiring them to perform a large portion of the duties of the Canal Board, for they are clearly judicial in their nature.

Again, the admitted fact, that these proceedings are not of such a character, that they can be revised until they are brought before the court by a certiorari, and are finally passed upon by the Court, and made a matter of record in that Court: proves to my mind that these judges are performing some other trusts and duties than such as belong to the Court. Indeed the prevailing opinion in the Supreme Court seems to concede that, while performing the duties in question, the Court is the party as an inferior and limited Court." This is also necessarily implied from the fact that it is subject to the command contained in the certiorari to make return of their proceedings into the Supreme Court. This subjection to a review in the Supreme Court can only exist in the case of a subordinate tribunal, and of itself proves that it is a distinct subordinate tribunal. If then the Judges while performing those duties of Commissioners, form a distinct, inferior and subordinate tribunal? it follows necessarily that it must be another tribunal than the Supreme Court. If another tribunal, and the officers composing it are in fact the Judges of the Supreme Court, how can it be said that they hold no "other office or public trust"? While executing that commission they are compelled to lay aside their character, and divest themselves of their power as judges, and assume that of Commissioners clothed with special and limited powers.

There is no difficulty in the same individual holding two offices at the same time. The same person may be first Judge of a county, and also Surrogate of the same county: and he may hold the different courts and exercise the different powers without causing any confusion of ideas, or of business. In the same manner, the judges of the Supreme Court, if not forbidden by the constitution, might sit in and exercise all the powers of any inferior judicial tribunal. But while performing those duties, it would be a misnomer to call that tribunal the Supreme Court. It would be inferior to it, and subject to its supervision and of course not the same tribunal. It cannot in any proper or admissible sense be said to be executing the same "office or public trust." It is possible that these commissioners may possess many of the attributes of a Court, as is supposed by the Chancellor in the case of the President, &c. of Brooklyn, vs. Patchen, (8 Wend. 47.) but the question does not turn upon that fact but rather upon this, whether it is inferior and subordinate, and therefore another.

I cannot, therefore, come to any other conclusion than that the statutes which confer upon the judges of the Supreme Court the powers in question do profess to give them another office or public trust than that of Judges of that Court, and that, as in this respect, they violate the constitution, and are void.

2nd. The statutes (sess. laws of 1816, p. 114, sec. 2) provides that when an assessment shall not be collected "and the Collector shall make affidavit of his demanding the money two several times of such owners as may reside in the city, and that they have neglected or refused to pay, then and in any such case, it shall be lawful to sell." The legality of the sale was objected to on the trial. Among other things for the reason that there was no proof of a demand of payment before proceeding to sell, nor any evidence that the collector had made the affidavit required by the statute. The objection was overruled, and it is now insisted that this defect was fatal to the defence. The answer is, that the same act declares that the lease to be executed to the purchaser "shall be conclusive evidence that the sale was regular according to the provisions of this act." The question then is: Suppose there was in fact no demand or affidavit as required by the act? Does the giving of the lease cure the defect? There are certain cardinal rules on this subject which I could no where better expressed than by Bronson J., in Sharp vs. Spier, (4 Hill 96). He says, "every statute authority in derogation of the common law, to divest the title of one and transfer it to another, must be strictly pursued, or the title will not pass. This a mere naked power in the corporation and its due execution is not to be made out by intendment. It must be proved. It is not a case for presuming that public officers have done their duty,

SUMMARY PROCEEDINGS RELATIVE TO PUBLIC OFFICERS ACTING COLLECTIVELY OR INDIVIDUALLY.

From the Revised Statutes, Vol. 2 p. 486.

"§ 54. Whenever any writ of *mandamus* shall be issued out of the supreme court of this state, the person, body, or tribunal, to whom the same shall be directed and delivered, shall make return to the first writ of *mandamus;* and for a neglect so to do, shall be proceeded against as provided in the thirteenth Title of the eighth Chapter of this Act.

"§ 55. Whenever a return shall be made to any such writ, the person prosecuting such writ, may demur or plead to all or any of the material facts contained in the said return; to which the person making such return, shall reply, take issue or demur; and the like proceedings shall be had therein for the determination thereof, as might have been had, if the person prosecuting such writ had brought his action on the case for a false return.

"§ 56. Issues of fact joined in any such proceeding, shall be tried in the county within which the material facts contained in the *mandamus*, shall be alleged to have taken place.

"§ 57. In case a verdict shall be found for the person suing such writ, or if judgment be given for him upon demurrer or by default, he shall recover damages and costs, in like manner as he might have done in such action on the case as aforesaid; and a peremptory *mandamus* shall be granted to him without delay.

"§ 58. A recovery of damages by virtue of this Article, against any party who shall have made a return to a writ of *mandamus*, shall be a bar to any other action against the same party, for the making of such return.

"§ 59. The supreme court, or any justice thereof, shall have the same power to enlarge the time for making a return and pleading thereto, and for filing any subsequent pleading, as in personal actions.

"§ 60. Whenever a peremptory *mandamus* shall be directed to any public officer, body or board, commanding them to perform any public duty specially enjoined upon them by any provisions of law, if it shall appear to the court, that such officer, or any member of such body or board, has, without just excuse, refused or neglected to perform the duty so enjoined, the court may impose a fine not exceeding two hundred and fifty dollars, upon every such officer or member of such body or board; and such fine, when collected, shall be paid into the treasury. And the payment of such fine, shall be a bar to any action for any penalty incurred by such officer or member of such body or board, by reason of his refusal or neglect to perform the duty so enjoined.

"§ 61. A writ of prohibition shall only be issued out of the supreme court; and hereafter such writs shall be applied for upon affidavits, by motion, in the same manner as writs of *mandamus*. And if the cause shown shall appear to the court to be sufficient, a writ shall be thereupon issued, which shall command the court and party to whom it shall be directed, to desist and refrain from any further proceedings in the suit or matter specified therein, until the next term of the said supreme court, and the further order of such court thereon; and then to show cause, why they should not be absolutely restrained from any further proceedings in such suit or matter.

"§ 62. Such writ shall be served upon the court and party to whom it shall be directed, in the same manner as a writ of *mandamus;* and a return shall in like manner be made thereto by such court, which may be enforced by attachment, as herein before provided.

"63. If the party to whom such writ of prohibition shall have been directed, shall, by instrument in writing to be signed by him, and annexed to such return, adopt the same return, and reply upon the matters therein contained, as sufficient cause why such court should not be restrained as mentioned in the said writ, such party shall thenceforth be deemed the defendant in such matter; and the person prosecuting such writ may reply, take issue or demur, to the matters so relied upon by such defendant, and the like proceeding shall be had for the trial of issues of law or fact joined between the parties, and for the rendering of judgment thereupon, as in personal actions.

"§ 64. If the party to whom such writ of prohibition shall have been directed, shall not adopt such return as above provided, the party prosecuting such writ, shall bring on the argument of such return, as upon rule to show cause; and he may, by his own affidavit and other proofs, controvert the matters set forth in such return. And the court, after hearing the proofs and allegations of the parties, shall render judgment, either that a prohibition absolute, restraining the said court and party from proceeding in such suit or matter, do issue, or a writ of consultation, authorizing the court and party to proceed in the suit or matter in question.

"§ 65. If the party to whom such first writ of prohibition shall be directed, shall adopt the return of the court thereto as above provided, and judgment shall be rendered for the party prosecuting such writ, a prohibition absolute shall be issued; if judgment be given against such party, a writ of consultation shall be awarded as above provided."

RICHARD MOTT, ESQ.

The individual whose name heads this paragraph has by his talent and industry accomplished great good in the reforming of abuses in assessments. Bold and fearless in his course, he has marched onward. His extensive examination of assessment abuses have made him acquainted with particular abuses of a very aggravated character, which give to him a power that is irresistible. Mr. Mott is associated with the Hon. J. E. CARY, and have their office at No. 11 Wall Street, Mortimer Buildings.

NORTHERN NEW-YORK.

The present volume of this Gazette will contain an account of the editor's geological exploration in northern New-York, and among the Adirondack Mountains of that region, which are far the highest land in this State. In these mountains the *chayotant*, or gold stone, is found, one of which we have weighing 17½ pounds. This stone has the hardness of the agate, receives the highest polish, and with strong solar or electric light gives out brilliant scintilations, the golden yellow surmounted by a halo of most brilliant green, amidst the most brilliant coruscations of three different colored scintilations united as the surface of the stone is turned in the sun's rays, or exposed in a proper angle to the brilliant coruscations of the lightning's fire, while it is lighting up the dark chambers of the storm. It is a pretty gem—it is beautiful.

THE CASE OF MRS. PIERSON.

Mrs. Pierson, and her children, are the owners of a house and lot on the corner of Pearl and Centre Streets. The husband of Mrs. Pierson, and father of the children, died about the year 1834, leaving this property, on which there was a mortgage, to his family. The annual rental paid the interest of the mortgage and left a surplus for the support of the children. The corporation sold the whole property for the assessment, and she and her children were thus reduced to suffering and to want. The assessment for regulating the street for which this property was sold, was never signed by the assessors. She made application to the Hon. MURRAY HOFFMAN, then Assistant Vice Chancellor for an injunction to restrain the corporation officers from executing the lease. The application was granted, and rightly, too. The Chancellor dissolved this injunction, and he also decided that Mrs. Pierson must pay the cost. Her friend who was security for her, was prosecuted by the corporation officers for the cost, and his property levied upon. He was a hard working mechanic, and suffered by this cruel act of the corporation officers. The Chancellor's opinion in this case is to be found on page 195 of this volume, and deserves an attentive perusal.

INCREASE OF TAXES.

The City Tax has been greatly increased this year, while the State Tax has been decreased. The Natives very improperly asked the Legislature to authorize a big Tax, and their successors, with the aid of the Natives, have expended the money.

BIG ASSESSMENT.

Two lots on 17th Street, near Union Square, 25 feet by 94 feet each, belonging to Henry Parish, Esq., have been assessed the large sum of five hundred and fifty dollars, or eleven dollars the foot, fronting on the Street.

Municipal Gazette.

EDITED BY E. MERIAM.] NEW-YORK, MARCH 2, 1846. [VOL. I....No. 38

STATE CONVENTION.

The Constitution of 1777, denominated the Legislative power vested by that instrument in the Senate and Assembly, "the supreme Legislative power."

The Legislative department of the State Government was not so independent uader the former Constitution as under the present. By the Former Constitution the Gov. could prorogue the Legislature, and send the members home to their Constituents, and he could also in the council of Revision, retain a bill passed by the legislature within nine days of its adjournment and return it with objections on the first day of the next session, or approve it after the Legislature adjourned.

The responsibility rested then upon that department of the Government denominated by the Constitution "the Supreme Executive power."

What is to be deemed a legislative power must be determined by the language of that Constitution which creates the legislative department of the State Government, as duties are imposed upon the Legislature other than those of enacting laws.

The Constitution of 1777, in art. 18, sought to restrain arbitrary legislation; and in art. 3, to provide against hasty legislation. The present Constitution provides no check against arbitrary legislation but the executive is vested with a qualified negative upon the acts of the Senate and assembly, but there is no provision to guard against the hasty approval by the executive of acts passed by the legislature, for on the last day of the session bills are hurried through the two houses in such numbers and sent to the Governor for approval that the executive must either sign them without reading, or return them without signing. If the executive was to carry out the spirit and letter of the Constitution he would direct his private Secretary to prepare a general communcation for him to sign, to accompany all such bills back to the house in which they originated, stating briefly that the nearness of the termination of the session prevented a careful and deliberate examination, and for that reason the bill is returned for reconsideration.

Under the former Constitution the negative upon the Bills passed by the Senate and Assembly was less qualified than under the present Constitution. A bill returned by the Council under the Constitution of 1777, required a vote of two thirds the house in which it originated to overcome the objection and of two thirds the members present in the other house. Under the present Constitution a vote of two-thirds the members present in either house is only required to pass a bill returned by the executive with his objections, although the bill might be of that class which required the assent of two-thirds the members elected to each house, to pass it in the first instance.

The veto power is much discussed in reference to the national legislature, and we think the majority of intelligent men are opposed to any greater qualfication than now exists.

In England, the refusal of the King to sign a bill passed by Parliament, is absolute. In Norway the negative is qualified to this extent: A bill pussed by the Legislative chambers and refused by the King, is an absolute veto for that session but if re-enacted the two succeeding sessions in the same form it becomes a law at the end of the third session without the approval of the King. The Legislative chambers convene but once in three years.

CANDIDATES FOR THE STATE CONVENTION.

It is high time to call public attention to the selection of candidates for the State Convention, as members of that body from the county of New-York. We present the following list of names selected from the three political parties, viz:

James Kent,	George Douglass,
Albert Gallatin,	Abraham G. Thompson,
Jonathan Thompson,	Abraham Van Nest,
Stephen Allen,	Gulian C. Verplanck,
Saul Alley,	Wm. B. Crosby,
Jonathan Goodhue,	Charles H. Russell,
John M. Bradhurst,	Peter Schermerhorn,
Solomon Townsend,	James I. Jones,
Peter Cooper,	Robert Smith,
James Harper,	Murray Hoffman,
Wm. F. Havemeyer,	David Hale,
Burtis Skidmore,	Philip Hone,
Richard Mott,	J. I. Coddington,
Lora Nash,	Theodore Sedgwick,
F. R. Tillou,	Samuel Thompson,
Luther Bradish,	James Donaldson,
Peter Lorrilard, jr.,	Thomas T. Woodruff,
Henry Grinnel,	Elisha P; Hurlbut,
Richard S. Williams,	John David Wolfe,
James Boorman,	Hiram Ketchum.

THE STATE CONVENTION QUESTION.

BY A. B. JOHNSON, ESQ., UTICA.

While history records but little more than unceasing attempts to circumscribe the natural rights of man, and enlarge the privileges of rulers, we occasionally institute the opposite experiment, of how far every man may be left in the unrestricted pursuit of his own happiness, and how far the superiority of rulers may be wholesomely diminished. In about five months we are to pronounce whether another experiment of this nature shall be tried or not. The object is undeniably benevolent, and with the known good dispositions and sedate views of our citizens, we ought not to be too suspicious of evil, miser-like clinging to our present possessions, and from the mere possibility of loss, refusing all attempts at further political acquisitions. The spirit of fair enterprise which leads us step by step to perfection in other arts and sciences, may, if directed to the science of government, lead to results equally beneficial. The good which may be elicited at every trial, will be a permanent acquisition to mankind in all times and places; while the mistakes that may be committed will be corrected by ourselves as soon as they are felt. The experience of all our States in such experiments is full of encouragement for the future, since every attempt has meliorated the condition of the people for whose benefit it was instituted.

Before any man can assume that our present constitution is incapable of improvement, he must believe that the congregated wisdom of the State can suggest nothing which is not already known to him; this too in the face of defects in our judiciary, that oppress every suitor with "the hope deferred, which maketh the heart sick;" and in the face of social inequalities that proceed not from the differences of intellect, health, perseverance, and other inevitable natural causes, but from a difference of priveleges accorded to some men arbitrarily and denied to others. If any citizen wishes to erect a saw-mill, he receives no guarantee that another person shall not erect a rival mill in its vicinity; but when a man has obtained from the Legislature a charter for the construction of a railroad, say from Utica to Schenectady, he has acquired a monopoly of the route, for no person can erect a rival road without like legislative facilities; and no legislative application for such rivalry would be successful in one application out of a thousand. The corporations of such special privileges, are, therefore, about as secure of their monopoly as though the monopoly were an express grant; hence their stocks sell in market at premiums varying from 20 to 30 per cent. or more: while travellers, excluded from the benefit of rival enterprises, are helplessly subjected to virtually unrestrained rapacity; and the result is seen in enormous dividends. Monopolies of this character, directed to numerous pursuits, flood our State; and so corrupting is the power to create such monopolies, and so eager is the instinct of gain to procure them, that as early as the year 1811, Gov. Tompkins prorogued the Legislature, and sent the members home for a season, in the vain hope that the sight of their constituents would arrest a corrupt combination to charter a bank. Gov. Clinton's messages to the legislature are full of evidences that the same corrupting influence was active in his day. From his suggestions, against what is technically called legislative log-rolling, arose the rule that no bill should create or alter more than a single corporation, lest the want of merit, which should preclude the enactment of the bills separately, might induce their legislative fathers to club and pass them all. And in our time, if rumor lies not, some of the members of our legislature, as they journey towards the Capitol to enter on their duties, are occasionally, (when their services are needed to create some new privilege,) surprised by the equivocal courtesy of receiving free railroad tickets. Nor is the corrupting power to grant special privileges, and the corrupting consciousness that special privileges are obtained by favor and friendship, seen in only the coy dalliance of such soft appliances; who cannot see it in the meritorious laws that are annually rejected, when they happen to conflict with existing monopolies; as, for instance, last winter, the railroad from Albany to New-York, and from Utica to Binghampton?—and who cannot see it also, in the laws that are annually passed, when they happen to benefit political favorites; as, for instance, the renewal, last winter, of two bank charters, after years of denial to kindred applications? and what resisted, till the people were weary of asking for it, the mere privilege of sending to and from Albany by railroad the produce and merchandize which the frozen canal cannot convey, and which, when transmitted by railroad, were to pay canal tolls? Let the tariff answer, which last winter the rail-roads established for freight, when they were, at length compelled (not being quite ready to accept this additional branch of lucre) to accede to the wants of the country; but acceded by freight charges so great as "to keep the word of promise to our ears only."

In the year 1821, when our present Constitution was created, the evil of special legislation was sought to be corrected by the expedient of a two-third vote. Experience shows that this has increased the facility of obtaining charters: for Legislators are now, by a spirit of practical concession, induced to help make up a two-third vote, when, had applications depended on the vote of a mere majority, they would have exercised on every question, their personal convictions of duty. Nor, in truth, is the remedy at all adapted to the disease.

Yale College, Aug. 26th, 1845.

E. Meriam, Esq.

Dear Sir,—I am much obliged by the account of the singular freak of lightning communicated in yours of the 20th, and I take this opportunity also to thank you for valuable facts on this and other subjects received through the medium of your paper.

Last Friday night the lightning played some queer pranks in this city, violently assailing two buildings, each furnished with two lightning rods. The enemies of this mode of protection thought they had now got us, for here the lightning struck half way between two rods which were on directly opposite sides of the house. I have some remarks to-day on the case in the New-Haven Palladium, which I will endeavor to send to you.

Your fondness for facts, and industry in collecting them, have already rendered much service to the cause of science and of humanity, and I hope you will continue your useful labors.

Very truly yours,
DENNISON OLMSTED.

From the New-Haven Palladium of Aug. 26th, 1845.

REMARKS ON THE CASES OF TWO BUILDINGS STRUCK BY LIGHTNING ON THE MORNING OF AUGUST 23d. BY PROF. OLMSTED.

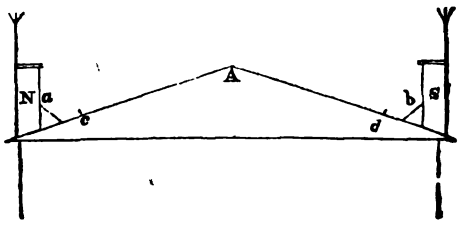
"The *facts* relative to the extraordinary cases of the two buildings struck by lightning during the thunder storm of the 23d of August, have been already laid before the public, and the only remaining inquiry is, *why the lightning rods* (of which there were two on each building) *failed to afford protection.*

"In regard to the dwelling house of Mr. Stillman, which is a building of moderate dimensions, having each of its two chimneys furnished with a conductor, and therefore to appearance, uncommonly well fortified, I cannot doubt that the cause of failure was that already assigned by my respected colleague Professor Silliman,—namely, the fact that the *rods descended into the ground but two or three inches, terminating with a blunt extremity in dry sand.* All the efficacy of a conductor depends upon its furnishing a passage for the lightning to the earth. Were it to terminate at the bottom in a glass bottle the lightning would not touch it. It acts not by *attracting* the electric fluid after the manner of a magnet, but by *conducting* it to the earth; and when the conducting medium is interrupted by the interposition of a non-conductor, a rod of iron loses all its power over a flash of lightning.

"Now, dry sand is almost or quite as bad a conductor of electricity as glass; and in the present case, the rod was almost as effectually prevented from exerting its proper office, as it would have been had it entered a glass bottle. Some have supposed, that the shower which preceded the stroke must have so far moistened the earth as to render it a conductor to the depth of several inches. It must, however, be recollected that previous to the shower the ground was quite dry; that but little rain had fallen previous to the stroke; that when the surface of the earth is in a dry, pulverulent state, rain is but slowly absorbed; and finally that the roots and grass that lie near the surface of the ground, render its conducting powers much inferior to those of the dense earth at the depth of permanent moisture. Hence, all writers on the subject of lightning rods insist upon this point,—that the rods must descend to the depth of permanent moisture,—as one of cardinal importance. In our dry soil, this depth is not less than from seven to ten feet, and a majority of the cases of the failures that have fallen under my observation, have arisen from a defect in this particular; although I have never before met with so egregious an instance of inattention to this point as the present. I would respectfully suggest, that our citizens examine their conductors, and see how far they penetrate the earth, before they confide to them the safety of their families from the attacks of this terrible element. At the same time, it may be well to examine whether their rods are *continuous* throughout, since breaks like the hook-and-eye joints, greatly impair their efficacy; and finally to see that the rod ascends above the *ridge* of the house to a height equal in every direction, to half the distance that it is required to protect. Thus, a rod ascending ten feet above the ridge, will protect a space all around it of twenty feet, and cannot be relied on to do more than this.

"The safety of Mr. and Mrs. Stillman, who were lodging so near the angle of the house which was so violently assailed, I ascribe to the fact that the bedsted was of hard and dry maple well varnished, and thus rendered so good a non-conductor as to insulate them or to cut off their communication with the earth. Had the bedstead been of soft pine and unvarnished, it is not improbable that so dense an electric charge would have sent off a branch through their persons in its way to the earth, unless the floor itself were so bad a conductor as to prevent it. Still, had the bedsted been of *iron*, and in free communication with the earth, they would probably have sustained no injury, since, in that case, the fluid would have followed the metal rather than the human system, being a better conductor.

The case of the *Lancasterian Schoolhouse*, presents more difficulties. The leading facts may be at once understood from the following diagram: Let N and



S represent, respectively, the north and south chimneys, and A the ridge of the house. After a careful examination of all the circumstances, it appears to me most probable, that the lightning did not strike either rod, but struck the ridge at the point A, following the rafters down on either side to the vicinity of the iron braces *a* and *b*, leaped through the roof at two openings at *c* and *d*, entered the braces, and went through them by way of the soot on the inside of the chimney, to the rods, and thence to the ground.

"*Why did not the lightning strike one or the other of the rods, rather than a point in the ridge half way between them?* In the first place, the rods were badly terminated at the lower extremity, one end at the depth of two feet four inches, and the other of only ten inches, the earth being in a very dry state. In the second place, the distance from the summit of the rod to the point of attack was greater than the rule requires. The rods rise about seven feet above the level of the ridge, while the distance from the summit of each rod to the point assailed, is at least twenty-five feet. In the third place, several nails at and near the point A, contributed to determine the charge in that direction, while the power of the rods was too feeble to present an antagonist force of sufficient intensity to divert the charge from its direct course. Had the charge come as near to either of the rods as it did to the point A, it would probably have taken that route; but it preferred, as the medium of least resistance, first to enter the ridge, then to divide into two branches, to follow the nails along the rafters each way to the iron braces, thence to the rods, and finally to the earth.

"On the whole, although there is nothing in these two extraordinary cases, which ought to diminish public confidence in the safety of lightning rods, when constructed according to the rules of science, yet there is enough to warn us not to trust to badly constructed rods, and not to employ incompetent artists in putting up new ones."

We copy the account of another visitation:

From the New-Haven Palladium, Sept. 2d, 1845.

TERIFFIC THUNDER STORM..THE TONTINE AND FOUR OTHER BUILDINGS STRUCK!

"The clouds gathered this morning about 10 o'clk. and in a few minutes a shower drenched the city and the whole neighboring country. It was accompanied by terrific thunder and lightning—three distant explosions at different times causing the earth to quake and tremble. Each of these electrical discharges struck five different buildings in different sections of the city, but happily no lives were lost.

"The observatory and flag-staff on the Tontine received the full force of one stroke. The staff was shivered and thrown in various directions, and the roof, sides and windows of the observatory essentially shattered. The electric fluid descended two rafters, one running north and the other south, and thus passed off, tearing up the shingles. On the north side its

progress is seen in the ceiling in the form of holes near the bell-wires, from whence it descended to the earth through that medium. In the upper part of the house the wires are broken and disordered, and in the basement story, where its effects are again visible, the wires are again broken and destroyed.

"The observatory of the Tontine is elevated some ten feet above the rods on the adjoining chimneys, and the flag-staff twenty feet above all neighboring objects. It is easily understood then, why that should receive the force of the blow, and why the cupola was so shattered in its progress. It is wonderfu. that no lives were lost. A colored man in the garret was left insensible for some time, and another on the stairs below, was prostrated, and as he thought at the moment, his *scull* fractured!! In the basement story, a number of the servants were thrown down, but no one in that crowded house was seriously injured. For a few minutes after the shock, there was a scene of great consternation among the numerous inmates, but when it was found that no one was injured, and that the building was not on fire, their self-possession was soon restored.

"The house of Capt. Samuel Short, situated in Park street, between George and Crown streets, was also struck and very much damaged. There was no rod upon it. The fluid struck the eastern or rear chimney, splitting it to the roof, when it entered the garret, following nails, and reached the floor, which it tore up for the space of eight or ten feet. It descended to a chamber, destroying the wood and plastering in its passage to the stairs, through which it entered to the cellar. Another portion shot off to the front of the house, tearing the window casings, and breaking the windows, together with a mirror hanging between them, when it entered the ground. Our time is too limited to give a minute description of the wonderful effects of the lightning. In some places it perforated the wood as if it had been a bullet.

It should be particularly remarked in regard to this house, that in every rain storm, a large pool is collected in front of it. This water probably invited the lightning down, acting as a cloud to receive the fluid from the surcharged cloud above. In proof of this is the fact that the house directly opposite was struck two summers ago upon the chimney nearest the street, and of course nearest this pool of water which then existed as at present. It is wonderful that no one was killed in Capt. Short's house, A lady was upon a bed in a chamber adjoining the chimney and closet which was so much injured. Other inmates of the family were in the rear part of the house.

"The house of Mr. J. Walton near the Catholic church was also struck. The fluid struck the chimney of the kitchen part of the house, notwithstanding there was a rod on the main part of it about ten feet distant. It descended the chimney, and after scattering some wood about, passed off through a young woman, Miss Walton, who was standing near the fire-place, and cut her shoe open in two places! The shoe has been exhibited to us, and the holes on each side show distinctly where the electricity passed off! She experienced no unpleasant effects from it, except fright, and miraculously escaped instant death.

"We have been informed since writing the above, that Miss Walton, after the shock, exclaimed that her foot was injured; her screams alarmed her parents, who immediately went to her relief. When her shoe was taken off, not only were holes found in that, but four small ones in her stocking, burnt by the electricity. The foot for some hours was affected; her father was also internally affected by the shock.

"Another house was struck in Wallace street. Mr. Henry Bromley, the occupant, informs us that the fluid descended one of the chimneys and down the roof, tearing up the shingles in its course. It ran along the eaves to the conductor, and down that into a rain-water cask. There was no rod upon this house.

"The house of Mr. Russel Hotchkiss, facing Wooster Square, was also struck, but no damage was done.—This is a brick house, defended by rods, yet slight effects of the lightning were found upon the house and the premises, which however we have no time to examine so as to give particulars this afternoon.

"In regard to the Tontine it should be stated that the nearest rod to the flag-staff was distant some forty or fifty feet, and the points of the rod were very rusty. The nearest rod could not therefore have been so good a conductor as the flag-staff, which was so much higher, and which was wet by the shower so as to become a more perfect conductor.

"In reference to the course of the lightning upon the house near the Catholic Church, there is much mystery, as there was a good rod upon one of the chimneys; but the lightning fell upon the other chimney, which had a much less elevation and upon which there was no rod. The soil, however, was very dry, and we have not learned how far the rod penetrated the ground."

In addition we add the following:

The city of New-Haven is often visited by thunder storms. Shortly after the thunder storm on the 23d of August, the New-Haven Palladium published a paragraph stating the remark of some wag, that the lightning was always taking liberties at New-Haven when Professor Olmsted was absent. The learned Professor was absent on the 23d. When the second storm came on the 2d of Sept., but a few days after, we presume the editor was not in a mood to make jest of the lightning of the thunder.

The lightning conductors on the dwellings in New-Haven protected the lives of the inmates—more than this cannot be expected.

We examined a church edifice at Clintonville. Clinton County, New-York, which was on Saturday afternoon the 20th of September, 1845, struck by lightning and injured. This building is constructed of wood, stands on a hill, and has a copula upon it surmounted by a frame work of iron, fancifully wrought, to which is attached an iron rod one inch in diameter, which leads from this iron frame work into the ground. The rod is in pieces, at each end of which a turn is made like a hook and eye to connect the rods together. A few hundred feet from the church edifice, are the large works of the Peru Iron Company, the roofs of which are covered with iron, and within these buildings and around them is a great abundance of iron and iron ore. To the north and to the west the hills are filled with ores of iron, and the surface of the ground is strewed with ore which has been mined. The lightning damaged the church edifice, broke the doors and windows and passed through the building the entire length. A large rock forming the underpinning of the north east corner of the building, and weighing several hundred pounds, was broken and appeared to have been struck by the lightning on its side with immense force. This rock is metallic. We brought a piece of it home but have not yet examined it. Whether the lightning descended the rod until it reached the first joint and then glanced off, or whether it struck the rock first, we were unable after a long and particular examination to determine. The rod terminated in a dry soil. The thunder storm which visited this place led a hurricane through the wilderness from Lake Ontario followed by a storm of hail. Its main path was to the north of Clintonville. We examined during the same tour the lightning rod on a church edifice at Keesville. This rod is led through the inside of the steeple, and is so nicely enclosed that whenever the lightning descends it the building will be most certainly set on fire or rent to pieces

We have thus given a statement of buildings struck by lightning which were furnished with rods.

THE LIGHTNING.

The lightning has been unusually active during the last year. Every month from January to November, both inclusive, have witnessed its operations and we are by no means certain that it did not extend its labors into December, in the neighborhood of Chicago, in the State of Illinois. The same testimony continues to be given by the lightning itself as to its habits and disposition, that we have recorded heretofore, which is, that in no case has a human being been killed by a thunderbolt in a building protected by a metallic rod *of any kind*, reared for the purpose of protection. What mysterious influence is exerted here is not within the province of human science to determine—the fact we know, but the cause is one of the mysteries that pertain to Him whose chariots are the burning clouds.

In our next number we will endeavor to present a synopsis of our record of the transactions of the lightning during the last year in this section of the United States so far as these have come to our knowledge, and will accompany it with a diagram of a building protected by rods diverging from the roof.

ICEBERGS.

In our next number we will endeavor to give a synopsis of our record of the Icebergs met upon the Atlantic by vessels arriving at New-York. The arctic ice has been abundant upon the ocean in southern latitudes ten months of the year 1845, from February to November, both inclusive.

THE COLD.

The frost the present year has presented some facts which are very instructive. At New-Orleans, on the night of the 27th of November the temperature of the atmosphere was below 32°, and ice was formed in great abundance. At Brooklyn at 6 o'clock P. M. of the 26th, the temperature of the air was at 50°. During the day the wind was in a state of activity, and the temperature at 4 o'clock next morning was down to 24°.

At St. Louis, Mo., on the following Sunday and Monday the temperature was at Zero, and at Springfield, Ill., at 14° below Zero. At Brooklyn the temperature did not fall below 33°, nor rise above 36° on either of those days.

At Franconia, New-Hampshire, on the 13th of December the cold measured by a spirit thermometer 28° below zero, and by the mercury 33° below zero, while at Brooklyn at the same time the lowest depression was 13° above zero, showing a difference between Brooklyn and Franconia of from 41 to 46°.

At the foot of the Adirondack Mountains on the Au Sable, we measured the cold on the 22d of October, and found it at 14° above zero, while at New-York at the same time it was 33° above zero.

THE DROUGTH.

During the summer of 1845, some of the districts of North Carolina suffered intensely from drought; also some sections of Orange County in this State, while at the same time Lower Canada and the State of Maine were suffering excessively in consequence of the great abundance of rain.

THE HEAT.

The heat the last summer was unusual. L. W. Conkey, Esq., in a letter to us covering elaborate records of his observations upon the weather at the State Salines at Onondaga, says that the rain which fell there in July was more abundant than usual, yet the drought was more severe in consequence of the great heat. We shall give a synopsis of Mr. Conkey's observations on the weather. They are useful statistics, and he has made these observations with great care, and registered them with great particularity.

LAKE ONTARIO.

In our tour on Upper Canada, in 1844, we selected Gull Island, in Lake Ontario, about two miles from its northern shore, between Port Hope and Coburgh for the establishment of a Lake-ometer, to measure the rise and fall of the waters of the lake, and thus determine whether these changes are periodical, or occasional. We have recently been furnished by the intelligent and worthy keeper of the light on that island with the following official statement of his observations for six years.

REMARKS ON THE RISE AND FALL OF THE LAKE AT THE GULL ISLAND LIGHT HOUSE.

With heavy gales from the west; a few days there is strong current up the Lake.

N. OWSTON, Jr., L. K.

reported that after leaving St. Lawrence county and crossing the great forest lying between Black River and Lake Champlain, it struck a new village and extensive iron works near Keesville, Essex county, which it entirely destroyed.

We have room only for a few particulars; but these, strange as they may appear, may be relied on as substantially correct. Our informant, Mr. Benton, resides at Fullerville, but 150 rods from the north track, has examined the ground with a view to the facts alone and his statement is entitled to the most implicit belief.

Passing along towards the Oswegatchie river it crossed the road running through what is known as the Emmerson and Streeter settlement, on the west side and distant about a mile from the river. In the track of the tornado on this road stood 16 buildings, all of which, as before stated, were swept down. Among the things carried away from this settlement was a feather bed, since found in what is called 'Pond's Settlement,' sixteen miles distant!

Crossing the Oswegatchie, the next settlement in line of the tempest was the Pitcairn road, embracing ten buildings. Near the north line of the tornado, among the sufferers was a Mr. Brown, who had recently erected a large 40 by 30 feet barn, which he had filled with the products of his farm. This, with his house, was blown down and the contents scattered far and wide. Mr. B. was taken up and carried fifteen or twenty rods, unconscious of the moving power, and was severely bruised upon the head, shoulders and other parts of his body. When he struck the ground he seized hold of a stump and by that means saved himself from further personal injury. His family in the house took refuge in the cellar, and were thus saved. The next house south of Mr. B. was that of Mr. Leonard, in which were two women and five children. Hearing the noise of the tornado and seeing its approach, these also took refuge in the cellar—one of the women last descending was struck by the timbers of the house, and rendered senseless, in which condition she remained nearly a day. It is said that she will ultimately recover. Next to Mr. Leonard's stood another house—the name of the occupant not given—in which was a sick woman with a young child about three weeks old and a young woman named Kinney, who was attending upon her. Frightened by the noise and looks of the tempest as it approached, Miss K. threw herself upon another bed in the same room, when the house was blown down and one of the logs of which it was composed fell across the bed of Miss K. and held the latter fast. The sick woman immediately rose from her bed and by almost superhuman strength removed the log, and thus saved the life of the young lady!

Near the latter house, in the street, was a man driving a yoke of oxen attached to a wagon laden with coal—being from 60 to 80 rods distant from any standing trees. Two large trees were brought by the wind and laid across the wagon, crushing it without injury to the team, or to the man, except the tearing of his clothes and slight scratches of his person. The team was so bound in by the trees and rubbish that it required several hours to extricate them, which was not effected until the Monday following.

A frame schoolhouse standing near Mr. Brown's dwelling, in which were several children and their teacher, was moved entire from its foundation, without injury to its inmates. A hemlock tree, said to be from two to two and a half feet in diameter, standing on the west side of the Oswegatchie, was taken up whole and deposited on the coal job on the east side of the river, distant two miles! A log school house in the town of Edwards was taken over the heads of the scholars—every log, down to those on which the floor timbers rested—carried away without injury to its inmates.

The village of Fullerville is situated on the Oswegatchie, about 150 rods distant from the north line of the tornado. Its citizens had a full view of the storm as it passed, and were consequently enabled to judge of its force and appearance. At this place, although out of the track, its force was perceptibly felt. A grist mill, the timbers of which in the lower story are from 20 inches to 2 feet square, rocked to its foundation.

Immediately following the tornado was a storm of hail, some of the stones as large as hen's eggs, severely lacerating the cattle exposed, as they fell.

We have thus briefly described the effects of the storm in eight miles of its length; we are not in possession of sufficient data to state accurately its effects after it left Benton & Fine's Tract, in the town of Edwards. But as the great eastern forest borders on the latter line, it is not probable that any considerable damage was done, except to standing timber, until it reached the inhabited parts of Essex county."

From the Plattsburgh Republican.

At Union Falls, in this county, it emerged from the forest, making a complete wreck of many of the buildings in that place, and for a distance of twenty miles in a northeasterly direction, over a tract from 80 to 100 rods in width, it swept everything before it—trees, fences barns and houses were levelled with the ground. Duncan's forge was considerably injured, the chimneys blown off even with the roof, and several out buildings destroyed. The brick school house near the Travis forge in Peru was utterly demolished, and the brick dwelling of H. N. Peabody, near by, was partially destroyed. We hear of two houses that were blown down over the heads of the inmates, and it is most extraordinary that no lives were lost. Some 15 or 20 buildings were destroyed or injured in that vicinity by the wind, which committed no further depredations until it reached Burlington, where it unroofed the house of Mr. Moody, blew down some barns, &c. It struck the Steamer Burlington near Fort Cassin, but she braved the storm handsomely, suffering no greater damage than the loss of some loose deck plank, which were picked up miles from the shore.

Extract of a Letter from Clark Rich, Esq. to Eben. Merriam, dated Shoreham, Vt., Oct. 13th, 1845.

"On the evening of the 20th of September we had the most majestic display of lightning I ever saw. Many other elderly people say so. The upper part of a dense cloud, coming slowly from the north west was almost constantly lighted up with flashes and spangled streaks shooting in every direction, upwards as often as otherwise. Occasionally the lightning would streak to the ground. As it approached the thunder commenced its roar, and increased without intermission until it passed by me. Just before the rain commenced, there was a narrow black cloud directly over me, so dense that I could not see the lightning through it, but the light from the flashes were very vivid on each side of the cloud. The beauty of the scenery was before and after the shower passed. The latter I did not notice."

We visited the pathway of this storm in October last, and made particular examination of its operations. At Clintonville, on the Au Sable, the lightning struck a church edifice, a notice of which will be found in another column. At New Sweden, the lightning struck a barn, set it on fire, and which was with its contents wholly destroyed. This storm was led by the lightning with a chain of fire enclosed by a cloud of dismal blackness filled with broken fragments of rocks of ice, attended by a furious wind which roared like a mighty cataract, amid peals of deafening thunder which kept almost a continuous crash as its fiery bolts fell from cloud to cloud, ever and anon lightning up the dark chambers of the storm with vivid coruscations—thus making the blackness of darkness doubly visible. When this storm was first seen emerging from the wilderness at Union Falls, it appeared to be descending from a higher region in the amosphere. Had this storm visited the great metropolis of the state, with the same force that it did its wilderness, how fearfully awful must have been its work of destruction—but it was guided by that Being who holds the wind in the hollow of his hand, and who has made "a way for the lightning of the thunder."

This storm followed the mineral strata that is embeded in the earth, its whole path.

The pathway of the storm in the wilderness is an instructive page to study—to contemplate—for it is written by a pen guided by the tempest, and is witnessed by the lightnings fire, amid the reverbations of

the thunder's awful crash, and the whirlwind's terrific roar—when it breathes its breath of fire—presenting a record when viewed in the regions of profound solitude in the midst of the stillness of silence that is overwhelming—bowing down the pride of man and at the same time lifting up his soul and leading it to the spontaneous offering up the homage of adoration.

THE AGE OF THE WORLD.

Mankind are wonderfully prone to disbelieve the record of time, and the only record extant, a record of indisputable authenticity, given to man by his Creator—by Him who made the world.

The gigantic bones which are found beneath the surface in numerous localities are brought forward as evidences of the existence of a previous world. The Book of Job, written but about 3300 years ago, treats of the Leviathan and Behemoth as then alive. This record is therefore sufficient upon this point, and although brief, is nevertheless particular.

The uninhabited, or thinly inhabited provinces of the Empire of Brazil swarms with countless herds of wild cattle, the offspring of stock imported thither from Europe within 250 years; and on Van Dieman's Land are numerous herds in the forest, the original stock of which were imported from Europe.

Our own Continent, or rather that section of it which now composes the United States, beyond 250 years ago was a perfect blank on the page of history.

There are vast and extensive sections of the globe yet unexplored, and our continent presents in its greater surface, a vast and uncultivated wilderness.

When the solar orb sent forth its first morning rays upon our earth, there was no human eye to behold the newborn light, yet it was not unseen, nor unrecorded. He who made it, beheld it, and pronounced it good.

THE STRANGER'S GRAVE.

It was near the close of a Sabbath, in the month of May, in the year last past that I came to a solitude on the bank of a pond, in the edge of a vast wilderness, where I found planted a "Strangers Grave." The wind was blowing its chilling blasts across the inland sea—the waves were dashing their murmuring waters upon the rocky shore—the trees that stood upon the banks were vocal, for the wind whistled through the bending limbs which were not yet clothed with newborn leaves—those of the previous year were dead. At a little distance stood a grove of mountain spruce, and beyond it, was a mountain avalanche that had torn a ragged path in its descent from its lofty bed—near by was a cabin, built of logs, which had once been a habitation, but is now a ruin. On a little knoll, near by the place we stood my companion pointed to a little mound of earth—a new-made grave, and added, that "a Stranger was buried there; none knew with certainty his name, or from whence he came." The lifeless body was brought to the shore of a little island in the pond by the wind and waves; there it was found by some persons who were fishing in the pond and brought to this shore, near where it lies buried, after an inquest had been held upon it.

Some supposed it was the body of a man who had been murdered and thrown into the pond, for the body of a wagon was found washed up upon the shore: others supposed it was the body of a man whom sorrow and trouble had bereft of reason, and who in that state of suffering had escaped from his friends who resided in a county on the opposite side of the wilderness, and had drowned himself in this pond, after a long wandering in the wild woods, bewildered, solitary, and alone. After the account of the finding of the body was published, a lone female journeyed hither from a distance of more than a hundred miles. She had lost a husband who had once possessed an active mind and a warm heart, misfortunes had overtaken and overwhelmed him, and made his mind a ruin; in a frenzied moment he fled his home, his friends, his fireside, and became a wanderer, she knew not where. She came to see this grave—and moistened its new-made sods with a mourners tears, for she was almost satisfied it was the grave of her dear fond husband. As I stood viewing this ground, my companion related to me the particulars I have narrated. The grave was in the path we were walking, but I turned and walked around it, for I did not like to tread upon human ashes—upon dust that is to become clothed upon with immortality, when those who are in their graves shall be awakened by the trump of the Resurrection morning.

I said it was at the close of a Sabbath day, in the wilderness, a day more revered here than in the busy walks of men. Here is impressive scenery—a majestic mountain lifts its venerable head to the very clouds, where the thunder rolls its fiery bolts—and the waves of this pond bathed the rocks of its foundation with the very fluid in which "the Stranger" made the bed of death.

Near the Stranger's grave is a limbless tree, its top has been cut from the trunk by the axe of the hurricane, and on the broken point was a little bird which often sings at midnight on the borders of the wilderness, and indeed at intervals throughout the night—this bird was singing a mournful song—every five or ten minutes it would thrice sound its mournful notes, and was again silent. I have heard this bird no where else but near the Adirondack Mountains.

No chisseled stone marks the place where the Stranger's grave is planted, but it has a more enduring *memento* which is impressed upon the very atmosphere that rests upon it. Parents will tell to their children the fate of the lone wanderer in the wilderness—they will point to his grave, and thus from generation to generation the place of sepulchre will be marked and its locality remembered.

Many years ago I passed in the wilderness, far from any human habitation, a solitary grave. I was alone, and from the time I came in sight of the thus consecrated ground, until I was far beyond, I checked the speed of the horse I was riding and went slowly past the last resting place of a brother mortal. It was an impressive path to travel, for it was shaded by the gates of another world.

I have been accustomed to the salutation of "Stranger," in extensive travels in a section of the country where a stranger always found favor, from the very reason that he was far from *home*.—"Stranger" was here a sacred name—when I have alighted, at the close of a hard day's travel, in stormy weather, at the gates of hospitality, and heard the kind welcome, "Come in Stranger and be seated, for you must be both weary and cold," I felt that kind words that came from a warm heart, were sweet indeed, and that tenderness of expression from the lips of a kind host, a rich solace to a weary traveller in a stranger land and one of those comforts which may be called a blessing.

My mind has been awakened to these remembrances by reading a notice that "Albany Street" is to be opened through Trinity Church yard, New-York, and also by reading a majority report of a committee of the Board of Assistant Aldermen in favor of the measure which excuses the desecration of the ground of that portion of the graveyard required, is that only in which "strangers" are buried. "Ashes to ashes—dust to dust," until the morning of the ressurrection of the dead, is an emphatic and solemn annunciation of the ministering servant of the Most High when he stands over the closing grave of a fellow mortal; and the forcible and solemn language of the patriarch Job, when he declared that although worms should destroy his body, yet in his flesh he should see God, is so impressive that there are very few who attentively read the sacred scripture, that have not both read and remembered this sentence.

In early time the grave was regarded as a sacred place. Abraham purchased the Cave of Macpelah, for the repose of the remains of his beloved consort, and his body was at the time of his decease carried to the same grave. Jacob, 200 years after the burial of Sarah, was carried by his son Joseph out of the land of Egypt and entombed in the same sepulchral chamber. Joseph of Arimathea left on record a sweet remembrancer in the kind provision he made for the repose of the body of the King of Heaven, while it lay in the sepulchred chamber during the period fixed for its rest by the King of Kings.

On the day of the crucifixion, many that had been long in their graves, arose, and appeared among the living.

Lazarus was raised from the grave in which he had been for some time buried.

Silence, solitude, impressive and instructive solemnity mingle in the atmosphere that rests upon the sepulchral chambers of mortality, and the willow that droops its branches over the sleeping ashes, and the cypress that stands sentry over the consecrated spot, have each an expression which those who go to meditate among the tombs, find to be living preachers to their souls.

Over the stranger's grave in Trinity Church yard, are to be seen the weeping tree—a memento, nourished by nature—fed by the golden rays of the morning sun—when the sacriligious axe shall be laid to its roots, its sound will echo from the hollow chambers beneath with an awful reverberation, for the echo will be from the tomb—the silence of which is thus broken—and when the sacriligious spade shall be driven into the ashes of the terrestrial urn, and these thrown to the winds and borne upon their wings to the chambers of the living, to be gathered to their bosoms in the air they breath——I pause—for my pen trembles while it marks down the emotion of the human breast. It is night—and darkness is thick and heavy—there is silence—in its midst I arose from my pillow to make this memorandum of my thoughts for they came not unbidden to the chambers of the mind.

The Lake of Sodom, where once stood the cities of Sodom and Gomorah, is now a deadly pool—no human being has ever navigated its waters and survived the impious deed three days afterwards. It is the *memento* of an awful judgment. High heaven has decreed it so.

The dissecting knife which wounds the operator when mangling the body of a fellow mortal, gives a deadly stab—death follows the slightest scratch that stains the knife with blood.

The dissector pleads his desire for the welfare of the living as an excuse for violating the resting places of the dead, but the statutes have declared the act to be sacrilege, and pronounced the removal of mortal remains for such a purpose, a crime.

The fields of Waterloo have been desecrated, the ashes of the dead have been carried away to manure the fields—to increase the products of vegetation—*and what do we hear?*—that famine threatens the land, for the food of man is poisoned—a disease, malignant and extensive has seized upon vegetation.—Need we look for a cause beyond what we already know—need we wonder that judgments fall upon us while we know full well that we have, in our acts, denied a safe resting place to the treasures of the grave, and torn the sepulchral chamber from its foundation.

AWFUL VISITATION.

Bark Bayfield, John Lucas, master, from Liverpool, for the Bonny River, on the West coast of Africa, with a cargo of ***gunpowder, spirits,*** &c., was struck by lightning on the 25th of Nov. last. The mate and the whole of the crew, then on deck, were knocked down by the force of the electric fluid, and soon afterwards it was discovered that the vessel was on fire directly over the magazine; after using all exertions to suppress the fire without effect, the crew were compelled to take to the boats. They were unable to save any water or provisions, and in this pitiful condition steered for Sierra Leone, then distant about three hundred miles, which port was reached after being nine nights and eight days in open boats, without water or other necessaries, and having lost three men by starvation.

PEACE.

The United States have enjoyed uninterrupted peace with the other nations of the earth, for a period of upwards of thirty years. From the termination of the revolutionary war to the commencement of the last war, was a period of about twenty-nine years. The war of the revolution lasted about seven years, and the last war with Great Britain lasted near three years; thus we have in the four periods named an aggregate of about 70 years, during which time our people have been engaged in war 10 years, or *one-seventh part of the whole time.*

direction, together with the 8 to 12 feet elevation of the tide, great advantages are presented for drainage, such as I fear New-York can never possess, although Brooklyn might be made to. In conversation to-day with the superintendant of a Sewer constructing in Fleet Street, he told me that a descent of 1 inch in 10 feet was considered large, and that 1 inch in 20 feet would suffice without flush gates, which are used as you know to create a current by holding the water. I found this individual very much disposed to communicate his knowledge on the subject, and he finally concluded by offering me the loan of a pair of boots adapted to the occasion if I would go down this afternoon and take a walk with him through some of the Sewers! an offer which I politely *declined*.

I send with this a London paper of Oct. 1st, containing an article upon the recent Parliamentary enquiry into Drainage, Ventilation, &c. I hope to procure one of the reports upon the subject made to Parliament by the Commission that made the investigation.

The pavements most approved here now, are of stone presenting a surface of 3 inches by 6 to 8, and about a foot deep; these cause less jarring to the wheels than those heretofore used, which were nearly square upon the surface. To lay them down cost about 2.50 per square yard.

The Fire Insurances are higher here than with us, considering the small risks—the price is much enhanced from an injudicious *stamp* charge on policies, which an effort is now being made to have abolished.

I have not as yet been near any of the Salt works except those on the coast of France, which were much impeded by the rains of the summer, so that the price of the article had risen much. At Salines, where are the springs in the east of France, the water is carried in conduits 15 miles to a forest where it is allowed to deposit its sediment and then is evaporated. This is equal to the plan that the Oswego people once proposed of having the *water* of Syracuse thus carried to the woods of their neighborhood, instead of carrying the *wood* to the *water*.

You can scarcely imagine the excitement here in regard to Railroads: wherever in Europe they are *constructing* the Magnetic Telegraph is combined with them. The Exchange of London and Paris are drowned with the clamor of the Brokers selling the projected road shares. Iron must for some time feel the effect of this rage, as roads are here constructed 300 ton a mile is wanted. Great Britain makes 1.500,000 tons this year.

When I meet you again, which I hope will be soon after the receipt of this, I may be able to communicate some information of a more definite character upon the topics on which I have just *touched* here—till then adieu.

SOLOMON TOWNSEND.

E. Meriam, Esq.

We are indebted to Mr. Townsend for the following extract from the log of the Great Western on his return passage.

Extract from London Globe of Oct. 1st, 1845, refered to by Mr. Townsend

"In considering the probable results of the late inquiry into the sanitary condition of our large towns and popular districts, we have one chief source of apprehension—that, in applying remedial measures, too much reliance may be placed upon mere legislation. For effecting the most important of the changes in the internal economy of crowded districts recommended by the Commissioners, there are but two available methods. Either the inhabitants, and others immediately concerned as individuals, must be persuaded voluntarily to adopt and co-operate in effecting the proposed measures, or adequate compulsory powers must be vested in some authority, disposed and competent to effect them in a proper spirit. In availing themselves of either of these methods, it is to be remembered that defective drainage and want of ventilation do not accompany the habitations of the poor because they are either agreeable to the tenant or profitable to the landlord. They are nothing more than the particular form assumed in England in the 19th century by incidents common to the condition of those who have reached the stage of civilization now occupied by the bulk of our population. Three centuries ago the personal habits of the highest classes in this country were scarcely in any degree superior to those which, when described as now actually prevailing in the courts and alleys of our large towns, excite the astonishment of most and the pity of all.

"A large section of the population—embracing all the most intelligent and influential persons in the country—is, it may be said, much improved in this respect. But how is the influence of this section to be brought to bear most effectually and beneficially upon the rest of the community?

"We are already far advanced both in a knowledge of what is wrong and of the means of setting it right. This the labours of the Commission we have referred to have done much to achieve. And to the influence last mentioned we must undoubtedly look for the chief if not the only means of usefully applying this knowledge. But we fear this influence will be found but weak if exerted through no better medium than Parliamentary debates and restrictive statutes, or the noisy discussions and arbitrary municipal regulations of corporation committees.

"On the other hand, mere exhortation is not likely to have much effect. The landlords of small houses will still claim the right to do as they like with their own; and may be expected very generally to resist every change till it is proved not only to be harmless, but to be attended with some positive advantage to themselves. Where the owners of such property in large towns are not themselves closely allied in habit and feeling with their tenants, they usually intrust its management to agents who are so, and have as little personal acquaintance with its condition as the merest stranger. Yet it is to the landlords alone that any appeal can be made. The tenants can seldom be brought to desire, and never found able to effect the requisite structural reforms.

"That the practice of building houses for the poorer classes which it is impossible by any ordinary means to ventilate, still continues, may be proved by a walk through the outskirts of any growing town in the kingdom. Even in the new town of Birkenhead, nearly the whole of which has been built within a very few years, may be seen rows of small houses lately built back to back, and facing into narrow courts in a manner specially reprobated by the Commissioners as having been found almost entirely to preclude the access of fresh air. Yet in the same locality, not only is the gross impropriety of this and similar practices well known, but ranges of houses for the families of laborers have actually been built—under the direction, we believe, of the Dock Commissioners—exhibiting all or the greater part of the simple and economical improvements of construction recomended in their reports.

"To effect the desired changes by operating upon public opinion, through the only method likely to be effectual in the end, must necessarily be a slow process; and nothing, we fear, but untiring energy and perseverance on the part of those intrusted with the task, can be expected to produce any material result. In the mean time, nothing should be left undone by the legislature in the narrow field, properly open to its influence. Drainage, and the supply of water, being now commonly brought under the management

either of the local authorities or of public companies, may in many cases be improved and extended with facility and advantage, and without much interfering with individual interests or prejudices. Ventilation offers other and more serious difficulties. But even here something may be done, both in actual improvements and in their extension by example. Public buildings, churches and schools may be so constructed or altered as to admit of safe and complete ventilation. Arrangements should be made for securing at all times to those who frequent them, an adequate supply of warmth and pure air. We do not doubt that the effects would soon be visible. The added health and comfort would be felt and appreciated—the cause would be considered, and in time properly valued. Let a taste for pure air once begin to prevail, and the means of gratifying it would soon be found.

"We cannot perhaps, better illustrate both the need for improvement and the scope afforded to it by the condition of *public buildings devoted to popular purposes*, than by reference to Dr. Reid's report on the state of the *Northern Coal Mine District*. The *neglect* is here the more striking as the popular attention must be constantly directed to the value of fresh air, in connection with the mines, and the abundance of cheap fuel renders perfect ventilation comparatively easy in all cases. "The same defects," we are told, "that prevail almost universally in the public buildings in other districts, are equally conspicuous in the public buildings in Newcastle, Sunderland, and other towns in the North of England."

"Churches with galleries near the ceiling—schools receiving vitiated air from other schools—one with vaults below it for the reception of dead bodies—and cases of recently erected buildings without a single aperture for the ingress or egress of air beyond those which doors or windows afford, all attest that, even in this mining district, the ventilation of public buildings has assumed no regular or systematic shape. Out of ten churches, chapels, and meeting houses in Sunderland, two bad been the subject of special arrangements for ventilation.

"In few places, for the most part, could ventilation be improved with greater facility than in churches.

"But in no public buildings does systematic ventilation appear to be so desirable as in schools, where the long period spent in them, as well as the age of the pupils and the numbers so often crowded in a given space, renders them peculiarly prone to suffer from a stagnant atmosphere.

"In an infant school in Durham, to which my attention was directed by Mr. Fox, 30 children out of 90 were absent from illness (scarlet fever). There were no means of systematic ventilation; a slaughter-house and a piggery were noticed opposite the principal window." . . . . . .

And again—

"If any buildings should be subjected to inspection in reference to their arrangements for ventilation, school-rooms pre-eminently present themselves for consideration, not only from the powerful effect which ventilation must have upon the health of pupils, but also from *the influence which the maintenance of a pure atmosphere, and the example of the simple manner in which it may be sustained, must exert in disseminating widely throughout the whole community a practical knowledge of means that are equally applicable to the habitations of the higher classes and the dwellings of the poor.*"

STATE OF PRISONERS ON BLACKWELL'S ISLAND.

The Sessions Grand Jury have presented the following communication to the Mayor, on the above subject. January, 1846.

To His Honor, William F. Havemeyer, Esq., Mayor of the City of New-York.

The Grand Inquest most respectfully submit, that in the prosecution of their duty, they have visited the Alms House and Prisons during the present session, and found them very crowded, as is generally the case at this season of the year. The Jury however were much pleased with the cleanly manner in which these establishments appear to be kept.

The Grand Inquest desire to call the particular attention of your Honor to the situation of one of the buildings called the *Luna House*. It is situated on the west side of Blackwell's Island, near the Penitentiary, is built of stone, 75 feet long, 35 wide, and three stories high; the lower story is used as a blacksmith's shop, the 2d and 3d are occupied as prisons, where the most miserable objects are confined. They are persons committed by the Police magistrates under the Vagrant Act, and more or less are sent up every day from the city. There were nearly 200 men confined in the two rooms the day the Grand Inquest visited the place, and the keeper and physician advised the Jury not to go in the building, on account of the vermin.

The inmates were directed to be brought out, and it is impossible to describe their miserable condition; a great many too are idiots, and the remainder either lame or diseased and covered with vermin.

Part of the jury visited the interior of the building, and found there were neither *beds* nor *straw;* nor was there even room on the floor for all these wretched people to lie down, at the same time.

The keeper informed the jury that there were, frequently, 250 persons confined in these two rooms; there being no place to put them in, and in consequence of this state of things, it is almost impossible to prevent them from quarreling and fighting.

The jury are unanimously of opinion that no time should be lost in alleviating the sufferings of these unfortunate beings, and they request of your Honor specially to advise the Common Council of the necessity which exists of an additional building to be erected with suitable accommodations, without delay.

Opportunity will then be given to classify these persons, and produce more cleanliness, order and regularity in the establishment, and the great object of society in providing these institutions, and the cause of humanity, will be in a greater degree promoted.

HENRY ERBEN, Foreman.

Jos. B. Brewster, Secretary.

DO THE CORPORATION OWN THE FEE OF THE STREETS?

Extracts from the Opinion of P. A. Cowdrey, Esq., Counsel of the Corporation of New-York, communicated to the Common Council, Feb. 24, 1840.

Doc. No. 54 of the Board of Aldermen.

"Have the Legislature of the State and the Corporation of the City, combined, the power to grant the authority conferred by the Acts above referred to?

"The streets and highways in the City of New-York, may be divided into two classes, one including such of the ancient streets as were in use prior to the passage of the law of 1807, (30 Sess. Chap. 115,) and the other of those which have been laid out under the provisions of the last mentioned Act. As to the first class, there being no statutory provision vesting the fee in the Corporation, but only authorizing the land to be converted to and used for a public highway, (Sess. 30, Chap. 61, Act March 21st, 1789,) they are governed by the rules of law applicable to other highways. These rules are that the fee to the centre of the road or street, belongs to the owner of the adjoining ground, and that the public have only a right of passage.

"This is the acknowledged doctrine of the common law, and is sanctioned by the decisions in our own state, and in others of the Union. (1 Burrows, 143; 19 Wend., 675; 11 Wend., 502; 8 Wend., 107; 1 Wend., 270; 1 Cowen, 238; 6 Mass., 456; 1 Pick., 122; 1 Conn., 105; 1 Yeates, 168; 9 Sarg. & Rawle, 31; 1 New Hampshire, 16; 3 Kent's Comm., 432.) This doctrine is carried so far by the authorities above cited, that the adjoining owners are held to have the exclusive right to the soil, while the public have only an easement or right of way—and that being such adjoining owners, they may maintain ejectment for any encroachment upon the road, or trespass against any person who digs up the soil of it—and that they may have every use and remedy, consistent with the right of passage in the public and with police regulations.

"As to the other class of streets, laid out under the law of 1807, and the revision thereof of 1813, (2 R. S., 414,) on the confirmation of the Commissioners' report, the Corporation become seised in fee of the land required for the streets,—"*in trust nevertheless* that the same be appropriated and kept open for a public street forever, *in like manner as the other public streets in the said city are, and of right ought to be.*" The streets last mentioned are opened by levying an assessment for the value of the land taken, and for the expenses thereof, upon the owners of the adjoining and contiguous property. The Corporation take the fee; but the owners pay for it. While therefore, the public at large have the right of using the street, because of its character as a common highway, the individual owners from the inherent right, resulting from their purchase and from the intrinsic character of their property, have a special interest in the street itself, as incident to their ownership of the adjoining land, and deprived of which, the land itself would become comparatively valueless. The streets in our city are opened, not only to subserve the ordinary uses of the public, but also and more especially for the benefit of those who thereby obtain a front upon the street, and at whose charge such street is made.

"In a very late case decided in Kentucky, (8 Dana, 294,) and particularly referred to hereafter, Chief Justice Robertson, whose opinions are of acknowledged authority, says, "The title to lots, contiguous to a public street, carries with it certain services and easements, almost indispensable, and as inviolable as the property itself, and the owners have a peculiar interest in the street, to which neither the local nor general public can pretend—a private right, of the nature of an incorporeal hereditament, legally attached to their contiguous ground, and without which, the property never would have been bought by them."

"The laws of our own state fully acknowledge this right, by providing that on closing a public street, the adjoining owners shall be paid the damages which they thereby sustain.

"We have thus seen, that as to the ancient streets and roads of the city, the fee remains in the adjoining owners, subject to the right of passage in the public, and to police regulation.

"That as to the new streets, the fee is vested in the Corporation, subject to the trust of "appropriating and keeping them open, in like manner as the other streets are and of right ought to be"—and that in this trust the adjacent owners have a special property.

"The Constitutions of the United States and our own State, provide that "No person shall be deprived of his property without due process of law, and that private property shall not be taken for public use *without just compensation.*"

"This provision is founded in natural equity, and is indispensable for the protection of private property.

"In 11 Wend., 151, the Supreme Court say that "the Constitution, by authorizing the appropriation of private property for *public* use, impliedly declares that for any other use, private property shall not be taken from one and applied to the *private* use of another. It would be in violation of natural right, and of the spirit of the Constitution." And in 19 Wend., 676, they say, "Our Constitution means that the Legislature should have no power to deprive one of his property and transfer it to another, by enacting a bargain between them, unless it be in the hands of the latter, a trust *for public use.*"

We have thus copied from this official document, and from the opinion of the learned Counsellor, a distinguished Corporation functionary and we have now a question to ask: What right have the Corporation to sell land under ground for Street vaults to those who already own it?

We shall hereafter review the opinion of the learned Counsel.

CHAPEL STREET SEWER.

The Corporation have agreed to pay Mrs. Flenders Five Hundred Dollars for the injury done her property by the Thomas Street Sewer, built at the same time and connected with the Chapel Street Sewer. The amount should have been five thousand dollars instead of five hundred.

Alderman Tillou has written a long criticism upon the Chapel Street Sewer Report, made by him and other members of the same committee prior to his embarkation for Europe, and printed in his absence. Alderman Tillou insists that printing was not properly conducted. We presume his remarks will be printed and extensively circulated.

The persons owning property upon Chapel and Thomas Streets should be paid one hundred thousand dollars at least, for damages done to their property by the destruction of the former sewer and the misconstruction of the present sewers.

every lot or parcel is separately valued, according to its local situation and advantages.

The following is a summary of the amount of each class, and will show the several and grand totals of the whole amount:

1.	Houses and Lots productive	405,200.00
2.	Lands and Buildings used for Public Purposes	1,731,036.62
3.	Productive Property at Brooklyn	62,150.00
4.	Unproductive do. do	1,950.00
5.	Ferries, including the necessary wharves and Piers,	122,000.00
6.	Common Lands productive	119,150.00
7.	Common Lands unproductive	37,800.00
8.	Common Lands payable in Wheat	2,650.00
9.	Common Lands, perpetual leases, rent payable in Coin	1,260.00
10.	Public Wharves, Piers and Slips	842,257.50
11.	City Lots, Rent payable in Wheat	5,200.00
12.	Personal property	65,564.00
	Grand Total	$3,396,218.12

Public Purposes.—Almshouse, City Hall, Jail, Bridewell, Markets, Park and Bowling Green.

Description of the Property.	Valuation.
New Almshouse, Penitentiary, Dwelling, &c. &c. at Bellevue, cost for the building	415,233.18
Twenty-eight acres of Land belonging to the same, including the Avenue and Streets, valued at $2,000 per acre	56,000.00
City Hall	528,634.31
Debtors' Prison	10,000.00
Bridewell	12,000.00
Fly Markets	9,000.00
Catharine Markets	4,500.00
Gouverneur Market	350.00
Grand Street Market	500.00
Essex Market	475.00
Centre Market, including a triangular piece of ground fronting on Grand, Rynders, and Orange Street	6,200.00
Washington Markets, and the piece of land on which they are erected	79,714.13
Spring Street Market	400.00
Christopher or Greenwich Market, and the ground given by Trinity Church for a Market	2,000.00
Duane Street Market	2,500.00
Old Almshouse and the Stable	20,000.00
The Park, comprising all the land east of Broadway and west of Chatham Street, and south of the south line of the supposed extension of Warren Street, including the land on which the City Hall, Bridewell and Jail are built; and excluding therefrom the land on which the Free School is built, and the adjoining land and buildings heretofore valued to the south of said schoolhouse, and east of the jail yard; containing about seven acres, or 122 lots, valued at $1,000 per lot on the supposition that said land is to be hereafter used for a Park, and other public purposes	122,000.00
Bowling Green, an oval piece of land, enclosed with and including an iron fence at the south end of Broadway, near the Battery, containing by estimation 22,500 feet, equal to nine lots	25,000.00
	$1,294,506.62

We, the subscribers, certify that we have, by direction of the Honourable the Corporation of the City of New-York, made the foregoing appraisement of their property, to the best of our skill and judgment.

JONATHAN THOMPSON,
JOHN TARGEE,
WILLIAM S. SMITH. } Appraisers.

New-York, August 19, 1820.

CORPORATION PROPERTY.

We have given on this page, an extract from the Report made by JONATHAN THOMPSON and others, of the value of the public property in 1820. The Battery was not valued by these gentlemen, for that ground belongs to the State of New-York. The public Streets and public Squares were not valued, for these when no longer used for public purposes revert to the adjoining owners, *or* to those who have paid for the ground in assessments for benefit?

In 1838, the Corporation officers put in the list the Battery and Public Squares neither of which belong to the Corporation. It would be a blessing to the city if such men as Jonathan Thompson, Stephen Allen and John Targee, were now in the City Councils. Such men are becoming scarce.

CANDIDATES FOR STATE CONVENTION.

We add to our list on the first page of this number, the following names:

Myndert Van Schaick, Edmund H. Pendleton,
Preserved Fish, William W. Fox,
Samuel F. Mott, Joseph Walker.

Municipal Gazette.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, MARCH 4, 1846. [VOL. I....No. 39

STATE CONVENTION AND NEW-YORK CITY CHARTER.

The most wonderful move toward the amendment of the State Constitution is to be found in the frame of a bill to be presented to the legislature for to be passed into a law to amend the New-York City Charter, and which was on the 16th of February approved by the Board of Aldermen, and on the 19th of February approved by the Board of Assistants. These two bodies form the Common Council of the City, and were vested by the State Legislature with the Legislative powers of the Corporation, and these proceedings have been enacted in their *Legislative* capacity.

The proceeding is not a legislative act and the two boards have no jurisdiction in the premises—but to to the pith of the *wondrous wonder*—and here it is:

"Sec. 11. The Mayor of the City of New-York shall continue to be elected annually, until an amendment of the Constitution of this State shall authorise him to be elected for a longer TIME, after which he shall be elected for two years."

Section 10 of article 4 of the Constitution of this State as amended in 1833, read thus:

"§ 10. The Mayor of all the cities in this State shall be appointed annually by the Common Councils of the respective cities, *except in the city of New-York, in which city the Mayor shall be chosen annually by the electors thereof qualified to vote for other charter officers of the said city, and at the time of the election of such officers.*"

If the wonderful section 11, was the production of a single mind, it is a rare protegee for it is a burlesque upon the Constitution.

The last part of this section is a new mode of instructing the members of the Convention, but the beauty of it is that if the State Convention shall determine that the Mayor's of the cities shall hold office for *three* years, the Common Council of New-York ask the Legislature to limit the term to two years, *notwithstanding* that the Constitution declares otherwise.

The eleventh section, we have quoted, is a fair specimen of the whole bill—it is a wonderful production.

Section 18 *of the proposed Charter.*

"§ 18. The Seventh section of the act entitled, 'an act to amend the charter of the city of New-York,' passed April 7, 1830, and all provision of law and of charter, which are inconsistent with this act are hereby repealed."

Whatever provisions of charter or law, (and the charter is nothing but a legislative act) that are designed to be repealed should be designated by chapter and verse. The Seventh section of the act of April 7, 1830 is one of the most important provisions of the Statute aad the disregard of its provisions should be made punishable to an extent equalling the offence.

This wholesale mode of repealing laws is so loose that we wonder that a State Legislature should ever allow it to have a place in the Statute book.

A NEW-YORK ALDERMAN

Is by virtue of his office of Alderman:

Ex Officio Judge of the Court of Oyer and Terminer.

Commissioner of Excise.

Judge of the Court of General Sessions.

Supervisor of the County.

Judge of the Court of Special Sessions.

Commissioner of Highways.

Judge of the County Court.

Health Commissioner.

Magistrate in the Ward he Represents, &c.

THE ROYAL GRANT OF CHARTER TO THE CITY OF NEW-YORK.

The charter of the city of New-York was never signed by the King or Queen of Great Britain.

The numerous proceedings in relation to the New-York City Charter, will be found in the first four numbers of this Journal. In 1683 a lengthy petition was presented by the Mayor and Common Council of New-York to Gov. Dongan for a charter, which we reprinted to go along side of the bill now proposed by the Common Council to increase their own powers and remove all restrictions and restraints upon their own acts.

PETITION FOR A CHARTER.

On our 2d page will be found the petition of the Mayor, Aldermen and Commonalty of the City for a charter. It was presented to Col. Dongan, the Provincial Governor, in 1683, and is a curious document, and although we had printed it in one of our previous numbers we deem it important to reprint it to put it along side of the present application for a charter from the Common Council in 1846. Thus we present at the same view the present charter, the proposed charter, the petition for a charter in 1683, and each member of the Legislature will be furnished with a printed copy of the address of the members of the City Convention in 1830. These will give each member of the legislature a pretty comprehensive view of the whole subject in a connected form. Extra copies of the testimony taken before the Hon. the Senate Committee in 1842, will also be forwarded to the members of the Legislature.

TAXES.

The time for making application to the Board of Supervisors for the correction of erroneous taxes will expire in the firstweek in April, and a penalty of near SIX per cent. on unpaid taxes will attach on the first of April.

CANDIDATES FOR THE STATE CONVENTION.

It is high time to call public attention to the selection of candidates for the State Convention, as members of that body from the county of New-York. We present the following list of names selected from the three political parties, viz:

James Kent,
Albert Gallatin,
Jonathan Thompson,
Stephen Allen,
Saul Alley,
Jonathan Goodhue,
John M. Bradhurst,
Solomon Townsend,
Peter Cooper,
James Harper,
Wm. F. Havemeyer,
Burtis Skidmore,
Richard Mott,
Lora Nash,
F. R. Tillou,
Luther Bradish,
Peter Lorrilard, jr.,
Henry Grinnel,
Richard S. Williams,
James Boorman,
Myndert Van Schaick,
Preserved Fish,
Samuel F. Mott,
George Douglass,
Abraham G. Thompson,
Abraham Van Nest,
Gulian C. Verplanck,
Wm. B. Crosby,
Charles H. Russell,
Peter Schermerhorn,
James I. Jones,
Robert Smith,
Murray Hoffman,
David Hale,
Philip Hone,
J. I. Coddington,
Theodore Sedgwick,
Samuel Thompson,
James Donaldson,
Thomas T. Woodruff,
Elisha P; Hurlbut,
John David Wolfe,
Hiram Ketchum.
Edmund H. Pendleton,
William W. Fox,
Joseph Walker.

CITY CHARTER MOVEMENT.

On the third and fourth page of this Number of the Municipal Gazette, will be found the draft of a bill agreed upon by the New-York Common Council, for amending the Charter of the city, prefaced with our brief comments thereon.

The bill is the worst we have ever seen drawn up for the frame of a City Government, and should never become a law. The Charter of the City of New-York, adopted in 1830, is a thousand times snperior to the bill proposed, but the *Departments* of the city government disregard it.

The State Convetnion which is to assemble in June will probably take the City Charter in hand with a view to a general modification conformable in principle to the doctrines of a free government.

In 1833, the British government issued a commission for the purpose of enquiring into the State of the Municipal Corporations throughout the United Kingdom of Great Britain and Ireland.

The elaborate report made to Parliament had especial reference to the affairs of the Corporation of the city of London, and in terms of unsparing condemnation exposed the abuses resulting from its long continued execrise of the many privileges of Jurisdiction, incident to its feudal constitution, and though a bill was enacted in pursuance thereof for the reformation of the country municipalities, the government promised to introduce a separate measure in reference to the city of London, nevertheless, owing to the overwhelming influence of the city corporation, combined with the magnitude of the interests involved in the preservation of its extensive powers on the one hand, and the weakness of the Whig Administration on the other, it has remained unmolested to the present hour.

LORD BROUGHAM in the House of Lords said of the Corporation of London, "From its design of an useful and efficient instrument of local government, the great metropolitan corporation has been perverted to "GIANT ABUSE," and so it is denominated. It has lost the confidence of the people." With a view to amend it, Lord Brougham moved an address to the Queen.

INDEPENDENT NEWSPAPER.

A public spirited citizen, possessing a surplus of this worlds goods, has volunteered pecuniary aid to sustain an independent newspaper to be published in the city of New-York. Two gentlemen have agreed to undertake the publication, trusting that they will be sustained by the citizens with such advertising patronage and subscription list as will enable them to refund the amount thus so generously advanced.

The Anti-Assessment Committee have volunteered the needful aid in the editorial department, free of charge.

The abuses of the city government and its officers, are to be given in great detail, and it is hoped that the exposure of these abuses will prevent a repetition of them.

The new Journal will discuss the question of more equal taxation in great detail.

Public matters, touching the administration of the National, State, and Corporate Government, will be freely treated of.

We have no doubt that the new Journal will be one of the most valuable newspapers in the Union.

A well conducted paper of the kind proposed, will in process of time, if persevered in, do more to correct municipal abuses than every thing else put together. We wish the publishers great success, for their gain will be that of the people.

River except he was a Freeman and had been arrival Inhabitant of this Citty offor ye space of 3 years, and if any ffreeman should be absent out of ye Citty ye space of 12 month, and not keep ffire and candle & pay seat and cott, should loose his freedome.

10th. All ye Inhabitants up Hudson River were forbid to trade over sea.

11th. No Flower was to be bolted or Packed or Biskett made for exportation but in ye Citty of New Yorke, being for ye Incouragement of trade and keeping up ye reputatiou of New Yorke fflower, which is in great request in ye West India and ye (Inhabitants) only support and maintenance of ye Inhabitants of this Citty, and if not confirmed to them, will ruin and depopulate ye same.

12th. That ye said Citty had a Common seale to serve ffor ye dealing of all and singular their affairs matters and business touching ye said Corporation.

All which said ancient customs privileges and lybertys ye said Mayor and Aldermen in behalf of themselves and ye Citizens of ye said Citty do humbly present & make known to yr Honour, humbly beseching yr honor in their behalf to Interceed & procure that ye same be Confirmed to them by charter ffrom his Royall Highnesse with these additions following:

1. That ye said Corporation be divided into six Wards.

2. That ye ffreemen in each Ward do once every year ellect their own officers to say Aldermen, Common Councilmen, Constables, Overseers of ye poor, Scavengengers, Questmen or other officers useful and necessary ffor ye said Corporation & Wards.

3. That there be a Mayor & a Recorder, who with ye said six Aldermen & Common Councillors shall represeut ye whole body of ye said Citty & Corporation & shall have power to make pecular Laws and ordinances ffor ye good Government and support thereof.

4. That a Mayor be appointed every year by Governour & Councill, & to be one of ye Aldermen choen as aforesaid.

5. That all Magistrates so chosen shall not be admitted to ye execution of their offices until sworn before ye Governor and Council.

6. That ye Recorder be appointed by ye Governor and Council, who shall be judge of ye city and corporation and be ayding and assisting ye Mayor, Aldermen and Common Council in all matters yt relate to ye well being thereof.

7. That a Sheriffe be annually appointed by the Governor and Council.

7. That ye Coroner and Towne Clark be appointed by the Governor and Councill.

9. That ye Mayor, Recorder, Aldermen and Commom Councill do appoint a Treasurer for collecting and paying all public debts and Revenues.

This and whatsoever else your Honor and his Royall Highnesse shall think ffit, necessary and convenient ffor ye good rule, order and welfare of this citty or Corporation, your Petitioners humbly pray may be granted and confirmed to them, in as full and ample manner and fform as his majesty hath been graciously pleased to grant to other Corporations within his Realme of England, ffor ye.

Of which they again humbly begg your honor to become their supplyant, whose kindness and service therein shall be most thankfully acknowledged.

New York, 9bre, ye 9th. 1683. And as in duty bound, your petitioners shall ever pray, &c.

EXPLANATION ASKED OF THE MAYOR, &c. AS TO CERTAIN PARTS OF THE FOREGOING PETITION BY THE GOVERNOR AND COUNCIL.

Some objections made by ye Governor and Councill to ye petition presented in the name of the Mayor, Aldermen and Commonalty with desire to be explained.

Att a Councill held in New Yorke ye 10th 9bre, 1683.

Present

The Governor,
Mr. Frederick Phillips,
Mr. Lewis Sancton.

A Petition from ye Deputy Mayor, Aldermen and Commonalty of ye citty of New Yorke being read, was conclnded as follows:

In answer to the first article it is thought reasonable that the Towne of Harlem shall have liberty to determine all matters yt come before them under 40s., att their own Towne Court. To ye third article it is answered that there being these words, these Magistrates had power to appoint all Inferior Officers, and Constables, Overseers, under Sheriffs, Cryers and Marshals, it is desired that it may be explained what is meant by Marshall in ye second article; it is also desired yt it may be explained what is meant by peculiar Laws, and how far they will extend, as likewise what is meant by Court of Judicature. and how ffar ye s'd Court is to extend, and yt ye Court of Judicature under forty shillings being allowed it is thought convenient to distinguish betwixt ye s'd Courts and make two articles of this one, being ye third article to ye fourth article, it is thought yt ye water Bailiffs belongs to ye admiralty, and ye seventh article Jews are to be accepted who are left to ye discretion of ye Governor.

By order in Councill,

JOHN SPRAGG, Sec'ry.

EXPLANATIONS TO THE FOREGOING, GIVEN BY THE MAYOR, &c.

An explanation of several heads contained in ye petition lately presented to his honor ye Governor, by ye Mayor Aldermen and Commonalty of ye citty of New Yorke, pursuant to ye desire of the Governor and Councill, Humbly presented to his honor's further consideration.

The Towne of Harlem is a village belonging to this Citty and Corporation ffor ye more easy administration and dispatch of Justice. Officers have been annually appointed by ye Mayor and Aldermen to hold Courts and determine matters not exceeding 40s., both at Harlem and the Bowery, and shall do ye like for ye future, and is intended to be one of ye six Wards.

3. Marshall is an under officer assistant to ye Sheriffe in serving writs, summoning Jurys, looking after prisoners and attending ye Court, and that Officer and the Cryer has hetherto been one person.

Pecular Laws, and Laws and Ordanancees by the Mayor, Aldermen and Common Councill, ffor ye well and good government of this Citty and Corporation and to extend as ffarr as the limit thereof.

Court of Judicature is a Court to hear and determine all causes and matters whatsoever brought before them, both Civill and Criminall, not extending to life, limb, or member, and had jurisdiction over all the harbours and Bayes, Coves, Creeks and Inletts belonging to ye same.

The whole Island being one Corporation, ye inhabitants are all members of one body and conceive no need of distinction. The Mayor, Aldermen and Common Councill having ye care and charge to make all things easy and convenient ffor ye Inhabitants as possible, and will have the same regard thereto as formerly.

A Water Bailliffe is an officer belonging to a Corporation, and ye Sheriffe of this Citty hath useually exercised the office by serving arrests and attachments in ye harbours, Bayes, Coves, Creeks and Inletts belonging to this Corporation, by Warrant ffrom ye Mayor, Sheriffe or other his superiors to him directed as Sheriffe or Watter Bailliffe, as well in Civill as Criminall matters.

What belongeth to the Governor or prerogative, think not fitt to meddle with or any way restrane.

New Yorke, 9bre. 19th, 1683.

REMARKS.

ARBITRARY POWER.

The foregoing petition and explanations, although made 163 years ago, are very much of the same character of the present proceedings of the Common Council of New-York in their present application to the Legislature.

The Common Council of New-York are administrative officers—they connot enact Statute law, that power is vested in the Senate and Assembly of this State, and these two bodies forming the Legislature of the State, cannot delegate this power to *an* officer of the New-York Corporation, nor to the Common Council of N. York, nor to any other individual or body of men. The City of New-York is a part of the State of New-York, and is governed by the laws of the State and not by the ordinances of a subordinate Corporation created by Statute, a mere creation of the Legislature, which the Supreme Court can dissolve and make void for abuse of power.

PROPOSED CHARTER OF 1846.

We have re-printed from the Journal of Commerce of Wednesday the eighteenth of February, the draft of a Bill which has been approved by the Board of Aldermen for ameuding the City Charter. We have not reprinted the Editorial commendation of the Bill which accompanied its publication, inasmuch as we think the worthy editors of that valuable public journal have greatly erred in *the commendatory notice*, and we hope to be able to convince them of this in our review of the provisions of the Bill in detail.

It was formerly the custom in legislative enactments to accompany the Bill with a preamble reciting the mischiefs its provisions were intended to remedy—it was a good custom and should not have been discontinued.

Had that been done in this case, the Bill would demonstrate an absurdity, for the mischief is in the departments, and not with the newly elected Aldermen.

Abuses of an aggravated and alarming character have been committed, and the great enquiry is—by whom?

Here is the foundation to begin at. The Departments of the City Government have been wretchedly administered. Corruption and abuses of an aggravated character have existed in the departments to such an alarming extent that if a scrutiny was to be had and the abuses fully exposed, the citizens would raise *en masse* and demand their abolition.

Take up any particular act of the corporation that is complained of, and begin with its commencement in the common Council, and follow its details to its final consummation through the departments, and it will be readily seen where the mischief attached, and in which department of the City Government the fault lies, and what particular officer the blame attaches to.

Much is said about the inexperience of members of the Common Council, and this it is suggested in the Bill, can be remedied by making the term of Aldermen of three years durationf in place of one year.

Experience is universally acknowledged to be the best schoolmaster, and we have this developed most satisfactorily in the records of the common council since the adoption of the amended charter in 1830, and before that change. Many of the members of the Common Council have been re-elected for years in succession, and there are now in that board gentlemen who have for several years been members of the Common Council. Contrasting these gentlemen with their associates of lesser experience, and thus obtain the sought for *desideratum*, if attainable by means of extended terms of office. We forbear any comparison which may be deemed personal, but state the case as a matter of general application. Our conclusion is that the experiment has been tried and found a failure.

The advocates of the bill in hand, are warm in their expressions of admiration of the general frame of our State fundamental law, and claim in this bill to copy after it, but section two repudiates the very doctrines they advocate, for by the Constitution, members of the legislature cannot at the same time hold or fill any other civil office, but this section of the bill provides that all the powers given to the Mayor, Aldermen and Commonalty shall continue to be *vested* in that body. Thus a member of the Board of Aldermen is by virtue of his office of Alderman, Judge of the Court of Oyer and Terminer, Judge of the Court of General Sessions, Judge of the Court of Special Sessions, Judge of the County Court, Commissioner of Excise, Health Commissioner, Supervisor of the County, Commissioner of Highways, Magistrate in his Ward, and if made President of the Board, acting Mayor of the City. Now then where is the great regard for great principles contained in the Constitution?

An Alderman cannot discharge the duties of all these ex officio offices, and besides all of them are incompatible with the office of a member of the Common Council possessing the Legislative powers of the Corporation.

The first section of the bill is a needless provision which will be readily seen when compared with section one of chapter 122 of the laws of 1830.

Section 2, is a dangerous and ruinous provision. Whatever powers are intended to be given to the Common Council, should be plainly and distinctly stated, and all not intended to be given should be interdicted.

Section 3, provides for 18 aldermen. Since 1836, application was made to the Legislature to increase the number from 16 to 17, for the reason that in 1836, the number of Whig Aldermen were 8, and the Democratic Aldermen 8, which made a tie vote, and two months time was consumed in organizing the Board, during which time no public business could be transacted by the Board.

Section 4, provides for a longer term of office. We have discussed that point in our prefatory remarks.

Section 5, increases the number of Assistants, and inasmuch as the members are to be paid $750 per year, by ordinance to be passed by themselves, the increased expenditures in this will be near $30,000 per annum for Assistants, and more than $13,000 for the Aldermen, besides gold pencil cases, stationery, maps, sets of volumes of natural history, &c. &c.

Section 7, is a substitute for the same section in chap. 122 of 1830, and is intended to defeat the restraints upon that necessary provision of that act, which was more dwelt upon as to its importance in the Convention which framed it than any other.

The 8th section is unnecessary, as by the act of 1830 the Common Council can fix the session in any way they shall see fit to determine by a joint rule of the two boards, and the same remark will apply to section 9.

Section 10 does not reinforce the Mayor's Veto, but leaves it as it is with one qualification growing out of periodical sessions of less frequency than now held, but that same provision is contained substantially in chapter 122 of the laws of 1830.

Section 11 is an absurdity. The State Constitution provides for the election of the Mayor annually and an attempt to dictate to the State Convention to assemble in 1846, as to extending the term to two years is improper.

If the members of the Common Council were all allowed to serve two years, it would be well, but electing only a part, does not lessen the frequency of Charter Elections.

Section 12 treats of Executive power. The Supreme Court say, some of powers of the Corporation are in part Executive, Judiciary and Legislative, and we add, others are administrative and others ministerial. The act should define the powers by express provision. The nomination of officers by the Mayor to the Board of Aldermen is a good provision, but he should have power to suspend an officer for misconduct, and the Board which consents to his appointment should have the power of prompt removal from office for good cause. These remarks are also applicable to section 13 and 14.

Section 15 provides for compensation to members of the Common Council. These officers should be paid compensation for each days session in the day time, but it should be in lieu of all other pay, and they should hold but the one office. This last remark applies to section 16.

Section 17, is well enough, but it should provide for a record, which record should be approved by the Mayor, and be open for inspection.

Section 18, is a deliberate wrong of untold and incalculable magnitude. Those who have adopted it, have been deceived as to its import.

The business of the Corporation should be managed by departments suitably organized, and under proper and salutary restrictions, and each should be independent of the other. Most of the duties that pertain to departments are administrative, or ministerial. The Heads of the Departments should be elected by the People. This remark is applicable to the remaining sections of the bill, all of which are badly framed, and not calculated to meet the expectations of those who are desirous of reform and retrenchment in City expenditures.

This Bill was not published until it was passed by the Board of Aldermen and was in three days after concurred in by the Board of Assistants and hurried off to the Legislature to be passed into a law and then to be submitted to the people the second week in March. *Why this great haste?* The submission to the people should be made at a general election, and full publicity should be given to the Bill.

The Bill should have been drawn up by such men as Stephen Allen, Gulian C. Verplanck, Saul Alley, Jonathan Thompson, Walter Bowne, Philip Hone, John Morse, Robert H. Morris, W. W. Fox, Thomas T. Woodruff, George B. Smith, F. R. Tillou, Burtis Skidmore, Richard Mott, Murray Hoffman, James Harper, Robert Smith, Edmund H. Pendleton, Abm. G. Thompson, and other citizens of the like experience in public concerns. It should be a deliberte work and well matured. The great majority of the citizens are in favor of restricting the powers of both the officers of the Corporation and of the members of the Common Council. The provisions of this bill will not accomplish that end.

In 1824 an act was passed entitled an act to alter the organization of the Common Council. *See session laws of* 1824. A similar act was passed in 1828. *See Session Laws of that year.* Both these acts were rejected by the People. In 1830, a convention was called to frame a bill for the legislature to pass into a law. This was accepted by the People and subsequently enacted by the Legislature, and is now the law, and the difficulty is that the Corporation officers as well as the Common Council disregard its provisions.

Chief Justice Bronson in an opinion recently given by him touching the seventh section of the amended charter, said, "The language is imperative—the ayes and noes shall be called. When the particular mode in which the Corporation is to act is thus specially declared by its charter, I think it can only be in the prescribed form. The contrary doctrine wants the sanction of legal authority, and is fraught with the most dangerous consequences. It would place Corporations above the laws, and there is reason to fear that they would soon become an intolerable nuisance."

AN ACT

To Amend the Charter of the City of New-York.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

§ 1. The Legislative power of the Corporation of the City of New-York, shall continue to be vested in a Board of Aldermen, and a Board of Assistants, who, together, shall form the Common Council of the City.

§ 2. All of the provisions of the City Charter, and State law, now in force, and appertaining to the Mayor, Aldermen and Commonalty of the City of New-York, shall continue to apply to them, except as hereinafter provided.

§ 3. The Board of Aldermen shall consist of eighteen members, who shall be elected for three years; the Board of Assistants shall consist of thirty-seven members, until after the next enumeration of the inhabitants of the City provided for by the Constitution of the State, and they shall be annually elected.

§ 4. Each Ward shall elect one Alderman and as soon as the Board of Aldermen shall meet after the first election held in pursuance of this Charter, they shall cause the Aldermen to be divided by lot into three classes, of six each, to be numbered one, two, and three; the seats of the first class to be vacated at the end of the first year; of the second class, at the end of the second year; of the third class at the end of the third year; so that one third of the members shall be annually elected.

§ 5, The members of the Board of Assistants shall be elected within the respective words, in the proportion, as nearly as may be, of one member to each ten thousand inhabitants; if the fraction in any ward shall amount to five thousand, such ward shall be entitled to a member of the same; if the fraction be less than five thousand, it shall not be entitled to a member; but each ward shall have at least one representative in the Board of Assistants.

§ 6. An appointment of members of the Board of Assistants, shall be made by the Common Council at its first session after the return of every enumeration provided for by the Constitution of this State, and, when made, shall remain unaltered until another enumeration shall have been taken.

§ 7. Whenever a vote shall be taken in either Board upon the passage of a resolution, or ordinance, which shall contemplate any specific improvement, or involve the appropriation or expenditure of public monies, or the taking or assessing of the citizens of said city, the ayes and noes shall be called, and recorded upon the journal, and be published as a part of the proceedings.

§ 8. There shall be held in each year, three sessions of the Common Council, during which the legislative business of the city shall be transacted, except as hereinafter provided. The first session shall commence on the second Tuesday in May, and on the second Tuesday June; the second session shall commence on the second Tuesday in September, and

which the Corporation is concerned, either as debtor or creditor. The chief Officer of this Department shall be called "The Comptroller of the City of New-York." There shall be a bureau in this Department for the collection of the revenue accruing from taxes; the chief officer thereof, shall be called the "Receiver of Taxes;" who shall appoint so many Clerks as shall be authorised by the Common Council. There shall be a bureau in this Department for the collection of the revenue accruing from rents, and interest on bonds and mortgages, and for the performance of such other duties as may be directed by the Common Council, the Chief officer of which shall be called the Collector of the City Revenue. There shall be a bureau in this Department for the prosecution of all delinquencies in the payment of rent on real estate, water grants, and on leases of docks and slips; and for encroachments upon public property; and for the drawing of leases, deeds, &c., connected with the Finance Department; the officer of which shall be called the "Attorney of the Treasury."

§ 22. There shall be an executive Department, for the reception of all monies paid into the Treasury of the city, and for the payment of monies therefrom, on the warrants drawn by the Comptroller, and countersigned by the Mayor and Clerk, under the denomination of the "Treasury Department:" and the chief officer thereof shall be called the "Chamberlain of the City of New-York."

§ 23. There shall be an Executive Department, under the denomination of the "Department of Trust Expenditures," which shall have cognizance of opening, regulating and paving streets; digging and building wells; building public sewers, and the construction of public roads, when done by assessments; the filling up of sunken lots, under Ordinances presented to the Common Council from the City Inspector's Department. It shall also have cognizance of collecting the assessments connected with such expenditures. The chief officer thereof shall be called the "Trust Commissioner." There shall be a bureau in this Department for the collection of the Assessments, and the chief officer thereof shall be called the "Collector of Assessments," and his assistants "Deputy Collectors." All acts of the Legislature of this State, which apply to the "Street Commissioner," shall hereafter be applied to the "Trust Commissioner."

§ 24. There shall be an Executive Department, to be denominated the "Department of Repairs and Supplies," which shall have the cognizance of building wharves and piers, and of all repairs and supplies of and for wharves and piers, roads and avenues, public pavements, repairs to the public buildings, and to fire engines and apparatus of the Fire Department; and the chief officer thereof shall be called the "Commissioner of Repairs and supplies." There shall be five bureaus, or branches, in this Department, and the chief officers thereof shall be respectively denominated the "Superintendent of Wharves and Piers," "Superintendent of Roads," "Superintendent of Repairs to Public Buildings," "Superintendent of Pavements," and "Chief Engineer of the Fire Department."

§ 25. There shall be an Executive Department. to be denominated the "Department of Streets and Lamps," which shall have cognizance of procuring the necessary supplies for, and of lighting the public streets and places lighted at the expense of the Corporation; and of cleaning the public streets, and collecting the revenue arising from the sale of the manure; and also of the transferring of butchers' stalls in the public markets. The chief officer thereof shall be denominated the "Commissioner of streets and lamps." There shall be three bureaus in this Department, and the chief officers thereof shall be called the "Superintendent of Lamps and Gas," "Superintendent of Streets," and "Superintendent of Markets."

§ 26. There shall be an Executive Department, under the denomination of "Croton Aqueduct Department," which shall have the Charge of the Croton Aqueduct, its reservoirs, and the other constructions connected therewith. It shall have cognizance of all repairs to the same, and of the laying of the water pipes in the streets of the City, and of the collection of the revenue arising from the sale of the water. The chief officer thereof shall be called the "Commissioner of the Croton Aqueduct." There shall be a bureau in this Department for the collection of the revenues derived from the sale of the water, and the chief officer thereof shall be called the "Water Register." Thre shall be a bureau in this Department which shall have the superintendence of the laying and repairing of the water pipes, the officer of which shall be called the "Wate- Purveyor."

§ 27. Nothing contained in the preceding section shall be construed to prevent the Water Commissioners from completing the Acqueduct according to law.

§ 28. There shall continue to be an Executive Department under the denomination of the "Alms House Department," which shall have cognizance of all matters relating to the Alms House and Prisons of the sad City. The chief officer thereof shall be called the "Commissioner of tha Alms House Department." There shall be several bureaus in said Department, and the chief officers thereof shall be called the "Superintendent of the Alms House," "Superintendent of the Penitentiary," "Superintendant of the City Prisons," "Resident Physician," and "Superintendent of the Nursery." All other officers of this Department, which shall be authorized by the Common Council, shall be appointed by the Commissioners of the Alms House Department.

§ 29. There shall be an Executive Department under the denomination of the City Inspector,s Department, which shall have cognizance of matters relative to the public health of said City, and the chief officer thereof shall be called the "City Inspector."

§ 30. There shall be an Executive Department, under the denomination of the "Law Department," which shall have cognizance of the law business of the Corporation. The chief officer thereof shall be called the "Counsel of the Corporation." The Counsel shall take cognizance of such suits as shall be brought by the Attorney of the Treasury, when requested to do so by the Comptroller. There shall be a bureau in this Department for the prosecution of violation of the City Ordinances, the officer of which shall be called the "Corporation Attorney." There shall be a bureau in this Department for the settlement of Intestate Estates, the chief officer of which shall be called the "Public Administrator."

§ 31. It shall be lawful for the Mayor and Common Council of said City to establish such other bureaus to the several Departments as they, in their discretion, may deem the public interest to require.

§ 32. It shall be the duty of the several Heads of Departments, at the commencement of each session, to communicate to the Common Council such suggestions in relation to the improvement of the affairs of their respective Departments as they may deem advisable; and it shall be the duty of the Common Council to refer the same to the appropriate Committee for investigation and report.

§ 33. The Mayor may require the opinions, in writing, of the Heads of each of the Departments, upon any subject relating to their respective Departments.

§ 34. The duties of the several Executive Departments shall be performed in accordance with the Ordinances which shall be passed by the Common Council, not inconsistent with this Act.

§ 35. All contracts to be made or let by authority of the corporation, whether for work to be done, or supplies to be furnished, shall be made by the appropriate Heads of Departments, under such regulations as shall be established by Ordinances of the Common Council.

§ 36. This Act shall be submitted for the approval of the electors of the City and County of New-York, at an election to be held in said City, on the second Tuesday in March, for which the Common Council of the City shall make the necessary arrangements. The tickets which shall be polled at said election, shall contain either the words "In favor of proposed Charter," or "Against proposed Charter;" and if a majority of all the persons voting at said election shall vote the ticket "In favor of proposed Charter," this Act shall become a law; if a majority of such persons shall vote "Against proposed Charter," this Act shall be void.

§ 37. In case this Act shall be approved by a majority of the electors of said City as aforesaid, and become a law, it shall go into effect at the ensuing charter election.

§ 38. All officers of the Corporation, now in office, shall continue to discharge the duties of their respective offices until their successors shall have been appointed and sworn in.

PRESENT CHARTER.

Prepared by Peter A. Jay, Stephen Allen, Phillip Hone, Saul Alley, John Duer, Thos. Bolton, Gulian C. Verplanck, John M. Bradhurst, Lambert Suydam, William Paulding, and about 50 other citizens, in Sept. 1829; approved by the citizens at the November election in 1829, and enacted by the Legislature April 7, 1830.

☞ Compare this with the proposed bill on the opposite page.

An act to amend the Charter of the City of New-York.

Passed April 7, 1830.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

§ 1. The legislative power of the corporation of the city of New-York, shall be vested in a board of aldermen and a board of assistants, who together shall form the common council of the city.

§ 2. Each ward of the city shall be entitled to elect one person, to be denominated the alderman of the ward; and the persons so chosen, together, shall form the board of aldermen: And each ward shall also be entitled to elect one person, to be denominated an assistant alderman; and the persons so chosen, together shall form the board of assistants.

§ 3. The aldermen and assistant aldermen, shall be chosen for one year; and no person shall be elegible to either office, who shall not, at the time of his election, be a resident of the ward for which he is chosen.

§ 4. The annual election for charter officers shall commence on the second Tuesday in April, and the officers elected shall be sworn into office on the second Tuesday in May thereafter: And all the provisions of law now in force in regard to the notification, duration, and conduct of elections for members of assembly, and in regard to the appointment, powers, and duties of the inspectors holding the same, shall apply to the annual election of charter officers.

§ 5. The first election for charter officers, after the passage of this law, shall take place on the second Tuesday in April, one thousand eight hundred and thirty-one; and all those persons who shall have been elected under the former laws regulating the election of charter officers, and shall be in office at the time of the passage of this law, shall continue in office until the officers elected under this law shall be entitled to be sworn into office.

§ 6. The board of aldermen shall have power to direct a special election to be held, to supply the place of any alderman whose seat shall become vacant by death, removal from the city, resignation or otherwise; and the board of assistants shall also have power to direct a special election, to supply any vacancy that may occur in the board of assistants: and in both cases, the person elected to supply the vacancy, shall hold his seat only for the residue of the term of office of his immediate predecessor.

§ 7. The boards shall meet in separate chambers, and a majority of each shall be a quorum to do business. Each board shall appoint a president from its own body, and shall also choose its clerk and other officers, determine the rules of its own proceedings, and be the judge of the qualifications of its own members. Each board shall keep a journal of its proceedings, and the doors of each shall be kept open, except when the public welfare shall require secrecy: And all resolutions and reports of committees, which shall recommend any specific improvement involving the appropriation of public moneys, or taxing or assessing the citizens of said city, shall be published immediately after the adjournment of the board, under the authority of the common council, in all the newspapers employed by the corporation; and whenever a vote is taken in relation thereto, the ayes and noes shall be called and published in the same manner.

§ 8. Each board shall have the authority to compel the attendance of absent members, to punish its members for disorderly behavior, and to expel a member, with the concurrence of two-thisds of the members elected to the board; and the member so expelled, shall, by such expulsion, forfeit all his rights and powers as an alderman or assistant alderman.

§ 9. The stated and occasional meetings of each board of the common council, shall be regulated by its own ordinances; and both boards may meet on the same or different days, as they may severally judge expedient.

§ 10. Any law ordinance, or resolution of the common council, may originate in either board; and when it shall have passed one board, may be rejected or amended by the other.

§ 11. No member of either board shall, during the period for which he was elected, be appointed to, or be competent to hold any office, of which the emoluments are paid from the city treasury, or by fees directed to be paid by any ordinance or act of the common council, or be directly or indirectly interested in any contract, the expenses or consideration whereof are to be paid under any ordinance of the common council; but this section shall not be construed to deprive any alderman or assistant of any emoluments or fees which he is entitled to by virtue of his office.

§ 12, Every act, ordinance, or resolution which shall have passed the two boards of the common council, before it shall take effect, shall be presented, duly certified, to the mayor of the city, for his approbation: if he approve, he shall sign it; if not, he shall return it, with his objections, to the board in which it originated, within ten days thereafter; or if such board be not then in session, at its next stated meeting. The board to which it shall be returned, shall enter the objections at large on their journal, and cause the same to be published in one or more of the public newspapers of the city.

§ 13. The board to which such act, ordinance, or resolution, shall have been so returned, shall, after the expiration of not less than ten days thereafter, proceed to reconsider the same. If, after such reconsideration, a majority of the members elected to the board shall agree to pass the same, it shall be sent, together with the objections, to the other board, by which it shall be likewise reconsidered; and if approved by a majority of all the members elected to such board, it shall take effect as an act or law of the corportion. In all such cases, the votes of both boards shall be determined by yeas and nays; and the names of the persons voting for and against the passage of the measure reconsidered, shall be entered on the journal of each board respectively.

§ 14. If the mayor shall not return any act, ordiaance or resolution so presented to him, within the time above limited for that purpose, it shall take effect in the same manner as if he had signed it.

§ 15. Neither the mayor nor recorder of the city of New-York shall be a member of the Common council thereof, after the second Tuesday of May, one thousand eight hundred and thirty one.

§ 16. Whenever there shall be a vacancy in the office of Mayor, and whenever the Mayor shall be absent from the city, or be prevented by sickness or any other cause from attending to the duties of his office, the president of the board of aldermen shall act as mayor and shall possess all the rights and powers of the mayor, during the continuance of such vacancy, absence or disability.

§ 17. It shall be the duty of the mayor,

1. To communicate to the common council, at least once a year, and oftener if he shall deem it expedient, a general statement of the situation and condition of the city, in relation to its government, finances, and improvements.

2. To recommend to the adoption of the common council, all such measures connected with the police, security, health, cleanliness, and ornament of the city, and the improvement of its government and finances, as he shall deem expedient.

3. To be vigilant and active in causing the laws and ordinances of the government of the city to be duly executed and enforced.

4. To exercise a constant supervision and control over the conduct and acts of all subordinate officers, and to receive and examine into all such complaints as may be preferred against any of them for violation or neglect of duty, and generally to perform all such duties as may be prescribed to him by the charter and city ordinances, and the laws of this State and the United States.

§ 18. Annual and occasional appropriations shall be made by proper ordinances of the common council, for every branch and object of city expenditure; nor shall any money be drawn from the city treasury, except the same shall have been previously appropriated to the purpose for which it was drawn.

§ 19. The common council shall not have authority to borrow any sums of money whatever, on the credit of the corporation, except in anticipation of the revenue of the year in which such loan shall be made, unless authorized by a special act of the legislature.

§ 20. It shall be the duty of the common council to publish, two months before the annual election of charter officers, in each year for the general information of the citizens of New-York, a full and detailed statement of the receipts and expenditures of the corporation, during the year ending on the first day of the month in which such publication is made; and in every such statement, the different sources of city revenue and the amount received from each; the several appropriations made by the common council, the objects for which the same were made, and the amount of moneys expended under each; the moneys borrowed on the credit of the corporation, the authority under which each loan was made, and the terms on which the same was obtained, shall be clearly and particularly specified.

§ 21. The executive business of the corporation of New-York shall hereafter be performed by distinct departments, which it shall be the duty of the common council to organize and appoint for that purpose.

§ 22. It shall be the duty of the common council to provide for the accountability of all officers and other persons, to whom the receipt or expenditure of the funds of the city shall be entrusted, by requiring from them sufficient security for the performance of their duties or trust, which security shall be annually renewed; but the security first taken, shall remain in force until new security shall be given.

§ 23. The clerk of the board of aldermen shall, by virtue of his office, be clerk of the common council, and shall perform all the duties heretofore performed by the clerk of the common council, except such as shall be assigned to the clerk of the board of assistant aldermen; and it shall be his duty to keep open for inspection, at all reasonable times, the records and minutes of the proceedings of the common council, except such as shall be specially ordered otherwise.

§ 24. The division of the common council into two boards shall not take effect until the officers to be elected under this law enter on the duties of their office. Each board shall hold its first meeting, for the purpose of organizing, on the second Tuesday of May in each year; at which time the mayor or clerk of common council shall attend, by whom the oath of office shall be administered to the members elected. In the absence of the mayor and clerk, such oath may be administered by the recorder or first judge of the city, or by any of the justices of the superior court.

§ 25. None of the provisions of this act, except the eighteenth, nineteenth, twentieth, and twenty-second sections, shall be construed as applying to the common council as now constituted.

§ 26. Such parts of the charter of the city of New-York, and of the several acts of the legislature amending the same, as are not inconsistent with the provisions of this law, shall not be construed as repealed, modified, or in any manner affected thereby; but shall continue and remain in full force.

Session Laws, 1830, *Ch.* 122.

PROPOSED CHARTER OF 1846.

The Bill which is to be found on the two preceding pages, viz: page 531, and 532, is called "KING JOHN'S CHARTER" and is said to be from the pen of that city AUTOCRAT. We are disposed to think there is a mistake in this, for we had always given that individual credit for more ability of intellect than the draft of this bill gives evidence of. But *nevertheless*, if this bill is from his pen, then we have heretofore over estimated the talents of the city King. It is said PRINCE GEORGE is looking to the succession, hence his admiration of the provisions of this bill, and his desire of having it made law.

It is said that the Corporation of city of New-York has gone bodily to Albany—to lobby through the Charter.

What are the evils and defects of the present charter? What the abuses? What are the remedies administered by the proposed scheme? One evil complained of, is a want of equal representation. Strange the plan proposed actually perpetuates this evil! One abuse complained of is the increase of taxes; this is not the fault of the charter, but the abuse of the members of the Common Council in unjustly and illegally squandering the money of the city; does the proposed plan provide a remedy for this? Not at all. Does it prohibit the spending of large sums of money for entertainments under pretence of City hospitalities, tea room refreshments, visits to Blackwell's Island, &c. Does it diminish the number of useless officers—does it mitigate the burdens of the people? No—on the contrary it specifically adds pay to the Aldermen, increasing the burden thus $30,000 per annum, and increases the number of officers under the name of Bureaus. Another abuse complained of is that the business is not done by Executive Departments, and why? Simply and only because the members violate in this the present charter! The present charter expressly tells them that the business is to be done by Executive Departments. Yet they do it by Committees.

But look over this proposed charter, and see if it really provides, under proper penalties, against the mis-application of the public money? If it is calculated to diminish expense; if it provides proper checks against fraud, tyrannic power, or extravagance; if it is clear, perspicuous in its language, in its method or arrangement; if it will give rise to no conflict of opinion, no difficulty of interpretation, if it duly conforms to the great principles of enlightened jurisprudence and civil liberty, that no one class be oppressed, no one right or privilege destroyed, if it is efficient, yet just to all—calculated to give security to right, punishment to wrong—to secure economy, good will, and happiness to the population which it is to govern.

All these things should be materially weighed and considered by the people in convention, not by a legislative body, before an instrument of so high a narure should be adopted.

THE WOUNDED DOG.

On Tuesday morning the 20th of January, a favorite dog, about twelve months old, came to the door covered with blood, crying most piteously, and in an agony of suffering. Some unfeeling creature in human shape had destroyed one of his eyes and otherwise mangled him. The door was quickly opened, and the bleeding animal came into the house and rushed into his master's arms, and with him came a stranger dog. This animal licked the bleeding wounds of his suffering companion, as he lay at his master's feet, and staid beside and watched over him with a constancy and devotion that would be a bright gem in the adorning of a human bosom. This faithful animal has not left the wounded dog night nor day for a whole week. Such affectionate kindness is a lovely picture to contemplate; and the contrast with him who inflicted the wounds, and the faithful animal who with his tender tongue is endeavoring to heal them, presents to view the two extremes—the cruel—the kind. The stranger dog, who had no home, has earned one by his kind offices, which he will be sure to obtain.

The services of the faithful dog of Sabinas, the Roman General, shines upon the page of history, while the acts of the cruel persecutors of his master are stamped with an enduring hate. Sabinas suffered death for his attachment to the House of Germanicus, and his dead body was exposed upon the walls of the Germonesse to deter others who should feel disposed to befriend the House of Germanicus. No friend had courage to approach his dead body—*one only, remained true*—his faithful dog. For three days the animal continued to watch the body—his pathetic howling awakened the sympathy of every heart. Food was brought him which he was kindly encouraged to eat, but on taking the bread, instead of obeying the impulse of hunger, he fondly laid it at his master's mouth and renewed his lamentations, but did not quit the body. The corpse was at length thrown into the Tiber, and the faithful dog leaped in after it, and clasped the body between his paws, and vainly endeavored to preserve it from sinking. My wounded dog is lying at my feet, and beside him his faithful companion—a picture that no painter's pencil can do justice to.

THE NEW-YORK CORPORATION have gone to Albany to procure the passage of a law to enable the present Common Council to appoint the present incumbents in the departments to office for three years before they go out of office. *Hence the great haste.*

They dare not trust to a new election, and the heads of departments would stand no chance if these officers were made elective.

This is the object of the New Charter, with those who are behind the curtains.

THE APPLICATION FOR A NEW CHARTER.

The applicants have not given such notice of the intended application by a publication in a newspaper, six weeks, as required by the provision of the Revised Statutes.

☞ The Common Council have not published a statement of the Receipts and Expenditures in detail as required by section 20 of the amended charter, to be made two months before the election, which by section 4 of the same act is to take place on the second Tuesday of April, but have gone almost bodily to Albany to ask a repeal of said section, and for authority to levy an immense tax.

☞ The Board of Supervisors of the City and County, which by section 17 of page 361 of vol. I of the Revised Statutes, are the Mayor, Recorder, and Aldermen, have not published an annual detailed statement of disbursements as required in sec. 1 of chap. 369 of the laws of 1839, but have gone to Albany to ask for authority to raise the largest tax ever imposed without this compliance with the law.

INDEPENDENT TICKET.

In proposed to circulate printed Tickets under cover throughout the City addressed to citizens by name, which will afford them the opportunity of voting for the right kind of men.

AMERICAN SALT.

We have prepared a lengthy article on AMERICAN SALT, which we we are obliged to defer till our next publication which will follow this week. or early the week following.

HON. ROBERT H. MORRIS,

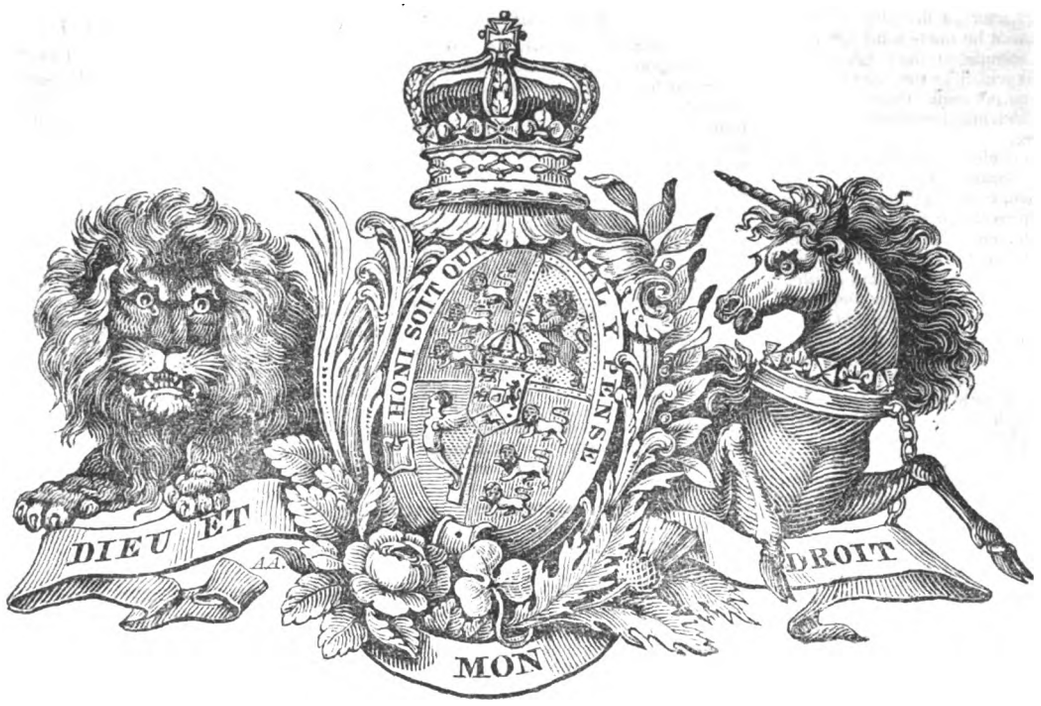
EX-MAYOR OF NEW-YORK,

Is opposed to King John's Charter. Mr. Morris was a faithful public officer and a very intelligent Mayor. His views upon this question are entitled to the highest consideration.

NOTE.

*The communication of a distingushed citizen, on this page, contains one paragraph marked thus * which we shall notice in our next as not being exactly orthodox.

BY THE KING.



WILLIAM III.
May 11th, 1697.

ROYAL ANTI-CHARTER, APPROVED BY THE KING.

The following Act was passed by the Colonial Assembly of the Province of New-York, in 1695, and was approved by KING WILLIAM III, May 11th 1697, O. S.

This act was in force when the Constitution of this State was adopted in 1777, and was confirmed by section 35 of that instrument.

The repealing act of 1787, specified certain colonial acts which it repealed by their respective titles, and confirmed all not thus designated. The Constitution of 1821, by section 13, of article 7, confirmed all colonial laws then in force, and continued them in force, subject to the future disposal of the legislature.

In the revision of the Statutes of the State in 1830, all Colonial laws were repealed by the general repealing clause, in vol. 3 of the Revised Statutes, and shortly after this the New-York City Charter, was amended, and this amended charter is now in force.

The following act speaks volumes. What the Corporation of New-York was then, it is now—stretching forward for arbitrary power—and abusing it to an extent beyond conception.

AN ACT AGAINST UNLAWFUL BY-LAWS AND UNREASONABLE FORFEITURES.

In all humble manner the representatives of this their Majesties Province of New York, show and complain unto your Excellancy, and their Majesties' Council, That the People of the City of New York, under color and pretext of their Charter, or custom, or both, have taken upon them to make and publish certain by-laws, orders, ordinances and regulations, whereby they forbid the bringing of any Flour or Bread, for exportation, to New York, under the penalty of forfeiture of the same; which said city being the principal port of this province for sending forth the produce and manufacturage thereof, and the Chief Market within the same, they thereby not only prohibit the importation and selling such Flour and Bread at the same city, and obstruct and hinder all bolting of Flour and baking of Bread for exportation, which are lawful mysteries, crafts, and trades in all other parts of the province; but also arrogate to themselves the sole bolting, bakeing, using, making, and selling, of all such flour and bread, raised or to be produced within this Province; and under color and pretence of the said Orders, By-Laws, Ordinances, and regulations, have taken, condemned, and converted to their own uses, divers quantities of flour belonging to several of their Majesties' good subjects of this province —ALL WHICH BEING CONTRARY TO LAW, to the grevious damage and impoverishing of many of their Majesties' good people, and the said By-Laws and orders, are unreasonable, and of evil, dangerous, and pernicious consequence to all their Majesties' subjects of this province—They therefore most earnestly pray that it may be enacted, and it hereby enacted, by his Excellency, the Council, and Representatives of their Majesties' Province, in General Assembly met and assembled, and by authority of the same, That the said pretended By-Laws, orders, ordinances, and regulations of the people of New York, made in the name of Mayor, Aldermen, and Commonalty of the city of New York, or in or by any other name or stile whatsever, annd every claim or thing in the same, or any other rule, order, or ordinance contained, in any wise concerning the restraint of bolting of Flour, Baking of Bread, or importing of Flour or Bread to New York aforesaid, OR CONCERNING OR RELATING TO THE PROHIBITION, OBSTRUCTION, OR HINDRANCE OF THE USING, PRACTICING, OR ENJOYING OF ANY OTHER LAWFUL TRADE, MYSTERY, OR OCCUPATION, or against the importing in or to, or exporting from the city of New York, or any other lawful port in the province, any Wine, Corn, Flour, Bread, Flesh, Fish, Victuals, Wares, Merchandize, and all other things vendable and not, by the Common Law or Statues of the realme prohibited; and all process, proceedings, judgements, and executions thereupon hereafter to be issued, ordered, entred, awarded, published, or executed, shall be entirely void and holden for none; and they are hereby declaired void and null to all intents and purposes whatsoever: any pretended by-law, order ordinance, custom, usage, or practice, to the contrary hereof in any wise notwithstanding.

And further, Be it Enacted, &c., That if any time after the making and publishing this Act, any officer, minister, or other person or persons whatsoever, shall presume, by or under color of any such pretended by-laws, ordinances, or regulations, to take, seize, condemn, or convert so his or their own uses, any flour, or other goods or merchandize whatsoever, not by law prohibited at any time to be imported from the said city of New York, or any other lawful port in this province, *he and they, and every of them shall forfeit to the owner of such flour, bread and other goods or merchandize, treble the vulue of the flour, bread, or other goods or merchandize, so to be taken, seized, condemned, or converted as aforesaid, and also his treble costs, to be recovered by action of debt in any of the Majesties' Courts within this province, wherein no essoign protection or wager of Law, nor any more than one imparlance shall be allowed,* Provided always, and it is the true intent and meaning of this Act, that no officer, minister, or other perron or persons, shall at any time be impeached, prosecuted, condemned, troubled ordisquieted, by virtue of this Act, or upon any construction or interpretation of the same, for any fact, matter or thing acted, done, perpetrated or committed at any time before the making or publication hereof; but that such officer, minister, or other person or persons, as to any fact, matter or thing, heretofore acted, done, perpetrated or committed, shall be and remain in such plight, state, and condition, as if this Act, and every clause therein contained, had never been made, any thing before herein expressed to the contrary hereof in any wise notwithstanding. WM. III. pp. 23 and 24, Law 1719, London Edition, Acts passed by the General Assembly of the Colony of New York, in March, July. and October, 1695.—This volume is in the STATE LIBRARY.

MUNICIPAL CORPORATIONS.

In Europe, many municipal Corporations are by *prescription*, having been in operation before the memory of man—others are by *Grant* and others by *Statute*. In the United States, all municipal Corporations are created by Statute, and are governed by the laws of the State of which they respectively form a part.

SYSTEM OF TAXATION.

Who shall be taxed?

The public taxes should be borne equally by all persons resident in the city benefitted by the expenditure of the money thus raised. It has been proposed to tax non-residents. Such a tax would be both impolitic and unjust. The other counties of the State are equally a portion of the great commonwealth, and should share equally in the support of its public expenditures by citizens resident in their respective boundaries in the producing part of the year. If a citizen raises his bread in Westchester, shall he be made to pay a tax upon it in the city of New-York because he came to the city in winter to expend his money.

There are certain impositions called Taxes which are not impositions of that class, but are more appropriately local assessments. The cleaning of the public streets is one of this class, and a law was passed on the first of October, 1691, for assessing the expense on the party intended to be benefitted whether owner or occupant. This act was repealed in 1787, and was re-enacted in the same form the same year, and was again incorporated into the general law in 1813. See section 175 and 176.

The lighting of the streets and the watching of the property of the citizens, and also the providing of Croton water to extinguish fires, and for the use of the inhabitants should be assessed on the parties benefitted. These charges have never been treated in the tax law as a general tax, but have been specially imposed upon the residents of a local district defined by geographical boundaries in the act.

The New-York tax law provides for the taxing of inhabitant and resident of the ward in which he resides at the time the assessment is made—and if he happen to reside at that time in a ward where there is no watch, no lamps, or no Croton Water, he should certainly not be made to pay a tax for these on his personal property not benefitted thereby.

Aliens, resident in the city of New-York, are taxable the same as citizens, they being, in the language of the law, inhabitants and residents, and not exempted from taxation, by treaties with the Government of which they are still subjects.

Firms should be taxed as individuals, but if an individual member of a firm resides without the city and is taxed for personal property at the place of his residence that portion of the Tax should be deducted from his New-York Tax. This would be equitable and just.

SYSTEM OF TAXATION.

What shall be taxed!

For the Croton, the Lamps, the Watch and the cleaning of Streets and repairing of wharves, the real and personal estate within the district where the benefit is derived should be taxed to the owner. A person residing in the first ward, owning stock in a Boston Bank should not pay a tax on that investment for these local expenditures, nor should a merchant residing in the first ward pay a tax for these local outlays on capital invested in a ship engaged in a three year's whaling voyage in the Pacific Ocean.

SYSTEM OF TAXATION.

Who shall assess the Tax?

A Board of Permanent Assessors similar to the Boston Board of Permanent Assessors, should be organized by the Legislature and these officers should be elected for three, four and five years, and be composed of three persons, and they should have an Assistant in each Ward. The Board of Permanent Assessors should have a permanent office in which should be deposited all the Ward maps. The Assistant Assessors should commence the assessment on the second Wednesday in May and complete it by the first of September. The books should remain open at the office of the Permanent Assessors one month for examination, and after the expiration of that time a copy should be delivered over to the Receiver of Taxes for collection.

The Board of Assessors should have power to correct erroneous taxes at any time within six months after the assessment is completed.

A return of the names of all persons votiug at the election should be made out in a list and returned to the assessors at the close of every election.

OPENING STREETS.

"Mons. Tonson come again."

THE NATIVES.

The New-York Express and Evening Post, each contain three notices of three sets of Commissioners, which were appointed by one of the Justices of the Supreme Court in September 1845, to make an estimate and assessment for three street openings viz: Widening Houston Street; widening the Bloomingdale Road; and extending Leroy Street. Wm. Paxson Hallet, a clerk of the Supreme Court, is Commissioner in two of the proceedings; J. W. C. Leveridge, son of John Leveridge, the Counsel of the Native Common Council, in three of the proceedings; C. A. Whitney, a Clerk of the Native Common Council in three of the proceedings, and Joseph Hufty, a member of the Native Finance Committee, in one of the proceedings. We learn that the confirmation of the Reports of these Commissioners will be opposed by RICHARD MOTT, Esq. We shall notice these proceedings in great detail hereafter.

INDEPENDENT OF THE MAYOR.

Section 32 of the proposed bill provides that the Heads of Departments shall communicate to the Common Council. Their Reports should be made to the Mayor of the City. The Mayor is more to be relied upon than any other officer of the City Government. Such has been the case for years past. It is true that we have sometimes had ignorant men for Mayors, but we do not recollect but a solitary instance of this kind.

WHARVES, PIERS AND SLIPS.

The Wharves, Piers and Slips of the city of New-York are not exactly corporation property, but are the property of the county having been constructed by monies derived from a county tax. It is not in the power of the corporation to sell these improvements.

The Wharves and Piers in New-York should be kept in a decent state. It is often that the piers are in an unmentionable condition.

DISBURSEMENTS OF THE PUBLIC MONIES.

There should be organized by law a board of auditors to audit all public accounts. All bills audited by the board should be open to the inspection of the citizens, and a copy on demand should be furnished to every person applying therefor, on his paying for such copy the actual expense of making the transcript.

THE LIGHTNING.

In our last number we stated that we would in our next number give a synopsis of our lightning records. The record will occupy so much of the paper that we are under the necessity of deferring its publication a few days. The record is vastly important as it will embrace more than two hundred different records of as many thunderbolts. It is from the testimony of the lightning itself—from its records, that we are to draw conclusions that are instructive.

THE MUNICIPAL GAZETTE.

This paper is circulated in every county in this State. We have received several communications from individuals residing in the country requesting us to forward to them the back Numbers, and expressing a delicacy in making the application on account of the publication being a gratuitous distribution. As a general reply to these suggestions, we state that the object of this publication is to diffuse useful information, and the back numbers will be most cheerfully forwarded to any person desiring the same. A correspondent under date of Feb. 20th, in a letter addressed to the editor says: "Having accidentally seen a number of the MUNICIPAL GAZETTE, and finding it it in my judgment a most valuable publication at this time, and during the approaching Convention to remodel the organic law of the State," &c. &c.

Municipal Gazette.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, APRIL 2, 1846. [VOL. I....NO. 40

STATE CONVENTION.

The Convention, when organized in June next, will have before them a labor of vast importance. Principles never change, it is said—but the habits of the People change—new discoveries are continually being made—new improvements introduced, producing changes of vast and surprising extent. When the former Constitution of this State was adopted, in 1777, steam power as applied to the navigation of the vast waters which cover a great portion of the surface of our globe, was unknown, and metallic railways as now used as great highways, were also unknown. It will be seen on reference to the session laws of this State enacted in 1686, that the Legislature were applied to by an individual named JOHN FITCH, of Bucks County, Pennsylvania, for a grant of exclusive right of navigation of the rivers and waters of this State by vessels or boats propelled by steam, or fire, for the term of 50 years. The Legislature entertained the application and passed an act in conformity with the prayer of the petitioner. JOHN FITCH was an humble individual, but his great mind gave birth to the discovery which has revolutioned the civilized globe. *He died poor and friendless*, and probably not a stone marks the gaave where the ashes which enveloped the spirit of the discoverer, sleeps.

This grant by the legislature, was for a *meritorious* object, but it has been decided to have been a violation of the Constitution of the United Stales, and therefore was declared void.

In the forming of a new Constitution for this State, or in amending the fundamental law now in force, it becomes necessary to examine the Constitution of the United States in order to avoid difficulties in assuming powers, and rights previously disposed of to the General Governments.

We have said that steam power has produced changes, and now, another discovery, that of conveying information by means of electricity, instantaneously from one extremity of the continent to the other.

What this will attain to, remains to be ascertained.

These changes, produce new interests, and call for new regulations. Formerly, the great roads, or highways, were constructed at the expense of the public, but this new system requires too great an outlay of capital to be borne by the public treasury, hence individuals have associated together, and furnished the means to make these improvements, in consideration of being allowed to charge a compensation for transporting Passengers, Merchandize, &c., upon them. These associations have been authorised by the Legislature to take land for the roads, paying the owner a just compensation therefor. Doubts have been expressed whether the Constitution authorised the taking of land in cases of individual associations for such use—the improvement being that of limited associations, and therefore not in the language of the Constitution, being the taking of private property for *public use*, as that term was for erly understood.

PUBLIC CITY OBLIGATIONS.

The Bonds now extant should be registered in the office of the Mayor of the City where these are signed, and also in the office of the clerk of the Common Council, where Corporation Bonds are also signed, and every one issued or extant, should have the registering page in each office upon its surface. These heretofore issued have not been so recorded.

EXAMINATION OF PUBLIC OFFICES.

The pecuniary concerns of the public offices have never to our knowledge been examined. The Street Commissioners office, and that of the City Comptroller should undergo this scrutiny for the past, and annually, for the future.

CANDIDATES FOR THE STATE CONVENTION.

It is high time to call public attention to the selection of candidates for the State Convention, as members of that body from the county of New-York. We present the following list of names selected from the three political parties, viz:

James Kent,	George Douglass,
Albert Gallatin,	Abraham G. Thompson,
Jonathan Thompson,	Abraham Van Nest,
Stephen Allen,	Gulian C. Verplanck,
Saul Alley,	Wm. B. Crosby,
Jonathan Goodhue,	Charles H. Russell,
John M. Bradhurst,	Peter Schermerhorn,
Solomon Townsend,	James I. Jones,
Peter Cooper,	Robert Smith,
James Harper,	Murray Hoffman,
Wm. F. Havemeyer,	David Hale,
Burtis Skidmore,	Philip Hone,
Richard Mott,	J. I. Coddington,
Lora Nash,	Theodore Sedgwick,
F. R. Tillou,	Samuel Thompson,
Luther Bradish,	James Donaldson,
Peter Lorrilard, jr.,	Thomas T. Woodruff,
Henry Grinnel,	Elisha P; Hurlbut,
Richard S. Williams,	John David Wolfe,
James Boorman,	Hiram Ketchum.
Myndert Van Schaick,	Edmund H. Pendleton,
Preserved Fish,	William W. Fox,
Samuel F. Mott,	Thatcher T. Payne.

PUBLIC SALINES OF THIS STATE.

The Constitution of this State provides as follows: "together with the duties on the manufacture of salt, as established by the act of the fifteenth of April 1817, "shall be and remain inviolably appropriated &c., and the Legislature shall never sell or dispose of the salt springs belonging to this State, nor the land contiguous thereto, which may be necessary or convenient for their use, but the same shall remain the property of this State. Art. 7, Section 10, Con. 1821.

Amendment of the Constitution in 1833.

"*Amendment No.* 3. That the duties on the manufacture of salt, as established by the act of April 15, 1817, and by the 10th section of the seventh article of the Constitution of this State, may at any time hereafter be reduced by an act of the Legislature of this State, but shall not while the same is appropriated and pledged by the said section be reduced below the sum of six cents upon each and every bushel; and the said duties shall remain inviolably appropriated and applied by said tenth section:

"And that so much of the said tenth section of the seventh article of the Constitution of this State, as is inconsistent with the amendment be abrogated."

We find in the Report of Mr. Spencer, Saperintendant of the State Salines to the Legislature in 1843, on page 54 of that Report the following.

The State came into possession of the springs in the following manner, viz:

"By a Treaty with the Onondago Indians, held at Fort Schuyler, September 12, 1788, the said Indians ceded to the State of New-York, all their lands forever, excepting certain '*tracts reserved.*' In the treaty they reserve: *Fourthly.* The Salt Lake, and the lands for one mile round the same shall forever remain for the common benefit of the people of the State of New-York, and the Onondagos and their posterity, for the purpose of making salt, and shall not be granted or *otherwise disposed of* for other purposes.'

"By Treaty held at Cayuga Ferry, dated July 20, 1795, the said Indians ceded to the state the said Salt Lake, and one mile around it, in order to render the common right formerly reserved more productive. They also ceded another tract on the west side of the creek, running from the northern boundary of the square tract surrounding their village to the Salt Lake an extent of one half a mile from said Creek.

"In consideration of which cession, the sum of $500 was then paid to the said Indians for the said Indians for the said common right, and $200 for the said half mile; and it is stipulated that the sum of $500 and $200, and *one hundred bushels of salt*, should be paid the said Indians annually thereafter, on the first day of June."

Mr. Spencer states that the salt duty collected from 1818 to 1824, both years inclusive, was $452,593.29. From the Report of Mr. Marks, State Superintendant of Salines, made to the Legislature the present session, it appears that the duty collected from 1825 to 1845, both years inclusive was 3,366.736.85, making in all from 1818 to 1845, both years inclusive, the sum of $3,759,329,84.

The duty thus collected was applied to making and completing a great highway to these salines, although not a public highway, for there are turnpike gates upon it.

The imposition of the duty by putting up turnpike gates upon the Salt Springs, and making toll gates upon the canal are proceedings of that questionable shape that it becomes a matter of paramount importance in the framing of a new fundamental law as to what kind of provision is called for in the premises.

The faith of the State is pledged for the payment of the public debt, and when that is extinguished none other should be created.

A tax upon every bushel of wheat, upon every bushel of potatoes, upon every ton of hay, &c. &c., would be an equal tax, but it would be found oppressive, and so is the Salt tax, and it is exceedingly so when the demand for salt is light, for the salt maker when in moderate circumstances is dependent on his sales, and he cannot sell his salt until he pays the State tribute. By the act of April 15, 1817, the duty was 12½ cents for 56 lbs. of salt,

The State has established an inspection of salt, but it is mere formal as most of the other inspections of articles of merchandize in this State have been found to be.

The State have abused the grant of 1788 and 1789 from the Indians.

It is by no means certain that the saline waters at Onondago are inexhaustable, and if abundant it is not improbable that these may deteriorate and become incorporated with lime and magnesia to a greater extent than now exists.

We have made extensive examinations of the saline waters of this region on both sides of Lake Ontario and have in our cabinet samples of salt water from numerous wells and springs.

The quantity of water which fell at the Onondago Salines from the clouds in 1845, was accordig to the recorded observation of L. W. Conkey, Esq., 37 85-100 inches. This is not half so much as falls during the same time at the Islands where the Rock Salt and Turk's Island Salt is made, but the heat of the sun is much greater at Turk's Island than at Onondago, and consequently the evaporation greater, and besides that the saline waters have a much higher average temperature.

We have taken up several pages of this present number of our Journal in the matters pertaintng to American Salt, with a view to the constitutional amendments on this behalf.

The analyses of salt made by the heat of fire from the saline waters of the Great Salt Lake, by Captain Freemont, in his recent tour across the continent, is as follows:

Chloride of sodium	97,80
Chloride of calcium	0,61
Chloride of magnesium	0,24
Sulphate of soda	0,23
Sulphate of lime	1,12
	100,00

The sulphate of lime is an almost insoluble salt. One pound of the chrystalized sulphate of lime requires about 65 gallons of cold water to dissolve it, or about 55 gallons of hot water. This combination in salt is therefore not injurious to salt for the packing of provisions. The chloride of calcium, and the chloride of magnesium are the combinations that are injurious to salt, for these deliquiate at a temperature above 32° of Fahrenheit.

Professor Beck states that the salt analized by him was reduced to a dry state by heat of 400 or 500°. We think he erred in this, solar salt should not be made to undergo this change of temperature.

We have before us an analysis of Saltville (south western Virginia) salt, vitrified by heat, which tested as follows:

Chloride of sodium	90,510
Sulphate of lime	9,311
Carbonate of lime	0,126
Chloride of calcium	0,050
	100,000

There can be little doubt that this change was produced to some extent by heat, as a heat sufficient to fuse the salt with its combinations, is sufficient to calcine the sulphate of lime. We know that the alkaline salts are effected to a very great extent by the peculiar mode of applying heat, and that caustic alkalines that are subjected for some time to heat, lose their caustic properties and acquire acid, and for the purposes of making soap are thus rendered unfit for that use. We have abundant instruction as to the degree of heat necessary to chrystalize salt. The brine pits or salt ponds at Turk's Island are never heated beyond 150 degrees of Fahrenheit, which is far short of the heat of boiling water. It follows from this that the brine should not be heated to such an extent as to produce ebulition, but should be heated gradually to 150°. We have for a period of more than 20 years used both foreign and American salt for chemical purposes to the extent of 30 or 40,000 bushels. We have also used salt for curing Butter for export and also for curing Beef and Pork which has given us the means of knowing much of the quality of the different kinds of salt. For some purposes we would give a decided preference to Onondaga solar salt over Turk's Island, and for others, to Turk's Island salt over Onondaga solar Salt. The rock salt of Commerce, which is the Bonaire and Cuaracoa salt, is made from sea water in the same way that Onondaga solar salt is made from the brine raised from the salt wells. The sea water is open to the atmosphere, and the Onondaga Saline waters are covered up with earth. Both rock salt, and Onondaga solar salt, are made by the heat of the sun. We have specimens of the saline waters of nearly all the salines in the United States, which we shall notice more particularly hereafter.

The import of Foreign Salt into the Port of New-York for the year ending Nov. 30th, 1845, was 1,040,456 bushels of 56lb. each, of which 604,084 bushels were from Liverpool, England. The proportion of coarse solar salt imported, is therefore not large.

This is the smallest importation of salt for many years.

The coarse salt made at the Onondaga Salines by solar evaporation, during the year ending December 31, 1845, was 353,455 bushels, of 56 lbs. each.

The fine salt made at the same salines by the heat of fire, during the year ending December 31, 1845, was 3,408,903 bushels, of 56lb. each, making the aggregate product of the Onondaga Salines in 1845, 3,762,358 bushels of Salt.

The salt manufactured at the Onondaga Salines from 1826 to 1845, both years inclusive, has been forty-three millions, five hundred and thirteen thousand six hundred and three bushels.

The Superintendant of the Salines in his report to the Legislature, states that the solar salt weighs about 77 lbs. to the measured bushel, and the salt made by the heat of fire, from 42 to 56 to the bushel; that made in the back kettles the lightest, and that in the front kettles the heaviest. The salt made in the back kettles is without any doubt the best of the two, as it is made with less heat.

The Superintendent of the Salines states that the brine from the wells at Liverpool, has become weaker than those of Salina and Syracuse. When I visited the Salines in 1842, the brine at the Liverpool well was the best at the Salines and was within less than 100 feet of the surface, while the best brine at Syracuse was then obtained from a depth of more than 300 feet. The natural reservoirs are therefore unequal in their dimensions, that at Liverpool being soonest exhausted.

By the records of the state of the salometer, it appears from the report, that the brine at Syracuse stood at 74 and 74½, from January 1 to April 26, during which time the rain gauge denoted a fall of water from the clouds of 11,59-100 inches. During the four months named above, but 237,515.61 bushels of salt, in all, was made. The temperature of the brine remained during this whole period, at 52° of Fahrenheit. The *second* apportionment of about 4 months, extending from April 26, to August 16, there was made at the salines 1,656,059 bushels of salt. The temperature of the brine remained at 52°. The salometer was from 71½ to 73½, with the exception of the 4th of August when it was 74°. During this period the rain gauge denoted an aggregate fall of water from the clouds of 15,22-100 inches, and the fall of water was greatest when the brine was the best. The remaining of the year from August 16, to Dec. 31, there was made at the salines 1,797,182 bushels of salt. The temperature of the brine remained at 52°, and the salometer on fifteen of the trial days was at 73; one day 74; two days, 73½, and two days 72½. The Rain guage for the same time denoting an aggregate fall of rain at 13,93-100 inches. The brine in the Liverpool well from January 1st to April 26, was at 68°, and from April 26, to August 16, was of an average of 66½; from August 16 to Dec. 31, it was 66 to 71°.

The Salina wells in January, February and March, were at 71; April, 70 and 69; May, 69; June, 69 to 71; July, 69 to 72; August, 71; September 69 to 72; Oct. 71; Nov. 71 to 73; Dec. 72 to 74°.

In 1840, Mr. Spencer Reports to the Legislature, the brine at Syracuse, in April, at 57; May and June 56; and in a new well 62 to 64; July 73 to 76; Aug. 77 to 78; Dec. 75 to 78. In 1841, the Syracuse brine was at 77 throughout the season, and the same during 1842. In 1843, the salometer tables are not contained in the Report of the newly appointed Superintendant, Dr. Wright. In 1844, Dr. Wright the superintendant gives the record of the salometer from January to June, inclusive, at 74°: July to September, inclusive, 72 to 73°; the residue of the year 74°. The Liverpool waters in 1840, show a fluctuation of from 65 to 72°; in 1841, from 64 to 74; 1842 from 70 to 78; 1844 from 66 to 71°. 1845, 66 to 71.

I have heretofore noticed the decrease of the saline properties in the water at these salines and have mentioned the fact to JOHN TOWNSEND, Esq., of Albany, who is one of the proprietors of the original village of Syracuse, as being a snbject requiring careful investigation.

The brine at each of the wells should be tested every week throughout the year in an accurate chemical analyses. The salt of each manufacturer, should undergo the same scrutiny, at the same periods, and these two scrutinies together in their results would determine facts of great importance.

It has been the policy of the State government to derive the utmost possible revenue from the salines, but such a policy is ruinous in the extreme.

There seems to be no certain information as to the extent of the saline deposit at Onondaga.

The location of the mineral, from which the water derives its saline properties, has never been ascertained. At Montezuma, a well has been sunk to the depth of 604 feet; and at Lockpit to the depth of 401 feet, and Syracuse to the depth 316 feet, but the greatest depth does not necessarily determine any important fact, for in the Saltville mines a well or boring was made to the depth of 400 feet, without obtaining salt water, but at the distance of 40 feet

another boring was made to the depth of 214 feet, and an inexhaustible supply of brine obtained.

During the continuance of cold weather, while Onondaga Lake was covered with ice, an examination should have been made of its surface, and of the stratas upon which it rests. My examinations of that lake led me to conclude that its lower surface once formed the surface of the ground, and that this lake has resulted from a breaking down of the surface from the removal of the substratum. The crust was clay and whether it reposed upon loose sand, or fossil salt, cannot now be determined, as the sand may have left its bed, and thenfilled that vacated by the salt, but if it was fossil salt the strata was probably of greater depth than the present waters of the lake and the lower stratas may yet remain and be reached by boring through a strata corresponding with that of the shore well at Liverpool.

GREAT AMERICAN SALT LAKE.

From Capt. Freemont's Report, made to Congress, and recently published by that Body.

"*September* 9.—The day was clear and calm; the thermometer at sunrise at 49°. As is usual with the trappers on the eve of any enterprise, our people had had dreams, and theirs happened to be a bad one —one which always preceded evil—and consequently they looked very gloomy this morning; but we hurried through our breakfast, in order to make an early start, and have all the day before us for our adventure. The channel in a short distance became so shallow that our navigation was at an end, being merely a sheet of soft mud, with a few inches of water, and sometimes none at all, forming the low-water shore of the lake. All this place was absolutely covered with flocks of screaming plover. We took off our clothes, and, getting overboard, commenced dragging the boat —making, by this operation, a very curious trail, and a very disagreeable smell in stirring up the mud, as we sank above the knee at every step. The water here was still fresh, with only an insipid and disagreeable taste, probably derived from the bed of fetid mud. After proceeding in this way about a mile, we came to a small black ridge on the bottom, beyond which the water became suddenly salt, beginning gradually to deepen, and the bottom was sandy and firm. It was a remarkable division, separating the fresh water of the rivers from the briny water of the lake, which was entirely *saturated* with common salt. Pushing our little vessel across the narrow boundary, we sprang on board, and at length were afloat on the waters of the unknown sea.

"We did not steer for the mountainous islands, but directed our course towards a lower one, which it had been decided we should first visit, the summit of which was formed like the crater at the upper end of Bear river valley. So long as we could touch the bottom with our paddles, we were very gay; but gradually, as the water deepened, we became more still in our frail batteau of gum cloth distended with air, and with pasted seams. Although the day was very calm, there was a considerable swell on the lake; and there were patches of foam on the surface, which were slowly moving to the southward, indicating the set of a current in that direction, and recalling the recollection of the whirlpool stories. The water continued to deepen as we advanced; the lake becoming almost transparently clear, of an extremely beautiful bright-green color; and the spray, which was thrown into the boat and over our clothes, was directly converted into a crust of common salt, which covered also our hands and arms. "Captain," said Carson, who for some time had been looking supiciously at some whitening appearances outside the nearest islands, "what are those yonder?—won't you just take a look with the glass?" We ceased paddling for a moment, and found them to be the caps of the waves that were begining to break under the force of a strong breeze that was coming up the lake. The form of the boat seemed to be an admirable one, and it rode on the waves like a water bird; but, at the same time, it was extremely slow in progress. When we were a little more than half-way across the reach, two of the divisions between the cylinders gave way, and it required the constant use of the bellows to keep in a sufficient quantity of air. For a long time we scarcely seemed to approach our island, but gradually we worked across the rougher sea of the open channel, into the smoother water under the lee of the island; and began to discover that what we took for a long row of pelicans ranged on the beach, were only low cliffs whitened with salt by the spray of the waves; and about noon we reached the shore, the transparency of the water enabling us to see the bottom at a considerable depth.

"It was a handsome broad beach where we landed, behind which the hill, into which the island was gathered, rose somewhat abruptly; and a point of rock at one end enclosed it in a sheltering way; and as there was an abundance of drift-wood along the shore, it offered us a pleasant encampment. We did not suffer our fragile boat to touch the sharp rocks; but, getting overboard, discharged the baggage, and lifting it gently out of water, carried it to the upper part of the beach, which was composed of very small fragments of rock.

"Among the successive banks of the beach, formed by the action of the waves, our attention, as we approached the island, had been attracted by one 10 to 20 feet in breadth, of a dark-brown color. Being more closely examined, this was found to be composed, to the depth of seven or eight, and twelve inches, entirely of the *larvæ* of insects, or, in common language, of the skins of worms, about the size of a grain of oats, which had been washed up by the waters of the lake.

"Alluding to this subject some months afterwards, when travelling through a more southern portion of this region, in company with Mr. Joseph Walker, an old hunter, I was informed by him, that, wandering with a party of men in a mountain country east of the great Californian range, he surprised a party of several Indian families encamped near a salt lake, who abandoned their lodges at his approach, leaving everything behind them. Being in a starving condition, they were delighted to find in the abandoned lodges a number of skin bags, containing a quantity of what appeared to be fish, dried and pounded. On this they made a hearty supper; and were gathering around an abundant breakfast the next morning, when Mr. Walker discovered that it was with these, or with a similar worm, that the bags had been filled. The stomachs of the stout trappers were not proof against their prejudices, and the repulsive food was suddenly ejected. Mr. Walker had further opportunities of seeing these worms used as an article of food; and I am inclined to think they are the same as those we saw, and appear to be a product of the salt lakes. It may be well to recall to your mind that Mr. Walker was associated with Captain Bonneville in his expedition to the Rocky mountains; and has since that time remained in the country, generally residing in some of the Snake villages, when not engaged in one of his numerous trapping expeditions, in which he is celebrated as one of the best and bravest leaders who have ever been in the country.

"The cliffs and masses of rock along the shore were whitened by an incrustation of salt where the waves dashed up against them; and the evaporating water, which had been left in holes and hollows on the surface of the rocks, was covered with a crust of salt about one-eighth of an inch in thickness. It appeared strange that, in the midst of this grand reservoir, one of our greatest wants lately had been salt. Exposed to be more perfectly dried in the sun, this became very white and fine, having the usual flavor of very excellent common salt, without any foreign taste; but only a little was collected for present use, as there was in it a number of small black insects.

"Carrying with us the barometer and other instruments, in the afternoon we ascended to the highest point of the island—a bare rocky peak, 800 feet above the lake. Standing on the summit, we enjoyed an extended view of the lake, enclosed in a basin of rugged mountains, which sometimes left marshy flats and extensive bottoms between them and the shore, and in other places came directly down into the water with bold and precipitous bluffs. Following with our glasses the irregular shores, we searched for some indications of a communication with other bodies of water, or the entrance of other rivers; but the distance was so great, that we could make out nothing with certainty. To the southward, several peninsular mountains 3 or 4,000 ft. high entered the lake appearing, so far as the distance and our position enabled us to determine, to be connected with flats and low ridges, with the mountains in the rear. Although these are probably the islands usually indicated on maps of this region as entirely detached from the shore, as we have preferred to represent them in the small map on the preceding page, precisely as we were enabled to sketch them on the ground, leaving their more complete delineation for a future survey. The sketch, of which the scale is nearly 16 miles to an inch, is introduced only to show clearly the extent of our operations, which it will be remembered, were made when the waters were at their lowest stage. At the season of high waters in the spring, it is probable that all the the marshes and low grounds are overflowed, and the surface of the lake considerably greater. In several places (which will be indicated to you in the sketch, by the absence of the bordering mountains) the view was of unlimited extent—here and there a rocky islet appearing above the water at a great distance; and beyond, everything was vague and undefined. As we looked over the vast expanse of water spread out beneath us, and strained our eyes along the silent shores over which hung so much doubt and uncertainty and which were so full of interest to us, I could hardly repress the almost irresistible desire to continue our exploration; but the lengthening snow on the mountains was a plain indication of the advancing season, and our frail linen boat appeared so insecure that I was unwilling to trust our lives to the uncertainties of the lake. I therefore unwillingly resolved to terminate our survey here, and remain satisfied for the present with what we had been able to add to the unknown geography of the region. We felt pleasure also in remembering that we were the first who, in the traditionary annals of the country, had visited the islands, and broken, with the cheerful sound of human voices, the long solitude of the place. From the point where we were standing, the ground fell off on every side to the water, giving us a perfect view of the island, which is twelve or thirteen miles in circumference, being simply a rocky hill, on which there is neither water or trees of any kind; although the *Fremontia vermicularis*, which was in great abundance, might easily be mistaken for timber at a distance. The plant seemed here to delight in a congenial air, growing in extraordinary luxuriance seven to eight feet high, and was very abundant on the upper parts of the island, where it was almost the only plant. This is eminently a saline shrub; its leaves have a very salt taste; and it luxuriates in saline soils, where it is usually characteristic. It is widely diffused over all this country. A chenopodiaceous shrub, which is a new species of ONION, (O. rigida, *Torr. & Frem.*,) was equally characteristic of the lower parts of the island. These two are the striking plants on the island, and belong to a class of plants which form a prominent feature in the vegetation of this country. On the lower parts of the island also a prickly pear of very large size was frequent. On the shore, near the water, was a woolly species of *phaca*; and a new species of umbelliferous plant (*leptotænia*) was scattered about in very considerable abundance. These constituted all the vegetation that now appeared upon the island.

"I accidentally left on the summit the brass cover to the object end of my spy-glass; and as it will probably remain there undisturbed by Indians, it will furnish matter of speculation to some future traveller. In our excursions about the island, we did not meet with any kind of animal; a magpie, and another larger bird, probably attracted by the smoke of our fire, paid us a visit from the shore, and were the only living things seen during our stay. The rock constituting the cliffs along the shore where we were encamped, is a talcous rock, or steaite, with brown spar.

"At sunset, the temperature was 70°. We had arrived just in time to obtain a meridian altitude of the sun, and other observations were obtained this evening, which place our camp in latitude 41° 10′ 42″, and longitude 112° 21′ 05″, from Greenwich. From a discussion of the barometrical observations made during our stay on the shores of the lake, we have adopted 4,200 feet for its elevation above the gulf of Mexico. In the first disappointment we felt from the dissipation of our dream of the fertile islands, I called this *Disappointment island.*

"Out of the driftwood, we made ourselves pleasant little lodges, open to the water, and, after having kindled large fires to excite the wonder of any straggling savage on the lake shores, lay down, for the first time in a long journey, in perfect security; no one thinking about his arms. The evening was extremely bright and pleasant; but the wind rose during

"Glancing your eye along the map, you will see a small stream entering the *Utah lake*, south of the Spanish fork, and the first waters of that lake which our road of 1844 crosses in coming up from the southward. When I was on this stream with Mr. Walker in that year, he informed me that on the upper part of the river are immense beds of rock salt of very great thickness, which he had frequently visited. Farther to the southward, the rivers which are affluent to the Colorado, such as the Rio Virgen, and Gila river, near their mouths, are impregnated with salt by the cliffs of rock salt between which they pass. These mines occur in the same ridge in which about 120 miles to the northward, and subsequently in their more immediate neighborhood, we discovered the fossils belonging to the oolitic period, and they are probably connected with that formation, and are the deposite from which the Great Lake obtains its salt. Had we remained longer, we should have found them in its bed, and in the mountains around its shores.

By observation, the latitude of this camp is 41°, 15′ 50″, and longitude 112° 06′ 43″.

The observations made during our stay give for the rate of the chronometer 31″.72, corresponding almost exactly with the rate obtained at St. Vrain's fort. Barometrical observations were made hourly during the day. This morning we breakfasted on yampah, and had only kamas for supper; but a cup of good coffee still distinguished us from our *digger* acquaintances.

"*September* 12.—The morning was clear and calm, with a temperature at sunrise of 33°. We resumed our journey late in the day, returning by nearly the same route which we had travelled in coming to the the lake; and avoiding the passage of Hawthorn creek, struck the hills a little below the hot salt springs. The flat plain we had here passed over consisted alternately of tolerably good sandy soil and of saline plats. We encamped early on Clear creek, at the foot of the high ridge: one of the peaks of which we ascertained by measurement to be 4,210 feet above the lake, or about eight thousand four hundred ft. above the sea. Behind these front peaks the ridge rises towards the Bear river mountains, which are probably as high as the Wind river chain. This creek is here unusually well timbered with a variety of trees. Among them were birch (*betula*,) the narrow-leaved poplar (*populus angustifolia*,) several kinds of willow, (*salix*) hawthorn, (*cratægus*,) alder, (*alnus viridus*,) and *cerasus*, with an oak allied to *quercus alba*, but very distinct from that or any other species in the United States.

"We had to-night a supper of sea-gulls, which Carson killed near the lake. Although cool, the thermometer standing at 47°, musquitos were sufficiently numerous to be troublesome this evening.

"*September* 13.—Continuing up the river valley, we crossed several small streams; the mountains on the right appearing to consist of the blue lime stone, which we had observed in the same ridge to the northward, alternating here with a granular quartz already mentioned. One of these streams, which forms a smaller lake near the river, was broken up into several channels; and the irrigated bottom of fertile soil was covered with innumerable flowers, among which were fields of *eupatorium purpureum*, with helianthi, a handsome solidago (*S. Canadensis*,) and a variety of other plants in bloom. Continuing along the foot of the hills, in the afternoon we found five or six hot spsings gushing out together, beneath a conglomerate, consisting principally of fragments of a grayish-blue limestone, effloresceing a salt upon the surface. The temperature of these springs was 134°, and the rocks in the bed were colored with a red deposite, and there was common salt crystallized on the margin. There was also a white incrustation upon leaves and roots, consisting principally of carbonate of lime. There were rushes seen along the road this afternoon, and the soil under the hills was very black, and apparently very good; but at this time the grass is entirely dried up. We encamped on Bear river, immediately below a cut-off, the cañon by which the river enters this valley bearing north by compass. The night was mild, with a very clear sky; and I obtained a very excellent observation of annocultation of Tani Arietis, with other observations. Both immersion and emersion of the star were observed; but, as our observations have shown, the phase at the bright limb generally gives incorrect longitudes, and we have adopted the result obtained from the emersion at the dark limb, without allowing any weight to the immersion. According to these observations, the longitude is 112° 05′ 12″, and the latitude 41° 42′ 43″. All the longitudes on the line of our outward journey, between St. Vrain's fort and the Dalles of the Columbia, which were not directly determined by satellites, have been chronometrically referred to this place.

NORTH WESTERN VIRGINIA....KANAWHA SALINES.

New-York May, 1, 1845.

Dear Sir: I send to three addresses in your place some newspapers, containing accounts of the salt formation, gas springs, &c., and also several to yourself, hoping that they may be found useful.

I am extremely anxious to ascertain the temperature of the water which rises in your deepest wells, for the aid of science. Can you name to me any individual in your place to whom I can address a letter upon that subject?

The abundant gas which underlays your place presents a very interesting and important fact—for I presume it is entirely covered by water; and such being the fact, there is no danger to be apprehended from the electric discharges from the clouds. In Kentucky, near the banks of Green river, a body of hydrogen gas was reached in boring for salt water, which was ignited by a torch, and being mixed with atmospheric air in the cavities below, it exploded, throwing up rocks and uprooting large trees. This happened in a limestone region, and no water overlaying the gas. You have no limestone, unless that rock has been reached in recent deep borings.

During my travels in the Canadian forests last summer, I found that the hydrogen gas underlays an extensive range of country in these northern latitudes, but it is in all cases covered by water.

Many scientific gentlemen express the opinion, that the temperature of the earth increases in the increase of depth. My investigations hitherto have not convinced me of that fact, for I find a variation on this continent which seems to contradict that theory. In Europe an increase of heat has been found, and on that continent there may be a local causes to produce this result.

The newspapers represent some of your wells at 1500 feet. I presume this is an error; 1000 feet is the extent of the former borings. If the depth of 1500 feet has been reached, it would follow, according to the theory of increased heat, that the water should test by the thermometer near 80° of Farenheit's scale. The estimate is, that the increase of temperature is 1° for every 55 feet descent. Assuming the surface rate at 53° of mean temperature, the depth of 1500 feet would give even greater heat than 80° —and at this rate, at the depth of 225 miles, the heat would be sufficient to fuse iron, giving to the centre of our globe a heat of almost inconceivable intensity. We know that above our heads the cold is intense at a given elevation. I have found in my mountain tours that the decrease was about 1° to 130 or 140 feet. This decrease is demonstrated by the perpetual frost on high mountains.

I have been informed that the gas at the Kanawha Salines encrusts the surface it strikes upon, forming a species of enamel. Have you any information upon this point?

I shall feel very grateful for a reply.

Yours with great respect,

EBEN. MERIAM.

Postmaster, Kanawha Salines, Va.

—

"In answer to the inquiries contained in the above letter, which has been placed in our hands by the gentleman to whom it was addressed, we remark: There has been no misrepresentation in the newspapers in relation to the depth of the salt wells. Several of them are from 1200 to 1600 feet. Mr. C. Reynolds assures us that his well is 1650, and that below the *surface of the rock*, which is nearly twenty feet below the surface of the earth. One of Messrs. Dickinson and Shrewsbury's by accurate measurement is 1500 feet.

"As to the increase of temperature, we answer, it has never been tested; and, we believe, cannot be by putting down the thermometer. But there are abundant evidences that there is no increase of the temperature at the depth reached in any of the wells.

First, the water that is drawn or forced up from all the wells is very cold. At one, of the depth of 1500 feet—and which is tubed 600 feet so as to exclude all the water, fresh or salt, to that depth—and it is quite certain that the water comes from the depth of 1500 feet, for at that depth the stream of salt water was struck—the water is as cold as that of the very coldest spring water, such as gushes out from the base of our mountains. Second. The workmen at the furnaces, in warm weather, are in the habit of filling jugs with river water, and immersing them in the cisterns of salt water as it is thrown up. The water in the jugs soon becomes, not quite so cold as ice water, but as cold as the coldest spring water. Third. The gas, which comes from the lowest depths of the wells, with the water, if not, according to the supposition expressed in the above letter, from beneath the water, is as cold as a northern blast in winter. To be exposed to even a moderate stream of this gas, in tubing the wells, is extremely disagreeable to the workmen. In the hottest days it chills them through in a short time.

"These facts every body here considers conclusive, that the temperature does *not* increase in proportion to the depth below the surface of the earth.

"That the gas forms incrustations resembling enamel on the surface of objects against which it strikes, we think, is all a mistake.

"The formations on the sides of the furnaces in which gas alone is burnt, are certainly curiosities. These furnaces we stated in a former account, are generally 100 feet long, 6 high, and 4 wide. The whole of this space, when gas is burnt, is filled with a pure flame. In a short time are formed, on the sides, concresences firmly adhering to the stone, in appearance like soot, but increase in the form of moss or sponge, to such an extent as to choke up the furnace. When disengaged in large pieces from the well, it is found to be a hard porous body, with veins or fibres running through it of a lighter color than the main body, and which it is almost impossible to pulverize. Whether, if submitted to a chemical analysis, it would prove to be any thing more than a common cinder, we do not know."

We have received a piece of the conreto formation in the salt furnaces resulting from the combustion of carburetted hydrogen gas, and from a hasty examination it appears like pummice stone. We intend to examine it with care. It is a singular and extraordinary formation, and it is possible may be increased in the furnaces by the droppings of the salt water, and the material of which the walls of the furnaces are made may have also had an influence upon the more rapid formation of the incrustation. I have noticed upon a stone which is placed upon the top of a kitchen chimney 30 feet high that the smoke condenses more rapidly upon it than upon the brick, and this forms a chrystalization resembling bituminous coal, and answers for combustion all the purposes of that mineral being easily ignited, and burning freely and with much flame. Since the reply to my enquiry was given by Mr. Newton, Editor of the Kanawha Republican, some of the salt wells have ceased their discharges of both gas and Salt Water. The interior gasometer has become exhausted. These wells were a wonder indeed —leading the human mind to contemplate with awe and admiration the wonders of nature thus displayed in the machinery of its works. Here is a large population living upon a surface in great apparent security, with a gasometer of inflamable gas beneath their feet —yet it is often the same population witness the burning, and also the icy clouds above their heads in which red hot thunderbolts hang suspended in chains of fire. All nature is full of wonders.

We find the following in the Kanawha Republican of the same date the following:

Kanawha Co., May 20, 1845.

"Mr. Editor: When I settled in these Salines 30 years ago, there was in this county one young Doctor, who had just finished his studies at Philadelphia, a talented young man. There was at the bar of this Court a lawyer from Scotland, and one from Ireland. Not one clergyman in the country, and the citizens applied to the Legislature to pass a law to authorize a citizen of the county to be appointed by the Court, to solemnize the rites of matrimony. There were then two small retail stores in the county, and a number of whiskey shops, kept in small huts, *hollow trees, &c.* But a few causes were on the Court docket. In the summer time, when the streams got low, the citizens had to beat their meal.

"We have now twenty lawyers, twenty physicians, twelve or fifteen preachers of the gospel, and about thirty stores with general assortments of merchandize, a branch of the Bank of Virginia, about fifty steam engines to draw salt water, many grist mills and saw mills operated both by steam and water power; foundries to cast all kinds of pans, kettles, &c.; a number of coppersmith establishments to manufacture all kinds of hollow ware, tubes, &c., and articles of brass, and several tinner's shops. On our river there are from five to eight steamboats. Our exports are from 2,000,000 to 2,500,000 bushels of salt per annum, which gives employment to more than 2,000 laborers, who, with their families, would number upwards of 6,000 people.

"Thus you see the beneficial result of our manufacturing establishments generally. Although the manufacturers are not individually, prospering, yet the the community in general are largely benefitted."

SOUTH WESTERN VIRGINIA....SALTVILLE SALT MINES.

LETTERS EROM A. McCALL, Esq.

Saltville, Va., Sept. 28, 1845.

Eben. Meriam. Esq.:

Dear Sir—We would negociate the sale of ⅞ shares of King's Salt Works, Washington Co., Va. The mean rents and profits for near 50 years past, averaged per annum $18,000, while the rival Preston Estate, lying adjacent, has yielded about $12,000. For 5 years James White rented both at $48,500 per year, and during 7 years we paid the annual sum of $34,500, being $18,500 for King's works, and $16,000 for Preston's works, thereby securing a monopoly. We also continued the same rent during 5 years, ending January last, for Preston's while Findlay, Mitchell & Co. conducted King's well in competition. The present price of salt is 50 cents at the works, and 75 cts. per 50 lbs. along the river depots. On the North Holston River we forward salt in winter in boats carrying 200 barrels, and insurance is worth 2 per cent. About 200,000 bushels annually is taken or may be consumed by the market, while the works yield water enough to make one million of bushels yearly.

In King's well the *rock mineral salt* lies 100 feet in depth and so saturates the water that three bushels of water (24 galls) will make 50 lbs. of salt, or as some say 18 gallons may do it.

There is no trace of bittine (muriate of magnesia) in the water, and but a slight amount of gypsum, so that the salt is white, and naturally the purest yet discovered. The cost of making salt has been rated at from 12 to 16 cents per bushel.

The blocking adheres to the kettles with great tenacity, and no good experiment has been made testing solar evaporation, or the steam plans of making salt. Kettles holding 100 galls cost, delivered, about $58 per ton, and wood $1,50 per cord, no stone coal being convenient, but immense forests of timber could be had at $1 per acre, along the river at points to which the water may pass in tubes.

A SENCOND LETTER FROM THE SAME GENTLEMAN.

Oct, 28, 1845.

"Our salt water was conveyed in tubes two miles, and ought to be taken six miles down the banks of the river where wood could be had at $1 per cord 4 feet by 4, and 8 feet long, of oak, beech and sugar tree. We are contracting for wood delivered at the salt well at $1.50 per cord.

Every 1000 or 1200 bushels of salt made, will on an average fracture one kettle, which may be once patched for an average cost of $5 answering as well as at first. The broken metal sells at $12 for 2240 lbs.; for five tons a cupola near at hand, will send us one ton of kettles. A small forge in the vicinity makes fine iron from the broken metal. The wholesale price of iron and hollow ware is 2¼ cents per lb.; pork is $3; beef $2.50; hay $6 per ton; flour $4 per barrel; bacon 6 to 7 cents; corn 30 to 40 cents per bushel at the works; negro hire $70 per annum, white hirelings 8 to $10 monthly; boats $100, carrying salt down the Holston and Tennessee to Alabama usullay 175 or 200 barrels to the boat. Salt sells 50 cents per bushel at the works and 75 cents at the depots, and the market in the present state of roads and navigation scarcely consumes 200,000 bushels per annum. The cash value of flasked or rough heavy kettles is $50 delivered at Saltville.

Saw mills or flour mills here are so numerous as to be valueless and barrels holding 300 lbs. net salt cost 25 cents, and about 5 cents for nails, coopering, and packing and sell at 40 cents to consumers of the salt. I could procure an engine with 2 boilers, not now in use, at Hywassen for $1000, The daily summer rains and fogs would make much against solar evaporation.

With *fresh water steam* raised in covered square kettles Mr. Findlay made salt in wooden cisterns conveying the steam in iron pipes some 200 feet or more, but the salt caked on the wood, and blocked on the pipes, causing as great waste as the blocking in kettles. The salt water being *naturally saturated* could not be employed *for making steam* under cover, and it was certain that unconfined steam imparts 33 per cent. less of caloric than was required to generate it.

In the steam generating, or fire heating about 20 per cent. of caloric or consumption of fuel is wasted through the air, the walls and the basis of the furnace, and his mode of applying steam heated to 212o in the generator, never raised the temperature of the salt water in the evaporating cisterns above 150 or 160°. The condensing process in the hollow of the tubes consumed the remainder of the heat which was conveyed off by the water thus formed, and always streaming out of the steam pipes.

Our brine begins to grain when the kettles commence boiling (without necessity for any clarifying process) and why it is that in England the brine saturated from the rock salt is boiled in kettles or wrought iron pans, where they so well understand the most economical modes of applying caloric through the medium of steam? If our water was 40 gallons to 50 lb. of salt instead of 20 or 24 gallons, the advantage of steam would be evident in reducing it to brine, but employing brine only, would you find *fresh water* more economical in graining than the direct mode of applying fuel? You could easily test it where the apparatus is already made. A comparison should be instituted without *reference to machine power* in a region abounding as this does with hundreds of untenanted waterfalls and mill-sites. Two furnaces in one building of fire brick or stone so placed as to allow the salt to drain back its water to the kettles and the salt then rolled on frames to side rooms for packing, would employ six hands daily, and would consume 10 cords of wood including that necessary for light among the dense fog from the kettles. For such rough business cheap houses are best, moving along as wood is consumed. Were the river a little improved and allum salt made for the western pork-packers, perhaps 1,000,000 bushels yearly may some day be sent off from here. But I will mention that Mr. Preston has 25 hands and 50 mules with 12 wagons and with officers and managers about the place whose salaries, I presume are about $4,500 annually.

I will describe the five furnaces which he works, built by us side by side, in an open shed 120 feet long, with chimnies 6 feet high, and the base of the furnaces ascending a slope of 5°. Each flue or furnace has two rows of kettles leaning together without a centre wall and resting on the sides of the flue, dug out of dry earth and lined with stone. The double line of kettles contain 37, weighing from 700 to 1000 weight each, the heavy metal being for the front. Troughs conveying the water over the kettles from the cistern, and a plug drawn lets it into every kettle, after dipping salt when the kettle is two-thirds boiled down. The salt drains out of hand baskets hung over the kettles containing each 14 lb., four of which baskets one man carries off to the side entries of the salt rooms.

The grates for fire are placed 26 inches below the kettles, and the ash-hole 20 inches deep is under the grates reaching back six or 8 feet from which the flues widen to 4 feet and of depth sufficient for a man to crawl through to rake out salt and ashes once weekly; for which purpose the boiling ceases at 12 o'clock on Saturday and begins again 12 o'clock Monday.

By the breaking of a kettle, or by water running out, the flue is often nearly closed with salt suddenly made in it and the pass so interrupted causes the heat to accumulate in front so that blocking third days boiling 6 or 8 inches thick over the interior bottoms of the kettles get red hot and the iron drips from the

much of the surrounding country. When I do so, I will give you a more minute account.

The valley in which the salt springs are, is about a half mile wide, with precipitous mountains on either side, about 200 feet high. The mountains, however, are not continuous ranges, but divided into conical hills, some of which are more lofty than others. Near the base of these hills and half way up the sides, a hard, flinty, pale yellow rock crops out. It resembles very compact French burr, such as is used in New-York for mill-stone. It is called here, "the mill-stone grit," and is used for that purpose. Above it is limestone and mixed in with it a rotten soft stone, which stands fire very well. Here it is called soap stone, but I think improperly.

The salt springs are about two miles from the north fork of the Holston River, which is approached through a gap in the mountains, or rather a pass way between two conical hills.

The height of land of the Clinch Mountains is distant from this place westerly about eight miles. It rises above this valley about 1200 feet. All the surrounding hills and mountains are yet covered with snow, but it has rained for the past 12 hours, and I think the snow will soon disappear. The weather is cold and unpleasant. Night before last the ice formed nearly one inch thick, and the rain now forms a soft ice upon the half frozen ground as it falls.

The valley of the James River, up which I passed in my journey, is pleasant and fertile. The bottom lands are from 1 to 2 miles wide for fifty miles above Richmond, and very fertile. In rear of the bottoms the country is beautifully rolling, and very little of it too steep for cultivation.

I passed up the canal from Richmond to Lynchburg, a distance of 143 miles. We passed 53 locks of about 8 or 9 feet each, all of which were ascending, (if I remember) but four of which locked down into the river. The locks upon the easterly section of the canal are built of a beautiful compact granite, which is found in great abundance upon the immediate bank of the Canal and River for the first 40 or 50 miles above Richmond. Above this the granite disappears, and gneis takes its place, and the country becomes more rough and precipitous, and the river bottoms become narrow, and at Lynchburg, precipitous mountains ascend from the river bank.

In ascending James River the weather was mild, and the farmers were plowing, but in crossing the Blue Ridge and Alleganies I found a different climate, and was detained nearly a week by bad roads and a severe snow storm. I was compelled to remain four days at one place, or expose my limbs and health in a manner that I was unwilling to hazard. The roads were the worst that I ever witnessed, but I was told that they were better in the summer. The whole country across the mountains is very broken with very little valley land. The gaps are narrow, and the hills too precipitous for cultivation, and the cattle generally starving for fodder. This winter has been unusually severe.

The Blue Ridge is chiefly gneis, and the Alleganies mostly a rough ill-shaped limestone, apparently combined with silicious matter.

The brine of the salt springs at this place stands at 90° by my salometer, and it contains more impurities than I expected. It contains (I think) as much sulphate of lime and oxide of iron as the Syracuse water.

Letter from JOHN MEAD, Esq., *dated Lockpit, Wayne Co.*, 1845.

"We have been prosecuting the boring seventy-one feet further, which makes the present depth four hundred and one feet, we still continue in the red rock, occasionally passing a stratum of bluish green clay slate, and a good many stratums of the mineral salt. They occur more often and are thicker in width. At three hundred and seventy-five feet I passed a stratum of solid salt of at least five inches in thickness and they have occurred as often as once in two feet for the last fifty feet, of various thicknesses, from one inch to two in thickness. When we are passing one of these stratas of salt, the water at the top of the tube will foam and froth like the strongest brine. The clay rock, or mostly so, that we are boring into adheres to the auger when we pull it out for the purpose of clearing the sediment out of the well is as salt as the salt itself.

"We have saved the specimens of the last boring, and I purpose to send them to you the first opportunity that presents itself, for your examination. I don't think that we have hit any veins of water, the last one hundred and eighty feet. The rock appears to be quite soft, and the water from above settles down and we are continually bringing up the salt; it brings the water to a point of saturation. We have inserted a tin pipe two inches in diameter within two feet of the bottom, and attached a pump at the top, and after pumping about an hour we exhausted the strong brine, but brine continued to flow of a weaker strength through the pump at the rate of about 28 thousand gallons for the 24 hours. I think this water would bear manufacturing, but if we could get a supply of our strongest water, 24 gallons would make a bushel of salt, while at Syracuse the manufacturers told me this summer that it took 40 gallons of their water to make a bushel—a wide difference. Then take into consideration the difference in the price of wood.—Here it could be obtained for a long time for one dollar per cord, while there it costs two dollars per cord. I wish you would have the goodness to inform me what is the geological calculation of the thickness of this red or saliferous rock, the texture of the rock was getting much coarser and more like slate. I have seen some calculations that the thickness of this rock was from 75 feet to 150 feet thick; we are now 161 feet into it, and we were in hopes of getting through it at 150 feet; we were also in hopes at that point of striking a full supply of our strong brine.

"Any information you can give me from your knowledge and experience will be gratefully received. The mineral salt that we raised was in small quantities, mixed with the clay rock, and of colors, redish and white almost transparent, and bluish green, which specimens we have on hand. and will forward to you soon.

"I should be pleased if you could make it convenient, to make us a visit and examine the whole of the specimens here and the location. I think there can be no doubt of the eventual success of this work if it is prosecuted, either by continuing the present well deeper or by commencing a new well close by. I wish you to have the goodness to give me your opinion in full upon the subject for which I shall be greatly obliged."

We have since the date of Mr. Mead's letter, quoted above, received from him the borings of the well at Lockpit, from a depth of 330 feet to 400 feet; also a jug of the brine.

We have a letter from Mr. L. I. Rice, dated Montezuma June 26, 1842, in which he says:

"The boring has just been completed to the depth of 605 feet. In boring this depth, the cuttings are mostly indurated clay, red and blue, some plaster rock (*sulphate of lime*), and some slate. At 190 ft. struck the first vein of salt water, by the hydrometer 44°; second vein 225 feet 48° and third vein 501 feet 52° and the last vein 598 feet 100° or full saturation."

We have a sample of the Montezuma brine raised from a depth of 598 feet. It is of the same specific gravity of that of Lockpit, viz; 1, 1895. One pint contains 1024 grains of chloride of sodium, and 1088 grains of chloride of calcium, chloride of magnesium, &c.

The thicknees of the saliferous strata about which Mr. Mead makes enquiry, is explained by the above quotation from the letter of Mr. Rice. The distance from Montezuma to Lockpit is six miles.

From an examination of the borings of the Lockpit well it appears that deep in the earth, stratas of transparent salenite exist. An erroneous opinion is quite extensively entertained that salt water can be found any where by boring into the earth to the level of the sea. Such is not the fact, but fresh water is frequently found under the bed of the ocean. The water of the ocean itself is of different degrees of density. Near the equator the ocean holds more salt in solution than toward the poles.

THE EARTHQUAKES AND THE STORMS.

On Monday, April 7th, 1845, a severe shock of an earthquake was experienced at the city of Mexico, at 53 minutes past 3 o'clock, P. M. Two other shocks were experienced at the same place, the same evening, between 6 and 8 o'clock. Much damage was done, and several lives were lost. At the same time a snow storm was raging at Chicago, in the State of Illinois, and nearly at the same moment of the last shock, a snow storm came up suddenly on the Hudson River, during which the steamboat Swallow stranded on the rock at Athens, and made fearful shipwreck.

The temperature at Syracuse, the 7th of April, by Mr. Conkey's observations, at 3 o'clock, P. M., was 46 deg., and cloudy.—Dew Point 24 deg, barometer 29, 48, to 29, 60.

On the 23d of December, 1845, at 30 minutes past 9 o'clock, in the evening, a severe shock of an earthquake was experienced at Memphis, Tennessee. It happened while I was making meteorological observations on Brooklyn Heights, and I was surprised at the almost instantaneous depression of the mercury in my thermometer three degrees, and named the extraor. dinary circumstance to my family that evening, and the next day I communicated the fact for publication in the Brooklyn Star. This was between 9 and 10 o'clock in the evening.

I copy from the Brooklyn Star, in which these memorandums were published, as follows:

From the Star of December 24th.

"After sunset, last evening, snow clouds bordered the southern and western horizon. At 9 o'clock in the evening temperature 28 deg.; 10 o'clock, 25 deg., at which it remained during the night, and was the same at 8 o'clock this morning."

From the Star of December 23d.

I copy as follows:

"The highest temperature attained yesterday was 24 deg.; at one time, in the afternoon, there appeared to be a much warmer atmosphere over head. At 7 o'clock last evening the temperature was 24 deg., and the same at 1 o'clock, P. M., the atmosphere was completely overcast. Temperature this morning at 7 o'clock, 20 deg. with snow clouds in the west and south before sunrise. Overhead the atmosphere is in that peculiar state, that a change of temperature will cloud it. The variation in the temperature the last twenty-four hours has not exceeded four degrees, and is in the descendant. A white frost was visible this morning. Place of observation, lat. 40 deg. 43 min., lon. 74 deg. 2 min. 30, altitude 62 feet."

From the Star of Dec. 26th, (25th being Christmas).

I copy as follows:

"Snow commenced falling on Wednesday morning (the 24th), at 9 o'clock, and continued to fall, moderately during portions of that day and during the night.—The quantity on the ground at 4 o'clock on Thursday morning was not more than four inches. The temperature on Wednesday at 1 o'clock, P. M., was 27 deg., and continued at that till 10 o'clock in the evening; Thursday morning, at 4 o'clock, 29 deg. The fluctuation for the 24 hours has been 4 degrees."

From Mr. Conkey's record, kept at Syracuee, we copy, as follows:

Dec. 23d, 9 o'clock, P. M.—Barometer, 29, 86. Sunrise on the morning of 24th, 29, 86, and the same at the same hour on the morning of the 25th. The temperature on the morning of the 23d, 24 deg. Sunrise on the morning of the 24th, 18 deg.

On the morning of the 28th of February, 1846, a shock of an earthquake was experienced at Cincinnatti, Ohio, at half past 8 o'clock, in the morning.

From the Brooklyn Star of February 28th, 1846.

I copy as follows:

"Temperature was 1 deg. lower yesterday morning, at 7 o'clock, than at 6 o'clock. At 6 o'clock, 8 deg.; at 7 o'clock, 7 deg.; 9 o'clock. 10 deg.; 10 o'clock, 12 deg.; 11 o'clock, 13 deg.; at 12 o'clock, 14 deg.; 1 o'clock, 18 deg.; 2 o'olock, 19 deg.; 5 o'clock, 20 deg.; 7 o'clock, 18 deg.; 9 o'clock, 18 deg.; and at 7 o'clock this morning, 17 deg. or 9 deg. warmer than the same hour yesterday morning. The present appearance of the weather is strongly in favor of a storm, the low temp. of the atmosphere being the only hindrance at present. The temperature of yesterday, compared with that of the day previous, presents a contrast, for, after 12 o'clock the previous day the mercury rose, the latter day it fell."

From the Star of March 2d, 1846.

I copy as follows:

"At half past 9, Saturday morning, the 28th, the temperature rose to 20 deg., being a fall of 3 deg. from 7 o'clock to 9, and with this rise of temperature snow commenced falling. At 1 o'clock, P. M., 21 deg.; 2 o'clock, 20 deg.; 4 o'clock, 18 deg.; 9 o'clock, 16 deg.; and continued at that without any change throughout the night. Sunday morning, at 8 o'clock, 16 deg.; 1 o'clock, P. M., 24 deg.; 7 o'clock, 20 deg., with a close atmosphere, indicating another fall of snow. Snow fell on Saturday to the depth of 3 or 4 inches."

From L. W. Conkey, Esq., we have received a transcript of his meteorlogical record of February 28th, 1845, which is as follows: Temperature, sunrise, Feb. 28th, 6 deg.; 9 o'clock, A. M., 15 deg. March 1st, sunrise, 5 deg.; 9 o'clock, 3 deg. The barometer, 28th, sunrise, 29, 60; 9 o'clock, A. M., 29, 66.

On the night of the 30th of January, 1846, a severe shock of an earthquake was felt at the Belgian settlement of Santa Tomas, near the equator. The sound resembled the discharge of a heavy piece of ordnance.

From the Brooklyn Star of February 2d, 1846.

I copy as follows:

"Saturday (31st) was the warmest day in the month of January—the temperature rose to 42 deg. at 2 o'clock, P. M., at the same time a black cloud appeared in the Northwest, which in half an hour reduced the temperature to 41 deg.; at midnight, it had reached 22 deg., at which point it continued for 11 hours, and at 12 o'clock, Sunday noon, was 23 deg.—at 5 o'clock, P. M., 52 deg.—rose one degree during the night; and at 7 o'clock, Monday morning, was 26 deg. Saturday, to near 1 o'clock, P. M., 31st, the East River was covered with a fog so dense that it was with difficulty the ferry boats crossed over, and not without the aid of shore bells. Thursday evening, January 29, at about 5 o'clock, P. M., snow fell in a few sprinklings, and was followed by rain during the night in a moderate quantity.—Rain fell on Friday night the 30th of January,"

It will be seen by the above statement that four earthquakes occurred during a period of less than 12 months, and each attended by a storm; and it will also be seen that the temperature on each night which succeeded the shock of December, January and February was succeeded by a stationary position of the mercury in the thermometer. We have placed these facts together for the information and examination of our friend, Mr. Halleck, of the Journal of Commerce. In January, that gentleman appended a note to our communication in relation to the Memphis earthquake, in which he dissented from the conclusions we drew from the premises we stated. Since that time the Journal has published the accounts of the earthquakes of January and February, and the Brooklyn Star, which publishes our meteorological observations daily, contains the above memorandums.—These meteorological records of ours are made in the morning before sunrise—they are useful to refer to, as it is by observations carerully and systematically made that we acquire knowledge. We advance no theory here—we merely record facts which the earthquakes, the storms, the frost and the lightning furnish us with. It is not improbable that what is sometimes believed to be earthquakes are meteoric explosions in the high atmosphere.

MINERAL TABLET.

I have recently received from the Hot Springs, in Arkansas, a beautiful tablet of about 15 inches long, 12 inches wide and three-fourths of an inch in thickness. It is of chalky white—straight lines, drawn in deep red color, cross it, and these are intersected by other straight lines forming right, acute, and obtuse angles. In the centre is a beautiful red cloud, in the middle of which is a splendid figure of delicate white. The inscriptions on this tablet, which penetrate deep, were written by a pen dipped in sunbeams. It is beautiful—it is delicate—it is splendid. It is in the mineral kingdom

THE ADIRONDACK MOUNTAINS.

I have prepared a lightning chain for the highest peak of the Adirondacks. It consists of bright circular plates of tin, 8 inches in diameter, linked together by pieces of iron wire, one foot in length. This will be surmounted by a bright spindle, one foot in length, and the whole be connected at the lower end with a copper wire, terminated in a tin bottle filled with water. In October last, I carried this apparatus with me to the mountain to affix upon its summit, but the snow met me there and the weather became cold, I therefore deemed the spring or summer a more appropriate season for the work. My object is to test the ability of the small wires to sustain the weight of a thunder bolt among the lofty clouds, in a locality where even a failure will be harmless, and where the lightning has abundant room for its operations, uninfluenced by surrounding objects.

The pinnacle of a lofty mountain, whether mantled in a cloud in which the lightning has its council chambers, or adorned with drapery made of brilliant sunbeams, or wrapt in the robes of midnight—is a fit place for contemplation. The etherial essence which rests upon its summit is a mental stimulant, so gentle, so mild, yet so enrapturing, that it becomes to the spiritual tenant of the mortal frame that feeds upon it, what the morning dew and gentle sunshine is to the rose bud in its opening.

I have stood at midnight upon the mountain top, and, with folded arms, looked upward—there, in the midst of the stillness of silence that was overwhelming, I have gazed upon the distant stars in the mighty firmament and endeavoured to traverse their bright surfaces in the ærial vehicles of thought—but, alas! they were far, far beyond the reach even of almost boundless thought. Silence, at midnight, upon the mountain top, is intensely impressive when attempted to be measured by the human mind in the moment of calm and tranquil meditation. The lightning, in its robes of fire, adorned with chains of liquid flame, discoursing in the thunder's voice, amid the mountains of sable clouds which are piled up high in the atmosphere---their lofty summits gilded with sunbeams, produce in the mind of the beholder sensations of fear—of dread--of solemnity---but all these are unequal to the solemn--the impressive--the overwhelming influence of the stillness of deep silence in a region where even breathing is without an echo. I have reposed in sleep upon the mountain top—and slept sweetly. I have reposed in sleep upon the cliffs of the Niagara where the reverberaitons of the thunders of the waters of the great cataract shook the pillow of my couch and lulled me to sleep, but I found nothing there to equal the deep silence in an atmosphere above the clouds.

The wilderness of the Adirondacks, altho' a vast and uncultivated forest, is no longer the home of the red man of the woods—at St. Regis, on the St. Lawrence, at Onondago Valley, near the lake of that name, and near the Oneida Castle, to the south west of Oneida Lake, is, at each place, a remnant of a nation, once numerous, once powerful, and brave—but now, almost a ruin.

These mountains, which have echoed their cries of distress, and these 'rocky ravines' which have 'reverberated' their piteous lamentation, have each treasured up the complaints thus committed to their keeping, and when these mountains shall be melted, and these 'rocky ravines' enveloped in the great conflagration, each will render up to Him who is to judge all nations with a righteous judgment, the record of woe, the catalogue of wrong.

Many look with wonder upon the declaration of the sacred record, as to the greatness of the multitude of human beings that inhabited our earth when the flood came uponits surface—then more than 16 centuries of time had elapsed, reckoning back to the creation, and what a change when brought in contrast with that period when only two individuals of our species formed the whole human family—but here is an illustration: 250 years ago, that portion of our continent now settled by the citizens of the United States was thickly inhabited by the people of numerous nations of red men—but now—where are they? gone, gone—and of many of these nations it may be said, in the language of Logan, " not a drop of their blood runs in any human veins."

Ere the flood came, the mountains had been framed, for these were the measure of the mighty deep—for, says the record of the inspired peman:

" And the waters prevailed exceedingly upon the earth, and the high hills under the whole heavens were covered," " and the mountains were covered."

When I gazed upon the surface of the white face peak of the Adirondack and looked upon that part of it covered with vegetation, and then upon that other part in which the mountain torrent had excavated its path to the base of the lofty eminence, I perceived that I was standing upon a mighty rock reared by the hand of Almighty, and since covered with a few feet of soil to support its vegetation. What an observatory, this, to occupy!

When the red men of the forest, ere the white man came, ascended this lofty mountain to its top, they deposited on an isolated rock or cleft a *memento* of their visit—a spontaneous offering up of tribute to Him who laid the foundations of these mountains.

These mountains are the great acqualogical laboratories, where the greater portion of the fresh waters of our State is produced, from these mountains flow eight rivers, and the wilderness which encompass them is dotted over with chrystal lakes—and although these rivers are constantly discharging their mighty waters, yet notwithstanding this they are never exhausted. How delightful, how cheerful and invigorating the high mountain air, amid the beauteous scenery which is there spread out in the field of view.

WINTER BIRDS.

I have near my window a box in which I feed the little Birds that frequent the groves in this latitude in winter. I have as daily visitors some forty or fifty snow birds and sparrows and occasionally a Virginia Red-bird makes his appearance among them. The visits of this bird are few and far between. It appears to be the guest of one of the Sparrows. The Sparrows, frequently in the spring, bring with them stranger birds—they are very hospitable. The birds have visited me for several years—they are cheerful companions of the pen, and give activity to thought. Birds possess intelligence—they have memory—they are grateful, and if kindly treated are very confiding.

I expressed to a very worthy citizen of Brooklyn a desire to invite the Birds to take up their residence in the grove in Greenwood Cemetry, where the grounds are enclosed, and where the little innocents would be protected from the cruelties of hard-hearted and unfeeling sportsmen, who wound and torture the poor birds.

I have received from the gentleman I have referred to above, the following note:

"Brooklyn, Saturday, 7th Feb. 1846.

"Dear Sir:

"I have not had the pleasure of meeting you for some time and write to say Mr. Perry would be very happy to promote your benevolent intentions in regard to the birds in Greenwood. Will you some time, when you are passing the office No. 39 Wall Street, suggest to him how you wish to attain the object, the keeper on the ground would assist in distributing the seed. If you have selected a lot, it may be made head quarters for these "minstrels of the wood," by placing your alms on it.

"Truly yours,

"HENRY E. PIERREPONT.

"Mr. E. Meriam.

Birds possessed this earth ere man was formed from its dust—it was the birds that sung the first morning anthem on earth, to the praise of Him who made the world, and this was on the second solar morning.

I often call to mind the plaintive notes of the little bird, which I call the Adirondack Solitary, which I heard sounding its notes at evening on a broken tree which stood near the Stranger's Grave, on the borders of the wilderness. This little songster would be an acquisition to the groves of Greenwood Cemetry, its plaintive notes would awaken in the minds of the visitors of the "City of the Dead" a feeling which would bow down human pride and lead the mind to meditate and contemplate, a suitable state of feeling to occupy the spiritual bosom of the material form while meditating among the tombs.

The Adirondack Solitary, as I call the little feathered minstrel, sings during the night, as well as the day—it sounds its notes at midnight, thrice, and then a pause—a long silence—and then again the three-fold measured sound is heard. Oft, oft do I call to mind the sweet notes of this little warbler; they have arrested my step when journeying the paths of the forest. An inhabitant of Black Brook who frequently was awake during the night attending upon the burning of lime kilns, informed me that he frequently heard these birds at all hours of the night, and at a considerable distance, but he had never seen one of them, and the same answer was given me by every person I enquired of. I saw but one of these birds upon the limbless top of a broken tree, but it was so hid by the stump that it was impossible to discover its color accurately or its size, except that it was a small bird.

My feathered visitors are sweet little creatures, their bright eyes kindling up into an expression of gratitude, speaks a language that is intelligible to the human bosom when in a state of quiet contemplation.

One of these little birds is lame. The lame bird has paid me two visits, and I watched its motions with much care, in order to endeavor to discover whether its helpless condition brought to its aid its mates.

The feeding of these little creatures is a labor, and the watching over them a care, yet it is of the agreeable and useful kind that makes it pleasant and instructive.

Two of these birds are dead—one, a snow bird fell down upon the ground while I was watching their movements, and before I could open the door and get to it, died. Another, also a snow bird, was killed at an early hour in the morning by a favorite cat. Poor pussy, had, unobserved by me, got into the yard and seized one of the little creatures, but my wounded dog interfered, seized poor puss and rolled her over and over in the snow, and then took her in his mouth and carefully brought her into the house without injury, and then gave me plainly to understand that something was wrong. I followed the faithful animal and he went direct to the little bird which lay dead upon the ground—when he saw me pick it up he was satisfied, but he does not allow poor pussy to interfere with the birds any more.

Thus, in the midst of the little pleasurable employments that are interspersed through the path of the journey of life there are scenes which mingle the bitter with the sweet.

It was the pretty Dove that brought the Olive Branch to the Great Captain of the deep, when he was on its bosom and gave him the first knowledge that our globe had ceased to be one vast ocean—a fit messenger from the King of Kings to his creature man.

It was the Raven that carried the food to Elijah—the feathered messenger of Him who made the world commissioned by Him on this very errand of mercy.

It whs the sweet Robin Red-Breast that gathered the leaves to enshroud the bodies of the children who made their grave in the wood. These sweet "minstrel's of the wood" thus provided the infant bodies with a sepulchre. "*Greenwood*" is a fit place for the pretty birds, and the pretty birds appropriate guardians to hover over the treasury of the grave.

ROCKLAND MOUNTAINS.

I have made several excursions to these mountains and made minute examinations of the rock formations of that locality. These present a wide field for investigation. The Pleonaste, a pretty stone which takes a high polish, is found there; the Lydius Stone, called by some the touch stone, is also found here. This stone is used in many parts of the world to determine the quality of gold coin. On the banks of the Hudson River, a little below the Dunderberg Mountain is a beautiful strata of porphyry of various colors. I found here also the ———— or mountain cork, so light that it floats upon the water.

The Rock formation on the top of the Dunderberg is the same as its base. The fissures which have been made in the rock, at various times, are filled with a mixture of purple and blue quartz.

To the west of the Rockland Mountains, in years long past and gone, Behemoth had his home. The monster beast seemed to have herded on that portion of the country watered by the Walkill. Numerous skeletons have been found there beneath the surface, one of which I examined and described on page 130 of this volume.

Our mountains afford a great field for investigation and one that imparts pleasure to the contemplative mind.

The mountain atmosphere possesses a peculiarity that gives to those who breathe it a mental energy found no where else—the northern mountaineer, is both peaceful and healthful.

THE ARKANSITE & THERMALITE.

Near the Hot Springs, a short distance from the Washitta River in the State of Arkansas is a mine of an extent not yet ascertained, belonging to John H. Ward ,Esq., from which the formation which I have denominated the Arkansite, and also that which I have denominated the Thermalite is obtained. Mr. Ward has presented me with specimens of the Arkansite, and also with specimens of the Thermalite, and I have recently received from him at two different times, via New Orleans, various other geological specimens of great interest, and also an aquaological specimen, being a bottle of the water of the Hot Springs, which when taken from the spring was of the temperature of 148° of Farenheit.

The Thermalite is an offspring of the Thermal Waters, and hence its name. One which I have weighs 35 ounces. It has the hardness of the Agate, and the lustre, when seen on its even surface in a proper angle of light equal to that of a polished mirror, and will reflect upon its surface objects ten miles distant. The colors of the Thermalite are red, yellow, purple, and white. It is opaque and has the peculiar property of transmitting one color and reflecting another. The Thermalite which I have is more than two inches thick, and when brought in the proper angle with the reflected rays of the sun and the light transmitted through a green curtain placed nearly horizontal over it, and at some feet distant from it and thrown upon it, a green color of a very delicate tint is transmitted through the curtain and thrown upon the surface of a white paper placed beside it, and at the same time a beautiful purple is reflected and borders that of the green.

Some of the colors of the Thermalite are a beautiful pink bordered by delicate chromic tints. The crystalization of the Thermalite is a spherdid. The Thermalite is of great value, is capable of giving a keen edge to fine instruments made of steel, and unlike all other substances it is subjected to no wear but cuts away the metal with surprising rapidity. I have no doubt that the Thermalite will come into a more extensive use than any other substance yet discovered. The Thermalite is as brittle as glass and has a ring like silver. Although it is of great density, and appears perfectly solid, yet its smooth surface is found on minute examiuation with a powerful magnifier to be made up of millions of little edges arranged in spherical order, that cut off the metal of an edged instrument like a file. I shall hereafter notice the thermalite more in detail.

The *Arkansite* is of a chalky whiteness, and when taken from the mine is opaque, but on being saturated with a fluid becomes translucent. It possesses the same property of transmitting one color and reflecting another, the same density and the same hardness as the thermalite, and is found in the same mine. This stone is invaluable as a hone for edged instruments of every kind. The English cutlery houses, where the finest cutlery is made, the Bank Note Engravers, and the Dentists, that have used the *Arkansite* pronounce it superior to any thing they have ever used. An Arkansite from this mine made into shape for a razor hone, is to be seen at the store of Messrs. Platt & Brothers, No. 12 Maiden Lane, valued by Mr. Ward at $15. Messrs. Platt & Brothers have several pieces of the Arkansite for sale, calculated for various kinds of edged instruments. Abraham G. Thompson, Esq., purchased an Arkansite about five inches long, for which he paid five or six dollars, for a razor hone. He informed us that he would not part with it for its weight in gold.

Robert Smith, Esq., has also one of the Arkansites for a similar purpose which he values greatly.

Mr. Adams, the accomplished engraver on wood, attached to the large publishing establishment of Harper & Brothers, speaks in the highest terms of the Arkansite.

Mr. Watson, a Lapidary in New-York, of near 30 years experience, cut one of the Arkansites, and he informs us that it used up the diamond dust faster than any substance he ever put on his wheel, except the diamond itself. I gave to this the name of Arkansite for the reason that it came from the mines of the State of Arkansas. I have abundant precedent for this, as good reason for such a designation. 'Strontian' derived its name from that which designated the town in the mines of which it was first discovered.

I have among the specimens sent me by Mr. Ward, a substance taken from the bottom of one of the springs. It is white as chalk, opaque and studded with minute and brilliant crystals of great beauty. At my earliest leisure I intend to examine these specimens minutely and will after that give a further account of them.

ASSESSMENT SUIT.

An important suit was to have been tried in the Circuit Court last week, but the Corporation were unwilling to go on with it, for fear, as is said, of scareing away the *bidders* at the assessment sales. The Corporation *Peter Funks*, are not easily scared—they generally bid the more spirited in such cases. They are old *sogers*.

SECOND AVENUE SEWER.

A suit has been brought by Richard Mott, Esq., for a gentleman who has suffered in his property by this sewer. and we understand that the counsellor will search this sewer to the bottom, and bring the whole matter before the Court.

"Hast thou known the variety of the cloude?

"For hee beholdeth the endes of the world, and seeeth all that is under heaven—:o make the weight of the windes and to weigh the waters by measure, when he made a decree for the raine and *a way for the lightning of the thunders.*"

The mysteries that pertain to him who framed the universe are beyond the reach of human research, but there are some things declared and written down by a pen moved by the source of all knoweldge, and to these things heed should be given.

I have not yet seen a lightning storm beneath me when standing on a mountain top, but I have been an astonished and admiring beholdor of a woundrous display of the brilliant adorning of the clouds that mantled the whole terrestrial surface which was far beneath me. I have gazed at the bright canopy of ethereal blue above me—at the morning sun as it entered the field of view from its morning chambers, and beheld it when risen but a few degrees above the shadow of the terrestrial surface, shining in all its glory, the clouds piled on clouds beneath me lighted up with its beauteous rays, in all the brilliancy of beauty—in all the splendor of magnificence—mountains, valleys, precipices, cataracts, grottos and extensive plains, all decorated with sunbeams and moving in all the variety of motion—these resembled an ocean of brilliants, it was then I could imagine what would have been the sublimity of the scenery had a thunderbolt thrown a brilliant chain of liquid fire among the aqueous gems of the mighty casket—but I dare not unbosom the thought that possessed the mind—my pen * * * * *—it has paused, for the thought was too gigantic for utterance.

The Lightning Record of 1844 presents a catalogue of 50 deaths—3 human beings killed by two thunder bolts, 4 at each time—14 persons killed by seven bolts, 2 at each time—and 28 persons killed by as many different thunderbolts, or one at each time.

The record of 1845, presents a greater number of deaths than those of 1844.

Four persons are stated to have been killed by a single thunderbolt; twelve persons by four bolts, three at each time: Sixteen persons by eight bolts, two at each time; forty-four persons by as many different bolts, and fifteen persons by one thunderbolt, besides between 40 and 50 persons also killed by the same electric charge in the same vicinity. This is but a part of the record of 1845. It is a fearful catalogue.

We had intended in this number of our paper to have made a synopsis of the catalogue presented, but the increased size of the Gazette has absorbed all the type of the office not already in use, I therefore shall defer it till the next number.

I will, however, remark that the result of the ivestigations I have so far made, is, that lightning conductors terminating in water have never failed to conduct all the lightning that entered upon them.

That lightning rods which have had an improper termination, have caused the lightning to explode and leave the conductor.

That lightning rods that diverge are preferable to any others. Ship's conductors all diverge, and none have ever failed, although the lightning traversed a slender wire in the midst of hundreds of tons of metal lying in cannon upon the deck.

LIGHTNING IN 1844.

On the 30th of March, a house belonging to James Miller, in the northern part of the city of Mobile was struck by lightning at an early hour in the morning of that day, and the whole of one gable end of the building torn to splinters. The electric fluid, in its descent, shattered to pieces one of the posts of a bedstead, on which two of the inmates of the house were sleeping, without doing the least injury to the occupants of the bed. Another person, sleeping in an adjoining apartment, had his face burnt, his hair singed, and was seriously shocked, probably by the same current of this subtle fluid.—*Jour. of Com. April* 9.

During a thunder shower in Derry, N. H., on the 6th inst., the lightning struck a large two story double house, and set it on fire in three places, which, however, was soon extinguished. A son of the owner, Capt. Hoit, was somewhat scorched, but not seriously injured.—*Jour. of Com. April* 15.

On Wednesday the 20th ult., a young man by the name of Underwood, residing in the county of Orange, was struck by lightning in his own house, and instantly killed. A little child that was clinging to his pantaloons escaped entirely unhurt.—*Raleigh (N. C.) Star.*

We were visited yesterday afternoon with a smart thunder shower. Several flashes of lightning were very vivid, and the electric fluid struck a large American poplar tree, standing on the margin of Independent Square. on Sixth Street, nearly opposite George Street. The fluid struck several feet above the crotch, and passed down the body of the tree nearly the entire length on two opposite sides of it, taking off the bark, the whole distance, about an inch in width, and scattering it in every direction, producing a fissure about the thirty-second part of an inch in diameter, apparently extending clear through the body of the tree. The shock was sensibly felt by the residents on the west side of Sixth Street. Two persons in different buildings were stunned and knocked down but experienced no injury.

In addition to this, we learn that a compositor in the printing office of King & Baird, in George Street above Sixth, had a stickful of matter knocked from his hands into pi, by the shock.—*Philad. Ledger of April* 20.

On Friday last, six steers, belonging to Mr. John Sharpless, of Delaware county, Penn., whilst grazing in the field, were struck by lightning, and instantly killed. The electric fluid first struck a pine-tree, which it shivered to pieces.—*Jour. Com. May* 4.

A storm prevailed with much violence over Chesapeake Bay, on Thursday night. A boat belonging to one of the lines was struck by lightning and partially damaged. Many of the passengers were greatly alarmed, but none of them sustained injury.—*Jour. Com. May* 6.

The house of Nathaniel Greene, Esq., 4 and 6 Hudson Street, and occupied by him and Mr. Maynard, one of his clerks was struck by lightning, last evening, but no great damage done.—*Boston Mail.*

Sloop Arion, from New-York, of and for this port, was struck by lightning on Saturday night last, off Point Judith, in seven fathom water; the crew were knocked down by the shock, and when they recovered, the sloop was in three fathoms only. The lightning shivered the topmast very badly, splitting it all to pieces, cauried away the peak halliards, jib halliards, split jib, and passed away through the forecastle. Fortunately the crew were all aft at the time, so that no lives were lost.—*Prov. Gaz. Tuesday. Jour. Com. May* 9.

A few days since, the house of Mr. Beardsley Frisbee of this town was struck by lightning, set on fire. and himself seriously injured. Seeing a shower approaching, Mr. Frisbee went from the field where he was plonghing, to the house, and seated himself near the fire-place. The lightning struck the house and glanced on to Mr. Frisbee, passing down one side, tearing his clothes and bursting open one boot, and then passed off. The neighbors observing the house on fire, hastened to the spot, and found Mr. F. senseless on the floor. The fire was extinguished, and after considerable exertion, Mr. F. was restored to animation, and we learn that he is now doing well. The family was absent, and no person was in the house but Mr. Frisbee.—*Delhi, N. Y. Gaz. May* 8.

The thunder storm on Saturday was very severe at New-Haven. It commenced between nine and ten o'clock. The rain fell in torrents, and there was a continual roar of thunder. The lightning struck two buildings, one a dwelling house in Franklin Street,—the other a barn in the outskirts of the city. No person was injured. The barn was set on fire, but by the prompt application of water, was saved from destruction. A barouche carringe in the barn was stripped of its leather covering, while the damask lining under the leather was comparatively uninjured. A pitch fork was broken in two and thrown across the barn. Both buildings were considerably injured. For the ——— observations in regard to this tempest, we are indebted to Professor Olmstead of Yale College:

There was a severe thunder storm at Poughkeepsie on Saturday morning, during which the lightning struck and set fire to a barn which was consumed.

The stables of Mr. Conklin, proprietor of the Centreville race-cqurse, L. I., were on Saturday struck by lightning, and completely destroyed. Loss, $1000. No insurance.—*Jour. Com. May* 14.

The house of Simeon Doggett, in Ravnham, Mass., was struck by lightning during the violent tempest on Saturday night last, at 12 o'clock. The house was very much shattered. The furniture of the parlor, and several other rooms, was thrown into the utmost confusion, and most of it destroyed. It appears that the lightning did not descend from the cloud, but burst through the floor in the front entry, and in several other parts of the house.

A quantity of iron in the back cellar of True & Almy's store, on State Street was struck by lightning during the shower on Saturday morning. The fluid passed into the store and shattered the ceiling in several places.—*Rochester Dem. May* 15.

The dwelling house of Mr. Orris Barns, in Ashville, we learn was on Monday last struck by lightning, and much injured, one side of the roof bein g entirely torn off. Mrs. Barnes was knocked down, and her clothes were set on fire, but we are happy to hear that she is not seriously injured.—*Maysville Sentinel.*

At 10 A. M., on Saturday last, the house, of Mr D. B. Lent, occupied by Mrs. Rebecca Gay, on the corner of Mill and Garden Streets, and the dwelling of Mr. S. V. Frost, situated on the opposite corner of the same streets, were struck at the same time. The bolt did but little damage.

Almost at the same instant, the barn of Mrs. Overbaugh, situated in the rear of her dwelling, in Mill Street, was struck, fired, and soon consumed, with its contents.

In the evening we had another shower, accompanied by thunder and lightning. The latter then struck in Clinton Street, but did no damage.

Vincennes, Ind., was visited with a severe storm on the 2.1. One house was struck by lightning—the largest and stoutest trees torn up—chimneys through down—but, though much damage was done, no lives were lost.—*Pough. Tel. and Jour. Com. May* 16.

A violent thunder storm occurred here last Saturday evening. The house of Mr. Pixley Judson, in the north part of the town, was struck by lightning and injured slightly. A black man in the house was prostrated by the shock, but soon recovered. Several oxen and a cow, we learn, were killed in Weston. Mr. Sherman French's barn was struck in Trumbull; likewise the barn of Mr. James Sanford, in Redding. *Bridgeport (Ct.) Farm. and Jour. Com. May* 17.

During the storm of Monday last, Miss Deardorff, residing near Hampton, Adams Co., Pa., was killed instantly by lightning. The electric fluid passed down a tree under which she was washing. Her sister had left the same place but a few minutes before.

We had a tremendous fall of rain on Friday and Saturday of last week, attended by repeated flashes of lightning and peals of thunder. Isaac Brown, of this town, had a cow killed by a stroke of lightning. Abraham Haight, of Newcastle, lost two hog in the same manner. The lightning struck a new house, building by R. J. Haight, and tore out the entire gable end. A large basswood tree on the farm of Walter Hunt, was also struck. What is a little remarkable, is the fact that these accidents all occurred within the circuit of a mile, as we are informed.—*Sing Sing Chronicle and Jour. Com. May* 18.

There was a fearful thunder-storm in Richmond, Va., last Thursday evening, according to the compiler. The lightning took a great many liberties with property but distinguished itself rather by the eccentricity than the disaster of its movements.

We learn that one of the sail lofts in the Navy Yard was struck by lightning on Thursday night and took fire. One of the watchmen was also struck but not seriously injured. The fire was soon extinguished. The Norfolk Engines repaired to the spot.—*Norfolk Beacon, Saturday, and Jour. Com. May* 21.

The barn of James Powell, Jr., of the town of Hempstead, Queens Co. was struck by lightning about 3 o'clock on Tuesday morning, and consumed. Also a colt and a small quantity of hay.

After 12 o'clock on Thursday night, a terrific storm of wind and rain, with a fearful accompaniment of thunder and lightning, made the boldest hearts in our city beat with apprehension. The electric fluid struck several points but without injury to life. The Exchange Hotel, the "Old Academy," near the basin, the "Park House," and other buildings were touched by the lightning, but not seriously injured. A wooden tobacco factory, occupied by Mr. Kerr, was blown down by the wind.—*Richmond Enquirer, Tuesday, Jour. Com. May* 23*d.*

During the storm on Wednesday evening, a servant girl in the employ of Charles Libeaw, on Third Street, was stunned by lightning. She was on the roof of the house, in the act of taking a feather bed, which she had in her arms, out of the rain. She saw the flash, and heard the report, and then became unconscious from the stunning effect of the electric fluid, and fell through the door into the house, in a state of perfect insensibility. Several remedies were proposed and tried to resusitate her, but the application of ice-water was found to be the most effectual. There were no marks upon her person, caused by the shock, nor was there any damage done to any of the buildings in the neighborhood. The physician called in reports that she would have been instantly killed, had she not been protected by the feather bed.—*Cincinnati Messenger.*

During the thunder storm on Monday evening last, the carpenter's shop of Thomas Leitch, Esq., in Friendship, was struck by lightning, and the shop and its contents to the value of about $300 was totally destroyed.—*Annapolis Md. Herald, and Jour. of Com. May* 25.

The Upper Marlboro' (Md.) Gazette of the 23d inst. says: "During the storm of thunder and rain on Monday evening, a Tobacco House belonging to Mr. Jesse Talber, near this village, was struck by lightning, and a negro boy and girl instantly killed. Mr. T. was considerably stunned. The house was not materially injured.—*Jour Com. May* 27.

During the thunder shower on Monday last, a man named Jacob Brown, residing near Carlisle, Pa, was killed by the lightning. He was in his corn field at the time the lightning struck him, and survived the stroke but a few minutes.

During the storm on Thursday night last, the barn of Mr. John Hade. in Antrim township, near Chambersburg, Pa., was struck by lightning and entirely consumed. About 100 bushels of corn and some other articles of value were also destroyed.

Much and general feeling was produced in Elizabethtown last evening, by the intelligence that Benjamin Seaman, a venerable citizen of some seventy years, was killed by lightning during the thunder shower, late in the afternoon. He was standing in his door, contemplating the grandeur of the elements, when he was struck dead by a bolt, which perforated the upper part of the house like a bullet, and passed off through the cellar, where the earth was slightly disturbed. Mr. S.'s hat and clothes were torn, but no mark was left upon his person. He was an honored member and office bearer of the Episcopal Church, and society snffers a loss in his death.—*Newark Daily Adv.*

During the violent storm on Thursday night last, three valuable horses belonging to Samuel Ogden, near Battentown, in Cumberland Co., N. J., that had been left in the pasture field, were killed by the lightning. A fourth, not worth much, escaped.—*Jour. Com. May* 28.

On Saturday morning, the 11th inst, this section of the country was visited by a heavy thunder storm. Among the doings of the lightning, we have heard of the following:

In the stable belonging to Hinckley's Farmers' Hotel, in this village, a valuable horse was killed, a cow knocked down, and Mr. Wm. Hinckley, who was standing within a few feet of the horse, was slightly shocked; the barn is uninjured. A tree in the neighborhood of the village was converted into kindling wood. In Newfield, the house of widow Dudley was struck, and four of its inmates received a severe shock; and a boy who was engaged at some forty rods distance from a tree which was struck, was laid prostrate by the shock. In Danby a steer was killed between two barns only a few feet apart, while the barns remained unscathed.—*Tompkins (Ithaca) Dem. J. C., May* 29.

Accounts have reached town of a storm striking Quincy, Illinois, and doing some serious damage. Houses were struck by lightning, and the office of the Herald was injured.—*St. Louis Reveille,* 17.

A child about 1 year old was killed at Jerusalem, on Saturday evening the 11th inst., while lying in a cradle. Its hair was set on fire and its skin discolored. *Brooklyn Star. May* 29.

On Sunday afternoon last, a hay house of Benjamin Wiggins in Upper Makefield township, Bucks county, Pa., was struck by lightning and consumed, together with its contents.

On Sunday afternoon last a thunder storm swept over sections of the towns of Rhinebeck, Hyde Park, Pleasant Valley, Clinton, &c. In some places it was accompanied with severe wind, which tore branches from the trees, or prostrated trees that were not well rooted. It was also attended with heavy thunder and lightning. Mr. James H. Clapp, of Pleasant Valley, had two cows killed by lightning. They were standing near together in an open field.

We understand that Mr. Daniel H. Tweedy, of Stanford had a pair of oxen also killed by lightning during the same shower.—*Poughkeepsie Telegraph, of May* 29.

Springfield, Erie Co., May 25.—A barn belonging to John Nichols, in this town, was struck by lightning on the 12th inst, and two horses the property of Mr. Thomas Richmond were struck down.—*Jour. Com. May* 31.

We learn from the Goshen Whig that the house of Mr. Gamaliel Russell, of Amity, Orange Co., New-York, was struck by lightning on Wednesday 26th ult., tearing off about one third of the siding. The fluid struck the chimney, Fortunately no person in the house was injured, although the back was torn from a chair standing near Mrs. R.—*Brooklyn Star, July* 11.

Mr. Henry Harner's house, half a mile west of Lebanon, Ohio, on the Hamilton Road. was struck by lightning on Friday last, and four of his daughters instantly killed, the mother injured, Mr. Harner and his little boy stunned. The fluid seemed to pervade the building. Two of the young ladies were on the second and two on the first floor of the house. "The scene exhibited on this occasion," says the Star, "was heart-rending in the extreme." The young ladies so suddenly called into eternity were exemplary members of the Methodist Church—pious children of pious parents.—*Jour Com. June* 8.

A little boy named Snyder, 8 or 9 years of age, was killed by lightning at Columbus Ohio, on the 27th ult., while walking in the street with a few chips on his head. The electric fluid perforated the ground for the space of two or three feet, all around him. It tore his hat and clothes, and burned a portion of the hair off his head.

A small boy was killed by lightning the same day at Pittsburgh. A house in Pittsburgh, occupied by Messrs. Gillespie and Wood, was also struck by lightning the same day. The fluid came down the water spout in front, ran off that to the iron hinge of the shutter, thence on to the bar used for fastening the shutter, and about the middle of the window glanced off through a pane of glass shattering it and making a small hole through the bottom. Inside the window it set fire to some papers, struck the head of a stem in a glass nob, and finally went down the gas pipe, doing the whole very little damage. One of the firm who was sitting at the windows, was greatly dazzled by the sudden and brilliant glare of the fluid.

The barn of Mr. Fisher, near Emmittsburg, (Md.) was struck by lightning on Sunday evening, 26th ult., and two horses therein were killed—*Jour. Com. of June* 5.

During a thunder-storm which passed over Montrose, Pa., on the 24th ult., the Episcopal Church was struck by lightning.—*Jour. Com. June* 6.

During a thunder storm at Providence, R. I., on Sunday afternoon, the schooner Providence, lying at Fox Point was struck by lightning.

The house of Miss Bridges, South Trenton, N. J., was struck on Friday morning. The fluid passed down the chimney through several rooms to the cellar, tearing floors and walls and twisting nails on the way. Miss B. was thrown from her feet some five yards, but not injured. A barn in the vicinity was also struck.

During the thunder storm on Sunday, two houses at Russell's Mills, Dartmouth, Mass., were struck by lightning, both being considerably damaged. A young man named Head, was killed by the electric fluid. He had been recently married.—*Jour. Com. of June* 12.

The barn belonging to the late John Hooker, deceased, in Whitemarsh Township, Montgomery Co., Pa., was struck with lightning, about 5 o'clock on Friday morning last and consumed. A small quantity of grain and one cow were consumed, comprising pretty much the contents.—*Jour. Com. June* 14.

During the thunder storm on the 9th inst., a boat belonging to Mr. Harrishoff, lying at Poppasquash, R. I. was struck by lightning, and her mast shivered to pieces.

trees in the field. Two other men were under the same tree, farther from the trunk; the one was knocked over by the electric stroke, and the other greatly shocked; but neither of them permanently injured.—*Huntington Journal.—Jour. Com. July* 8.

On Thursday week, on the plantation of Messrs. Wood and Stutson, in Louisiana, about ten miles west of Vidalia, five oxen were killed by lightning.

Fourteen sheep, belonging to Mr. Alexander Day, of Ireland Parish, West Springfield Mass., were killed by lightning on Saturday last. They were found dead near a small oak tree.—*Jour. Com. July* 12.

During the thunder storm last evening, about 9 o'clock the barn of Mr. Charles Lines in Woodbridge, about five miles from the city. was struck by the lightning, and entirely destroyed. It contained a hay press, between 20 and 30 tons of hay, a quantity of grain, &c. The light was plainly visible in our streets, and the fire engines turned out at the alarm, but found the fire too far beyond their precincts to be reached in time. Mr. Lines's loss, we are informed, is some 5 to 700 dollars —whether insured or not we do not know.—*New-Haven Herald*, 11th inst.

During the shower on Wednesday, the barn of Mr. Jacob Frederick, in Guilderland, was struck by lightning, and with its contents entirely consumed. Luckily his crops were not in, but his farming utensils and some of last year's grain were lost.—*Albany Argus.—Jour. Com. July* 13.

During the thunder storm yesterday afternoon, the barn of a Mr. Peck, in Cheshire was struck by lightning and entirely consumed. The barn was filled with hay and grain.—*New-Haven Courier, Monday.*

During a heavy thunder shower on Saturday afternoon last, the barn of Mr. Peter M. Hubbell, of Brookfield, Ct., filled with hay, was struck by lightning and burned to the ground.—*Ib.*

From the Burlington, Vt Free Press of July 12.—On Wednesday morning our town was visited by a severe rain with violent thunder and lightning. The lightning struck the conductor of the Winooski Church, and the sidewalk near Mr. Catlin's on the hill.—*Jour. Com. July* 16.

The house of Mr. Morton, near New Paris, Ia., was struck by lightning, on the evening of the 5th, and his daughter, Miss Rosanna Morton killed. Miss M. was 17 or 18 years of age.—*Jour. Com. July* 18.

On Saturday the 13th inst., the barn of John C. Moffatt, of the town of Blooming Grove, in this county, was struck with lightning and consumed, together with 10 or 12 tons of hay.—*Goshen Clarion.*

From the Montreol Herald of Tuesday.—A house was struck by lightning and set on fire, but was speedily extinguished by the torrents of rain which poured down. The St. Pierre Pavillion was also struck with lightning, demolishing the walls of the kitchen and rending the stock of a fowling piece which was in that apartment of the house.—*Jour. Com. July* 19.

We had a severe storm last eveniug, and regret to learn that a young lady and a boy were killed by lightning, on Court Street, near Western Row. Their names were Henry Bump and Eliza Evans. An alarm of fire was started just as the storm subsided. It proceeded from the part of the house in which the persons were killed. being struck by lightning—*Cin. Gazette, Monday.*

The barns, sheds, &c., of Holloway Long, of York, were struck by lightning on Saturday morning last, and entirely consumed. About 300 bushels of Wheat entirely lost. We have not heard the extent of the loss.—*Livingston Republican.—Jour. Com. July* 20.

The thunder storm of Sunday last was one of unusual violence. At W. Ware, Esquire's property, a large tree was destroyed, and a second partially unlimbed. Two or three horses grazing in the fields in the vicinity and at Larotte, were also killed.—*Quebec Mercury.*

The Sullivan Whig states that in a severe thunder storm on Sunday last, during the afternoon service, the Presbyterian Church near the village of Liberty, in that county was struck by lightning, which knocked down some 10 or 12 of the congregation. None were killed on the spot, but Mr. Henry Burr was so badly injured that his life is despaired of, and a Mr. Young was se seriously burned that he is in great danger. Most of the others were also seriously burned and otherwise injured, but it was believed not fatally. The interior of the church was much shattered.

The Schooner Napolean, of Pittston, Bangor, with lumber, was struck by lightning on the 14th inst., which shivered foremast and foretop gallant mast.

Schooner Edward Burley, of Beverly, was at St. Thomas, Africa, May 29, bound to Princes' Island to repair, having been struck by lightning on the morn of April 23, while lying at Dix Cove, which badly injured the head of foremast, and shattered the mainmast so that it was of no further use, was supplied with a spare top-mast from U. S. ship Saratoga, for a jurymast.

Bark Palestine, Hunt, of Boston, was struck same morning, while lying at Anamboo—damage not ascertained.—Jour. Com. July 22.

On Wednesday the 9th inst., William Hutchings, aged 14 years son of Jonathan Hutchings of Carmel, was instantly killed by lightning in his father's house. He was standing at a window near the head of the stairs in company with another boy, and both were thrown to the foot of the stairs. The boy in company was stunned but recovered in a short time. The house was struck in two places and considerably injured. No other persons were hurt, although there were 16 in the house.—Bangor Whig. Jour. Com, July 24.

On Tuesday evening, during the violent thunder shower, the house owned and occupied by Jared St. John in Ridgefield, was struck with the fluid, and entirely consumed. The family in the house at the time consisted of four persons, who had retired They were unconscious of the situation of their tenement, until they were aroused to an examination by the collection of smoke in their sleeping apartments. The house was new, having been occupied but a short time. The furniture was saved. There being no insurance, the loss falls heavily upon a worthy and industrious man, of but moderate means.—Norwich (Conn.) Gaz.

A barn owned by Mr. Samuel Scovill, in Watertown, containing ten tons of hay and 57 shooks of rye, was struck by lightning and wholly consumed by fire on the 19th inst. The rye belonged to Mr. Reuben Hungerford. No insurance. Less about $300. —Hartford Journal.

We learn that Phineas Terry, Esq., a respectable citizen of Orange county, while visiting his friends in Lumberland, died very suddenly last Saturday afternoon. It is thought he was struck by lightning, as there was a thunder storm during his absence. No marks of the electric fluid, however, were found on his body.—Monticello Watchman.

On Wednesday last, during the thunder storm, the barn of Mr. John Hawley of South Egremont, was struck by lightning, and entirely consumed. A very valuable horse in the building was killed at the time.—Pittsfield Sun.—Jour. Com. July 25.

The house of Mr. James Alexander, about a mile and a half distant from Portsmouth, on Saturday last was struck by lightning. The chimney was severed in two perpendicularly, and the weather boardings of the gable end much injured. There were nine persons in the house at the time, all of whom were stunned and thrown prostrate upon the ground; Mr. Alexander was injured somewhat in the back by a splinter from the weather boarding, and Mr. Hall's clothes were burned, and one shoe torn from his foot; yet strange to say, no one was fatally injured. A dog belonging to one of the persons was found dead near the house, and a cat on the premises was also killed.—Portsmouth (Va.) Index.—Jour. Com. July 26.

A terrible thunder storm visited Harrisville, Missouri, on the 4th inst. A Mr. Elliott was killed by lightning. A large number of sheep were killed near that place. In Van Buren county, on the 5th, five horses were killed by lightning.—Jour. Com. July 29th.

The lightning struck a large tree, about 8 miles from Frankfort, on Thursday last, and scattered its fragments far and near. What rendered the circumstance remarkable was that there was just over the place struck a very small white cloud, scarcely to be noticed, and from which neither rain nor lightning could have been expected. Just rising above the horizon, there was a dark cloud, which really promised a tempest.—U. S. Gaz.—J. C. July 30.

The Schr. Grape Island, Capt. Secount, which arrived here on Saturday from Boston, was struck by lightning on the 23d inst., by which the foremast, mainmast, and main-top-mast were shivered, the foremast completely so from the hounds to the deck, decks ripped up, and sustained other damage. From the smoke which issued out of the hold, the Capt. entertained no doubt but that she was on fire below, but which was put out by the rain falling at the time. The electric fluid passed out thro' the hawser hole. The mate was the only person on board who felt the shock.—Norfolk Beacon, July 29.—J. C. July 31.

During a thunder shower on Friday last, Mr. Henry Fuller and a boy named Houghton, took shelter under the branches of an issolated oak. Not liking the sheltor, Mr. Fuller proposed seeking another, and set off on a run for that purpose, but before having made thirty feet from the tree, it was rent from top to bottom by lightning—the boy being hurled to the earth apparently lifeless. The body was immediately borne to the house, face upwards—when it was found that the falling water had restored animation. The boy soon recovered.—Rochester Adv.—J. C. Aug. 1.

Baltimore was visted on Wednesday afternoon by a tempest of exceeding violence. A row of small brick dwellings in a court near Monmouth Street, was struck by lightning, eight or ten females were stunned by the electric fluid, and one Julia Ann Pratt was instantly killed. The lightning struck two other houses, shattering them badly, and two vessels in the harbor.—Brooklyn Eve. Star, Aug. 2.

During the thunder shower of yesterday morning, the brick house occupied by Dr. Henry, on Clinton Avenue, was struck by lightning. It entered the chimney, demolishing a part of the same, and the fence in its course passed along the roof, tearing off the slutes, &c., whence it passed off by the tin leader into the cistern.—Ib. Aug. 5.

We understand that a sloop belonging to Troy was struck by lightning yesterday afternoon, somewhere between Bristol and Catskill landing; she had her masts shivered, a splinter from which struck one of the hands who is not expected to survive.—Albanian.

We learn from Capt. Betts, of the schr. Princess Anne, from North Carolina, that the schr. John C. Pettijohn was struck by lightning on Saturday last, while going from Plymouth Nag's Head, Both masts were shivered, and the decks were ripped up, and melancholy to relate, Mr. Lucas, a merchant of Plymouth was killed; a man and a boy were also much injured, the former so much so, that for three days his life was despaired of. There was a large party of ladies on board at the time, none of whom were injured.—Norfolk Beacon, Saturday.—Jour. Com. Aug. 6.

From the Hudson Gazette, Aug. 6.—On Thursday afternoon last, the barn of Philip Miller was struck by lightning and con-

sumed, together with considerable grain, which was in it and some stacks of hay which were near the barn.

The sloop Sally Ann, of this city, which was at anchor near Catskill, was struck by lightning, and a man named Barnum considerably injured. We understand however, that he is likely to recover.

Capt. Jarvis, of the brig Cameo, arrived at this port yesterday from Smyrna, reports that on the 2d inst., off Cape Cod, was struck by lightning, which shivered the main-top-mast, tore several sails badly, passed through the deck into the hold, and returned back through the deck, tearing up about eight feet of the planking and bringing with it some wool torn from the bales. The second officer who was upon the fore-top-gallant yard at the time, was stunned and fell, his back across a gasket, and his legs upon the cross-trees, in which perilous situation he remained until the people relieved him, when it was found that he was not dangerously hurt.—Bost Trans.—Jour. Com. Aug. 7.

During the storm in the forenoon on Sunday last, an ox standing near a barn in Far Rockaway, the property of Mr, Richard Mott, was struck by lightning, and instantly killed.—Brooklyn Star, Aug. 8.

Bark Herschell, of Bangor, from Baha, was struck by lightning no date, off Cape Palmas, had main-top-gallant and royal yards splintered, and a bale of tin ware in the hold set on fire and injured: the first and second officers, 3 seamen, the cook and two passengers were knocked down but not seriously hurt.—Jour. Com. Aug. 9.

On Wednesday morning last, a small house in Hill Street, New-Haven, which was supplied with a lightning rod, was struck with lightning, notwithstanding.—Jour Com. Aug. 10.

On Sunday morning last, at about daylight, a heavy thunder shower passed over this town and Hyde Park, and we regret to say that during its continuance a barn belonging to Mr. Gilbert Budd, in Hyde Park, was struck by lightning, and consumed, with its contents and the out buildings adjoining. Mr. Budd had just finished his harvest, having in his last load of oats the previous evening, which was left on the wagon, thus causing that also to be lost. The barn was very large, filled with grain and hay, and also containing several valuable farming implements. Loss about $1,500, on which there was no insurance.

Here is another instance, among the many recorded every season, showing the importance of having lightning rods to buildings and of having them insured.—Pough. Eagle, Saturday.—Jour. Com. Aug. 12.

In the storm on Wednesday evening last, the wife of James Cooper, of Bunker Hill, Ill., was instantly killed by the lightning. Mrs. Cooper was at the time sick in bed in the house.—Jour, of Com. Aug. 13.

The Court House in our city received a charge from the cloud that passed over yesterday. The flash is said to have passed off at the four corners of the building. No one was materially injured, a lady, however, was somewhat stunned for a few minutes. This was a fortunate escape, as the court at this time was in session.—Cin. Bulletin, 10th.—Jour. Com. Aug. 15.

The sloop 'Betsy and Ann,' of Hudson, was struck by lightning on the river about 3 miles below this place, during the thunder shower on Thursday last. The lightning descended the mast and we understand seriously injured one of the hands. During the same shower, a barn in the town of Germantown, Col. Co., nearly opposite this village, was struck, and with its contents entirely consumed.—Catskill Messenger.—Brooklyn Star of Aug. 15.

Last Wednesday about noon, as some of Dr. Patrick's negroes were cutting cord wood, in the rear of his plantation, in West Baton Rouge, one of them was killed on the spot by lightning and two others were knocked down but not seriously injured.—N. O. Bee.—Jour. Com. Aug. 17.

A hand on board of a sloop which was struck by lightning near Hudson a few days since, was coiling a chain cable near the bow at the time. After the flash, he walked to the stern and dropped senseless. By immediate application of cold water and camphor he was resuscitated, and will probably recover. This is the first instance recorded, within our knowledge, of any time elapsing between the stroke and the effects of lightning.—Kingston Jour. Jour. Com. Aug. 19.

A correspondent of the N. O. Republican writing from Jackson, Louisiana, 7th inst says:

This evening about 4 o'clock, as a young man named Barrett, was returning to Mr. E. S. Gordon's where he resided, from this place in company with another named Wm. Robbins, of this Parish, both of them were thrown from their horses almost at the same time. Robbins held his horse's bridle reins and was dragged along for a considerable distance before he recovered either strength or presence of mind to stop him, and on his return to the place where he and Barrett were thrown, the latter lay dead, and the horse he rode was just expiring.—Brooklyn Star. Aug. 19.

The ship Newark arrived at Savannah, Geo. 13th inst. from New York, on the night of the 10th inst., off Frying Pan Shoals, during a heavy squall from the north west, was struck by lightning, which carried away the main royal mast and yard, badly injuring main-top-mast, carrying away main-top-sail yard, and top-sail, passing down to the cabin deck, where it exploded, setting the deck on fire in every direction, and doing considerable damage to the forward part of the cabin; it then passed along the side of the cabin, and entering the water closet, did some damage there, broke 28 panes of window-glass from the cabin, and nearly all the crockery in the pantry. Two of the men were seriously injured, but have since partially recovered.—Jour. Com. Aug. 20.

On Friday, John Clendenon, an old gentleman of 60, and his nephew, James Clendenon, an orphan boy he was raising, aged 20, were both instantly killed by lightning, in Springfield township, Franklin County, Ia., while sitting under a large oak tree. They were making hay together, says the Cincinnati Commercial, when the shower came up, and took shelter under the old oak, which stood alone near by, not regarding the many warnings which have been from time to time given to avoid trees in a thunder storm. The clothes were nearly all torn off the old man, and his head was partially buried in the hole made by the lightning in the earth. It appeared as though the main charge struck his body, as the young man was apparently not much injured. Never upon any consideration take shelter under a tree in a thunder storm. We would as soon think of reposing under the end of a lightning rod.—Brooklyn Star, Aug. 20.

Several buildings were struck by lightning in different parts of Philadelphia, during a violent thunder-storm on Monday evening, and a number of persons were seriously affected. One was yesterday still lying dangerously ill. A large number of barns in the vicinity were also struck. The lightning also struck the ship Champlain, lying at Girard's Wharf, and the schooner H. Westcott, lying in the stream, shattering the main-mast of the former, and both masts of the latter.—Brooklyn Star, Aug. 21.

The thunder storm of Monday evening favored the citizens of Bristol Pa., with a touch of its quality. The house of Hugh Dungan was struck by lightning and all the windows in the upper stories were broken; also, the hickory pole connected with the house was struck and shattered from top to bottom; also the barn of Joseph Stackhouse was burned to the ground, and 800 bushels of oats and about 5 or 6 tons of hay; also a barn on the Jersey side belonging to Mr. Homer Jackson.—Brooklyn Star, Aug. 21.

Further particulars of the storm in Philadelphia in the Star of the 22d, with an account of the house of W. D. Fort, which was struck with lightning, though provided with a rod.

On Thursday afternoon, during the heavy thunder-shower, the lightning struck the house of a German named Conrad Hammond, in Alleghany City. The electric fluid tore open the roof and one of the gable ends of the house, and notwithstanding the shock was a very powerful one, two persons who were in the house lying upon a bed, were entirely uninjured. The fluid, after passing from the house, took the direction of the public schoolhouse of that ward, which stood near by, and gave the teacher, Mr. Leonard H. Eaton, as well as several of the scholars, a severe shock.—Pitts. Chronicle.—Brooklyn Star Aug. 27.

The storm on Monday afternoon, the 19th proved very destructive. The house of Mr. Shuster, near this place, was struck by the lightning and one end of it and the cellar wall very much injured, but was not set on fire. A little son of Mr. Shuster, we learn, was also considerably injured. At Carpenter's Landing a barn belonging to Mr. Bowman Sailor, Esq., was struck and burned down. At Sharpstown, we heard one or two barns were burned down. A barn near Burlington and one near Bristol, were also struck and destroyed.—Woodbury (West Jersey Const.—Jour. Com. Aug. 29.

J. B. Barre, candidate for the place of clerk to the convention, a resident near Jackson, Miss., was lately killed by lightning; the bolt striking behind the right ear. The fluid running through the interior of his body, came out under the right foot. His horse was also killed instantly.—Jour. Com. Aug. 30.

On Sunday last, Mr. Daniel Clements of Flushing, L. I., while on a visit to Mr. Samuel Greenock's in Flushing township, was struck by lightning. He was stunned by the shock, and remains delirious.—Brooklyn Star, Aug. 31.

During the thunder shower which passed over our city last night, the steeple attached to St. James' (Catholic) Church in Aisquith Street was struck by lightning. A hole, as if made by a cannon ball, was perforated in the steeple, and an arm of the cross upon its summit broken off.—Balt. Patriot, Tuesday.—Jour. Com. Sept. 3.

On the 22d ult. in Monroe Township, Preble county, Ohio, two daughters of Mr. Daniel Dashers, aged 10 and 13 years, when returning home from the orchard with a basket of apples, were instantly killed by a flash of lightning. A younger brother was with them, but escaped without material injury.

On the same day, and within two hours of the above calamity, the house of Mr. George Walker, of Twin Township, Darke co., Ohio, was struck by lightning, and one of his sons, aged four years was instantly killed; the arm of a younger brother was broken, and he was otherwise so seriously injured that little hopes were entertained of his recovery. Several other members of the family were more or less injured, but not dangerously.

We learn by Hale & Co.'s Express, direct from Reading, via Philadelphia, that during the violent storm on Monday evening, a locomotive with a train of 100 coal cars was struck by lightning, a little above reading, causing the locomotive to blow up, and instantly killing the conductor, engineer and two firemen.

Philadelphia was visited last evening with a shower, accompanied with sharp lightning and thunder. The clouds appeared to be considerably charged with the electric fluid, and some damage was done by it in different parts of the city. A brick house in Budd Street near the Germantown Road, N. J., was struck and several feet of the peak of the gable was knocked away. A woman in the house was stunned, but soon recovered. The electricity descended the water spout, and entering the rain-barrel, diverged and passed out in four distinct directions, making a hole through the staves of the hogshead at the various points where it touched.

A dwelling house in New-Market Street, Northern Liberties, was struck by lightning, and a portion of the roof torn off. No person was injured.—Jour. Com. Sept. 4.

The Schr. American Eagle, from Philadelphia for Savannah, was struck by lightning, on 2d inst., while at anchor below Reedy Island and had both mast shivered.—Jour Com. Sept. 6.

Mr. John Cartwright, of Algonac, Mich., was struck dead by lightning, on the 1st inst., while sitting with his family. The fluid passed down the chimney, and after doing its work of death, left no visible trace of its course.—Jour Com. Sept. 10.

Mrs. Phillips, of Montgomery county, Ga., was instantly killed by lightning on the 10th ult. The electric fluid struck a tree near which she was standing, and glancing off to her person broke her neck and split her breast bone.

We regret to state that the severe gust of wind, which, accompanied by thunder and lightning and a welcome rain, visited our city on Tuesday evening last, caused one of our esteemed citizens, Mrs. Ann Johnston, to suffer much in property.

The cotton house on her plantation, on the Ogechee, seven miles from Savannah, was struck by the electric fluid, and with its contents, 14 bales of S. I. cotton, of this year's crop, consumed by fire. The overseer, Mr W. Cole, with a number of negroes, had but a few moments previously left the cotton house.—Savannah Georg. Friday.—Jour. Com. Sept. 12.

A friend from Indiana informs us that Jacob M. Neely, a respectable citizen of Brown county in that State, was killed by lightning a few days since. He was returning home from Court, on horseback, and on the approach of the storm stopped under a tree by the road side. The lightning struck the tree and passed to Mr. Neely killing him and his horse instantly, it is supposed, as they were found lying side by side, quite dead.—Cin. Chron.—Jour. Com. Sept. 16.

LIGHTNING IN 1845.

On the 18th of March the brig Corsair, from New-Castle, England, bound to New-York, was struck by lightning, killing two of her crew, and seriously injuring two others.

On the 4th of April, Mr. Wesley Ivy was killed by lightning in Macopin county, Ill.

On the 5th of April, a negro woman, belonging to Mr. Williams of Perry county, Ala., was killed by lightning in her master's yard.

On the same day the lightning struck a tree standing near the piazza in front of the residence of Gabriel Fenn, Esq, of Westville, Miss., and glanced off in several directions, striking and badly stunning some 8 or 10 persons who were on the piazza, near the base of the tree, 3 of whom were instantly killed—namely, Bird Fenn; a son of Mrs. Alvord, and another name not given.

On the 17th of April, a barn in Manchester was struck by lightning, belonging to Adam Van Tyle, and consumed together with a fine span of horses, a double carriage and harness, and a considerable quantity of hay and grain.

On the same evening, the house of Mr. Frederick Young of Hagerstown, Md., was struck by lightning, by which the inmates were struck to the floor, and a cradle containing an infant, together with a stove were overturned. The floor rafters of the house, and other timbers, were much torn.

On the 25th of April, the dwelling house of Mr. Henry Knox, situated near Sykesville, Carroll co. Md., was struck by lightning, and Mr. Knox and his son, who were standing at the door, were instantly killed.

On the same day, Mrs. Torrey, wife of Jacob Torrey, residing near Hanover, York county, Pa., was killed by lightning. A little girl sitting by her side escaped unhurt.

On the same evening, the house of Mr. Quigly, near the Navy Yard, Washington City, D. C., was struck by lightning. The fluid passed down the chimney and shivered the mantel piece and china which rested on it to atoms. The son and daughter of Mr. Quigley, who were in the room at the time, were struck by the lightning and severely stunned, the young lady so much so that she did not recover until the following day. A cow near the residence of Mr. Quigley was instantly killed by the lightning.

On the same evening, the barn of Mr. Jacob Hoff, of Straban township, near Gettysburg, Pa., was struck by lightning, and entirely consumed with all its contents.

On the same day, young Mr. Wm. Wilson near York, Penn., was struck by lightning, and instantly killed. Mr. Mathew Placide who was near him at the time, was severely stunned but has recovered.

On the same evening, the lightning struck into the barn of Mr. Michael Waters, of North Codrus township, Pa., destroying five head of horned cattle, and burning the barn to the ground.

On the same evening, the lightning struck the large meeting house in Fitzwilliam, N. H., the fluid breaking the rod to pieces, and partially demolishing one part of the house. Many years since the house, which had been erected but for a short period, on the same spot, was struck, and the building burnt, by leaving shavings under the floor.

On the same day, the lightning struck the Methodist Parsonage in Newton, Sussex county N. J., which was considerably damaged. The tin gutter was twisted, blistered and torn in several places. Every pane of glass was broken. Fortunately the family (Rev. Mr. Winner's) was absent.

On the same day, Spencer's Tavern in Chicago, Illinois, was struck by lightning, and completely uncofed.

Same day, the barn of Col. Henry Lewis, near Hagerstown, Md. was struck by lightning.

On the same day, the Chemung Gazette says, a house was struck by lightning, tearing off a part of the roof and weather boards and stunning the inmates.

On the same day, the Warehouse of C. B. & L. Blair, of Michigan, was struck by lightning, killing one man and badly injuring another.

On the night of the 26th of April, the Catholic Church at Vincennes Va., was struck by lightning, which entirely ruined the town clock, and did considerable damage to the steeple.

On the morning of the 27th of April, the barn of James Wray, near Pittsburgh was struck by lightning, and entirely consumed.

On the night of the 23th of April, the Canal Schooner, Mary Piner, lying at Myers' Wharf, Norfolk, was struck by lightning. Her mainmast was shivered from the top-mast head to within about three feet of the deck. The lightning no doubt passed into the well of the centre board. Fortunately no person was injured.

On the afternoon of the 30th of April, a man was instantly killed by lightning in Girard, Mich. As was sitting in his house and holding a small child when struck. The child was stunned for the time but recovered.

In April, four men were killed by lightning in Morgan county, Ohio. Date not given.

In April, a young man, 18 or 20 years of age, son of Mr. Wm. Gallop, of Columbia, Michigan, was killed by lightning while standing under a tree. The only perceptible mark about his person was upon the top of his head, his hair being slightly singed.

In April, a barn in New-Jersey was consumed by lightning with its contents, consisting of hay, grain and flour, 1 horse, 2 cows, 10 sheep, and all the farming utensils.

On the 12th of May, the chimney of the store corner of Burling Slip and Front Street, New-York, was struck by lightning, which passed into the adjoining store, shivering an upright beam.

On the same afternoon, three persons were knocked down by a thunderbolt at Humphreysville, Conn. One of them, by the name of Thomas Barnell, was taken up entirely senseless, but recovered. The peal was terrific, and seemed to shake the whole village.

On the same day, a correspondent of the Adrian (Rich,) Watchtower, says: In Branch county, three persons were killed, a Miss Worden, and a Mr. Harris, also a boy 10 years of age. Several are blind.

On the 13th of May, the lightning struck and burned Mr. Allston's tide mill on Richmond plantation, S. C., together with a considerable quantity of clean rice, which was ready for market.

On the 19th of May, a house in Montgomery Street, Jersey City, was struck by lightning. The shock was terrific, shattering the building considerably.

On the 20th of May, a dove on the roof of Military Hall, River Street, Troy, was killed by lightning. The electric fluid passed along the railway very perceptible for several seconds. Two houses were struck, and the fluid ran down the lightning rod of a third. Several persons were stunned, but none of them materially injured. A lady and child both had their shoes torn by lightning, and holes were made by it in the childs stockings, the child itself being entirely unhurt.

On the 23th of May, a Mr. Christopher of Lexington county, Ky., was killed by lightning. He took shelter in a corn crib, in a field, with several negroes. The negroes were all stunned, but none of them killed.

On the 29th of May, the ship Soldan, at New-Orleans, was struck by lightning. It shivered the fore-royal mast and top-gallant mast, and passing down to the deck, ripped up the latter for a distance of six feet, then passed out into the water, knocking down two men.

On the same day the flag-staff of the St. Charles Theatre, at New-Orleans, was struck by lightning and shattered into a thousand pieces.

On the 4th of June, the wife of John Wilkinson, of Madrid, St. Lawrence county, N. Y., was killed by lightning.

On the same day, a man named Stevens, of the town of Riga was killed by lightning while ploughing in the field. The fluid entered the top of his head and came out at his chin, making a hole like a bullet. It then ran down his body, passed through his foot, and tore the sole off his boot. One of the horses was killed.

On the 5th of June, two fine saddle horses were killed by lightning, under a tree near Newman, Ga.

On the 9th of June, the lightning struck two houses in Philadelphia, shattering the upper part of the houses. It also struck a tree in Long Lane, Passyunk, under which two boys with a horse and cart had sought shelter from the rain. It killed the horse, and severely affected both of the boys. The rim of the hat of one of them was cut in two, and his hair singed.

On the same day, a French woman was killed by lightning on Prince Edward's Island. The lightning came down the stove pipe.

On the same day, a bolt of lightning descended in the orchard of Jas. S. Tarrantt, near Peekskill, killing a horse under a tree.

The same day, a young man named Nichols, and a young lady named Pierce, were killed by lightning in Royalston, Mass., while standing at her father's door.

The same day in Hampton, Rev. Nathaniel Rawson was killed by lightning while in an open field. He had a rake in his hand which was torn to pieces.

The same night a large barn, belonging to David Zeller, Esq., near Hagerstown, was burnt by the lightning. It contained 1,000 bushels of wheat and 60 tons of hay, which were entirely destroyed, together with a very valuable imported cow, threshing machine, six setts of gears, and a great many other articles. Loss above $4,000.

The 15th of July, a church in Salem Street, Boston, was struck by lightning, and injured. Five houses in Fayette Street, Boston, was struck by lightning and injured. A house was struck in Arlington; also two barns were struck and burnt; also a railroad bridge, near Whitestone was struck and burnt.

The same day, a barn belonging to Mr. Reeves, of Wayland, Mass., was set on fire by lightning, and burnt with its contents.

The same day, two barns belonging to A. & L. Rice, Barre, Mass. were consumed by lightning. A barn on the same spot was struck by lightning and burnt 13 years ago.

The same day, the building of Gen. Blossom, in Turner village, Me., was burned by lightning.

The same day, three children were killed in Stewartson, N. C. They were playing near a tree in the school yard, when the lightning struck the tree and killed three of them on the spot.

The 16th of July, Mr. Thompson's house, near Petersburg, Va., was struck by lightning. Mr. Thompson was struck upon the head and killed instantly; his wife was knocked down, and a servant girl much burnt.

The 17th of July, the brick house of J. B. Titcomb, Newburyport, Mass., was struck by lightning and damaged.

The 20th and 21st of July, several persons were killed by lightning at St. Maria, Canada; Mr. Lotpeniere's farm house was burnt by lightning.

The 21st of July, a young man, a Carpenter, named James Mc Ilroy, was killed by lightning in Toronto, U. C.

The same day, a barn near Richmond, U. C., was struck by lightning, and burned with its contents.

The 24th of July, brig Caracas was struck by lightning, in lat. 34 35, long. 74 20, which stunned several men who were aloft, descended in a straight line to the quarter deck, and passed out of the hawser hole into the sea.

The same day, bark Rio Grand was struck by lightning, in lat. 34 35, lon. 71 38, and main-top mast was split.

The 26th July, a farm house near Schenectady was struck by lightning. The building was shattered throughout. The occupant was passing at the time between the house and barn—he was thrown down, badly bruised, and we believe had some bones broken; his wife, who was in the house, was stunned.

The 27th of July, 3 men were killed by lightning in a house in St. Genieve Canada; an another person is not expected to live; and an another was injured.

The 30th of July, the lightning struck the warehouse of J. D. Thurston, at Town Point, and rent it considerably.

The same day, the house occupied by Mr. Poliss, Worcester, Mass. was struck by lightning, and was with the furniture considerably injured. One person was stunned.

The same day, John Boose, his wife and child, aged 7 or 8 years, were killed by lightning at Pine Creek, about 2 miles from Washington.

The same day, a large stone barn, near Philadelphia, was struck by lightning, and with its contents consumed.

The same day, an ice house in Philadelphia was struck by lightning, and the roof shattered. A fine horse in a shed adjoining was killed.

The same night, bark Sharon, at Charlestown, Mass., was struck by lightning, had main-mast, main-top-mast, and main-top-gallant mast shivered.

In July, the barns of Mr. F. Summers, of Middletown Valley, Md., and of John Siler, of Back Creek, Va., were destroyed by lightning.

In July, Mrs. Lair, on the Little Sciota, was killed by lightning. She was holding an infant in her arms which was *not killed*. It was burnt on the lips a little.

In July, at Pulaski, Tenn., Mrs. Verrell and her child, and the horse on which they rode were killed by lightning.

The 3d of August, the bark Casild, from Boston, bound to Pensacola, was struck by lightning, lost her main and mizzen top-mast, and was left in a leaky state.

The same day, the brig Manhattan was struck by lightning off St. Marks, Fa., damage trifling.

The 7th of August, a house in Georgetown, Mass., was struck by lightning and damaged. No person was injured. Another dwelling was struck during the same shower.

The 8th of August, Miss Putney and Miss White were killed by lightning on Union Hill, Richmond, Va. They were sitting on the same sofa at the time.

The same day, the lightning struck the chimney and roof of the Washington Assembly Rooms, and stunned a female in that building and a boy in a coach factory close by.

The same day, the house of Mr. Samuel Burt, in Woolwich, was struck by lightning, and a little girl about 7 years old was killed.

The 9th of August, the lightning struck a liberty pole at the corner of Jackson and Sands Street, Brooklyn; also a lamp-post in Sands Street, which was shattered to pieces. Several persons in the neighborhood were more or less shocked.

The same day, the lightning struck a house in Pearl Street, New-York, which was slightly damaged.

The same day, at Barnstead, N. H., the lightning struck J. K. Kane's cabinet shop, consuming it with his dwelling and barn. Also, at the same place, the house, barn and other out buildings of Rev. Enos George, were destroyed by lightning.

The same day, Ezra Farnsworth's barns, in Groton, were struck by lightning and consumed with their contents.

The same day, a barn in Maiden Creek Township, Pa., was destroyed by lightning with its contents.

The same day, the lightning struck several places in Moultonborough, N. H., and in one place killed two cows and injured another.

The 10th of August, the barn of Joseph Detwiler, near Reading, Pa., was destroyed by lightning with its contents.

The same day, a barn of M. F. Clark, near Cornwall Landing, Hudson River, was struck by lightning, and with its contents consumed.

The same day, the barn of Thomas Jones, Carroll county, Md., was destroyed by lightning with its contents. Two horses were also burned.

The same day, the schr. Atalanta was struck by lightning in the river coming down from New-Orleans.

The same day, Charls A. Lavalle, Jr. was killed by lightning in New Madrid, Mo. while standing by the fire-place conversing with his mother.

The 11th of Aug., the lightning struck in several places in the vicinity of Yarmouth, Mass. The house of Capt. Howes Taylor, in Yarmouth was struck and much damaged. The inmates narrowly escaping. The dwelling of Ezra Hall, in North Dennis, was struck and injured. The barn of Kelly Chase and the house of Miller Wheldon, in South Dennis, were struck and injured. The barn of L. Howes, in East Dennis, was struck and with its contents consumed. The dwelling of Capt. Jos. Lewis, of Centreville, L.I. was struck and injured. The house of G. Sears, of Hyannis Port, was struck and injured, and several sheep belonging to Mr. Sears killed. The dwelling of Eben. Scudder, at Marston's Mills, was struck and damaged. A salt mill at Brewster was struck and injured. The Schooners Virginia and Clinton, lying at the breakwater at Bass River, were struck and damaged. At Harwick, Preston Ellis, 22 years old, was struck dead while standing in the door of Franklin Barrett.

The same day, ship Berlin was struck by lightning at New-Orleans. All three of her masts were struck, and the electric fluid escaped by passing down her mainmast into the hold, setting fire to her cargo.

The same night, there were several houses struck in Sandford, York county, Maine. The house of Captain Stephen Willard, of Sandfoad, was literally shattered. The fluid passed down from the chimney to all parts of the house; and in the descent passed upon the beds in which were Capt. W. and his wife, and two children. Capt. W. was seriously injured, his wife was badly lacerated, and it is feared dangerously wounded. One of the children was much burned. The fluid passed from Mrs. W.'s chest down her legs, and gashed them badly, perforated the beds, and passed off into the cellar. It also struck the out-buildings separated from the house, and killed two large hogs out of four which were in the same pen. It also struck and badly shattered the Methodist meeting-house at Spring Vale.

The 16th of August, the house of Dr. Thompson, at St. Charles, Missouri, was struck by lightning, and one young man was killed, and another so injured that he died next day.

The same day, the barn of James H. Dix, in Malden, was struck by lightning. The fluid first struck the roof, tearing off several rafters, and then passed down on the inside of the barn into the stall in which a horse is usually kept, where it killed a chicken, burning nearly all its feathers. The lightning then passed out without doing any further material damage. The course of the fluid was clearly marked on the boards, where it passed through the hay, which it did not ignite. Fortunately the horse was not in the barn at the time.

Thr 22d of August, the dwelling-house, barn and shed of T. Jones, of Sandford, Maine, were set on fire and destroyed by lightning.

The 23d of August, a house was struck by lightning, in Philadelphia, and injured; several other houses were struck. Three places were struck at New Haven, two at Hartford, one at Boston, and one at Dorchester. The buildings struck at New Haven were provided with lightning rods; they were the Lancasterian School-house, the house of Mr. Stilman, and a house of James Brewster. At Hartford, the bridge over the Connecticut was struck, and a barn in the rear of Talcott street. A horse and hog in the barn were killed.

The same day, Miss Perry, aged 14, was killed by lightning, at Westminster, Mass.

The same day, the Tremont House, in Littleton, Mass., was struck by lightning, and, together with all the buildings connected, consumed.

The same day a barn, near Poughkeepsie, was destroyed by lightning, together with a waggon-house and shed adjoining.

The same day, Daniel Britt, of North Bridgewater, Mass., was killed by lighining, while returning from his field.

The same day, a daughter of Mr. Bowerscck, of Daytou, Ohio, aged 12 years, was killed by lightning.

The same day, the lightning struck an apple tree on Staten Island, near Brighton, splitting it in pieces. A large stone was broken into two pieces by the bolt, and one half driven into the body of the apple tree, and the other half forced into the ground. Several persons who were at work on a building near the tree were severely stunned. Some days before, the lightning struck upon the ground near the Narrows, killing the watermelon and cucumber vines for several feet round, but affected no other vegetation.

The same day, at Hubbardstown, Mass., a barn, with its contents, was consumed by lightning.

The same day, at Fitchburg, a barn, with its contents, was destroyed by lightning. Two young heifers were killed during the same storm.

The same day, the barn of Mr. Keen, in Exeter township, near Reading, was totally consumed by the lightning.

The same day, the lightning struck a vessel at Port Richmond, and severely injured the Captain.

The 24th of August, several persons were assembled under the trees, at the Meeting-house near Norfolk, Va. The lightning struck two boys, cutting one of them from the shoulder down.

The same day, the ship Oceanus, in James River, was struck by lightning, had her main-topmast and top gallant shivered, killing one man and severely injuring another.

The 26th of August, Mr. Stow was killed by lightning, at Northampton, Illinois, and his brother so much injured as to preclude all hope of his recovery.

The same day, as the western stage was proceeding west from Chicago, Illinois, and when about 17 miles from that city, near Honeywell's stand, it was met by a thunder storm. A gentleman, who was seated with the driver, to avoid getting wet left the box, and took an inside seat. He had not been many seconds within the coach, before the driver was struck by the electric fluid, which passed down his body, tearing his cravat, vest and pantaloons, and depriving him of life almost immediately. The fluid then passed down and struck one of the wheel horses, tearing the harness off and killing the animal. The driver's name was Summon's.

The 27th of August, the lightning struck two or three houses at Washington City, D.C.

The same day, a young man, aged 22, was killed by lightning at Saco, Maine.

The 29th of August, the dwelling of H. B. Miller, of Addison township, Ohio, was struck by lightning. Mrs. Miller was killed instantly, and Mr. Miller so badly injured that his recovery is doubtful. Other persons in the house were stunned.

The 30th of August, the house of Sydney Morse, on Beacon street, was struck upon the roof and slightly damaged. The lightning also struck upon the wharf of Hinckley & Drury, South End, and effected some small damage. Mr. Welch, of Roxbury, was driving his meat waggon across Little Neck, Dorchester, when the lightning struck his horse and killed him instantly, while he himself escaped uninjured. The storm was very severe at Taunton. The Bristol Print Works were struck.

The same day, at Hingham, in the North Village, the dwelling of Mr. Henry Herrey, near the old Colony House, and that of Mr. Gridley Stodden, in Herrey street, were struck by lightning.

In August, the Ship Eliza, with 178 passengers, from Bremen, bound to Baltimore, when 30 miles W. S. W. of Cape Henry, encountered a heavy storm of thunder, lightning and rain. The clouds were so low that they rested upon the tops of the masts. At about 3 o'clock, P. M., a heavy and fearful crush was heard, part of the mainmast fell on the deck, and the whole ship seemed sparkling with fire. Two of the seaman were knocked down, but recovered. The hold of the vessel was filled with sulphurous smoke. The passengers were in great consternation supposing the vessel on fire. A young woman who had a white handkerchief in her hand, found on examination that it had become colored with black spots. The ship was found tight on trying the pumps, but the iron rod of the pump was so hot that it could not be handled.

In August, the brig Americ was struck by lightning, at B. F., North River, carrying away foretop-gallant mast, shivered foretop mast, and damaged foremast badly. No one injured.

The 2d of September, C. Kaufman was killed by lightning at Back River Neck, near Baltimore, while sitting on the shore of Back River, mending his net.

The 4th of September, Schooner Mary Caroline, from Edenton, bound to Charleston, was struck by lightning which shattered her maintop mast and mainmast down to the deck.

The 18th of September, two children were struck down by lightning, in Ernestown, Upper Canada, while drawing water from a well. The one holding the well-pail was instantly killed, the other lies in a very precarious state.

The night of the 20th September, the storm was very severe at Burlington, Vt., Whitesboro', Utica, Deerfield, and other places in the vicinity. The lightning struck in several places.

The same night, at Davenport, in Delaware County, the barn and sheds of Isaac Birdsall, were struck by lightning and consumed.

In September, Mrs. Green, of Wilton, Maine, was killed by light ning, while on a visit at Harrington. Mrs. Green was seated near the fire-place, the lightning descended the chimney, struck the wire in the dress cap upon her head, set her cap on fire, and then descended her person, tearing her clothes and producing instant death.

The 21st of September, a barn was struck by lightning at Shoreham, Vt., and consumed.

The morning of the 22d of September, about 2 o'clock, the brick storehouse of Mr. Aronson, of Whitehall, New-Jersey, was struck by lightning, and the roof set on fire, but soon extinguished.

The 20th of October, a thunder-storm was experienced at Grand Ecore, Natchitochez, and a young man by the name of Lucien Robau killed by the lightning.

The 1st of November, a very severe thunder-storm was experienced in the lower part of the state of Delaware. The lightning struck in several places about Central Bridge. The storm extended to Philadelphia, at which place the lightning was very vivid.

Nine oxen were killed by lightning near Chicago, Illinois.

[From the Galveston News of Nov. 2d.]

A very heavy storm of thunder and lightning recently occurred at this place, the reports of the thunder and the flashes of lightning being so nearly simultaneous that the intervening time was imperceptible. Immediately after the shower the bay was seen covered with dead ducks and geese in all directions. There could not have been much short of three thousand slain in the vicinity. Others, though not killed, were so stunned or paralized with the concussion, that they paddled about in utter bewilderment, as if intoxicated or afflicted with the vertigo. Some wild geese on the prairie were also killed by the same shock, and have since been found.

The 20th of October, a storm of thunder and lightning was experienced at Bainbridge, in Decatur county, Georgia. The academy edifice was struck by the electric fire, and a son of Mr. Harrell killed instantly. A little girl was also struck, her clothes set on fire, and her shoes torn from her feet. The scholars were all of them severely stunned.

SINGULAR ESCAPE FROM LIGHTNING.

We were at Oswego the newly erected county seat of Kendall, some time since, and visited Mr. Chapman's blacksmith shop, which the day before had been struck with lightning. There appears to have been two currents nearly simultaneous, one of which struck the ridge pole ten feet from the front end, and another struck a chimney in the back end of the building.—The house is probably 35 feet in length and 24 in width, the upper part occupied for a wagon maker's shop, and the lower for a blacksmith shop. The first named current divided on the roof, shivering to pieces the corner post, and on the other side of the building passing down the post ten feet from the corner. A man stood at his work bench in front of the post, who was thrown across the shop under a bench, and his chisels, bits, augers, &c., which were hanging in frame work, were carried out of the front window, as is supposed, and none of them could be found except a piece of chisel, which was found the other side of the street. Many of the tools on the bench had spots on them melted. The man was uninjured except that his hair was singed, and the side of his neck and arms next to the post were severely burnt, almost blistered. In the blacksmith shop below a man at his vice bench held a piece of iron in his hand, the end of which was melted and he uninjured; and a man standing on a door sill close by, remarked "that it felt as if a cannon ball had been shot and carried off all my leg." His look of blank astonishment may be surmised, when upon looking down he found a strip the whole length of his pantaloons had been singed threadbare.

The other current threw down the top of the chimney, and sent a man standing near by, in the second story across the shop. He was considerably deranged for a time, as he supposes, from the effects of the lightning, though his head was slightly cut by a brick. Otherwise he was uninjured. The current descended the chimney, passing out under the sill, by an old anvil, and within two or three feet of another man who was working at the anvil, and who was uninjured.

We have been thus particular in the incidents, for the escape of so many men uninjured, with marks of lightning upon their persons, and amid the flying of splinters, tools and bricks, is most wonderful. We have never known a parallel instance.

The succeeding night there was a thunder storm, and the man who was deranged in the morning, was also deranged during the storm. The others said they felt most uncomfortably the influence of the electricity in the atmosphere.

LIGHTNING AND SNOW.

On the 20th of October, 1845, I set out early in the morning to ascend the white face peak of the Adirondack Mountains and met on my way to the mountain a snow storm. My thermometer marked the temperature at 36° of Farenheit. It was 7 o'clock in the morning when the storm met me; next day the snow made a second visit, and the following day at 5 o'clk. in the morning, my thermometer marked the cold at 14 degrees. At New York at the same hour it was 33°, and at Syracuse, at sunrise was 32°, but next morning fell to 24°. Mr. Conkey notes the record of his barometer on the 22d at from 29,74 to 29,80. On the 20th the thermometer marked the temperature from 41 to 46° throughout the day and the dew point at 36°. Rain fell at Syracuse on that day to the extent of but 3-100 of an inch, the wind blowing from the North and N. West. The clouds were *nimbus* all day. At Montreal, Lower Canada, snow fell on the 22d. The Great Western Steamer in latitude 46,26, long. 53,09, encountered a snow storm on the 23d. Air at noon, 38°, water 45°. At Grand Ecore Natchitoches, a lightning storm occurred the 20th of October, and a young man was killed instantly by a thunder-bolt. At Decatur County, Georgia, a thunder-storm was experienced the same day and a young man was struck by the lightning. The same day a snow storm was in great activity on the mountains of south western Virginia. We thus have the testimony of the lightning as to the commencement of the storms of the 20th of Oct. ond the 14th and 15th of February, and that the line of the tempest was a thorough line in both cases.

LIGHTNING AND SNOW.

On the 13th of February, 1846, the schooner Hand, lying in the port of New-Orleans, was struck by Lightning. The same morning, at six o'clock, a thunderbolt fell from a lightning cloud at Mobile, Alabama, upon a house, killing a young lady instantly who was at the time reposing upon a feather bed. The Watch on board the ship Huntress, in latitude 32°, 29' N. longitude 72° 18' W., at half past 3 o'clk. on the morning of the 15th, noticed lightning in the north-west, and shortly after was overtaken by a squall from the same direction. At Charleston, S. C., on the morning of the 14th, at half-past 8 o'clock, the wind blew a hurricane, the storm was terrible. At New-York snow commenced falling at 10 o'clock in the evening of the 14th, and continued a gale of wind which blew in unfitful and furious blasts, I have received from L. W. Conkey, Esq., of Syracuse, the following account of this storm:

"The snow storm which commenced on Saturday, the 14th, at half-past 11 o'clock, P. M., commenced with a strong wind from the east. Sunday morning the 15th, at 7 o'clock, there seemed to be a calm, the mercury in the Barometer standing at 29 inches for about three hours—the snow falling principally during the same time, and it seemed as though the whole country would be buried in an avalanche. In a previous letter to you I stated that the nearer the dew-point temperature was to the temperature of the atmosphere, the more likely it was to storm when the mercury fell in the Barometer. On examining the hygromatic state of the atmosphere at sun rise I found the dew-point temperature to exceed that of the atmosphere about four degrees, which accounted for the vapor condencing so rapidly at that time—the snow falling in an entire cloud for about two hours. At 9 o'clock in the morning, I measured the depth of the snow in my rain guage (and also at other places) and found it to be 18 inches deep; at 5 o'clock P.M. the end of the storm, the whole depth was 32 inches. The snow was very light and dry, and measured but 1 80-100 inches when melted in the rain guage. I think it the heaviest fall of snow within the same time ever known."

ARKANSAS SNAKES.

I received, via New-Orleans, a few weeks since, a box of living Rattlesnakes, three in number, which were captured upon the mountains in Arkansas in August last. My friend, Mr. Ward, presented them to me "as a specimen of the live stock of Arkansas." Their snakeships arrived safely, a journey, counting the distance of the circuitous route they came, of 4000 miles. These snakes I have presented to the individual who keeps the curiosity shop in Courtlandt Street near Broadway. It is his intention to dispose of them to some person going to Europe. In my extensive travels in the forest I have seen but two Rattlesnakes—one of these lay across the path I was riding, and within a few feet of him was a striped squirrel. I dismounted from my horse, cut a pole from the wood, and was about to attack the serpent when he fled, making his rattles jingle merrily—the squirrel was alive when I took it up: it had not been within four feet of the snake. I carried it with me a few miles in a loose pocket in an outside coat and on examination an hour or more afterwards found it lifeless. The other rattlesnake which I mentioned, I passed while on horseback upon the prairies. This snake was short but unusually thick. It fled on my approach. I was glad to drop the acquaintance as soon as made.

In the wardrobe of a mummy which I examined in the mammoth cave of Kentucky were the skins of two rattlesnakes nicely folded up. One of these had 16 rattles and a button. The skins were no doubt placed in the sepulchural chamber as trophies to denote the daring acts of the individual who was deposited beside them, and in the same knapsack was the claw of an eagle, and the jaw of a bear, and various other articles, a particular account of which will be found in this volume.

LOOSE WAY OF DOING THE PUBLIC BUSINESS.

The business of the corporation is transacted in a loose manner; as an illustration, we will state a case. Burtis Skidmore, Esq., a member of the Anti-Assessment Committee, as Executor of the estate of S. Nersworthy paid an assessment of $500 and upwards to one of the Corporation Collectors, claimed as an assessment for opening Thirty Second Street on paper,

Some months after another Collector called with a bill and demanded payment: this he also paid. In making up his accounts some months after he discovered that he had paid the Corporation twice, whereupon he applied for a return of the money, which he was unable to obtain, after applying to the proper department and after petitioning the Common Council—he commenced a suit against the Mayor, Aldermen, &c., when the suit was noticed for trial the Corporation at length returned the money with interest, and paid the costs. The Collector's were so often calling with assessment Bills that Mr. Skidmore was not particular in looking into their proceedings, as they had been in the habit of calling almost every week with some new assessment, and as he observes "they had beaten a regular pathway to his place." *This business was done by "departments."* Comment is needless.

STATE CONVENTION.

Court for the Correction of Errors.

The Constitution of 1777, contains the following provision:

XXXII. And this convention doth further, in the name and by the authority of the good people of this state, ORDAIN, DETERMINE, and DECLARE, that a court shall be instituted for the trial of impeachments and the correction of errors, under the regulations which shall be established by the legislature, and to consist of the president of the senate for the time being, and the senators, chancellor and judges of the supreme court, or the major part of them; except that when an impeachment shall be prosecuted against the chancellor, or either of the judges of the supreme court, the person so impeached shall be suspended from exercising his office, until his acquittal; and in like manner, when an appeal, from a decree in equity, shall be heard, the chancellor shall inform the court of the reasons of his decree, but shall not have a voice in the final sentence. And if the cause to be determined shall be brought up by writ of error, on a question of law, on a judgment in the supreme court, the judges of the court shall assign the reasons of such their judgment, but shall not have a voice for its affirmance or reversal.

The Constitution of 1821, contains the following provision:

"The Court for the trial of Impeachments and the Correction of Errors, shall consist of the president of the Senate, the Senators, the Chancellor, and Justices of the Supreme Court, or the major part of them; but when an impeachment shall be presented against the chancellor, or any justice of the Supreme Court, the person so impeached, shall be suspended from exercising his office, until his acquittal; and when an appeal from a decree in Chancery shall be heard, the Chancellor shall inform the Court of the reasons of his decree; and when a writ of Error shall be brought on a judgment of the Supreme Court, the Justices of that Court shall assign the reasons for the judgment, but shall have no voice for affirmance or reversal.—*Art. 5, Sec.*

It is most clear that it was the intention of the Convention of 1777, as well as that of 1821, to organize the HIGH COURT in the manner and form in which the language of both these sections indicate. The Court is constituted of *classes of public officers*, viz: the Lieut. Governor, the Senators, the Chancellor and the Justices of the Supreme Court, or a major part of them. It is the majority of the *classes* and not a majority of the *individuals* who compose one or two classes. The Chancellor is required to give his reasons in cases of appeal, but is to have no vote—the same duty is required of the Justices of the Supreme Court in cases of writs of Error. Thus the presence of these officers are contemplated by this language of the Constitution. It frequently happens in cases of writs of Error that neither the Chancellor or Justices of the Supreme Court are present, and on the occasion of the resignation of Lieut. Governor Dickinson, on being appointed United States Senator during his term of office, the Lieut. Governor and Chancellor were absent. It was doubtless the interest of the framers of the Constitution to constitute an intelligent Court, and they selected four classes of public officers, whose experience in the performance of other public duties would qualify them for this particular duty. The executive, the Legislative, the Equity and Law branches of the government, are here combined.

The duties of the Lieut. Governor, as well as the Senators are interfered with in this taking up their time, in this judicial employment, but it is a suitable, a good school for the Senators, and under our peculiar organization of government, necessary to qualify them for their duties, as Legislators. Senators are elected for four years, and this lengthened term of office is as useful as a schoolmaster to the incumbent, but experience is also needed for to qualify for judicial duties as well as legislative, and who shall learn the Judge if he is a Freshman.

Law is said to be a science; so is chemistry, and had the great Sir Humphrey Davy been called upon to analyze a compound, it would not have resounded to his credit to state that in all his former analyses he had been mistaken in consequence of having overlooked the reported analyses of some chemist of former times.

In a not very recent assessment decision we have an admission of the great equity Judge of this vast Commonwealth in the case of the widow Pierson and her children, who were deprived of house and home, by a New-York Corporation assessment—that in the "*hurry of business*" he had overlooked a decision.

STATE CONVENTION.

Can a free, sovereign and Independent State in the framing of a fundamental law for the limitation of the exercise of power, by its public functionaries, create within its boundaries a local monarchy, circumscribed by the geographical boundaries of a single county like that of the city of New-York?

STATE CONVENTION.

Salaries of Judges.—The act passed by the Legislature in 1828, organizing the Superior Court in the City of New-York, provides that the salary of the Judges shall be paid by the Corporation—and they also can diminish or increase their salaries. *This is all wrong.* The Corporation have a multitude of suits in this Court. The Convention must see to this.

The New-York Corporation which went post-haste to Albany to procure the confirmation of ☞ *KING JOHN'S CHARTFR—forthwith by the State Legislature*—have come back again!

They met a  in the way.

JOHN STREET ASSESSMENT.

SUPERIOR COURT, March Term, 1846.

Judge Vanderpool Presiding.

Action of Ejectment, brought by David M. Prall, *vs.* Widow McGowen, and Isaac Adriance.

This suit was brought by the Plaintiff to obtain possession of a lot on the southerly side of John Street, between William and Nassau Streets, upon which a new store house was erected by Mrs. McG. The said plaintiff bid off this lot at the Street Commissioners assessment sale for $123, and the defendant has since built a store upon it.

The Corporation Officers in consideration of the Plaintiff's paying to them the assessment executed to him a lease of the widow's lot, for the term of 50 years. The property is valued at $40,000. Peter A. Cowdrey, Esq., X-Counsel of the Corporation appeared as Counsel for the Plaintiff, and produced documentary evidance of the Corporation of New-York and of the SUPREME COURT ROAD COMMISSIONER'S DEPARTMENT, to establish the Plaintiff's title. Richard Mott, Esq., and J. P. Hall, Esq., Counsel for Defendants objected to each and every paper, and insisted that the plaintiff had wholly failed to show any title in himself in the premises in question, and moved for a *nonsuit*. The Court sustained the objections of defendant's Counsel and nonsuited the plaintiff.

Every lot on the southerly side of John Street, between William and Nassau, received an award, except the lot of Mrs. McGowen. A part of this lot was taken for widening the Street, and the residue, as now appears, assessed $123. This matter is a mystery, as was also the case of an assessment on lots belonging to Assistant Alderman Townsend for the pretended opening of the Seventh Avenue. Mr. ADRIANCE and Assistant Alderman TOWNSEND *were both members of the Anti-Assessment Committee*

HUDSON RIVER RAILROAD.

We are highly gratified to see a thorough movement making for the construction of a Railroad on the bank of the Hudson River, from New-York to Albany Nature has made a path for this road, and it is astonishing that the improvement of it should have been so long neglected, and still more astonishing that the legislature of 1845 should have neglected to grant a charter on the application of such citizens as JAMES BOORMAN, STEPHEN ALLEN, and SAUL ALLEY. It is to be hoped that the present legislature will remedy this neglect. Mr. Boorman, who heads this movement, is a member of one of the the oldest Commercial Houses in New-York; a merchant of high standing, a most estimable citizen, a man of great wealth, of extensive business acquirements, and a practical man. Mr. Allen and Mr. Alley, are among our best citizens. When such men step forward and offer to go on with the work, success will follow the movement. Of the superiority of the route and the advantages of the work, it is superfluous to speak. The stock will be quickly taken when a charter is obtained. Mr. Boorman will take 50,000 at once, and advance the whole sum in cash.

OPENING STREETS.

The Common Council, we are informed, attach a condition to the resolutions for making application to the Road Department of the Supreme Court for opening streets, which is, that the applicants shall give a bond to pay the cost in case of failure. The opponents will of course use this proceeding as an objection, among others, to the appointment of Commissioners. The whole proceedings are vitiated by such a condition.

THE HISTORY OF THE WORLD.

The history of our earth—its creation and subsequent changes, prior to the deluge, covering a period of many centuries of time, and extending back beyond to three unmeasured and unmeasurable periods, and of the people which inhabited it, is confined to the pages of the sacred Scripture.

The history of that portion of our continent embraced within the limits of the United States, beyond 250 years ago, is a perfect blank.

We have no rule to measure changes, and it is as difficult to comprehend the mysterious works of creation as accomplished within the limit of 6000 years, as it would be to extend the creation still beyond that period until it reached backward to the extent of millions of millious of years that are swept into the ocean of eternity, and left unrecorded by human knowledge. What is to be, and not yet made known to man by his Creator, is equally unattainable. We have one record—and it is a record that is indisputable—the Scriptures of Truth. It was penned by hands that were moved by Him who is the source of all knowledge.

Municipal Gazette.

PUBLISHED BY THE ANTI-ASSESSMENT COMMITTEE AND DISTRIBUTED GRATUITOUSLY.

EDITED BY E. MERIAM.] NEW-YORK, JUNE 1, 1846. [VOL. I....No. 41

☞ The MAY No. of the Gazette containing the Constitution of Massachusetts, Connecticut and Vermont, &c. pg. 81 to 96 of the volume both inclusive, is issued to supply a vacant number in the volume in order that we may be able to place the entire volume complete in the hands of each of the members of the Convention as soon as they shall be organised for business. The present number contains some important facts in relation to the Montgomerie charter, copied from the volumes of copies of documents obtained in England, by Mr. BROADHEAD, and now in the State archieves.

ANNUAL TAX BILL.

We give below the annual Tax Bill. It authorises the assessment of the heaviest tax ever before imposed in the city of New-York. The necessity for such a tax does not exist. One half the sum authorised, properly expended, would be far more useful to the City than this great waste of money lavished upon political favorites.

A question of great importance arises under this act with respect to what particular personal property is assessable.

The act is special—has a local and not a general operation, and differs in that respect from the State Tax act. The act has been bunglingly drawn. It provides as follows: "*to be collected according to law.*" As to the *assessment of it*, the provision is special—and no personal property is authorised to be assessed except of freeholders and inhabitants of the city and county whose real and *personal estate is situate within the county.*

The question then arises under section 5 of page 381 of the 1st volume of the Revised Statutes as to the oath. If the person taxed declares that he is worth only a certain sum named in the affidavit over and above his just debts and property exempted from taxation, and he includes in this exemption all his personal estate without the county of New-York, whether such a construction is right?

The counsel of the corporation, Mr. Brady (whose course so far in office has been greatly approbated on account of his honesty of purpose and careful compliance with law) should instruct the assessors in this.

No. 282.

IN ASSEMBLY March 5, 1846.

Introduced by Mr. ALBERTSON.

AN ACT

To enable the supervisors of the city and county of New-York to raise money by tax.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

SEC. 1. The mayor, recorder and aldermen of the city of New-York, as the supervisors of the city and county of New-York, of whom the mayor or recorder shall be one, are hereby empowered, as soon as conveniently may be after the passage of this act, to order and cause to be raised by tax, on the estates, real and personal, of the freeholders and inhabitants of and situated within the said city and county, and to be collected according to law, a sum not exceeding nine hundred and sixty thousand one hundred and sixty-two dollars, to be applied towards defraying the various contingent expenses legally chargeable to the said city and county, and such expenses as the mayor, aldermen and commonalty of the city of New-York may in any manner sustain or be put to by law. Such portion of the contingent expenses of the said city of New-York as relates to re-paving and cleaning streets in that part of the said city lying south of a line running through the centre of Thirty-fourth street, shall be assessed only that part of the said city lying south of the said line. And also the further sum not exceeding four hundred and twenty-eight thousand dollars, by tax on the estates, real and personal, of the freeholders and inhabitants of and situated within the said city and county, and to be collected according to law, to be applied towards defraying the expenses of police in said city and county. And also a further sum of one hundred and ninety-one thousand one hundred and ninety-three dollars eighty-two cents, by tax on the estates, real and personal, of the freeholders and inhabitants of and situated within the said city and county, and to be collected according to law, to be applied to supplying the deficiency in taxation in said city and county for the year one thousand eight hundred and forty-five. And also a further sum not exceeding one hundred and seventy-four thousand nine hundred and sixty eight dollars, by tax on the estates, real and personal, of the freeholders and inhabitants of and situated within that pars of the said city and county of New-York, which is or may be designated by a resolution or ordinance of the common council of the said city of New-York as the "Lamp district," to be collected according to law, and applied towards defraying expenses of such parts of the said city last mentioned.

CITY CONVENTION.

No. 341.

IN ASSEMBLY March 24, 1846.

Introduced by Mr. STEVENSON.

AN ACT

To provide for the calling of a convention to amend the charter of the city of New-York.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

SECTION 1. An election shall be held in the city of New-York on the first Monday of June ensuing the passage of this act, for the selection of delegates in each ward of said city, to a county convention for revising and amending the charter of the said city of New-York.

§ 2. The delegates chosen to this convention shall be chosen as representatives from each ward, each delegate representing ten thousand inhabitants; and if any ward have, in addition to this ratio, a fraction of six thousand and upwards, one representative shall be allowed to be chosen for said fraction: but each of the present wards of the city of New-York, without regard to its population, shall be allowed one representative in said convention.

§ 3. Notice of such election shall be given, and the same shall be conducted in the manner now provided by law in regard to the charter elections in the city of New-York, and the name of each delegate voted for shall be written or printed, or partly written and partly printed upon each ballot, and the ballot shall be endorsed "Delegates to the Convention," and a separate box for the deposite of such ballots shall be kept by the inspectors of each election district in the several wards of the said city. The result of such election shall be ascertained and certified in the manner now provided in the act regulating charter elections in said city.

§ 4. All the provisions of law for the purity of elections in the city of New-York shall apply to the election held under this act; and all false swearing at said election shall be deemed and punished as perjury.

§ 5. The delegates to be chosen under this act, shall meet in the city of New-York on the first Monday of July next, at the chamber of the board of aldermen, and shall then, or as soon after as may be practicable, organize and adopt rules for their government. They shall complete their business so that any charter or amendments adopted by them, may be submitted to the electors of the city and county of New York, as in the next section provided.

§ 6. The charter or amendments adopted by the convention to be organized under this act, shall be submitted to the electors of the city and county of New-York, each provision separately at the election to be held in the said city on the first Tuesday after the first Monday of November, in the year one thousand eight hundred and forty-six; and such amendments as may be approved by a majority of said electors at said election, shall thenceforth be incorporated in, and form a part of the charter of the city of New-York. And if an entirely new charter be submitted to the electors at said election, the same shall, upon being adopted by a majority of said electors, become the charter of the city of New-York. The tickets to be used at the election to be held under this section, shall be prepared in such form as the said convention may direct.

§ 7. The expenses of the election of delegates held under this act, and all expenses attending the convention, shall be paid out of the treasury of the city of New-York. The proceeding of the convention shall be filed in the office of the clerk of the county, when duly certified to by the presiding officer and secretary or secretaries of said convention.

§ 8. The members of the convention shall have power to provide for their own pay, which shall not exceed one dollar and fifty cents per day for every day actually in session.

[*Amended...See page 556.*]

TAX UPON ACTUAL CAPITAL.

The following bill was reported in the Senate. The same bill has been three times reported in the same form, and yet remains dormant.

No. 16.

IN SENATE, January 16, 1846.

[Reported by Mr. Porter, from the Committee on Finance.]

An Act to amend the Revised Statutes in relation to the exemption of incorporated companies from taxation, and for other purposes.

The People of the State of New-York, represented in Senate and Assembly, do enact as follows:

Section 1. Section nine of title four, of chapter thirteen of part one of the Revised Statutes, which authorizes the exemption of incorporated companies in certain cases from taxation, is hereby repealed.

§ 2. All banks established under the act entitled "An act to authorize the business of Banking," passed April 18, 1838, shall be subject to taxation on the amount of capital paid in or secured to be paid, in the same manner as incorporated banks; and the proper officer or officers of such banks shall make an annual statement to the Comptroller and the assessors in the manner provided by the second section of title four, chapter thirteen, of the first part of the Revised Statutes.

§ 3. The provisions of the fifteenth section of the second title of the thirteenth chapter of the first part of the Revised Statutes, shall be extended to all such banks, and to all incorporated companies subject to taxation, and the affidavit in such case may be made by the president, cashier, secretary, or treasurer thereof; and such banks and incorporated companies shall be assessed on the actual value of all their real and personal estate at the time of making such assessment; and all provisions of law which are inconsistent with this act are hereby repealed. The proper officer or officers of such banks and incorporated companies shall make and deliver to the assessors an annual statement of the amount of all their real and personal estate in the manner required by section two, title four, chapter thirteen, of the first part of the Revised Statutes.

LIGHTNING OF THE THUNDERS.

The influence which lightning exerts upon the atmosphere is very great; recorded facts and long continued observation, will enable us to learn much of this active principle in the great machinery of nature.

It has been said that feathers are a protection against injury from lightning. The facts and observations recorded in this volume, prove that feathers afford no certain protection.

Metalic lightning conductors do afford protection, and no instance has yet been found in which loss of life or injury to a human being by lightning, has ever occurred in a building or vessel protected by any kind or form of metalic lightning conductor, reared for the purpose of protection; and this fact alone, it would seem, should be sufficient to satisfy every intelligent mind.

Buildings protected by metalic conductors, have been struck by lightning, and sometimes injured, but no case has yet been found in which a vessel protected by a metalic rod, has been in the least injured by lightning, if the rod terminated in the water and extended above the highest spar of the vessel.

A comparison in this, affords the illustration which demonstrates conclusively that a metalic rod extending above the surface desired to be protected, and terminates in the water, is sure and certain protection.

As to the extent of the surface which can be deemed to be protected, we must have recourse to the records of the lightning, and these are ample.

Buildings in blocks, of various heights, are often seen, and among such blocks are numerous cases in which a building of a less height has been struck by lightning, while the next, and immediately adjoining building of greater altitude, has escaped altogether. This was the case in Pine Apple street, in Brooklyn, and in Pearl street, in New-York. We examined both of those buildings with great care. Adjoining to each, and within 25 feet of where the lightning struck, was a building of more than ten feet greater elevation.

Fences are sometimes struck in barn-yards, while the buildings close alongside escape. We examined a case of this kind several years ago. An instance is recorded in this volume, of a vessel being struck upon the bowsprit, while the masts escaped altogether.

We have heard of no case in which the lightning has ever struck the vessel between the masts, or the ground between two trees which were not more than 50 feet apart.

In the protection of vessels by rods, the conductors diverge and reach the water several feet outside the vessel—these rods have never failed, and therefore offer such conclusive testimony in favor of that position, that leave us no room to say a word in favor of rods that descend perpendicular, in preference to those diverging.

Steamboats require no protection—are rarely struck by lightning, although filled with iron, and when struck are never injured—nor is there an instance on record of the loss of human life on board of a steamer, by lightning. We record one instance, in this volume, of a person being stunned by lightning on board of a steamer on the Ohio, by the breaking of a thunder bolt.

Iron ships and iron boats, and iron buildings, are the best of protection from lightning.

Buildings with metalic roofs, afford protection, but metalic eave troughs and spouts, for conducting the rain to the earth, should be straight. Spouts with short turns in them, obstruct the water, and also obstructs the lightning, and causes it either to explode or force its way through the metal, and in such case it may take a horizontal direction and pass into the building and do injury. We have in our Cabinet, tin spouts that have been broken through by lightning, and we have examined numerous tin spouts to buildings struck by lightning, and the result is the same in all these cases. The lightning in all the numerous cases we have examined, descended the *inside* of the spout, and in no case passed through the water or entered that fluid.

Carbonated hydrogen gas ignites when in contact with lightning, and the lightning at the same instant disappears. This was the case in Pearl street, and a person setting within three feet of the gas pipe, when it was struck by lightning—the pipe melted and the gas set on fire—deliberately extinguished the flame and escaped unharmed.

Water thrown freely upon persons struck by lightning, has in numerous cases restored them to activity, and this fact indicates the importance of its use in all cases.

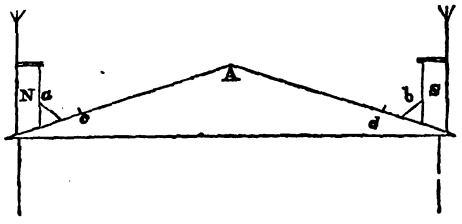
We have before frequently said, that iron wire, of No. 1 size, weighing one pound for every six feet, is a good lightning conductor, and our desire, in so frequently repeating this opinion, is not with a wish to establish a theory, but to show that protection against damage by lightning, may be had at a small cost, and thereby most persons, from the cheapness of the rod, can avail themselves of this mode of protection. We repeat—these wires have never failed, and the cost is less than a dollar for a single rod of 70 feet in length.

We have expressed the opinion that bright surfaces are preferable for lightning conductors to dark surfaces; we still entertain that opinion. In the particular examination we made of the hardware store, in Pearl street, struck by lightning in 1845, we found metals with bright surfaces fused, but we could not ascertain if the surface thus fused was in contact with other metal, for the metalic implements struck had been removed from the places in which they were when the lightning passed over them. We have a tinned iron fork in our collection, which has several spots upon it where the lightning fused the metal. An oil holder, made of bright tin, was fused in three places by the lightning in the same store.

If the lightning rod terminates in water,—which we would suggest as preferable in all cases, *when a well or cess-pool is accessible*,—it matters not whether the lower end is blunt or pointed.

We have seen iron nails that had led the lightning into the inside of buildings, and others where the lightning has followed the same conductor out of the building, and hence we argue that iron staples designed for fastening rods to the sides of dwellings, are improper appendages to lightning conductors.

We examined a highly varnished mahogany table, the surface of which the lightning had passed over, and found the varnish had been removed to the extent of the length of the track, and to the width of from one eighth to one quarter of an inch.



The diagram is designed to represent a building 50 feet long—N, the north chimney; S, the south chimney, and A, the ridge of the house. The two rods extend each seven feet above the highest point of the ridge, and at a distance of 25 feet therefrom. This is the diagram used on page 522 of this volume, to represent the Lancastrian School House, while struck by lightning, as described by Professor OLMSTEAD, to which page the reader will please refer.

We suggest this alteration in the position of the rods, viz:

1st. That a rod should project six feet or more above the centre of the ridge, making a gradual bend a few inches above the roof, and following the slant of the roof to the eave trough,—after passing over that let it diverge in its father descent, so as to reach within four feet of the ground at a distance of twenty feet from the building, at which point it may be bent so as to terminate in the water of a well or cess-pool, and if neither are close by, it may be extended to such a termination by running it along a fence.

2d. Instead of leading the rods to the ends of the building, along side of a chimney, let them diverge from the chimney, the upper point terminating in the atmosphere four feet higher than the chimney, and six feet distant from it, over a portion of the roof of the house, and when reaching the side of the roof, let the rod diverge from the roof so as to reach within four feet of the ground, twenty feet or more from the house, and terminate as in the first case of the centre rod.

3d, To a building fifty feet square, five rods should be used, all cost not to exceed five dollars, except putting up. If fifty feet long and thirty feet wide, three rods are sufficient.

In all cases terminate the rod in the water, or deep in the ground, and let the rod diverge from the building in its descent to the ground.

Iron wire of No. 1 size, measuring six feet to the pound, costs in New-York six cents per pound, or one cent per foot. This size wire has never been known to fail—the cost is so trifling, that it leaves no excuse in neglecting protection.

A wire of this size will not support itself, and should therefore have a wooden support over the roof. Where it is necessary to pass a wire through a staple, we should suggest a tin tube, of six or or more inches in length. When the tube is of tin, let it be in the shape of a hollow tube, and narrowest at the lowest point, so as to aid the lightning on the way past the points of the staple pointing inward.

Where tin spouts terminate above the floors of basement rooms which are occupied, it would be well to connect a wire with such termination, leading to the well or cess-pool, or deep into the ground, and to avoid short turns in such spouts that should cause the water in heavy rains to fill up the inside.

EARTHQUAKES STORMS, AND CALMS.

The Journal of Commerce of January 13th, 1846, contains the following:

"EARTHQUAKE AT MEMPHIS.

The Journal of Commerce of Saturday contains an account of an earthquake at Memphis, Tennessee, on Tuesday the 23d of December, at half past nine o'clk. in the evening. I was engaged the same evening and at the same hour in making meteorlogical observations upon Brooklyn Heights, and was surprised at the sudden depression of the mercury in my thermometer of three degrees. The temperature until this change was 28°—it fell to 25°, and continued at that for 11 hours afterwards, when snow commenced falling. I discovered nothing in the appearance of the atmosphere at the time to account for the sudden change. I noticed this change in the Brooklyn Star, of the next day (Wednesday the 24th). On the 7th of April last, three severe shocks of an earthquake were felt at the City of Mexico, two of which occurred between the hours of six and eight o'clock in the evening, at the same time a snow storm commenced upon the Hudson River during the continuance of which, the Steamer Swallow was stranded upon the rocks at Athens. At the same time a snow storm was raging at Chicago, Illinois, and next day snow fell plentifully at Quebec. E. M.

"[It is very unsafe to rely upon a mere coincidence of *time*, as throwing any connection between events occurring at far distant places, and having, so far as we know, no natural connection with each other.]—*Editors Jour. Com.*

We wrote Mr. HALLECK, the Editor, a private note on the morning of January 13th, after seeing the editorial remark appended to our communication, expressing in substance the opinion that we hoped we should be able to convince him of the correctness of our views in this, and of the incorrectness of those contained in the Editorial comment.

The paragraph referred to as published in the Journal of Commerce of Saturday, was that of January 10, 1846, and was in the words following:

"*Earthquake.*—The Memphis Eagle of Thursday Dec. 25th says: A very sensible quaking of the earth occurred at about half-past nine, on Tuesday evening, starting many of our people to their feet who were not on them, and frightening many others; the agitation was accompanied with a roar, or rumbling noise, and apparently proceeded from a north westerly direction, it lasted about half a minute."

The Journal of Commerce of March 7, 1846, con-

tains the following notice of an earthquake at Cincinnatti, on the 28th of Feb., 1846:

"*Earthquake.*—Several of the gentleman at our boarding house—the Howard House, on Main Street, mentioned to us on Saturday, that they felt the shock of an earthquake about 10 minutes to 8 o'clock in the morning. One gentleman, sitting in the parlor, felt the undulating motion with such force that it was with difficulty he could maintain his sitting posture. Two others, in their private rooms were affected in the same manner. The shock continued during the space of half a minute.—*Cin. Gaz. March 2d.*

The Journal of Commerce of March 14, 1846, contains the following notice of an earthquake at Santo Tomas, on the 30th of January, 1846:

"*Earthquake.*—A very violent shock of earthquake was felt at the Belgian Settlement of Santo Tomas, on Friday Evening, Jan. 30th. It is described as being like the discharge of a heavy piece of ordnance.

The Journal of Commerce of April 1, 1846, contains the following account of an earthquake at Maysville, Ky., on the 23d of March, 1846:

"*Earthquake.*—The Maysville (Ky.) Eagle of the 24th inst,, says; At 45 minutes past 12 o'clock, on Sunday night, an earthquake, preceded by a rumbling sound as of distant thunder, was sensibly felt by all the inhabitants of this city who were awake at that hour. We learn from one gentleman, who was up, that there were two concussions, scarce five seconds intervening, and that his house shook perceptibly. At the time of the shocks, there was a cloudy sky, but no wind. A gentleman from the country, who resides at an elevation of nearly 400 feet above the Maysville bottom says that the shocks at his house were severer than any that have occurred since the memorable earthquake of 1811, '12."

The Journal of Commerce of April 23, 1846, contains the following;

"*Earthquake in the West Indies.*—By way of Havanna we have received advices from the town of Cuba. On the 23d ultimo, at half past 7 in the morning, after a calm, sultry night, low, rumbling sounds were heard- Suddenly the ground shook violently, causing the greatest consternation, the people running into the street for safety. The first shock lasted one or two minutes and after a lapse of five minutes, the ground was again violently shaken. It was a solemn moment: in every direction the affrighted inhabitants might be seen on their knees, calling on God to save them, expecting each moment to be swallowed up. Several slighter shocks were felt during the forenoon, but it is believed no lives were lost. Several buildings were thrown down, and very many cracked. In the evening mass was said in all the churches for their deliverance from death."

The Journal of Commerce of May 15, 1846, contains the following:

"There was a slight shock of an earthquake at Santa Cruz (south side of Cuba) on the 28th of April."

By referring to our last Gazette, it will be seen that an earthquake took place at Memphis, Tennesee, on the 23d of December, at half-past 9 o'clock in the evening; another at Santo Tomas near the equator, on the 30th of January, hour not stated; another at Cicninnati, Ohio, on the 28th of February, at about 8 in the morning, and now we add another at Maysville, Ky., on the morning of the 23d March, at 15 minutes before 1 o'clock A.M.; and still another at Cuba, on the 23d of March, at half-past 7 in the morning; and yet another in Cuba on the 28th of April ult.

Here then, we present from the columns of our good friend Mr. Halleck, the account of six earthquakes which have occurred since he penned the editorial comment upon our notice of the Memphis earthquake.

The regularity as to time, shows that these have been periodical, one each month, and near the close of the month. Each followed by a storm, and each succeeded by a fixedness of temperature in the atmosphere.

After the December earthquake, the mercury in my thermometer remained stationery 11 hours after; that of January, 11 hours; February, 11 hours, March, 23, 11 hours, March 24, nearly the whole day, and April 28th and 29th, 11 hours.

The meteorlogical observations for the 28th and 29th of April were published in the Brooklyn Evening Star, on the 29th of April and 5th of May. The last published were first written.

The following is a copy:

"Monday morning 27th, 9 o'clock, 61°; half-past 9, 64; 12, 65; 1, 66; 2, 68; 3, 69; 4, 67; 5, 65; 6, 62; 9, 57; 10, 55.

"Tuesday morning 28th, 4 o'clock 47°; 5; 48; 6, 52; 7; 58; 8, 64; 2, 72; 3, 71½; 4, 67; 5, 65; 6, 60; 7, 58; 9, 53; 10, 50.

"Wednesday morning 29th, 4 o'clock, 50°, 5, 50; 6, 50; 7, 50; 8, 50; 9, 50. Thus we have another night in which the atmosphere has been stationary in temperature. This morning rain fell in a gentle shower between 7 and 8 o'clock.

"Thursday morning 4 o'olock, April 30. The temperature yesterday reached 57°, and vibrated considerably, lowest point at 50, at which it now is. During the night it fell 2°. In my communication sent you yesterday I stated the fixedness of temperature the previous night, and have now to notice the profuse rain-storm which followed. It will be seen by referring back to my published memorandas that a storm followed the same state of the atmosphere Dec. 23d, Jan. 31, February 28, March 23, and April 23d, (at the south,*) and now, yesterday the 23th, here."

The meteorlogical observations to which we refer were made by the editor of this Gazette, and published in the Brooklyn Star long before the accounts of the earthquakes reached here.

The account of the earthquake at Maysville, was published in the Maysville Eagle on the 24th of March, and the meteorlogical observations made on Brooklyn Heights, on the 22d, 23d and 24th of March, was published on the 25th of March in the Brooklyn Star, as follows:

"Sunday morning 5 o'clock, 32°; 7, 32°; 8, 36°; 9, 41°; 12, 47°; 3, 53°; 5. 49°.

"Monday morning, 6 o'clock, 34°; 12, 50°; 2, 50; 6, 42°; 8, 40°; at which it continued through the night, and varied from that but little during Tuesday. On Monday afternoon clouds bordered the horizon at every point of the compass. indicative of what followed," which we now add, was a storm, in which the Packet Ship Henry Clay went on shore.

The Brooklyn Star of March 2, 1846, contains our memorandum as follows:

"At half-past 9, Saturday morning, the 28th, the temperature rose to 20°, being 3° from 7 o'clock, and with this rise of temperature snow commenced falling; at one o'clock 21°; 2 P. M., 20°; four, 18°; nine o'clock, 16; and continued at that without change during the night. Sonday morning, at 7 o'clock, 16°; one P. M., 24°; 7, 20°. This morning at 7 o'clock, 20°, with a clouded atmosphere, indicating another fall of snow."

The Brooklyn Star of February 2d, 1846, contains our meteorlogical memorandums, as follows:

"Saturday was the warmest day for the month of January—the temperature rose to 52° at 2 o'clock P. M.; at the same time a black cloud appeared in the northwest; which in half an hour reduced the temperature to 41°—at midnight it had reached 22°, at which point it continued for 11 hours, at 12 o'clock, Sunday noon, was at 23°, at 5 o'clock P. M. 25°, and rose one degree during the night, and was at 7 o'clock this morning, 26°. Saturday, to near 1 o'clock P.M., the East River was covered with so dense a fog that it was with difficulty the ferry boats crossed over, and not without the aid of the shore bells. Thursday evening, about 5 o'clock, snow fell in a few sprinklings and was followed by rain during the night, in moderate quantity. Rain fell on Friday night also."

A comparison of the respective accounts of the earthquakes as stated above with the memorandums of the observations made here and published at the respective dates will be most convincing.

We have a further illustration, as follows: On the 28th of February at 11 o'clock A. M., a sudden and heavy blow was experienced at New-Orleans, and several vessels were injured by the wind.

On the first of March, next day, the ship Oneida, bound from Canton to New-York, encountered a terrible hurrieane off the south end of the Island of Madagascar, which hove the ship down on her beam ends. The same day, and the day following, the sea was so much swollen and disturbed at St. Helena that several vessels were shipwrecked in the harbor, and much damage done to buildings on the shore. The same day Nott's Island on the coast of North Carolina was nearly inundated by the sea, and great damage done. The wild fowl were killed in great numbers by the storm. The same day a tremendous snow storm was experienced at Norfolk and also at Richmond, Va. The same day snow fell three inches deep at Saltville, Va. Here are the results of the earthquake at Cincinnatti, traversing almost half across the globe.

It will be seen by the memorandums published in the star, that on the night of Dec. 23d, the temperature was stationary, that that peculiar state was preceded by a sudden fall of 3°. The same occurred on the 28th of April, and on the 28th of February the rise was 3°.

Two of the earthquakes occurred on the 28th day of the month—two on the 23d day of the month, and one on the 30th day of the month.

Extract from a Meteorlogical Record kept by the Editor on Brooklyn Heights.

Friday May 15, 1846.—4 o'clock A..M., 58; 5, 58; 6, 60; 7, 62 8, 65; 10, 70; 11, 71; 12, 72; 1, 73; 2, 72; 3, 70; 4, 68; 5, 68; 6, 62, black clouds in the south west—7, 62; 8, 61; 8½, 60; 9, 60; 10, 60.

Saturday May 16, 4 o'clock A. M., 59; 5, 59; 6, 59; 7, 62; 8, 66; 9, 66; 10, 66; 11, 65; 12, 64; 1, 62; 1½, 61, heavy rain; 2, 61; 2, 10, 61½; 2, 45, 60½; 3, 61; 3½, 63½, wind and rain; 3, 45, 62; 4, 62; 5, 60; 6, 60; 8, 58; 9, 59; 10, 60. The rain continued with trifling intermission from 30 minutes past 1 to 5 o'clock.

Sunday May 17, 5 o'clock A. M. 58; 6, 58; 7, 59; 8, 59; 9, 62; 10, 63; 11, 68: 12, 70; 1, 72; 2, 74; 3, 74; 5, 71; 6, 67; 7, 65; 9, 62: 10, 61; 11, 60.

Monday, May 18, 5 o'clock 60; 6, 62, 7, 68; 8, 75; 9, 72; 10, 77; 11, 78; 12, 80; 1, 81: 2 82; 230, 83; 2 45, 82; 3, 80, distant thunder; 3, 15, 76; heavy rain; 3 20, 75½; 3 30, 74; 3 45, 72; rain ceased; 4, 72; clear over head; 4 ½ 76; clouds approaching; 4 30, 65; 4 50, 73, very black clouds causing great comparative darkness; 4, 57, heavy rain; 5, 69½, heavy rain and vivid lightning; 5, 5, very heavy rain; 5 10, 67, heavy thunderbolt broke near by; 5½, 67; rain, thunder, lightning; 5¾, 66½, 5 35, 66; 6, 66; 6 30, 66; 6 45, 66, heavy wind and great rain; 7, 64; 7 5, 60; 7 15, 59, lightning; 8, 57; 9, 57; 10, 55.

Tuesday May 19, 4 o'clock 45; 6, 45; 7, 52; 8, 54; 9, 57; 10, 56; 11, 56; 12, 58; 1, 59; 2, 60; 3, 60; 4, 61; 5, 60; 6, 58; 7, 56; 3, 54; 9, 53; 10, 52; 11, 51.

Wednesday 20, 4 o'clock, 46; 5, 46; 6, 48; 7, 54.

A careful examination of the above record will be found very instructive.

---

* The 23d of April referred to above. Our record of that and the preceding two days, published in the Brooklyn Star of April 24, is as follows:

"Tuesday 21st April, 5 o'clock, 49 deg.; 7, 53; 8, 62; 9, 67; 10, 70; 11, 72; 12, 78; 1, 79; 2, 80; 3, 81, 3½, 82; 4, 81; 5, 78; 7, 73; during Tuesday night the temperature decreased 14 deg. being at 59 at 4 o'clock on Wednesday morning. Wednesday morning 4 o'clock temperature 59 deg. 6, 57; 7, 59; 9, 57; 10, 57; 11, 55; 12, 56; 1, 56; 3, 55; 4, 54; 5, 54; 6, 53; 7, 49. It continued at that throughout the night, and was the same at 4, 5, and 6 o'clock on Thursday morning, and at 7 rose to 51."

On Thursday a heavy storm set and rain fell plentifully.

We have no account of earthquakes on the 22d of April but the peculiar state of the temperature gives abundant reason to suppose an earthquake took place on that day near the equator. It may be that we may never hear of it, for had that at Memphis, or Maysville, or Cincinnati, taken place in the wilderness, where no newspapers were printed, we probably should never have heard of the occurrence.

CHARTER.

CORPORATION OF NEW-YORK.

Papers Dd. No. 73.

Gov. Montgomerie to the Board of Trade.

New-York, May 6th, 1728.

My Lords.

I thought it my duty to take the first opportunity of acquainting your Lordships, that after a tedious voyage and being five months out of England, I arrived here on the 15th of last month. I that day published His Majesties Commission here and at Perth Amboy in New-Jersey, the week thereafter.

I have been so short a while in this country, that I dare not yet take upon me to give your Lordships a particular account of the state of the province, nor of the circumstances of the frontiers on the side of the Indians. I shall hereafter be very punctual in all my accounts and will always endeavor to put things in so true a light that your Lordships may have reason to depend upon what information I give you.

Governour Burnet tells me that he has sent you a full account what was done in the assembly here which he dissolved in November last, and in some time thereafter issued writs for calling a new one, but they had not met when I arrived. Application was immediately made to me and the people of the best interest of the province advised me to dissolve this new assembly, but I did not determine myself till I consulted with every member of the council singly, and with what gentlemen of the province were then in town. They all unanimously, and even Gov. Burnet himself advised me, to call a new assembly, as the most probable way to compose differences, and reconcile all animosities; In compliance with all their advices, I dissolved the assembly by proclamation, and writs are preparing to summon a new one to meet after harvest.

All I can yet inform your Lordships of, as to affairs in New-Jersey, is that in December last, Governour Burnet met the assembly there which ended in February; several laws were passed, of which he himself will give you a particular account. As soon as I can have them from the secretary, I shall transmit them to your Lordships, ingrossed, under the seal of the province. I hope your Lordships will be so good as to forgive the imperfect and indistinct accounts I have given you; hereafter I hope to convince your Lordships that my whole business here shall be to do what is for His Majesties service, and for the good of the provinces he has been pleased to entrust to my care. I shall alwyas strive to deserve your Lordships approbation, for I am, with great respect, My Lords,

Your Lordships' most obedient,
And most humble servant,
J. MONTGOMERIE.

Endorsed,

Rec'd, Read, } June 20th, 1728.

Col. Cosby to the Board of Trade.

New-York, 18 Sept., 1732.

My Lords,

I have the honor to acquaint your Lordships of my arrival to this place; the assembly is now a sitting, so soon as they are upp, I will not faile by the first ship that goes for England to send all the acts in order to be laid before you. I have just this moment received your Lordships' letter with a copy of Capt. Carrington's inclosed. I will immediately write to the Commissioners for the Indian affairs to consult with the Five Nations in order that they may interpose, and will do every thing that I can in that affair. I am, my Lords, with the greatest respect imaginable.

Your Lordships' most obedient humble servant,
W. COSBY.

Extract from a letter, written by GOVERNOR COSBY of the Province of New-York to the Government at Home, on the 29th of August 1733, in reference to the NEW-YORK CITY CHARTER, called Montgomerie's charter.

"No. 10 is an act confirming the charter of the city of New-York by Governour Montgomerie, MY LORDS, as to this act I would beg leave to observe that the Charter which was designed to be confirmed by this act having past away grants of a very extraordinary nature that I thought it necessary for me to acquaint your lordships with some of the inconveniences arising from it. By this charter are granted all the Islands near and round his majesties garrison here, the soil of the East River, as far as low water mark and extending in length to the utmost limit of the Island whereby His Majesties prerogative and interest may be in danger of suffering, and his ships stationed here under the necessity of becoming petitioners to the Corporation for a convenient place to carreen, or refit, for this charter having granted the Corporation, all the Islands as well near and round as before the fort which lay commodious for the security and defence of it, in case of any eruptions, was as I conceive lodging too great a power in them, in case of any necessity, and by so much lessening of the King's prerogative.

"I must own, my Lords, that I was *merely* surprised into an assent to this act, it having been exhibited so very early after my arrival (as your Lordships will perceive by the act itself) that I had not an opportunity of being acquainted with the nature and design of it, and from the general words of the title of it very little apprehended the nature of its extent.

"The act in general terms confirms the city all the grants to them at any time heretofore made without either referring to any one grant in particular, or mentioning what the grants were that were designed to be confirmed by this act, so that your Lordships on view of the act could not determine what rights, grants or particular privileges were to be confirmed by the act and for ought appears some (if not many) of these grants or charters may be (and as I believe are) prejudicial to His Majesties' interests.

"It were but lately my Lords that I came to any knowledge of the charter designed to be confirmed by this act, and that charter consisting of a vast number of skins of parchment, and the vessel by *whom* I now write being to sail in a day or two has rendered it improbable for me by this opportunity to have sent to your Lordships a copy of it, and without which your Lordships could not judge of the act, the act being worded in general terms, but shall send it by the next ship, and now hope that what I have offered will justify your Lordships to stop any proceedings at your board upon that act until I have this honor a second time to write further to your Lordship's concerning it."

REMARKS.

The Constitution of this State contains this provision:

"But nothing contained in this Constitution. shall affect any grants of land within this State, made by authority of the said King or his predecessors, or shall annul any charters to bodies politic or corporate by him or them made, before that day, or shall effect any such grants or charters since made by this State." Sec. 14, Art. 7.

The charters of the City of New-York were never granted by the said King or his predecessors, nor was it granted by this authority or sanctioned by him.

Members of Common Councils of the City in the management of its public concerns are in every respect like the "Selectmen" of towns, or the Supervisors of counties—mere administrative officers, nothing more—they have strictly speaking no legislative power for the Constitution has vested that solely in the Senate and Assembly, and these bodies cannot delegate this power.

An Act to provide for the calling of a Convention in relation to the Charter of the City of New York. Passed May 9, 1846.

The people of the State of New-York, represented in Senate and Assembly, do enact as follows:

§ 1. An election shall be held in the city of New-York on the first Monday of June ensuing the passage of this act, for the selection of delegates to a county convention for forming a new, or revising and amending the present charter of the said city of New-York.

§ 2. Each of the wards of the said city of New-York shall be entitled to the following representation in said convention, viz: First ward, one delegate; Second ward, one delegate; Third ward, one delegate; Fourth ward, two delegates; Fifth ward, two delegates; Sixth ward, two delegates; Seventh ward, two delegates; Eighth ward, three delegates; Ninth ward, three delegates; Tenth ward, two delegates; Eleventh ward, three delegates; Twelfth ward, one delegate; Thirteenth ward, two delegates; Fourteenth ward, two delegates; Fifteenth ward, two delegates; Sixteenth ward, two delegates; Seventeenth ward, three delegates; Eighteenth ward, two delegates.

§ 3. Notice of such election shall be given, and the same shall be provided in the manner now provided by law in regard to charter elections in the city of New-York, and the name of each delegate voted for shall be written or printed upon each ballot, and the ballot shall be endorsed "delegates to the convention," and a separate box for the deposit of such ballots shall be kept by the inspectors of each election district in the several wards of the said city.

The result of such election shall be ascertained and certified in the manner now provided in the act regulating charter elections in said city.

§ 4. All the provisions of law for the purity of elections in the city of New-York shall apply to the election held under this act; and all false swearing at said election shall be deemed and punished as perjury.

§ 5. The delegates to be chosen under this act, shall meet in the city of New-York on the first Monday of July next, at the chamber of the board of aldermen, and shall then, or as soon after as may be practicable, organize and adopt rules for their government. They shall complete their business so that any charter or amendments adopted by them may be submitted to the electors of the city and county of New-York, as in the next section provided,

§ 6. The charter or amendments proposed by the convention organized under this act, shall be submitted to the electors of the city and county of New-York, at the election to be held in the said city on the first Tuesday after the first Monday of November, in the year 1846, and if adopted by a majority of the votes cast on the question, shall be submitted to the legislature at the next session thereof for approval, and if so approved shall become the charter, or a part of the charter of the said city of Ne-York; and in case the said convention shall prefer amendments and not a new charter, the said amendments shall be submitted to the electors of the city and county of New-York separate or in clauses relating to the same subject. The ballots to be used at the election to be held under this section, shall be prepared in such form as said convention may direct, and a separate box for the deposit of such ballots shall be kept by the inspectors of each election district in the several wards of the said city, and the result of such election shall be ascertained and certified to in the same manner now provided in the act renulating elections for members of assembly.

§ 7. The expenses of the election for delegates to be held under this act, and all expenses attending the convention, shall be paid out of the treasury of the city of New-York. The proceedings of the convention shall be filed in the office of the clerk of the county, when duly certified to by the presiding officer and secretary or secretaries of said convention.

§ 8. The members of the convention shall have power to provide for their own pay, which shall not exceed one dollar and fifty cents per day for every day actually in session.

☞ The Clerk of the Anti-Assessment Committee copied the act on the 13th of May, prior to the adjournment of the Legislature, in the office of Secretary of State, but as his copy disagreed with the Corporation copy, we wrote our friend, Mr. Sec. Campbell, who is one of the most faithful and worthy public officers in the State, and received from him a letter, of which the following is a copy.

"Secretary's office, Albany, May 19, 1846.

"Dear Sir,—Your letter of yesterday has been received. The act entitled "*An act to provide for the calling of a Convention in relation to the Charter of the City of New-York,*" passed May 9, 1846, by a two-third vote, contains nine sections. The last is as follows:

"§ 9. *This act shall take effect immediately.*"

"I sent a certified copy of the act to Mr. Valentine, Clerk of the Common Council last Friday, which you can examine. Yours, very respectfully,

ARCHIBALD CAMPBELL,
Dep. Secty. State.

E. Meriam, Esq.

NO NEW VICTIMS OF TAXATION.

The Finance Committee in the Senate of this State have reported AGAINST the application for a law to tax the merchandize in the hands of commission merchants the funds in the hands of Bankers belonging to persons abroad in the city of New-York and against taxing the citizens of other states and of other counties in this State who happen to transact business in the city of New-York. The Report is an able document, it is from a very able Committee and accords with the views expressed by the meeting held at the merchant's Exchange in 1843.

The Corporation need not seek out new victims of taxation—the remedy is elsewhere, and is in the stopping of the profligate expenditure of the public money—in ceasing to squander the money wrung out of the people by destructive taxation—stop the treasury leaks—these are the remedies, We here give the Senate Report.

STATE OF NEW-YORK.

No. 109.

IN SENATE,

March 27, 1846.

REPORT

Of the finance committee on the petition of Lewis Silbrand, and others, for the taxation of the personal property of non-residents of the city of New York.

Mr. Porter, from the committee on finance, to whom was referred the petition of Lewis Silbrand and others, praying for the passage of a law that shall make all personal property liable to taxation, whether the same is owned by non-resident citizens or otherwise,

REPORTS:

That the committee have had the said petition under consideration; that it alleges that it has been ascertained that there is over ten millions in value of personal property in the city of New York, belonging to merchants and others, who are doing business in that city, but who do not reside therein; and that this property is not taxed in that city, although its owners derive equal benefits in the protection of their property with those who are compelled to pay by tax the expense of the city government; that many persons doing business in the city have become residents of neighboring places, for the purpose of avoiding taxation upon their personal property in the city, all of which the petitioners deem a grievance which they claim should be redressed.

The petition is very numerously signed, and shows that very many of the inhabitants of that city entertain the opinion, that it is consistent with the general policy of our laws, to impose taxes for the purpose of meeting the expenses of the city and state governments, upon personal property found within the city, irrespective of the residence of the owner. It may not, therefore, be inappropriate at this time to refer to the several statute provisions on this subject, to show the scope and policy of the law on the subject of taxation in this respect.

In the first place in regard to real estate, it is provided (1 *R. S.* 389, *sec.* 1, 2, 3.) that every person shall be assessed in the town or ward where he resides when the assessment is made for all lands then owned by him, within such town or ward, and occupied by him, or wholly unoccupied; and if it shall be occupied by another person than the owner, it may be assessed in the name of the owner or occupant. But if it shall be unoccupied, and the owner does not reside in the town or ward, it shall be assessed in that town or ward as the land of a non-resident. And sections 11 and 12 further provide that such lands shall be placed on the assessment roll, as the lands of non-residents, with some proper description to designate them.

Thus it will be seen that in respect to real estate, the law requires that it shall be assessed in the town or ward where it is situated, without regard to the residence of the owner.

But in respect to *personal* property the 5th section of the same title provides that every person shall be assessed in the town or ward where he resides when the assessment is made, *for all personal estate owned by him.* And section 9, which gives directions as to the form of the assessment roll, provides that the assessors shall set down in the fourth column the full value of *all the taxable personal property owned by such person*, after deducting the just debts owing by him.

The statute is therefore equally explicit and clear, that all personal property shall be assessed in the town or ward where the owner resides and not elsewhere. The universal practice has been, it is believed, in accordance with this principle, with the entire acquiesence until this time of the whole people, from the organization of the government. It is now sought to make New-York an exception in the application of this uniform principle of taxation. And the only argument offered in favor of this position is, that while the owners reside out of the city, their business and property is within the city, and they enjoy the protection of the government without sharing in the burdens of its taxation. It might be inferred that the petitioners supposed, that if they sought to make New York an exception to the general rule, that the evil of which they complain was confined to that city. Whereas it is believed that it is a common circumstance that individuals possessing wealth, will employ their capital consisting of personal property in one city or town, while they reside in another. The property, does not in any case, if assessors do their duty, escape taxation. It will contribute its due proportion to the discharge of the public burthens, though not always in the locality where it is employed. Still it is not impossible, nor indeed improbable, that equal and exact justice is done in this respect. There may be as great an amount of personal property owned by residents in the city of New-York, and employed in business elsewhere, and which is of course taxable in the city of New York, as there is employed in the city and owned by those who reside out of it.

The principle of taxing personal property in the city or town in which the owner resides, the committee believe to be sound and just in all respects. To adopt the other system, of taxing personal property where it was employed in business, irrespective of the residence of the owner would be exceedingly perplexing and troublesome in practice, and inquisitorial in character, and cannot be required upon any principle of justice or fairness. Personal property has no fixed locality, except as connected with the habitation of the owner. It may appear reasonable to the petitioners, that since a large amount of personal property is employed in business in the city of New York, while the owners reside in the neighborhood of the city, that the property should be taxable in the city. But if that principle is adopted in this instance, it must be made universal; and then the personal property of those who reside permamently in other States and in foreign countries, if found in the city of New York by the assessors, would be subjected to taxation there. Even property sent there to be sold and awaiting a market, would in that view be properly set down in the assessment roll; although the proceeds of it may have been transmitted to the owner, before that roll should be completed, and the owner assessed for it at the place of his residence.

The committee discern no reason or argument for departing from the uniform and established rule, that connects the taxation of personal property with the residence of the owner, and they recommend the adoption of the following resolution:

Resolved, That the prayer of the petitioners be denied.

TAX UPON NON-RESIDENTS.

At a public meeting held at the Merchant's Exchange in the city of New-York, on the 6th of March, 1843, in relation to Taxes and Assessments, Preserved Fish, Esq., was called to the Chair, as President of the meeting, and William B. Crosby, Peter Cooper, Peter Schermerhorn, Abraham Van Nest, Abraham G. Thompson, George Griswold, Charles H. Russell, Jonathan Goodhue, Peter Embury, Peter I. Nevius, Peter Lorrilard, Jr. and John Haggerty as Vice Presidents.

These gentlemen were of both political parties.

The memorial of the meeting to the Legislature signed by all the persons above named, was presented in the senate of this State on the 11th of March, 1843, by the President of that Honorable Body, and is now on file in the Senate. This memorial contained the following:

"The Remonstrants represent that the Real Estate situate in the city of New-York the principal sea port of this great and growing state is valuable mostly in consequence of the Commercial advantages which said city possesses; and whatever laws are or shall be enacted which impose restrictions or burdens upon trade and Commerce in said city alone and distinct from the rest of the state is an indirect tax upon such real estate, operating in a two-fold degree, depreciating the value thereof in the same ratio as Commerce and trade are affected,—also hindering improvements and decreasing its population. The provision of one of the said bills of the said Common Council, is, that persons doing business in said city and residing beyond its limits, shall be taxed in the said city and not elsewhere in this State, or if they live without the boundaries of this State, such citizens must pay tax on their personal property in the state where they reside, and also in the State where they do business, making a double tax. This provision involves principles which are of great importance, and if it is to become a law, may lead to the passage of retaliatary laws by other States and thus the harmony of the Union be disturbed, very much to the injury of trade and Commerce as well as to the detriment of the public welfare. The provision of the said bills which requires every inhabitant or person doing business in the city of New-York to make an inventory or schedule of the personproperty belonging to him or held by him as agent for others, and to return the same under oath to the assessors within a limited time, is disapproved of, and considered inquisitorial, arbitrary and oppressive, and will in many cases be difficult and in some almost impossible to comply with."

"It is suggested that the present law of the State is sufficiently ample in this particular, and that it affords the assessors as much opportunity or means of ascertaining what persons are liable to be assessed for personal property as is needed. By the present law, they are authorised to assess any and every inhabitant, for personal property, as great in amount as they believe him to be worth; and if they cannot satisfy themselves as to the amount, they can set down as large an amount as to compel the person thus assessed to reduce the same under oath, or otherwise pay the tax on the said property.

"It is said by public officers, as the remonstrants are informed, that many persons escape taxation on personal property who are liable to taxation; this, it is suggested, is the neglect of the assessors, and not the inadequacy of the present provisions of law.

"The provision which authorises the imposing a tax upon the personal property, merchandize, produce, funds, &c., &c., in the hand of an agent, is a new feature sought to be incorporated into the laws of the State, and made applicable to this city only, involving principles of very great importance. Should this provision become a law, the effect will be *to drive business away from this city*, as well as money funds, and hereafter the interest on public and other pecuniary obligations will be made payable without the bounds of the tax district."

WHARF TAX.

An extraordinary provision has made its appearance in a bill introduced into the House of Assembly, providing for levying a wharf Tax, *secretly*, by inserting a clause at the foot of a bill relating to other matters. Such a system of legislation we are confident that the legislature will never give countenance to.

STATE OF NEW-YORK.

ASSEMBLY,

April 10, 1846.

No. 415.

AN ACT to amend an act concerning passengers in vessels coming to the port of New-York, passed February 11, 1824.

6. "*and said Corporation shall have full power to regulate the rates of wharfage charged upon all goods of vessels discharging in, at, or upon any wharf, pier, or slip in said city.*"

If there is need for the passage of a law in relation to wharfage, let a bill with a proper Title be introduced, and not insert this extraordinary provision in a bill of a title calculated to mislead the persons interested. The Corporation have recently leased the wharves, piers, &c., at public auction. A Remonstrance will be sent to the Legislature against this provision, in the mean time the members from the country will take care that their butter, pork, ashes, &c., are not thus indirectly taxed in the city of New-York.

The Flour and Produce pays a tax in the Storage and Commissions, for the Commission Merchant pays a tax and the store house is also taxed, and the vessel pays wharfage.

The Wharves, Piers, &c., are county property the same as Bridges and Roads, and are paid for by a County Tax.

[NOTE.—*The sleeper killed the bill.*]

AMERICAN SALT.

Speech of Hon. A. C. Hand, of the fourth senatorial district, in the Senate of this State in relation to the duty on Onondago Salt, reported in the Albany Atlas.

THE SALT DUTIES.

REMARKS of Mr. HAND, in Senate, March 20, in Committee of the Whole, on the bill in relation to Salt Duties.

Mr. Hand said, that as a member of the Committee on Finance, he would try to give a few statistics, showing the reasons for and against the bill reported by the Committee, and other propositions now before the Senate; among which was one from his colleague, (Mr. Clark) to make the tolls equal on foreign and on our own salt; and another by his colleague, (Mr. Mitchell,) to put the duty at three cents per bushel instead of two as proposed by the committee on finance. He said it was well known that there are but three great sources for supplying us with salt; for although Pennsylvania made, perhaps three-fourths of a million of bushels, and Massachusetts nearly half a million, and a little was made in about 20 of the states, yet foreign importation, the Kanawha springs in Virginia, and the Salina Works, were the great fountains of supply. It is supposed the United States use now about 17 or 18 millions of bushels, of which last year we imported over 8½ millions; the Salina Works made nearly four millions; and the Virginia Works, it is believed, made as much. The Hon. Abbot Lawrence, in a recent letter, has said our home manufacture is about ten millions of bushels, but he, (Mr. H.) doubted there being quite so much; and not over one-fourth of a million were exported, and this year not probably over 100,000 bushels. It is an article of prime necessity and the localities of its manufacture were limited, though perhaps the amount that can be made at those localities is not.

Of the nearly 7 millions imported in 1841, England (which exports about 12 millions bushels annually) furnished about 3¾ millions, British West Indies, about 1¾ millions, and Portugal over half a million, The amount used in the United States, is wonderful, and the demand fast increasing; and yet the price is decreasing; ten years ago it being betwen 40 and 50 cts. per bushel, and much less now as he should show. It has been said, that an adult uses about 16 lbs., annually, but it seems that in the United States, the total consumption is nearly a bushel to an inhabitant, and it is constantly applied to new uses as manure, &c. The importation of 8½ millions last year, was valued in imposing the duty, at nearly $900,000, or a little over 10 cents per bushel; and the duty imposed was over 70 per cent on the cost; amounting in all to over $680,000.

The committee on finance has reported a bill imposing a duty of 2 cents per bushel, and all drawbacks or bounty were to be abolished. These drawbacks or bounties were granted by the law of 1843 to encourage the manufacture of the article. It amounted to 7 cents and 6 mills at tide water per bushel, and ranged from 5 cents to as low as 4 mills in Ohio, Pennsylvania, Indiana, Buffalo and Oswego, being different in different places. The effect of this bounty was to increase the annual amount that came to tide water from about 5,000 bushels to 205,000 bushels in 3 years, and made a difference of nearly 170,000 bushels the first year. This year nearly 900,000 bushels have been brought to tide water, and nearly 2,000,000 have left the state the other way. This makes the question of duty very important. As the duty and tolls now are, the income on a barrel of salt brought to tide water is as follows:

Duty on 5 bushels at 6 cents, (per 56 lb)	30 cents.
Tolls,	11.79
	41.79
Drawback on reaching tide water,	38.00
Nett to the State for tolls and duty,	3.79

The proposed new duty and tolls would produce a very different result. On a barrel it would be as follows:

Duty at 2 cents (per 56 lb)	10 cents.
Tolls, (1 mill on 1000 lbs. per mile,)	5.13
Received by the State,	15.13

Making a difference of 11.34 cents per barrel in favor of the State.

Can the business stand this change? A majority of the committee thought so, so long as the present tariff is kept on, though he (Mr. H.) had his own views as to the salt coming to tide water. That this state property ought to contribute something to our present burdens no one doubted. The receipts of the canals last year just about paid expenditures and interest on the original cost. The tolls received on salt, however, fell short of its proportion. The amount of tolls received was only about one-thirtieth of the whole tolls whereas the tonnage was about one-seventeenth. It might be useful here to state the various sums imposed as duty at different times. He would put the tariff along side.

Duty.	Tariff.
To 1817, 3 cents.	1788, 6 cents.
1817 to 1834, 12½ cents.	1790, 12
1834 to 1843, 6 cents.	1813, 10
Since 1843, 6 cents and bounties.	1830, 15
	1832, 10
	1842, 8

These are imposed upon the bushel of 56 lbs. The duty, without the drawback, still remains at 6 cents. The tariff too was cut down to about 7 cents by the operation of the "compromise act," but that is not important now.

To ascertain whether the business could bear the new plan, he would make an estimate of the cost &c. Take a barrel of boiled salt:

Duty at 2 cents, (as proposed,)	10 cents.
Toll,	5.13
Making	30
Transportation (say,)	26
Per barrel,	71,13

(Not including barrel and packing.)

Suppose we take the solar salt, of which there was made, he regretted to say, less than 400,000 bushels last year. It weighs probably from 70 to 75 lbs. A bushel by measure runs thus:

Making (say,)	11
Duty 2 cents for 56 lbs.	2.5
Toll,	1.2
Freight, (say,)	7
Cost at tide-water,	21.7

This 21. 7-10th cents does not include barrel, &c., but supposes it brought in bulk.

An estimate had been made of the cost of Turk's Island salt, which weighed about as much. Take a bushel by measure:

Cost when shipped, (say,)	10 cents.
Tariff, (8 cents on 56 lbs.)	10 "
Freight, (say,)	8 "
Cost in New York,	28 "

A statement of cargo prices has been kindly furnished by a friend, by which he found them for 12 months past to average 31 cts. 8-10ths, for Turk's Island, and Liverpool 24 1-2 cents. From this statement it could be seen that probably the business could stand the proposed change, so long as the tariff remained as it now is, but if the 8 cents should be taken off by government, and foreign Salt admitted free, in all probability, the Salina Salt would no longer reach tide water. And besides the tariff, the tolls on foreign salt is 15 times as much as it will be on our own, which would always give ours the advantage west of Albany. One cent duty would hardly do more than keep the works in repair, and many facilities on the canal are now afforded, as wood toll-free, &c. He thought, at any rate, that this duty of 2 cents, should be imposed on salt not brought to tide-water. Perhaps one cent would be enough on that, as the consumer there had a choice of markets. Gentlemen had complained of the discrimination. But the difference is in facilities. If the consumer in the interior gets it at reasonable rates, is not that enough? Suppose the State, by receiving only *one* cent on a bushel in all, duty and toll, brings to tide water one million of bushels, when if *two* are imposed, none will come, should the interior complain that the State saves this $10,000, and aids in keeping down the article at tide water, by competition? He should regret to lose the New England market.

Something (said Mr. H.) has been said about reducing it as low as possible, as all must use it. That is very true, but we require tolls on all necessaries—nearly 9 cents on corn from Buffalo to Albany. And upon all kinds of provisions too. There is a large debt unpaid, the interest on which must be met, and this is the property of the State, and should it not contribute a share? On the other hand he would not embarrass the works. The amount annually paid by other States to our citizens for salt was large, and many persons are employed. By fostering these works, you keep up a brisk competition on the east and on the west, and it keeps down the foreign article.—This induced him to oppose the proposition to place foreign salt upon the same footing. The tolls now may be too high on foreign salt, but if put on par with our own manufacture, he feared it would destroy our works, and consequently destroy competition, and very much enhance the price of the article in a few years everywhere. Mr. H. said he had thus thrown together the items of information he had received. They might be, in some respects, incorrect, but if useful to the committee in forming correct opinions, he should be satisfied."

In the last number of our Gazette several typographical errors occurred in overlooking the proof sheet in the statement of analysis of the several specimens of salt. We correct these by recapitulating the statements of analysis as follows:

Salt made by solar evaporation at Geddes.

Pure chloride of sodium,	992,50
Sulphate of lime,	6,50
Carbonate of lime and magnesia,	1,00
Chloride of calcium and magnesium,	trace
	1000,00

Salt made by boiling saturated brine.

Pure chloride of sodium,	989,44
Sulphate of lime,	8,92
Chloride of calcium and magnesium,	1.64
	1000,00

Turk's Island Salt.

Pure chloride of sodium,	984,04
Sulphate of lime,	13,16*
Carbonate of lime and magnesia,	2,80
	1000,00

* And sulphate of magnesia.

Salt made at Saltville.

Chloride of sodium,	90,510
Sulphate of lime,	9,314
Carbonate of do.	0,126
Chloride of calcium,	0,050
	100,000

The analysis of the brine at Syracuse compared with that at Saltville affords more accurate information than the analysis of the prepared salt of the two establishments.

Dr. Beck made an analysis of the Onondago brine in 1837, and C. B. Hayden, Esq., made an analysis of the Saltville brine in 1843. We have the brine of both these salines in our cabinet, and also the salt, and a careful examination of all these, lead us to confide in the correctness of the respective analysis.

1000 parts of Onondago brine from four different wells produced in water 856,49,100 average—the same quantity of the Saltville, Virginia, brine produced but 754,5.100 water.

1000 parts of Saltville, Virginia, brine produced in chloride of sodium 240,52,100 and the brine of four wells at Onondago Salines average produce 136,48,100 chloride of sodium.

1000 parts of Onondago brine produced in chloride of calcium and magnesium 2,04,100 ⋈ 1000, and the Saltville brine but 0,08,100 ⋈ 1000 of chloride of calcium.

Extract of a letter from Thomas L. Preston, Esq. of Virginia, one of the proprietors of the Salt Mines in Washington county in that state, written at Syracuse, while on a visit to the Onondago Salines of our State, to the Editor.

"Syracuse, N. Y., April 20, 1846.

"My Dear Sir.

"On my arrival here I found every thing in the salt business in confusion. The water had not been let into the canal, and upon that depends the moving of the machinery for pumping the brine.

"The salt blocks were dismantled, and most of the

operatives were engaged in the unsightly process of reconstruction.

"I wished to see them in this condition for then I could have a better idea of the manner of putting them up, and a practical occular demonstration of the principles upon which they worked.

"I saw many in this denuded condition, and always sought, in consulting with the manager, information in regard to his notion of evaporating the brine. In the character of the persons enaged in this business here, I confess I have been disappointed. For the most part they have little science, and are content to follow the marked and beaten track of by gone years. Their structures are, as you informed me, rough and temporary, put up for present use on the most economical scale. From all I see around me it is but too apparent that the salt manufacturers have not prospered, and that the competition, as it is managed, is too great to make it a lucrative investment of capital. The system of hypothecating the salt manufactured by those of small means must always keep down the prices and work to the injury of those who have capital and wish to follow up their business in a regular manner. Mr. Nolton, of the Hope Factory, tells me that with all his advantages he is obliged to economise very closely to realize any thing from his operations. Here at Syracuse, that factory is acknowledged the best, and is rather looked up to, as the model. It is evidently the best arranged in every way, but I think there are defects in it which might be easily remedied and which would add materially to the saving of labor and to the more rapid evaporation of the brine. The wood used is even coarser, larger than that we use in Virginia, and much heat is lost by the manner of laying down the kettles. I have thought of several minor improvements in the construction of the blocks which I will submit you when we meet.

"The pans used here for collecting the Bittern, and other sediment, are eminently defective—inefficient. In the first place they do not fit the bottom sufficiently close, and they are so small that I presume not more than one half of that which is actually precipitated, is received in them. Still the salt is very white and makes a good show, and in the western market would sell well. A better article however can be made of our Brine, I am confident, and at as little cost. And this suggests to me a fact in the calculation of the expense of making salt that has generally been overlooked in the estimate as given at different places. We at Saltville, pump the water—cut and draw in the wood—make the barrels—build the boats and ship it to market ourselves. All these go, in some measure if not entirely, in our estimates of the price of manufacture. Here nothing is taken into the account but that which is necessary to the simple evaporation of the brine. But more of this anon.

"As the works were not in operation last week, after looking through them for two days, I resolved to proceed at once to Niagara, and spend more of my time here on my return. I left here accordingly on Thursday morning, and got back yesterday, Sunday, at 6½ A. M. I was at the Falls from 10½ A. M. Fri till 2½ P. M. Saturday. To say how much I was delighted is entirely impossible. Language but faintly conveys the impressions made upon the mind by such grand works of nature. We stand "and gaze and gaze till the heart reels with its fullness," and the mind is bound by a sense of the greatness and power of God.

"These two days I look upon as an epoch in my life. The only drawback to my pleasure was that I was alone—not even cheered by the papers giving an account of your visit. By some unexplained delay, they did not reach me till last Friday or Saturday, and I of course did not receive them till yesterday, (Sunday) morning. I have spent to-day amid the vapor of the salt kettles at the Hope Factory mostly.

"I visit now (6 o'clock P. M.) Mr. Getteau's old works. I call them *old*, for they are abandoned. I will give you my impression of them in my next. I have made Mr. Conkey's acquaintance, and find him like every one else here, kind and attentive.

"Do you not think PROF. MAPES, mistaken in his theory of the section pump? I have been thinking of it since we parted, and I confess do not fully concur with him.

"The pressure of the atmosphere will only raise water 32 feet—and no system of stationaries or underfoot valves I have ever seen bring it up higher—suppose for instance the first stationary is 26 feet below the surface of the water where a vacuum has been formed. The piston strikes against the vacuum is not made more complete, and I see no force sufficient to force the water on. 'Tis not true, you then pump from a cistern 20 feet higher than the water's ordinary surface. I would be glad you would look at this a little before we meet. I hope to be in New-York by Saturday night.

"I may drop you another line before leaving here. In the meanwhile however be assured of my kindest and most grateful regards and believe me,

"Most respectfully,

"Your ob't. sorv't,

THO. L. PRESTON."

E. Meriam, Esq.

"Saltville, Va., March 18, 1846.

"Dear Sir–I have an opportunity now of addressing you a letter by the hand of Thos. L. Preston, Esq., who will pass through New-York on his way to Syracuse, which place he intends to visit for the pupose of making a personal examination of the various improvements in the manufacture of salt. He will deliver you samples of the salt which I have manufactured since my arrival. The finest grained specimen was made in a front kettle by rapid evaporation, and the coarser specimen in the back kettles by slow evaporation, while the furnace was cooled down.

"You will perceive by these specimens, that the Saltville brine has a stronger capacity to assume the cubic form of crystals than that of Syracuse. This I attribute to the absence in the Saltville brine of a certain impurity which is contained in that of Syracuse.

"I wrote to you soon after my arrival here, and I gave it as my opinion that the Saltville brine contained as much oxide of iron and sulphate of lime as the Syracuse water; but after more careful examination, I am satisfied that it contains far less impurities. It works more kindly than any brine that I have been acquainted with, and with proper apparatus as pure and beautiful salt may be made from it as the world produces.

I have made such improvements as the nature of the circumstances, and the limited time I have been here has admitted, and the people think that the improvement is very great, but I have hardly begun to do in the way of improvement what can be done, and what I intend to do.

"Mr. Preston will collect for you, before he starts, some specimens of the various rocks of this neighborhood, which he will present to you on his arrival at your place. He is the brother of Senator Wm. C. Preston of South Carolina, and is the manager of the large Preston estate at this place. He is a highly intelligent gentleman, and you will be much gratified by a call from him.

"You would be delighted with a ramble among our mountains in search of mineral treasures in aid of the cause of science. The country presents a charmingly romantic prospect. The mountains in this vicinity do not present a continuous unbroken chain, but are in the form of a succession of pyramids, rising from two to five hundred feet high, with narrow passes between them, in many places only of sufficient width for a wagon track. I hope that you will visit us in the course of the summer.

"I am keeping a table of the temperature of the atmosphere which I will furnish you hereafter. This morning at eight the thermometer stood at 42°, and now. at 2 o'clock P. M. it is at 65°.

"Please write to me often if you have leisure. I thank you for the papers sent me since my arrival, which were duly received. It is like meeting with an old friend to see a paper from New-York.

"Respectfully yours,

THOS. SPENCER.

E. Meriam, Esq."

"Saltville, Washington Co., Va.
March 22, 1846.

"E. Meriam, Esq.

"Dear Sir:–Your letter of the 12th inst., was received yesterday, for which I thank you. I had written to you two days previous by Thomas L. Preston, Esq., who left here on that day for Syracuse, which place he intends to visit for the purpose of making a personal examination of the various improvements in salt-making.

"Mr. Preston informed me that he intended to call upon you, as you had been a correspondent of his brother, Senator Wm. C. Preston, and that he should provide himself with the various specimens of rock and minerals of this neighborhood. Knowing that it will afford you very great pleasure to see him and receive the minerals, I take this early opportunity of answering your letter received yesterday, and of apprizing you of his intention to visit you, supposing that you may receive this before his arrival, as he has numerous friends to call upon on the road, and may he detained several days in his journey.

"The Barytes is found "in place," six miles from here. I have not yet seen it, excepting a small fragment that Dr. McCall gave me, which he happened to have on hand. I put it up with a small package of specimens and sent it to my family by Mr. Preston. If he does not happen to have a specimen of Barytes for you, please to request him to open my package and give you the specimen it contains. I beg that you will not fail of doing this, as it will in your hands be more beneficial to the cause of science, and I can supply my family at another time. I sent you by Mr. Preston, samples of salt which I have manufactured since my arrival. It is better than that which has generally been made here, but I have not yet had opportunity of introducing those radical improvements which are needed to make salt with economy, and to produce that unsurpassed quality which the Saltville brine can furnish.

"In relation to the snow storm, concerning which you enquire, the first severe storm occurred on the 14th of February, while we were on board the Packet Boat ascending the James River Canal, and approaching Lynchburg. The previous day was delightful. This latter place is 142 miles west of Richmond and here the Canal terminates. It is a broken, mountainous country, and the gneis, which is the prevailing rock has been at a former period very much disturbed and the strata so distorted that it is difficult to discover any thing like a general inclination or "dip," Much of it is in a vertical position, and in some places it seems to have been turned upside down. Lynchburg is 180 miles from Saltville. We performed this part of the route by stage, and a rougher stage ride I never had. We arrived at Wytheville, in Wythe County, on the evening of the 17th of February, two days after taking stage at Lynchburgh, distance 150 miles. It was at this place that we encountered the severest snow storm, and were detained at Wytheville in consequence four days. It snowed most of the time while we remained there, with a strong wind, I think blowing from the East.

"Saltville is 28 miles from the Tennessee line and 30 miles from North Carolina. It is 90 miles from Kentucky at the gap in the Cumberland mountains. The Clynch mountain is in view about six miles distant North Westerly and is at that point 2760 feet high, the top of it capped with white sandstone, resting upon red sandstone both of which are distinctly visible at this place. By water navigation down the Holston and Tennessee Rivers, it is 150 miles to Knoxville, Tenn., and 600 miles to Huntsville, Alabama. The north fork of the Holston at this place is little more than a mountain rill, excepting in time of a freshet, when it swells to a river about 200 feet wide, and six feet deep with a strong current, at which time boats take 200 barrels of salt, and proceed down stream, but the navigation is difficult and dangerous for the first thirty miles.

"Freight from this place to Lynchburg is about one dollar per hundred, and about 50 cents from thence to Richmond.

"The chimneys of the salt furnaces here are entirely too low to manufacture salt with economy. I can stand beside some of them on the ground, and look down them. The heat is chiefly spent upon the front kettles to the destruction of the metal, and by this process much unburnt carburetted hydrogen is distilled from the fuel, and passes off into the atmosphere without benefit.

"There are some small iron works five or six miles distant, and there are works of considerable extent thirty and fifty miles distant. I furnish you with the temperature of the atmosphere and observations of the weather during this month so far, which are made by Mr. WM. KING, the clerk of King & McCall.

"Please advise me as to the amount of mineral speci-

mens you desire to have sent you. It will afford me pleasure to collect them and forward them to you.

Truly yours,

THOS. SPENCER.

	8 a.m.	12 m.	6 p.m.	
March	2d	40	46	37 Snow 3 inches.

	20	52	56	54 do. do. with light sprinkling rain.
	21	38	52	.... Clear.

Saltville, Washington Co., Va. May 3, 1846.

Dear Sir.

Your highly esteemed letters of April 6th, 10th, and 12th, were duly received. I thank you heartily for the valuable hints they contain on various topics.

Your suggestion that fire brick may be made by grinding our fire rock to a powder, and remoulding it. I think an important one. At your suggestion the experiment is now being tried, at Mr. Preston's brick yard. The rock was ground at Mr. Preston's grist-mill. The brick-maker says that it works beautifully in the moulds. I will let you know the result when they are burned.

You say that you are inclined to think that the Saltville brine is slow of evaporation, and wish my opinion upon the subject. I have examined this matter as carefully as possible, and it seems to me that it evaporated more rapidly than the Syracuse brine. In our 38 kettle furnace the back kettles "come down," full three times in 24 hours. In a furnace of the same size at Syracuse, the back kettles do not "come down" oftener than twice during the same time, and we draw quite as much salt from each kettle each time, as they do at Syracuse; that is one and a half or two bushels of salt each time the kettle "comes down" or boils down sufficiently low to withdraw the salt. The difference in quantity being 50 per cent. in favor of Saltville, which is a greater difference than there is in the strength of the brine. Syracuse being 75°, and Saltville brine at 90°. In a chemical point of view there are also strong reasons why the Syracuse brine should be the slowest of evaporation, as it contains more muriate of lime, which is exceedingly difficult to evaporate.

The buildings and machinery for pumping, attached to Mr. Preston's Salt Well, were destroyed by fire last night. The fire commenced in a blacksmith's shop, which was in the same building. The buildings and machinery at Kings' well (which is near by) were not injured.

I have procured some beautiful specimens of Barytes for you. I found it "in place" about seven miles from here, in the side of a mountain, imbedded in a yellowish hard flinty rock, which rests upon an amorphous lime stone. In one of your letters you suggested that I should be likely to find Strontian in the same locality. Will you please describe its appearance, and inform me how I may distinguish it from Barytes? I believe there is a strong resemblance between them.

I have requested Mr. King to furnish me, for your use, his meterological table up to the first of the month, which I will enclose herewith. We can furnish you with a more complete table after the arrival of the Rain-gauge which you have procured for Mr. Milner,

The season is now delightful, and our mountain scenery is beautifully picturesque. I took a ride of a dozen miles on horseback a few days since, among the mountains, and the forests presented the aspect of a magnificient flower garden, many of the trees being covered with fragrant flowers which are in full bloom at this season of the year. To add to the beauty of the scenery, we frequently meet with springs of cool transparent water, of capacious volume, gushing from the mountain side, and what is a sublime prospect, a day seldom passes that we may not see the clouds stoop and kiss the mountain's top.

I will select for the various specimens of minerals as I have opportunity, and forward them when I have completed the selection. I have recently learned that there is an extensive cave 6 or 8 miles from here, which has never been fully explored. I intend to visit it before long, and will furnish you with a description. Please write me as often as you can find it convenient.

Respectfully yours,

THOS. SPENCER.

E. Meriam, Esq.

TABLE FOR APRIL 1846.

Date.	8 a.m.	12 m.	6 p.m.	Condition of the weather.
1.	47.	60.	54.	.light cloude—east wind.
2.	41.	32.	52.	.hail, snow, east wind.
3.	49.	54.	55.	.clear and calm.
4.	48.	57.	52.	. do. do.
5.	49.	67.	62.	. do. do.
6.	46.	72.	60.	. do. do.
7.	60.	69.	56.	.cloudy, sprinkling rain.
8.	47.	56.	42.	.clear and calm.
9.	42.	60.	48.	. do. do.
10.	52.	72.	60.	.clear and calm.
11.	54.	70.	56.	.rain, west wind.
12.	59.	52.	45.	.rain in the morning, clear at evening.
13.	38.	49.	46.	.cloudy, west wind, frost in morning.
14.	32.	60.	55.	.clear and calm, frost in morning.
15.	40.	70.	58.	. do. do. do. do.
16.	50.	84.	55.	.clear and calm.
17.	46.	78.	62.	. do. do.
18.	52.	76.	58.	.clear, west wind.
19.	68.	80.	70.	.clear and calm.

23.	65.	73.	70.	.cloudy, west wind.
24.	67.	79.	68.	.cloudy, west wind.
25.	64.	70.	68.	.cloudy, west wind.
26.	68.	—.	—.	.cloudy, west wind.
27.	58.	67.	62.	.cloudy, east wind.
28.	59.	62.	56.	.cloudy, east wind, rain in night.
29.	61.	—.	—.	.clear, east wind.
30.	58.	76.	—.	cloudy, rain, wind variable, thunder storm

Hereafter observations will be made four times per diem. W. K., Jr.

[NOTE.—The latitude is between 36 and 37° north, longitude between 82 and 83° west. Elevation above tide-water not ascertained.—*Ed.*]

We have received from LYMAN W. CONKEY, Esq., of Syracuse, several very elaborate reports of his very minute and valuable meteorlogicol observations made at that locality. From that of April, 1846, we make the following synopsis:

Place of observation Syracuse, Onondago County, New-York, latitude 43° 1′, longitude 76° 15′, altitude of Barometer 400 feet.

APRIL 1846.

April, 1845.	Sunrise.	9 a. m.	3 p. m.	9 p. m.	REMARKS.
1.	27.	36.	43.	34.	.heavy frost.

28.	37.	56.	74.	58.	.
29.	51.	52.	60.	52.	.Showery 3 p.m. rain 0,45-100.
30.	51.	62.	72.	60.	.Showery 6 a.m. and 9 p.m. 030-100.

East wind at sunrise on the morning of the 26th and 30th.

South east wind at sunrise on the morning of the 23d and 29th.

South wind at sunrise on the morning of the 2d, 3d, 5th, 7th, 11th, 16, 17, 18, 20th and 28th.

South west wind at Sunrise on the mornings of the 4th, 9th, 10th, 13th, 14th, 21st, 24th and 27th.

West wind at sunrise on the mornings of 1st, 6th, 8th, 15th and 19th.

North west wind at sunrise on the mornings of 12th 22d, and 25th.

At 9 o'clock in the morning the wind was from the east on the 4th, 26th, 29th and 30th, from the south on the 2d, 3d, 5th, 7th, 11th, 16th, 17th, 18th, 21st, 28th; south west, 10, 13, 14, 20 and 24; west, 1, 6, 8, 9, 19, and 27; north west 12, 15, 22 and 25; north 23.

At 3 o'clock P. M., the wind was east, 4, 18, 28, and 30; south east 29; south, 5, 7, 10, 16, and 21; south west 11, 14 and 20; west, 12, 17, 19 and 22; north west 1, 2, 3, 9, 18, 15, 25, 26 and 27; north east, 6, 23 and 24.

At 9 o'clock in the evening the wind was south east 4, 28, and 29th; south 2, 5, 6, 7, 10, 16, 17, and 30; south west 3, 11, 14, 15, and 20; west on the 8, 12, 18, 19, 21, 22 and 23; north west 1, 9, 13, 23, 25, 26 and 27; north east on the 24th.

Clear weather at sunrise on the 1, 2, 3, 4, 5, 10, 14, 16, 18, 19, 21, 27 and 28; at 9 A. M;, 1, 2, 3, 4, 16, 17, 19, 21 and 27; at 3 P. M., on the 1, 2, 3, 4, 9, 17 and 27, and at 9 P. M. on 1, 2, 3, 3, 4, 5, 6, 8, 9, 10, 15, 17, 19, 20, 22, 23, and 27.

The Dew point on the 1st at sunrise was 24; on 7, 36; 11, 54; 13, 25; 15, 28: 18, 46; 20, 28; 21, 36; 23, 47; 24, 46; 29, 36; 30, 46.

The Barometer was at 30.00 on 1, 2, 3, 4, 5, 6 and 9, and the 2, 4, and 5, 30,02, and on the 3d and 6th, 32,06, on the 11th 29,14.

Rain during the month, 2 inches.

BIRDS.

In the April number of the Gazette we said, the little bird which we denominate the Adirondack Solitary we had never seen or heard elsewhere than along the borders of the wilderness which skirt these majestic heights.

Early in the morning of the 17th, of the same month, we were surprised by the plaintive notes of the Adirondack Solitary on the top of a cherry tree, standing within twenty feet of the window at which we had penned the account of that little bird—the lower sash of the window was up at the time. We were a little surprised at the sound, and began to doubt whether imagination had not suggested the notes to the organs of hearing—while recovering from the surprise, the notes were repeated—we arose from our seat, and beheld at the top of the tree a little gray bird, which immediately flew away. The next day we visited Greenwood Cemetry, and spent a considerable time in viewing those consecrated grounds, in company with Henry Parish, Esq., who had selected some lots in that City of the Dead, for the construction of a Tomb. There we saw numerous birds. The next morning, at a little past 4 o'clock, we took a morning walk upon Brooklyn Heights, and during the whole of this walk we heard the plaintive notes of the Adriondack Solitary upon the tops of the highest trees, which it sounded at intervals. Since then we have met with Mr. Perry, of Brooklyn, who visits the Greenwood Cemetry daily, and he informs us that he heard the notes of this bird, which we described in the last number of the Gazette, a copy of which we sent him in the Greenwood Cemetry Groves, during his visits to those grounds in the month of Ap[illegible]
