THE RAILWAY MONITOR.

The Political Economist.

THE MINISTRY.

THE discussion on the renewal of the income-tax which was fixed The discussion on the renewal of the income-tax which was fixed for last night, was unexpectedly postponed on the motion of the First Minister of the Crown till Monday next, when he will state to Parliament the course which he will pursue. A meeting had taken place at Lord Stanley's in the course of the day, at which it was determined by the Protectionists to move a resolution as an amendment on the Government proposal, to the effect that the prospective surplus of the year should be devoted to a reduction of the income.tax in place of any of the purpose during which proce-

amendment on the Government proposal, to the effect that the prospective surplus of the year should be devoted to a reduction of the income-tax in place of any of the numerous duties which press upon trade and industry. This would be a perfectly consistent motion to come from that quarter. The Protectionist policy is to impose import duties, not to repeal them; to repeal direct taxes on property, not to maintain them. But such a proposal, had it been brought to discussion, would have been rejected by a large majority of the House of Commons, who are too sensible of the enormous advantages the country has derived during the last eight years by the reforms rendered possible only by the income-tax, and of the further reforms in our fiscal system which that tax will alone enable the Legislature to complete, to have agreed to such a resolution. The course pursued by Lord John Russell had no relation whatever, as has been said, to the step which the Protectionists had determined to take on this occasion. The suspension of the business of Parliament, pending so im-portant a discussion, with an intimation that the Honse will meet on Monday to hear the explanation of the Minister, but not to proceed with business, is fairly regarded as a virtual announce-ment that the Government has resigned. Of course rumours of all kinds are rife. But, without pretending to any special infor-mation, we believe all to be mere conjecture and speculation, and not worth repeating, beyond the simple fact inferred from the an-nouncement made in the Honse of Commons last night. Comment would, therefore, be premature. At the same time, we cannot dis-gaise from ourselves the serious dangers which must arise from any protracted political crisis, at a time when parties are so unsettled, both in their organisation and in their principles. Probably no greater misfortune could befal the country than a general election at this moment. It would be a signal for a revival of the wildest demands which no Parliament can satisfy It would unsettle ev everything and settle nothing. And the result might possibly be, that numbers being evenly balanced on some of the most vital

questions of the day, Legislation would be brought to a dead lock, and thus lead to a fatal uncertainty as to the future. A few days will probably clear up this most complicated and diffi-cult dilemma. Happen what may, we sincerely trust a general election will be avoided. To no party would it be so embarrassing as to the Protectionists themselves. But their embarrassment would be no consolation for the confusion and mischief of which we cannot profess to foresee the end, which would be inflicted on the interests of the country at large. There are few dangers so great in a country like this, (and they are not lessened by the present state of matters on the Continent,) as those which arise from the absence of a powerful executive; and our greatest alarm at this moment arises from the fact that, look in what direction we will, we own we see insuperable difficulties to any such organis-ation being effected, as will secure to the country that great and ation being effected, as will secure to the country that great and desirable object. Looking to parties in the House of Commons and in the country, it is difficult to say which is most divided.

THE BUDGET .- THE PAST EFFECTS OF THE INCOME-TAX.

Now, when the income-tax is about to expire, and when a pro-posal for its renewal is before Parliament, the time has arrived when it will be useful to institute a careful inquiry into the effects of that tax and the objects which the country has attained through of that tax and the objects which the country has attained through its instrumentality. It may, however, be well, before passing to a more general view of the subject, shortly to consider the present state of the finances of the country as laid before Parliament by the Chancellor of the Exchequer on Monday night. The balance-sheet for the year ending the 5th of January, a copy of which will be found in the Economism of the 8th inst., showed a surplus of income over expenditure of 2,579,006*l*. But as that year included a small portion of the brick duties, repealed in 1850, and a portion of the stamp duties at the old rates, the surplus in the financial year ending the 5th of April next, as com-puted by the Chancellor of the Exchequer, will be 2,502,122*l*. For the next year, April 5th, 1851, to April 5th, 1852, the income and expenditure are estimated as follows :--

Income.	£	pril 5, 1852-ESTIMATED. Expenditure.	£
Excise stamps Faxes Property-tax Post-office	14,000,0 0 6,353,000 4.348,000 5,380,000 830,000	Ordnance	28,092,000 2,600,000 6,595,915 6,537,000 2,424,171 4,000,000
Crown lands Miscellaneous	160,0°0 672,000	Total	50,249,110 1,890,884

£52,140,000

But this estimated surplus of 1,890,884*l*, of course depends on the realisation of the estimates made of the income and expendi-ture; both of which, though on a favourable scale, are probably the realisation of the estimates made of the income and expenden-ture; both of which, though on a favourable scale, are probably fully justified by the present condition of the country. It is how-ever, obvious that any unforeseen event, such as a failing harvest, which might interfere with the state of trade, would affect the in-come, or which might necessarily lead to larger establishments, would affect prejudicially the expenditure of the year. The ex-istence of a surplus in one year of great prosperity and profound peace, does not necessarily imply a continuance of such surplus, even with the same scale of taxation. Experience, however, has shown that taxes may be safely remitted, representing a consider-able portion of such estimated surpluses; especially if they apply to articles, a reduction of the duties upon which is likely to lead to a very extended consumption, or to articles of raw material, the cheapening of which has a tendency to increase trade, to ex-tend employment, and thus to lead to an enlarged consumption of all other articles contributing to the revenue. But when it is con-sidered that the surplus may not be permanent, while taxes re-mitted apply as well to all future years as to that in which the surplus arises, we cannot be surprised, that no prudent Chancellor of the Exchequer has ever consented to devote the whole of an estimated surplus to the immediate remission of taxes. To such To such estimated surplus to the immediate remission of taxes.

No. 391.

a precaution there can be less objection, when it is considered that any estimated surplus of the following year, which may be unap-propriated at the time, if realised and permanent, will be appli-cable for the remission of other taxes in the next succeeding years.

The surplus of the last ten years has risen in part from improving income and in part from reduced expenditure. The following account shows the net income for five years :--

	MET INCOME April 5 to April 5.	36
1847-48		52,082,757
1848-49		53,017,732
1849-50		52,916,918
1850-51		52,708,000
1851 52	estimated	52,140,000

But in estimating the full character of these results, it must be borne in mind that taxes to the amount of at least 1,600,000/have been repealed during the period. With regard to the expenditure, it is but a small portion of the whole on which any reduction can be made. The debt and

whole on which any reduction can be made. The debt and charges on the Consolidated Fund secured by Act of Parliament, involve an expenditure of (in round numbers) 30,000,000*l* out of 50,000,000*l*. It is therefore, only on the remaining 20,000,000*l*, 50,000,000*l*. It is therefore, only on the remaining 20,000,000*l*, including the army, navy, ordnance, and all the miscellaneous expenses of the civil government, including the administration of the law, that any minister has the power to effect reductions. The following account shows the expenditure under each of these general heads in each of the above years :-

Expenditure-April 5 to April 5.

	Charges			Irish	
	on the	Army,	Miscellaneous	, Distress	
Public	Consolidated	Navy, and	(Civil Govt.,	and Kaffly	
Debt.	Fund,	Ordnance.		War.	Total.
£	£	£	£	£	£
 28,427,23	322,724,971.	.18,241,674		2,975,000.	

1847-48 1848-49 1849-50 1850-51 28,489,860...2,811,556...17,707,159 28,194,507...2,740,760...15,687,586 28,091,589...2,854,460...15,592,913 28,092,000...2,600,000...15,557,116 1851-52 Autin 4.000.000 .50.249.116 Thus it will be seen that since 1848-49, the expenditure has been reduced by more than 3,000,000*l*, nearly the whole of which reduction has been in the establishments of the army, navy, and ordnance.

In anticipation of the estimated surplus of 1,890,884*l* in the year ending April 5th, 1852, the Chancellor of the Exchequer proposes to apply to remissions the sum of 1,342,000*l*; thus leaving unap-propriated only 548,884*l*. The relief proposed is as follows :---

The difference between the present window-tax, and the new house duty	700,000
Reduction on confee	176,000
Reduction on timber	286,000
Reduction on seeds	30,000
Portion of the charge for pauper lunatics transferred to the Consolidated Fund	150,000

Total £1.342.000

In some respects the window duty may be regarded as one of the most unobjectionable taxes which at present contribute to the revenue ; in others, as one of the most objectionable. In so far revenue; in *others*, as one of the most objectionable. In so far as it is a direct tax upon real property, almost impossible of evasion, easy of collection, and of such old standing that the rela-tive value of house property, both as regards owners and occu-piers, has been determined in reference to it, and lastly, that nearly the whole that is paid by the public in this respect goes into the Exchequer, the window duty is a most unobjectionable tax; but inserved as in the terms of Lord Duncan's motion. If the measure but inasmuch as, in the terms of Lord Duncan's motion, "the prese " mode of assessing, leving, and collecting taxes on air and light " in England and Scotland interferes most prejudicially with the " health and sanitary condition of the people," it is a most objec-tionable tax. But, however desirable it may be to remedy the defects of this duty, we can hardly conceive a more unjustifiable act that could be adopted by Parliament than altogether abandon-ing so excellent a source of revenue (yielding so large a sum as 1,800,000/) while there remains so many deformities in our tariff still to be removed. We only deeply regret that it has been found necessary to sacrifice so much as 700,000*l* in the change from the present window-tax to a modified house duty. However, as it is now proposed, all that the tax has to recommend it is retained, except its amount--all that is objectionable, is removed.

The equalisation of the foreign and colonial duties on coffee, at The equalisation of the foreign and colonial duties on conce, at 3d per lb, in lieu of the existing duties of 4d and 6d, is so ob-viously desirable, in the present state of the coffee trade, that the proposal may be said to meet with general concurrence. On principle, it would be difficult to conceive any duty more objectionable than that charged on timber. One of the most im-portant and bulky raw materials used in the various branches of our inductor, measing theorem.

portant and burky raw materials used in the various branches of our industry, passing through very numerous hands, and thus accumulating numerous profits between the merchant who pays the duty, and the consumer who ultimately reimburses him, and being protective in a very high degree, there are few duties that combine so many objections as that charged on foreign timber, or that we shall be so glad to see entirely repealed. In the mean-time, a reduction of one-half is a large instalment, and probably, so far as the consumer is concerned, he will gain as much in the first instance from this reduction as if the whole duty had been so far as the consumer is reduction as if the whole duty had been first instance from this reduction as if the whole duty had been repealed. Ten years ago, the duty on colonial timber was 10s a load, and on foreign, 55s a load;—now, after many successive re-ductions, the duty on the former will be 1s, and on the latter, 7.5d the load

The reduction of the duty on agricultural seeds, is so obviously an act of justice to the great majority of farmers throughout the country, who are entitled to have the raw material used in their trade at the lowest possible price, that we can look for no opposi-tion to such a proposal, even from the Protectionists. It will surely never be contended that the few persons who cultivate seeds in two or three counties in England, are entitled to be pro-tected at the cost of the farmers generally. The amount may appear small, but it is only common fairness that the farmers all be without any just cause of complaint on this score.

shall be without any just cause of complaint on this score. These remissions are, of course, only practicable on the suppo-sition that the property and income-tax shall be renewed. And when we consider how much has already been effected, how much has been rendered possible only through the instrumentality of the income-tax, and how much may yet be effected by the same agency, we cannot entertain a doubt that, at least, for another term of years it will be renewed. Let us see what has already here accompliable by its means

term of years it will be renewed. Let us see what has already been accomplished by its means. In 1842, the late Sir Robert Peel computed the deficiency of the revenue for the preceding five years at 7,500,000*l*; he esti-mated the expenditure of the year at 50,919,000*l*, and the in-come at 48,350,000*l*, establishing a further deficiency of 2,569,000*l*. making in six years a total deficiency of 10,069,0000. It was under these circumstances that Sir Robert Peel first proposed the property and income-tax, with three distinct and clearly ex-pressed objects :---

- 1. To meet the existing deficiency.
- To afford relief to commerce.
 To reduce the cost of articles of extensive consumption, with a view, in some degree at least, to compensate for the new tax imposed.
 Let us see how these objects have been effected. So far as the first object is concerned, no doubt can be entertained of the success of the necessre. In place of annully recurring detaincies.

of the measure. In place of annually-recurring deticiencies, every year since, with one or two exceptions during the Irish famine, year since, with one or two exceptions during the Irish famine, has witnessed a very considerable surplus, and this too in spite of the constant reductions which during the whole poriod have been made, the extent of which we will shortly refer to. 2. The relief to commerce. In every way this is by far the most important view in which we can regard the income-tax. The following are the successive remissions of taxes made from 1842 to 1850 :--

	TAXES REMITTED.	£
1842 1843 1844 1845 1846 1846 1847 1848	Timber	1,596,366 411,821 458,810 4,535,561 1,151,790 180,000 180,000 260,000
1849	do do Bricks and stamps	333,000 335,000 950,000
	Potel terms reported	10.394.348

This amount is divisible among the various general heads of revenue as follows :-

Castom duties Excise	. 1,674,000
Taxes	

quest

	The result is as	Reductions.		Additions.	N	et Reductions.
Excise	9	1,674,000	******	141,930 263,720 121,745	*****	7,898,680 1,410,280 557,993
	Total net reduct					9,866,953

more than in 1842!!

more than in 1842!! The entire net income in the year ending Jan. 5th, 1842, was. 48,084,359*l*, and in the last year 52,810,880*l*. Taking the amount of the income-tax at 5,500,000*l*, then, in spite of the reductions to which we have referred, amounting to no less than 9,866,953*l*, the net income of 1850 exceeds that of 1841 by a sum equal to the whole income-tax, except only 773,479*l*. Thus, then, we establish the remarkable fact, that of the net amount of taxes annually remitted during the nine years referred to, amounting in all to 9,866,953*l*, the revenue has already recovered within

773,479*l* of the whole, or no less a sum than 9,093,474*l*. In other words, the public have now the advantage of a net annual reduction of taxes, after making allowance for the income-tax, to the amount of 9,093,474*l*.

amount of 9,093,4747. There is but one explanation of this remarkable result. We have already shown how large a portion of the remissions referred to, consisted of Customs duties. And of these, on referring to the articles of which they consisted, we find they were, either raw materials of manufacture, the duty on which was entirely repealed, or articles of general and extensive consumption, on which the duties had been excessive in amount, and which were considerably reduced. Among the most prominent of the first class, were timber, cotton, wool, tallow, silk, hemp; and of the latter class, sugar, coffee, brandy, &c. And with regard also to the Excise duties, those were selected which most interfered with the trade and industry of the country, such as glass, bricks, &c. But during the whole period no direct tax bearing on real property has been either repealed or reduced.

the whole period no direct tax bearing on rear property has been either repealed or reduced. The great success, then, which attended the fiscal measures of the years in question, and the rapidity with which the revenue recovered nearly the whole amount remitted, are clearly to be attributed to the character of the articles selected for relief. At first sight it may be a matter of surprise that the entire repeal of duties on raw materials to so large an amount should not have had a more serious effect in reducing the revenue, whatever beneficial effect such reductions may have had otherwise. But it must be borne in mind that although cotton, wool, silk, hemp, and other raw materials, on which the duties were entirely repealed, could yield nothing direct to the Exchequer in future; yet, the stimulus which those reductions gave to trade and to the employment of the people, led to a greatly increased consumption of all other articles from which revenue is derived; while the reductions made upon some articles of general use, such as spirits, sugar, molasses, &c., &c., have been in some instances entirely, and in others to a great extent, recovered by the increased consumption which followed a reduction of prices. As to the third object which Sir Robert Peel had in view, that

As to the third object which Sir Robert Peel had in view, that of compensating, to some extent, the pressure of the income-tax, by cheapening articles of general consumption, it requires only that we should refer to the great difference in the price, not alone of the necessaries of life, but also of many of the luxuries, at this time, compared with the period when this policy was first commenced. There may be serious objections to the income-tax, as indeed there are to almost every tax which exists; but we think that there are few who reflect on the extraordinary advantages which, through its aid, have been conferred on the trade and industry of the country, and who have witnessed and appreciated the remarkable reforms which have been accomplished in our tariff, who will not agree with us, that it has been the most profitable, the most richly-rewarded sacrifice ever made by a people; and who will not also agree with us, that it would be a great national misfortune to lose it, while there are so many deformities still left in our tariff, and in our Excise laws, which can only be removed through the same agency, and by persevering in the same policy, by which we have already accomplished so much.

THE NEW PRETENSIONS OF AUSTRIA.

THE flame about to expire, whether of candle or conflagration, rises high as it dies. So Austria is flaring up over Europe as if she were not long to survive. With an ambition utterly incommensurate to her means—for by her own force she could not subdue Hungary—she is now, by a cunning diplomatic arrangement, to control Germany and defy Europe. She could not command her own subjects, and she is to conquer the world by a little arrangement in a congress of nearly powerless men. Scarcely relieved from the terrors of a revolt, which Russia put down—without any increase of her own strength she is to reduce the comparatively free people and kingdoms of Germany to the condition of dependent provinces. The absurdity of the scheme is so glaring, that but for the immediately disastrous effects which it may have on Austria and in Europe, we should think it almost unworthy of notice.

History tells of the brigands of old Rome conquering place after place, and gradually building up a vast empire, rather by instinct than reason contemplating such results, to tumble however to pieces almost as soon as the work was achieved. We have heard of conquerors—like Tamerlane or Buonaparte—at the head of a savage or an outraged people, invading, crushing, and reducing kingdoms to dependent provinces, to be conquered in their turn, or have their conquests again severed into fragments when the genius or the enthusiasm that began them had expired. People from superstitious reverence have obeyed a Pharoah or Czar as a divinity, and have done his will to their own discomfiture, disgrace, and death. But none of these nor any similar elements exist in Austria, and we cannot see how its discredited bureaucracy—without the shadow of a claim to reverence either from origin or services to mankind—without any kernel of strength either in the reasonable obedience or the superstition of any part of the people—can hope, by a little mittary organisation or diplomatic arrangement, not only to continue in subjectiou the many discordant nations and people, some of them barbarous, that com-

pose the empire, but to extend its power over the civilised portion of the North of Europe. Such, however, is supposed to be the project of Prince Schwartzenberg, who is neither a conqueror nor hedged round with divinity, to be accomplished by merely incorporating the whole of the dominions of Austria, including Italy, with Austria Proper in the German Confederation. Beyond diplomacy and military organisations, which are mere lifeless forms, directing but not creating power, there is no basis for such a structure nor any force that can bind it together. Though the project have shaken the nerves of some strong-headed and strongwilled men, as is plain by the lamentations of the press, and though it have called forth remonstrances from France and England, it resembles rather the madness that precedes destruction than the exertions of new-born vigour foreshadowing a long and glorious maturity. It is less like an infant Hercules strangling serpents in his cradle, than a restless old Maximian essaying in vain to recover a lost empire. It is going back on the past beyond the treaties of Vienna, concluded nearly forty years ago, which, with the assent of the people of Europe, tired of objectless war, reconstituted the enfeebled and decavire ampire of Austria. In comparison to the other states of

It is going back on the past beyond the treaties of Vienna, concluded nearly forty years ago, which, with the assent of the people of Europe, tired of objectless war, reconstituted the enfeebled and decaying empire of Austria. In comparison to the other states of Europe, measured by population, wealth, and knowledge—the pith of all political power—Austria has made less progress than the bulk of them. By their steady adhesion to the principles of those treaties—by the gradual but growing predominance of the desire of peace, and the comparative decline of the military spirit, far more than by inherent power in the Government of Austria, which has dwindled in usefulness, and become comparatively despised, has that Government been preserved. It has been kept up by the guardianship of France, England, Prussia, and Russia. Their strict observance of the treaties of Vienna has been the safety of Austria. But for that, Italy would have successfully revolted, and Hungary would have become independent. Even in spite of that, at every moment when there was a chance of those treaties not being rigidly observed, as in 1830 and 1848, she trembled for her complex existence, and in fact in the latter year fell at once into confusion and disorder. It is, therefore, as a part of the general policy of Europe, established by the treaties of Vienna—though they are now old and feeble in relation to a growing and powerful democracy—that the existence of the Austrian Empire has been preserved. Can it be less than madness, therefore, or inflated vanity equal to madness, that the first use Austria makes of a little recovered strength, is to propose an arrangement that at once threatens the democracy, and overthrows the treaties which alone have guaranteed to the imperial house of Austria its heterogeneous dominions?

But for those treaties, and their consequences for Austria, we should be inclined to regard the proposed scheme—as limited to the domestic arrangements of the Federal States of Germany, and as likely, from tending to unite them all under one commercial code, abolishing all custom-houses between the Baltic and the Adriatic—as eminently advantageons. We should feel inclined, therefore, were the union proposed in a good commercial spirit, to welcome it as a means of advancing civilisation. But proposed as a means of subduing Germany, and obtaining power against the parties to the treaties of Vienna, it is eminently mischievous. Those treaties secure Italy to Austria; bind the other powers of Europe to repress, rather than encourage, the Italians, Hungarians, and others, in a struggle for a separate national existence; and Austria, by violating there, is drying up the source of her own strength, and provoking the renewal of revolution and of war in Europe. It is accordingly the duty of the French Government to remonstrate against the Austrian scheme, which has already added to the power of the war party in France. It gives strength to the old Bonapartean spirit. There is again a talk of arming in France, and there must be arming in Austria; and the many millions it costs nations to arm we scarcely needed the late experience of Prussiato inform us. In the condition of the Austrian finances—and what is the Government of Austria but its revenue ?—the very sound of war must be disastrous. Austria would lose more of real strength and power by merely arming to carry out its views, should opposition extend so far—to say nothing of the actual war it might excite—than it could gain by the most complete success of its diplomacy at Dresden.

Looking beyond the mere resolutions of cabinets, which can only be strong in proportion as they are supported by the knowledge and strength of the people, it has been our opinion throughout, that the real compulsory power which constrained the hostile Governments of Prussia and Austria to preserve peace was, the declared aversion of all the middle tax-paying classes to war, and the obvious design of the revolutionary party to profit by the dissensions. The motives thus expressed are stronger in relation to the proposed scheme, as likely to involve all Europe in war, and enlist some of its most powerful Governments on the side of the revolutionary party, than they were in relation to the personal and family dissensions of the Houses of Hapsburg and Hohenstauffen. All the reasons that induced those two powers to huddle up their differences and preserve peace at the expense of reputation, bear with still greater force against this new scheme of Austria. Though she be the weakest of all powers, ready at every moment to break into separate parts, she proposes a great innovation in the policy of Europe which insures hersafety. Sherisks a war

THE ECONOMIST.

without allies other than Russia, and will excite, if war begin, the resuscitation of the revolutionary spirit in Europe. To persist notwithstanding the advice and remonstrances of France and Engnotwithstanding the advice and remonstrances of France and Eng-land, in such a course, mustlead to her own destruction. Even with-out any active measures on their part, which might possibly for a time compress into union some of the heterogeneous elements of Aus-trian power, such a result would be probable. It would be suffi-cient that they stood aloof, and no longer took an active part in supporting the treaties of Vienna. That would give full scope to the national feelings in Italy and Germany, and would prove fatal to Austrian power. to Austrian power.

PROSPERITY-MARRIAGES-SHIP-BUILDING.

THE Registrar-General has recently published the Quarterly Return for December of births and deaths ; but, as our readers will recolfor December of births and deaths; but, as our readers will recol-lect, that of marriages comes down only to the end of the pre-ceding quarter. The general character of the return is highly favourable, corresponding to all the other *indicia* of the national prosperity, and confirming all that has ever been said in favour of Free Trade. "It implies," says the Registrar-General, "a hap-"pier condition of the population at the close than at the com-" mencement of the year. While fewer lives have been lost in the " quarter by epidemic diseases, the marriages and births have in-" creased." The sum of the Report is this :—

MARRIAGES. The marriages celebrated in the summer quarter ending September 30th were \$7,496, or more by ten thousand than were registered in the summer quarter of 1842, and two thousand four hundred more than have been returned were \$7,496, or more by ten thousand than were registered in the summer quarter of 1842, and two thousand four hundred more than have been returned in the summer quarter of any previous year. Allowing for increase of popu-lation, the proportion of marriages is greater than it has been in the same season of any year since the registration commenced. Except in the eastern and south-eastern counties, the increase of marriages has been general in all the great divisions of the country. In London the increase has been considerable. At Wolstanton, Burslem, and Stoke-upon-Trent, among the potteries, the multi-plication of marriages is remarkable. In the iron districts of Dudley, Waisall, Birmingham, and Merthyr Tydfil, the advance was slow or inconsiderable. At Coventry, as well as Spitalfields, Whitechapel, the seats of the silk trade, the marriages increased rapidly; as they did also at Leicester, Nottingham, and Derby, at Stockport and Macclesfield. At Manchester the marriages more from 1,097 to 1,442; at Preston, from 159 to 281; Halifax, from 215 to 313; Leeds, from 418 and 359 to 488; Newcastle-upon-Tyne from 293 to 313; Carlisle, from 29 to 53; Merthyr Tydfil from 160 to 213. In the purely agricultural counties marriage then still went on slowly, but steadily; in all the iron and coal fields at but a slightly increasing rate; while in all the counties peopled by the workers in lace, silk, wool, and cotton, the number of marriages -of new families established - has increased at a rate of which there are few examples in the returns of the last hundred years. And the general result is an aggregate increase in the last hundred years. And the general result is an aggregate increase in the marriages of the whole country during the summer quarter of the year 1850. INFIRTS.

BIRTHS. The births in the quarter following, which ended on December 31st, 1850, were also the greatest number ever registered in the autumn quarter of any previous year. 146,268 children were born in the three months.

were also the greatest number ever registered in the autumn quarter of any previous year. 146,268 children were born in the three months. INCREASE OF POPULATION. The excess of births registered over deaths in the quarter is 54,245. The usual excess is forty thousand more births than deaths; the excess in the last quarter of 1845 was 50,000; in 1847, when influenza was epidemic, only 24,000; in 1849, when the cholera' epid-mic was rapidly declining, 38,000. In the last quarter of the year 1850, 56,971 emigrants left the ports of the United Kingdom, at which there are Government emigration officers; 3,836 departed from Irish ports; namely, 1,702 from Plymouth, 4,282 from London, and 45,248 from Liverpool. During the whole of the year 1850 the births were 593,567, the deaths, 369,679, and consequently the excess of births over deaths was 223,888 in England; the same year 280,843 emigrants salled from the shores of the United Kingdom-214,606 (many of them of Irish birth) from England, 15,154 from Scotland, and 51,053 from Ireland. The number of births and deaths in Scotland and Ireland is unknown; and the census alone can disclose at what precise rate the population increases; but we know that the new births more than replace the vast armies of peaceful emigrants that every year assemble without much noise, and led apparently by the same kind of divine instinct that directs other migrations, leave their native land to seek homes in regions prepared for them all over the world. The Board of Trade Tables have told us accurately from month

The Board of Trade Tables have told us accurately from month to month, by the continual increase of our exports and of employto month, by the continual increase of our exports and of employ-ment for our shipping in what way the increased number of labourers has been continually provided for, and we have con-firmed them from time to time by statements of the prosperity of Manchester, Glasgow, and other places. To quote another illustration, a late number of the *Sunderland Herald* stated that the arrivals at the port of Hartlepool were :--

The trade of Sunderland exhibits equally gratifying results; and The trade of Sunderland exhibits equally gratifying results; and it is especially satisfactory to learn, from the authority above quoted, that the ship-building of Sunderland has been extensive and prosperous in 1850, though nothing but ruin was predicted from the abolition of the Navigation Laws. Our contemporary gives the following table of the number of vessels built and re-gistered at Sunderland during the last ten years:-

Year.	No.		Tons.	Av	rerage '	Tons
1841	141		40,396	********	2861	
1842	107		26,837		2504

In addition to these thirte	en oth	er ves	sels w	ere bu	ilt in	1850,

but are not inserted in this list because they were but in 1966, till 1851. On the 14th inst. there were 100 vessels on the stocks in Sunderland. From the table it appears that there were three in Sunderland. From the table it appears that there were three vessels more built, with 4,473 more tonnage, in 1850 than in any one of the previous ten years; and 73 more vessels, with 29,997 more tonnage, than in the worst of the ten years. Of the 158 vessels built in 1850, 80 were sold to Sunderland and 78 to other ports, many of them to London, showing that Sunderland built ships are prized in most of the ports of the empire. Such, then, is now the flourishing state of the empire. What is true of Hartlepool and Sunderland is true of all the commercial

is true of Hartlepool and Sunderland is true of all the commercial and manufacturing towns and seaports of the empire. Even the manufactures and trade of Ireland are flourishing. People every-where fully employed, poor rates decreasing, revenue increasing, taxation in progress of reduction, military and naval forces to be diminished, and tranquillity in every part of the country, par-ticularly in those large towns, the growth of which has alarmed even some of the advocates of Free Trade, are the distinguishing features of the times. We have, as the result of Free Trade, prosfeatures of the times. We have, as the result of Free Trade, pros-perity at home and honour abroad. England is as formerly "teach-ing the nations how to live;" and they have no higher ambition, though they mistake the source of her greatness, than to follow in her featstens and he prospersus like her. But has any man nictured footsteps and be prosperous like her. But has any man pictured to himself what would have been the condition of this now happy country had we not had free-trade in corn? The harvests of 1849 and 1850 were both very partial and very defective. The bulk of the grain grown in the graat where the provide a state of the Terr and 1850 were both very partial and very defective. The bulk of the grain grown in the great wheat-growing counties of the East of England was in 1850 so much mildewed as to be worth little more than half its usual price. In the last year we have ac-cordingly imported 9,076,266 qrs of grain of all kinds and flour reckoned as grain; and in the previous year 1849 we imported 10,655,197 qrs, together 19,731,463 qrs, the whole of which nearly has gone into communication. has gone into consumption.

onfining our attention, however, to wheat and flour, and saying nothing of the sustenance indirectly afforded to man by the im-ported grain which has gone to feed animals, and saying nothing of the multitudes who have been subsisted by oatmeal and Indian of the multitudes who have been subsisted by oatmeal and Indian corn, the quantities imported were, respectively, of wheat and flour reduced to quarters, in 1849, 4,802,475 qrs; and in 1850, 4,856,038 qrs; together, 9,658,513 qrs. In the former year the average price of wheat was 44s 6d, and in the latter 40s 4d. Now, the greatest quantity of wheat and flour ever imported and entered for home consumption in any two consecutive years between 1828 and 1842, adopting Mr Tooke's figures, was in 1838-9, 3,560,957 qrs; and 1839-40, 1,762,482; or together 5,323,439 qrs. In those years the average price was respectively 71s 8d and 68s. The following is a tabular view of the matter with the average price of wheat :--

price of wheat :

	••••••••••••••••••••••••••••••••••••••	qrs 4,802,475		8 44	d 6 4
	Together	9,658,518			
	***************************************		******		8 0
	Together	5 323,439			

From the returns of the comparative quantities and prices then, From the returns of the comparative quantities and pices then, and from the known fact that foreign cultivators have laid them-selves out, in the last four years, to supply our markets, we may infer that, but for the repeal of the Corn Laws, we could not in the last two years, making every allowance for the increase of cultivation in foreign countries, have obtained more than 0.000 one of what and four though the average price had the last two years, making every allowance for the increase of cultivation in foreign countries, have obtained more than 7,000,000 qrs of wheat and flour, though the average price had been 70s, instead of 9,658,513 qrs. We should have had there-fore, say 2,500,000 qrs of wheat and flour less in the two years, or 1,250,000 qrs less in each year. It is usually estimated that the fore, say 2,500,000 qrs of wheat and how a similar the fore, say 2,500,000 qrs less in each year. It is usually estimated that the 1,250,000 qrs less in each year. It is usually estimated that the average consumption of the whole community is eight bushels per head. But for the repeal of the Corn Laws, therefore, we should have had a deficiency of wheat and flour alone, taking no notice of the enormous supplies of other grain obtained in the last two years, corresponding to the subsistence of 1,250,000 persons in each year, and 9,500,000 in the two years. That would have been the case corresponding to the subsistence of 1,250,000 persons in about years or of 2,500,000 in the two years. That would have been the case though prices had risen to 70s the quarter. But the difference between comfortably feeding in two years 2,500,000 persons, or not being able to feed them, would have made all the difference between prosperous England in 1850, and calamitous starving Ireland in 1846-7.

Now, we may perhaps realise to our imagination what would have been the condition of England at present, had free trade in grain been refused. Marriages, those signs of a people prosperous at present, and full of hope for the finture, calmly pursuing domestic happiness, there would have been comparatively few. The mortality would have greatly exceeded the births, and a rapid depopulation

[Feb. 22.

by the slow agonies of starvation would have ensued. The numby the slow agonies of starvation would have ensued. The num-ber of pappers and the amount of poor rates would have in-creased, and having no richer England to help us, they would have swallowed up the rent of the landowner and the profit of the capitalist. Trade would have been paralysed and ship-building capitalist. suspended. As it can scarcely be expected that the people of England would have patiently suffered starvation, the probability is that our great towns would have been focil of sedition and insur-rection, and many of those whom famine spared would have been cut down by the sword. We cannot even be sure that insurrection might not have been successful, and have grown into a great convulsion and rebellion, toppling down throne and church, and burying aristocracy, landlords, capitalists, and officials in one wide-spread and common ruin. From convulsions worse than France suffered in 1848, in consequence of less distress than would have been the lot of our people had the Corn Laws been continued, we are happily spared by the timely change in our commercial regula-tions, which have allowed us to have plenty and peace, and filled the land with joy and gladness. For a timely rescue from impending disasters, almost unexampled in history, the nation has not yet learned to be sufficiently grateful to the Great Disposer of all events, and to the statesman whom He inspired with wisdom to do, and to that portion of the people to whom He gave skill and courage to demand the performance of, the right thing at the right time. The Corn Law was appropriately abolished in an hour of need and peril, and the abolition has saved the nation from unspeakable calamities.

THE NATIONAL PUBLIC SCHOOL ASSOCIATION.

THE NATIONAL PUBLIC SCHOOL ASSOCIATION. WE learn from the letter of Mr Hickson, the chairman of a meet-ing held at Manchester, on October 31 (inserted in another part of our journal), that the National Public School Associa-tion "has not adopted any proposition for *enforcing* attend-ance at free schools," and that on this question "the Asso-ciation has pronounced no opinion." Mr Hickson further assures us, that "such a proposition is not likely to be entertained," being contrary to the spirit of free institutions. The Association pro-poses the establishment, by *law*, of a system of free schools sup-ported by local rates, and managed by local committees, but it does not propose to make the attendance at them compulsory. At the meeting of the association, held at Manchester, however, At the meeting of the association, held at Manchester, however, on the 22nd ult, Mr Cobden said, as reported in the Manchester Examiner:—"I have heard mentioned wherever I have been, "that you have plenty of schools, and the people will not attend " schools until you adopt some system of compulsion, some coer-" cive system, and compel people to send their children to school; "cive system, and compel people to send their children to school; "it is of no use building schools, for the children will not attend "them. I have heard this compulsory system of attendance at "schools advocated in private meetings, in friends' houses, "wherever I have been—where gentlemen have spoken, pro-"bably, with less reserve than they would in public; and I have "found, to my astonishment, everywhere a strong opinion in "favour of a compulsory attendance in schools." He afterwards said, speaking in his own person,—

said, speaking in his own person,— If, after you had established a free school, and given everyone the opportu-nity of attending gratis, and given them good masters, you find the people will not send their children to the schools, but bring them up in idleness and igno-rance, I don't know that, under such circumstances, I should see that it would be any great infringement of the liberty of the subject, if you did adopt some plan, first, perhaps, to seduce or bribe them to send their children to echool, and if that would not do, try a little compulsion. I don't see any objection in principle to that; but I say to our friends, before you do that, try every induce-ment to make them come; and I should not be squeamish about any outcry there might be of the liberty of the subject, and no on;—there is just as much liberty in Switzerland as in England, and in Subtzerland they do plusish parents who do not send their children to the free school, unless they can show they are giving them an education elsewhere.

who do not send their children to the free school, unless they can show they are giving them an education elsewhere. We interpreted those passages, received, as they were, by the assent of the meeting, to be favourable to a compulsion on parents to send their children to the free schools, and we rejoice that we have obtained from Mr Hickson, on the part of the Association, a disclaimer of any such intention. The Association only means to collect rates compulsorily by law, and will leave parents and children to profit by the application of the money raised from the public or not, as they like. The passage quoted from Mr Cobden's speech may supply an answer to Mr Hickson's statement that there "is no example in Europe of a compulsory attendance." In Switzerland, Mr Cob-den says, parents are punished if they do not send their children to school. In Prussia, too, though the law does not prescribe the kind of school which children must attend, yet as the publicly endowed schools make it impossible to support other schools, except in very rare cases, and for technical objects, the compulsion to attend school, whatever may be the words of the law, is practically to attend the public school. We believe too that few or no chil-dren will be found in all Prussia, except the children of very distinguished persons, who are not educated at the school of the village or town in which their parents have their domicile. How-ever well meant are Mr Hickson's corrections, we decline to adopt them. well meant are Mr Hickson's corrections, we decline to adopt them.

With reference to compulsion, too, we must observe, as the whole funds of society are never superfluous, any portion appro-

priated compulsorily to education will compel persons in want of education, and all the young need it, to profit by that appropria-tion, or go without education. Funds appropriated to pauperism, foundling and other hospitals, and to alms-giving of all kinds, always foundling and other hospitals, and to alms-giving of all kinds, always find claimants. There never is for long periods too much food in the world; and consequently whatever conditions accompany any distribution of food, they will be complied with to get it. The funds compulsorily appropriated to education are no excep-tion to this rule, and thus compulsory rates for schools, to a certain extent, will compel attendance, or education will be neglected. Probably the appropriation in past times of large funds to systems not suitable to the wants of this generation, is one of the recence when our ducation has continued wary imporfact The Association, Mr Hickson assures us, does not intend compulsion ; but no words of his will convince us that if it levy compulsory rates, it will not to some extent compel attendance. Free-traders do not require to be informed that what law-makers intend, whether landowners or educationists, and what they effect by laws, whether landowners or educationists, and what they effect by laws, are very different things; and if the Association do not intend compulsory attendance when it proposes to levy rates by law, we must be permitted to believe that it is not very well aware of what it will effect. What actually takes place in Prussia, and indeed throughout

What actually takes place in Frussia, and indeed independent Germany, where there are few or no schools but the public schools, should warn us against levying compulsory rates for schools. When men are compelled to pay them, they will no more sub-scribe to or support voluntary schools, than they now subscribe to support the poor for whom they are compelled to pay rates. Compulsory rates, therefore, to support schools, will probably in the end extinguish all other schools. With a great national Compulsory rates, therefore, to support schools, will provably in the end extinguish all other schools. With a great national scheme, there will be no use for the schools supported by the National Society, and the British and Foreign Society. There will be an end to the competition that now exists between those bodies, and all schools will be merged in public schools. Have the National Public School Association considered what will be the effects of that?

the effects of that? We are acquainted with a parish in the South of England, of which the Rector, administering a large family property, is the principal landowner. He is a rabid Protectionist, a spouter at public meetings, and a determined for to Dissenters. The churchwardens and overseers are generally his tenants and creatures. Another large landowner of the parish entertains similar political and religious opinions to the Rector, but he is non-resident, and his tenants are guided by his clerical friend. Amongst the shopkeepers tenants are guided by his clerical friend. Amongst the shopkeepers and farmers there are several Dissenters, and they maintain their own chapel and a small school. If the inhabitants of that parish were authorised by law to levy school rates, the Rector would, in his own person and by his tenants and friends, determine the amount, and how they should be appropriated; the Dissenters' school would die away; and they would be compelled to pay for a school that would be made to subserve his purposes. Would that be a pleasing result for the National Public School Association? But a large propertien of the rural parishes are would that be a pleasing result for the National Public School Association? But a large proportion of the rural parishes are placed under similar circumstances. They are generally under the control of one or two Protectionist landowners and clergy-men, who will be able, whenever a law shall be passed compelling parishes and districts to establish public schools by rates, to tax Dissenters to pay for the schools which they will exclusively manage. manage.

Manage. When the Association has gots its law, the working of it will not remain in its hands. The members in their several spheres can answer for themselves : can they answer for their successors? They have the purest intentions : will town councils and commitnever be a majority of zealous Churchmen in one place, Will there and zealous Dissenters in another, who will know how to make the school rates subservient to their own purposes ? Will the committees be always free from the influence of party, and the rates be always appropriated to the public satisfaction? Will not, in fact, all the intrigues and squabbles that are now everywhere connected with local politics then contaminate education; and will not the comlocal politics then contaminate education; and will not the com-pulsory rates increase the prizes for which faction contends? Left to voluntary exertions, each party and sect now maintains its own schools in competition against each other : with compulsory rates, the contention would be for the management of the funds, and the Church of England having the most followers, would gene-rally carry off the victory. Compulsory rates would virtually add to the revenues and power of the Church. They are less in-jurious in Prussia, where the Government regulates the whole, than they would be here, where, though ordained by law, the appli-cation of them would be an additional bone of contention between sects and parties.

The principal promoters of the society, we presume, from the The principal promoters of the society, we presume, from the place of meeting, are master manufacturers. At any rate, they are the middle classes. As we learn from Mr Cobden, many of them contemplate compelling the attendance of children at free public schools. It is then a question of importance: Would placing public schools—supported by compulsory rates—under their auspices, increase the harmony between them and the lower classes? There may be at this moment a cessation of hostility between the employers and the employed, but give the power by law into the hands of the former to collect rates for the education

of the latter, and the peace will soon be, and for ever, at an end, till the relations between them be totally changed.

We reason much in the dark, however, as to the modus operandi of a law of which we are informed only of the compulsory principle; but we have somewhere read that the design is to make property pay for the education of poverty. Rates are to be levied exclusively on the rich for the education of the poor. If that be the plan contemplated, the whole control over the application of the rates must rest with the rich. Levelling in its aim, its prac-tical results would probably be an additional means of keeping the poor subservient, and continuing the present degradation of the multitude on the pretence of teaching them.

To all these forcing systems of education there remains the decided objection, that they nourish into life a degree of intel-lectual activity which finds no corresponding object for its exer-tions, and makes its possessors more the instruments for corrupt-ing than improving society. They are bounties on a species of production not at the moment in demand. The cities of France, Italy, and of a large part of Germany, are filled with men edu-cated to be averse from manual labour, who crowd all the genteel, the literary, and learned professions, to overflowing, and who, finding no adequate rewards for their exertions—no scope even finding no adequate rewards for their exertions—no scope even for the exercise of faculties forced into existence by the hothouse culture of the State, are a plague to themselves, and dangerous to society. They are engaged either in convulsing it by their ambition, or stifling it by their multiplied restrictions. Our fac-tory population, which has excited the alarm of well-meaning men, is far less dangerous to the peace of society, and less cor-rupting, than the educated artists, authors, and candidates for ad-ministrative employment who swarm in Paris and the other cities of the Continent. of the Continent

We hope Mr Hickson will not consider such an expression of opinion an attack on the Association. We can assure him we mean no attack, but merely to repeat the expression of our con-viction that all these forcing schemes, whether for the growth of food or the culture of the mind, are inimical to the welfare of society. We have habitually condemned them in France and Ger-many, and we cannot approve of them because they are advocated by a few of the middle classes in England.

Agriculture.

AGRICULTURAL DISTRESS.

AGRICULTURAL DISTRESS. A GRICULTURAL DISTRESS. Is the assertions of party leaders in the one House of Parliament and of Protectionist Peers in the other were to be accepted as evi-dence of agricultural distress, an unparalleled state of woe and im-pending ruin amongst English farmers might be taken to exist, as the direct and inevitable consequence of Free Trade in corn and cattle. But, fortunately for farmers, peers, and political landlords, and in auch high quarters, are very nearly directly contrary to the truth. We do not mean to offend the "agricultural interest" so much as to deny altogether its "distress." We will not seek entirely to deprive the owners and occupiers of land of their cherished difficulties, or the comfort they seem to derive from the ulterance of prophecies of ruin ; but we must take leave to examine the real ex-tent and probable causes of their distress, and to test, by reference to fact, not fancies, the value of their lagubrious predictions. Neither shall we deny that the change from a restricted to an open trade in agricultural products has had some, perhaps not inconsiderable, effect and to render such prices some what lower at the present moment throw most beneficial to the farmers. The principal effect of Free Trade in grain has been to produce a remarkable steadiness in prices, and to render such prices some what lower at the present moment throw most beneficial to the farmer, will eventually cause to be action of land with insufficient capital, which was based on the occur-reace of the expectation of high prices, will eventually cause to be action of land with insufficient capital, which was based on the occur-reace of the expectation of high prices, will eventually cause to be action of land with insufficient capital, which was based on the occur-price of the expectation of high prices, will eventually capital eystem of which was going on through improvements in our home hus-bandry. Low prices, especially for wheat, must inevitably have on that wide neld for increased production which their own farms ofter. Hence the extensive improvements which are going on, and the great exertions farmers are making. Doubtless a new era in husbandry is commenced; some men who have got into the possession of farms without the means of good cultivation will be compelled to give up; and others there are, whose means are ample, but who having been accustomed to a certain routine, shrink from that extra exertion mo-

NOMIST. [Feb. 22, dern husbandry demands, and therefore retire from the business. But there is no great or general giving up of farms by English farmers, and there will be none. On the contrary, any farm in reasonably good condition and let on fair terms, readily finds a tenant more able to cope with the times than his predecessor. In fact the present time offers a favourable opportunity for going into farming, much unwhole-some competition for farms having ceased, and landowners being somewhat less unreasonable in the stipulations they claim from their farm than at any time since 1035. Even Lord Forester, we understand, has found a tenant for the farm he had devoted to "growing thistles," or rather, it might be said, kept for the cultivation of a grievance. Never were the agricultural labourers so well off as at present, and in general they are extremely well employed ; where they are not so is an exception to be accounted for by local or peculiar causes. But apart from any change occasioned by Free Trade, the last three years have been trying ones for the farmers of many districts. In 1848 the grain crops, especially in the South of England were inferior in quality and deficient in quantity, so that many, perhaps the majority of farmers, sustained serious losses. Then in 1849, though the wheat crops were groups are were scarcely recovered. Then again in 1650 the yield of grain has nowhere been equal to the appearance of the growing crops, while in several extensive districts blight and mildew prevailed. The barley, too, has been in most places inferior. Thus we find amongst the Free Traders, that " in Cambridgeshire they grew a description of barley which made good beer ; but this year the crop was injured, and the maltsters would not buy it. It was utterly rejected, and had to be sold for 16s or 18s the quarter." How in such circumstances appresses our comprehension. Why should the rest of the community be called on to insure the farmer against a bad crop of wheat or foctor 8. And in the same debate Lord Wi substitution of the scythe for the reaping hook in cutting wheat, as a proof that husbandry is retrograding ! He said :--

From what he had himself seen, he was convinced that land was going out of cultivation, and that the cultivation carried on was becoming of a worse cha-racter. He had recently seen prople mowing wheat instead of cutting it.

Factor. He had recently seen prople mowing wheat instead of cutting it. Perhaps his lordship would regard the substitution of the spade for the hoe, or the plough for the spade in cultivating land, as evi-dences of declining cultivation. Yet such are the arguments for Protection put forth in high places. On the other hand, Earl Fitzwilliam suggested the true cause, not only of much local distress, but of the low average price of wheat at this time. He said, with reference to Cambridgeshire :-

only of much local distress, but of the low average price of wheat at this time. He said, with reference to Cambridgeshire :--The fact that that county was distressed could not be disputed, but he would give some reasons why that distress did exist. Amongst some propositions, in which he agreed, the noble earl who had just sat down had stated one in which he could not concur, at least without limitation. The noble earl fart said that they must not look at particular prices, but at the prices of the whole country. Now their lordships knew that the average price was greatly affected by the character of the corn sold. At the present moment, in the county of Cambridge, he could assure the noble earl that good wheat fetched no less a price than 42a per quarter. He would not say that that was a high price, and he, for one, was glad that they had not high prices. But the average price in that county, and in another which had been alluded to, was no doubt very much lower. It was perfectly well known, and no one knew it better than the noble earl who had just sat down, that the last harvest was one of the most disastrous that had ever been known in the Fens; and that in most of the markets in Lincolnshire and Cambridgishire the lowest qualities of corn had only realised the price of 22s a quarter. That he conceived to be the true explanation of the agricultural distress which prevailed in the county of Cambridge, and in other parts of the country. He understood, however, that the price of good wheat last market day at Cambridge was 42s per quarter, and he had returns from several other towns. The first place he would mention was St Ives, which, although in Huntingdon-shire, was on the borders of Cambridgeshire. The lowest price of the best corn was 38s, while inferior corn was as low as 22s. At Wisheach the lowest prices of the best wheat was 36s 6d, and some fetched ever 14s; but the inferior sorts were as low as 24s. At Boston, Spalding, and Peterborough, the highest prices respectively were 29s, 42s, and 41s, while

And he most justly added, that the "distress" could be best reme-died by arrangements between landlords and tenants :--

died by arrangements between landlords and tenants :---With respect to the existing distress of the agriculturists, he must be allowed to say that a great number of the questions at issue were questions between the landlord and the tenant. He believed that in most cases the distress of the tenant could be met by fairness on the part of the landlord. It was not, in fact, a question of Corn Laws or Protection at all; for it was just as possible to calculate the rent when corn was 40s, as when it was at 60s or 80s; or to go to the other extreme, it was as easy to calculate it when it was at 40s. The worst of thesechemes of Protection was that they never succeeded. Notwithstanding the laws of 1815, of 1822, and the subsequer enactments, there had been distress; and the landowner, the land valuer, and the man that took the farm had, in fact, all been injured by those laws. Under the operation of them all agricultural distress existed, as if to prove that it was not in the power of man to regulate trade and prices by the force of law, so as to give satisfaction to the different classes of the community. These are truths which cannot be too frequently repeated.

to give satisfaction to the different classes of the community. These are truths which cannot be too frequently repeated. So again, Lord Woodhouse pointed out the utter absurdity of the Duke of Richmond's assertion, that farmers were temporarily em-ploying men to keep them off the parish rates, and not with expecta-tion of getting a profit from their labour. A statement so puerile only proves how little the noble speaker knows of the real facts and circumstances of English husbandry. Lord Woodhouse said :--

It was said to be only reckless and desperate tenants, those who were making a last effort to know above whiter, who continued to give employment to the regular number of labourers; but was it likely that men would continue to invest money in what they knew must produce a certain loss? Still less pro-

Feb. 22,

THE ECONOMIST.

bable was it, in such a state of thing^o, that men should be found ready to take farms for the first time, and enter upon their cultivation; and he well knew that there were such, and that farms could be readily let. He believed the diminution in the price of meat was caused less by foreign importation, than by the increased number of cattle reared at home, as evinced by the number of fat cattle brought to market—also by the increased facilities of internal commu-nication, whereby the great meat markets of London and Liverpool had been brought within reach of many to whom they were before inaccessible. Then there had been a great diminution in the expenses of farming—not equal, certainly, to the falling off in the price of produce, but still a very considerable item to enter into the balance at the end of the year.

That good farmers have many countervailing benefits from the low price of articles they purchase is certain. For instance, on a farm we are acquainted with—a small one of 290 acres by the by—40 tons of oilcake are annually consumed in feeding stock, and during the high prices of 1847 oilcake sold for 13*l* a ton, the present price being 8*l* per ton. Here, then, we have a clear saving of 200*l* on one item of orner diverse.

It is somewhat singular that the demand for foreign wheat should not have It is somewhat singular that the demand for foreign wheat should not have been even greater than it has, scarcely any of the English having for months past come to hand in fit condition to be manufactured into flour without a con-siderable mixture of old foreign. That very large quantities have been consumed is proved by the extent of the imports and the present comparatively moderate stocks in warehouse; but there would certainly have been more activity in the wheat trade (though prices might not have been higher), if a less proportion of our supplies had consisted of flour. The pressure of the manufactured article on the different markets has been severely felt, and has unquestionably had a more depressing effect in all parts of the kingdom than would have been pro-duced by much larger supplies of Wheat.

And the cause of this pressure of French flour on our market, seems to be cause of this pressure of French nour on our marker, seems to be caused by the superior machinery the French millers have erected. We suspect that we are a good deal behind in this department of mechanical enterprise. One of the grievances of the Duke of Richmond was "that flour mills are now erecting in various parts of France, a steam mill at Rouen with 100 pair of stones for grinding wheat having been built."

DEEP CULTIVATION.

traordinary success." He says :--I am not going to give the author credit for novelty, for Jethro Tull advocated the principle 100 years ago, and the advantages to be gained from deep culture have been well shown by others; nor am I wishing to bring forward the prac-tice there laid down as the one best suited for farmers' adoption. All I wish to do is, to draw attention to the advantages gained from deep cultivation and frequent moving of the soil, for I confess my own experience has taught me to look with distrust at the pains many are taking to impress upon arable farmers the necessity for plocing their chief dependance on stock keeping, to give them the means to profitably grow corn, for I have ever found the losses from stock keep upon the produce of arable land, largely interfered with the profits from cultivation : and as I, too, have experienced, and on a large scale of furming, how much the occasion for manure to grow corn may be lessened by deep and good cultivation, and how much larger my profits grew as the occasion for manure became less, I introduce with much pleasure the work to my readers.

readers. To give the confidence which is so much wanting on introducing new systems, I begin with drawing attention to the author's very satisfactory balance-sheet, showing the cost of growing an acre of wheat, with the return which he has ob-tained from land where he has grown wheat without manure for five successive years, the return given being the last year's:-THE OUTLAY. E s d

£11 14 0 Now, if we add to the charges 40s an acre to cover rent and interest of capital, and 40s an acre more for provision for contingencies and dressing (for I would not encourage the idea that iand can be farmed for ever without dressing), a net profit of 30 as 6d per acre, per annum, remains; and this is gained by cultiva-tion, which permanently deepens the staple of the land. The practice which has given this extraordinary return is as follows:—The ground is laid out in stetches of five feet, each of which is thus appropriated— one-half is given to growing three rows of wheat, at intervals of one foot. The other half is left to admit of being worked as follows : as soon as the young wheat shows, this part is trenched two feet deep, and to within six inches of the young wheat. The top soil being placed undermost, and the bottom uppermost. In this state the wide intervals lie all the winter exposed to the action of frost and atmospheric changes, which are so beneficial to newly turned up earth. In the spring, this space is again turned over with the fork one spit deep, and has for it. In this period wheat receives several horse hoeings, so long as the young growth permits. As soon as the wite is harvested, the failowed space is again turned over with the fork, and levelled, and chanucs are made by a three-wheel presser to receive the ased, which is carefully dropped, grain by grain, three inches apart, at the rate of two pecks per sure. In this way upwards of four

quarters of , wheat have been annually grown from the same land, and without manure, for five successive years. By this simple process, with nothing beyond the use of a simple cultivator, the spade, the fork, and the presser, has the same acre of land been made to pay back so bountifully for the farmer's labour; the fertility has been gained from the decomposing action of heat and cold, wet and drought, wind and rain upon the well-tilled intervale, which, at the same time, has been gathering the treasures of nitrogen, ammonia, and decomposed organic matter, that the descending rains carry into the substrata made previous by the deep tillage. There is a recommendation of this plan of farming which I must not omit to allude to, for in this appears one of its greatest merits to the very worthy gentleman who has taken such pains to apread the practice. The hand labour it calls for would give employment to our rural population through the winter; and knowing how desirable is this, and how readily the system may be applied to small holdings, the little capital it calls for, and its simplicity, I hope many others will follow the example of Mr Smith. It is not stated what is the kind of soil on which Mr Smith has made this ex-periment, probably a sandy one, that being the sort most frequently cultivated successfully with the spade.

Foreign Correspondence.

From our Paris Correspondent.

Paris, Feb. 20, 1851.

Paris, Feb. 20, 1851. The week has been very calm, every party is on the qui vive. The Assembly and the Executive Power have avoided every new irritating question since the Dotation Bill has been rejected. Though the President himself had announced in the Moniteur that he would accept no subscription in his favour, some of his friends had continued to declare that they would open a subscription in order to purchase the estate of the Malmaison. This advertisement had a very bad effect on the public, as it was evident that the subscription would not answer. But the President sent another letter to the paper who had persisted to open the subscription, and his adherents were obliged to abandon it. It is probable that the next question which will excite the passions of the Assembly, will be M. Creton's motion for the repeal of the

It is probable that the next question which will excite the passions of the Assembly, will be M. Creton's motion for the repeal of the Royal Families' Banishment Bill. When that motion was brought last year to the Assembly, the Legitimists and Bonapartists had united to postpone it to the month of March, and a part of the Republicans had voted in the same way. But it might be adopted when it will come to discussion in the first days of next month. If it were adopted, it would be a great check to Louis Napoleon's hopes, and would in-orease the chance of the Prince of Joinville. In that case men would be allowed to vote in favour of the Prince of Joinville as President of the Republic ; but the votes given to Louis Napoleon for the pro-longation of his powers would be contrary to the letter and spirit of the constitution. constitution.

It is almost certain now that the Assembly will not grant the re It is almost certain now that the Assembly will not grant the re-vision of the Constitution, and will oppose any attempt at a prolonga-tion of the President's powers. Louis Napoleon himself has probably recognised that he could not easily obtain his proclamation as Emperor, or the prolongation of his own powers. He now affects to be devoted to the Republic, and he has begun to sell a part of his horses, and to diminish his expenses. It is true that the country at large is favourable to him, but on condition that he will remain strictly within the limits of the Constitution, and will not try to put it aside. aside.

The friends of the president hope that when the Presidential election takes place, an overwhelming majority of the electors will give him their votes in spite of the Constitution, which prohibits his

give him their votes in spite of the Constitution, which prohabits his re-election; and they believe that it will be impossible to reject the will of the nation. As the National Assembly are acquainted with these projects, they will enact a law, by which they will impose a heavy penalty on all the mayors who will indicate upon the minutes of the *poll* the votes given against the Constitution. The Assembly have not sat since Saturday last. They met in the bureaux to examine the bill which has been prepared by the Council of State upon the municipal system. The Council of State had decided that the mayors should be named by the elective power from among the members of the municipalities. But the majority of the Assembly will not carry such a clause, and is decided to maine from among the members of the municipalities. But the majority of the Assembly will not carry such a clause, and is decided to maine-tain the nomination of the mayors by election. The Assembly have chosen the committee, who will examine the bill. Eighteen members out of thirty are unfavourable to the bill. One hundred and eighty-nine members of the Left have presented to the Assembly a domental a monsty for political offences:

One hundred and eighty-nine members of the Left have presented to the Assembly a demand of general annesty for political offences; but it will not be accepted by the majority. The President had also a desire of granting restrictive annesty; but he has abandoned it, as he was apprised that M. Gurnard and several other political convicts, who were to obtain their pardon, were determined to refuse it unless it were granted also to all their fellow-convicts. The Government have published the table of imports and exports for January 1851 as compared with January 1850 and 1849. The amount of exports has decreased. They amounted in January 1851 to 8,211,145f; in January 1850 to 9,265,975f; and in January 1849 to 8,533,241f. It is a decrease of 1,054,830f upon 1850, and of 322,096f upon 1849.

It is a decrease of 1,054,830f upon 1850, and of 322,096f upon 1849. The exports have generally improved during the same months. They amounted to-

THE NATIONAL PUBLIC SCHOOL ASSOCIATION.

To the Editor of the Economist.

SIR,-The ECONOMIST enjoys too high a reputation among thinking men to admit of the supposition that it would permit the opinions of any section of reformers to be intentionally misrepresented in its columns. The fact, therefore, that they have in one case been misrepresented in your last number, I must attribute to an error of inadvertence, which you will give me leave to rrect

correct. The writer of an article on the National Public School Association states it to be the object of that Association to establish "free Schools, supported by com-pulsoryrates, to which parents are to be compelled to send their children." This is incorrect. No proposition for enforcing attendance at free schools has been adopted by the Association; nor is such a proposition likely to be en-tertained; for not only would it be contrary to the spirit of free institutions, but the principle of such compulsion would be an anomaly even in despotic states, of which there is no example, that I know of, in Europe. The writer refers to the Praesian law, but mistakes its import. The Prussian law enacts that all children under fourteen shall attend school, but does

The writer refers to the Prussian law, but mistakes its import. The Prussian law enacts that all children under fourteen shall attend school, but does not prescribe the kind of school they shall attend. Parents in Prussia are at perfect liberty to send their children to a private school, if they prefer a private school to the free schools of the municipalities. Upon the widom of a compulsory law educationists differ. It is a question upon which the National Public School Association has pronounced no opinion. Allow me to add, that the writer is further in error, in assuming that the ad-vocates of secular instruction are at all insensible to the advantages of that indirect ducation, which in a free country may be obtained out of school. Some of us would readily admit that the free ochools of the Continent are of secondary importance to a free press; but we disparage neither. Like the people of the United States, we would have both.

Emperial Parliament.

Thursday:-Committee appointed to consider the Law of Partnership-Mr Locke King's motion to extend the 10/ Franchise to Counties carried.

HOUSE OF LORDS.

Friday, Feb. 14.

Intracial, Feb. 14. [CONTINUED FROM OUR LAST.] Lord Monteagle presented a petition from New Brunswick, praying for Government assistance towards the completion of the railway to Quebec. His lordship enlarged apon the benefits that would result from the line, and warmly supported the prayer of the petitioners. Lord Stanley concurred in approving the plan of the railway, and Earl Grey stated that the Government had the matter under consideration. Their lordships adjourned at a quarter to 7 o'clock.

Monday, Feb. 17.

The house adjourned at an early hour, after the despatch of some unimportant business.

portant business. Tuesday, Feb. 18. The Earl of Hardwicke presented a petition from the county of Cambridge, complaining of agricultural distress, and praying for a return to protection. The noble earl admitted that, as stated in the Royal Speech, the condition of the people generally was prosperous, but he contended there was great reason for alarm so long as the owners and occupiers of land were in embarrassment and distress. He complained of the burdens upon agriculture, and of the opera-tion of free trade upon the farmers, who were fast losing their capital, and no longer able to obtain a just return for their labour. Earl Granville, whilst defending the policy of free trade, showed that the commerce of the country was increasing, and the people, as a whole, prosperous and contented. Individual instances of embarrassment, such as the noble earl

relied upon, could not be accepted as proofs of general distress. They were exceptional, and such as might be expected whilst passing through a state of transition, and afforded no grounds for returning to a system of protection. He hoped to hear Lord Stanley's opinion upon the question, whether agriculture ought to look for a return to protection, or to a diminution of local burdens upon land. If to the latter, the country had a right to be informed of the pro-posed mode of reduction.

upon land. If to the latter, the country had a right to be informed of the pro-posed mode of reduction. The Duke of Richmond said it was not the duty of an opposition to describe the details of their policy; it was their business rather to object to what they did not approve. The noble duke confirmed the accounts given of distress among tennants and labourers, and advocated protection as the remedy for it. A somewhat lengthened debate followed, in which several noble lords engaged. At the close of it the petition was laid on the table, and the house adjourned. *Thursday, Feb.* 20. The Lord Chancellor, in reply to Lord Brougham, announced the intention of the Government to introduce next week a bill for a reform of the admi-nistration of justice in the Court of Chancery. It was not yet decided as to whether the measure would be introduced in the Upper or Lower house. The house then adjourned. *Friday, Feb.* 21.

The house then adjourned. Friday, Feb. 21. Lord Langdale introduced a bill authorising the appointment of a new Vice-hancellor, and would move the second reading of the bill on Monday. The bill was then read the first time. [LEFT SITTING.] C

HOUSE OF COMMONS.

HOUSE OF COMMONS. *Iring, Feb. 14.* **IFAGM, FED. 14. IFAGM, FED. 14. IFAGM, CALLED, FORMAGE, ALLED, FORM**

make every man a Jesuit and every priest a spy. It would be found almost impossible to work it in Ireland. Mr Hamilton followed up come personal observations in defence of his colleague, Mr Napier, by arguing that the act of papal aggression justified legislative inter-ference, provided there were mo intolerance shown to the religious principles of the catholics. His approval of the Government measure must depend upon the tenor of its provisions, of which, as yet, he knew nothing. Mr Sadleir wished to see protestanism resting upon faith and the scriptures instead of the factitious strength of statutes. He proceeded to adduce numer-ous instances to support a complaint that Irishmen and catholics had been un-fairly treated in the distribution of Government patronage. Mr Milner Gibson disapproved of any return to the system of imposing civil disabilities on account of religious opinions. The measure replaced some of that it was not fair to construct a measure directed sgainst the hierarchy of one church under the coursel of the chief preiate of snother, and a rival church. He should offer to the bill his most strengous opposition. Mr Camming Bruce remarked (in reply to a statement made by Mr Oswald in a previous debate), that if Scotland had not partaken in the agitation, it was not that Scotchmen lacked sympathy with the English protestants, but because they felt secure that their southern brethren could repel the insult without assistance. With respect to the ministerial measure, he feared that it would be unsatisfactory and insufficient. He suggested that the bill should be invigorated, the introduction of papal bulls made penal, and all monkeries prohibited in thi country. Mr Gx Maule vindicated the right and duty of the legislative to interfere in

Mr Fox Maule vindicated the right and duty of the legislature to interfere in matters where the secular bordered upon the spiritual jurisdiction, and, above all things, to provide that the great principles received from former ages should be handed down uncorrupted to their successors. He reviewed various criticisms that had been hazarded upon the Prime Minister's letter, and proceeded to rebut the assertion of Mr Oswald, that the Pope had but followed the example set by the leaders of the free kirk movement in Scotland. There was no analogy be-tween the cause. Before the unprovoked act of the Vatican,'a happy tranquillity prevailed in the country, and the acerbities of sects and faiths were disappearing under the influence of the tolerant policy which the present ministry had always upheld. This was now suddenly disturbed. After contending that no logal catholic could give voluntary obedience to the canon law, the Scoretary at War related the official steps he had taken to accommodate the military duties with the religious observances of the catholic soldiers in our army. Mr Scally having briefly opposed the measure, Col. Sibthorp, though he possessed no confidence in the ministry, and had witnessed innumerable evils resulting from the Act of Emancipation, would not refuse to allow the introduction of a measure designed to vindicate the dignity and independence of the Crown. Mr Muntz endeavoured to semarate the question from the church cuarrels in country. Mr Fox Maule vindicated the right and duty of the legislature to interfere in

and independence of the Crown. Mr Muntz endeavoured to separate the question from the church quarrels in which it had been estart up. But fluding that more power was claimed by the Pope in England than in other countries, or in this until the present occasion, he thought they were justified in taking measures for their defence.

THE ECONOMIST.

Mr Brotherton, looking upon the measure as intended to prevent a violation of the independence and civil rights of Englishmen, intended to vote for it. He was assured that no infringement would be sanctioned upon the principle of toleration, and stated that many catholics among his constitutents approved of the ministerial processition was assured that no infringement would be sanctioned upon the principle or toleration, and stated that many catholics among his constitutents approved of the ministerial proposition. After a few words from Mr F. O'Counor, Mr Scholefield declared that he could not vote for a measure which would interfere with the necessary discipline of the catholic church, without being available for any good purpose. The house divided—for leave to bring in the bill, 395; against it, 63; majority, 332. The bill was then brought in and read a first time, Friday, the 28th, being fixed for the second reading.

32. The bill was then brought in and read a first time, Friday, the 28th, being fixed for the second reading. *Monday, Feb.* 17. The house rose at half-past twelve. *Monday, Feb.* 17. The house having resolved itself into a Committee of Ways and Means, The Chancellor of the Exchequer made his financial statement for the year. He began by referring the Committee to the balance sheet made up to the 5th of January last, which would afford, he thought, a not incorrect criterion of the attle of the revenue for the financial year ending the 5th of April next. The income he had estimated last year at 52,285,0001; the actual income furned out to be 52,810,8771 up to January, and he estimated that its amount up to the 5th of January last was 50,205,8794, and he believed that its amount on the 5th of April would be less than 50,134,9001, showing a reduction below the expendi-ture of last year of 641,0001. The probable surplus on the 5th of April would 2,521,0004. He then proceeded to estimate the income for the ensuing year. The Customs up to January amounted to upwards of 20,400,0001, and he thought The Castoms up to January amounted to upwards of 20,400,000, and he thought he should be justified in taking this branch of the revenue in the ensuing year at the same sum. The Excise he thought he could not estimate at so large an ight he should be justified in taking this branch of the revenue in the enuing year at the same sum. The Excise he thought he could not estimate at so large an amount as that of the last year, owing to the inferior quality of the barley in the last harvest; he took it, therefore, at 14,000,000?. In the Stamps there would be a further diminution in the ensuing year, as the late act would not be in full operation until October, so that he should estimate the stamp duties at 6,310,000?. The other taxes, including the property-tax, he took at the same amount as last year, making an estimated income altogether of 52,140,000?. The estimates for the army were 6,593,945?; for the navy, 6,537,055?; for the ord-nance, 2,424,171?. There had been some reductions in these estimates, which would have been larger but for certain circumstances, which he explained. The Government had not been of opinion that it would be advisable to reduce the number of our forces, and they had continued the expenditure on account of certain defences at home, believing that Parliament would not desire to see the country left in an unprotected state. The reduction in the estimates was 457,000?, from which deductions were to be made to the amount of 246,000?. The reduction would have been largere but for the commutation of a money compensation to seamen for a diminution of their grog, and for a curtailment of 400,000?. The miscellancous estimates had amounted to 4,005,000?. The ecnsus the ensuing year would cost 10,000?, but he would take these estimates that 400000?. The cheal expenditure would take these estimates that 400000?. The task estimates had amounted to 40,024,171?. Deducting stoppages from the pay of soldiers serving abroad. These twoitems amounted to 140,000*l*. The miscellaneous estimates had amounted to 4,065,000*l*. The census the ensuing year would cost 110,000*l*, but he would take these estimates at 4,000,000*l*. The total expenditure would, therefore, be 50,247,171*l*. Deducting this from the probable income, there remained an estimated surplus, in round numbers, of 1,892,000*l*. The first point to consider was, how far this state of our finances bore upon the question of the renewal of the income-tax and the stamp duties in Ireland. The amount of the former was 5,400,000*l*, that of the latter 120,000*l*, but he would take it at 100,000*l*. If, therefore, these taxes were not renewed, a revenue of 5,500,000*l* would lapse, and, deducting from that sum the surplus of 1,892,000*l*, there would be a deficiency to the extent of 3,610,000*l*. In the ensuing financial year half a year's income-tax would be receivable, so that in the next year the deficiency would be only 910,000*l*, but in future years it would be 3,600,000*l*. The house must consequently be prepared to have an annual deficit to that amount, or to reduce to an equal extent the expenditure, which, upon an amount of 16,000,000*l*, was impracticable, or to impose new taxes, whereas there were taxes still existing which it was desirable to get rid of. When these were reduced or repealed, and the inequalities and anomalies of our system of taxtion were corrected, the question would fairly arise whether the income-tax should be retained, reduced, or removed. Till, however, our present commercial policy was fully carried out, he trasted the house would not refuse to continue this tax, under the cover of which so many objects beneficial to the country had been accomplished. He did not think it advisable to go into the details of the tax until the bill was before the house. He had, however, come to the conclusion that, upon the whole, an equal and however, our present commercial policy was fully carried out, he trusted the house would not refuse to ontinue this tax, under the cover of which so many objects beneficial to the continue this tax, under the cover of which so many objects beneficial to the continue that a until the bill was before the house. He had, however, come to the conclusion that, upon the whole, an equal and uniform rate on all descriptions of income, from whatever source, was the fairest and most practicable mode of assessment. He proposed to continue the ex-emption of Ireland. Sir Charles then, having replied to certain suggestions made to him respecting a revision of taxation, and having claimed for the Government the merit of having contributed to the augmentation of the favorenment the merit of having contributed to the augmentation of the forevenue by economy, proceeded to consider the mode in which the anticipated sur-plu should be disposed of. The first claim, he observed, was for some reduction of the debt. Since 1830 we had borrowed 35,000,000,000 to our debt. He did not think it necessary to make a great effort to reduce this debt, but a portion of the surplus ought to be applied to its reduction, and he proposed to retain about 1,000,000. What was to be done with the remainder? Of all the claims made upon him, he though the was bound to attend to that for mitigating a tax which bore upon the health and morals of the lower classes, namely, the window duty. The amount of that tax was 1,356,000, which would aboorb the whole of the surplus, and chis would be unjust to other classes. Sanitary relief might be ob-tained without sacrificing the whole tax, by changing the mode of levying it, which was most objectionable. He proposed, therefore, to repeal the existing mode of assessment, and to substitute a tax upon houses, to lay two-thirds of the present tax upon 30,000 houses, to except the great majority of farm-housed, would be to exempt from the tax 120,000 houses, to lay two-thirds of the present tax upon 30,000 houses, to

Deducting this from the surplus, there would remain 612,0001; bat half of the present window duty would be receivable next year, which would make the surplus for that year 962,0001, the permanent surplus in future years being 612,0001. Sir Charles concluded by moving that the income-tax and the stamp duties in Ireland be further continued for a time to be limited. At the suggestion of Mr Herries, who considered that the house should have time to weich the propositions.

At the auggestion of Mr Herries, who considered that the nouse successful the every state of Mr Herries, who considered that the nouse successful the propositions, Lord John Russell consented that the subject should be discussed in committee on Friday. The debate which followed was, therefore, of a somewhat desultory character. Mr Hume was very much disappointed at the statement of the Chancellor. He objected to any part of the surplus being applied to the payment of the debt, instead of to the removal of taxes that pressed upon industry. Lord Duncan was straid the proposition of the Chancellor would cause considerable disappointment among those who expected the entire remission of the window-tax.

Mow-tax. Mr Hodges and Mr Frewen urged a mitigation of the duty upon hops. Sir B. Hall inquired whether the house-tax was to be extended to Ireland? The Chancellor of the Exchequer replied that he proposed to reduce the duty id on houses in Great Britain, and did not mean to impose a new tax in placed. Mr Muntz and other members strongly denounced the income-tax.

The Chancellor of the Exchequer, in reply to various queries, stated that mo tax would be charged upon warehoused, manufactories, or any buildings that were not dwelling houses; that the assessment upon existing houses would be commutable to a charge levied upon the rental, calculated upon the basis laid down in the original house duy, and amounting generally to two-thirds of the abolished window tax; and that the proposed transference of the costs, or part thereof, of papper luratic asylums, was to have effect in all parts of the United Kingdom.

Kingdom. Capt. Harris, Mr Newdegate, Mr Wakley, Mr Hildyard, and other n having added some observations, the chairman reported progress, and f an reported progress, and the house

sumea. Mr Hawes moved the second reading of the Passengers' Act Amendme Mr Hawes moved the second reading of the Passengers' Act Amendment Bill, which was agreed to after a few remarks from Mr Sidney Herbert and Mr Henley, and the committee fixed for Thursday next. On the motion of Mr C. Anstey, leave was given to bring in a bill for estab-lishing councils in counties in Ireland. Sir W. Tuesday, Feb. 18.

Tuesday, Feb. 18. Mr Poulett Scrope moved for the appointment of a select committee to con-sider the expediency of assimilating the poor laws of the three kingdoms, and of promoting the productive employment of able-bodied paupers. Before the hon. member had concluded the house was counted out.

Wednesday, Feb. 19.

Wednesday, Feb. 19. Sir W. Clay moved the second reading of the Compound Householders Bill which, he said, was in all respects the same as the bill of last session. It, object was to remedy an accidental omission in the machinery of the Reform Act, whereby persons were disfranchised who were intended by the act to enjoy the franchise

the Franchise. Mr Mackenzie thought that further time should be afforded for considering the bill, and moved that it be read a second time that day fortnight. Lord J. Russell resisted the proposal for delay. The subject was one with which the house was perfectly familiar; the bill was not intended to enlarge the scope of the Reform Act, but to carry out its purpose. Objections to details were propose for the computities ere proper for the committee. Mr Henley demurred to the wording of the bill, which went beyond its prowei

fessed object.

fessed object. It was ultimately arranged that the bill should be read a second time, and committed that day three weeks, prior to which time the wording of the bill should be revised. Sir G. Grey moved for leave to bring in a bill to amend the law relating to the expenses of prosecutions, by empowering the Secretary of State to regulate those expenses, giving a succinct exposition of its provisions. Mr S. Wortley suggested that there should he a provision for the proper conduct of prosecutions, making some person responsible for the form of the despositions.

conduct of prosecutions, making some person responsible for the form of the despositions. Sir G. Grey said this subject involved the appointment of a public prosecutor, and great difficulties beset such a measure. The subject, however, occupied the attention of Government. Leave was given to bring in the bill. Sir G. Grey theu moved for leave to bring in a bill for the removal of Smith-field market. He observed that the Commission had recommended the removal of the site of the market, and he had communicated with the Corporation of the city of London, in the hope that it would co-operate with the Government in fixing upon a new site; but as the Corporation had declined, this bill had been prepared, by which it was proposed to appoint commissioners, under the title of the Metropolitan Cattle Market Commissioners, who would be empowered to provide a market, make by-laws and regulations, levy tolls, and raise money by mortgage of the tolls, under certain limitations. After a short discussion, leave was given to bring in the bill. The house adjourned at 2 o'clock. *Thursdan, Feb.* 20.

Thursday, Feb. 20. Lord John Russell, in reply to a question by Mr Charteris, stated that certain occeedings in reference to the National Gallery were in contemplation. Pos-

Lord John Russell, in reply to a question by Mr Charteris, stated that certain proceedings in reference to the National Gallery were in contemplation. Pos-sibly a select committee would be appointed. Mr Slancy then moved for a select committee to consider the law of partner-ship, and a proposed limitation of liability, with a view to encourage useful enterprise and the additional employment of labour. Mr Labouchere replied, admitting that the law of liability might, in some respects, be changed with advantage to the commercial and general community, and consenting to the appointment of the proposed committee. The appointment of the committee was then agreed to. Mr Locke King next proceeded to bring on his motion for the extension of the borough 10*l* franchise to counties. He did not intend his proposition to come in the way of any reforming scheme which the Ministry might entertain, and disclaimed all intention of interfering with the number and arrangement of the constituencies. His object was to remove one of the greatest anomalies of our electoral system, by a proposition which was the legitimate result of the influences of the presently existing law. Why should the distinction without a difference of town and country constituencies be suffered to exist? A man who paid 10*l* in a town could be none the less fitted for the enjoyment of the suffrage if he removed his domicile to the country. He urged the propriety of extending to England the reforms in this respect which had been granted to Ireland, and instanced the decrease in several English county constituencies as an argument for some measure of suffrage extension. Within the last seven years the county constituencies had decreased by more than 22,000, while the

THE ECONOMIST.

202

these circumstances, he thought that the house ought not to assent to the present motion. Mr Hume argued for an immediate extension of the suffrage, and taunted Lord John Russell with having betrayed the cause of Parliamentary Reform. The present was a time of general prosperity and tranquility, and was admi-rably suited for the introduction of measures of electoral extension, the carrying out of which would speedily put an end to the Protectionist hopes founded upon the divisions and ho-tile parties into which the house was divided. Mr Cobden expressed his pleasure that the Government had at length deter-mined to act in the matter of Parliamentary reform, and hoped that the mea-sure when it did come would be one of substantial improvement. He alluded to the scenes of drunkenness and riot which had occurred at recent small borough elections, and trusted that effectual steps would be taken to clear away those blemishes on our own electoral system. Applying himself shortly to the question before the house, he argued that county 10/ householders would be far more independent than 50l tenants-at-will, and that the 40s freeholders would be found to be in general in favour of extending the franchise to the class now proposed to be admitted into the circle of the electoral constitution. As at present constituted, the county constituencies were utterly powerless in re-presenting the real opinions of the mass of the motion. Mr P. Howard said a few words in favour of the motion. The house then divided - For the bill, 100 ; against it, 52 ; majority against Government, 43. This result was received with loud chereing. The house disposed of some further unimportant business, and rose early. *Friday, Feb.* 21.

Friday, Feb. 21. In answer to a question from Sir B. Hall,

In answer to a question from Sir B. Hall, Lord J. Russell said it was not the intention of the Government to impose any new qualification for electors by the proposed tax on houses. By the in-terpretation of the law, it would be the same as all assessed taxes. In answer to another question from the same quarter, with reference to the suppression of Pusepite practices, Lord J. Russell stated that he had been in com-munication with the Bishop of London and the Archbishop of Canterbury on the subject, and that the Archbishop says he does not think that any alteration of the law is necessary, or that any interference of this house or of the Legis-lature is at the present moment requisite. But the law is such, he says, that there is great difficulty in reaching cases such as that alluded to. Although, however, no immediate change may bring any advantage, some alteration is evidently necessary.

however, no immediate change may bring any advantage, some alteration is evidently necessary. After some remarks from Mr A. Hope, Mr Reynolds, Mr Hume, and Sir R. Inglis, the subject dropped. On the motion for going into Committee of Ways and Means, Lord John Russell rose to move that the committee should be postponed until Monday. He would then state the remons for this request. Mr Herries wished to know whether it was intended positively to proceed with the committee on Monday. Lord John Russell said he could not state positively. On Monday night he would state the remon for the request, and the course which he meant to take. The remaining orders of the day were then disposed of, and the house adjourned. adiour

COURT AND ARISTOCRACY.

HER MAJESTY and the Royal Family continue at Buckingham Palace. The Counters de Neuilly and the Duke and Duchess de Nemours visited Her Majesty and Prince Albert at Buckingham Palace on Saturday. Prince Albert accompanied them to the Exhibition. The Queen held a Chapter of the Order of the Garter on Wednesday afternoon at Buckingham Palace, when the Marquis of Normanby was elected a Knight of the Order. On Thursday His Royal Highness the Prince Albert, attended by Colonel the Hon C. Grey and Lieutenant-Colonel Hon. A. Gordon, visited the Model Lodging-houses for Families, in Streatham street.

METROPOLIS.

THE GREAT REVENUE CASE in the Court of Exchequer on the eleventh day of its trial was on Taesday concluded. Chief Baron Pollock summed up at great length. He agreed with the counsel in entirely exculpating the Dock directors. The Jury accordingly found a verdict substantially for the company—that boxes of sugar had been removed, lilegally, but not with a view to defraud the com-pany; at the same time recommending more careful supervision for the future. The verdict was received with applause. TRIBUNAL OF COMMERCE.—A public meeting for promoting the establish-ment of Tribunals of Commerce, for adjudicating commercial causes by men of business, and for extending the principle of arbitration, was held on Wednesday in the large room of the Hall of Commerce, Threadneedle street. The chair was taken at twelve o'clock by the Right Hon. the Lord Mayor. The meeting was well attended. Amonget the gentlemen present were Sir James Duke Bart, M.P.; John M'Gregor, E:q., M.P.; Arthur Anderson, E:q., M.P. A memorial, signed by nearly 1,000 of the merchants, bankers, and traders of the City of London, had been got up. The resolutions were unanimously passed and a committee appointed.

A memorial, signed by nearly 1,000 of the merchants, bankers, and traders of the City of London, had been got up. The resolutions were unanimously passed and nommittee appointed.
THE WINDOW-TAX.—On Wednesday night an enthusiastic meeting of the metropolitan delegates was held in the Court House, Marylebone, " to consider the unsatisfactory statement of the Chancellor of the Exchequer as to the above tax, and the substitution of a house-tax." Amonat those present were Viscount Duncan, M.P.; Sir De Lacy Erans, M.P.; Sir B. Hall, M.P.; F. Mowatt, E.G., M.P., Jacob Bell, E.S., M.P.; T. Wakley, E.S., M.P.; C. Lushington, E.G., M.P., Jacob Bell, E.S., M.P.; T. Wakley, E.S., M.P.; C. Lushington, E.G., M.P., Jacob Bell, E.S., M.P.; N. T. Wakley, E.S., M.P.; C. Lushington, Taxes on KNOWLEDGE.—On Thursday, Feb. 13, a meeting of gentlemen anxious for the freedom of the press, among whom were Messra J. Hume, M.P., R. Cobden, M.P., J. Bright, M.P., M. Gibson, M.P., W. Scholefield, M.P., and W. Ewart, M.P., was held at the Exchequer Hotel, New Palace yard, when "an association for the repeal of the taxes on knowledge" was formed.
DESTRUCTIVE FIRE NEAR LONDON BRIDGE.—On Tuesday morning a free broke out in Dake street, near the south side of London bridge, which, extending backwards into Tooley street, committed great devastation in a very short space of time. It broke out in an immense warehouse, the property of Alderman Humphery, and let by him to Messrs Wigan and Co., very extensive hop merchants, and ignited the hops, valued at 50,0000, which what we then the loss was estimated at 50,0000, whereas new it is not supposed to exceed 60,000.
HEALTH OF LONDON DURING THE WEEK.—The Official Ecport says :— " The present return indicates some improvement in the public health. Under the influence of more favourable weather the deaths, which in the first be influenc

PROVINCES.

SOUTH NOTTS ELECTION.—On Monday the official declaration of the poll was made, when the numbers declared were—For Lord Viscount Newark, 1,482; for William Hodgson Barrow, Esq., 1,493, giving a majority for Mr Barrow of 11. REFRESENTATION OF BEDFORDSHIRE.—A similar opposition to that made against the nominee system in South Notts is being made in Bedfordshire. On Monday last, at the nomination, Mr Houghton, a free trade farmer, was pro-posed in opposition to Colonel Gilpin, and a poll was demanded. On Thursday the polling commenced, and the following was the state of the poll at the close of that day:—Colonel Gilpin, 1,017; Mr Houghton, 350. This only includes the return of Leighton Buzzard and Luton to 12 o'clock. GLAMOGANSHIRE ELECTION.—No candidate, except Sir George Tyler, is now likely to come forward. Several gentlemen of liberal principles have been applied to, but owing to the supposed near spproach of a general election, and from other circumstances, they have declined the profiered honour.—Steamsed Herald.

Heraid. Heraid. The MERCANTILE MARINE ACT.—A deputation of seamen from Shields, Sunderland, Hartlepool, and Stockton, were received by Mr Labouchere on Wednesday. They were accompanied by Mr Hume and Mr Wawn. Their prin-cipal grievances were the compulsory attendance at shipping-offices and the regulations as to fines. In the answer read and delivered to them by Mr La-bouchere, he states that he has in the north-eastern ports suspended the use of the regulations above-mentioned, and of the forms which contain them. RAILWAY ACCIDENT.—On Tuesday evening, as the parliamentary train from London to Manchester came near Alderley, at about six o'clock, an accident, the immediate cause of which is at present involved in mystery, occurred, by which the engineer was killed on the spot, and many of the passengers were more or less injured. Five of the carriages were dashed to pieces. An inquiry is now being entered upon as to the origin of this caiamity.

DUNGARNON ELECTION .- The Hon. Stuart Knox was returned without op-

DUNG ARVON ELECTION.—The Hon. Stuart Knox was returned without op-position yesterday week. Mr CHIBHOLM ANSTER, the member for Youghal, has, in a spirit which goes far to redeem him from the charge of inconsistency, responded to the expressed wishes of a body of his constituents, and has decided upon accepting the Chil-tern Hundred», with a view of giving the electors another opportunity of re-cording their suffrages either for or against him. THE NEW PARLIAMENTARY FRANCHISE.—The registry for the county of Westmeath, just closed, leaves the new constituency at 2,963. The revision for the borough of Youghal shows a curious and unexpected result—the electoral list having suffered a diminution of 157. The numbers under the old Act were of voters for the county of Kilkenny under the new Act amounts to 5,041. THE NEW "PENAL LAWS."—The storm is gradually rising, and it will not be the fault of the Irish press if, within the course of a brief week or so, the old religions warfare, which had been slowly dying off during the last 20 years, be not revived with its ancient virulence. The Roman Catholic journals—metro-politan and provincial—have all sounded the toosin of war, and every nerve is to be strained to defeat the ministerial messure. The *Freeman* denounces in numeasured terms the conduct of those Irish representatives who, by their votes in the late division, have placed " the sword of persecution more firmly in the gippe of the political apostate," who is no " Premier of England by the vote of Irish Catholics and representatives of Irish constituencies." Parish meetings to protest against the contemplated bill have already commenced in Dublin, and preparations are in progress throughout the provinces for demonstrations on a nore wholesale scale. Arts IN-AD.—The total amount of rate-in-aid paid into the Bank of Ire-feator the remained the Paymater of Civil Services, up to December 31, 1850. The general fund, has been 232,6811 138, leaving a balance unissued of 68,9067. The poor-law valuation of the var

FOREIGN AND COLONIAL.

CENTRAL GERMANY. Advices from Cassel are of the 17th inst. The Bavarian troops in Hesse have been ordered to return to their own country. They are to march on the 24th inst. The Bishops of Bavaria have authoritatively claimed the exclusive right of education all over Bavaria. They plainly declare that they ignore the con-stitutional laws which stand against their claim. Though they have sworn to obey and uphold these laws, this was done, they say, in a sense, not ex-pressed but implied, that left their own superior rights inviolate. A free-trade congress at Elburg has addressed a most interesting remon-strance to the government, in which the principles of free trade are very strongly stated. This paper is likely to produce a good effect upon those who, in Germany, are wavering between free trade and protection.

SWITZERLAND.

SWITZERLAND. The news of an intended interference in the domestic arrangement of the Swiss Confederation is again repeated by the German papers. A well-in-formed correspondent of the Kolner Zeitung asserts that the Central Fede-ral Commission at Frankfort is preparing for a serious diplomatic joust with the Swiss cantons, and that the demands of the Federal agents will be supported by a powerful army. Rumours of this kind, which are confirmed auquestionable authenticity by the frequent, vehement, and well-directed attacks of the ministerial journals at Berlin and Vienna against the treat-ment and protection which political fugitives from all parts of Germany receive at the hands of the Swiss Cantonal Governments. The last number of the Oesterreichiscke Correspondenz contains an article on this subject, in which it is said that Switzerland, with its spontaneous production of "Free Corps," must ever remain a source of annoyance and danger to Europe, un-tess the German Federal authority decides on the only effectual course of dealing with this "common nuisance." It appears, however, that the plan of a war with Switzerland is by no means popular with the Germans themselves. Even a concentration of armies on the Swiss frontiers for the purpose of enforcing the demands of the German Pieler and the order of a war with Switzerland is by no means popular with the Germans themselves. Even a concentration of armies on the Swiss frontiers for the purpose of enforcing the demands of the German political agents excites the apprehensions and provokes the armies of the financial reformers.

AUSTRIA. The latest Vienna letters are to the 16th inst. They contradict the late rumours of the intended movement of the Hesse and Holstein troops into the Austrian provinces. They likewise contradict the rumour of a proposed Russian loan of 160,000,000 florins. The Breslau Zeitung states that the concentration of large masses of troops in and around Vienna had given rise to the most distressing rumours. The objects of the late Austria negotiations with the Court of Denmark are now distinctly stated. Austria demands a Customs union with Denmark, a modification of the Sound duty in favour of Austria ; and, at Russia's require-ment, a plan for abolishing what is called the democratic constitution of the Danish kingdom. The campaign against Switzerland in the spring is ru-moured.

PRUSSIA. Advices fron Berlin are to the 18th. Baron Manteuffel's sudden return from Dresden had given rise to various rumours. Of these rumours none were authenticated. It was, however, generally believed that Prince Schwarzenburg had made some new and startling proposal, and it was com-monly thought that this proposal was directed against the proposed duality of power.

monly thought that this proposal was directed against the proposal of power. The ministerial papers state that the Prince of Prussia, supported by an Austrian Prince, will take the direction of the Federal War-office. The organs of the Austrian Cabinet protest that such rumours anticipate an uncertain and doubtful event. A deputation from the Upper House has been admitted to an andience by the Prince of Prussia, who informed them that the Government would respect the Charter, but that modifications must take place in the communal law, in the electionary law of the Lower House, and in the press law.

Measures are being taken in Prussia against disaffected functionaries. The New Prussian Zeitung says:—" To judge from appearances the Dresden Conference will not produce any real access of strength to the Central Power of the Confederation. We have before alluded to the dif-ficulties in the way of an entire new organization, even in case a complete unity of purpose could be effected between Austria and Prussia. Since the two great Powers have ceased to come forward with propositions in common, it may with confidence be predicted that the re-organization of the Bund according to the necessities of the period will not succeed. It is reported that M. von Radowitz, in his retirement at Erfurt, is en-gaged in writing a History of the last 10 years of the Prussian State.

PORTUGAL

At two on the morning of the 3rd instant the Queen of Portugal gave birth to a princess. The child, which received the name of Donna Maria, lived ut a few hours.

The official returns for the census of 1850 have been so far completed that a sufficiently correct estimate can now be made of the population of this country, as compared with what it was in 1840. The white race numbers 19,879,211; the free coloured, 500,000; the slaves, 3,295,495; in all, 23,674,708. They are divided thus:-

New England States Middle Free States Western Free States	1850. 2,719,840 8,070,037 3,142,697	*******	1840. 2,234,821 6,024,332 1,448,303

company commenced operations.

CAPE OF GOOD HOPE.

CAPE OF GOOD HOPE. Papers extend to the 26th of December, The excitement respecting the position of a fairs on the frontier continued unabated. Sir Harry Smith was on the spot, evidently determined to make a strict investigation into the causes originating this renewed spirit of turbulence among the Caffres. Sindilli, the chief suspected of organizing the movement, had, it was said, escaped into the bush, and would not attempt to come into the presence of the Governor to explain his conduct. Sir Harry Smith had entered into arrangements with the other tribes to support him, if necessary, in main-taining peace, and at the interviews he had had with them the whole of the proceedings were considered to have terminated most satisfactorily. A portion of the Gaika people, it was said, were prepared to support Sandilli should hostilities be entered upon.

Should hostilities be entered upon. WEST INDIES. By the Franklin we are placed in possession of dates from Jamaica to the slist of January. The cholers was fast disappearing from the colony, and the only parish now afficied to any extent is Lucia. From Kingston we learn that a serious riot occurred in the parish of St. David's a few days previous, which led to serions loss of life. It appears that an election for a member of the House of Assembly, to represent that parish, was appointed to take place on Monday, the 27th of January, when two candidates were placed in nomination—Mr. John Nunes, put forward and supported by the heads of the King's House, or government party, and Mr. James Porteous, by the conservative party. The polling went on briskly, each party keeping even on the poll until about half-past two o'clock in the afternoon, one and a half hours before the time for closing the poll. At this juncture a voter appeared for Porteus, and as this would have given that genieman the majority, the services of a body of armed men, apparently or-ganised for the purpose, were called into requisition, and a most fearful riot cnsued. The court house was almost entirely demolished ; the police dread-fully cut and wounded, as well as several other persons, some of whom, it is feared, will not survive from the injuries sustained. Mr. David MtLean, coroner of the parish, was beaten by the rabble so cruelly that he died a few hours afterwards. A verdiet of "wilful murier" against three persons has been returned. They had been apprehended, as well as several other partie charged with being concerned in the riot. The poll was resumed the next day, and Mr. Porteous elected by a majority of one vote.

COMMERCIAL AND MISCELLANEOUS NEWS.

At a meeting of the British Colonial Bank and Loan Company, held this week, a dividend for the half-year was declared, at the rate of 2 per cent per annum. The improvement in the condition of the Australian colonies during the past year has tended to increase the value of the property of the Company, and augment its business. The amount of Exchequer Bills authorised to be raised, charged on the sup-plies of 1851, was 17,758,7002. Deduct 2,8007 paid off in money in 1850, there remains to be provided for, in the present year, 17,756,6007. It is stated that the contracts for supplying timber to her Msjesty's dockyards are to be taken at prices which will not include the duty; in other words, that the timber is to be served in without any duty having been paid upon it. The practice hitherto has been to supply duty-paid timber, and the result of the Change will be to make the navy estimates look lower, at the expense of the Customs revenue.

practice interior has been to supply only back lower, at the expense of the change will be to make the navy estimates look lower, at the expense of the Customs revenue. It is shown in a return to Parliament, just printed, that the estimated net revenue of India for the year 1849-50 will amount to 20,498,4127, and after paying all charges, the estimated surplus will be 77,6627. It will be remembered that several influential meetings have recently been held in the coal districts in the north, deprecating the present unequal and ex-cessive duties levied on the importation of coals into France, by which English coal is taxed on its admission to that country by a duty five times as great as that upon Belgian coal. It now appears that intelligent parties in France are beginning to recognise this provision as no less injurious to the French con-sumer and manufacturer than to the English producer. The Madagascar question remains without alteration, and a fair supply of cattle continued to arrive from Tamatave in French and English vessels. The Bourbon Government maintained the prohibition against the admission of goods or cattle from Tamatave, but the oxen shipped from the Mauritius were readily received, irrespective of origin.

received, irrespective of origin. Letters from Rio Janeiro, dated the 4th ult, state that diamonds have lately been extracted again from the mines called "Riven et Cuithe," in Minas. Amongst them was one weighing 291 grains, which was sent to England by the Linner packet

Almongst them was one weighing 25% geams, which the builders, have offered to accept the American challenge, to construct a sailing ship, of any size, to com-pete with one of Yankee build; and the owners of the winning ship to gain the local sectors. sing one.

of Vice-Chan

It was rumoured some days since in the Court of Chancery, that the office Vice-Chancellor is likely to be conferred on Master Kindersley. The seat of Lord Downes, at Binstead, Jale of Wight, was totally consumed y an accidental fire on Monday. Lady Downes lost jewels of the value of 1000 by an

On Monday a bill was printed, by which "compound householders" will be enabled to vote for members who have once claimed and tendered the rates. At present many are deprived of the franchise by having to make continual claim to be rated. cla

A petition from certain electors of St. Albans, complaining of the late elec-tion in that borough, was presented on Tuesday evening by Sir James Duke, and referred to the General Committee of Elections. We understand that Mr Sheriff Carden's friends can prove a very strong case against the return of Mr. Ball Mr B

We understand that since the Lord Advocate's removal to Edinburgh, the dangerous symptoms of his malady have not in any degree diminished, and an immediate resignation of his important office is exceedingly probable,—Daily

Mail, The bill now in the House of Commons, brought forward by Mr W. Williams o prevent unnecessary trading on Sunday within the metropolitan police dis-rict and the city of London, provides that trading is to cease by nine o'clock on unday, and goods exposed to sale may be seized. It is proposed that the Bessure shall come into operation on the 1st of November next. The day nursery in Ancoats Crescent, Manchester, was opened for the re-metion of children on Monday. to

measure shall come into operati The day nursery in Ancoats ception of children on Monday.

Literature.

From Mr M'Culloch's Geographical Dictionary. LONDON. 1851.

LONDON. From Mr M'Culloch's Geographical Dictionary. 1851. Longmans, Paternoster-row. London, according to Mr M'Culloch, contains at present 2,100,000 persons, or, including the districts embraced by the Registrar-General's bills of mortality, 2,240,000, "a greater amount of population than has ever been previously accumulated in the same (an equal ?) space." Such a place well deserves that the account of it in his Geographical Dictionary should be separately noticed. Though the trade of Lon-don is now greater than ever, "the total value of the produce con-veyed into and from London, including the home markets, not being over-rated at 65,000,0004.;" "yet as respects foreign trade, London is surpassed by Liverpool, and perhaps also by New York." Whether that be the case now or not, the progress of these two latter cities has in modern times so much surpassed the progress of London-they

being the focii of the trade of the increasing millions of the United States—that ere long the trade of both must exceed that of London. London, notwithstanding, will still remain a very respectable place, and when we get all the freedom we must have, its peculiar trades, including those of literature and clothing, will flourish more than ever, and will surpass even more than at present those of other places. Mr M'Culloch's description of the great metropolis—without going into alleys and corners—without being topographical or antiquarian—is broad and general, and under that aspect excellent. It is not anec-dotical nor perambulatory, though it gives a very good account of the direction of the principal thoroughfares, the situation of the parks, &c. It is not like Mr Leigh Hunt's and Mr Peter Cunningham's amusing works on the same subject; it is a general account of modern London. It is not like Mr Leigh Hunt's and Mr Peter Cunningham's amusing works on the same subject; it is a general account of modern London, which is much wanted. Mr M'Culloch is not, we presume, an advocate of the water companies, but he bears a very strong testi-mony to the value of their exertions. "Every house," he says, "has the inestimable advantage of having an abundant supply of water; and in all the better classes of houses it is supplied to the top as well as to the under story." Such a remark would not be made if other great towns had the same advantage. It would then be too common to be noticed in such terms. The passage confirms our statement, made more than once, that London is more conveniently supplied with water than any capital of Europe, though it pleases a number of noisy journalists and others to make a great outcry to the contrary. Mr M'Culloch's London will help to correct that error, as well as give a correct description of many of the buildings, docks, trade, and pur-suits of the metropolis. The Geography, of which it forms a portion, is a work of established reputation, and the new edition will be ac-ceptable to the public. ceptable to the public.

ceptable to the public. THE CLASSICAL GAZETTER. A Dictionary of Ancient Geography, Sacred and Profane. By WILLIAM HAZLITT, Barrister. Whittaker and Co., Ave Maria lane. THIS is a kind of book which we have often felt the want of. To have a small volume at hand to tell us, by an easy reference, what every ancient place—such as are continually mentioned in books—is now called, if it be known to the moderns—to tell us its situation, and the origin and meaning of its name, is desired by all. Such is Mr Hazlitt's Dictionary of Ancient Geography, which is at once full, as embracing the name of every place to be found in sacred or profane history, and succinct in its description of each. To adapt the book to the use of schools, all redundancies are carefully avoided; and it will be as welcome on that account to mearly all classes of readers as to students. It is appropriately and neatly dedicated to the Marquis of Lansdowne, on account of the " much he has already done amid extreme difficulties to promote education, and the much more he is known to desire and to design." Without such a book, ancient history must continue to be, as hitherto it has mainly been, the monopoly of a few; with such books, and others like it, ancient history will become, and it is happily now becoming, the instruction and the treasure of all. It has long ago been remarked that this is the age of diffusion, and the remark is true of ancient learning, of modern acquirements, and modern liberties. Mr Hazlitt is only one of many now engaged in gathering from small rills into one reservoir all the knowledge of the ancient world, and spreading it abroad to fertilise living minds. His book will be used by the young to learn from and the old to refer to. It is equally adapted for schools or libraries.

DOMESTIC FOWL AND ORNAMENTAL POULTRY. By H. D. RICHARD-SON. Orr and Co., Paternoster row. THIS is a new and greatly enlarged edition of a very useful little work which treats on the natural history, origin, and treatment, in health and disease, of all the varieties of our domestic poultry. As articles of agricultural produce, poultry have of late years been too little regarded by the smaller farmers, who appear to have placed their expectations of profit exclusively on grain-growing to the neglect of the animal produce of their predecessors. Besides, these creatures furnish a suitable and profitable employment for the farmers' wives and daughters. At the Newcastle Farmers' Club in 1848, a statement by a farmer's wife was read, from which it appeared that from a stock of sixty hens, six ducks, and seventy or eighty geese, purchased in the autumn, a net profit of 347 2s 10d was made in one year. This book gives plain and sensible directions for rearing and feeding and for the general management of poultry. for the general management of poultry.

Music .- The "Harvest Home Polkas," by Madlle. Lauriette, are two MUSIC.—The "Harvest frome Folkas," by Madile, Lauriette, are two lively good dancing polkas, adapted for the piano-forte. They are published for the author by J. Shepherd, Newgate street, and will be found a very agreeable addition to the number of polkas now at the command of our musical and dancing belles.

i.	THE OL	D FORM.	

The above Bank accounts would, if made out in the old form,

25,481,057

The balance of assets whove liabilities being 2,326,7801, as stated in the above accounter the head REST. 39,954,558

FRIDAY NIGHT. The preceding accounts, compared with those of last week, axhibit

A decrease of Circulation of	£341,942
An increase of Public Deposits of	440,565
An increase of Other Deposits of	63,401
An increase of Securities of	54,114
An increase of Bullion of	195,337
An increase of Rest of	87,424
An increase of Deserve of	468 097

The present returns show a decrease of circulation of 341,942l; an increase of public deposits of 440,568l; an increase of private deposits of 63,401l; an increase of securities of 54,114l; an increase of bullion, the first for a considerable time past, of 195,337l; an increase of rest of 87,424l; and an increase of reserve of 460,0971. The only noticeable feature in the return is the increase of bullion, which is partly due to the return of sovereigns to the banking department, consequent on the issue to pay the dividends, and partly to an increase of bullion in the issue department.

Money is decidedly dearer. Bills are offered to the Bank of England; $2\frac{3}{4}$ is given for money on call, and private bankers will not discount the best bills for 3 per cent., except in some rare cases for their best customers. The exchanges are improved, and come better from Paris than they have been for some weeks past. At the same time there are

for their best customers. The exchanges are improved, and come better from Paris than they have been for some weeks past. At the same time there are not many bills offered here, nor much business doing. There are reports prevailing that loans are to be negotiated for Prussia and Austria, with a guarantee given by Russia, and a Prussian agent is said to have arrived to negotiate a loan. If this be so, he keeps himself very much *au secret*, and has not yet openly shown himself in the money market. The reports, how-ever, have had an unfavourable effect on the Russian loan, which was done to-day at 96³/₃, though it closed at 97¹/₄. Gold continues to be exported, but the chief exports in the week have been to Alexandria, on account, it is supposed, of the Pacha of Egypt, who is probably, according to reports, collecting means for resisting the Sultan. There is no alteration in the price of silver. There is none here in the shape of bars to dispose of, and the transactions in dollars have been insignificant. The Stock Market was flat to-day, the necessary consequence of almost all changes. People do not know what their effect will be, and money being always available, under any circum-stances of doubt it generally rises in value in relation to secu-rities. The division in the House of Commons on Thursday night, and the opposition the Budget seems destined to encounter, have had accordingly an unfavourable influence on the market for securities, and they were generally flat. Consols opened at 96⁴/₅ and closed at 96⁴/₅ and ⁴/₅. Our usual list will show the alteration securities, and they were generally flat. Consols opened at $96\frac{1}{3}$ and closed at $96\frac{1}{3}$ and $\frac{1}{4}$. Our usual list will show the alteration in price through the week :—

The Railway Share Market was also flat, partly from the same cause, and partly from the report of the proceedings at the meet-ing of the shareholders of the North-Western line, and the pre-vious state of the market. The chairman of the North-Western was personally against making a five-and-a-half per cent. divi-dend, stating as his reason for the recommendation, that the North-Western must now concenter a serious competition with the Western must now encounter a serious competition, that the North-Western must now encounter a serious competition with the Great Western, and he should have liked to have a greater re-serve. The bulls being numerous in the market, this announce-ment gave them no satisfaction, and flatness was the result. The following is our result list of the miner hart Friday and the second following is our usual list of the prices last Friday and this day of the shares of the principal lines :

As no one doubts Lord Stanley's rashness, it is reported and believed that he is quite ready to take the Government should Lord John Russell think of giving it up, and that he hopes to coax the trading classes by modifying schedule D of the income-tax, and to satisfy his friends of the land by imposing a fixed duty of 5s on foreign wheat. But it is thought his project is more likely to cause a great agitation amongst the former than to please the latter. The following from the North American, completes the accounts we have already published of the coinage of the United States :--COIMAGE AT PHILIDELFHIA for December, 1850.

The Commercial Times.

Mails Arrived. LATEST DATES. On 17th Feb., INDIA and CHINA, via Marseilles-Shanghae, Dec. 23; Hong Kong, 30; Borneo, 14; Manilla, 21; Batavia, 27; Singapore, Jan. 6; Penang, 8; Mau-ritius, Nov. 18; Calcutta, Jan. 7; Madras, 14; Bombay, 17; Ceylon, 17; Aden, 27; Alexandria, Feb 6; Corfu, 7; Malta, 10. On 17th Feb., SynErr, N.S.W., Nov. 2, per Overland Mail. On 17th Feb., AMERICA, per Arclio steamer, via Liverpool-Halifax, Jan. 25; Montreal, Feb. 1; New York, 5. On 17th Feb., PENINSULAR, per Iberia steamer, via Southampton-Gibraltar, Feb. 8; Cadiz, 9; Liabon, 11; Oporto, 12; Vigo, 18. On 17th Feb., BRAZILS, per Titania, via Liverpool-Bahia, Jan. 10; Pernam-buco, 15.

On 17th Feb., BRAZILS, per *Titania, via* Liverpool-Bahia, Jan. 16; Pernambuco. 15.
 On 20th Feb. CAFE OF GOOD HOFE, Dec. 24; St Helena, Jan. 4; Sierra Leone, 20; per Benlinck steamer, via Southampton.
 On 21st Feb., UNITED STATES, per Franklin steamer, via Southampton-New York, Feb. 8; California, Dec. 81.
 On 21st Feb., INDIA and CHINA, per Indus steamer, via Southampton. Dates as received 17th inst., via Marseilles.

Mails will be Despatched FROM LONDON On 24th Feb. (evening), for the MEDITERRANEAN, EGYPT, INDIA, and CHINA, via Marseilles. On 27th Feb. (morning), for VIGO, OPORTO, LISBON, CADIZ, and GIBRALTAR, per steamer, sis Southampton. On 23th Feb. (evening), for AMERICA, per Asia steamer, via Liverpool and New York.

On 23th Feb. (evening), for AMERICA, per Acts Status, Yark. Tork. On 1st March (evening), for WEST INDIES, MEXICO, VENEZUELA, and CALIFORNIA (Cuba, Honduras, Nassau, Chii, and Peru excepted; mails to these places on the 17th of each month only), per Trent steamer, viz Southampton. The Ganges steamship is appointed to sail from Southampton on the 27th inst. for Gibraltar, Malta, and Constantinople; letters in time on the 26th inst.

Mails Due.

FEB. 20.-West Indies. FEB. 20.-Havana, Honduras, and Nassau. FEB. 24.-Brazils and Buenos Ayres. FEB. 26.-Spain, Portugal, and Gibraltar. FEB. 26.-America.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

207

We have, as usual, to report a very dull Corn Market, and similar reports come from the continental markets. At Danzig' fine qualities of wheat are offering at 42s f.o.b., and in Mecklenburg the best is said to be not purchaseable under 39s to 40s, cost and the best is said to be not purchaseable under 39s to 40s, cost and freight to London, all for spring shipment. In Rotterdam we are told, under date the 17th instant, the arrivals were small, but the demands also were small, and consequently Zealand, Flemish, and Upper Maes were selling slowly at previous rates. The same is the case in France, and we may say all over the Continent. Such a circumstance as a superabundance of food everywhere is too remarkable not to attract notice and excite speculation to account for it. Of course what is meant by the circumstance is that there is not enough of other things produced to give in account for it. Of course what is meant by the circumstance is, that there is not enough of other things produced to give in exchange for food. It can scarcely mean not enough money, since the mines of California have latterly poured an unwonted supply of one precious metal into the market. It must mean, therefore, that other species of industry are not nicely balanced against the cultivation of the land. Though reckoned in money, price is always ultimately measured in commodities, and a very low price of food means a high price of clothing, metals, wines, spices, and other useful things. The explanation, therefore, of the remarkable phenomenon is to be found in the general freedom with low price of food means a high price of clothing, metals, whiles, spices, and other useful things. The explanation, therefore, of the remarkable phenomenon is to be found in the general freedom with which agriculture may be exercised over almost every part of the Continent, and the restrictions which are laid on the industries, which must by their produce pay the price of food. The inference is, that these industries must be set free in order to find the means of which must by their produce pay the price of food. The inference is, that these industries must be set free in order to find the means of paying the producers of food, and that all may go forward at an equal rate. One cannot be impeded and delayed without injur-ing all the others, and instead of our free trade, which has en-couraged various industries, being the cause of the low price of food, it is the restrictions on industry in other countries; and our freedom, by bringing more commodities from other countries and by creating more, tends to keep up the price of food. At any rate, there is no country in the world where so many other things than food are produced or obtained at so cheap a rate as England, and where really so much is given for farm produce, whatever proportion of the price may go to the actual cultivators of the soil. The Legislature has done all it ought to do, and all it can in jus-tice do, since it has liberated manufacturing and commercial intice do, since it has liberated manufacturing and commercial in-dustry, and thus enabled it to produce all that it can produce dustry, and thus enabled it to produce all that it wherewith to reward the cultivator of the soil. The Colonial Produce Market has been also dull.

For sugar there has been only a moderate demand, and the market closed heavily to-day. The market for refined sugar was dull, and prices remain unaltered.

There was one cargo of St Domingo sugar, from Port-au-Prince, sold afloat to-day, at 43s. It consisted of 4,500 bags, and is destined to Trieste, being insured in London on the most favourable terms.

Coffee has been affected by the proposition of the Chancellor of the Coffee has been affected by the proposition of the Chancellor of the Exchequer to place the duty on foreign and colonial coffee and foreign chicory on an equal footing. British colonial coffee declined from 3s to 5s, the price of native Ceylon being from 44s to 44s 6d. Planta-tion Ceylon realised 52s to 53s 6d. Foreign coffee maintains its price, and for Mocha there is an increased demand, at a rise of from 3s to 5s. Some uncertainty, too, is felt whether the pro-position of the Chancellor will be convided out which contributed position of the Chancellor will be carried out, which contributed

THE ECONOMIST.

1,200 bags of cotton have been sold at about former About prices. Our accounts from the United States continue favourable to the opinions of those who have calculated on the largest quanprices. tity. More is brought from the interior to the scaports, while more remains on hand, and more is shipped for England than last

year. We refer to the tables in another part of our journal. The sales of silk have not been satisfactory. The prices are unaltered, except that Bengal was a shade lower, but the business was very limited; nearly the whole that was offered on

Thursday was taken in. The wool sales continue much as last week; the buyers are numerous, but some inferior kinds of wool scarcely fetch as high

a price as last week. The latest advices, says the *Philadelphia Commercial List*, from the River Plate, say:—American purchasers haverun up the prices of wool higher than ever before known in the history of the La Plata. The advance with the exchange will enhance the cost full 50 per cent. over last year. Exports of wool from Buenos Avres are-

or a large portion or the pront in anticipation; the outer is at least violation and speculation is active, consumption stands still until the material is admitted at the lower daty. Further than this, it is to be hoped the Chancellor of the Exchequer will do away with the cumbrous machinery of cubic measurement, most vexatiously car-ried out by the Customs in London for every piece in a cargo, while sawn wood is estimated at more favoured outports on the measurement of a few rises.

wood is estimated at more favoured outports on the measurement of a few pleces. The colonial prices of wood will not be much affected by the proposed re-mission of foreign duty, and the foreign wood will rise to the extent of one-third of the abated duty, another one-third will benefit the consumer, and the remainder will be the fluctuating point of contention, and as ever dependent on supply and demand. The meeting on Wednesday, to promote the establishment of Tribunals of Commerce, was eminently successful. There seems but one opinion throughout the country, as well as in the me-tropolis, in favour of such tribunals. It is thought that they would not only settle cases of disputed accounts and disputed rights between merchants more readily and cheaply than the or-dinary courts of law, but that they would prevent many disputes from ever coming to an issue. Wherever they have been estab-lished, there has been a judge or officer before whom complainants must appear, and whose business it is to use his moral influence to soothe the angry passions, and prevent litigation. Before the complainant can proceed further, the reconciling judge must cer-tify that there is a dispute which cannot be settled without the intervention of the tribunal. Under our system, the person who supposes he is aggrieved, goes to an attorney, who is too often intervention of the tribunal. Under our system, the person who supposes he is aggrieved, goes to an attorney, who is too often disposed to excite strife, rather than soothe anger. Thus trifling disputes are blown into costly suits, by which the members of the legal profession only profit. Under a better system disputes would be nipped in the bud, and when they must receive a legal decision that would be given by mercantile men conversant with the object in dispute, the rules of trade, and the rules of equity by which the dispute ought to be decided. The members of the legal profession have carried their pretensions and their power too far, and have at length made the operation of the law so fre-quently a complete denial of justice, that it is not surprising that the mercantile community seek the establishment of tribunals which shall speedily adjust disputes, when they arise, by equitable and plain rules, and stiffe many in their origin. Between tribunals of commerce, however—superseding a cum-brous system of law and equity as applied to mercantile affairs— and chambers of commerce, which are rather legislative than judi-cial bodies—bodies representing the whole mercantile community distinct from the common representation it enjoys with all the

cial bodies—bodies representing the whole mercantile community distinct from the common representation it enjoys with all the other classes in Parliament—there is a wide distinction; and we regret to see that an attempt has been made to turn the attention of the mercantile classes from establishing commercial tribunals to establish a chamber of commerce for the metropolis. A cham-ber of commerce seems rather destined to make laws and regulations than to settle disputes, and as it never would and never could make regulations exactly like those which the necessities of each case prescribe, we look on it as more likely to increase than diminish litigation. A chamber of commerce, too, seems better adapted to serve the purpose of a few ambitious men than promote the general interests of trade. It may array the mercantile classes against the Government or against Parliament-it may add to agitation and contention, but it will scarcely prevent disputes, or settle them when they arise. It may serve to make the wants of the commercial community known, but that advantage scarcely compensates for the disposition of all such bodies to engross power and interfere with matters which do not exactly concern them. We do not condemn chambers of commerce, but the difference between them and commercial tribunals, and the

the difference between them and commercial tribunals, and the superior advantages of the latter, ought not to be overlooked. The whale fishery of the United States is described in the annual report for 1850 as having been very prosperous:— The number of ships returning with full cargoes has been large, while prices have risen to an unprecedented height. Nevertheless, the im-portation of oil in 1850 fails short of that of 1849 about 7,000 bbls sperm and 18,000 bbls whale, and the number of arrivals is less by six sperm and insceen right whales, yet the stock on hand is about the same as on the 1st Jan. 1850. This discrepancy as regards whale oil, is undoubtedly owing to a diminished consumption, arising from the very high figure at which oil has been held, which has forced many substitutes into the market and seriously impaired exportations. The number of vessels employed in the fishery is about the same as that of last year. Of the fleet, 145 have cruised in the Russian and Arctic Seas, during the last seeason, with great success; indeed, the average quantity of oil taken is larger than in any previous year.

the last season, with great success; indeed, the average quantity of oil taken is larger than in any previous year. We regret to say that accounts from the sperm whalers in the Pacific are not at all encouraging. The old cruising grounds are pretty well exhausted for the present, and very light catchings are to be expected. If we are to judge by present indications, importations of sperm oil for the coming year will hardly exceed 75,000 bbls, while that of whale oil will not probably fall short of 275,000 bbls. Perhaps no better evidence can be offered of the confidence felt by business men than the fact that no less than fourteen firt class vessels are in of process construction, or are under contract, all intended for the business from this dis-tri alone, while five or six will be added to the New London fleet. Importrations of SPERM and WHALE OIL and WHALEBONE into the United States Sperm. Whale. Bone.

INDIGO.

THE quarterly sales which commenced on Tuesday the 11th instant, terminated on the 18th; the quantity originally declared was 16,413 chests, which consisted of the following assortment, viz :--8cc.

1,509 256 502	Bengal Benares, Madras. Kurpah Manilla Oude
11,683	chests in catalog

11,683 chests in catalogue A, and 4,730 chests of sundries in catalogue B, of which about 400 are Madras and Kurpah.

16,413 Of these 11,031 were withdrawn and not printed,

leaving 5,382 chests actually put up. From the beginning of the sales it was quite evident that the orders for the home trade and for export were unusually small, and although the first marks in the catalogue were kept up by the proprietors at full prices, and chiefly bought-in, a decline of 2d to 6d per lb was sub-sequently submitted to; the reluctance on the part of the buyers, however, continued, and the result was, that on each day very

1851.7

THE ECONOMIST.

extensive withdrawals took place. A large proportion of the 5,382 cheets actually put up, was bought in, viz., 3,231 cheets, leaving but 2,151 chests sold in the room, to which must be added 400 chests Madras and 250 chests Bengal stated to have been sold privately from the withdrawn and bought-in parcels, thus giving a total of only about 2,800 chests, in the proportion of 1,700 chests for export, 400 chests for home comsumption, and 700 chests for re-sale. Fine qualities of Bengal have been generally kept back, there being a total want of orders for Russia and other continental markets where fine qualities are chiefly used; middling and good middling

being a total want of orders for Russia and other continental markets where fine qualities are chicfly used; middling and good middling appeared to be the only ones in demand, whilst ordinary and espe-cially low sorts were quite neglected. Dry leaf Madras of fair average quality has been in better demand, comparatively, than any other kind, at from 2d to 3d discount on October prices, while superior descriptions such as Vellore (which had been run up very high in October, owing to their scarcity) were heavy of sale at from 4d to 6d discount. The quantity of Kurpahs was small, and a fair proportion sold at 2d to 4d under the last sale's prices. All the Manilla, imported chiefly from the United States, was withdrawn, 2s to 2s 6d per 1b being the only bids for them. The whole of the Futtighur figs was also withdrawn or bought in at a nominal price of 3s per lb. Annexed are the prices :—

Deliveries in January annual section of the present year. The section of the same month were set of foreign were equal to the present in 1848 and 1849, but 20 per cent, larger in 1850. The imports in the six principal entrepots, in January last, were only 623,000 cwt, against 890,000 cwt in January, 1850. The deliveries during the same month were 869,000 cwt in 1850, and 848,000 cwt this year. In the course of last year, duty was naid on 6.220,004 cwt of all

In the course of last year, duty was paid on 6,229,094 cwt. of all kinds of sugar for consumption in this country, against 5,997,815 cwt in 1849, showing consequently an increase of about 231,000 cwt; be-

sides, the quantity of molasses shows an excess over 1849 of 100,000 cwt. Of foreign sugar, nearly double the quantity was cleared in 1850 for consumption in the United Kingdom than in 1849. The total importation in Great Britain, in 1850, amounted to 6,641,418 cwt, against 7,241,741 cwt in 1849, including 1,707,863 cwt of foreign growth in 1850, against 2,029,541 cwt in 1849. The whole of the present stock in London is but 1,122,000 cwt., in-cluding 614,000 cwt foreign, against a total of 1,482,000 cwt at the corresponding period of last year. The value of all kinds of sugar, with the exception of refined, is at present higher than at the same period of the last three years.

present higher than at the same period of the last three years.

MARKETS OF THE MANUFACTURING DISTRICTS.

MANCHESTER, THURSDAY EVENING, FEB. 20, 1850.

(From sur eun Correspondent.) We are glad to be able to report a change in our market for the better, assunch as a considerable amount of business has been done in both yarn Ina and cloth.

On Tuesday last, the first symptoms of returning animation were percepti-ble, and although the prices submitted to were low in the extreme, the in-creasing amount of the transactions going on and their general character give rise to confidence that we have seen the lowest point, at least for some time to come

In yarn, the purchasers have been chiefly for India and our home manu-factures; for China also something has been done. The Germans have bought to a fair extent at the lowest prices of last week. The descriptions of cloth most in demand are shirtings for China and India. Some of the home trade houses have operated freely, and a fair amount has also been done for the Brazils. The commercial accounts from China and India, which arrived here on Monday, were of a somewhat chequered character. In China sums improvements have taken place; the best feature is the more favourable rate of the exchange. From Bombay the accounts are gloony in the extreme, and without any prospect of an early improvement. The Calcutta market is suffering from a rather severe pressure in the money market; notwithstanding this, the transactions of the fortnight have been considerable, and a hope is expressed that the tightness of money will sum be relieved. be relieved.

going much to stock, as many large contracts were given out in December, which are not yet completed. In fancy goods there is not much either making or selling. LEEDS, Feb. 13.—There is no change to notice in the woollen trade since last week. The market has been dull to-day, but a fair quantity of goods continues to be delivered to order. Prices keep very firm, and stocks are lighter in the cloth halls. There is rather more doing in the warehouses, both for home trade and for slipping. MaccLESFIELD, Feb. 18.—The manufactured goods trade remains exactly in the same state as reported in our last, scarcely anything worth notice having taken place in the interim ; and production is going on, though to a more limited extent than has been the case for some time past. Many manu-facturers, however, anticipate a resumption of business in the course of next month. The throwing mills generally continue to be well employed, and in this branch there exists a demand for hands ; very little business has, however, of late been transacted in the thrown material; this, no doubt, being caused by purchasers waiting the result of the public sales of raw silk in London. The dyers are rather better supplied with work. We regret to have to note a failure of a firm here, engaged in silk throwing and manu-facturing, who stopped payment the latter end of last week. The liabilities are said to be upwards of 5,000*l*, but there is every appearance of the greater part being paid up if time be allowed. The late failure of a firm in Man-chester, engaged in buying and selling wholesale manufactured goods, will not effect the Macclesfield manufacturers very much. ROCHDALE, Feb. 17.—We have had an extremely dull market in flannels ; very few buyers have attended, and the business transacted has been of a very limited nature. The wool dealers complain of the limited demand for the raw material, but prices remain stationary. HaLIPAX. Feb. 15.—There has been scarcely as much business done in our

very few buyers have attended, and the business transacted has been of a very limited nature. The wool dealers complain of the limited demand for the raw material, but prices remain stationary. HALFAX, Feb. 15.—There has been scarcely so much business done in our Piece-hall to-day, and the merchants are rather more shy of giving orders, especially for those fabrics which are partly made of cotton; but for damasks and low lastings there is still a good demand. The yarn market continues languid; and the merchants are bidding lower prices, to which the spinners are unwilling to accede. The wool trade is quiet, and, owing to the slackness of the demand, wool is a little easier to buy.

CORN.

AMERICAN CORN AND FLOUR MARKETS.

AMERICAN CORN AND FLOUR MARKETS. New YORK, Feb. 8.—GRAIN.—Wheat continues very dull, and our quota tions, though revised, are nominal; 1,500 bushels red Long Island, sold in lots, at 1 dol to 1 dol 3c. Corn has continued in fair request, without par-ticular change in prices; the sales are 26,000 bushels, at 664 to 67c for Jersey yellow; 68o for Jersey white; 67c for Southern yellow; 675o for Southern white, and 67c for common Long Island white; 10,000 bushels mixed Western sold for June delivery on private terms. FLOUR AND MEAL.—The flour market has been depressed since our last, meculative holders showing a desire to realise," and common State is 64c fower; yesterday, however, there was more inquiry, and there was a better feeding, but no improvement in prices. New Orleans is in small supply, and may be quoted 4 dols 75c to 4 dols 876. Canada is held above the views of buyers, and there is nothing doing. The sales of domestic were—Wednesday 8,800 bbls, Thuraday 8,100, and yesterday 4,700. We quote superfine No2, 4 dols 814c to 4 dols 816c; favourite do. 4 dols 814c to 4 dols 874c; mixed Wisconsin, 4 dols 814c; mixed Indiana, Ohio and Michigan, 4 dols 814c to a dols 814c; straight Michigan and Indiana, 4 dols 874c. Com meal is steady, with small sales of Jersey, at 3 dols 124c; and Brandywine, in lots, a dols 25c ceah.

THE ECONOMIST.

LONDON MARKETS. STATE OF THE CORN TRADE FOR THE WEEK.

STATE OF THE CORN TRADE FOR THE WEEK. MARE LANE, FRIDAY MORNING. The supply of Eoglish wheat at Mark lane last Monday was very limited, and the best dry samples sold steadily at the full prices of the previous week, and no decline was submitted to on inferior parcels, but the damp qualities sold slowly. The imports of foreign wheat were tolerably good, and the business transacted in this description was confined to small quantities for immediate use. Prices were unaltered. The quantities reported consisted of 1,000 qrs from Anclam, 1,080 qrs from Ancons, 700 qrs from Barletts, 710 qrs from Berdianeks, 950 qrs from Danzig, 420 qrs from Dunkick, 620 qrs from Ghent, 250 qrs from Leghorn, 310 qrs from L'O ient, 500 qrs from Lubeck, 510 qrs from Nances, 9,350 from Odessa, 610 qrs from Erzalelli, 937 qrs from Pheodosis, making a total of 16,688 qrs. The supply of Eaglish barley was short, and prime malting qualities supported prices, but secondary sorts were the turn cheaper ; the imports of foreign consisted of 12,228 qrs, the greatest part of which came from Denmark, some choice Chevalier samples from whence were taken for malting purposes, the next beat by the distillers, and and prime malting qualities way 5,602 acaks, from Frauce prin-cipally 6,775 sacks, and 200 harrels via New York : trade was firm for good amples, particularly for choice qualities of Freuch. On the whole there was an abundant supply of oats at market, 1,812 qrs English, 3,437 qrs Scotch, 13,895 qrs Irish, and 12,251 qrs foreign, making a total of 31,395 qrs : pinue form was taken by the consumers as former ates, and the dealers aboved ather more disposition to get into stock, but uo quotable change occurred and the value of any decaription. The imports at Liverpool were good both of wheat and flour, particularly

rather more disposition to get into stock, but no quotable change occurre-in the value of any description. The imports at Liverpool were good both of wheat and flour, particularly from France. Fine old wheat maintained former rates, but samples of new ware 1d per 70 lbs cheeper: average, 37s 5d on 249 qrs. Sack flour gave way 6d to 1s, and barrel 6d on the quotations of the previous Tuesday. There were limited imports at Hull of all grain, but a fair supply of wheat was brought forward by the farmers; dry samples were steady in value and demand, but other sorts were quite unsalcable: average 36s 8d on 815 qrs. The arrivals of wheat were good at Leeds, and the best qualities were 1s per qr lower, whilst damp parcels were almost unsalcable : average 39s 1d on 1,527 qrs. Farmers brought forward small quantities of grain at Ipswich, yet no improvement took place in the value of wheat : average, 39s 10d on 781 qrs.

Farmers brought forward small quantities of grain at Ipswich, yet no improvement took place in the value of wheat: average, 393 104 on 731 qre. The fresh artivals at Mark lane on Wednesday were limited of all grain, foreign as well as English, but there was a good import of flour from France. Not much passing in wheat, and prices of all descriptions were much the same as on Monday. Fine malting buley was quite as dear and in fair re-quest. There was rather more business transacted in good oats, and the consumers had to pay fully as much money for all useful qualities. The weekly averages announced on Thursday were 37s 8d on 87,051 qrs wheat, 22s 11d on 81,340 qrs barley, 16s 2d on 28,025 qrs oats, 23s 10d on 49 qrs rye, 25s 5d on 6,941 qrs beans, 26s 10d on 2,194 qrs pens. The Scoteln markets during the week have been dull and depressed; the sales of fine home-grown wheat at E-linburgh were effected without any material change in value, other sorts were lower: average, 36s 8d on 826 qrs.

grs. The imports at Glasgow were good of wheat and large of French flour; the mand for both articles was large and prices in favour of the buyers; the summers benefiting all the while by obtaining good articles at a cheap deman

rate. At Birmingham the supply of wheat was short, demand slow at barely former rates: average, 40s 10d on 1,235 qrs. There were moderate deliveries of English wheat at Bristol, which the millers took off slowly at lower prices for most sorts: average, 36s 11d on \$70,000

millers took off slowly at lower prices for most sorts: average, 36s 11d on 370 qrs. Newbury market was moderately supplied with wheat; prices were un-changed, demand steady: a verage, 36s 9d on 942 qrs. The quantity offering at Uxbridge was limited, trade dull and generally lower: average, 4s 10d on 471 qrs. The fresh arrivals of English wheat at Mark lane on F.iday were limited, and there was only a moderate addition of barley and oats from our own coast, with sfalling off in the imports of foreign grain, whilst those of flour continue to be liber.1, mostly from France. The frost was of short duration, and since Monday it has been mild again, with heavy rain last night, but this morning is finer with a lower temperature. Wheat met a slow sale at about the rates of Monday for gool patiels. Flour was in fair request and nualtered in value. Barley was quite as dear and in moderate demand. O its supported prices, with a steady business transacted in fine corn to the con-sumers.

The London averages announced this day were.

FOREIGN AND COLONIAL PRODUCE MARKETS. TRANSACTIONS OF THE WEEK. (For Report of This Day's Markets see " Postscript.")

MINCING LANE, FRIDAY MORNING.

MINCING LANE, FRIDAY MORNING. SUGAR.—The market continues quiet, as the demand from the refiners is still rather limited. There has been a steady bu-iness done in British West India, the sales to yesterday reaching 1,000 casks as full prices, and the supply is getting small. 150 casks Barbadoes sold by auction at 41s to 43s 6d for middling to very good; 100 casks crystalised Demerara brought 42s to 44s 6d for good to fine yellow. The stock of West India sugar is 5,409 tons less than at same ime in 1850. Last week the deliveries were sgain steady, being computed at 3,288 tons, and the aggregate falling off in the stock amounts to 23,854 tons. *Maurius.*—No public sales were held on Tuesday, and there has not been much business done by private contract during the week. The deliveries last week were 417 tons.

Bengal - The sales on Tuesday comprised 5,603 bags, and 2,500 bags sold at barely previous rates for grainy descriptions; low to middling yellow, 388 6d to 408 6d; fine, 438 6d to 448; brown, 35s to 37s 6d: Dhobahs chiefly taken in

at 42s 6d to 43s 6d for good : no white Benares was offered. The stock as compared with last year's at same time, shows a decrease of 6,300 tons. Madras.—4,500 bags offered in the early part of the week were principally withdrawn above the market value, from 30s to 32s 6d for low to good brown ; some middling damp yellow sold at 35s 6d per cwt. Foreign.—The market continues firm, and there has been a moderate business done by private treaty. 5,600 bags Pernambuco about half found buyers at previous rates : low to good white, 40s to 43s; brown, mid to good, 34s to 35s 6d ; with a few lots yellow, 37s to 40s. Some clayed Manilla was taken in at high rates. By private treaty 2,000 boxes yellow Havans have been sold, duty paid 42s, in bond 22s : a cargo of brown Bahia for an outport, at 37s 6d, and 300 cases brown and grey at 34s to 39s per cwt. Refined.—Rather more inquiry has been made, at the decline quoted last week, and the refiners are keeping supplies moderate. Some brown goods have been diod at 46s to 48s. Several parcels Dutch goods have been aloged de upper at 34 sto 34s. Several parcels Dutch goods have been diposed of. Pieces are rather lower. Bastards and treasle remain as last quoted. Bonded sugars are still depressed, and prices of Dutch crushed are rather lower. Bastards and treasle remain as last quoted. Bonded sugars are still depressed, and prices of Dutch crushed are not with a limited demand-10b, 32s 6d to 33s per cwt. MotAsses.—The sales have been confined to a parcel of new Demerara at 56s per cwt.

met with a limited demand—101b, 32s 6d to 33s per cwt. MOLASSES.—The sales have been confined to a parcel of new Demerara at 16s per cwt. COFFEE.—Since the Chancellor made known his intention to equalise the duties upon coffee, the market has been in an unsettled state, but the immedi-ate effect of this measure was to depress Ceylon, and increase the value of some oreign kinds which now pay 6d. About 3,500 bags native Ceylon have sold since Monday at 45s, and yesterday at 44s, for good ordinary, establishing a de-ciline of 4s. A few lots first and second class sea-damaged sold by auction at 43s 6d to 44s 6d. Plantation kinds have given way 2s to 34. 177 casks, 217 bags, were chiefly taken in; some middling selling at 54s to 55s, with good ordinary and ragged, &co., 44s to 48s. The deliveries do not improve. Mocha has advanced 5s to 7s, and met with some inquiry; yesterday 350 bales and half bales were rather more than half sold, at 68s to 72s for common to mid-ding clean garbled; a portion of old inport being withdrawn at 30s. Costa Rica brought an advance of 2s to 3s in the middle of the week, but yesterday 2,751 bags were bought in, as there did not appear to be any buyers, above the previous value; fine ordinary even, 55s to 56s; elipping kinds, ordinary to fine ordinary dingy, 48s to 54s; low, 46s to 47s. The transactions in common kinds of Brazil for export are two cargoes Rio at the low price of 42s and 43s, and one of St. Domingo at 42s. CocoA.—The better kinds of Trinidad are so scarce, that little business has been done. To a meated bas not here much influenced by the intelligence received

been done.

been done. TEA.—The market has not been much influenced by the intelligence received from China, and continues in a very depressed state, with large supplies of many descriptions. The only new feature to notice this week is a demand for com-mon congous of recent import, which have been taken by the trade at 11¹/₂d to 11¹/₂d: old parcels are difficult of sale: good and fine are also very dull. Canton hysons and gunpowders have met with a limited inquiry at the late de-cline. In fine green teas, the few sales made have been at previous rates. Yes-terday 4,100 packages were offered in public sale, and about 3,000 found buyers, (including small boxes,) without material alteration in prices, except for some good to fine young hysons, which went rather lower. Two more vessels have arrived at this port.

good to nne young hysons, which went rather lower. Two more vessels have arrived at this port. RICE.—The demand has not improved : 913 bags Bengal were taken in at last week's prices from 108 to 108 6d for good middling to good white rather broken ; 300 pockets small broken white sold at 8s to 8s 6d ; 2,426 bags low pinky Madras were rather more than half sold at 7s 6d to 8s, being a decline of 3d.

PIMENTO --The market is firm with few parcels offering, and some e by private treaty at 53d. The stock on 15th inst. con

PIMERIO - Private treaty at bigd. And the pre-has been done by private treaty at bigd. And the pre-likes bags. PEPPER. - The high rates demanded for common kinds of black have pre-PEPPER. - The high rates demanded for common kinds of black have pre-ter and business being done. Some parcels damaged offered at public sale

11,550 bags. Preprer. —The high rates demanded for common kinds of black have pre-vented much business being done. Some parcels damaged offered at public sale were bought in above the market value. OTHER SPICES.—No public sales of nutmegs or mace have taken place. Cassia lignea is bringing rather higher rates for small parcels. The sound portion of 2,800 bags, 92 casks, &c. African ginger was taken in at 35s 6d to 37s. 130 barrels, &c. Jamaica sold steadily from 3/14s to 5/3 sper cwt. RUM.—The sales in all kinds are limited, as the market continue dull. SALTFFIRE.—Some business has been done in Madras by private contract at 26s 6d. 100 bags in public sale brought 26s 6d for 12½ refraction, and 424 bags Bengal of 15\$ per cent, 26s 6d per cwt, being rather easier rates. The stock is reduced to 2,931 tons. NTRAKE SODA is quict at 14s to 14s 6d.

NITRATE SODA is quiet at 14s to 14s 6d.

NITRATE SODA is quiet as to is to is on COCHINEAL.-This article is very flat, and 165 bags were chiefly taken in at revious rates. A few Honduras silvers sold from 3s 6d to 3s 8d. Mexican ilvers taken in at 3s 6d to 3s 7d. Teneriffe silvers part sold at 3s 7d to 3s 8d

Silvers taken in at 3s 6d to 3s 7d. Teneriffe silvers part sold at 3s 7d to 3s 8d per lb. Lima withdrawn. LAC DYE.—The market is very quiet, and there have been some further large arrivals. Yesterday, a few lots ordinary and native marks sold at 3s 7d to 3s 8d per lb. LaC DYE.—The market is very quiet, and there have been some further large arrivals. Yesterday, a few lots ordinary and native marks sold at 3d to 11 2d, with a few good, 1s 3d to 1s 3d per lb, being about previous rates. DRUGS, &c.—Castor oil has brought rather higher prices for good pale qualities, which have sold at 5d to 5d per lb. There is still a very large stock. A parcel middling Madras turneric sold at 12s 6d, being rather dearer. Some large speculative purchases have been made in gambier, and 15s 6d paid, which is a further advance of 6d. Cutch has been quiet. We may remark a considerable advance in the value of ipecacuhana. METALS.—There has not been any change in the iron market this week, the makers asking fully former rates. Solth pig is held with more firmness, but the demand inactive. Spilter remains quiet, at 16d 2s 6d to 16d 5s per ton. The market for East India tin has been firm, but rather inactive : Banca is held at 88s. No alteration in British tin or other metals. Lead has been former.

1 mer

HEMP .- The transactions in Russian are still confined to the immediate wants of the dealers, and prices remain the same as quoted for some time past. Ma-nilla is scarce and in demand. Jute has been dull of sale. of th

Orts.—Nearly all kinds of fish have been dull of sale. Orts.—Nearly all kinds of fish have been dull, with a downward tendency in prices. Some transactions are reported in cod at 35 per ton. Lineed has been in steady demand during the week at 33s 34 to 33s 64, maintaining the im-provement last quoted; rape is dull and rather easier. Some business has been doue in Ceylon cocco nut at 29s 64 per cwt.

LINSEED .- The market is firmer and rather higher rates paid for Black Sea, which commands 45s to 45s 6d per qr on the spot ; cakes are dull, the unusually mild weather checking consumption fine English can be bought at 7*i* to 7*i* 5s per ton.

TALLOW .-- The market continues flat, rather a limited business having been done for consumption since last Friday. Yesterday 1st sort St Petersburg Y. C. on the spot was quoted at 37s 3d, and the same to arrive in the next two months. East India is bringing comparatively high prices. The deliveries last

THE ECONOMIST.

[Feb. 22,

week were 2,151 casks, leaving the stock on 15th inst 43,500 against 41,735 casks at same time in 1850. There is a good supply of town melted.

POSTSCRIPT. FRIDAY EVENING. SUGAR.—The market was steady to-day. 200 dasks of West India sold privately, and the week's business amounted to 1,150 casks. Mauritius -5,427 bags were chiefly sold at very full prices: fair to good strong yellow, 41s to 42s; low to good mid, 38s to ;40s 6d; brown, 36s 6d to 58s. Bengal -358 bags, sold at former prices, while damp soft brown brought 33s. Madras—The lower qualities went easier; grocery at full prices; of 3,000 bags in public sale, about 2,000 bags sold; low to good yellow, 36s to 40s 6d; low soft to good damp browns, 29s to 30s 6d; soft yellow, 32s to 32s 6d per cwt. Refined—The market was dull this morning. Correct.—About 1,000 bags native C-ylon, sold at 44s 6d to 45s, being rather higher rates: 215 casks, 61 bags plantation, only about half sold at the decline previously quoted : fine fine ordinary bold brought 53s to 53s 6d per cwt.

per cwt.

COCHINEAL .- 44 bags, chiefly Mexican blacks, about half sold at 3s 8d to 3s 9d per 1b

Cuba ...

38 90 per lb.
DrEwooDS.-250 tons Laguna logwood were taken in at 6l 10s; 168 tons Caba fustic at 5l 10s to 6l per ton.
OLIS.-180 tons Southern whale offered by auction only partly sold at lower rates, from 29l 10s to 32l. A few lots pale seal, 32l per ton. Some cocca nut were taken in; Cochin, 31s; Ceylon, 29s 6d per cwt.
TALLOW.-443 casks Australian were about three-fourths sold at 34s 3d to 37s ad ner cwt.

TALLOW.-4 37s od per cwt.

 ADDITIONAL NOTICES.

 REFINED SUGAR.—The home market for reflued sugar is rather firmer, without any improvement as to proces. The bonded remains without any alteration. Dry Faurt.—The demand for currants increases, but only for low-priced and for fine fruit, of which there is very little now left in the market; buyers will, consequently, be more obliged to improve their offers; the clearances of currants constinue large. The business in raisins and other fruits is on a most limited scale, although prices generally are unusually mederate.

 GREEN FRUIT.—The stock of oranges being diminished has improved the price; two cargoes of St Michael and 700 boxes Lisbon, sold by Keeling and Hunf, went at an advance ou the former, and 1s per box lower for the latter, the quality being inferior. Lemons sustain the advance in price. Nuts of all kinds are held firmly, an increased consumption being expected in the spring. No alteration in the duty on fruit, although upon some articles, where the duty levied is disproportionate to the value, a reductihn was expected.

 SEEDS generally slow at the quotations.

 CotoNAL AND FOREIGN Wool remains firm in prices. The public sales are going off with good spirit, and the prices paid for colonial wool are fully equal to these prices paid for Surat are about 1d per Ib decline, and Madras id per Ib from the highest point. Sales of cotton wool from the 14th to the 20th instinuester.—900 bales Surat, at 5d to 5gd, fair to good fair; 300 bales Madras, at 5d to 5gd, fair to good fair; 300 bales Madras, at 5d to 5gd, fair to good fair; 300 bales Madras, at 5d, to 5gd, fair to good fair; 300 bales Madras, at 5d, to 5gd, fair to good fair; 300 bales Madras, at 5d, to 5gd, fair to good fair; 300 bales Madras, at 5d, to 5gd, fair to good fair; 300 bales Madras, at 5d, to 5gd, fair to good fair; 300 bales Madras, at 5d, to 5gd, fair to goo

NEWGATE AND LEADENHALL MARKETS.

MONDAT. Feb. 17.—Somewhat extensive supplies of mutton have come to hand sin our last report, chiefly from the midland counties; but those of other kirds of me have been very moderate. To day mutton is in good request at fully last weel quotations. Otherwise, the demand is heavy, at late rates. The general supplies a seasonably good. asonably good. FRIDAT, Feb. 20.-These markets were extensively supplied to-day. Generally eaking the demand ruled heavy, at barely stationary prices. At per stone by the carcase.

SMITHFIELD CATTLE MARKET.

SMITHFIELD CATTLE MARKET. MONDAY, Feb. 17.—The imports of foreign stock into London continue on a very extensive scale. During the last week they amounted to 2,449 head, against 576 in the corresponding period of 1850; 2,011 in 1849; and 1,064 head in 1848. The items were-beasts, 501; sheep, 1,678; calves, 237; pigs, 33. The arrivals at the outports were confined to 400 head, chiefly beasts and calves, from Holland. From Ireland, 54 pigs came to hand for this market. is in to-day's market, the sucply of beasts was large, and of unusually prime quality. Notwithstanding the favourable change in the weather, and that the attendance of buyers was on the increase, the beel trade ruled somewhat inactive, at prices about

equal to those obtained on Monday last. We may observe, however, that the extreme value of the best Scots was 3s Ed per Sibs. From Norfolk, Suffolk, Essex, and Cambridgeshire, we received about 2,600 Scots, shorthorns, Sc.; from the northern districts, 800 shorthorns; from other parts of England, 300 of various breeds; and from Scotland, 250 horned and polled Scots, chiefy by railway.

England, 300 of various Directs; and from scoreary, are available, and for that description of schedy by railway. The numbers of shoep being again very moderate, the demand for that description of stock ruled firm at fully Friday's improvement in value, the general top figure for the best oil Downs in the wool being 45 od per 81bs. There were about 2,600 shorn sheep in the market. The few lambs on show produced 5s 6d to 6s per 61bs. Calves, the supply of which was small, moved off slowly at late rates. There was rather more doing in pigs, at full prices. There was rather more doing in pigs. At full prices. Web. 10, 1849. Feb. 18, 1850. Feb. 17, 1851.

LIVERPOOL MARKETS. FRIDAY NIGHT.

WOOL.

(From our own Correspondent.) Our market is very quiet this week. The public sales in London are stated to be going hardly equal to the expectations formed; this has, however, had no effect on prices here, as the stocks are very light, and consist chiefly of low de-

CORN.

CORN. (From our sum Correspondent.) The grain market remains in a lifeless state, but without any apparent change in prices since Tuesday. This morning the demand was even more limited than usual, and so little was done in any article that we can only report prices to be nominally the same as in the early part of the week. METALS. (From our own Correspondent.)

METALS. (From our own Correspondent.) There has been only a very moderate demand for any iron during the week, with little change to note in prices. for any kind of manufactured For Scotch pig iron m way a little. Copthere is only a limited inquiry, and prices have again given way a little. per, lead, and tinplates in fair request at previous rates.

FOREIGN MARKETS.

PETERSBURG, FEB. 8.

CORN-without transactions. DEALS.-Last week, about 15,000 doz, Redwood in Cronstadt, not Gromoff's, were iken at 14 ro. Gromoff has sold 4,000 doz. Whitewood at 83 ro. FLAX.-No business. One of the second class dealers would accept 115 ro., money, r9. heads on contract, but refuses 110 ro. For 1st and 2nd sort Archangel Tow, 90 ro) 80 ro. money demanded on contract. HEMP,-Within the last eight days upwards of 1,000 tons have been taken on outract, chiefy clean, at the lower quotations, at which there are buyers, but few or o sellers. N-without transactio ξ,

no sellers. LINSEED.—Nothing done. Sellers of Rjeff on contract, at 24± ro., 10 ro. down TALLOW.—The transactions have been confined to about 500 casks bought August at 106 ro. money, and resold at 113 ro. 10 ro. down. Some parties increase expected supply of new tailow to 110,000 to 115,000 casks.

The Railway Monitor.

EPITOME OF RAILWAY NEWS.

GREAT WESTERN.—The half-yearly general statement of accounts of the Freat Western Railway Company, laid before the meeting at Faddington, on Thursday the 13th inst., shows the total amount of receipts to have been 13,318,138/168 10d. The balance of estimated liabilities atill outstanding for iquidation are, 216,1017 08 4d. The revenue account shows a receipt for the 13,318,138/163 10d. The balance of estimated liabilities still outstanding for liquidation are, 216,101/05 4d. The revenue account shows a receipt for the half year by traffic of 428,7361 1s 10d; from the Bristol and Birmingham Railway, 7,0501; from the South Wales Railway Company, 3,9711 17e 4d; making a total, with other sundries, of 455,8551 3s 8d. The expenditure has been, maintenance of way, 32,8701 la 8d; locomotive account, 34,3601 12s 1d; carrying account, 38,3981 7s; general charges, 16,1551 15s 10d; Government duty, 12,5282 ms 6d; rates and taxes, 10,7001 6m 1d; making a total, with general, office, and other expenses included, of 154,2381 ls 10d. The balance for the half year is 455,8551 3s 8d, which, by charges in the general revenue account, is reduced to a disposal balance of 215,5321 1s 7d. After payment of a dividend of 2 per cent. for the half year on 8,072,600,1, the amount called on which dividend is payable, there will be left over the large balance of 49,660/12s 9d. The report and dividend were unanimously adopted. MIDLAND.—The directors of this company have published their account for the half-year ending 31st Dec., 1850. The principal items on the Dr side of the revenue account are—Maintenance of way, 30,4131 11s 5d; locomotive power, 89,1001 5s 3d; traffic expenses, 34,3611 12s 2d; coaching expenses, repairs, 6c., 45,4061 12s 2d; debentures and hons, 82,3471 7s 8d; dividends on shares and guaranteed stock, 176,7441 7s 2d; making a total, inclusive of disposable balance of 117,5667 3s 3d, amounting to 644,9267 2z 7d. From the other side of the account, traffic from all sources it appears has produced the sum of 625,0711 16s 2d. It is proposed to appropriate the disposable balance to the payment of dividends as follows :— Great West

6,554,805 <i>l</i> Consolidated stock, after the rate of 2 ¹ / ₂ per cent. per annum 25,000 <i>l</i> Midland 6 <i>l</i> Preference	81,935 750 5,594 4,350	0000	0000
Leaving balance in hands of directors	92,537 25,025	0	07
	117,566	2	7.

Leaving balance in hands of directors assume that the second sec tenths, 31,6001; making together 527,4077, and leaving a balance of net revenue to the credit of the next account of 151,2917.

RAILWAY SHARE MARKET.

LONDON.

LONDON. MONDAY, Feb. 17.—There was a good demand for railway shares during the day at improved prices, but towards the close a general tendency to reaction became manifest. The rearrangement of the official list shows these securities under respective heads—viz., those denominated ordinary shares and stocks, lises leased at fixed rentals, preference shares, and foreign. TUESDAY, Feb. 18.—The railway market was rather heavy at the com-mencement of the morning, but priors subsequently railied, owing to increased activity among the speculators. The full advance, however, was not maintained up to the close of business. WEDNERDAY, Feb. 19.—Reilway shares were in a fluctuating position ell

activity among the speculators. The full advance, however, was not manufacture up to the close of business. WEDNESDAY, Feb. 19.—Railway shares were in a fluctuating position all day, prices generally presenting an unsettled appearance. Towards the close of business, however, greater firmness was exhibited, and a favourable reaction is stated to have taken place later in the afternoon, when the regular market hours had concluded. THURSDAY, Feb. 21.—The railway market was firm to-day, and after the separation of the Bank directors at their weeky court prices showed symptoms of improvement, but the advance was not in all case maintained. FRIDAY, Feb. 21.—Shares are quieter and rather in favour of buyers.

NOT SOLD BY ANY HOSIERS OR DRAPERS. FORD'S EUREKA SHIRTS are not Sold by any Hosiers or Drapers, and can

I are not Sold by any Hosiers or Drapers, and can therefore be obtained only at 185 STRAND, LONDON. They are made in two qualities, the first of which is 40s the half-dozen, and the second 30s the half-dozen. List of prices with direction for self-measurement sent

R. FORD, 185 STRAND.

The Trish Amelioration Society and OTHERS. The Trish Amelioration Society beg to draw the atten-tion of the public generally to the fertilising and decoloris-ing properties of Irish Peat Charcoal. Mixed with nightsoil or sewage matter, it instantly and wholly destroys all offensive smell, renders it easy of manipulation, adapts the fertilising properties as a ready food for plants, and enables it to be transported by Rail-way or any other conveyance, without the slightest in-convenience.

way or any other conveyance, without the slightest m-convenience. The extent to which Charcoal (Carbon) enters into the composition of every article of Agricultural produce, and the value of nightsoil in about equal weights, a most efficacious manure is produced at a very small cost. Price of the Charcoal ready for use at Dublin, 47s per ton; in London, Liverpool, Bristol, and other seaports in England, 60s per ton, sacks included. Agents for the sale of the Society's Charcoal have been appointed at several of the principal seaports and inland towns, a list of whom, together with all other informa-tion, may be had on application at this office. By order of the Court, GEO. PARROTT, Secretary. Head office, 9 Waterloo place, London, January, 1851.

S MO KY CHIMNIES.-NO CURE NO PAY.-J. E. DOWSON, 123 Oxford street, (five doors west of Regent Circus), sole manufacturer of CUNDY'S PATENT REGISTER GRATE, begs to call attention to it, as being the most elegant increasing and certain Constants.

and certain Cure for Smoky Chimnies. A prospectus forwarded upon application, post free. J. E. Dowson is also the sole manu-facturer of CUNDY'S PATENT HOT AIR and VENTI-LATING STOVE for Churches, Warehouses, Shong, Entrance Halls, &c. They embrace in a peculiar manner all requisite features. Great strangth and neatness, undoubted resistance to FIEE, and Locks which it is impossible either to force or pick. Their prices are strictly moderate. Also IRON DOORS, and every description of strong fastenings. MANUEACTURERS-GRIGG and JENKINSON, FINS-BURY IRON WORES, 119 and 120 BUNHILL ROW.

HUBBUCK'S PATENT WHITE THE PERMANENT WHITE OF PAINT, THE PERMANENT WHITE OF THE ANCENT ARTIST, Conduces Elegance, Durability, Health, and Economy, THE WHITE OF ALL PAINT, and the other circumstances, when every other paint these and other circumstances, when every other paint these and other circumstances, when every other paint these and other circumstances, when every other paint these should be all water. By virtue of its galavanic and the other circumstances, when every other paint paint "has preserved the fastness of its colour. In ad-dition to its preservative properties, when applied to out-work exposed to sait water. By virtue of its galavanic of and and of the two metals, which is a strong preser-ation.

of similar of the two incluss, which is a strong previous vative. The "Patent White Zinc Paint" becomes cheaper than the inferior paints hitherto used, from its spreading over a much larger surface. Two ewt of this paint covers as much space as is usually taken up by three ewt of white beat

much space as is usually investigated by "Paralysis and painter's colic are entirely avoided by "Baralysis and painter's colic are entirely used without injury to the health of children or the most delicate persons."

injury to the health of children or the most delicate persons." "For public schools, and all rooms occupied by children, there will now be no excuse for using poleonous paints. Farents have remarked that their children on returning from the country to newly-painted houses have suffered in health. The reason is evident. The breath extracts the polson from paint, even after several months drying, and the langs draw in the deadly vapour." "Amongst other tests to which it has been sub-jected, has been that of painting the hold of a sugar vessel, which, after a voyage to 5K kitt's and back, ist found as white as the first day the paint was applied."— BELL'S WERLY MESSINERS, June 22, 1860. "We trust that it will not be long ere the Royal Navy discards the injurious white lead paint for Hubbuck's healthy and otherwise valuable substitute."—UNITED SERVICE GALETTE, August 17, 1850. "ME cach cask is stamped "HUBBUCK—LONDON —PATENT." A circular, with full particulars, may be had of the. Manufacturers, T H O M A S H U B B U C K and S O N.

Manufacturers, T H O M A S H U B B U C K and S O N, Colour Works, opposite the London Docks. Specimens of the Paint may be seen at the Office of the AKTISAN Journal, 69 Cornhill.

LECTURES SERVE ONLY TO GIVE A TASTE FOR SCIENCE ; THEY NEVER TEACH IT.

LIVERPOOL COLLEGE PRACTICAL CHEMISTRY, recognised OF

L PRACTICAL CHEMISTRY, recognised by i leading Medical Examining Boards in England. Professor—Dr Sheridan Musprat, F.R.S.E. Hon.-Assistant—Mr Joseph Danson, F.C.S. The next Session of four months will commence MONDAY, the 3rd of March. Students wishing attend should signify their intentions as soon as possil as a bench is appropriated to each pupil. ALL FEES PAYABLE IN ADVANCE. Per Sessi
