Chief of Staff, under the direction of the President, or of the Secretary of War under the direction of the President, has supervision of all troops of the line, of the Adjutant-General's department in matters pertaining to the command, discipline, or administration of the existing military establishment and of the Inspector General's, Judge Advocate General's, Quartermaster's, Subsistence, Medical, Pay and Ordnance Departments, the Corps of Engineers, and the Signal Corps and performs such other military duties not otherwise assigned by law as may be assigned by the President. For purposes of administration, his office constitutes a supervising military bureau of the War Department. Duties formerly prescribed by statute for the Commanding General of the Army, as a member of the Board of Ordnance and Fortification and of the Board of Commissioners of the Soldiers' Home, are performed by the Chief of Staff or some other officer designated by the President. There are embraced within the Department several military bureaus, whose chiefs are officers of the Regular Army of the United States, the Military Secretary, the Inspector General, the Quartermaster General, the Commissary General of Subsistence, the Surgeon General, the Paymaster General, the Chief of Engineers, the Chief of Ordnance, the Judge Advocate General, the Chief Signal Officer, and, lastly, the Chief of the Bureau of Insular Affairs, to whom is assigned, under the immediate direction of the Secretary of War, all matters pertaining to civil government in the island possessions of the United States subject to the jurisdiction of the War Department. To this chief is also assigned the transaction of all business in this country in relation to the temporary administration of the Republic of Cuba. In 1902 there was created within this Department a Board of Engineers for Rivers and Harbors to which are referred for consideration and recommendation all reports upon examinations and surveys provided by Congress and all projects and changes in projects for river or harbor improvement upon which report is desired by the Chief of Engineers, U. S. A. It is also made its duty to report through the Chief of Engineers upon the advisability of undertaking certain improvements at the expense of the United States."—J. H. Finley and J. F. Sanderson, *American executive and executive methods*, pp. 298-301.—"The President is officially commander-in-chief of the regular army and of the militia when it is in the service of the United States. A President has never personally directed the movements of armies in the field. The real management of a war falls upon the Secretary of War, the head of the War Department. This officer has supervision of the army in times of war as well as in times of peace. He acts through the chief of staff of trained officers who have direct control of the troops. A most important duty of the Secretary of War is to care for the material welfare of the army. In this he is assisted by the quartermaster-general, who attends to the clothing and the transportation of troops; by the commissary-general, who supplies the food; by the chief of ordnance, who supplies the arms; by the surgeon-general, who provides medicine and assistance for the sick and wounded; by the adjutant-general, who conducts the correspondence of the War Department. It is estimated that ten per cent of the population and wealth of the United States is situated on the sea-coast, exposed to destruction by hostile naval forces. The defense of this life and property is the duty of the War Department."—S. E. Forman, *American democracy*, pp. 250-251.

WAR POWERS OF THE UNITED STATES.—Distribution of power.—The war powers of the United States are stated in the constitution (Article I, Sect. VIII, 1-8). "The war powers under the Constitution are carefully distributed. To Congress is given the power 'to declare war.' The proposal to add 'to make peace' found no favor, as this was deemed to belong to the treaty-making power vested in the President and the Senate. To the President was given the

direction of war as the Commander in Chief of the Army and Navy. It was not in the contemplation of the Constitution that the command of forces and the conduct of campaigns should be in charge of a council or that as to this there should be a division of authority or responsibility. The prosecution of war demands in the highest degree the promptness, directness, and unity of action in military operations which alone can proceed from the Executive. This exclusive power to command the Army and Navy, and thus to direct and control campaigns, exhibits not autocracy but democracy fighting effectively through its chosen instruments and in accordance with the established organic law. While the President is Commander in Chief, in the Congress resides the authority 'to raise and support armies' and 'to provide and maintain a navy' and 'to make rules for the government and regulation of the land and naval forces,' and as a safeguard against military domination the power to raise and support armies is qualified by the provision that 'no appropriation of money to that use shall be for a longer term than two years.'—C. E. Hughes, *Fighting powers of the United States under the constitution (Address before American Bar Association, Sept. 5, 1917, at Saratoga Springs)*.

Power to declare war.—"The framers of the Constitution turned over an ample measure of the powers of war to Congress because Representatives and Senators are delegates of the People and States of the United States whose commercial interests must be staked upon the issues of every conflict. The People pay the bill. Therefore, their representatives in Congress are of right the proper persons to control military affairs. 'The war making power,' according to the decision in the case of *Perkins vs. Rogers* (35 Indiana Rep., 167) 'is, by the Constitution, vested in Congress and . . . the President has no power to declare war or conclude peace except as he may be empowered by Congress. . . . The existence of war, and the restoration of peace are to be determined by the political department of the government, and such determination is binding and conclusive upon the courts, and deprives the courts of the power of hearing proof and determining as a question of fact either that war exists or has ceased to exist.' In the course of the decision of the case of *Brown vs. United States* (8 Cranch's Rep., 120) which grew out of one of the incidents of the War of 1812 with Great Britain, Chief Justice Marshall took pains to explain just what happens to commerce when war is declared. A ship owned in Massachusetts, chartered to a British company and loaded with British goods, had put in at New Bedford, where, at the instance of the Federal authorities, the cargo had been claimed as enemy property. An action for forfeiture had been instituted upon the claim that the goods seized were the property of an alien enemy. The case finally reached the Supreme Court of the United States, where Chief Justice Marshall ruled that a declaration of war does not of itself authorize the seizure and condemnation of property of the enemy, but that a special act of Congress must be passed for that purpose. He said: 'The declaration of war has only the effect of placing the two nations in a state of hostility, of producing a state of war, of giving those rights which war confers; but not of operating, by its own force, any of those results, such as a transfer of property, which are usually produced by ulterior measures of government.'—C. W. Bacon and F. S. Morse, *American plan of government*, pp. 152-153.

Power to grant letters of marque and reprisal.—"In Revolutionary days, owners of small ships

found profitable employment as privateers. A smart sailing master with a good reputation as a fighting man, could get any number of stout fellows to take the chances of the sea against the merchant ships of the enemy. The Continental Congress issued many letters of marque in order to harass the enemy and retaliate for injuries already suffered. Many an honest Yankee sailor was able to put by prize money during the Revolutionary War, and was sorry when it was over. Incidentally, the privateersmen did their share for the American cause. Their captures of muskets, gunpowder, and military supplies often came in the nick of time, when Washington had more soldiers than he could supply with arms. Privateering now being out of date, this clause of the Constitution is obsolete."—*Ibid.*, pp. 153-154.

Power to make rules concerning captures on land and water.—This power "gives Congress a right to prescribe what disposition shall be made of property captured in time of war; and the President, as commander-in-chief of the Army and Navy, carries out its directions. The case of *The Thomas Gibbons* (8 Cranch's Rep., 421) turned upon President Madison's instructions of August 28, 1812, that privateers should not interrupt any vessels belonging to citizens of the United States, coming from British ports to the United States laden with British merchandise, in consequence of the repeal of the British Orders in Council. *The Thomas Gibbons*, one of those very ships, had been brought into the harbor of Savannah by a privateer which claimed her as a prize. The Federal District Court sustained the protest of the owners that the ship and cargo were protected from seizure by the terms of the President's proclamation. The appeal of this case to the Supreme Court resulted in a declaration that it is for Congress to lay down, and for the President to enforce, rules concerning 'captures on land and water.' Justice Story said: It is very clear that the President has, under the Prize Act, power to grant, annul, and revoke at his pleasure, the commissions of privateers; and by the act declaring war, he is authorized to issue the commission in such form as he shall deem fit. . . . In this view, the commission is qualified and restrained by the power of the President to issue instructions. The privateer takes it subject to such power, and contracts to act in obedience to all the instructions which the President may lawfully promulgate."—*Ibid.*, pp. 154-155.

Power to pass conscription laws.—"Upon every citizen lies the duty of aiding in the common defense. In exercising its constitutional power to raise armies the Congress may enforce this duty. The Congress may call any one to service who is able to serve. The question who may be called, or in what order, is simply one for the judgment of the National Legislature. The power vested in Congress is not to raise armies simply by calling for volunteers, but to raise armies by whatever method Congress deems best, and hence must be deemed to embrace conscription. To the framers of the Constitution the draft was a familiar mode of raising armies, as it had been resorted to by the colonies to fill up their quotas in the Revolutionary War."—C. E. Hughes, *Fighting powers of the United States under the constitution (Address before the American Bar Association, Sept. 5, 1917, at Saratoga Springs)*.—The constitution states that "Congress shall have Power to . . . raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years.' The Supreme Court has said that in this particular the power of Congress is 'plenary and

exclusive.' This statement was made in *Tarble's Case* (13 Wallace's Rep., 397) in which the main question was whether a State court has any right to discharge a soldier from military service by writ of habeas corpus. One Edward Tarble had enlisted in the United States army in July, 1869. Soon afterward, his father had petitioned a Wisconsin court to issue a writ of habeas corpus on the ground that, as the boy was under eighteen, he could not legally be enlisted. The writ was issued and served on his commanding officer, who protested that the State court had no power to release a Federal soldier by this means. When, in spite of this objection, the release was ordered the case was taken to the Supreme Court of Wisconsin, which ruled that a State court might lawfully decide whether a Federal court had jurisdiction in a case involving the rights and liberties of a citizen of a State. The military authorities now took the case to the Supreme Court at Washington, and asked that tribunal to decide whether Congress and the Federal Courts were to be dealt with in such cavalier fashion. Justice Field said: 'Among the powers assigned to the National government is the power "to raise and support armies," and the power "to provide for the government and regulation of the land and naval forces." The execution of these powers falls within the line of its duties; and its control over the subject is plenary and exclusive. It can determine, without question from any State authority, how the armies shall be raised, whether by voluntary enlistment or forced draft, the age at which the soldier shall be received, and the period for which he shall be taken, the compensation he shall be allowed, and the service to which he shall be assigned. . . . No interference with the execution of this power of the National government in the formation, organization, and government of its armies by any State officials could be permitted without greatly impairing the efficiency, if it did not utterly destroy, this branch of the public service. The two-year period for which Congress may make appropriations for the support of an army, was established probably because the members of the House of Representatives are elected every two years. The People's House of each Congress must assume responsibility for the size of the army, since it has to take the first step toward making the biennial appropriation for its support.' Alexander Hamilton is said to have written the number of *The Federalist* (No. 26.) which says: 'The legislature of the United States will be obliged, by this provision, once at least in every two years, to deliberate upon the propriety of keeping a military force on foot; to come to a new resolution on the point; and to declare their sense of the matter by a formal vote in the face of their constituents. They are not at liberty to vest in the executive department permanent funds for the support of an army, if they were even incautious enough to be willing to repose in it so improper a confidence.'—C. W. Bacon and F. S. Morse, *American plan of government*, pp. 155-156.

Power to provide and maintain a navy.—'Congress can appropriate money to be used in building and equipping battleships and in providing all appliances for the navy, which when thus established is under the control of the President.'—*Ibid.*, p. 157.

Power to make rules for government of army and navy.—Congress is given "power to formulate military codes and insitute courts-martial by which the President maintains discipline in the army and navy. Courts of law may not interfere with courts-martial. In the case of *Dynes vs. Hoover* (20 Howard's Rep., 65) an attempt was

made to induce the Supreme Court to prevent the execution of the sentence of a naval court-martial on the ground that the Supreme Court has power over all cases arising under the Constitution. Frank Dynes had been convicted at New York under the Act of April 23, 1800, of having attempted to desert from the U. S. Ship *Independence* on September 12, 1854, and sentenced to six months' imprisonment in the penitentiary of the District of Columbia. The President ordered the United States marshal to receive Dynes from a vessel which had brought him from New York to Washington, and commit him to the penitentiary of the District of Columbia. The prisoner tried to regain his liberty by suing the marshal for false imprisonment upon the ground that the President had no constitutional authority to issue such an order. The defendant answered that, as marshal of the District of Columbia, he had imprisoned the plaintiff under the authority of the President and in execution of the sentence of a naval court-martial. Justice Wayne, in the course of the decision of the Supreme Court, took occasion to say that the judiciary has no power to control the action of military and naval courts established by Congress under this constitutional clause. He said in part: 'Among the powers conferred upon Congress by the 8th section of the first article of the Constitution, are the following: "to provide and maintain a navy," "to make rules for the government of the land and naval forces." . . . Congress passed the Act of 23d April, 1800, providing rules for the government of the navy. . . . The 35th article provides for the appointment of courts martial to try all offences which may arise in the naval service. . . . In this case, all of us think that the court which tried Dynes had jurisdiction over the subject matter of the charge against him.'—*Ibid.*, pp. 157-158.

Congressional power over state militia.—The constitution states that "Congress shall have Power . . . To provide for organizing, arming, and disciplining the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress.' The Supreme Court explained the meaning of this clause in the case of *Houston vs. Moore*. (5 Wheaton's Rep., 1.) A Pennsylvania militiaman named Houston had refused to march with his detachment when called into actual service by the governor in pursuance of an order or requisition made by the President of the United States on July 4, 1814. Houston was tried by court-martial under a Pennsylvania law, which provided that any person who refused to obey when so ordered out should be liable to the penalties prescribed by the Act of Congress of February 28, 1795. A fine was imposed and collected out of his property. He thereupon brought a lawsuit against the deputy marshal who had collected the fine upon the claim that the Pennsylvania law was null and void because the United States alone had power to punish him for disobedience of its orders. Justice Washington said: 'Upon the whole, I am of opinion, after the most laborious examination of this delicate question, that the State court-martial had a concurrent jurisdiction with the tribunal pointed out by the acts of Congress to try a militia-man who had disobeyed the call of the President, and to enforce the laws of Congress against such delinquent; and that this authority will remain to be so exercised until it shall please Congress to rest it exclusively elsewhere, or until the State of Pennsylvania shall withdraw from their court-martial the authority

to take such jurisdiction.'—*Ibid.*, pp. 160-161.—“As the service of the Organized Militia can only be required by the National Government for the limited purposes specified in the Constitution, it follows (as Attorney General Wickersham advised President Taft) that the Organized Militia, as such, can not be employed for offensive warfare outside the limits of the United States. This, however, is apart from the power of Congress to raise and support a Federal Army. Congress may be content with a small standing army in ordinary times, but Congress may create and equip such army as it pleases, subject to the qualification with respect to appropriations. It can equip an army in preparation for war, and of course, it may furnish whatever army is required for the prosecution of war. The organization and service of an army raised by Congress are not subject to the limitations governing its control of the militia. The power to use an army is coextensive with the power to make war; and the army may be used wherever the war is carried on, here or elsewhere. There is no limitation upon the authority of Congress to create an army, and it is for the President as Commander in Chief to direct the campaigns of that army wherever he may think they should be carried on.”—C. E. Hughes, *Fighting powers of the United States under the constitution (Address before the American Bar Association, Sept. 5, 1917, at Saratoga Springs)*.—The constitution states that “‘Congress shall have Power . . . To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions.’ The framers of the Constitution gave Congress, instead of the President, power to summon the militia for active service, because the law-making bodies were under the control of the People and the States. They limited the power of Congress over the militia by providing that the citizen soldiery should not be called into active service except for three specified objects. No serious question arose under this clause until, in 1861, it became necessary to use the militia of the loyal States against the States which had attempted to secede from the Union. At the beginning of the Civil War, President Lincoln, under the authority of certain acts of Congress which dated back to 1795 and 1807, called out the militia, so that the laws should be faithfully executed (U. S. Const., Art. II., Sec. 3) in those States where the Federal Courts had become ineffective. His proclamation putting the ports of the Confederacy under blockade was challenged in the Supreme Court in *The Prize Cases* (2 Black’s Rep., 635) in which the question was whether the citizen soldiers of some States could be used under the authority of acts of Congress to obstruct access to the harbors of other States. Proceedings were brought in the Federal Courts against a number of vessels which had been captured as blockade runners. Some of these were condemned and others released, according to the merits of each case. Justice Grier sustained the war powers of Congress.”—C. W. Bacon and F. S. Morse, *American plan of government*, pp. 158-159.

Power of the president.—“By the Constitution, Congress alone has power to declare a national or foreign war. It cannot declare war against a State, or any number of States, by virtue of any clause in the Constitution. The Constitution confers on the President the whole Executive power. He is bound to take care that the laws be faithfully executed. He is Commander-in-Chief of the Army and Navy of the United States, and of the militia of several States when called into the actual service of the United States. He has no power to initiate or declare a war either against a foreign nation or a

domestic State. But by the Acts of Congress of February 28, 1795, and 3d of March, 1807, he is authorized to call out the militia and use the military and naval forces of the United States in case of invasion by foreign nations, and to suppress insurrection against the government of a State or of the United States. . . . He does not initiate the war, but is bound to accept the challenge without waiting for any special legislative authority. And whether the hostile party be a foreign invader, or States organized in rebellion, it is none the less a war, although the declaration of it be ‘unilateral.’”—*Ibid.*, p. 159.—See also PRESIDENT: United States: War powers of the president.

Taxing power.—“One of the expressed objects of the power granted to Congress ‘to lay and collect taxes, duties, imposts, and excises’ is to ‘provide for the common defense’; and it can not be doubted that taxes laid for this purpose—that is, to support the Army and Navy and to provide the means for military operations—must be laid subject to the constitutional restrictions. That is, all duties, imposts, and excises must be uniform throughout the United States, and direct taxes must be apportioned among the States according to population. And by the sixteenth amendment, providing that income taxes, from whatever source derived, may be laid without apportionment among the States, these taxes fall into the great class of excise duties and imposts and are alike subject to the rule requiring geographical uniformity, a requirement operative in war as well as in peace.”—C. E. Hughes, *Fighting powers of the United States under the constitution (Address before the American Bar Association, Sept. 5, 1917, at Saratoga Springs)*.

Treason.—“The provisions as to treason are also clearly applicable in war: ‘Treason against the United States shall consist only in levying war against them or in adhering to their enemies, giving them aid and comfort—And—the Congress shall have power to declare the punishment of treason, but no attainer of treason shall work corruption of blood or forfeiture except during the life of the person attainted.’

“But what shall be said of the efficacy in time of war of the great guaranties of personal and property rights? It would be impossible . . . to discuss comprehensively this important subject, or even to refer to all these guaranties, but we may briefly touch upon the question in its relation to the fifth and sixth amendments, viz.: ‘No person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall he be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation. In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.’ Clearly these amendments, normally and perfectly adapted to conditions of peace, do not have the same complete and universal application in time

of war. Thus the fifth amendment normally gives its protection to 'any person.' But in war this must yield to the undoubted national power to capture and confiscate the property of enemies."—*Ibid.*—The exception to right of trial by jury, insured to the citizens of the United States by Amendments V and VI of the constitution, lies in the provision for cases "arising in the land and naval forces or in the militia when in actual service in time of war or public danger."

Martial law.—"A different question, however, is presented with respect to the rights of citizens and others not enemies in places which are outside the actual theater of war. It was upon the question of the power of Congress to provide for the trial of citizens by military commission in such places that the justices sharply divided in the noted case of Milligan. He was a citizen of Indiana who had been tried by a military commission at Indianapolis on a charge of aiding the enemy and conspiring against the Government and had been sentenced to be hung. He was not a resident of one of the rebellious States nor a prisoner of war, and he had not been in the military or naval service. The court was unanimous in the opinion that under the terms of the act of Congress creating the commission it had no jurisdiction. But the majority of the court went further and declared that Congress was without power to provide for the trial of citizens by military commissions save in the locality of actual war and when there was no access to the courts."—*Ibid.*

Power to wage war and regulations to insure success.—Implied powers of war administration.—"The extraordinary circumstances of war may bring particular business and enterprises clearly into the category of those which are affected with a public interest and which demand immediate and thoroughgoing public regulation. The production and distribution of foodstuffs, articles of prime necessity, those which have direct relation to military efficiency, those which are absolutely required for the support of the people during the stress of conflict, are plainly of this sort. Reasonable regulations to safeguard the resources upon which we depend for military success must be regarded as being within the powers confided to Congress to enable it to prosecute a successful war. In the words of the Supreme Court: 'It is well settled that the Constitution is not self-destructive. In other words, that the power which it confers on the one hand it does not immediately take away on the other.' (Billings v. United States, 232 U. S., 282.) This was said in relation to the taxing powers. Having been granted in express terms, the court held it had not been taken away by the due process clause of the fifth amendment. As the Supreme Court put it in another case: 'The Constitution does not conflict with itself by conferring upon the one hand a taxing power and taking the same power away on the other by the limitations of the due process clause.' (240 U. S., 24.) Similarly, it may be said that the power has been expressly given to Congress to prosecute war and to pass all laws which shall be necessary and proper for carrying that power into execution."—*Ibid.*—"At the outbreak of the [World War] the National Government was wholly without any . . . organ of general administration except in so far as the President and his Cabinet constituted such an organ. Though constitutionally the President's powers are exclusively executive as distinguished from administrative, the President has nevertheless become in effect the administrator-in-chief of the Government. This has resulted partly as a logical consequence of his duty as Chief Executive

to see that the laws are duly enforced, partly in consequence of the powers possessed by him to nominate and, with the consent of the Senate, to appoint the chief administrative officers of the Government and his unrestricted power to dismiss all such officers, but chiefly from the fact that Congress has by statute conferred upon him administrative powers of the most comprehensive character. Especially has this policy been pursued by Congress since the entrance of the United States into the war. In almost no case did Congress attempt itself to prescribe the character of organization or the administrative methods that should be employed in enforcing the large volume of war legislation it enacted. Almost invariably it contented itself with providing that the President should take such action as in his opinion was wise to see that the provisions of those acts were properly carried out. By an Act approved May 20, 1918, it went much further even than this, and conferred a general power upon the President during the war and for six months after its termination to effect such a coordination or consolidation of existing bureaus, agencies, and offices of the Government as in his opinion would lead to a more efficient prosecution of the war. This very important Act . . . is known as the Overman Act from the name of its author. . . . Prior to the outbreak of the Great War recognition was had of the need for some organ that should have as its function the formation of a general war programme and the correlation of the activities of the several branches of the Government for its execution should the United States ever be called upon to engage in a conflict that would measurably tax its resources. To this end there was drafted as early as 1912 a bill providing for the creation of a body to be known as the Council of National Defense. This bill, which had the strong endorsement of President Taft, the Secretaries of War and the Navy, and the Chief of Staff of the Army, had as its principle the creation of a body through which the programme and activities of Congress and the Executive might be correlated for purposes of war preparation and prosecution. It thus provided for a body composed of *ex officio* members representing the two Houses of Congress, the President, and the War and Navy Departments. The chief function of this body was to insure that a general programme in respect to preparedness and the prosecution of war, should that eventuality occur, should be adopted that would secure the common support of all branches of the Government. Particularly was it designed to insure that the War and Navy Departments should not work at cross-purposes such as had been more or less in evidence during our war with Spain. Mention is made of this proposal, although it failed of enactment, since it illustrates a feeling on the part of Congress that it should participate directly in the formulation of preparedness and war programmes which was strongly in evidence during the first few months after our entrance into the war. This was manifested by the introduction of bills calling for the creation of a joint Committee on the Conduct of the War, a War Cabinet, special Departments of Munitions, Air Service, and the like. All of these proposals were successfully opposed by President Wilson on the ground that they tended to lessen his authority as head of the administration, to divide responsibility, and were unnecessary. As the possibility of the United States' being drawn into the war became progressively more apparent, this idea of a Council of National Defense was revived in a modified form and provision was made for its establishment by a clause inserted in the Army

Appropriation Act of March 29, 1916. This Act provided for the creation of a body to be known as the Council of National Defense to consist of the six Secretaries of War, the Navy, the Interior, Agriculture, Commerce, and Labor. The function of this body was stated in exceedingly broad terms to be 'the coördination of industries and resources for the national security and welfare,' and its specific duties, in performing this function."—W. F. Willoughby, *Government organization in war time and after (Problems of war and of reconstruction, pp. 5-6, 9-11)*.

WAR PRISONERS. See PRISONERS OF WAR.

WAR RELIEF. See WORLD WAR: Miscellaneous auxiliary services: IX. War relief; INTERNATIONAL RELIEF; FOOD REGULATION: 1918-1921.

WAR REVENUE ACTS: United States. See U. S. A.: 1917-1919: Taxation and expenditures.

WAR RISK INSURANCE. See U. S. A.: 1917 (May): Mobilization of civilian forces; 1917-1919: Effect of the war; INSURANCE: Government.

WAR SAVING STAMPS. See U. S. A.: 1917-1919: Taxation and expenditures.

WAR TIME PROHIBITION BILL (1918). See LIQUOR PROBLEM: United States: 1913-1919.

WAR TRADE BOARD: United States. See TARIFF: 1917-1919; BLACKLIST: American.

WAR WORK COUNCIL, Y. M. C. A. See YOUNG MEN'S CHRISTIAN ASSOCIATION: World War activities: 1917-1919: Organization of war work council.

WAR WORK COUNCIL, Y. W. C. A. See YOUNG WOMEN'S CHRISTIAN ASSOCIATION: 1917.

WARAD-SIN (fl. 2350 B. C.), king of Elam. See BABYLONIA: First Babylonian empire.

WARAUS, South American Indian tribe. See CARIBS.

WARBECK, Perkin (c. 1474-1499), pretender to the throne of England. Claimed to be the duke of York, son of Edward IV. See ENGLAND: 1485-1509.

WARBURG, Battle of. See GERMANY: 1760.

WARD, Artemas (1727-1800), American soldier and jurist. Conducted the siege of Boston, 1775; became chief justice of the court of common pleas at Worcester in 1776; president of the Massachusetts Executive Council, 1777. See U. S. A.: 1774-1775; 1775 (April-May); (May-August).

WARD, Artemus. See BROWNE, CHARLES FARRAR.

WARD, Sir Joseph George (1857-), New Zealand statesman. Premier, 1906-1909; represented New Zealand at the colonial conferences in London, 1907, and 1909. See NEW ZEALAND: 1906-1909; BRITISH EMPIRE: Colonial and imperial conferences: 1907; WAR, PREPARATION FOR: 1909: British Imperial Defense Conference.

WARD, Mary Augusta (Mrs. Humphry Ward) (1851-1920), English novelist. See ENGLISH LITERATURE: 1880-1920.

WARE VS. HYLTON (1796). See SUPREME COURT: 1789-1835.

WARENNE, John de, Earl of Surrey and Sussex (c. 1231-1304), English soldier. Fought under Prince Edward at the battle of Lewes, 1264; served as the king's lieutenant in Scotland, 1296-1297. See SCOTLAND: 1290-1304.

WARFARE, Laws of. See BLOCKADE; CAPITULATIONS; CONTRABAND; EMBARGO; FREEDOM OF THE SEAS: 1650-1815; 1914-1918; GENEVA CONVENTIONS; HAGUE CONFERENCES: 1899: Convention with respect to the laws and customs of war on land; INTERNATIONAL LAW; MILITARY LAW; NEUTRALITY.

WARFARE, Organization of. See MILITARY ORGANIZATION.

WARFARE, Trench. See TRENCH WARFARE.

WARFUSÉE-ABANCOURT, town of France, east of Amiens. It was taken by the Germans in 1918. See WORLD WAR: 1918: II. Western front: c, 27.

WARINGS. See VARANGIANS.

WARMBAD, mission station of Namaqualand, Southwest Africa, 130 miles northeast of the mouth of the Orange river. It was taken by the British in 1915. See WORLD WAR: 1915: VIII. Africa: a, 1.

WARNER, Anna Bartlett (1820-1915), American novelist. Presented Constitution island to the United States. See CONSTITUTION ISLAND.

WARREN, Francis Emroy (1844-), American legislator. Territorial governor of Wyoming, 1885-1886, 1889-1890; governor of Wyoming, 1890; United States senator, 1890-1913. See WYOMING: 1868-1889; U. S. A.: 1898 (April-May).

WARREN, Gouverneur Kemble (1830-1882), American general. Took part in the Peninsular campaign of the Civil War; participated in the siege of Petersburg, 1864. See U. S. A.: 1864 (August: Virginia); 1865 (March-April: Virginia).

WARREN, Joseph (1741-1775), American patriot. See U. S. A.: 1772-1773; 1775 (May); (June).

WARRIOR, British armored cruiser. It was disabled in the battle of Jutland, May 31, 1916. See WORLD WAR: 1916: IX. Naval operations: a, 1; a, 9.

WARSHIPS: Classification and functions.—“The three primary elements of naval force are battleships, cruisers large and small, and torpedo craft of all kinds including submarines, together with their attendant depot ships and other needful auxiliaries. These three elements are for war purposes organized in definite relations one with another, battleships being the central core and nucleus of the whole organization, but seldom, except in actual conflict, in such immediate contact with the enemy as the other two. A battleship is the chief component unit of a main fleet. It has been variously designated from time to time as a ‘capital ship,’ a ‘ship fit to lie in a line,’ a ‘ship of the line,’ a ‘line-of-battle ship,’ and, all to briefly a ‘battleship’—for the word ‘line’ is much more essential to its proper definition than the word ‘battle.’ . . . The so-called battle cruiser is, as its designation implies, something of a hybrid, being on the one hand ‘fit to lie in a line,’ and on the other exceedingly well qualified to discharge many of the functions of a cruiser proper. It has the speed of a very fast cruiser combined with the armament and armour, both slightly, but not perhaps unduly, reduced of a battleship. We shall perhaps best conceive its functions in the line of battle by recalling the tactical disposition projected—but for lack of numbers not carried out—by Nelson at Trafalgar, when he declared his intention of ‘placing the fleet in two lines of 16 ships each, with an advanced squadron of eight of the fastest sailing two-decked ships, which will always make a line of 24 sail on whichever line the Commander-in-Chief may direct.’ . . . On the other hand, its function as a cruiser does not seem to differ essentially from that of other cruisers properly so-called, except in the measure of its greater force. This function must now be briefly considered. The cruiser proper is either an armoured cruiser, a protected cruiser—protected, that is, by an internal armoured deck covering its vitals, but not by vertical armour on its side—or a light cruiser of such moderate displacement that it can carry very little armour, if

any, either vertical or internal. It is employed either singly or in organized squadrons to patrol the seas far and wide, either for the purpose of gathering and transmitting to headquarters information of the enemy's movements and whereabouts, or for the still more important purpose of keeping open the ocean highways and clearing them of such of the enemy's cruisers as may be endeavouring to molest, attack, and interrupt their adversary's commerce afloat, and thereby of affording safe conduct to the latter. . . . A third function of the larger cruiser, armoured and protected, is to afford adequate protection and support to the light cruisers and torpedo craft employed in maintaining as close a watch as is practicable on the ports which shelter the armed forces of the enemy, with intent to make sure that none of his small craft can come in or go out without being challenged and, if it may be, impeached, and none of its larger craft can come out without being observed, shadowed, attacked with torpedoes if opportunity offers, and in any case instantly reported to the supporting cruisers astern of the advanced guard off the ports and from them to the headquarters of the battle-fleet itself. This is at once the most vital and the most hazardous function which light cruisers and flotillas of torpedo craft have to perform. . . . A fourth function, on occasion, is to take part in the conflict of battle-fleets themselves, for it is one of the characteristics of modern naval warfare that the battleship enjoys no immunity from the attack of torpedo craft. But that is a function which can only come into operation when the enemy's battleships are at sea."—*The Times* (London) *book of the navy*, pp. 5-9.

Earliest shipbuilders.—Phœnician and Greek.—"Many attempts at explaining the construction of antique ships have been made, but the mutual ignorance of seafaring men and philologists with regard to the technical terms of their respective branches of knowledge has, in many cases, led to bewildering confusion and wild conjectures. Moreover, antique representation of ships—partly from the total want of perspective, partly from the omission of the most important details—are of comparatively little assistance to us."—E. Guhl and W. Koner, *Life of the Greeks and Romans*, p. 253.—The Phœnicians were the earliest ship builders of whom we have any knowledge, but the only records existing of their activities in that line have come down to us through Assyrian channels, and these records go back no further than about 700 B. C. The Greeks were once supposed to have learned more from the Phœnicians in navigation and in commercial enterprise than now seems to be the fact. Undoubtedly there was a time, after the fall of the Cretan sea power and of the Mycænæan domination, during which the Phœnicians were active in Greek waters and influenced the new development of Greek life in some degree. The Phœnicians seemingly cared for nothing but commercial opportunities, and showed no kind of political ambition throughout their career. Yet they also had their war galleys, and it is not improbable that they or the Egyptians invented the style of craft later developed by the Greeks and Romans. "Following the researches of Boeckh (in his celebrated work on the Attic navy) with regard to the construction and rigging of Greek ships, Graser has expounded an entirely new theory of the dimensions and rowing apparatus of Greek ships. His intimate knowledge of modern ships has been of considerable assistance to him. . . . We pass over the earliest attempts at navigation in

hollow trees or on rafts. The invention of the art of shipbuilding, like that of most other arts, must be placed in prehistoric times; gods and heroes are mentioned as its originators. . . . Homer's description of the interior arrangements of ships prove that at the time of the Trojan war the art of shipbuilding was considerably advanced. Rowers (20 to 52 in number), sitting on benches along the sides of the ship, beat the waves simultaneously with their long oars made of pinewood. As in our sloops (*Schaluppen*), the oars of the Homeric vessel were made fast between pegs by means of leather straps so as to prevent their slipping. . . . The war vessels sent against Iliion [Troy] carried fifty to a hundred and twenty soldiers, who undoubtedly, had also to act as rowers. Of the fifty men forming the crew of the smallest vessels, forty plied the twenty oars by turns, the others taking care of the rigging or acting as officers. The small draught of the vessels is proved by the fact of their being, without much difficulty, pulled ashore, where wooden or stone props served to keep them dry and protect them from the waves. The development of shipbuilding was undoubtedly due to the Greeks. The numerous natural harbours of the Greek continent, combined with the growing demands of intercommunication with the islands, and the colonies of Asia Minor and southern Italy, favoured the rapid growth of navigation. The continual wars waged among the Greek tribes, and by them collectively against barbarians, necessitated the keeping up of large navies. The Homeric vessel, most likely only a transport, and unfit for battle, was soon supplanted by war-vessels of larger dimensions. Besides flat-bottomed vessels . . . we also hear of ships of greater draught in which the oarsmen sat in two rows, one over the other. During the Persian and Peloponnesian wars the fleets consisted of *τρίηρεις* exclusively. Vessels with more than three ranks of rowers . . . were first introduced by Dionysios I., tyrant of Syrakuse, after a Carthaginian pattern. . . . Even six rows were not always deemed sufficient. Ten and (with a modification of the system) more rows were placed one over the other, the result being a surprising velocity and hardness of the vessels thus constructed. In the battle of Actium we hear of ships with ten rows; Demetrios Poliorketes had even vessels of fifteen and sixteen rows, the seaworthiness of which is warranted by antique authors. The construction of the war vessel, as introduced shortly before the Persian wars, must now command our attention. The keel consisted of one horizontal beam, parallel to the longitudinal axis of the vessel; in older ships it rose from the centre to the ends in a wide curve. The large ships of a later period had keels composed of several straight beams joined together, into the ends of which stem and stern posts were inserted almost in a right angle, being only slightly bent outwards. Under the keel another beam was placed parallel to it, so as to add to its power of resistance; corresponding to this, a third beam lay on the top of the keel; into this, the ribs of the ship were let. The upper ends of each pair of corresponding ribs forming together one curvature were joined together by means of a straight cross-beam, destined to carry the upper deck. The bulwark, enclosing the two long sides of the latter, generally consisted of trellis-work. In larger vessels a second layer of boards, underneath the upper deck, was laid across the ribs of the vessel, destined to carry the second or lower deck. The two decks communicated with each other and the hull by means of steps, hatchways being cut in the

boards for the purpose. The hull contained the ballast and the pump. Both in the prow and poop of the vessel small half-decks, corresponding to our forecastle and quarter-deck, were placed considerably above the upper deck. They rested on the prolongation of the ribs nearest to stem and stern. The poop and prow were essentially identical in construction, differing in this from all modern vessels excepting our latest ironclads [1875]. The planks of the vessel were strengthened externally by a wooden ledge just above the waterline, corresponding to which a number of boards were placed along the ribs inside, so as to give firmness to the whole fabric. As a further means of increasing their compactness, war-vessels were provided with a band consisting of four stout ropes laid horizontally round the hull below the water line; in case of a dangerous voyage, the number of these ropes might be increased. . . . A little lower than the upper deck, just above the upper holes for the oars, a narrow gangway runs along both sides of the vessel; in woodclad vessels this *parodos* [gangway] is protected by strong massive boards. Both stem-post ended in a volute. The tent-like house of the helmsman stood on the poop just underneath the volute. From this point he directed the two rudders to right and left of the stern, which are peculiar to all antique ships, by means of a rope running across the vessel. The rudders were always kept parallel. To the volute of the poop a leaf or feather ornament has been added. The prow frequently shows an ornament resembling the neck of a swan which, perhaps, at the same time, served for fastening ropes. Between these two, the flagstaff, with the flags attached to it, was erected. . . . The prow, as we said before, exactly resembled the poop. Here, also, a strong wooden band encircled the vessel on a level with the *parodos*. The point where the outer ribs crossed each other was marked by a ram's head made of bronze, and serving either as an ornament or as a protection to the upper part of the vessel. Underneath this, on a level with the waterline, was the beak, consisting of several rafters let into the body of the vessel and ending in a point, which was made more formidable by the addition of a massive piece of iron divided into three blunt teeth of unequal length. Two beams, supported by prows, protruded on both sides of the rostrum [beak]; on these the anchors were hung up. They also served to protect the vessel from the attacks of the enemy's beak. We finally mention an opening on each side of the prow, through which the cables were drawn; these holes were bound with iron, and somewhat resembled eyes, whence their name *ophthalmoi*. The resemblance of a vessel thus constructed to a fish was not unnoticed by the ancients. Something similar we meet with in the imitation of dragons in the vessels of the Norsemen, and in the construction of Chinese junks. . . . The mainmast stood in the centre of the vessel. It was square-rigged, and carried two sails, one above the other, answering to our course and topsail. Above these was another square sail corresponding to our top-gallant sail, and above that two triangular sails. Besides the main-mast there were two smaller masts, with two fore-and aft lateen sails each, one over the other, which were important in tacking. Strong ropes supported the main-mast . . . and the two smaller masts; thinner ropes served for lifting and bracing the yards, setting the sails, etc. Besides the ropes of the rigging . . . a war vessel required various contrivances of a similar nature to protect her both against high seas and the mis-

siles of the enemy. To this class belonged strips of tarpaulin hung round the hull to cover the apertures for the oars, when these had to be pulled in owing to the roughness of the sea; as also an awning suspended over the upper deck as a protection both from the sun and missiles; a woven stuff was also pulled over the trellis of the bulwark to ward off darts and arrows. . . . The interior arrangement of the antique ship, particularly with regard to the position and manipulation of the oars, is subject to many doubts. . . . The building and equipping of vessels was done in military harbours, of which that of Athens is in the best state of preservation."—E. Guhl and W. Koner, *Life of the Greeks and Romans*, pp. 253-259, 262.

Roman.—"The Roman vessel resembles the Greek in most points. . . . As long as Roman conquests were limited to Italy, their navy consisted only of long boats (*caudices, naves caudicariæ*) for river navigation, and of small sea-vessels as a means of intercommunication between the maritime provinces, not to mention the defence of the harbours. The Carthaginian wars necessitated the building of a powerful fleet. In a space of two months 130 penteres and trieres were constructed, after the pattern of a stranded Carthaginian pentere. The timbers were roughly cut, and the improvised sailors had to be trained on rowing-frames erected on shore; but the foundation was thus laid of a fleet of triremes, quadriremes, and quinqueremes, commonly called *naves longæ*. The Romans, differing in this from the Greeks, transferred the mode of close fighting to their sea-battles. Two or four towers (*navis turrita*) and catapults transformed the deck into a castle, from which the marines began the fight with missiles till the vessels approached within boarding distance. The marines, therefore, were much more numerous on board Roman than Greek vessels. The quinquereme contained 120. After the battle of Actium Roman ship building underwent a thorough change. That battle had been won against the Greek-Egyptian fleet of Antony, built according to Greek rules, chiefly by means of the ships of the Liburnian pirates, which had only two banks of oars and a very light rigging. In consequence, the Roman fleet was reorganised according to the same principle (*navis Liburna*). Besides men-of-war, larger vessels of burden were required; these *naves onerariæ* . . . were about three or four times as long as they were broad. Many statements in ancient authors prove the quickness of voyage in those days. Balbilus went from Messina to Alexandria in six days (the French mail-steamers require 6½ days for the same distance)."—*Ibid.*, pp. 263-264.

8th-9th centuries.—Character of Viking ships. See SCANDINAVIAN STATES: 8th-9th centuries.

9th century.—Open rowboat of Alfred the Great's time.—Saxon and Danish war vessels.—"A hundred years ago the old line-of-battleship was of wood, had many decks and was pierced for more than one hundred guns. Such was the big fighting machine. Today [1915] the superdreadnought of steel has ten or twelve guns. But these are of from thirteen to fifteen inch calibre. A single shot from one of them weighs almost as much as the total of metal discharged from all the guns on the ship of one hundred years ago. Such difference and more, is there between the first ships of the line that are separated by a century. One shell from a superdreadnought would set one of the old line-of-battleships ablaze from stem to stern. The superdreadnought has developed in the course of a thousand years from the open row-

boat that carried armed men. This may be said to have been the type of war boat Alfred the Great found in use and from which he began to develop a fleet of war vessels. Alfred himself took command of his fleet in sea battle and was quick to found, organise and systematically plan the extension of his country's 'sea power,' though he had never read Mahan and even was ignorant of the term of which that author practically was the inventor. Evidently Alfred had grasped the fundamental fact that the rampart of defence to an island race lay on the sea that lapped their shores, and that their only adequate protection lay in an efficient navy. Alfred succeeded his brother Ethelred in 871, but it was not until he had by his victories over the Danes secured at any rate temporary peace for the territory over which he held sway, that he devoted his attention to providing permanent security from foreign attack in the shape of a fleet. One of the chief marks of Alfred's genius lies in the fact that he was his

beam of ten and a half feet, and was apparently intended to be propelled by twenty-eight oarsmen. Alfred's vessels were akin in type, but vastly superior in design and sea-worthiness to the latter, as is evident from the description of contemporaries: 'Full nigh twice as long as the others; some had sixty oars, some had more; they were both swifter and steadier and also higher than the others; shapen neither like the Frisian nor the Danish, but so as it seemed to him that they would be most efficient.' Campbell seems to think that they were of a type to the 'galleys' of the Mediterranean; and as Alfred had twice visited Rome, though only as quite a child, it may be that dim recollections of the craft that he had seen in the port of the Tiber aided him when he came to work out the designs of what were known as the 'king's ships'—built primarily for war, though hired out for trading purposes in time of peace—and which may fairly claim to be the earliest vessels in a 'Royal Navy.' In the very year that

FLEET OF WILLIAM THE CONQUEROR

own naval architect. As Campbell says of him, 'he had made himself master of the principles of shipbuilding, and knew how to vary the form in constructing vessels, so as to fit them for different uses and services; which, if the ignorance of those times were half so gross as modern writers are willing to represent, was certainly a very great and wonderful discovery. . . . His naval architects might be, and in all probability were, men of as great skill and extensive capacities as any of their time; but then their knowledge was of a very different nature from that of the king: they might be great artists in their way, but were still mechanics.' The type of craft that conveyed the Saxon raiders oversea were simply undecked row-boats, somewhat high at prow and stern, and fitted with a pole mast carrying a single square sail. They could accommodate some fifty or sixty men, and were specially built for beaching. The ships of the Danes were of the same type, but developed into somewhat more sea-going and habitable vessels, and the larger ones were fitted with light removable half-decks. A typical craft of this kind, found in Jutland, is seventy-five feet long, with a

the earliest 'king's ships' were launched, they swept the South Saxon coast clear of pirates, destroying no less than twenty of these hornet craft, and putting their crews to the sword; and in 885 his fleet inflicted a signal defeat on the Danish invaders off the Essex coast. Alfred, however, was not invariably successful in the long-protracted naval warfare; but experience was being gained, the importance of sea power becoming more and more recognized, and a love of maritime enterprise was being engendered in the characteristics of the race. So much, indeed, was the latter the case, that Alfred sent out several expeditions for the purpose of discovery and commerce."—*Evolution of the warship* (Lotus Magazine, Jan., 1915, pp. 209-210). —See also NORMANS: Influence of Vikings, etc.

11th-15th centuries.—Naval and commercial supremacy of the Byzantine empire and Venice. See COMMERCE: Medieval: 11th-16th centuries.

15th-16th centuries.—First royal navy.—"Great ship" of the sixteenth century.—First armored ship.—"In its gradual evolution from the rowboat to the ship with sails and through increase in size and sail power the warship attained the dimensions

of the *Great Harry*, built by Henry VII in 1488, at the cost of £14,000. This may be regarded as the first ship of a royal navy, for, unlike previous 'king's ships,' which in no way differed from ordinary merchantmen of their period, she was undoubtedly built primarily for war, though she probably engaged in commerce during peace time. This ship is stated by Derrick to have been burnt by accident at Woolwich in 1553; but according to Yonge she was, on the accession of Henry VIII, rechristened *Regent*, and perished in a memorable battle. . . . To replace the *Regent*, Henry VIII built his great ship the *Henry Grâce de Dieu*. A great novelty in this ship was that she had port-holes, thus giving extra battery decks. This was a design introduced into the French ships fifteen

versally carried. The heavy pieces comprised cannon, demi-cannon, and cannon-petro, mounted on the lower deck, and culverins and demi-culverins mounted on the main deck. On the superstructure were carried the medium pieces, sakers, minions, falcons, falconets, and rabinets. Smaller pieces, known as 'port-piece halls,' 'port-piece chambers,' 'fowler halls,' 'fowler-chambers,' and 'curtails,' were also carried. Many of these latter discharged a number of projectiles—the prototype, in fact, of the modern 'grape' and 'canister'—and were mounted pointing inboard from the poop and fore-castle, so as to be utilisable against any boarders who had made good their entrance. In fact, during the period so far did the science of artillery advance that we are told 'sea fights in these

HARRY GRACE DE DIEU, 1520

(From painting by Dominick Serres, engraved by W. A. Le Petit)

years before by Descharges, a Brest shipwright. Henry's great ship was a two-decker, of large tonnage—one list says fifteen hundred—carrying twenty-six heavy guns, fourteen on the lower and twelve on the main deck. Of the light pieces there were forty-six—eighteen on the poop and quarter-deck, and the same number on the fore-castle, and ten giving fire direct astern. She had four masts and a bowsprit, and was square-rigged on the 'foer' and 'mayne,' and lateen-rigged on the 'mayne mizzen' and 'bonaventure.' She may be taken as a typical 'great ship' of the sixteenth century; for the improvements that took place during the Elizabethan era consisted not so much in enlarging tonnage, but in building on longer keels and with finer lines, in the lowering of the great top-heavy superstructures, and, finally, in the sheathing of the keels with lead (an idea taken from the Spaniards), so as to decrease fouling. Ordnance, and that of fairly large calibre, was now uni-

versally carried. The heavy pieces comprised cannon, demi-cannon, and cannon-petro, mounted on the lower deck, and culverins and demi-culverins mounted on the main deck. On the superstructure were carried the medium pieces, sakers, minions, falcons, falconets, and rabinets. Smaller pieces, known as 'port-piece halls,' 'port-piece chambers,' 'fowler halls,' 'fowler-chambers,' and 'curtails,' were also carried. Many of these latter discharged a number of projectiles—the prototype, in fact, of the modern 'grape' and 'canister'—and were mounted pointing inboard from the poop and fore-castle, so as to be utilisable against any boarders who had made good their entrance. In fact, during the period so far did the science of artillery advance that we are told 'sea fights in these

days come seldom to boarding or to the great execution of bows and arrows, small shot, and the sword, but are chiefly performed by the great artillery breaking down masts and yards, tearing, raking, and bilging the ships.' Some of the guns were brass pieces; indeed, according to Derrick, all the ordnance in some ships was of that material, but in the main the guns were constructed of iron. The fact that the smaller pieces of artillery were 'breach-loading' is but another proof of the old adage, that there is nothing new under the sun."—*Evolution of the warship* (*Lotus Magazine*, Jan., 1915, pp. 211-212).—"While the idea of protecting ships of war by means of armor plate is not of so recent conception as may be generally supposed, its practical application, like that of many inventive designs, was delayed until long after the first trial; and armored ships, as we know them, date from about the middle of the nineteenth century. Prior to the sixteenth century,

the wooden sides of the ships were depended upon for protection against hostile missiles, and, with the advent of guns and their increase in power, the thickness of the sides of the vessels increased. The *Great Michael* which was built by James the Fourth of Scotland, who was killed at Flodden in 1513, was 240 feet in length and 56 feet in breadth, but as the sides of the ship were 10 feet in thickness, the interior breadth was only 36 feet. While this great thickness was given to the sides of the vessel for the purpose of protection, it scarcely entitles the *Great Michael* to be classified as an armored vessel, and the first of these does not appear until 1530. One of the largest ships of that time, belonging to the fleet of the Knights of St. John, was covered entirely with lead and was said to be successful in keeping out all the shot of the period. The practice of using lead armor does not, however, seem to have become general."—R. Arthur, *Armor and its application to ships* (*Coast Artillery Journal*, 1914, v. 42, p. 28). —"In 1578 the *Dreadnought* was a ship of 400 tons, manned by 250 men—the modern seaman wonder where they all stowed themselves away—whereof, says the roll of the navy for that day, there were mariners 140, gunners 20, soldiers 80, the remainder officers. The 'furniture of the ship' was, Harquebusses 80, Bows 25, Arrows, sheaves of 50, Pikes 50, Bills 60, Corselets 40, and Mariners (*sic*) 80. From the time of Drake to the building of the first ironclad the ships of the Royal Navy, although they became bigger, differed little in type, the two-decked and three-decked line of battleships being the generally accepted units for bearing the shock of battle."—*The Times* (London) *book of the navy*, p. 18.

16th century.—Character of the Spanish war vessels in the sixteenth century. See ENGLAND: 1588: Spanish Armada; Destruction of the Armada.

1782-1860.—French floating batteries.—Early English, French and American experiments in armor plate.—Use of armored vessels in the Crimean War.—Building of *La Gloire* and the *Warrior*.—"The French had designed floating batteries in 1782 with a novel means of protection. These vessels, which the French employed in their attack upon Gibraltar, were covered with junk, rawhide, and timber to the thickness of 7 feet, and had bombproofing over the decks. Unfortunately for the French, this armor-plating was combustible and the ships were easily set on fire with red-hot shot. Still the French seemed to like the idea of floating batteries, for similar vessels were again used some seventy years later by them in the Crimea. The earliest recorded proposal to employ war vessels seems to have been made in England by Sir William Congreve in 1805. In 1812 John Stevens, of New Jersey, designed a ship with a battery protected by inclined armor. In 1814, a bomb-proof vessel was patented by Thomas Gregg of Pennsylvania. The Stevens family continued to work on the subject of iron armor and had, by 1841, determined by actual experiment, the penetrative powers of the projectiles of the day against wrought iron. In 1842 R. L. Stevens began the construction of an iron-armored ship which was never completed. In 1845 M. Dupuy de Lôme designed an armored frigate. In 1814 the first war steamer ever built, the *Fulton*, was launched and demonstrated the possibilities of steam in the construction of navies. This ship was

designed by Robert Fulton and called by him the *Demologos*. She was essentially a floating battery, the precursor of the *Monitor*, with two 100-pounder guns on pivot mountings and with a ram-shaped bow. She was driven by a steam paddle in the center of the ship, and was armored with wood so thick that it was proof against the shot of the time. The *Demologos*, upon being launched, became known as the *Fulton the First* and was considered the *Dreadnought* of the day. She attained a speed of 3½ knots, but was not completed in time to demonstrate her possibilities in the war. By 1822 shell guns had been adopted and the question of protection to ships became more important than it had been before. General Paixham, the inventor of the shell gun (*canon obusier*), himself suggested that the only reply to shell was armor. The necessity for armor becoming more and more apparent, experiments were begun about 1827 in England, France, and the United States, with a view to the determination of the resisting powers of iron and its possibility of use for protection of ships. Iron, for structural purposes, was developed rapidly, but in ship construction wood continued to be used almost to the exclusion of iron, until the middle of the century; and even in 1850 there were constructors who declared that iron was unsuitable, because of the greater stresses to which the larger ships were subjected. The local strength and stiffness of a wooden ship was great, but the structural strength was considerably less than that of the iron vessel. Iron was, therefore, practically forced upon ship designers. It is of record that an iron boat, intended apparently for passenger service, was built and launched on the River Foss in Yorkshire in 1777, and during all the latter part of the century iron was, according to report, used in the construction of canal boats and barges. The first iron steamboat in the United States, of which there is definite record, was the *Aaron Manby*, built in 1820. The U. S. S. *Wolverine* (ex-Michigan) built in 1842, was the first iron warship in our service, and is still in use (out of commission) on the Great Lakes. The use of metal in the construction of merchant and passenger vessels developed much more rapidly than in naval construction, because of the slower increase in size of naval vessels. However, by about the middle of the nineteenth century iron had been definitely adopted and the navies of the world were continuing with ships of metal that struggle for supremacy which had begun with ships of wood. In 1840 the British Admiralty conducted experiments to test the action of shot against iron plates backed by various substances, and it was concluded that iron was a poor material for ships of war. In 1842 armor experiments were conducted with iron plates made by riveting together plates three-eighths of an inch in thickness to a total thickness of six inches. These plates did not successfully resist 8-inch guns or heavy 32-pounders at 400 yards; so some modifications were introduced and further experiments made in 1850. This laminated armor was never reported on favorably, and general opinion, at about this time, was somewhat against armor. The French, however, formed a more favorable opinion of iron armor than did the other nations, and, in 1853, they constructed five floating batteries which carried four inches of iron armor. These ships were almost totally unmanageable because of their bad lines, and their speed never exceeded four knots. They were of light draft and carried eighteen 50-pounder guns with a crew of 320. It was intended that they should be able to use either sail or

steam; but, when it was discovered that they refused absolutely to proceed under sail, the masts were removed and pole masts substituted. Notwithstanding their many defects, three of them were sent to the Crimea, and it is reported that it was necessary to provide transports to carry their guns for them. Having arrived safely, they joined a large fleet in the attack on Kinburn on October 17, 1855, and, by steaming in close to the fortifications, the floating batteries were enabled to silence the batteries in the course of a four-hour engagement without material injury to themselves. It was no doubt the success of the floating batteries in this attack which led the French to adopt armor plating for their ships of war; and so it is the French who are to be credited with having produced the first sea-going iron-clad, *La Gloire*, and, with her, that contest between gun and armor which has not yet ended; for improved kinds of guns and armor are still being sought and experimented with. *La Gloire*, together with the *Normandie*, the *Invincible*, and the *Couronne*, were laid down in 1858; but scarcely were their frames up before England replied by laying down the *Warrior*, the *Black Prince*, the *Defence*, and the *Resistance*.—R. Arthur, *Armor and its application to ships* (*Coast Artillery Journal*, 1914, v. 42, pp. 28-31).—"The first idea of the 'armoured' vessel was to cover the side of the ship with iron plates. To do this in a two-decked or three-decked ship was impossible, as the extra weight would have submerged her lower ports, or even if it did not do this, would have placed them in such close proximity to the water as to render the opening of them a most dangerous operation. It was therefore decided to build H. M. S. *Warrior*, the first of our [British] ironclads, as a frigate, that is to say, a vessel with one fighting deck. But even in her case the pioneer builders of the ironclad were hampered by the enormous weight which the ship had to bear, subject to the condition that she must so float that the best use could be made of her as a fighting machine. It was evident that it was a case for a compromise, and the designers met it by leaving the ends unprotected and plating the middle portion for a little over half her length. This arrangement involved placing an armoured bulkhead across the ship at each end of the armoured portion of the side to protect her against a raking fire. She therefore became a floating square iron box as far as her midship section was concerned, with unarmoured ends that could easily be pierced. Experiments having shown that 4½ in. of iron, backed by 18 in. of teak, could not be penetrated by the 68 pounder gun, then the most powerful ordnance in use afloat, this specification was accordingly used in the construction of what was avowedly an experimental ship. She was built at the Thames Ironworks, Blackwall, from the designs of the Controller of the Navy, Rear-Admiral Robert Spencer Robinson, and launched December 29, 1860."—*The Times* (London) *book of the navy*, pp. 19-20.

1856-1905.—American ships.—From wood to iron.—Propulsion and armament.—*Monitor* and *Merrimac*.—Effect on English and French experimenters.—Type of battery changed by Russo-Japanese War.—"The ship of the line, built of wood, reached its greatest development just prior to the Civil War of the United States of America. The change from wood to iron covered a period of twenty (20) years, or from 1856 to 1876. A little later than the end of this period sail power was abandoned and steam relied upon entirely, the last full rigged ship of the United States Navy

being the 'Newark' as originally built. In wooden vessels the United States led the way among the nations, and its models and methods of construction were eagerly sought after and copied by foreign navies. The 'Hartford' and 'Franklin' classes were of the best American type, and were immediately followed in the English Navy by similar vessels. The United States was rich in building materials, especially in live oak, from which the frames of the vessels were made, and which was practically indestructible. For this reason, perhaps, as well as that its corps of naval constructors were men of great practical skill in wooden ship building, the United States continued the use of wood when the lack of such material was driving the European navies into the use of iron in place of wood. A study of the construction of one of these fine specimens of naval construction is of great interest, especially when the construction was more or less composite. In the best vessels iron was used in strapping the frames both inside and out, and reinforcing the upper strength members, with iron clamps. The vessels were full rigged, having auxiliary machinery capable of steaming at 10-knots speed. They were fitted with two-bladed propeller wheels, which were hoisted or triced up above the water line when the vessels were under sails. The vessels were armed with smooth bore muzzle loading guns, generally of 8-inch diameter of bore, throwing solid shot of 68 pounds and having a penetration of about four inches in wrought iron at close range. Later in the United States Navy eleven-inch pivot guns were used, one being mounted on the centerline, usually forward, and served on either broadside. . . . The scarcity of building material led to the building of iron vessels in the English and French Navies. . . . While this development was going on abroad some of the brightest minds, quickened by the possibility of war in the United States, were giving earnest thought and study to a fighting machine, notably John Stevens and Theodore Timby, American born citizens and John Ericsson, a Swede, who afterwards became an American citizen. Stevens made the plans of a remarkable vessel called the Stevens Battery and at his death left a sufficient sum of money available for the completion of the vessel. The vessel, however, was never completed. . . . Theodore Timby had given years to the perfection of a revolving fort or turret of steel, in which was housed a number of guns. This fort he mounted on a raft which was intended for harbor defense. . . . It remained, however, for the genius of Mr. Ericsson to combine the ideas of both Timby and Stevens in the epoch making vessel known as the 'Monitor.' I fully believe Mr. Ericsson was working along entirely independent lines from either of these gentlemen, but all three had many ideas in common, and the fact remains that Mr. Timby was so protected by patents of his design that Mr. Ericsson had to pay \$5000 royalty on each of the turrets fitted on the Monitor class. Just here we will refer to the Stevens battery, which has a lasting influence upon subsequent warship design. Its building period extended over such a term of years, from 1860 to 1870, that many of its original features were modified entirely and the experience of the naval combats of the Civil War incorporated. However, Mr. Stevens started out to build an armored vessel with guns of one calibre carried in revolving turrets. In this general conception he and Ericsson were on common ground, but Stevens went much further. He introduced the armored deck with sloping sides extending down to the lower edge of the armor belt, precisely what was known as the

protective deck of later years. His main belt extended from stem to stern. The vessel was fitted with twin screws, and the same type of balanced rudder now fitted to nearly all United States battleships found its prototype in the wonderful vessel. Unfortunately the vessel passed into the ownership of the State of New Jersey and was never fully completed. Attention, however, is called to the features incorporated and actually built which afterward became fundamental in battleship design: 1. Battery of one-calibre guns mounted in turrets. 2. Twin screws. 3. Protective deck. 4. Balanced rudders fitted in the deadwood or run of the vessel. While these features were being dreamed upon and slowly put into execution, Mr. Ericsson, for the Northern States, and the designer of the reconstructed 'Merrimac' was pushing ahead and forcing upon their governments types of vessels that were to revolutionize the design of war vessels the world over, and which were known as the 'Monitor' and 'Merrimac.' In the former was the complete waterline belt and armored deck with guns mounted in turrets, while in the 'Merrimac' was found the armored casemate with sloping sides and the ram. The combination of these features has been perpetuated in battleship design to the present day [1914]. The United States Government was so exhausted financially by the long war that it had neither means nor inclination to carry into effect the many lessons of the war, but England, ever watchful, profited to the utmost by the experience gained in our naval engagements and embodied them in the navy of iron vessels she was rapidly building. About this time there arose in England a group of notable men who by practical and technical training were well able to establish and apply the valuable lessons of the American Civil War. These were Scott Russell, Brunel, Sir Edwin Reed, and Rankine, followed by William John, William White, Nathaniel Barnaby, Francis Elgar, and Martel, while in France such men as DeBusy and Bertin were investigating and working along the same line. To Russell must be accorded the credit of starting scientific inquiry into the lines of the least resistance, to Brunel the best disposition of material to meet longitudinal stresses, and to Reed and his young assistants the cellular construction and framing which did so much to obtain the necessary strength with less weight. The designs evolved ran the gamut of the armored broadside with multiple guns of the 'Warrior' type to the battery of a few guns of larger calibre mounted in turrets, such as the 'Devastation' type of high freeboard Monitors. These designs finally worked into the mixed gun battery with the large guns mounted in turrets or barbets and the smaller guns in armored casemates. This type of battery prevailed in one form or the other, up to the time of the Russo-Japanese War. The fight through that long period was between armor and guns, with varying results. At one time the armor would defeat the guns, then the guns would penetrate the best armor made. The same fight is still on, with honors resting with the guns. Then began the long fought question between speed and protection and armament, or the feature of offense and defense. The lesson hastily drawn from the fight in the Japan Sea [1905] was the all-gun battery of heavy guns, with a numerous secondary battery of very small guns. Calm and cooler consideration, however, has given the larger calibre rapid firing gun its old place as a defense against torpedo craft, with the exception perhaps that protection for this class of gun has been dropped. The cycle has been

made that we are again with batteries of mixed calibres just as at the close of the Civil War, only with all the tremendous increase in power and rapidity of fire."—W. A. Dobson, *Evolution of the battleship of the dreadnought type (Proceedings of the Engineers' Club, Oct., 1914, v. 31, no. 4, pp. 299-304)*.—See also U. S. A.: 1862 (March): Battle of the *Monitor and Merrimac*.

1861-1892.—Contest between gun and armor.—British experiments.—Italian improvements in use of steel.—Compound plates.—Harveyized nickel steel armor.—"By 1862 all the naval powers of the world had taken notice of the new naval developments. While the manufacture of armor plates progressed rapidly from the first the improvements in gun powder forced a continually increasing thickness of the plates. While soft iron had been adopted for the armor for ships, experiments continued with this and with laminated armor, hard iron, and, later, chilled iron, steel, and the plate-upon-plate system. In 1861 various backings such as timber, cork, india-rubber, layers of wire, etc., were tried and it was concluded that, 'while the hard materials improved the resisting power of the armor, they led to its being more injured by cracking, and to the giving way of fastenings.' At about this same time, a Special Committee on Iron (British) came to the following conclusions: '1. That steel and steely iron are bad materials for armor, while soft iron is best. 2. That corrugations and bosses, designed to break shot on impact, are undesirable. 3. That plates should be as large as practicable. 4. That hard backing supported the plates at the expense of the bolts, whose functions are not only to hold the plates on but also to resist vibration and prevent buckling. 5. That tonguing and grooving of plates tend to spread injury from plate to plate, and are bad. 6. That the effect of shot on plates is not proportional to the momentum of the former, but to the energy.' . . . The advantages of a hard pointed projectile with which to attack the soft armor soon became apparent, and Sir William Palliser introduced an ogival-pointed chilled-iron shot. His projectiles were first tried at Shoeburyness in the autumn of 1863. In 1864 steel plates made their first appearance, plates supplied by the Thames Company, Brown & Co., the Parkgate Company, and Petin & Gaudet, being unsuccessfully tested in Russia in this year. With the adoption of armor protection for ships of war, all the principal nations of the world, with the exception of the United States, began the construction of armor-clad navies with a feverish activity, which continued until the eighties. Up to 1875 the contest between gun and armor had wrought iron armor on one side and cast iron projectiles on the other. There had been no material improvement in the manufacture of projectiles since the introduction of rifled cannon other than that (noted above) caused by chilling the ogive in casting. Neither had there been any essential improvement in the manufacture of armor-plate; so the steadily increasing power and caliber of the gun had forced a continually increasing thickness of armor-plates. The climax was reached in 1876 when the *Inflexible*, a ship of 11,880 tons, was given 24 inches of armor amidships. In this ship an outer thickness of 12-inch armor-plate was backed with 11 inches of teak, behind which was another 12-inch armor-plate backed with 6 inches of teak. Inside all this were two thicknesses of 1-inch iron plating. As the weight of armor to be carried by ships could not be increased indefinitely, an improved kind of armor with which the gun might be successfully

opposed became necessary. The Italians seem to have been the first to recognize this, for they began a series of experiments at Spezia in 1876 upon several forms of target, with their attention especially directed to steel. The steel employed tended to shatter upon impact of the projectile; but it was noted that projectiles which passed completely through wrought iron plates were stopped by the steel plates. As a result, the Italians fitted the *Dandolo* and the *Duilio* with armor belts consisting of 21.65 inches of solid steel. These were the first ships to carry steel armor. These experiments gave added stimulus to the investigation of steel for armor; and, from this date, experiments were conducted under the conviction that wrought iron would be replaced sooner or later by steel in some form. Mr. George Wilson, of the Cammel Company, patented a compound armor in 1876 which was to compete with the all steel armor. This armor consisted of a steel face welded to a wrought-iron back and offered the advantages of a hard surface and a tough body. Experiments in 1877 with plates consisting of 5 inches of steel united to 4 inches of wrought iron showed this compound armor to be superior to wrought iron plates, and further experiments showed that best results with compound armor were obtained when the steel constituted about one-third of the plate. Naturally, a contest between the all-steel and the compound armor resulted, and the compound armor seemed at first to have the advantage; but, with the introduction of the steel shell a little later, the advantage turned to the steel plate. The compound plate was produced mainly in England and the steel plate mainly in France, and rivalry between these plates continued until the Annapolis and Ocha experiments of 1890. At these trials the superiority of the steel plate was demonstrated beyond a doubt; but both plates were found to be inferior to a new nickel-steel plate which had just appeared. The introduction of the compound and the steel armor gave the plate the advantage over the gun, and investigations were conducted with a view to the determination of the best material for projectiles. One series of experiments was conducted by the British Admiralty in 1877 with chilled iron projectiles of various kinds, steel projectiles, and projectiles with steel bodies and chilled iron heads. Among other things, they recommended: 'That all battering projectiles should have heads struck with a radius of 2 diameter. That the question of a delay-action fuse to be used with guncotton be further investigated. That a certain proportion of forged steel shells be issued. That cast steel shells be not adopted unless greatly improved.' In this same test was tried a wrought iron cap on the point of the projectile. This was brought about by the fact that it had been discovered that a steel-faced armor plate lost its power of breaking up chilled shot when a 2½-inch wrought-iron plate was placed over the face of steel plate. Captain English and General Inglis thought a cap would serve the same purpose as the iron plate. The effect of the first shot encouraged further investigation, but further trial showed that 'no advantage was gained by a cap.' Other experiments were carried on by all the manufactures of projectiles. Krupp, Hadfield, Holtzer, Armstrong, Firth, and others tested cast steel, forged steel, specially treated steel, and steel alloys, until the Holtzer works advanced a chrome-steel projectile which was successful against the new armor. With a chrome-steel projectile, Holtzer in France and Hadfield in England became most prominent as projectile manufacturers. The

projectile having again gained the ascendancy, it became necessary to effect the destruction of the chrome-steel projectile; so the plate manufacturers began to increase the hardness of the face of the plates. Captain Tressider, R. E., patented a method of face hardening in 1887, which was first applied to the compound armor. In 1880 Schneider introduced nickel into steel; and in 1891 or 1892 the St. Chamond works used nickel steel with a small percentage of chromium. The armor which was adopted for replacing the steel and the compound armor was a face-hardened nickel-steel armor introduced by Mr. H. A. Harvey, of the Harvey Steel Works of Newark, N. J. This is the armor mentioned above as having been tested at the Annapolis trials. These trials led to further tests at Indian Head, and the results were so successful that Harveyized nickel steel armor-plate was adopted for warships."—R. Arthur, *Armor and its application to ships* (*Coast Artillery Journal*, 1914, v. 42, pp. 32-36).

1870-1905.—Development of navies: Austria-Hungary.—France.—Germany.—Italy.—Japan.—Russia.—"Austria-Hungary during the seventies built a number of casemate vessels and in the eighties two barbette ships, of which the last one, *Kronprinz Erzherzog Rudolph*, 1887, 6950 ts., resembled the English *Admiral* class in point of protection, but the belt was higher and the barbettes were developed into redoubts. This vessel had high freeboard, a speed of 16 kts., an armament of 12-in. guns and 12-in. armor on the water-line. The coal capacity was small, but the ship was well adapted for defensive service in the Adriatic, and was remarkable as a technical achievement, considering the small displacement. The vessels of the *Monarch* class, 1895-96, 5500 ts., were too small and had too low freeboard for anything but local coast defence in the Adriatic. As in German ships of that time the primary guns were of only 9.4-in. caliber. . . . At the end of the century the naval power of Austria fell far short of the needs of the country and compared unfavorably with that of Italy, who was the most probable enemy. . . . The first ships built in the new century, however, were hardly equal to the task assigned to them, being of too small displacement. The *Habsburg* class, 1900-02, 8175 ts., 20 kts., and the *Erzherzog Karl* class, 1903-05, 10,450 ts., 20.5 kts., resembled respectively the English *Formidables* and *King Edwards* in the disposition of armor and battery, but the primary guns, of 9.4-in. caliber, were too light for ships that might have to meet first-class battleships. The high speed was probably adopted in competition with fast Italian ships. Technically, the qualities of these vessels were all that could be expected of the limited displacements."—W. Hovgaard, *Modern history of warships*, pp. 128-129.—"In France several second-class cruisers of the protected type were built during the nineties. The last and most important was the *Jurien de la Gravière*, 1899, 5600 ts., 23 kts., which was well adapted to its work as a commerce-destroyer, being faster than the English cruisers of that time. . . . Towards the end of the eighties France possessed a number of protected cruisers, large and small, designed with the main object of eventually preying upon British commerce, but the value of these vessels was much depreciated by the advent of the high-explosive shell and the quick-firing gun. . . . In 1888, the French Government authorized the construction of an armored cruiser, the *Dupuy-de-Lôme*, 1890, 6500 ts., 20 kts., designed by De Bussy. . . . The sides were completely covered by armor of 4-in thickness, extending from 3¼ ft.

below the water-line to the main deck, 13 ft. above the water-line. A 1½-in. vaulted deck, which joined the lower edge of the side armor, was worked the entire length of the ship, and a splinter deck was fitted underneath in way of the machinery. The space between these decks was filled with coal, and above the armor deck, behind the belt, was a cofferdam of 3 ft. depth filled with cellulose. The combination of side armor with an under-water deck was applied to battleships a few years later, in the *Majestic*. The principal armament of the *Dupuy-de-Lôme* consisted of two 7.6-in. and six 6.4-in. B.L. guns, all mounted in single turrets on the main deck, except one that was placed on the forecastle. The disposition of the battery was peculiar, the two heavy pieces being placed amidships, one on each side, while the 6.4-in. guns were grouped together at the ends, three forward and three aft. All the guns had longitudinal fire, and thus the somewhat unique result was attained that five guns could be brought to bear in all directions. The *Dupuy-de-Lôme* was the first large vessel to receive three propellers, a practice followed in all later French armored cruisers, and soon after adopted by the Germans. The sides had a pronounced tumble-home, as in most other French ships, and also the bow and stern exhibited the same feature in a rather exaggerated degree. In this way a great deal of weight was saved in the upper works, and longitudinal fire was obtained with the broadside guns; but the form was not without concurrent disadvantages. Especially the plough-shaped bow proved objectionable, since it had a tendency to bury itself in the waves, resulting in a serious reduction in speed. This feature was repeated in many French cruisers and in some of the battleships. It was later severely criticized, and ultimately much modified or entirely abandoned. The *Dupuy-de-Lôme* marks a new epoch in the history of protection, and a great step in advance compared with the older belted cruisers and with the protected cruisers of her time. . . . *Jeanne d'Arc*, 1899, 11,100 ts., of 23 kts., designed speed, was the first of a series of large armored cruisers embodying Admiral Fournier's ideas. The protection was extensive, but not so complete as in the *Dupuy-de-Lôme*. . . . The *Jeanne d'Arc* formed the model for the succeeding large cruisers of the *Jules Michelet*, the *Ernest Renan*, and the *Edgar Quinet* classes, 1905-08."—W. Hovgaard, *Modern history of warships*, pp. 190, 206-208.

"Towards the end of the sixties Prussia acquired three armored battery vessels (*Panzer Fregatten*), which were built in England and France. After the war with France in 1870-71, the newly created German Empire commenced at once an active naval policy, and the Chief of the Admiralty, General von Stosch, laid out a plan to build up the navy (*Flottengründungsplan*). Three rigged turret ships, the *Preussen* class, 1873-75, 6650 ts., similar to the British *Monarch*. . . were the first armored iron ships constructed in Germany. . . . Two casement vessels, the *Kaiser* and *Deutschland*, 1874, 7550 ts., designed by Reed, were built in England. . . . In 1877 was launched the *Sachsen*, 7300 ts., 14 kts., the first of a class of four coast-defence vessels (*Ausfall-Corvetten*). She carried two 10¼-in. guns in a pear-shaped barbettes forward, and four 10¼-in. guns in a rectangular barbettes amidships. In the distribution of the artillery great weight was given to longitudinal fire, as in the *Inflexible*. The hull protection was on the central citadel plan. The *Sachsen* was the first large armored ship of the German Navy without sail power. . . . The *Baden*, was not completed till 1884. . . . Not till

1883 . . . was the keel laid to another armorclad, the *Oldenburg*, 5100 ts., which was intended to be the fifth vessel of the *Sachsen* type, but owing to lack of funds she had to be of smaller size, and became a somewhat belated casemate vessel. The need of a small type of coast-defence ship for the protection of the estuaries in the North Sea and the Baltic, and in particular for the defence of the Kaiser Wilhelm Canal, called for the *Siegfried* class, six vessels of 3500 ts., 15 kts., and 18 ft. draught, launched during the years 1889-93. These vessels strongly resembled the *Tréhouart* [a French ship] in point of general form of hull and hull protection, but the heavy guns, being placed in shallow barbettes with lightly armored floors, were not so well protected as in the closed turrets of the French ships. The forward barbettes redoubt might be described as two single barbettes merged into one structure, reaching from one side of the ship to the other. . . . The only advantage of the *Siegfried* mounting was that the bow-guns could fire more nearly in after directions. The belt was complete, but the high freeboard and large superstructures made the ships very vulnerable to shell fire. Two additional vessels of this class, the *Odin* and *Aegir*, were launched in 1894-95, differing from the previous ships chiefly in their system of water-line protection, which was a reversion to that of the British *Admiral* class. . . . Later these ships were reconstructed. . . . A new era in the history of the German Navy commenced in 1888 with the accession of Kaiser Wilhelm II. . . . The construction of larger seagoing battleships was commenced, the first type being the *Brandenburg* class, 1891-92, 10,000 ts., 17 kts. In general form of hull and in disposition of armament these ships resembled strongly the French *Admiral Baudin* type, having great tumble-home, a complete belt, and three barbettes placed in the center-line. The main battery was very powerful, consisting of six 11-in. guns, all capable of firing on either broadside, but the secondary battery consisted of only 4-in. and 3½-in. Q.F. guns. The *Brandenburg* having no intermediate battery, resembled still more than its prototype, the *Admiral Baudin*, the latter 'all-big-gun' battleships. . . . The midship barbettes was not well placed, the guns being relatively short and close to the deck. . . . In the next type of battleships, the *Kaiser* class, 1896-99, 11,000 ts., 18 kts., the armament was entirely different in character and disposition. . . . The main battery consisted of four guns of only 9.4-in. caliber, but an exceedingly powerful intermediate battery of eighteen 6-in. Q.F. guns was carried, in addition to a torpedo-defence battery of 3½-in. Q.F. guns. The reduction in the caliber of the principal guns appears to be due chiefly to a desire to save weight for the secondary battery. . . . The secondary battery was not only very powerful, but also well protected, being mounted in single turrets and casemates protected by 6-in. armor. As in the *Charles Martel*, the secondary guns were clustered in rather close proximity to the principal guns, which were here mounted in twin turrets forward and aft. Nearly all the 6-in. guns were capable of firing along the keel-line. The torpedo-defence battery was of heavier caliber than used at that time in the British and American Navies. . . . A belt of harvey-nickel steel of 12-in. thickness extended indeed for about four-fifths of the length, and was covered by an armour deck on the top, while a splinter deck was fitted at the height of the lower edge, as in the French ships; but the belt was very narrow, and no protection was given to the side above the belt, as in contemporaneous ships

TYPES OF WARSHIPS

1 *Iron Duke*, British battleship, 1912. 2. *Charles Martel*, French type of battleship of the 'nineties. 3. *Moltke*, German battle cruiser, 1910-1911. 4. *Dreadnought*, 1905, original battleship of its type. 5. *Iowa*, American battleship, 1917. 6. *Conte di Cavour*, Italian battleship, 1911. 7. *Woolsey*, American destroyer. 8. *Hood*, British battle cruiser, 1918.

of other navies. A high superstructure and extensive bridges added to the large unprotected target which these ships presented, and made them very vulnerable to shell fire. In this respect, as also in the great tumble-home of the sides and the arrangement of the guns, these vessels resembled strongly the French battleships of the nineties (*Bouvet*). The boiler plant consisted of twelve cylindrical and six Thornycroft boilers, which latter were here for the first time used in larger battleships. There were three propellers. The normal fuel supply was 650 ts. of coal, with an additional of 100 ts. of oil for mixed combustion. Triple screws and a supply of oil-fuel were features of all succeeding battleships and large cruisers of the German Navy. The ships of the *Kaiser* class were later constructed. The superstructures were cut down, and the four lower casemate guns were removed, with the result that the top of the belt came higher above the water. . . . [According to] the Navy Law of 1900, . . . the fleet was to consist of two 'double squadrons,' each of seventeen battleships with an appropriate number of smaller units. . . . By the new law, therefore, a harmonious development of the navy was secured, and its strength practically doubled. The type represented by the *Kaiser* class was modified and improved upon in the following three types of battleships: the *Wittelsbach* class, 1901-02, 11,600 ts., the *Braunschweig* class, 1902-04, 13,000 ts., 18 kts.; and the *Deutschland* class, 1904-06, 13,000 ts., 18 kts. These classes possessed the tactical advantage of homogeneity, but their primary battery was weak, although in the two latest classes the 11-in. gun took the place of the 9.4-in. gun. At the same time the high mounting of the forward guns, which had been hitherto a feature of German battleships, was abandoned, the heavy turrets being both mounted on the main deck. The secondary battery was powerful, especially in the two latest classes, where fourteen 6.7-in. guns were substituted for the eighteen 6-in. guns of the *Wittelsbach*. The torpedo-defence battery was in all vessels of 3½-in. caliber, as in the *Kaiser* class. The same tendency to an extension of the armored surface, which existed in other navies, was evidenced in the German ships during this period. The water-line received protection of light armor at both ends, and the heavy portion of the belt was more and more extended. A redoubt of armor of medium thickness was built above the belt between the barbettes of the big guns up to the main deck, housing a battery of secondary guns. The armor deck was of the sloping type. The conning-tower was very large, of the shape of an oval, with transverse major axis, and protected by armor of 12-in. thickness. There were six torpedo tubes, four submerged on the broadside, one submerged in the bow, and one aft, which in the *Deutschland* was likewise submerged. In the latest vessels of the *Deutschland* class, small-tube boilers of the Thornycroft-Schulz type were used exclusively, and this boiler, which had already been adopted previously in torpedo-vessels and cruisers became henceforth the standard for all vessels of the German Navy. The main reason for this important step was probably a desire for a reduction in weight, but it also had the advantages which follow from uniformity in the *matériel*. The supply of liquid fuel was raised to 200 ts. in normal load condition. The relatively small displacement of German battleships of that period was necessitated by the insufficient dimensions of canal-locks and harbors, and was perhaps due also to the naval policy, which aimed primarily at control of the

Baltic and the North Sea. . . . A demand for well-armed and protected cruisers arose about the middle of the nineties, in consequence of which the ships of the *Freya* class, 1807-98 of about 5600 ts., 19 kts., were laid down. They were armed with two 8.3-in. and eight 6-in. guns. . . . Germany commenced the construction of small cruisers with the *Hela*, 1895, 2000 ts., 21 kts., fitted with locomotive boilers. At the end of the decade was commenced the *Gazelle* class, 1898-1900, about 2600 ts., 20-22 kts., mostly fitted with small-tube boilers of the Schulz-Thornycroft type. The *Frauenlob* class of vessels, 1902, was a slight modification of the *Gazelle* type."—W. Hovgaard, *Modern history of warships*, pp. 110-116, 189-190, 192.

"During the first part of the nineties there was a pause in battleship construction in Italy, but in 1897 the two vessels of the *Emanuele Filiberto* class, 9650 ts., 18 kts., were launched. . . . The defence of the extended coast of Italy required fast and powerful ships, and Brin, in accordance with this policy, designed the *Regina Margherita* type, 1901, 13,200 ts., 20 kts., armed with four 12-in. four 8-in., twelve 6-in., and twenty 3-in. guns. Such high speed and powerful armament could not be combined with heavy armor in ships of that size, whence the belt was of only 6-in. thickness. . . . The next type, the *Vittorio Emanuele III.* class, 1904-07, 12,600 ts., 22 kts., was designed by Colonel (later General) Cuniberti, who, like Brin, was a strong advocate of high speed for the Italian battleships. The *Vittorio Emanuele* type was highly successful, remarkable results being obtained on a relatively small displacement. Combining, as it did, high speed with a good protection and an armament which comprised heavy armor-piercing guns, it may be considered a forerunner of the battle-cruiser. By abandoning the heavy quick-firers and substituting 8-in. turret guns instead, a secondary battery of exceptional power was obtained. . . . The hull of the two last ships of this class, the *Rome* and *Napoli*, was constructed entirely of high-tensile steel, a material which was used only partly in the *Vittorio Emanuele* and *Regina Elena*. The armament consisted of two 12-in. guns mounted singly in barbette-turrets protected by 10-in. armor, and twelve 8-in. guns in twin turrets protected by 6-in. armor. . . . The forward 12-in. guns was mounted high on the upper deck, which extended for two-thirds of the length of the ship from the bow. Two of the 8-in. gun turrets were likewise mounted on the upper deck, but all the other guns were placed on the main deck. The torpedo-defence battery consisted of twenty-four 12-pdrs., of which eight were placed in a 3-in. casemate amidships. The water-line belt was complete from end to end, with a thickness of 10 in. amidships, reduced to 4 in. at the ends. The protective deck had 4-in. armor on the slopes, and a 1-in. splinter deck was fitted underneath. The sides between the belt and the main deck were protected by 8-in. armor amidships, and by 3¼-in. armor in the bow. The normal coal supply was 1000 ts., total capacity 2800 ts."—W. Hovgaard, *Modern history of warships*, pp. 116-118.—"The armorclad navy of Japan is of even more recent date than that of the United States and Germany. The first armored ships were the casemate vessel *Fusoo*, 1877, 3700 ts., and two small coast-defence ships of 2250 ts., launched in 1877-78, all built in England. In the war with China in 1894-95, the Japanese did not possess a single battleship until they captured the Chinese vessel *Chen-Yuen* at Wei-hei-Wei. After that war Japan pursued a vigorous policy of naval expansion in preparation for the

struggle with Russia. . . . The vast majority of the new ships and all the battleships acquired during this period were built in England and modelled on contemporaneous English ships. The *Fuji* and *Yashima*, 1896, 12,300 ts., were reduced *Royal Sovereigns*, but somewhat faster. . . . The *Shikishima* class, 1898-99, 15,000 ts., was quite similar to the English *Formidable*. . . . The *Mikasa*, 1900, 15,200 ts., was similar to the *Shikishima*. Most of the 6-in. guns were, however, mounted in a battery as in American ships, but instead of a central longitudinal armor bulkhead two 2-in. bulkheads were fitted behind the guns, one on each side, forming with transverse splinter bulkheads between the guns a continuous series of single casemates. In this way the guns were efficiently protected, but supervision and fire control of the battery were rendered difficult. . . . In the *Kashima* and *Katori*, 1905, about 16,000 ts., the Japanese followed the *King Edward* type, but 10-in. guns took the place of the 9.2-in. guns of the English ships. These ships were not completed till after the war."—*Ibid.*, pp. 127-128.—"Up to about the middle of the nineties the Russians appear to have followed the English practice in the general design of their battleships, but after that time French models were preferred. . . . The *Navarin*, 1891, 9475 ts., was a reduced *Trafalgar*. She was well protected; even the superstructure, in which a 6-in. battery was placed, had 5-in. armor. . . . *Sissoi Veliki*, 1894, 8875 ts., bore much resemblance to the *Royal Sovereign*, but the heavy guns were mounted in closed turrets and the secondary battery in a large casemate on the gun deck. . . . The *Poltava* class, 1894-95, 10,950 ts., to which also the *Petropavlovsk* and the *Sebastopol* belong, were reduced *Royal Sovereigns*. . . . The *Peresviet*, *Pobieda*, and *Oslibia*, 1898-1900, 12,675 ts., were of French type, not unlike the *Suffren*, characterized by relatively small beam, considerable tumble-home, and high freeboard with towering superstructures. The armament was four 10-in. and eleven 6-in. guns, of which latter one was placed right in the bow on the main deck, the others in single casemates, as in the English battleships of that period. The water-line belt was 9 in. thick amidships and extended over six-sevenths of the ship's length; above the belt was a 5-in. redoubt up to the second deck, extending about one-third the length of the ship. The protection of the stability was imperfect even at moderate angles of heel, for the heavy armor belt was in normal condition only about 9 in. above the water, and the ends above the belt were entirely unprotected. . . . Amidships, the gun-ports on the gun deck were in normal condition only from 10 to 11 ft. above the water-line. The curve of stability must have been very weak, due to the great tumble-home of the sides, and although the high freeboard secured a great range, this advantage was in time of battle illusory when the unprotected upper works were damaged. Finally, these ships possessed the undesirable feature of a center-line bulkhead in the boiler-rooms. . . . The *Retvizan*, 1900, 12,700 ts., which was built by Cramps in Philadelphia, resembled very closely the English *Formidable* both in point of armament and protection. . . . The *Czarevitch*, 1901, 12,900 ts., was built in Toulon after the design of Mons. Lagane. Like the *Oslibia*, she was of distinctly French type and resembled the *République* in the disposition of armor and artillery. The beam was relatively greater than in the *Oslibia*, being increased from 71.5 ft. to 75.5 ft. The draught was reduced from 27½ ft. to 26 ft. The tumble-home was, however, much greater than in the *République*. The arma-

ment consisted of four 12-in. guns, mounted in closed turrets forward and aft, the forward turret about 31 ft. above the water-line. Twelve 6-in. guns were mounted in twin turrets, four on the upper deck at the corners of the superstructure, and two on the main deck amidships. Part of a battery of 12-pdrs. was mounted on the second deck amidships on the broadside. The water-line belt, 10 in. thick amidships, extended the whole length of the ship. It was surmounted by another complete strake of armor of 8-in. maximum thickness, covered by a 2¾-in. armor deck, which was about 7 ft. above the water-line. A splinter deck, 1½ in. thick, was fitted about 6 ft. below the principal armor deck, slightly above the level of the water-line, and curved down at the sides to form a lateral armor bulkhead some 6 ft. from the sides, as in the *Henri IV.*, intended as protection against under-water attack. The speed was 18 kts. . . . The ships of the *Borodino* class, 1901-03, 13,600 ts., . . . had the same armament as the *Czarevitch* and were in point of general form and protection very similar to that vessel. The principal armor deck was 4 in. thick. The conning-tower had a very bad location, being imbedded between inflammable bridges, which carried several light guns and numerous fittings. It was adjacent to the foremast and the charthouse. The roof was of the mushroom type. According to Chief Constructor Koutejnikoff, the designed metacentric height was 4.3 ft. in normal condition and 4.1 ft. in fully loaded condition, but when equipped and ready . . . the ships were, in spite of Koutejnikoff's urgent representations, so much overloaded that the metacentric height, as found by inclining experiment in Libau, was only 2½ ft. The upper edge of the water-line belt was immersed, the top of the upper strake was not more than 6 ft. above the water, and the port-sills of the 12-pdr. battery, mounted on the gun deck, were less than 8 ft. above the water. . . . Russia was the first country to acquire a vessel which deserved the name of 'ocean-scout,' viz., the *Novik*, 1900, 3000 ts., 26 kts., built by Schichau in Elbing. The acquisition of this vessel was due to the initiative of Admiral Makaroff, who realized the necessity of extreme speed in ships to be used for reconnoitering service. The *Novik* was built as an enlarged destroyer. The hull was exceedingly light and the free-board was low, although somewhat augmented in the bow by a low forecastle. The boilers were of the Thornycroft type; the coal supply was small. The armament was rather heavy, six 4.7-in. Q.F. guns and five above-water torpedo tubes. The protective deck was 2 in. thick over the vitals. There were three propellers, of which the central one projected considerably below the hull, as in a torpedo-boat. There was no double bottom. . . . At the end of the nineties Russia built a number of protected cruisers to be used primarily as commerce-destroyers, viz., the *Bogatyr* class, the *Askold*, and the *Variag*, all of about 6500 ts. displacement and of 23 kts. speed, and the *Pallada* class, of the same size and 20 kts. speed. These ships carried an armament of 6-in. and 3-in. guns. The 6-in. guns were either unprotected or provided with shields. Only the *Bogatyr* class had twin turrets for the 6-in. guns forward and aft, protected by 4-in. armor, while four guns were placed in single casemates at the corner positions on the main deck. The uptakes were protected by 2-in. armor up to the main deck."—W. Hovgaard, *Modern history of warships*, pp. 118-121, 123-124, 192-193.

1893-1914.—Harvey armor replaced by "Krupp Cemented".—Changes in armor plate slight.—

Modifications in construction of ships.—New types.—Dreadnought originated in Great Britain.—Development of the American dreadnought.—“In 1893 Krupp introduced a face-hardened armor, nickel chrome steel with special heat treatment, which soon superseded the Harvey armor. This armor, known as Krupp Cemented (K. C.), was adopted by Germany on the *Kaiser Wilhelm II* in 1897. By 1901 this new armor had been adopted by all the naval powers, and now [1914] practically all the principal armor of all the navies of the world is Krupp Cemented. In regard to recent improvements in armor very little has been made public. Several new kinds of armor or methods of manufacture have recently been reported, and it may be that K. C. armor will soon be discarded, as have all preceding kinds. The Schaumann plate, recently invented, consists of a light steel plate backed by a plate of duralumin. The two are welded together at various points, but not solidly. The new plate is lighter than steel and it is stated that the inventor expects to equal the best Krupp plate with 25 to 30 percent less weight. Another new plate is the Simpson, which consists of a hard tool steel plate and a tough steel plate welded together, with a sheet of copper between, giving a weld which is practically invisible, the welded plates being molecularly continuous. Hadfield had produced a cast steel plate which has been very successfully tested, and the use of these plates seems to be becoming more and more general. However, the quality of armor in general use has not greatly improved since 1897, while, on the other hand, guns have enormously improved at the same time that there has been improvement in the projectile itself, as well as that due to the adoption of the cap shortly after the Russian trials in 1894. With the introduction of the 13.5 and the 14-inch guns in the last year or so it may be said that the gun has again attained superiority over the armor; so, according to all precedent, we should see a new or improved armor adopted in the course of the next few years. . . . The change to steel permitted a lighter construction, giving a decrease in the dead weight and an increase in the allowable weight for armor and armament. Improvements in the methods of manufacture since that date have permitted of many improvements in the details of construction. In types of ships there has been a great change. The old wooden sailing ship carried a battery arranged for broadside fire, while the battleship of today is prepared for heavy end-on as well as broadside fire. The intermediate armament came into being on armored ships and passed away, battleships of to-day carrying only big guns and some torpedo defense guns. The old line-of-battle ships were high sided and from this type we jumped to the monitor with practically no freeboard. The battleships and battle-cruisers of today [1914] have worked back to the high freeboard and its elevated gun platform, which permits the use of the guns in a seaway and gives greater stability to the ship. In size also there has been a marked increase since the beginning of the modern era. Warships increased very gradually but continuously in size from the 1400 tons of the French floating batteries to the 12,000 tons of the pre-Dreadnoughts. Since then they have increased very rapidly to the 30,000 tons of to-day, with 40,000 tons proposed, with the result that battleships launched ten years ago have to-day but little value. [The British super-dreadnought *Hood*, launched in 1919, is 41,200 tons.] As the Panama Canal can accommodate battleships up to 43,000 tons only, that would seem to be the present limit in size, at least for the United States. The *Dreadnought*, which

marked the beginning [1906] of the rapid increase in size of warships, is about the only epoch-making development in naval science originating in Great Britain, but it opened a new era in ship design for the navies of the world. [See also WAR, PREPARATION FOR: 1906-1909.] This ship was based on the design of ‘the ideal ship for the British Navy,’ published in 1903 by Colonel Cuniberti, Constructor to the Italian Navy. The ship, whose design had been declined by the Italian Navy because it was too ambitious for that power, was to be of 17,000 tons displacement and was to combine in itself the offensive and defensive powers of two or three battleships. The idea was not taken seriously, until, in the Russo-Japanese War, it was announced that the battleships *Aki* and *Satsuma*, which had been laid down, were to be more or less on the lines of Colonel Cuniberti’s design. At the same time it was announced that the United States had started the *South Carolina* and the *Michigan*, each carrying four two-gun center-line turrets. Both of these ideas were public property before the *Dreadnought* was laid down, but she was built with such rapidity that she was completed before any other vessel of the type, and her building was shrouded in so much mystery that she received considerably more advertising than did the other vessels. Japan and the United States are obviously entitled to a great share of the credit for originating the Dreadnought movement. The *South Carolina* type, all big guns on the center line, all bearing on either side, was a distinct novelty. No secrecy whatever was observed about them and the United States is probably the first nation that definitely adopted the all-big-gun idea. The Dreadnought idea spread rapidly, each nation striving to out-do the others by increasing the size and armament of each vessel laid down. This has resulted in a type known as the super-Dreadnought which surpassed the *Dreadnought* as much as that vessel surpassed its immediate predecessors. . . . It remains to be seen, however, whether the battleship will retain dominion over the sea or whether it is doomed to disappear, future wars being decided in the air or beneath the surface of the waters.”—R. Arthur, *Armor and its application to ships* (Coast Artillery Journal, 1914, v. 42, pp. 37-39).—The British ship *Dreadnought* was launched on February 10, 1906. The *South Carolina* and *Michigan* were laid down in the course of the same year. “At the time of the Spanish-American War our battleships had as their primary batteries 13-inch or 12-inch guns, combined with 8-inch, all in turrets, the heavier guns being mounted on the centre-line forward and aft, and the 8-inch on either beam. The secondary battery ranged from 6-inch down to 3-pounder rapid fire guns. The chief lessons taught by this war, insofar as battleships are concerned, were the value of keeping a navy in the pink of condition, both men and material; the necessity of radical changes in our gun target practice; and the necessity of adopting smokeless powder. The gallant effort of Cervera’s fleet, without proper stores or good ammunition, and its pathetic destruction, as compared with the famous trip of the ‘Oregon,’ speaks volumes for the necessity of a high standard of naval efficiency and drill. The remarkably low number of hits for the number of shots fired was a surprise to our naval authorities and brought about such a radical reform in target practice, mounting of guns, and service of ammunition, that today our vessels are excelled by none in the number of target hits. . . . In the early American Dreadnaughts the heavy guns were mounted in pairs in turrets, using the standard American emplacement. This arrange-

ment gave at the best four guns ahead and astern, with the broadside varying in accordance with the number of turrets mounted. This has given place to mounting three, and in the French Navy even four, heavy guns in a single turret. With a battery of ten or twelve heavy guns the emplacement may be made in four turrets, the forward guns and their ammunition being entirely clear forward of the machinery, while the after guns and ammunition abaft the machinery. This is a most desirable arrangement, as it lends itself to the better ventilation of magazines and prevents interruption between engine and the rooms. In one case we may have three guns each in the lower turrets and two each in the upper firing over the turrets below. This would give five heavy guns ahead and astern and ten on either side. By using three guns in each turret the head and stern fire may be increased to six guns and the broadside to twelve. The French in their latest design have placed four guns in one turret. With twelve guns, if mounted in four turrets, this would mean no increase in head fire over the 3-gun turret, but renders it possible to mount all twelve guns in three turrets, with the second turret firing over the first, giving eight guns ahead, twelve on broadside, and four astern. All sorts of variants may be made by using the several types of turrets here spoken of. . . . In firing in salvo this objection is not a serious one. However, the number of guns per turret may vary. The mounting of all heavy guns in turrets protected by armor and placing these upon the centre line has been universally adopted and the United States must be given the credit for originating this plan, embodying the greatest efficiency with the least weight. . . . It may be of interest to dwell for a few moments on the development and application of the turtle back or protective deck to war vessels. . . . The Stevens Battery incorporated this feature, but before this a lieutenant in the U. S. Navy, by the name of Hunter, invented an armored deck with the sides sloping down at the sides of the vessel below the waterline. In the development of foreign war vessels this system was adopted for the protection of the magazines and machinery of protected cruisers and in some cases sole reliance for protection to the vital portion of the vessel was placed in decks of this sort for ships of large displacement and heavy artillery. Later on, this principle was applied to battleships, the idea being that if the projectile penetrated the belt armor the armored deck would stop the fragments of shell or deflect the solid shot. The accepted method of the present day is to work a flat deck of armor at the top of the main deck and a sloping deck not more than one and one-half inches thick on the slopes as a splinter deck."—W. A. Dobson, *Evolution of the battleship of the dreadnaught type (Proceedings of the Engineers' Club, Oct. 1914, v. 31, no. 4, pp. 306-307, 309)*.

1900-1918.—Formation of submarine fleets.—Use of guns.—Mine-laying submarines. See SUBMARINES: 1900-1918; 1912-1918.

1905.—Smaller navies: Argentina.—Brazil.—Norway. — Holland. — Sweden. — Denmark.—"Most navies of the second and third rank are intended for a defensive policy or for offensive duties within a short distance from their base. . . . This determines the requirements to seagoing qualities. For countries that border on the ocean, it is desirable to have ships of full seagoing, *i.e.* ocean-going, capability. . . . The coast-lines of these countries [Argentina and Brazil] are very extensive, . . . requiring for their defence ships of full seagoing capability, high speed, and good steaming radius. . . . During the period here under con-

sideration the Argentine Government was not able or willing to incur the enormous expenditure incident to the construction of such vessels, and as late as the middle of the nineties the country possessed no armored ships suitable for service on the ocean. The small armorclads *Almirante Brown*, 1880, 4200 ts., and the *Libertad* and *Independencia*, 1890-91, 2340 ts., could only be used for coast defence in a narrow sense. In the last half of the nineties several armored cruisers were acquired as a compromise to represent the sea-going element. The requirements to the Brazilian Navy are even more exacting than in case of the Argentine Navy, the coast-line to be defended being much more extended; but in Brazil, as in Argentina, only small coast-defence ships were acquired prior to 1905. The *Riachuelo*, 5700 ts., and *Aquidaban*, 4950 ts., were built by the Thames Iron Works in the eighties, and resembled the British Admiral class in point of protection, but the two turrets, which carried 9.4-in. guns, were placed *en échelon*. At the end of the nineties two still smaller coast-defence ships were built by La Seyne in Toulon. . . . The strategical conditions of Norway demand, first, a local defence of important fiords; second, a general defence of the extended coast-line, so as to prevent blockades and protect the communication between different parts of the country. Before the advent of the submarine boat, monitors assisted by torpedo-craft were the types best suited for the former duty, and during the years 1866-72 four monitors were launched. . . . The problem before the Norwegian Navy is, in fact, similar to, although less exacting than, that before the Argentine Navy, and requires at least moderate-sized seagoing battleships; but the financial resources of the country have not so far allowed this solution without an undue concentration of power in a few ships. Hence, a compromise has been adopted by the construction of smaller ships which can only imperfectly satisfy all requirements. In 1895 the naval defences of Norway were in a very low condition, the only armored vessels being the four monitors, which were then quite obsolete; but the controversy with Sweden concerning the union between the two countries suddenly aroused an interest in the naval defence, and liberal means were appropriated for this purpose. The result was the acquisition of four armorclads of the *Harald Haarfager* type, 1897-1900, of nearly 4000 ts. displacement. These vessels, which were built by Armstrong, were very similar to the Swedish ships of that time, being, like these, in reality slow-speed armored cruisers. . . . The Dutch Navy has to perform two entirely distinct strategic duties: defence of home coasts and defence of the colonies, especially in the East Indies. The ships destined for the former service must be suitable for coast and river navigation, whence small draught is of advantage. The freeboard may be moderate, . . . the coal supply may be small and the speed moderate. The caliber of the guns and the thickness of the armor should match those of first-class battleships. . . . Ships for service in the colonies must be capable of navigating the ocean and must possess a fair speed and great steaming radius. The armament and protection may be relatively light in view of the service which such vessels will generally have to perform. . . . Second-class armored cruisers seem the most appropriate for this service. The *Reinier-Claeszen*, 1891, 2500 ts., was a monitor with a mid-ship superstructure. She was built for home defence, but the small displacement did not allow an adequate armament to be carried, and the armor was very light. The main battery consisted of one 8.3-in. and one 6.7-in. gun. In the following type,

the *Piet-Hein* class, 1894, 3500 ts., 16 kts., an attempt was made to combine the qualities required for home defence and colonial service in one design (*schep à double usage*), but the small displacement made it impossible for the designers to solve this problem, and a compromise had to be accepted. The armament was light, consisting of three 8.3-in. and two 6-in. guns, and the armor belt was of only 6-in. thickness. The freeboard was moderately high, 9 or 10 ft., and the seagoing capability was fairly good, but the coal capacity was small, the ships were therefore militarily too weak for home defence, and the steaming radius was too small for colonial service. At the end of the nineties it was decided to build a new and larger type of armor-clad, especially designed for service in the East Indies, where it should be assisted by protected cruisers. The vessels of the *Piet-Hein* class became thus available for home service and were to be assisted by the older monitors and gunboats. The new ships, the *Koningin-Regentes* class, 1900-01, 5100 ts., 16½ kts., were armed with two 9.4-in. and four 6-in. guns. The belt was complete and had a maximum thickness of 6 in. The coal capacity was 680-830 ts., giving a steaming radius of 4500 miles. There was one full deck above the protective deck and a fore-castle. The two last ships of this class were slightly larger and carried the 6-in. guns in single turrets. . . . Swedish battleships, having to operate in the Baltic and the Kattegat, must possess fair seagoing qualities. The speed should be relatively high on account of the extended coast-line of the country, but, as in the Norwegian battleships, the coal supply may be small. The ships built prior to 1880 were monitors and gunboats, well suited to local defence of the fiords and channels inside the numerous islands that skirt large sections of the Swedish coast, but not adapted to work in the open sea. The first monitor was designed by John Ericsson, who presented to his native country the two American 15-in. guns with which the ship was armed. It was completed in 1865 and was named *John Ericsson*. It was regarded at that time as the most powerful armor-clad in Europe. In the period from the middle of the eighties to 1905 were built a number armor-clads of from 3300 to 3700 ts. displacement, all with about 9 or 10 ft. freeboard, armed with two guns of 10-in. or 8.3-in. caliber, and protected on the same principle as the English *Admiral* class. The earliest vessels, the *Svea* class, carried two 10-in. guns in one turret, but all the later ships had a turret at each end. The secondary battery consisted of 5-in. or 6-in. guns, and was well protected. The thickness of the armor belt was reduced steadily from 11¼ in. in the *Svea*, 1885, to 7 in. in the *Aeran* class, 1901-03. The speed was high for ships of that size, being about 15 kts. in the *Svea* type, increasing to 17 kts. in the *Aeran*. These features were still more marked in the last ship laid down in this period, *Oskar II.*, 1905, 4600 ts., which had a speed of 18½ kts., and only 6-in. armor on the belt. On the other hand, the hull protection was more extended. In spite of the larger displacement, the primary battery still consisted of two 8.3-in. guns, as in the preceding ships, but the secondary armament was increased to eight 6-in. guns, mounted in turrets. The relatively high requirements as to seaworthiness and speed in Swedish battleships were such as could only be satisfied on a much larger displacement, . . . if at the same time an adequate armament and protection were to be carried. . . . The solution was necessarily a compromise. . . . The resulting type, especially as represented by *Oskar II.*, was virtually . . . an armored cruiser of relatively

slow speed. . . . The operation of Danish battleships is confined almost entirely to landlocked waters, where only small seagoing capability is required. . . . Under these advantageous conditions a monitor-like vessel, with a freeboard of 3 to 4 ft., fulfils the requirements. After the construction of several small monitors following the *Rolf Kreke*, there was built a rather large casemate vessel, the *Helgoland*, 1878, 5400 ts., with the armor and armament of a first-class battleship. The freeboard was unnecessarily large, being about 11 ft., but on the whole the *Helgoland* was a satisfactory type for that time. The *Iver Hvitfeldt*, 1886, 3300 ts., was very similar to contemporaneous Swedish battleships, and had the same freeboard, which, again, was rather high for Danish waters. She carried two 10-in. guns in barbettes. The *Skjold*, 1896, 2200 ts., was a monitor for harbor defence, armed with one 9-in. and three 4.7-in. guns. In this ship Thornycroft boilers were used for the first time in an armor-clad, after having been first successfully tried in a small cruiser, the *Gejser*, 1892. They were henceforth applied in practically all classes of warships in the Danish Navy. In 1899 was launched the *Herluf Trolle*, 3410 ts., 15 kts., the first of a new class of ships which in point of seagoing capability were well suited to the conditions, being virtually monitors with a low fore-castle to prevent the bow-wave from flooding the fore-deck. A rather large superstructure was built amidships, housing four 6-in. guns in single casemates, and at each end was mounted one 9.4-in. gun in a closed turret. The belt was complete, and had a maximum thickness of 8 in. It was covered with a flat 2-in. armor deck. Again, the caliber of the principal guns, although superior to that of Norwegian and Swedish ships, was too small."—W. Hovgaard, *Modern history of warships*, pp. 129-135.

1905-1915.—Various navies since 1905.—"In the Argentine Navy the complete step to the dreadnought type was taken in the *Rivadavia* and *Moreno*, 1911, 27,570 ts. . . . [In Austria-Hungary], 1907, the claim was advanced that the fleet should be sufficiently strong to perform all duties in the Adriatic. . . . This brought about the construction of an intermediate type, the *Radetzky* class of 14,300 ts. displacement; but the political events in 1909 and the general development in warship design soon led to greater efforts, and in 1911 was launched the *Viribus Unitis*, the first of a class of dreadnoughts of 20,000 ts. displacement, which was well suited to the conditions that obtained in the Mediterranean. These ships carry four triple turrets in the center-line on the *Michigan* plan. The conning-tower is in two stories, and an armored Bar and Stroud range-finder is mounted in a hood on the top; it rises behind the gun turrets as an independent structure, being practically unencumbered by bridges and other light works. . . . The Brazilian Navy acquired the dreadnoughts, *Minas Geraes* and *Sao-Paulo*, 1908-09, 19,500 ts., and the *Rio de Janeiro*, 1913, 27,500 ts.; but the latter ship was incorporated in the British Navy at the outbreak of the war and named the *Agincourt*. . . . The [German] Navy Law of 1900 was modified by various amendments (*Novellen*), and was finally replaced by a new Law . . . 1912, according to which the German fleet by 1920 should consist of 41 battleships organized in 5 squadrons, with one fleet-flagship, 20 large cruisers, 40 small cruisers, 144 torpedo-boats, and 72 submarines. Battleships and cruisers should be replaced after twenty years, reckoned from the year when the first appropriation was given for the old ship till the year when the first appropriation was given for the new ship.

The German dreadnought battleships evolved through the following types: the *Nassau*, 1908, 18,600 ts.; *Helgoland*, 1909-10, 22,450 ts.; *Kaiser*, 1911-12, 24,300 ts.; *König*, 1913-14, 26,600 ts.; and *Ersatz Wörth* or *Baden* class, 28,000 ts. The development followed the same general lines as in the British Navy. The caliber of the heavy guns, which was 11 in. in the *Nassau*, was increased to 12.2 in. in the *Helgoland*, but this weapon was considered equivalent in power to the 13½-in. gun that was just then adopted in the British Navy, and the number of guns in the *Helgoland* was twelve as against ten in the British ships. After the English, in 1913, had adopted the 15-in. gun, the German followed and adopted the same caliber (38 cm.) in the *Ersatz Wörth*. The German dreadnoughts, like the Japanese, carry a battery of 6-in. guns, but besides that they have a light battery consisting of a great number of 3½-in. (8.8 cm.) guns. The disposition of the primary guns in the *Nassau* and *Helgoland* is the same as in the *Kawachi*, where two turrets placed on each side mask one another and are liable to interfere with the center-line turrets at the ends. This feature is the result of overgunning and is particularly objectionable in . . . short vessels. . . . In the *Kaiser* class, where the number of guns is reduced to ten, it has been avoided, the superfiring arrangement being adopted for the aft turrets, and the two midships turrets being mounted on the broadsides *en échelon*. This is the same arrangement as in the *Neptune*, then already abandoned in England. In the *König* class there are five turrets in the center-line, as in the *Orion*, and the *Ersatz Wörth* is, in the arrangement of the guns, a copy of the *Queen Elizabeth*. The torpedo tube in the bow, which had been a feature in German ships for many years, was abandoned in the *Kaiser* class, and henceforth only five tubes were carried. The belt armor, which was 12 in. thick in the *Nassau*, was increased to 14 in. in the *König* and 15 in. in the *Baden*. The uptakes are in later ships protected by 6-in. armor. In the *Helgoland*, and probably also in later ships, Frahm's anti-rolling tanks are fitted. . . . The evolution of the light cruiser in the German Navy was very systematic, progressing from the *Bremen* class, 1903-05, 3200 ts., 23 kts., through the *Königsberg*, *Kolberg*, and *Magdeburg* classes to the *Rostock* class, 1912, 4800 ts., 27 kts. The vessels of the two latter classes resemble the English *Bristol* type, but their armament, twelve 4-in. guns, is lighter, the speed somewhat higher, and the coal capacity greater. Two guns are mounted abreast of each other, forward and aft respectively, on a fore-castle and on a deckhouse. The waterline is protected by a narrow 4-in. belt; the protective deck has 2 in. of armor. The vessels of the *Graudenz* class, 1913-14, 5000 ts., 27.5 kts., are armed with two 6-in. and ten 4-in. guns. In the *Ersatz Gefion* of this class, Föttinger transformers were tried in the propulsive machinery. The 4-in. gun with which the German light cruisers are armed is semi-automatic and can fire up to about twenty rounds per minute. . . . A number of German light cruisers built during the war, named after war losses, *Köln*, etc., were of 5400 ts. displacement and carried eight 6-in. guns. Two cruisers, the *Bremse* and *Brummer*, 4000 ts., 29.5 kts., armed with four 6-in. guns in the center-line, were specially designed and equipped for mine-laying. The German cruisers excel in coal capacity. The vessels of the *Magdeburg* class, for instance, can stow nearly 1200 ts., those of the *Rostock* class stow 1550 ts. of coal. . . . The German armored cruiser evolved from the *First Bismarck*, 1897, 10,550 ts., 19 kts.,

through the *Prinz Heinrich*, 1900, 8750 ts., 20½ kts.; the *Prinz Adalbert* and *Friedrich Karl*, 1901-02, 8850 ts., 21 kts.; the *Roon* and *Yorck*, 1903-04, 9350 ts., 21½ kts.; the *Scharnhorst* and *Gneisenau*, 1906, 11,400 ts., 23 kts.; and the *Blücher*, 1908, 15,550 ts., 25¾ kts., showing a steady progression in size and speed. . . . While the caliber of the primary guns was reduced, beginning with the *Prinz Adalbert*, and while the number of guns was gradually increased, the distribution of the side armor was altered in the same general direction, being concentrated and heavy (8 in.) in the *Fürst Bismarck*, but more extended and lighter (4 in. or 6 in.) in the later types. . . . The first German battle-cruiser was *Von der Tann*, 1909, 19,100 ts., 28 kts. She is of the same size and quite similar in general design to the *Indefatigable*, but the heavy guns are only of 11-in. caliber. The torpedo-defence guns are of 3½-in. caliber, but in addition an intermediate battery of ten 6-in. guns is carried. The armor on the belt is of 10-in. thickness as against 8-in. in the English ship, and the 6-in. guns are placed in a large armored casemate or battery amidships. *Von der Tann* was followed by the *Moltke*, *Goeben*, and *Seydlitz*, all armed with ten 11-in. guns, arranged as in the *Neptune*. The *Seydlitz*, 1912, 24,600 ts., 28 kts., is said to be protected against submarine attack by 2-in. longitudinal bulkheads fitted 10 ft. from the sides. The armor was carried to the main deck amidships. The last type of which any data are officially known is the *Derfflinger*, 1913, 26,000 ts., 26.5 kts. (designed), armed with eight 12-in. guns mounted in four turrets on the super-firing plan and twelve 6-in. guns. . . . The *Derfflinger* was followed by the *Lützow*, 1913, *Hindenburg*, 1915, *Mackensen* and *Graf von Spee*, 1917. The two last-named ships are said to be larger and more powerfully armed than previous German ships of this class. [See also GERMANY: 1898-1914; WAR, PREPARATION FOR: 1909: German side, etc.; 1909-1913; WORLD WAR: CAUSES: Indirect: 1.] . . . In Holland, the latest battleship, *De-Zeven-Provincien*, 1909, 6400 ts., although carrying 11-in. guns instead of the 10-in. guns in earlier vessels, is yet too weakly gunned and also the armor protection is too light to enable the ship to face modern first-class battleships. The same remark applies to the new Swedish battleship *Sverige*, 6700 ts., which is likewise armored with 11-in. guns. . . . [The] *De-Zeven-Provincien* has fore-castle, poop, and deckhouse amidships, and carries 700 ts. of coal, the *Sverige* has only a superstructure amidships, and carries but 310 ts. of coal. . . . The primary as well as the secondary battery in the Swedish ship is exactly twice as powerful as in the Dutch ship; the belt armor is about 8 in. against 6 in., and a 4-in. redoubt is fitted between the belt and the main deck, not found in the Dutch ship. The speed is 22.5 kts. against 16.3 kts. It appears, however, that a ship of still greater military value could have been obtained by giving the *Sverige* two guns of heavier caliber instead of the four 11-in. guns, by reducing the speed somewhat, and by increasing the thickness of the armor. A step in this direction was taken in the Danish battleship *Niels Juel*, 4000 ts., now building, of the *Herluf Trolle* class, which is to carry two 12-in. guns instead of the 9.4-in. guns of former ships of that class. . . . The *Quarto* class [in Italy] 1911-12, 3250-3550 ts., 28 kts., have relatively high speed, but are said to be bad sea-boats. The armament consists of six 4.7-in., six 3-in. guns, and two above-water 18-in. torpedo tubes. Provision is made for carrying 200 mines. . . . The Italians adopted the triple-gun

turret in the *Dante Alighieri*, 1910, 19,200 ts., and used this installation in the following ships except in the superfiring turrets, which are on the twin system. The armor protection of Italian battleships is characterized by great extension and very moderate thickness. In the *Andrea Doria* the side is almost completely covered with armor, the thickness ranging from 10 in. to 4 in. The vessels of the *Christoforo Colombo* class, 30,000 ts., 25 kts., now building, are to carry eight 15-in. and sixteen 6-in. guns. They seem to resemble strongly the *Queen Elizabeth*. . . . The *Satsuma* and *Aki*, the first battleships built in Japan, are a development of the intermediate *Kashima* type, but the *Kawachi* and *Settsu*, 1910-11, 20,800 ts., are pure dreadnoughts, carrying twelve 12-in. guns mounted in twin turrets, of which four are placed on the broadsides. In the *Fuso* class, 1914-17, 31,000 ts., 22.5 kts., the broadside installations are abandoned, and twelve 14-in. guns are mounted in triple turrets on the center-line. The secondary battery consists of sixteen 6-in. and four 3-in. guns, the latter for use against aircraft. . . . The Battleships *Tsukuba* and *Ikoma*, laid down in 1905, were designed for 20.5 kts., but in the *Kurama* and *Ibuki*, 1907, 14,600 ts., the speed was raised to 22 kts., 3 kts. more than in battleships of that date. These vessels were a modification of the *Vittorio Emanuele*. The next Japanese battle-cruisers, the four vessels of the *Kongo* class, 1912-13, 27,500 ts., 28 kts., were of a far more perfect design and represent the best practice in the construction of battle-cruisers. The main armament consists of eight 14-in. guns mounted on the *Michigan* plan, and the Japanese here, as in their battleships, retained the secondary battery, which consists of sixteen 6-in. guns. The light battery is of 3-in. caliber. A powerful armament of four double 21-in. torpedo tubes is carried. The maximum thickness of the belt is 10 in., which approaches that of contemporaneous battleships. . . . The *Pervozvannyi* class [Russia], 1906-07, and the *Gangut* class, 1911, are remarkable for the completeness of their protective system, the armor extending over practically the entire outer surface, but, as in the Italian ships, this is necessarily attained at the expense of thickness. The *Gangut* is quite similar to the *Dante Alighieri*, but, although 4000 ts. larger, its armament and external protection are, according to the published data, somewhat weaker and the speed somewhat smaller than in the Italian ship. Probably greater weight is devoted in the Russian type to armor decks and the under-water protection, or the published data are inaccurate."—W. Hovgaard, *Modern history of warships*, pp. 159, 157-158, 155-156, 196, 219, 231-232, 160-161, 196-197, 156-157, 155, 232-233, 157.

1914.—Strength of the Great Powers at the outbreak of the World War. See WORLD WAR: 1914: IX. Naval operations: a.

1914-1918.—World War lessons.—Usefulness of destroyers.—Mine layers and sweepers.—Smoke screens.—Sea-going battleships.—Light cruisers.—Torpedo vessels.—"In the recent war the usefulness of destroyers was fully demonstrated. In spite of the numerous fleet of such craft possessed by Great Britain, there seems to have been a constant scarcity of them throughout the war. In the North Sea, destroyers, assisted by submarines, appear to have performed the principal part of the reconnoitring, patrol, and blockading service. They were used extensively for escorting battleships and troopships, and successfully attacked battleships (*Goliath*) and cruisers (*Hamadieh* and *Takachio*). . . . In the spring of 1915, when active operations against the Dardanelles commenced, the

work of the destroyers became even harder. . . . In the battle of Jutland destroyers vindicated their position as an indispensable link in the organism of a modern fleet. Tactically destroyers were used as a screen for the capital ships, partly to protect them against submarines, partly against attacks from other destroyers. In the latter function they were often assisted by light cruisers. . . . They were used for direct attack on capital ships whenever opportunities offered, and when it was desired to head off the enemy, to open the range, or perform a critical maneuver. . . . On many occasions during the war destroyers carried out surprise night attacks by bombarding roadsteads and fortresses, a work for which they are well suited on account of their smallness and high speed. The most important duty of destroyers in this war, however, was the safeguarding of the lines of communication across the sea against attack by submarines. This duty comprised in the first line protection of transports of troops and army supplies of all kinds, but it included also protection of all merchant shipping, and as the war developed this problem became one of vital importance. Gradually, as the German submarines progressed in seagoing capacity and arteristic power, destroyers became more and more indispensable to combat them and a powerful artillery the first requisite. . . . In large seagoing destroyers the gun has now become the primary weapon, while the torpedo, although yet of importance, is a weapon of opportunity. . . . Since 1905 a great number of vessels in all navies were fitted out as 'mine-layers' and 'mine-sweepers.' . . . In this war mines were used on an unprecedented scale. The losses in warships due to mine attack aggregated for the Central Powers about 135,000 tons and for the Entente Powers about 200,000 tons, not including auxiliary cruisers and other special vessels. There was, moreover, an enormous destruction of merchant tonnage. The mine danger exerted a marked influence on the strategic conditions; it affected the relative importance of the various types of warships, and in some cases influenced their design. . . . The enormous proportions which the mine war had taken by this time is evidenced by the fact that during 1917 one thousand mine-sweepers were constantly employed around the British coasts, and a total of 4600 mines were swept up. Mine-sweeping, which at first was carried out with improvised means and methods, became a profession or art, which was practised methodically by crews trained and experienced in this particular service and in ships specially equipped for this purpose. It was preceded and assisted by a systematic exploration and reconnoitring of the suspected areas, and in this work not only patrol vessels but also all kind of aircraft were employed on an increasingly large scale. The production of mines attained unprecedented figures; in the United States alone it arose at the end of 1917 to one thousand a day. . . . The submarine mine is, more than any other weapon, American in origin and development. It was invented by an American about one hundred and fifty years ago, was for the first time applied on a large scale in the American Civil War, and reached its highest development in the North Sea barrage, which was due essentially to American initiative and efforts. In boldness of conception, in magnitude, as well as in energy and skill of execution the North Sea barrage surpassed everything heretofore attempted in that field. . . . Concealment as a means of protection, allowing temporary relief from attack by a superior enemy, was practised during the war on many occasions, and

often with important results. [See *WORLD WAR: Miscellaneous auxiliary services: VII.*] . . . Seagoing battleships must be able to navigate the ocean for extended periods, and should afford a dry and steady platform for the guns. They must therefore possess good seagoing capability as one of their fundamental qualities. The battles of the Dogger Bank and Falkland Islands, as well as several minor actions in the World War, have demonstrated the enormous value of combined superiority in speed and gun power. In fact, a ship possessing the speed-gauge and being armed with guns of superior power can annihilate a weaker enemy at extreme ranges with relatively small risk to itself. This two-fold superiority, for which we venture to propose the name of the 'speed-armament gauge,' must be a fundamental principle in battleship design. The principle of the speed-armament gauge is of paramount importance for battleships, but is of at least equal importance to battle-cruisers, and must indeed govern the design of all classes of vessels armed with artillery as their principal weapon. . . . For the torpedo-defence battery a caliber of 6 in. will probably remain adequate for the present. A battery of anti-aircraft guns, effective up to altitudes of at least 10,000 ft., must be carried in all battleships. As regards protection against attack by artillery, there appears no immediate necessity for augmenting the thickness of vertical armor, but it is likely that the horizontal armor protection will be further developed in view of the great angles of fall of projectiles at extreme fighting ranges, and the dangers of aerial attack. A more efficient under-water protection is imperatively demanded in order to meet the greatly enhanced submarine dangers. . . . Conning-towers should be further developed in direction of roominess and protection, permitting a concentration of all the controlling elements of the ship within one armored structure, so designed as to avoid mutual interference and the danger of simultaneous disarrangement of destruction of the various parts. . . . To the requirements here advanced must be added that of a great radius of action, necessitating a large supply of fuel. It is evident, therefore, that seagoing battleships must be in the future at least as large and probably larger than any vessels of this class now completed. . . . The limitation to an increase in size, imposed by the requirements to tactical and strategical divisibility of the forces, is essentially a financial one, and need not, so far, be considered by the great and wealthy nations. The only active limitations are those due to restrictions in the use of ports, docks, canals and channels. . . . Under modern conditions of warfare battleships are not self-contained tactical units. More than ever they require for their assistance and protection a variety of attendant ships of different types, the most important of which are battle-cruisers, light cruisers, destroyers, submarines, and aircraft. Each of these classes, besides being indispensable as tactical adjuncts to the battleships, also supplement them strategically and are required for a variety of independent duties. Depending upon the nature of the operations, a fleet of modern battleships needs also the more extraneous assistance of minesweepers, mine-layers, and a host of auxiliary vessels. Other types of ships, such as monitors, gun-boats, small submarines, and torpedo-boats, are required for local defence of and attack on coasts and harbors. . . . Light Cruisers should be at least as fast as battle-cruisers and should carry guns at least as powerful as those of enemy ships of their class. These claims may lead to an increase in displacement considerably beyond the now common

5000 ts., and possibly to a differentiation in large and small light cruisers in order to meet all the various requirements of the service. Since multiplicity of units is a fundamental claim in this class of vessels, it is well to be conservative in augmenting their displacement. Torpedo-Vessels should be at least as fast as light cruisers. The 4-in. gun and the 21-in. long-range torpedo will probably for some time to come remain the principal armament of large destroyers. The violent motions of this craft in a seaway render it unprofitable to go to larger caliber of the guns, since long-range fighting cannot be used with advantage on such an unsteady gun platform. Flotilla-leaders of more than 1500 ts. displacement may perhaps with advantage carry guns of 4.7-in. or 5-in. caliber."—W. Hovgaard, *Modern history of warships*, pp. 271-273, 275, 444-445, 449-451, 471, 477-481.

WASHINGTON, name for proposed state west of Pennsylvania. See NORTHWEST TERRITORY OF THE UNITED STATES: 1784.

WASHINGTON: Location.—Area.—Climate.—Resources.—Washington, the "evergreen state," is one of the Pacific coast states, and nineteenth in size of the states of the Union, to which it was admitted in 1889. It is bounded on the north by British Columbia, on the east by Idaho, on the south, by Oregon, and on the west by the Pacific ocean. In 1920 its population was 1,356,621. "Washington is located at the northwest corner of the United States directly west of the most accessible passes across the northern Rocky Mountains. It is therefore on the natural trade routes between the central states and the Orient. It is also the nearest shipping point to Alaska. . . . The state is roughly rectangular in form. The greatest length east and west is 360 miles and the greatest width 240 miles. Its total area is 69,127 square miles, including 2201 square miles of water surface. . . . [It] exceeds in area the New England states."—E. J. Saunders, *Physical geography of Washington* (*Journal of Geography*, May, 1916, p. 309).—"Washington is said to have all climates except the tropical. It is divided into two distinct divisions by the Cascade Mountains. On the west, the Puget Sound Country, there is really no winter and almost no ice or snow. Roses bloom in December and grass is green all the year round. . . . In Eastern Washington the climate is very different. It is much drier and somewhat colder in winter and dry and considerably warmer in summer. . . . In some sections of Eastern Washington irrigation is carried on, and enormous fruit, grain, and pasture crops are raised. The climate of both Eastern and Western Washington is entirely free from the sudden changes and variations of other sections. There are almost no thunderstorms; no cyclones or blizzards; no drought or floods; no sunstrokes; no insect pests, grasshoppers, army worms, chinch bugs, etc. . . . Different parts of the state vary so much in altitude, rainfall, quality of soil, etc., that almost any fruits except the citrus family will thrive and bear bountiful harvests somewhere."—W. C. Wolfe, *Washington, the evergreen state* (*Sketches of Washingtonians*, pp. 18, 22).—"Beginning at Mt. St. Helens on the south, and following to the International boundary on the north, crossing at times to the east, and veering at others to the west, the great mineral belt of Washington traverses the state, identifying itself with the Cascade range and its numerous and elevated spurs and foothills. . . . [The mineral wealth consists of] precious metals as well as of copper, lead, quicksilver, zinc, arsenic, antimony, molybdenum, nickel, cobalt, tungsten, titanium, quarries of granite, limestone, sandstone, marble, jasper, and serpentine beds of fire clay, kaolin, diatomaceous earth and pottery clays, veins of talc and asbestos and indications of petroleum."—J. C. Hubbart, *Metal mining* (*Sketches of Washingtonians*, p. 35).—See also U.S.A.: Economic map.

1803.—Basis of claim for American possession. —Louisiana Purchase. See LOUISIANA: 1798-1803.

1811-1846.—Early history of Washington and Oregon coincident.—Astoria.—"The history of Washington is a part of, and essentially the same as, the history of Oregon during its earlier years. The Washington of today was originally a part of that vaster Oregon which extended from California, then a part of Mexico, on the south, to an undefined boundary,—by many claimed to be in the line of 54° 40' north, or the southern boundary of Alaska, but finally fixed by the treaty of 1846 at the forty-ninth parallel,—and from the Pacific Ocean to the summit of the Rocky Mountains. Until California was acquired, at the close of the Mexican war in 1848, Oregon was the only territory owned or claimed by the United States, bordering on the Pacific. . . . The value of this vast region was for many years but lightly regarded either by our government or its people."—C. A. Snowden, *History of Washington*, v. 1, p. 3.—See also OREGON: 1808-1826.—"After the Louisiana purchase by the United States and the return of the Lewis & Clark expedition with their report upon the conditions which they found in the Pacific Northwest, . . . it became an open secret that the Americans and especially the great fur merchant of New York, namely John Jacob Astor, had designs upon the Columbia river basin. . . . The Nor'westers [the Northwest Company, an English firm] were quick to see the opportunity offered them by . . . the defenseless condition of the Astor establishment on the Columbia [1817]. . . . Without going into details, Duncan McDougal, the factor in charge at Astoria, sold out the whole Astorian enterprise on the Pacific to the Northwest Company on November 12th, 1813. The American flag was hauled down and the Union Jack was run up in its stead."—W. C. Brown, *Early Okanogan history*, pp. 2, 20.—"The real peopling of Washington was started by the Oregon Migration in the spring of 1843. This party, of more than one thousand people from Ohio, Indiana, Michigan, and other honest farmers of the middle west, had Marcus Whitman as one of the leaders and followed the Oregon Trail through the South Pass into the new country. Horace Greeley considered these people wholly insane but he lived to visit this region of marvelous possibilities and advised young men to go west. The long caravans crawling slowly over the plains and the mountains did not bring the people very rapidly. . . . The early comers spread over the new lands, selecting those sites that were best adapted for fishing, sawmills and trading posts."—W. M. Gregory, *Growth of cities of Washington* (*Journal of Geography*, May, 1916).—See also TRAILS: Transcontinental.—The extent of the claim upon the Oregon Territory made in 1846 by the United States government, based upon the settlements of these western pioneers, is a controverted question among American historians.—See also OREGON: 1818-1846; 1846-1855.

1848-1853.—Creation of Territory of Washington.—Political relations with Oregon Territory.—"In 1848 Oregon had been organized as a territory in which the settlers of the territory later to be known as Washington were included. [See OREGON: 1846-1855.] Just before it adjoined in 1851 the legislature of Oregon passed an act removing the capital of the territory from Oregon City to the new town of Salem. . . . When the time appointed for the next meeting of the legislature arrived, a majority of its members repaired to Salem, organized both houses [legislature and council] and proceeded to business. . . . At Ore-

gon City also appeared [Judge] Columbia Lancaster, sole member of the council, . . . Daniel F. Brownfield, sole representative of the north side of the river, and three other members of the lower house, and proceeded to organize a minority legislature, so far as such a body could be organized. . . . For seventeen days, Sundays excepted, these two minority houses gravely met and as gravely adjourned for want of a quorum. Then the presiding officers as gravely adopted a memorial to Congress, to which they affixed their official signature and adjourned without day. . . . Before the time arrived for the next meeting of the legislature, Judge Lancaster resigned his place [in the regular council] and Governor Gaines in November, 1853, called a special election to choose his successor. . . . The proclamation came so late there was not time to hold the election and get returns from the scattered communities interested in time for the member chosen to be present at the session of 1852-1853. . . . Thus for two successive sessions the settlers in northern Oregon were deprived of the services of nearly all of the few representatives allotted to them, and it is not surprising that they should feel that their interests were neglected, or that they should early begin to agitate for a legislature, all of which should be their own. . . . At the second celebration in Olympia on July 4, 1852 . . . the separation question was discussed with much enthusiasm. Before the meeting adjourned resolutions were adopted recommending that a general convention be held at Cowlitz landing on August 29, 1852. . . . On the appointed day twenty-six delegates assembled at Cowlitz. . . . [They] proceeded to prepare a memorial to Congress asking for the division of the territory; also for a military road from some point on the Sound to Walla Walla, and another from the Sound to the Columbian River. They also indicated the boundaries of twelve counties of which the new territory would consist, and asked that the benefits of the donation law might be extended to it when created. They then adjourned to meet again in the following May, when, if the prayer of their memorial was not granted, they proposed to proceed to the preparation of a constitution, after the manner of California, and ask for admission as a State. As the territory did not then contain more than twenty-five hundred or three thousand inhabitants, the action might by some be considered a little presumptuous. . . . [A subsequent convention was shortly called at Monticello.] The memorial which the convention had adopted was promptly sent to Washington with a letter to Governor Lane, who was now territorial delegate from Oregon at the national capital, asking that he would give it his cordial approval and support. It was soon followed by a similar memorial from the Oregon legislature, approving and recommending the separation. . . . These were laid before Congress by Delegate Lane, who gave them his hearty and vigorous support. There was now no slavery question to provoke discussion or opposition. Nobody called attention to, or seems to have thought of, the fact that the census, taken scarcely more than two years earlier, had shown only 1,040 people residing in the territory, or that the number now was scarcely more than three thousand. The bill met scarcely any opposition. During its consideration in the House, Representative Stanton of Kentucky had proposed to change the name of the new territory from Columbia to Washington, and this was immediately approved. No one cared

to withhold this honor from the Father of His Country, and on the second of March [1853], just as the thirty-second Congress, and Mr. Fillmore's administration, were drawing to a close, the bill passed and was immediately approved by the president."—C. A. Snowden, *History of Washington*, v. 3, pp. 195, 202-204, 210.

1863.—Idaho separated as territory. See IDAHO: 1863-1864.

1872.—Settlement of San Juan water boundary question. See SAN JUAN, OR NORTHWESTERN, WATER-BOUNDARY QUESTION.

1872-1890.—Development of the state's resources by new railroads.—Lumber industry.—In the seventies "came a rapid and a tremendous development when the great timber resources were suddenly made accessible by the railroads that were extended into this region with marvelous rapidity. One of the earliest railroads was at Walla Walla in 1876, its rails were wooden stringers covered with rawhide. Its traffic was frequently delayed by the starving coyotes eating the hide track which is a minor incident in the rapid railroad development that enabled the state to jump from the difficult trail and the slow caravan to the more expeditious steam road. In 1880 Washington had less than three hundred miles of railroad and in the decade that followed its mileage increased ten times and the same period had an increase of 375 per cent in population. These decades of wonderful growth in population were due to the sudden opening of the vast forests to lumbering. The railroad found a ready market in the east or at a shipping port on the coast for the lumber, the salmon, and the wheat. The western terminus of each road became a port for the outlet of the regions of production. Thus the gathering points for manufacture or for shipping were the places that had the greatest growth in the early development of the state's natural resources. . . . Washington has leaped from an undeveloped region of scattered sawmills and fishing ports to an urban state in which its percentage of urban people ranks eleventh among the states. The wagon road stage of development that stands in the growth of a community between the trail and the steam road was rapidly hurdled. Hence the rural life . . . developed slowly, . . . for the exploitation of the forests has offered a more rapid source of wealth than the slower process of soil cultivation. In the vigorous growth of the cities of the western part of the state the forests and the railroads have been controlling influences to which must be added the geographical advantage of their location on the salt water estuary of Puget Sound. This Inland Sea of the Northwest reaches nearly one hundred miles eastward with its narrow arms of deep navigable water that extend into the lands for more than a hundred miles to the north and south. This 'Harbour Country' offers to commerce more than 1,900 miles of shore line, many deep and easily accessible harbors surrounded by a land of equable climate. Further, this body of water is nearer Chicago, Alaska and Japan than is the rival harbor of San Francisco, and this is a great geographic advantage for Puget Sound in the competition for Pacific commerce. It is about Puget Sound that the most vigorous growth of cities has taken place. The counties contiguous to Puget Sound are about one fifth of the area of the state and yet they have more than one half of its total population. The railroads reaching westward to this Inland Sea have made cities where they

touch the open and navigable water of the Sound. The growth and development of these railroad and port towns has been due at first to the lumber, then to the fish, and later to the rich resources of Alaska and the extensive markets of the Far East. The materials and outfits for the Alaskan development have been shipped largely from the Puget Sound ports and in return they have controlled the Alaskan products. In the Far East markets the Puget Sound ports show their advantage in distance by their greater imports of raw silk and far greater shipments of iron products than San Francisco. Seattle [became] the first city of the Northwest because it has the most advantageous site on Puget Sound for the Union of sea commerce and land trade. . . . Spokane, the second city of the state, began with a saw-mill and three men in 1872."—W. M. Gregory, *Growth of cities of Washington* (*Journal of Geography*, May, 1916, pp. 348-350, 352).

1889.—Admission to statehood.—Political conditions at time of admission.—"A time came at

But Washington was, at length, no longer alone in demanding statehood. Idaho formed wholly, and Montana formed partly out of the Oregon country, and partly out of the Louisiana purchase, and Dakota, large enough for two states, were likewise demanding admission, and Congress could defer their claims no longer. An enabling act authorizing five new states to be formed along the Northern border, between Minnesota and the Pacific, was passed by the house and Senate, and became law in February 1889. . . . In 1850 the donation law had been looked upon as an experiment of such extreme liberality, that its operations had been limited to three years, and then almost grudgingly extended to five. But now a settler who was American born, or who had become a naturalized citizen, might take a homestead wherever he could find an unoccupied or unreserved part of the public domain. In 1853 Congress felt that it had done a generous thing in giving two whole townships of wild land to found a territorial University in Washington, but this

SEATTLE, WASHINGTON, IN 1864

last when Congress could no longer postpone the demand of the far away territory for full membership in the family of states. . . . [At that period] the Civil War reconstruction, the resumption of specie payments, and transcontinental railroad building absorbed public attention. The west advanced steadily and even rapidly. Washington, its richest and remotest part, earliest began to claim, and then to urgently demand recognition of its right to statehood. Its legislators planned and worked according to the light that was in them. Its governors—Ferry among the first—urged the matter in their annual reports to the Interior Department, in their correspondence, and in their messages. But the East was conservative and even incredulous. . . . It seemed scarcely possible, no doubt, that the new region, so long known yet so little known to many, could deserve what it so persistently asked. Could it be that a sufficient number of people to form a state, had gone two thousand miles to find new homes, when Kansas, Iowa and Minnesota were scarcely more than safely in the Union? How could it be that this new territory had grown so rapidly, when Ohio and Indiana and Illinois had been so much more deliberate and dignified in their progress?

enabling act gave the new state two sections, in place of one in every township for public school purposes; 50 sections for public buildings; 90,000 acres for an Agricultural College and 100,000 acres for a Scientific School; besides liberal endowments in lands for Manual Schools and other institutions. . . . The [Constitutional] Convention had not proceeded far when it became apparent that some of its members also had some very troublesome views as to what a Constitution should be. Could they have had their way it would have comprised a full code of statutes, many of them impracticable, inoperative, and unrepeatable or amendable except by vote of the people. It took time, patience and hard work, principally in the Committees, to eliminate all these crude and impracticable theories. The work was also hindered and embarrassed to some extent by a numerous lobby representing various interests, but it was in time finally and satisfactorily accomplished. The Convention sat fifty-two days, Sundays included,—though no sessions were held on Sundays,—and concluded its work. The Constitution was published in full in most of the newspapers of the territory, and on October 1st, 1889, the people, by a satisfactory majority, rati-

fied and approved it. Two articles were submitted separately, one providing for female suffrage, and the other for prohibition, but both were defeated. The location of the Capital was also voted upon as a separate issue, the cities competing being Olympia, Ellensburg, North Yakima and Vancouver, and Olympia won by a practically decisive vote. In due course the Constitution, as adopted by the people, was approved by Congress, and President Harrison issued his proclamation announcing that fact. November 11th, 1889 was fixed upon as the day when the territorial should give place to the new state government, and on that day the state officers and members of the legislature who had been chosen on the day that the Constitution was voted upon, and a large number of citizens, including many of the oldest living settlers, assembled at the Capital. . . . Governor Miles C. Moore, last of the territorial executives, . . . turned the government over to Governor Ferry, who had been one of his predecessors as governor of the territory, and was now to be the first governor of the state. The other state officers took their oaths of office, the first legislature organized and began its session. It was just a hundred and one years, and about a hundred days, since Gray and Kendrick had first displayed the flag of the Union, which was not yet a Union, off the Coast of Oregon, and forty-four years since Simmons, Kindred, McAllister and their party had fixed their homes at Tumwater, almost within sight of the scene of these ceremonies. The wilderness of those days had disappeared, and now a new state was launched, to take its place as number 42 in the fleet of the Union, and hold it proudly forever."—C. A. Snowden, *History of Washington*, v. 4, pp. 384-385, 389-390.—See also U. S. A.: 1889-1890.

ALSO IN: E. S. Meaney and J. T. Condon, ed., *Washington's first constitution and proceedings of convention* (*Washington Historical Quarterly*, Jan., 1918-1919).—E. S. Meaney, *Cowlitz convention* (*Washington Historical Quarterly*, Jan., 1922).

1890-1917.—Irrigation program.—State governors.—"It is interesting to note that irrigation was not absent from the minds of the citizens when they met, in 1889, to make their State Constitution. Ar. XXI, Sec. 1, provides as follows: 'The use of waters of the State for irrigation, mining and manufacturing shall be deemed a public use.' The year 1890 marks a systematic organization of irrigation, and in order to protect all parties in their legal right in the use of water for irrigation an act was passed which provided that every person, association or corporation owning or claiming any interest in any ditch or canal, shall, on or before June 1, 1890, file with the Clerk of the County the name and full description, giving location of the headgate, name of stream from which it comes, amount of water claimed under such ditch, present capacity and the number of acres irrigated. It also provided that the Court might, when thought necessary, appoint a commissioner with qualifications, as theoretical and practical knowledge of the science of hydraulics, as will enable him to construct and operate measuring devices as may be necessary to place in any ditch. . . . The year 1890 also marks the beginning of the district organization for the irrigation. Utah has the honor of having enacted the first district law on January 20, 1865. The Wright law, an amendment on Utah's law, was enacted in California, March 7, 1887. On March 20, 1890, . . . an act was ratified by Washington's governor pro-

viding for the organization and government of irrigation districts and the sales of bonds arising therefrom. This law was amended in 1895 . . . and has been further improved, until today the 'District Law' is thought superior to the Water User's Association, the authorized organization of federal projects. The district system is being substituted by the Reclamation Service for its organization. The district system is a business organization of the stockholders of a project and the governing board levies assessments for the whole. In 1895, the Legislature provided for a Commission of Public Lands to take, select, manage and dispose of all public lands of the State of Washington. All proposals for construction of irrigation works shall be filed with him. . . . In February, 1904, Governor Henry McBride appointed an irrigation Committee for the purpose of investigating the subject of irrigation, and recommending such changes in the laws 'as may be deemed for the best interest of the State.' This Board stated that since the waters of the State belonged to it, its right should be asserted; and that the State should for the present permit private individuals and corporations to use its waters to aid in the development of its resources; and that the right to use water should be appurtenant to, and, under ordinary circumstances, inseparable from the lands. These were incorporated into legislation and the water code began to have laws of real benefit to the people. In the session of 1917, the office of State Hydraulic Engineer was created, and on June 15, 1917, the present incumbent began his work. His duty is to supervise all public waters within the State, their appropriation, diversion and use, and officers connected therewith. He shall inspect all dams, canals, ditches, irrigation systems and hydraulic power plants insofar as may be necessary to assume safety to life and property. All persons claiming a right to divert any waters shall petition the State Hydraulic Engineer, and he shall investigate and file findings with the Superior Court which shall proceed as in civil action."—R. M. Boening, *History of irrigation in the state of Washington* (*Washington Historical Quarterly*, Jan., 1919, pp. 40-41).—The governors of the state of Washington are as follows: Elisha P. Ferry, 1889-1893; John H. McGraw, 1893-1897; J. R. Rogers, 1897-1901; Henry G. McBride, 1901-1905; Albert E. Mead, 1905-1909; Samuel C. Cosgrove, 1909; M. E. Hay, 1909; Ernest Lister, 1913-1919; Louis F. Hart, since 1919.

1911-1920.—Ratification of Federal amendments.—State legislation.—Industrial welfare measures.—Washington ratified the Sixteenth Amendment to the United States Constitution (Income Tax) on Jan. 26, 1911; the Seventeenth Amendment (Direct Election of Senators) on Feb. 7, 1913; and the Eighteenth Amendment (Prohibition) on Jan. 13, 1919. The Nineteenth Amendment (Woman Suffrage) was adopted by the Washington state legislature on Mar. 22, 1920. In the matter of constructive state legislation, Washington has a significant record. The 1911 legislature passed a compulsory state insurance act, which was upheld by the state supreme court on September 27, 1911. The Washington law has proved one of the most successful in the history of workmen's compensation legislation. Under its operation were included 5,000 employers and more than 100,000 employees. During the first ten months of its administration there was paid into the state "accident fund" the sum of \$791,473.57. Of the 9,212 accidents reported in the

same period claims were adjusted in the case of 7,660 applicants at a cost to the state of fifteen cents for every dollar paid out in awards. The law not only provides for compensation in case of injury, but also sets aside a reserve to guarantee pensions during the life of widows or for workmen's children until they reach the age of sixteen. In November, 1911 a women's suffrage amendment to the state constitution was adopted, which provided for jury duty for women in the state courts. The experience under the operation of this provision was such to lead to a rapidly increasing number of women jurors and a corresponding decrease in the prejudice against the innovation. (See also SUFFRAGE, WOMAN: United States: 1851-1920.) Further legislation for the women of the state was enacted in 1913. Under the mother's pension and family deserter's acts it is the duty of each county to provide an amount of money sufficient to support women whose husbands are dead, or are inmates of penal institution or an insane asylum; also to care for women who have been deserted by their husbands, or whose husbands have been totally disabled, when such women are destitute mothers of children under fifteen years of age. Women who are not mothers are not benefited by the legislation. Allowances to mothers are made by the juvenile court in each county. In 1912 the voters approved an amendment to the constitution proposed by the legislature in 1911, providing for the initiative and referendum in legislation. During the same year impeachment investigation proceedings were begun against Judge Hanford of Seattle. The case originated in the Judge's revocation of Leonard Oleson's citizenship papers on the ground of his socialistic views. During the investigation Judge Hanford was attacked for drunkenness and conduct unbecoming a member of the Federal bench. His resignation, accepted by President Taft, ended the investigation. During the 1913 session of the legislature the law creating the Industrial Welfare Commission was passed and the organization of the Commission was effected in July. Its first action was an investigation into conditions affecting the employment of women workers throughout the state. Upon the basis of the information collected the commission fixed upon a minimum wage for each of three classes of employees, mercantile, factory, and laundry. The new wage was made obligatory in 1914 in each group. The fact that the law had given the commission control over the apprenticeship problem enabled that body to determine occupations requiring apprenticeship, period of time to be served, rate of wages to be paid and issuance of license to employer. [See also LABOR REMUNERATION: 1910-1920.] Through the interest of the farmers' granges the legislature was prevailed upon to create a department of agriculture in 1913. At the fall election in 1914 a test was made of the initiative and referendum adopted two years before. One of the most important measures initiated by petition provided for the abolition of private employment agencies by making it illegal to collect fees from persons seeking employment. The measure was approved by a majority of the voters. Governor Lewis F. Hart became governor in 1919.

1917-1918.—Part in the World War.—Washington contributed 45,154 men to the American Expeditionary Forces, or 1.2 per cent. of the total national forces. The great demand for spruce wood in the war industries was met largely from the magnificent forests of that western state.

1918.—Flood problem.—“The rapid fall on the western slope of the Cascade Mountains from the glacial line to the valleys below, coupled with the floating of immense quantities of large trees and other debris down the streams at every flood season [has given Washington] a unique flood problem from the beginning, and without precedent as to solution. The original estimate of the cost of work [of reclaiming devastated areas] was \$1,500,000, and it was agreed under the terms of the contract that a fund should be created in each county, to be known as the ‘Inter-County River Improvement Fund,’ and that there should be raised by general taxation in the two counties the sum of \$250,000 each year for six successive years. It was also agreed that a fund, to be known as the ‘Upkeep Fund,’ should be provided, producing the sum of \$50,000 per year for a period of ninety-nine years.”—W. J. Roberts, *Inter-county river improvement in the state of Washington* (American City, Dec., 1918, pp. 443-444).—See also CONSERVATION OF NATURAL RESOURCES: United States: 1918.

1918-1919.—General strike in Seattle. See LABOR STRIKES AND BOYCOTTS: 1918-1919: Seattle general strike.

1921.—Re-organization of government administration by civil administrative code.—Washington in 1921 undertook the complete revision of her state administration by passing a new civil code through which certain state offices were abolished, and the work of administering the state was concentrated and logically assigned. The new system of government was put into effect Apr. 1, 1921. “To Governor Louis F. Hart belongs the chief credit for the enactment of a code on the main lines of that of Illinois and of Nebraska. Upon Governor Hart's suggestion the special session of the legislature of 1920 authorized him to have such a code drawn to be presented to the regular session of 1921. In the preparation of this code Governor Hart had the assistance of Attorney-General L. L. Thompson, of L. D. McArdle, known for his intimate knowledge of our state government, and of Hon. Charles Gleason, an expert draftsman and attorney of Seattle. This code after consideration by the legislature was enacted into law, with slight change. The Civil Administrative Code . . . creates ten departments of the state government and over each department there is a chief executive officer known as a director. The ten departments are as follows: public works, business control, efficiency, taxation and examination, health, conservation and development, labor and industries, agriculture, licenses, fisheries and game. Each director is nominated by the governor and confirmed by the senate. The act also creates nine administrative committees of three members each and composed of the elective state officers. These nine committees are: state equalization, state finance, state highway, state capitol, state archives, state parks, state voting machine, state law library, state library. The governor and the ten appointed directors are to constitute the administrative board. The governor is the chairman. In popular language this board is called the governor's cabinet. The act gives it the power to adopt general rules for the transaction of business of the board. A majority of those present at any meeting of the board is given the power to determine and advise as to questions of policy in the administration of any of the departments of the state government created by this act. It is made the duty of the board to systematize

and unify the duties of the various departments of the state government created by this act; to classify subordinate offices, departments and institutions; to determine the salaries and compensation of subordinate officers and employees; to authorize in cases of emergency, any institution, state officer or department of the state government to incur liabilities to carry on their work until the meeting of the legislature. Each office created by this act became established on the first day of April. The salaries of the director are to be fixed by the governor. Each director is given power to make rules for his own department not inconsistent with state law. Each department is to maintain its principal office at the state capital, but branch offices may be established at other points in the state. While the governor is to nominate each director, the director names his own chief assistants, and these assistants select their own subordinates."—W. F. Dodd, ed., *Legislative notes and reviews (American Political Science Review, Nov., 1921, pp. 568, 569-570)*.

1922.—Reconstruction Congress.—"On January 9, a convention was held at Tacoma of more than 400 delegates from hundreds of organizations throughout the state of Washington. A permanent state-wide congress was organized under the title of the Washington Reconstruction Congress. . . . The program adopted at the Tacoma conference involves the reclamation and settlement of waste lands in cooperation with the Federal Government, construction of good roads and public improvements, vocational education and training, and the care and welfare of social dependents and delinquents."—H. A. Weston, "*Consolidated people's lobby*" for reconstruction in the state of Washington (*American City, Mar., 1919, pp. 214-215*).

WASHINGTON, D. C.: Area.—Population.—The city of Washington, the Federal capital of the United States, is part of the District of Columbia. (See DISTRICT OF COLUMBIA.) It is not a separate municipality, but subject to the same laws as the territory set aside by Congress for the seat of the Federal government. The District of Columbia has an area of 38,408 acres, of which the city occupies 6,654. The population of Washington in 1920 was 437,571. Its commercial importance is evidenced from the fact that it ranked third in the United States in 1921 as a port of entry for foreign tonnage.

1791-1800.—Foundation of the city.—L'Enfant's plan for its development.—Other architects.—National government removed from Philadelphia to Washington.—"One important duty which engaged the President's [Washington's] attention during part of the recess [of Congress] related to the purchase and survey of the new Federal city. The site chosen on the Potomac by himself and the commissioners in conformity with

law [see U. S. A.: 1780-1792], lay a few miles to the north of Mount Vernon on the Maryland side of the river, at the confluence of the Eastern Branch, and just below Georgetown. The tradition goes that, while a young surveyor scouring the neighboring country, Washington had marked the advantages of this spot for a great city. . . . The entire soil belonged in large parcels to a few plain, easy, Maryland farmers, who rode over to Georgetown for their flour and bacon. One of these only, David Burns, was obstinate about making terms. . . . The government was permitted to reserve all tracts specially desired at £25 an acre, while the land for avenues, streets, and alleys should cost nothing. Thus the Federal Capital came to the United States as substantially a free conveyance of half the fee of the soil in consideration of the enhanced value expected for the other half. Major Pierre Charles l'Enfant, a French engineer who had served in the Revolutionary war, was selected . . . to map out the new city [and to plan for its development as the new capital of the new republic]. . . . The highways were mapped and bounded . . . substantially as they exist at this day, being so spacious and so numerous in comparison with building lots as to have admitted of no later change, in the course of a century, except in the prudent direction of parking, enlarging sidewalks, and leaving little plats in front of houses to be privately cared for. Streets running due north and south from the northern boundary to the Potomac were intersected at right angles by others which extended east and west. To mar the simplicity of this plan, however, which so far resembled that of Philadelphia, great avenues, 160 feet wide, were run diagonally, radiating like spokes, from such main centres as Capitol Hill and the President's house. [See also CITY PLANNING: United States: Survey of New York]. . . . This new Capital, by the President modestly styled 'the Federal City,' but to which the commissioners, by general acclamation, proceeded in September to affix his illustrious name, was America's first grand essay at a metropolis in advance of inhabitants. . . . The founder himself entered with unwonted ardor into the plans projected for developing this the new Capital. Not only did he picture the city which bore his name as an instructor of the coming youth in lessons of lofty patriotism, but he prophesied for it national greatness apart from its growth as the repository of the nation. He believed it would become a prosperous commercial city, its wharves studded with sails, enjoying all the advantages of Western traffic by means of a canal linking the Potomac and Ohio rivers, so as to bring Western produce to the seaboard. The ten-mile square which comprised the territorial District of Columbia, inclusive of the Capital, stretched across the Potomac, taking Georgetown from the Maryland jurisdiction, and Alexandria from Virginia. . . . The first corner-stone of this new Federal district was publicly laid with Masonic ceremonies, and though the auction sale of the city lots in autumn proved disappointing, the idea prevailed that the government would gain from individual purchasers in Washington city a fund ample enough for erecting there all public buildings . . . needed."—J. Schouler, *History of the United States, v. 1, ch. 2, sect. 2*.—"L'Enfant was removed before having progressed far with the work, and Andrew Ellicott of Pennsylvania was appointed in his place. But the present widely admired plan of Washington had its origin in the artistic, creative mind of L'Enfant. In 1792,

Congress voted him a sum of five-hundred guineas, and deeded him a lot in Washington, as compensation for his services; but the designing of the capital city had been to him a work of art and love, and he rejected all considerations of payment. His dismissal had been brought about by his refusal to submit his plans to the Commissioners, his defense being that if his design were published speculators would seize upon the 'vistas and architectural squares and raise huddles of shanties which would permanently disfigure the city.' . . . The lots sold more readily abroad than at home, and

more practical drawings. . . . Sometime before this, and in answer to an advertisement by the Commissioners, James Hoban, an Irish architect, then acting as supervising architect of the Capitol, had submitted plans for a 'President's House,' and they had been accepted. Inasmuch as the Act of Congress creating the District decreed that the houses for Congress and the President should be ready for occupancy by the year 1800, the work on both was now carried forward vigorously. Washington, retiring to his home at Mount Vernon at the close of his second term in 1797, gave over

L'ENFANT'S PLAN OF WASHINGTON, 1792

A. Equestrian figure of George Washington. B. Historic column, intended for a mile or itinerary column from whose station all distances through the continent are to be calculated. C. Naval itinerary column proposed to be erected to celebrate the rise of a navy. D. Church intended for national purposes. E. Five grand fountains. F. Grand cascade formed of the water from the sources of the Tiber. G. Public walk, being a square 1200 feet through which carriages may ascend to the upper square of the federal house. H. Grand avenue, bordered with gardens on each side. I. President's park. K. Well improved field, being part of the walk from the president's house. L. Square. M. Avenue running under an archway, lined with shops.

for a time brought extravagant prices in London. However, comparatively few seem to have been disposed of, and the meagre return from sales was most unfortunate because the money was badly needed to pay for the first public buildings. Finally, the President made a personal appeal to Maryland, which lent \$100,000, not, however, without first securing the personal bond of the Commissioners. The Capitol was planned by Dr. William Thornton, an Englishman, who seems to have been a man of some natural talent, but unskilled in architecture. Stephen L. Hallett, a professional house-builder, also submitted specifications for the building, and there is good reason to suppose that Thornton's plans, as finally accepted, were considerably affected by Hallett's

the care of the Federal city to his successor, John Adams. President Adams first appointed a new architect for the Capitol, Stephen Hallett, who resigned after holding the position for one year. George Hadfield, an Englishman, next appointed, resigned in 1708, and left James Hoban the supervising architect, to finish the work alone. Congress having adjourned about May 20, 1800, to meet in Washington in November, the seat of government was removed from Philadelphia to Washington early in June of that year. When the government officials arrived, only the north wing of the Capitol had been completed, while the Treasury Building, a plain two-story structure of thirty rooms located on the site of the south front of the present edifice, was the only public building ready

for the occupancy of the executive departments. Work had been begun on the War Office at the southwest corner of the White House grounds. When Congress convened in November, little progress had been made. The few hotels and buildings of the city were so overcrowded that few of the members could secure quarters nearer than Georgetown, three miles away through mud and forest. Streets existed for the most part only on paper, and Pennsylvania Avenue, the principal thoroughfare, was really a bog lined with bushes. The only sidewalk, that from the Capitol to the Treasury, being made of stone chippings, so wounded the feet and tempers of pedestrians as to make the mud of the street preferable."—F. A. Vanderlip, *Washington, the nation's capital* (L. P. Powell, ed., *Historic towns of the southern states*, pp. 120-121, 125-126, 129).—President and Mrs. Adams moved into the new White House in November, 1800.

1802-1871.—First charter.—Amendments.—Mayorality government replaced by territorial government.—"On May 3, 1802, the first charter of the City of Washington was granted under an act of Congress incorporating the inhabitants, and dividing the city into three wards for the purpose of assessment. This charter provided for the government of the city by a Mayor, to be appointed annually by the President, and an elective Council of twelve members divided into a 'first chamber' of seven members, and a 'second chamber' of five members, the latter to be chosen from the whole of councillors. The continuance of this charter was limited to a period of two years. It was renewed at its expiration by an act approved February 28, 1804, for an added term of fifteen years. The act of renewal changed the council to consist of two chambers of nine members each, both of which were to be chosen by popular election. An act of Congress approved May 4, 1812, further amended the charter so as to provide for the election of the Mayor by the 'Councils,' which were to consist of a Board of Aldermen of eight members elected biennially, two from each ward, and a Board of Common Council, of twelve members, elected annually, three from each ward. This act provided for the redistricting of the city from time to time so as to equalize as nearly as possible the numbers of voters in the several wards. An entirely new charter was created by an act of Congress approved May 15, 1820. This act contained many provisions relating to the powers and duties of the Corporation but made little change in the form of government except to provide for the election of the Mayor biennially by popular ballot and for the annual election alternately of one of the two aldermen from each ward. By this act the city was provisionally divided into six wards. The charter of 1820 was by its terms to continue in force for twenty years. It was amended in minor respects in 1824 and 1826, and as so amended continued in force until 1848. Up to this time the city officers, aside from the Mayor and members of the two boards of the Council, had been appointed under authority of ordinances creating their offices. In 1848 the charter was amended to make the offices of assessor, register, collector and surveyor, elective. The charter, as amended in 1848, continued in force under its own provisions for a period of twenty years with some amendments made in 1864 and 1865. Upon the expiration of the term of this charter in 1868, it was continued for one year with an amendment making all officers who had previously been appointed by the Mayor, elec-

tive by the Mayor, Board of Aldermen and Board of Common Council in joint session. In 1869 these offices were again made appointive by the Mayor and in this form the charter continued in force until the Territorial form of government went into full effect June 1, 1871. . . . It was an inevitable result of the Civil War that the interest of the nation in its Capital should be keenly awakened. Almost immediately upon the close of that conflict, public sentiment was directed to the problem of placing the city in a condition fitting its character as the seat of the government of the reunited country. The consideration of this question was crystallized into law by the act approved February 21, 1871, creating the so-called 'Territorial' Government, which provided that on and after June 1 of that year the corporations of Washington and Georgetown, and the Levy Court of the County of Washington, which had jurisdiction over the portion of the District which was outside of those corporations, should no longer exist as such; and that beginning with that date the entire District of Columbia should constitute a single municipality under the name of 'The District of Columbia.' It was the passage of this act which gave the National Capital its full municipal impulse. From this time forward the municipal history of the City of Washington is identical with that of the government of the District of Columbia. . . . The new municipality consisted of a Governor; a Board of Public Works composed of the Governor and four other persons; a Secretary, a Board of Health; a Legislative Assembly, consisting of a Council of eleven members and a House of Delegates consisting of 22 members, and a Delegate in the House of Representatives of the United States."—W. Tindall, *Standard history of the city of Washington*, pp. 225-226, 247-248.

1873-1915.—Washington under territorial government.—Governor Shepherd's improvement of the city.—Corcoran Art Gallery.—Re-organization of form of government by the Organic Act of 1878.—"The District's second, and last, Governor, Alexander R. Shepherd, a native of Washington, who served from September 13, 1873, to June 20, 1874, backed by President Grant, put into practical effect the reawakened national concern. Imbued with the ideals of the first President, he set about with vigor and rough-shod methods to build up the long-neglected city. Streets and avenues that until then were in existence only on the map laid out under Washington's directions, were opened, graded and paved. Improvements all over the city were made and

all was done at the expense of the resident taxpayers. The unprecedented improvements and their accompanying expenditures, placing a new and heavier burden upon taxpayers, aroused a storm of protest such as to end the Shepherd régime and the territorial form of government."—G. H. Gall, *New Washington and the South*, p. 27.

—In 1874 there was opened to the public the collection of paintings and statuary presented to the city by William Wilson Corcoran, one of its philanthropic residents. The donor presented to the city at the same time an endowment gift of \$900,000 by which the Corcoran Art Gallery has been developed. A free art school is maintained in connection with this gallery. "Early in 1874, in compliance with a petition of W. W. Corcoran and many other leading property owners in the District, who charged the officers of the District government with unlawful conduct, extravagance and mismanagement, a Joint Select Committee of the Senate and House of Representatives was appointed by a resolution which originated in the House of Representatives on February 2, 1874. . . . The investigation conducted by this Committee showed a complicated and apparently insolvent condition of affairs which seemed to call for a readjustment of the municipal situation by disinterested hands. The Committee made a report on June 16, 1874. . . . The recommendations of the Allison Committee were put into effect by the speedy passage of the Act of Congress, approved June 20, 1874, which abolished the Territorial form of government and provided for a Commission of three members to be appointed by the President of the United States and by and with the consent of the Senate. This Commission was to exercise much the same power and authority as had been vested in the Governor and Board of Public Works under the Territorial government. To co-operate with and assist the Commission, the President was by this act authorized to detail an officer of the Engineer Corps of the Army who, under the general supervision of the Commissioners, was to have control of the engineering work of the municipality. . . . The act [Organic Act] creating the permanent Board of Commissioners was approved June 11, 1878. This act declared that all the territory ceded by the State of Maryland for the permanent seat of Government of the United States, should continue to be designated as the District of Columbia, and that the District of Columbia should 'remain and continue a municipal corporation.' By the terms of this act the two civil members of the Board of Commissioners were required to have been residents of the District for three years next preceding their appointment. Their salary was fixed at \$5,000 per annum. The first appointment was to be one Commissioner for one year and one for two years, after which their successors were to be appointed for three years."—W. Tindall, *Standard history of the city of Washington*, pp. 268, 271, 277.—"The question as to just what political rights the citizens of the District of Columbia should have is not by any means a new one. A hundred years ago it was a very live issue and was mentioned in several presidential messages to congress, and it has continued to break out at intervals during the whole century. [See DISTRICT OF COLUMBIA: Constitutional status.] . . . Closely bound up with the question of local self-government has been another, which was settled by the congress . . . at the same time that the commission form was adopted. This was

the question as to what was the proper proportion of the expense of local administration that congress should provide as compared with that to be furnished by the local taxpayers. For a long while the general theory prevailed that the city should bear its own expenses just as any other city should. But the theory was never strictly applied as from the very beginning congress, much in the manner of an indulgent parent giving money to a free-spending offspring, granted appropriations, guaranteed bond issues, and assumed part of the expenses for improvements. There has always been a more or less definite feeling that the status of the city was out of the ordinary, and that the dignity of a national capital demanded a standard of upkeep whose cost should properly not be shouldered entirely on the local citizens. The organic act of 1878 fixed the proportion to be paid by congress at one-half and this half-and-half arrangement has continued ever since. In a way it may be regarded as a compromise, the property holders and other taxpayers of the District consenting to forego a voice in the levying of taxes and other municipal matters and the national government consenting to pay half the expenses. . . . [Since this article was written congress has changed the proportion to 60 and 40 per cent, the larger amount to be paid from taxes raised in the District.]"—O. Wilson, *Disfranchised Washington* (*National Municipal Review*, Aug., 1920, pp. 489-491).

1890.—Meeting of first International American Congress. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1890.

1897.—Library of Congress completed. See LIBRARIES: Modern: United States: Library of Congress.

1900.—Centennial celebration.—In December, 1900, the one hundredth anniversary of the existence of Washington as the capital of the United States was celebrated. "The whole nation . . . gathered through its representatives in Congress and the governors of its States to celebrate the accomplishments of a century and to pledge new efforts to a realization of 'The Federal City' of which Washington dreamed; and the world looked on through the eyes of the diplomatic corps. The Park Commission plan, that embellishment, modernization, and extension of the Washington L'Enfant plan to meet the requirements of the greater city, was conceived, and its execution commenced within a year afterward [by a commission appointed by the United States Senate and composed of Daniel Hudson Burnham, C. F. McKim, Augustus St. Gaudens, and F. L. Olmsted, Jr.]"—G. H. Gall, *New Washington and the South*, p. 29.

1902.—Restoration of the White House. See WHITE HOUSE.

1902.—Unveiling of Rochambeau monument. See U. S. A.: 1902 (May).

1913.—Park Commissioners' plans.—Monuments and government buildings.—"With the overwhelming vote in Congress in February, 1913, authorizing the expenditure of \$2,000,000 for a great memorial structure to Abraham Lincoln and directing that the structure be raised on the site chosen for it eleven years before by the Park Commission, the keystone of the plan's main arch was dropped into place. Although never formally enacted into law, as was its prototype the Washington L'Enfant plan, the Park Commission

plan for the greater Washington has been followed consistently and every important new step in the upbuilding of the city for the past eleven years has been taken in conformity with it. To keep the plan intact and locate public structures in conformity with it has been no easy task during this period. . . . Practically every important proposed public building has involved a contest over its location, and in every instance selfish motives have entered that would make serious departure from the whole scheme. A bitter fight was waged over the location of the Great Memorial, but the advocates of adherence to the plan set for it by the Park Commission finally prevailed. The last important and greatest contest of all was that over the Lincoln Memorial in the closing days of the Sixty-second Congress. Another important section of the plan was also provided for by Congress on the fourth of March, 1913, the first large project in the section relating to the outer-park system. This was a provision for a connecting parkway along the valley of

ing occupies the square at the southeast corner of 14th Street and Pennsylvania Avenue. Although incomplete, a new building has been erected for the Department of Agriculture at a present cost of \$1,500,000, on the B Street, S. W. side of the Mall. A new building for the Government Printing Office has been constructed at a cost of \$2,500,000. Extensive additions have been made to the White House. . . . Two notable semi-public buildings, the Pan-American Union and the D. A. R. Continental Memorial Hall, have been erected in conformity with the plan of the Park Commission at a cost of nearly \$2,000,000, and are notable features in the ornamentation of the scheme. Just west of the Union Station, and on the plaza, there has been completed a new building for the Washington City Post Office at a cost of nearly \$3,000,000. Looking out upon Potomac Park just south of the Washington Monument a great new building for the Bureau of Engraving and Printing has been erected at a cost of \$2,500,000. Without exception, these buildings, to be erected, under con-

LINCOLN MEMORIAL BUILDING AT WASHINGTON, D. C.

Dedicated May 30, 1922

Rock Creek between Rock Creek and Potomac Park. Congress also made an appropriation for a survey and estimate for the memorial bridge proposed by the Commission to span the Potomac and form a public highway to the national cemetery at Arlington. . . . A conception of the physical development of the capital since 1900 can best be had from a brief review of the more notable accomplishments of the period. In that time the unsightly railway stations and yards, one at Sixth and B Streets, and the other at New Jersey Avenue and C Street, have been entirely cleared away. The Union Station, into which come all of the passenger trains entering the city, has been erected at a cost, including the vast plaza, of nearly \$20,000,000. Splendid new office buildings have been erected for the accommodation of Senators and Members of the House of Representatives, on two sides of the park on the east side of the Capitol, at a total cost of nearly \$7,000,000. A great new building for the National Museum has been erected at a cost of \$3,500,000 on the B Street, N. W., line of the Mall. At a cost of \$2,500,000, a new building has been erected to house the Government of the District of Columbia. This build-

struction, or about to be built, harmonize in design and location with the original plan of the founders, which was enlarged by the Park Commission in 1900. The Connecticut Avenue bridge over Rock Creek has been built at a cost of \$1,000,000. An ornamental bridge on Sixteenth Street has been constructed and work is now proceeding on another to carry Q Street across Rock Creek, the two costing \$435,000. Potomac Park has been largely developed and the Speedway completed. The Army War College, built at a cost of \$1,000,000, now adorns the point of land formed by the Anacostia River and the Washington channel of the Potomac. Additions to the park system of the District, costing for the ground alone about \$800,000, not including the Rock Creek Park connection, have also been made. Thus there has been expended about \$65,000,000 in this short period in carrying into execution the plan for beautifying the city. Remarkable progress in municipal improvements has also been made. A new sewerage disposal system has been instituted at a cost of \$5,264,520. A filtration plant, which has resulted in giving Washington an abundant supply of pure water has been built at a cost of \$3,500,000. The rail-

road grade crossings of the city have been abolished at a cost to the railroad companies of about \$15,000,000, and to the United States and the District of Columbia of \$3,000,000."—G. H. Gall, *New Washington and the South*, pp. 29-32.—See also CIVIC BEAUTY: Washington, D. C.

1917-1920.—Housing problem.—With the increased activity of all government departments in Washington following the declaration of war on Apr. 6, 1917, the influx of extra clerical workers estimated at about 60,000, strained the housing capacity of the city to an unprecedented degree. Buildings were commandeered by the government, and many temporary structures were erected. The prices of hotels and boarding houses rose exorbitantly, and the city faced serious economic conditions.—See also HOUSING: United States: National Housing Association.

1919.—Race riots.—Pershing's reception by Congress.—"Serious race riots lasting for several days in Washington, . . . left a toll of dead among the white and black participants and spread a reign of terror throughout [the city], . . . never before experienced in . . . [its] history. . . . The riots in Washington began on Saturday, July 19, 1919. They were occasioned by long continued and repeated reports of assaults by negroes on white women. Soldiers, sailors, marines, and civilians made violent attacks on negroes in the Centre Market district in the heart of the city. [The riots lasted about a week.] Seven men, four colored, were killed, and more than seventy were wounded. . . . The rioting was the most serious since the days following the Civil War."—N. Y. *Times Current History*, Aug., 1919, p. 453.—See also RACE PROBLEMS: 1905-1921.—General Pershing's return to the United States after the World War was the occasion for a formal recognition of his services to the country tendered him by a joint session of Congress on Sept. 18, 1919.

1920.—Zoning ordinance.—"On March 1, 1920, an act of congress provided for the creation of a zoning commission for Washington, consisting of the commissioners of the District of Columbia, the superintendent of public buildings and grounds, and the superintendent of the capitol buildings and grounds. The act provided that the engineer commissioner of the district should act as chairman of the zoning commission, that employes of the several departments of the district government might be used for the preparation of a zoning plan, an appropriation of \$5,000 was made for the expenses of the commission. The act also provided that the work should be completed not later than September 1, 1920. Owing to pressure of work in the district, consideration of the zoning plan was not undertaken until May 1, when a definite program of procedure was outlined which provided for the preparation of the various study maps not later than July 1, preparation of the tentative use-height-and-area zone maps and ordinance by August 1. The week of August 9 was devoted entirely to public hearings, after which the plan was revised in accordance with suggestions made at the hearings and by numerous individuals and organizations. The plan was officially adopted and became effective August 30, 1920. Provision is made for four districts (residential, first commercial, second commercial, and industrial); four height districts (35 feet, 55 feet, 85 feet, and 110 feet); and for four area districts." *National Municipal Review*, Dec., 1920, pp. 799-800).

WASHINGTON CONFERENCE ON LIMITATION OF ARMAMENTS (1921-1922).—

"The objects of the international conference which sat in Washington from November 12, 1921, to February 6, 1922, were set forth in President Harding's formal invitation of August 11, 1921, to Great Britain, France, Italy and Japan. [See U. S. A.: 1921 (July-August): Conference for the limitation of armament.] (Note.—On July 10, 1921, the department of state announced that these powers had been 'approached with formal but definite inquiries' on the subject.) These objects included two distinct topics, limitation of armament, and Pacific and Far Eastern questions. The problem of an association of nations, emphasized by the Republican platform of 1920 and various addresses by President Harding, lay in the background though not on the formal agenda, published September 21, 1921. The conference consisted of plenary sessions and committees. The plenary sessions were formal occasions attended by all the delegates, in which announcement was made of programs for discussion or agreements reached. They were not intended for negotiation but for declaration. . . . [They] were open to members of the Senate and House of Representatives, representatives of the press and such of the public as had cards of admission from the state department. The delegates sat at a 'U'-shaped, green-covered table with Mr. Hughes as chairman at the head of the 'U.' The remaining American delegates sat at his right, the British at his left and then in regular alternation the French, Italian and Japanese delegations. Thus, as is customary in such gatherings, an alphabetic order was followed. The powers attending merely the Far Eastern but not the Limitation of Armament Conference sat at the ends of the 'U' in a similar order, Belgium, China, Netherlands, Portugal. In the center of the 'U' sat the secretary of the conference and the official interpreter, M. Cameflynck, ready to repeat instantly every English speech in French and vice versa, for both these languages were official in the conference. Back of the delegates sat their techni-

cal experts. . . . The delegations were assisted by technical experts. Of these Japan had the most. . . . 'One hundred millions frankly want less of armament and none of war.' Thus President Harding struck the keynote of the conference at its opening meetings . . . November 12, 1921. . . . After President Harding's address of welcome, Secretary of State Hughes was elected chairman and surprised the conference and the world by laying down a concrete program for the limitation of naval armaments. On November 14 a session was held in which Mr. Balfour for Great Britain, Premier Briand for France, Admiral Baron Kato for Japan and Senator Schanzer for Italy accepted the American proposal 'in principle.' Committee negotiations upon the details of this proposal began at once as also upon the Far Eastern problems, but before any conclusions had been reached another plenary session was held, on November 21, to afford Premier Briand the opportunity to say that France was unwilling to discuss an agreement for the limitation of land armament until Germany was 'morally' as well as 'physically' disarmed. He cited passages from General Ludendorff's recent book to prove that this happy state had not been reached. Delegates of the other powers diplomatically voiced their disappointment, Senator Schanzer of Italy expressing the hope, doomed to disappointment, that the land armament item on the agenda would not be abandoned."—Q. Wright, *Washington conference (American Political Science Review, May, 1922, pp. 285-287)*.

The American proposal embodied four general principles:

(1) That all capital shipbuilding programs, either actual or projected, should be abandoned; (2) that further reduction should be made through the scrapping of certain of the older ships; (3) that in general, regard should be had to the existing naval strength of the powers concerned; (4) that the capital ship tonnage should be used as the measurement of strength for navies, and a proportionate allowance of auxiliary combatant craft prescribed. In accordance with these principles the United States offered to scrap thirty capital ships, with an aggregate tonnage (including that of ships in construction, if completed) of 845,740 tons; Great Britain was called upon to scrap a tonnage of 583,375; Japan, 289,100 tons. With respect to replacement, the United States proposed that it be agreed that the first replacement tonnage shall not be laid down until ten years from the date of the agreement, and that replacements be limited by an agreed maximum of capital ship tonnage as follows: For the United States, 500,000 tons; for Great Britain, 500,000 tons, and for Japan, 300,000 tons. Two further conditions were proposed, that, subject to the ten year limitation above fixed and the maximum standard, capital ships may be replaced when they are twenty years old by new capital ship construction; and that no capital ship should be built in replacement with a tonnage displacement of more than 35,000 tons. With regard to the naval power of France and Italy, in view of certain extraordinary conditions due to the World War affecting the existing strength of those two countries, the United States did not consider necessary a discussion at that stage of the proceedings of the tonnage allowance of these nations, but proposed that it be reserved for the later consideration of the conference. With regard to auxiliary combatant craft, it was proposed that the total tonnage of cruisers, flotilla leaders and destroyers allowed each power should be—for the United States, 450,000 tons; for Great Britain,

450,000 tons, and for Japan, 270,000 tons. It was provided, however, that no power party to this agreement whose total tonnage in auxiliary surface combatant craft on Nov. 11, 1921, exceeded the prescribed tonnage should be required to scrap such excess tonnage until replacements began, at which time the total tonnage of auxiliary combatant craft for each nation should be reduced to the prescribed allowance. In submarines, the United States and Great Britain were to be allowed 90,000 tons each, and Japan 54,000 tons; the tonnage of airplane carriers allowed was 80,000 tons each for the United States and Great Britain and 48,000 tons for Japan. The limitation of naval aircraft was not proposed owing to the fact that naval aircraft may be readily adapted from special types of commercial aircraft.

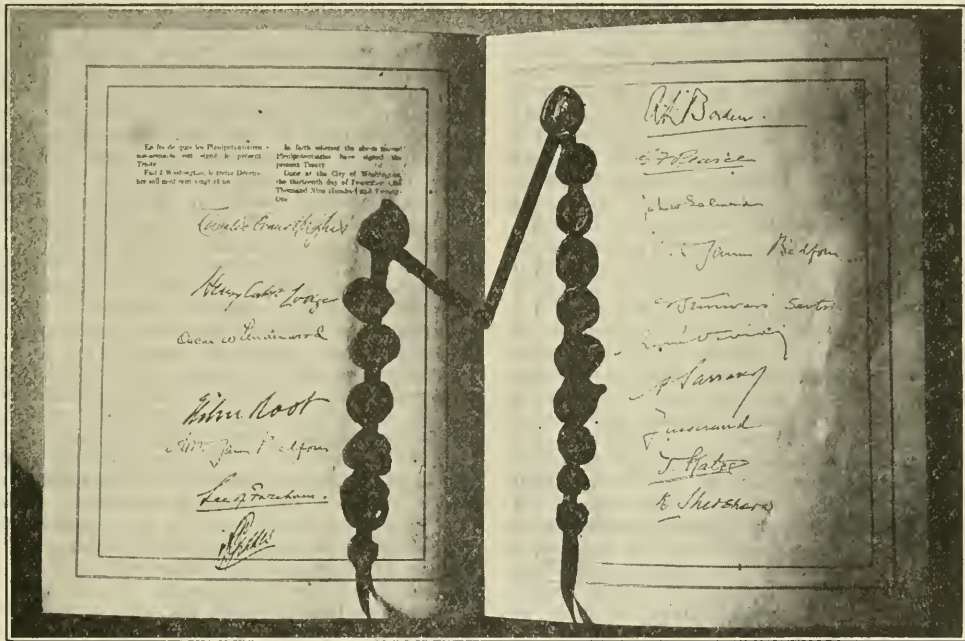

The results of the conference may be summarized as follows:

1. A treaty signed Feb. 6, 1922, between the United States, the British empire, France, Italy and Japan, limiting naval armament. The contracting powers agree that in existing warships (specified by names) the United States shall retain a total tonnage of 500,650, which, on the completion of the two ships of the *West Virginia* class and the scrapping of the *North Dakota* and *Dela-ware*, would be raised to 525,850 tons. The total tonnage of capital ships to be retained by the British empire was fixed at 580,450, but on completion of two projected vessels and the stipulated scrapping of four others, the total quota would stand at 558,950 tons. The metric tonnage to be retained by France was to be 221,170, while provision was made for new construction in 1927, 1929 and 1931. The Italian quota was designated at 182,800 metric tons, with new construction permissible during the same years as laid down for France. Japan undertook to retain a tonnage of 301,320. A capital ship is defined as a vessel of war whose displacement exceeds 10,000 tons (10,160 metric tons), or which carries a gun with a calibre exceeding eight inches (203 millimetres). No capital ship exceeding 35,000 tons (35,560 metric tons) standard displacement shall be acquired by, for, or within the jurisdiction of any of the contracting powers, and no capital ship shall carry a gun with a calibre in excess of sixteen inches (406 millimetres), while no war vessel hereafter laid down by any of the contracting powers, other than a capital ship, shall carry a gun exceeding eight inches in calibre. Except for conversion into two aircraft carriers, no warship designated to be scrapped may be converted into a war vessel. In time of peace, no preparations for the installation of warlike armaments on merchant vessels may be carried out beyond the necessary stiffening of decks for the eventual mounting of six-inch guns. The sale or transfer of warships from one power to another is prohibited; nor shall any power, while at war, convert to its own use any warship that may be under construction within its jurisdiction for another power. Furthermore, the United States, the British empire and Japan agree that the *status quo* at the signing of the present treaty shall be maintained, with regard to fortifications and naval bases, in their respective territories and possessions, as specified: (1) The insular possessions—present or future—of the United States in the Pacific ocean, except (a) those adjacent to the coast of the United States, Alaska, and the Panama canal zone, not including the Aleutian islands, and (b) the Hawaiian islands; (2) Hong Kong and insular possessions—present or future—of Great Britain in the Pacific.

east of the meridian of 110° east longitude, except (a) those adjacent to the coast of Canada, (b) the Commonwealth of Australia and its territories, and (c) New Zealand; (3) the following insular territories and possessions of Japan in the Pacific: the Kurile islands, Bonin islands, Amami-Oshima, Loochoo islands, Formosa and the Pescadores, or any other such insular possessions in the Pacific which Japan may hereafter acquire. This treaty to remain in force until Dec. 31, 1936, notice of intention to terminate the treaty to be given two years before the expiration of that date, whereupon the treaty will terminate for all of the contracting parties.—Based on official report on the Washington conference (67th Congress, 2nd Session, 1921-1922, v. 10, Senate Document no. 126).—See also U.S.A.: 1922 (January-September).

2. A treaty signed Feb. 6, 1922, between the United States, the British Empire, France, Italy

merchant vessel in conformity with these rules the existing law of nations requires it to desist from attack and from seizure and to permit the merchant vessel to proceed unmolested. Article II. The Signatory Powers invite all other civilized Powers to express their assent to the foregoing statement of established law so that there may be a clear public understanding throughout the world of the standards of conduct by which the public opinion of the world is to pass judgment upon future belligerents. Article III. The Signatory Powers, desiring to ensure the enforcement of the humane rules of existing law declared by them with respect to attacks upon and the seizure and destruction of merchant ships, further declare that any person in the service of any Power who shall violate any of those rules, whether or not such person is under orders of a government superior, shall be deemed to have violated the laws

FOUR-POWER PACIFIC TREATY, DEC. 13, 1921
Facsimile of the signatures of the principal delegates

and Japan, in relation to the use of submarines and noxious gases in warfare. The contracting parties, "desiring to make more effective the rules adopted by civilized nations for the protection of the lives of neutrals and non-combatants at sea in time of war, and to prevent the use in war of noxious gases and chemicals, have determined to conclude a Treaty to this effect . . . (declaring) Article I . . . that among the rules adopted . . . the following are to be deemed an established part of international law: (1) A merchant vessel must be ordered to submit to visit and search to determine its character before it can be seized. A merchant vessel must not be attacked unless it refuses to submit to visit and search after warning, or to proceed as directed after seizure. A merchant vessel must not be destroyed unless the crew and passengers have been placed in safety. (2) Belligerent submarines are not under any circumstances exempt from the universal rules above stated; and if a submarine cannot capture a

of war and shall be liable to trial and punishment as if for an act of piracy and may be brought before the civil or military authorities of any Power within the jurisdiction of which he may be found. . . . Article V. The use in war of asphyxiating, poisonous or other gases and all analogous liquids, materials or devices, having been justly condemned by the general opinion of the civilized world and a prohibition of such use having been declared in treaties to which a majority of the civilized Powers are parties, the Signatory Powers, to the end that this prohibition shall be universally accepted as a part of international law binding alike the conscience and practice of nations, declare their assent to such prohibition, agree to be bound thereby as between themselves and invite all other civilized nations to adhere thereto."—67th Congress, 2nd Session, 1921-1922, v. 10, Senate Document no. 126.—See also POISON GAS: Recent developments.

3. A treaty signed Dec. 13, 1921, between the

United States, the British empire, France and Japan "with a view to the preservation of the general peace and the maintenance of their rights in relation to their insular possessions and insular dominions in the region of the Pacific Ocean. . . . I. The High Contracting Parties agree as between themselves to respect their rights in relation to their insular possessions and insular dominions in the region of the Pacific Ocean. If there should develop between any of the High Contracting Parties a controversy arising out of any Pacific question and involving their said rights which is not satisfactorily settled by diplomacy and is likely to affect the harmonious accord now happily subsisting between them, they shall invite the other High Contracting Parties to a joint conference to which the whole subject will be referred for consideration and adjustment. II. If the said rights are threatened by the aggressive action of any other Power, the High Contracting Parties shall communicate with one another fully and frankly in order to arrive at an understanding as to the most efficient measures to be taken, jointly or separately, to meet the exigencies of the particular situation. III. This Treaty shall remain in force for ten years from the time it shall take effect, and after the expiration of said period it shall continue to be in force subject to the right of any of the High Contracting Parties to terminate it upon twelve months' notice."—*Ibid.*—See also U. S. A.: 1923 (March-September).—Accompanying this "Four-Power Treaty" a separate instrument, signed the same day, declared (1) "That the Treaty shall apply to the mandated islands in the Pacific Ocean; provided, however, that the making of the Treaty shall not be deemed to be an assent on the part of the United States of America to the mandates and shall not preclude agreements between the United States of America and the Mandatory Powers, respectively, in relation to the mandated islands. (2) That the controversies to which the second paragraph of Article I refers shall not be taken to embrace questions which according to principles of international law lie exclusively within the domestic jurisdiction of the respective Powers."—*Ibid.*—By a supplementary treaty signed Feb. 6, 1922, it was agreed that "the term 'insular possessions and insular dominions' used in the aforesaid Treaty shall, in its application to Japan, include only Karafuto (or the southern portion of the island of Sakhalin), Formosa and the Pescadores, and the islands under the mandate of Japan."—*Ibid.*

4. A treaty signed on Feb. 6, 1922, between the United States, Belgium, the British empire, China, France, Italy and Japan, "to adopt a policy designed to stabilize conditions in the Far East, to safeguard the rights and interests of China, and to promote intercourse between China and the other Powers upon a basis of equality of opportunity," sets forth that the contracting parties, other than China, agree "Article I (1) to respect the sovereignty, the independence, and the territorial integrity of China; (2) to provide the fullest and most unembarrassed opportunity to China to develop and maintain for herself an effective and stable government; (3) to use their influence for the purpose of effectually establishing and maintaining the principle of equal opportunity for the commerce and industry of all nations throughout the territory of China; (4) to refrain from taking advantage of conditions in China in order to seek special rights or privileges which would abridge the rights of subjects or citizens of friendly States, and from countenancing action inimical to the

security of such States. Article II. The Contracting Powers agree not to enter into any treaty, agreement, arrangement, or understanding, either with one another, or, individually or collectively, with any Power or Powers, which would infringe or impair the principles stated in Article I. Article III. With a view to applying more effectually the principles of the Open Door or equality of opportunity in China for the trade and industry of all nations, the Contracting Powers, other than China, agree they will not seek, nor support their respective nationals in seeking (a) Any arrangement which might purport to establish in favor of their interests any general superiority of rights with respect to commercial or economic development in any designated region of China; (b) any such monopoly or preference as would deprive the nationals of any other Power of the right of undertaking any legitimate trade or industry in China, or of participating with the Chinese Government, or with any local authority, in any category of public enterprise, or which by reason of its scope, duration or geographical extent is calculated to frustrate the practical application of the principle of equal opportunity. . . . China undertakes to be guided by the principles stated in the foregoing stipulations of this Article in dealing with applications for economic rights and privileges from Governments and nationals of all foreign countries, whether parties to the present Treaty or not. [In Article IV the signatories agree not to lend their support to the creation of spheres of influence in Chinese territory. In Article V China agrees not to exercise or permit any unfair discrimination on her railways, whether in respect of freight or passenger transport, while Article VI defines China's neutrality rights in any war to which she may not be a party. In Article VII the signatories agree to full and frank communication among themselves should a situation arise involving application of this treaty, and Article VIII invites the adherence of non-signatory states, which shall become effective on notification received by the United States government.]—*Ibid.*

5. A treaty signed on Feb. 6, 1922, between the United States, Belgium, the British empire, China, France, Italy, Japan, the Netherlands and Portugal, "with a view to increasing the revenues of the Chinese Government," embodies a resolution adopted on February 4, "with respect to the revision of Chinese customs duties, for the purpose of making such duties equivalent to an effective 5 per cent. *ad valorem*, in accordance with existing treaties concluded by China with other nations," though the provisions of this treaty "shall override all stipulations of treaties between China and the respective Contracting Powers which are inconsistent therewith, other than stipulations according most favored nation treatment." The treaty provides for a Tariff Revision Commission at Shanghai and stipulates the procedure to be adopted.

6. A treaty signed on Feb. 4, 1922, between the representatives of China and Japan "to settle amicably and in accordance with their common interest outstanding questions relative to Shantung," provides, in Article I, that "Japan shall restore to China the former German leased Territory of Kiaochow." Articles II to VIII deal with the appointment of a Joint Commission to arrange the details of transfer, the handing over of administrative powers, official documents, public property, etc. Articles IX to XI provide for the withdrawal of Japanese troops and the disposition of Chinese police or military force. Arti-

cles XII-XXII relate to the transfer of the Custom House of Tsingtao, of the railway properties and mines, and the terms of compensation from China to Japan. In Articles XXIII-XXVIII Japan renounces any attempt to establish an exclusive settlement within the territory and China agrees to open the entire area to foreign trade and to respect foreign vested rights; China agrees to purchase the salt industry from Japanese subjects, and to take over the submarine cables and two Japanese wireless stations for fair compensation.

7. A convention signed Feb. 11, 1922, between the United States and Japan relative to the Island of Yap. (See YAP.) "Article I. Subject to the provisions of the present convention, the United States consents to the administration by Japan, pursuant to the . . . mandate [awarded by the League of Nations to Japan], of all the former islands in the Pacific Ocean lying north of the Equator. Article II. The United States and its nationals shall receive all the benefits of the engagements of Japan defined in Articles 3, 4, and 5 of the aforesaid mandate, notwithstanding the fact that the United States is not a member of the League of Nations. It is further agreed between the High Contracting Parties as follows: (1) Japan shall insure in the islands complete freedom of conscience and the free exercise of all forms of worship which are consonant with public order and morality; American missionaries of all such religions shall be free to enter the islands and to travel and reside thereon, to acquire and possess property, to erect religious buildings and to open schools throughout the islands; it being understood, however, that Japan shall have the right to exercise such control as may be necessary for the maintenance of public order and good government and to take all measures required for such control. (2) Vested American property rights in the mandated islands shall be respected and in no way impaired; (3) Existing treaties between the United States and Japan shall be applicable to the mandated lands; (4) Japan will address to the United States a duplicate of the annual report on the administration of the mandate to be made by Japan to the Council of the League of Nations; (5) Nothing contained in the present convention shall be affected by any modification which may be made in the terms of the mandate as recited in the convention unless such modification shall have been expressly assented to by the United States. Article III. The United States and its nationals shall have free access to the island of Yap on a footing of entire equality with Japan or any other nation and their respective nationals in all that relates to the landing and operation of the existing Yap-Guam cable or of any cable which may hereafter be laid or operated by the United States or by its nationals connecting with the island of Yap. The rights and privileges embraced by the preceding paragraph shall also be accorded to the Government of the United States and its nationals with respect to radio-telegraphic communication; provided, however, that so long as the Government of Japan shall maintain on the island of Yap an adequate radio-telegraphic station, cooperating effectively with the cables and with other radio stations on ships or on shore, without discriminatory exactions or preferences, the exercise of the right to establish radio-telegraphic stations on the island by the United States or its nationals shall be suspended. Article IV. In connection with the rights embraced by Article III, specific rights, privileges, and exemptions, in so far as they relate to electrical communications,

shall be enjoyed in the island of Yap by the United States and its nationals in terms as follows: (1) Nationals of the United States shall have the unrestricted right to reside in the island, and the United States and its nationals shall have the right to acquire and hold on a footing of entire equality with Japan or any other nation or their respective nationals all kinds of property and interests, both personal and real, including lands, buildings, residences, offices, works, and appurtenances. (2) Nationals of the United States shall not be obliged to obtain any permit or license in order to be entitled to land and operate cables on the island or to establish radio-telegraphic service, subject to the provisions of Article III, or to enjoy any of the rights and privileges embraced by this article and by Article III. (3) No censorship or supervision shall be exercised over cable or radio messages or operations. (4) Nationals of the United States shall have complete freedom of entry and exit in the island for their persons and property. (5) No taxes, port, harbor, or landing charges or exactions of any nature whatsoever, shall be levied, either with respect to the operation of cables or radio stations, or with respect to property, persons, or vessels. (6) No discriminatory police regulations shall be enforced. (7) The Government of Japan will exercise its powers of expropriation in the island to secure to the United States or its nationals needed property and facilities for the purpose of electrical communications if such property or facilities can not otherwise be obtained. It is understood that the location and the area of land so to be expropriated shall be arranged between the two Governments according to the requirements of each case. Property of the United States or of its nationals and facilities for the purpose of electrical communication in the island shall not be subject to expropriation."—*Congressional Record, Feb. 21, 1922, pp. 3170-3172.*—"Far East and Pacific Questions were concerned primarily with China, but Pacific islands and Siberia were also on the agenda. The absence of Russia from the conference precluded action on the latter beyond a resolution taking cognizance of the Japanese declaration of intention eventually to withdraw its troops from Siberia and northern Sakhalien. No time was stated. . . . More important is the four power pact. . . . The agreement is to continue for ten years and more unless denounced with a year's notice. Its dual object from the American standpoint of superseding the Anglo-Japanese alliance and protecting the Philippines seems to have been achieved, the first expressly. The treaty is only between four powers and is confined to insular possessions and dominions in the Pacific, but in other respects it seems to bear a close resemblance to Article X of the League of Nations Covenant. . . . Mr. Lodge, however, in presenting the four power pact to the conference on December 10, distinguished it from this article, and in offering the treaties to the Senate on February 10, President Harding said: 'There is no commitment to armed force, no alliance, no written or moral obligation to join in defense, no expressed or implied commitment to arrive at any agreement except in accordance with our constitutional methods. It is easy to believe, however, that such a conference of the four powers is a moral warning that an aggressive nation, giving affront to the four great powers ready to focus world opinion on a given controversy, would be embarking on a hazardous enterprise.' . . . The United States will have less cause to worry about the Philippines . . . and the

Anglo-Japanese alliance has been superseded. Made in 1902 against Russia, renewed in 1905 and 1911 against Germany, it seemed in 1921 to have no objective unless the United States. Yet to denounce it after the loyal observance by Japan during the World War would hardly comport with British honor. The addition of France and the United States seemed the easiest way out and this was achieved by the four power pact."—Q. WEEKLY REST DAY. See **SUNDAY OBSERVANCE**.

WEEKS, John Wingate (1860-), American legislator and cabinet officer. Mayor of Newton, Massachusetts, 1903-1904; member of the House of Representatives, 1905-1913; United States senator, 1913-1919; secretary of war since 1921. See **U. S. A.**: 1921 (March): President Harding's cabinet.

WEHLAU, Treaty of (1657). See **BRANDENBURG**: 1640-1688.

WEIGHT-CLOCK, ancient invention for measuring time. See **INVENTIONS**: Ancient and medieval: Measurements.

WEI-HAI-WEI, territory with a capital of the same name, China, under British administration. The territory "covers an area of 285 square miles bordering the Yellow Sea, on the coast of the foreland of Shantung, facing northward. It comprises a coast-line about 70 miles in length, and is bounded by an (approximate) arc of a circle whose centre is that of the bay in which the harbour is situated. [The territory had a population of 154,416 at the 1921 census inhabiting 'upwards of 300 villages.] The resident white population is small (some 200 in all), consisting of a few officials, missionaries, and traders."—A. J. Herbertson and O. J. R. Howarth, *Oxford survey of the British empire* (Asia, pp. 448, 451).—See also **BRITISH EMPIRE**: Extent.—Under the terms of the Washington conference (1921-1922), Britain offered to restore it to China. Negotiations to carry this out began on October 2, 1922.

1895.—China sanctions temporary Japanese occupation. See **SHIMONOSEKI, TREATY OF**.

1898.—Lease to England. See **CHINA**: 1898 (March-July).

1914.—Occupied by British. See **WORLD WAR**: 1914: V. Japan: d, 2.

WEIMAR, town in the state of the same name in Germany, incorporated in the new republic of Thuringia, Dec. 24, 1919. The state had, in 1919, a population of 433,314. Formerly the town of Weimar was the capital of the grand duchy of Saxe-Weimar and is famous as the home of Goethe and Schiller. See **SAXONY**: 1180-1553.

WEINBERG, Battle of (1140). See **AUSTRIA**: 805-1246.

WEINSTOCK, Harris (1854-), American merchant, born in England. Appointed member

of the Industrial Relations Commission, 1913. See INDUSTRIAL RELATIONS COMMISSION.

WEISMANN, August (1834-1914), German zoölogist. See EVOLUTION: Weismann's theory of continuity of the germ plasm.

WEISSENBERG, Battles of. See GERMANY: 1620; FRANCE: 1870 (July-August).

WEITZEL, Godfrey (1835-1884), American general. During the Civil War sent to aid in the defense of Fort Pickens, Florida, 1861; in Lafourche campaign, 1862-1863; entered Richmond, 1865. See U. S. A.: 1865 (April: Virginia): Abandonment of Richmond.

WEKERLE, Alexander (1848-1921), Hungarian statesman. Member of the House of Deputies, 1886; minister of finance, 1889; premier, 1892-1894, 1906-1909, 1917-1918. WERGILD, Weregild, or Leodis.—"The principle that every injury to either person or property might be compensated by a money payment was common to all the northern nations. It was introduced into Gaul by the conquering Franks, and into Britain by the English invaders. Every man's life had a fixed money value, called the 'wergild.' In the case of a freeman, this compensation for murder was payable to his kindred; in that of a slave, to his master. The amount of the wergild varied, according to a graduated scale, with the rank of the person slain."—T. P. Taswell-Langmead, *English constitutional history*, p. 41.

WEST INDIES: Location.—Area.—Name.—Number of islands.—As colonial possessions of foreign powers.—"The West Indies extend from the tip of Florida's toe west and east a thousand miles out to sea. This is the most important section of the Caribbean world and comprises the four large islands of Cuba, Jamaica, Hispaniola (Hayti, or San Domingo) and Porto Rico. [See also **CUBA**; **JAMAICA**; **HAITI**; **HAITI, REPUBLIC OF**; **PORTO RICO**; **SANTO DOMINGO**.] The continental shore line of South America and Central America, and the old Spanish Main from the mouth of the Orinoco to the Yucatan channel complete the land boundaries of the American Mediterranean."—S. Bonsal, *American Mediterranean*, p. 1.—The West Indies are made up of two great groups of islands, the Greater Antilles and the Lesser Antilles, whose total area is over 100,000 square miles. Four foreign governments hold possessions in these islands, the United States, Great Britain, France, and Holland. The West Indies "owe their names to the fact that when they were discovered by Columbus, the Genoese navigator believed that he had achieved

his ambition and had succeeded in reaching India by a western route. The name 'West Indies' was once of wider application than it is now. [See also AMERICA: 1493; 1493-1496; 1494.] . . . A large part of America thus became the 'West Indies,' but the term was eventually applied only to the islands in the Caribbean sea, and to adjacent parts of the mainland. The islands were also called the Antilles after Antilla or Antiglia, a mythical land which figures on old charts and maps 200 leagues to the West of the Azores or Western Islands. The most northerly of the West Indies are the Bahamas, which have a total area of 4,466 square miles. [See also BAHAMA ISLANDS.] Below them is the chain of large islands lying east and west, known as the Greater Antilles which consist of Cuba, an independent republic, by far the largest island in the West Indies, having an area of 44,000 square miles, with Jamaica (British, 4,207 square miles) just below its eastern end, Haiti or San Domingo (an island owned by independent republics, 29,830 square miles [formerly a French colony]), and Porto Rico (American, 3,600 square miles). To the east of Porto Rico are the Lesser Antilles lying mainly north and south, which comprise St. Thomas (American, 33 square miles), St. Croix (American, 74 square miles), St. John (American, 20 square miles) [all three islands, and a number of unnamed islands known as the Virgin islands and formerly owned by Denmark (see VIRGIN ISLANDS)]; another small group of islands, called also the Virgin Islands (British, 58 square miles); and in sequence below them, Anguilla (British, 35 square miles); St. Martin (Dutch and French, 38 square miles); St. Bartholomew (French, 8 square miles); Saba (Dutch, 5 square miles); Barbuda (British, 62 square miles); St. Eustatius (Dutch, 8 square miles); St. Kitts (British, 68 square miles); Nevis (British, 50 square miles [see NEVIS]); Antigua (British, 108 square miles); Montserrat (British, 32½ square miles); Guadeloupe (French, 619 square miles [see GUADELOUPE]); Marie Galante (French, 55 square miles); Dominica (British, 291 square miles); Martinique (French, 380 square miles); St. Lucia (British, 233 square miles); St. Vincent (British, 140 square miles); Barbados (British, 166 square miles [see BARBADOS]); Grenada and the Grenadines (British, 123 square miles); Tobago (British, 114½ square miles); and . . . Trinidad (British, 1,752 square miles). The Greater Antilles used to be called by the Spanish the *Islas de Sotavento*, or the Leeward Islands, owing to their being to leeward of the prevailing north-easterly trade winds, and, for the converse reason, the Lesser Antilles were known as the *Islas de Barlovento*, or Windward Islands, but these titles have been diverted to two British groups of islands."—A. E. Aspinall, *British West Indies*, pp. 7-8.—Curaçao (Dutch, 212 square miles) is the largest of a group of islands lying off the coast of Venezuela, and with them is known as Holland's Curaçao colony. See CURAÇAO.

British possessions.—"It will be seen from the above figures that the total area of the British West Indian Islands is less than a quarter of that of Cuba. For administrative purposes, however, British Guiana . . . [the] great colony on the north-east coast of South America, and British Honduras, on the coast of Central America, of which the areas are 90,277 square miles and 8,598 square miles respectively, are included in the [British] West Indies, with the interests of which they have much in common. . . . The British West Indies are divided into eight colonies or groups, namely, the Bahamas, Barbados, British Guiana, British Hon-

duras, Jamaica with its dependencies Turks and Caicos Islands and the Caymans, Trinidad and its ward Tobago, the Windward Islands, and the Leeward Islands. With the exception of some of the Bahama islands, all the West Indies are within the tropics."—A. E. Aspinall, *British West Indies*, p. 8.—"There are 130,000 East Indians in British Guiana, 110,000 in Trinidad, 18,600 in Jamaica and smaller numbers in some of the other colonies. Originally introduced into the British West Indies as indentured labourers on the sugar estates, most of them are now free from their indentures, many have become peasant farmers and some have acquired considerable wealth and occupy important positions. While the spending capacity of the East Indian population remains very low they have retained their national customs and tastes and therefore a regular demand for Indian produce exists and the trade is large enough to enlist the interest of exporters. The annual imports of rice alone into Trinidad, Barbados and Jamaica exceed 18,000 tons and the four largest colonies import at least 4,000,000 produce bags every year."—A. W. H. Hall, *Report on Economic and Financial Conditions in the British West Indies*, June 30, 1922 (*Great Britain Department of Overseas Trade*, p. 16).—See also BAHAMA ISLANDS; BARBADOS; GUIANA; HONDURAS, BRITISH; JAMAICA; TURKS AND CAICOS ISLANDS.

Dutch possessions.—Curaçao holds first place because geographically and commercially it is of all Netherlands possessions in the West Indies closest to the United States. Since the opening of the Panama Canal especially, it has gained a strategic position in the trade between the various hemispheres that makes it an object of Pan-American interest it could not claim before. The Colony of Curaçao is divided into two groups, the Leeward and the Windward Islands. To the former belong Curaçao proper, Aruba and Bonaire, to the latter St. Martin (which is partially French), Saba and St. Eustace. The distance between the two groups is from 200 to 600 miles. The largest of the six islands, Curaçao, after which the whole group has been named, measures about 300 square miles and has a population of about 35,000 of whom 15,000 reside in the capital of the island, Willemstad. . . . Curaçao is only on the first rung of the ladder to national prosperity. With the enterprise of its Government leaders, the progressive spirit and foresight of its many prominent merchants, with its strategic position as the key to the West Indies, with its uniformly excellent climate, and varied natural resources, it is fast becoming one of Holland's most cherished dependencies."—*Curaçao: Key to the West Indies* (N. Van Aken, ed., *Holland and her colonies*, Sept., 1921, pp. 11, 15).—Surinam (Dutch Guiana) has an area of 46,060 square miles and a population of 113,181. Formerly it belonged to Great Britain, but was exchanged at the Treaty of Breda in 1667 for the colony of New Netherlands. Later it was given back to England. The Dutch regained it in 1802. The population consists of Europeans, a few aboriginal Indians, negroes (who are in the majority) and coolies from India and China.—See also CURAÇAO; GUIANA: 1580-1814.

French possessions.—The French possessions in the West Indies consist of Guadeloupe, acquired in 1634; Martinique, acquired in 1634; and St. Pierre and Miquelon, acquired in 1635. "While the northern coast of Santo Domingo had been frequented by French adventurers as early as the year 1630, no claim to sovereignty over that territory had been made at first by the French crown. Although repelled at various times, the persistency

of the buccaneers had outlasted the spasmodic vigilance of Spain, and they had continued to grow in numbers and in daring. Upon the organization of the [French] Company of the West Indies, Louis XIV had placed the stamp of his royal approval on their encroachments by including in the patent of the French governor of Tortuga full jurisdiction over the settlements on the northern coast of Santo Domingo. Families were sent over from France, courts were established in the principal towns, and the region became an integral portion of the French colonial domain. By 1675 it was estimated that the French population in northern Santo Domingo numbered several thousand inhabitants, while Spanish settlements in the south contained only a scant fifteen hundred souls. This action on the part of Louis XIV seemed to indicate clearly the policy that he intended to follow in regard to Spanish rights in America. Spain confidently believed that the French settlements in Santo Domingo would be but a stepping-stone to more formidable aggressions on her mainland colonies, and that in such aggressions the pirate host in the Caribbean region would be utilized in hiding the true designs of the French until the desired usurpation should be successfully accomplished."—W. E. Dunn, *Spanish and French rivalry in the Gulf region of the United States, 1678-1702* (*University of Texas Bulletin No. 1705, Jan. 20, 1914, Studies in History, no. 1, pp. 8-9*).—See also GUADELOUPE; MARTINIQUE; SANTO DOMINGO.

United States' interests.—Purchase of Virgin islands in 1917.—"The slave holding party [of the United States] sought to acquire Cuba and Porto Rico, hoping to turn them into slave states; and President Polk even tried to buy Cuba from Spain. . . . Attempts were made by President Johnson in 1867 to acquire St. Thomas and St. John from Denmark, and by President Grant (1860-73) to acquire San Domingo, . . . but the Senate frustrated both."—J. Bryce, *American commonwealth, v. 2, p. 568*.—"By her policy toward Cuba [after the War with Spain, 1898] the United States gave the world a striking example of observing the plighted word even when contrary to the national interest. . . . For a century the United States had expected to acquire the 'Pearl of the Antilles.' Spain in the treaty of peace (1899) refused to recognize the Cuban government and relinquished it into the hands of the United States. The withdrawal of Spanish troops left the Cuban government utterly unable to govern, and the United States was forced to occupy the island. Nevertheless, the Government had begun the war with a recognition of Cuba's independence and to that declaration it adhered. The country gave the best of its talent to make the island self-governing as soon as possible. Harvard University invited Cuban teachers to be guests at a summer session. American medical men labored . . . to stamp out disease. General Leonard Wood as military governor established order and justice and presided over the evolution of a convention assembled to draft a constitution for the people of Cuba and to determine the relations of the United States and Cuba. These relations . . . were subsequently embodied in the Platt Amendment (March 2, 1901)."—C. R. Fish, *Path of empire (Chronicles of America Series, v. 46, pp. 201-202)*.—See also CUBA: 1901 (February-March).—"For three years Cuba remained an American possession . . . until, on May 20, 1902, Thomas Estrada Palma took his office as first president of Cuba Libre, and the island was launched forth as a new republic."—A. H. Verrell, *Cuba, past*

and present, p. 10.—See also CUBA: 1901-1902; 1902.—"For the United States to step into a foreign country as an administrator [as it did in the case of Haiti] was indeed a startling innovation. . . . On the other hand the development of such a policy was a logical sequence of the Monroe doctrine. . . . In 1915 the United States took the Island of Hayti under its protection by a treaty which not only gave the government complete control of the fiscal administration but bound it to land efficient aid for the preservation of Haitian independence."—C. R. Fish, *Path of empire (Chronicles of America Series, v. 46, pp. 268-269)*.—See also HAITI, REPUBLIC OF: 1911-1916; DOLLAR DIPLOMACY; U. S. A.: 1915 (August-September).—Porto Rico, which came into the possession of the United States by the treaty following the Spanish-American War, 1899, was organized as a dependency in April, 1900. (See PORTO RICO: 1900 [April].) The Virgin islands, or Danish West Indies, were purchased by the United States from Denmark in 1917, primarily for naval coaling stations, and placed under the administration of the United States Navy. See VIRGIN ISLANDS; U. S. A.: 1917 (March): Purchase of Danish West Indian islands; also Historical geography.

1897.—Report of a Royal Commission on the condition and prospects of the sugar growing colonies.—A state of increasing distress in most of the British West India colonies, caused by the depression of the sugar growing industry, led to the appointment, in December, 1896, of a Royal Commission "to make an inquiry into the condition and prospects of the colonies of Jamaica, British Guiana, Trinidad and Tobago, Barbados, Grenada, St. Vincent, St. Lucia, and the Leeward Islands, and to suggest such measures as appeared calculated to restore and maintain the prosperity of these colonies and their inhabitants." In the August following the commission made its report, stating that the sugar industry in the West Indies was in danger of great reduction, which in some colonies may be equivalent or almost equivalent to extinction. The commission reported as follows:

"The special remedies or measures of relief which we unanimously recommend are—(1.) The settle-

ment of the labouring population on small plots of land as peasant proprietors. (2.) The establishment of minor agricultural industries, and the improvement of the system of cultivation, especially in the case of small proprietors. (3.) The improvement of the means of communication between the different islands. (4.) The encouragement of a trade in fruit with New York, and, possibly, at a future time, with London. (5.) The grant of a loan from the Imperial Exchequer for the establishment of Central Factories in Barbados. The subject of emigration from the distressed tracts also requires the careful attention of the various Governments, though we do not find ourselves at the present time in a position to make recommendations in detail." The commission suggested that grants of money be made to Dominica and St. Vincent. A quarter of a century later (1922-1923), the British West Indies were producing 184,800 short tons of sugar.

1898.—Barbados devastated by tornado.—Ten thousand homes were destroyed on the island of Barbados on Sept. 10, 1898, when a tornado swept the island. St. Vincent and St. Lucia suffered from the same storm in great losses of life and property.

1899.—Porto Rico visited by hurricane.—Three-fourths of the Porto Ricans were made homeless by a terrific hurricane which visited the island on Aug. 7 and 8, 1899. The total loss of life in the West Indies was estimated at 5,000.

1902.—Martinique's volcanic disaster.—Mont Pelée, the volcano overlooking the city of St. Pierre on the island of Martinique, after a long period of inactivity, overwhelmed the city on May 8, 1902, destroying it, and the lives of many of its citizens by a rain of lava and fire. La Soufrière, the volcano on the neighboring island of St. Vincent, also broke into action.

1920-1922.—Proposed West Indian Council.—Associated West Indian Chamber of Commerce.—Canadian West Indian Agreement.—"During 1920 Sir Edward Davson, the President of the Associated West Indian Chambers of Commerce, formulated a scheme for a West Indian Council. The federation of the British West Indies, though undoubtedly a very desirable ideal, is for many reasons impracticable at the present time, and Sir Edward Davson therefore suggested that a Conference should be held to discuss the formation of a Central Council which should be advised by a number of sub-committees dealing with law, health, education, customs, police, commerce and agriculture. The formation of such a Council 'was in no way connected with the question of Federation' but 'would supply a complete system of West Indian co-operation.' The Colonial Office therefore invited the Colonial Governments to arrange for a Conference to be held in Trinidad in January, 1922. Unfortunately the purpose of this Conference was misunderstood, and as some of the colonies failed to send representatives, it fell through. When this became known Sir Edward

Davson immediately convened a meeting of the Associated West Indian Chambers of Commerce in Trinidad, and delegates from British Guiana, Barbados, Grenada, St. Lucia, St. Vincent, Montserrat, Antigua, St. Christopher and Nevis attended. Resolutions were adopted relating to the following subjects, namely, the sugar crisis, increased preference by the United Kingdom and Canada, steamship and telegraphic communications, the West Indian Central Conference, currency, the Hague Rules, freight rates, etc. This meeting had been arranged to coincide with Mr. [Leonard] Wood's visit to Trinidad, and before the delegates separated the principal resolutions were discussed with him. . . . All the West Indian colonies except Bermuda have now [1922] introduced new tariffs to give the different degrees of preference arranged for it in the agreement, and since the beginning of 1921 the Canadian Government Merchant Marine have been running a three-weekly passenger and freight service to the Leeward and Windward Islands, Barbados, Trinidad and British Guiana."—A. W. H. Hall, *Report on Economic and Financial Conditions in British West Indies, June 30, 1922 (Great Britain, Department of Overseas Trade)*.—See also CANADA: 1920: Canadian tariff.

WEST POINT.—Early in the War of Independence, the need of fortifying the Hudson river at its narrow passes was seen. In the spring of 1778, "a committee of the New York Legislature, after surveying several sites, unanimously recommended West Point as the most eligible. Works were accordingly commenced there under the direction of Kosciuszko. . . . The principal redoubt, constructed chiefly of logs and earth, was completed before May. . . . At the close of 1779, West Point was the strongest military post in America. In addition to the batteries that stood menacingly upon the hilltops, the river was obstructed by an enormous iron chain. . . . West Point was considered the keystone of the country during the Revolution, and there a large quantity of powder, and other munitions of war and military stores, were collected. These considerations combined made its possession a matter of great importance to the enemy, and hence it was selected by Arnold as the prize which his treason would give as a bribe. [See U.S.A.: 1780 (August-September).] When peace returned, it was regarded as one of the most important military posts in the country, and the plateau upon the point was purchased by the United States Government. . . . The Military Academy at West Point was established by an act of Congress which became a law on the 16th of March, 1802. Such an institution, at that place, was proposed by Washington to Congress in 1793; and earlier than this, even before the war of the Revolution had closed, he suggested the establishment of a military school there. But little progress was made in the mat-

ter until 1812."—B. J. Lossing, *Field book of the Revolution*, v. 1, pp. 702-706.—From the opening of the academy in 1802, when the Corps of Engineers was stationed there, until the close of the World War, November, 1918, it had graduated 6539 cadets. Then because of the war two classes were graduated in advance of their normal time, and since then, November, 1918, 816 new students have been admitted, while there were 483 in the fourth class. The roll of instructors in 1920 counted 159, and the library more than 106,284 volumes.—See also CONSTITUTION ISLAND.

WEST SPITSBERGEN, or New Friesland. See SPITSBERGEN.

WEST VIRGINIA: Location.—Description.—Area.—Population.—Resources.—West Virginia, known as the "Pan-handle State," is the fortieth in size of the states of the Union to which it was admitted in 1863. "It is bounded on the north by Ohio, Pennsylvania, and Maryland; on the east, by Pennsylvania, Maryland, and Virginia; on the south by Virginia and Kentucky; and on the west by Kentucky and Ohio. West Virginia is the most irregular in shape of all the states of the American Union. The total area of the state is 24,715 square miles; of this, 24,580 square miles . . . are land, and 135 square miles water surface. West Virginia has a wealth of natural resources. In 1920 she was the second state in coal production in the United States, having mined 75,500,000 tons. In the production of natural gas she led all the states in the Union. In petroleum production she stood eighth. West Virginia possessed more hard wood than any other state except Arkansas. In her steel industry she ranked sixth. In 1920 her population was 1,463,701.—See also U. S. A.: Economic map.

1609-1863.—Included in Virginia.—"What is now West Virginia was not included in the [grant given by James I to the Virginia Company of London on Apr. 10, 1606]; . . . but this was afterwards done by the sixth section of the second Charter granted to the Virginia Company, bearing date May 23, 1609, when the boundary of the Virginia colony was so enlarged as to include 'all those lands, countries, and territories situate, lying, and being in that part of America called Virginia, from the point of land called Cape or Point Comfort, all along the sea coast to the northward two hundred miles; and from the said point of Cape Comfort, all along the sea coast to the southward two hundred miles, and all that space and circuit of land, lying from the sea coast of the precinct aforesaid, up into the land throughout from sea to sea west and northwest,'—that was, from the Atlantic to the Pacific Oceans. The zone within this grant being four hundred miles wide, of course included the present State of West Virginia. (Henning's 'Statutes at Large' of Virginia, Vol. 1, p. 88.) . . . She was, therefore, a part of Virginia from 1609 to 1863—a period of 254 years; and throughout this length of time they had one common interest in the literature of those States"—S. Myers, *History of West Virginia*, v. 1, pp. 31, 51.

1632.—Partly embraced in the Maryland grant to Lord Baltimore. See MARYLAND: 1632.

1670-1727.—Early exploration.—First settlers.—"It is probable that the first white men who saw any part of the eastern portion of the State of West Virginia were those composing the party under John Lederer, a German explorer in the service of Sir William Berkeley, Colonial Governor

of Virginia. In company with Captain Collett, nine Englishmen and five Indians, he, on August 30, 1670, set out from York River and proceeded by way of the Rappahannock, near the present city of Fredericksburg; thence to the mouth of the Rapidan River; thence along the north side of the Rappahannock to the base of the Blue Ridge; and thence to the summit of the mountain barrier, from which, at a point south of the present Harper's Ferry, the explorers looked down upon and across the Lower Shenandoah Valley—now included in the counties of Jefferson and Berkeley—a first view of the old part of West Virginia."—S. Myers, *History of West Virginia*, v. 1, p. 53.—"As early as 1670 and 1671 Henry Batts reached the valley of New River. A period of forty-five years followed before another attempt at exploration was recorded. In 1716 Governor Spotswood, of Virginia, led a party of explorers over the Blue Ridge, across the Shenandoah River, and to the eastern base of the Alleghanies; but he did not reach the present territory of West Virginia. Within nine years after that time the Potomac River, above its passage through the Blue Ridge, had been explored; and twenty years after Governor Spotswood's expedition, William Mayo ascended to the very source of the Potomac, passed the summit of the Alleghanies, and discovered tributaries of Cheat River, in the present county of Tucker. There is reason to believe that the Kanawha Valley, as far west as Charleston, had been visited before that time."—R. E. Fast and H. Maxwell, *History and government of West Virginia*, p. 11.—"About the year 1725 John Van Meter, a representative of an old Knickerbocker family early seated on the Hudson, traversed the valley of the South Branch of the Potomac—the Wap-pa-tom-i-ca of the Indians. He was an Indian trader, making his headquarters with the Delawares, on the Susquehanna. Thence he made journeys far to the southward, to trade with the Cherokees and Catawbas. It was he who first told the story of the wonderful fertility of the land in the Lower Shenandoah and South Branch Valleys. In 1727 a number of Germans from the valley of the Susquehanna in Pennsylvania crossed the Potomac . . . and founded a village which they named New Mecklenburg [the first settlement in West Virginia]."—S. Myers, *History of West Virginia*, v. 1, p. 55.

1732-1770.—Early settlers.—Scotch-Irish.—Quakers.—One of the first settlers was "John Lewis [who], with the aid of his sons, constructed from native stone the walls of 'Fort Lewis' [1732], within which the hardy pioneers who came after him found refuge until the barbarian no more visited the banks of the Shenandoah. . . . Other adventurers reached the Upper Valley and, attracted by the great fertility of the soil, hastened to make surveys and applications for patents for their lands. The earliest of these issued was that for what has ever since been known as Beverly Manor. The patent, signed by Governor William Gooch and bearing date September 6, 1736, granted to William Beverly, of the county of Essex; Sir John Randolph, of the city of Williamsburg; Richard Randolph, of the county of Henrico; and John Robinson, of the county of King and Queen, a tract of land containing 118,491 acres. These lands were located within the present limits of Augusta county and included the site of the city of Staunton. The magisterial district in which that city is situated is still known as 'Beverly Manor.' . . . The second grant made of lands in the Upper Valley was that to Benjamin Burden,

or Borden—name spelled both ways. . . . Burden went to Europe for the purpose of securing emigrants to settle upon his lands, and in 1737 returned, bringing with him more than a hundred families. Among these primitive emigrants we meet with the names of some who have left a numerous posterity, now widely dispersed, not only over the Virginias, but throughout the South and West—such as Ephraim McDowell, Archibald Alexander, John Patton, Andrew Moore, Hugh Telford and John Matthews. The first party was soon joined by others, mostly of their relatives and acquaintances, from the mother country. . . . They were Irish Presbyterians, who, being of Scotch extraction, were called Scotch-Irish. [See SCOTCH-IRISH.] . . . While these determined people were finding homes in the Upper Valley the lower portion was being occupied by the sturdy yeomanry of Germany. Quite a number of those who settled on Opequon, now in Berkeley and Jefferson, were Quakers, and to them is due the credit of having established the first religious organization, not only in West Virginia, but west of the Blue Ridge."—V. A. Lewis, *History of West Virginia*, pp. 68-72.—"From the coming of the first white settlers to West Virginia to the year 1754—a period of nearly thirty years—the white men and Indians dwelt together in peace and harmony. . . . In 1755 the English General, Edward Braddock, with the 44th and 48th Royal Infantry Regiments, came to Virginia, and, having been joined by a large force of provisional troops, marched against Fort Duquesne; but when within ten miles thereof, his army was shot down by the French and Indians on the fatal field of Monongahela. Then began a war of extermination—a border war carried on against the West Virginia settlements. This continued for seven long years, in all of which the French and Indians, or the latter alone, carried death and desolation all along the frontier of civilization. [See also SOUTH CAROLINA: 1759-1761.] The West Virginia pioneers nevertheless stood their ground, and, aided by companies of rangers from the older Virginia settlements, warred successfully against their barbarian enemies until the close of the war in 1763."—S. Myers, *History of West Virginia*, v. 1, pp. 100-101.

1768.—Cession of Iroquois claims to western Pennsylvania, West Virginia and Kentucky. See U. S. A.: 1765-1768.

1773-1820.—Movement towards independence.—Objection to aristocratic constitution of Virginia.—Political grievances of western territory.—From the first the settlers in western Virginia developed a difference in economic and social interests which left little in common between them and the older sections of the East. The agitation for a separate government began almost as soon as there were enough settlers to justify any form of political administration. In 1773 a petition was sent to England asking for a separate government. "On the 2d day of December, 1773, George Mercer, who was still in London, addressed a letter to George W. Fairfax, which is still preserved, and from which it is learned that the new province was to be called 'Vandalia,' the seat of government of which was to be at the mouth of the Great Kanawha, and George Mercer to be the first governor. That Washington was apprised of this scheme is apparent from the advertisement for the sale of his lands on the Ohio and Great Kanawha rivers, which appeared in the *Virginia Gazette* in 1773. . . . The Revolution put an end to all these negotiations, and had it not been so, it is probable that there would have been an independent gov-

ernment in what is now West Virginia more than a century before it came. . . . In the year 1776, Virginia framed and adopted a Constitution by which she was governed for more than fifty years. It was the first document of the kind prepared by an American State, and, formed without a precedent, it was but natural that in it should be found many imperfections. First among these were its two great distinctive features—Sectionalism and Aristocracy—both of which had their origin a century before the preparation of that Constitution. The unequal representation of the counties, which was the remote cause of its sectional character, was established in the year 1661, by the House of Burgesses, representing a population residing exclusively in the Tidewater region, and consequently at that time homogeneous in character and identical in interest. The limitation of suffrage to freeholders, which gave to it its aristocratic character, was imposed on the Colony in 1677, by Royal instruction from Charles II., to the Governor of the Colony of Virginia 'To take care that the members of the Assembly be elected only by freeholders, as being more agreeable to the customs of England,' to which he might have added, 'And more congenial also with monarchical institutions.' With the increase of population and the organization of counties west of the Blue Ridge, the principle was reversed, and what had been equal representation had become unequal representation, and while many of the western counties paid into the public treasury many times the amount paid by some of the eastern counties, yet the representation of both was the same. Loudoun county had a population twenty-six times as great as Warwick, and paid twenty times as much of the State taxes, while both had the same representation upon the floor of the General Assembly. What was true of these two counties was, by comparison, true of many others in the two sections. It was 'taxation without representation'—one of the leading causes of the Revolution—and it is not surprising that it became a source of great dissatisfaction to the dwellers in the Valley, and to men who were felling the forests on the western slope of the Alleghenies and in the valleys toward the Ohio. This basis of representation gave to the East the balance of power, and rendered the western section almost powerless in all matters of State legislation. In the Assembly in 1820, the former had one hundred and twenty-four members, while the latter had but eighty. The result was that the East secured to itself nearly everything in the character of internal improvements."

—V. A. Lewis, *History of West Virginia*, pp. 79, 310-320.

1815-1860.—Struggle for equal representation in Virginia government.—As early as 1815 a movement began to demand equal representation. A convention was called at Richmond Oct. 5, 1829, but it was unable to secure reforms. Another convention took place Oct. 14, 1850. This extended the right of suffrage and gave the western parts greater equality.

1860-1861.—Opposition of West Virginia to secession.—Wheeling convention.—Two rival state governments in Virginia.—On Oct. 12, 1860, a meeting was held in Preston county against secession from the Union; another was held in Harrison county on the 24th. Taylor county had a meeting on December 3, Wheeling City on December 14 and Mason county in January, 1861, but eastern Virginia was in an overwhelming majority for secession. West Virginia then decided to become a separate state. "From the people of

Monongalia [came] the first resolution relative to the formation of a new State. But they were soon followed by expressions of a similar sentiment, for on the 22d of April the people of Wetzel, assembled in mass meeting, declared by resolution, "That Secession is no remedy for the evils which afflict the country, and we pledge ourselves to oppose any act of Secession attempting to force us into a connection with the Gulf States; then, as citizens of Western Virginia, we will deem it a duty to ourselves and posterity to adopt such means and use such measures as will result in a division of the State."—V. A. Lewis, *History of West Virginia*, p. 9.—The first Wheeling convention which met on May 13, 1861, was divided on the question of secession until such time as the matter was put before the people. The second Wheeling convention on June 11, 1861, elected Francis H. Pierpont as governor of Virginia. Thus there were two governments in Virginia, one owing allegiance to the United States and one forming part of the Confederacy of Southern States.—See also VIRGINIA: 1861 (January-June).

1861 (June-July).—General McClellan's successful campaign.—Confederates driven out. See U. S. A.: 1861 (June-July: West Virginia).

1861 (August-December).—Campaign of Rosecrans against Lee. See U. S. A.: 1861 (August-December: West Virginia).

1861-1862.—Vote on separation from Virginia.—Adoption of constitution for new state.—Under the guidance of Governor Pierpont, the government of the loyal parts of Virginia was established and a tentative marking out of the boundaries for a new state of West Virginia was made through the vote of the counties, for the western parts of Virginia were determined to form an entirely separate state. The second Wheeling convention decided to put the matter to the popular vote. In October there were 18,489 votes in favor of the new state and only 781 against. Kanawha was proposed as a name for the new state.—"The [constitutional] Convention met November 26, 1861, in Wheeling; all the counties in the present State of West Virginia being represented, except Jefferson, Berkeley, Webster and Monroe. The Convention adopted a constitution for the new State, to be submitted to a vote of the people at an election to be held April 3rd, 1862. This constitution differed from the old constitution of Virginia in several important particulars. It abolished the old County Court system and provided for Judicial Circuits and created township government for local affairs. It provided that taxation should be equal and uniform; that the State should contract no debt, but should assume an equitable proportion of the debt of Virginia, and also provided for the establishment of a system of public schools. This constitution was adopted by a vote of the people, the vote being reported as being 18,061 for it and 514 against it. The population of these counties in 1860 was 334,921 whites and 12,771 negroes. The assent of the State of Virginia to the creation of the State of West Virginia was given by the re-organized government under Governor Pierpont on May 6th, 1862, and it was finally approved by Congress after the constitution had been amended so as to provide for the gradual emancipation of the slaves [December, 1862]."—J. M. Callahan, *Semi-centennial history of West Virginia*, pp. 451-452.—See also VIRGINIA: 1861 (June-November).

1862 (May-June).—Frémont's Mountain Department. See U. S. A.: 1862: (May-June: Virginia).

1863.—Admission to the Union.—It had been President Lincoln's condition that the newly organized state make provision for the gradual abolition of slavery. "This provision was the subject of extended debate and discussion. The constitution as amended was again voted upon by the people and adopted by a majority of 17,000 of the votes cast [Mar. 26, 1863]; and, in accordance with the Acts of Congress, the President of the United States, on April 19th [1863], issued his proclamation providing that the government of the new State of West Virginia should go into effect on the 20 day of June, 1863. . . . Governor Pierpont, who had been exercising the powers of Governor of the re-organized government of Virginia at Wheeling, now removed the seat of his government to Alexandria, and after the war it was removed to Richmond, and he remained Governor during the early part of the Reconstruction Period. . . . West Virginia entered upon her career as a separate state of the American union at the most critical period in the war of secession—two weeks before the battles of Gettysburg and Vicksburg. After the President's proclamation, . . . the new government was rapidly organized. Arthur I. Boreman for governor, and other state officers, nominated at a convention at Parkersburg early in May, were elected the latter part of the same month."—J. M. Callahan, *Semi-centennial history of West Virginia*, pp. 453, 151.

1868.—Attitude toward Confederates. See U. S. A.: 1865-1868.

1868.—West Virginia University founded.—In 1868 the University of West Virginia was founded at Morgantown.

1869-1885.—Determination of the site of the state capital.—Removal from Wheeling to Charleston, and back to Wheeling.—Final choice of Charleston.—"At the time of the formation of the State, Wheeling became the Capital, and here the seat of Government continued until April 1, 1870, when in compliance with an act of February 20, 1869, it was removed to Charleston, which place was, by the act providing for the removal, declared to be the permanent capital. But it proved not to be such, for by another act of the Legislature, passed February 20, 1875, to take effect ninety days after its passage, it was again established at Wheeling 'until otherwise provided by law.' Citizens of Charleston enjoined the removal of the records from that city, and on the 20th of May, the Governor and other executive officers departed for Wheeling, but took no State property with them. Thus the State officers were at Wheeling and the archives at Charleston. The suit was carried before the Supreme Court of Appeals, where the injunction was dissolved and the archives removed and deposited in the Lindsey Institute building, which had been occupied previously as a Capitol. In it the government remained until the completion of the State building in 1876, which the city of Wheeling had erected. Still great dissatisfaction existed, and February 21, 1877, the Legislature passed a bill submitting the question of permanent location of the capital to the people, to decide by ballot whether it should be at Clarksburg, Martinsburg or Charleston, the act declaring that the place receiving the largest number of votes should from and after the 1st day of May, 1885, be the permanent capital of the State.

Charleston was successful; work was at once begun on the capitol building at that place, and on the last date mentioned above the government made its final removal."—V. A. Lewis, *History of West Virginia*, p. 469.

1873-1921.—Governors.—Political history of the state.—In 1873 the Democratic governor, J. J. Jacob (1871-1877) came "into serious conflict with the legislature in regard to the appointing power of the executive department and the power of the legislative department to pass the act of January 14, 1873, creating the board of public works with appointive powers. . . . H. M. Mathews [1877-1881], who defeated General Nathan Goff (the popular Republican candidate) for governor, was a patriotic, broad and liberal minded ex-Confederate who had fully accepted the results of the Civil War and was well-fitted to lead in meeting living issues. His administration has been characterized as an era of good feeling in which the state began to show new signs of awakening life—especially in industrial development. He adopted a liberal and sensible policy of appointing on administrative boards members from both political parties—a wise policy which unfortunately was abandoned by some of his immediate successors. During his administration a committee of inquiry investigated the question of discriminating freight rates of the Baltimore and Ohio railway and reported (January 15, 1879) that the Camden Consolidated Oil company had received especial advantages by a system of rebates. Governor J. B. Jackson [Democrat, 1881-1885], who succeeded Governor Mathews in 1881, was an honest but partisan Democrat of the old school. . . . Jackson favored the enactment of laws that would encourage immigration, manufactures, and the development of the material resources of the state. He also attempted to secure reforms in taxation and state finance, by directing that all property not exempted by the constitution should be listed for taxation, and by the appointment of a tax commission (1883). During his administration, a period of general prosperity and happiness (excepting the calamitous results of the great floods of February, 1884), steps were also taken to revise the laws, some of which were indefinite and inconsistent. Soon after the inauguration of E. Willis Wilson [Democrat], who was elected in 1884 . . . there was a continuation of the agitation for the revision of the tax laws in order to secure equality of taxation, and the governor also proposed legislation to reform the election laws, to prohibit oppressive trusts and combinations, and to prevent the distribution of railway passes to officers of the state and delegates to political conventions. The administration waged a fierce and relentless war against the trunk line railroads which, the governor said, had discriminated against the people of West Virginia in freight and passenger rates. . . . [At the conclusion of his term of office, there was a ballot scandal in the gubernatorial election, and Governor Wilson refused to give up his office to either of the candidates, General Goff, or Carr, president of the Senate.] Mandamus proceedings in the state supreme court were at once begun against Governor Wilson by the other two claimants. The case of General Goff was decided on March 12, the court holding that the joint legislative convention of the legislature alone had power to determine the result of an election and that General Goff was not the legal governor. The case of President Carr was decided on March 14, the court declaring that there existed in the office no such vacancy as under the

constitution would authorize the president of the senate to succeed to the duties of the governor. The joint committee completed its work in December. The majority report declared, by counting out 300 votes, a plurality of 237 for [A. Brooks] Fleming. This was signed by the three Democratic members. The minority report found no such frauds as charged by the majority, and gave a plurality of 140 to Goff. On December 18, Governor Wilson issued his proclamation calling an extra session for January 15. At this session the majority report, by a strictly party vote, was accepted and Fleming was declared elected [1890-1893]. The governor in his biennial message of 1889 emphasized the need of a registration law to remedy the fraudulent and corrupt voting which had been common in almost every county in the state. In 1890, following the charges of bribery and fraud made by each party in the contested gubernatorial election, a special session of the legislature (called to consider thirty-seven specified subjects) enacted a law designed to prevent the purchase of votes, or other forms of bribery at elections, and to prevent ballot box frauds. The senate voted for an Australian ballot bill, which failed in the house (Democratic). Governor Fleming continued the policy of his predecessor, who as a result of the contest had continued to act as executive for nearly a year beyond the term for which he was elected. He urged the taxation of the property of the Pullman company and other foreign car companies, and of the business of foreign telegraph companies operating in the state. He also recommended a general policy of legislation to preserve the resources of the state from monopoly, to foster agricultural interests, and to diversify the various industries of the State. . . . [William A. MacCorckle, a Democrat, was governor from 1893 to 1897. A succession of Republican governors followed: George W. Atkinson, 1897-1901; Albert B. White, 1901-1905; and William M. O. Dawson, 1905-1909.] The beginning of [William E.] Glasscock's republican administration was marked by a more centralized management of the finances of state institutions through the agency of a newly created board of control, which by liberal principles of economy reduced much waste of expenditure. In the latter part of his term, the most prominent public question was the prohibition amendment, which was submitted by the legislature and ratified by popular vote in the elections of 1912. Near its close, his administration was called to face difficult problems connected with the strike precipitated by general mining conditions on Paint creek and Cabin creek in Kanawha county—resulting in the first declaration of martial law in the state [see below: 1902-1913] and the appointment of a commission of investigation which recommended various legislative remedial reforms for the conservation of life, health and happiness, and for the general welfare. . . . In his inaugural address Governor [Henry D. Hatfield, 1913-1917, a Democrat] indicated that his administration would promote a program of progressive principles. For over four months he devoted a large part of his energy to the solution of the serious industrial and political problems connected with the strike of miners on Paint and Cabin creeks, and to the establishment of conditions conducive to a permanent peace between miners and coal operators. By August, 1913, he was able to obtain an agreement by which the mines secured important concessions without imposing any unnecessary burden upon the operators."—J. M. Callahan, *Semi-centennial history of*

West Virginia, pp. 241-243, 245, 247-248.—Governor Hatfield was succeeded by John J. Cornwall in 1917, which was a victory for the Democrats. In 1921, Ephraim F. Morgan (a Republican) became governor of the state. In national politics West Virginia has always followed the Republican column.

1902-1913.—Kanawha coal strikes.—Demands of the miners.—Armed conflict and martial law.—Report of Governor's Mining Investigation Committee.—Settlement.—“Of the fifty-five counties which composed the state of West Virginia thirty-nine have coal areas aggregating 9500 square miles or 6,080,000 acres. . . . Prior to the year 1902 the miners of West Virginia were fairly well organized, though their organization was not ‘recognized’ by the operators, in that they refused to meet them in joint conferences. At a state convention held that year in Huntington the miners determined to make a vigorous attempt to compel recognition. They prepared a scale of wages and called upon the operators to accept it or meet the union in a joint conference to discuss a new wage-scale. In accordance with past policy the operators ignored the demand and a strike ensued. Although the events of the first few weeks were auspicious and seemed to portend a victory for the miners, in the end they not only failed to receive recognition but also lost their organization everywhere throughout the state except in the Kanawha district. There, however, the strike was in a large measure successful. . . . Subsequent to the strike of 1902, there was no serious disturbance in the Kanawha district for a period of two years. In the fall of 1904, however, a disagreement arose on Cabin Creek with regard to the interpretation of that clause of the joint agreement relating to the check-off. The miners claimed that an unlimited check-off was provided for, whereby union dues were to be collected through the company offices not only from regularly enrolled members of the union but from all men employed in and about the mines, whether members or not. The operators denied that such was the correct interpretation and urged that the dispute be submitted to arbitration as provided by the joint agreement for the settlement of disputes. The union, however, refused to arbitrate and called a local strike. It lasted only about ten days and resulted in the union losing all of its organization on Cabin Creek, though control was retained in other parts of the Kanawha district. . . . These conditions remained practically unchanged until the spring of 1912. Since the recognition of the union by the Kanawha operators in 1902, wages in the district had been raised about seven per cent, except on Cabin Creek where under non-union operation smaller wage advances had been granted. The check-off, which during earlier years had been in effect in the union mines, had gradually disappeared and for several years prior to 1912 had not been in effect at all. The joint agreement of 1910 was to expire on April 1, 1912. It had been the custom in years past for representatives of the union and of the Kanawha Coal Operators’ Association to meet in joint conference during February or March preceding the expiration of the old agreement, for the purpose of effecting a new one. At the request of the union the meeting for 1912 was postponed until the operators and miners in the other four states of the central competitive field had concluded their new interstate agreement, which that year had been delayed. A conference had been held earlier in the year at Indianapolis,

but so urgent was the demand of the miners for higher wages and so strenuous was the resistance of the operators that an adjournment was necessary before any agreement had been reached. A second meeting was held in Cleveland from March 20 to 30 (1912), and there after a final struggle the operators were forced to grant an increase of five cents a ton for coal miners and an advance of 5.26 per cent for inside day labor. The miners in the Kanawha district immediately formulated their demands and presented them to the operators on April 8, the opening day of the Kanawha Joint Conference. The following were the most important: (1) the Cleveland wage advance; (2) a uniform work day of eight hours; (3) pay every two weeks; (4) an unlimited check-off. The operators refused to grant the demands, but offered to renew the old scale and the old conditions. Finding the operators firm in their refusal, the union dropped all its demands except that for the Cleveland wage advance. This too was refused and a third offer was made by the miners, to accept the old scale if a check-off was given. The mere collection, at the source, of union dues from all employees in and about the mines appears on the surface to be a relatively unimportant request; but to the union it is frequently a matter of the utmost importance. While the excitement of the strike keeps the miner's interest centered in the organization, he needs no incentive to loyalty; but when the difficulty has been adjusted and he sees others, not members of the union, enjoying the benefits of the same wage scale and the same conditions of employment which he enjoys, yet paying no dues, his enthusiasm wanes. The check-off is as a rule one of the last demands to be granted by operators, and this occasion proved to be no exception. The demand was refused; no further concessions were made by either party; and on April 18 [1912], negotiations were concluded. On the following day a strike was called throughout the Kanawha district and all mines except those on non-union Cabin Creek were closed down. . . . The newspaper accounts of the strike were so unreliable that the Governor on August 28 appointed a commission to make a thorough investigation of the whole disturbance, that the public might be informed as to the true conditions. This commission was composed of the Rt. Rev. P. J. Donahue, a Catholic Bishop, Captain S. L. Walker of the state militia, and Hon. F. O. Blue, state tax commissioner. The temper of the strikers was slowly approaching white heat. In order to protect their property, the operators had installed four machine guns, one on Paint Creek and three on Cabin Creek, and in addition had employed secret service men from the Baldwin-Felts and Burns detective agencies. They mingled with the strikers and kept the operators forewarned of all impending outbreaks. Despite all the efforts of the agitators to close down the Cabin Creek mines, many still remained at work. A great demonstration was therefore planned by the union forces to compel these men to join in the strike. On the evening of September 2, forces were gathered from the camps of the striking miners, from union mines across the river and elsewhere, and these men in large numbers went into the woods along Cabin Creek, intending on the day following to drive out all working miners at the head of the creek where the most of the mines are located. It is estimated that 1500 armed men were assembled in the hills that night. The operators, fully aware of their intentions, sent the women to the cellars, and prepared to defend themselves and their property as

best they could. Such were the conditions on the night when Governor Glasscock issued his martial law proclamation and created a military commission to serve as a substitute for the criminal courts of the district. The operators strenuously opposed the declaration of martial law, claiming that they were able to cope with the situation themselves. The union officials, however, were strongly in its favor, for through it they hoped to eliminate the guard system. Upon the declaration of martial law, the militia assumed entire control of the strike district. They disarmed both mine guards and miners, and brought before the military commission for trial all violators of law and order. Under their régime peace and quiet were soon restored. . . . On September 11, Governor Glasscock attempted to effect a settlement of the difficulty by submitting to both parties proposals for the arbitration of all points in dispute. The miners agreed to the Governor's terms, but the operators, especially those on Cabin Creek, were firm in their refusal to meet the union's representatives, on the ground that the only question at issue was the recognition of the union, which in their opinion was not a subject for arbitration. Despite the failure to effect a settlement, conditions became much more quiet during the martial-law régime. On October 14 the Governor deemed it safe to recall the proclamation. . . . The Mining Investigation Commission, appointed by the Governor, made its report November 27. It attributed the main cause of the strike to the efforts of the United Mine Workers to organize West Virginia. In discussing the 'contributing causes' the commission reported as follows: (1) Wages—at least equal to those in union states and in many respects better. (2) Houses—'as comfortable as those of the average farm hand, or of those who live by other manual labor.' (3) Rents—'slightly excessive, but not exorbitant.' (4) Sanitation—'as good as could be expected in view of the location and other surroundings.' (5) Company stores—in the districts under examination had charged more than a fair average figure in open market for any given article.' (6) Blacklisting—evidence 'tending somewhat to establish the fact' that it had in some cases been employed. (7) Guard System—'vicious, strife promoting, and un-American.' The report concluded with some suggestions for establishing a more perfect harmony between employers and employees and a recommendation for some form of legislation analogous to the Canadian Industrial Disputes Investigation Act of 1907. By the first of the year [1913], conditions in the strike districts were greatly improved and hope was entertained that a settlement would soon be effected. Early in February, however, violence again broke out. . . . On March 4, Governor Glasscock's term of office expired, and Governor Hatfield, his successor, assumed the burden of bringing about a settlement of the difficulty. For days he labored to effect a compromise satisfactory to both parties. At last, worn out by their petty complaints and disagreements, the Governor, on April 25, issued what was practically an ultimatum, that the "strife and dissension must cease within thirty-six hours." This had the desired effect, and within the specified time-limit both parties had agreed to the terms of settlement submitted by the Governor. The agreement was signed by representatives of the union and of the companies on Paint Creek and Cabin Creek. It became effective on May 1. The following were its chief provisions: (1) A nine-hour day, which should be understood as nine hours of actual serv-

ice, at the wage scale previously paid; (2) Semi-monthly pay; (3) A checkweighman to be provided where a majority of the miners requested one; (4) Right of the miners to deal where they pleased without discrimination. It was thought that a final settlement had at last been effected. Considerable opposition, however, soon developed on the part of the union because no check-off was granted, nor provision made for arbitration. At first the dissatisfaction did not assume alarming proportions, and on May 29, just one year after the first outbreak of the strike, Governor Hatfield authorized the civil authorities in the strike zone to resume their full jurisdiction. Martial law remained in this modified form until its complete revocation a few weeks later. Dissatisfaction, however, with regard to the provision and operation of the greement of May 1 [1913], increased to so great an extent that on June 29 the miners on Paint Creek and Cabin Creek declared another strike. . . . This second strike on Paint Creek and Cabin Creek was not of long duration. On July 15, the leading Paint Creek companies signed a new agreement to be effective until April 1, 1914. They again accepted the articles of agreement of May 1. . . . Though the union was successful in its efforts to secure the check-off, the miners returned to work under a wage-scale essentially lower than that which had prevailed before the strike. No provision was made for an arbitration board. . . . On July 29 a settlement was made on Cabin Creek to be effective until April 1, 1915. Terms very similar to those of the Paint Creek agreement were accepted, except that no check-off was provided. The wage for day-work was not advanced, but there was an advance for coal miners of from twelve to seventeen per cent. On this creek, however, as on New River, provision was made for the arbitration of all matters in dispute. Thus ended an insurrection which had continued for a period of fourteen months. Thirteen lives were lost during the course of the strike. The cost in money was enormous: operators' loss in business \$2,000,000; loss to the miners in wages \$1,500,000; cost to the taxpayers of Kanawha county \$100,000; cost to the United Mine Workers \$602,000; property destroyed \$10,000; total \$4,612,000. The union's membership in the state had increased from 2000, the figures for paid-up members prior to the beginning of the strike, to 4769 on November 30, 1913. These figures appear insignificant in comparison with a total of 20,000 miners in the Kanawha district and 70,000 in the entire state."—*West Virginia coal strike (Political Science Quarterly, Dec., 1914)*.

1906-1915.—*Lawsuit with Virginia.*—*Decision of Supreme Court.*—In 1906 Virginia commenced a suit against West Virginia for the payment of her share of the state debt contracted before 1862. "Judgment [was] rendered [against West Virginia] in 1915. The results are thus summarized by Mr. Justice White: The judgment . . . was for \$12,393,929.50, with interest, and it was based upon three propositions specifically found to be established: First, that when territory was carved out of the dominion of the State of Virginia for the purpose of constituting the area of the State of West Virginia, . . . the new State, coincident with its existence, became bound for and assumed to pay its just proportion of the previous public debt of Virginia. Second, that this obligation of West Virginia was the subject of contract between the two States made with the consent of Congress, and was incorporated into the Constitution by which West Virginia was admitted by Congress into the

Union, and, therefore, became a condition of such admission and a part of the very governmental fiber of that State. Third, that the sum of the judgment rendered constituted the equitable proportion of this debt due by West Virginia in accordance with the obligations of the contract. This case is especially noteworthy because the bonds were largely held by private individuals who had already exempted Virginia from paying their claims, because a large part of the judgment was for interest on the bonds, and because it was conceded that the judgment could not be paid without the exercise of the power of taxation. West Virginia has passed a debt settlement bill (1919) in which she provides for direct taxes to meet the debt. But for a time it looked as if some form of compulsion would be necessary. The court did not hesitate to meet this possibility squarely. It recognized a threefold obligation to carry out the judgment of the court: (1) the duty of West Virginia to provide for the debt by appropriate taxation; (2) the power and the duty of Congress to make provision for enforcing the terms of the contract between the two States, either by legislation which should apply to West Virginia directly, or by legislation which would give the court direct authority to enforce its judgment; (3) the duty of the court to secure the enforcement of its own judgment under existing legislation. In the hope that one of the first two methods would be used, the court did not consider fully the methods, by which it might carry out its own decree, but it suggested that this might be done either by mandamus to the legislature of West Virginia, or perhaps even by the direct exercise of the judicial power within the limits of the State. Happily, the action of West Virginia has cut the Gordian knot and relieved the court from what would certainly have been a trying and embarrassing situation. But the fact that the Supreme Court has never been compelled to resort to force in its inter-state decrees, does not lessen the significance of a decision in which it claimed both for Congress and for itself such sweeping powers."—R. G. Caldwell, *Settlement of inter-state disputes*, p. 58.

1920-1921.—Logan county miners in collision with operating companies over unionizing.—**Bloodshed in Mingo county.**—"On May 19 [1920] eleven men were shot to death in the town of Matewan, Mingo County. Seven of them were detectives, three were miners and one was an official. . . . With the beginning of May, the miners formed local unions, and brought in 2,000 members. As fast as the miners . . . [joined] the union, the coal companies . . . [were] evicting them from the company-owned houses. . . . The stronghold of the operators' power . . . [was] not Mingo, but Logan County. . . . There [were in 1920] 91,000 persons in West Virginia employed in and around mines. Of these, 54,000 [were] organized in the United Mine Workers of America. For the possession of the unorganized 37,000 the coal operators and the union . . . engaged in the . . . bloody struggle. Of these 37,000, 4,000 . . . [were] in Mingo and 9,000 in Logan. . . . The coal operators . . . [maintained] on their pay-rolls public officials who preserve order, guard the company funds, and keep union men out of the county. It is this exercise of public power under private pay which . . . [was] one of the fundamental causes and is the most lively occasion of the bad blood between owners and workers."—A. Gleason, *Private ownership of public officials* (*Nation*, May 29, 1920).—See also LABOR STRIKES

WESTERN AUSTRALIA.—Western Australia comprises about one-third of the continent of Australia, and is the most sparsely settled section of that country. It is bounded on the west by the Indian ocean, and on the east by South Australia and Northern territory. It extends 1,500 miles in length and is 1,000 miles across. See AUSTRALIA: Location and physical features; also Map.

1616-1870.—Exploration and settlement.—Peel's colony.—Penal colonies.—The names of many famous men are connected with the exploration and survey of the country. It was discovered in 1616 by Dirk Hartog. In 1627 Jan Pieter Nuyts examined and charted the southern coast line. In 1629 Urech of Batavia landed on the Abrolhos islands. In 1688 William Dampier anchored in Cygnet bay. In 1896 William de Vlaming expored the Swan river. In 1722 Captain de St. Alouarn, anchored off Cape Leewin and started explorations for the French government. In 1791 Captain George Vancouver surveyed and took possession of the country northwest of King George Sound. In 1801 Matthew Flinders reached Cape Leewin. In 1818 De Freycinet revisited western Australia. From 1818 to 1822 Lieutenant Parker King surveyed the coast line, and in 1826 Major Lockyer landed at Albany and took possession in the name of Great Britain.—Based on *Pocket Year Book of Western Australia*, 1923.—In 1827 "Captain Stirling explored the Swan River, discovered in 1697 by Vlaming [and called by him New Holland], and reported that the country there was 'not inferior in any natural essential condition to the Plain of Lombardy,' an optimistic view that experience has failed to justify. Stirling urged that the Swan River should be occupied, and Darling supported this view. The British authorities decided against the idea on the score of expense. The distance from Sydney was so great that it meant setting up a new Government, and this was not necessary. But private enterprise stepped in. . . . The reports of Stirling on the Swan River led Thomas Peel, a wealthy cousin of Sir Robert Peel,

and others to propose to the British Government that they should take 10,000 emigrants to Western Australia, receiving in return 4,000,000 acres of land. Eventually the scheme was modified. Settlers were to receive an acre for each 1s. 6d. of capital invested, on condition that they spent 1s. 6d. an acre in improvements. Peel was granted 250,000 acres of land, receiving 200 acres for each person over ten years of age whom he brought to the colony. Stirling, who was appointed [Lieutenant] Governor [1829], was to receive 100,000 acres. This was the first free settlement in Australia. [Between 1837 and 1839 Captain George Grey made his explorations into the interior.] No convicts were landed in Western Australia until 1850. . . . In 1841 Edward John Eyre, setting out from Fowler's Bay on February 25, worked his way round the coast of the Great Australian Bight to Albany on King George's Sound, which he reached on July 7, 1841. Accompanied only by his overseer, Baxter, and three aborigines, he set out on a journey of over 1,000 miles through a barren, dry, and desolate region. At one point he crossed a stage of 150 miles without water. About halfway through two of the aborigines shot Baxter and deserted, carrying off some of the stores. With one King George's Sound native as his sole companion, Eyre struggled on. He killed his horses and dried their flesh for food, and found a little water by collecting, in the early morning, the dew from the bushes in a sponge. Even so he would probably have failed, but on the coast near Lucky Bay he found a French whaler, the *Mississippi*, one of the great fleet of foreign whaling ships, mainly French and American, which then worked on the southern and western coasts of Australia. The Frenchmen even had vegetable gardens and a few sheep and goats grazing on islands off this desolate coast. With assistance from Rossiter, the whaling captain, Eyre pushed on to Albany. This exploit had but intensified the isolation of Western Australia by showing how difficult, almost impossible, it was to traverse the intervening wilderness, and until the Transcontinental Railway was opened in 1917 the sea was, for all practical purposes, the only means of reaching Western Australia from the east. . . . The population was still, after twenty years of settlement, only 5,000. About this time the British authorities had raised the price of land throughout Australia, whatever its quality, to £1 an acre. Settlers could no longer be attracted to Western Australia by the prospect of acquiring large areas at exceptionally low rates. And, by restricting land sales, this policy reduced the fund which had been used to pay the passages of immigrant labourers. Under these conditions the earlier policy was abandoned, and in 1849 a public meeting, held at Perth, decided in favour of asking the British Government to 'erect this colony into a regular penal settlement.' This was done, and the first convicts arrived in June, 1850. During the next seventeen years about 10,000 prisoners and the same number of free immigrants were landed in Western Australia. After 1853, when transportation to Van Diemen's Land ended, Western Australia was the one part of Australasia to which convicts were sent. To this day Perth and Fremantle retain more buildings bearing evidences of the convict days than any other towns in Australia. In 1867 the system was finally abandoned."—T. Dunbabin, *Making of Australasia (Making of the British empire, pp. 136-149)*.—In spite of the forced growth of the population, little progress was made until the advent of Sir Frederick Weld, who was appointed governor in 1870 and at once

initiated a vigorous policy of development. Explorations of the interior were begun and, surveys were made for telegraph and railway lines. The explorations of the Forrest brothers into the interior took place at this time, 1869-1870.—See also AUSTRALIA: 1787-1840.

1885-1900.—In councils for federation of Australia. See AUSTRALIA: 1885-1892; 1900: Federation, etc.; 1900 (August).

1892-1893.—Coolgardie and Kalgourlie gold fields discovered.—Effect on status of Western Australia at federation.—"Long before the Kimberley find was reported—in fact, as far back as the year 1847—a traveller and prospector named Calvert had discovered, much further to the south and west, reliable evidence of the existence of the precious metal on the upper courses of the Ashburton and Murchison rivers. Nothing, however, was done to utilize his information for a long period, and it was not till the year 1891 that his report was verified by the finding in each of the localities mentioned by him of both quartz and alluvial gold. Mining was then undertaken on each of these fields and with particularly good results in the Murchison district. Prior to this . . . a still more important auriferous region was found in the Yilgam district, situated about 250 miles eastward of Perth. This discovery was the immediate forerunner of the finding of and successful mining for the precious metal at a number of places in the Pilbarra district. But all of these discoveries were about to be overshadowed by one of infinitely more importance; for during the year 1892, Messrs. Bayley and Ford reported, and their report was verified, that they had found rich gold-bearing country in the Coolgardie district, situated considerably to the eastward of the Yilgam field. Immediately this news became known, a rush set in—at first from the settled parts of the colony; but soon large numbers of gold-seekers from all parts of Australia came pouring in, and for a time the long journeys and labours of many of these men were abundantly rewarded by rich returns. As these began to fall off, some of the prospectors moved still further eastward and there came across the Kalgourlie field, which was soon to be famous as one of the chief gold-producing localities of the world and as the richest of the existing auriferous fields of Australia. . . . The extent and importance of the influx into Western Australia that the gold-fields had caused may be readily judged from the fact that in the year 1891, or shortly before the Coolgardie discovery, the population of the Western State was estimated to be 58,674, and that in the opening year of the twentieth century it exceeded 180,000 persons; whilst, during the same period, the revenue of the colony increased nearly sixfold and the expenditure in a slightly larger degree. In fact, though blessed with a number of other sources of wealth, Western Australia is wholly indebted to the Coolgardie and Kalgourlie gold-fields for bringing her, in a few years, from a position immensely behind the next most backward of the eastern colonies to one in which she could take an honourable place among the sisterhood of States that form to-day the Australian Commonwealth. Nay more, it is highly probable, if there had been no Coolgardie or Kalgourlie gold-fields, that Western Australia would not have been permitted to enter the Commonwealth as an Original State."—R. P. Thomson, *National history of Australia, New Zealand, and the adjacent islands, pp. 186-188*.

1889-1900.—Representative government accorded Western Australia.—"The agitation in the

colony for a Constitution similar to those in existence in Eastern Australia was supported in the year 1889 by a unanimous vote of the Legislative Council and this, greatly aided by the influence of the other colonies, was decisive with the authorities in Great Britain, and thus, in the following year [1900], the Imperial Parliament passed a measure granting to the western province Responsible, combined with Representative, Government, and this in the following year came into full operation."—*Ibid.*, pp. 189-190.

1900.—Women granted suffrage. See SUFFRAGE, WOMAN: Australia.

1901.—Member of Australian Commonwealth.—In 1901 when "the statesmen of the West resolved to submit to the electors of their colony that Federal Bill which the other colonies had, in the previous year [1900], determined to adopt, the western voters, on the 31st of July, by a decisive majority accepted it also, and with the adherence to the Compact of Union, the Australian family was fully complete. Owing to her comparatively small population, Western Australia, like Tasmania, has had to take advantage of the provision in the Constitution which guarantees a minimum of five members in the House of Representatives, to each State, which, by the smallness of its population, might be otherwise entitled to a lesser number; but, equally with each of the more populous States, she returns six representatives to the Senate. In the former Chamber one of her members, Sir John Forrest, has, from the outset, occupied a prominent position."—R. P. Thomson, *National history of Australia, New Zealand, and the adjacent islands*, p. 190.

1901-1910.—Effect of gold production on status of Western Australia in the Australian Commonwealth.—"In the Commonwealth Constitution which the western men endorsed [in 1901] there was a provision made for the exceptional position that Western Australia was placed in by the gold-fields and by the fact that a great mass of her imports came from the eastern States. Had the revenue derived from the latter been suddenly cut off, the Treasury would have been largely depleted. In consequence, it was provided that, for five years after Federation, Western Australia might levy duties on goods from the east; but these imposts were to decrease by one-fifth annually. Hence, the collections finally came to an end in the year 1906. A further concession of a similar character was subsequently made, for just as Tasmania succeeded in inducing the Commonwealth to accord a special consideration to her owing to the fact that so much of the goods consumed within her limits were either re-exports from, or the produce of, the eastern States, so did Western Australia [under the capable premiership of Sir John Forrest], after the failure of the Referendum on the financial questions in the year 1910, find that the National Government recognized that her revenues were in a difficult position from a like cause. Accordingly it was provided that for a period of ten years from 1910, an annual amount should be granted to Western Australia, which should commence with £250,000 for the first year and be reduced by £10,000 yearly, that is to say, for the second year the amount would be £240,000, and so on, so that, at the end of the ten years, the last payment would be £150,000."—*Ibid.*, p. 189.

1902.—Workmen's compensation law passed. See SOCIAL INSURANCE: Details for various countries: Australia.

1907-1917.—Railroad construction.—Trans-

continental railway completed. See AUSTRALIA: 1907-1920; RAILROADS: 1908-1918.

1911.—University of Western Australia founded. See UNIVERSITIES AND COLLEGES: 1850-1922.

1913.—Railroad construction.—During the year 1913, 600 miles of railroad were constructed.

1920.—Soldiers' land settlement scheme.—Civil service strike.—A further immigration project was inaugurated in 1920 with the soldiers land settlement scheme. By grants of land to soldiers, Western Australia hoped to bring some of her thousands of undeveloped acres into profitable use. In the same year, a strike of civil servants resulted in the creation of an Appeal Board. The Prince of Wales visited Australia in 1920.

1921.—Group settlements to encourage immigration.—Trade delegation to the Near East.—Race riots.—In 1921 the government decided to encourage immigration by founding group settlements instead of giving isolated plots of lands to settlers. (See IMMIGRATION AND EMIGRATION: Australia: 1909-1921.) In order to stimulate export trade through new markets, a trade delegation was sent to the countries of the Near East.—"Anti-Japanese feeling in Australia culminated in a race riot at Broome, an important seaport of West Australia, on Dec. 21, in which two Japanese were killed and others injured. Nearly all the male white inhabitants were sworn in as special constables and disarmed the Japanese. Broome is the centre of the pearling industry, in which large numbers of Japanese are employed. The trouble originated in disputes between Japanese and Malays. The Japanese became aggressive and it was necessary to send a white man in each pearling boat. As a consequence of the riot the pearling fleet was temporarily laid up."—*New York Times Current History*, Feb., 1921, pp. 313.

1922-1923.—Immigration.—Loans to farmers.—"The most important political event of the year [1922-1923] in Western Australia was the definite launching of the Government's scheme of comprehensive settlement by the introduction of a steady stream of migrants from Great Britain. In March the Premier (Sir James Mitchell) visited England and successfully negotiated an agreement with the British Government which postulates the introduction of 75,000 immigrants within three years. The scheme had previously received the endorsement of the Commonwealth Government, which, after investigation of the lands proposed to be opened up, gave a guarantee of financial assistance. The terms of the tripartite agreement finally concluded provide that, for the first five years, the interest charges on the loan of £6,000,000 necessary to carry out the settlement scheme will be paid in equal moieties by the Imperial, Commonwealth, and State Governments. The Commonwealth Government maintains the necessary organisation in the United Kingdom for the purpose of securing settlers, but the final selection is in the hands of the State. Up to the end of 1922, 4,369 State-aided migrants had arrived in Western Australia, and the immigration propaganda also had the effect of attracting to Western Australia 2,109 full-paying third-class passengers on account of whom the Government accepts no responsibility. Except for a few weeks in the depth of winter, when seasonal conditions produced a temporary depression, no difficulty was found in placing the new arrivals in situations in the country immediately on arrival, the scheme providing that the oversea settlers, in order to familiarise themselves with local conditions, shall serve for a few months with established

agriculturists before taking up holdings of their own. Early in the year some difficulty was found in placing married couples, but so brisk has been the demand for labour latterly that during December the Government cabled to the Agent General requesting that the shipments of married persons, be increased by 1,000 monthly. The favourable terms under which loan money has been made available have enabled the Government to place at the disposal of the State Agricultural Bank all the funds necessary to meet the demands from farmers for advances for clearing purposes, in consequence of which large additional areas have been, and are being prepared for cultivation. For the 1922 season 2,237,465 acres of land were cropped, but owing to the shortage of rain in some districts during the growing season the estimated average yield of wheat (9.05 bushels per acre) was below anticipations, in addition to which an unexpectedly large area sown for grain was cut for hay. Yielding to the representations of growers' organisations, the Government terminated the State wheat pool, which had operated during the 1921-22 season, and the 1922-23 season's crop is being handled by a growers' voluntary pool and by private buyers."—*Pocket Year Book of Western Australia*, 1923, pp. 94-95.

WESTMINSTER ABBEY, or the Collegiate Church of St. Peter, ancient abbey church, famous as the crowning place of the kings of England, and in modern times the place of sepulchre of the country's most honored dead. The Anglo-Saxon

King Sebert is said to have erected the first church in honor of Saint Peter about 616. The Benedictine religious house (monasterium, or minster), connected with this church, and directly west of the Cistercian abbey of St. Mary of the Graces (Eastminster), was named Westminster Abbey. "A charter was certainly granted to Westminster by Offa (756-796), and a residence of the Saxon kings was established hard by. Another charter, purporting to be granted by King Edgar, and date 951, is in existence. By some not over-credulous persons it is accepted as genuine, but it is more probably an early and a very skilful forgery. This charter is witnessed, among others, by Dunstan, who was Archbishop of Canterbury from 960-980, and practically re-established Westminster Abbey by bringing twelve Benedictine monks from Glastonbury and settling them at Thorney. . . . The 'Western Monastery,' or 'Minster of the West,' did not flourish during the stormy time of the Danish invasion, and it would possibly have had no further history if the notice of Edward the Confessor had not been attracted to it. . . . His piety took the form of special devotion to S. Peter. Before he ascended the throne, he had vowed that he would make a pilgrimage to the apostle's tomb in Rome, and soon after his coronation he announced his intention of keeping his oath. The Great Council heard his decision with dismay. . . . A deputation was therefore sent to Leo IX. to persuade him to release Edward from his vow. The pope consented on condition that the king should found or restore a monastery to S. Peter. . . . The king ultimately decided that the old monastery at Thorney, of which his intimate friend Edwin was the abbot, should be replaced by a new and magnificent Abbey of S. Peter. . . . The Abbey was begun in 1050 on a site to the east of the old church, which was occupied by the monks during the rebuilding. In the Confessor's lifetime little more than the choir was completed, and this was joined by a porch, or *atrium*, to the old church, which thus became the nave of the new structure. Of Edward's work nothing is now to be seen above ground, but in 1866 small fragments in position, consisting of wall-footings and bases of two piers, beneath the floor of the presbytery, were discovered by Sir G. Gilbert Scott. . . . The work of construction was carried on after the Confessor's death, for he had left large funds for its continuation. . . . The choir and transepts, the first bay of the nave northwest of the crossing, and the south and west walls of the cloister, as well as the chapterhouse and the adjoining buildings, were completed by the year 1100. Fifty years later the nave and western towers were finished. . . . Up to the time of the Confessor and for some years afterward, the church of the Abbey was the parish church of the district. This arrangement, however, was found inconvenient alike to the monks and the people. At first the north aisle of the Abbey church was set apart for parochial worship, but very soon the Church of S. Margaret was built in the shadow of the great minster. . . .

"The first important event which took place in the new Abbey church, after its dedication on December 28, 1065, was the burial of the founder himself on January 6 of the following year. William the Conqueror was crowned there on Christmas Day, 1066. . . . Since then the coronation of every English sovereign has taken place in the Church of S. Peter, with the exception of Edward V., who, in Speed's phrase, died 'uncrowned without sceptre or ball.' Henry III., although

crowned at Gloucester on his accession, was crowned again at Westminster four years later. . . . The next great event in the story of the construction of Westminster Abbey took place in the reign of Henry III., who may in some sense be called its second founder. . . . His association with the Abbey commenced early in his life, for, although the . . . [original] lady-chapel was not due to his inspiration, he laid its foundation-stone in 1220, when only fifteen years of age. This structure, which remained unaltered for more than two centuries, was really the starting-point of Henry's reconstruction of the Norman church. It ended in a semi-octagonal apse, the foundations of which were discovered in 1876. Henry's rebuilding of the eastern parts of the church occupied nearly a quarter of a century (1245-1269). . . . The plan is unquestionably French, but the

Abbey. In 1296 Edward brought the famous stone of Scone to the Abbey, and on it caused himself to be crowned King of the Scots. . . . Up to the year 1330 no considerable structural additions or alterations were made, but the magnificence of the Abbey was from time to time increased by the erection of [various] tombs. . . . Almost as soon as the nave was completed, the thirteenth-century lady-chapel was pulled down to make room for a new one, generally known as Henry VII.'s chapel, which was the last of the royal alterations and additions to the Abbey church. . . . The building was . . . probably finished about the year 1510. . . . We must now turn for a moment to the consideration of the fate of S. Peter's Church at the Reformation. Looking to the destruction which that vast change brought to many abbeys of great prestige, Westminster may be said to have

WESTMINSTER ABBEY

details are clearly English, and the workmanship is better than that of contemporary French builders. The parts first undertaken included the eastern arm and the chapels round it, both the transepts, the crossing, and the chapter-house. The last of these was practically finished in 1253, the windows being temporarily filled with canvas in order that the room might be used without delay. From the evidence of the fabric itself, it would appear that the construction of the main buildings of the church was pushed forward as rapidly as, if not more rapidly than, the chapter-house. By the year 1269 the eastern portions of the building and the four bays west of the crossing were finished. The cloisters were also rebuilt with the adjacent parts of the church so far as they lay by them. . . . From the time of Henry III., Westminster Abbey became, and for centuries remained, the mausoleum of English royalty. . . . On August 19, 1274, the coronation of Edward and his Queen, Eleanor of Castile, took place, being the first joint coronation in the history of the

Abbey. The dissolution of the monastery was quietly effected on January 16, 1539, and the first book containing the orders of the new dean and chapter is dated 1542. The abbot was converted into a dean; for the monks, twelve prebendaries, who were to meet every Saturday in the year, were substituted. Over the head of the newly constituted body was placed a prelate, entitled Bishop of Westminster, whose diocese extended over the whole of Middlesex, with the exception of Fulham. The Episcopate of Westminster was, however, short-lived. It was only with great difficulty that the Abbey was preserved from destruction in the tempestuous days of Edward VI. . . . The services of the Roman Church were continued until the reign of Edward VI., when the 'Communion' took the place of 'Mass,' and brass lecterns, candlesticks, angels, and other ornaments, as well as many sumptuous vestments, were sold, the proceeds being spent in adding to the library. In the reign of Mary, who was crowned on October 1, 1553, the monastery was partially reinstated under Abbot

Heckenham, and the old worship was revived, and in 1557 the queen and Philip of Spain attended mass in the Abbey. The abbacy was swept away by Elizabeth, who re-established the dean and twelve prebendaries under the title of the 'College, or Collegiate Church of S. Peter, Westminster.' During the Commonwealth, although the services were changed and 'monuments of superstition and idolatry' demolished, the fabric itself happily escaped serious injury. The year 1643 is memorable by reason of the Assembly of Divines in Henry VII.'s Chapel. With the Restoration, the older order of things naturally returned. A school was always attached to the Monastery of Westminster. The famous public school which flourishes beside the Abbey to-day was practically founded by Henry VIII. and richly endowed by Elizabeth in 1560. Up to the eighteenth century the Abbey church remained without towers or spires. . . . For generations the erection of a great spire over the crossing has been eagerly discussed, and more than once the discussion has resulted in a definite project. The last great structural additions to the fabric, the western towers, were completed in 1730. Sir Christopher Wren 'restored' the lower parts of the towers, sweeping away exquisite details in ruthless fashion, and designed the upper parts in a style of his own. After his death in 1723, the work was continued by Nicholas Hawksmoor up to 1736, and probably completed by James during the term of office of Dean Wilcocks. . . . There have, of course, from time to time been repairs to various parts of the structure, including the almost complete recasing of the exterior; indeed, the Abbey has suffered and is still suffering much from restoration, but the general aspect of the great church remains unchanged. . . . The most ambitious alteration has been that of the north front under Sir Gilbert Scott and Mr. J. L. Pearson."—G. Hiatt, *Westminster Abbey*, pp. 4-15.

WESTMINSTER ASSEMBLY.—"In the Grand Remonstrance of the winter of 1641, the Commons desired a general synod of the most grave, pious, learned, and judicious divines of this island, to consider all things necessary for the peace and good government of the church. It was not until the summer of 1643 that this synod was at last after half a dozen efforts actually appointed by Parliament. . . . The Westminster Assembly of Divines . . . was nominally composed of one hundred and fifty members, including not only Anglicans, but Anglican bishops, and comprehending, besides divines, ten lay peers and twice as many members of the other House. Eight Scottish commissioners were included. The Anglicans never came, or else they immediately fell off; the laymen, with the notable exception of Selden, took but a secondary part; and it became essentially a body of divines, usually some sixty of them in attendance. The field appointed for their toil was indeed enormous. It was nothing less than the reorganization of the spiritual power, subject to the shifting exigencies of the temporal, with diverse patterns to choose from in the reformed churches out of England. Faith, worship, discipline, government, were all comprehended in their vast operation. They were instructed to organize a scheme for a church; to compose a directory in place of the Prayer Book; to . . . [draw up] a confession of faith . . . [and] a catechism . . . The divines first met in Henry VII.'s chapel (July 1, 1643), but when the weather grew colder they moved into the Jerusalem Chamber. . . . For most of five

years and a half they sat—over one thousand sittings. . . . It was not until May (1747) that this famous exposition of theological truth was submitted to the House of Commons. By that time Parliament, in deep water, had other things to think of, and the Westminster Confession never received the sanction of the State. Nor did the two catechisms, which, along with the Confession, are still the standards not only of the Church of Scotland, but of the great body of Presbyterian churches grouped all over the English-speaking world, and numbering many millions of strenuous adherents. The effect of familiarity with the Shorter Catechism upon the intellectual character of the Scottish peasantry, and the connection between Presbyterian government and a strongly democratic turn of thought and feeling in the community, are accepted commonplaces. . . . Few more determined struggles have ever been fought on our sacred national battle-ground at Westminster, than the contest between the Assembly of Divines and the Parliament. The divines inspired from Scotland insisted that Presbytery was of divine right. The majority of the Parliament, true to English traditions and instinct, insisted that all church government was of human institution and depended on the will of the magistrate. The divine contended that presbytery and synod were to have the unfettered right of inflicting spiritual censures, and denying access to the communion-table to all whom they should choose to condemn as ignorant or scandalous persons. The Parliament was as stubborn that these censures were to be confined to offenses specified by law, and with a right of appeal to a lay tribunal. . . . The breach widened as time went on, and by 1645 its repair was hopeless. The conflict in its progress made more definite the schism between Presbyterian and Independent. It was the alliance of Independent and Erastian in Parliament that finally baffled the Presbyterian after the Scottish model, and hardened the great division, until what had been legitimate difference on a disputable question became mutual hatred between two infuriated factions. . . . We need not follow the vicissitudes of party, or the changing shadows of military and political events as they fell across the zealous scene. . . . It was in 1646 that Parliament consummated what would have seemed so extraordinary a revolution to the patriots of 1640 by the erection of the Presbyterian system of Scotland, though with marked reservations of Parliamentary control, into the Established Church of England. The uniformity that had rooted itself in Scotland, and had been the center of the Solemn League and Covenant [1643] was now nominally established throughout the island. But in name only. It was soon found in the case of church and state alike, that to make England break with her history is a thing more easily said than done, as it has ever been in all her ages. The Presbyterian system struck no abiding root. The Assembly, as a Scottish historian has pointedly observed, though called by an English Parliament, held on English ground, and composed of English divines, with only a few Scotsmen among them, still, as things turned out, existed and labored mainly for Scotland."—J. Morley, *Oliver Cromwell*, pp. 145-153, 155-156.—See also PRESBYTERIAN CHURCHES: 1649-1919; ENGLAND: 1643 (July); (July-September); 1646 (March).

WESTMINSTER CONFESSION. See CONGREGATIONAL CHURCH: 1646-1883.

WESTMINSTER PALACE.—"Westminster was from the days of Edward the Confessor the

PEACE OF WESTPHALIA: ADOPTION OF TREATY AT MUNSTER, 1648
(After the painting executed on copper by Gerard Terborch in 1648, now in the National Gallery at London)

recognised home of the great council of the nation as well as of the king. How this came about, history does not record; it is possible that the mere accident of the existence of the royal palace on the bank of the Thames led to the foundation of the abbey, or that the propinquity of the abbey led to the choice of the place for a palace; equal obscurity covers the origin of both. . . . From the very first introduction of representative members the national council had its regular home at Westminster. There, with a few casual exceptions, . . . all the properly constituted parliaments of England have been held. The ancient Palace of Westminster, of which the most important parts, having survived until the fire of 1834 and the construction of the New Houses of Parliament, were destroyed in 1852, must have presented a very apt illustration of the history of the Constitution which had grown up from its early simplicity to its full strength within those venerable walls. It was a curious congeries of towers, halls, churches, and chambers. . . . As time went on, every apartment changed its destination: the chamber became a council room, the banquet hall a court of justice, the chapel a hall of deliberation. . . . The house of commons met occasionally in the Painted Chamber, but generally sat in the Chapter House or in the Refectory of the abbey, until the reign of Edward VI, when it was fixed in S. Stephen's chapel."—W. Stubbs, *Constitutional History of England*, v. 3, ch. 20, sect. 735-736.

WESTPHALIA, Peace of (1648), treaty bringing the Thirty Years' War to an end. "It was just before the death of Richelieu, which occurred in 1642, that the first whisperings of peace were heard. Everybody was inexpressibly weary of the war and longed for the cessation of its horrors, yet each ruler and statesman wanted peace on terms advantageous to himself. The arrangement of the articles of peace was a matter of infinite difficulty, for the affairs and boundaries of the states of Central Europe were in almost hopeless confusion. To facilitate matters the commissioners were divided into two bodies, one holding its sessions at Osnabrück, and the other at Münster, both Westphalian cities. After four years of discussion and negotiation, the articles of the celebrated Peace of Westphalia, as it is called, were signed by different European powers. The chief articles of this important peace may be made to fall under two heads,—those relating to territorial boundaries, and those respecting religion. As to the first, these cut short in three directions the actual or nominal

limits of the Holy Roman Empire. Switzerland and the United Netherlands were severed from it; for though both of these countries had been for a long time practically independent of the Empire, this independence had never been acknowledged in any formal way. The claim of France to the three bishoprics of Metz, Toul, and Verdun in Lorraine, which places she had held for about a century, was confirmed, and all Alsace, save the free city of Strasburg, was given to her. These Alsatian lands gave France a foothold on the Rhine and an open door into Germany,—a door which remained open until 1871, when Germany, determined to possess these valuable lands across her border, went to war against France, pushed her back from the river, and seized the coveted territory. Sweden, already a great maritime power, was given territories in North Germany—Western Pomerania and other lands—which greatly enhanced her influence by giving her command of the mouths of three important German rivers,—the Oder, the Elbe, and the Weser. But these lands were not given to the Swedish king in full sovereignty; they still remained a part of the Germanic body, and the king of Sweden through his relation to them became a prince of the Empire and entitled to a seat in the German Diet. The changes within the Empire were many, and some of them important. Brandenburg, the nucleus of a future great state, especially received considerable additions of territory. She got Eastern Pomerania, and also valuable ecclesiastical lands. The articles respecting religion were even more important than those which established the metes and bounds of the different states. Catholics, Lutherans, and Calvinists were all put upon the same footing. Every prince, with some reservations, was to have the right to make his religion the religion of his people, and to banish all who refused to adopt the established creed; but such nonconformists were to have five years in which to emigrate. This arrangement was known as the princes' 'Right of Reformation' and the subjects' 'Right of Emigration.' The different states of the Empire—they numbered over four hundred, counting the free imperial cities—were left almost wholly independent of the imperial authority. They were given the right to enter into alliances with one another and with foreign princes, but not, of course, against the Emperor or the Empire. This provision made the Empire merely a loose confederation, and postponed to a distant future the nationalization of the German fatherland. Germany became what Italy had been, and still was, an open field in which any enemy might sow the dragon's teeth of discord and war. These were some of the most important provisions of the noted Peace of Westphalia. For more than two centuries they formed the fundamental law of Germany, and established a balance of power between the European states which, though it was disregarded and disturbed by Louis XIV of France, was in general maintained until the great upheaval of the French Revolution."—P. Van Ness Myers, *Medieval and modern history*, pp. 391-393.—"When by the Peace of Westphalia a crowd of petty principalities were recognized as practically independent states, the need of a body of rules to regulate their relations and intercourse became pressing. Such a code (if such it can be called) Grotius and his successors compiled out of the principles which they found in the Roman law; then the private law of the Germanic countries, thus laying the foundation whereon the system of international jurisprudence has been built up dur-

ing the last three centuries."—J. Bryce, *Holy Roman empire*, p. 436.—See also GERMANY: 1648; Peace of Westphalia; 1648: Effects of the Peace of Westphalia; 1648-1705; AUSTRIA: 1618-1648; INTERNATIONAL LAW: 1648-1714; NETHERLANDS: 1648.

WHIGGAMORS. See WHIGS.

WHIGS: American party. See U. S. A.: 1834; 1841; 1854-1855.

WHIGS, WHIGGAMORS: English party.—"The southwest counties of Scotland have seldom corn enough to serve them round the year: and the northern parts producing more than they need, those in the west come in summer to buy at Leith the stores that come from the north: and from a word 'whiggam,' used in driving their horses, all that drove were called the 'whiggamors,' and shorter the 'whiggs.' Now in that year [1648], after the news came down of Duke Hamilton's defeat [at the battle of Preston [see ENGLAND: 1648 (April-August)]], the ministers animated their people to rise and march to Edinburgh; and they came up marching on [at] the head of their parishes, with an unheard-of fury, praying and preaching all the way as they came. The marquis of Argyle and his party came and headed them, they being about 6,000. This was called the 'whiggamors' inroad; and ever after that all that opposed the court came in contempt to be called 'whiggs'; and from Scotland the word was brought into England, where it is now one of our unhappy terms of distinction."

—G. Burnet, *History of my own time, summary*, v. 1, bk. 1, sect. 43.—"We find John Nicoll, the diarist, in 1666, speaking of the west-country Presbyterians as 'commonly called the Whiggs,' implying that the term was new. The sliding of the appellation from these obscure people to the party of the opposition in London a few years later, is indicated by Daniel Defoe as occurring immediately after the affair of Bothwell Bridge in 1679. The Duke of Monmouth then returning from his command in Scotland, instead of thanks for his good service, found himself under blame for using the insurgents too mercifully. 'And Lauderdale told Charles, with an oath, that the Duke had been so civil to the Whiggs because he was himself a Whig in his heart. This made it a court-word; and in a little while all the friends and followers of the Duke began to be called Whiggs.'—R. Chambers, *Domestic annals of Scotland*, v. 2, p. 172.—See also ENGLAND: 1680.

WHIPS, Party.—The "party whips," in English politics, are "an extremely useful and hard-working body of officials. Being charged with the duty of keeping the respective sides in readiness for all emergencies, they are generally to be found in the lobby, where they make themselves acquainted with the incomings and outgoings of members, and learn a good deal as to their prospective movements. The whips are the gentlemen who issue those strongly underlined circulars by which legislators are summoned on important nights; and who, by their watchfulness and attention, can generally convey reliable intelligence to the party chiefs. If the Ministers, for example, are engaged in any controversy, and their whips are not absolutely certain of a majority, they would make arrangements for a succession of men to keep on talking till the laggards could be brought to their places." The whips also arrange "pairs," by which members of opposite parties, or on opposite sides of a given question, agree in couples, not to vote for a certain fixed period of time, thereby securing freedom to be absent without causing any loss of relative strength to their respective parties. This arrangement is common in most legislative bodies. "In addition to these duties, the whips of the opposing forces have to move for the issue of new writs in the place of deceased members—a task never undertaken till they have a candidate ready for the fray."—*Popular account of Parliamentary procedure*, p. 18.

WHITE BROTHERHOOD, secret association of southern whites. See U. S. A.: 1866-1871; KU KLUX KLAN.

WHITE CAMELIA, Knights of the, organization of southern whites similar to the Ku Klux Klan of the Reconstruction period and often confounded with the Ku Klux, with which it was afterwards merged. It originated in Louisiana in 1867 and spread quickly over the whole of the Confederacy. Its organization was like that of the Ku Klux, but without the uncouth nomenclature. Its officers were called commanders, and the membership, much larger than that of the Ku Klux, knights and brothers. See KU KLUX KLAN; U. S. A.: 1866-1871.

WHITE CITY. See BELGRADE.

WHITE COCKADE.—"This is the badge at the same time of the House of Stuart and of the House of Bourbon."—E. E. Morris, *Early Hanoverians*, p. 138.

WHITE COMPANIES. See WHITE PENITENTS, OR WHITE COMPANIES.

WHITE COMPANY, name assumed by bands of freebooters in the thirteenth and fourteenth centuries. One of the bands, under the leadership of Sir John Hawkwood, fought in the pay of various

Italian states until it was disbanded in 1391. See ITALY: 1343-1393.

WHITE CROSS, Order of the, order founded by the grand duke of Tuscany, 1814.

WHITE EAGLE, Order of the, Polish order of knighthood, instituted in 1325 by Wladislaus I, and revived by Augustus in 1705.

WHITE FRIARS. See CARMELITE FRIARS.

WHITE GUARDS, Finland, anti-Bolshevist troops. See FINLAND: 1918.

WHITE GUELPHS (Bianchi), political party in Florence. See FLORENCE: 1295-1300; 1301-1313.

WHITE HOODS OF FRANCE.—"The Caputiati, Capuchons, or White Hoods [was] a sect originating with a wood-cutter of Auvergne, by

out some hints about restoring the primæval liberty of mortals and universal equality; thereby incurring the displeasure of Hugo Bishop of Auxerre, who took arms against them, and put an end to the sect by the might of the sword in 1186."—L. Mariotti, *Frà Dolcino and his times*, ch. 1.

WHITE HOODS OF GHENT, followers of John Lyon in Ghent, who in 1379 proceeded against ditchers sent out by the city of Bruges to divert by a canal the waters of the River Lys. This was the beginning of a series of violent conflicts lasting three years. See FLANDERS: 1379-1381.

WHITE HOUSE, executive mansion in Washington, official residence of the president of the United States. The house, which is not ex-

THE WHITE HOUSE, NORTH PORTICO
Before its restoration

name Durand, about the year 1182. Their primary object was the maintenance of peace, and the extermination of the disbanded soldiery, whom the English kings had spread over the south of France, and [who] were now ravaging the country under the name of Routiers or Cotereaux. The members of this religious association were bound by no vow, and made no profession of any particular faith; they were only distinguished by the white head-gear that gave them their name, and wore a little leaden image of the Virgin on their breast. They found favor at first with the bishops, especially in Burgundy and the Berri, and were even, from the best political causes, countenanced by Philip Augustus. They thus rose to such a degree of power that on the 20th of July, 1183, they surrounded a body of 7,000 of the marauding party, and suffered not one man to escape. They were, however, soon intoxicated with success, and threw

tremely large, is built in excellent proportions, and on the south front has a fine portico supported by Ionic columns. It is flanked east and west by two low wings: the westerly one contains the president's office, and cabinet offices; while the east wing is used as an entrance for the general public. The public is admitted to the state rooms—the east room, blue room, red room, and green room, or state dining room. The south front faces on handsome grounds, at the head of the fine park system which sweeps down to the Potomac. The building, which was designed by James Hoban, after the plan of the seat of the dukes of Leinster, was begun in 1792 at the instance of President Washington. (See also WASHINGTON: D. C.: 1791-1800.) It was first occupied by President Adams in 1800 and was partly destroyed by the British in 1814 in reprisal for the destruction of York (now Toronto) in Canada in the winter of 1813. The wings were not

added until 1903. "During President Roosevelt's Administration the historic mansion has undergone complete repair and restoration—so complete, in fact, that the vexed question of an appropriate home for the President of the United States is, in all probability, settled forever. In his Message, transmitting the Report of the Architects on the restoration of the White House, President Roosevelt aptly and appreciatively remarks: 'Through a wise provision of the Congress at its last session, the White House, which had become disfigured by incongruous additions and changes, has now been restored to what it was planned to be by Washington. In making the restorations the utmost care has been exercised to come as near as possible to the early plans and to supplement these plans by a careful study of such buildings as that of the University of Virginia, which was built by Jefferson. The White House is the property of the nation, and so far as is compatible with living therein it should be kept as it originally was, for the same reasons that we keep *Mount Vernon* as it originally was. The stately simplicity of the architecture is an expression of the character of the period in which it was built, and is in accord with the purpose it was designed to serve. It is a good thing to preserve such buildings as historic monuments which keep alive our sense of continuity with the nation's past.' . . . An act [Sundry Civil Appropriation Bill], approved June 20th, 1902, appropriated \$65,196 to be expended at the discretion of the President 'for a building to accommodate the offices of the President, to be located in the grounds of the Executive Mansion. . . . In addition, \$475,445 was appropriated for repairs and refurbishing the Executive Mansion and for each and every purpose connected therewith.'"—E. Singleton, *Story of the White House*, v. 2, pp. 279-280.—In accordance with the advice of Charles F. McKim, the architect, the east and west terraces were restored so as to comply with the original plans. The rooms in the western terrace were arranged to provide space for the executive offices.—See also WASHINGTON, D. C.: 1791-1800.

WHITE PENITENTS, or White Companies.—"The end of the 14th century witnessed a profound outburst of popular devotion. The miserable condition of the Church, distracted by schism, and the disturbed state of every country in Europe, awoke a spirit of penitence and contrition at the prospect of another great Jubilee, and the opening of a new century. Bands of penitents wandered from place to place, clad in white garments; their faces, except the eyes, were covered with hoods, and on their backs they wore a red cross. They

walked two and two, in solemn procession, old and young, men and women together, singing hymns of penitence, amongst which the sad strains of the 'Stabat Mater' held the chief place. At times they paused and flung themselves on the ground, exclaiming 'Mercy,' or 'Peace,' and continued in silent prayer. All was done with order and decorum; the processions generally lasted for nine days, and the penitents during this time fasted rigorously. The movement seems to have originated in Provence, but rapidly spread through Italy. Enemies were reconciled, restitution was made for wrongs, the churches were crowded wherever the penitents, or 'Bianchi' ['White Penitents,' 'White Companies,' 'White-men' are various English forms of the name] as they were called from their dress, made their appearance. The inhabitants of one city made a pilgrimage to another and stirred up their devotion. The people of Modena went to Bologna; the Bolognese suspended all business for nine days, and walked to Imola, whence the contagion rapidly spread southwards. For the last three months of 1399 this enthusiasm lasted, and wrought marked results upon morals and religion for a time. Yet enthusiasm tended to create imposture."—M. Creighton, *History of the Papacy during the period of the Reformation*, v. 1, pp. 145-146.—See also FLAGELLANTS.

WHITE SHIP, Sinking of the.—William, the only legitimate son of Henry I of England, accompanied his father on a visit to Normandy (1120). "When they were about to return by the port of Barileur, a Norman captain, Thomas Fitz-Stephen, appeared and claimed the right of taking them in his ship, on the ground that his father had been captain of the 'Mora,' in which the Conqueror crossed to invade England. The king did not care to alter his own arrangements, but agreed that his son should sail in the 'Blanche Nef' [the White Ship] with Fitz-Stephen. William Ætheling, as the English called him, was accompanied by a large train of unruly courtiers, who amused themselves by making the sailors drink hard before they started, and dismissed the priests who came to bless the voyage with a chorus of scoffing laughter. It was evening before they left the shore, and there was no moon; a few of the more prudent quitted the ship, but there remained nearly 300—a dangerous freight for a small vessel. However, fifty rowers flushed with wine made good way in the waters; but the helmsman was less fit for his work, and the vessel struck suddenly on a sunk rock, the Raz de Catteville. The water rushed in, but there was time to lower a boat, which put off with the prince. When in safety, he heard the cries of his sister, the countess of Perche, and returned to save her. A crowd of desperate men leaped into the boat; it was swamped, and all perished."—C. H. Pearson, *History of England during the Early and Middle Ages*, v. 1, p. 445.

WHITE SLAVE TRADE: Movement for suppression.—American legislation.—"While the

beginning of the present movement of warfare against commercialized vice in an active and direct form dates practically from the beginning of this [twentieth] century, the foundations were laid in Europe in 1878, during the period of twenty years before the beginning of the century. A clergyman of the Church of England made a public declaration to the effect that English girls were being transported to Belgium for immoral purposes. The declaration was taken up by . . . Josephine Butler, who gathered the evidence to prove the declaration. Belgium demanded of the English government that the charges be withdrawn or that they be investigated by competent authorities. The English Home Secretary . . . ordered an inquiry to be made by a magistrate of the city of London. Contrary to their expectations, Josephine Butler . . . appeared with her witnesses. Before the magistrate had concluded his hearing, two leading police officials of Brussels were retired. Twenty years of agitation followed. When, in 1902, the French government, roused by the revelations made throughout the rest of Europe, called together an international congress which drafted an international treaty, the term 'white slave' came into being. . . . Following the ratification of this international treaty by the great powers of Europe [1904] and the United States [1908], and subsequent agitation in the United States, . . . there was appointed by the President of the United States a commission to investigate the subject of immigration. One of the important topics taken up by this commission was the importation of women into this country from Europe for immoral purposes. [The report of this commission was published in 1909, and astonished the country with its revelations.]—J. B. Reynolds, *War against the white slave traffic and commercialized vice (Proceedings of the National Conference of Charities and Correction, 1914, pp. 211-212)*.—"By the act of March 26, 1910, sections 2 and 3 of the immigration law of February 20, 1907, were amended to more effectively prevent the importation of women and girls for immoral purposes and their control by importers and others after admission to the United States. These amendments followed recommendations of the Immigration Commission contained in a report of the Commission on the importation and harboring of women for immoral purposes. By the act of March 26 the following were added to the classes excluded by section 2 of the immigration act: 'Persons who are supported by or receive in full or in part the proceeds of prostitution.' Under the terms of the act of 1907 'women or girls coming into the United States for the purpose of prostitution or for any other immoral purpose,' and also 'persons who procure or attempt to bring in prostitutes or women or girls for the purpose of prostitution or for any other immoral purpose,' were specifically excluded from the United States. Under that law, however, there was no specific provision for the exclusion of that particularly reprehensible class of persons referred to in the act of March 26, 1910. By the amendment of section 3 of the law of 1907 additional means were provided for the punishment and deportation of aliens who in any way profited or derived benefit from the proceeds of prostitution. The agitation of the white-slave traffic in Congress also resulted in the enactment of a law prohibiting the transportation of persons from one state to another for purposes of prostitution [the White-Slave Traffic Act or so-called Mann Act, approved June 25, 1910]."—*Abstracts of the Reports of the Immigration Commission, v. 2, p. 577*.—See also U.S.A.: 1922: Relations between the states, etc.

Work of League of Nations for suppression of traffic in women and children.—The League of Nations "in accordance with the covenant, is entrusted with the general supervision over, and the execution of, agreements in regard to the Traffic in Women and Children. Accordingly, the League took as its starting point, the agreements reached in 1910 between 19 states. When the League took up the matter in 1920, it was found that the Convention of 1910 had not been applied in many even of the signatory states. The League convened an International Conference which met in Geneva in June 1920 and at which 34 states were represented. The conference passed unanimously a 'Final Act' which was a great advance upon previous efforts to combat the traffic. By changing the name 'White Slave Traffic' to 'Traffic in Women and Children,' the League enabled the agreement to be extended to protect the native population in the colonial possessions of the European countries. The 'Final Act' of the Geneva International Conference was approved by the League's Council and Assembly. As a result, the League has formed a Special Advisory Committee which centralises information with regard to the traffic in women and children from all parts of the world. Also, this committee has power to recommend, through the League's Council, reforms and fresh legislation that it thinks desirable and to enquire into any failure of any member-state, signatory to the Convention, to carry out its obligations, and to urge the assembly and the Council to bring all possible pressure to bear upon the defaulting state."—C. B. Fry, *Key book of League of Nations*.

WHITLEY COUNCILS.—In England "the history of the nineteenth century and after, so far as it concerns the relations of capital and labour, is encouraging. . . . The striking fact becomes evident that an improvement in the relations of capital and labour has taken place side by side with a strengthening of the organisations, defensive and offensive, of the opposing interests. It is to the lasting credit of the Sub-Committee appointed by the [British] war-time Ministry of Reconstruction

to consider the relations between employers and employed, that they seized on this fact and rightly interpreted it. It is because these opposing interests are so strongly organised that their difficulties can be most easily settled, and it is in the industries where Employers' Associations and Trade Unions are strongest, that the Sub-Committee (the Whitley Committee as it is usually called, after its chairman) suggested the fullest extension of the method of conference and conciliation. For industries well organised on both sides the system of Joint Standing Industrial Councils was suggested in the first Whitley report, dated March, 1917. These 'Whitley Councils' resemble Trade Boards in that they are permanent bodies representative of both capital and labour. They differ from Trade Boards in that they are not statutory but purely voluntary, and that their decisions are not enforced by law, but owe their value to the good faith which each side should be able to have in the other because it is strongly organised and truly representative. They, therefore, differ also from those meetings of representatives of employers and employed which have met from time to time to settle specific questions of dispute, for although, like them, they are not statutory bodies and rely for the upholding of their decisions on the good faith and representative characters of the opposing organisations, they are not to meet merely to settle particular disputes, but are to be permanent bodies meeting regularly to discuss difficulties, to suggest improvement, and largely to forestall disputes. To descend to details. The Committee divide all industry into three groups. In *Group A* they place 'industries in which organisation on the part of employers and employed is sufficiently developed to render the Councils representative'; *Group B* is to include 'industries in which either as regards employers or employed, or both, the degree of organisation, though considerable, is less marked than in *Group A* and is insufficient to be regarded as representative'; the last group, *Group C*, includes 'industries in which organization is so imperfect, either as regards employers or employed, or both, that no associations can be said adequately to represent those engaged in the trade.' Of these three groups the first and last are, generally speaking, definite: trades falling in either can readily be assigned to their group. *Group B* is less exact, including some examples very nearly ripe for inclusion in the first group and others only just beyond the last. The proposals seek first, the establishment of a full organisation of councils in the advanced group, and, second, the application of the system to the lower groups in such modified forms as will help them to advance in organisation until they become fitted for the complete system applicable to *Group A*. The complete system is to consist for each trade of a joint standing industrial council for the whole country, and, subsidiary to this, district councils, and smaller bodies still for industrial establishment or works, those smallest bodies being known as 'works committees.' The establishment of a joint standing industrial council in an industry postulates one Employers' Association and one Trade Union (or, at least, a very small group) covering the whole country. The scheme is to be taken up voluntarily by those bodies, and the two sides are to agree as to representation on the council, the constitution of the council, and the somewhat delicate question of the chairmanship. In all this the industry is given a free hand. Strongly as the system is recommended by the government department, there is not compulsion, no stereotyped form. The state is willing to lend all the aid it can, particularly

by watching the progress of the system where adopted, and by giving assistance and information where desired; beyond that nothing at present. The variety of the needs of various industries, the delicate nature of some of their problems, the intricate and close knowledge of the associations on both sides concerning the conditions in the trade, are all recognised, and the state is prepared to leave all to them, trusting in their capacity. The Whitley commissioners recommend frequent and regular meetings of the councils wherever they are set up, for 'the object is to secure co-operation by granting to workpeople a greater share in the consideration of matters affecting their industry, and this can only be achieved by keeping employers and workpeople in constant touch.' . . . They would naturally discuss questions of hours of work and rates of wages, including the intricate problems of fixing rates for piece-work and time-work of varying kinds and under varying conditions. In this they would materially assist their trade unions and employers' associations. They would not, as some have feared, supersede the trade unions, because the representatives of labour, being appointed by the unions, would be responsible to them and could not bind them without their approval. The whole power of the labour representatives, in fact, would rest on the support of the unions behind them, answerable to the whole of the workpeople, and still holding the ultimate weapon of the strike. Joint councils are not intended to supersede, but to supplement, existing organisations. . . . The councils are . . . urged to establish themselves as the head of a system of lesser councils. . . . 'In every industry there are certain questions, such as rates of wages and hours of work, which should be settled by District or National Agreement, and with any matter so settled, no Works Committee should be allowed to interfere; but there are also many questions closely affecting daily life and comfort in, and the success of, the business, and affecting in no small degree efficiency of working, which are peculiar to the individual workshop or factory. The purpose of a Works Committee is to establish and maintain a system of co-operation in all these workshop matters.' 'We regard the successful development and utilisation of Works Committees in any business . . . as of equal importance with its commercial and scientific efficiency; and we think that in every case one of the partners or directors, or some other responsible representative of the management, would be well advised to devote a substantial part of his time and thought to the good working and development of such a committee.' While the complete system of councils and committees is recommended for the most highly organised industries, only partial application is suggested for those classified in *Group B*. Some may be found to be so nearly complete in their organisation as to be capable of establishing national councils if, at first at any rate, these councils are carefully guided. It is recommended that information collected by the state on the working of the system generally should be utilised on behalf of these weaker national councils by the appointment of members representing the government department, but not possessed of voting power. In other industries of *Group B* there may be found localities or branches of the trade well organised although the trade as a whole is not ready for a national council. Here the local organisation only could be used, and it is proposed that district committees should be established without a national council, but by their work, influence and experience warranted gradually

to prepare the trade, as a whole, for national organisation. For the totally unorganised trades, classified in *Group C*, strong state control is necessary, for they are quite incapable of organising on the Whitley system, at present. Those sitting for the unorganised party would have no real power, because they would not be truly representative of their side of the industry, and would be unable to commit it to any decision they might take in the council or committee. A method for dealing with such cases is already familiar in trade boards, and nothing more than an extension of this system is recommended. There is nothing revolutionary in the scheme of the Whitley commissioners. . . . The system continues progress in the direction already taken before the war by arbitration and conciliation and trade boards, availing itself of accumulated experience on both sides and on the part of the state; seeking to wear away difficulties gradually without any sudden and serious disorganisation of the economic system. The scheme was published in 1917 in the hope that it might be adopted by a great many industries, and an organisation thereby provided in good time to deal with the problems of peace. Within a year over forty trades had announced that they had set up joint standing industrial councils or were in various stages of the consideration of the proposal."—A. S. Turberville and F. A. Howe, *Great Britain in the latest age*, pp. 174-182.—The Whitley plan, in the five years following the World War, resulted in the following successful applications. It was adopted by the Trades Union Congress in 1917. The civil service departments put it into use in 1919, and in that year it was also accepted by the Federation of British Industries. A permanent court for industrial arbitration was established by the Industrial Court Act of November, 1919. The Mining Industry Act of 1920 and the Agricultural Act of 1920 provided special machinery for applying arbitration to these industries. The Trades Board Act of 1918 by providing for the extension of Trade Boards, carried out the suggestion of the Whitley Committee that their scheme of voluntary industrial arbitration should not interfere with the system already established.

WILDCAT BANKS.—"During Jackson's struggle with the Bank of the United States [see U. S. A.: 1833-1836; 1835-1837] many new banks had been formed in various States, generally with little or no capital to pay the notes which they issued. They bought large quantities of cheaply printed bills. As these bills had cost them very little, they could afford to offer a higher price in paper money for lands in distant States and Territories than others could afford to offer in gold and silver. Having bought the lands for this worthless money, the wildcat bankers sold them for good money, hoping that their own bills would not soon find their way back for payment. If they were disappointed in this hope, the bank 'failed,' and the managers started a new one."—A. Johnston, *History of the United States for schools*, sect. 496.—See also MONEY AND BANKING: Modern: 1837-1841.

WILDE, Oscar O'Flahertie Willis (1856-1900), British dramatist and poet. See ENGLISH LITERATURE: 1880-1920; DRAMA: 1843-1895.

WILDMAN, Rounseville, United States consul at Hong Kong. See U. S. A.: 1897 (November); 1898 (April-May: Philippines).

WILFRED, Saint (c. 634-709), English archbishop. Bishop of Ripon, 665-668, 686-687; of York, 668-677, 685; converted Friesland, 677. See CHRISTIANITY: 496-800.

WILHELM. See WILLIAM.

WILHELMINA (1880-), queen of the Netherlands since 1890. Under regency of her mother, 1890-1898. See NETHERLANDS: 1887-1896; 1898-1903.

"**WILHELMINA,**" American vessel. It left New York for Hamburg on Jan. 22, 1915, with a cargo of foodstuffs on board. "According to the prevailing principles of international law, foodstuffs were only conditional contraband. They might be imported into Germany if they were intended for the exclusive use of the civil population. As, however, England succeeded in restraining the exporters from any attempt to consign foodstuffs to Germany, especially as in view of the enormous supplies that were being forwarded to our enemies they had little interest in such shipment, the question never reached a clear issue. Herr Albert therefore induced an American firm to ship foodstuffs for the civil population of Germany on the American steamer *Wilhelmina*, bound for Hamburg, by himself undertaking the whole risk from behind the scenes. This was arranged in such a way as to preserve in appearance the good faith of the American firm, and to make the shipment seem purely American in the eyes of the American Government and the English."—J. H. A. Bernstorff, *My three years in America*, pp. 9192.—Calling at Falmouth on February 9, her cargo was detained as prize and was subsequently subjected to proceed-

ings for condemnation. On January 25 a decree of the Bundesrat had made "all grain and flour imported into Germany deliverable only to certain organizations under direct Government control; on February 6 this provision was repealed; and it . . . never applied to more than 15 per cent of the *Wilhelmina's* cargo, which was largely of meats, vegetables, and fruits. The important question raised by the case was therefore whether Great Britain should treat as contraband foodstuffs destined for the civil population of the enemy. This question was never determined, for on March 11 the British government instituted its embargo upon all neutral trade with Germany and proceeded forthwith, in accordance with the terms of the order in council, to purchase the *Wilhelmina's* cargo."—*War cyclopaedia*, p. 304.—See also U. S. A.: 1915 (February): Contraband of war.

WILHELMSTAL, town in East Africa, formerly German territory, taken by the British in 1915. It was later given the name of Lushoto. See WORLD WAR: 1915: VIII, Africa: a, 1.

WILHELMSTRASSE, street in Berlin, Germany, on which is located the office of the chancellor and other government offices, hence often used to signify the German administration.

WILKES, Charles (1798-1877), American naval officer and explorer. Stopped the British steamer *Trent* and removed two Confederate commissioners, Mason and Slidell, 1861, thus causing considerable friction with England. See TRENT AFFAIR; U. S. A.: 1861 (November); ANTARCTIC EXPLORATION: 1819-1838; also map.

WILKES, John (1727-1797), English politician and publicist. Imprisoned for his criticism of George III, 1763; expelled from Parliament, 1764; became lord mayor of London, 1774. See ENGLAND: 1762-1764; 1768-1774.

William I, the Conqueror (c. 1027-1087), king of England, 1066-1087, and duke of Normandy, 1035-1087. Succeeded to the duchy of Normandy, 1035; aided Henry of France against the count of Anjou, 1048; repelled an invasion by Anjou, 1054; acquired Maine, 1063; forced Harold, earl of Essex and heir to the English throne to promise his aid in obtaining the English throne, 1064; but Harold disregarded this promise and ascended the throne; William invaded England, conquered Harold, and was crowned, 1066; suppressed the barons, 1066-1070; exacted homage of Scotland, 1072; put down a rebellion of the barons, 1075-1076. See ENGLAND: 1042-1066, to 1085-1086; NORMANDY: 1035-1063; SALISBURY, GEMOT OF; SCOTLAND: 1066-1093.

William II, Rufus (c. 1056-1100), king of England, 1087-1100. Third surviving son of William I; put down a revolt of the barons, who wished his elder brother, Robert of Normandy, as king, 1088-1090; waged war in Normandy against his brother Robert, 1090-1091; invaded Scotland, 1091; invaded Normandy, 1094; took possession of Normandy from his brother Robert, 1096; conquered Maine, 1098-1099. See ENGLAND: 1087-1135.

William III (1650-1702), king of England, 1689-1702, and prince of Orange. Proclaimed stadtholder of the Netherlands, 1672; married Mary, daughter of King James of England, 1677; opposed to James's policy; invited by English barons to accept crown; landed in England, 1688; proclaimed joint sovereign with Mary, 1689; defeated James at the battle of the Boyne in Ireland, 1690; in the league against France, 1690-1697. See ENGLAND: 1688 (July); 1688 (July-November); 1689 (January-February); AUSTRIA: 1672-1714; FRANCE: 1689-1690; IRELAND: 1689; NETHERLANDS: 1690-1694; SCOTLAND: 1688-1690.

William IV (1765-1837), king of England, 1830-1837. See ENGLAND: 1830: Death; 1834-1837.

William I (1772-1844), king of the Netherlands, 1815-1840. Commanded against the French, 1793-1795; served against Napoleon, 1800; recovered his territories from Napoleon, 1813; proclaimed first king of the Netherlands, 1815; secession of Belgium, 1830; abdicated, 1840. See NETHERLANDS: 1813; 1813-1830; 1815-1845; 1840-1840.

William II (1792-1849), king of the Netherlands, 1840-1849. Commanded against Napoleon, 1815; led army against Belgium, 1832; proclaimed king at the abdication of his father William I, 1840. See NETHERLANDS: 1840-1840.

William III (1817-1890), king of the Netherlands, 1849-1890. Abolished slavery in the Dutch West Indies, 1862; incorporated Limburg into his territories, 1866; neutrality of Luxembourg recognized by the Treaty of London, 1867. See NETHERLANDS: 1840-1890; 1887-1890.

William, the Lion (1143-1214), king of Scotland, 1165-1214. Unsuccessful invasion of England, 1174. See SCOTLAND: 1174-1180.

William I, the Silent (1533-1584), prince of Orange, 1544-1584, and count of Nassau, 1550-1584. Founder of the Republic of the United Netherlands. Governor of Holland, Zealand and

Utrecht, 1555; served in the war of Philip II against Henry II of France and negotiated preliminaries of peace, 1559; addressed petition to Philip II for recall of Granvella, who was persecuting Protestants, 1564; active in the struggle of the Dutch Protestants against the Duke of Alva, 1568-1576; brought about pacification of Ghent, 1576; union of Utrecht, 1579; received the hereditary stadtholdership, 1581; assassinated, 1584. See NETHERLANDS: 1559-1562, to 1584-1585.

William II (1626-1650), prince of Orange, 1648-1650. Grandson of William the Silent. As stadtholder, established peace with Spain, 1648; negotiated peace with France, 1650. See NETHERLANDS: 1648-1650.

William III, prince of Orange. See **WILLIAM III**, KING OF ENGLAND.

William IV, Charles Henry Friso (1711-1751), prince of Orange, 1747-1751. Recognized as stadtholder of all provinces of Holland, 1747. See NETHERLANDS: 1747.

William V (1329-1389), count of Holland, 1354-1359. See NETHERLANDS: 889-1345; 1345-1354; 1356-1413.

"**WILLIAM P. FRYE**," "American vessel, sunk, in defiance of treaties and law, by the German raider *Prinz Eitel Friedrich* January 28, 1915, while carrying a cargo of wheat to the British Isles. The United States Government promptly protested against the sinking, urging that it was in violation of the treaties of 1799 and 1828 with Prussia, and presented a claim for the value of the ship. The German Government acknowledged its liability under the treaties, but contended that the sinking of the ship was legal if its value in money was paid. An agreement was finally reached, providing that the question whether there had been a violation of international law should be referred for decision to The Hague tribunal. In the course of the correspondence the German Government agreed that while the arbitration was pending (1) it would not sink American vessels unless loaded with 'absolute contraband'; also (2) that when vessels were sunk, 'all possible care must be taken for the security of the crew and passengers'; and (3) that 'the persons found on board of a vessel may not be ordered into her lifeboats except when the general conditions—that is to say, the condition of the sea—and the neighborhood of the coasts afford absolute certainty that the boats will reach the

nearest port.' This agreement was repudiated by Germany January 31, 1917."—*War cyclopaedia*, p. 105.

WILZEN, or Welatabians.—“The Wilzen, as the Franks called them, or the Welatabians, as they called themselves, were perhaps the most powerful of the Slavonian tribes, and [at the time of Charlemagne] occupied the southern coast of the Baltic; their immediate neighbors were the Abodrites, old allies of the Franks, whom they harassed by continual raids.” Charlemagne led an expedition into the country of the Wilzen in 789 and subdued them.—J. I. Mombert, *History of Charles the Great*, bk. 2, ch. 4.

WIMBORNE, Ivor Churchill Guest, 2nd Baron (1873-), British administrator. Member of Parliament, 1900-1910; paymaster-general, 1910-1912; lord-lieutenant of Ireland, 1915-1918. See IRELAND: 1916 (May-July).

WIMPFEN, Battle of (1622). See GERMANY: 1621-1623.

WINCEBY FIGHT (1643).—The sharp encounter known as Winceby fight, in the English Civil War, was one of Cromwell's successes, which drove the royalist forces out of the Lincolnshire country, and compelled the marquis of Newcastle, who was besieging Hull, to abandon the siege. “Cromwell himself was nearer death in this action than ever in any other; the victory, too, made its due figure, and ‘appeared in the world.’ Winceby, a small upland hamlet, in the Wolds, not among the Fens, of Lincolnshire, is some five miles west of Horncastle. The confused memory of this Fight is still fresh there. [The fight occurred Oct. 10, 1643.]”—T. Carlyle, *Oliver Cromwell's letters and speeches*, v. 1, letter 18.—See also HULL: 1643.

WINCHESTER, Elhanan (1751-1797), American divine. See UNIVERSALISM.

WINCHESTER, James (1752-1826), American general. Commander at Fort Wayne, 1812-1813. See U.S.A.: 1812-1813: Harrison's northwestern campaign.

WINCHESTER, England, capital of Hampshire, sixty-six miles southwest of London, and the ancient capital of England. In 1921 it had a population of 23,378. “There can be little doubt that a town, of greater or less importance, has existed since the earliest dawn of English history on the same place where stands the Winchester of today. . . . If the first founders of the ancient city were Celtic Britons, covering with their rude dwellings the summit and sides of S. Catherine's Hill they were certainly conquered by the Belgæ, also probably of Celtic origin, who, crossing over from Gaul, established themselves in a large district of southern England. But whether in their time Winchester was called Caer Gwent is doubtful; very probably it was simply Gwin or Gwent, the white place. . . . But as there is no question of the Roman occupation of Britain, first by Julius Cæsar, later on by Claudius and Vespasian, so we

know that the settlement on the Itchen was turned into Venta Belgarum, and S. Catherine's Hill converted into a Roman camp. . . . Venta, as well as many other towns, was completely Romanised. . . . But the time arrived when Rome could no longer defend herself at home, and was thus forced to leave Britain to contend with the wild Northmen who had already begun their inroads. The Britons implored their former masters to come back and help them, but in vain. . . . We know how Vortigern, chief among the southern British kings, invited the Saxon adventurers to help him against the Picts and Scots, who encroached more and more in Britain. . . . In 495 (as we learn from the Brito-Welsh Chronicle), there 'came two ealdormen to Britain, Cerdic and Cymric,' who landed at Hamble Creek, and eventually, after many battles much extolled in the Saxon Chronicle, became kings of the West Saxons. Cerdic is said to have been crowned in Venta, to have slaughtered most of the inhabitants and all the priests, and to have converted the cathedral into a heathen temple. . . . The name Venta now becomes Wintana, with the affix of 'ceaster,' Saxon for fortified place."—A. R. R. Bramston and A. C. Leroy, *Historic Winchester*, ch. 1.—See also VENTA.—Most of the Saxon kings of Wessex were buried in the ancient cathedral, no portion of which remains to-day. The present cathedral was begun in 1070 and is the chief glory of the town.

WINDAU, seaport of Latvia, on the Baltic sea. The Germans captured it from the Russians in 1915. See WORLD WAR: 1915: III. Eastern front: g, 8.

"**WINDBER,**" American vessel. While it was at sea, the steward, one Piepenbrink, was removed by a French cruiser. In answer to the protest of the United States government (dated Dec. 7, 1914), the British government sought to extenuate the act on the ground that, while Piepenbrink had declared his intention of becoming an American citizen, he was actually still a German subject. The American government replied that he was an American citizen in contemplation of the law, but that whether he was or not, his removal was without justification, citing the case of the *Trent*. [See TRENT AFFAIR.] Eventually the British and French governments agreed to Piepenbrink's release as a special favor, while reserving the question of principle.

WINDER, William Henry (1775-1824), American soldier. In command of Fort Washington, 1814. See U. S. A.: 1814 (August-September).

WINDHOEK, capital of the former German colony of Southwest Africa. It surrendered to General Botha, of the Union of South Africa, in 1915. See SOUTH AFRICA, UNION OF: 1915; WORLD WAR: 1915: Africa: a, 1.

WINDISCHGRÄTZ, Alfred Candidus Ferdinand, Prince (1787-1862), Austrian field marshal. Fought in the Napoleonic Wars, 1804-1814; took part in war in Bohemia, 1840-1848; suppressed the insurrection in Prague, and in Vienna, 1848; took Buda and Pesth, 1849; governor of Mainz, 1850. See AUSTRIA: 1848-1849; HUNGARY: 1847-1849.

WINDSOR, Connecticut, town six miles north of Hartford, settled in 1635. See CONNECTICUT: 1634-1637.

WINDSOR, House of, name of the reigning family in Great Britain, succeeding the House of Saxe-Coburg and Gotha in 1917, by virtue of the following proclamation:

A PROCLAMATION

DECLARING THAT THE NAME OF WINDSOR IS TO BE BORNE BY HIS ROYAL HOUSE AND FAMILY AND RELINQUISHING THE USE OF ALL GERMAN TITLES AND DIGNITIES.

GEORGE R. I.

Whereas we, having taken into consideration the Name and Title of Our Royal House and Family, have determined that henceforth Our House and Family shall be styled and known as the House and Family of Windsor: And whereas We have further determined for Ourselves and for and on behalf of Our descendants and all other the descendants of Our Grandmother Queen Victoria of blessed and glorious memory to relinquish and discontinue the use of all German Titles and Dignities: And whereas We have declared these Our determinations in Our Privy Council:

Now, therefore, We, out of Our Royal Will and Authority, do hereby declare and announce that as from the date of this Our Royal Proclamation Our House and Family shall be styled and known as the House and Family of Windsor, and that all the descendants in the male line of Our said Grandmother Queen Victoria who are subjects of these Realms, other than female descendants who may marry or may have married, shall bear the said Name of Windsor: And do hereby further declare and announce that We for Ourselves and for and on behalf of Our descendants and all other the descendants of Our said Grandmother Queen Victoria who are subjects of these Realms, relinquish and enjoin the discontinuance of the use of the Degrees, Styles, Dignities, Titles and Honours of Dukes and Duchesses of Saxony and Princes and Princesses of Saxe-Coburg and Gotha, and all other German Degrees, Styles, Dignities, Titles, Honours and Appellations to Us or to them heretofore belonging or appertaining

Given at Our Court at *Buckingham Palace*, this Seventeenth day of *July*, in the year of our Lord One thousand nine hundred and seventeen, and in the Eighth year of Our Reign.

GOD SAVE THE KING.

—The *Times* (London), July 17, 1917.

WINDSOR, Treaties of (1175, 1890). See IRELAND: 1160-1200; WORLD WAR: Diplomatic background: 71, xi.

WINDSOR CASTLE, principal residence of the English sovereigns since William the Conqueror bought the land from Westminster Abbey. It is situated at Windsor, on the river Thames, twenty-one miles southwest of London. The castle is a veritable museum of works of art, collections made by princes since Henry VIII engaged Holbein as his court painter. The royal library is also very valuable, and contains an unusually fine collection of drawings. (See also GARTER, KNIGHTS OF THE.) "All the successive Royal Houses have been connected with Windsor, some more closely than others. King Edward VII., now the only Monarch who may be said to belong to the line of Saxe-Coburg, is buried there; so also is Queen Vic-

toria, the last representative of the House of Hanover. . . . Norman (1066-1154), Plantagenet (1154-1399), Lancaster (1399-1461), York (1461-1485), Tudor (1485-1603), Stuart (1603-1714), Hanoverian (1714-1901), have all occupied the same princely residence in succession, and if English surnames are derived, as in hundreds of cases they are, from a family's place of residence or origin, it is certain that no place can compete with the name of Windsor for the purpose for which the King has now selected it. For the first time in its long history Windsor becomes the home of an eponymous House."—*The Times* (London), July 17, 1917.

WINGFIELD, Battle of (655). Fought between King Oswin of Northumberland and King Penda of Mercia, the latter being defeated and slain.

WINKELRIED, or von Winkelried, Arnold, legendary Swiss patriot. Said to have fallen in the battle of Sempach in which the Austrians were defeated, 1386. The story relates how he flung himself upon the closely serried ranks of the Austrians, and received in his breast so many spears that a way was opened in their ranks for the Swiss soldiers to break through.—See also **SWITZERLAND**: 1386-1388.

WINNEBAGOES, North American Indian tribe. See **STOUAN FAMILY**.

WINNIPEG, capital of Manitoba, the most easterly of the prairie provinces of Canada, is situated at the confluence of the Red river of the North with the Saskatchewan. "The town seemed to have four nuclei—Fort Garry, which had been the seat of government and the centre of business for the Hudson's Bay Company; Winnipeg village, which was the centre of the 'Canadians' and most of the other newcomers; Point Douglas, the old centre of the Selkirk settlers; and the village of St. John's. . . . In November . . . [1873] the bill incorporating the city became law. . . . Up to 1874 the city had telegraph communication to the south only, but . . . [by 1876] there was a telegraph line between Winnipeg and Battleford. In 1877 the *Prince Rupert* inaugurated a steamboat service on the Assiniboine river, and the venture proved so successful that a company was formed and several boats were soon plying on that stream. . . . A bill to incorporate Winnipeg's first street railway was passed in 1882."—F. H. Schofield, *Story of Manitoba*, v. 1, pp. 318-319.—In 1921, the population of the city was 179,087.

1917.—Strike of metal trade workers. See **CANADA**: 1917 (June).

1919-1921.—Housing problem. See **HOUSING**: Canada.

WISBY, Laws of. See ADMIRALTY LAW: 1798.

WISCONSIN, northern, middle western state (popularly called the "Badger state"). The Mississippi separates most of the state from Minnesota and Iowa, while the Menominee and Montreal rivers separate it on the north and east from the upper peninsula of Michigan. The state contains 810 square miles of water, and has a shore boundary 550 miles long. The resources of the state consist of timber, hay, grain, zinc, stone, iron ore and clay products. In 1900 Wisconsin was the greatest lumber producing state in the Union, but by 1909 it had fallen to eighth place because of destructive fires and otherwise depleted forests. The growth of manufactures, however, has been steady and rapid. The raising of live-stock, particularly dairy cows, is an important industry. (See also U.S.A.: Economic map.) The area of the state is 56,066 square miles and the population in 1920 was 2,631,839. Physically the state is rich. The southern and central portions are overlaid with a perfect network of railways. "Wisconsin is working out its educational ideas on the intelligent system of one that may be expected to demonstrate the full value of the popular method—I mean a more intimate connection with the life of the people. . . . The graded school system of the State is vigorous, all working up to the University. This is a State institution, and the State is fairly liberal to it. . . . The distinguishing thing, however, about the state university is its vital connection with the farmers and the agricultural interests. I do not refer to the agricultural department . . . but . . . the connection of the University with the farmers' institutes. A special act of the Legislature drawn . . . by C. E. Estabrook authorized the farmers' institutes and placed them under the control of the regents of the University. . . . Co-education seems to be everywhere accepted without question as if it were already demonstrated that the mingling of the sexes in the higher education will produce the sort of men and women most desirable in the highest civilization. The success of women in the higher schools, the capacity shown by women in the management of public institutions and in reforms and charities, have perhaps something to do with the factor to woman suffrage [shown in the state]."—C. D. Warner, *Studies in the South and West*, pp. 157, 163-165.

Aboriginal inhabitants. See SIOUAN FAMILY.

1634-1673.—Visited by Nicolet and traversed by Marquette and Joliet. See CANADA: 1634-1673.

1658-1669.—Radisson and Groseilliers.—Fathers Ménard and Allouez.—Post at Rapides des Peres.—Explorers came in quick succession. Radisson and Groseilliers followed Nicolet's path and descended the Wisconsin river almost to its mouth in 1659. In 1661 Father Ménard was killed in upper Wisconsin. In 1665 Father Allouez founded La Pointe mission. In 1669 the first church was built at Rapides des Peres on the Fox river, around which grew the first permanent settlement. It became the great port for trappers and traders.

1671-1685.—Claimed by France.—Explored by La Salle.—Fortified by Perrot.—In 1671 Saint-Lusson took formal possession of the territory in the name of the king of France. Eight years later La Salle thoroughly explored the Wisconsin region before he went down the Mississippi, but no real

settlements were made in spite of the activities of trappers and traders. (Wisconsin had become the central ground of the *coureurs de bois*.) About this time the De Langlade family established itself at Green bay. In 1685 Perrot, who had been a prominent trader and explorer in Wisconsin, was made "commandant of the west." This marked the beginning of the period of real occupation. Perrot, therefore, found it necessary to build numerous forts along the Mississippi to protect the increasing population from the Indians, to regulate trade, and to build up the connection between Canada and Louisiana.

1712-1740.—War between the Fox Indians and the French.—After the slaughter of a tribe of Fox Indians near Detroit, the French were involved in constant warfare with the Foxes. The result was disastrous to French trade and made it extremely difficult to keep up the posts down the Mississippi.

1755-1765.—French and Indian Wars.—First English-speaking colony formed.—During the French and Indian Wars the Indians and Charles de Langlade led troops against Braddock. In 1761 Robert Rogers went to Detroit to occupy the French posts in the West. Lieutenant Gorrell was sent to occupy the more or less deserted Wisconsin post, and the company together with the traders who accompanied him formed the first English-speaking colony in Wisconsin. The fort was called Fort Edward Augustus, but during Pontiac's rebellion in 1763, Gorrell was forced to abandon it. By 1765, the English began to re-occupy the posts.

1763.—Cession to Great Britain. See SEVEN YEARS' WAR: Treaties.

1763.—King's proclamation excluding settlers. See NORTHWEST TERRITORY OF THE UNITED STATES: 1763.

1774.—Embraced in the province of Quebec. See CANADA: 1763-1774.

1776-1783.—Revolutionary War.—At this time the Wisconsin settlers and traders were loyal to the British, and although this territory went to the United States by the Treaty of 1783, the British continued to rule the region for some time. After 1796 the posts began slowly to be evacuated by the British.

1784.—Included in the proposed states of Syl-
vania, Michigan and Assenisipia. See NORTH-
WEST TERRITORY OF THE UNITED STATES: 1784.

1785.—Partially covered by the western land claims of Massachusetts, ceded to the United States. See U.S.A.: 1781-1786.

1787.—Ordinance for the government of the Northwest Territory.—Perpetual exclusion of slavery. See NORTHWEST TERRITORY OF THE UNITED STATES: 1787.

1805-1848.—Territorial vicissitudes.—Admission into the Union as a state.—From 1805 to 1809, Wisconsin formed a part of Indiana Territory. From 1809 to 1818 her territory was embraced in the Territory of Illinois, excepting a small projection at the northeast which was left out of the described boundaries and belonged nowhere. When Illinois became a state, in 1818, and her present boundaries were established, all the country north of them was joined to Michigan Territory. In 1834 that huge territory was still further enlarged by the temporary addition to it of a great area west of the Mississippi, embracing the present states of Iowa, Minnesota and part of Dakota. It was an unwieldy and impracticable territorial organization, and movements to divide it, which had been on foot long before this last enlargement, soon attained success. In 1836, the

year before Michigan became a state, with her present limits, the remaining territory was organized under the name of Wisconsin. Two years later, "by act of June 12, 1838, congress still further contracted the limits of Wisconsin by creating from its trans-Mississippi tract the Territory of Iowa. This, however, was in accordance with the original design when the country beyond the Mississippi was attached to Michigan Territory for purposes of temporary government, so no objection was entertained to this arrangement on the part of Wisconsin. The establishment of Iowa had reduced Wisconsin to her present limits, except that she still held, as her western boundary, the Mississippi river to its source, and a line drawn due north therefrom to the international boundary. In this condition Wisconsin remained until the act of congress approved August 6, 1846, enabling her people to form a state constitution. . . . Wisconsin was admitted into the Union, by act approved May 29, 1848, with her present limits."—R. G. Thwaites, *Boundaries of Wisconsin (Wisconsin State Historical Society Collections, v. 11, pp. 455-468)*.

1812-1825.—Fur traders.—"In the history of the fur-trade, the period of 1812-25 was, for what we now know as Wisconsin, a time not only of transition but of crisis. Before the outbreak of our second war with Great Britain the fur-trade in the so-called Upper Country had experienced little change, either in methods or in *personelle*. Under Jay's Treaty (1796), the Americans had been given control of the Northwest posts. About 1808 John Jacob Astor's American Fur Company superseded the old Michilimackinac Company of British traders, and took over its territory, of which Wisconsin was a part. Astor, however, naturally found it expedient to employ as agents and crews those men who had been trained to the business. Thus the same Mackinac, Green Bay, and Prairie du Chien Frenchmen, or their descendants, who had served during the French régime and had continued in the employ of the British were now the representatives of a New York instead of a Montreal house. The transfer had not much altered the method of conducting the trade itself. But the opening of the war of 1812-15 demoralized all previous arrangements. It now became a military necessity that the United States should insist on each trader declaring whether his political allegiance was to remain British or be henceforth American. Heretofore, the rival companies operating along the international frontier had been conscious of no political divisions; but the incident at Astoria, on the Northwest Coast, showed that under hostile conditions there must needs be a fierce clashing of interests, for business rivals had now become political enemies. This sharpening of relations was especially acute in Wisconsin. In 1805-06 the principal Wisconsin traders had courteously welcomed Lieut. Z. M. Pike and accepted American commissions as civil and Indian officials; they now turned front, repudiated these commissions, and at the head of their forest allies took the war-path in an attempt to drive Americans and American sympathizers from the country of the Upper Lakes. The signing of the Treaty of Ghent (December, 1814) did not quench this spirit of Anglo-French hostility toward American interests. The Canadian traders and their barbaric followers were keenly disappointed that this instrument had not

redrawn the international boundary in the region of the Upper Lakes. With the aid of the local militia they had with much display of valor wrested from the Americans the forts of Mackinac and Prairie du Chien and the broad belt of territory dominated by those posts, and had hoped that the peace would confirm to them its acquisition. The district which they had captured and held had in fact never ceased to be British in spirit, and should, they claimed, have remained British territory. Small wonder, therefore, that tribesmen, traders and *habitants* felt aggrieved at the peace settlement and long refused to be reconciled. The treaties made by American officials with the Indian tribes at Portage des Sioux in 1815 and 1816 were the fruit of virtual threats by the former. The Winnebago did not as a whole treat for peace, but for years sullenly brooded. As a matter of fact, most Wisconsin Indians hated the 'Big Knives,' and until long after 1825, the year with which these documents cease, made annually trips to Drummond Island and Amberstburg to consult with their wily British 'father.' This intercourse continually invited disorder among our wards, but American authorities long found its discontinuance impracticable. As soon as peace was declared between Great Britain and the United States the Americans began to assert control of the Northwestern fur-trade, and to threaten expulsion of those inhabitants who would not consent to become citizens of the republic. The first step was to build and garrison forts in the recovered territory. The Mackinac and Chicago posts that had throughout the war been in the hands of the British or of their Indian allies and were now retroceded to the United States, required strengthening and equipping; at Green Bay and Prairie du Chien new strongholds were erected; a few years later (1819), Fort Snelling was established on the upper reaches of the Mississippi River. Next, came the rehabilitation of the government fur-trade factories. The Mackinac factory was not restored, possibly because geographically it was not convenient to the needs of any considerable body of Indians, although the island remained the chief outfitting and gathering station for the Upper Country; but new locations for factories were chosen at Chicago, Green Bay, and Prairie du Chien. The outlook for the system was hopeful, and sanguine observers freely prophesied beneficent effects from fair dealing with the Indians. It was pointed out that the tribesman who, for instance, had at Green Bay paid fifteen dollars for a pound of tobacco and a dollar-and-a-half for a thimble, would readily recognize and appreciate the benevolence of a government that sold him articles at cost and paid him full market value for his furs. A British admirer of the plan wrote: 'He (the Indian) had only to present a portion of his furs, etc., for barter to the Canadian Traders and the like at the States Trading House, and the advantages of dealing with the latter were too palpable to be overlooked.' Unfortunately for the success of the system, the transactions were not thus simple. The improvident barbarian, having no reserve stock of necessities, could not possibly go out to his winter's hunt unless supplied in advance, and on unsecured credit, with firearms, ammunition, clothing, and sundries of various kinds. To the repayment of these credits, he pledged to the trader the peltries which he was about to seek. Obviously, goods advanced under such hazardous conditions were charged for at the highest possible prices; and furs brought in exchange therefor were received at the lowest prevailing rates. To secure

such credits among the Indians, who were shifty and uncertain in their financial relations, the trader was under the necessity of sending clerks and *voyageurs* to follow as many of them as possible to their hunting grounds and to secure on the spot as much of their peltry harvest as could thus be obtained; also to waylay others in the forest and along the streams on their return to the summer villages. Thus almost wholly depleted of the fruits of their winter's hunt, the Indians reached Green Bay or Prairie du Chien with but few skins to present at the government trading house, for barter on a strictly market basis. The government factors encountered other sources of trouble. It had been the custom of both French and British Indian officials periodically to make considerable presents to their forest wards; weapons, ammunition, utensils, clothing, ornaments, and liquor were distributed among them with a rather free hand, being regarded as a sort of annuity to secure the continuance of their good will. Under the rule adopted for the American government factory system, the factors were held to a strict accountability for the goods placed in their hands. They were not furnished with presents for the Indians, yet the withholding of such gratuities was interpreted by the latter as evidence of meanness, than which no vice is more contemptible in aboriginal eyes. Moreover, no liquor could be obtained at the factories in exchange for furs—the federal government even forbade private traders to deal in this powerful incentive to forest trade; a prohibition, however, constantly violated by even the best of the factor's rivals. Square dealing at the factory, when devoid of credit, presents, and liquor offered little attraction to the Indian, so long as all three of these lures remained features of the unofficial trading post. He could not or would not go on the hunt without advances; he experienced keen human enjoyment in receiving something for nothing; and through his long period of enforced abstinence, while in the woods he longed for the joys of intoxication, to obtain which indulgence he was willing to make almost any sacrifice. Moreover, the Indian had profound contempt for a government that turned trader. . . . The truth is, that this period—closing with the year 1825, when the great treaty at Prairie du Chien had adjusted the boundaries between the tribes, and brought about a temporary peace of the warring rivals—is an interesting interval between the disintegration of an old regime and the inauguration of a new. Broadly viewed, it is plain that the injury to our fur trade was inevitable, owing to changing economic conditions. Under American domination, it was impracticable for Wisconsin long to remain a game preserve for the redmen, as had been contemplated by both its French and its British owners. The new political masters felt impelled to exploit its resources in the interest of the civilization and not of the hunter class. Accustomed to a patriarchal society the old traders chafed at the innovations that quickly followed American occupation; they found themselves victims of a new social order. Such of the younger generation as became Americanized soon found it essential to abandon the French language and customs, that heretofore had prevailed in this region, and to familiarize themselves with the Anglo-American substitutes therefore. On their shoulders, in large part, fell the task of rebuilding the social and industrial fabric of Wisconsin."—R. G. Thwaites, *Preface (Wisconsin State Historical Society Collections, v. 20, pp. xi-xv, xx)*.

1816-1832.—Indian lead mines taken over by Americans.—In 1816 the Indian title to the lead regions was nullified. These mines had first been worked as early as the seventeenth century by Perrot. In 1786 Julien Dubuque systematically worked them after obtaining privileges from the Indians. In 1804 William Henry Harrison obtained full rights from the Indians but these rights were never carried out. In 1810, 400,000 pounds were mined by the Indians. Between 1816 and 1820, such progress was made by white men that the region was filled with miners. In 1822 the first civil government was established and immigrants flooded the lead diggings to such an extent that by 1830 lead mining began to take precedence over the fur trade which under John Jacob Astor had been the dominant industry. This resulted in friction between the Indians and settlers so that Red Bird and the Winnebagos took the war path in 1827, and Black Hawk in 1832.

1832.—Black Hawk War. See ILLINOIS: 1832.

1832-1920.—Immigration.—German element.—Other elements in population.—Comparison with other states.—Social modifications due to character of population.—"By 1850 Michigan contained nearly 400,000 inhabitants, who occupied the southern half of the State. But she now found an active competitor for settlement in Wisconsin. In this region two forces had attracted the earlier inhabitants. The fur-trading posts of Green Bay, Prairie du Chien, and Milwaukee constituted one element, in which the French influence was continued. The lead region of the southwest corner of the State formed the center of attraction for Illinois and Southern pioneers. The soldiers who followed Black Hawk's trail in 1832 reported the richness of the soil, and an era of immigration followed. To the port of Milwaukee came a combined migration from western New York and New England, and spread along the southern tier of prairie counties until it met the Southern settlers in the lead region. Many of the early political contests in the State were connected, as in Ohio and Illinois, with the antagonisms between the sections thus brought together in a limited area. The other element in the formation of Wisconsin was that of the Germans, then just entering upon their vast immigration to the United States. Wisconsin was free from debt; she made a constitution of exceptional liberality to foreigners, and instead of treasuring her school lands or using them for internal improvements, she sold them for almost nothing to attract immigration. The result was that the prudent Germans, who loved light taxes and cheap hard-wood lands, turned toward Wisconsin,—another *Völkerwanderung*. From Milwaukee as a center they spread north along the shore of Lake Michigan, and later into northern central Wisconsin, following the belt of the hard-wood forests. So considerable were their numbers that such an economist as Roscher wrote of the feasibility of making Wisconsin a German State. 'They can plant the vine on the hills,' cried Franz Löher in 1847, 'and drink with happy song and dance; they can have German schools and universities, German literature and art, German science and philosophy, German courts and assemblies; in short, they can form a German State, in which the German language shall be as much the popular and official language as the English is now, and in which the German spirit shall rule.' By

1860 the German-born were sixteen per cent of the population of the State. But the New York and New England stream proved even more broad and steady in its flow in these years before the war. Wisconsin's population rose from 30,000 in 1840 to 300,000 in 1850. The New England element that entered this State is probably typical of the same element in Wisconsin's neighboring States, and demands notice. It came for the most part, not from the seaboard of Massachusetts, which has so frequently represented New England to the popular apprehension. A large element in this stock was the product of the migration that ascended the valleys of Connecticut and central Massachusetts through the hills into Vermont and New York,—a pioneer folk almost from the time of their origin. The Vermont colonists decidedly outnumbered those of Massachusetts in both Michigan and Wisconsin, and were far more numerous in other Northwestern States than the population of Vermont warranted. Together with this current came the settlers from western New York. These were generally descendants of this same pioneer New England stock, continuing into a remoter West the movement that had brought their parents to New York. The combined current from New England and New York thus constituted a distinctly modified New England stock, and was clearly the dominant native element in Michigan and Wisconsin. . . . Wisconsin's future is dependent upon the influence of the large proportion of her population of foreign parentage, for nearly three-fourths of her inhabitants are of that class. She thus has a smaller percentage of native population than any other of the States formed from the Old Northwest. Of this foreign element the Germans constitute by far the largest part, with the Scandinavians second. Her American population born outside of Wisconsin comes chiefly from New York. In contrast with the Ohio River States, she lacks the Southern element. Her greater foreign population and her dairy interests contrast with Michigan's Canadian and English elements and fruit culture. Her relations are more Western than Michigan's by reason of her connection with the Mississippi and the prairie States. Her foreign element is slightly less than Minnesota's, and in the latter State the Scandinavians take the place held by the Germans in Wisconsin. The facility with which the Scandinavians catch the spirit of Western America and assimilate with their neighbors is much greater than is the case with the Germans, so that Wisconsin seems to offer opportunity for non-English influence in a greater degree than her sister on the west. While Minnesota's economic development has heretofore been closely dependent on the wheat-producing prairies, the opening of the iron fields of the Mesabi and Vermilion ranges, together with the development of St. Paul and Minneapolis, Duluth and West Superior, and the prospective achievement of a deep-water communication with the Atlantic, seem to offer to that State a new and imperial industrial destiny. Between this stupendous economic future to the northwest and the colossal growth of Chicago on the southeast Wisconsin seems likely to become a middle agricultural area, developing particularly into a dairy State. She is powerfully affected by the conservative tendencies of her German element in times of political agitation and of proposals of social change. Some of the social modifications in this State are more or less typical of important processes at work among the neighboring States of the Old Northwest. In the north, the men who

built up the lumber interests of the State, who founded a mill town surrounded by the stumps of the pine forests which they exploited for the prairie markets, have acquired wealth and political power. The spacious and well-appointed home of the town-builder may now be seen in many a northern community, in a group of less pretentious homes of operatives and tradesmen, the social distinctions between them emphasized by the difference in nationality. A few years before, this captain of industry was perhaps actively engaged in the task of seeking the best 'forties' or directing the operations of his log-drivers. His wife and daughters make extensive visits to Europe, his sons go to some university, and he himself is likely to acquire political position, or to devote his energies to saving the town from industrial decline, as the timber is cut away, by transforming it into a manufacturing center for more finished products. Still others continue their activity among the forests of the South. This social history of the timber areas of Wisconsin has left clear indications in the development of the peculiar political leadership in the northern portion of the State. In the southern and middle counties of the State, the original settlement of the native American pioneer farmer, a tendency is showing itself to divide the farms and to sell to thrifty Germans, or to cultivate the soil by tenants, while the farmer retires to live in the neighboring village, and perhaps to organize creameries and develop a dairy business. The result is that a replacement of nationalities is in progress. Townships and even counties once dominated by the native American farmers of New York extraction are now possessed by Germans or other European nationalities. Large portions of the retail trades of the towns are also passing into German hands, while the native element seeks the cities, the professions, or mercantile enterprises of larger character. The non-native element shows distinct tendencies to dwell in groups. One of the most striking illustrations of this fact is the community of New Glarus, in Wisconsin, formed by a carefully organized migration from Glarus in Switzerland, aided by the canton itself. For some years this community was a miniature Swiss canton in social organization and customs, but of late it has become increasingly assimilated to the American type, and has left an impress by transforming the county in which it is from a grain-raising to a dairy region. From Milwaukee as a center, the influence of the Germans upon the social customs and ideals of Wisconsin has been marked. Milwaukee has many of the aspects of a German city, and has furnished a stronghold of resistance to native American efforts to enact rigid temperance legislation, laws regulative of parochial schools, and similar attempts to bend the German type to the social ideas of the pioneer American stock. . . . With all the evidence of the persistence of the influence of this nationality, it is nevertheless clear that each decade marks an increased assimilation and homogeneity in the State; but the result is a compromise, and not a conquest by either element."—F. J. Turner, *Frontier in American history*, pp. 227-228, 233-236.

ALSO IN: K. E. Levi, *Geographical origins of Wisconsin Germans* (*Wisconsin State Historical Society Collections*, v. 14, pp. 342-351).

1836-1844.—Madison chosen as the capital.—Wisconsin phalanx.—The first temporary council met at Belmont where Madison was finally chosen

as the capital. There continued to be a rapid growth in population and towns, and in 1844 the Wisconsin phalanx, a very successful communistic settlement, was established at Ripon. At the same time the Mormons settled in Racine and Walworth counties.

1847-1848.—Constitutional conventions.—Public school system established.—The first constitution, submitted to the people after the bill had passed Congress admitting Wisconsin to the Union, was rejected. The second submitted by the convention was accepted and Wisconsin became a state May 29, 1848. The same year the free public school system was established, whose excellence was to attract nation-wide attention. (See UNIVERSITIES AND COLLEGES: 1848.) During this period extensive German and Scandinavian immigration occurred.

1849.—Boundary settlement with Minnesota. See MINNESOTA: 1849.

1851.—First railroad.—The first railroad was built in 1851 when a track was laid from Milwaukee to Waukesha. In 1854 it was extended to Madison, and in 1857 to the Mississippi.

1854.—Organization of Republican party.—Attitude towards slavery.—Wisconsin held strong anti-slavery sentiments in the fifties, and in 1854 the first steps were taken towards the organization of the Republican party at Ripon. A fugitive slave, being returned to his master, was rescued by a mob from Milwaukee, and the fugitive slave law was declared null and void by the supreme court of the state. Besides taking a stand against slavery, the new party attacked the Democratic administration of the state, because its early history was full of scandals in the sale of public lands and in the charters granted to railroads, scandals which continued under Republican administration, as well.—See also U. S. A.: 1854-1855.

1856-1893.—Governatorial contest.—Position of women.—Railroad extension.—Panic of 1893.—“Civil war threatened to convulse the people of the state in 1856 as the result of a bitter contest for the office of governor. No governor ever had warmer friends or bitterer enemies than William A. Barstow. The Democrats renominated him in the fall of 1855, while the Republicans placed Coles Bashford in nomination. Many scandals during Governor Barstow's term gave the Republicans an opportunity to vigorously attack his administration, and such terms as the ‘Forty Thieves’ and ‘Barstow and the Balance’ passed into current language in the course of the campaign. The entire machinery of election was in Democratic hands. When the state canvassers declared Barstow reelected by a majority of 157, his opponents loudly proclaimed that a fraud had been committed, and that the returns had been doctored in the interest of the governor. Party newspapers made such an outcry that political passions were inflamed to a point that threatened personal collision between the factions at the capital. Undaunted by the charges of fraud, Gov. Barstow prepared for his installation. Early in January, seven companies of militia arrived in Madison, marched to the governor's residence and escorted him to the capitol, where two thousand persons awaited his appearance and that of the other state officers. With much ceremony they proceeded to the senate chamber, where the usual oath of office was administered. In the meantime Coles Bashford had quietly gone to the court-room of the Supreme court, and Chief Justice Whiton administered the oath of governor. Some of the

most eminent attorneys of the state had ranged themselves on the side of Bashford, including Timothy O. Howe, E. G. Ryan, Alexander W. Randall and J. H. Knowlton. By their advice, Bashford proceeded to the executive office and formally demanded possession. Gov. Barstow refused to yield, and the contest was thereupon transferred to the Supreme court. Here much legal sparring ensued, Jonathan E. Arnold, Harlow S. Orton and Matt. H. Carpenter representing the governor, who had nine points of possession. Tremendous excitement ensued all over the state. Partisans of the contestants prepared for the seemingly inevitable encounter by arming themselves; it seemed that an appeal to physical force would follow the appeal to law. The result of the court's inquiry was awaited with intense concern by conservative men who feared the consequences. The counsel of the contestant won at every point in their contention before the court, and finally Barstow withdrew from the case, claiming that political prejudices prevented fairness of treatment, and further denying the right of the court to go behind the returns. Foreseeing the outcome he sent his resignation as governor to the legislature, hoping to prevent the seating of Bashford by installing as governor the duly-elected lieutenant-governor, Arthur McArthur. It was a shrewd move, but Bashford's lawyers were prepared for it. They held that McArthur could gain no rights to the office of governor through the resignation of a fraudulently-elected incumbent. The court went on with the inquiry, and found gross forgeries of election returns. Their amended count gave Bashford a majority of 1,009, and they declared him entitled to the office of governor. Instead of yielding gracefully, McArthur announced that he would hold on at all hazards. On the day that the court rendered its decision, March 24, great crowds flocked to the capitol, with a grim and determined air that boded ill. . . . The enemy . . . [was] dispossessed with scarcely a struggle and the unexpected ending made the crowd good-humored. . . . For a time the assembly refused to recognize the new governor, but finally did so. The lieutenant-governor resumed his place as presiding officer of the senate, and the troubled waters subsided. The case was a notable one. For the first time in the history of the country had a Supreme court been asked to oust a governor and seat a contestant. The lawyers engaged in the case were among the greatest who ever practiced at the bar in the Northwest. Jonathan E. Arnold and J. K. Knowlton were regarded as lawyers of exceptional power; E. G. Ryan became chief justice of the Supreme court of the state, and so did Harlow S. Orton; Matt. H. Carpenter died a senator of the United States; Timothy Howe and Alexander Randall served as cabinet officers, each occupying the position of postmaster-general. Although the crisis passed without bloodshed, there is no doubt that it needed but a breath to fan the flame into tremendous proportions.”—H. E. Legler, *Leading events in Wisconsin history*, pp. 230-333.

“Many stumbling blocks were encountered by women in their efforts to secure legal recognition in this state. It was not until 1877 that the legislature passed a law permitting members of their sex to practice law. The year before that the Supreme Court of the state rejected the application of Miss Lavinia Goodell for admission to the bar. E. G. Ryan was chief justice of the state at the time. ‘We cannot but think the com-

mon law wise in excluding women from the profession of the law,' said the eminent jurist in the decree of refusal. 'The profession enters largely into the well-being of society, and, to be honorably filled, and safely to society, exacts the devotion of life. The law of nature destines and qualifies the female sex for the bearing and nurture of children of our race, and for the custody of the homes of the world and their maintenance in love and honor. And all life-long callings of women inconsistent with the order of nature, and when voluntary, are treason against it.' A lobby of women convinced the next legislature that the views entertained by the chief justice were not founded on the rights of womankind, and a law was passed permitting women to practice law. Many Wisconsin women have availed themselves of the right thus obtained. In 1871, by legislative enactment, a college for women was added to the State University. . . . Immediately after the war railroad extension was carried on in the state at a remarkable rate. The attitude of the railroad magnates toward the people grew so arrogant that [the unheeded warnings of Governor Washburn in 1873 were followed by a radical change of government at the next election], . . . and the passage of the famous 'Potter law' followed at the next legislative session. [See below: 1873-1907.] . . . During the days of wildcat banking in territorial times, the people of Wisconsin sustained heavy losses [see MONEY AND BANKING: Modern: 1837-1841]; they suffered reverses when the hard times of 1873 swept over the country; but the climax of commercial adversity overtook them in 1893. The business panic of that year, which swept from one end of the country to the other, engulfed about 200 commercial houses in this state and two scores of banks were forced to close their doors. The panic began with a run on the banks. . . . The five Milwaukee banks that failed had \$13,700,000 of assets and but \$11,700,000 of liabilities, and two of them—one of them Mitchell's [Wisconsin Marine] bank—resumed business when the panic subsided. In but one instance was brazen dishonesty the cause of the wreck, and the culprit was sent to the penitentiary. Dishonesty of management was also charged in a few instances in other cities of the state, but on the whole unforeseen and unavoidable conditions contributed mainly to the business disasters of the year. The storm cleared the business atmosphere and eventually led to more wholesome financial methods in commercial life."—*Ibid.*, pp. 282-283, 287-288.

1861-1865.—Social relief during Civil War.—"In an effort to ameliorate the effect upon the currency of the overthrow of the credit of the Southern States, upon whose bonds it rested, Wisconsin, on April 17, provided that all actions against banks or banking institutions to compel specie payment be deferred until December 1, 1861, that the state laws with regard to the same subject be not enforced, nor any bank-note be protested by a state officer until the same date. . . . More specifically affecting soldiers was the Wisconsin law of April 17, 1861, exempting 'from all civil process . . . such persons as may enroll themselves in the service of the country.' This was modified on May 25 to exclude actions for the foreclosure of mortgages and to enforce mechanics' liens, and on March 15, 1862, to exclude actions in trusteeship and joint indebtedness. On March 22, 1862, the legislature provided that in the case of volunteers all sales of state lands on credit be held *in statu*

quo until three months after their discharge, and on April 5, 1862, it was ordered that a stay be granted in all mortgage foreclosure proceedings. On March 31, 1863, volunteers were allowed until April 1, 1865, to redeem 'all lands' sold for taxes. . . . The volunteer had good ground for the belief that relief would not be limited to such negative action. The blazing posters which those seeking recruits plastered along the city streets and spread broadcast over the countryside, dwelt not only on the generous pay offered by the United States, and its land bounties and pensions, but very frequently on the care that would be taken of those at home. . . . Wisconsin was the only state . . . which undertook to handle the subject through the central administration. On May 25, 1861, it was voted that 'non-commissioned officers, musicians and privates mustered into the service of the United States or of this state . . . receive . . . in addition to the pay provided . . . the sum of five dollars a month to all volunteers having families dependent on them for their support.' The execution of the law was placed in the hands of the secretary of State, and he was to authorize payments only while the soldier was in actual service as evinced by monthly reports from the regimental officers, or, after April 4, 1864, from hospital authorities. The operation of the law was gradually extended to all Wisconsin volunteers, but never included those entering the regular United States service and consequently excluded the navy. Soldier and family must be residents of the state. The term family was ambiguous. It was defined March 22, 1862, as 'Wife living, and actually dependent,' or, there being no wife, children under fourteen, or no children, 'infirm or indigent parent or parents, actually dependent upon the labor of said volunteer.' By a law of April 4, 1864, in the case of children who had lost their mother by death or desertion, the money was to go to 'the person having such child or children in charge.' No family was to receive more than five dollars a month, but by the law of March 3, 1863, a family having more than one breadwinner in the ranks could transfer its claim in case the one in whose name they received the extra pay should die. A law of April 2, 1863, evinced some delicacy of feeling by allowing the state officials to omit the names of recipients from their annual reports. . . . In Wisconsin, laws of May 15, 1861, and September 25, 1862, granted the local government authorities the power of taxing 'for the support of the families . . . of volunteers.' One indication of the frequent exercise of this right is the great number of laws legalizing such taxes in cases where some irregularity of form occurred. Other laws permitted in individual cases the different wards of various cities to tax themselves for the same purpose. For the most part this local relief was voted by the towns, cities, and villages, their total contributions for war expenses amounting to \$7,134,341.12, as compared with \$618,164.55 paid by the counties. Twenty-six counties taxed themselves while thirty-two did not, but in only three was there a complete absence of town and county relief. Rock county was perhaps the most generous, giving at one period ten dollars in winter and a little less in summer. In most cases some smaller sum was given to a wife, with additional allowance for minor children. . . . During and after 1863 . . . [bounties] played a large part in the support of soldiers' families. This close connection is illustrated by a Wisconsin law of March 2, 1865, al-

lowing Oshkosh to levy a 'special volunteer tax' for bounties, the payment of which, in the case of married men, could be made in monthly installments. State and local relief was not the sole reliance of those left at home. The pay of the soldier was not sufficient to provide for maintenance but was an item in the support of his family. The problem, however, was to get the money from the soldier to the family, and sometimes it was not easy to persuade the soldier to send home as much as it was felt he should. This situation led to the development of the allotment service. This was organized on a somewhat peculiar basis, in that the officers employed in it held United States commissions but were appointed and paid by the states, which also managed the funds collected. Wisconsin on April 3, 1862, provided for allotment commissioners, with salaries fixed by the governor but not to exceed one thousand dollars each, or three thousand dollars in all. The state treasurer was to receive and distribute the money. . . . The United States government was so strongly committed to the payment of pensions, that the Northern States deemed it unnecessary to devise any permanent plans for the future, but there was an opportunity for real suffering during the period between the death of the volunteer and the obtaining of the pension, while the securing of the latter was often a matter not of time alone, but also of money and knowledge. Wisconsin, on April 2, 1863, provided that the state aid continue six months after the death of the principal, unless the pension begin before. This act created an injustice in that it applied only to those who died after the act was passed. Some of the local relief, however, was extended without regard to this provision. . . . In addition to these public resources, private charity, organized and unorganized, naturally assisted the necessities in their own communities. . . . In many cases employers offered to continue pay to those enlisting. . . . The women's own work was another resource."—C. R. Fish, *Social relief in the Northwest during the Civil War* (*American Historical Review*, Jan., 1917).

1866-1877.—Growth of National Farmers Alliance. See U. S. A.: 1866-1877.

1871.—Forest fires.—After a continued period of drought, disastrous forest fires broke out in Oconto, Dove, Brown, Shawano, Manitowoc and Kewaunee counties. Vast tracts of timber were burned, about 1,000 lives lost and many were rendered destitute.

1873-1907.—Struggle between the railroad corporations and the state government.—Potter, or granger, law.—Defiance of railroads.—Modification of the law.—Public Utilities Commission of 1905.—"In January, 1873, Governor Cadwallader C. Washburn pointed out to the legislature that 'vast and overshadowing corporations in the United States are justly a source of alarm, and the legislature cannot scan too closely every measure that comes before them which proposes to give additional rights and privileges to the railways of the state.' This warning came just previous to a financial panic that profoundly affected the commercial and manufacturing interests of Wisconsin, in common with those of other states. One result of the

financial storm of 1873 was the customary defeat of the dominant party. The Democratic-Liberal Reformers came into power in January, 1874, with William R. Taylor as governor, supported by an assembly of his political faith; but the senate, owing to half of the body being hold-over members, remained Republican. The most conspicuous legislation was an act called the 'Potter Law,' or 'Granger Law,' which asserted the right of the state to regulate railroad freight and passenger rates within the commonwealth through a board of three commissioners clothed with almost autocratic powers. [See also RAILROADS: 1870-1876.] The legislature adjourned on March 13. A fortnight later the presidents of the St. Paul and the Northwestern systems—then, as now, the principal companies operating in the state—officially informed the governor that their respective corporations would 'disregard so much of the law as attempts to fix an arbitrary rate of compensation for freight and passengers.' Their contention was, that the rates fixed by law would 'amount to confiscation, as the working expenses could scarcely be paid under it.' Governor Taylor issued a proclamation to the effect that, unless the companies submitted he would use to the utmost all the great powers of his office to compel them to do so. Action was thereupon brought in the state supreme court, in the nature of a *quo warranto*, for the annulment of the charters of the transgressing roads. Application was also made to the supreme court by the attorney-general, for an injunction restraining the companies from further disobedience of the law. A long legal fight followed, that attracted national attention, with the result that the court granted the injunction, the decision in the case being written by Chief Justice Edward G. Ryan. Judge Ryan held that 'in our day the common law has encountered in England, as in this country, a new power, unknown to its founders, practically too strong for its ordinary private remedies. . . . It comports with the dignity and safety of the state that the franchises of corporations should be subject to the power that grants them, that corporations should exist as the subordinates of the state which is their creator.' The attorney-general was, on his part, instructed not to prosecute the companies for forfeiture of charter until the latter were given a reasonable time to arrange their tariffs under the new law. In the United States District Court at Madison, a suit of stockholders of the Northwestern Railway, praying for an injunction against the state, on the ground that the value of their securities was being depreciated by the Potter Law, was decided against the petitioners, so far as the validity of the law was concerned. The question as to the state's right to interfere with interstate commerce, however, was left undecided, as the court desired to hear further argument. Thus the companies were defeated at every point, so far as traffic within the state was concerned, and open opposition ceased. But more effective measures were now resorted to by them, to influence public opinion against the law. European capitalists, who at that time were chiefly relied upon for assistance in American railroad development, declined further investments in the stock of such roads as ran through the 'Granger states'—some of the neighboring commonwealths having followed Wisconsin's example. Work on roads in course of building was suspended, projected lines were abandoned, some of the smaller towns were, on the plea of enforced economy badly treated in the matter of

service, and everywhere railroad employees were spreading reports that Grangerism was spelling ruin to the companies on whom Wisconsin so largely depended for prosperity. In 1876 the Reform party was buried beneath a mountain of opposition ballots, the sting in the railroad law was promptly removed by the new legislature, and the Granger movement became a closed chapter. . . . In 1905, after some years of renewed agitation, recalling not a few aspects of the Grangerism of three decades previous, the state created a new railroad-rate-regulating commission, composed of three members with large powers. Two years later there were placed under the jurisdiction of this body the various other public utility corporations of the state,—those operating street and interurban railroads, sleeping cars, gas plants, electric power and lighting plants, waterworks, and the like. The constitutionality of laws creating this public utilities commission having been called in question, the state supreme court rendered a decision on June 5, 1908, confirming the validity of the commission and declining to hamper its operations so long as stockholders were allowed a 'reasonable compensation' for their investment. Corporations of this character are now taxed by the state upon an ad valorem basis, the valuation of their tangible property being established by the State Tax Commission (created in 1899), which employs for this purpose a competent staff of engineers, appraisers and accountants."—R. G. Thwaites, *Story of Wisconsin*, pp. 382-387.

1889.—Bennett law.—In 1889 the Bennett law was passed to enforce the teaching of English in the public and parochial schools of Wisconsin. The result was that the German portion of the population voted Democratic in 1890 and the Bennett law was repealed. The Republicans, however, were able to regain their power in 1895.

1901-1905.—Reform movement in state led by La Follette through four campaigns of national interest.—Direct primary issue.—"The lion's share of credit for the political regeneration of Wisconsin is yielded by all to La Follette. . . . Smarting under the humiliation of having his delegates taken away from him in the previous convention, and eager to remedy the sordid political conditions that prevailed, . . . La Follette resolved upon a campaign for the complete abolition of the caucus and convention system. . . . In its stead he decided to propose primary elections for the direct nominations of all candidates for public office from lowest to highest. . . . There was then no thorough-going primary in any state, although the legislatures in a number of states had begun breaking the new ground in sporadic ways. . . . La Follette was . . . alert enough to discern the new movement in its uprising. . . . After his two defeats for nomination [for governor] it was assumed by many that La Follette would not again be a candidate in 1900. . . . But with the entrance of La Follette into the field the other candidates for governor made no headway. . . . With four candidates against him LaFollette was elected by the unparalleled plurality of 102,745 votes. . . . The change of administration in January, 1901 . . . was to mark the passing of an old order. . . . The traditional Republicanism . . . controlled by conservatism and holding to party fetiches was to give way to a new ideal of service to the state and a new type of public servant. . . . The first of the great battles of the session of 1901 was waged over the primary election law. . . . All the interests opposed to La Follette united to discredit

and defeat the measure [which they succeeded in doing at that time]. . . . The second great fight of the session was over the so-called railroad taxation bill. . . . Like the primary bill, this was also to be defeated and created a burning issue for the next campaign. . . . The stalwart allies in the legislature . . . conspired to crush LaFollette in the next campaign [in 1902 and again in 1903. In 1904] the entire state was rent in twain and every political party disrupted by the burning issue of La Folletism. . . . With the election in 1904 La Follette's great fight was finally and decisively won. . . . The legislature chosen at that same election was to write all the demands of the party upon the statute books."—A. O. Barton, *La Follette's winning of Wisconsin*, pp. 77-78, 139, 151, 164, 165, 170-171, 174, 181, 286, 449.—In 1905 Governor La Follette entered the United States Senate. "Thanks to the movement for genuinely democratic popular government which Senator La Follette led to overwhelming victory in Wisconsin, that state has become literally a laboratory for wise experimental legislation aiming to secure social and political betterment for the people as a whole."—T. Roosevelt (C. McCarthy, *Wisconsin idea, introduction*, p. 7).

1902.—Care of deaf and blind children. See CHARITIES: United States: 1874-1902.

1905-1911.—Progressive legislation.—Stringent insurance law.—Examination of state banks.—Economic status.—Governor James O. Davidson was La Follette's successor in office and the advocate of his policy of government administration by experts. "Wisconsin has also taken hold of the insurance problem with vigor. The special session of the legislature which I called in 1905 provided for a committee to investigate insurance corporations. This was about the time of the Hughes investigation in New York, and the committee appointed pursuant to that legislation rendered a very signal service to our state. As a member of that committee H. L. Ekern, who was then Speaker of the Assembly—a legislator of real creative power—developed a very remarkable aptitude for the insurance problem. It was most extraordinary. Ekern is a Norwegian, a university graduate, a lawyer. In the legislature of 1907 he appeared before the committee having charge of the insurance legislation, and there demonstrated his ability to more than hold his own against the ablest actuaries and lawyers representing the largest insurance companies in the United States. In 1910 he was elected Insurance Commissioner of the state and in the legislature of 1911 he brought about a complete recodification of our insurance laws. He has indeed practically laid the basis for a system of state insurance—the first, I think, in the United States. The public service of the state has been democratized by a civil service law opening it to men and women on an equal footing independent of everything excepting qualification and fitness for office. I think the passing of this law was the only case of the kind where the employees then holding office were not blanketed into the service, but were required to take the regular competitive examinations in order to retain their jobs. The law has worked to the great advantage of the service and to the general improvement of political standards. There is no longer any political pull in Wisconsin. I give here, also, some further facts to show that Wisconsin, instead of being retarded by progressive legislation, is advancing more rapidly than the country taken as a whole. Since 1904, when we recodified our whole system for the examination

of state banks, there has not been a single failure among the 573 state banks in Wisconsin, with \$27,000,000 of capital, surplus and undivided profits. The only bank failures in the state have been those of three national banks through embezzlement. During the years 1903 to 1911 the capital, surplus and undivided profits of all state and national banks in Wisconsin increased 72 per cent., whereas for the United States they increased only 48 per cent. Individual deposits for the same years in Wisconsin banks increased 82 per cent., while in the United States as a whole they increased but 74 per cent. The clearing-house exchanges for Milwaukee increased 117.5 per cent. from 1900 to 1910, whereas for the United States the increase was 106 per cent. Milwaukee's increase was greater than Chicago's. Judged by commercial failures, Wisconsin has prospered better in proportion than the country. The total liabilities in commercial failures for the entire United

be fair and complete that did not record the splendid services of the men who led the fight for progressive principles. I regret that I cannot here give to each the individual recognition that is merited. That must wait for a more detailed history of the Wisconsin movement. It was a day-and-night service with them; they left their offices and business interests and devoted years to the great constructive work which has made Wisconsin the safest guide in dealing with the political, economic and social problems of our time."—R. M. La Follette, *La Follette's autobiography*, pp. 364-368.

1907.—Railroad legislation. See RAILROADS: 1907.

STATE HOUSE, MADISON, WISCONSIN

Built at a cost of \$7,000,000 in 1909-1910, on the site of the old building, partly destroyed by fire in 1904.

States in the four years, 1906 to 1909 increased 33 per cent. over the total amount for the preceding four years 1902 to 1905. But the liabilities in Wisconsin for the same years fell off 5.3 per cent. In other words, comparing the four years that followed the progressive victory of 1905 with the four years that preceded it, the business failures in Wisconsin fell off one twentieth, but for the whole United States they increased one third. These are a few of the conclusive proofs that progressive legislation in Wisconsin has not been destructive, as its enemies predicted. Instead of driving capital out of the state it has attracted capital more than other states. It has made investments safe for all, instead of speculative for a few. It has been conservative and constructive as well as progressive. Only one or the progressive laws—a law passed in 1911, declaring flowing water public property—has been overturned by the supreme court of the state, and not one has been carried into the federal courts. No account of the long and successful struggle in Wisconsin would

1911.—Significance of the state income tax.—“For many years expert opinion in the United States has strongly condemned the state income tax. Despite the voice of authority, however, the legislature of Wisconsin passed an income-tax law in 1911, which has since stood the test of two assessments. The Wisconsin income tax originated in an effort to find an equitable and efficient method of personal taxation. . . . The tax on property did not meet the requirements of the situation and, after the necessary constitutional amendment had been secured, a graduated income tax was adopted as the most available supplement to the system previously in force. The law was approved in July, 1911, and went into effect the following

year. The first assessment, therefore, was made in 1912, based upon incomes of 1911. The Wisconsin law is applicable to persons living in Wisconsin, to business transacted there and to income derived from property within the state. Where the business is taxed in Wisconsin any partner or shareholder residing in Wisconsin is exempt in his personal return from income taxed directly to the partnership or corporation. The rates are progressive, rising in the case of individuals and partnerships from one per cent on the first \$1,000 of taxable income to six per cent on taxable income over \$12,000. For corporations the rate rises from two per cent on the first \$1,000 of taxable income to six per cent on income over \$6000. The incomes of wife, husband and children under eighteen years of age are grouped together and the following deductions are allowed: \$800 for an individual, \$1,200 for man and wife and \$200 additional for each child entirely dependent upon the taxpayer for support. No deductions are provided for partnerships and corporations. Educational and benevolent institutions not conducted for pecuniary profit are exempt from the tax, as are insurance companies and all those public utilities which pay taxes directly to the state government. The yield of the tax is, of course, greatly affected by this withdrawal of insurance companies, steam railways, street railways and all gas and power companies associated with street railways. Since the first assessment, banks and trust companies have likewise been exempted from the income tax. This exemption is due to the fact that the income of most of these corporations is given proper weight in fixing assessments under the *ad valorem* tax imposed by the state government. Moreover, in the case of practically all of these corporations, the personal property tax would be sufficient to cancel the income tax. For it is provided by the statute that any personal property tax may be used as an offset or credit against the income tax. Thus a man with an income tax of \$100 and a personal property tax of \$70, pays his personal property tax and only \$30 as income tax. It was found impracticable to make the income tax a complete substitute for the tax on personal property. On the passage of the income-tax law, however, all moneys and credits, household goods and farm machinery were exempted from taxation, thus leaving subject to the property tax only a few kinds of personal property, the most important of which are farm animals, and the stock of merchants and manufacturers. The administration of the tax is highly centralized, the assessment of corporations being made by the tax commission, and the assessment of partnerships and individuals by assessors of incomes appointed by the tax commission in accordance with civil service requirements. But the income tax is still predominantly a local tax. The administration only is centralized. The state government gets only ten per cent of the revenues collected and pays all expenses. Twenty per cent goes to the county government and seventy per cent to the town, city or village in which the tax is collected. . . . The greatest discovery of the Wisconsin income tax is the non-political assessor of incomes. The law requires assessors of income to be selected in accordance with civil-service requirements and without regard to political affiliation. Among the forty-one assessors of incomes there are republicans, democrats, socialists and single-taxers. . . . It is very largely their work that has made the income tax a success. With the

property tax they have wrought something in the nature of a revolution. . . . The insignificant yield of the income tax in rural districts raises sharply the question whether or not the income tax has proved a successful substitute for the personal property tax. No categorical answer to this question can be given. The income tax produced in the first year several times as much as the revenue formerly collected from the important classes of personalty exempted when the income tax took effect. In the larger cities, moreover, the income tax produced enough to warrant the immediate exemption of all personal property from taxation. On the other hand, in the smaller cities, villages and rural townships, the yield of the income tax is, except where there are important mines or factories, almost negligible."—T. S. Adams, *Significance of the Wisconsin income tax (Political Science Quarterly, Dec., 1913, pp. 569-572, 583)*.—In 1912 the state supreme court upheld the constitutionality of the law.

1911-1919.—Governors.—Ratification of Federal amendments.—From 1911 to 1914 F. E. McGovern was governor of the state, conducting an administration in line with the reform program of his two predecessors. The conservative elements of the Republican party appeared to triumph in 1914 in the election of Emanuel Phillip, who, however, proved an able administrator during the critical years of the World War, when the nation looked with concern to the state whose loyalties might have been expected to be divided by sentiments springing from a population markedly of German extraction. The Sixteenth Federal Amendment (Income Tax) was ratified, May 26, 1911; the Seventeenth (Direct Election of Senators), May 8, 1913; and the Nineteenth (Woman Suffrage), June 10, 1919. The Eighteenth Amendment (Prohibition) was not ratified by Wisconsin.

1912-1917.—Important court decisions and legislation.—In 1912 a blue sky law and a minimum wage law were passed. In 1916 a decision of the United States Supreme Court denied to a state the right to revoke the charter of a foreign corporation because it removed a case to the United States courts. Marriage Licenses were regulated by a law passed in 1917, which was one of the earliest attempts to put into application some of the conclusions of eugenics. It required a clear bill of health before a license could be granted.

1917-1918.—Part played in the World War.—In 1917 the legislature provided for a moratorium. The state furnished 87,000 soldiers or 2.5% of the whole force.

1918-1919.—Municipal and coöperative housing law.—"In July [1919] the Wisconsin Legislature added a section to its general corporation law which made it possible for municipalities to engage in housing or for interested individuals to organize themselves to form coöperative housing companies. Under the law in question such a corporation is given power to acquire land and to prepare it for residential use upon approval of any public land commission or city planning commission of any locality where the property of such corporation is located. It is also provided that if the land is located within any city or within a radius of three miles from the boundary of the city approval must be had from the health department for the development of the land. No single dwelling may be erected by such company the cost of which exceeds \$5,000. Sufficient ground space must be provided to furnish sufficient air and light. . . . The Wisconsin act has been se-

cured by the urgency of the Milwaukee Housing Commission, whose report was filed in April, 1918. The original draft of the law was drawn by members of that commission. In its report to the mayor of Milwaukee that commission said among other things: The solution of the housing problem involves—(a) The elimination of speculative land values in some residential districts. (b) Zoning of the city to safeguard all residential districts. (c) Economical and adequate planning of streets, transportation, sewage disposal, water supply, lighting, planting of trees, etc. (d) Elimination of waste in construction of homes. (e) Acquiring for wage earners the benefits of ownership without interfering with labor mobility. (f) Legislation aiming to stimulate the erection of wage earners' homes. (g) Public instruction as to the possibilities of housing betterment."—United States Department of Labor (*Monthly Labor Review*, Sept., 1919).

1921-1922.—Governor Blaine.—State amendment of trial by jury.—John J. Blaine, Republican, was elected governor of Wisconsin in 1922, and Robert M. La Follette was returned to the United States Senate for a fourth term. In that year the voters of Wisconsin made the following amendment to their state constitutions: "The right of trial by jury shall remain inviolate and shall extend to all cases at law without regard to the amount in controversy; but a jury trial may be waived by the parties in the manner prescribed by law. Provided, however, that the Legislature may, from time to time, by statute, provide that a valid verdict in civil cases may be based on the votes of a specified number of the jury, not less than five sixths thereof."

WISE, Henry Alexander (1806-1876), American soldier and political leader. Member of the House of Representatives, 1832-1836, 1837-1841, 1843; minister to Brazil, 1844-1847; governor of Virginia, 1855-1860; joined Confederate army, 1861. See U.S.A.: 1842: Victory of John Quincey Adams, etc.; 1861 (August-December: West Virginia).

WISEMAN, Nicholas Patrick Stephen (1802-1865), English cardinal and first Roman Catholic archbishop of Westminster. Founded the *Dublin Review*, 1836; acted as coadjutor to the vicar apostolic, 1840, and later as vicar apostolic in England, 1849; diplomatic envoy of the pope, 1840-1850; created archbishop of Westminster and cardinal by Pius IX, 1850.

WISEMAN, Sir William George Eden (1885-), British diplomat. Chief adviser on American affairs to the British delegation at the Paris conference, 1918-1919.

WISHART, George (c. 1513-1546), Scottish reformer and martyr. Accused of heresy, 1538, 1539; member of Corpus Christi College in England, 1543-

1545; burned at the stake, at the instigation of Cardinal Beaton, 1546.

WISHOSKAN FAMILY.—"This is a small and obscure linguistic family and little is known concerning the dialects composing it or of the tribes which speak it. . . . The area occupied by the tribes speaking dialects of this language was the coast from a little below the mouth of Eel River to a little north of Mad River, including particularly the country about Humboldt Bay."—J. W. Powell, *Seventh Annual Report of the Bureau of Ethnology*, p. 133.

WITBOIS, tribe in South Africa. See SOUTHWEST AFRICA: 1905.

WITCHCRAFT, Salem. See MASSACHUSETTS: 1692; 1692-1693.

WITENAGEMOT, assembly of the wise. This in old English history "is the supreme council of the nation, whether the nation be Kent or Mercia as in the earlier, or the whole gens Anglorum et Saxonum, as in the later history. The character of the national council testifies to its history as a later development than the lower courts, and as a consequence of the institution of royalty. The folkmoot or popular assembly of the shire is a representative body to a certain extent: it is attended by the representatives of the hundreds and townships, and has a representative body of witnesses to give validity to the acts that are executed in it. . . . The council of the aggregated state is not a folkmoot but a witenagemot. . . . On great occasions . . . we must understand the witenagemot to have been attended by a concourse of people whose voices could be raised in applause or in resistance to the proposals of the chiefs. But that such gatherings shared in any way the constitutional powers of the witan, that they were organized in any way corresponding to the machinery of the folkmoot, that they had any representative character in the modern sense, as having full powers to act on behalf of constituents, that they shared the judicial work, or except by applause and hooting influenced in any way the decision of the chiefs, there is no evidence whatever. . . . The members of the assembly were the wise men, the sapientes, witan; the king, sometimes accompanied by his wife and sons; the bishops of the kingdom, the ealdormen of the shires or provinces, and a number of the king's friends and dependents. . . . The number of the witan was thus never very large."—W. Stubbs, *Constitutional history of England*, v. 1, ch. 6, sect. 51-52.—See also ENGLAND: 958; 959-975; PARLIAMENT, ENGLISH: Early stages of its evolution; SUFFRAGE, MANHOOD: British empire: 500-1295.

WOLSELEY, Garnet Joseph, Viscount (1833-1913), British field marshal. Served in second Burmese War, 1852-1853; in India, also taking part in the relief of Lucknow, 1857; fought in the war with China, 1860; commander of Red River Expedition to put down Riel's rebellion in Canada, 1870; commanded in Ashanti War, 1873-1874; administrator of Natal, 1875; member of the council for India, 1876; governor of Natal and the Transvaal, 1879-1880; defeated Egyptian insurgents under Arabi Pasha, 1882; commanded expedition for the relief of Gordon, 1884-1885; commander-in-chief of the forces in Ireland, 1890; commander-in-chief of the British army, 1895-1900. See EGYPT: 1882-1883; CHANNEL TUNNEL: 1914 (May).

WOLSEY, Thomas (c. 1475-1530), English cardinal and statesman. Dean of Lincoln, 1509; privy counselor, 1511; bishop of Lincoln, 1514; archbishop of York, 1514; became lord chancellor and cardinal, 1515; prime minister of Henry VIII, 1515; legate of the pope, 1519; deprived of offices because of disagreement with Henry VIII regarding his divorce, 1529; restored to archbishopric of York; arrested on a charge of treason, 1530. See ENGLAND: 1513-1529; EUROPE: Renaissance and Reformation: Catholic Reformation; BALANCE OF POWER: Modern application.

WOMAN'S CHRISTIAN TEMPERANCE UNION, organization of women, primarily for the promotion of temperance. As a result of the great temperance crusade of 1874, a group of women issued a call for a convention of temperance women, which was held in Cleveland, Ohio, Nov. 7, 1874. Sixteen states were represented. This was the first of a continuous succession of annual conventions. Mrs. Annie Wittermyer was the first president of the national organization and was succeeded in

1879 by Frances E. Willard, who held the position until her death in 1898. Later presidents have been Mrs. L. M. N. Stevens, who followed Miss Willard, and Anna A. Gordon, who took office in 1914. In 1883, due to the efforts of Miss Willard, the World's Woman's Christian Temperance Union was organized.—See also LIQUOR PROBLEM: United States: 1869-1893.

WOMAN'S COMMITTEE OF THE COUNCIL OF NATIONAL DEFENSE, group of ten representative women of the United States, appointed by the Council of National Defense, Apr. 21, 1917, to coöordinate and centralize the war work of women. The members were Dr. Anna Howard Shaw, of New York, chairman; Miss Ida Tarbell, of New York, vice chairman; Mrs. Philip N. Moore, of St. Louis, secretary; Mrs. Stanley McCormick, of Boston, treasurer; Mrs. Josiah E. Cowles, of California; Miss Maud Wetmore, of Rhode Island; Mrs. Carrie Chapman Catt, of New York; Mrs. Antoinette Funk, of Illinois; Mrs. Joseph R. Lamar, of Georgia; and Miss Agnes Nestor, of Illinois. The organization had state divisions in forty-eight states, and acted as a mouthpiece of the government, sending messages to women, stimulating patriotic service, and supplying a channel for effective prosecution of war work. There were ten departments or subcommittees finding their counterpart in state, county, and civic units, namely, registration, food production and home economics, food administration, women in industry, child welfare, maintenance of existing social service agencies, health and recreation, education, Liberty Loan, and home and foreign relief: The headquarters at 1814 N Street N. W., Washington, D. C., became a clearing house for war activities through organizations and through individuals. When the Council of National Defense at the termination of hostilities turned its attention to problems of reconstruction, the Woman's Committee, by an amalgamation with the state councils section, was merged into the field division of the council, guiding the work of 184,000 units of state, county, community and municipal councils of defense, and local units of women's committees throughout the country.

WOMAN'S RIGHTS

Introduction.—A comprehensive, and critical history of women's rights, which takes into consideration all the factors in the situation, does not exist, notwithstanding the constant appeal to history in support of this or that thesis with regard to women. Most existing histories have been written in the heat of the conflict for the emancipation of women, and have, in one way or another, the bias of propaganda. Moreover, the data for such history is scanty and not easy to interpret—belonging as it does to the intimate, partly unconscious, and generally unrecorded life of the world. The records of women's legal rights and the indirect testimony of literature—the two main sources of historical material—or even the biographies of exceptional women furnish only very partial testimony for the history of women's position and real social rights. Through the greater part of the world's history the attempt to extend woman's rights concerns woman, not as an individual, but as a social institution—as daughter, wife, or mother. The economic and social importance of women is so overwhelmingly important in any condition of economic life short

of the most highly civilized that it is only under conditions of exceptional material prosperity and a high development of the arts of living that women have been sufficiently free from their fundamental tasks of feeding, clothing, and mothering the world to look around for any other works or opportunity for self-expression. Whenever conditions of prosperity obtain, and the woman's arts of providing food and clothing begin to be organized by men on a large scale—as in Greece in its most brilliant period, in the convents of the Middle Ages, in Europe following the Industrial Revolution—a movement toward the so-called "freedom" of women forthwith develops. But such periods have been brief in the history of the world, and with the collapse of the general organization of the arts of life before war or disaster or the too rapid change and development of national life, women are forced back into their primitive place as feeders, clothers, and mothers, and are too busy keeping the machinery of life running in the unit of the family to think of other fields of activity. The most recent movement for the "emancipation" of women in the

nineteenth century bids fair to be the most permanent because it is based on a change in the industrial foundations of society, which has practically abolished the original primitive industries of the household. The history of women's rights is therefore a large and somewhat nebulous subject. Sometimes it concerns humane provisions to make the woman comfortable in her all important place in the home, as in ancient Babylonia and Egypt. Sometimes women's rights are considered to be their rights, not to be made happy and efficient in the home, but to escape from it altogether. Nearly everything that concerns the intimate life of the family, as the unit of society, becomes a part of the subject of woman's rights. In this survey the attempt has been made to cover the outstanding periods in the history of the world when there has been some effort to improve the quality and scope of woman's life, whether in the home or out of it.

Women in prehistoric times.—"On the threshold of the past we find the horde as the first human community. In the horde, as in the cattle herd, sexual impulses were gratified without order or separation according to pairs. We have no grounds for assuming that in this primitive state men were physically or mentally superior to women. Not only is such an assumption *a priori* improbable, the observations afforded us by savage races at the present day tend to prove the contrary. Among all such races the size and weight of the brain differs far less according to sex than is the case among civilised nations, while in regard to bodily strength, little or no inferiority exists on the side of the women. Indeed, certain tribes in the interior of Africa are governed by women instead of men, owing to the superior strength of the former. In one Afghan tribe the women carry on war and hunt, while the men attend to the household. The King of Ashantee in West Africa, and the King of Dahomey in Central Africa have female bodyguards, and regiments entirely recruited from and officered by women, which distinguish themselves from the male troops by greater courage and bloodthirstiness. . . . The so-called Amazon States which are supposed to have existed in ancient times on the shore of the Black Sea and in Asia, and which were composed entirely of women, can only be explained on the grounds of physical authority. . . . As long as the single hordes, and later on the tribes (clans) were in a state of constant warfare, and before agriculture or the breeding of cattle had been introduced, and death was consequently no rare occurrence, it was a matter of primary importance for the horde or tribe to free itself from every appendage that required care, that was an impediment in battle or flight, and that promised small future return for the trouble incurred. This applied especially to female children, who were consequently put out of the way as soon as possible after birth. A few only of the strongest were allowed to live for the necessary purposes of propagation. This is the simple explanation of the practice which still exists among many savage races of Further Asia and Africa, of killing female infants immediately after birth, a practice which has also been erroneously ascribed to the modern Chinese. The same fate was shared by all male children who came crippled or misshapen into the world, and therefore threatened to become a burden to the tribe. They too were put out of the way. As is well known, the same custom prevailed in several Greek States, *e. g.*, in Sparta. A further rea-

son for destroying female children was the loss of life which an endless state of warfare occasioned among the males, who thus sought to avoid a disproportionate increase of women. Moreover, it was a far simpler plan to capture women by force than to bring them up from infancy."—A. Bebel, *Woman*, pp. 7-9.

B. C. 2250-538.—Babylonia.—Provisions with regard to women in Code of Hammurabi.—Temple prostitution.—"Hammurabi, the great law-maker of the Babylonians, . . . published a number of regulations relating to marriage. Adultery was punishable by the death of both persons by drowning. Provision was made for the desertion of wives. 'If a man has abandoned his city, and absconded, and after that his wife has entered the house of another, if that man comes back and claims his wife, because he had fled and deserted his city, the wife of the deserter shall not return to her husband.' A wife or a concubine who had borne children could not be sent away from the harem without the return of her dowry, and she was at liberty to marry again. Incest incurred a penalty of death, either by drowning or burning, according to the severity of the crime. The law of Hammurabi was very rigid in regard to the descent of property through the mother. 'If a man has married a wife and she has borne children, and that woman has gone to her fate, then her father has no claim upon her dowry. The dowry is her children's.' Mr. Chilperic Edwards, author of 'The Oldest Laws in the World,' writes, in his notes on the Hammurabi Code, that many of the stories of Herodotus about the women of Babylon are fables. 'The Babylonian woman was given in marriage by her father or brothers. The suitor, or his family, paid a certain sum as "bride-price," the amount being often handed over in instalments. The bride's father gave her a "dowry," which usually, but not necessarily, included the "bride-price." The bridegroom might also make his bride a "settlement." The status of the concubine is not clear. She does not seem to be necessarily of lower rank, like the Roman, but was a secondary spouse. Like the chief wife she carried bride-price and dowry, and we may assume that she possessed the same rights as the chief wife in regard to maintenance and participation in the husband's estate.' A humane measure for the annulment of marriage on the ground of incompatibility is recorded in the following clause: 'If a woman hate her husband, and say "Thou shalt not possess me," the reason for her dislike shall be inquired into. If she be careful, and has no fault, but her husband takes himself away and neglects her, then that woman is not to blame. She shall take her dowry and go back to her father's house.' In Babylon women were queens and priestesses, and held other exalted positions. The goddess was more honoured than the god. Women owned property and had equal rights with men. The Queen Semiramis had immense sway; and greater still was the power of Nitocris, who, according to Herodotus, enlarged and fortified the city and showed a wonderful capacity for engineering and the planning of canals and reservoirs. By the . . . Code of Hammurabi, marriage by purchase and polygamy were permitted in Babylon. But wives could not be divorced at the caprice of the husband, and the marriage dowry given to the bride by her father could not be taken from her even though she were divorced. Concubinage was allowed by the Code, the secondary wife, or concubine, ranking as subordinate to the chief wife.

"If a man desired a maiden for his wife, he approached her parents first, and the prospective bride had no voice in the contract. Herodotus describes a custom of the Babylonian villagers that recalls the old-time hiring fairs of England. Once a year all the girls of a marriageable age were collected together in an open space, surrounded by a crowd of men. One by one the damsels were put up for sale, the more comely being first offered to the bidders. The wealthiest men naturally secured the most beautiful wives. After the disposal of the handsome women, their plain sisters were sold by auction; but in this case they were given to poor men, and the successful bidder was one who would accept the lowest dowry. This sum was paid out of the sale of the beautiful maidens. Until the buyer of a girl had given full assurance that he would marry her legally, he was not permitted to carry her away. In the event of disharmony in the married life, the wife would be freed from the tie by the return of the purchase money. 'Such,' writes the historian, 'was their best institution. It has not, however, continued to exist.' At a later period, after defeats in warfare and impoverishment, the poorer classes resorted to the selling of their daughters in prostitution. Herodotus refers to the sacred prostitution of women at the Temple of Mylitta, the Venus of the Babylonians. Generally speaking, prostitution is comparatively uncommon in polygamous countries, and its introduction often arises from the coming of strangers from the monogamous nations. The religious rite observed in the Babylonian temple was by no means a purely commercial transaction. Once in her life every woman in ancient Babylon was compelled to sit in the Temple of Mylitta until chosen by a man. . . . After 'absolving herself from her obligation to the goddess,' the woman returned home, and was regarded as chaste. . . . The rite of Mylitta was designed as a benefit to the woman-devotee. . . . Similar rites were practised by the Egyptians, the Romans, in the worship of Priapus, the Corinthians, and among the priestesses of Cyprus. In Lydia it was the custom of girls to prostitute themselves for the purpose of securing a marriage-portion. Frazer is of the opinion that this was a development of sacred prostitution. At first the money is offered to the god, but later it is used by the woman as a marriage-portion. . . . The secularisation of prostitution followed gradually upon the decay of religious and symbolic prostitution among the Eastern nations. Once a ceremony of holy and solemn import, it degenerated into a mere traffic for money, and is now a commercial institution of every monogamous country. In the harems of Babylon, the wives held considerable power and high status. Nor were the concubines the mere chattels of their masters. The Hammurabi Codes had important clauses respecting the treatment of inferior wives. If a man determined to dismiss a concubine, he was compelled to pay her 'the usufruct of field, garden, and goods,' to maintain and educate her children. A bride put away on the ground of sterility, or for another cause, was entitled to the price originally paid for her. If there was no bride-price, the husband paid her one mina of silver; and in the case of a poor man one-third of a mina of silver. In regard to faithless wives in the harem, the law was not liberal. The woman who had 'belittled her husband,' or 'played the fool,' was sent away without compensation or held as the slave of a new wife. An errant wife was condemned to death by

drowning, a favourite Oriental punishment for women."—W. M. Gallichan, *Women under polygamy*, pp. 23-24, 17-22.—See also BABYLONIA: Social structure; EDUCATION: Ancient: B. C. (c) 35th-6th centuries: Babylonia and Assyria.

B. C. 2000-500.—Egypt.—Comparatively high status of Egyptian women.—Legal position.—Condition of women under polygamy.—Domestic life of monarchs.—'Among the Egyptians,' wrote Diodorus, 'the woman rules over the man.' The existence of the harem in a nation so distinguished as ancient Egypt for a recognition of sex-equality, is somewhat bewildering at the first thought. Let us remember that polygamy from the earliest times has been the privilege and the luxury of the rich. It was never the practice of a vast mass of the population in polygamous countries. Therefore, in speaking of such countries, we must not lose sight of the fact that the bulk of women are outside of the harems. It is also necessary that we should recognize the constant recruiting of the inmates of the harem by the importation of alien women. . . . [But the harem is not really typical of the present domestic life of the Egyptians, though happy relations between men and women seemed often to flourish there.] In Egypt of ancient days the mass of the people laboured for the mere maintenance of existence, and bowed beneath the stern common lot of the multitude in most civilised nations. Family life among the humble was on a very different plane from the luxurious lives of the influential and the wealthy. But in happy domesticity the Egyptians excelled all peoples. The women were the beloved of their husbands, the mistresses of the house. Innumerable are the precepts to husbands, urging them to bestow tenderness and affection upon their wives, to cherish them in every manner and to honour all women. The marriage contracts, in the days of the highest culture in Egypt, prove conclusively that women were more favoured than men. Purchase-marriage became a form only, for the bride-price was given to her, and the wife's property was entirely her own to enjoy and dispense as she chose. In the event of separation, the wife retained her possessions. A woman who left her husband was entitled to all that was her own, and in some instances the wife was endowed with the whole of her husband's belongings. Children were carefully and lovingly tended by both parents. Even the child of a slave woman was legitimate and accorded equitable rights. The woman who had wandered from the strict path of chastity was not scorned nor made an outcast. Petah Hotep declared that such misfortune should be softened by the kindness of the man who had consorted with her. He was enjoined to shelter her and 'be kind to her for a season,' and to 'send her not away.' [Even within the bounds of polygamy there seems to have been considerateness and justice.] The wives living in polygamy had each their own house; their children were endowed and their property-rights were well-defined. Instead of being at the beck and call of her husband at any time, the woman received him in her own house as an invited guest. [The highest dignity and luxury of women in polygamous union was found in the royal household.] . . . When the Egyptians became pacific, women enjoyed the social, civic and domestic advantages which were denied to them during the militant period. The Greek travellers in Egypt were surprised at the independence of the women. It is doubtful whether, at the highest stage in their culture, the Greeks

approached the Egyptian ideal of family life."—W. M. Gallichan, *Women under polygamy*, pp. 25-27.

B. C. 1200.—Women in old Indian law.—Dependence upon and subservience to husbands.—"The position of women in all countries is largely determined by the teaching of the prevailing faith. In the monogamous Christian nations, the social and marital status of women is due chiefly to the precepts of St. Paul and the ascetic Fathers. Hindu women owe their position principally to the elaborate counsels and rules laid down by Vishnu and Manu. Indian sacred writings abound with the most explicit commands upon the relations of the sexes. Manu fears woman as all men fear an overwhelming fascination. He desires that she should be justly and kindly treated. The necessity for her protection is constantly urged upon men. . . . Thus speaks Manu:—"Day and night women must be kept in dependence by the males of their families. . . . Her father protects her in childhood, her husband protects her in youth, and her sons protect her in old age. A woman is never fit for independence. He who carefully guards his wife, preserves the purity of his offspring, virtuous conduct, his family, himself, and his means of acquiring merit. No man can completely guard women by force; but they can be guarded by the employment of the following expedients: Let the husband employ his wife in the collection and expenditure of his wealth, in keeping everything clean, in the fulfilment of religious duties, in the preparation of his food, and in looking after the household utensils." . . . In 'The Institutes of Vishnu' there are a number of clauses relating to marriage. A man is forbidden to marry a woman of a lower caste. No woman having six fingers can be married, nor one having lost one of her limbs. There is a curious prohibition against marriage with a woman of decidedly red hair. . . . Finally, Vishnu forbids marriage with a woman who 'talks idly.' The stigma of virginity must be removed as soon as possible after a girl attains to the function of womanhood. If no man chooses her within three months, she is at liberty to make her choice. We will now survey some of 'The Duties of a Woman,' according to Vishnu. To live in harmony with her husband. To show reverence (by embracing their feet and such-like attentions) to her mother-in-law, father-in-law, to Gurus (such as elders), to divinities, and to guests. To keep household articles (such as the winnowing basket and the rest) in good array. To maintain saving habits. To be careful with her pestle and mortar and other domestic utensils. Not to practise incantations with roots, or other kinds of witchcraft. To observe auspicious customs. Not to decorate herself with ornaments, or to partake of amusements, while her husband is absent from home. Not to resort to the houses of strangers during the absence of her husband. Not to stand near the doorway or by the windows of her house. Not to act by herself in any matter. To remain subject, in her infancy, to her father; in her youth to her husband; and in her old age to her sons. After the death of her husband to preserve her chastity, or to ascend the pile after him. No sacrifice, no penance, and no feasting allowed to women apart from their husbands; to pay obedience to her lord is the only means for a woman to obtain bliss in heaven. A woman who keeps a fast or performs a penance in the lifetime of her lord, deprives her husband of his life, and will go to hell. The following advice to would-be husbands is from the 'Upanishads.'

'She is the best of women whose garments are pure. Therefore let him approach a woman whose garments are pure, and whose fame is pure, and address her.' . . . Are these ordinances obeyed to the letter? . . . It is fairly evident, from all that we hear of the present position of the women of India, that neither Manu or Vishnu are invariably accepted quite literally."—W. M. Gallichan, *Women under polygamy*, pp. 91-95.—See also INDIA: People; ASIA: European influences, etc.: 5.

B. C. 600-300.—Seclusion of Greek women.—Citizen-women of Athens.—Hetaira.—Woman's life in the home.—Legal position.—Feminism in Greek literature.—The life of the Greek woman, especially at Athens during the period of its greatest glory, is usually represented as extremely limited. 'The citizen-women had special apartments assigned to them, generally in the upper story, that they might have to come downstairs, and men might see them if they ventured out. Then they were forbidden to be present at any banquet. The men preferred to dine by themselves, rather than expose their wives to their neighbour's gaze. And in order to defy all possibility of temptation, the women must wrap up every part of their bodies. In addition to these external arrangements, laws were passed such as might deter the most venturesome. . . . Restrictions of the most stringent nature and punishments the most terrible were employed to keep the citizenship pure. To help further to realize the position of the Athenian wife, we have to add that she was generally married about the age of fifteen or sixteen. Up to this time she had seen and heard as little as possible, and had inquired about nothing. Her acquaintance with the outside world had been made almost exclusively in religious processions. . . . When she married, her life was not much more varied. Her duties lay entirely within the house. They were summed up in the words, 'to remain inside to be obedient to her husband.' She superintended the female slaves who carded the wool; she made, or assisted in making the garments of her husband and children; she had charge of the provisions; and she was expected to devote some time to the infants. If she went out at all, it was to some religious procession or to a funeral, and if old she might occasionally visit a female friend and take breakfast with her, or help her in some hour of need. For the discharge of the duties which fell to an Athenian woman no great intellectual power was needed, and accordingly the education of girls was confined to the merest elements. . . . Matches were managed to a large extent by old women, who were allowed to go from house to house, and who explained to the young woman the qualities of the young man and to the young man the qualities of the young woman. A marriage concluded in such a way might or might not be happy, but there could be little ideal love about it. Nor is there any reason to believe that the Athenians were very fond of their wives. They liked them if they managed their houses economically, and had healthy children, especially sons. . . . [The husbands were absent from their wives for] most part of the day; they did not discuss with them subjects of the highest moment; they did not share with them their thoughts and aspirations. The domestic sentiment was feeble."—J. Donaldson, *Woman*, pp. 50-53.—"Generally speaking, the law afforded a woman but little protection from her husband; infidelity on his part did not entitle her to a divorce. On the other hand, the strictest fidelity was required from the wife; but, in spite of the

seclusion in which she lived, infidelity was by no means uncommon. . . . In most Greek states the offenders were punished by the loss of certain rights, and the husband was not only justified in demanding a divorce, but even morally bound to do so if his wife's wrong-doing had been noised abroad. The law took no steps to punish the lover; but the husband had the right to inflict corporal punishment on him, or even, if he caught him in the act, to kill him, unless, indeed, he preferred to seek compensation for his shame in a money fine. In case of divorce, too, the woman was worse off than the man. In consequence of the loose relation of the marriage-tie, it was very easy to break it. A husband could dismiss his wife or send her back to her parents, or the woman could simply leave her husband's house, and this was usually enough to annul the marriage. Women of the better classes only went out attended by a servant or slave, and then but seldom. A respectable woman stayed at home as much as possible. . . . There were no common meetings for them as there were for men. They visited one another occasionally, and there were a few festivals in the year to which they went without the men, and then the proceedings seem to have been very lively, as for instance, at the Thesmophoria. The women drove in their finest clothes to the Eleusinian celebrations, and they also took part in the Panathenaea, on which occasion the daughters of the resident foreigners carried their chairs and sunshades behind them. In general, it appears as though more liberty had been gradually granted women in the matter of appearance in public."—A. Zimmern, *Home life of ancient Greeks*, pp. 149-153.—"The citizen-women were confined to their houses, and did not dine in company with the men. But the men refused to limit their associations with women to the house. They wished to have women with them in their walks, in their banquets, in their military expeditions. The wives could not be with them then, but there was no constraint on the stranger-women . . . and accordingly they selected these stranger women as their companions, and 'Hetaira,' or companion, was the name by which the whole class was designated. Thus arose a most unnatural division of functions among the women of those days. The citizen-women had to be mothers and housewives—nothing more; the stranger-women had to discharge the duties of companions, but remain outside the pale of the privileged and marriageable class. These stranger-women applied their minds to their function, with various ideas of it, and various methods. Many adopted the lowest possible means of gaining the good-will of men; but many set about making themselves fit companions for the most intellectual and most elevated among men. They were the only educated women in Athens. They studied all the arts, became acquainted with all new philosophical speculations, and interested themselves in politics. Women who thus cultivated their minds were sure to gain the esteem of the best men in Greece. Many of them also were women of high moral character, temperate, thoughtful, and earnest, and were either unattached or attached to one man, and to all intents and purposes married. Even if they had two or three attachments, but behaved in other respects with temperance and sobriety, such was the Greek feeling in regard to their peculiar position, that they did not bring down upon themselves any censure from even the sternest of Greek moralists."—J. Donaldson, *Woman*, pp. 57-59.—"Notwithstanding this, every-

where and always in antiquity a woman's sphere was supposed to be the household, and when the family and the number of slaves were large, this charge required a good deal of strength and attention. Not only had all the food to be prepared for the household, but also the clothing had to be provided for all its members; for it was very unusual for any woman, who had numerous slaves at her disposal, to purchase stuffs or clothes ready-made. They therefore spent a great part of the day with their daughters and maids in a specially appointed part of the house, where the looms were set up. Here, in the first place, the wool, which was bought in a rough condition, was prepared for working, by washing and beating, then fulled and carded, disagreeable occupations which, on account of the exertion required, were usually left to the maids. The wool thus prepared for working was then put in large work or spinning-baskets . . . and we often see these on monuments which represent scenes from a woman's life."—A. Zimmern, *Home life of the ancient Greeks*, p. 153.—The legal position of the wife is thus defined in Xenophon's "Economicus." "If at some future time God grant us to have children born to us, we will take counsel together how best to bring them up, for that . . . will be a common interest, and a common blessing, if haply they shall live to fight our battles and we find in them hereafter support and succor when ourselves are old. But at present there is our house here, which belongs alike to both. It is common property, for all that I possess goes by my will into the common fund, and in the same way all that you deposited was placed by you to the common fund. We need not stop to calculate in figures which of us contributed most, but rather let us lay to heart this fact that which ever of us proves the better partner, he or she at once contributes what is most worth having."—G. W. Botsford and E. G. Sihler, *Hellenic civilization*, p. 503.—There were not wanting complaints of the monotony, loneliness, and drudgery of the secluded life of women. A poet in the Greek anthology bewails the lot of women thus. "The task of youths is not so great as falls to us delicate women. They have their comrades, to whom with fearless utterance they tell the pains of their anxiety. They are busy with diverting games, and roaming about the streets, enjoy bright colored pictures. 'Tis not permitted us to see the daylight, but in dim rooms we are hidden, wasted with worries."—*Ibid.*, p. 704.—Despite the fact that in the brief period of the finest Greek civilization nothing effective was done to release women from conditions whose ill effects were beginning to be recognized, there must have been a considerable "woman's rights" movement—to judge from the tone of Literature. Euripides is full of passages which have the very quality of the modern feminist discontent. "Lysistrata," by Aristophanes, boldly puts the whole case of the modern woman suffragists, proclaiming that a woman's hand on the helm of state now and then would preserve a man-ridden polity from considerable foolishness. The existence of a good deal of feminist discussion is further attested by Plato, who comes out boldly with the whole feminist program, striking at the root of the matter, after the fashion of the most daring of European feminists, with a proposal for communal motherhood and householding, and equal political responsibilities even to the highest administrative offices of the state.

B. C. 300-A. D. 300.—Ancient Rome.—Political

divisions.—Domestic position of women.—Marriage and divorce.—Economic independence.—Public activities.—Degeneracy in the latter days of the empire.—Political and social power of women of the upper classes.—“In Roman society there were . . . three classes of women—the full citizen, the alien, and the slave. The Roman citizen could marry only a woman who was the daughter of a Roman citizen. Marriage with any other was impossible. The very object of marriage was to produce a race of citizens, and, therefore, both father and mother must belong to the class of citizens. It was for this reason that such care was taken of the purity of Roman women, and such a broad distinction was drawn between the conduct of the man and the woman. There must be no suspicion of spuriousness in regard to the Roman citizen. But the offspring of the man with a foreign woman or a slave did not become a citizen, and, therefore, the State was perfectly indifferent as to what relations might exist between a male citizen and alien women or slaves, and society was equally indifferent. The Roman idea of a family made the father a despot, with the power of life and death over his children, who could do nothing without his consent. This was the case in regard to male children, even after they had reached a considerable age. Women, according to the opinion of the early Romans, were always children. They required protection and guidance during their whole life, and could never be freed from despotic control. Accordingly, when a Roman girl married, she had to choose whether she would remain under the control of her father, or pass into the control, or—as it was called—into the hands of her husband. It is likely that in the early ages of the city she always passed from the power of her father into the hands of her husband, and the position she occupied was that of daughter to her husband. She thus became entirely subject to him, and was at his mercy. Roman history supplies many instances of the despotism which husbands exercised over their wives. The slightest indiscretion was sometimes punished by death, while men might do what they liked without let or hindrance. . . . I think that we may see that the Roman matrons did not like this arbitrary treatment, and that they protested against the assumption that they were beings quite different from their husbands, and entitled to no rights and privileges as against them. And the interesting feature in the history of the Roman matron is the gradual emancipation which she effected for herself from these fetters of Roman tradition and usage. . . . In the later days of the Republic and the commencement of the Empire, Roman matrons displayed . . . [a] rage for foreign worships. The temples of the Egyptian goddess Isis were crowded, and her priests were caressed and revered. Many women became adherents of the Jewish faith, and Eastern divinities had numerous devotees. In these cases the women claimed for themselves the right to worship whatever god pleased them. Often, in carrying out this worship, they had to break through the rules of conventionality, and they thus asserted for themselves a freedom which nothing but a religious impulse would have led many of the more sensitive to claim. . . . Marriage was . . . a contract which came into full force when the woman was led to the house of the man. It was a contract which must be made in the presence of witnesses, and it could be dissolved; but again, the dissolution of it must be carried out legally—in the presence of competent witnesses. Religious ceremonies

accompanied the marriage, but the religious ceremonies had nothing to do with the contract, and therefore were not essential to the marriage. It was necessary in this contract that husband and wife should give their consent, and when they were under control, that their parents or guardians also should consent. Generally each family had a family council, consisting of friends and relatives, and this council would be summoned to decide on the terms of the contract, and it was deemed disreputable in a man to dissolve his marriage without invoking this council. Husband or wife might dissolve the marriage for any reason, but precipitation was guarded against by the necessity of legal forms and by the practice of asking the advice of this council, at the head of which was the father of the husband or wife. . . . Whenever there arose a feeling of bondage, the woman as well as the man could arrange for a dissolution of the connexion. And the woman had no pecuniary difficulties in the way. Every father provided for the support of the daughters for life by the dowries which he bestowed on them; and, therefore, no woman was compelled to put up with a faithless and cruel husband because she was entirely dependent on him for her subsistence. The complaints which we hear of Roman marriages are not from the female, but the male side. The women were too independent. A Roman marries a Roman woman who has ample means of her own. He finds that the old times are gone, and he cannot now lay hold of her money or property without her consent. He must now humour her if he is to enjoy her wealth, and the effort to gain her over in this way is held up as degrading and humiliating to a man, and it is represented that it is better for a man to be without a wife than to be subject to all the imperious whims of a wealthy woman. Then, again, there was no shame attached to a dissolution of marriage. Marriage was a contract. . . . It was an agreement between two parties, and whenever this agreement began to gall the one or the other, there was no reason why the agreement should not come to an end. . . . No doubt it was their good sense, their kindness, and their willingness to co-operate with men, that led to their freedom and power in political matters. And this power was sometimes very great. . . . It is true that some of the women who engaged in political affairs were reckless and disagreeable. . . . But even these women had much enjoyment from their careers and the companionship of their own choice. At all events, the women enjoyed great freedom, and a wide field for the exercise of their power. And many of them certainly made a good use of their opportunities and wealth. Some of them were charitable. They bestowed public buildings and porticoes on the communities among which they lived; they received public honours, and one woman in Africa so impressed her fellow-citizens with her excellence that she was elected one of the two chief magistrates of the place. Especially in Asia Minor did women display public activity. Their generosity took the most various forms, even to bestowing considerable sums on each citizen in their own cities. They erected baths and gymnasia, adorned temples, put up statues, and contributed in every way to the enjoyment of their fellow countrymen. They often presided at the public games or over the great religious ceremonies, having been regularly appointed to this position, and they paid the expenses incurred in these displays. In consequence of this they received the most marked distinction, and were elected to the highest magistracies.

They also held priesthoods, and several of them obtained the highest priesthood of Asia—perhaps the greatest honour that could be paid to anyone. And they were admitted to aristocratic clubs, such as the 'gerousia' is generally supposed to have been. It cannot be said that all the professions were thrown open to them, because many of the professions were not open to the men. Medicine and teaching and similar arts were still to a large extent practised by slaves or freedmen, and were deemed unworthy occupations for free-born citizens. . . . Women had a wide range of action in legal matters. Many Roman women devoted themselves to philosophy and literature, and showed considerable ability in these subjects. But there is no proof that any one of them attained a great reputation. Only one literary work of a Roman woman has come down to us, the Satire of Sulpicia. It is creditable to her good sense and ability, but it does not take a high place among satires."—J. Donaldson, *Woman*, pp. 79, 87-89, 97-98, 109-110, 114-115, 122-127.—"The Roman lady's irritable pride of birth is at least as old as the rivalry of the two Fabiæ in the fourth century. The elder Cato dreaded a rich wife as much as Juvenal, and satirised as bitterly the pride and gossip and luxury of the women of his time. Their love of gems and gold ornaments and many-coloured robes and richly adorned carriages is attested by Plautus and the impotent legislation of C. Oppius. Divorce and ghastly crime in the noblest families were becoming common in the days of the Second Punic War. About the same time began that emancipation of women from the jealous restraints of Roman law, which was to be carried further in the Antonine age. The strict forms of marriage, which placed the wife in the power of her husband, fell more and more into desuetude. Women attained more absolute control over their property, and so much capital became concentrated in their hands that, about the middle of the second century B. C., the Voconian law was passed to prohibit bequests to them, with the usual futile result of such legislation. Yet the old ideal of the industrious housewife never died out, and Roman epitaphs for ages record that the model matron was a wool-worker and a keeper at home. . . . But from the second century B. C. the education of the Roman girl of the higher classes underwent a great change. Dancing, music, and the higher accomplishments were no longer under a ban, although they were still suspected by people of the old-fashioned school. Boys and girls received the same training from the grammarian, and read their Homer and Ennius together. There were women in the time of Lucretius, as in the time of Juvenal, who interlarded their conversation with Greek phrases. . . . Even in the gay circle of Ovid, there were learned ladies, or ladies who wished to be thought so. Even Martial reckons culture among the charms of a woman. Seneca maintained that women have an equal capacity for cultivation with men. Thus the blue-stocking of Juvenal, for whom he has so much contempt, had many an ancestress for three centuries, as she will have many a daughter till the end of the Western Empire. Even in philosophy, usually the last study to attract the female mind, Roman ladies were asserting an equal interest. Great ladies of the Augustan court, even the empress herself, had their philosophic directors, and the fashion perhaps became still more general under M. Aurelius. . . . Even in the field of authorship, women were claiming equal rights. . . . Juvenal feels as much scorn for the woman who is interested in public

affairs and the events on the frontier, as he feels for the woman who presumes to balance the merits of Virgil and Homer. And here he is once more at war with a great movement towards the equality of the sexes. From the days of Cornelia, the mother of the Gracchi, to the days of Placidia, the mother of Honorius, Roman women exercised, from time to time, a powerful, and not always wholesome, influence on public affairs. . . . The influence of women in provincial administration was also becoming a serious force. . . . In the inscriptions of the first and second centuries, women appear in a more wholesome character as 'mothers of the camp,' or patronesses of municipal towns and corporations. They have statues dedicated to them for liberality in erecting porticoes or adorning theatres or providing civic games or feasts. . . . We are reminded of the 'chapter of matrons' who visited Agrippina with their censure, and another female senate, under Elagabalus, which dealt with minute questions of precedence and graded etiquette. On the walls of Pompeii female admirers posted up their election placards in support of their favorite candidates. Thus Juvenal was fighting a lost battle, lost long before he wrote. For good or evil, women in the first and second centuries were making themselves a power."—S. Dill, *Roman society from Nero to Marcus Aurelius*, pp. 79-81.—"There was at no time at Rome anything that could be called a feminist movement. No solidarity existed in a sex split by caste into classes that had no motive in common. The ladies from time to time organized to obtain legislation in their interests; but so far as we know, such legislation dealt only with pecuniary questions. We have no record of any attempt on their part to improve the lot of women in general. Women in general were in fact submerged. An inspection of the literature and the inscriptions of the late Republic and the early Empire gives the odd impression that the Roman women of the lower classes had pretty nearly ceased to exist. The professional woman, if we may so call her, the doctor, the *accoucheuse*, the *masseuse*, the actress, the dancer, the courtesan, the dressmaker, was almost always a Greek. In trade and industry, the same was true; according to the inscriptions, Greek women were the fish-mongers, the barmaids, and the laundresses of Rome. No one can doubt that hundreds of thousands of hard-working, god-fearing Roman women lived silent, unrecorded lives, and bore children to carry on the state. But the lady had nothing to do with them. Her struggles were directed to the strengthening of her own position. It was to this end that Hortensia and her ladies came down to the Forum to argue that taxation without representation is tyranny. . . . Public speaking had no terrors for the Roman lady. We read of women of litigious temperament who were constantly at law, and argued their own cases in the prætor's court and in the Forum. The practice was prevalent enough to need an edict to suppress it. Business on a large scale sometimes provided an outlet for the energies of the restless, able, and idle *domina*. The manufacture of bricks seems to have been largely in her hands, for almost every Roman brick is stamped with the name of its maker, and the names of many great ladies, including even empresses, are handed down to us on the remnants of their product. The great field, however, for the activity of the Roman lady was the exertion of her personal influence, and the development of her power in political and social intrigue. The amorous intrigue, for which

she is perhaps most famous, should be subordinated to the other two, for it was apparently in many cases their handmaid. . . . The women of the Triumvirates are hardly less striking figures than the men. The Empire saw a succession of masterful women, indistinguishable psychologically from the male. Augustus caused public honors to be accorded to his wife and to his sister. Tacitus was struck by the significant novelty of a woman enthroned, when Agrippina was seated near Claudius to review a Roman army. With the Antonines, titles for women began to develop: 'mother of the legions,' 'mother of the senate and the people.' It was debated in the senate whether magistrates sent to govern the provinces should be permitted to take their wives with them, and in the course of the discussion conservative opinion declared that the official ladies were altogether too active in political matters. . . . Social changes in Rome had brought . . . [the lady] from the privacy of her own house into the world of society. She found herself at the head of a great establishment, with town-house and country-house, with a round of magnificent entertainments to offer and to receive, and with more money to spend than Europe had ever seen collected before, or would see again for many centuries. Supposing her to be singly devoted to her husband, she found that she could be of immense assistance to his career. Aften, too, she found that she must compete with other women for his admiration. An attractive *demi-monde*, chiefly Greek, had become an institution in Rome. It behooved a wife to be as charming and intelligent as the ladies without the pale. The art of fascination once learned, it was difficult not to keep it in practice at the expense of the first comer. And when a woman had discovered that she counted for something in her husband's career, she not unnaturally aspired to a career of her own. Seneca expressed succinctly the dilemma in which the Roman found himself: it is hard, said he, to keep a wife whom every one admires; and if no one admires her it is hard to have to live with her yourself. We have a great deal of detailed information about the ladies of Rome. Many are known to us by name, and we are aware of the impression they made on their contemporaries. We should not be helped in differentiating them from other ladies by opening a ledger and setting down the good against the bad, Calpurnia against Faustina, and Alcmena against Trimalchio's wife. The trait that is interesting for our purpose is present in good and bad alike. The Roman lady was a person; indeed, she was often what we call a 'character.' She is distinguished from the Athenian lady as a statue in the round is distinguished from a relief. Once for all, she was detached from the background of family life and, not supported throughout her height by the fabric of society, must see to it that her personal centre of gravity should not lie without her base. She committed her own sins and bore her own punishment. Her virtues were her own, and did not often take the direction of self-effacement. The strong men among whom she lived, who broke everything else, could not break her."—E. J. Putnam, *Roman lady* (*Century Magazine*, June, 1910, pp. 791-794).

A. D. 300-1400.—Medieval Christianity.—Effect of canon law in improving woman's position.—Opening of independent career to women in monastic life.—Secular liberties.—Rise of chivalry.—In the Middle Ages, under which for our

purpose we include early Christian times, an important factor affecting the position of women is the relation in which they stood to the Church. Many influences were at work here. On the side of women was the old, ineradicable belief of the human heart that woman stands very near to the Divine. . . . The worship of motherhood . . . persisted down to Christian times, and its undying spirit was, like other elements of far less value in Paganism, recognized and transcended by the Church—a fact which was naturally most helpful to women in every department of life. Above all, the true inner spirit of Christianity accorded dignity to women, vouching for the truth that both men and women are primarily spiritual beings, and that sex relations are secondary and evanescent. . . . On the other side was the weight of custom in the patriarchal world, causing practical difficulties of all sorts, for how were national customs to be suddenly set aside—the veil, as a needful distinction worn by all women of good repute, the strict seclusion to which they were accustomed—such difficulties in fact as are discussed by St. Paul in his First Letter to the Church at Corinth? Moreover, the Jewish elements in Christian tradition regarded women as inferior beings, and, lastly, the asceticism of the age, which despised marriage, and, in defiance of common sense, laid to the score of woman alone all the degradation and vice of Pagan society, branded her, in Tertullian's shameful words, as the 'Devil's gateway'—J. A. Thomson, *Position of woman*, pp. 41-42.—"The most important effect of the canon law was on marriage, which was now a sacrament and had its sanction not in the laws of men, but in the express decrees of God. Hence even engagements acquired a sacred character unknown to the Roman law; and when a betrothal had once been entered into, it could be broken only in case one or both of the contracting parties desired to enter a monastery. Free consent of both man and woman was necessary for matrimony. There must also be a dowry and a public ceremony. . . . Clandestine marriages were forbidden, but the Church always presumed everything it could in favour of marriage and its indissolubility. . . . Not until the great Council of Trent in 1563 was this changed. At that time all marriages were declared invalid unless they had been contracted in the presence of a priest and two or three witnesses. The Church is seen in its fairest light in its provisions to protect the wife from sexual brutality on the part of her husband. . . . Various other laws show the same regard for the interests of women. A man who was entering priestly office could not cast off his wife and leave her destitute, but must provide living and raiment for her. Neither husband nor wife could embrace the celibate life nor devote themselves to continence without the consent of the other. A man who cohabited with a woman as his concubine, even though she was of servile condition or questionable character, could not dismiss her and marry another saving for adultery. Slaves were now allowed to contract marriages and masters were not permitted to dissolve them. . . . By doctrine of 'diriment impediments' the Pope or a duly constituted representative of his can declare that a marriage has been null and void from the very beginning because of some impediment defined in the canon law. Canon IV of the twenty-fourth session of the Council of Trent anathematizes any one who shall say that the Church cannot constitute impediments dissolving marriage, or that she has erred in constituting them. The

impediments which can annul marriage and leave the parties free to marry again are chiefly affinity and consanguinity. Affinity 'is a relationship arising from the carnal intercourse of a man and a woman, sufficient for the generation of children, whereby the man becomes related to the woman's blood relatives and the woman to the man's.' Consanguinity is 'blood relationship or the natural bond between persons descended from the same stock' and is a 'diriment impediment' to the fourth degree. The minute and far-fetched subtleties which the Church has employed in the interpretation of these relationships make escape from the marital tie feasible for the man who is eager to disencumber himself of his life's partner. The Church furthermore grants a decree of nullity for 'spiritual kinship' which exists, for example, when a man marries a woman whose father stood as his godfather at baptism. Moreover, the Church regards as dissoluble the marriage of all unbaptised persons; it is divided on the question of the validity of baptisms not administered by itself. A Catholic husband, whose wife has not been baptised or has been baptised by a non-Roman, can have his marriage declared null and void and may marry again. . . . Questions such as those of inheritance belong properly to civil law; but the canon law 'claimed to be heard in any case into which any spiritual interest could be foisted. Thus in the year 1199 Innocent III enacted that children of heretics be deprived of all their offending parents' goods 'since in many cases even according to divine decree children are punished in this world on account of their parents.'—E. A. Hecker, *Short history of woman's rights*, pp. 108-114, 116.—'The Church, while excluding women from priestly or pastoral office, gave them, short of this, 'a greater career than any other ever thrown open to women in the course of modern European history.' The convent from about the seventh to the fourteenth century was not what it later became, purely a place of devotion and seclusion; on the contrary, in it the woman of spirit and capacity might find a high and satisfying career, while the ordinary woman found assurance from want and safety from violence. True, the price paid was the renunciation of family ties, but in return the religious house provided congenial companionship and outlets in abundance for individual taste and energy. Nuns wrote books, like the *Garden of Delights* of the Abbess Herrad, or the Latin Comedies of the nun Hrosvith; wonderful tapestries, fine embroideries, exquisitely illuminated MSS bore witness to their artistic skill; the education of the gently-born girls of the time was carried on in convents; and, besides, the woman of practical ability would have the housekeeping of the great establishment to superintend, its often large estates to manage. Nor was even sport denied—the recognized medieval authority on hawking was a nun—Dame Juliana Berners. And over the whole community the Abbess ruled—a lady frequently of royal birth, who ranked with princes and nobles. Even mixed religious houses were ruled by Abbesses. Such were Whitby in Yorkshire, where in Saxon times under St. Hilda several bishops were trained, Fontevrault in France, the chosen burial place of Norman kings, and Wadstena in Sweden. The medieval convent was, in fact, a blend of three things—a feudal castle, a college, and an industrial establishment—and its head might be a powerful noble in close touch with the politics and national business of her time. Thus in England Abbesses who held the convent lands of the kings,

might be summoned, in common with Peeresses in their own right, to attend Parliament, but were allowed, what was then esteemed a privilege, to send proxies in their stead. In Spain the Abbess of Las Huelgas ruled both in secular and ecclesiastical affairs over sixty towns and villages, the military force which she could bring into the field was second only to that of the King, and when she travelled 'her journey was little less than a royal progress.' In Germany two Abbesses at least, those of Quedlinburg and Gandersheim, were sovereign Princes of the Holy Roman Empire, minted their own coinage, and were represented on the Imperial Diet. Twice during the reign of the Emperor Otto III, once in his minority and again during his long absence in Italy, his aunt, Matilda, Abbess of Quedlinburg, governed the empire, once at least, in 999, convening the Diet. However true it may be that about the fourteenth century convents ceased to be in line with the advanced thought of the time, their intellectual standard woefully declined, moral laxity crept in, and they often became mere convenient places for disposing of superfluous women; still, it must be admitted that with their abolition in Protestant countries all the benefits they had conferred upon unmarried women and widows, and all the opportunities they had afforded of a dignified and useful life, disappeared also. . . . On the secular side of life in the Middle Ages we find that the woman of high birth—privileged in every age—had almost unlimited opportunities. Thus, in the fifth century two great Empresses ruled the civilized world. Pulcheria, the daughter of the Emperor Theodosius, from her sixteenth year governed in fact, though not in name, the Eastern Empire. . . . Of the second, Galla Placidia, who ruled the Western Empire for twenty-five years, Hodgkin writes, 'She was the man of her family, she had the energy and the wisdom of her father' (Valentinian I). . . . But not only women of noble birth, women generally in the Middle Ages enjoyed more equality of opportunity with men than they have ever done since. The ideals of life were shared by men and women, not sharply sundered. Thus in [England] . . . women could be burgesses of towns, trading freely and fulfilling all the duties and enjoying the privileges, so valuable in those days, of that position. They could be members of those trading and semi-religious Guilds and Companies which played so important a part in the social and commercial life of the times, wearing the livery, taking apprentices, and sitting at the election feasts. Thus the greater Companies of the Drapers, Clothworkers, Brewers, Grocers, Armourers, Barber-Surgeons and others counted their Sisters as in all respects equal to their Brothers. On the whole, the women were better educated than the men, except churchmen. . . . In England, in Saxon times, rough as society was, and though it was held to be a salutary discipline to administer three blows with a broomstick to wives (this discipline would go a considerable way, surely, to account for the attraction of convent life), yet these very wives shared in public affairs with more freedom than women do now, or did until very lately. Public matters were not, as later, accounted exclusively men's business. Women could inherit and possess property freely, and could be present at the local Moot or meeting of the wise men, and even at the national Witenagemot. With Norman rule the rights of women in England were gradually curtailed, but even the Feudal System, hard as it was in some respects on women, especially on heiresses,

yet conferred upon them the compensating advantage of fully recognizing their right to hold property, and even to fill high office in the State, when such office fell to them in default of male heirs. That husbands and sons might fill such offices by proxy for wives and mothers no doubt generally reduced the latter to the position of mere transmitters of honour, but in some cases the offices were filled by the heiresses themselves. . . . One other point cannot be passed over—the rise of Chivalry about the eleventh century, in the comparatively peaceful and wealthy regions of Southern France, for the change wrought by Chivalry in manners and social relations was far reaching and partly, though not entirely, beneficial. . . . No ideal could be finer, but, while fully admitting its excellence, we cannot but ask what Chivalry practically did for women? It ignored the peasant, and it failed to deliver the rich woman from the tyranny of the feudal system, which identified her with her property. The reverent service of his lady dictated to the knight by Chivalry, was, no doubt, of infinite value for the refining and softening of manners. But the show of virtue was hollow. In the Provençal Courts of Love, presided over by the fine ladies of the eleventh and twelfth centuries, it was decided that love between husband and wife was impossible, and yet love was declared to be the inspiring source of every worthy action. The whole scheme of society was artificial and absurd, and the false morality which naturally followed, and which pervades medieval romances (we probably know it from Tennyson's *Idylls of the King*), poisoned social life."—J. A. Thomson, *Position of Woman*, pp. 43-52.—See also MONASTICISM: Women and monasticism; ABBOT: Hilda; Hildegarde.

1100-1400.—Lady of the castle.—Feudal property rights of the lady.—Superiority of her education to that of her husband.—Occupations.—Physical freedom and courage.—Development of courtly love.—"Doubtless it would be absurd to represent the social status of the lady as the direct outcome of the architecture of her home, since both were in fact the outcome and expression of the life of the man of her class and time. But it is certain that the castle was the primary condition of that life, and that, where its interests clashed with those of the lady, hers had to give way. In her everyday life she perhaps gained as much from its limitations as she lost. . . . Her place was in the hall, and in the hall the life of the house was transacted. Whatever interested her husband was discussed in her presence. . . . If she lost in refinement she gained in education. The life of her time was an open book before her; she was free to form her opinion of men and things and to make her personality count for what it was worth. But the really sinister effect upon the lady of the castle and its lands was one that resulted from their meaning rather than from their physical characteristics. They were held by the knight from his overlord on condition of the payment of rental in the form of military service. Every acre of ground was valued in terms of fighting-men, and only the knight in person could be sure of rallying the quota and producing them when required. If the knight died, in harness or in his bed, and left a widow with young children or a daughter as his sole heir, there was a good chance that the rent would not be paid. The overlord had the right, in view of his interests in the matter, to see that a fief should not be without a master; in other words, to marry as soon as might be the widow or the daughter of the

deceased to some stout knight who was willing to take the woman for the sake of the fief. . . . In fact, it could be said of the lady as truly as of the serf that she 'went with the land.' She knew this full well herself. . . . Farseeing men betrothed or even married their children in infancy. Hardy younger sons might win castle and lands by recommending themselves through feats of arms to fathers of daughters. . . . As a sort of indemnification for the iron hand laid upon her destiny by the system of land-tenure in the Middle Age, the lady achieved a new measure of personal liberty. She might within reason philander where she would, provided she married where she was bid. The lady's education was probably, on the academic side at least, considerably better than her husband's. Very likely she could more often read and write than he. . . . Not only in literary but in practical matters the daughter of the castle would receive much the same education as Helen of Troy. She would be a famous spinster and needlewoman, able to make a shirt or an altar-cloth. . . . All household work was familiar to her. Life was full of emergencies, and she was ready for them. Often she was a skilful leech, unafraid of blood, trained to succour the men on whose lives her life depended. . . . In religion she learned the Pater Noster, the Ave and the Credo. She could read her book of hours and follow the mass. The cult of the Virgin had virtually restored the feminine divinity of primitive religion. . . . It is the *métier* of the romance to deal with action, and from it we receive inevitably the impression of a stirring, animated life. Where the house of the great lord is concerned this impression may be measurably true. . . . But in the castle of the simple knight, life, as far as we are able to reconstitute it, must have passed with a monotony before which the modern mind quails. When Gautier, an enthusiast for the Middle Age, enumerates the winter occupations of the castellan, he is obliged to include sitting at the window and watching the snow fall. The lady of the castle was vigorous, and loved to be out of doors. . . . High physical courage was esteemed a virtue in her as in her lord, for it is only in secure and peaceful societies that the timid lady survives to transmit her qualities. . . . The hardihood which served her well in crises was an invaluable element of daily life for herself and for her offspring, as it led her to healthy and vigorous out-of-door pastimes. But after the fullest allowance has been made for these pursuits, many empty hours remain unaccounted for. Life for the lady in the small castle must have had some similarity to life for women on the remote ranch to-day, if we eliminate the postal service and the library, and if we imagine that the ranchman is away from home as often as he can manage it, rounding up wild cattle, fighting Indians, trailing horse-thieves, or otherwise pleasurably endangering his life. . . . The aspect of life that comes to the modern woman under the guise of literature had a different expression, though largely literary too, in the existence of the lonely *châtelaine*. In her case it came to be a reflection of the social development for which the age is noted, a specific and original contribution to the history of the lady—I mean, of course, the theory and practice of courteous love. In looking closely at this institution it must be borne in mind that in the age of chivalry the wedded relation was not a romantic one. The husband was allowed by law to beat his wife for certain offences, and it is likely that he did not always wait to consult the code. The law, it is

true, specified that he was to beat her 'reasonably,' and insisted that he must stop short of maiming her; he must not, for instance, destroy an eye or break a bone. Her marriage had been contracted without any necessary reference to inclination, and her relations with her husband were simply such as she was personally able to make them. With him her sole source of strength was her power to please, and that was naturally, as always, largely a matter of accident. He was under no manner of compulsion to try to please her. The fact, however, that she was his wife gave her importance with the rest of the world in proportion to his own, and from the standing-ground of this external importance she applied her lever to society. In her lord's absence she commanded the castle; in his presence she shared the respect paid him by his subordinates. And the whole ordinary population of the castle consisted of subordinates. Not only his servants and men-at-arms, but the knights who held of him in fee and the squires who waited on him for military education observed towards him the etiquette of inferior to superior. This etiquette was strictly personal to him, and his wife had logically no right to share in it; but it was inevitably reflected on her by the sentiment that to-day makes the enlisted man in a lonely army post feel that the colonel's wife very nearly holds a commission herself. Like the colonel's wife, the knight's lady was the social head of the garrison; but she had the advantage of being free from competition with the wives of subalterns. If the visiting knight or squire had a wife, she stayed at home. The lady of the castle was virtually the only woman in a society consisting of men generally younger than herself who were socially her husband's inferiors, and who therefore paid court to her. If she had any personal force or charm these circumstances were highly favourable to its exertion. With her husband's importance her sphere of influence would vary from a single squire to a whole train of knights-vassal, but her position would tend to stereotype itself; so that the success of a great baron's wife in modifying the manners and the ideas of her husband's court would work to the advantage of the lonely châtelaine in the simple donjon. From the great centres would spread a theory of the lady's position and of the duty to her of every gentleman not her husband. Such a theory was developed and perfected in the twelfth and thirteenth centuries, and came by degrees to colour the whole of literature. The brutality of the old romances faded out, and an extraordinary code of manners came into fashion, based on a new theory of feminism and largely due to the initiative of influential women themselves. How far this theory actually modified life we are not in a position to say. It is certain, however, that every lady who listened to troubadour or jongleur, or who read for herself the new love-songs and romances, was furnished with the material for constructing a fresh estimate of her own importance. . . . As in the case of the lady abbess, feudalism played into the hands of the very persons to whose interests it was apparently inimical. A form of society devised and carried on by men became suddenly a source of strength to women. And the most surprising thing of all is that the women in whose hands power was thus placed proved to be able to use it. Instead of showing the atrophied remnant of a suppressed class, ready to govern in name but in reality to be governed by the nearest man, and to carry on a society and a culture imitative of that erected

by men everywhere about them, they proved to be themselves personages capable of forming reasoned designs and making them prevail, and they effected changes in society and culture that have become a permanent part of the life of Europe. . . . By chivalry we mean to-day not the strong, hard framework of military society which prevailed for centuries in Europe, unregardful of women if not cruel to them, but we mean the brief and local phase, confined chiefly to the great courts, which, by passing into literature, has forever clothed the knight with virtues and sentiments not (if all had their rights) his own. The constraint that was put upon the man who looked for preferment in a lady's service to be clean and civil, pleasant to look at and pleasant to hear, and an ardent advocate of the intellectual and moral supremacy of women, was but a small and ephemeral result of her power. The real result was attained when the men of genius had constructed and won acceptance everywhere for a whole theory of life based on the superiority of the lady. . . . The lady's power to excite love was to her what the lord's prowess in battle was to him. The new theory of life was therefore based upon a new theory of love, and into this new theory were worked up a number of old elements that would have seemed singly rather unpromising material. One of the fundamental principles of the doctrine of courteous love was its incompatibility with marriage. It is true that no age of men had imagined that love and marriage were ever, except by accident, coincident. Since marriage is primarily founded on economic considerations, the continued effort of mankind to make its sentimental aspect prevail involves a paradox. The Athenians . . . looked not to their wives for love's delight. The Romans were not authorities on love, but what they knew by that name was not a domestic sentiment. Early Christianity also considered marriage as a duty rather than a pleasure. But these different societies had felt the irksomeness of the bond from the man's point of view; it was in conflict with one of the characteristics that had been most serviceable in helping him along in the world—his unquenchable desire of novelty. Courtesy, on the other hand, objected to marriage from the point of view of the wife. Courtesy maintained that a lady's love should be free. The mere fact that in marriage she was bound by law to yield her favours destroyed their value and her dignity. Even if she married her lover, she thereby extinguished love. *Amour de grace* and *amour de dette* were discriminated by the doctors, who held the first only to be worthy of the name of love. No true lover would accept love save as a gift of free will. The lady might withhold her favour with reason or without; treason to love consisted in bestowing it for any reason save love alone. But it was not as a pretext for frequent change that the lady exalted love at the expense of marriage. On the contrary, it behooved her to choose her lover with far greater care than her husband (says Sordello in his *Ensenhamen d'Onor*), because love is *plus fort establit*. Husband and wife may be parted by divers accidents, *mas no es res que puese' amors, ses mort, partir*. . . . The lady dreamed of no reconstruction of society; marriage was her portion, and she accepted it. Love did not interfere with it—did not, in fact, lie in the same plane. Her criticism of marriage was suggested and enforced by a number of circumstances besides her own personal revolt from it. The poets who embodied her ideas were generally of a class below

her own, and under chivalry there was no marriage possible between classes. The singer who offered homage to his lady must find some footing on which he could address her without too servile an acknowledgment of inferiority. Nothing could have served his purpose so well as the theory that love is the great leveller, but that every lover is his lady's servant. Besides the barriers to marriage erected by feudal society, the Cluniac reform was insisting on the celibacy of the clergy, but many a troubadour was either monk or priest. For him also it was valuable that love should keep clear of marriage."—E. J. Putnam, *The lady*, pp. 115, 117, 119-120, 122, 124-127, 130, 133-136.

1334-1574.—Status of women raised under Hojo rule in Japan. See JAPAN: 1334-1574.

1400-1600.—Pre-eminence of women in Italian Renaissance.—Freedom of education.—Anti-feminist movement in the north.—"It was during the Renaissance that the remarkable flowering of the intellect of the Italian woman was seen at its best. While the women in the other parts of Europe, especially in England and Germany, were suffering the ill effects consequent on the suppression of the convents, which, for centuries, had been almost the only schools available for girls, the women of Italy were taking an active part in the great educational movement inaugurated by the revival of learning, and winning the highest honors for their sex in every department of science, art and literature. Not since the days of Sappho and Aspasia had woman attained such prominence, and never were they, irrespective of class-condition, accorded greater liberty, privileges or honor. The universities, which had been opened to them at the close of the Middle Ages, gladly conferred upon them the doctorate, and eagerly welcomed them to the chairs of some of their most important faculties. The Renaissance was, indeed, the heyday of the intellectual woman throughout the whole of the Italian peninsula—a time when woman enjoyed the same scholastic freedom as men, and when Mme. de Staël's dictum, *Le Génie n'a pas de sexe*, expressed a doctrine admitted in practice and not an academic theory. It would require a large volume, or rather many volumes, to do justice to the learned women of Italy who conferred such honor upon their sex during the period we are considering. . . . But the educational advantages enjoyed by the women of the Renaissance were not for the bourgeoisie—not for the daughters of peasants, tradesmen and artisans. They were solely . . . for the benefit of the children of princes or of scholars—of those only who could claim either nobility of birth or nobility of genius. Even the most zealous of the humanists would have been surprised if they had been asked to diffuse a portion of their light among the women of the masses. For education, as they viewed it, was something solely for the elect—for ladies of the court and not for women of a lower condition. So far as the rest of womankind was concerned, their occupation was limited, according to a Breton saying, to looking after altar, hearth, and children—'*La femme se doit garder l'autel, le feu, les enfants.*' It was about this time, too, that men began, especially in France and Germany, to revive the anti-feminist crusade which had so retarded the literary movement among the women of ancient Greece and Rome. They refused to hear women and intellect spoken of together. The Germans recognized no intelligence in them apart from domestic duties. . . . 'What the Italians called intelligence a German would call tittle-tattle, trickery,

the spirit of opposition.' . . . In the estimation of Luther, the intellectual aspirations of women were not only an absurdity, but were also a positive peril. . . . Montaigne gave expression to the age-old prejudice against woman by refusing to regard her as anything but a pretty animal, while Rabelais, the coryphæus of the French Renaissance, declared that 'Nature in creating woman lost the good sense which she had displayed in the creation of all other things.' . . . The masses of women, especially after the suppression of the convent schools in England and Germany, were, in many parts of Europe, and notably in the two countries mentioned, in a worse condition than they were during the Dark Ages."—H. J. Mozans, *Women in science*, pp. 57-58, 73-75.

16th century.—Views of Erasmus and Luther in regarding education of women. See EDUCATION: Modern: 16th century: Erasmus, etc.; Luther, etc.; Schools in Germany.

1500-1600.—Women of the English Renaissance.—Spanish influence on English court ladies.—Enthusiasm for education of women.—Advanced feminism of the period.—Change of attitude after Elizabeth's time.—"The learned lady as a recognized factor in social life had no real place in England till the time of Henry VIII. Renaissance ideas concerning the education of women came into England from Spain through Catherine, the first wife of Henry VIII. She was in England from 1501 to 1531. Under the influence of her mother, Queen Isabella, she had been given remarkable educational advantages. Queen Isabella was interested in all that pertained to learning. . . . Learning for women was encouraged at her court. The queen had herself a lady teacher Beatrix Galindo, who was professor of rhetoric at the University of Salamanca, and who was called, for her knowledge of the Latin language, *La Latina*. Other learned ladies of Spain were doubtless known at the court, as Francisca de Lebrixa who often took the place of her father, professor of history in the University of Alcalá; or Doña Maria Pacheco de Mendoza and her sister, who are mentioned by Mr. Foster as the parallels of Sir Thomas More's daughters in England. In this eager, ambitious, intellectual atmosphere the daughters of Isabella were brought up. She gave them personal instruction, and secured for them foreign teachers of eminence. Erasmus said that Catherine had been happily reared on letters from her infancy, that she loved literature, and that she was *egregie docta*. In the English court Queen Catherine's influence was all on the side of learning. Mr. Watson says that all the treatises on the education of women that appeared in England between 1523 and 1538 were under the spell of Catherine. In the education of her own daughter, the Princess Mary, she kept to the traditions of the Spanish court and secured the most learned tutors for the young girl. . . . These treatises by Vives and Hyrde have much in common and they express the most advanced contemporary ideas on woman's education. That the place of woman is in the home is emphatically stated. Housewifery is imperative. . . . The lady should also be mistress of a closet of medicaments which she must be able to administer with skill. Occupations that involve any sort of publicity are counted inappropriate for women, hence Vives gives 'no license to a woman to be a teacher.' The essential feminine virtues are piety and modesty. Obedience to parents and to husbands is enjoined. This obedience, if born of inner concord, might be a voluntary and ideal thing. . . . In all these points Vives

and Hyrde were quite in accord with their age. The new element in their creed was that learning could make women more attractive, companionable, and efficient in these home relationships. . . . The example set at court was followed in many noble families. There is in the realm of education no single picture more entertaining and attractive than that of Sir Thomas More and his daughters. . . . Sir Thomas could not see why learning was not as suitable for girls as for boys. . . . In describing the ideal wife he said: 'May she be learned, if possible, or at least capable of being made so,' and he gave the same training to [his daughter] Margaret and her sisters as to his son John. The fame of these daughters went far. . . . In addition to the many instances of girls trained in the best learning of their times during the first half of the sixteenth century, we have striking contemporary testimony as to the prevalence of the custom, and the high esteem in which such learning was held. Richard Mulcaster (1530-1611), first head-master of a school founded by the Merchant Taylors' Company in 1561, in discussing principles of education, expressed advanced ideas concerning the ability and training of girls. . . . Mulcaster was himself in favor of sending girls to the public grammar schools, and even to the universities, but he said it was 'a thing not used' in his country, there was no 'president' thereof. But he is enthusiastic about the attainments of women. . . . It is but natural that the praise of learning for women should extend through the reign of Elizabeth. The Queen herself was an admirable linguist. She spoke and wrote Latin with ease; she was a student of Plato, Aristotle, and Xenophon; and she made translations into English from French and Italian, even translating from Latin into Greek. According to Ascham she read more Greek every day than some Prebendaries read Latin in a week, and bestowed more regular hours on learning than six of the best given gentlemen in the court. . . . With the death of Elizabeth we come practically to the end of the favor accorded learned women. The changed tone of public opinion may be fairly indicated by a few scattered utterances from contemporary poems and essays. Sir Thomas Overbury, in his *Characters* (1614), describes 'A Good Woman' as one 'whose husband's welfare is the business of her actions.' Her chief virtue is that 'Shee is Hee.' In *A Wife* he says that 'Books are a part of Man's Prerogative.' He praises a 'passive understanding' in women and deprecates learning. . . . Sir Ralph Verney said of his own daughter: 'Pegg is very backward. . . . I doubt not but she will be scholar enough for a Woeman.' With regard to Little Nancy Denton he wrote: 'Let not your girl learn Latin nor short hand: The difficulty of the first may keep her from that vice, for soe I must esteem it in a woeman; but the easinesse of the other may be a prejudice to her; for the pride of taking sermon noates hath made multitudes of women unfortunate.' . . . Mr. Baldwyn, it is true, in 1619, in his *New Help to Discourse*, praises England as the place where women had the greatest prerogatives. . . . But this favorable opinion must be discounted as being a retrospective estimate based mainly on the attitude towards women in the sixteenth century; and further, as being an Englishman's attempt to exalt English as against continental customs."—M. Reynolds, *Learned lady in England*, pp. 5-9, 16-17, 19, 23-26.

17th-18th centuries.—Neglect of woman's education in England and France. See EDUCATION:

Modern: 17th century: England; France: Standard, etc.; 18th century: England.

1644-1852.—Women's status in America.—Work in the home.—Gainful occupations open to women.—Colonial legislation.—Early steps toward higher education.—"Our primary interests during this early [Colonial] period were agriculture and commerce, and there was very little field for the industrial employment either of men or women. Such manufactures as were carried on in these early centuries were chiefly household industries and the work was necessarily done in the main by women. Indeed, it would not be far wrong to say that, during the colonial period, agriculture was in the hands of men, and manufacturing, for the most part, in the hands of women. Men were, to be sure, sometimes weavers, shoemakers, or tailors; and here and there women of notable executive ability, such as the famous Eliza Lucas of South Carolina, managed farms and plantations. . . . Women . . . were, for the most part engaged in the domestic cares of the household, which included at that time the manufacture within the home of a large proportion of the articles needed for household use. And besides the occupations of a domestic kind, there were, in the seventeenth and eighteenth centuries, various other employments open to them. . . . One of the oldest of these was the keeping of taverns and 'ordinaries.' . . . Shopkeeping was another of the early gainful employments for women in this country. . . . Other kinds of business attracted women in this same period. The raising of garden seeds and similar products seems to have been a common occupation. Women were sometimes shrewd traders and, often, particularly in the seaboard towns, venturesome enough to be speculators. . . . Among the other gainful employments for women in this period which were not industrial might be mentioned keeping a 'dame's school' which, though a very unremunerative occupation, was often resorted to. There were, too, many notable nurses and mid-wives; in Bristol a woman was ringer of the bell and kept a meeting-house, and in New Haven a woman was appointed to 'sweepe and dresse the meeting house every weeke and have 1s. a weeke for her pains.' . . . There remain, however, a number of instances, in which women were employed in and were even at the head of what might, strictly speaking, be called industrial establishments. A woman, for example, occasionally ran a mill, carried on a distillery, or even worked in a sawmill. The 'Plymouth Colony Records' note in 1644 that 'Mistress Jenny, upon the presentment against her, promiseth to amend the grinding at the mill, and to keep morters cleane, and baggs of corne from spoyleing and loosing.' At Mason's settlement of Piscataqua, 'eight Danes and twenty two women' were employed in sawing lumber and making potash. In 1693 a woman appears with two men on the pages of the 'Boston Town Records' 'desiring leave to build a slaughter house.' But all of these seem to have been unusual employments. . . . Perhaps the best expression of the prevailing attitude toward the employment of women at that time is to be found in one of the Province Laws of Massachusetts Bay for the session of 1692-93. The law ordered that every single person under twenty-one must live 'under some orderly family government,' but added the proviso that 'this act shall not be construed to extend to hinder any single woman of good repute from the exercise of any lawful trade or employment for a livelihood, whereunto she shall have the allowance and approbation of

the selectmen . . . any law, usage or custom to the contrary notwithstanding.' It is not, therefore, surprising to find that, in 1695, an act was passed which required single women who were self-supporting to pay a poll-tax as well as men. That this attitude was preserved during the eighteenth century, the establishment of the spinning schools bears witness. There was, however, the further point that providing employment for poor women and children lessened the poor rates, and the first factories were welcomed because they offered a means of support to the women and children who might otherwise be 'useless, if not burdensome, to society.' The colonial attitude toward women's work was in brief one of rigid insistence on their employment. Court orders, laws, and public subscriptions were resorted to in order that poor women might be saved from the sin of idleness and taught to be self-supporting."—E. Abbott, *Women in industry*, pp. 11, 13-17, 33-34.—"In America, freedom for women to study has moved more rapidly than in Europe. Even in the colonial period, there were emancipated women, . . . and in the last half of the eighteenth century several schools were opened for girls, which were more than polite finishing schools. Notable among these institutions were the seminary at Bethlehem, Pa., opened in 1753 by the Moravians, and the school established by the Society of Friends, in Providence, R. I., in 1784. But nearly all girls' schools before 1800 were limited to terms of a few months, where girls attended to learn needle-work, music and dancing, and to cultivate their morals and manners. At the close of the Revolutionary War, the leaders of public opinion universally recognized that their new experiment in government would succeed only if the voters were intelligent. This statement of belief became the major premise on which all arguments for free and compulsory education were based. . . . But the women had not full citizenship and hence the argument for general education did not apply to them. . . . But even without this change . . . economic conditions steadily forced the women into educational activity. There were not enough men available to teach the scattered country schools, and citizens had to be trained for the needs of the new democracy. . . . American women were fortunate, too, in having for their leaders such women as Emma Willard, Mary Lyon and Catherine Beecher. Emma Willard was a woman of the world; she had traveled abroad and she brought to her work a cultivated nature, wide experience of life and a natural leadership. Her personality went far toward lifting the movement to a plane of respect. After trying a little academy in Vermont, she appealed to the State of New York in 1814 for help. . . . The State . . . granted her articles of incorporation for her academy at Waterford, N. Y., but refused her the modest sum of five thousand dollars for which she had asked. In 1821, she established the Troy Female Seminary, where for years she trained and led the intellectual life of American women. Miss Mary Lyon begged the money from the common people with which she opened Mount Holyoke Seminary in 1837. . . . Notwithstanding the conserving influence of housework and religion, there went steadily out from Mount Holyoke during the following years a strong line of teachers demanding ever larger opportunity for themselves and for those they taught. Miss Catherine Beecher added to her work in schools for girls a general propaganda for woman's education, and she devised large plans for its development. In

1852, she organized the American Woman's Educational Association 'to aid in securing to American women a liberal education, honorable position, and remunerative employment.' She helped to start girls' schools in half a dozen cities, and by writing and talking she sowed in the hearts of women, especially in the Middle West, a discontent with existing conditions and a deep desire to know. . . . Boston opened a high school for girls in 1825. New York opened a high school for girls three years later. It was in the West, however, that this movement took strongest root and made most steady advance."—E. Barnes, *Woman in modern society*, pp. 61-63, 65-68.—See also EDUCATION: Modern: 19th century: United States: Secondary education.

1650-1775.—Women in England.—Effects of Civil War and Restoration.—Writers and scholars.—Spread of ideal of intellectual freedom for women.—First realization of possible economic independence through education.—"The first half of the sixteenth century and the first half of the seventeenth seem even more than a hundred years apart in tone and temper. We turn from the eager intellectual life of many women in the Tudor period, from their full and rich opportunities, and we find that in the time of the earlier Stuarts there were very few women who took any pride in learning, that there was little or no provision at home or in schools for any but the most desultory sort of education for girls, and that there were practically no formulated ideals or theories of intellectual advancement for women. But at the close of this barren half-century we come upon what may be considered the real beginnings of the modern work of women. . . . The reigns of Henry VIII and Elizabeth have been called the golden age for learned women, and even a cursory glance over these years serves to justify that reputation. . . . But this golden age remains as hardly more than a brilliant picture; it has practically no important place in the progress of the education of women. The advantages given to women were nullified, so far as initiating more widespread activities is concerned, by two inherent defects. The learning of women had no legitimate purpose or outcome beyond the home. . . . Learning was a kind of high-class individual accomplishment purely for home consumption. A second defect was that learning belonged only to the daughters of the nobility or of the very rich. Even within these bounds it was sporadic, depending entirely on the opinion of the head of the family. A gradual decline of interest in scholarship as an appropriate pursuit for damsels of high lineage was apparent even in Elizabethan days, and the change from Tudor ideals became marked in the period from the death of Elizabeth to the Restoration. James looked upon women with contempt. Queen Anne's mother, Sophia of Mecklenburg, was a highly gifted woman who, after her retirement from public life, devoted her leisure to astronomy, chemistry, and other sciences. But Anne had none of her mother's intellectual interests. . . . She brought no literary ideals or ambitions to counteract the king's cold indifference to education in general. Under Charles I and Henrietta Maria there might readily have arisen in a new and lighter form some educational ideals or schemes favorable to women. . . . But the troubled times of the Civil War turned the minds of both men and women to sterner tasks. And it is perhaps not strange that this period proves the most barren one in English history so far as the education of girls is con-

cerned. At the Restoration we enter upon a new era of feminine activity. The beginnings of this era do not, however, coincide sharply with 1660, but belong at least a decade earlier. The chief women writing and studying between 1650 and 1675, the Duchess of Newcastle, Mrs. Philips, Mary North, Dorothy Osborne, Margaret Blagge, Lady Pakington, the Countess of Warwick, Mrs. Hutchinson, and Lady Fanshawe, brilliantly ushered in this new period. With the coming of peace and national security women were apparently conscious not only of a new freedom, but of a new power and a new demand for some form of personal expression. But it must be observed that along with this consciousness of national and political self-realization there was, under the Puritans, stern repression in matters of social and religious life. At the coming of Charles, however, all this was changed. With disastrous suddenness people found themselves free to follow with all gayety of spirit wherever their pleasure-loving instincts led. That such breaking of bonds resulted in an almost incredible outburst of immorality should not be allowed to obscure the fact that there was also a remarkable freeing of the mind from conventional standards. For good or for evil the individual found himself free to give energetic expression to his individual tendencies. By this freedom, by this license, women as well as men were profoundly moved. The new impulses thus brought into being did not, however, give rise to anything like orderly and progressive activity on the part of women. The century following 1660 is seen to be an inchoate assemblage of beginnings. . . . There is, indeed, after the middle of the eighteenth century, even an appearance of retrogression in the attention devoted to learned pursuits for women. It is not till the end of that century that the movement acquires new momentum. Until we come to Catharine Macaulay, the novelists in the last quarter of the century, and Mary Wollstonecraft at its end, we have little that is new in theory or striking in achievement. From 1760 to 1775 no new woman writer of distinction appears. On ideals of education and conduct, Dr. James Fordyce, Mrs. Barbauld, and Mrs. Chapone, the recognized arbiters, are tame compilers of bromidic maxims with little of the dignity and spirit of the best writers on feminism six or seven decades earlier. The actual accomplishment of the period before 1760 was a destruction of old placidities, a restlessness of discussion, rather than a movement reaching definite achievement. But this discussion and the many individual examples of literary or learned accomplishment on the part of women were together slowly having their collective effect. Finally salons came and gave social prestige to the women who could think and talk brilliantly, and gave a tremendous impetus, if not to actual learning, yet to the idea that a woman should have sense, intelligence, a wide knowledge of books, and an understanding of history and current affairs. From Catharine Macaulay to about the time of Tennyson's *Princess* is a period possessing considerable unity and one that would reward minute study. Such an investigation would bring us close to the establishment of great schools for the higher education of women and their consequent entrance upon a new era, an era that should look back with astonishment and respect to such ancestors as Anna van Schurman, Bathsua Makin, Dr. Hickes, and Mary Astell. One of the most promising characteristics of the work of women is the emergence of learning from

the aristocratic seclusion of the 'golden age.' In Tudor times it was in courtly circles only that learning was counted appropriate for women. Elizabeth Lucas stands as a solitary record of a lady from the wealthy middle class whose accomplishments were similar to those in the palaces of the great. But a significant change is to be noted in the century initiated about 1660. Duchesses and countesses are listed with wives and daughters of the clergy, of rich merchants, of needy tradesmen. From the Duchess of Newcastle to Mary Leapor, the gardener's daughter, the roll shows that aristocratic restrictions are no longer in full force in the realm of letters. In intimate connection with this change is the fact that authorship is no longer a private, home affair. . . . To be sure, women hesitated to publish. The Orindas and Astræas and Philomelas and Ardelias, whom Richardson derides as 'the lovely dastards' of the sex, show how women sought protecting pseudonyms. But publish they did. . . . Furthermore, women were thinking of authorship as a tool and as a weapon, not merely as a private resource. Mrs. Behn, the first English woman to write definitely for money, was but the precursor of various women in succeeding years who came to regard the products of their minds as of pecuniary significance. Especially is this true towards the end of the period. When we find Mrs. Haywood and Mrs. Manley writing fiction of a sort that will sell, Mrs. Blackwell doing superb botanical work in order to pay the fine imposed on her husband, or Mrs. Collyer writing that she may supplement a meager income and educate her children, we may not have come upon great art or literature, but we have come upon a new idea for women, the possible economic value of their work. It was not an idea that reached any but the most meager fruition, but at least the seed of a new thought was sown. A third change was a respect for literature as a weapon, sometimes of offense, but mainly of defense and propaganda. . . . Pamphlets poured forth. In fact, the fundamental difference between the golden age of the Tudors and the much less agreeable period for learned women after the Restoration was this matter of a public. . . . Of greater significance still is the large number of women who gave themselves to intellectual pursuits. From Mrs. Philips to Mrs. Collyer the roll is impressively long. . . . And all the way down the line there is the suggestion that many other women of like tastes and attainments have been lost in obscurity."—M. Reynolds, *Learned lady in England*, pp. 46, 42-43¹.

1673-1800.—First suggestions for women's colleges.—Limitations on feminine education.—Unchanged conceptions of woman's position and duties.—"There were, of course, hundreds of intelligent men to whom any change in the status of women seemed hostile to the best interests of society. And there were hundreds of women who flouted all thoughts of learning as essentially, eternally unfeminine. . . . But we come to quite a different state of affairs when we consider the opinions of the progressive minority. The proposed schemes for higher education, although without immediate practical result, are notable indications of a new era of thought. Bathsua Makin's was the first formulated plan. But her effort to graft new fruit on the old stock resulted in a singular mixture. Her impassioned desire to induct girls into the excellencies of higher learning was hampered in various ways. She could not lessen the attention paid to the accomplish-

ments; she could not venture to push the school age beyond sixteen; and she could not make her beloved linguistics compulsory. What she did accomplish was not in the establishment of an ordered system. It was rather the impress of her tastes and advanced ideas on the minds of individual pupils. . . . Mrs. Makin's court prestige, her reputation for prodigious scholastic attainments, her courage, originality, and independence, made her a dignified and an authoritative figure. . . . The education proposed by Dr. Hickes in his remarkable sermon in 1683, ten years after Mrs. Makin established her school, was not analyzed into details. But when he suggested for women seminaries of learning similar to Oxford and Cambridge with only such changes in the instruction and the regimen as might be found advisable to fit them for their lives as women, and when he urged rich and childless women to make their wealth serve humanity by founding such colleges for girls, he was too far ahead of his time to meet any immediate practical response, or even any opposition. The next plan came from Mary Astell. This was a matured scheme. Her college was to be a sort of conventual retreat without vows and with an emphasis on the intellectual as well as the religious life. Publicity, college honors, degrees, were not thought of. . . . Mary Astell seems to have looked about her and found many women to whom the customary régime offered no satisfactory place. There were widows who did not choose remarriage, spinsters unwelcome in the homes allotted them by kinship, girls with dowries too slender to make an advantageous marriage probable, young heiresses subject to the too adventurous pursuit of impecunious lovers and so in need of a haven pending marriage. All these uncoördinated needs were to be met by the new institution. The plan was to provide agreeable surroundings wherein women could tranquilly and without hostile criticism work out their own salvation. . . . The plan included too much, and the adjustments rendered necessary by its captivating flexibility would have taxed any organizer to the utmost. . . . Mary Astell's contribution was in the idea she set forth and in her eloquent defense of that idea. It is surprising that Defoe's plan for a woman's college should have been coincident with Mary Astell's, yet independent of it. . . . He evidently considers Mary Astell's plan as too loose in general structure and too religious in tone to be practicable. He narrows his work down to such studies as are given in public schools. After Defoe we hear of no further plans for higher education. But the idea lingered in the minds of many. Richardson in *Clarissa Harlowe* suggests such an institution, and Lady Mary Wortley Montagu says that it was her youthful ambition to be foundress of a college. In Mrs. Centlivre's *Basset Table* the learned young Valeria is advised to found a woman's college in which the pupils shall be called 'Valerians.' The most curious and interesting embodiment of the scheme was that by Thomas Amory. . . . [His] fictitious narrative is . . . of especial significance as showing the persistence of Mary Astell's abortive plan. In complete harmony with these various schemes for giving women greater intellectual freedom was the attitude in many private homes. It is quite surprising to discover how many studious girls had a favorable home environment. . . . In all the discussions of plans for the intellectual training of women two suggestive limitations are to be noted.

One is that nearly all men and women who favored the higher education did so because of the advantage it would be to the Church. The Quakers recognized the right of women to speak in public because they believed such action authorized by the Scriptures, but the freedom so granted did not go beyond religious topics. Susanna Wesley's ministry to her husband's parishioners was excusable only because her teaching was in the service of the Church. And the clergymen of high rank who favored learned women did so because the piety of these women would probably prove more advantageous if it were trained. Even Ballard put extra emphasis on the ladies who read the Scriptures in Hebrew and Greek. . . . The basis of Bishop Burnet's objection to Mary Astell's college was that a body of women thus set apart for learning might conceivably prove inimical to the Church. . . . It was the attitude towards the Church that turned the scale against or in favor of higher education. In point of fact, no woman—not even the most profligate—wrote against religion. On the contrary, all women of letters—even the most profligate—wrote in favor of religion. Genuinely, or as a matter of convention, they all upheld virtue and the authority of the Church. A second limitation is that the ultimate outcome of any greatly increased intellectual freedom for women was but dimly desied. . . . Further steps in independence would seem an inevitable sequence. But such steps were not only not taken, they were not even foreseen. . . . Home duties and relationships remained unchanged. Bathsua Makin said that higher education was not designed to make wives self-assertive, but more reasonably and intelligently submissive. Lady Mary Wortley Montagu and Mary Astell, the two most advanced and independent women of their day, are at one with the theory of the divinely ordained headship of man. Their bitterness of tone contains no thought of change, no hint of rebellion. Women were still under the dominion of fathers and husbands. The difference was that these fathers and husbands were in numerous instances willing to accord a very much enlarged freedom. But the next step was not taken by virtue of which the final right of decision as to her own thought and action would have belonged to the woman herself. There was, furthermore, no claim made by women for any part in public life. Mary Wollstonecraft's suffrage programme of 1791, mild as it was, would have seemed to Mary Astell an incredible overturning of feminine ideals. . . . The idea of woman as a self-sufficing, self-directing individuality, responsible for her own destiny, and capable of playing an important part in civic and national affairs, did not come into clear outline until two centuries after Mary Astell's pronouncement. . . . What was actually accomplished in the century before 1760 was a lavish sowing of seed, a steady infiltration of new ideas, a breaking up of old certainties as to woman's place in domestic and civic life, and an accumulation of examples proving women capable of the most varied intellectual aptitudes and energies."—M. Reynolds, *Learned lady in England*, pp. 447-450, 453-456.

1700-1787.—Social importance and freedom of the lady in France.—Lack of thorough education.—The salon.—Political influence.—"The difference between the status of the lady at Athens in the fifth century before Christ and her status in France in the eighteenth century of our era is so profound that other social changes seem comparatively negligible. . . . The lady alone of

All classes of society had succeeded in breaking her tabu and, while leaving her economic basis untouched, in altering her social relations in several fundamental directions. She retained what she had originally and added provinces on every side. At Athens she was allowed the dignities belonging to the head of the household on condition of entire fidelity to her husband. In France she even strengthened her position in the house while no longer fulfilling the condition. She had of old been a lady as distinguished from a courtesan; in the eighteenth century the distinction had disappeared except as between amateurs and professionals. Her private security had of old been connected,—indissolubly as men supposed—with her abstinence from public activity; in the later period she strengthened her hand at home by the importance she gained abroad. But since her economic position was unchanged, since men were still officially in control and what she enjoyed was won by favour, it was necessary that all the changes in her position should be wrought by the connivance of men. . . . She was therefore seated in the fork of a perpetual dilemma; to gain her ends, whether in politics or in millinery or in letters, she must cultivate her powers, but how far could she cultivate them without giving offence to men? No one but a Puritan will imagine that to be the mistress of a king or a minister or a savant—to be Madame de Pompadour or Madame de Boufflers or Mlle. de Lespinasse—was a matter simply of *beaux yeux*. Such women and hundreds more of the same type were possessed of talents so great that if they had been men they would have been men of distinction. Being women, they had not only to be agreeable in a positive sense, but they had to draw a veil over what might displease if seen too clearly,—over the unremitting intellectual labour which alone enabled them to achieve their ends. They were permitted to undertake great responsibilities provided they preserved an air of being unfit for them, and to present every other evidence of genius provided they dissembled the capacity to take infinite pains. The education the lady received in her youth before she took the matter in hand herself was not of a sort to raise the presumption of pedantry against her. The convent was the only school and its graduates could not always read and write. The four younger daughters of Louis XV could not when they were 'finished' at Fontevault. Thirty years later the little girl who became Madame Roland received a favourable impression at the school of the Congregation, which was one of the best of its day. The sister in charge of instruction was an object of jealousy because of her superior attainments which consisted of a beautiful handwriting, skill with the needle, a knowledge of orthography and some acquaintance with history. Thirty-four pupils from six years old to eighteen occupied a single room and were divided into two classes. The ethical side of the children's training was open to criticism as well as the pedagogical. . . . To balance their severities, the good sisters allowed the most surprising privileges. Many convents received ladies from the world as transient guests and these inmates brought the world with them. Madame de Genlis, shortly after her marriage, sojourned in a convent while her husband was absent on military duty. She enjoyed herself thoroughly. The abbess used to invite men to dinner in her apartment; at the carnival, Madame de Genlis was allowed to give in the convent-parlour two balls a week attended by nuns and

school girls. . . . The little girls were often allowed free access to the lady-boarders and listened with round eyes to their tales of life in the world. The hygiene of the early eighteenth century was primitive everywhere, and the convent was not a leader in reform. Bathing was discouraged. The children sometimes slept in their clothes, either for fear of the cold or to be able to lie a few minutes longer in the morning. They were required to rise early, and yet they had no food until nine o'clock, although the last meal had been taken at not later than six the night before. There was apparently no ventilation in either school-room or dormitory, and no systematic open-air exercise. The corset was an article of faith, and very careful convents required the pupil to sleep in it lest the good work of the day among her organs be undone at night. If a little girl were not sent to the convent but educated at home she was not likely to fare very much better. If her parents were thoughtless, she grew up as best she might; if they were thoughtful, they were pretty sure to have a theory of education of which the child was to be the living vindication. No subject was more congenial to the theorists of the eighteenth century; every one had a plan for the regeneration of society, and every one began soundly enough with the training of the child. . . . The fundamental occasion of the great efflorescence of the lady under Louis the Fifteenth was the peculiar social temper of the French, finding free play in favourable external conditions, which had been developing ever since the days of Louis the Eleventh. The lady's acknowledged importance as a factor in civilised social life is plainly noted in the tales and by-play of the *Heptameron*. If her progress was interrupted, the interruption was due to the relapse into barbarism known as the wars of religion. These once over, the lady's future was assured; she had but to take her own. Even Louis the Fourteenth could not suppress her. The French sense of solidarity made her essential to the social scheme, and the century which in England developed the coffee-house and Dr. Johnson developed in France the salon. The art of the *salonnière* is in its nature unsusceptible of comparative criticism, like that of the actress. . . . It is a somewhat striking fact that the portraits of the most famous *salonnières* show them—even though the good-will of the artist—as plain. Madame Geoffrin's portentous ugliness, the irregularity of Mademoiselle de Lespinasse, the *chinoiserie* of Madame du Deffand, are an enduring proof of their power. But it would be a bold woman who should argue from their example that to be plain and to have no education are in themselves the basis of social success. One result of the lady's lack of education was her restriction to the field of action which is always most congenial and easiest to her, the field of personal influence. She had plenty of ideas but she could not express them impersonally. . . . A man whose function was merely to write great books could do so with his eyes closed; the lady whose success in life was to consist in exploiting him was compelled to keep hers open. Her first business was to understand herself, her second to understand her world. Nothing is more surprising to the Anglo-Saxon, who believes in unpremeditated art, than the fact that beauty is not necessary to make a Frenchwoman seductive. The power of mind when applied to the science of being agreeable is something of which he has very little conception. His women have an *amour propre* which forbids them

to try to please. The admiration they excite without trying is the only kind they value. . . . The French lady of the eighteenth century on the other hand aimed to please as whole-heartedly as a grocer aims to sell cabbages. Her enthusiasm often carried her to the length of pleasing her husband. Her intimate man friends she pleased without too much trouble, and she was very careful to please her woman-friends as well. In the political world the women (Montesquieu says) all had relations with each other and formed a sort of republic, a state within the state, the members of which were always active in mutual good offices. But the lady counted these steps as but preliminary; she was a failure unless she pleased all her world. . . . The lady could give sound advice on any practical subject. . . . The ladies of the court of Francis the First delighted in a sort of erotic mysticism that included both sacred and profane love. Love and religion were interwoven in an emotion not too clearly analysed. The ladies of the eighteenth century had no illusions about either. . . . To suppose that the life of the *salonnière* consisted in giving pleasant parties is to mistake the flower for the root and the branch. The force of these strong and gifted ladies showed itself everywhere where personal influence can count, that is throughout the field of social relations. The ablest of all had a controlling voice in the affairs of the state, instructed ambassadors, determined the fate of ministers. The very despatches of the time show a feminine style and abound in '*mots de ruelle*.' Cardinal de Tencin and the Duke de Choiseul expressed the wills of Madame de Tencin and the Duchess de Gramont. Madame de Langeac could command *lettres de cachet*, Mademoiselle Renard could create general officers, Mademoiselle Guimard could distribute benefices. The surest way into the Academy was through a lady's recommendation; the success of a play, a poem, a picture, a philosophy, depended upon her. The lady is the sturdy oak, the man of genius the clinging vine; Madame de Luxembourg protects Rousseau, Madame de Richelieu protects Voltaire; Madame de Choiseul protects the Abbé Barthelemy; Mademoiselle de Lespinasse protects de Guibert. It was not until the middle of the century that the diffused feminism of the age crystallised in the salon. . . . The knight was gone, and the lady was emancipated. In the social struggle she fought with the same weapons and the same chance of success as her lord. Instead, therefore, of two codes of conduct for the sexes with love as the only common ground, *politesse* was as nearly as possible the same for both sexes."—E. J. Putnam, *The lady*, pp. 224-229, 232, 235, 237-239, 242.—See also RAMBOUILLET, HÔTEL DE.

1800-1875.—American women in industry.—Inadequate wage.—Beginnings of women's trade unions.—"As early as 1832 they [American women] were employed in as many as one hundred different occupations. In many of these, to be sure, they were as rare as women blacksmiths are today. But in 1836 a committee of the National Trades' Union, appointed to inquire into the evils of 'female labor,' reported that in the New England States 'printing, saddling, brush making, tailoring, whip making and many other trades are in a certain measure governed by females,' and added that of the fifty-eight societies composing the Trades' Union of Philadelphia, twenty-four were 'seriously affected by female labor.' The census of 1850 enumerated nearly one hundred and seventy-five different manufacturing industries in

which women were employed, and the number has steadily increased until there is now scarcely an industry in which they are not to be found. . . . Women's wages have always been excessively low and their hours excessively long. About 1830 Mathew Carey estimated that in Philadelphia, New York, Boston and Baltimore there were between 18,000 and 20,000 working women, at least 12,000 of whom could not earn, by constant employment for 16 hours out of the 24, more than \$1.25 per week. At this rate he figured that, allowing for the loss of one day a week through sickness, unemployment or the care of children, and counting lodging at 50 cents and fuel at 12½ cents a week, a woman would have left for food and clothing just \$22.50 per year. A good seamstress without children and employed all the time he figured could earn \$1.12½ per week or \$58.50 per year, out of which she would have to pay 50 cents per week for rent, 15 cents per week for fuel, 8 cents per week for soap, candles, etc., and \$10 for shoes and clothing—which would leave her for food and drink 2¾ cents per day. If she was hampered by the care of children, was unemployed one day a week, or was slow or unskilled, he figured that, at the same rates of expenditure, she would have a yearly deficit of \$11.56. The situation of the working women in the cities of this country during the early decades of the nineteenth century was, indeed, as characterized by the New York *Daily Sentinel*, the first daily labor paper in this country, 'frightful, nay disgraceful to our country, . . . a gangrenous spot on the body politic, a national wound that ought to be visited and dressed, lest it rankle and irritate the whole system.' Fifteen years later conditions were little better. An investigation of 'female labor' in New York in 1845 led to the assertion by the *New York Tribune* that there were in that city about 50,000 working women, one half of whom earned wages averaging less than \$2 per week, and to the further statement that the girls who flocked to that city from every part of the country to work as shoe binders, type rubbers, artificial-flower makers, match-box makers, straw braiders, etc., found competition so keen that they were obliged 'to snatch at the privilege of working on any terms.' . . . In 1863 the average wages paid to women in New York, taking all the trades together, were said to have been about \$2 a week, and the hours ranged from eleven to sixteen a day. And in 1887 it was stated that in New York City nine thousand and in Chicago over five thousand women earned less than \$3 per week. Some of these statements may be exaggerations, but there can be no doubt that, throughout the entire history of women in industry in this country, their wages, in thousands of cases, have been inadequate for decent support. Their wages, too, have been far below those of men. In 1833 and again in 1868 it was stated that women's wages were, on an average, only about one-fourth what men received. Moreover, it has been authoritatively stated that during the civil war period the wages of women increased less than those of men, while their cost of living rose out of all proportion. It is probable that, in general, women's wages have been less flexible, more subject to the influence of custom and less to the influence of demand and supply, than men's. Unfortunately custom in this case has furnished a standard of exploitation and not of protection. It is probable, too, that working women have suffered more than working men from periods of panic and depression, for such periods, like war, have thrown upon their own re-

sources thousands of women who in normal times are supported by their male relatives. . . . The general conditions under which women have toiled in this country have been little if any better than their wages and their hours. . . . One woman who testified before the Massachusetts Committee on Hours of Labor in 1845 stated that, in the room where she worked, along with about 130 other women, 11 men and 12 children, there were 293 small lamps and 61 large lamps which were sometimes lighted in the morning as well as in the evening. The lack of ventilation in the mills and boarding houses of Lowell was in 1849 made the subject of a report to the American Medical Association by Dr. Josiah Curtis, and in the same year the physician of the Lowell Hospital, established by the manufacturing corporations exclusively for the use of operatives, attributed to lack of ventilation in the cotton mills the fact that, since the founding of the hospital nine years before, over half the patients had suffered from typhoid fever. Typhoid fever, however, was doubtless a far less general result of these conditions than consumption. . . . There is no reason to believe that conditions were any better, if as good, in other manufacturing districts. . . . Whole blocks of tenements, too, have been rented out to families in New York for the manufacture of cigars. As early as 1877 the United Cigar Manufacturers' Association, an organization of small employers, condemned as unsanitary these tenement cigar factories where the babies rolled on the floor in waste tobacco, and the housework, the cooking, the cleaning of children and the trade of cigar making were all carried on in one room. From these evil conditions, low wages, long hours and unwholesome sanitary arrangements, immigrant women have naturally been the greatest sufferers, for, like their husbands and brothers, they have been obliged to begin at the bottom. Irish women first entered the factories of New England, for example, as waste pickers and scrub women. But their daughters became spinners and weavers. There have been, however, certain exceptions to this rule. The skilled Bohemian women cigar makers who came to New York in the seventies, for instance, earned from the first comparatively high wages. Foreign girls who have gone into domestic service, moreover, have frequently earned higher wages than American girls who have chosen to be, for example, saleswomen. The chief forces which have tended to improve the condition of working women have been trade unions, industrial education and legislation. In certain industries, especially shoe making, cigar making, printing and collar and cuff making, trade unions have brought about higher wages, shorter hours or better conditions in certain localities. Women shoe-binders, about one thousand in number, won a strike for higher wages at Lynn as early as 1834, and during the sixties and seventies the Daughters of St. Crispin protected the working women of their craft. Women members were admitted into the Cigar Makers' International Union in 1867 and were prominent in the great strike of 1877. The International Typographical Union admitted women in 1869. Probably no organization of women workers, however, has been more effective than the Collar Laundry Union of Troy, N. Y., the predecessor of the Shirt, Waist and Laundry Workers' International Union. During the sixties the Collar Laundry Union is said to have raised the wages of its members from \$2 or \$3 to \$14 a week, and to have contributed \$1000 in aid of Troy iron molders on strike against a reduction

of wages, and \$500 in aid of striking bricklayers in New York. . . . In the textile industries, too, a long series of efforts by operatives to improve their own situation began with the picturesque strike of four hundred women and girls in Dover, N. H., in 1828, when the operatives paraded the town with flags and inscriptions and the factory agent advertised for two or three hundred 'better-behaved women.' The long and bitterly contested but successful strike of the Fall River weavers against a reduction of wages in 1875 was led by women who went out after the Weavers' Union, composed of men, had voted to accept the reduction. Many other examples of effective trade-union activity among women workers might be cited. These women's organizations, moreover, have proved powerful factors in the fight for ten-hour laws."—H. L. Sumner, *Economic position of women*, pp. 14-15, 17-24.

1815-1900.—Effects of industrial revolution on woman's movement in England.—Change in economic status of the home.—Parasitism of middle class women.—Exploitation of working women.—About the beginning of the nineteenth century the question of woman's rights took an entirely new form and began to emerge as a definite movement. The history of women hitherto had been far from static. Even the nineteenth century did not create a greater revolution in the general attitude to woman's rights than had been created in the Middle Ages by the code of chivalry and the recognition, for the first time, of a whole series of woman's rights which, though seldom embodied in political statutes, altered the social position of woman and set her on that "pedestal" against which the feminists of the nineteenth century appealed. But previous to 1800 woman's rights had been mainly personal and social and had not been achieved by an organized and definitely formulated effort among women themselves. With the beginning of the nineteenth century there occurred a revolutionary change which entirely altered the social relations of individuals—both men and women—and precipitated upon the world a whole set of new questions. One of these questions was the relation between capital and labor; another was the movement for woman's rights. "It was not until the nineteenth century that the demand of women for political, economic, and educational freedom was heard among any considerable mass of the people. This extension of the demand for emancipation was due to economic changes . . . associated with the substitution of mechanical power for human energy in the making of commodities, and with the development of powerful and smoothly working machines in place of human hands and simple tools. . . . Of all the changes introduced by the industrial revolution there is none greater than the alteration brought about in the position of women. Many people believe that it was only in the nineteenth century that women began, on a large scale, to work for their living. There could be no greater mistake. All the evidence goes to show that before the eighteenth century women, with few exceptions, worked as hard and as long as men did. In the sixteenth century women not only helped their husbands in farm work, but they toiled at spinning and carding of flax and wool as a by-industry of their own. . . . Before the industrial revolution women took a full share in industrial work. The basis of their work, however, was quite different from what it is to-day. Speaking generally, before the industrial revolution the economic unit was the family, and

and not the individual. So much was this the case, that in the censuses of 1811, 1821, and 1831 it was assumed that all the members of the family would practise the same occupation. Much of the work done by women in the family was of a domestic nature for the immediate service of their husbands and children, and not for profit. In technical language it was the production of use values, and not of exchange values. . . . It is common to find a woman carrying on the farm or shop of her husband after his death, and the farmer's wife . . . was her husband's working partner in his business enterprise as well as his housekeeper and servant. In fact, before the nineteenth century marriage was an industrial partnership as well as a relation of affection. The women worked, and worked hard, contributing much to the wealth of England, which was sold in her markets. This situation must have served to modify considerably the harshness of the common law, which decreed the husband's entire control of his wife's property. Fitzherbert's husbandmen, depending as he did on his wife's energy in poultry yard, garden, and spinning room, would not be likely to insist upon his legal rights to take absolute possession of her earnings. And in one way the law recognized the wife's partnership. A husband could not leave his property entirely away from his wife. The widow's ancient right to one third of her husband's property was only abolished in England by the Reform Parliament, that Parliament which was called together on the basis of the Franchise Act, which for the first time introduced the word 'male' into the qualifications of the parliamentary elector. Before the industrial revolution, then, the household was, as a general rule, the unit of industry, and women worked in it as members of the family for the production of exchange as well as of use values. Now what was the effect of the industrial revolution on the position of women in relation to these economic activities of the family? Briefly, the answer is that the introduction of machinery, by taking work out of the home and establishing the factory, the railway, and the mine as the organs of industry, 'broke up the family as an economic unit and diminished the amount of production for use carried on within the home. Brewing, baking, butter-making, spinning, weaving, even—to a large extent—the making of clothes, have ceased to be activities of the family; and increasingly housewives are finding that it is cheaper and more convenient to hand over jam making, laundry work, even window cleaning and floor polishing, to agencies that exist independently of the home. This is an inevitable development. Modern machinery and the use of artificial sources of power immensely cheapen production, but they can only be used by organizations bigger than the family group. So that the economic basis of the family has altered more within the last hundred years than in the whole course of Christian civilization preceding that time. Inevitably this has reacted on the position of women, whose relation to the family was always closer than that of men; and the changes in the nature and aspirations of women, which have developed in the nineteenth century, are very largely, though not entirely, due to these altered economic conditions. But different classes of women were affected very differently. Among the wealthier people attempts were made to preserve the subordination of women to the family unit, although the economic justification for that dependence had ceased. Among the poor the necessity for the women's contribution to the family income was so strong that they were drafted into the new

forms of industrial life without any consideration of their powers or capacities. To put it shortly, parasitism became the fate of the middle class women, ruthless exploitation that of the working class women. The latter were absorbed in large numbers by the new factories, as were also the children, who equally had worked as parts of the family unit; and the first stage of machine production saw the women and children workers cruelly and shamelessly sacrificed to the demands of profit. . . . The middle class woman, in fact, was regarded solely from the standpoint of sex. There was no way by which she might satisfy her natural wish to use the welling energies within her other than by becoming the mistress of a household. Naturally, therefore, she often regarded 'to be settled' as an end to be aimed at, quite apart from the personality of the man who offered to make her his wife. And the irony of the situation was that to the finer spirits who refused to acquiesce in this degradation of love to the economic plane, there was no other alternative than an existence which became 'that useless, blank, pale, slow-trailing thing' of which one of the Charlotte Brontë heroines so bitterly complains. As the nineteenth century wore on other tendencies came into play which further increased the hardships of middle class women. The presence of a surplus of women in the middle classes made itself more and more apparent. Probably the cause of this is the emigration of young men, rendered necessary by our enormous colonial development; but it may be that some other and more subtle cause is at work. . . . Another new element in the position of the middle class woman arises from the fact that her men relations tend to become salaried officials in place of independent merchants and employers. This means not only that the women can no longer take part in the economic activities of their men relations, but that, in the event of the death of the latter, their position is far more precarious. A business or a shop goes on even after the death of a husband or father who established or inherited it, but when a salaried official dies his family are altogether deprived of the support which he afforded them. And again, if a wife is no longer of any direct economic value, if on the contrary, she is an expense, then men, in many cases, probably with reluctance, must defer marriage until they can afford that luxury."—E. J. Morley, *Economic foundations of the women's movement* (Fabian Tract, no. 175, pp. 2-3, 5-6, 8-9, 11).

1839-1848.—Laws passed for the legal emancipation of women in America. See COMMON LAW: 1839-1848.

1861-1910.—Further development of education for girls.—American colleges.—English education.—"It was fortunate for the cause of feminism that . . . [the English] system of elementary education had a religious origin, and the Church of England and dissenting sects equally believed in the possession by girls of souls to be saved, so that even from the days of society for the Propagation of Christian Knowledge, schools for girls were established side by side with those for boys. In the second half of the nineteenth century the movement for creating High Schools revolutionised the education of the middle-class girl, and led to the establishment of numerous women's colleges."—G. Slater, *Making of modern England*, p. 290.—"The effort to establish distinctly women's schools [in the United States] was continued after the Civil War by Matthew Vassar, who founded in 1861, and opened in 1865, the first adequately endowed and organized college for women in Amer-

ica. Ten years later, Miss Sophia Smith founded and endowed Smith College to furnish women 'with means and facilities for education equal to those that are offered in colleges for young men.' The institution was opened in 1875; and in the same year Henry Durant established Wellesley College. . . . The West has always led the East in opening equal opportunity to women, even equal suffrage. . . . Thus it is no accident that Oberlin, in the western forest, was the first college to open its doors to women. Antioch, under Horace Mann's direction, was, however, the first institution of higher learning to give men and women equal opportunity. . . . A woman can work in almost any important university in America to-day if she cares to do so. In 1910 there were conferred in the United States 12,590 A. B. degrees, and women took 44.1 per cent of them."—E. Barnes, *Women in modern society*, pp. 69-71.—"The opening of . . . higher educational opportunities to women has given feminism a cutting edge, and has also stimulated its other demands. The girls who has proved her intellectual fitness demands free entrance to the intellectual professions. To a great extent this demand has been successful. The greatest fight of all was over the entry to the medical profession, and was won only after a struggle lasting for eighteen years. The prejudice against women doctors still persists. [In England] we have as yet [written in 1915] no women solicitors or barristers, scarcely any women ministers of religion. But journalism, painting, sculpture, music, the stage, and teaching give women opportunities approximately equal to those of men. Into the disputed question as to how far women are penalised for their sex in the amount of their remuneration, it is impossible to enter here. Side by side with the demand for equal opportunities in work, is that for equal opportunities in play. The time is not so long past when the unfortunate inmates of girls' schools were provided with no more exciting forms of physical recreation than an ordered march in the afternoon, two and two, with the governess in the rear. Croquet came to the rescue, followed by lawn tennis. Now hockey, golf, cycling, swimming, motoring, and even aviation have their female devotees in goodly numbers; and the best women in many forms of athletics can hold their own with all except the men in the first-class. . . . But perhaps it may be said that the wisest and soundest form of feminism is the demand that the work which is characteristically women's should receive full recognition of its true importance, both in remuneration and in status. When women began to desert their homes for paid occupations, a sudden discovery was made that the work of household management, of the care of husbands and the bringing up of babies, hitherto despised because feminine, was really, after all, of inestimable importance. But to this day the respectable poor widow with three or four children is usually driven by a Board of Guardians into the factory, and compelled to neglect her children, instead of being required to give them all her time and enabled to do so."—G. Slater, *Making of modern England*, pp. 290-291.—See also EDUCATION: Modern; 19th century: England: Voluntary and board schools; France; Germany; United States: Secondary education.

1867-1905.—Progress of feminism in Europe.—Predominance of Scandinavian influences.—German organization.—Demands.—Education.—Economic life.—Marriage and the family.—Public life in community and state.—"To the American observer there is much food for reflection in

the outspoken feminism of the continental movement. One sees very little evidence of truckling to narrow-minded criticism. All questions of importance are thrashed out in the open, at conventions and in the feminist press. The consequence is that the foreign movement has developed a very strong power of self-direction and a keen, steady consciousness of woman's varied interests as a sex. One cause, though not the only one, of their more aggressive self-expression is the consciousness of being in the majority. On the continent, as well as in England, the 'surplus women' were already a problem before the outbreak of the war. In Germany, there were 800,000 superfluous women, and in Austria-Hungary 600,000, making a total of 1,400,000. Likewise, in the four Scandinavian states, Norway, Sweden, Finland, and Denmark, the women outnumber the men by nearly 300,000. That grave social changes must result from this disturbance of the natural balance of the sexes is a foregone conclusion. The impetus thus given to the woman movement will be no less powerful because it is not of their own seeking. The industrial revolution also gave a great impetus to the woman movement, which was not of its own seeking, but the impetus is none the less powerful and cumulative. The greater autonomy of the European woman movement is most definitely seen in the number and kind of periodicals which interpret the movement to the public. That the women who write the leaders and articles in a dozen or two of fortnightly and monthly journals should have no voice in the councils of the nation is an official betrayal by the German government of that on which it professes, as a state, to place the highest moral value—Kultur. These feminist periodicals correspond in purpose to the American suffrage journals. But in no sense are they to be compared with the so-called women's magazines, the commercialized monthly journals which really exploit, with cold-blooded cunning, all the immaturities in woman which feminism is trying so laboriously to remove. On the continent, however, the woman's press has attained substantial dimensions. Beginning with *Neue Bahnen* (New Paths) in 1867, it has steadily increased in volume and excellence, mirroring in its various journals the progress of the age of reason in the woman's world. All phases of feminism are discussed in their columns, and their intellectual hospitality and devotion to the free speech are evidenced by the range of subjects treated, embracing, as it does, everything from the servant problem to the new morality. Even the special organ of the 'moderates,' *Die Frau*, has opened its columns from time to time to the exponents of the new ethics propaganda, though its teachings have been definitely repudiated by the organized Frauen-Bewegung of Germany. But to stifle discussion and pronounce the taboo is not the way the feminist journals have chosen. . . . It is not to be inferred that the various branches of the German woman's movement operate with insipid unanimity and thoughtless agreement. On the contrary, there are the socialist-feminists and the bourgeois-feminists; the conservative feminists, the moderate feminists, and the radical feminists; the Christian-feminists and the neutral-feminists; the 'Old Feminists' and the 'Young Feminists'; the suffrage-feminists and the feminist-feminists. These divisions mean an appreciable amount of pull and strain within the movement, a lively flow of internal discussion, and a multitude of mutually corrective attacks. . . . Despite all evidences of heterogeneity, the will to organize is strong

in both Germany and Scandinavia—the will and the skill. During the past twenty years, the German women have built up a great Union of Women's Clubs (Bund Deutscher Frauenvereine). The Union now [written in 1915] embraces 2,290 Associations and has a membership of half a million women. The establishment of the union grew directly out of the International Congress of Representative Women held at the Chicago World's Fair in 1893. Taking for their model the organization of the American Women's Clubs, the German women formed their union in 1894. At first it was simply a loose federation of women's associations, mainly philanthropic in character. Today it is a self-conscious, self-directing organization for the furtherance of all the aims of the woman movement. It is true that the knitting processes of the intervening twenty years have proceeded very slowly and unequally. At times it looked as if disruption were imminent, but always the new sense of cohesion triumphed and the union grew. History shows that the sense of cohesion is a thing of slow growth even among the men of the human race. How much slower and more difficult must it be among women, the unsocialized sex, individuals who dwell in the super-isolation of married life. . . . The first organization whose avowed purpose was the emancipation of women to be formed in Germany was the Allgemeiner Deutscher Frauenverein (General Woman's Union). This association, founded in 1865, is still the strongest subdivision of the Federation (Bund). From the beginning, it adopted a pro-woman attitude. Its history is practically the history of the German woman movement. It is, in many ways, the most representative of all the associations which have combined to form the great half-million woman party. In 1905, the same year in which moral and political militancy startled the world, the General Woman's Union issued a program which is of utmost importance to the student of the woman movement. This program fixes the threshold of European feminism. Its demands are the minimum demands of the twentieth century woman movement. Anything less than this program would be something less than feminism, just as anything more would be pioneerism, and pioneerism requires no platform. Conceiving, then, that the time for organization on a grand scale had come, the makers of the program for 1905 set out to produce a document which should serve as an instrument of amalgamation for as many sex-conscious women as possible. They took over the political demands of the nineteenth century feminists but rejected their insistent emphasis on woman solely as a human being. They adopted Ellen Key's idea of total sex differentiation but rejected the matriarchal program which she built upon it. The practical demands of the declaration, however, are the groundwork of the practical feminist movement of both the nineteenth and twentieth centuries, and are valid, on whatever basis of abstract theory, always and everywhere, until they shall have been canceled by the necessary social reforms. . . . Some of the demands of the program have been so canceled in Germany and Scandinavia during the ten years which have elapsed since its drawing up. The Woman's Movement has chosen its goals and tasks irrespective of all political and religious parties. It works for the women of all classes and parties. The demands of the Women's Movement are based on the existence of thorough-going mental and physical differences between the sexes. It deduces from this fact that only by the cooperation of men and women can all the pos-

sibilities of cultural progress be realized. The Woman's Movement, therefore, sets for itself this aim: To bring the cultural influence of women to its complete development and free social effectiveness. The opportunity for the full development and effectiveness of woman's influence is *not* contained in the social and economic conditions of the present. Much more is it true that modern life has, on the one hand, limited the sphere of influence of the woman within the home, and on the other hand, thrust her into active participation in economic and social life, without providing her with the inward equipment and the outward mobility for it. The Woman's Movement seeks, therefore, a transformation of ideas and conditions in the fields of: 1. Education. 2. Economic Life. 3. Marriage and the Family. 4. Public Life in Community and State. The Woman's Movement holds the opinion that the education of girls in its present form does not show sufficient consideration either for the development of personality in woman or for her future domestic, vocational, and civic duties. It demands from state and community the manifestation of the same interest in the education of girls as in that of boys. It makes especially the following demands. 1. Obligatory continuation schools for girls after their dismissal from the public schools. 2. Reorganization of the secondary schools for girls, so that the latter, without hurt to their special adaptation to women's sphere, shall be made equal to the secondary schools for boys. It must be made possible for girls to prepare themselves, either within the frame-work of their own secondary schools or by admission to the boys' secondary schools, to enjoy their rights in the higher institutions of learning. 3. The unconditional admission of properly qualified and prepared women to all universities and technical schools. The Woman's Movement regards as the primary and immediate occupation of the married woman the sphere of duties involved in marriage and motherhood. The satisfactory performance of this vocation must be secured in the interest of society by all the means of education, of economic reform, and of legal protection. The work of women in the performance of this vocation shall be valued, economically and legally, as a competent cultural service. In view of the great number of women who remain unmarried and the still greater number of those who cannot find an adequate provision in marriage, the vocational work of women is an economic and moral necessity. But the Woman's Movement also regards the vocational work of women, in a broader sense and independently of every outward necessity, as a cultural value, for women may be the possessors of a specific talent, and with the full and free development of their capacities may find, in many fields of intellectual and material activity, tasks which by reason of their nature they can perform better than men. In respect to the economic valuation of women's vocational work, the Woman's Movement stands for the principle: Equal pay for equal work. In consequence of this view of the economic side of the Woman question, the Woman's Movement makes the following demands. 1. It lays upon parents, and, in a deeper sense, upon society, the obligation to give every girl the opportunity to learn an occupation according to her inclination and capacity. 2. It strives to broaden the range of women's occupation, especially by the furtherance and improvement of the vocational training of girls. 3. It supports all forms of vocational organization as a primary means of elevating women's work, especially its

economic valuation. It works towards the continuous broadening and the efficient execution of the laws protecting working women as well as toward the extension of state insurance in the sense of greater economic protection of the mother. 5. It seeks for women participation in the rights which are conferred upon certain classes of business (Merchants' Courts, Trade Courts, and so forth). The Woman's Movement sees in the sacredness of marriage the essential guarantee of the physical and spiritual welfare of posterity and the fundamental condition of public health. With regard to sexual morality, it lays upon men and women alike the same duties and combats the double standard of morals which, on the one hand, grants to the man a sexual freedom fatal in every respect and, on the other hand, strikes the woman with unjust harshness. It demands for the woman, as the guardian of the home and the educator of the children, that she shall bear, in harmony with the dignity of her obligation and the value of her activities, the same legal responsibility as the man in all the affairs of marriage and of family life. From the foregoing we derive the following aims: 1. The Woman's Movement combats prostitution with all the means at its command and sees in the legal sanction of vice, expressed by the existing system of regimentation, a social and moral danger. 2. It demands a reform of the marriage laws, by which both parents shall be assured of the same rights of decision in all personal affairs and the same responsibilities and rights in their joint affairs, especially the same share in parental authority. It demands statutory reforms concerning the rights of illegitimate children, reforms which shall lay upon the illegitimate father greater responsibilities toward mother and child. . . .

"The Woman's Movement represents the conviction that our economic, social, and intellectual progress must have as consequence the increasing participation of women in the public life of community and state. It demands the enlistment of women in the duties and rights of communal and political citizenship. It demands this primarily for the sake of women. For, in the modern state, the economic and cultural interests of women can only be lastingly secured by the acquisition of these rights. Also the exclusion of women from national life and social responsibility, together with the inevitable narrowing of her domestic sphere of influence, must result in the retarding of her development as a personality as well as in the lowering of her social position. The Woman's Movement takes this demand in the second place for the sake of the public welfare, because the coöperation of women is indispensable to state and community in the solution of all their modern social-political problems. In particular, the Woman's Movement seeks the following goals, according to the possibilities given by the stage of social development: 1. Admission of women to responsible offices in community and state, primarily to such as stand in a particularly close relation to the interests of women (the education of girls, social-political administration of state and community, the problems concerning working women, courts of law, and so forth). 2. Enlistment of women in the representation of laity in legal proceedings (justice of the peace and jury members). 3. Removal of all limitations placed on women's right to combine. 4. The extension of the church franchise to women. 5. The extension of the community franchise to women. 6. The extension of the political franchise to women."—K. Anthony,

Feminism in Germany and Scandinavia, pp. 11-17, 19-26.

1867-1921.—First feminist movement in England.—Attitude toward marriage.—Growing realization of the importance of the child.—Mutterschutz on the continent.—From the time of the development of a conscious woman's movement in the middle of the nineteenth century, the struggle for women's rights underwent a considerable change in direction and emphasis. The earliest struggle was for higher education and political representation. The struggle for higher education was won in a generation. At the same time the early leaders of the movement for woman's rights had begun a slow and unpopular effort to gain economic independence. As the question of education settled itself and the struggle for enfranchisement became less novel and difficult, the question of economic independence grew to be the one of greatest importance. But this brought up the whole matter of marriage, motherhood, and the care of children. The first advocates of woman's rights had been individualists. They had fought for personal liberty. Faced with a choice between a "career" and motherhood, they made the choice heroically and seemed to think the matter settled. But as more and more women entered the professions and organized industry, as the woman with a man's education and a man's work ceased to be an unusual phenomenon, the sacrifice of marriage to work began to be resented. There arose a generation of women who not only claimed both work and motherhood for women, but began a spirited attack upon the limitations of the home as hitherto conducted, pointing out that it defeated its own end, and instead of fostering motherhood, restricted it. Of these newer leaders the most notable were Charlotte Perkins Gilman in America and Ellen Key in Scandinavia. They frankly centred their whole propaganda in the child. For his sake they proposed reforms that seemed to shake the very foundations of society—the abolition of private housekeeping, communal nurseries, free divorce, etc. Their effort was earnest and high-minded, and they had a powerful influence. "The first feminist movement [in England] emerged into the open at the time of the Reform Bill of 1867. If its origin is grasped, its peculiar characteristics will be easily understood. It was on the whole a demand of elderly unmarried women for the right to freer activities, as the alternative to an impracticable ideal of marriage and motherhood for every woman. Therefore it is not astonishing that these early feminists tended on the whole to ignore differences of sex, since those differences had been made the pretext for condemning them to a condition of parasitism, against which a healthy human being was bound to revolt. It was natural enough that these pioneers of the women's movement should insist upon their likeness to men, should demand the right to the same education as men received and the entrance to the same professions as men followed. In their revolt against the degradations which sex parasitism had brought in its train, it was not unnatural that in their dress and bearing they should neglect the grace and charm which a normal man will always desire in women. It was not unnatural either, when they found a section of the public advocating in industry special protection of women by law, that they should regard this as another form of the masculine exclusiveness from which they themselves suffered, so that to them the right of a woman to be a doctor and the right of a woman to work underground in a mine should pre-

sent themselves as similar demands. Being but middle class women, influenced by the progressive ideals of their class, they were mostly Liberals, and to their special dread of the exclusion of women from human activities, other than those conditioned by sex, was added the strong individualism of the Liberalism of the period. Therefore they naturally set themselves in opposition to the demand for factory legislation, and there arose in consequence misunderstandings between two sections of reformers, the echoes of which have persisted to our own time. The attitude towards marriage of these early feminists has also been much misunderstood. There were, no doubt, a certain number among them who were indifferent or opposed to marriage; but most of them found themselves driven into hostility to normal family relations, mainly because these were used as an argument to convince them that the alterations in the position of women which they desired were impossible. When a woman, struggling for education and the right to work for herself, was met by the objection: 'If you learn Greek or if you become a doctor no one will marry you,' is it astonishing that she answered, 'I don't care if no one does'? Moreover, as has been already said, the pioneers came mostly from the class of 'superfluous women.' They knew well that marriage was far from being the certainty or the likelihood which their opponents always assumed it to be. The alternative for them was not work or marriage, but work and money of their own or a spinstered existence in their fathers' houses. Therefore, naturally most of them put out of their minds, with what bitterness few people have realized, the possibility of marriage and motherhood, and turned instead to develop their own intellectual and spiritual forces, devoting themselves to public work and to the struggle for that independent living which is so sweet to the woman who has revolted against parasitism. . . . So, at the present time there are two main sections in the modern women's movement—the movement of the middle class women who are revolting against their exclusion from human activity and insisting, firstly, on their right to education, which is now practically conceded on all sides; secondly, on their right to earn a livelihood for themselves, which is rapidly being won; and, thirdly, on their right to share in the control of Government. . . . On the other hand, there are the women of the working classes, who have been faced with a totally different problem, and who naturally react in a different way. Parasitism has never been forced on them. Even when the working class woman does not earn her own living in the world of industry—though practically all the unmarried girls of the working classes do so—her activities at home are so unending, and she subconsciously feels so important and so valuable, that she has never conceived of herself as useless and shut out from human interests as the parasitic middle class woman. . . . The reforms that she demands are not independence and the right to work, but rather protection against the unending burden of toil which has been laid upon her. A speaker at a working women's congress said once, 'It is not work we want, but more love, more leisure to enjoy life, and more beauty.' These facts explain the relative lukewarmness of working class women in the distinctively feminist movement, and one of the possible dangers of the future is that the working class women in their right and natural desire to be protected against that exploitation which the first development of machinery brought with it, should allow themselves to drift without

observing it into the parasitism which was the lot of middle class women. . . . An even more momentous change is occurring in the attitude towards marriage. The first generation of feminists did not so much oppose marriage as ignore it; but there is now coming into existence a second generation of advanced women, few at present, but destined to increase. . . . The problem of the modern professional woman is that she is forced to reconcile two needs of her nature which the present constitution of society make irreconcilable. She wants work, she wants the control of her own financial position, she wants education and the right to take part in the human activities of the State, but at the same time she is no longer willing to be shut out from marriage and motherhood. And the present organization of society means that for most women the two are alternatives. . . . The normal woman, like the normal man, desires a mate and a child, but she does not therefore desire nothing else. Least of all does she desire to sink back into a state of economic dependence and sex parasitism. Women do not want either love or work, but both; and the full meaning of the feminist movement will not develop until this demand becomes conscious and articulate among the rank and file of the movement."—E. J. Morley, *Economic foundations of the women's movement (Fabian Tract, no. 175, pp. 13-17)*.—As the question of marriage and motherhood emerged as the real crux of the Woman's Movement, there were not wanting those who arose to protest that not only had woman's household works been taken from her in the new society, but even her function of motherhood was being so restricted that it no longer filled her life. "The commandment to the modern woman is now not simply 'Thou shalt bear,' but rather, 'Thou shalt not bear in excess of thy power to rear and train satisfactorily'; and the woman who should today appear at the door of a workhouse or the tribunal of the poor-law guardians followed by her twelve infants, demanding honorable sustenance for them and herself in return for the labor she had undergone in producing them, would meet with but short shrift. . . . It is certain that the time is now rapidly approaching when child-bearing will be regarded rather as a lofty privilege, permissible only to those who have shown their power rightly to train and provide for their offspring, than a labor which in itself, and under whatever conditions performed, is beneficial to society. Further, owing partly to the diminished demand for childbearing, rising from the extreme difficulty and expense of rearing and education, and to many other complex social causes, . . . millions of women in our modern societies are so placed as to be absolutely compelled to go through life not merely childless, but without sex relationship in any form whatever; while another mighty army of women is reduced by the dislocations of our civilization to accepting sexual relationships which almost negate child-bearing, and whose only product is physical and moral disease. . . . Even for those of us [who are child-bearers], child-bearing and suckling, instead of filling the entire circle of female life from the first appearance of puberty to the end of middle age, becomes an episodal occupation, employing from three or four to ten or twenty of the three-score-and-ten years which are allotted to human life. . . . Looking round . . . with the uttermost impartiality we can command, on the entire field of woman's ancient and traditional labors, we find that fully three-fourths of it have shrunk away for ever, and that the remaining fourth still tends

to shrink. It is this great fact, so often and so completely overlooked, which lies as the propelling force behind that vast and restless 'Woman's Movement' which marks our day. It is *this* fact, whether clearly and intellectually grasped, or, as is more often the case, vaguely and painfully felt, which awakes in the hearts of the ablest modern European women their passionate, and at times it would seem almost incoherent, cry for new forms of labor and new fields for the exercise of their powers.—O. Schreiner, *Women and labor*, pp. 59-64.—“Stimulated mainly by Ellen Key, the movement to reform the institution of marriage is decidedly the most important work of European feminism. The marriage problem is approached by the continental critics from an angle as yet little known in our American discussions. In America, the faults of the marriage institution are seen in the prevalence of divorce. The fact that one out of every twelve marriages ends in divorce is the outstanding feature of the marriage situation in this country. In Europe, on the other hand, the failure of the institution of marriage is seen in the prevalence of illegitimacy. By a curious statistical coincidence, it happens that in Germany one out of every twelve babies born is illegitimate [written in 1915]. This mass of illegitimacy is just as disconcerting to the European moralist as the corresponding mass of divorce is to the American moralist. The effect on public discussion is strikingly prominent. The question of divorce, which occupies so much attention in America, falls into the background in Europe and the question of illegitimacy, which has scarcely been broached in public in this country, is one of the most widely-discussed public questions of the day in foreign countries. The illegitimate children born in Germany yearly number 180,000. In Sweden, they number 18,000, and in Norway 5,000. Moreover, to get a true picture of the number of individuals concerned, we must double these numbers, because each case of illegitimacy means an outlawed pair, the unmarried mother and the illegitimate child. It is apparent that the fate of so large a group of persons cannot be a matter of indifference to society or state. It is also apparent that the sole form of marriage legally sanctioned in these countries is not that practiced by a considerable portion of the population. Either something is wrong with this large group of human beings or something is wrong with marriage. According to church and state, nothing can be wrong with the form of sex union defined as legal marriage. To its official sponsors, it represents the highest ideal of sex morality that has yet been attained, or ever will be attained, by civilization. But according to the woman movement and the Mutterchutz movement, something is wrong with the institution of marriage. The woman movement approves of its monogamic basis, but attacks its proprietary rights. Monogamy purified of proprietary rights is the ideal of the main guard of European feminism, the substance of the marriage reforms demanded by the 1905 Program. The Mutterschutz movement goes further. It not only demands the abolition of proprietary rights in marriage, but questions the eternal validity of monogamy itself, if not as ideal morality at least as practical morality. . . . The Mutterschutz idea was the natural historical corrective of a . . . proprietary marriage. The founding of this society in 1905 was the most important historical event in the history of the woman movement since the American Woman's Rights Convention at Seneca Falls in 1848. [See SUFFRAGE, WOMAN: United States: 1848-1851.] . . . With the establishment of

this society, the Mutterschutz Idea became a system. It had already been partly formulated by individuals and leaders, primarily by Ellen Key and Lily Braun. But the society now existed based on the Mutterschutz Idea, with international connections and systematized activities. Its purpose was stated to be the reform of sexual ethics and the protection of motherhood. It soon developed that among their other activities, they had to carry on a ceaseless crusade against hypocrisy. They had to reckon not so much with conventional conscience as with guilty consciences. . . . The movement was denounced as a menace to the family, the church, and the state. That women should come before the public and discuss such subjects was peculiarly resented. But for the fact that they were so ably championed by such continental celebrities as Professor August Forel of Switzerland, Dr. Rutgers of Holland, Dr. Sigmund Freud of Austria, and Minister of Justice Castberg of Norway, the feminine contingent would have had a much thornier path to tread than they actually did.”—K. Anthony, *Feminism in Germany and Scandinavia*, pp. 83-84, 88, 90, 92.

ALSO IN: C. P. Gilman, *Women and economics. 1870-1911.*—Struggle of women for legal justice in England.—Attitude of the law toward women.—Injustices which drove English women to militant revolt.—Attempt of women to get the right to hold property or control their own earnings.—Struggle for liberty of person.—Attempt to get a share in control of their own children.—Injustice in maternity benefit provisions.—“For centuries the status of a woman while single was solemnly defined as *femme sole* and after marriage as *femme covert*. Veritably it may be said that the second estate of that woman was far worse than the first. A *femme sole* was in legal phraseology an ‘infant’ until her majority, but after attaining it she had full possession and control of her property. If she was rich, it was scarcely reputable that she should not marry unless she became a nun; consequently the interval between minority and wedlock was, so to speak, ‘twixt hay and grass. Nevertheless, if she defied social sentiment and remained single, the law protected her ownership. She might be choused out of her possessions, but she could not be deprived of them. The instant she married, however, she became *femme covert*, and every attribute of ownership ceased. Of every human status devised by civilization that of the *femme covert* was the most ignominious, though it wore the air of chivalrous concern for the inherent helplessness of women. So absolutely did the law insist on merging her entity in her lord and master's that if she committed a crime (unless it were very atrocious), she was assumed to have acted at his instance and he was held responsible for it. . . . The author of ‘The English Woman's Legal Guide’ (London, 1913) states her quondam predicament succinctly as follows: ‘By the common law, prior to the series of acts known as the Married Women's Property Acts, 1870-1908, a woman by marrying stood to lose, either permanently or during married life, all actual benefit in any property of which she was at the commencement of or might during the marriage be possessed. The theory was that “a man and his wife are but one person in the law,” which sounds as favourable to wife as to husband, and which if literally applied would have meant equal enjoyment by both of their common property. This, however, was not the meaning given to the phrase in practice. The real meaning would be expressed better by saying that “a man

and his wife are but one person in the law, and that one person is the man," since the immediate interest in the whole of her property passed to her husband, while his property continued to belong to him solely.' So genuine did this legal fiction—that a married woman could not own anything—seem to the legal mind that as time went on and a desire was felt to protect the dowries of wives from the rapacity or debts of husbands, recourse was had to circumvention. Barred from declaring that a wife's property should continue hers, the lawmakers of the period devised a method of tying it up so that her spouse or his creditors could not reach the principal, and so that the yearly income should be paid over to her own use. This method survives in the comparatively modern system of trusts by which estates in Great Britain or the United States can be kept intact during a generation or so for the support of widows, unmarried daughters or spendthrift sons, and protection against sons-in-law. Yet, although because of its historic origin, the tradition of woman's financial ineptitude lingers, it is some time now since the common-law fiction holding her incapable of ownership after marriage was done away with as an absurdity in English-speaking countries. In the United States, where it obtained for a while as a part of the legal code inherited from England, the repudiation has been well-nigh universal. To quote from 'The Legal and Political Status of Women in the United States' (1912). . . . 'In most of the States at the present time property of every kind owned by either husband or wife at time of marriage, or acquired during the marriage by gift, devise, bequest, inheritance, or purchase, constitutes the separate estate of such husband or wife, and is not liable for the debts of the other, but it is liable for the debts of the one who owns the property whether they were incurred before or after marriage.'—B. Grant, *Law and the family*, pp. 5-10.—'It took thirty years of agitation and effort in England to obtain for married women the right to hold property, or to control their own earnings. Again and again bills were introduced and debated in Parliament. . . . Even as late as 1882, when the measure at last actually became law, there were not wanting outspoken protests against any limitation of the power of the husband over his wife and her property. 'Who is the head of the house?' exclaimed one despairing member of Parliament—'the woman or the husband?' 'This bill,' he added, 'is a measure to carry out certain notions of women who rebelled against the law of God that women should be subservient to men.' Nor was the subservience of the wife shown only in the fact that she could hold no property. Until 1890, a husband had the right to confine his wife in his own house, and to prevent her by force from leaving him. In 1840 in the well-known Cochrane case, the court decreed that 'the husband hath by law, power and dominion over the wife, and may keep her by force within the bounds of duty and may beat her, but not in a violent or cruel manner.' What was a violent or cruel manner was apparently left by the court to the judgment of the husband. . . . The fight of English mothers for the right to some share in their own children was longer, bitterer and up to now less successful than the fight of the English wife to her own property or to her personal liberty. Even yet the English child has practically only one legal parent—the father when the child is legitimate, is a source of pride and honour to the parent, when it is earning wages or when it has property to pass on its death; the mother when it is the child of shame and dis-

honour, and when its care and upbringing are a burden almost too heavy for those crushed and feeble shoulders to bear. In 1884, after fifty years of agitation, which was begun in the first case by the Hon. Mrs. George Norton, the question of the mother's right to some share in her children was again under debate in the House of Commons. The first step in the direction of recognizing the rights of the mother was taken in 1839, in response to the public feeling created by Mrs. Norton's valiant battle against her husband for the right occasionally to see her three boys, or at least to know of their whereabouts and of their health. . . . Another very small and hesitating step had been taken in 1857 when it was made possible for the court, after a woman had obtained a divorce from her husband—which could only be granted if he were persistently cruel to her as well as unfaithful—to award to the wife the care of the children until they attained the age of seven. In 1873 the age to which the innocent mother might be allowed to keep her children was extended to ten years old, and in 1884 the effort was being made to give to a mother the right of guardianship over her children in the event of the death of her husband. It was not until 1886 that the Infant Guardianship Act was passed, which over-ruled the old law that a man might by will leave his children to any guardianship he pleased, excluding altogether the mother even from access to them. It took two years of debate and agitation after the introduction of the bill in 1884 to force the measure through both Houses of Parliament. During the debates on the bill, one of the strong advocates of the woman's cause was Mr. [James] Bryce. . . . 'The common law of England,' said Mr. Bryce in commenting caustically on the attitude of the opponents of the mothers of England, 'considered husband and wife to be one, but it did so on the basis of giving the husband all that was his own, and all that was his wife's and giving her nothing; and that principle which had been constantly applied as regarded the property was also applied in the family as regarded the respective rights of the parents to the custody, guardianship and control of their children. The wife had no rights during the lifetime of the husband, and even after his death, by his will, he could exclude her altogether.' . . . A modern instance of English discrimination against women is furnished by the Insurance bill on which the House of Commons engaged in the session of 1911. This measure, which was heralded as the great statesmanlike plan of the Chancellor of the Exchequer which should do away with destitution and make the working classes of England happy and comfortable, is most palpably unfair to women. For widows and orphans it makes no provision, in fact for these most helpless waifs of modern civilisation, it does less than nothing. It does less than nothing because, by compelling every wage earner to ensure against his own sickness and unemployment, it makes it almost impossible for him to make provision either by thrift or insurance against his untimely death. Neither is there any help under the measure for the married women in the home. The single woman wage-earner, although unfairly discriminated against in the amount of relief granted her during sickness or unemployment—a man making the same weekly payment receives ten shillings a week during sickness, a woman receives seven shillings and sixpence—is included within the four corners of the measure. But the woman in the home—the women who are doing the normal work of wives and mothers—is to have no help during the sick-

ness. She is not to be allowed to insure even though she may desire to do so. And the excuse of Mr. Lloyd George for her exclusion is that the nation cannot afford any money for the mother in the home. The demands of the voting wage-earners are too insistent. The voteless woman must drag through sickness with no insurance fund to help out with doctor and nurse, and helper to see to the unfulfilled duties of the mother—duties far more exigent than those which fall to the lot of the factory worker or the casual laborer. . . . It is true that the Insurance bill includes a maternity benefit of thirty shillings. But strange as this may sound, the maternity benefit is for the men rather than for the women, and in the first place the bill provided that the money should be paid to the husband. Owing to the great outcry in the country which greeted this provision, it was amended and it was provided that money shall be paid direct to doctor and nurse. It is, however, only wives of insured men, who are in full working, for whom the maternity benefit is designed. The wife of the man who is not insured, or who through unemployment has exhausted his insurance fund will not benefit. Nor, unless an amendment is carried, will the widow to whom a child may be born in the first sad months after the loss of her husband.”

1900-1921.—International aspects of woman's movement.—Movements for woman's rights in the Orient.—Turkey.—China.—Japan.—India.—Municipal suffrage in Burma.—“Something approaching an international freemasonry in women's matters has most surely been one outgrowth of the Woman's Movement. . . . British women owe many a debt of gratitude to leaders in Norway and Germany, Finland, and other European countries, for victories already won, or lines of advance indicated. Where would much of our work for the suppression of the White Slave Traffic be, if it were not for the leaders in Switzerland and other Continental countries, who form, for instance, the great body of the ‘Amies de la Jeune Fille’? To women in the United States of America many societies of women workers in other lands have owed ideas which have borne fruit in united work for municipal and other reforms. Indeed, it was from that republic that the first organized Woman's Movement emanated. . . . The Woman's Movement differs greatly in form as it makes its appearance in different types of civilization, and as influenced by differing faiths. The lines of its development are affected also by economic and other causes, but, however varied its development may be, the same ideals are found everywhere struggling to birth. The Woman's Movement is an international fact. In unexpected ways the Near and Far East share in the movement. An article in the *Contemporary Review* for June, 1914, gives the following as the aim of the Turkish Society for the Defence of the Rights of Women:—1. To transform the outdoor costume of Turkish women. 2. To ameliorate the rules of marriage according to the exigencies of common sense. 3. To fortify woman in the home. 4. To render mothers capable of bringing up their children according to the principles of modern pedagogy. 5. To initiate Turkish women into life in society. 6. To encourage women to earn their own living by their own work, and to find them work in order to remedy the present evils. 7. To open women's schools in order to give young Turkish

girls an education suited to the needs of their country; and to improve those schools already existing.’ The last two points are considered to be in some ways the most important, and ‘show that Turkish women have grasped the essential nature of their problem, because it remains true in Turkey, as elsewhere, that in women's economic independence and in her intellectual training lies the secret of her social position.’ Dr. Alice Salomon, the secretary of the German National Council of Women (*Bund Deutscher Frauenvereine*), in a report on the work of the Woman's Movement throughout the world, writes: ‘The endeavour to grasp the Woman's Movement in different lands as a whole, never fails to produce a feeling of astonishment that the aims and undertakings of the modern woman, though everywhere spontaneous in their origin, are so fundamentally alike, utterly different as their promoters may be in national temperament, in environment, in occupations, and in religion. The same convictions animate the women of all lands: they strive after the same objects: they are everywhere dominated by the same ideas: they are pushing the same demands.’ Miss Ruth Rouse writes: ‘My own experience amongst the women students of forty-two different countries confirms this verdict: conversation with leaders of women's organizations, study of their literature, attendance at their conferences, reveal a curious unanimity of idea and ideal. It is no forced and artificial unanimity, for the majority of modern national women's movements have sprung up spontaneously.’ From East to West, from North to South, the Movement spreads. Already we find at least eight international organizations at work. These are summed up in a recent writing as The International Council of Women, with its more than seven million members in twenty-two different lands (the National Councils of Women of which this is composed are almost invariably very representative of the Woman's Movement): The International Women's Suffrage Alliance; The Travellers' Aid Society; Les Amies de la Jeune Fille, working in thirty-nine countries; Le Secretariat Internationale de l'Action Sociale de la Femme; L'Association Catholique Internationale des Œuvres de Protection de la Jeune Fille; The World's Young Women's Christian Association, with 670,000 members in twenty-three countries; The World's Women's Christian Temperance Union, with auxiliaries in at least fifty countries. The nations whose women are joining these international societies are in most varied stages of development; not only do we find among them those lands where women are educated and have also long since entered the great industrial world, but also countries where, in spite of a so-called civilization, women's position is still mediæval. The great non-Christian lands are beginning to take their place in the line and enter the International Alliance. China was the twenty-seventh nation to form a National Woman Suffrage Association. Those who know China well speak of the last decade as having witnessed there the greatest educational renaissance the world has ever seen. The words, ‘the emancipation of women,’ have become one of the watchwords of modern China. Education and the ideals of moral freedom have gone forward hand in hand. After some fifty-five years in which under missionary (and therefore foreign) guidance, women's education had battled its way into favour, the prospectus of the first girls' school under purely Chinese management in 1897 contained a clause to the effect that ‘no girls may be sold as concubines or as slaves, who have

been pupils.' A society was launched by a Manchu princess a few years ago to abolish the practice of having secondary wives. So China moves with her Western sisters. [See also CHINA: 1920: Development of journalism.] In Japan, too, the new life is throbbing. 'Women are demanding larger spheres of service in both professional and commercial life, a larger freedom of choice in marriage, more spiritual freedom . . . the right to *think*.' . . . Of the three great Eastern countries, India, however, is that which we might feel would be excluded from countries in the freemasonry of the Woman's Movement. It is true that it is possible even now for an Indian woman lawyer who has intimate knowledge of the life of uppercaste Indian women to say sadly that they are still back in the life of the mediæval centuries, but the very existence of that woman lawyer and her position as legal adviser on women's matters to the Government of Bengal is typical of the advance that is being made. Another Indian woman, the wife of a barrister, stood for election to the Municipal Council in Allahabad, though finally her name was withdrawn. The Begum of Bhopal, a woman ruler of a Mohammedan State, in spite of all Mohammedan prejudice, even presides at public meetings at which men are present. Behind these outstanding women there is an ever-increasing number of those who are steadily opening new avenues for themselves, and taking up the burden of the yet unemancipated masses of their fellow-women. [See also INDIA: 1835-1922.] . . . The history of women's education has been on the whole fairly uniform in character in the Anglo-Saxon countries and in those of Northern Europe. The story of Mary Lyon in the United States and her fight for higher education, the foundation by her of a great women's college, Mount Holyoke, could be paralleled in many lands. The rapidity of the growth of the demand for higher education for women in the United States since then could perhaps scarcely be paralleled except in Russia—for these are some 60,000 women in the American universities and colleges, and (before the . . . [World War]) some 40,000 in those of Russia. In many countries, however, in varying proportion, the advance from merely elementary education, or something supposedly specially adapted to girls, to the highest education possible to any, has been made. In Latin countries girls educated under Roman Catholic auspices have not had so great an opportunity, but last year before the . . . war some six thousand women were studying in French universities. A curious development of education is reported from China, where an English college woman for a time taught in one of the many new 'Political Colleges' for both men and women. These schools were started by the great political parties, and run at fees which could not possibly pay, involving therefore in many cases daily personal superintendence or tuition without any remuneration. There is something rather pathetic about the mistaken idea that one can and should stimulate girls to spend their time studying International, Mercantile and Administrative Law to the exclusion of subjects of far greater importance, in a country where infant mortality is normally fifty per cent. Yet, however mistaken in form or method, the devotion to modern education shown by this is an augury of the place Chinese women will ultimately take in the educational world. . . . From education we pass to economic changes. Scarcely a country remains untouched by the gigantic revolution which has forced women out of home production into factory production. While Great

Britain has approximately four and a half million women and girls over fifteen in industry, Germany is reported to have nine million, in each case about a third of its female population. In France the proportion is said to be a good deal higher. In the United States of America eight million women and girls over ten years of age were reported in 'gainful occupations' in the last census [1910]. The evils of sweated trades among women are limited to no one nation, nor the danger of the breaking-up of homes because of women's enforced absence for daily work. Even India shares in the new industrial life, and thousands of women work twelve to fourteen hours a day in the mills of Bombay; the child labour in the jute mills of Calcutta was one of the evils to which attention was drawn by the Maharani of Baroda. The factory returns of Japan for 1910 show 477,874 women factory workers, and of these 34,605 girls were under fourteen years of age. The girls work for long hours and are housed in dormitories attached to the factories in many cases. After some seven or eight years of work many are sent home with tuberculosis or other diseases. Some rather meagre factory laws to remedy these things have been passed, but they are only to come into operation some eight years hence.—U. M. Saunders, *Some aspects of the woman's movement*, pp. 129-138.—See also EDUCATION: Modern developments; 20th century; General education; China; England: Primary and secondary; France; UNIVERSITIES AND COLLEGES: 19th-20th centuries; Higher education of women.

1914-1921.—Effect of the World War on woman's rights.—The World War made a great change in the whole status of woman, or rather, it first made the world conscious of the changes that had already taken place. The first notable aspect of the change was the replacing of men in business and industry by women. This altered the whole economic position of women and gave them a remuneration substantially equal to that of men. The conditions of the war also broke down many of the traditional restrictions that had stood in the way of woman's progress. Moreover, the great development of war activities which required women's services demonstrated that war is no longer a masculine occupation, and opened further fields of usefulness. One of the results of the realization of women's new position in the world was that, after the World War, the right of suffrage was conceded in practically all civilized countries.—See also ENGLAND: 1915: Ministry of munitions; FRANCE: 1914-1918: French women, etc.; ITALY: 1915-1918.

WORLD WAR

EXPLANATORY NOTES ON THE ARRANGEMENT OF MATERIAL COMPRISING HISTORY OF THE WORLD WAR.

Owing to the great length and complexity of the article **WORLD WAR** it was necessary to devise a special scheme of arrangement. The plan adopted will, it is expected, enable the reader to grasp and understand the World War as a whole—from historical causes to peace and reconstruction—or to read any portion by itself, or insure quickest possible reference to any of the many thousands of topics comprising this vast subject. A careful reading of the following explanation will be helpful.

There are twelve main divisions, lettered from A to L, as follows:

- A. CAUSES OF THE WAR
- B. DIPLOMATIC BACKGROUND
- C. PREPARATION FOR WAR
- D. FIRST YEAR OF THE WAR: 1914
- E. SECOND YEAR OF THE WAR: 1915
- F. THIRD YEAR OF THE WAR: 1916
- G. FOURTH YEAR OF THE WAR: 1917
- H. FIFTH YEAR OF THE WAR: 1918
- I. MISCELLANEOUS AUXILIARY SERVICES, ARMISTICES, ALLEGED ATROCITIES
- J. BIBLIOGRAPHY
- K. DOCUMENTS
- L. CHRONOLOGY

Each of these main sections is further subdivided, and to show the form and extent of the subdivisions a part of Section E is given below:

- E. SECOND YEAR OF THE WAR: 1915
 - I. MILITARY SITUATION AT THE BEGINNING OF 1915.
 - II. WESTERN FRONT.
 - (a) Summary of military operations, 1915.
 - I. BATTLE OF SOISSONS.
 - (b) Battle of Neuve Chapelle.
 - I. DISPOSITION OF TROOPS.
 - (c) Second battle of Ypres.
 - (d) Battle of the Labyrinth.
 - (e) Further operations around Ypres.
 - (f) Summer operations.
 - I. ACTION AT FONTENELLE (FRENCH REPORT).
 - 2. FONTENELLE AND LES ÉPARGES (GERMAN REPORT).
 - (i) *French tactics.*
 - (ii) *French attacks repulsed.*

It will be observed that five different and distinctive styles of type are used to indicate the various divisions, subdivisions, topics and subtopics.

WORLD WAR: EXPLANATORY NOTES

Each of the items included in the article is indexed in the usual Larned way and specific reference is made to the section where the desired material is to be found. It will be noted that each division and subdivision is given a number or letter: A, B, C; I, II, III; a, b, c; 1, 2, 3; (i), (ii), (iii). It is to these letters and figures that the reader is referred from other volumes, rather than to the titles of the sections. Thus

BAILLOUD, Maurice Camille, French general.
See **WORLD WAR**; 1915: V. Balkans: c, 3, i; 1917:
VI. Turkish theater: c, 1, vi.

LES ÉPARGES, town in France. . . . See **WORLD
WAR**: 1915: II. Western front: f, 2; f, 2, i.

In the section "B. DIPLOMATIC BACKGROUND" only Arabic numerals are used as guides to its different parts.

Page-headings throughout the article furnish cues to the subdivisions, such as the years, battle fronts and lettered or numbered sub-sections, and (in the second line of italics) to the principal subject-matter, to be found on the pages.

With the above explanation in mind a very little practice in referring to topics under this subject head will prove the simplicity and efficiency of the system.

WORLD WAR

A. CAUSES OF WORLD WAR

"On June 28, 1914, the Archduke Franz Ferdinand, heir apparent to the throne of the Austro-Hungarian Monarchy, was assassinated by a Serbian nationalist in the streets of the chief town [Serajevo] of Bosnia. [See also AUSTRIA-HUNGARY: 1914 (June).] Doubtless not more than the merest handful of the millions who read the news on the following day, realized that the murder would carry in its train consequences of extraordinary moment. The popular mind had become accustomed to assassination of royalty. . . . Who could guess that this new crime would prove to be of greater significance? And yet within five weeks of the murder and apparently as a direct result, the five greatest Powers of Europe were battling in the most terrific war of history. . . . The murder was merely the occasion of the conflict, the spark igniting the magazine; if it had not been for thirty years' accumulation of powder, there could have been no explosion. History shows that great events find their genesis in influences which work for a long time separately and silently, but which when brought together by some comparatively minor factor, are powerful in their union to produce results of the utmost magnitude. So it was in the case of the war that broke out in 1914."—C. Seymour, *Diplomatic background of the war, 1870-1914*, pp. 1-2.

I. INDIRECT CAUSES OF THE WAR

(a) Development of the German empire.—"To comprehend . . . the influences which by their combination resulted in the titanic conflict, a survey of the previous forty-five years of diplomacy is essential. Even the most superficial consideration of the generation that followed the Franco-Prussian War, leads irresistibly to the conclusion that the factor of vital significance during this period was the development of the new German Empire. . . . Not that German policy was more aggressive or more nationally selfish than that of the other states; but that simply by her entrance into the circle of great nations and by her extraordinary growth, new elements were introduced into the diplomatic situation, which were destined to result inevitably in conflict. The other states were simply passive, in the sense that they pursued their policy along much the same lines as those followed previous to 1871. Germany was the active agent. By defeating France and forcing upon her a humiliating peace in 1871, Germany attained her political unity and at once secured a position of unquestioned weight in the councils of the great Powers. A decade later, she organized the Triple Alliance, which guaranteed the support of Austria and Italy and soon assured to her a preponderant rôle in European diplomacy; by means of this coalition of the three states of central Europe and despite the Dual Alliance of France and Russia which was formed in 1891, Germany practically controlled the Continent from 1882 to the end of the century. [See also TRIPLE ALLIANCE.] This position of primacy she utilized skillfully to secure a period of uninterrupted peace on the Continent, which gave her the necessary opportunity for organizing her imperial political institutions and developing the industrial

and commercial activities essential to the economic life of the nation. With increasing intensity, the Germans created new industries, built up their mercantile marine, opened up new markets, laid down vessels of war, dreamed of colonies. And as a result partly of economic necessity and partly of a moral transformation that came over the Empire, German policy began to concern itself not merely with European matters, but with everything that went on over all the globe. It was the inauguration of Germany's 'World Policy.' [See also GERMANY: 1890-1914: Alteration of foreign policy.] It was inevitable that the policy of the other states should be affected by the successful growth of Germany, and when they recognized its true significance, a new period opened in the history of European diplomacy. The more far-sighted in France and Great Britain perceived with inexorable lucidity that Germany's new policy must necessarily threaten the position of their own countries. In the face of the common danger they agreed to put an end to their traditional enmity and, together with Russia, to form a tentative combination, which was designed merely to preserve the balance of power threatened by the growth and ambitions of Germany. The latter Power, disquieted by this apparent barricade to the realization of her hopes and in order to reinforce her prestige, adopted a policy of bluster, which was at times successful, but which culminated in welding the loose understanding between the three Powers into a comparatively solid force of opposition. Under such conditions there arose a diplomatic conflict scarcely less bitter than the war which was to succeed it. On the one side stood the Entente Powers, unalterably convinced that the development of the Germany world policy spelled their ultimate or their immediate ruin; on the other, Germany, equally determined in the belief that failure to win for herself a position in world affairs comparable to her influence in European matters, meant economic and national disaster. Between such opposite poles there could be no compromise. With each successive crisis the tension increased. Finally, in the summer of 1914, the strain suddenly exerted upon the thread of fate proved too severe and it snapped. If, as seems obvious, the development of Germany—military, naval, economic, national—was the essential leit-motif of the international drama which was to have such a tremendous dénouement, we ought to remind ourselves briefly of the circumstances under which united Germany came into being. The foundation of the German Empire in 1871 was, perhaps, the greatest political fact of the nineteenth century. Both because of the immediate effects of the process of unification and because of the ultimate consequences, which were not at once revealed, any survey of recent diplomatic history must go back to the great triumph of Prussia and Bismarck in 1871. Previous to that date, Germany as a political state was non-existent. The hundred and more kingdoms, principalities, duchies and cities which were loosely bound together in the German Federation, formed something more than a geographical expression, for they were sentimentally united by language . . . but they formed nothing like a nation in the po-

litical sense. From disunion comes weakness, and all through the seventeenth and eighteenth centuries Germany was the prey of Europe. Although the two chief German states, Austria and Prussia, were reckoned as great Powers, their mutual jealousy had on more than one occasion left Germany impotent before the attack of a powerful foe on the east and on the west."—*Ibid.*, pp. 2-5.

1. A UNITED NATION.—"For centuries the dream of a politically united nation had filled the minds of Germans. . . . But whenever a definite attempt was made to transform the vision into fact, the mutual hatred of the warring German states proved disastrous and the dream of union was never realized. The forces of disintegration always triumphed over those of consolidation. With the fall of Napoleon, it seemed for a moment as though the hope of unification might be fulfilled. The burst of patriotism which informed the war of liberation against the French Emperor was enforced by the conviction that the national aspiration was about to be satisfied; the youths who pressed on from Leipsic, driving the French across the Rhine, fought the more fiercely in the belief that they were fighting for a united Fatherland. . . . But the hopes of the peoples were deceived by the princes. The popular enthusiasm for national unity based upon liberalism was not in accord with the designs of the diplomats and sovereigns who planned the map of Europe in 1815, and Germany was left disunited. A generation later, in 1848, the German Liberals made another effort to attain national unity. For the moment the reactionary Austrian Government was paralyzed by a revolution which spread through all the Hapsburg possessions; the King of Prussia was intimidated by the Berlin mob; and the Liberals, meeting at Frankfort, had free hand. But their attempt was again frustrated by the opposition of the princes. Austria, which soon recovered her control and stamped out revolution, refused to sanction a centralized Germany founded upon liberal principles. And the King of Prussia would not take the imperial crown from the hands of the people, 'picked up out of the mud,' as he said; he would reign as emperor only by the grace of God and at the invitation of his fellow princes. The failure of the German Liberals in 1848 was succeeded by the far different method of Bismarck, which ultimately proved successful, although the cost was great. . . . In the mind of Bismarck, the sole means of union was to be found in the Prussian King and army. Austria, the great stumbling-block to unity, must be driven out of Germany by war; the other German states must be compelled by force to accept union under the Prussian domination. With the strongest army in Europe as his instrument, Bismarck carried this policy into effect by means of three wars: the war of 1864 with Denmark, of 1866 with Austria, and of 1870 with France. . . . A quarrel that sprang up in 1863 between the King of Denmark and the German states, over the Duchies of Schleswig and Holstein, presented the opportunity he desired. Persuading Austria to act with Prussia, Bismarck brought on a war with Denmark in 1864, in which the smaller power was naturally overwhelmed. Denmark surrendered the two duchies to the rulers of Austria and Prussia. [See also GERMANY: 1861-1866.] Realizing that so long as Austria remained a member of the German Confederation, Prussia could not hope to unify Germany under her own control, Bismarck did not seek to prevent the quarrel that soon developed over the disposi-

tion of Schleswig and Holstein. In both his military and diplomatic arrangements he was thoroughly prepared for the struggle with Austria that was to decide the hegemony of Germany. The Prussian army had been brought to the highest degree of efficiency by the Minister of War, Roon, and was led by that master of strategy, Moltke. Bismarck had received from Napoleon III a guarantee of benevolent neutrality, in return for vague promises of compensation for France along the Rhine. He obtained the active assistance of Italy in his attack upon Austria by promising that Italy should win the province of Venetia. The war with Austria, which broke forth in 1866 [see GERMANY: 1866], was brief and decisive; it completely fulfilled the hopes of Bismarck. Austria, defeated in a seven weeks' campaign and with her main army crushed at Sadowa, agreed to withdraw from the German Confederation, and allow Prussia to organize a centralized union of the North German states under Prussian domination. Hanover and some five smaller states were annexed to Prussia outright, despite their protests. It was the first step towards national unity; the new North German Federation was solidly constituted and led by Prussia formed a powerful political entity. But it was incomplete. There still remained the states of South Germany, Baden, Bavaria, and Wurtemberg, who were jealous of Prussia, resentful of the position of mastery that she was securing, and who appeared determined on remaining aloof. Bismarck perceived that to bring them into the union a third war would be necessary, preferably directed against France, the national enemy of Germany; a war in which the states of both North and South Germany should fight together side by side. By a series of diplomatic manœuvres, which force our admiration if not our approval, and favored by the rash and bellicose attitude of the French Government, Bismarck precipitated the Franco-German War in 1870. With equal skill he saw to it that the struggle was regarded as a national and not merely a Prussian quarrel, and that South Germany stood by the North German Federation. The entire country was a unit, and the sentiment of national consciousness aroused by battling against a common foe was enforced by the common victory. The brave, but ill-equipped and miserably officered French armies proved totally incapable of coping with the Germans, who were splendidly organized and directed by the genius of Moltke. Overwhelmed at Sedan in September, 1870, the French Emperor surrendered; four months later Paris capitulated, and the Provisional Government of France accepted the German terms. In order that France might be stripped of future powers of offence and defence, Alsace-Lorraine was taken from her, and she was forced to pay an indemnity of five billion francs (Treaty of Frankfort). [See also GERMANY: 1870 (September-December).] Through this national victory over France, Bismarck's hope of persuading the South German states to enter the union was realized. While the German guns were still thundering outside the walls of Paris, at Versailles, in the Hall of Mirrors, painted with all the scenes of the triumphs of Louis XIV, the King of Prussia was proclaimed German Emperor and accepted by the rulers of all the German states. A consolidated unified Germany, in which the principle of centralization triumphed over all factors of disunion, became a definite fact."—*Ibid.*, pp. 5-9.

2. NEW POLITICAL STATE.—"Thus was born in Europe a new political state, whose entrance upon

the international stage was destined to have the most far-reaching consequences. The whole set of international conditions which rested upon the division of Germany disappeared. France was humiliated and her material power broken, at least for the moment. The creation of united Germany brought with it the completion of Italian unity, for upon the withdrawal of the French troops, which had been stationed at Rome to protect the Pope, Victor Emmanuel was able to make of Rome the capital of his kingdom. German unification also reopened the Near Eastern Question, for Bismarck, in order to win the benevolent neutrality of Russia in 1870, had agreed to her violation of the neutrality of the Black Sea, which had been guaranteed by the Treaty of Paris in 1856; Russia could once more send her warships down to the Bosphorus and again threaten Constantinople. More important than the immediate political results were the moral effects of the methods employed by Bismarck in the unification of Germany. Instead of coming through the application of liberal and nationalistic principles, as the idealists of 1815 and 1848 had hoped, it was consummated in direct contravention to those principles. It was the product of force not unadulterated with trickery. . . . The effect upon Germany was inevitable. Having witnessed the failure of the liberal and the success of the Bismarckian method, the German people 'conceived thereby a faith in force, a veneration of power and might that has directed in large part the subsequent course of German life and history.' The material prosperity that followed upon the military and political success of Bismarck only enhanced their belief that 'iron is gold.' The world did not realize at once the full significance of the Prussian victory and the acceptance of Prussian methods by Germany; and the ultimate consequences of Prussian domination in Germany were not completely manifested until the twentieth century. For, after securing the unification of Germany, Bismarck was careful to allay the fears caused by his methods and extraordinary success. During the twenty years that followed the birth of the German Empire, he made use of quite different weapons than those by which he had carried out his earlier policy. War and brute force had served their turn; what he desired after the war with France was a period of uninterrupted peace in which he might consolidate the Empire and foster its economic development. Above all he was anxious to preserve the new diplomatic prestige that Germany had won on the Continent of Europe. The study of how he worked towards these ends is essential to an understanding of contemporary international relations."—*Ibid.*, pp. 9-11.

(b) *Italy and Austria*.—1. *LONG-STANDING QUARRELS*.—Although at the outbreak of the World War Italy and Austria were partners in the Triple Alliance, there still existed an old-standing feud between the two countries which contained a variety of factors, political, ethnological, geographical, strategic and economic. "Austria came out of the Congress of Vienna in 1815, mistress of Lombardy, and of the Veneto, of the Trentino, of Julian Venetia and of Dalmatia, all provinces which by . . . right of nationality belong to United Italy. [See AUSTRIA: 1815-1846.] Besides this actual territorial domination in Italy, she had also dukelings and a duchess of her own imperial house upon the petty thrones of Modena, Tuscany and Parma; and by intrigue and the encouragement of the elements of disorder in the various states of the peninsula she had managed

to conclude secret treaties with their separate intimidated governments. [In 1849 Palmerston had declared that "Austria never possessed Italy as part of her Empire, but has always held it as conquered territory."] In fact she may be said to have been effectively in control of the destinies of all Italy, throughout whose extent she was served by a widely extended and intricate system of espionage. . . . The consolidation of northern Italy from the Ticino to the Julian Alps under the dominion of Austria, in 1814 and 1815 [see ITALY: 1814-1815], and the years which followed, was characterized by three cardinal enormities of misgovernment: the first was the supplanting of all Italian civil and military officials, from the clerk and corporal to the judge and general, by Austrians almost all of whom were unacquainted with the language, and ignorant of the habits of the country, —by 1817 two Italians only remained in the higher departments of the Lombard government; the second, the levying of crushing taxes—in 1817 landed proprietors paid about 37 per cent of their annual produce in direct taxes; the third, the expenditure of a large part of the revenue extorted from Italy, . . . as far as possible in, and for the benefit of, the German and other provinces of the Empire—during the Austrian domination in the Lombardo-Veneto from 1814 to 1859, government expenditure for these provinces amounted to only about fifty per cent of the revenue collected there; the remaining fifty per cent was carried out of the country and expended elsewhere in the Empire, while the Italian provinces received no benefit in return. . . . Industries in the German and other provinces were also favoured to the detriment of those in the Italian provinces—for example, the very armies by which Austrian domination was maintained in Italy, were furnished with supplies purchased whenever practicable, though necessarily at a much greater expense, in the German provinces. Venice was the city to suffer most from the ruinous effects of Austrian misrule. In 1797 it numbered 137,240 inhabitants, including those of Murano, Burano and Malamocco. In 1824 its population reckoned on the same basis had decreased to 114,000."—H. N. Gay, *Introduction* (M. Alberti et al., *Italy's great war and her national aspirations*, pp. 16, 18).

2. *GERMANIZATION OF ITALY*.—"The purpose and end of Austrian methods of administration and government in the Lombardo-Veneto may be summed up in one word, *Germanization*. The term occurs early in Austrian official despatches and the vital error of the policy which it defined was quickly recognized by the more able of the Austrian governors. The predatory fiscal system imposed . . . and the general misery of the population were in themselves sufficient to account for the grave discontent and the strong aversion with which the Austrian was regarded from the outset in Italy, but . . . the fundamental error which excluded all possibility of conciliation between the government and the governed and which bred an ever increasing hatred of the oppressor for half a century, was the Austrian policy of *Germanization*. . . . The population of the Italian provinces which were subjected to the Austrian yoke by the Treaty of Vienna for nearly a half-century numbered about five millions. The population of the other parts of the Austrian Empire numbered about thirty millions. The odds therefore, in view of the numerical inferiority of the Italians, were overwhelmingly against the success of any revolution undertaken for the libera-

tion of the Italian provinces from foreign domination. Furthermore, Austria kept an army of occupation in Italy of such strength as to make still more evident the inutility of any efforts at Italian revindication, unless accompanied by assistance from outside. . . . Everywhere in Italy, however, the result of the Austrian policy was the same—to augment the ranks of the liberals and to quicken their hatred of the foreign oppressor and of the autocrat. Austria had believed that she would be able to completely eradicate secret societies from the peninsula, but when she had done her utmost, she found that she had only consolidated national sentiment, and that the Italian nation had become little less than one vast secret society, sworn to resist all attempts at *Germanization*, and at the first opportunity to drive her back beyond the Alps. . . . The first great political conflict in Europe which seemed to offer a chance of success for a simultaneous national rising against Austria in Italy, was the revolutionary movement which swept over the continent in 1848. Violent outbreaks against the government in Hungary and even in Vienna itself, compromised the very existence of the Empire. Milan, the headquarters of Austrian domination in the Lombardo-Veneto, was the first Italian city to seize the opportunity and to rise against 'the Germans.' The prohibition against the private possession of fire-arms had long been in force, and in consequence the Milan insurgents could command but six hundred muskets and shot-guns with which to oppose the Austrian garrison of twelve thousand troops, fully equipped, well furnished with artillery and commanded by Austria's greatest soldier, Field-Marshal Radetzky. But such was the audacity and exasperation of the citizens after decades of suffering and humiliation that after five days of ferocious fighting at the barricades Radetzky withdrew his troops from the heroic city and fell back upon the fortresses of the Quadrilateral. The epic struggle is known in history as the Five Glorious Days of Milan. . . . But the hour of Italy's final liberation had not yet sounded. Sectional jealousies prevented the different parts of the country from working together as a whole; party hatred ran high and the patriots were divided. . . . there were unitarian monarchists, federalists and republicans. The failure of the revolutions in Vienna and in Hungary left Austria free to pour her armies into Italy, and her domination there was soon restored with blood and iron."—H. N. Gay, *Introduction* (M. Alberti et al., *Italy's great war and her national aspirations*, pp. 22-25, 29-32).—See also ITALY: 1848-1849.

3. PUNISHMENT FOR POLITICAL OFFENSES.—The crushing of the revolution of 1848, in Italy was followed by stern reprisals and cruel punishments. "From August 6, 1848 to August 9, 1849 the execution of 961 sentences of capital punishment in the Lombardo-Veneto were reported in the official journals of Austria. . . . For the most trivial offences . . . men, women and children were condemned to be flogged—for patriotic songs, for conversations hostile to the government, for applauding, for hissing. . . . *L'Italia del Popolo* of Lausanne estimated the total number of those condemned for political crimes in the Lombardo-Veneto in two years, April 1849 to April 1851, at over 4,000. But the crowning infamy of Austrian domination in Italy was the shameful trial of the martyrs of Belfiore. One hundred and twenty-seven arrests were effected between July 1851 and the end of 1852, the victims being charged with complicity in a conspiracy which centered in

Mantova; of these, ten found death on the gallows and forty received milder sentences. . . . The war of 1859 freed Lombardy [see ITALY: 1856-1859], and the war of 1866 liberated the greater part of the Veneto, but the premature peace of 1866 . . . left several Italian provinces still under the despotic rule of Austria. [See ITALY: 1862-1866.] . . . The martyrdom of the courageous patriots of Belfiore . . . [was] followed by the equally brutal martyrdom of equally noble and devoted sons of Italy, in Trieste, Trent and other unredeemed Italian territory [—Italia Irredenta. These provinces, Italy stood ready to bargain for or win when the occasion offered.]"—H. N. Gay, *Introduction* (M. Alberti et al., *Italy's great war and her national aspirations*, pp. 33-35).

(c) Triple Alliance and Triple Entente.—The two most powerful international factors underlying the political history of the World War were undoubtedly the Triple Alliance and the so-called Triple Entente. A more detailed account of these groupings of European states will be found elsewhere. (See BALANCE OF POWER; ENTENTE CORDIALE; TRIPLE ALLIANCE.) They will be discussed here only in their relation to the war, the influence of these combinations upon the complex diplomatic circumstances preceding the war, and the subsequent alignment of the principal belligerents for the conflict. When the Congress of Vienna (1814-1815) was held, Europe was war-weary and anxious for any agreement whereby the nations would be forced to keep the peace. In November, 1815, therefore, the late Allies against Napoleon—England, Prussia, Russia and Austria—concluded a quadruple alliance pledging themselves to the preservation of "public peace, the tranquillity of states, the inviolability of possessions, and the faith of treaties." Since that time during the nineteenth century, various congresses of the powers had been held, all with a view to maintaining peace. These gatherings, held as occasions arose during international crises, came to be known as the "Concert of Europe." Owing to conflicting interests and policies, however, these "concerts" were rarely accompanied by harmony. The suppression of insurrections in different countries was regarded as one of the functions of the concert. Great Britain disagreed with this view and dropped out of the concert. Yet there were occasions when matters of general European interest drove the powers into some agreement in order to prevent war among themselves. Under the dominance of Metternich the nascent spirit of nationalism and liberalism had been disregarded; the rights of autocracy were to be maintained at all costs. In the end nationalism, allied with liberalism, triumphed over internationalism in partnership with autocracy. That the statesmen of Europe failed to establish a successful combination to ensure the preservation of peace led to the formation of diplomatic groups with the sole object of maintaining the balance of power between their countries. "Early in the twentieth century [we find] the great European powers . . . aligned into two rival groups. . . . [After the Franco-Prussian war Bismarck realized that the French feeling of humiliation over the loss of Alsace-Lorraine in 1871 by the Treaty of Frankfurt] would lead France into another war with Germany unless he could continue to keep the odds against her. . . . His policy, therefore, was to isolate France and thus deprive her of all hope of success in a war with Germany. To this end he approached Austria and Russia with a view to allying them with Prussia. Since . . . 1866 he had

Maps prepared specially for the **NEW LARNED**
 under direction of the editors and publishers.

maintained a very friendly attitude toward Austria. He had also in 1863 offered the Tsar of Russia aid in putting down the Polish revolt and had thereby won his lasting gratitude. . . . [In 1872] the Three Emperors' League [*Dreikaiserbund*] was the result. The success and permanence of this league was endangered by the rivalry of Austria and Russia in the Balkans. This rivalry became acute at the time of the Berlin Congress (1878). [See BERLIN, CONGRESS OF.] . . . The decision of the powers was a diplomatic victory for Austria-Hungary and a defeat for Russia. Bismarck supported Austria-Hungary's demands in the congress and thereby strengthened the cordial feeling existing between his country and Austria-Hungary but at the same time incurred the ill will of Russia. The Three Emperors' League now fell into abeyance, and though Russia did not formally withdraw at this time, relations between Germany and Russia were strained for a few years. Bismarck, feeling that he would have now to count on the possible enmity rather than on the friendship of Russia, decided to draw more closely to Austria-Hungary. In 1879 Germany and Austria formed a defensive alliance against Russia. . . . Italy became a party to the alliance in 1882. To take this step Italy had to suspend a deep-seated historic enmity toward Austria, for this power had frequently thwarted efforts on the part of the Italian people to liberate and unify the peninsula. . . . One reason for her taking this unnatural step was that she was ambitious to play the rôle of a great power and was angered at France for having taken Tunis (1881), because she had picked out this region as a suitable field for Italian occupation. The league of the three powers was known as the Triple Alliance. It was made for a definite period and . . . [was] renewed from time to time. Italy did not formally withdraw from it until May, 1915.—O. P. Chitwood, *Immediate causes of the Great War*, pp. 7-10.—“Let it be emphasized first of all that the Triple Alliance is by no means to be regarded as supplanting the Austro-Hungarian-German treaty of October 7, 1879. On the contrary, it did not impair the validity of that treaty in any way. Independently of the treaty which the Central Powers concluded with Italy in 1882 (a treaty four times renewed), the Austro-Hungarian-German treaty, from October 1879, to the outbreak of the World War, constituted the basis of action of the Central Powers in all questions of foreign policy, most especially as concerns their relation to Russia. For in none of the treaties of the Triple Alliance is Russia mentioned as that power, upon whose single and unprovoked attack upon one of the allies the *casus foederis* was to be considered established for the other two. The duty of giving aid in this case devolved exclusively upon Germany and Austria-Hungary, to the extent provided for in the treaty of October, 1879.”—A. F. Pribram, *Secret treaties of Austria-Hungary, 1879-1914* (tr. by D. P. Myers and J. D. D'Arcy Paul), v. 1, p. 6.—In July 1886 Italy requested the prolongation of the Triple Alliance, at a time when changes which had taken place in European affairs “gave the Italians reason to believe that they could now enter into negotiations under more favorable circumstances. The Bulgarian affair, with the annexation of Eastern Rumania to Bulgaria in September, 1885, had destroyed the passable relations which, thanks to the mediatory policy of Bismarck, had existed up to that time between the governments of Vienna and St. Petersburg. The events following this—

the Serbo-Bulgarian war, Austria's intervention in favor of the vanquished Serbian king, and the firm stand taken by the government of Vienna against that predominance of Russian influence in the Balkans which had manifested itself in the enforced abdication of Alexander of Battenberg—aggravated the struggle of the two powers for mastery in the Balkans. The understanding existing between them threatened to vanish; the peril of an Austro-Russian war loomed larger. Taking these circumstances into consideration, the value to Austria-Hungary of an alliance with Italy, stronger as she now was financially and in military resources, had decidedly increased—all the more so because it must have been realized in Vienna that Bismarck was by no means inclined to support Austria-Hungary's Balkan policy through thick and thin. On the contrary, it was known that he intended to demand considerable sacrifices of his ally for the purpose of blocking the union of the French military party, at that time making great headway under Boulanger's leadership, with that of Russia. . . . The renewal of the Triple Alliance in February, 1887, was accomplished only after prolonged negotiations, and was dearly paid for by the Central Powers; while the mutual distrust between Italy and Austria-Hungary remained undisputed. In fact, the points of friction had multiplied through Italy's freshly acquired right to a decisive voice in the Balkan questions. . . . The Triple Alliance [however] became a bulwark against French projects of revenge as well as against Russia's efforts to extend her sphere of influence in the Balkans, both of which perils assumed more threatening proportions during 1887, and, toward the end of that year and the beginning of 1888, brought Europe to the verge of war. The structure erected by Bismarck's masterly skill for the safeguarding of peace had as its core the alliance between Germany, Austria-Hungary, and Italy, around which numerous other powers were grouped as more or less stalwart buttresses.”—*Ibid.*, v. 2, pp. 46-47, 82.—“In 1883 Roumania attached herself to the group of powers which had recently founded the Triple Alliance. The agreement effecting this was never submitted to the Roumanian parliament, probably because its ratification might have been difficult to procure. Nevertheless it was constantly renewed and was the underlying fact in the nation's foreign policy. For thirty years Roumania considered herself and was considered a part of the German system of alliances which dominated Europe. The practical results of this secret and yet well-known connection were that Austro-German finance and commerce were able to secure a control in Roumania which was sometimes very irksome to the latter.”—C. D. Hazen, *Europe since 1815*, v. 2, p. 860.—Bismarck had thus succeeded in his policy of isolating France. But this period of isolation ended in 1891, when France and Russia formed the Dual Alliance. Negotiations, which included the floating of large Russian loans in France, were carried on throughout the remainder of the year 1891, in 1891 and 1892, and finally on Dec. 31, 1893 a military convention was signed between two countries. “The document signed by Giers and the Marquis of Montebello on December 31 was revealed by the French Government in 1918, when the Tsardom was overthrown and the alliance at an end. France and Russia being animated by an equal desire to maintain peace, and having no other aim than to be ready for a defensive war, provoked by an attack of the forces of the Triple Alliance against one or other of them,

have agreed on the following: 1. If France is attacked by Germany, or by Italy supported by Germany, Russia will employ all her forces to attack Germany. If Russia is attacked by Germany, or by Austria supported by Germany, France will employ all her forces to combat Germany. 2. In the event of the forces of the Triple Alliance, or of any member of it, mobilizing, France and Russia, at the first news and without the need of preliminary accord, will immediately and simultaneously mobilize the whole of their forces . . . to combat Germany. 3. The forces to be employed against Germany will be, on the part of France, 1,300,000 men, on the part of Russia 7 to 800,000. These forces will engage with all their might, so that Germany has to fight both on the East and West. 4. The staffs of the armies will co-operate at all times in preparing and facilitating the execution of the measures above contemplated. They will communicate in time of peace all the information relative to the armies of the Triple Alliance which comes to their knowledge. The ways and means of corresponding in time of war will be studied. 5. France and Russia will not conclude peace separately. 6. The present convention will have the same duration as the Triple Alliance. 7. All the clauses will be kept rigorously secret.' Though nobody doubted that an alliance had been concluded, the momentous secret was not officially revealed to the world till January, 1895."—G. P. Gooch, *History of modern Europe, 1870-1919*, pp. 183-184.

"In June, 1914, the French ambassador at Berlin told . . . [the] secretary of State, that France's obligations to Russia were as binding as those of Germany to Austria. The formation of the Triple Alliance had divided Europe into two hostile camps. Great Britain for a while stood aside in isolation, maintaining a policy of neutrality toward both groups. She thus had the power of tipping the scales in favor of the side to which she might throw her support. There were causes of friction between Great Britain and members of both groups, and she might at any time give up her position of neutrality and identify herself with one side or the other. The friendship that Bismarck had cultivated between Germany and Great Britain began to wane in the 'nineties. The Conservative party, which ruled England from 1895 to 1905, favored imperialism and a strong foreign policy. In the meantime, Germany too had entered upon a policy of industrial development and colonial expansion. As a result of these imperialistic ambitions a feeling arose in both countries that the interests of Germany conflicted with those of Britain. . . . It was thought by many Englishmen that Germany had 'an ambition to deprive their country of her maritime supremacy and to rule the world.' On the other hand, the charge was made in Germany that England was trying to isolate her and thus prevent her from playing an important part in world politics. These unsatisfactory relations were aggravated by Germany's attitude toward the Boer struggle with the British (1899-1902). 'The British were especially aroused by the more or less open favor and sympathy which the emperor and official classes of Germany showed to the Boers.' In addition to this general feeling of distrust, there were specific instances of friction between these two great powers. One important controversy was that over the Bagdad Railroad, the construction of which was in line with Germany's ambition to extend her influence over Turkey. [See BAGDAD RAILWAY.] . . . Germany's avowed purpose was economic, the desire to develop the rich natural

resources of Mesopotamia to the advantage of both this neglected district and Germany. It is more than likely, however, that her aims were political as well as economic. If her plan were realized, she would have convenient bases for propaganda against Egypt and India in time of peace and of attack in time of war. [See GERMANY: 1912: Balkan and Asia Minor interests.] It is no wonder, therefore, that British public opinion took affright and British statesmanship determined to thwart the scheme. . . . The result was that Great Britain determined to shut off the road from the Persian Gulf. The only suitable terminus for the road was in the little principality of Koweit, the ruler of which was virtually independent of Turkey. In 1899 England signed a secret treaty with the Sheik of Koweit, pledging him protection on condition that he would not dispose of any of his territory without the consent of the English Government. Great Britain also signed an agreement with Russia in 1907 whereby protectorates over southern and northern Persia were established by these two countries respectively. In this way the Bagdad Railroad was shut off not only from the Persian Gulf but also from Central Asia. The result was very unfortunate for the relations between Germany and England. The German people were aroused to renewed bitterness against Great Britain which country, they considered, had prevented the success of an important business venture purely out of jealousy and ill will. Germany, however, persisted in her plan and a few years later succeeded in getting the consent of both Russia and Great Britain to the completion of the railroad. Russia agreed to give up her opposition by an understanding arrived at in 1911, and Great Britain by one that had been negotiated, though not consummated, just prior to the outbreak of the war in 1914. Thus just on the eve of the Great War, England and Germany had virtually settled amicably one important cause of difference between them."—O. P. Chitwood, *Immediate causes of the Great War*, pp. 11-14.—See also EUROPE: Modern: Conflicting currents before World War.

"The main cause of Anglo-German tension in the years following the Boer War was neither Venezuela, nor the Bagdad Railway, nor Canadian Preference, nor commercial rivalry [though all contributed], but the resolve of Germany to build a formidable Fleet. British anger at the Kruger telegram of 1896, declares Reventlow, converted Germany to the idea of a Fleet. In 1898, a small programme of construction to be carried out by 1904, was accepted by the *Reichstag*, and the German Navy League was founded. Little interest, however, was aroused till the Boer War, when the Kaiser utilized the excitement created by the stoppage of German vessels on the east coast of Africa to secure acceptance of an enlarged programme to be completed by 1917. The decision of 1900 brought Germany into what German publicists describe as the danger-zone; and in his political apologia, *Imperial Germany*, Bülow claims credit for careful steering. When Bebel quoted in the *Reichstag* articles by naval officers arguing that the fleet must be strong enough to defeat England, the Chancellor dismissed them as rubbish to which no sensible German paid attention. Even when the programme of 1900 was completed, he pointed out, the German Navy would only stand fourth or fifth on the list; and it harboured no aggressive designs. . . . Official assurances failed to dispel the anxiety of the British Government, which was fostered, not only by the Navy

Law of 1902, but by provocative utterances of the Kaiser, who styled himself Admiral of the Atlantic, and of certain of his subjects. It was owing to the danger anticipated from a new quarter that it was decided in 1903, to construct a first-class naval base at Rosyth; that the Cawdor programme of four battleships annually was sanctioned, and that Sir John Fisher, on his appointment as First Sea Lord in 1904, proceeded drastically to overhaul the distribution and composition of the British Fleet. . . . In 1897, an article in *The Saturday Review* contended that, if Germany could be swept away to-morrow, every Englishman would be the richer. This mischievous nonsense attracted no attention in England; but it was diligently exploited [in Germany] to whip up enthusiasm for a Fleet. In 1904, an article in *The Army and Navy Gazette*, suggesting that Great Britain should veto any further increase of the German warships, was accepted in Germany as the authentic voice of the Admiralty. . . . [A speech by Sir Arthur Lee, Civil Lord of the Admiralty early in 1905 was construed by Germany as an official threat.] The Kaiser complained to the British Ambassador, and large sections of German opinion began to believe that their country was threatened by a sudden attack. The construction of the *Dreadnought* intensified the feeling of danger and impotence."—A. W. Ward and G. P. Gooch, ed., *Cambridge history of British foreign policy, 1783-1919*, v. 3, pp. 302-305.—See also GERMANY: 1898-1914; WAR, PREPARATION FOR: 1909: German side of navy building; WARSHIPS: 1870-1905; 1905-1915.—"The Navy Estimates for 1908-9, providing for only two *Dreadnoughts*, although in March the German programme was enlarged, testified to the conciliatory spirit of the British Cabinet. The promotion of Mr. Asquith to the Premiership in 1908 brought Mr. Lloyd George to the Exchequer, and Mr. Churchill into the Cabinet; and for the next three years those two men led a crusade for social reform and a reduction of armaments. . . . On November 23rd, Lord Roberts delivered a weighty speech in the House of Lords, which succeeded in making compulsory service a living issue. 'Hitherto,' he began, 'I have failed to wake people up to my warnings against a danger that is all too obvious. If you, who ought to realise that our naval supremacy is being disputed, neglect to place this country in such a state of defence as would make even the most powerful nation hesitate to attack it, I cannot help feeling that a terrible awakening may be in store for us at no very distant period. . . . The Navy is not enough. The Territorial Army is too small and too untrained to cope with highly trained troops. . . . There lies in front of us one of the strangest spectacles ever witnessed. Within a few hours' steaming of our coasts, there is a people numbering over sixty millions, our most active rivals in commerce and the greatest military power in the world, adding to an overwhelming military strength a naval force which she is resolutely and rapidly increasing; while we are taking no military precautions in response. [In his speech Lord Roberts asked for a million men.]"—*Ibid.*, pp. 389, 392-393.—"A few days before German pressure at Petrograd ended the Bosnian crisis, British nerves received an unexpected shock. The Navy Law of 1908, reducing the life of capital ships from 25 to 20 years, conformed to the general practice and excited no alarm in Whitehall; but, in the autumn, the Admiralty learned that the German naval programme of 1909-10 was being anticipated. The Admiralty's proposal for meeting the new German Navy Bill was, accordingly, to lay down six *Dreadnoughts* in 1909-10, and a similar number in the two succeeding years. . . . The Estimates were indeed for four, but it was added that the Government 'might find it necessary to make preparations for the rapid construction of four more large armoured ships.' Thus, the Admiralty, in the guise of a compromise, obtained power to build two more than they originally proposed. . . . For the first time, the Estimates were defended by selecting Germany as the standard by which to measure . . . [British] requirements; and British and German *Dreadnoughts* were balanced against each other down the vista of the coming years. . . . [A wave of panic swept over Great Britain from which the navy profited], for six of the eight vessels of our 1909-10 programme were super-*Dreadnoughts*, with 13.5 inch instead of 12 inch guns. This smart stroke delayed the construction of the German vessels that had already been laid down, and, when the dangerpoint of the spring of 1912 was reached, Germany possessed, not the thirteen monsters which Mr. Asquith had foretold as a certainty, but nine. . . . [In a speech made at this time Sir Edward Grey, foreign minister, said:] 'A new situation in this country is created by the German programme, whether it is carried out quickly or slowly. When it is completed, Germany will have a fleet of 33 *Dreadnoughts*—the most powerful the world has ever seen. That imposes on us the necessity, of which we are now at the beginning—except so far as we have *Dreadnoughts* already—of rebuilding the whole of our fleet.' . . . [The accord between Great Britain and France became gradually closer, and in 1912 an exchange of letters took place in which it was agreed that under certain circumstances the British fleet would support the French fleet in defense of the coasts of France. (See below: Diplomatic background: 56.)] The Grey-Cambon formula left the British Government in theory with its hands free; but M. Poincaré's comments show that it understated the intimacy of the relationship which had grown up in eight years of diplomatic cooperation. . . . The freedom of the British Government continued to be solemnly reiterated at intervals by the Prime-Minister and the Foreign Secretary; but, from 1911 onwards, every Frenchman regarded Great Britain as bound in honour to come to the assistance of France if attacked by Germany. The problem was further complicated by the fact that France was allied to Russia, whom she was bound to aid if attacked. It was not deemed necessary to embody . . . [British] relations to the great Slavonic Power in a written formula; yet the action of Russia might concern the fortunes of Great Britain very closely, since an attack on Russia would involve an attack on France. . . . [Great Britain was] thus conditionally involved in the quarrels and ambitions of a distant Power over whose policy . . . [she] exercised no control. . . . In April 1912, . . . discussions between British and Belgian experts [which had been commenced] in 1906, were revived. As a European War appeared to become more probable, the part which Belgium and the Scheldt might be forced to play became an object of increasing interest to her neighbors. . . . No convention [however] was concluded or even discussed. Indeed, when General Jungbluth was invited to attend the British manœuvres in 1912, the invitation was declined in order to afford no foundation for the rumour of an *entente*. But though no common action was taken, both coun-

try's proposal for meeting the new German Navy Bill was, accordingly, to lay down six *Dreadnoughts* in 1909-10, and a similar number in the two succeeding years. . . . The Estimates were indeed for four, but it was added that the Government 'might find it necessary to make preparations for the rapid construction of four more large armoured ships.' Thus, the Admiralty, in the guise of a compromise, obtained power to build two more than they originally proposed. . . . Indeed, when General Jungbluth was invited to attend the British manœuvres in 1912, the invitation was declined in order to afford no foundation for the rumour of an *entente*. But though no common action was taken, both coun-

tries proceeded to prepare for the expected storm. Belgium introduced compulsory service in 1913, and elaborate surveys of Belgian roads and railways were undertaken by the British War Office."—*Ibid.*, pp. 430-431, 468-470.

(d) **The Balkans.**—1. **THE BALKANS TO 1878.**—"Most wars finally turn upon a single incident which may be the culmination of a long and acrid controversy, but is accepted as the reason for hostilities. In 1861 everybody knew that the war actually began with the firing on Fort Sumter. In 1870 the last official reason was the insistence, or supposed insistence, of the Emperor of the French upon a pledge from the King of Prussia that he would not in future allow any Hohenzollern to occupy the throne of Spain. . . . For reasons hereafter given, August 1, 1914, marks the extinction of the last possibility of peace and may be considered the date of the beginning of the war. . . . Eight nations were placing their troops in the field before any one of them could give a solid and substantial reason for the war, other than that they were compelled to defend themselves against a wicked and unprovoked attack. That the war began in eastern Europe was natural because . . . the tension in that part of the world is greater, and on that battleground of the ages live a number of race groups of individuals whose fate is settled for them by members of a different race unacceptable to them. Whatever might have happened next year or in the next decade, it is clear that the prime reason for the war of 1914 is to be found in the abnormal relations of the Balkans to the rest of the European powers. The tale of the present [1914] condition of the Balkans may be taken up in the year 1876. . . . In that year Turkey still occupied almost all the territory north to the Danube and Save Rivers, except for Greece, then confined to the southern peninsula; and the plucky little country of Montenegro, which was the only part of the Balkans that never bowed the knee to the Turks. The trouble was made public by certain journalists who discovered that the Turks were sending certain irregular troops called *Bashi Bazouks* to harry, strip, and torture the Bulgarians. With great difficulty these journalists got access to the English newspapers; that aroused Mr. Gladstone. . . . [then in opposition, against Lord Beaconsfield, the premier, for defending Turkey]. When in 1877 Russian and Rumanian troops marched southward, freeing Bulgaria, England held off. . . . [But in 1878] the Conservatives . . . took the side of Turkey and for their good-nature received the Island of Cyprus. Austria, which was on the flank of Russia, refrained from using the military opportunity of cutting the Russian communications and held off while the Russians penetrated to San Stephano [Stefano], within sight of the imperial city of Constantinople. Then England took affront and in the Congress of Berlin compelled the Russians to draw back beyond the Danube. [See also BULGARIA: 1875-1878; 1878; TURKEY: 1877-1878; 1878; EUROPE: Modern: Wars of the great powers.] Austria was at last rewarded with the two provinces of Bosnia and Herzegovina, which completed a compact block of territory lying between the Adriatic Sea and the Turkish province of Macedonia. [See BOSNIA-HERZEGOVINA: 1878.] On the other side the Bulgarians were allowed to set up a little principality like that of the Servians. The purpose of the Treaty of Berlin, signed July 13, 1878 [see BERLIN, CONGRESS OF], was to give Austria close contact with the Balkan states and at the same time to prepare the Christ-

ian inhabitants of the rest of the Balkans for some sort of governments of their own. Russia was left shut out from the Danube by the buffer state of Rumania, which looks on itself as non-Slav. Anyone can see that this settlement was crude and temporary, yet when Disraeli and Salisbury returned to London from the Congress they rode through the streets in triumph and Disraeli made his brilliant and theatrical remark, 'I bring you peace with honor.' The only wonder is that this settlement endured for thirty-six years."—A. B. Hart, *War in Europe*, pp. 104-107.

2. **BALKAN TROUBLES FROM 1878 TO 1912.**—"It was part of a general disposition not to look Oriental things squarely in the face that the Treaty of 1878 still kept up the fiction of Turkish supremacy over Bulgaria and also over Bosnia and Herzegovina. Bulgaria was 'constituted an Autonomous and tributary Principality under the suzerainty of His Imperial Majesty the Sultan.' . . . Montenegro was held to be independent, as was also Servia. Rumania gave up some territory on the Russian border and received other territory on the delta of the Danube. This treaty left Turkey still the strongest power in the Balkans; and the five little Slav or semi-Slav states, Rumania, Servia, Bulgaria, Montenegro, and Greece, were left to work out their own salvation. Macedonia and Albania continued integral parts of the Turkish Empire. [See also BALKAN STATES: 1878.] The Austrians occupied in Bosnia and Herzegovina a region which had never been theirs, in which the population was Serb, and in which there had been no such things as good order and good government for centuries. . . . It took many years to tranquilize the two provinces in which about a third of the population was intensely Moslem; but the Austrians persevered, built narrow-gauge railroads, stopped the brigandage, encouraged farming and lumbering, and made a handsome little capital out of the old Moslem town of Sarajevo. [See also BOSNIA-HERZEGOVINA: 1878-1908.] . . . Meantime across the border Macedonia was year after year the scene of the merciless forays of the *Comitadjis*. These were professional brigands, armed and aided by committees or associations of Bulgarians or Greeks as the case might be, and their main object was to kill out as many Greek or Bulgarian villages as possible so as to hold as much territory as possible when the break-up came. [See also MACEDONIA: 1870-1912.] The traffic on the River Danube has long been open to all nations, but the Upper Danube runs wholly through [what was then] Austro-Hungarian territory, and the Austrians were the intermediaries between the Balkan Slav powers and the rest of Europe. They were constantly suspected of biding their time till they might safely move down from Bosnia through Macedonia and take possession of Salonica, thus giving them a port on the *Ægean* and a land route in the direction of the Orient. In 1908 the Young Turks revolted and deposed Sultan Abdul Hamid [in 1909]. Their government everywhere relaxed and the Austrians, on October 5 [7], 1908, issued a declaration to the effect that the Emperor had made up his mind . . . ['to extend my sovereign rights to Bosnia and Herzegovina'], promising the people civil rights, freedom of religious belief, and freedom of the press, and a formal constitution. . . . Part of the population considered this action a second and unrighteous conquest, which was intended to remove the last hope of combination with their Serb neighbors in Servia and beyond. [See also BOSNIA-HERZEGOVINA: 1908.]

Servia also took it in very ill part till Austria used such threats that on March 31, 1909, the Servian government formally declared that 'Servia recognizes that the *Fait Accompli* regarding Bosnia had not affected her rights.' . . . Notwithstanding this unwilling promise, the Servians were in trouble with Austria much of the time. The Austrians cruelly hampered their exports of grain, cattle, and timber, which were their only means of livelihood. Belgrade lies [1914], . . . a short cannon shot from the Hungarian border and the Austrian Minister and Consul-General were potent forces in Servian affairs."—A. B. Hart, *War in Europe*, pp. 107-111.

3. BALKAN WARS OF 1912 AND 1913.—"The year 1912 opened with dark clouds on the eastern horizon. The death of Count Aehrenthal, once the stormy petrel of European politics, was regretted; for he had championed the cause of peace since 1909 against the bellicose Chief of the Staff, Conrad von Hötzendorf, and his successor, Count Berchtold, was headstrong and incapable. A Military Convention between Servia and Bulgaria was signed in April, determining the conditions of mutual aid in the event of attack by Turkey, Roumania and Austria, or of an attack on Turkey. A Græco-Bulgarian Military Convention followed in September, and a verbal understanding was reached with Montenegro. In the same month, Austria enquired whether the Great Powers would join in 'recommending to Turkey the adoption of a policy of progressive decentralization, which would secure to the Christian nationalities their legitimate guarantees, and in urging the Balkan States to await peacefully the results of their policy.' The Powers approved; but Berchtold seemed in no hurry to follow up his suggestion, and on October 8th Montenegro gave the signal for the Balkan War by attacking her ancient foe."—A. W. Ward and G. P. Gooch, ed., *Cambridge history of British foreign policy, 1783-1919*, v. 3, p. 470.—"Turkey had gone through several stages of revolution, and, for the moment, seemed impotent. Venizelos, the Greek Premier . . . laid the foundation for an understanding between Greece, Servia, and Bulgaria. . . . In October, 1912, war began, and by the next June the Turkish power in Europe, after six hundred years of existence, was smashed. The city of Constantinople was too large a prize for any of the allies and remained Turkish, with a narrow belt of territory behind it. Otherwise the whole of the Balkans was apportioned by a treaty (practically dictated by the Great Powers) to the five Christian powers, Rumania, Bulgaria, Servia, Montenegro, and Greece, and to the mixed Christian and Moslem people of Albania. At that moment the Balkan alliance was still intact. A quarrel [however] arose as to the portion of Macedonia which should go to Bulgaria. . . . All this time the Austrians were lying along the frontier of Bosnia waiting for the opportunity to step in; and some of the ablest statesmen in the Empire though the time had then come for a step which would in all probability have brought about the two combinations of opposing powers which [in 1914 were] fighting each other. It was clear that if Austria went into the Balkans, Russia would do the same. The event proved that either the Austrians were not ready to take the step, or had not the assurance of support of Germany which was necessary in such a crisis. . . . Nobody will ever know how far Russia caused either of the Balkan wars nor how far Russia recommended moderation to the allies. One thing is certain: there is not and

never has been any evidence that any Balkan power desired or would have accepted incorporation with Russia, or would have failed to fight with all its strength against any arrangement which meant that Russia should establish a protectorate over them."—A. B. Hart, *War in Europe*, pp. 111-113.—See also BALKAN STATES: 1912: First Balkan War, to 1914-1916.

4. HIGH TIDE FOR SERBIA.—"The result of the Balkan War was to give the world a new impression of the national and military strength of the Balkan powers. They easily defeated the Turks, who, to be sure, were disorganized and amazingly unprovided. . . . In the second war, when the Bulgarians expected to repeat their triumph of 1885, the Servian armies man for man, regiment for regiment, division for division, stood day after day and week after week against the Bulgarians. The Servian people were naturally elated; their sovereign . . . [was] a figurehead, the real head of the nation being the Prime Minister Pashitch, a man of large capacity. Servia is a peasant land, most of the farmers owning their own fields; it has almost no city population. Yet it had fought two victorious campaigns and its area and population were nearly doubled as a result of the war. . . . But what the Servians wished was less significant than what the Serbs in Trans-Leithia thought. Naturally the Austro-Hungarian government . . . [had] not been generous in producing proof that its people were losing their loyalty. In case of any break-up the pressure would immediately come upon the Magyars, who, . . . [were] only 10,000,000 in an aggregation of 21,000,000. All the circumstances point to the certainty that the Magyar statesmen informed the German statesmen who were carrying on the monarchy in Vienna that unless something were done, the Trans-Leithian part of the Empire would crack to pieces."—*Ibid.*, pp. 113-115.—See also BALKAN STATES: 1914-1916; BULGARIA: 1912, to 1914; RUMANIA: 1912-1913; SERBIA: 1909-1913; TURKEY: 1914.—"The rapid triumph of the Balkan States raised difficulties for their champions. Sir Edward Grey expressed the hope that the Tchataldja lines would be held, adding that, if the Turks were ejected from their capital, it should be internationalized. His apprehensions, however, were quickly relieved; for the Bulgarian wave had spent its force. A far graver problem was raised by the victories of Servia and by her resolve to secure an outlet on the Adriatic. These possibilities of explosion threw a special responsibility on Great Britain, of which she showed herself fully conscious throughout the Conference of Ambassadors which sat in London from December onwards. The task of its Chairman, Sir Edward Grey, was to prevent Russia and Austria flying at each other's throats. . . . Throughout these agitating controversies, the British and German Governments worked in perfect accord for the preservation of peace. 'Sir Edward,' writes Prince Lichnowsky, who had succeeded Marschall von Bieberstein and speedily learned to admire the character of the Foreign Secretary, 'from the very beginning took up the position that England had no interest in Albania. He merely wished to mediate between the two groups as an "honest broker." He therefore, by no means took sides with the Entente, and his authoritative influence contributed in no small measure to agreement. On all questions we took sides with Austria and Italy, while Sir Edward Grey hardly ever backed the French or Russian claims. . . . Thus with his assistance it was possible to coax King Nicholas out of Scutari. . . . He conducted

the negotiations calmly and tactfully. When a question threatened to become involved, he sketched a formula which was always accepted. His personality inspired equal confidence in all the participants.' A slightly different account is given by Jagow, the German Foreign Minister. 'The credit of an attitude of mediation should not be denied to him. Certainly, he often advised yielding at Petrograd, as we did at Vienna, and found formulas of agreement; but he represented the Entente, because, like us, he neither could nor would abandon his associates. We, like England, played a mediatory part.' . . . The ten months of war had left a profound *malaise*, not only in the Balkans, but also on the broad arena of European politics. The overthrow of Turkey by a League formed under the auspices of the Tsar, and the aggrandisement of his *protégé* Serbia, filled the Central Powers with alarm. The German Army was increased, and a capital levy of 50 millions was devoted to strengthening the frontier fortresses, improving the artillery, and augmenting the gold reserve at Spandau. The German military effort inevitably provoked a French response, and the Three Years' Service, which had been abolished in 1905, was restored. Austria, where Conrad von Hötzendorf had been restored to his position as Chief of the Staff after the death of Aehrenthal, was only restrained from action against Serbia, when Bulgaria attacked her late allies, by the refusal of her own allies to cooperate. That opinion in Russia was no less inflamed than in Germany, Austria and France was proved when, in response to a request from Turkey for a German officer of high rank to reorganise her army, Liman von Sanders was appointed in November, 1913, to command the First Army Corps. Sazonoff telegraphed to Benckendorff that a German Commander of an army corps in the Turkish capital was tantamount to a German garrison on the Bosphorus, and suggested that Great Britain and France should make a joint representation at the Porte and ask for compensations. Sir Edward Grey agreed that a German garrison at Constantinople could not be permitted, and proposed to try to persuade Germany to modify her plan. Meanwhile, he was willing to join France and Russia in asking the Porte if it was really intended to give Liman [von Sanders] command of Turkish troops in the capital.—A. W. Ward and G. P. Gooch, ed., *Cambridge history of British foreign policy, 1783-1919*, v. 3, pp. 471-474.—“While the Liman [von Sanders] crisis was at its height a New Year's article in a Russian military paper expressed the views prevailing among a section of officers. 'We all know we are preparing for a war in the West. Not only the troops but the whole nation must accustom itself to the idea that we arm ourselves for a war of annihilation against the Germans, and the German Empire must be annihilated.' . . . The Liman incident inspired Sazonoff to submit a memorandum to the Tsar 'on the necessity of a comprehensive programme of action, in order to assure for us a satisfactory solution of the question of the Straits in the event of being compelled at no distant period to defend our interests in the Bosphorus and Dardanelles.' The Tsar ordered the question to be discussed by a Crown Council, which met on February 21, 1914. . . . The deliberations of the Council were unknown to the public; but the tension was revealed in a sensational article in the *Kölnische Zeitung* of March 2 from its Petrograd correspondent. 'The Russian danger is not imminent; but in 1917 the army reforms will be

completed and troops are already being massed on her Western frontier. Germany will perhaps be unable to prevent invasion. Russian armaments are enormous and she will turn her arms against Germany. Such a war would be acclaimed by the whole people. In three years, when we negotiate a new commercial treaty, she will perhaps try to provoke foreign complications.' The article, which was believed to have been inspired from Berlin, aroused alarm throughout Europe; and an article in the *Bourse Gazette* of March 13, universally attributed to Sukhomlinoff, the War Minister, increased the excitement. 'Russia wishes for peace but is ready for war. The army is not only large but excellently equipped. Russia has always fought on foreign soil and has always been victorious. Russia is no longer on the defensive, Russia is ready.' On May 14 Jagow uttered a warning in the Reichstag to the Russian Press, while expressing his conviction that the Government remained friendly; and on May 23 exhorted the Press of both countries to remain calm. The appeals were in vain. . . . Russia, like Germany and France, had made feverish efforts since the Balkan wars to increase and improve her armaments; for it was in vain that Witte and Rosen besought the Tsar and their colleagues in the Council of the Empire to drop the forward policy in the Balkans which was leading straight to war. In June, 1913, an increase of recruits was demanded of the Duma, approved by the Tsar in August, and begun in November, the scheme to be completed in 1917. In the spring of 1914 the Duma, in secret session, voted large sums for military preparations. [See also RUSSIA: 1914 (August): Status of army.] . . . The tension was increased by a provocative article on June 13 in the Petrograd *Bourse Gazette*, entitled, 'Russia is ready. France must be ready too,' attributed to the War Minister. 'Russia fulfils all her obligations under the alliance, and she expects her ally to do the same. The contingent of recruits this year has been raised from 450,000 to 580,000, and the period of service increased by six months. Thus every winter Russia has an army of 2,300,000. Germany possesses 880,000, Austria 500,000 and Italy 400,000. Russia therefore naturally expects 770,000 men from France, which is only possible with the Three Years' Service. . . . Russia and France desire no war; but Russia is ready, and France must be ready too.' The article aroused anger in Berlin. 'So the Russians have shown their cards,' wrote the Kaiser. 'Any German who still disbelieves that Russia and France are working full steam for an early war against us and that we must take corresponding measures is fit for a madhouse.' On June 16 the pacific Chancellor wrote to Lichnowsky that no inspired article had ever so nakedly revealed the bellicose tendencies of the Russian military party. 'Till now only the extremist circles among the Pan-Germans and militarists attributed to Russia the definite plan of an early offensive against us; but cooler minds are beginning to share this view. The first result is the cry for a new and immediate increase of the army; and when the army gets something, the navy will also raise its voice. As the Kaiser is already won over I apprehend for the summer and autumn the outbreak of a new attack of armament fever. I do not believe Russia is planning a speedy attack; but she wishes, in the event of another Balkan crisis, to take a stronger line. Whether it comes to a European conflagration will depend solely on the attitude of Germany and England. If we combine, which

our respective obligations do not forbid, war will be avoided. If not, a subsidiary difference between Russia and Austria would light the torch.' While the relations between the Dual Alliance and the Central Powers grew steadily worse, a welcome *détente* had occurred between Great Britain and Germany. After the settlement of the Morocco crisis [see GERMANY: 1911: Morocco crisis] Sir Edward Grey declared that . . . [Great Britain] had no desire to oppose German expansion in Central Africa; and the possibilities of colonial co-operation were briefly discussed between Lord Haldane and Bethmann-Hollweg at Berlin. Negotiations were begun in London after his return, and the first task was to overhaul the agreement of 1898 which divided the African colonies of Portugal into economic spheres of influence. 'Thanks to the accommodating spirit,' writes Lichnowsky, 'the new agreement fully accorded with our wishes and interests.' Angora, with San Thomé and Principe on the West coast, and Mozambique from German East Africa to the Zambesi were earmarked for Germany. The agreement was far more favourable to Germany than that of 1898. The negotiations were practically completed when King George visited Berlin in May, 1913, and the agreement was initiated in August. Sir Edward, however, would only sign if the agreement of 1898 and the Windsor Treaty were published with it; and the Wilhelmstrasse declined the condition. 'We intended publication,' explains Jagow, 'but only at a suitable moment, when the danger of hostile criticism should be less acute, and if possible with the simultaneous announcement of the Bagdad agreement, then near completion.' Sanction was finally obtained at the end of July, 1914; but by that time the war was in sight, and the Treaty was never signed."—G. P. Gooch, *History of modern Europe, 1878-1919*, pp. 519-522, 524-526.—In May 1914 conversations between Great Britain and Russia were begun with a view to arriving at an arrangement such as that contained in the Grey-Cambon letters. The matter was allowed to rest in abeyance for the time, and meantime the secret was transmitted to Berlin by an official in the Russian embassy and was revealed in the *Berliner Tageblatt*. By August, the time set to continue the conversations, all Europe was ablaze.

(e) *Bosnia and Herzegovina.—Revival of Italian irredentism.*—"The announcement of the Annexation of Bosnia and Herzegovina by Austria (October, 1908) [see BOSNIA-HERZEGOVINA: 1908; TURKEY: 1908; also below: n; and Diplomatic background: 8], aroused in Italy a feeling of mingled anxiety and resentment, which expressed itself in a press polemic so violent as to demand all the address of the Government to neutralize it. The Italian Foreign Affairs Minister in diplomatic phrase referred to it as having 'so deeply perturbed the Italian political atmosphere.' It was generally demanded that Austria should meet the requirements in the Triple Alliance Treaty for compensation to Italy under such circumstances by ceding to her at least the Trentino, and it was declared later by some that certain statesmen, like Prinetti, stood for insisting on this cession, but were overruled by the Consulta when Austria refused firmly to admit that the *casus foederis* had arisen. The Minister for Foreign Affairs, while reproaching earnestly the action of Austria in 'creating a difficult situation in Europe,' having 'a considerable repercussion on the internal condition in some states' and deeply perturbing the Italian political atmosphere, yet opposed a protest on

Italy's part. . . . The speech of the Italian Minister for Foreign Affairs was, in fact, a strong presentation of the history of the Austrian movement which resulted in the Annexation of the Jugo-Slav provinces. . . . He pointed out the difficulties and dangers that any other course on Italy's part than that pursued by her would have brought on her, standing, as she would have done, alone, and he reiterated his conviction that Italy's true policy lay in adhering to the Triple Alliance and at the same time cultivating the friendship of England and France. No reiteration of friendly sentiments, however, nor expressions of confidence in Austrian good faith availed to stay the on-sweep of Austria's policy of dominance and absorption. She knew too well the deep-seated antagonism of the Italians to her policy and the profound causes of the Irredentism that made Governmental conventions a feeble palliative. . . . So Austria set herself to the task, on the one side, of rooting out the spirit of Irredentism and rendering her Italian provinces permanently Austrian, in fact, and, on the other, of pushing southward and extending her power into the Balkans, where she proposed to herself to become the heir of their former Suzerain, the Sultan of Turkey, and reaching the seas from which new acquisitions would await her. To achieve the first she proposed to Austrianize the Schools. She would cut up Italianism at the root. The Italian tongue was discouraged, and eventually, where it was necessary to accomplish her end, the Schools were suppressed, as in the case of the Italian University of Trieste. . . . But however Italian Ministers might labor to prevent Irredentism, or at least any public expression thereof, the feeling had become too deep-rooted in the Italian mind to be eradicated, and the spirit too widely diffused throughout Italy to be suppressed. The Trentino and Trieste especially were deemed integral parts of Italy, separated from her by violence and bound in foreign servitude by force. Istria and the Dalmatian coast were likewise considered so by some; but the feeling about Trent and Trieste was universal. Even could it have been suppressed in one age, it contained the elements of an immortal Spring, ever ready to burst forth anew. There was no more chance of their ever being forgot, or left permanently in peace as a part of Austria, than there was of Rome's being forgot or abandoned. . . . Seditious societies were dissolved; their members were prosecuted or chased away. Public meetings were forbidden, and the conditions resembled those in Lombardy in the old days of Austrian Occupation. No amount of discouragement on either side of the line, Austrian or Italian; no amount of repression, and no amount of concession availed to discourage or suppress, much less to cajole the irredentists on either side. The fact was, that they were Free in spirit and Italian, and wanted, on the one side, to be a part of Free Italy and not of Imperial Austria, and, on the other, they wanted to help them to be free. Thus, nothing could extinguish their aspiration. As the blood of the Martyrs is the seed of the Church, so the blood of Patriots is the seed of Liberty. Irredentism had its birth the moment after Garibaldi, on July 25, 1866, sent his laconic reply: 'Ubbidisco' [I obey] to King Victor Emmanuel's announcement to him that the armistice was signed and he must evacuate the Trentino. . . . They were volunteers under three generations of Garibaldis, and fought as exiles fight to rescue their country. Italy was not able to continue the war for their deliverance. . . . Austria pursued a policy of firm repression

without avail. No policy would have availed. After the Triple Alliance was entered into, the Italian authorities endeavored to distract the attention of Italy from the Irredentist regions; but this, too, was without permanent results. The numerous Associations on both sides of the line represented a profound and fundamental conflict of sentiment. . . . Austria, finding the Italian Universities Seminaries of Sedition, as she deemed them, undertook gradually to change their character, and when this did not succeed, she did what was tantamount to abolishing them. The consequences were such a recrudescence of Irredentist feeling, both in the Irredentist Provinces and in Italy herself, that she agreed to make certain concessions to this aroused sentiment, and promised to substitute an Italian Faculty of Law at Trent, Rovereto, or Trieste. It was on the occasion of this new explosion of Irredentism that Signor Tittoni, the Minister for Foreign Affairs, made his memorable speech reaffirming that Italy's policy was to stand by the Triple Alliance Treaty as one of the greatest safeguards of peace in Europe. But whatever the Government might proclaim, the People were not appeased. Societies sprang up, or those existing received new impulse to free Trent and Trieste, and 'incidents' were of frequent occurrence. The old Mazzini spirit seemed to have revived. Appeals and proclamations were circulated secretly calling for the rescuing of the Irredentist Provinces from Austrian rule."—T. N. Page, *Italy and the World War*, pp. 108-113.

(f) Sequence of European events since the Franco-Prussian War.—"Bismarck . . . did more than create an approximately united Germany; he destroyed Europe. Bismarck retarded the work of the French Revolution, gagging France and flinging Europe back into the old régime. After the defeat of France, the first steps towards the reconstruction of Europe, by the restoration of the balance of power, were taken by the French Republic and the Tsar. That, however, is only a brief portion of the story. The normal evolution of every nation in Europe has been disturbed, if not utterly deranged, by the action of Germany in annexing Schleswig-Holstein and in seizing the French provinces of Alsace and Lorraine. . . . The date of the fall of Bismarck, in 1890, . . . is more than a convenient rallying point for perplexed observers of the European movement. Bismarck gone, responsibility for Germany's destinies was assumed by a young sovereign of exceptionally alert intelligence, fully abreast of his time, and perfectly aware of the deficiencies, as well as of the greatness, of the work of the Founder of the Empire. Bismarck had relied mainly on his political intuition to insure—yet he took the precaution to re-insure by treaty—German prestige. He presided over the beginnings of German economic enterprise without completely comprehending the drift of the time. An astute, daring and unscrupulous diplomacy, varied, when necessary, by a policy of intimidation based on an invincible military force, seemed to him sufficient to maintain his country at the point provisionally guaranteed to her by the Treaty of Frankfort. . . . He came to an arrangement with Austria in 1879, and simultaneously . . . favoured French expansion in Tunis. This was a quick way of alienating Italian sympathy from the Power that not so long before had helped Italy to achieve her independence. 1881 is the date of the Treaty of Bardo, whereby Tunis was given to France; and in 1882 Italy joined Germany and Austria in an alliance which was thus made Triple. [See above: c.] . . .

Almost twenty years had passed since the Franco-German war; ten since the Treaty of Berlin. That Treaty, which had confirmed German hegemony, had established in South-Eastern Europe a series of small States, left by Germany to shift for themselves under the vigilant guardianship of Russia and Austria-Hungary, and calculated, in the German Chancellor's eyes, to absorb the entire attention of those Powers. Bismarck believed that he had crushed and completely isolated France, and that the Eastern Question had been settled for a generation. What he had really done was to render an alliance between the Tsar and the Republic inevitable, and to alienate Russia from Austria-Hungary, while making her the friend of Italy. . . . Meanwhile, France, which had gone to Tunis in 1881, was in Tongking in 1885. England was watching her with jealous eyes. At the same time her domestic difficulties, notably the anti-Republican coalition conspiracy known as Boulangerism, paralysed her energy, and compromised her authority in Europe. Bismarck saw no reason to complain of the situation. Now and then—as in the Schnaebelé affair of April 1887, when he imprisoned the police-commissioner of Pagny, releasing him only after eight days—he invented a frontier incident calculated to remind France that Germany was on her guard. Simultaneously, the same Bismarck who had signed an anti-Russian alliance with Austria and Italy arranged a reinsurance pact with Russia. [See GERMANY: 1887; 1890-1891.] The tendency of Russia to draw nearer to France doubtless interfered with the complete realization of the Bismarckian plan. But Bismarck never considered it beyond his capacity to solve a problem of that kind. He was engaged upon it when [in 1890] his new master, William II., abruptly requested him to resign."—W. M. Fullerton, *Problems of power*, pp. 45-48.—See also GERMANY: 1889-1890.—"The revival of French power and prestige was a fact which the British public only began to realise after 1904, but actually it began immediately after the war of 1870-71. This was why Bismarck had a regular war-scare in 1875, and why he arranged the Dual Alliance in 1879, the Triple Alliance in 1882, and the Reinsurance Treaty in 1887. . . . [Thus] France was absolutely isolated by Bismarck's wonderful system of anti-French alliances. Nevertheless, the French went on with the greatest energy renewing their sources of strength, as is particularly to be seen in the colonial policy of Jules Ferry. Soon Tunis, Tonkin, Madagascar, and the Congo had given to France an enormous place in the sun. [See FRANCE: 1875-1889.] Before the Great War opened, France's sensitive neighbours had begun, not without reason, to fear that she would be able to make up for her deficiency in white soldiers by bringing Colonial troops from over the sea. . . . [In August, 1891] an exchange of letters took place between M. Ribot (French Minister for Foreign Affairs), M. Freycinet (Minister of War for France), and M. de Giers, the Minister of Foreign Affairs for Russia. These letters constituted an *Entente Cordiale*, a phrase which now became popular, expressing a definite international friendship without specific alliance. When the *entente* was announced in public speeches, a sigh of relief went up, over all France. . . . [Which had been] living for twenty years absolutely without friends or allies in the middle of the armed camp of Europe, existing almost by sufferance of the powerful and inexorable enemy, who was fashioning a network of military alliances around and against her. It was now recognised throughout Europe

that the French Republic was stable, that French resources were those of a Great Power, and that the French Government could continue to 'practise peace with dignity.' . . . The creation of the Franco-Russian Alliance took altogether about six years, and required much patient and sustained work on the part of the French diplomatists, who especially had to dissipate the prevailing notion that France's frequent ministerial crises meant instability. Gradually the two Governments drew closer together. . . . At last, on August 18, 1892, the draft of a military convention between Russia and France was signed at St. Petersburg. It provided that 'if France is attacked by Germany or by Italy supported by Germany, Russia shall employ all its available forces to fight Germany'; and that 'if Russia is attacked by Germany or by Austria supported by Germany, France shall employ all its available forces to fight Germany.' . . . In March, 1894, the military convention was ratified, and the *casus foederis* was registered in a treaty. . . . The Entente of Great Britain and France followed surprisingly closely upon a period of strain between the two countries, a period of which the end came with Germany's offer to conclude an accord with France on the basis of a guarantee of the Imperial possession of Alsace-Lorraine, and France's definite refusal of this (February, 1900)."—R. B. Mowat, *History of European diplomacy, 1815-1914*, pp. 250, 252-254, 268.—"With the resignation of Bismarck and the death [1894] of Alexander III, a new movement began in Europe. That movement was to culminate in the removal of Russia from her European spheres of influence, and her exile during a protracted period in Manchuria, where her military power was eventually to be shattered at Mukden (February to March, 1905). . . . The year [1898, following] the Austro-Russian Agreement [of 1897] concerning the Balkans (when the Powers recognized the 'superior interest' of Austria and Russia in the provinces of European Turkey), marks the moment when Russia first began to realize the inconvenience of her Far-Eastern policy, and to doubt the disinterestedness of her German friends. Dreaming of victories in Manchuria, she was forced to neglect the pursuit of her traditional Pan Slavist policy in the Balkans. She was obliged to adopt the policy of the pan-Germans. Partially paralysed in Europe, Russia could neither actively favour, nor effectually arrest, the ambitions of the Balkan States to fling the Turks across the Sea of Marmora, and to extend their boundaries in Macedonia and Thrace. She was constrained to a policy of marking time. Meanwhile Germany, impelled by the ever-increasing momentum of her *Drang nach Osten*, was assuring, through her Austro-Hungarian allies, her economic preponderance in the Balkan States; while, benefiting by the persistent antagonism of Russia and England, she became the protector of the Turkish Empire, and the *concessionaire* of that Baghdad Railway which was intended to be the instrument of the establishment of her protectorate over Asiatic Turkey. [See also GERMANY: 1890-1914: Alteration of foreign policy.] Thus, owing to Russia's policy in the Far East, and owing to the reciprocal jealousies and apprehensions of the Powers, all hope of settling the Eastern Question was indefinitely postponed. Bulgaria, Serbia, and Montenegro were left to work out their national salvation alone, and the Macedonians were exposed to periodic massacre. . . . But throughout this period the Balkan nationalities were slowly awakening to self-knowledge. Liberty, national

rancour, and a sense of responsibility were transforming them into self-reliant Powers. The evolution did not escape the notice of good observers; but who could foresee that within a period of only fourteen years the sovereigns of Bulgaria, Serbia, Greece, and Montenegro were to cross their several frontiers at the head of their allied armies, 'imploping the benediction of the Almighty on their New Crusade,' against the Turk? . . . Already the period of civil war known as the 'Dreyfus Affair' had begun in France. [See FRANCE: 1894-1895; 1894-1906; 1898.] . . . Russia and Germany alone seemed to be happy nations; but Russia, lured eastward out of Europe, partially by German wiles, was already doomed, and Germany alone seemed likely to reap the fruit of her intelligent diplomatic action. In reality she had overstepped the mark. Italy, England and France, colonial rivals, almost bitter foes, had nevertheless one thing in common: all three had been unfortunate; all three were in need of friends. With the departure from the Quai d'Orsay of M. Hanotaux, who had practically paralysed the Dual Alliance by his compliance with the schemes suggested by the German Emperor to the Tsar, the new Minister for Foreign Affairs, the Pyrenean M. Delcassé, was free to adopt a new policy. M. Cambon, who had been appointed ambassador in London in September 1898, was to treat with Lord Salisbury in the name of M. Delcassé for the settlement of the Fashoda crisis. [See EGYPT: 1898 (September-November).] M. Barrère, meanwhile, in December 1897, had arrived as French ambassador in Rome. In November 1898, he succeeded in arranging a treaty of commerce, which indicated that the two 'Latin sisters' were awakening to the fact that the Bismarckian policy of the galliphobe Italian statesman Crispi was not necessarily in the interests of either Power; and this treaty was the first step in that magnificent Mediterranean policy pursued by M. Delcassé, out of which was to come the Anglo-French Entente, England's definitive establishment in Egypt, the French Protectorate over Morocco, the Italian seizure of Tripoli (which France had acquired in 1901), and the Europe of 1910, 1911 and 1912. . . . Thus, while Russia was dragging France towards the disaster of Mukden, February 24 to March 10, 1905, Germany turned with a candid face to the people whose sea-power her own growing navy was already beginning to menace, and sought to convince them of her unalloyed sincerity. So long as Lord Salisbury remained at the head of the Foreign Office, France would strive in vain to thwart Germany's action. For that statesman, even for his august Queen, France and Russia were the hereditary enemies. German policy, in driving Russia into the East, had enhanced England's suspicion of Russia. England regarded opting for Germany as a less dangerous choice than making up with Russia; moreover, she was the deadly foe of Russia's ally. And thus it was that Germany could still continue to develop to their logical limits all the ramifications of the Bismarckian policy; she could still play to her heart's content the part of the honest broker, while, under another disguise, she was actively planting her flag throughout the world. But in October 1899 the Transvaal War broke out, and for two and a half years England's sinews were wrung in the heroic duel. [See SOUTH AFRICA, UNION OF: 1899 (September-October); (October-November); (November-December).] Now at last she opened her eyes to those perils of isolation as to which Mr. Chamberlain had warned her in 1898; for her enemies might, for

argument's sake, almost class her among the 'dying nations' on whose territory, in the words of her ironic Prime Minister, Lord Salisbury (May 4, 1898), the living nations were bound to encroach. . . . Lord Salisbury disappeared from the Foreign Office, being succeeded by Lord Lansdowne, in October 1900. A few days later Queen Victoria died and was succeeded by King Edward, who was immediately greeted by French public opinion as a sovereign 'capable of doing much to better the relations between the two countries.' At all events the tension between France and England could last no longer without a war. Something had to be done. For both England and France the hour was ripe for meditation over their individual national problems. They stood, for an instant, silent and face to face, blinking in the glare of the new light that illuminated the dread cross-roads of Fashoda and Ladysmith. . . . France and England were face to face like birds in a cockpit, while Europe, under German leadership, was fastening their spurs, and impatient to see them fight to the death. Then suddenly they both raised their heads and moved back to the fence. They had decided not to fight, and the face of European things was transformed."—W. M. Fullerton, *Problems of power*, pp. 50-58.—See also EUROPE: Modern: Conflicting currents; ENGLAND: 1901 (January).—"From the year 1904, by the formation of the Entente of France and Great Britain, a diplomatic group was established, balancing the Austro-German Dual Alliance. Accordingly, with the equipoise of Europe so nicely adjusted—German and Austria, with Italy in one group, England and France, with Russia in the other—the slightest political tremor made the scales oscillate in an alarming fashion. The international situation was thus delicate and dangerous; still, there is this to be said in favour of the policy of the balance: it produced a better situation than would have existed if there had been no Entente and if the German diplomatic group were in a position to decide everything. The crises may be considered to have had their diplomatic origin in the concession which Germany gained in 1903 from the Ottoman Government, to build a railway line connecting Constantinople with Bagdad. The grant of this concession at last convinced Great Britain that she had lost her pre-eminence with the Porte in favour of the German Government. . . . On the other hand, the formation of the Franco-British Entente was for the time being 'check' to the German plan of operation. So the next event in the diplomatic field is a vigorous move against the Entente, in what might be called one of its weak 'sectors,' in Morocco. . . . [The Kaiser's visit to Tangier, the Casablanca incident, and the Agadir incident (see AGADIR); FRANCE: 1910-1912; ITALY: 1911; MOROCCO: 1905-1906; 1907-1909; 1911-1914] all threatened to bring about a war between Germany and France. After the *Panther* incident] for weeks and months the conversations continued, dealing with most technical points—political, economic, geographical. Many times the conversations seemed on the eve of breaking down altogether. The war-cloud continued to impend over Europe. . . . Every Great Power except the United States felt oppressed in a greater or less degree by the huge armaments it had to maintain. In particular two great forces stood out in obvious rivalry: the British and German Navies. The British Navy had always been large, and British statesmen had never made a secret of their determination to keep it larger than that of any other Power. Accordingly the expan-

sion of the German Navy under William II was inevitably followed by a proportional increase of the British Navy, nicely calculated to maintain its superiority. As it was absolutely certain that the British Government would continue increasing the Navy in proportion to every increase of the German Navy, and as British resources were large enough to keep up the race indefinitely, it might have appeared simple for the two Governments to come to an understanding. A thoroughly statesmanlike effort in this direction was made by Mr. W. S. Churchill, First Lord of the Admiralty, in a speech delivered in April, 1912. Mr. Churchill solemnly undertook that 'if in any particular year, not as a matter of bargain but as a matter of fact,' the German programme of naval shipbuilding were 'reduced or cancelled,' the British programme would be 'reduced or cancelled too.' Thus the German Government, without binding itself by treaty for the future, could slacken the pace, and decrease naval expenses, knowing that the weight of their navy, compared with that of the British, would remain exactly the same. Increased expenditure on ships would be no advantage to Germany, as it would automatically bring about a sixty per centum increase of the British Navy. The German Government took no notice of the offer to come to an understanding on the subject of naval armaments. In the same way, when Lord Haldane went on special mission to Berlin (February, 1912), and held conversations with Herr von Bethmann-Hollweg, the Chancellor, no agreement could be reached: the new Navy Law—the German programme for future ship-building—had to proceed. About the same time (i.e. on March 27, 1911, and June 14, 1912), the German Government carried through the Reichstag laws for increasing the peace effectives of the army to 625,000 men, and to raise large sums of money for armament. The French Government (Premier, M. Barthou), inevitably met this menace by the re-establishment of the three-years' term of military service (August 8, 1913)."—R. B. Mowat, *History of European diplomacy, 1815-1914*, pp. 282, 287, 289-290.—See also ENGLAND: 1912; 1912-1913; FRANCE: 1913-1914; GERMANY: 1890-1914: Growth of the army, etc.; 1898-1914; WAR, PREPARATION FOR: 1900-1915, and after; WARSHIPS: 1870-1905; 1893-1914.

(g) Economic causes of the war.—"The incessant growth in the Empire's population demanded a widening of its territory. Cooped up within a narrow space, the Germans could not breathe freely; they needed new lands that could be peopled, new outlets to drain off some of this superabundant vitality. This, it is claimed by certain economists, is a biological law, and at the same time one of the causes that made the war inevitable."—N. E. L. Beyens, *Germany before the war* (tr. by P. V. Cohn), p. 202.

I. DEVELOPMENT OF GERMAN INDUSTRY.—COMMERCIAL POLICY.—"At the beginning of the twentieth century Germany had truly become an industrial power; she could not retrace her steps; should she attempt it, she would provoke a revolution. What would come of that growing population living the life of the factory and having no longer any bond with the soil? 'The whole development of Germany,' wrote Steinberg in 1902, 'is directed, from the natural course of things, toward the industrial and exporting state.' The national economic system was out of equilibrium, a condition of affairs which now gave concern to clear-sighted politicians. They found it necessary to go to the help of agriculture. It was undoubtedly progressing, for it

too had given up traditional methods and was seeking and following the advice of scientists, but what was such progress in comparison with that of manufacture? Prince von Bülow, who was Chancellor at the time when the treaties of 1891-1892 expired, had to adopt a commercial policy. . . . German emigrants, who generally remained grouped together, constituted in the countries where they were settled excellent *points d'appui* from which to launch her commercial enterprises. She directed her endeavors more particularly to the markets of Latin America; perhaps in certain circles there was hope for a time of setting foot politically in the region of the South American temperate zone, for in Brazil in the state of Rio Grande do Sul some two hundred thousand non-assimilated Germans were settled."—A. Viallate, *Economic imperialism and international relations during the last fifty years*, pp. 43, 45.—"The Nationality Act of 1st June 1870 had laid down that German citizenship would be lost by any one who lived for a continuous period of ten years in another country. The bill of 22nd July 1913, based on the principle of *jus sanguinis* (right of blood), and not of *jus loci* (right of domicile), abolished this forfeiture of civic rights. Furthermore, it allowed a German to become naturalized in another country without losing his original nationality. . . . This permission is granted by the authorities in the State of his origin, provided he is vouched for by the nearest German consul (art. 25). Finally, Imperial citizenship may be conferred upon former Germans and on their descendants, even if they are not settled on German soil (art. 33). In thus consolidating the centres of German influence wherever they existed—in the United States and in South America, in the Far East and in Turkey—the Government was not thinking only of gaining for the national products an easier access to the local markets. Its aim was no less political than commercial. By establishing these colonies of a new type in the heart of foreign countries, it endeavoured to set up a sort of Germanic Empire across the seas, as a counterpoise to that British Empire which was the object of its unceasing envy. [See also NATURALIZATION: Germany.] . . . It would be superfluous here to give the figures recorded in all the tables of statistics, proving the enormous development of German industry throughout the forty-four years of peace that have elapsed since the Treaty of Frankfort. Like all growths that are too speedy, this development had its weak points, its alarming symptoms; it did not bear the look of perfect health. In an organism that was shooting up so rapidly, a sudden crisis, a violent illness, was likely to produce fatal complications. Too many enterprises were being founded on advances from banks. The great financial and industrial companies were inflating their share and debenture capital to such an extent that any slackening in production would have threatened to suspend the payment of dividends. Two-thirds of the population lived on the wages earned in workshops and factories. A stoppage in the activity of the latter, involving prolonged loss of work, would have meant a dearth of bread in countless homes and a great outcry of distress from countless throats. It was therefore the imperative duty of the Government, not only to see that the existing outlets for the national industry were kept open, but to provide for the acquisition of new ones. Already some ominous bankruptcies had warned the authorities of what might happen. Over-production would inevitably lead to extreme measures, in order that there might be no conges-

tion. Among these measures, the only infallible one was war, with its invasion of foreign markets by force, its wiping out of those competitors who would not let German labour enjoy the monopoly that it needed. Such, in a crude outline, are the arguments adduced to show the overwhelming importance of economic causes. If from industry we pass to farming on a large scale, which is organized in Prussia on industrial lines, we observe a specious prosperity, depending in no small degree on the renewal of the commercial treaty with Russia. This treaty, concluded at a critical moment, after the Russo-Japanese war, empowered the great Prussian landowners, thanks to surreptitious export bounties, to send their wheat and their rye even to Finland, whereas Russian agricultural produce could only enter Germany after the sale of the German crops.—N. E. L. Beyens, *Germany before the war* (tr. by P. V. Cohn), pp. 205-208.

2. ECONOMIC POLICY.—COLONIAL POLICY.—INFLUENCE OF LOANS.—IMPATIENCE WITH BOUNDARIES.—"German industry and banking were active . . . in the countries of Central and Southern Europe. Here their object was not only economic but decidedly political. 'The heel of Achilles,' said Count Apponyi, 'is its economic policy. . . . If the edifice of the Triple Alliance is to be made enduring, if this, the firmest of all guarantees of European peace, is to abide, the political pillars which alone support it today and which may in time collapse, must be supplemented by economic pillars.' The Germans understood this and they endeavored to remedy this weakness. Their customs policy was based on this idea. They wanted to control the economic development of their allies, who were far behind them and who lacked capital as well as technical personnel. They sent them both, in the hope of remunerative returns of course, but also with the conviction that if they played an important part in the great enterprises of those countries they would bind them to Germany by financial interests difficult to sever and thus they would acquire the means of influencing their policy. The particular object of their efforts, whose pledge never seemed reliable to them, was Italy. Germany was also deeply interested in the Balkan States and the Near East. In the Near East the concession for the construction of a railroad from the Bosphorus to Bagdad promised by the Sultan to the Kaiser in 1898 had aroused great hopes. [See BAGDAD RAILWAY.] Prince von Bülow wrote of it: 'This threw open to German influence and German enterprise a field of activity between the Mediterranean Sea and the Persian Gulf, on the rivers Euphrates and Tigris, and along their banks; this land can hardly be surpassed for fertility and for its great possibilities of development in the future. If one can speak of boundless prospects anywhere, it is in Mesopotamia.' New Germany, however, was mortified because of her inability to create a vast colonial empire for herself. She felt that in default of such an empire, her economic prosperity would never be secure, and this deficiency also wounded her vanity as a world power. In the world's situation at the opening of the twentieth century she knew that she could not satisfy her desire unless there came a general political readjustment. Should such a crisis ever arise, she trusted her army and navy to enable her to take advantage of it. It was above all toward the African continent that she turned her hopes. . . . Germany came late—more than a quarter of a century after France—to take her place in the

world as a capitalist nation. Her industrialization, tenaciously pursued after the creation of the Empire, required a large amount of capital; and so rapid was her industrial progress that her financial structure could not develop at the same rate. This weakness has been on several occasions an impediment and a cause for serious anxiety. The Berlin Börse has always ranked second to the Paris Bourse. Without the help of foreign capital German industry would not have been able to survive many difficult periods, the crises attendant upon too rapid growth. In spite of such difficulties, the German financiers did not hesitate to invest capital abroad in order to open markets for their manufacturing industries. Then a time came when, in spite of the risks, they were compelled to continue this policy; the huge factory that Germany had become had to find ever new outlets, not merely to avoid temporary crises but to save the entire structure from collapse. . . . The ability of a power to lend capital to foreign countries may be a serious weapon in the hands of her statesmen. It furnishes them means of pressure on countries in the course of development and particularly on those in financial straits; it allows them to give efficient support to their allies and to embarrass potential opponents by withdrawing aid to which they have become accustomed. . . . In 1885 Bismarck, being in disagreement with Russia on account of the customs policy, forbade the Reichsbank to advance on the security of Russian state loans, and so brought pressure on Russia to yield. The opening of the French financial market to Russia prepared the way for a political alliance between the two countries. Some ten years later Italy, though a member of the Triple Alliance, made a *rapprochement* with France as a consequence of financial need which the Berlin market could not satisfy. At the time of the Agadir crisis in 1911, the great French banks suddenly called their loans in Germany, for lending on call in the Berlin Börse had been one of the ways in which the French banks had been using their surplus funds, especially when the difference in the rate of interest made the operation profitable. Germany thus found herself in a difficult situation and avoided a serious crisis only by obtaining aid from American banks, which had at the time idle funds to lend abroad. The financial weapon which France wielded so opportunely, helped to bring about a peaceful solution of the conflict. . . . The whole body of treaties and agreements arrived at during the first decade of the twentieth century, by fixing the limits of the spheres of influence that the signatory powers mutually recognized as belonging to one another, was bound to minimize the dangers of economic imperialism. But Germany had seen with apprehension the signing of these agreements because she interpreted them as an encircling policy pursued obstinately by England to check her progress. She was proud of her rapid development and of her newly won power. 'The German Empire to-day,' wrote Prince von Bülow, 'is a great world power, not only by virtue of its industrial and commercial interests, but of its power in international politics; its power in the sense that its arm can reach to the farthest corners of the world, and that German interest can be injured nowhere with impunity. The sphere of German power has literally been extended over the whole world by the construction of our fleet, so that it can protect German interests scattered over the face of the earth.' This empire, however, did not answer the needs of the Germans. The geographical situation of their country, now that

they were obliged to import such large amounts of foodstuffs and raw materials, for which they had to pay with the exportation of manufactured articles, seemed to them unfortunate; they were far from the great sea routes, access to which might be forbidden them. 'If the English prohibit our passage along their coasts, we are caught in a trap. How much freer is the coast of France on the Ocean itself!' They deplored the scant area of their empire limited by the rigor and uniformity of its climate to a small variety of farm products, and not complemented by colonies located in more favored regions able to compensate for the deficiencies of the home country. 'Foodstuffs have to be imported in large quantities to satisfy our present population. The greater part of our industry also can exist only if its needed materials are imported. . . . England and France, on the contrary, can supply from their transatlantic possessions whatever they lack themselves, and such gigantic states as Russia and the United States are capable of an autonomous existence within their own boundaries.' These advantages were always present in the minds of German statesmen and business men, since industrialization, so tenaciously pursued, had now reached such a degree that the equilibrium of their economic system had been irretrievably lost. Only the building of an immense empire, they thought, stretching like that of England over various climates, could safeguard Germany from the dangers born of her very prosperity. Moreover, this was the path along which contemporary discoveries seemed to them to direct humanity. 'The wealth of the available scientific material to-day is so enormous compared with that of the former ages, that only a big nation can master it. . . . In future the smaller peoples will have only the choice to decide with which one of the big nations they will voluntarily combine, or to which one of them their geographical position will commit them.' And these ideas gave birth among the Pan-Germans, whose influence was being more and more asserted, to plans of a wide scope. 'If one examines all our history and the modern economic state,' said Fritz Bley, 'one must perforce come to the incontrovertible conclusion that Germany, Austria, Italy, the Balkans, Holland, Belgium, and Switzerland, and if possible the Scandinavian countries too, ought, together with their colonies, to join in a common Customs Union, following a policy of free trade or at least reduced protective tariffs as among each other, but enforcing a highly protective system against all outside nations. In no other way can they hope to safeguard their economic existence against the gigantic Russian, British, and Pan-American Empires!'"—A. Viallate, *Economic imperialism and international relations during the last fifty years*, pp. 43, 45-47, 56-59, 112-115.

(h) Germany's struggle for world power.—The ambition of certain strong elements in the former German empire to make that empire the dominant power in Europe, if not in the world, and their efforts to attain this goal, is regarded as one of the principal factors which produced the war. This movement had received the attention of many leading German publicists.

I. BERNHARDI (1911).—General von Bernhardi, in particular, writing from the viewpoint of a believer in the right of Germany to dominance, strove to rouse not only German ambition, but Austrian fears of Russia, and Italian fears of

England and France. Thus, in 1911, he said: "In discussing the duties which fall to the German nation from its history and its general as well as particular endowments, we attempted to prove that a consolidation and expansion of our position among the Great Powers of Europe, and an extension of our colonial possessions, must be the basis of our future development. . . . The sphere in which we can realize our ambition is circumscribed by the hostile intentions of the other World Powers, by the existing territorial conditions, and by the armed force which is at the back of both. Our policy must necessarily be determined by the consideration of these conditions. We must accurately, and without bias or timidity, examine the circumstances which turn the scale when the forces which concern us are weighed one against the other. . . . We see the European Great Powers divided into two great camps. On the one side Germany, Austria, and Italy have concluded a defensive alliance, whose sole object is to guard against hostile aggression. In this alliance the two first-named States form the solid, probably unbreakable, core, since by the nature of things they are intimately connected. The geographical conditions force this result. The two States combined form a compact series of territories from the Adriatic to the North Sea and the Baltic. Their close union is due also to historical national and political conditions. . . . There has been no conflict of interests between the two States since the struggle for the supremacy in Germany was decided. . . . A quarrel between Germany and Austria would leave both States at the mercy of overwhelmingly powerful enemies. The possibility of each maintaining its political position depends on their standing by each other. It may be assumed that the relations uniting the two States will be permanent so long as Germans and Magyars are the leading nationalities in the Danubian monarchy. It was one of the master-strokes of Bismarck's policy to have recognized the community of Austro-German interests even during the war of 1866, and boldly to have concluded a peace which rendered such an alliance possible. The weakness of the Austrian Empire lies in the strong admixture of Slavonic elements, which are hostile to the German population, and show many signs of Pan-Slavism. It is not at present, however, strong enough to influence the political position of the Empire. Italy, also, is bound to the Triple Alliance by her true interests. The antagonism to Austria, which has run through Italian history, will diminish when the needs of expansion in other spheres, and of creating a natural channel for the increasing population, are fully recognized by Italy. Neither condition is impossible. Irredentism will then lose its political significance, for the position which belongs to Italy from her geographical situation and her past history . . . cannot be won in a war with Austria. It is the position of a leading political and commercial Mediterranean Power. That is the natural heritage which she can claim. Neither Germany nor Austria is a rival in this claim, but France, since she has taken up a permanent position on the coast of North Africa, and especially in Tunis, has appropriated a country which would have been the most natural colony for Italy, and has, in point of fact, been largely colonized by Italians. It would, in my opinion, have been politically right for us, even at the risk of a war with France, to protest against this annexation, and to preserve the territory of Carthage for Italy. We should have considerably strengthened Italy's position on

the Mediterranean, and created a cause of contention between Italy and France that would have added to the security of the Triple Alliance. The weakness of this alliance consists in its purely defensive character. It offers a certain security against hostile aggression, but does not consider the necessary development of events, and does not guarantee to any of its members help in the prosecution of its essential interests. It is based on a *status quo*, which was fully justified in its day, but has been left far behind by the march of political events. Prince Bismarck, in his 'Thoughts and Reminiscences,' pointed out that this alliance would not always correspond to the requirements of the future. Since Italy found the Triple Alliance did not aid her Mediterranean policy, she tried to effect a pacific agreement with England and France, and accordingly retired from the Triple Alliance. The results of this policy are manifest to-day. Italy, under an undisguised arrangement with England and France, but in direct opposition to the interests of the Triple Alliance, attacked Turkey, in order to conquer Tripoli, the required colonial territory. This undertaking brought her to the brink of a war with Austria, which, as the supreme Power in the Balkan Peninsula, can never tolerate the encroachment of Italy into those regions. . . . England is clearly a hindrance in the way of Italy's justifiable efforts to win a prominent position in the Mediterranean. She possesses in Gibraltar, Malta, Cyprus, Egypt, and Aden a chain of strong bases, which secure the sea-route to India, and she has an unqualified interest in commanding this great road through the Mediterranean. England's Mediterranean fleet is correspondingly strong and would—especially in combination with the French Mediterranean squadron—seriously menace the coasts of Italy, should that country be entangled in a war against England and France. Italy is therefore obviously concerned in avoiding such a war, as long as the balance of maritime power is unchanged. . . . France and Russia have united in opposition to the Central European Triple Alliance. France's European policy is overshadowed by the idea of *revanche*. For that she makes the most painful sacrifices; for that she has forgotten the hundred years' enmity against England and the humiliation of Fashoda. She wishes first to take vengeance for the defeats of 1870-71, which wounded her national pride to the quick; she wishes to raise her political prestige by a victory over Germany, and, if possible, to regain that former supremacy on the continent of Europe which she so long and brilliantly maintained; she wishes, if fortune smiles on her arms, to reconquer Alsace and Lorraine. But she feels too weak for an attack on Germany. Her whole foreign policy, in spite of all protestations of peace, follows the single aim of gaining allies for this attack. Her alliance with Russia, her *entente* with England, are inspired with this spirit; her present intimate relations with this latter nation are traceable to the fact that the French policy hoped, and with good reason, for more active help from England's hostility to Germany than from Russia. The colonial policy of France pursues primarily the object of acquiring a material, and, if possible, military superiority over Germany. The establishment of a native African army, the contemplated introduction of a modified system of conscription in Algeria, and the political annexation of Morocco, which offers excellent raw material for soldiers, so clearly exhibit this intention that there can be no possible illusion as to its extent and meaning. Since France has succeeded

in bringing her military strength to approximately the same level as Germany, since she has acquired in her North African Empire the possibility of considerably increasing that strength, since she has completely outstripped Germany in the sphere of colonial policy, and has not only kept up, but also revived, the French sympathies of Alsace and Lorraine, the conclusion is obvious: France will not abandon the paths of an anti-German policy, but will do her best to excite hostility against us, and to thwart German interests in every quarter of the globe. . . . The French policy was so successful that we shall have to reckon more than ever on the hostility of France in the future. It must be regarded as a quite unthinkable proposition that an agreement between France and Germany can be negotiated before the question between them has been once more decided by arms. Such an agreement is the less likely now that France sides with England, to whose interest it is to repress Germany but strengthen France. . . . The Empire of the Czar, in consequence of its defeat in Manchuria, and of the revolution which was precipitated by the disastrous war, is following apparently a policy of recuperation. It has tried to come to an understanding with Japan in the Far East, and with England in Central Asia; in the Balkans its policy aims at the maintenance of the *status quo*. So far it does not seem to have entertained any idea of war with Germany. The Potsdam agreement [1910], whose importance cannot be overestimated, shows that we need not anticipate at present any aggressive policy on Russia's part. . . . It is improbable, therefore, that Russia would now be inclined to make armed intervention in favour of France. The Russo-French alliance is not, indeed, swept away, and there is no doubt that Russia would, if the necessity arose, meet her obligations; but the tension has been temporarily relaxed. . . . After a successful war, Russia would hardly hesitate to seize the mouth of the Vistula, at the possession of which she has long aimed, and thus to strengthen appreciably her position in the Baltic. Supremacy in the Balkan Peninsula, free entrance into the Mediterranean, and a strong position on the Baltic, are the goals to which the European policy of Russia has naturally long been directed. She feels herself, also, the leading power of the Slavonic races, and has for many years been busy in encouraging and extending the spread of this element into Central Europe. Pan-Slavism is still hard at work. . . . England has recently associated herself with the Franco-Russian Alliance. She has made an arrangement in Asia with Russia [1907] by which the spheres of influence of the two parties are delimited, while with France she has come to terms in the clear intention of suppressing Germany under all circumstances, if necessary by force of arms. . . . A strong French fleet may be as great a menace to England as to any other Power. For the present, however, we may reckon on an Anglo-French *entente*. This union is cemented by the common hostility to Germany. No other reason for the political combination of the two States is forthcoming. There is not even a credible pretext, which might mask the real objects. This policy of England is, on superficial examination, not very comprehensible. Of course, German industries and trade have lately made astounding progress, and the German navy is growing to a strength which commands respect. We are certainly a hindrance to the plans which England is prosecuting in Asiatic Turkey and Central Africa. This may well be distasteful to the

English from economic as well as political and military aspects. But, on the other hand, the American competition in the domain of commercial politics is far keener than the German. The American navy is at the present moment stronger than the German, and will henceforth maintain this precedence. Even the French are on the point of building a formidable fleet, and their colonial Empire, so far as territory is concerned, is immensely superior to ours. Yet, in spite of all these considerations, the hostility of the English is primarily directed against us. It is necessary to adopt the English standpoint in order to understand the line of thought which guides the English politicians. I believe that the solution of the problem is to be found in the wide ramifications of English interests in every part of the world. . . . There is another danger which concerns England more closely and directly threatens her vitality. This is due to the nationalist movement in India and Egypt, to the growing power of Islam, to the agitation for independence in the great colonies, as well as to the supremacy of the Low-German element in South Africa. Turkey is the only State which might seriously threaten the English position in Egypt by land. This contingency gives to the national movement in Egypt an importance which it would not otherwise possess; it clearly shows that England intensely fears every Pan-Islamic movement. She is trying with all the resources of political intrigue to undermine the growing power of Turkey, which she officially pretends to support, and is endeavouring to create in Arabia a new religious centre in opposition to the Caliphate. The same views are partially responsible for the policy in India, where some seventy millions of Moslems live under the English rule. England, so far, in accordance with the principle of *divide et impera*, has attempted to play off the Mohammedan against the Hindu population. But now that a pronounced revolutionary and nationalist tendency shows itself among these latter, the danger is imminent that Pan-Islamism, thoroughly roused, should unite with the revolutionary elements of Bengal. The co-operation of these elements might create a very grave danger, capable of shaking the foundations of England's high position in the world. While so many dangers, in the future at least, threaten both at home and abroad, English imperialism has failed to link the vast Empire together, either for purposes of commerce or defence, more closely than hitherto. . . . There are clear indications that the policy of the dominions, though not yet planning a separation from England, is contemplating the future prospect of doing so. Canada, South Africa, and Australia are developing. . . . into independent nations and States, and will, when their time comes, claim formal independence. . . . The argument is often adduced that England by a war with Germany would chiefly injure herself, since she would lose the German market, which is the best purchaser of her industrial products, and would be deprived of the very considerable German import trade. I fear that from the English point of view these conditions would be an additional incentive to war. England would hope to acquire, in place of the lost German market, a large part of those markets which had been supplied by Germany before the war, and the want of German imports would be a great stimulus, and to some extent a great benefit, to English industries. After all, it is from the English aspect of the question quite comprehensible that the English Government strains every nerve to check the growing power of Germany, and that

a passionate desire prevails in large circles of the English nation to destroy the German fleet which is building, and attack the objectionable neighbour. English policy might, however, strike out a different line, and attempt to come to terms with Germany instead of fighting. This would be the most desirable course for us."—F. von Bernhardi, *Germany and the next war* (tr. by A. H. Powles), pp. 85-89.—A critic, who died before the war began, said of this work: "In its military character the book is, like General von Bernhardi's other writings, eminently up to date. But what marks out this work from all others of the same kind, giving it something of the distinction of a really epoch-making book, is that it represents a definite attempt made by a German soldier to understand not merely how Germany *could* make war upon England most effectively, but why Germany *ought* to make war upon England. It is in this respect that the book focuses the thoughts of many German writers, historians, thinkers, novelists, pamphleteers, who, again and again, for quite the last forty years, have bent their attention to this subject. Is it possible to find any moral, any ethical justification for a war upon England? The war of 1870 with France was a war of great revenge, of *just* revenge, and for one of the greatest of causes. No war in history, perhaps, was ever more just than the war which Bismarck and Moltke waged against France. When she comes to this war upon England, on the other hand, Germany is face to face with the difficulty that here she has no such motive of retributive justice or revenge. And therefore you find a tendency to shape the question thus: How do England and her Empire stand in the path of the deepest desires and ambitions, and perhaps, also, the highest and most sacred aspirations of Germany? If we ask what those desires, ambitions, and aspirations are, the answer is this: Germany, not less than England, it is contended, is dowered with the genius for empire, that power in a race which, like genius in the artist, must express itself or destroy its possessor."—J. A. Cramb, *Germany and England*, pp. 10-11.

2. INFLUENCE OF NIETZSCHE AND TREITSCHKE IN GERMANY.—"Since the days of Sadowa [1866] and Sedan [1870] Germany has produced two . . . thinkers, Nietzsche and Treitschke. Both were ultimately of Slavonic origin; both were professors, the one of philosophy, the other of history; both lived and thought and taught in the new Germany which sprang from the great wars of 1866 and 1870. They caught the spirit, and they helped to make the spirit, of that new Germany whose note, it has been well said, is *subdual*. Power, more power, and always power—this was the gospel which they found, and preached. 'Political questions are questions of power' was Bismarck's principle. 'Two souls dwell in the German nation,' a Berlin professor wrote. 'The German nation has been called the nation of poets and thinkers, and it may be proud of the name. To-day it may again be called the nation of masterful combatants, as which it originally appeared in history.' . . . It is [a] . . . paradox that the man [Nietzsche] who boasted himself 'the most essential opponent of Christianity' should have been the son of a village pastor. He was born in 1834; he died in 1900. . . . For ten years, from 1860 to 1879, he acted as professor of Classical Philology in the University of Bâle; for the next ten years he was a wandering invalid; for the last eleven years of his life he was insane. The stuff on which his mind worked was partly Greek

literature and art, and partly biology, of which he acquired in later years a somewhat superficial knowledge. From the one he drew an aesthetic interpretation of the world, as a thing non-moral but potentially beautiful; from the other he drew the vision of the new beauty which might enter the world through the evolution of the superman. . . . All things in the world—all intentions and actions of men—are amoral. 'There are no moral phenomena; there is merely a moral interpretation of phenomena.' Nothing is, but thinking makes it so; and all so-called moral values are the creations of human interpretation. To these creations we must address a simple question. Are these existing valuations of intentions and acts as moral or immoral, as beautiful or ugly, of any real value? Or must they be 'transvalued' to suit a new and higher standard? To answer such a question we must first of all examine existing values critically. If we do so, we find that they are not absolute but relative. They are relative to race, and differ from race to race: they are relative to time, and vary from time to time. . . . The morality of to-day is thus a phase, and nothing more; and it is a phase to be condemned. . . . All is not necessarily for the best, when 'lofty independent spirituality, the will to stand alone, are felt to be dangers; when everything that elevates the individual above the herd is called evil, and the tolerant, unassuming, self-adapting, self-equalizing disposition attains the moral distinction and honour.' . . . 'Life is a state of opulence, luxuriance, and even absurd prodigality: where there is a struggle, it is a struggle for power. Life is essentially appropriation, injury, conquest of the strange and weak, suppression, severity, obtrusion of its own forms, incorporation, at the least and in its mildest form exploitation. The criterion of truth lies in the enhancement of the feeling of power.' That then is true which enables me to expand in the full opulence of power: that is good which contributes to the unfolding of my power in the full blossom of action. Power is of the few, ultimately perhaps of the one, the Caesar or Napoleon; and since power is the standard, it is therefore the few whose truth is the *vraie vérité des choses*, and whose morality is 'the true morality. . . . Nietzsche seeks to destroy Christian destruction, and to return to a healthy paganism in which there shall be the drunk delight of battle with peers on ringing windy plains. Not peace, but a sword wielded by the will to power—that is the true way of the world. 'Horribly clangs its silvery bow; and although it comes like the night, war is nevertheless Apollo, the true divinity for consecrating and purifying states. . . . National consumption, as well as individual, admits of a brutal cure. . . . Let the little schoolgirls say: "To be good is sweet and touching." Ye say, a good cause will hallow even war. I say unto you: a good war hallows every cause. War and courage have done greater things than love of your neighbour. . . . Against the deviation of the State-ideal into a money-ideal the only remedy is war, and once again war, in the emotions of which this at any rate becomes clear, that in love to fatherland and prince the State produces an ethical impulse indicative of a much higher destiny.' Passages such as these would seem to indicate an aggressive and militant nationalism. But Nietzsche is not consistent; and nationalism, as has already been said, is one of his many *bêtes noires*. . . . His ideal may be said to be a sort of combination of Comte and Galton, of Positivism and Eugenics. Like the Positivist, he would abandon theology, and seek a goal in man-

hood, here on earth; like the Eugenist, he would create the manhood by pure breeding. . . . At first Nietzsche seems to have thought of the superman as a single individual: he repeatedly speaks of Napoleon. Gradually, however, superman passed into super-species. Of the evolution there were apparently to be three stages: first, an aristocracy to rule all Europe; next, a new European race of 'higher men'; and finally, the race of supermen. It is significant that Nietzsche dreams of a united Europe, or a United States of Europe. Nationalism, in his later years, he abandoned. 'Is there a single idea behind this bovine nationalism?' 'We are not nearly German enough to advocate nationalism and race-hatred.' He emphasizes the unity of European culture, and the coming unity of European economics; he looks to the day when men shall be called in honour Good Europeans, 'the heirs of Europe, the rich, overwealthy heirs, the heirs, only too deeply pledged, of millennia of European thought.' . . . His books are a chaos of separate aphorisms and aperçus; and he can at once denounce the State and hold that in war it produces a great ethical impulse—at once laud the will to power, and extol a Spartan self-discipline. His dream of the United States of Europe, and of mankind perfected by Eugenics, may attract, and rightly attract, many noble souls. He did not pander to that exclusive and jealous nationalism which has consumed modern Germany—'that national heart-itch and blood-poisoning' which he detested. . . . The Germans have felt, no doubt vaguely and almost unconsciously, that they are the European aristocracy, destined to 'carry heroism into knowledge and to wage war for the sake of ideas.' Their militarism has drawn new encouragement from a praise of struggle which has indeed nothing to do with the mere soldiers' battle, but which easily slips into a fleshly interpretation. It is quite natural that Bernhardi should quote Nietzsche by name; and indeed much of Bernhardi is simply Nietzsche transcribed. Take for instance these sayings: 'Without war, inferior or demoralized races would only too easily swamp the healthy and vital ones, and a general decadence would be the result. War is one of the essential factors of morality.' So has Nietzsche ministered to that which he despised. Finally, he has helped to swell the contempt and hatred of England which, if one may judge from much . . . [pre-war] German literature, . . . [became] almost a national passion. . . .

"Treitschke was already a professor of history in Berlin while Nietzsche was a professor of philology at Bâle. Unlike Nietzsche, who was unknown to his own generation, Treitschke had great and abounding vogue during the twenty-two years from 1874 to 1896, in which he lectured at Berlin. . . . His lectures at Berlin were attended by soldiers and by administrators as well as by students; and the version of German history and the interpretation of political theory which he taught are living and moulding forces to the present day."—J. E. Barker, *Nietzsche and Treitschke*, pp. 5, 13, 15-17.—"Treitschke, beyond any other German, stands forth as the interpreter of these forces. His interpretations have sunk deep into the German mind; his fiery challenges and impassioned rhetoric have coloured German thought. Though his greatest book deals only with the record of thirty-two years, it is spoken of *sans phrase* as 'the History of Germany,' and 'our great national historian' has become a familiar periphrasis in newspapers and on platforms for Treitschke's name. The real and abstract principles of German history seen

and reinterpreted through Treitschke's medium—that for many men in Germany has become their faith. These are arguments of a unique and immense influence. And what are the feelings towards England which this great historian and orator expresses? He incessantly points his nation onwards to the war with England, to the destruction of England's supremacy at sea as the means by which Germany is to burst into that path of glory and of world-dominion towards which, through all the centuries of her history, she has deliberately moved. . . . He saw Germany thus fitting herself for that high task which he had marked out to one generation after another of students—the day of reckoning with England, the day of reckoning with the great enemy for whom he had nevertheless that kind of regard which every great foe inspires, which England's strength inspires. . . . What are the origins of this antagonism or this antipathy in Treitschke to England and to things English? The question is worth asking; for there is no disputing Treitschke's immense influence not only upon his own generation but upon the whole of modern German thought. This attitude of mind does not begin with him; it is present in the Heidelberg School, in Häusser, for instance, and in Schlosser; and Dahlmann's 'History of the English Revolution' is capable of many interpretations. But in Treitschke the antagonism reaches a height and persistence of rancour or contempt which in so great a man is arresting if not unique. To him the greatness of England passes with the seventeenth century, with Cromwell and Milton. . . . The sentiment has also its roots in history, recent and remote. 'France,' said Bismarck in September 1870, 'must be paralysed; for she will never forgive us our victories.' And in the same spirit Treitschke avers: England will never forgive us our strength. And not without justice he delineates English policy throughout the eighteenth and nineteenth centuries as aimed consistently at the repression of Prussia, so soon as English politicians discovered the true nature of that State and divined the great future reserved for it by destiny. . . . For Treitschke it is not genius, it is not valour, it is not even great policy, as in the case of Venice, which has built up the British Empire; but the hazard of her geographical situation, the supineness of other nations, the measureless duplicity of her ministers, and the natural and innate hypocrisy of the nation as a whole. . . . Along with this he has the conviction that such a power can be overthrown. . . . The sincerity as well as the intensity of Treitschke's anti-Englishism is attested by the spontaneity and variety with which it finds expression. . . . His inventiveness is astonishing. Here he takes up a phrase of Montesquieu, who in 'The Spirit of Laws' makes England, so to speak, the hero of that great and perfect book, and he turns Montesquieu's judgment into an occasion for a diatribe not only against French character in the eighteenth century, but against the whole character of English history. . . . Treitschke has defined the aim of Germany, and Treitschke's definition, which has been taken up by his disciples, is this: That just as the greatness of Germany is to be found in the governance of Germany by Prussia, so the greatness and good of the world is to be found in the predominance there of German culture, of the German mind, in a word, of the German character. This is the ideal of Germany, and this is Germany's rôle as Treitschke saw it in the future. For, observe, this world-dominion of which Germany dreams is not simply a material

dominion. Germany is not blind to the lessons inculcated by the Napoleonic tyranny. Force alone, violence or brute strength, by its mere silent presence or by its loud manifestation in war, may be necessary to establish this dominion; but its ends are spiritual. The triumph of the Empire will be the triumph of German culture, of the German world-vision in all the phases and departments of human life and energy, in religion, poetry, science, art, politics, and social endeavour. The characteristics of this German world-vision, the benefits which its predominance is likely to confer upon mankind, are, a German would allege, truth instead of falsehood in the deepest and gravest pre-occupations of the human mind."—J. A. Cramb, *Germany and England*, pp. 71, 91-94, 111-112.—See also HISTORY: 29.

(i) **Germany, the ruler of Middle Europe.**—1. PAN-GERMANISM.—With the same desire for power as that voiced by Bernhardi, other writers advocated the creation of a hegemony in Middle Europe, and the idea of Pan-Germanism. In 1916, writing after the war had already been in progress for two years, Naumann summed up the arguments for this idea as follows: "So long then as the sun still shines on us it must be . . . [Germany's] purpose to enter the first class of the economic world-group Powers. This involves the adhesion of the other Central European States and nations. Except to our comrades of German race living in Austria and Hungary [1916], it is indeed of no special direct interest to these peoples that we Germans should sit in the upper council of universal history. It is not to be expected of them that they should share our historical sentiments, since there beats within them a heart of another race and of different stuff. They will put the question to themselves from their own point of view: whether, in the choice of German, Russian or English leadership, they wish to belong to the German world-union or not. Their position is similar to . . . [what] it would be with us if we were to join the Russian or English union, only with this difference, that the smaller nations have not the possibility of imagining themselves as leaders of economic world-groups. They have in fact only to choose between isolation and adhesion, and for them . . . isolation will hardly be any longer tolerable by the end of another generation. Hence sooner or later they must anyway decide with which union they will or can range themselves, according to geographical position, production and mental leanings. This is a harsh necessity, a heavy fate, but it is the overpowering tendency of the age, the categorical imperative of human evolution. When once the powerful intermediate forms have introduced themselves between territorial and national States on the one hand and humanity on the other, struggles and complaints avail nothing. People may submit to necessity earlier or later, freely or from compulsion, but the universal watchword is spoken and must be complied with. And those who conform to it earlier will in general secure better conditions for the future than those who let themselves be forced and pushed beyond the historical moment. There is no need whatever to proclaim this to opponents with many words, for words are feeble in this connection, but economic experiences will speak. Small States which cannot carry through any tariff war, but need daily imports and exports, must in future be registered with one of the great world-firms, as soon as the super-firms themselves mutually separate off from one another even more than they had done before

the war. If, however, the foundation of the Mid-European union is to be attempted in the midst of this human evolution, it must be admitted as a matter of course that Mid-Europe will be no such natural growth, no such already coagulating organism as the three great unions already in existence. The Mid-European structure must be erected with judgment and deliberation from stones already shaped and repeatedly used in building. Unfortunately it did not grow up out of the old instinct for power before the period when mankind began to make schemes for setting its house in order. This constitutes a weakness and a very considerable practical and politico-technical difficulty. The building of Mid-Europe will be even more an intellectual achievement than the foundation of the German Empire, but it will be the intellectual achievement of that nation which can say of itself without vanity that it is gifted and trained like no other for organising an economic world-group of this nature. . . . No one amongst our neighbours doubts that the Germans can accomplish the economic organisation involved, if it is at all humanly possible. But it is a somewhat different question whether or not we have, in addition to organisation and technique, that indispensable quality for world-union which we have previously termed elasticity, that flexible skill which we find in three different forms amongst Russians, English and Americans. We are somewhat hard, masterful, taciturn, have but little patience for our slower fellow-creatures, and demand that things shall be done precisely as we wish. All this has its good side, but in order to be a leading, directing economic nation some sort of international oil is needed, the art, the great art of managing men, sympathy with others, the power to enter into their nature and aims. Scientifically we can accomplish the thing irreproachably. In retrospect we are the most sympathetic of all nations, but practically we have not seldom been small schoolmasters of the old style or non-commissioned officers with pencil and mustachios. This indeed applies least of all to our leading merchants, but often to our trade secretaries, directors, officials. The German nation as a whole needs first to grow into its new task. But this too it will be able to do if it is necessary. It needs only to be put plainly to us in the first instance. We are still rather too young as a world-group nation, too close to the narrowness of the old provincial manners and the habits of thought of small nations, not yet free enough from the old position of subjection of the pre-'48 period, not sufficiently assured in intercourse, and hence often rude and insolent from want of self-confidence. Respect for those with whom we wish to work in prosperity and failure is not yet a matter of course. I say all this openly and repeatedly with intention because herein lie much greater hindrances than in clauses and statutes. Yet already the race of men who are now returning home from the war, and the race of women who have in the meanwhile worked like men, are more flexible and readier for great things. We all wish to begin anew, and so, and so only, not with our old positiveness, we approach our neighbours and ask whether or no they will enter into our union."—F. Naumann, *Central Europe*, pp. 194-196.—Writing in 1911, O. R. Tannenbergh asserted that "Greater Germany is the goal of the twentieth century. We shall fill Middle Europe with an empire of racial vigor. We shall then be in a position to meet the further duties and demands that are in store for us."—*Gross-Deutsch-*

land: *Die Arbeit des zosten Jahrhunderts*, p. 87.—These theories were not new. As early as 1878 de Lagarde wrote: "Only a Germany that reaches from the Ems to the Danube, from Memel to Trieste, to about the Bug, can compel peace in Europe without imposing a lasting burden on her inhabitants. For only such a Germany can feed herself, only such a Germany can defeat France and Russia. . . . Since, then, all the world desires peace, all the world must desire such a Germany."—P. de Lagarde, *Deutsche Schriften, 1878 (Conquest and kultur, p. 52)*.—"The strongest Germanic State on the Continent must take over the hegemony; the smaller ones must sacrifice as much of their independence and their language as is necessary to the permanent insurance of a new imperial unity. The question whether military force would become requisite is secondary, but it is essential that the state which aspires to the hegemony should have at its disposal sufficient intellectual, economic, and military power to reach this end and hold it fast. Which state should it be? It can only be the German Empire, which is now in search of more territory. No one can doubt it. . . . The moral situation, however, is so far favorable to the little Germanic states that a military, fratricidal attack upon them will not be at all necessary. All depends upon Germany's obtaining the hegemony in middle and western Europe by the subjection of France and the incorporation, at the same time or afterwards, of the German Provinces of Austria in any form that may suit our racial purposes. The natural pressure of this new German Empire will be so great that, willy-nilly, the surrounding little Germanic States will have to attach themselves to it under conditions which we set."—J. L. Reimer, *Ein pan-germanisches Deutschland, 1905 (Conquest and Kultur, pp. 53-54)*.—"Do not let us forget the civilizing task which the decrees of Providence have assigned to us. Just as Prussia was destined to be the nucleus of Germany, so the regenerated Germany shall be the nucleus of a future empire of the West. And in order that no one shall be left in doubt we proclaim from henceforth that our continental nation has a right to the sea, not only to the North Sea, but to the Mediterranean and to the Atlantic. Hence we intend to absorb one after another all the provinces which neighbor on Prussia. We will successively annex Denmark, Holland, Belgium, Northern Switzerland, then Trieste and Venice, finally northern France, from the Sambre to the Loire. This program we fearlessly pronounce. It is not the work of a madman. The empire we intend to found will be no Utopia. We have ready to hand the means of founding it and no coalition in the world can stop us."—B. von Schellendorf, quoted in H. A. L. Fisher, *The War, its causes and issues, 1914 (Conquest and Kultur, p. 54)*.—See also PAN-GERMANISM.

2. IDEAL OF A PROUD NATION OF WARRIORS.—"There are the false apostles of to-day who condemn the war as in itself reprehensible. A universal peace in which wolf and lamb shall dwell together in unity is proved possible by means of a multitude of misleading and seductive arguments. Thus do the shadows deepen over the ancient Germanic ideal of a proud nation of warriors, an ideal which is bound to lose its power to attract, particularly in a prolonged peace, when even the most martial-minded see that all chances of testing their prowess are fading gradually away. . . . The warlike spirit must not be allowed to die out among people, neither must the love of peace get the upper hand, for all the greater would be the consternation at

the moment of awakening. If the Fatherland is to remain victorious we must not let our old ideals of manly courage, fearless scorn of death and knightly virtue be destroyed, but must cherish and uphold them to the utmost, both in this generation and in all that are to come."—C. von der Goltz (E. Reich, *Germany's war mania, pp. 186-187*).

3. KAISER'S BLESSING TO GERMAN TROOPS STARTING FOR CHINA.—"In connection . . . with the trouble in China on July 27, 1900, the Emperor addressed troops in Bremerhaven immediately before their departure. In his speech he pointed out: 'The Chinese have trampled on international law, they have, in a manner unheard of in the history of the world hurled foul scorn at the sanctity of the Ambassador and the duties of hospitality. Such conduct is all the more revolting, because the crime was committed by a nation which is proud of its immemorial civilization. Maintain the old Prussian excellency; prove yourselves Christians in the cheerful endurance of suffering; may honor and glory attend your colors and your arms; set an example to all the world of discipline and obedience. . . . May you all prove your German efficiency, devotion, and bravery, bear joyfully all discomfort, and uphold the honor and glory of our arms and colors. You must set an example of discipline, self-domination, self-control. . . . When you meet the foe you will defeat him. No quarter will be given; no prisoners will be taken. Let all who fall into your hands be at your mercy. Just as the Huns a thousand years ago, under the leadership of Etzel (Attila) gained a reputation in virtue of which they still live in historical tradition, so may the name of Germany become known in such a manner in China that no Chinaman will ever again dare to look askance at a German. . . . May the blessing of God attend your flags, and may this war have the blessed result that Christianity may make its way into China.'"—Report in *Bremen Weser Zeitung* (tr. in *London Times, July 30, 1900*).—See also GERMAN Y: 1900 (October 9).

4. WAR AS A NECESSITY.—The idea that war is a necessity is not peculiar to Germany. But in Germany, where the army was one of the chief bonds of nationalism, it was taught by men whose names were revered, and sank deep into the minds of a people, one of whose characteristics was a profound regard for authority. In the book already quoted, Bernhardt taught that "it was always timely progress which has led us to victory, and has given us from the outset a certain amount of superiority over our adversaries. Such a superiority we must try to gain all the more in future as well, since it is only too likely that, with the present state of affairs in the world, we may be forced to fight against superior numbers, while, on the other hand, our most vital interest will be at stake. The political situation as it is to-day makes us look upon such a war as a necessity, on which the future development of our people depends."—F. von Bernhardt, *How Germany makes war*.—"These were the results of cosmopolitanism, the love of peace, humanitarian twaddle, and the deteriorated pre-Jena methods of warfare. Then, if ever, did history furnish proof of the fact that a nation which desires happiness must also be powerful and skilled in arms. It must neither renounce its passionate love of the Fatherland nor lose its power to regard war as an earnest, bitter thing, and an historical necessity. As long as the process of reconstructing states proceeds with the changing seasons, as long as human development does not stand still, so long

will there be war. But those who do not wish to be ruined by it must prepare in peace time to endure the stern armed contest with opponents and rivals. To this end we must spare no pains in educating the rising generation in the spirit of bravery, scorn of danger, and bodily vigor; and never again as of old before Jena must we set a higher value upon the art of war than upon soldiery virtues."—C. von der Goltz, *Jena to Eylau* (E. Reich, *Germany's war mania*, pp. 189-190).

5. THE SIN OF NATIONAL WEAKNESS.—"We find it necessary to distinguish between public and private morality. The rank of the various duties must necessarily be very different for the state and the individual man. There is a whole series of these duties which are imposed upon the individual which are absolutely out of the question for the state. The state's highest law is that of self-assertion; that is for it the absolute morality. Therefore, one must assert that of all political sins, the worst and most contemptible is weakness; it is the sin against the holy ghost of politics. In private life certain weaknesses of the soul are excusable. But of these there is no question in the state; for the state is might, and if it should belie its very essence there would be no judgment severe enough for it. It is indeed political idealism which fosters war, whereas materialism rejects it. What a perversion of morality to want to banish heroism from human life. The heroes of a people are the personalities who fill the youthful souls with delight and enthusiasm. Amongst authors, we as boys and youths admire most those whose words sound like a flourish of trumpets. He who cannot take pleasure therein is too cowardly to take up arms himself for his fatherland. All appeal to Christianity in this matter is perverted. The Bible states expressly that the man in authority shall wield the sword; it states likewise that: 'Greater love hath no man than this that he giveth his life for his friend.' Those who preach the nonsense about everlasting peace do not understand the life of the Aryan race; the Aryans are before all brave. They have always been men enough to protect by the sword what they had won by the intellect. . . . To the historian who lives in the realms of the will, it is quite clear that the furtherance of an everlasting peace is fundamentally reactionary. He sees that to banish war from history would be to banish all progress and becoming. It is only the periods of exhaustion, weariness and mental stagnation that have dallied with the dream of everlasting peace."—H. von Treitschke, *Die Politik* (E. Reich, *Germany's war mania*, p. 221).

6. AIMS AND OBLIGATIONS OF THE GERMAN MILITARY (1913): REPORTS BY GERMAN STAFF.—"[(i) *Strengthening the sword.*]—Our new army is only an extension of the military education of the German nation. Our ancestors of 1813 made greater sacrifices. It is our sacred duty to sharpen the sword that has been put into our hands and to hold it ready for defence as well as for offence. We must allow the idea to sink into the minds of our people that our armaments are an answer to the armaments and policy of the French. We must accustom them to think that an offensive war on our part is a necessity, in order to combat the provocations of our adversaries. We must act with prudence so as not to arouse suspicion, and to avoid the crises which might injure our economic existence. We must so manage matters that under the heavy weight of powerful armaments, considerable sacrifices, and strained political relations, an outbreak (*Losschlagen*) should

be considered as a relief, because after it would come decades of peace and prosperity, as after 1870. We must prepare for war from the financial point of view; there is much to be done in this direction. We must not arouse the distrust of our financiers, but there are many things which cannot be concealed.

"[(ii) *Colonies and secret allies.*]—We must not be anxious about the fate of our colonies. The final result in Europe will settle their position. On the other hand, we must stir up trouble in the north of Africa and in Russia. It is a means of keeping the forces of the enemy engaged. It is, therefore, absolutely necessary that we should open up relations, by means of well-chosen organizations, with influential people in Egypt, Tunis, Algeria, and Morocco, in order to prepare the measures which would be necessary in the case of a European war. Of course, in case of war, we should openly recognize these secret allies; and on the conclusion of peace we should secure to them the advantages which they had gained. These aims are capable of realization. The first attempt which was made some years ago opened up for us the desired relations. Unfortunately these relations were not sufficiently consolidated. Whether we like it or not, it will be necessary to resort to preparations of this kind, in order to bring a campaign rapidly to a conclusion. Risings provoked in time of war by political agents need to be carefully prepared and by material means. They must break out simultaneously with the destruction of the means of communication; they must have a controlling head to be found among the influential leaders, religious or political. The Egyptian School is particularly suited to this purpose; more and more it serves as a bond between the intellectuals of the Mohammedan World.

"[(iii) *Small steps to be covered.*]—However this may be, we must be strong in order to annihilate at one powerful swoop our enemies in the east and west. But in the next European war it will also be necessary that the small states be forced to follow us or be subdued. In certain conditions their armies and their strong positions can be rapidly conquered or neutralized; this would probably be the case with Belgium and Holland, so as to prevent our enemy in the west from gaining territory which they could use as a base of operations against our flank. In the north we have nothing to fear from Denmark or Scandinavia, especially as in any event we shall provide for the concentration of a strong northern army, capable of replying to any menace from this direction. In the most unfavorable case, Denmark might be forced by England to abandon her neutrality; but by this time the decision would already have been reached both on land and on sea. Our northern army, the strength of which could be largely increased by Dutch formations, would oppose a very active defence to any offensive measures from this quarter. In the south, Switzerland forms an extremely solid bulwark, and we can rely on her energetically defending her neutrality against France, and thus protecting our flank.

"[(iv) *Scandinavia.*]—As was stated above, the situation with regard to the small states on our northwestern frontier cannot be viewed in quite the same light. This will be a vital question for us, and our aim must be to take the offensive with a large superiority from the first days. For this purpose it will be necessary to concentrate a large army, followed up by strong Landwehr formations, which will induce the small states to

follow us or at least to remain inactive in the theatre of operations, and which would crush them in the event of armed resistance. If we could induce these states to organize their system of fortification in such a manner as to constitute an effective protection for our flank we could abandon the proposed invasion.

"[(v) *Belgium.*—But for this, army reorganization, particularly in Belgium, would be necessary in order that it might really guarantee an effective resistance. If, on the contrary, their defensive organization was established against us, thus giving definite advantages to our adversary in the west, we could in no circumstances offer Belgium a guarantee for the security of her neutrality. Accordingly, a vast field is open to our diplomacy to work in this country on the lines of our interests. The arrangements made with this end in view allow us to hope that it will be possible to

EMPEROR WILLIAM IN FIELD UNIFORM

take the offensive immediately after the complete concentration of the army of the lower Rhine. An ultimatum with a short time-limit, to be followed immediately by invasion, would allow a sufficient justification for our action in international law.

"[(vi) *Conquests.*—Such are the duties which devolve on our army and which demand a striking force of considerable numbers. If the enemy attacks us, or if we wish to overcome him, we will act as our brothers did a hundred years ago; the eagle thus provoked will soar in his flight, will seize the enemy in his steel claws and render him harmless. We will then remember that the provinces of the ancient German Empire, the County of Burgundy and a large part of Lorraine, are still in the hands of the French; that thousands of brother Germans in the Baltic provinces are groaning under the Slav yoke. It is a national question of restoring to Germany her former possessions."—J. R. H. O'Regan, *German War of 1914.*

(j) *Reign of William II.*—There is small doubt that the events which took place during the reign

of William II had a profound effect upon the situation in Europe. The idea of a colonial empire, the development of the navy, the fact that Prussia, with its militaristic tendencies remained predominant were important factors. Furthermore, the electoral system of Prussia had a certain controlling influence. For, while ostensibly providing for universal manhood suffrage, actually it gave undue influence to the militaristic class. "On the 9th of March, 1888, Emperor William I died at the age of ninety-one. He was succeeded by his son, Frederick III, in his fifty-seventh year. The new Emperor was a man of moderation, of liberalism in politics, an admirer of the English Constitution. It is supposed that, had he lived, the autocracy of the ruler would have given way to a genuine parliamentary system like that of England, and that an era of greater liberty would have been inaugurated. But he was already a dying man, ill of cancer of the throat. . . . The reign was soon over, before the era of liberalism had time to dawn. Frederick was King and Emperor only from March 9 to June 15, 1888. He was succeeded by his son, William II. [See GERMANY: 1888: Death, etc.] The new ruler was twenty-nine years of age, a young man of very active mind, of fertile imagination, versatile, ambitious, self-confident, a man of unusual vigor. In his earliest utterances, the new sovereign showed his enthusiasm for the army and for religious orthodoxy. He held the doctrine of the divine origin of his power with medieval fervor, expressing it with frequency and in dramatic fashion. It was evident that a man of such a character would wish to govern, and not simply reign. He would not be willing long to efface himself behind the imposing figure of the great Chancellor. Bismarck had prophesied that the Emperor would be his own Chancellor, yet he did not have the wisdom to resign when the old Emperor died, and to depart with dignity. He clung to power. From the beginning friction developed between the two. They thought differently, felt differently. The fundamental question was, who should rule in Germany? The struggle was for supremacy, since there was no way in which two persons so self-willed and autocratic could divide power. As Bismarck stayed on when he saw that his presence was no longer desired, the Emperor, not willing to be overshadowed by so commodious and illustrious a minister, finally demanded his resignation in 1890. [See GERMANY: 1889-1890.] . . . He [Bismarck] lived several years longer, dying in 1898 at the age of eighty-three, leaving as his epitaph, 'faithful servant of Emperor William I.' Thus vanished from view a man who will rank in history as a great diplomatist and sagacious statesman. After 1890 the personality of William II was the decisive factor in the State. His chancellors were, in fact as well as in theory, his servants, carrying out the master's wish. Down to the outbreak of the Great War there were four: Caprivi, 1890-1894; Hohenlohe, 1894-1900; von Bülow, 1900-1909, and Bethmann-Hollweg, from July, 1909 [to July 1918]. That war was to add three others to the list, whose terms were to prove exceedingly brief, Michaelis, Hertling, and Prince Maximilian of Baden."—C. D. Hazen, *Fifty years of Europe, 1870-1910*, pp. 52-54.

I. REMOVAL OF BISMARCK.—"The extreme political tension was at first somewhat relieved by the removal of Bismarck from the scene, by this 'dropping of the pilot,' after twenty-eight years of continuous service. [See GERMANY: 1889-1890.] The early measures under the new régime showed

a liberal tendency. The anti-Socialist laws, expiring in 1890, were not renewed. This had been one of the causes of friction between the Emperor and the Chancellor. Bismarck wished them renewed, and their stringency increased. The Emperor wished to try milder methods, hoping to undermine the Socialists completely by further measures of social and economic amelioration, to kill them with kindness. The repressive laws lapsing, the Socialists reorganized openly, and have conducted an aggressive campaign ever since. The Emperor, soon recognizing the futility of anodynes, became their bitter enemy, and began to denounce them vehemently, but no new legislation was passed against them, although this was several times attempted. The reign of William II was notable for the remarkable expansion of industry and commerce, which rendered Germany the redoubtable rival of England and the United States. In colonial and foreign affairs an aggressive policy was followed. German colonies proved of little importance, entailed great expense, and yielded only small returns. But the desire for a great colonial empire became a settled policy of the Government, and seized the popular imagination."—*Ibid.*, p. 54.—See also GERMANY: 1890-1914: Alteration of foreign policy; EUROPE: Modern; Imperialism.

2. DEVELOPMENT OF THE NAVY.—RISE OF SOCIAL DEMOCRATIC PARTY.—"Connected with the growing interest of Germany in commercial and colonial affairs went an increasing interest in the navy. Strong on land for fifty years, William II desired that Germany should be strong on the sea, that she might act with decision in any part of the world, that her diplomacy, which was permeated with the idea that nothing great should be done in world politics anywhere, in Europe, in Asia, in Africa, without her consent, might be supported by a formidable navy. To make that fleet powerful was a constant and a growing pre-occupation of the Emperor. [See GERMANY: 1890-1914: Growth of the army; 1898-1914; WARSHIPS: 1905-1915.] In the political world the rise of the Social Democratic party was the most important phenomenon. It represented not merely a desire for a revolution in the economic sphere, it also represented a protest against the autocratic government of the ruler, a demand for democratic institutions. While Germany had a constitution and a parliament, the monarch was invested with vast power. Parliament did not control the Government, as the ministers were not responsible to it. There was freedom of speech in Parliament, but practically during most of this reign it did not exist outside. Hundreds of men have, during the past twenty years, been imprisoned for such criticisms of the Government as in other countries are the current coin of discussion. This is the crime of *lèse-majesté*, which, as long as it exists, prevents a free political life. The growth of the Social Democratic party to some extent represented mere liberalism, not adherence to the economic theory of the Socialists. It was the great reform and opposition party of Germany. It had, in 1907, the largest popular vote of any party, 3,260,000. Yet the Conservatives, with less than 1,500,000 votes, elected in 1907 eighty-three members to the Reichstag to the forty-three of the Socialists. The reason was this: The electoral districts had not been altered since they were originally laid out in 1869-71, though population has vastly shifted from country to city. The cities have grown rapidly since then, and it is in industrial centers that the Socialists are strongest. Berlin,

with a population in 1871 of 600,000, had six members in the Reichstag. It still had only that number in 1907, although its population was over 2,000,000, and although it would have been entitled to twenty members had equal electoral districts existed. These the Socialists demanded, but for this very reason the Government refused the demand. The extreme opponents of the Social Democrats even urged that universal suffrage, guaranteed by the Constitution, be abolished, as the only way to crush the party. To this extreme the Government did not dare to go. In recent years several questions have been much discussed: the question of the electoral reform in Prussia; of the redistribution of seats, both in the Prussian Landtag and the Imperial Reichstag; and of ministerial responsibility."—*Ibid.*, pp. 55-56.—See also GERMANY: 1907-1914; 1910.

3. PRUSSIA AND THE EMPIRE.—"Prussia was the state that in practice ruled the German Empire. This was what was intended by Bismarck when he drew up the Constitution of the Empire, it was precisely the object of his entire policy. The Constitution was based on the two chief articles of Bismarck's creed, the power of the monarch and the ascendancy of Prussia. This was the accepted idea of the governing classes down to the outbreak of the war. Prussia, as was said in 1914 by Prince von Bülow, the most important Chancellor of the Empire since Bismarck, 'Prussia attained her greatness as a country of soldiers and officials, and as such she was able to accomplish the work of German union; to this day she is still, in all essentials, a state of soldiers and officials.' The Governing classes were, in Prussia, which, in turn, governed Germany, the monarchy, the aristocracy and a bureaucracy of military and civil officials responsible to the King alone. The determining factor in the state was the personality of the King. Neither the Empire, nor the Kingdom of Prussia, was governed by democratic institutions. The Kingdom lagged far behind the Empire, and, so great was its power, that it impeded the development of liberty in the Empire."—*Ibid.*, pp. 56-57.

4. ELECTORAL SYSTEM.—QUESTION OF MINISTERIAL RESPONSIBILITY.—"The exercise of the right to vote was so arranged that the ballot of the poor man was practically annihilated. Universal suffrage was rendered illusory. And this was the way it was done. The voters were divided in each electoral district into three classes according to wealth. The amount of taxes, paid by the district, was divided into three equal parts. Those taxpayers who paid the first third were grouped into one class; those, more numerous, who paid the second third, into another class; those who paid the remainder, into still another class. The result was that a very few rich men were set apart by themselves, the less rich by themselves, and the poor by themselves. Each of these groups voting separately, elected an equal number of delegates to a convention, which convention chose the delegates of that constituency to the lower house of the Prussian Parliament. Thus in every electoral convention two-thirds of the members belonged to the wealthy or well-to-do class. There was no chance in such a system for the poor, for the masses. The system gave an enormous preponderance of political power to the rich. The first class consisted of very few men, in some districts of only one; the second was sometimes twenty times as numerous, the third sometimes a hundred, or even a thousand times. Thus, though every man had the suffrage the vote of a single

rich man might have as great weight as the votes of a thousand workmen. Universal suffrage was thus manipulated in such a way as to defeat democracy decisively and to consolidate a privileged class in power in the only branch of the government that had even the appearance of being of popular origin. . . . In 1908 there were 293,000 voters in the first class, 1,065,240 in the second, 6,324,079 in the third. The first class represented 4 per cent, the second 14 per cent, the third 82 per cent of the population. . . . The first class chose the same number of electors as the third. Thus, 370 rich men had the same voting capacity as 22,324 proletarians. . . . This system would seem to be outrageous enough by reason of its monstrous plutocratic caste. But this was not all. This reactionary edifice was appropriately crowned by another device—oral voting. Neither in the primary nor the secondary voting was a secret ballot used. Voting was not even by a written or printed ballot, but by the spoken word. Thus everyone exercised his right publicly in the presence of his superior or his patron or employer or his equals or the official representative of the King. In such a country as Prussia, where the police were notoriously ubiquitous, what a weapon for absolutism! The great landowners, the great manufacturers, the State, could easily bring all the pressure they desired to bear upon the voter, exercising his wretched rudiment of political power. Needless to say, under such a system as this the working classes were almost entirely unrepresented in the Prussian legislature. . . . In the Empire, also, a similar problem became yearly more acute. In 1871, Germany was divided into 397 constituencies for the Reichstag. That number remained the same henceforth down to the war, and, indeed until the Reichstag disappeared in the convulsions of the closing months of 1918. Not a single district gained or lost in representation. Yet from 1871 to 1914 the population of the Empire increased from about forty-one millions to over sixty-seven millions, and there was a great shifting in population from the country to the cities. One of the divisions of Berlin, with a population of 697,000, elected one representative, whereas the petty principality of Waldeck, with a population of 59,000, elected one. The 851,000 voters of Greater Berlin returned eight members; the same number of voters in fifty of the smaller constituencies returned forty-eight. A reform of these gross inequalities was widely demanded, but the demand passed unheeded. [See also SURFRAGE, MANHOOD: Germany: 1844-1917; 1867-1917.] Another subject much discussed during the later years of the Empire was that concerning ministerial responsibility. The indiscretions of Emperor William II made this from time to time a burning question. An interview with him, in which he spoke with great freedom of the strained relations between Germany and Great Britain, was published in the London *Telegraph* on October 28, 1908. At once was seen a phenomenon not witnessed in Germany since the founding of the Empire. There was a violent protest against the irresponsible actions of the Emperor, actions subject to no control, and yet easily capable of bringing about a war. Newspapers of all shades of party affiliation displayed a freedom of utterance and of censure unparalleled in Germany. All parties in the Reichstag expressed their emphatic disapproval. The incident, however, was not sufficient to bring about the introduction of the system of the responsibility of ministers for all the acts of the monarch, and the control of the

ministry by the majority of the Reichstag; in short, the parliamentary system in its essential feature."—*Ibid.*, pp. 57-61.—See also GERMANY: 1908 (November); 1910 (March).

(k) The case from an Austrian viewpoint.—"For years the political barometer of the European ministries of Foreign Affairs had stood at 'storm.' It rose periodically, to fall again; it varied—naturally; but for years everything had pointed to the fact that the peace of the world was in danger. The obvious beginnings of this European tension date back several years, to the time of Edward VII. On the one hand, England's dread of the gigantic growth of Germany; on the other hand, Berlin's politics, which had become a terror to the dwellers by the Thames; the belief that the idea of acquiring the dominion of the world had taken root in Berlin. These fears, partly due merely to envy and jealousy, but partly due also to a positive anxiety concerning existence—these fears led to the encircling policy of Edward VII, and thus was started the great drive against Germany. It is well known that Edward VII made an attempt to exercise a direct influence on the Emperor Francis Joseph to induce him to secede from the Alliance and join the Powers encircling Germany. It is likewise known that the Emperor Francis Joseph rejected the proposal, and that this decided the fate of Austria-Hungary. From that day we were no longer the independent masters of our destiny. Our fate was linked to that of Germany; without being conscious of it, we were carried away by Germany through the Alliance. I do not mean absolutely to deny that, during the years preceding war, it would still have been possible for Germany to avert it if she had eradicated from European public opinion all suspicion respecting her dream of world-dominion, for far be it from me to assert that the Western Powers were eager for war. On the contrary, it is my firm conviction that the leading statesmen of the Western Powers viewed the situation as such, that if they did not succeed in defeating Germany, the unavoidable result would be a German world-dominion. I mention the Western Powers, for I believe that a strong military party in Russia, which had as chief the Grand Duke Nicholas Nicholaievitch, thought otherwise, and began this war with satisfaction. The terrible tragedy of this, the greatest misfortune of all time—and such is this war—lies in the fact that nobody responsible willed it; it arose out of a situation created first by a Serbian assassin and then by some Russian generals keen on war, while the events that ensued took the monarchs and statesmen completely by surprise. The Entente group of Powers is as much to blame as we are. As regards this, however, a very considerable difference must be made between the enemy states. In 1914 neither France nor England desired war. France had always cherished the thought of revenge, but, judging from all indications, she had no intention of fighting in 1914; but, on the contrary—as she did fifty years ago—left the decisive moment for entering into war to the future. The war came quite as a surprise to France. England, in spite of her anti-German policy, wished to remain neutral and only changed her mind owing to the invasion of Belgium. In Russia the Tsar did not know what he wanted, and the military party urged unceasingly for war. As a matter of fact, Russia began military operations without a declaration of war. The states that followed after—Italy and Rumania—entered into the war for purposes of conquest, Rumania in particular. Italy also, of course,

but, owing to her geographical position, and being exposed to pressure from England, she was less able to remain neutral than Rumania. But the war would never have broken out had it not been that the growing suspicion of the Entente as to Germany's plans had already brought the situation to boiling-point. The spirit and demeanor of Germany, the speeches of the Emperor William, the behavior of the Prussians throughout the world—whether in the case of a general at Potsdam or a *commis voyageur* out in East Africa—these Prussian manners inflicting themselves upon the world, the ceaseless boasting of their own power and the clattering of swords, roused throughout the whole world a feeling of antipathy and alarm, and effected that moral coalition against Germany which in this war has found such terribly practical expression. On the other hand, I am fairly convinced that German, or rather Prussian, tendencies have been misunderstood by the world, and that the leading German statesmen never had any intention of acquiring world-dominion. They wished to retain Germany's place in the sun, her rank among the first Powers of the world; it was undoubtedly her right, but the real and alleged continuous German provocation and the ever-growing fears of the Entente in consequence created just that fatal competition in armaments and that coalition policy which burst like a terrible thunderstorm into war. It was only on the basis of these European fears that the French plans of revenge developed into action. England would never have drawn the sword merely for the conquest of Alsace-Lorraine; but the French plan of revenge was admirably adapted to suit the policy inaugurated by King Edward, which was derived not from French, but from English motives. Out of this dread of attack and defense arose that mad fever for armaments which was characteristic of pre-war times. The race to possess more soldiers and more guns than one's neighbor was carried to an absurd extreme. . . . Two possibilities alone remained—either a voluntary and general disarmament, or war. A slight attempt at the first alternative was made in 1912 through negotiations between Germany and England respecting naval disarmament, but never got beyond the first stage. England was no readier for peace, and no more disposed to make advances, than was Germany, but she was cleverer and succeeded in conveying to the world that she was the Power endangered by Germany's plans for expansion. . . . The Aehrenthal policy, contrary to what we were accustomed to on the Ballplatz, pursued ambitious plans for expansion with the greatest strength and energy, thereby adding to the suspicions of the world regarding us. For the belief gained credence that the Vienna policy was an offshoot of that of Berlin, and that the same line of action would be adopted in Vienna as in Berlin, and the general feeling of anxiety rose higher. Blacker and blacker grew the clouds; closer and closer the meshes of the net; misfortune was on the way."—O. Czernin, *In the World War*, pp. 1-6.

(1) European politics in 1914.—The Serajevo crime "aroused intense indignation against the Serbs . . . and all through Europe there rang denunciations of 'that nation of assassins.' There were suspicious features about the crime. The Archduke had favoured *Trialismus*; and the Archduchess was of Slav race. Therefore the murdered pair were more Slavonic in their sympathies than nine-tenths of those who now denounced the Serbs. But there can be no doubt as to the intense in-

dignation which the crime at Serajevo aroused throughout the Austrian dominions; and it excited, what has been so rare in the recent history of the Empire, a passionate and general longing for war. . . . Up to July 23 Austria delayed action. But the *Militärische Rundschau* clamoured for war.—'The moment is still favourable for us. If we do not decide upon war, the war we shall have to wage in two or three years at the latest will be begun in circumstances much less propitious. Now the initiative belongs to us. Russia is not ready; the moral factors are for us, might as well as right. Since some day we shall have to accept the struggle, let us provoke it at once.' Let us . . . take a brief survey of the general situation in Europe in the first seven months of 1914. In Russia there was a very serious strike [see RUSSIA: 1914 (July)], which promised to paralyse not only the tram service but also the transport service of the Empire. Consequently that vast organism seemed likely to move with far more than the traditional amount of circumspection. Difficulties of mobilization have always been great in Russia owing to the sparseness of the population and the primitive nature of the means of communication. Her railways are not all of the same gauge; and the locomotives on different lines are constructed, some to burn wood, others coal or oil. But strategic railways to her western frontier were either planned or were in course of construction, an additional motive why the Germans should act soon. Further, in her three last wars, the Crimean, the Turkish and the Japanese, her organization had proved to be very defective. Consequently, it was a proverb in historical circles that Russia, however strong for defence (as against Charles XII and Napoleon) was weak for offence; and in June, 1914, her offensive power seemed at the lowest point. Russian finances were also judged to be weak. . . . In the spring and summer of 1914 the French Republic was not in good odour. The miserable Caillaux affair [see FRANCE: 1913-1914], with the resulting recriminations between Ministers of State, awakened a general sense of distrust and alarm. Parliamentary Government had long been on its trial, and now it seemed condemned. Groups of men, struggling for power, displaced others so soon as they were hopelessly discredited. Above them there stood . . . M. Poincaré, who typified France; but he seemed powerless before the strife of the factions. Worst of all, some Ministers stood accused of selling State secrets to Germany. Then again, the army was far from strong. True, the Chambers had in the summer passed a law reinforcing three years' military service, a measure which promised to restore the military efficiency latterly open to question. But early in 1914 the supporters of the new Ministry threatened to get that decree repealed. Everything therefore became uncertain. Later on, on July 13, there took place in the Chambers a debate, in which the army was alleged to be ill equipped for war, boots and other necessities being deficient both in quality and quantity. The disclosures sent thrills of alarm through France, of exultation through Germany. . . . The most serious feature in the life of France remains to be noted, the declining birth-rate. If that decline continued, France would obviously become a Power of the second rank. A German official puts it thus: 'The French may arm as much as they like. They cannot from one day to another increase their population.' What of the British Empire? In the year 1914 how did it stand in the eyes of the militant party of Berlin?

Certainly there was much to excite their hopes. The Pan-Germans had long filled their books and journals with disquisitions on the inherent weakness of the British dominions. The arguments were curiously like those used by the French Republicans in 1793, adopted by Bonaparte, and then pressed home in his Continental System. An essay might be written on the theme *Delenda est Carthago*, as applied to England. The idea has captivated many a thinker, from the time of Quesnay and the French Economistes down to the German Agrarians of to-day. . . . Rohrbach [in] his estimate of the defensive power of Australia . . . declared that she could not resist if her four chief towns, all of them near the coast, were occupied by an invader. As for Canada, she was sparsely peopled and had no military force worthy of mention. India was discontended; the handful of white administrators did not understand the people, who were always on the brink of revolt. The appearance of a single Russian army-corps on the Indus would lead to the collapse of British rule. Egypt, the keystone of the imperial arch, could easily be dislodged by the Moslems in a Holy War. Above all, the heart of the Empire was weak; for the British people were too enervated by luxury and selfishness to cope with the difficulties presented by their overgrown Empire. . . . Even those who did not depreciate Great Britain to this extent, proclaimed the need of beating her down. General von Bernhardt in his second book, *Unsere Zukunft* (Berlin, 1912), declared that a naval war with her might be successful; she found great difficulty in manning her fleet by the voluntary system; and (said he), 'she seems to be approaching the limits of her naval capacity. In the second place the Baltic and North Sea Canal will soon be finished, and its completion will yield considerable military advantages to Germany. Lastly, the German navy grows from year to year, so that the conclusion lies near, that the comparative strength of the two navies will gradually be altered to England's disadvantage. In the Mediterranean the Austrian and Italian navies are about to be strengthened.' He then says it is clearly to the interest of Great Britain to provoke a war with Germany as soon as possible. . . . Indeed, writers who neglect the military and naval situation leave out of count the determining factor of the policy of Berlin. Germany has enjoyed an astonishing series of triumphs because she does not go to war for an idea or a principle, but because she awaits a time favourable for dealing a sudden blow. That is the essence of Realpolitik. Even when she does not deal the blow, her diplomacy is coloured by the military and naval situation. . . . She . . . pushed on her navy as fast as possible; but the adoption of the Dreadnought placed her for a time at a great disadvantage, because, after the completion of her first Dreadnoughts in 1911-12, she could not send them through her ship-canal; and in view of the persistence of the Anglo-Russo-French entente, which she found to be solid at the time of the Bosnian crisis of 1908-9, she had to prepare to face a naval war with all three Powers. She then made greater efforts than ever, and so did her Allies, Austria and Italy. By the Naval Act of 1912 she provided that about four-fifths of her marine should always be kept on a war footing; and so threatening was the situation which thus came about that the British Admiralty for a time decided to leave the Mediterranean, a resolve which emphasized our reliance on France in that quarter. It was clear, then, that Germany was beginning to

run us close. Still, she could not well face a war until the great strategic advantages of the Kiel Canal were again at her disposal. Therefore, on naval grounds it was desirable for her to postpone a war until after the completion of that great work. This fact was well understood in naval circles. [See also ENGLAND: 1912-1913; GERMANY: 1890-1914: Strength of the army, etc.; 1898-1914; WAR, PREPARATION FOR: 1913; 1914; WARSHIPS: 1905-1915.] . . . But why did she hurry on the Canal so as to be ready by Midsummer, 1914? Here the state of the French and Belgian armies must be considered. The efficiency of the French army was certain soon to increase owing to the operation of the law of 1913, reinforcing three years' military service. [See also MILITARY ORGANIZATION: 26.] The Belgian army also was becoming stronger every year. . . . In 1912, owing to alarming advice respecting German plans, the Chambers at Brussels extended the principle of compulsory service with few exceptions to males physically fit, above the age of nineteen. . . . Finally . . . [the Belgian army] would rise to 340,000. [See also MILITARY ORGANIZATION: 24.] It is certain that Germany took into consideration this increase. The new Army and Taxation Bills introduced into the Reichstag on April 7, 1913, led to an interesting discussion, the Imperial Chancellor stating that it was the duty of the Government to train 60,000 men more every year, in order to meet the proposed increases of the French and Russian armies. He also pointed out the difficulty of acceding to Mr. Churchill's proposal of a Naval Holiday. The Minister for War then stated that the object of the Bills was to render possible an offensive strategy if war came; for 'the best parry is the lunge: the best covering force is the offensive.' . . . [See also MILITARY ORGANIZATION: 29.] The opinion became prevalent that . . . [the new] drastic taxation could not last; and a feeling of restlessness increased. . . . A rupture of the peace of Europe appeared so imminent on the Albanian-Montenegrin disputes as to justify the Powers in taking financial precautions. Those of Germany were especially thorough, probably because her credit suffered severely at the time of the Agadir crisis in 1911. . . . Accordingly, on July 3, 1913, amidst a time of great prosperity, a law was passed authorising the addition of gold and silver equal in value to £12,000,000. This sum was to be added to the imperial reserve of £6,000,000 deposited in 1871 in the fortress of Spandau. In addition, there was in the Banks of Issue bullion of the value of £86,960,000. Thus, the total value of gold and silver reserve was £104,960,000. But the Government was also ready with measures calculated to meet a sudden demand for money. On August 1, 1914, it suspended cash payments at the Banks and issued a large amount of paper notes and silver coins. The imperial reserve was also made available, and the Government immediately established banks for the issue of loans even for very small amounts on the security of goods and securities of all kinds, thereby becoming a paternal pawnbroker. There was therefore no need of a moratorium, and Germany prided herself on the ease with which she adapted herself to a state of war. [See also MONEY AND BANKING: Modern: 1871-1914.] The British Government had no plans ready for meeting the financial strain; and at the close of July . . . [was] face to face with a very serious situation. . . . Far worse, however, was the general political situation of the United Kingdom. The Germans seem to have been singularly impressed with the in-

ability of our Government to deal with 'the wild women' [the suffragettes.] Much space was given in their papers to the outrages of the militants; and many were the comments on the softness and hesitancy of British procedure. . . . The Irish Question produced an even deeper impression. That the British Government should be unable to prevent two sets of Irish volunteers procuring arms and drilling was incomprehensible to the German mind. . . . A heavy responsibility lies somewhere about that whole business. That responsibility will be allotted some day and will prove to be an indirect cause of the war. . . . This further point deserves notice. The Austrian Note to Serbia was sent on July 23, the day on which it became known that the Buckingham Palace Conference on the Irish Question was certain to fail."—J. H. Rose, *Origins of the war*, pp. 96-120.

(m) Ambassador Morgenthau's version of the cause of the war.—Bethmann-Hollweg's. See below: Diplomatic background: 74; 76.

(n) German view of international politics in Europe.—Fear of encirclement.—From the formation of the Entente Cordiale and the subsequent conclusion of the Anglo-Russian Agreement (1904-1907) the vision of an "encircling policy" directed against Germany gradually took hold of the German mind. Not only was that idea uppermost in the thoughts of many German publicists and the general public, but it apparently haunted the imperial government. Unfounded fear and suspicion of the Triple Entente colored German political literature for several years before the war came. The following extracts from a well-known German publicist and from the writings of von Bethmann-Hollweg reflect the prevalent German view. "In 1907, every detail of the Anglo-Russian agreement was perfect; in another year, the decisive blow could be dealt. In June 1908, Edward VII and the Czar met at the Russian naval station Reval. A month and a half later, the meeting of the Czar with the President of the French Republic took place. Meanwhile, the Young-Turkish revolution had broken out in Constantinople, resulting in a temporary shift in the conditions of the Orient. It is a well known fact today, that in the summer of 1908 all Europe not only was in great fear of war, but stood in imminent peril of being embroiled in a bloody conflict. It is no longer a secret that the visit of the French president in Russia had been prepared for some time past. The sudden changes at the Bosphorus, a few days prior to the meeting, could not have been foreseen by any one. The immediate purpose of the two meetings at Reval was the launching of a scheme of intervention in Macedonia. The Macedonian question had, for a number of years, been the most serious point in the inner-Turkish policy; at the same time, it offered to the foreign powers the best possible opportunity for interference. German diplomacy was, of course, well informed as to the steps planned; nor is it a secret today that the German naval forces, as in fact all European navies, were at that time in a state of utmost preparedness. The joint demand of England, Russia, and France with regard to Macedonia would in all probability have been rejected by the Sultan. The Turkish refusal would then have been considered sufficient reason for interference. No matter what the outcome was, each of the powers, party to the agreement, above all, England, was to gain effective control over the territory in question. For Germany, that would have meant the choice between peace and war. Certain it seems that King Edward, the

governing power of the isolation, had set his mark less upon a war than upon forcing Germany to submission without active resistance; in fact, he seemed to be all but convinced that at the critical moment the ruling authorities in Germany would lack courage to declare war. The unexpected revolution in Turkey upset the entire program, so that England had cause to postpone the forceful issue of the crisis in the Orient. . . . Suddenly the crisis seemed to approach from an entirely unsuspected quarter. On October 5 Austria-Hungary proclaimed its sovereignty over Bosnia. Although thereby the actual state of affairs suffered no change in the least, as Bosnia for thirty years had been an Austrian possession under Austria's administration, the annexation caused an enormous excitement in Serbia. For the first time since the misfortune of the Japanese war, Russia, having assured herself of Italy's coöperation, made a hostile move on the Balkans. Ever since the failures in Tunis and Abyssinia, Italy, in consequence of the king's marriage with a princess of Montenegro, had her eye on the Balkans, and public opinion in Italy grew increasingly anxious for the proffered chance to possess a strip of land on the other side of the Adriatic Sea. That ambition realized, the commercial existence of Austria-Hungary would have been endangered, as Italian possessions on both sides of the Straits of Otranto were likely to imperil her outlet upon the open sea. On the other hand, Albania proved a particularly enticing bait to sever Italy's connection with the Triple Alliance and induce her to join the English-Russian-French group directed against Germany. Russia was particularly active in bringing about that conversion. The great Slav empire obviously hoped that, during the impending settlement of the Turkish question, exceptional advantages would be gained by a coöperation with Italy. Early in 1909 the whole situation was in a highly critical stage. Serbia's attitude, stirred up and supported by Russia, forced Austria-Hungary to a partial though vigorously conducted mobilization. Russia was pleased with her own political conduct, which was no doubt calculated to express her readiness to go to war, and the Russian press, together with a number of irresponsible Pan-Slavic organizations, continued to add fuel to the fire which was threatening to break forth into a great European conflagration. It had not been England's aim to force the crisis by a general European war, which could not be avoided if, with Russia's support, the threatening conflict between Austria-Hungary and Serbia were to break out openly. France had large financial interests in Turkey and in the Balkans, while her navy, owing to the poor quality of powder, was in no condition to fight. Above all, Russia was unable to take the field. Her armed forces had so little recuperated from the effects of the war with Japan, and the subsequent revolution, that she could not enter a great European war with any hope for success. The entire Russian agitation, encouraging Serbia and threatening Austria-Hungary and Germany, was calculated to intimidate the opponent, but was destined to collapse when Germany called the bluff. On March 20 [1909], the German ambassador in St. Petersburg declared that Germany had decided not to influence Austria's independent action with regard to the Servian controversy, and if necessary, to grant her ally every support her life-interests seem to demand. Thereupon Russia was obliged to put her cards on the table, a move equally fatal to Russia's prestige and to the policy of the intended isolation of Germany. For now it had become a

matter of universal knowledge that Russia lacked the military strength required for the successful pursuance of her political aims. A moment of significant consequences for the future was the growing conviction, in the political circles of Russia, that the government had been forced to yield in the Bosnian question by a threatening letter of the emperor to the Czar. So violently did that supposed pressure on Russia act on the public feeling that, since the spring of 1909, it became a conscious factor in the anti-German spirit throughout the empire. In fact, as the story of the letter gained increasing credence in the cultured strata of Russian society, the latent hostility against Germany assumed extraordinary proportions. . . . The Young-Turkish revolution and Russia's military impotence, which came to light a year later as the consequence of her defeat at the hands of Japan, resulted, at least for the time being, in a failure of England's policy of isolation as originally conceived. Britain's policy, it will be remembered, aimed at Germany's immediate or gradual surrender, in fact or in spirit, to the extensive English program in the Orient, by means of dreadnaughts and an alliance with Russia and France. If the English plea had been successful, Germany's defeat would have been overwhelming. Even Prussia's retreat to Olmütz, which may have been considered its closest parallel, presents superior features, as in the present case it would have been impossible to recover from the crushing blow. It seemed as if the death of Edward VII in May, the year following, was an accidental or even predestined occurrence, confirming, as it were, the failure of a policy so zealously pursued by that ruler since the beginning of his reign. Though Edward's death did not alter the fundamental relation of the powers, particularly that between Great Britain and Germany, yet the English policy lost a characteristic which was highly effective though scarcely discernible, namely, the deliberate and active participation of a master mind in shaping a political situation hostile to the interests of the German empire. . . . One of the first symptoms of Russia's reawakened political ambition was the resumption of her oriental policy. The Russian-English agreement of 1907 had already directed Russia's political course toward her old aims in Turkey. The foreign policy in the Far East had to be abandoned; the long cherished plan to change Persia entirely into a tributary state of Russia, and to construct a railroad to the Persian Gulf or the Indian Ocean, was relinquished in favor of England. Instead, Russia and England entered into an agreement, which bade fair to bring about a speedy dismemberment of the Turkish empire and thereby an indemnity for the Russian losses sustained in the Far East. The new tendency of Russia's oriental policy received its momentum from a number of powerful incentives. First of all, there was need of recovering military prestige. Secondly, a general revulsion of feeling, both in political circles and with the people at large, demanded a return from the chimeras in the Far East to the practical aggressive policy against Turkey—the so-called 'legacy of Peter the Great.' A third incentive was furnished by the internal struggles between the reactionary and the liberal parties, a conflict which was constantly growing more violent. . . . At the present time [1914], the Russian government as well as public opinion exert a stupendous pressure against the Orient. One subject of discussion, above all others, occupies the Russian press, the speakers of Pan-Slavic and similar political gatherings, and even the official military organs—the subject of the Orient. In Constanti-

nople, at the Turkish straits, in Asia Minor, there, so they say, lie the goals of Russia's political future; to attain them is Russia's historical and national mission. Much Russian gold has been expended, much Russian blood has been spilled for the Slavs in the Balkans, so that Russia has indeed a right to their leadership. But for still another reason Russia must be their chosen head; for, once in possession of the Turkish straits, it is her duty to protect them. Austria's and Germany's oriental policies form an obstacle which she must overcome. Austria is an enemy eager to subject the Balkan Slavs for her own purpose; Germany is her ally and accomplice. Moreover, Germany is filled on her own account with a 'longing for the East.' But her presence in the East is not desired, and yet she seeks to rob Russia of her legitimate inheritance. Today, it is hatred against Germany that Russia nurses, hatred, downright and unequivocal, a hatred which is no longer limited to isolated circles but is shared by the entire Russian population. This hostile feeling is still deeper rooted with those that are conscious of the political humiliation which, in 1909 and 1913, Russia suffered at the hands of Germany. Since 1909, an almost feverish zeal has been displayed in the reorganization of the army, not only for the purpose of general defense, but also more especially for the final and decisive struggle for the Turkish Orient. . . . The Russian government now recognizes that it will not be possible to defer the final issue for any great length of time. Accordingly, when Russia proposed to her ally, France, to increase her preparedness for war by introducing the three years' military service, and to grant to the Russian government a credit of six hundred and twenty-five million dollars for war-like preparation in Russia, Germany met the situation by introducing the recent army bill and the military taxes. The Russian minister of finance at first tried to conceal the real purpose of the loan (financial stringency and military preparations), and attempted to explain it by an extensive plan of pioneering activity, such as the building of railroads and the construction of irrigation canals in Asiatic Russia. . . . Competent judges in Germany point to 1915 as the year in which Russia's military preparedness will have attained a moderately high degree of perfection. It can, of course, not be expected that until then all desirable strategic railroads on her western boundary will be completed. Nevertheless, certain important prerequisites for mobilization and readiness for battle may until 1915 be adequately fulfilled. Preparedness for war is obviously a relative concept. No nation is ever fully prepared, as its opponent is likewise at work, and his progress continually demands new measures to counteract whatever advantages may have been gained on the hostile side. This race for supremacy also characterizes Germany and Russia. The Russian strategic railways which had been planned, supposedly by special request of the French general staff, would require several years for their completion. Similarly, the Russian army would reach its highest numerical development, as provided by the recent recruiting laws, not until 1916. And yet, if the political situation would warrant the fatal step, it is not impossible that Russia may resolve to force the decision of the sword some time during the year 1915 or even earlier."—P. Rohrbach, *Germany's isolation* (tr. by P. H. Phillipson), pp. 48-53, 56-57, 96-100, 103-104.

"When Prince Bülow on leaving office in July, 1909, turned over to me [Bethmann-Hollweg] the business of the Imperial Chancellery, he gave me,

in various lengthy conversations, a review of the foreign relations of Germany. This review may be summed up broadly in the statement that our relations with Russia and France being entirely correct, the attitude of England alone gave any cause for anxiety; but that it would be possible with careful handling to establish confidential relations with England also. My own impression was that the general ill-will that had been excited against us among the Great Powers of Europe, other than our allies, by King Edward's policy of encirclement was as bad as it ever had been. Iswolski, who was responsible for the foreign policy of Russia, lost no opportunity of giving the most violent expression to his irreconcilable dislike of Count Aehrenthal and the latter's method of conducting Austro-Hungarian policy. Even the devotion and determination with which the Russian Ambassador, Count Osten-Sacken, the type of the sound diplomat of the old school, threw himself personally into the maintenance of the traditional friendship between Russia and Germany could deceive no one as to the fact that more influential forces in St. Petersburg were carrying their hostility to the Monarchy of the Danube over to its ally, Germany. Our attitude in the Bosnian crisis of 1908-09 had, as a matter of fact, been intended to offer the Russian Cabinet a way out of the cul-de-sac that it had got into, and had actually done so. But this attitude had been considered as an affront to Russian national feeling, and Russia had become more and more accustomed to regarding Germany as the principal obstacle to the realisation of its ambitions for exclusive control of the Balkans and of Constantinople. Our relations with France were for the time being undisturbed. The Morocco economic convention concluded in February, 1909, seemed likely to avoid further friction, provided it were properly enforced. . . . In England, King Edward was at the zenith of his power. English politicians very generally lauded him as the great 'peacemaker,' and emphatically rejected all suggestions that the associations with France and Russia entered into by England aimed at a political encirclement of Germany—still less any military enterprise. Lord Haldane, in a speech made on the 5th of July, 1915, had expressly declared that any such opinion was without foundation and contrary to the fact. In this he was to some extent right and to some extent wrong. That King Edward, or to express it more correctly—the official British policy behind him, had planned any military enterprise against us, is in my opinion not the case. But to deny that King Edward aspired to and attained our encirclement is mere playing with words. The fact of the matter was that the communications between the two Cabinets were confined essentially to the dispatch of such formal business as was required by the mutual relations of two States not at war with one another. Further, that Germany found itself opposed by a combine of England, Russia and France in all controversial questions of World policy. Finally, that this combine not only raised every obstacle to the realisation of German ambitions, but also laboured systematically and successfully to seduce Italy from the Triple Alliance. You may call that 'encirclement,' 'balance of power,' or what you will; but the object aimed at and eventually attained was no other than the welding of a serried and supreme combination of States for obstructing Germany, by diplomatic means at least, in the free development of its growing powers. . . . We may learn much in this connection from the significance attached to the position of England in the new alignment of the

Great Powers by the most respected English statesmen without distinction of party. Sir Edward Grey had declared as early as 1905, when the Liberal Party were about to take over the Government, that a Liberal Cabinet would maintain the foreign policy of the former Government. He added that he aspired to better relations with Russia, and that it was desirable not to oppose an improvement in the relations with Germany, but on the condition that such improvement would not prejudice English friendship with France. There you have it—an understanding with Germany, but only in so far as French friendship permits, and later Russian friendship becomes also a condition—that is the guiding principle of English policy from the end of the period of 'splendid isolation' right up to the war. And this principle was a serious matter for Germany. England was well aware that the eyes of France were steadfastly fixed upon Alsace-Lorraine, and could hear the deep notes of the *revanche motif* sounding ever through the harmonies of Russo-French fraternisation. England knew well the conditions in respect of improvement of armaments and development of strategic railways against Germany that France imposed on its ally, Russia, in return for almost every loan. In a word, England was at least in as good a position as ourselves to see right through the hostile tendencies of the Franco-Russian Alliance to the war that had already once loomed up behind them. No one could therefore be surprised at the anxiety with which German eyes followed every development of this English policy. Indeed, King Edward himself, the founder of the policy of encirclement, latterly gave more than one unmistakable indication as to how he wished to have his work regarded. The signal signs of favour that he accorded so energetic a worker for *revanche* as Monsieur Delcassé on the occasion of his fall in the spring of 1906, could not but dissipate any doubt as to the real spirit of the friendship uniting France and England. Sir Edward Grey refrained, as far as he personally was concerned, from showing any actually unfriendly feeling against Germany. It is even questionable whether he himself recognised the full force of the aggressive tendencies of the Franco-Russian policy. Probably he considered it his task to water down these tendencies to the requirements of English policy. There is good reason to think indeed that his plans did not exclude the possibility of a *rapprochement* in certain respects with Germany, and that he considered such a *rapprochement* as reconcilable with the maintenance of a closer relationship with France and Russia. His attitude seems to have been more complex than that of the French and Russian statesmen. Through his subtle brain ran various threads of political thought which possibly did not all lead to the more obvious objects of the Entente. I do not intend to go into the question whether Germany could have given a different turn to these developments of world policy if it had responded in the first years of the century to the English attempts at a *rapprochement* and had modified accordingly its naval programme. In the year 1909, the situation which I am broadly attempting to describe here was based on the fact that England had firmly taken its stand on the side of France and Russia in pursuit of its traditional policy of opposing whatever Continental Power for the time being was the strongest; and that Germany held fast to its naval programme, had given a definite direction to its Eastern policy, and had, moreover, to guard against a French antagonism that had in no wise been mitigated by its policy in later

years. And if Germany saw a formidable aggravation of all the aggressive tendencies of Franco-Russian policy in England's pronounced friendship with this Dual Alliance, England on its side had grown to see a menace in the strengthening of the German fleet and a violation of its ancient rights in our Eastern policy. Words had already passed on both sides. The atmosphere was chilly and clouded with distrust. . . . The external situation in the summer of 1909 may then be impartially summed up as follows: England, France and Russia were associated in close coalition. Japan was affiliated through its English alliance. The grave controversies of earlier times between England and France or England and Russia had been got rid of by agreements from which each party had received material advantages. Italy, whose Mediterranean interests had brought differences between it and the Western Powers but had also brought it into dependence on them, had been steadily drawing closer to their group. The cement that bound the whole structure of the coalition together was the community of interest between the associated Powers created by the British policy of *do ut des* and by the conflict of each separate Power with Germany. The fundamental antagonism to Germany of the Franco-Russian Alliance had been aggravated in the case of France by the first Morocco crisis and in the case of Russia by the Bosnian crisis; in the latter case, be it observed, with gross ingratitude for our attitude during Russia's war with Japan. Japan, for its part, of course, resented the attitude we had taken at Shimonoseki. Finally the economic hostility of England to its German competitor had been given an acutely political character by our naval policy. And consequently Germany had, in my opinion, to endeavour to reduce the main danger that it could not entirely remove (that danger being the alliance of France with Russia), by getting English support of this Dual Alliance restricted as far as possible. This made it necessary for us to try to come to an understanding with England. The Emperor was entirely in agreement with this policy and even described it to me in more than one discussion as the only possible procedure and the one that he himself would pursue with every personal means in his power. . . . At that time German critics were in the habit of asserting that too frequent protestations of our peaceful intentions were less conducive to peace than an inducement to the Entente to pursue a modification of the *status quo*. This consideration is unquestionably of weight in an imperialistic age which calculates mainly in terms of material power, and only incidentally contemplates the maintenance of peace. Such an age was the last decade before the war, and it is possible that such considerations explain more than one pronouncement of the Emperor in which German military power was strongly accentuated. Certainly expressions of this character did not tend to relax the general tension which was straining international relations. But the general unrest in the world was really rooted in that Balance of Power which divided Europe into two camps, anxiously watching each other and armed to the teeth. . . . The confused and fluid condition of parties was most unfavourable to the conduct of foreign affairs. The external position of Germany, as I have described it, was far too serious to allow it to indulge in the luxury of heated internal conflicts which would be welcomed by an unfriendly foreign public opinion as evidence of weakness. For although political life requires an emancipated criticism both of men and of matters,

yet a reckless extravagance in this respect must eventually run the risk of giving the appearance of political immaturity. And it is impossible to give the interests of a country effective representation abroad without an *esprit de corps* sufficient to bridle a contumelious criticism. The German people had taken long in learning to give foreign problems that attention that was required by the entry of Germany into world policy. That is the impression that one gets from reading the annual debate of their representatives in the Reichstag on the Foreign Office vote. Many of the speeches on this occasion, speeches that were bound to make and did make bad blood abroad to no purpose, cannot but make us wonder whether the perils of our external situation were sufficiently realised in these discussions of our foreign policy; even though on the other hand such perils were frequently overestimated on the occasion of debates of Army Bills. The people as a whole showed no inclination for Chauvinistic impulses. The public read neither Nietzsche nor Bernhardt. . . . However untrue may be the view that obtained general acceptance abroad during the war that the German character finds its true expression in Pan-Germanism, it was none the less becoming evident in 1909 that the Pan-German movement had already begun to get a firm footing among the Conservatives and National Liberals. But this did not react upon the policy of the Government. Soon after my entry into office I had occasion to give a sharp repulse to an offensive of the Pan-German Association. I was to learn later, on the occasion of the Morocco crisis in 1911, and during the attempts to come to an understanding with England, to what extent parties who had a strong position in the Prussian administration, in the Army, in the Navy, and in big business, and who had been affected with Pan-German ideas, could and would embarrass the conduct of foreign policy. I do not mean that Conservatives and National Liberals carried on a campaign that contemplated war. But they could not deny themselves gestures that could be interpreted by ill-disposed persons as challenges. And they embarrassed my efforts to eliminate the friction surfaces in foreign affairs by reproaching me with weakness."—T. von Bethmann-Hollweg, *Reflections on the World War* (tr. by G. Young), pt. 1, pp. 9-19, 26-29.

II. DIRECT CAUSE OF THE WAR

"The antagonism which finds expression in the conflict between Austria-Hungary and Serbia is the central positive cause of the world-war. Of all the other breaches of peaceful relations, it has at least been asserted that each was due to some kind of obligation for rendering assistance, made in anticipation of a war. Only this original declaration of hostilities by Austria against Serbia is universally admitted to have had its own independent cause. There were serious potential causes for war in Europe . . . boundaries that did not conform to natural geographic conditions, or which violated national unity, bitterness due to former wars, conflicting colonial aspirations, naval competition, international suspicion. Europe was like a group of warehouses stored with inflammable material, threatening a general conflagration. One of these warehouses suddenly burst into flames, and the fire very quickly spread to the others. . . . The Archduke Francis Ferdinand left Vienna, June 23, 1914, to attend the military maneuvers in the province of Bosnia, as commander-in-chief of the

Austro-Hungarian armies. On Sunday, June 28, accompanied by his wife, the Countess of Hohenberg, he paid a visit of ceremony to Sarajevo, the seat of the provincial administration. . . . The archduke and duchess narrowly escaped being killed by a bomb thrown at their carriage, as they entered the town, by a youth, Nedjelko Cabrinovic, who injured thirteen bystanders in his murderous attempt. Later in the day they were shot by Gavrio Prinzip with a Browning pistol, as they were riding back from a reception at the town hall. The crime was evidently the execution of a political conspiracy. It was assumed to be an act of revenge for the annexation of Bosnia and Herzegovina by Austria-Hungary, a step which Francis Ferdinand had heartily advocated. . . . The findings of the criminal investigation in Sarajevo pointed to the powerful Pan-Serbian society

in an impressive Memorandum that there was not sufficient proof to charge Belgrade with the crime, that Austria would be universally regarded as the disturber of the peace, and that to begin a great war before Bulgaria replaced Roumania as a satellite of the Triple Alliance would be folly. The sentiments of Francis Joseph were expressed in an autograph letter, drawn up by Berchtold, to the Kaiser. 'The crime against my nephew is the direct consequence of the agitation carried on by Russian and Serbian Pan-Slavists, whose sole aim is to weaken the Triple Alliance and shatter my Empire. Though it may be impossible to prove the complicity of the Serbian Government, there can be no doubt that its policy, intent on uniting all Jugoslavs under the Serbian flag, must encourage such crimes and endanger my house and countries if it is not stopped. My efforts

ARCHDUKE FRANCIS FERDINAND AND HIS WIFE, THE COUNTESS OF HOHENBERG

Narodna Odbrana as the instigator of the crime, and implicated persons in high places in Serbia. . . . On the other hand, we must not lose sight of the fact that the assassin of Sarajevo and his two chief fellow-conspirators, all youths under twenty years of age, were Austro-Hungarian subjects. Another circumstance of the importance in forming a judgment of Serbia's position: six days before the crime was committed, the Serbian minister in Vienna warned the Austrian government that the archduke's visit to Bosnia would be perilous on account of the probable existence of a plot against his life. Austria-Hungary demanded that Serbia accept the findings of the Sarajevo investigation, and in consequence adopt proposals which seemed to threaten her independence, without an opportunity of examining the evidence."—G. H. Allen et al., *The Great War*, v. 1, pp. 143-144, 202, 205-206.—"The headstrong Berchtold instantly resolved to seize the opportunity for the final reckoning with Serbia for which he had been waiting; but on July 1 Tisza warned the Emperor

must be directed to isolating Serbia and reducing her size. After the recent terrible event I am certain that you also are convinced that agreement between Serbia and us is out of the question, and that the peace policy of all European monarchs is threatened so long as this centre of criminal agitation remains unpunished in Belgrade."—G. P. Gooch, *History of modern Europe, 1878-1919*, pp. 532-533.—"The plan, however, was useless unless the unqualified support of the German Kaiser and his army could be secured, as is evident from what follows: The Kaiser gave it his instant and whole-hearted approval and agreed to back it to the limit with his vast military resources. It is now easily seen why the Kaiser's backing was so readily secured. The Pan-German and 'Mittel-Europa' ideas required the crushing of Russia for their realization. The Balkan Peninsula was the backbone of the proposed Central European Empire. The Balkan States must either become the creatures of Berlin or they must be crushed. A strong and united Russia would never

allow her small racial kinsfolk either to be absorbed or crushed by Austria or Germany. . . . The war was to be brought about by picking a quarrel with little Serbia and then proceeding to crush her. This would, of course, bring Russia to her rescue and the real war would begin. This war would be fought with Russia, France, and Serbia on one side, and Germany, Austria, Turkey, and perhaps one of the other Balkan States on the other. Provided such a war was started before Russia recovered from the Russo-Japanese War, the outcome could not be doubted."—J. Goricar and L. B. Stowe, *Inside story of Austro-German intrigue, or how the World War was brought about*, pp. 5-6.—"The years 1914-1915 were regarded in Austria-Hungary as the time limit for starting a successful war against Serbia and Russia. . . . [The Serajevo murder] was at once seized upon by the Ballplatz [Foreign Office in Vienna] and our [the Austrian] General Staff as the God-sent instrument by which they were finally to be able to realize what for six years, in spite of constant intrigues, they had failed to accomplish. The value of the Archduke's assassination for the war party was twofold. First, it obliged both adherents and antagonists of the dynasty to approve of every action taken to vindicate its honour; second, in an international sense, it gave to the harsh action of the Ballplatz a moral support which no other *casus belli* could have received. It was realized that the Archduke's murder would arouse great sympathy in all the monarchical coun-

tries of Europe. These calculations later proved correct. The whole blame for the outbreak of the war was, therefore, at first attributed to the Archduke's assassination. This was the moment for Austria to act. It was only necessary to point to Belgrade, and to make a *causal nexus* between the Archduke's murderer and the Serbian Government. . . . Our [the Austrian] war party dreaded nothing so much as a conference of ambassadors or indeed any influential international conference. It would again spoil their game. I learned that Germany had . . . on the 27th [July] declined to participate in the London conference 'because she would not place Austria before a European tribunal.' Count Berchtold came out on the 28th of July . . . with the statement that Austria-Hungary could neither recede from her demands nor enter into any discussions about the terms of the Austro-Hungarian note. . . . The Socialist paper, *Vorwaerts*, of Berlin, on July 28th, in an article entitled 'War or Peace,' said: 'Czarism is not this moment the worst war danger, but the ill-informed Austria which lives under the insane illusion that it needs only to give the signal, and the whole of Europe will sound the bugle to bring the flower of its youth as a holocaust for the assassination of its heir to the throne.' The die was cast. The fatal step, which was to plunge the world into the most terrible catastrophe of history, had been taken."—*Ibid.*, pp. 184, 219-220, 243-244.—See also SERBIA: 1914.

B. DIPLOMATIC BACKGROUND TO OUTBREAK OF THE WAR

1.—Introduction: Interpretations of history.—"Every generation writes its own history of the past. It is not so much the acquisition or mastery of new material as the changing attitude of each generation that causes the perpetual re-writing of the long story of man living in community with his fellow-men. Each generation looks at the past from a different angle, and the historian is inevitably controlled by the spirit of his age. Every historian is unconsciously biased by his education and surroundings and in his historical works displays not only his interpretation of the past, but also the point of view of the period in which he lives. Honestly, under the inspiration of the truth-lovers of his time, whether they be bold thinkers or ardent men of science, the writer of history tries to discover and tell the truth, the whole truth, and nothing but the truth. But, in his heart of hearts, if he be not a self-deceived fanatic, he knows well that he cannot free himself from his human limitations, and that his work, whether it be in research, in narration, or in interpretation, can only

approximate the truth. . . . [In ancient times] it was part of the business of an historian to assert impartiality and to declare that his duty was to discover and tell the truth, but his work as an historian was not judged by his truthfulness and impartiality but by his literary skill. All students of history know Lucian's inimitable 'The Way to Write History,' and how the witty Syrian declares that 'the historian's one task is to tell the thing as it happened,' but they also recollect that his whole essay is concerned rather with the way in which the story is to be told than with the method by which truth and impartiality are to be attained. The example of the classical writers of Greece and Rome was supreme until the eighteenth century, and the protestations of truth-seeking and truth-telling were invariably followed by histories that exhibited either the personal views of the writer with regard to the past, or at the very least the influence of the age in which he lived."—H. M. Stephens, *Nationality and history* (*American Historical Review*, Jan., 1916).—See also HISTORY: 33, 34.

ABBREVIATIONS.—In order to avoid needless repetitions of the titles of the principal works and diplomatic papers quoted from, the following abbreviations are employed:

A. R. B. Austrian Red Book, January, 1915.

B. D. C. British Diplomatic Correspondence.

B. G. B. Belgian Grey Book.

Fay S. B. Fay's articles in the *American Historical Review*: I, July, 1920; II, October, 1920; III, January, 1921.

F. Y. B. French Yellow Book.

G. W. B. German White Book, 1914.

Gooss Austrian Red Book, published after the close of the war, containing documents which were omitted from the Austrian Red Book, of 1915.

Headlam History of twelve days.

Kautsky Kautsky's edition of the *German Diplomatic Documents*.

Lichnowsky Prince Lichnowsky's Memorandum.

Oman C. W. Oman, *Outbreak of the war*.

R. O. B. Russian Orange Book.

S. B. B. Serbian Blue Book.

In all the "colored" books and papers issued by the different governments, each document, letter, telegram, etc., is numbered. Hence the numbers following any of the above abbreviations refer the reader to that particular exhibit in the book or paper from which the quotation is taken.

2.—Premonitions and warnings.—Who is responsible for the World War? The question has been asked times out of number and as frequently answered—according to the prepossessions of the writer or speaker undertaking to solve the problem. Those who from nationality, ties of kinship or inclination leaned to the side of Germany and her allies, are more or less unanimous in laying the major—if not entire—responsibility for the conflict upon the shoulders of France, Great Britain and Russia; nationals of, and sympathizers with, the "Allies" unhesitatingly ascribe the responsibility to Germany in the first place and to Austria-Hungary in the second. Besides these two classes of whole-hearted partisans there have been not a few from each side whose sympathies or convictions led them to espouse the cause of the opposite camp, or at least to express the belief that their own side was in the wrong. The quantity of material at the student's disposal for investigation is already immense, and will undoubtedly still further increase with time. Though this section is primarily concerned with the diplomatic negotiations immediately preceding the war—from the Serajevo murders of June 28, 1914—it will be apposite to introduce here some literary, political and diplomatic events which happened somewhat earlier, but are intimately connected with the war. Of particular interest are the numerous premonitions and warnings uttered by keen observers long before the war clouds began to darken the political horizon. Thus, in 1912 there appeared in London a book entitled "The Anglo-German Problem," by Charles Sarolea, a Belgian, who began his *introduction* with the following prophetic words: "Europe is drifting slowly but steadily towards an awful catastrophe, which, if it does happen, will throw back civilization for the coming generation, as the war of 1870 threw back civilization for the generation which followed and which inherited its dire legacy of evil. For the last ten years two great Western Powers and two kindred races have become increasingly estranged, and have been engaging in military preparations which are taxing to the utmost the resources of the people, and are paralyzing social and political reform in both countries. . . . Only a year ago England and Germany stood on the brink of war. If after the *coup* of Agadir, Germany had persisted in her policy, the conflagration would have ensued, the storm would have burst out. The war cloud has temporarily lifted, but it has not passed away. The danger is as acute as it was, because the causes which produced the recent outburst are still with us, and the malignant passions are gathering strength with each passing day. This formidable evil is threatening England, but it does not originate in England, and England cannot be held responsible for it. . . . It is Germany and not England which is the storm-centre, the volcanic zone, in international politics. From there have come, ever since 1860, the tension and friction, the suspicion and distrust. It is there that the pagan gods of the Nibelungen are forging their deadly weapons."—C. Sarolea, *Anglo-German problem*, pp. 19-20, 24.—Shortly after the German navy bill was introduced (Feb. 8, 1900), the late Sir Rowland Blennerhasset wrote: "But the true reason why an increase of the [German] navy is supported by ministers and politicians is to prepare for a struggle with England."—*National Review*, Mar., 1900.—Two months earlier, Professor Hans Delbrück had written: "So the German nation has now directed its hate against England. England must have no illusions on this point. . . . The experience of his-

tory shows that in the long run monarchies have always overpowered democracies. The House of Hohenzollern never can be separated from the fortune of the nation."—*North American Review*, Jan., 1900.—On Mar. 22, 1905, the German emperor declared at Bremen: "God has called us to civilize the world; we are the missionaries of human progress. . . . We are the salt of the earth." On Sept. 1, 1907, the emperor said, in a speech at Münster: "The German people will be the block of granite on which our Lord will be able to elevate and achieve the civilization of the world." In 1910 the late Admiral Mahan wrote: "For reasons absolutely vital, Great Britain cannot afford to surrender the supremacy at sea. . . . The British navy is left the sole military force in the world superior to anything that Germany can as yet bring into the field. . . . This removed, neutral or fallen in power, Germany . . . becomes the dominant naval state of the world, as well as the predominant country in Europe." In 1911 the German publicist, Dr. Paul Rohrbach, wrote "Egypt is a prize which for Turkey would well be worth the risk of taking sides with Germany in a war with England." In the same year appeared General von Bernhardi's book, "Germany and the next War," in which the author asserted the necessity of Germany acquiring more territory in Africa even at the cost of a war. So long ago as 1884 the German historian Treitschke declared in "Deutschlands Kämpfe": "We have reckoned with France and Austria. The reckoning with England is still to come; it will be the longest and most difficult." In 1900 a book appeared in Germany entitled "Deutschland beim Beginn des zwanzigsten Jahrhunderts" (Germany at the beginning of the twentieth century), wherein its author declared: "We consider a great war with England in the 20th century inevitable." The German *Koloniale Zeitschrift* of Jan. 18, 1900, prophesied: "The old century saw a German Europe; the new one shall see a German world." In calling attention to this type of verbal and literary prognostications, a London review made this comment: "If a nation constantly proclaims that it is the strongest and greatest people on earth, that its destiny is to dominate the world . . . what wonder that its neighbours take it at its word, and insure one another's prosperity and safety by *ententes* and understandings?"—*Round Table*, Dec. 1911.—Among the foremost of those who visioned the great conflict and preached the doctrine of preparedness for ten years before it came, was the late Earl Roberts, one time commander-in-chief of the British army. On the occasion of his eighty-first birthday, Sept. 30, 1913, he issued an appeal to the nation, in which he sounded this prophetic exhortation: "Fellow citizens and fellow Britishers . . . arm yourselves! . . . Arm and prepare to quit yourselves like men, for the day of your ordeal is at hand!"

3.—Principal sources for diplomatic history to outbreak of World War.—The principal authorities are the diplomatic correspondence published by the various governments. These are: (1) The British diplomatic correspondence published originally on August 5th [1914] as a White Paper, and subsequently reprinted under the title 'Great Britain and the European Crisis.' This may be taken as giving a full, accurate and practically complete record of all the communications dealing with the outbreak of war which passed between the British Government and British representatives abroad from the presentation of the Austrian Note to the declaration of war. . . (2) The French Yel-

low Book. This was published in November [1914]. Like . . . [the English publication] it is very full and it appears to contain in the same way a complete record of the negotiations. In one way it has the advantage over the English Blue Book in that owing to the absence of the French President and Minister for Foreign Affairs during some days the acting Ministry at Paris sent each day a full *résumé* of the situation. These accounts are of great interest as enabling us to follow the gradual development of the situation. In regard to both the British and the French publications it must be noted that their great importance consists in the large mass of evidence accumulated; we have not here to do with isolated and selected despatches. While it would always be possible for any Government which wished to hide its real designs to produce a few despatches written to order, it would be quite impossible to produce so great a bulk of correspondence all of which is completely in the same tone and in complete harmony with itself. The value of these two publications is enhanced by the way in which they corroborate and supplement one another. While there is complete accord in regard to the facts at each stage of the negotiations there is great difference in tone, and in fact they each represent faithfully the spirit and character of the nation. While the British despatches show the extreme caution, moderation, restraint of an intensely practical mind dealing with the precise situation as it presents itself each day, in fact at each hour, the French despatches excel in logical analysis and in the brilliance with which the governing facts are placed in strong relief. Criticism might be made that this very quality causes from time to time a tendency to exaggeration, but it will in all cases eventually be found that what appears to be exaggeration is merely the simple truth. . . . (3) The Russian Orange Book. This was published in September [1914]. While it adds considerably to our knowledge of the course of events, it does not present in the same way a complete picture. There are considerable omissions, and we have none of those graphic descriptions of the state of affairs in other capitals which we owe to the despatches of M. Jules Cambon, Sir George Buchanan, and Sir Maurice de Bunsen. [The omitted despatches were published in 1923 in C. Romberg's 'Falsifications of the Russian Orange Book.'] (4) and (5) The 'Belgian Grey Book' and the Serbian 'Blue Book' naturally deal with only a small portion of the narrative; within these limits the 'Belgian Grey Book' appears to give the full text of the relevant despatches; that of Serbia is chiefly valuable as giving a picture of the conditions in the Austrian capital as they present themselves to the Serbian Minister. (6) The 'Austrian Red Book' was not published until January [1915]; it gives us a very full account of the Austrian case against Serbia, and adds materially to our knowledge of the relations between Austria and Russia. As to the relations between Austria and Germany it is very disappointing, for this which is the most critical point in the negotiations is also that as to which we have least evidence. The despatches contained in it have strong characteristics of their own; considering that they are mostly telegraphic, they are curiously verbose. They give the official Austrian view with moderation and dignity; on the other hand they are superficial; they show no quickness to apprehend the real matter at issue with Russia. (7) . . . There was presented to the Reichstag on August 4 [1914] a document

entitled 'Vorläufige Denkschrift zum Kriegausbruch.' Of this a translation into English . . . [was] officially issued by the German Government under the title of the 'German White Book.' The greater portion of this is occupied with an exposition of the course of events, but to it are attached twenty-seven documents, including the correspondence between the German Emperor and the Czar, and fragments of other telegrams are incorporated in the text. The nature of the publication, therefore, differs greatly from that put forward by the other Governments; in particular, in a large number of cases the telegrams included are obviously only small portions of the original. This in itself is very unsatisfactory, and in addition only those have been selected which appear to illustrate and substantiate statements made in the text. As a presentation of what happened the text itself is extremely unsatisfactory; . . . many statements contained in it cannot be accepted as true, and there are many serious omissions. One can well understand that . . . [in 1915 it would be] very difficult for the German Government to publish their correspondence in a more complete form, for to do so would necessarily draw attention to the inaccuracies and omissions in the 'White Book.' . . . [After] the outbreak of war the German Government . . . from time to time issued in different forms varied explanations as to their action. We have, for instance, a speech by the Chancellor, made in the Reichstag on December 2, 1914, which is chiefly occupied with the relations with Great Britain; a semi-official article in the *North German Gazette* of December 21st deals chiefly with the 'French Yellow Book,' and this is supplemented by an official despatch from the Chancellor to German representatives dated December 24th (1914). Unfortunately these later explanations are of little help; the object of an explanation is presumably to remove difficulties. It cannot be said that in this the German Government have been successful; the explanations which they offer are generally inconsistent with one another, and inconsistent with the facts with which they profess to deal.—J. W. Headlam, *History of twelve days*, pp. viii-xi.—One of the most important diplomatic documents which inadvertently came to light during the course of the war was the famous "Lichnowsky Memorandum" written by Prince Lichnowsky, German ambassador to Great Britain from 1912 to the outbreak of war. The document was composed in 1916 and intended only for his private family archives, but it became public in March, 1918, when it created a profound sensation not only in Germany but throughout the world. "After the revolution of November 9, 1918, the new German republic at once made Karl Kautsky assistant secretary of state for foreign affairs, and authorized him to edit the documents which would throw light on the origins of the World War. By March, 1919, he and his assistants had carefully copied, dated, arranged, and annotated a mass of papers contained in eighteen volumes in the archives of the Foreign Office. He was eager to publish this material as soon as possible during the Peace Conference at Versailles, in order to convince the world how completely the new régime had broken with the old Junker rulers of 1914. But the Ebert government feared that Kautsky's known opposition to the Kaiser and the old imperial government might lay his edition of the documents open to the charge of party bias. It therefore delayed its publication until it could be examined and edited by three scholars of different political views, Dr. Walter

Schücking, Count Montgelas, and Professor Mendelssohn-Bartholdy. These co-editors found that Kautsky had done his work most conscientiously and carefully. Meanwhile, however, in June, the Ebert government published a *White Book, Germany Guilty?*, drawn up by Hans Delbrück, the well-known historian, Mendelssohn-Bartholdy, Count Montgelas, and Max Weber. It was intended as a reply to the report which the Allied commissioners at Versailles had made on the responsibility for the war. But as it repeated many of the old arguments of 1914, trying to exculpate Germany and throw the blame on Austria, it had quite the opposite effect from convincing the world that the new Germany had completely broken with the past. This *White Book*, as Kautsky bitterly complained, was nothing but a 'white-washing book.' He felt all the more aggrieved because he himself had already written a book on the causes of the war, quoting large extracts from the documents, but had agreed not to make it public until after the documents had been officially published. In December, 1919, after many delays, the documents were finally published by the co-editors, in four volumes. They comprise 1123 documents, of which 937 are given *in extenso* and the remainder in a sufficiently full summary. Included also are the complete texts of the secret Triple and Rumanian alliances, translations of which . . . [were] edited by Professor Coolidge. There is no reason to believe that any material documents which passed through the German Foreign Office have been deliberately withheld by the editors. The editors have wisely refrained, absolutely, from all subjective comment, but have conveniently given cross-references, indexes, and all existing official indications as to the exact day, hour, and minute, when despatches were sent and received. This precise information, unfortunately lacking in the various colored books issued at the beginning of the war, . . . makes it possible to determine just how much an official knew when he took an action; it enables one to judge with nicety as to the motives, honesty, and ability of the men in charge of Germany in 1914. Most interesting from the point of view of the Kaiser's psychology are his numerous marginal annotations . . . which led Kautsky to many jibes at royalty As publication of the official compilation of documents was still delayed beyond the date agreed, Kautsky's publishers at last lost patience and published in November, 1919, the work which he had written in the preceding May, *How the World War arose* [*Wie der Weltkrieg entstand.*] It is distinctly a partizan attack on the old régime, and is, of course, much less trustworthy than the documents themselves.

"In Vienna Dr. Richard [Roderich] Gooss did for the Austrian Foreign Office what Kautsky had done for the German. He edited anonymously, without such detailed information as to dates, a three-volume *Red Book* containing 352 documents, dealing with the four weeks prior to the outbreak of war. Like Kautsky, he also published prior to his official compilation a volume summing up his own conclusions and interpretations. It is a valuable book, more temperate than Kautsky's, and contains much information not given in the *Red Book*. It is curious to see how zealously each of these two men, after studying one set of documents, assigns exclusively the whole blame for the war to his own former government. According to Kautsky, Germany eagerly pushed a hesitating Berchtold into the attack on Serbia and a world war. According to Gooss the unsus-

pecting Emperor William was the sacrificial lamb offered up on the altar of Berchtold's reckless perfidy and obstinacy. In addition to the *Kautsky Documents* and the *Red Book*, the two great sources on which writers will largely base the future war of words as to the immediate responsibility for the World War, a flood of exculpatory memoirs and pamphlets followed the German collapse of 1918, similar to that which followed the French débâcle of 1870. Jagow rests his work mainly on his reply to Lichnowsky ['Ursachen und Ausbruch des Weltkrieges,' *Norddeutsche Allgemeine Zeitung*, Mar. 23, 1918], and on the already well-known material in the various colored books. Pourtalès, the German ambassador at Petrograd, gives a very straightforward account of his share in the events at Petrograd and of his honest efforts to carry out the instructions of his government to keep Russia quiet and preserve the peace by localizing the conflict. His narrative [*Am Scheideweg zwischen Krieg und Frieden*, Berlin, February, 1919] is based on the contemporary notes which he made on his journey home in August, 1914, and on the embassy telegrams which he appears to have taken with him. Bethmann-Hollweg's *Observations* [*Betrachtungen zum Weltkrieg*, 1919] still insists that England was chiefly responsible for the war; England encouraged Russia with the hope of support, and Russia was consequently encouraged to interfere in the Austro-Serbian crisis which Germany had intended to localize. Tirpitz, however, like Lichnowsky, takes Bethmann severely to task [in 'My Memoirs'] for having trusted too optimistically in thinking that Russia and France would not dare to call the bluff which Germany was allowing Austria to make. Helfferich [in '*Die Vorgeschichte des Weltkrieges*,' 1919] agrees with Tirpitz that the German Foreign Office and the German people made their great mistake in taking the Serajevo crime so calmly and in thinking that war could be avoided as in 1909 and the later Balkan crises, if only Germany and Austria stood firm. The Austrians, and with good reason, have made little effort to exculpate themselves. Berchtold, who more than any one else was responsible for the World War, has kept silent except for a very short and lame letter of excuse. Count Czernin's interesting volume deals mainly with diplomacy during the war, but in an introductory chapter he expresses the view, in which there may be truth, that the German ambassador at Vienna, Tschirschky, like so many German militarists, 'was firmly persuaded that in the very near future Germany would have to go through a war against France and Russia, and he considered that the year 1914 would be more favorable than a later date. . . . That, however, was his policy, not Bethmann's.' Tschirschky was one of those ambassadors who 'did not keep to the instructions from their governments; they communicated messages correctly enough, but if their personal opinion differed, they made no secret of it, and it certainly weighed in the balance.' Count Tisza, the Hungarian premier, by what we know of his character and attitude in July, 1914, might have been able to tell the truth fearlessly, but he lies in a bloody grave, assassinated [Nov. 1, 1918], his lips sealed forever."—S. B. Fay, I.—"Russia's pre-war relations with the Balkan States, with Serbia in particular, are discussed in the volume by Boghitchewitsch, *Kriegsursachen* (1919). The author, who was Serbian *Chargé d'Affaires* at Berlin until the outbreak of the war, makes it his aim to prove that Russia supported and encouraged aggressive Serbian intentions, and his arguments

attracted very wide attention in the German press. . . . This specious volume was subjected to a searching examination by Dr. Seton-Watson in *The New Europe* (London) for October 16, 1919. On the subject of Russian relations with the *Entente* and Great Britain in particular, an early hint of 'revelations' was contained in Professor Schiemann's accusation that Herr von Bethmann-Hollweg had concealed from the Emperor documents which, he alleged, tended to show the way in which Great Britain had bound herself to Russia. This charge and the controversy which followed it are to be found in the German papers during March, 1919. During April and May of that year exceptional efforts were made, particularly in the *Deutsche Allgemeine Zeitung*, to upset the whole *Entente* case against the Central Powers.—*New Europe*, Dec. 25, 1919, p. 338.—An intimate picture of the late Austrian Emperor Francis Joseph and his opposition to the Serbian ultimatum is given by Lieutenant-General von Margutti in his book, "Vom alten Kaiser" (Vienna, 1921).—See also bibliography at end of this section.

4.—French diplomatic warnings in 1913.—Alleged growth of German war spirit.—Kaiser and von Moltke warn Belgian king of coming war with France.—Revelations of French Yellow Book.—From the foregoing pages it will be seen how strong the feeling of suspicion which had grown up among the nations of Europe had become. The year 1913 was a period of extreme tension. Austria mobilized against the Balkans: Germany gave warning of mobilization to the army reserves. These facts and the increase in the German army strength, resulting from the army laws of 1911, 1912, and 1913, induced a reaction of fear in France as evidenced by the following extracts, from diplomatic documents (see also below: 5):

"NO. 1. JULES CAMBON [FRENCH] AMBASSADOR . . . AT BERLIN [WROTE] TO M. JONNART, MINISTER FOR FOREIGN AFFAIRS, . . . MARCH 17, 1913:

" . . . Hitherto, taxation . . . [for military measures] has been reserved to the Federal States, and the latter see in the surrender of this principle a new declaration of the corporate unity (*personnalité*) of the Empire, constituting a distinct diminution of their own sovereign power. However this may be, in increasing the strength of the German army the Empire desires to leave nothing to chance in the event of a possible crisis. The German changes have produced a result unexpected by that country, viz., the proposal of the Government of the Republic to re-establish the three years' service, and the manly determination with which this proposal has been welcomed in France. The surprise occasioned by these proposals has been utilized by the Imperial Government for the purpose of insisting on the absolute necessity of an increase of German military strength; the German proposals are represented as a reply to our own. The reverse is the case, since the immense military effort which France is undertaking is but the consequence of German initiative. . . .

"ENCLOSURE I. REPORT OF LIEUT.-COL. SERRET, MILITARY ATTACHÉ TO THE EMBASSY OF THE FRENCH REPUBLIC AT BERLIN TO M. ÉTIENNE, MINISTER OF WAR, . . . MARCH 15, 1913:

"The patriotic movement which manifested itself in France has caused real anger in certain circles. . . . For some time now it has been quite a com-

mon thing to meet people who declare that the military plans of France are extraordinary and unjustified. . . . More moderate persons, military and civil, glibly voice the opinion that France with her forty million inhabitants has no right to compete in this way with Germany. To sum up, people are angry, and this anger is not caused by the shrieking of certain French papers, to which sober-minded people pay little attention. It is a case of vexation. . . . To outdistance us, since we neither will nor can be allied with her, is Germany's real aim. I cannot insist too much on the fact that the impending legislation, which French public opinion is too apt to consider as a spontaneous outburst, is but the inevitable and expected consequence of the law of June, 1912. This law, while creating two new army corps, had deliberately, according to German fashion, left regiments and other large units incomplete. It was evident that there would be no long delay in filling in the gaps. The Balkan crisis, coming just at the right moment, furnished a wonderful opportunity for exploiting the centenary of the War of Liberation, and obtaining with greater ease sacrifices through the memory of those made in days gone by, and that too at a time when Germany was opposed to France. . . . Germans wish for peace—so they keep on proclaiming, and the Emperor more than anyone—but they do not understand peace as involving either mutual concessions or a balance of armaments. They want to be feared and they are at present engaged in making the necessary sacrifices. If on some occasion their national vanity is wounded, the confidence which the country will feel in the enormous superiority of its army will be favorable to an explosion of national anger, in the face of which the moderation of the Imperial Government will perhaps be powerless. . . . The trend of public opinion would result in giving a war a more or less national character. By whatever pretext Germany should justify the European conflagration, nothing can prevent the first decisive blows being struck at France."

"ENCLOSURE II. M. DE FARAMOND, NAVAL ATTACHÉ TO THE FRENCH EMBASSY AT BERLIN, TO M. BAUDIN, MINISTER OF MARINE, MARCH 15, 1913:

"In reporting on the examination of the Naval budget by the Financial Committee of the Reichstag, I said that no Naval law would be introduced this year having as its object an increase of the fleet, and that the whole of the military effort would be directed against us. Although the new Bill, having for its object the increase of the German effectives, has not yet been presented to the Reichstag, we know that it deals with "an increase of military strength of immense scope" to use the expression of the *Norddeutsche Allgemeine Zeitung*. . . . The German effectives reach at the present moment 720,000 men. We are, therefore, entitled to conclude that on the 1st October, 1914, the Imperial army will be raised to a figure not far removed from 860,000. . . . The conditions under which the German Emperor would nowadays commence a campaign against France are not those of forty years ago. . . . William II cannot allow a retreat to enter into his calculations, although the German soldier is no longer today what he was forty years ago, a plain religious man, ready to die at the order of his king. When it is remembered that at the last election 4,000,000 votes were cast by the Socialists and that the franchise is

only obtained in Germany at the age of 25, it may be presumed that the active army, composed of young men from 20 to 25, must contain in its ranks a considerable proportion of Socialists. It would indeed be foolish to think that the German Socialists will throw down their rifles on the day when France and Germany come to blows; but it will be very important that the Imperial Government should persuade them that on the one hand we are the aggressors, and on the other that they can have entire confidence in the direction of the campaign and its final result. . . . In reality the Imperial Government wishes to be in a position to meet all possible eventualities. It is from the direction of France that the danger seems to them greatest. The *Kölnische Zeitung* has said as much in an article both spiteful and violent, the form rather than the substance of which has been disavowed by the *Wilhelmstrasse*. But we must be willing to realize the opinion expressed by the *Kölnische Zeitung* is at the present moment that of the immense majority of the German people. . . . When I spoke above of the new German proposal I only alluded to increased effectives. But the proposal will include also an increase of material and of defense works, the details of which are not known, but some idea of which may be gained by the figure estimated to be necessary to meet the expenses, viz., 1,250,000,000 francs. . . . To sum up: In Germany the execution of military reforms always follows very closely the decision to carry them out. All the provisions made by the law of the quinquennium of 1911 and by the law of 1912 have already been put into operation. It is quite possible that part of the material, the purchase of which will be authorized by the new law, is already in course of manufacture. Military secrets are so well kept here that it is extremely difficult to follow the changes in *personnel* and *matériel*. . . . Germany has wished to upset the equilibrium of the two camps which divide Europe by a supreme effort beyond which they can do little more. They did not think that France was capable of a great sacrifice. Our adoption of the three years' service will upset their calculations.'

"No. 2. M. ÉTIENNE, MINISTER OF WAR, TO M. JONNART, MINISTER FOR FOREIGN AFFAIRS. . . . APRIL 2, 1913:

"I have just received from a reliable source an official secret report concerning the strengthening of the German army. The report is divided into two parts; the first consisting of general statements, the second dealing with technicalities and describing in the greatest detail, for each branch of the service, the measures to be adopted.

"ENCLOSURE. MEMORANDUM ON THE STRENGTHENING OF GERMAN ARMY. . . . MARCH 19, 1913:

"I. *General Memorandum on the New Military Laws*.—The increase has taken place in three stages: (1) The Conference of Algieras has removed the last doubt with regard to the existence of an *Entente* between France, England, and Russia. . . . To meet the English plan of sending an Expeditionary Force of 100,000 men to the Continent, it would be necessary to make a better formation of reserves to be used according to circumstances in the protection of the Coast, in fortresses and in siege operations. It was already clear at that time that it would be absolutely necessary to make a great effort. (2) The French having violated the Morocco Conventions brought on the incident of

Agadir. At that time the progress made by the French army, the moral recovery of the nation, the technical advance in the realm of aviation and of machine guns rendered an attack on France less easy than in the previous period. Further, an attack by the English fleet had to be considered. This difficult situation opened our eyes to the necessity for an increase in the army. . . . (3) The war in the Balkans might have involved us in a war in support of our ally. The new situation in the south of Austria-Hungary lessened the value of the help which this ally could give us. On the other hand, France was strengthened by a new *loi des cadres*. . . . Public opinion is being prepared for a new increase in the active army, which would ensure Germany an honorable peace and the possibility of properly ensuring her influence in the affairs of the world. The new army law and the supplementary law which should follow will enable her almost completely to attain this end. Neither ridiculous shriekings for revenge by French chauvinists, nor the Englishmen's gnashing of teeth, nor the wild gestures of the Slavs will turn us from our aim of protecting and extending *Deutschtum* (German influence) all the world over. The French may arm as much as they wish, they cannot in one day increase their population.

"II. *Aim and Obligations of our National Policy, of our Army, and of the Special Organizations for Army Purposes*. [See above: Indirect causes: i, 6.] . . .'

"No. 3. M. JULES CAMBON, FRENCH AMBASSADOR AT BERLIN, TO M. STÉPHEN PICHON, MINISTER FOR FOREIGN AFFAIRS, MAY 6, 1913:

"I was talking this evening to the Secretary of State about the conference of Ambassadors and the results obtained at the [Balkan War] meeting in London yesterday. The crisis with which Europe was threatened is in his opinion over, but only temporarily. 'It seems to me,' said Herr von Jagow, 'that we are traveling in a mountainous district. We have just reached a difficult pass and we see other heights rising in front of us.' 'The height which we have just surmounted,' I replied, 'was, perhaps, the most difficult to cross.' The crisis which we have just gone through has been very serious. Here the danger of war has been considered imminent. . . . The mobilization of the German army is not restricted to the recall of reservists to their barracks. There is in Germany a preliminary measure which we have not got, and which consists in warning officers and men of the reserve to hold themselves ready for the call, in order that they may make the necessary arrangements. It is a general call to 'attention,' and it requires an incredible spirit of submission, discipline, and secrecy such as exists in this country, to make a step of this kind possible. . . . This warning was given in 1911 during the negotiations which I was carrying on with regard to Morocco. Now it has been given again about ten days ago—that is to say, at the moment of the Austro-Albanian tension. I know that this is so, and I have it from several different sources, notably from officers of the reserve who have told it to their friends in the strictest confidence. These gentlemen have taken the necessary measures to put aside in a safe the means of existence for their families for a year. . . . The intention of the General Staff is to act by surprise. 'We must put on one side,' said General von Moltke, 'all commonplaces as to the responsibility of the aggressor. When war has become necessary it is essential to carry it on

in such a way as to place all the chances in one's own favor. Success alone justifies war. Germany cannot and ought not to leave Russia time to mobilize, for she would then be obliged to maintain on her Eastern frontier so large an army that she would be placed in a position of equality, if not of inferiority, to that of France. Accordingly, . . . 'we must anticipate our principal adversary as soon as there are nine chances to one of going to war, and begin it without delay in order ruthlessly to crush all resistance.' . . .

"No. 4. M. ALLIZÉ, MINISTER OF THE REPUBLIC IN BAVARIA, TO M. STÉPHEN PICHON, MINISTER FOR FOREIGN AFFAIRS, . . . JULY 10, 1913:

"From a political point of view people are asking what is the object of the new armaments. Recognizing that no one threatens Germany, they consider that German diplomacy had already at its disposal forces sufficiently large and alliances sufficiently powerful to protect German interests with success. As I pointed out the day after the Morocco agreement of 1911, it is thought that the Imperial Chancery will be as incapable in the future as in the past, of adopting an active foreign policy and of achieving, at least in this sphere, successes which would justify the burdens which the nation has assumed. . . .

"No. 5. REPORT TO M. STÉPHEN PICHON . . . ON PUBLIC OPINION IN GERMANY . . . JULY 30, 1913:

"From observations which our agents in Germany have been able to collect from persons having access to the most diverse circles, it is possible to draw the conclusion that two feelings sway and irritate men's minds: (1) The [Franco-German-Morocco] Treaty of the 4th of November, 1911, [see FRANCE: 1910-1912], is considered a disappointment for Germany. (2) France—a new France—undreamed of prior to the summer of 1911 is considered to be a warlike country, and to want war. Members of all the parties in the Reichstag, from the Conservatives to the Socialists, representing the most different districts of Germany, university people from Berlin, Halle, Jena, and Marburg students, elementary school teachers, commercial clerks, bank clerks, bankers, artisans, merchants, manufacturers, doctors, lawyers, editors of Democratic and Socialistic newspapers, Jewish publicists, members of trade unions, clergymen and shopkeepers from the Mark of Brandenburg, country squires from Pomerania and shoemakers from Stettin celebrating the 50th anniversary of their association, country gentlemen, officials, priests, and large farmers from Westphalia, are unanimous on these two points, with very slight differences corresponding to their position in society or their political party. Here is a synthesis of all these opinions: The Treaty of the 4th November is a diplomatic defeat, a proof of the incapacity of German diplomacy and the carelessness of the Government (so often denounced), a proof that the future of the Empire is not safe without a new Bismarck; it is a national humiliation, a lowering in the eyes of Europe, a blow to German prestige, all the more serious because up to 1911 the military supremacy of Germany was unchallenged, and French anarchy and the powerlessness of the Republic were a sort of German dogma. In July, 1911, the 'Coup of Agadir' made the Morocco question for the first time a national question affecting the life and expansion of the Empire. . . . Why then did not

Germany go to war during the summer of 1911, since public opinion although not so unanimous and determined as French public opinion, was certainly favorable? Apart from the pacific disposition of the Emperor and the Chancellor, military and financial reasons made themselves felt. But these events of 1911 have caused a profound disillusionment in Germany. A new France united, determined, resolved not to be intimidated any longer, has emerged from the shroud in which she had been seen burying herself for the last ten years. . . . German public opinion is divided into two currents on the question of the possibility and proximity of war. There are in the country forces making for peace, but they are unorganized and have no popular leaders. They consider that war would be a social misfortune for Germany, and that caste pride, Prussian domination, and the manufacturers of guns and armour plate would get the greatest benefit, but above all that war would profit England. The forces consist of the following elements: The bulk of the workmen, artisans and peasants, who are peace-loving by instinct. Those members of the nobility detached from military interests and engaged in business, such as the *grands seigneurs* of Silesia and a few other personages very influential at Court, who are sufficiently enlightened to realize the disastrous political and social consequences of war, even if successful. Numerous manufacturers, merchants and financiers in a moderate way of business, to whom war, even if successful, would mean bankruptcy, because their enterprises depend on credit, and are chiefly supported by foreign capital. Poles, inhabitants of Alsace-Lorraine, and Schleswig-Holstein—conquered, but not assimilated and sullenly hostile to Prussian policy. There are about 7,000,000 of these annexed Germans. Finally, the Governments and the governing classes in the large southern states—Saxony, Bavaria, Wurtemberg, and the Grand Duchy of Baden—are divided by these two opinions:—an unsuccessful war would compromise the Federation from which they have derived great economic advantages; a successful war would only profit Prussia and Prussianisation, against which they have difficulty in defending their political independence and administrative autonomy. These classes of people either consciously or instinctively prefer peace to war; but they are only a sort of makeweight in political matters, with limited influence on public opinion, or they are silent social forces, passive and defenseless against the infection of a wave of warlike feeling. . . . Finally, it must be observed that these supporters of peace believe in war in the mass because they do not see any other solution for the present situation. . . . People sometimes speak of a military party in Germany. The expression is inaccurate, even if it is intended to convey the idea that Germany is the country where military power is supreme, as it is said of France that it is the country where the civil power is supreme. There exists a state of mind which is more worthy of attention than this historical fact, because it constitutes a danger more evident and more recent. There is a war party, with leaders, and followers, a press either convinced or subsidized for the purpose of creating public opinion; it has means both varied and formidable for the intimidation of the Government. . . . Those in favor of war are divided into several categories; each of these derives from its social caste, its class, its intellectual and moral education, its interests, its hates, special arguments which create a general attitude of mind and increase the strength and rapidity of the

stream of warlike desire. Some want war because in the present circumstances they think it is *inevitable*. And, as far as Germany is concerned, the sooner the better. Others regard war as necessary for economic reasons based on over-population, over-production, the need for markets and outlets; or for social reasons, *i.e.*, to provide the outside interests that alone can prevent or retard the rise to power of the democratic and socialist masses. Others, uneasy for the safety of the Empire, and believing that time is on the side of France, think that events should be brought to an immediate head. . . . Others are bellicose from 'Bismarckism' as it may be termed. They feel themselves humiliated at having to enter into discussions with France, at being obliged to talk in terms of law and right in negotiations and conferences where they have not always found it easy to get right on their side, even when they have a preponderating force. . . . Others again want war from a mystic hatred of revolutionary France; others finally from a feeling of rancour. These last are people who heap up pretexts for war. Coming to actual facts, these feelings take concrete form as follows: The country squires represented in the Reichstag by the Conservative party want at all costs to escape the death duties, which are bound to come if peace continues. . . . On the other hand this aristocracy is military in character, and it is instructive to compare the Army List with the year book of the nobility. War alone can prolong its prestige and support its family interests. . . . Finally, this social class which forms a hierarchy with the King of Prussia as its supreme head, realizes with dread the democratization of Germany and the increasing power of the Socialist party, and considers its own days numbered. Not only does a formidable movement hostile to agrarian protection threaten its material interests, but in addition, the number of its political representatives decreases with each legislative period. . . . The higher bourgeoisie, represented by the National Liberal Party, the party of the contented spirits, have not the same reasons as the squires for wanting war. With a few exceptions, however, they are bellicose. They have their reasons, social in character. The higher bourgeoisie is no less troubled than the aristocracy at the democratization of Germany. . . . Lastly, there are the manufacturers of guns and armour plate, big merchants who demand bigger markets, bankers who are speculating on the coming of the golden age and the next war indemnity—all these regard war as good business. Amongst the Bismarckians must be reckoned officials of all kinds, represented fairly closely in the Reichstag by the Free Conservatives or Imperial Party. This is the party of the 'pensioned,' whose impetuous sentiments are poured out in the *Post*. They find disciples and political sympathizers in the various groups of young men whose minds have been trained and formed in the public schools and universities. The universities, if we except a few distinguished spirits, develop a warlike philosophy. Economists demonstrate by statistics Germany's need for a colonial and commercial empire commensurate with the industrial output of the Empire. There are sociological fanatics who go even further. The armed peace, so they say, is a crushing burden on the nations, it checks improvement in the lot of the masses, and assists the growth of socialism. France, by clinging obstinately to her desire for revenge opposes disarmament. Once for all she must be reduced, for a century, to a state of impotence; that is the best and speediest way of solving the

social problem. Historians, philosophers, political pamphleteers and other apologists of German *Kultur* wish to impose upon the world a way of thinking and feeling specifically German. They wish to wrest from France that intellectual supremacy which, according to the clearest thinkers, is still her possession. . . . We come finally to those whose support of the war policy is inspired by rancour and resentment. These are the most dangerous. They are recruited chiefly among diplomatists. German diplomatists are now in very bad odour in public opinion. The most bitter are those who since 1905 have been engaged in the negotiations between France and Germany; they are heaping together and reckoning up their grievances against us, and one day they will present their accounts in the war press. . . . They must have their revenge, for they complain that they have been duped. During the discussion on the Army Bill one of these warlike diplomatists exclaimed, 'Germany will not be able to have any serious conversation with France until she has every sound man under arms.' . . . Must war then be considered as inevitable? It is hardly likely that Germany will take the risk, if France can make it clear to the world that the *Entente Cordiale* and the Russian alliance are not mere diplomatic fictions but realities which exist and will make themselves felt. The English fleet inspires a wholesome terror. It is well known, however, that victory on sea will leave everything in suspense. On land alone can a decisive issue be obtained. As for Russia, even though she carries greater weight in political and military circles than was the case three or four years ago, it is not believed that her co-operation will be sufficiently rapid and energetic to be effective. People's minds are thus getting used to consider the next war as a duel between France and Germany.—[*Reports of diplomatic and consular agents.*]

"No. 6. M. JULES CAMBON [FRENCH] AMBASSADOR AT BERLIN, TO M. STÉPHEN PICHON, . . . NOV. 22, 1913:

"I have received from an absolutely reliable source an account of a conversation which took place a fortnight ago between the Emperor and the King of the Belgians, in the presence of the Chief of the General Staff—General von Moltke. This conversation, it appears, has made a profound impression on King Albert. . . . The person addressed by the Emperor had thought up till then, as did all the world, that William II, whose personal influence had been exerted on many critical occasions in support of peace, was still in the same state of mind. He found him this time completely changed. The German Emperor is no longer in his eyes the champion of peace against the warlike tendencies of certain parties in Germany. William II has come to think that war with France is inevitable, and that it must come sooner or later. Naturally he believes in the crushing superiority of the German army and in its certain success. General von Moltke spoke exactly in the same strain as his sovereign. He, too, declared war to be necessary and inevitable, but he showed himself still more assured of success 'for,' he said to the King, 'this time the matter must be settled, and your Majesty can have no conception of the irresistible enthusiasm with which the whole German people will be carried away when that day comes.' The King of the Belgians protested that it was a travesty of the intentions of the French Government to interpret

them in that sense; and to let oneself be misled as to the sentiments of the French nation by the ebullitions of a few irresponsible spirits or the intrigues of unscrupulous agitators. The Emperor and his Chief of the General Staff nevertheless persisted in their point of view. . . . One may well ponder over the significance of this conversation. The Emperor and his Chief of the General Staff may have wished to impress the King of the Belgians and induce him not to make any opposition in the event of a conflict between us. Perhaps Germany would be glad to see Belgium less hostile to certain aspirations lately manifested here with regard to the Belgian Congo, but this last hypothesis does not seem to me to fit in with the interposition of General von Moltke. . . . If I may be allowed to draw a conclusion, I would submit that it would be well to take account of this new factor, namely, that the Emperor is becoming used to an order of ideas which were formerly repugnant to him, and that, to borrow from him a phrase which he likes to use, 'we must keep our powder dry.'—*F. Y. B., ch. 1.*

In November, 1913, "King Albert of Belgium had visited Potsdam and had been at a banquet with the Emperor and General von Moltke, the chief of staff. The King was grievously distressed at the tone of the conversation, over the walnuts and wine. War seemed in the air. . . . By war, of course, was meant a great European war against a coalition of great powers. . . . It is commonly supposed that Monsieur Cambon got his information about this imperial supper party from King Albert himself or at least from Baron Beyens."—*W. S. Davis, W. Anderson and M. W. Tyler, Roots of the war, p. 223.*—The precarious situation of the former Austro-Hungarian empire, aggravated by the turbulent activities of the various races which inhabited its territories before the war, formed an ever-present preoccupation to the minds of German and Austrian statesmen. The Balkan policies and attitudes of certain powers towards the disruptive elements within the monarchy is thus described by Bethmann-Hollweg: "The political literature of our enemies occupied itself long before the war with the future of Austria-Hungary. They openly discussed whether the Hapsburg Empire should be broken up or whether it should be preserved. That the death of the Emperor Francis Joseph would be an evil day for the Monarchy was an axiom shared by others besides our enemies. In Germany there were lively discussions as to what would then follow, and writers, especially those with Pan-German pens, occupied themselves with ambitious schemes for dividing up the estate without troubling as to the possible effect this might have abroad. Before the conclusion of the Entente Cordiale many voices had been raised in France in favour of detaching Austria-Hungary from the Triple Alliance, and of drawing her over to the Franco-Russian camp. With this end in view much clever work was done in Vienna against the German ally by exploiting Pan-German indiscretions and the sentiments of certain circles there that could not forget Königgrätz. [Sadowa, 1866. (See AUSTRIA: 1862-1866.)] If the Triple Alliance could be broken up, then the door would be bolted and barred against the much-discussed advance of Germany in the East. And, as Austrian and Balkan Slavs penetrated more and more into the political publicity of the West, autonomist ideas again came to the front. These ideas took definite shape with the conclusion of the Triple Entente. The general principle of it was the support at all

costs of the Slav constituents of the Danube Monarchy. The Czechs were almost openly struggling to free themselves from the State, and the South Slavs were in a perpetual ferment. Every demand put forward by these centrifugal forces not only dislocated the solidarity of the Austro-Hungarian Federation but also undermined the whole position of the Central Powers. A natural and necessary complement of the Entente policy was concurrent support of the Slav Balkan States that had an interest in the destruction of the Danube Monarchy. The short-sighted economic policy followed by Austria-Hungary in regard to Serbia had given to the restless activities of the Russian Minister in Belgrade, Hartwig, a favourable opening for fomenting hostility to the Hapsburg neighbour. While the Montenegrin country, insignificant as it was, served as a well-subsidized provincial branch of the Pan-Slavic business centre on the Moskwa. Of course, this development had not followed a direct course. It was not so long ago since England had refused to be diplomatically represented at Belgrade on account of the overthrow of the Obrenovitch dynasty by assassination. But it became more and more the fashion for England and French politicians to bring back reports from their tours in the Slav territories of Austria-Hungary to the effect that the population were impatiently waiting the collapse of the Hapsburg Monarchy, that would be the consequence, it was hoped, of the death of the old Emperor. This view was eagerly accepted and energetically exploited in the political literature of the day. In the Slav territories themselves, agitators were not content with the study of future possibilities, but prepared for direct action through the Press, through pamphlets, through meetings and societies."—*T. von Bethmann-Hollweg, Reflections on the World War (tr. by G. Young), pt. 1, pp. 101-103.*

5.—**French, Russian and German military increase in 1913.**—"In 1913, without waiting for similar movements in France and Russia, a notable increase was authorized by the Reichstag in the German army. The standing peace-army was to be raised from about 720,000 to about 860,000, with a corresponding increase in the reserves. There were to be startling additions to the new motor-tractor and aircraft services, also (as a jealously guarded secret) sundry great mobile howitzers were to be manufactured, which could beat the best forts to powder. . . . The German government alleged that the new quotas for the army were simply to match corresponding increases in France and Russia. As a matter of fact the German increases were first formulated in November, 1912, openly discussed in January, 1913, and became a law June 30, 1914. [See also GERMANY: 1890-1914: Growth of the army.] The French increases were formulated in February, 1913 (after great alarm over the situation in Germany) and only became a law July 19, of that year. [See FRANCE: 1913-1914.] The Russian increases were not even formulated until March, 1913, when the new German programme was patent to all the world. [See RUSSIA: 1914 (August): Status of army.] The 'defensive' character of the German measures can be judged from the statement on June 28, 1913, in the semi-official Kölnische Zeitung: 'This security gives us a free road to a profitable world policy. We are as yet but at the starting-point. Long roads, full of promise, open before us in Asia and in Africa.'—*W. S. Davis, W. Anderson and M. W. Tyler, Roots of the war, p. 481.*—See also WAR, PREPARATION FOR: 1913.

6.—List of principal persons mentioned in the correspondence, showing their official positions.

GREAT BRITAIN

Secretary of State for Foreign Affairs: Sir Edward Grey.

Permanent Under Secretary of State for Foreign Affairs: Sir A. Nicholson.

French Ambassador: Monsieur Paul Cambon.

Russian Ambassador: Count Benckendorff; *Monsieur de Etter (Counsellor of Embassy).*

German Ambassador: Prince Lichnowsky.

Austro-Hungarian Ambassador: Count Mensdorff.

Belgian Minister: Count Lalaing.

Serbian Minister: Monsieur Boschkovitch.

FRANCE

President of the Republic: Monsieur Poincaré.

President of the Council and Minister for Foreign Affairs: Monsieur Viviani.

Minister of Justice and Acting Minister for Foreign Affairs: Monsieur Bienvenu-Martin.

British Ambassador: Sir Francis Bertie.

Russian Ambassador: Monsieur Isvolsky.

German Ambassador: Baron von Schoen.

Austrian Ambassador: Count Scécsen.

RUSSIA

Minister for Foreign Affairs: Monsieur Sazonof.

Minister for War: M. Sukhomlinov.

British Ambassador: Sir George Buchanan.

French Ambassador: Monsieur Paléologue.

German Ambassador: Count Pourtalès.

Austro-Hungarian Ambassador: Count Szápáry.

GERMANY

Imperial Chancellor: Dr. von Bethmann-Hollweg.

Secretary of State: Herr von Jagow.

Under Secretary of State: Herr von Zimmermann.

British Ambassador: Sir Edward Goschen; Sir Horace Rumbold (*Counsellor of Embassy*).

Russian Ambassador: Monsieur Swerbeiev.

French Ambassador: Monsieur Jules Cambon.

Austro-Hungarian Ambassador: Count Szögyény.

AUSTRIA-HUNGARY

Secretary of State for Foreign Affairs: Count Berchtold.

Under Secretaries of State for Foreign Affairs: Baron Macchio; Count Forgach.

British Ambassador: Sir Maurice de Bunsen.

French Ambassador: Monsieur Dumaine.

Russian Ambassador: Monsieur Schebeko.

German Ambassador: Herr von Tschirschky.

ITALY

Minister for Foreign Affairs, Marquis di San Giuliano.

British Ambassador: Sir Rennell Rodd.

French Ambassador: M. Barrère.

BELGIUM

Foreign Minister: M. Davignon.

British Minister: Sir Francis Villiers.

SERBIA

Prime Minister: Monsieur Pashitch.

British Minister: Mr. des Graz; Mr. Crackan-
thorpe (*First Secretary*).

Austro-Hungarian Minister: Baron Giesl.

ALPHABETICAL LIST OF STATESMEN AND DIPLOMATS.

M. Allizé: *French minister to Bavaria at Munich (Germany).*

Mr. Herbert H. Asquith: *British premier, 1908-1915.*

M. Pierre Baudin: *French minister of marine, 1913.*

M. Bapst: *French minister to Denmark.*

M. Barrère: *French ambassador to Italy.*

M. De Bassompierre: *Of the Belgian diplomatic service.*

Mr. Beaumont: *British counsellor of embassy at Constantinople.*

Herr von Below Saleske: *German minister at Brussels.*

Count Benckendorff: *Russian ambassador at London.*

Count Berchtold: *Austrian minister of foreign affairs.*

M. Philippe J. L. Berthelot: *Of the French ministry for foreign affairs.*

Sir Francis L. Bertie: *British ambassador at Paris.*

Dr. Theobald T. F. A. von Bethmann-Hollweg: *German chancellor.*

Baron Beyens: *Belgian minister at Berlin.*

M. Bompard: *French minister to Serbia.*

M. Boschkovitch: *Serbian minister at London.*

M. Bronewsky: *Russian chargé d'affaires at Berlin.*

Herr von Buch: *German minister to Luxemburg.*

Sir George W. Buchanan: *British ambassador at St. Petersburg.*

Sir Maurice de Bunsen: *British ambassador at Vienna.*

M. Paul P. Cambon: *French ambassador at London.*

M. Jules M. Cambon: *French ambassador at Berlin.*

M. Chevalley: *French minister to Norway.*

Count Clary und Aldringen, *Austrian minister at Brussels.*

Mr. Dayrell M. Crackanhorpe: *British chargé d'affaires at Belgrade.*

Count Czernin, *Austro-Hungarian minister at Bucharest.*

M. Henry Davignon: *Belgian minister of foreign affairs.*

M. Théophile Delcasé: *French minister of foreign affairs.*

M. Doumergue: *Former French minister of foreign affairs.*

M. Dumaine: *French ambassador to Austria-Hungary.*

M. Eugene Etienne: *French minister of war, 1913.*

Baron Van der Elst: *Belgian secretary-general to ministry of foreign affairs.*

Count Errembault de Dudzeele: *Belgian minister at Vienna.*

M. De Etter: *Russian counsellor of embassy at London.*

M. Eyschen: *President of Luxemburg government.*

Baron Fallon: *Belgian minister at The Hague.*

M. De Faramond: *French naval attaché at Berlin.*

M. Farges: *French consul, Basle, Switzerland.*

M. De Fleuriau: *French chargé d'affaires at London.*

Herr von Flotow: *German ambassador to Italy.*

Count Forgach: *Austrian under-secretary of state for foreign affairs.*

Mr. James W. Gerard: *American ambassador to Germany.*

Baron Giesl von Gieslingen: *Austrian minister at Belgrade.*

Marquis di San Giuliano: *Italian minister of foreign affairs.*

Sir William E. Goschen: *British ambassador at Berlin.*

Baron Grenier: *Belgian minister at Madrid.*

- Sir Edward Grey: *British foreign secretary.*
 Baron Guillaume: *Belgian minister at Paris.*
 M. O. P. Hartwig: *Russian minister, resident at Belgrade.*
 Herr Josias von Heeringen: *German secretary for war, 1913.*
 M. Isvolsky: *Russian ambassador at Paris.*
 Herr Gottlieb von Jagow: *German secretary for foreign affairs.*
 Sir A. Johnstone: *British minister to Luxemburg.*
 M. Jovanovich. See below: YOVANOVITCH.
 M. Kazansky: *gérant of Russian consulate at Prague, Austria.*
 M. Klobukowski: *French minister at Brussels.*
 Prince Kudachef: *Russian counsellor of embassy at Vienna.*
 Count de Lalaing: *Belgian minister at London.*
 Prince Lichnowsky: *German ambassador at London.*
 Jonkheer Loudon: *Dutch minister of foreign affairs.*
 Baron Macchio: *Counsellor of Austrian ministry of foreign affairs.*
 M. De Manneville: *French chargé d'affaires, Berlin.*
 M. De Margerie: *Of the French diplomatic service.*
 M. Bienvenu-Martin: *French acting-minister of foreign affairs.*
 M. D'Apchier le Maugin: *French consul-general at Budapest.*
 Count Mensdorff: *Austrian ambassador at London.*
 M. Messimy: *Former French minister for war.*
 M. Mollard: *French minister to Luxemburg.*
 Count von Moltke: *chief of German general staff.*
 Mr. Henry Morgenthau: *American ambassador at Constantinople.*
 Herr von Mueller: *German minister at The Hague.*
 Sir Arthur Nicholson: *British under-secretary for foreign affairs.*
 M. Maurice G. Paléologue: *French ambassador to Russia.*
 M. Nicola Pashitch: *Serbian premier and minister of foreign affairs.*
 Dr. Patchou: *Serbian minister of finance.*
 M. Stephen Pichon: *French minister of foreign affairs 1913.*
 M. Raymond Poincaré: *President of the French republic.*
 Count Pourtalès: *German ambassador at St. Petersburg.*
 Sir R. Rodd: *British ambassador at Rome.*
 Sir Horace G. M. Rumbold: *British counsellor of embassy at Berlin.*
 M. Salvjati: *Russian consul-general at Fiume.*
 M. Sergius D. Sazonov: *Russian minister of foreign affairs.*
 M. Schebeko: *Russian ambassador at Vienna.*
 Baron von Schoen: *German ambassador at Paris.*
 Lieutenant-Colonel Serret: *French military attaché at Berlin.*
 M. Sevastopoulo: *Russian chargé d'affaires at Paris.*
 Count Van den Steen de Jehay: *Belgian minister to Luxemburg.*
 M. Strandtman: *Russian chargé d'affaires at Belgrade.*
 Count Stürgkh: *Austrian premier.*
 General Suchomlinof: *Russian minister of war.*
 M. De Swerbeew: *Russian ambassador at Berlin.*
 Count Szapary: *Austrian ambassador at St. Petersburg.*
 Count Szecsen: *Austrian ambassador to France.*
 Count Szögyény: *Austro-Hungarian ambassador to Germany.*
 M. Thiebaut: *French minister to Sweden.*
 Count Tisza: *Hungarian premier.*
 Prince Troubetzkoy: *General attached to the military household of the czar of Russia.*
 Herr von Tschirschky: *German ambassador at Vienna.*
 Count de Villers: *Luxemburg minister at Berlin.*
 Sir F. Villiers: *British minister to Belgium.*
 M. René Viviani: *Premier of France.*
 Baron Wangenheim: *German ambassador at Constantinople.*
 Johkheer de Weede: *Dutch minister at Brussels.*
 M. de Welle: *Belgian minister at Belgrade.*
 Brand Whitlock: *United States minister at Brussels.*
 Mr. Y. Yovanovitch: *Serbian minister at Vienna.*
 Herr Alfred F. M. von Zimmermann: *German under-secretary for foreign affairs.*
- 7.—Introductory narrative of events, from "Great Britain and the European crisis," issued by the British Foreign Office in 1914.—"On the 23d June, 1914, the Archduke Francis Ferdinand, nephew of the Emperor of Austria, Heir to the Throne, and Commander-in-Chief of the Army, left Vienna to attend army manœuvres in the Province of Bosnia. On Sunday, the 28th, he visited Sarajevo, the capital of the province, and made a progress through the town accompanied by his wife, the Duchess of Hohenberg. While passing through the streets their automobile was fired on by an assassin.—Both the Archduke and Duchess were killed. [See also above: Causes: Direct.] No crime has ever aroused deeper or more general horror throughout Europe; none has ever been less justified. Sympathy for Austria was universal. Both the Governments and the public opinion of Europe were ready to support her in any measures, however severe, which she might think it necessary to take for the punishment of the murderer and his accomplices. It immediately appeared, from the reports of . . . [the British] representatives abroad, that the press and public opinion of Austria-Hungary attributed much of the responsibility for the crime to the Servian Government [see below: 14], which was said to have encouraged a revolutionary movement amongst the Serb populations of Bosnia and Herzegovina. That there had for many years been a strong Serb nationalist movement in these two provinces there is no doubt. This movement in an earlier form had swept the provinces, then part of the Turkish Empire, into the insurrection against the Turkish Government in the seventies of last century, culminating in the war of 1877-8 between Russia and Turkey. It had continued when Austria took over the administration of the provinces under the Treaty of Berlin in 1878. [See BERLIN, CONGRESS OF.] Austria then pledged her word to Turkey that her occupation should not 'detract from the rights of sovereignty of His Majesty the Sultan over these provinces.' Thirty years later, however, in 1908, she suddenly proclaimed their annexation to her Empire. [See BOSNIA-HERZEGOVINA: 1908.] On the 7th October of that year, the annexation was celebrated in Sarajevo by the firing of salutes and ringing of cathedral bells, amid scenes of official rejoicing and popular apathy. Servian nationalist feeling immediately asserted itself, and the Servian Government protested to the Powers against the annexation as a 'deep injury to the feelings, interests and rights of the Servian people.' Servia's atti-

tude, coupled with the resentment felt by Russia and certain other Great Powers, nearly brought about a European war; but after six months of extreme tension she was induced to make a declaration abandoning her protest and promising to live on good terms with Austria. [See also AUSTRIA-HUNGARY: 1908-1909; SERBIA: 1903-1908.] Her nationalist aspirations still continued, however, and were strengthened by her successes in the Balkan wars of 1912-13—successes which were compromised by Austria's opposition to her territorial expansion. As Serbia grew, Austrian suspicions of her designs deepened. . . [For the Serbian declaration of 1909, see below: 15.]

"In the light of this history the storm of anti-Servian feeling which swept Austria-Hungary after the Sarajevo murders is easily understood. It was a feeling based on patriotism and loyalty. Europe was disposed to excuse its exaggerations and to sympathize with its motives. But the dangers to European peace which it involved were immediately evident from the reports which reached the Government in London. Anti-Serb riots took place at Sarajevo and Agram. The members of the Serb party in the Provincial Council of Croatia were assailed by their colleagues with cries of 'Servian assassins.' Mobs in Vienna threatened the Servian Legation. The Austrian press, almost without exception, used the most unbridled language, and called for the condign punishment of Serbia. There were signs that the popular resentment was shared, and perhaps encouraged, by the Austrian Government. Both the British and also the German Government knew that the peace might be disturbed. In view of these reports it naturally became incumbent on disinterested Powers to exercise what influence they possessed in a direction which would reconcile justice with peace. Unfortunately, though the attitude of public opinion in Austria, and, to a less degree, also in Germany, was plain, the intentions of the Austrian Government remained almost equally obscure. The Austrian Foreign Office maintained an attitude of reticence towards the British and Russian Ambassadors. On the 7th July the Government were careful to make a public announcement that a joint meeting of the Cabinets of Austria and Hungary, which had just taken place, was only concerned with the question of domestic measures to repress the Pan-Serb propaganda in Bosnia. On the 8th July the Minister-President of Hungary made, on the whole, a pacific speech in the Hungarian Parliament, defending the loyalty of the majority of the Serb subjects of the Empire. On the 11th July the Servian Minister at Vienna had no reason to anticipate a threatening communication from the Austrian Government, and as late as the 22nd July, the day before the Austrian ultimatum was delivered at Belgrade, the Minister-President of Hungary stated in Parliament that the situation did not warrant the opinion that a serious turn of events was necessary or even probable.

"His [Britannic] Majesty's Government had therefore largely to fall back on conjecture. It was known that the situation might become serious, but it was also known that Serbia had made professions of readiness to accept any demands compatible with the sovereignty of an independent State. It was known that the opinion of the Russian and French—and also of the German—Governments was that the Servian Government was not itself to blame for the crime, but that Serbia must be ready to investigate and put an end to the propaganda which had apparently led to it,

and which was said to have originated in part on Servian soil. Sir E. Grey advised Serbia to show herself moderate and conciliatory. He promised the German Ambassador to use his influence with the Russian Government in the same direction. More could not be done, for no actual evidence had yet been furnished that Servian territory had in fact been made the base for revolutionary operations. It was only known that a court-martial had been set up at Sarajevo, the proceedings before which were secret. The Servian Government stated that they were only waiting for the Austrian Government to communicate the evidence thus collected before setting their own investigations on foot. The Servian Government also stated that both the assassins implicated were Austrian subjects, and that on a previous occasion the Austrian Government had informed the Servian Government, in reply to enquiries, that one of these men was harmless and was under their protection. It was remembered that Austria had tried on previous occasions to fasten guilt on the Servian Government by means of police evidence brought forward in Austrian courts, and had failed. It was therefore assumed on all sides that, before Austria took any action, she would disclose to the public her case against Serbia. When Sir E. Grey said this to the German Ambassador on the 20th July, the latter replied that he certainly assumed that Austria would act upon some case that would be known; but, as a matter of fact, His Majesty's Government did not receive any statement of the evidence on which Austria had founded her ultimatum till the 7th August. It was, therefore, necessary to wait. The situation was as clear as it could be made till Austria would consent to throw off her reticence. There was nothing doubtful in the general international situation, no incalculable element which Austria could not take into full consideration. Whatever she did, she would know accurately the consequences of her action. The Triple Alliance and the Triple Entente remained as they had always been. We had been quite recently assured that no new secret element had been introduced into the former, and Sir E. Grey had stated emphatically in Parliament on the 11th June that the latter had remained unchanged so far as we were concerned. Russia's interest in the Balkans was well known. As late as the 23rd May the Russian Minister for Foreign Affairs had reaffirmed in the Duma the policy of the 'Balkans for the Balkans,' and it was known that any attack on a Balkan State by any great European Power would be regarded as a menace to that policy. If Serbia was, as the Austrian Ambassador said to Sir E. Grey on the 20th July, 'regarded as being in the Austrian sphere of influence'; if Serbia was to be humiliated; then assuredly Russia could not remain indifferent. It was not a question of the policy of Russian statesmen at St. Petersburg, but of the deep hereditary feeling for the Balkan populations bred in the Russian people by more than two centuries of development."—*Great Britain and the European crisis (Introductory narrative of events, British Foreign Office, 1914)*.—See also below: 69.

8.—Austro-Serbian quarrel.—Goluchowsky's and Aehrenthal's policies.—Austro-Serb customs convention.—Crisis of 1909.—Serbian minister's version.—Russo-French political and financial activities in Balkans.—Diplomatic documents.—The direct origin of the World War may be traced, more than to any other cause, to the long-standing political and economic feud between Austria and Serbia. Count Goluchowsky, Aehren-

thal's predecessor at the Austrian foreign office, had for ten years been accustomed to play off the Slav against the non-Slav Balkan states, *i.e.*, Rumania and Greece versus Bulgaria and Serbia, inclining generally towards the former, and treating the latter in a magisterial manner, which aroused bitter resentment. Aehrenthal reversed that policy; he granted Bulgaria the abolition of the "capitulations," a relic of the old times of Turkish rule, and ratified a convention with Rumania defining to her satisfaction the fishery rights in the Danube. He next proceeded to come to friendly terms with Serbia. The quarrel between that country and the Dual Monarchy had begun by the "discovery" of a secret customs convention on the point of being concluded between Bulgaria and Serbia. All the press joined in an angry chorus of reprobation, and also blamed Goluchowsky for not having known of this arrangement. As a matter of fact, he had known of it, the first negotiations in this sense a year previously having been duly reported both to the foreign office and in the press. He seemed, however, to have either forgotten all about it or to have strangely neglected the matter. In order to punish Serbia, the frontier was shut against her live-stock and negotiations for a commercial treaty was suspended. This brought about a succession of ministerial changes in Serbia, until the Pashitch ministry came in with the programme of concluding a foreign loan. Bound up with this loan was a contract for armament, and urged on by the Vienna press, Goluchowsky had insisted on a considerable portion of this contract being given to Austrian firms as a condition of taking off the restriction against importation of live-stock and making a commercial treaty. Serbia rebelled against this treatment; the result was a bitter quarrel and an almost complete cessation of commerce between the two countries, after the expiration of a two months' moratorium given by Austria-Hungary for the fulfilment of current engagements. If there was an official boycott, though, a most active trade in contraband went on across the Danube, and Serbia having disposed of most of her cattle and pigs during the couple of months, suffered little, if at all, more than Austria did from want of meat. Serbia also succeeded in concluding her loan, and received a great deal of encouragement from foreign capitalists, whilst Austria-Hungary remained in an attitude of ill-disguised sulkiness. On Aehrenthal taking the reins, nothing was done for a few months, until the beginning of March, 1907, when a note was handed in at Belgrade which drew a sponge over the past, and stated the readiness of Vienna, after the treaties with Rumania and Bulgaria had been concluded, to resume negotiations with Serbia, only stipulating that none of the concessions asked for and granted or refused during previous correspondence should be taken as having ever been mentioned. In other words, the whole of the misunderstanding was to be buried, and normal relations were to be resumed. Aehrenthal's annexation of Bosnia-Herzegovina in 1908 threatened to set the Balkans ablaze. (See also AUSTRIA-HUNGARY: 1908-1909; BOSNIA-HERZEGOVINA: 1908; SERBIA: 1903-1908.) Serbia and Montenegro made preparations for war, and the situation at last became so dangerous that the quiescence of Turkey had to be bought by a variety of concessions and a sum of over \$10,000,000, although Aehrenthal had frequently stated that financial compensation was out of the question. It proved a costly triumph for Austria. Serbia continued to

urge her claims, and it was believed in Vienna that Russia and England were at her side. In the early part of 1909 everything was ready for war on the south-eastern frontier, but Serbia was forced to yield when it became evident that Germany had compelled Russia to withdraw all hope of practical support. Great Britain induced Austria and Serbia to come to terms; all the powers then followed the lead which Russia had been compelled to take. For Austria, the result of the crisis was that her trade with the Balkan states had been injured, an indemnity had been paid to Turkey, and, worst of all, she had lost that position of freedom which, two years previously, had seemed to be within reach. The other powers were alienated by the breach of the Berlin Treaty, and Austria-Hungary was shackled to Germany by the debt of gratitude owed for the latter country's timely intervention at St. Petersburg. The following review of the relations between Austria and Serbia during the decade preceding the outbreak of the war, by M. Yovanovitch, Serbian minister to Vienna during 1912-1914, indicates the Serbian frame of mind towards the various crises which had darkened the Balkan horizon up to 1914: "From the period of Metternich (1773-1859) to that of Count Berchtold (Austro-Hungarian foreign minister in 1914), the policy of the Danubian Monarchy was consistent. Serbia was regarded as one of the provinces which should be annexed for the benefit of the Habsburg Empire, whose principal object was to assure itself an outlet at Salonika and the possession of the entire eastern coast of the Adriatic. When, in 1904, that energetic diplomatist, Baron Aerenthal, accepted the *portfolio* of Foreign Affairs, political interest in the Balkans was centred on the question of Macedonian reforms. The Baron, being an ardent and ambitious patriot, was desirous of raising the weakened prestige of the Habsburg Monarchy, and for this reason was not in favour of the introduction of the international reforms which had been projected; and while the British Government insisted that the problem of Macedonia should be settled by common agreement among all the Great Powers, he, on his part, carried on underhand negotiations to the opposite purpose with Sultan Abdul Hamid. Although Aerenthal was finally obliged to accept the views of the British Government, he nevertheless continued to work unceasingly and untiringly to obtain particular advantages for Austria-Hungary. In 1908, Aerenthal negotiated with the Porte for the construction of a railway-line which would have joined up the Balkan frontier in the north with Skoplye (Uskub) and Salonika; and when, in the month of July, 1908, the Young Turk Revolution broke out [see TURKEY: 1908; 1909], he decided to put into execution, with the least possible delay and without consultation with the Entente, a scheme which he had cherished from the moment of his accession to office—namely, the annexation of Bosnia and Herzegovina. This *coup-d'état*, it should be remembered, was carried out in October, 1908, with the knowledge and consent of Germany, and in accord with Bulgaria, which became at the same time an independent kingdom. Now, in view of the development of events in Turkey and of the aggressive attitude of Germany towards both Russia and France, it was clear to Serbian statesmen that Austria-Hungary would not content herself merely with the annexation of Bosnia and Herzegovina, and that, although she had renounced the privileges granted her by the Treaty of Berlin, of maintaining garrisons in the

Sandjak of Novi-Bazar [see *NOVI BAZAR*], she would push her programme still further afield. It was precisely for these reasons that Serbian statesmen made strenuous efforts to reach an agreement with the other Balkan States, so that they might be in a position to defend themselves against a danger which was becoming more menacing to their existence day by day. [See also *JUGO-SLAVIA: 1868-1917*.] The chief difficulty in the way of an arrangement was Bulgaria. As a matter of fact, Serbo-Bulgarian relations were already very delicate. At the commencement of the year 1907, when the Bulgarian Cabinet was presided over by M. Alexander Malinoff, . . . very slight aggravation of the situation would have precipitated an armed conflict between Serbia and Bulgaria. Austria-Hungary was fully alive to this situation, and set herself not only to impede any *rapprochement*, but actually to embroil the two states. Simultaneously, Viennese diplomacy endeavoured to incite Turkey against the Balkan peoples, particularly Bulgaria. We therefore find Baron Aerenthal sowing strife between Serbia and Bulgaria, and between Turkey and the Balkan States. On the other hand, being discontented with the attitude of the Young Turks, whose advertised programme, had it been put into execution, would have upset the calculations of Austria-Hungary, he prepared his own particular project, which, as it happened, accorded perfectly with the plans elaborated by the Pan-Germans. This scheme sought the creation in the western part of Turkey-in-Europe of a series of autonomous provinces, as a result of which there would have been an autonomous Macedonian province, an autonomous Greek province, and an autonomous Albanian province. According to the projected arrangement, the largest of these vassal states was to be Albania, in which territory would have been incorporated a great part of Old Serbia, and also a large tract of Western, Eastern, and Southern Macedonia, although these territories englobed only an insignificant number of Albanians. This great autonomous Albania was to be under the protection of Austria-Hungary. When the real purport of this scheme was understood in Sofia, the eyes of certain members of the Bulgarian Government were opened, and they at length grasped the real intentions of Austria-Hungary in regard to the Balkan Peninsula. . . . It was the opinion of Viennese diplomacy that Turkey would speedily overcome the joint forces of Serbia, Bulgaria, and Greece [in 1912], and it was probably for this reason that no effort was made by Austria-Hungary to stifle the conflict at its commencement. But when the Serbs took Koumanovo and Skoplye (Uskub) and entered Bitolye (Monastir), it was realised that an error of judgment had been committed. [See also *BALKAN STATES: 1912: First Balkan War; 1912-1913*.] Count Berchtold [who had succeeded Aehrenthal in 1912], was a rich aristocrat, a lover of music and the classics, and an ardent sportsman. . . . The next development in the Monarchy was the inauguration of a great press campaign against Serbia, whose victories had greatly increased her prestige in Europe, and, what was more to the point, among the Southern Slav subjects of the Habsburgs. The arrival of the Serbian army on the shores of the Adriatic provoked a demand on the part of the military party in Austria-Hungary for immediate and energetic action against the Serbian State. The danger of a new conflagration was indeed great, and both Dr. Kramarz and Professor Masaryk . . . acquainted the Belgrade Government of the serious-

ness of the menace. It was at this critical juncture, again, that a member of the Vienna Reichsrat, Professor Redlich—probably at the instigation of the Austro-Hungarian Government—offered the Serbian Government a Customs union with Austria-Hungary 'in order that the Monarchy might recognize the acquisitions made by Serbia in the war against Turkey.' It may be added in passing that at this particular moment the Bulgarian ex-Premier, Dr. Daneff, was received with great cordiality at Budapest, where the Austro-Hungarian Delegations were in session, and he declared in various interviews 'how well disposed towards Serbia were the governing circles of the Monarchy.' . . . Nevertheless, the press of Vienna and Budapest, acting under the direction of the official Press Bureau, had already prepared public opinion, both at home and abroad, for war against Serbia, the apparent object being to influence the Austrian Delegations in favour of armed intervention. . . . Towards the end of November and the beginning of December, 1912, Austria-Hungary had become violently incited against Serbia as a result of this campaign of invective and calumny, and it was at this juncture that I reached Vienna to take up my appointment as Serbian Minister. The very day of my arrival in Austria I became conscious of the effect which had been created by the Press upon the public. . . . Prior to presenting my credentials to Count Berchtold I had met several colleagues and journalists, whose conversation clearly indicated that the anger of the military party in Austria-Hungary was growing apace. . . . It may be said that right until the end of my mission in Vienna the official attitude of Austria-Hungary towards Serbia was unfriendly, and, for the most part, in favour of war. It would be incorrect, however, to say that all official circles were at one as to the advisability of embarking on a military enterprise. . . . On its part the Serbian Government showed itself disposed to do all in its power consistent with the dignity of an independent State to close up the fissures of discord. With this object in view, *pourparlers* were engaged in concerning a Treaty of Commerce, communications over the joint waterways of Serbia and Hungary, and other matters in general. In all these negotiations the Austro-Hungarian Government strove incessantly to secure an exceptional economic position in the Balkans which would have ensured to her a preponderating voice in political, military, and financial affairs. . . . During the course of these negotiations, the military continued to rattle the sword in a menacing fashion, and to prepare for war against Serbia. A serious situation was reached in the months of February and March, 1913, when Austria-Hungary demanded that Serbia should withdraw her troops from Albania and particularly from Durazzo and Skudar (Scutari) without delay. This difficulty was overcome by Serbia giving way, but in August of the same year [1913], Austria desired to attack Serbia, because in the Treaty of Bucharest Serbia had not consented to cede to Bulgaria at least a part of Western Macedonia—Kotchana and Shtip. The following October she sent a new ultimatum to Serbia, ordering her to withdraw her troops from the strategical positions which the Serbian army had occupied towards the end of September after the great Albanian raid into Serbian territory. On each occasion the ultimatum was accompanied by a partial mobilisation of the Austro-Hungarian army, and each time Serbia found herself obliged to submit to the recommendations of the Great Powers. At the commencement of the year 1914, many fresh

indications showed that Austria-Hungary had not abandoned her intention of inflicting military punishment upon Serbia. At that period, negotiations for the repurchase of the Oriental Railway were being carried on between Belgrade and Vienna. Now the Austrian Government had secretly and surreptitiously bought up the greater part of the shares of this Society from the German banks, and a few in addition from Austrian banks, in order that it might present itself as the principal, if not the unique proprietor and negotiator of the Oriental Railway Company. Its intention from the very commencement was that the sector of the railways which had been ceded to Serbia by the Treaty of Bucharest should be administered by Austro-Hungarian employees, who should even have the right of determining the tariffs. Under no conditions could Serbia accept this pretension, and a slight aggravation of the situation would have provoked a conflict. This, however, was avoided, and negotiations actually seemed to take a favourable turn, thanks to the attitude of the Serbian Minister of Public Works. It now became more evident than ever at Vienna that the peace of Europe hung by a very slender thread. There were never-ending rumours that Germany could not afford to wait until Russia was fully prepared for war—a position which, it was stated, she would reach by the beginning of 1917. The Emperor William arrived at Konopischt on a visit to the Heir-Apparent to the Habsburg crowns; at Trieste the new Austrian *Dreadnoughts* were being finished in feverish haste; and the Press discussed the probabilities and eventualities of war with less restraint than formerly. About this time, several of my acquaintances in Germany wrote me to the effect that the Berlin Government was straining every nerve to prepare for war. . . . Although Count Berchtold was the nominal head of the Ministry of Foreign Affairs, very considerable influence was exercised by Count Forgatch, the Austro-Hungarian Minister at Belgrade and a well-known figure in the days of Baron Aerenthal. Forgatch, although in favour of an active and energetic policy in respect of Serbia, directed the words and actions of the *Ballplatz* [the Vienna Foreign Office] in a very skilful manner. Thus Serbia, like other Powers, observed the indications and symptoms of the storm, but was unable to obtain proof of the militant intentions of the Central Empires. Among such indications figured my conversations on the subject of the Oriental Railways and the revision of the Treaty of Bucharest [Aug. 10, 1913] with the German Ambassador, von Tschirsky [Tschirschky]. I begged him, as a man whose words carried considerable weight at the *Ballplatz*, to use his influence in the direction of a pacific settlement of these two questions, in which Austro-Hungarian diplomacy was principally directed against Serbia. This German, who had no love for the Slavs, but who absolutely despised the Austrians, at once remarked to me in most brutal fashion: 'Until there has been a war between you and Austria-Hungary, not one of the questions that you are actually negotiating with that country can be settled. Yes! first the war, and then the settlement.' And in striking fulfilment of this prophecy, Austria-Hungary availed herself of the pretext provided by the assassination of the Archduke Francis-Ferdinand and the Duchess of Hohenberg, and proceeded to that military action against Serbia which precipitated the world-war."—Y. Yovanovitch, *How Austria willed war* (*Balkan Review*, London, *Mar.*, 1919, pp. 73-85).

The atmosphere of mutual suspicion in the Balkans does not appear to have been created by efforts of imagination. Russian and Serbian suspicions of Austrian designs were fully reciprocated by the Dual Monarchy and with some show of justice. The following diplomatic correspondence sheds some light upon Russo-French political and financial activities in the Peninsula previous to the outbreak of the war:

"(359) THE RUSSIAN AMBASSADOR AT VIENNA TO SAZONOFF. CONFIDENTIAL REPORT, FEB. 2-15, 1911: 'Having read with the greatest attention and impartiality the reports of our representatives at Sofia and Belgrade as well as of our Chargé d'Affaires at Constantinople, I come to the conclusion that all news of the Serbian Government derived from secret sources is to be accepted only with reservations. The weak side of the Serbians is their constant need of political intrigues which are devoted to but one purpose—not to admit good relations on the part of Russia to those Powers with which Serbia's relations are bad. The whole atmosphere of Belgrade is saturated with unjustifiable sensitiveness and excitement. The Serbian Government will not concede that Russia should conclude an agreement with Austria upon any basis whatsoever; if it is not the Serbian Government that calls our attention to the deep and treacherous designs of Austria, then it is the Serbian General Staff. At this moment when the relations of Serbia to Turkey are by no means satisfactory, there is no doubt in the minds of the Serbians that Turkey has concluded some pact with Austria. I am entirely of the opinion of our Chargé d'Affaires at Constantinople that Austria-Hungary has no design upon the Sandjak. I have arrived at this conclusion not only on account of the repeated declarations of the Austrian Minister for Foreign Affairs in the Delegations that Austria has no intention of continuing the policy of territorial acquisitions in the Balkans, but also by reason of the consideration that only thus could an agreement with Russia be reached, which is a direct political necessity for Austria. The *rapprochement* with France which would be so desirable for Austria is also possible only under these circumstances. The union of all Slav nationalities must naturally be the goal of Russian policy, but one asks oneself how is this to be achieved, now that the King and the Government of Bulgaria manifest such distrust of Serbia? I consider it to be my duty to say, that I am entirely of the opinion of our Chargé d'Affaires at Constantinople, that we must seriously consider the necessity of arriving at a new agreement with Vienna, in order to protect our interests as far as possible in a peaceful manner. It depends entirely upon the Imperial Government to judge when the favourable moment for a new Balkan agreement of this kind shall have arrived. On me merely devolves the duty of rendering the Balkan intrigues which are directed against such an agreement, ineffective and which might easily, and contrary to our desire, lead to a complete rupture with Austria. . . .'

"(364) MEMORIAL BY M. N. RAFFALOWITCH [THE FRENCH ECONOMIST] REGARDING AUSTRIAN INFLUENCE IN FRENCH BANKS. MAY 14, 1914: ' . . . In consequence of political events, Austria has during recent years had no access to the Paris market, and neither the efforts of her representatives, nor her close connections with the French world of finance, have helped her in this respect.

. . . The former German subject Ullmann occupies an important position in the *Crédit Lyonnais*;—although he entertains no immediate relations with Austria, he stands very close to the *Diskontogesellschaft* of Berlin which exercises a great influence at Vienna. The *Crédit Lyonnais* has on several occasions circulated Austrian and Hungarian values on the Paris market and has disposed of treasury certificates of these two states among its clients. There is no need of mentioning Rothschild, for, although he is very much interested in Austrian business, his influence in Paris is steadily diminishing. Finally, the *Union Parisienne* has a Balkan bank which depends directly upon Viennese and Budapest financial firms and which is under the local control of the Austrian *Donner*. It is essential, above all things, to remark that up to recently the French banks in the Balkans have proceeded in common with the Austrians, who have thereby been able to exploit French capital. The fundamental changes in the political structure of the Balkan Peninsula are bound to influence the Franco-Austrian relations in an unfavourable sense. In order to attain this end, we on our part must proceed in a very systematic fashion. In this we must discriminate between the efforts of the Austrians to float their values on the Paris Bourse, and to proceed hand in hand with the French banks in the Balkans. So far as the former efforts are concerned, these need not seriously disquiet us since they represent an "attempt with inadequate means." The French banks have altogether too great a fear of the interference of their government, and of the protest of public opinion, to determine light-heartedly upon such an operation which might be reduced to nothingness by a single newspaper article or by a single step on the part of Russia. . . . With reference to the co-operation of the French and Austrian banks, we may here too be able to play a very useful rôle. When for example, the Austrian banks, with a view to eventual participation, applied the other day to the French group which is examining the question of the internationalisation of the Eastern Railway in Serbia, it sufficed for the Russian representative to declare that the Russian group would not participate in such a combination, to induce the French to give the Austrians a negative answer. When one French group reproaches another with being too close to the Austrians this is usually only a *ruse de guerre*. We on our part must recognize the fact that all of the chief French groups stand very close to Austria and that it would be difficult to tell which of them are most under Austrian influence. We must set up the one general rule,—that we must not leave the French alone with the Austrians in any questions or countries in which we have an interest. Where the French are to co-operate with Russian elements there will no longer be any room for Austrians. Besides, this means to us the one possibility of being informed at the right moment of everything that we wish to prevent. . . .'

"(523) SAZONOFF TO THE RUSSIAN MINISTER AT SOFIA. CONFIDENTIAL LETTER. . . . MARCH 2, 1914: . . . 'The letters and reports received from you, since your arrival at Sofia, depict the difficult conditions prevailing in Bulgaria since the last war, and which she has not yet succeeded in overcoming. His skillfulness enables King Ferdinand to veer around between the numerous difficult complications of the domestic situation and his wish to improve his relations with Russia as much as possible, without compromising himself in his

relations with Austria on whose sympathy his Government is at present dependent. Considering the complicated political situation, the Russian representative can essentially adopt only a waiting attitude. This, of course, does not prevent a friendly exchange of views with the King or leading personalities. But these conversations cannot inspire us with much confidence, as you rightly observed in your letter of February 5. They give us no guarantee for the future, for even Daneff himself, although the watchword "Russophile" had been given him, was not prevented at that time from playing with Austria instead of siding with us. I may consequently call your attention to the circumstance that the present Cabinet does not enjoy our confidence. The more so as the reputation of the personalities who compose it, is very dubious. The coming election will perhaps bring a majority for the Radoslavoff Cabinet. What attitude would you adopt in this case? Perhaps we could support Bulgaria in certain concrete cases if a guarantee is given us that Bulgaria is acting independently of the members of the present or possible future Cabinets. But it is difficult to effect a rapprochement between Russia and Bulgaria and between Bulgaria and Serbia through the good offices of Russia unless a complete change in public opinion and a change of the Government takes place. For as long as the present Ministers are in power, it is advisable for us to observe reserve and extreme caution. . . . A ministerial change . . . would lead to active support on our part. For instance, it would render it possible for us to accelerate the final settlement of the Bulgarian Loan at Paris and to prepare the way for a rapprochement between Bulgaria and Serbia. But even then, we shall observe extreme caution and only advance by degrees, for, otherwise, we should incur the danger of shaking Serbia's confidence in ourselves and of alienating Roumania from us, if, at the same time we should not succeed in binding Bulgaria to us by the closest ties.'

"(524) THE RUSSIAN AMBASSADOR AT VIENNA TO SAZONOFF. LETTER. APRIL 3, 1914: 'However deplorable the Second Balkan War has been from the point of view of the Slavs, one cannot deny that the result of this war, so far as it is a question of special Russian interest, has been advantageous to us. Indeed what would have happened if wisdom had prevailed at Sofia at the conclusion of the armistice with Turkey, and if the Bulgarian Government had been willing to accept the justifiable demands of Serbia as to the alteration of the agreement existing between them, and the entirely unjustifiable, but relatively modest, demands of Roumania. So far as the expansion of her territory and strength of her population are concerned, Bulgaria would have become the greatest of the Balkan States; Roumania would have hastened to approach her, probably Turkey too, and if finally even a rapprochement with Austria had been brought about—which I have always thought possible even before the war with Serbia—a block hostile to us would have been formed in the Balkans, consisting of Austria, Bulgaria, Roumania and Turkey. Now, however, under existing political conditions, Austria is entirely isolated in the Balkans and every attempt on her part to alter the status quo would meet with decided resistance on the part of the League—Roumania, Serbia and Greece. For this reason, everything must be avoided that could set Roumania at variance with Serbia and Greece, an end which Austrian diplomacy will probably try to attain.

In this respect, Austria possesses an efficacious means in Albania. It must be understood at Belgrade and Athens that every imprudence on their part can only be of service to Austria, as it would evoke Roumania's dissatisfaction, whilst Austria and Italy, left to themselves in Albania, would ultimately quarrel. This situation, and the knowledge that the Vienna Cabinet has committed an error in supporting Bulgaria during the last crisis, are calling forth in Austria and Hungary that vague general apprehension which has become apparent of late. . . .'

"(534) THE RUSSIAN MINISTER AT SOFIA TO SAZONOFF. TELEGRAM, APRIL 9-22, 1914: 'According to various reports, negotiations are in progress at Berlin as to a Bulgarian loan of about 250 million francs. Up to the present, the German Government has not given its consent on account of Roumanian protests. Apparently, one has now succeeded in persuading Roumania to give up her negative attitude, and at Sofia it is assumed that the loan will be raised on condition that there is to be no expenditure on military armaments. It is a question of life and death to the Radoslavoff Cabinet to raise such a loan in the course of the next month, and it will consequently accept all conditions.'

"(535) THE SAME TO THE SAME. TELEGRAM, APRIL 26, 1914: 'It appears to me more and more probable, that the loan will be raised. I am making efforts, together with the French Minister here, to prove to the King and public opinion here, that the financial policy of the present Bulgarian Government with regard to the economic and political situation is fatal for the country. According to my information, it is to be assumed that English and Belgian money will be employed for the loan. Do you not believe it possible to prevent this? The French Minister asserts that his Government is doing everything possible to prevent French capital from going to Bulgaria. . . . We must make the utmost efforts to thwart the plans of Radoslavoff and Tontcheff.'

"(536) THE RUSSIAN AMBASSADOR AT PARIS TO SAZONOFF. TELEGRAM, APRIL 29, 1914: 'Doumergue has just confirmed to me that he has given categorical instructions to the French banks to place no means at Bulgaria's disposal in the shape of a Bulgarian loan in Germany. According to the French Government's information from Berlin, the negotiations at Berlin have been fruitless, which Doumergue attributes to the refusal of the French banks.'

"(537) SAZONOFF TO RUSSIAN AMBASSADOR AT LONDON. TELEGRAM, APRIL 23-MAY 6, 1914: 'I deem it extremely important to frustrate Bulgaria's intention to raise a loan in Germany, and I beg the British Government to direct its representative at Sofia to support our Minister in the fulfillment of his instructions to restrain Bulgaria from a disadvantageous financial operation which would be bound to lead to the complete economic subjection of Bulgaria by Germany. The French Minister at Sofia has already undertaken successful steps in this connection.'

"(538) THE RUSSIAN MINISTER AT SOFIA TO SAZONOFF. TELEGRAM, MAY 13, 1914: 'Urgent. After the steps taken in London and Paris, we have exhausted all our resources to prevent the raising of the loan. But the necessity of a loan is making itself felt here more and more. In con-

sequence of this consideration, and in order to prevent the Austro-German influence here from growing stronger, I have decided to propose a final means, after having discussed it at length to-day with my French colleague and the representatives of the French banks. We might bring it to the King's cognizance that Russia, who does not trust the present Government, but who is as solicitous as before as to Bulgaria's political and financial independence, will now make the following proposal. France will be induced to advance the money needed by the country—about 100 millions—to the King personally, without imposing the onerous conditions now being discussed at Berlin. At the same time the declaration must be made that, until the conclusion of a loan, France will renounce to be repaid the 75 millions, and Russia the 45 millions treasury notes due for military supplies. The representative of French financial interests at Sofia is convinced that such an operation is tantamount to the realisation of the loan and will render it impossible for the Berlin banks to obtain the loan. Apart from the fact, that we are removing Bulgaria from Austrian influence in future, the influence of Austria and Germany here will also be weakened in this way, and, sooner or later, the present Cabinet will be brought to fall, whereas an immediate removal of the Ministers not agreeable to us would entail great difficulties.'

"(533) SAZONOFF TO THE RUSSIAN MINISTER AT BELGRADE. TELEGRAM. . . . JULY 7, 1914: 'Confidential. The recent events in Serbia, which have led to an accentuation of the anti-Serbian feeling at Vienna, induce us to advise the Serbian Government to treat with the utmost caution all questions which might tend to accentuate this feeling and thus create a dangerous situation. We are consequently of the opinion that it would be advisable to postpone the negotiations concerning the Serbo-Montenegrin rapprochement a little, for these negotiations have already attracted the attention of Austria-Hungary and even of Germany. I beg you to communicate confidentially this opinion to Pashitch.'

—B. de Siebert, *Entente diplomacy and the world* (tr. from original texts, G. A. Schreiner, ed.), pp. 304, 306-307, 312-314, 441-443, 450-452.—See also AUSTRIA-HUNGARY: 1914.

9.—Alleged imperial council at Potsdam on July 5, 1914.—Much controversy has raged around an alleged imperial council supposed to have been held at Potsdam on July 5, 1914. The best authority we have is the evidence of Henry Morgenthau. (See below: 74.) All German sources deny that such a council was ever held; Bethmann-Hollweg denied it, and his version of the events of that day is strongly supported by the Kautsky *Documents*. Hence there is every reason to believe that Baron Wangenheim was romancing when he gave Mr. Morgenthau that vivid description of what had "happened" in his presence. As Wangenheim died in Constantinople in October, 1915, we are left in the dark as to his veracity. Bethmann-Hollweg said that on July 5 Count Szögyény lunched with the German emperor at Potsdam and delivered to the latter a memorandum on the Balkan situation together with a personal letter from the Austrian emperor. (See below: 76.) Kautsky in his *Documents* proves the truth of this statement. The memorandum in question had been prepared by the Austrian Foreign Office before the Serajevo murders, which led to some slight changes being introduced at the end of it. The private or

personal letter from the Austrian to the German emperor read as follows: "I am sending you a memorandum drawn up by my Minister of Foreign Affairs, prior to the frightful catastrophe at Serajevo, which after that tragic event now appears especially noteworthy. The attack on my poor nephew is a direct result of the agitation of the Russian and Serbian Pan-Slavs whose single aim is the weakening of the Triple Alliance and the disruption of my Empire. Serajevo is not the deed of a single individual, but the result of a well-arranged plot whose threads reach to Belgrade; and though presumably it will be impossible to prove the complicity of the Serbian government, there can be no doubt that its policy of uniting all the South Slavs under the Serbian flag promotes such crimes and that a continuation of this situation spells lasting danger for my dynasty and for my territories. This danger is heightened by the fact that Rumania, in spite of its existing alliance with us, is in close friendship with Serbia and permits in its own territory just as hateful an agitation against us as does Serbia. . . . I fear that Rumania can only be saved for the Triple Alliance in case we do two things: prevent the establishment of a new Balkan League under Russian protection by joining Bulgaria to the Triple Alliance; and give it clearly to be understood in Bucharest that Serbia's friends cannot be our friends, and that Rumania can no longer count upon us as allies, unless she cuts loose from Serbia and suppresses with all her power her own agitation in Rumania which is directed against the existence of my Empire. The aim of my government must henceforth be to isolate and diminish Serbia. The first step in this direction must be to strengthen Bulgaria and secure an alliance with her. Bulgaria can then unite with Rumania and guarantee her territorial integrity; and Rumania will then perhaps retreat from the dangerous path into which she is led by her friendship with Serbia and her rapprochement with Russia. If this should succeed, a further attempt could be made to reconcile Greece with Bulgaria and Turkey, and so form a new Balkan League under the protection of the Triple Alliance; its purpose would be to set a dam to the Pan-Slav flood and assure peace to our lands. This will only be possible when Serbia, which at present forms the pivot of the Pan-Slav policy, is ejected from the Balkans as a political factor. After the last frightful events in Bosnia, you too will be convinced that a friendly settlement of the opposition which divides Austria from Serbia is no longer to be thought of, and that the peace policy of all European monarchs is threatened so long as the source of criminal agitation in Belgrade lives on unpunished."—*Kautsky*, no. 13.—This letter was first published in *Deutsche Politik*, May 16, 1919. Berchtold's memorandum appeared in the same publication shortly after.

ALSO IN: Gooss, *Austrian Red Book*, v. 1, no. 1.

It was these two documents which Count Szögyény presented at Potsdam on July 5. The Count himself describes the affair thus in his report to Count Berchtold: "After I had brought it to the knowledge of Emperor William that I had a letter to deliver, I received Their Majesties' invitation to lunch today [July 5] at noon in the New Palace. I gave His Majesty the letter and the accompanying memorandum. He read both documents in my presence with the greatest attention. At first he assured me that he had expected an earnest action on our part against Serbia, but that in view of the statements of Francis Joseph, he must keep in view a serious European complica-

tion and therefore wished to give no definite answer until he had consulted with the Chancellor. After luncheon when I again emphasized the seriousness of the situation, His Majesty authorized me to report that in this case also we could reckon on Germany's full support. He thought action ought not to be delayed. Russia's attitude would doubtless be hostile, but he had been prepared for that for years; and if it should even come to a war between Austria and Russia, we could be convinced that Germany would stand by our side with her accustomed faithfulness as an ally. Russia, furthermore, he thought, was in no way ready for war and would certainly ponder very seriously before appealing to arms. His Majesty said he understood how hard Francis Joseph, with his well-known love of peace, would find it to invade Serbia; but if we had really decided that military action against Serbia was necessary, he would be sorry if we left unused the present moment which was so favorable for us. Early tomorrow morning Emperor William intends to go to Kiel to start from there on his northern cruise. But first he will talk with the Chancellor, and for this purpose he has summoned him for this evening to the New Palace."—*Gooss*, v. 1, no. 6.—"On the next day, after Bethmann, accompanied by Zimmermann, had discussed the matter with Emperor William, the chancellor officially defined Germany's attitude to Szögyény as follows: 'Austria must judge what is to be done to clear up her relation to Serbia; whatever Austria's decision may turn out to be, Austria can count with certainty upon it, that Germany will stand behind her as an ally and friend.'"—*Ibid.*, no. 7.—"Thus the Kaiser and Bethmann chose their policy. They gave Austria a free hand and made the mistake of putting the situation outside of their control into the hands of a man as reckless and unscrupulous as Berchtold. They committed themselves to a leap in the dark. They soon found themselves involved . . . in actions which they did not approve, and by decisions which were taken against their advice; but they could not seriously object or threaten, because they had pledged their support to Austria in advance, and any hesitation on their part would only weaken the Triple Alliance at a critical moment when it most needed to be strong. Bethmann and the Kaiser on July 5 were not criminals plotting the World War; they were simpletons putting 'a noose about their necks' and handing the other end of the rope to a stupid and clumsy adventurer who now felt free to go as far as he liked."—*Fay*, I.—In a footnote the author says, "as the Kaiser himself frantically wrote on July 30 after learning of Grey's warning, Russian mobilization, and Berchtold's persistent rejection of all proposed peaceful solutions: In addition to encirclement by the Entente, 'wird uns die Dummheit und Ungeschicklichkeit unseres Verbündeten zum Fallstrick gemacht' [will the stupidity and clumsiness of our ally have been made a noose for our necks]."—*Kautsky*, no. 401.—"However, though no such general conference [as the alleged imperial council] took place on July 5 at which a European war was plotted, the date is momentous, for it does mark the moment at which Berlin gave Berchtold a free hand against Serbia. Until July 5 Berchtold had not dared to take energetic action against Serbia; partly because he knew that his colleague Tisza, the Hungarian premier, was strongly opposed to a sudden and unprovoked attack on Serbia; and partly because he did not feel sure of German support. Germany had hitherto been taking a reserved and moderating

attitude in regard to Austrian adventures in the Balkans. Even before the Serajevo crime Berchtold had tried in vain 'to open Tschirschky's eyes to the danger that Austria was in.' [Count Hoyos in Vienna wrote to ambassador Pallavicini in Constantinople on June 26, 1914: "Meanwhile, a long Memorandum is being prepared for Berlin, which is soon to be sent, and the Minister (Count Berchtold) is doing his utmost to open Tschirschky's eyes."] Two days after Serajevo [June 30, 1914], when even serious people in Vienna 'were expressing frequently the hope that Austria had now the excuse for coming to a final reckoning with the Serbs,' Tschirschky still [Kautsky *Documents*, no. 7] used every opportunity to warn calmly but very energetically and earnestly against any over hasty steps. He pointed out above all else that Austria must be clear as to exactly what she wanted, and remember that she did not stand alone in the world, that she must consider her allies and the European situation, and especially the attitude which Italy and Rumania would take in regard to Serbia. (Note.—Highly significant of Emperor William's eagerness to have Austria act quickly and vigorously against Serbia are his marginal comments on this despatch. He underlined both the passages placed in quotation marks above: beside the first he wrote 'now or never,' and beside the second, in condemnation of Tschirschky's restraining attitude of moderation: 'Who authorized him to this? That is very stupid! It's none of his business, for it is purely Austria's affair to consider what to do in this matter, for it will be said afterwards, if things go wrong, that Germany was not willing!' Tschirschky will please drop this nonsense! Matters must be cleared up with the Serbs *and that soon*. That's all self-evident and as clear as daylight.')

—Fay, I, p. 631.

—Up to July 5, Tschirschky accurately represented the moderating views of the Berlin Foreign Office, for on July 4 Szögyény telegraphed to Berchtold, 'Zimmermann recommends the greatest precaution and advises that no humiliating demands be made upon Serbia' [*Red Book*, v. 1, no. 5]. But after July 5 his attitude changed. Henceforth Tschirschky appears to have urged Berchtold to the speedy and energetic action against Serbia desired by Emperor William [*Red Book*, v. 1, nos. 10, 44; Kautsky *Documents*, nos. 35, 40-41, 49, 94]. Accordingly, on Tuesday morning, July 7, Berchtold, now confident of German support, called a ministerial council at Vienna at which the leading ministers and the chiefs of the army and navy were present."—*Ibid.*, pp. 631-632.

—"Our knowledge as to the attitude and actions of that statesman was very considerably enlarged by the publication of a further Austrian Red Book, as well as a similar semi-official collection of documents [the Gooss edition], which show that Count Berchtold at the Council held at Vienna on 7 July, 1914, urged the necessity for an immediate war with Serbia, adding that he had received private assurances of support from Berlin. . . . The assurances Count Berchtold spoke of were presumably those given on 5 July; that is to say, before the conciliatory Serbian answer. Subsequent to this, and with the recognition of the fact that Russia would stand by Serbia, and thereby a European war ensue, the German statesmen appear to have realized the gravity of the situation and made some ostensible attempt to exercise moderation on Vienna."—*"Tramontana," Some new sources of European history (New Europe, Dec. 25, 1919)*.

10.—Calm before the storm.—After the Serajevo murders, which happened on June 28 (see

AUSTRIA-HUNGARY: 1914 (June)], the world generally and Europe in particular breathlessly waited for something of tremendous import to happen. Twenty-five days passed without a cloud appearing on the international horizon; Austria held the center of the stage, yet neither word nor sign emanated from the Vienna Foreign Office. On July 22 the Hungarian Minister President stated in Parliament that the situation was not serious enough to arouse any fear of complications. The Serajevo tragedy had almost faded away as a newspaper sensation; European affairs seemed to have resumed their normal course; a British battleship squadron under Admiral Beatty was paying a friendly visit to Kiel; the French president and his prime minister were away on a visit to St. Petersburg (Petrograd), and most of the diplomatic representatives accredited to European capitals were enjoying summer vacations. It was a deceptive calm preceding the most terrific storm in human history.

11.—Austrian reticence as to intentions towards Serbia.—"The Serbian Minister, M. Yovanovich, had more than one conversation at the Austrian Foreign Office [during the four weeks following the murders at Serajevo] but they were confined to a discussion of the quarrel which was going on between the newspapers of the two countries. On both sides very bitter language was used, but this was nothing new; violent attacks on other States and nations are, even in peace time, unfortunately not peculiar to the Press of Vienna, Budapest, and Belgrade. Austrian papers demanded the condign punishment of the whole Serbian race; Serbian papers answered by rehearsing the crimes of Austria. The Austrian Press would make the Serbian nation and Government responsible for the murder; the Serbian Press answered, if not by justifying the crime, by putting forward the reasons which might have inspired it, and in particular they attributed it to the misgovernment and ill-treatment of the Southern Slavs who inhabited the Dual Monarchy. The point was made that in Serbia the Government had no control over the Press, while in Austria and in Hungary there was an organised system by which the papers could be influenced by the Government. . . . There were also mutual recriminations as to the treatment of Serbians in Austria and in Hungary, and demonstrations made against subjects of the Monarchy in Serbia. . . . All this was, however, comparatively unimportant; as had happened before, these popular demonstrations would within a short time have died out. The only matter of real interest was the action which the Government of Austria-Hungary proposed to take. As to this no information could be obtained. Their intentions were veiled under complete secrecy. M. Yovanovich wrote on July 7, 'In authoritative circles the excitement continues undiminished. Though the Emperor has addressed a letter to the Prime Ministers of Austria and Hungary respectively, and to the Minister for Finance, Mr. Bilinski, which calls for calmness, it is impossible to determine what attitude the Government will adopt towards us. For them one thing is obvious; whether it is proved or not that the outrage has been inspired and prepared at Belgrade, they must now or later solve the question of the so-called Great Serbian agitation within the Hapsburg Monarchy. In what manner they will do this and what means they will employ to that end has not as yet been decided; this is being discussed, especially in high Catholic and military circles. The ultimate decision will be taken only

after it has been definitely ascertained what the inquiry at Sarajevo has brought to light. The decision will be in accordance with the findings of the inquiry.'—*Headlam*, pp. 19-21.

12.—Awaiting Austrian action.—French and British diplomats' reports.—Austrian and German ambassadors confer with Grey.—German secret war documents.—Private and official correspondence.—“Would the demands to be directed to Serbia be confined to requiring their co-operation in the investigation and punishment of the conspiracy and to preventing similar crimes in the future, or would they take this opportunity to force the Serbian nation to surrender the great ambitions by which they had been inspired? Would they attempt to require a complete alteration in the policy and spirit of the Government, and insist on a return to the position of subordination to Austria which had existed during the reign of the last two kings of the dynasty of the Obrenovitch? On this depended the future of Serbia and also of Europe. [The anxiety was not confined to Serbia; there was throughout Europe] an uneasy feeling based indeed, not on any actual knowledge of the intentions of Austria, but on the recognition that Serbia was the most dangerous point in Europe, and on an appreciation of the consequences which might result if Austria were to take this opportunity, as she well might, for bringing to a point the long-standing controversy with Russia over the political position of the Serbian kingdom. There was, indeed, every ground for anxiety. . . . To Europe the Austro-Hungarian Government maintained a silence as impenetrable as to Serbia. It was known that demands were to be made on Serbia; the nature of these demands in all detail were being constantly discussed, obviously on good information, in the Austrian and Hungarian papers, but to the other Powers not a word was said.”—*Headlam*, p. 23.—This growing uneasiness is clearly shown in the following correspondence between the ambassadors at the various capitals and their home governments.

“No. 8. M. DUMAINE, FRENCH AMBASSADOR AT VIENNA, TO M. RENÉ VIVIANI, . . . JULY 2, 1914:

“The crime of Serajevo arouses the most acute resentment in Austrian military circles and among all those who are not content to allow Serbia to maintain in the Balkans the position which she has acquired. The investigation into the origin of the crime which it is desired to exact from the Government at Belgrade under conditions intolerable to their dignity would, in case of a refusal, furnish grounds of complaint which would admit of resort to military measures.

“No. 9. M. DE MANNEVILLE, FRENCH CHARGÉ D'AFFAIRES AT BERLIN, TO M. RENÉ VIVIANI, JULY 4, 1914:

“The Under-Secretary of State for Foreign Affairs told me yesterday, and has today repeated to the Russian Ambassador, that he hoped Serbia would satisfy the demands which Austria might have to make to her with regard to the investigation and the prosecution of the accomplices in the crime of Serajevo. He added that he was confident that this would be the case because Serbia, if she acted in any other way, would have the opinion of the whole civilized world against her. The German Government do not then appear to share the anxiety which is shown by a part of the German press as to possible tension in the rela-

tions between the Governments of Vienna and Belgrade, or at least they do not wish to seem to do so.

“No. 10. M. PALÉOLOGUE, FRENCH AMBASSADOR AT ST. PETERSBURGH, TO M. RENÉ VIVIANI, . . . JULY 6, 1914:

“In the course of an interview which he had asked for with the Austro-Hungarian Chargé d'Affaires, M. Sazonoff pointed out in a friendly way the disquieting irritation which the attacks of the Austrian press against Serbia are in danger of producing in his country. Count Czernin having given him to understand that the Austro-Hungarian Government would perhaps be compelled to search for the instigators of the crime of Serajevo on Serbian territory, M. Sazonoff interrupted him: ‘No country,’ he said, ‘has had to suffer more than Russia from crimes prepared on foreign territory. Have we ever claimed to employ in any country whatsoever the procedure with which your papers threaten Serbia? Do not embark on such a course. May this warning not be in vain.’

“No. 11. M. D'APCHIER LE MAUGIN, FRENCH CONSUL-GENERAL AT BUDAPEST, TO M. RENÉ VIVIANI, . . . JULY 11, 1914:

“Questioned in the Chamber on the state of the Austro-Serbian question M. Tisza explained that before everything else it was necessary to wait for the result of the judicial inquiry, as to which he refused at the moment to make any disclosure whatsoever. And the Chamber has given its full approval to this. . . . With regard to this *démarche* it seems that the word has been given to minimize its significance; the anger of the Hungarians has, as it were, evaporated through the virulent articles of the press, which is now unanimous in advising against this step, which might be dangerous. The semi-official press especially would desire that for the word ‘*démarche*,’ with its appearance of a threat, there should be substituted the expression ‘*pourparlers*,’ which appears to them more friendly and more courteous. Thus, officially, for the moment all its for peace. All is for peace, in the press. But the general public here believes in war and fears it. . . . The Government, whether it is sincerely desirous of peace, or whether it is *preparing a coup*, is now doing all that it can to allay these anxieties. This is why the tone of the Government newspapers has been lowered, first by one note, then by two, so that it is at the present moment almost optimistic. . . .

“No. 12. M. DUMAINE, FRENCH AMBASSADOR AT VIENNA, TO M. RENÉ VIVIANI, . . . JULY 15:

“Certain organs of the Vienna press, discussing the military organisation of France and Russia, represent these two countries as incapable of holding their own in European affairs; this would ensure to the Dual Monarchy, supported by Germany, appreciable facilities for subjecting Serbia to any treatment which it might be pleased to impose. The *Militärische Rundschau* frankly admits it. ‘The moment is still favourable to us. If we do not decide for war, that war in which we shall have to engage at the latest in two or three years will be begun in far less propitious circumstances. At this moment the initiative rests with us: Russia is not ready, moral factors and right are on our side, as well as might. Since we shall have to accept the contest some day; let us

provoke it at once. Our prestige, our position as a Great Power, our honor, are in question; and yet more, for it would seem that our very existence is concerned—to be or not to be—which is in truth the great matter today.' Surpassing itself, the *Neue Freie Presse* of today reproaches Count Tisza for the moderation of his second speech, in which he said, 'Our relations with Serbia require, however, to be made clear.' These words rouse its indignation. For it, tranquillity and security can result only from a *war to the knife* against Pan-Servism, and it is in the name of humanity that it demands the extermination of the cursed Servian race.

"No. 13. M. DUMAINE, FRENCH AMBASSADOR AT VIENNA, TO M. RENÉ VIVIANI, . . . JULY 19:

"The Chancellor of the Consulate, who has sent me his half-yearly report, in which he sums up the various economic facts which have been the subject of his study since the beginning of the year, has added a section containing political information emanating from a trustworthy source. I asked him briefly to sum up the information which he has obtained regarding the impending presentation of the Austrian note to Serbia, which the papers have for some days been persistently announcing. . . .

"No. 14. MEMORANDUM, (EXTRACT FROM CONSULAR REPORT ON THE ECONOMIC AND POLITICAL SITUATION IN AUSTRIA) . . . JULY 20:

"From information furnished by a person specially well informed as to official news, it appears that the French Government would be wrong to have confidence in disseminators of optimism; much will be demanded of Serbia; she will be required to dissolve several propagandist societies, she will be summoned to repress nationalism, to guard the frontier in co-operation with Austrian officials, to keep strict control over Anti-Austrian tendencies in the schools; and it is a very difficult matter for a Government to consent to become in this way a policeman for a foreign Government. They foresee the subtrefuges by which Serbia will doubtless wish to avoid giving a clear and direct reply; that is why a short interval will perhaps be fixed for her to declare whether she accepts or not. The tenor of the note and its imperious tone almost certainly ensure that Belgrade will refuse. Then military operations will begin. There is here, and equally at Berlin, a party which accepts the idea of a conflict of widespread dimensions, in other words, a conflagration. The leading idea is probably that it would be necessary to start before Russia has completed the great improvements of her army and railways, and before France has brought her military organisation to perfection. . . . Now, for the last ten days, the official agency has furnished daily to the Austro-Hungarian press a complete review of the whole Servian press, giving a prominent place to the least known, the smallest, and most insignificant papers, which, just on account of their obscurity, employ language freer, bolder, more aggressive, and often insulting. . . . The fact is significant.'

"No. 15. M. JULES CAMBON, FRENCH AMBASSADOR AT BERLIN, TO M. BIENVENU-MARTIN, ACTING MINISTER FOR FOREIGN AFFAIRS, . . . JULY 21:

"It has come to my knowledge that the Servian representative at Berlin declared, at the Wilhelm-

strasse, yesterday, that his Government was ready to entertain Austria's requirements arising out of the outrage at Serajevo, provided that she asked only for judicial cooperation in the punishment and prevention of political crimes, but that he was charged to warn the German Government that it would be dangerous to attempt through that investigation, to lower the prestige of Serbia. In confidence I may also inform your Excellency that the Russian Chargé d'Affaires at the diplomatic audience today mentioned this subject to Herr von Jagow. He said that he supposed the German Government now had full knowledge of the note prepared by Austria, and were therefore willing to give the assurance that the Austro-Servian difficulties would be localised. The Secretary of State protested that he was in complete ignorance of the contents of that note, and expressed himself in the same way to me. I could not help showing my astonishment at a statement which agreed so little with what circumstances lead one to expect. . . .

"No. 16. M. BIENVENU-MARTIN, ACTING MINISTER FOR FOREIGN AFFAIRS [IN FRANCE TO THE FRENCH AMBASSADORS AT] LONDON, ST. PETERSBURG, VIENNA, ROME . . . JULY 21, 1914:

"I specially draw your attention to information of which I am in receipt from Berlin; the French Ambassador notifies the extreme weakness of the Berlin Bourse yesterday and attributes it to the anxiety which has begun to be aroused by the Servian question. M. Jules Cambon has very grave reason for believing that when Austria makes the *démarche* at Belgrade which she judges necessary in consequence of the crime of Serajevo, Germany will support her with her authority, without seeking to play the part of mediator.

"No. 17. M. BIENVENU-MARTIN, ACTING MINISTER FOR FOREIGN AFFAIRS [TO THE FOUR FRENCH AMBASSADORS AS ABOVE]. . . . JULY 22, 1914:

"M. Jules Cambon having questioned Herr von Jagow on the tenor of the Austrian note at Belgrade, the latter replied that he knew nothing of the text; our Ambassador expressed his great astonishment at this. . . . M. Barrère also discussed the same question with the Marquis di San Giuliano who appears disturbed by it, and gives the assurance that he is working at Vienna in order that Serbia may not be asked for anything beyond what is practicable, for instance, the dissolution of the Bosnian Club, and not a judicial inquiry into the causes of the crime of Serajevo. . . . I have asked the French Ambassador at Vienna to use all his influence with Count Berchtold and to represent to him, in a friendly conversation how much Europe would appreciate moderation on the part of the Austrian Government, and what consequences would be likely to be entailed by violent pressure on Serbia.

"No. 18. M. DUMAINE, FRENCH AMBASSADOR AT VIENNA TO M. BIENVENU-MARTIN: . . . JULY 22, 1914:

"Nothing is known as to the decision which Count Berchtold, who is prolonging his stay at Ischl, is trying to obtain from the Emperor. The intention of proceeding against Serbia with the greatest severity, of having done with her, of 'treating her like another Poland,' is attributed to the Government. . . . In any case it is believed the *démarche* will be made at Belgrade this week.

The requirements of the Austro-Hungarian Government with regard to the punishment of the outrage, and to guarantees of control and police supervision, seem to be acceptable to the dignity of the Servians; M. Jovanovich believes they will be accepted. M. Pashitch [Serbian premier] wishes for a peaceful solution, but says that he is ready for a full resistance. He has confidence in the strength of the Servian army; besides, he counts on the union of all the Slavs in the Monarchy to paralyze the effort directed against his country.

"No. 19. M. PAUL CAMBON, FRENCH AMBASSADOR AT LONDON, TO M. BIENVENU-MARTIN: . . . JULY 22, 1914:

" . . . Sir Edward Grey told me [yesterday] that he had seen the German Ambassador, who stated to him that at Berlin a *démarche* of the Austro-Hungarian Government to the Servian Government was expected. Prince Lichnowsky assured him that the German Government were endeavouring to hold back and moderate the Cabinet of Vienna, but that up to the present time they had not been successful in this, and that he was not without anxiety as to the results of a *démarche* of this kind. Sir Edward Grey answered Prince Lichnowsky that he would like to believe that, before intervening at Belgrade, the Austro-Hungarian Government had fully informed themselves as to the circumstances of the conspiracy to which the Hereditary Archduke and the Duchess of Hohenburg had fallen victims, and had assured themselves that the Servian Government had been cognisant of it and had not done all that lay in their power to prevent the consequences. For if it could not be proved that the Servian Government were responsible and implicated to a certain degree, the intervention of Austria-Hungary would not be justified and would arouse against them the opinion of Europe. The communication of Prince Lichnowsky had left Sir Edward Grey with an impression of anxiety which he did not conceal from me. The same impression was given me by the Italian Ambassador who also fears the possibility of fresh tension in Austro-Servian relations. This morning the Servian Minister came to see me, and he shares the apprehensions of Sir Edward Grey. He fears that Austria may make of the Servian Government demands which their dignity, and above all the susceptibility of public opinion, will not allow them to accept without a protest.

. . . Sir Edward Grey, in an interview with the Austro-Hungarian Ambassador, asked him to recommend his Government not to depart from the prudence and moderation necessary for avoiding new complications, not to demand from Servia any measures to which she could not reasonably submit, and not to allow themselves to be carried away too far.

"No. 20. M. BIENVENU-MARTIN TO LONDON, BERLIN, ST. PETERSBURG, AND ROME: PARIS, JULY 23:

"According to information collected by the French Ambassador at Vienna, the first intention of the Austro-Hungarian Government had been to proceed with the greatest severity against Servia, while keeping eight army corps ready to start operations. The disposition at this moment was more conciliatory; in answer to a question put to him by M. Dumaine, whom I instructed to call the attention of the Austro-Hungarian Government to the anxiety aroused in Europe, Baron Macchio stated to our Ambassador that the tone of the

Austrian note, and the demands which would be formulated in it, allow us to count on a peaceful result. In view of the customary procedure of the Imperial Chancery I do not know what confidence ought to be placed in these assurances. In any case the Austrian note will be presented in a very short space of time. The Servian Minister holds that as M. Pashitch [Serbian premier] wishes to come to an understanding, he will accept those demands which relate to the punishment of the outrage and to the guarantees for control and police supervision, but that he will resist everything which might affect the sovereignty and dignity of his country. . . .

"No. 21. M. ALLIZÉ, FRENCH MINISTER AT MUNICH, TO M. BIENVENU-MARTIN: . . . JULY 23.

" . . . The President of the Council said to me today that the Austrian note the contents of which were known to him (*dont il avait connaissance*) was in his opinion drawn up in terms which could be accepted by Servia, but that none the less the existing situation appeared to him to be very serious."—*F. Y. B.*, nos. 8-21.

"No. 1. SIR EDWARD GREY TO SIR H. RUMBOLD, BRITISH CHARGÉ D'AFFAIRES AT BERLIN, . . . JULY 20, 1914:

"I asked the German Ambassador to-day if he had any news of what was going on in Vienna with regard to Servia. He said that he had not, but Austria was certainly going to take some step, and he regarded the situation as very uncomfortable. I said that I had not heard anything recently, except that Count Berchtold, in speaking to the Italian Ambassador in Vienna, had deprecated the suggestion that the situation was grave, but had said that it should be cleared up. The German Ambassador said that it would be a very desirable thing if Russia could act as a mediator with regard to Servia. I said that I assumed that the Austrian Government would not do anything until they had first disclosed to the public their case against Servia, founded presumably upon what they had discovered at the trial. The Ambassador said that he certainly assumed that they would act upon some case that would be known. . . .

"No. 2. SIR H. RUMBOLD . . . TO SIR EDWARD GREY: . . . BERLIN, JULY 22, 1914:

"Last night I met Secretary of State for Foreign Affairs, and the forthcoming Austrian *démarche* at Belgrade was alluded to by his Excellency in the conversation that ensued. His Excellency was evidently of opinion that this step on Austria's part would have been made ere this. He insisted that question at issue was one for settlement between Servia and Austria alone, and that there should be no interference from outside in the discussions between those two countries. He had therefore considered it inadvisable that the Austro-Hungarian Government should be approached by the German Government on the matter. . . .

"No. 3. SIR EDWARD GREY TO SIR M. DE BUNSEN, . . . JULY 23, 1914:

"Count Mensdorff told me today that he would be able tomorrow morning to let me have officially the communication that he understood was being made to Servia today by Austria. He then explained privately what the nature of the demand would be. As he told me that the facts would

all be set out in the paper that he would give me tomorrow, it is unnecessary to record them now. I gathered that they would include proof of the complicity of some Servian officials in the plot to murder the Archduke Franz Ferdinand, and a long list of demands consequently made by Austria on Servia. As regards all this, I said that it was not a matter on which I would make any comment until I received an official communication, and it seemed to me probably a matter on which I should not be able to make any comment at first sight. But, when Count Mensdorff told me that he supposed there would be something in the nature of a time limit, which was in effect akin to an ultimatum, I said that I regretted this very much. To begin with, a time limit might inflame opinion in Russia, and it would make it difficult, if not impossible, to give more time, even if after a few days it appeared that by giving more time there would be a prospect of securing a peaceful settlement and getting a satisfactory reply from Servia. I admitted that, if there was no time limit, the proceedings might be unduly protracted, but I urged that a time limit could always be introduced afterward; that, if the demands were made without a time limit in the first instance, Russian public opinion might be less excited, after a week it might have cooled down, and if the Austrian case was very strong it might be apparent that the Russian Government would be in a position to use their influence in favor of a satisfactory reply from Servia. A time limit was generally a thing to be used only in the last resort, after other means had been tried and failed. Count Mensdorff said that if Servia, in the interval that had elapsed since the murder of the Archduke, had voluntarily instituted an inquiry on her own territory, all this might have been avoided. In 1909 Servia had said in a note that she intended to live on terms of good neighborhood with Austria; but she had never kept her promise, she had stirred up agitation the object of which was to disintegrate Austria, and it was absolutely necessary for Austria to protect herself. . . . I made the remark that, in a time of difficulties such as this, it was just as true to say that it required two to keep the peace as it was to say, ordinarily, that it took two to make a quarrel. I hoped very much that, if there were difficulties, Austria and Russia would be able in the first instance to discuss them directly with each other. Count Mensdorff said that he hoped this would be possible, but he was under the impression that the attitude in St. Petersburg had not been very favorable recently."—*B. D. C.*, nos. 1-3.

Documentary indications of German knowledge of Austrian terms prior to presentation of ultimatum to Serbia.—The secret war documents preserved in the German imperial archives were published by the Republican government in December, 1919. The following five documents, taken from this collection, reveal (a) the view of the German Foreign Office on the crisis as confidentially expounded by von Jagow to Prince Lichnowsky; (b) the accurate forecast of Austro-Hungarian intentions towards Serbia given on July 18, 1914, by the German foreign under-secretary to the Bavarian charge d'affaires, in Berlin, which the latter transmitted to his government; (c) a statement by the German ambassador, von Wedel, in Vienna, successor to the late Tschirschky concerning the latter's attitude on the ultimatum to Serbia; (d) an acknowledgment by Zimmerman that the text of the ultimatum was received in Berlin twelve hours before its presentation at Belgrade; and (e) a dis-

patch from the German chancellor to the chargé d'affaires attending the kaiser on his holiday cruise in Norwegian waters.

(a) PRIVATE LETTER FROM THE GERMAN SECRETARY FOR FOREIGN AFFAIRS VON JAGOW TO PRINCE LICHNOWSKY, THE AMBASSADOR IN LONDON:

"BERLIN, JULY 18, 1914: DEAR LICHNOWSKY, Your opinion of our policy, which your Serbian report contains, is always valuable to me, and I believe that the Imperial Chancellor thinks similarly about the matter. I cannot deny either that many of your remarks are justified. But we have an alliance with Austria (this can't be helped): hic Rhodus, hic salta. Whether this alliance with the continuously disintegrating structure of states on the Danube is to our advantage is also open to discussion, but I say with the poet—I believe it was Busch: 'If this company no longer suits you, look for other provided you have got it.' And a completely successful relationship with England we have unfortunately not succeeded in creating so far, in fact could not after what has happened in the past—if we can ever succeed at all. Austria which, because of her lack of aggressive strength, has continuously lost more and more of her prestige, can hardly be counted any longer as a full-fledged Great Power. The crisis in the Balkans has weakened her position still more. Because of this decline of Austria's political power our group of allies has also been decidedly weakened. Austria no longer intends to tolerate the Serbian underground propaganda, nor the continually provocative attitude of the little neighbor at Belgrade.—Notice the language of the Serbian press—and that of Mr. Pashitsch. She recognizes that she has missed many chances and that she can still act, but not so in a few years. Austria wants to settle her affairs with Serbia now and has informed us of this. During the whole Balkan crisis we successfully mediated in the interest of peace without having forced Austria at critical moments into passivity. The fact that, nevertheless, we are in Austria often unjustly accused of being lukewarm, is a matter of indifference to me. We have not now driven Austria to her decision. But we cannot and must not stop her. If we did this, then Austria could justly accuse us, as could we ourselves, of having denied her the last chance for political rehabilitation. Then the process of her disintegration and of her internal decay would only be accelerated. Her position in the Balkans is, indirectly, also inadmissible to us. The maintenance of Austria, and of a very strong Austria, is for internal and external reasons a necessity for us. That she cannot forever be maintained I willingly admit. But, in the meantime, combinations may perhaps be found. We must try to localize the conflict between Austria and Serbia. Whether this succeeds, will depend, first of all, upon Russia and, in the second place, upon the moderating influence of the members of the Entente. The more determined Austria shows herself, the more energetically we support her, the more likely it is that Russia will keep quiet. Some blustering at Petersburg will not be wanting, no doubt, but Russia is not really prepared now. Neither France nor England will want a war now. In a few years Russia will be prepared, according to all competent opinion. Then she will destroy us by means of her large number of soldiers; then she will have built her Baltic fleet and her strategic railroads. Our group in the meantime will be becoming continually weaker.

This is known in Russia and quiet is absolutely desired there for several years. I gladly believe your cousin Benckendorff that Russia does not want any war with us now. Sazonoff also assures us of the same thing, but the Government of Russia, which today is still peace-loving and half-way friendly towards Germany, is continually becoming weaker, while the attitude of the Slavs is continually becoming more anti-German. How Russia really treats us, we were shown last fall. During the Balkan crisis she could not thank us enough for our pacifying influence. The acute crisis had hardly passed when the unfriendliness about Liman, etc., began. [See above: Causes: Indirect: n.] If localization cannot be achieved and if Russia attacks Austria, then the *casus fœderis* exists, and we cannot sacrifice Austria. We would then be in a position of isolation which could scarcely be called proud. I want no preventive war, but if the struggle presents itself we cannot retreat."—*Kautsky, no. 72.*

(b) VON SCHOEN, THE BAVARIAN CHARGÉ D'AFFAIRES AT BERLIN, TO THE CHAIRMAN OF THE MINISTERIAL COUNCIL, MUNICH:

"BERLIN, JULY 18, 1914: On the basis of conversations which I had with Under-Secretary Zimmermann and, further, with the Balkan and Triple Alliance Referendary at the Foreign Office and with the Austro-Hungarian Counselor to the Ambassador, I have the honor to inform your Excellency of the following in regard to the discussion with Serbia intended by the Austro-Hungarian Government: The step which the Vienna Cabinet has decided to undertake at Belgrade and which will consist of the presentation of a note, will be made on the 25th of this month. The reason for the postponement of the action until the present moment is that it is desired to await the departure of M. Poincaré and Viviani from Petersburg so that it will not be so easy for the Powers of the Dual Alliance to come to an understanding on a possible counteraction. Till then Vienna is assuming the appearance of peacefulness by the absence at the same time of the Ministers of War and the Chief of the General Staff, and pressure has also been brought to bear upon the press and the exchange, not without success. That the Vienna Cabinet is acting very skillfully in this connection is admitted here; it is only regretted that Count Tisza, who is said to have been opposed at first to firmer action, has already lifted the veil somewhat by his statements in the Hungarian Chamber of Deputies. As Herr Zimmermann told me, so far as has now been determined, the note will contain the following demands: 1. The promulgation of a proclamation by the King of Serbia, in which it shall be stated that the Serbian Government is entirely dissociated with the pan-Serbian movement and disapproves of it. 2. The initiation of an investigation against the accomplices in the murder of Sarajevo and the participation of an Austrian official in this investigation. 3. Proceedings against all who are connected with the pan-Serbian movement. A time limit of 48 hours is to be given for the acceptance of these demands. That Serbia cannot accept such demands, which are irreconcilable with her dignity as an independent state, is evident. The result would therefore be war. Here there is complete agreement that Austria should use the opportune hour, despite the danger of further complications. Whether Vienna will really make an effort itself, still appears to be doubtful to both Herr von Jagow and Herr Zimmermann. The

Under-Secretary remarked that Austria, thanks to her indecision and unsteadiness, has now really become the sick man of Europe, as formerly Turkey was, whose dismemberment Russians, Italians, Roumanians, Serbians and Montenegrins are awaiting. A strong and successful action against Serbia would result in Austrians and Hungarians again feeling themselves to be a political power, would revive her prostrate economic life and suppress foreign aspirations for many years. Because of the indignation which now exists throughout the whole Monarchy over the bloody deed, one could probably also be sure of the Slavic troops. As General Conrad von Hoetzendorf is said to have himself admitted, in a few years, with the further operation of Slavic propaganda, this would no longer be the case. The opinion here, therefore, is that for Austria this is a fateful hour, and for this reason, upon an inquiry from Vienna, it has been declared here without hesitation that . . . [Germany] should agree to every action which will be determined upon there, even at the risk of a war with Russia. The full powers which were given Count Hoyos, the chief of the Cabinet of Count Berchtold, who had come here to present an autograph letter of the Emperor and a detailed promemoria, were so extensive that the Austro-Hungarian Government was empowered to negotiate with Bulgaria as to admission to the Triple Alliance. It seems that Vienna did not expect from Germany such unreserved intervention on behalf of the Danube Monarchy and Herr Zimmermann has the impression that the eternally fainthearted and undecided officials at Vienna feel almost annoyed because, from the German side, there has been no admonition to be cautious and restrained. How vacillating Vienna is in its decision is proved by the fact that Count Berchtold, three days after he had an inquiry made here regarding an alliance with Bulgaria, had telegraphed that he still had doubts as to allying himself with Bulgaria. It would also be more satisfactory to Berlin if the action against Serbia were not deferred so long and the Serbian Government not given time, perhaps under Russo-French pressure, to offer satisfaction on its part. What position the other powers will take towards an armed conflict between Austria and Serbia will, according to opinion here, depend largely upon whether Austria will be satisfied with a thrashing of Serbia, or will also demand territorial compensation for herself. In the former case it would be possible to localize the war; in the latter, however, larger complications would probably be inevitable. In the interest of the localization of the war, the Imperial [German] Government will, immediately after the presentation of the Austrian note at Belgrade, start a diplomatic action with the Great Powers. Calling attention to the fact that the Emperor is on his northern trip, and the Chief of the Great General Staff as well as the Prussian Minister of War on leave of absence, it will insist that it has been just as much surprised by the action of Austria as the other Powers. (I take the liberty of inserting here that even the Italian Government has not been taken into confidence.) It will explain that it is to the common interest of all monarchical states that the 'Anarchist Nest at Belgrade' be destroyed, and it will work to the end that the Powers take the position that the discussion between Austria and Serbia is an affair between these two states. A mobilization of German troops will not be undertaken and our military influence will be brought to bear upon Austria not to mobilize her entire army and especially

those troops stationed in Galicia, so as not to bring about automatically a counter-mobilization on the part of Russia, which would force us also, and then France, to take similar measures, and thus bring on a European war.

"The question whether the localization of the war will succeed, will be decided in the first place by the attitude of Russia. If Russia absolutely does not want war against Austria and Germany, she can in this case—and that is the most favorable fact in the present situation—very well remain inactive and take the position towards Serbia that she, just as little as the other civilized states, endorses a method of struggle which proceeds by means of bomb-throwing and revolver shots. This especially so long as Austria does not threaten the national independence of Serbia. Herr Zimmermann assumes that England, as well as France, who would hardly wish for a war at present, will influence Russia to adopt a peaceful attitude; furthermore, he takes for granted that 'bluffing' is one of the favorite methods of Russian policy, and that the Russian likes to threaten with the sword but, in the decisive moment, does not like to draw it for others. England will not prevent Austria from holding Serbia to account. However, an annihilation of the country she will hardly permit; on the contrary, loyal to her traditions, she will probably intervene here also for the principle of nationality. A war between the Dual and Triple Alliance would hardly be welcome to England at the present moment, merely in consideration of the situation in Ireland. Should it, nevertheless, come to this, we would, according to opinion here, find the English cousin on the side of our opponents, since England fears that France, in case of a defeat, would sink down to the rank of a second rate power and the 'balance of power' thus be destroyed, whose preservation England considers necessary for her own interest. Italy would receive very little pleasure from a castigation of Serbia by Austria, to whom she would hardly be willing to grant a strengthened position in the Balkans. As the *Chargé d'Affaires* von Bergen, the Referendary for Triple Alliance affairs at the Foreign Office, told me, the relation between Vienna and Rome is again anything but friendly. Vienna is very much put out over the Italian *chargé d'affaires* in Albania, Aliotti, who seems to have carried on considerable intrigue against Austria, and Ambassador von Mérey, therefore, received several days ago an order to demand of Italy that she change her whole policy, since otherwise a continued understanding would not be possible. The order is said to have been worded so strongly that San Giuliano was quite wrought up, and this tension between Austria and Italy greatly aggravates the situation. The partitioning of Serbia or merely the annexation by Austria of Mount Lovcen in Montenegro, which commands the Bay of Cattaro, would not be suffered by Italy without compensation. It does not seem improbable that Italy is calling out her reserves for the purpose of occupying Valona in this case, an act which she tries to justify by her internal political conditions. Herr Zimmermann is of the opinion that Austria should not oppose this, since Valona would become a new tendon of Achilles for Italy, and the distance between Brindisi and Valona is too large for the Italians to succeed in completely blocking the Adriatic. Perhaps one can also deduce from a statement of the Austro-Hungarian Counselor to the Ambassador, according to whose opinion Valona might well be given to the Italians, that Vienna has already familiarized

itself with the possibility of an occupation of southern Albania by the Italians. As I have very confidentially been informed, the Counselor to the [German] Ambassador at Vienna, Prince Stolberg, who was here several days ago, was ordered to talk over the question of compensation to Italy with Count Berchtold, and to insinuate in an unofficial way that Italy would probably be won over permanently if Austria would agree, in case of large territorial expansions, to a cession of the southern part of the Trentino, i. e., that part of the archbishopric Trent which had never belonged to the old German Empire. That the Vienna Cabinet will approve this idea is, however, hardly expected here and in order not to cause bad feeling by an official suggestion of this kind, the Counselor to the Ambassador and not the Ambassador, who is also at Vienna, has been ordered purposely to turn the conversation to the Trentino.

"As to Bulgaria, the Austro-Hungarian Embassy here assumes that King Ferdinand would use the outbreak of a war between Austria and Serbia to strike against Serbia, so as to win back the territory lost by the Peace of Bukarest [1913]. Since the danger exists that Roumania, as in the Second Balkan War, would turn against Bulgaria, an exercise of influence on the part of Russia in this direction, who will not undertake anything directly against Bulgaria, will probably also not be wanting at this time. King Carol, whose attitude of late has been very unsatisfactory, has been informed from here, in unequivocal terms, that Germany would take the side of Bulgaria in case Roumania does not abandon Serbia. According to the answer of the King, it is assumed here that Roumania will keep peace in case the prospect of compensation is held out to her. As such, the territory around Vidin, whose population consists mainly of Roumanians, would come under consideration. In this way, Roumania would of itself probably have been won back to the Triple Alliance. Greece, which would not be averse to seeing a diminution of Serbia, would be compensated in the Epirus and would, in exchange, have to cede Kavalla to Bulgaria. As far as Montenegro is concerned, it is hoped here that the intelligent King Nikita will find it advantageous to let the Serbs fight alone against Austria. For the cession of the Lovcen, which Austria, in case of such a far-reaching revision of the Balkans, would probably demand for herself, Montenegro could be compensated in northern Albania. What the fate of the Duchy of Albania will be, can hardly be determined today. For the present, the unhappy condition will continue which has been characterized in Paris by the words: 'Les caisses sont vides, le trône est Wied, tout est vide,' and has caused the prince to receive the nickname 'Le Prince du Vide.'"—*Kautsky*, no. 386.

(c) THE GERMAN AMBASSADOR AT VIENNA, COUNT B. WEDEL, TO THE UNDER-SECRETARY FOR FOREIGN AFFAIRS, BARON VON DEM BUSSCHE (PRIVATE LETTER):

"VIENNA, 9/5/1917. DEAR BUSSCHE: Stumm wrote to me shortly before his leave of absence that Czernin had said that Tschirschky had declared to Count Berchtold in July, 1914, that, if Austria did not decide upon energetic action against Serbia, we would be forced to consider a different foreign policy. I would like to try to settle this. The documents contain nothing about it. Stolberg considers it impossible that the prudent Tschirschky should have made such a state-

ment. In order to be sure, I asked Berchtold. He answered my question in the negative and told me that Tschirschky had explained to him that Berlin considered energetic action against Serbia to be desirable. Upon my question as to whether Tschirschky had used any pressure to force the Imperial and Royal Government to this, he said: 'No, I did not use any pressure.' That would, in fact, have been incomprehensible since Vienna itself was urging such a procedure and wanted to make sure of our support. I will not fail to draw Czernin's attention to his mistake. There are also people here at the Ballplatz who would like to put the blame for the war upon our shoulders, and invent such tales. The note to Serbia only became known at Berlin on the day on which it was presented at Belgrade. Tschirschky, that is to say, had not sent it by telegaph but by mail. Jagow at that time told Szögyény that the fault of the note consisted in making retreat impossible; a note might be as sharp as possible, but must always leave a way out in case the other party is willing to yield."—*Kautsky, no. 1, appendix II.*

(d) EX-SECRETARY OF STATE, ZIMMERMANN, TO THE UNDER-SECRETARY FOR FOREIGN AFFAIRS, BARON VON DEM BUSSCHE (PRIVATE LETTER):

"BERLIN, SATURDAY, AUGUST 11, 1917: DEAR BUSSCHE: The statement of the *Evening News* is actually correct in so far as we had, it is true, received the Serbian Ultimatum about twelve hours before delivery. On the other hand, I can positively not recall confiding this to an American diplomat. A denial can therefore be issued, but I venture no opinion as to whether this would be of any use, considering that the fact of our cognizance of this matter cannot, after all, be kept secret forever."—*Kautsky, no. 2, appendix II.*

(e) VON BETHMANN-HOLLWEG, IMPERIAL CHANCELLOR TO THE CHARGÉ D'AFFAIRES OF THE IMPERIAL SUITE:

"BERLIN, JULY 23, 1914: Austro-Hungarian note is to be presented this afternoon or evening and published at Vienna tomorrow morning. Ultimatum would therefore expire the evening of the 25th. Our attitude for the present will be that it is an affair which concerns only Austria and Serbia. Only the intervention of another power would drive us into the conflict. That this should happen at once, namely that England should immediately decide to interfere, is not to be assumed. The trip of President Poincaré, who leaves Kronstadt to-night, visits Stockholm the 25th, Copenhagen the 27th, Kristiania the 29th and arrives at Dunkerque the 31st, would in itself delay all decisions. The English fleet, according to information from the Admiralty Staff, is to disperse the 27th and proceed to its home ports. Any premature recall of our fleet might cause general uneasiness and be regarded with suspicion, particularly in England. After notification of Admiral von Mueller, please make report to His Majesty accordingly. Am adding to this that the Admiralty Staff makes the following report: 'If the possibility of an immediate declaration of war by England is to be considered, then from a military point of view an attack upon our fleet by the English fleet is to be counted upon with certainty. Our fleet, with its great numerical inferiority, must not in any event be exposed to this possibility. As soon as the possibility of the outbreak of a war with England within any six days has to be reckoned

with, the fleet must be recalled.'"—*Kautsky, no. 89.*

13.—Behind the veil in Vienna.—Official report of historic ministerial council at Vienna on July 7, 1914.—Statement of promise by Germany of unconditional support.—Austria-Hungary decides for war.—Peril of European war foreseen.—Berchtold's desire for military action regardless of consequences.—Fear of "Greater Serbia" propaganda.—It was not until the publication of the second "Austrian Red Book" at the end of 1919, edited by Dr. Roderich Gooss, and approved by the Austrian republican government, that any exact knowledge was forthcoming as to the real attitude of the Austro-Hungarian government in general and that of Count Berchtold in particular, during the period between the Serajevo assassinations and the declaration of war on Serbia. The official report of the meeting of the ministerial council held in Vienna, July 7, reveals that Berchtold alleged that he had received certain assurances from Berlin, and that he had drawn amply upon the "blank check" thus handed him. The members present at the meeting were: Count Stuerghk, Austrian premier, Count Tisza, Hungarian premier, von Bilinski, Joint minister of finance, General von Krobatin, war minister, General Conrad von Hoetzendorff, chief of staff, and Rear-Admiral von Kailer. Count Hoyos acted as recording secretary and Count Berchtold presided over the meeting. The latter opened the session by remarking "that the Ministerial Council had been convened to discuss the measures to be taken to remedy the evil internal conditions which obtained in Bosnia-Herzegovina in connection with the tragedy of Serajevo. In his opinion there were various internal measures, the application of which to Bosnia seemed to him to be in order against the critical situation, but, first of all, clarity should be reached on the question whether the time had not arrived to render Serbia harmless for good by the application of force. Such a decisive blow could not be struck without diplomatic preparations, and he had therefore got into communication with the German government on the subject. The latter had led to a very satisfactory result, as both the German Emperor and Herr von Bethmann-Hollweg had most emphatically assured us of the unconditional support of Germany in case of warlike complication with Serbia. Now we must still reckon with Italy and Rumania, and here he agreed with the opinion of the Berlin cabinet that it would be better to act and then await any possible demands for compensation. He realized that a war with Serbia might lead to a war with Russia, but Russia was at present following a policy which, taking a far-sighted view, aimed at a combination of the Balkan states, including Rumania, for the purpose of utilizing them against the monarchy at an opportune moment. He was of the opinion that we must take into account the fact that our situation, as opposed to such a policy, was bound to become worse, especially as passive toleration would surely be construed by our Southern Slavs as a sign of weakness and would lend force to the drawing power of the two border states. The logical conclusion to be drawn from these considerations would be to get a start on our opponents and, through a timely settlement with Serbia, put a stop to the process of development already in full swing, which might not be possible later. Count Tisza agreed that the situation had changed during the last few days because of the facts established by the investigation, and because of the attitude of the Serbian press, and he emphasized the fact that he, too, considered

the possibility of war measures against Serbia closer at hand than he had believed immediately after the Serajevo assassinations. He would never consent, however, to a surprise attack upon Serbia without preliminary diplomatic action, as seemed to be the intention, and as, unfortunately, had been discussed in Berlin by Count Hoyos, because it was his opinion that in such a case we would occupy a very bad position in the eyes of Europe and would very probably have to reckon with the hostility of all the Balkan States except Bulgaria, which at present was too weak to assist us to the proper extent. We ought first to formulate unconditional demands upon Serbia and only present an ultimatum if Serbia did not yield to them. These demands must be severe, indeed, but not impossible of fulfilment. If Serbia accepted them we would be able to show a striking diplomatic success and our prestige in the Balkans would rise. But if our demands were not accepted then he, too, would favor military action. But he must emphasize beforehand that with such action we must aim at the diminution of Serbia's power but not at her complete destruction, because on the one hand Russia would never permit that without a life-and-death struggle, and on the other because he, as Premier of Hungary, would never be able to agree to the annexation of a part of Serbia to the [Austrian] monarchy. It was not Germany's affair to determine if we should now strike Serbia or not. He personally was of the opinion that it was not unconditionally necessary at the present moment to make war. At present we must take into account the fact that there was a very strong agitation against us in Rumania; that, in view of the excited state of public opinion, we would have to reckon with a Rumanian attack, and that at all events we would have to keep a good-sized force in Transylvania in order to intimidate the Rumanians. Now that Germany has happily cleared the way for the adhesion of Bulgaria to the Triple Alliance, there is opened to us a very promising field for successful diplomatic action in the Balkans by uniting Bulgaria and Turkey and attaching them to the Triple Alliance, thus creating a counterbalance against Serbia and Rumania, and then being able to force Rumania to return to the Triple Alliance. Upon the European field it must be taken into consideration that the relation of strength between France and Germany would steadily become worse for the former, because of its low birth-rate, and that in the future Germany would constantly have more troops available against Russia. These were all considerations that must be weighed in the case of such an important decision as was to be arrived at today, and therefore he must again point out that he would not unconditionally decide for war, in spite of the crisis in Bosnia, which, furthermore, could be remedied by an energetic reform in administration; he believed, rather, that a proper diplomatic victory—one which would include a severe humbling of Serbia—would be better adapted to improve our position and to make possible a profitable Balkan policy. In answer to this Count Berchtold, presiding, remarked that the history of recent years had shown that diplomatic victories over Serbia had, it was true, temporarily raised the prestige of the monarchy, but that the tension actually existing in our relations with Serbia had merely become greater. Neither our success in the annexation crisis [1908-1909 (see BOSNIA-HERZEGOVINA: 1908)] nor the one connected with the creation of Albania, nor the subsequent yielding of Serbia in consequence of our ultimatum

in the autumn of the preceding year, had changed anything in the actual conditions. A radical solution of the problem created by the Greater Serbia propaganda systematically carried on from Belgrade, the distintegrating effects of which upon us are noticed as far as Agram and Zara, was only possible through an energetic intervention. Regarding the danger of a hostile attitude by Rumania mentioned by the Hungarian premier, the chairman remarked that at present this was less to be feared than in the future, when the joint interests of Rumania and Serbia would constantly increase. Of course King Carol [of Rumania] had occasionally expressed doubts as to his ability to fulfil his duty as an ally toward the monarchy by active military service in case it became necessary. On the other hand it was hardly to be assumed that he would allow himself to be induced to take military action against the monarchy or be unable to withstand any public sentiment for such action. For the rest there must be considered Rumania's fear of Bulgaria, which would be bound to somewhat restrain the former's freedom of movement even under the present circumstances. So far as the Hungarian premier's remarks regarding the comparative strength of France and Germany were concerned, he [Berchtold] believed it unnecessary to point out that the diminishing increase in population of France was offset by the disproportionately higher increase in the population of Russia, so that the assertion that Germany would in the future have more troops available against France hardly appeared to hold good.

"The premier [Count Stuerghk] remarked that today's council of ministers had really been called for the purpose of discussing the internal measures to be used in Bosnia and Herzegovina that would be calculated on the one side to make present investigation, begun on account of the assassination, a success, and on the other to counteract the Greater Serbian movement in Bosnia. Now these questions must give place to the main question of whether we ought to settle the internal crisis in Bosnia by an expression of force against Serbia. This main question had now become timely after two months, first of all because the commander of the provinces of Bosnia and Herzegovina, on the basis of his observations and his acquaintance with Bosnian conditions, proceeded on the hypothesis that no internal measures could be successful unless we decided to strike a powerful blow at Serbia on the outside. On the base of . . . [observations made by] General Potiorek we must consider the question as to whether the schismatic activity proceeding from Serbia could be stopped, and whether we could even retain the two provinces if we did not proceed against the kingdom. During the last few days the entire situation had taken on a different aspect, and there had now been created a psychological situation, which, in his opinion, was unconditionally forcing us into a war with Serbia. He agreed, indeed, with the Hungarian premier that we, and not the German Government, must decide if a war was necessary or not; but he must still remark that it was bound to exercise a very great influence upon our decision when, as we had heard, we had been assured of unconditional loyalty by the ally whom we must regard as the most faithful supporter of our policy in the Triple Alliance and, furthermore, had been urged to act at once, after we had made inquiries there. Count Tisza certainly ought to attach importance to this circumstance and remember that we, through a policy of hesitation and weakness, ran the risk of no longer

being so sure of this unconditional support of the German Empire at a later period. This was the second matter of weight to be considered in reaching our decision, along with the interest in restoring orderly conditions in Bosnia. How the conflict was to be begun was a matter of detail, and if the Hungarian government was of the opinion that a surprise attack *sans crier gare* [without shouting a warning], as Count Tisza had said, was not practical, then another way must be found: nevertheless, he urgently desired that, whatever might happen, quick action be taken and our national economic life be spared a long period of unrest. All these were details alongside of the principal question as to whether it was to come unconditionally to warlike action or not, and there the interest in the prestige and the existence of the monarchy, whose South Slavic provinces he would consider lost if nothing happened, was decisive above all else. Therefore, today it should be decided in principle that it should and will come to action. He, too [Stuergkh], shared the opinion of the chairman that the situation would not be bettered at all by a diplomatic victory. If, consequently, the road of preliminary diplomatic action were to be taken because of international reasons, this must be done with the firm intention that this action dare only end in a war. The Finance Minister [von Bilinski] observed that Count Stuergkh had referred to the fact that the commander of the provinces wanted war. General Potiorek for two years had occupied the standpoint that we would have to undergo a trial of strength with Serbia in order to retain Bosnia and Herzegovina. We ought not to forget that the provincial commander, being on the spot, was the best judge of matters. Herr von Bilinski also entertained the conviction that the decisive struggle was unavoidable sooner or later. He had never doubted that Germany would stand by us in a grave case, and already in November, 1912, he had received the most positive assurances from Herr von Tschirschky [German ambassador at Vienna] along that line. The recent events in Bosnia had produced a very dangerous sentiment among the Serbian population, particularly because the Serbian pogrom in Serajevo had made all the Serbs very excited and embittered, and consequently one could no longer decide who among the Serbs was still loyal and who was for greater Serbia. In the country itself this condition could never be remedied; the only way to accomplish that was by a definite decision as to whether the Greater Serbia idea had a future or not. Although the Hungarian premier [Count Tisza] would now be content with a diplomatic victory, he [Bilinski] could not be so from the standpoint of the Bosnian interests. The ultimatum that we sent to Serbia last autumn had aggravated the sentiment in Bosnia and merely increased the feeling of hatred for us. It was a current topic among all the people there that King Peter [of Serbia] would come and free the people. The Serb only understands force; a diplomatic victory would make no impression in Bosnia, and would be more likely to do harm than good. The Hungarian premier asserted that he, indeed, had the highest opinion of the present provincial commander as a military man; but so far as the civil administration was concerned it could not be denied that it had completely failed, and that it must be reformed unconditionally [*unbedingt*]. He [Tisza] did not want to go into details about this now, especially as it was not the proper time to undertake great changes; he must point out, however, that the

most indescribable condition must prevail among the police in order to have made it possible for six or seven characters known to the police to place themselves on the day of the assassination along the route of the murdered heir-apparent, armed with bombs and revolvers, without a single one of them being noticed by the police and removed. He could not understand why the conditions in Bosnia could not be essentially bettered through a thorough reform.

"The Minister for War [Krobatin] expressed the opinion that a diplomatic victory was of no value. Such a success would only be interpreted as weakness. From a military standpoint he must emphasize the fact that it would be more advantageous to carry on war at once than at a later time, as in the future the comparative conditions of strength would be disproportionately shifted to our disadvantage. So far as the forms of beginning the war were concerned, he must

COUNT TISZA

stress the fact that the two great wars of the last few years, the Russo-Japanese and the Balkan wars, had been begun without preliminary declarations of war. He thought that at first only the mobilization provided for against Serbia should be carried out, and that general mobilization should be delayed until it could be seen if Russia was going to move. We had already let pass two opportunities to settle the Serbian question, and each time postponed the decision. If we were to do the same thing now and fail to react to this recent provocation it would be regarded in all the South Slav provinces as a sign of weakness, and we should be strengthening the agitation against us. From a military standpoint it would be desirable if the mobilization were put into effect at once and with as much secrecy as possible, and an ultimatum were only sent to Serbia after mobilization had been accomplished. This would be an advantageous action in connection with the Russian military forces, also, as just now the ranks of the Russian frontier corps were not at full strength because of the harvest furloughs. At

this point there ensued a lengthy discussion over the objects of a warlike action against Serbia, in connection with which the view of the Hungarian premier that Serbia must, indeed, be reduced in size, but not entirely destroyed, was accepted. The Austrian Premier [Stuergkh] insisted that it would be a good idea to remove the Karageorgevitch dynasty and give the crown [of Serbia] to an European prince, as well as to bring about a certain relation of dependency of the diminished kingdom upon the monarchy in a military way. Count Tisza still held to the opinion that a successful Balkan policy for the monarchy could be effected through the adhesion of Bulgaria to the Triple Alliance and he pointed out the fearful calamities of a European war under the present conditions. It must not be overlooked that all sorts of future eventualities were imaginable—such as the sidetracking of Russia through Asiatic complications, a war of revenge upon Serbia by a revived Bulgaria, etc.—which might make our position in regard to the Greater Serbia problem materially more favorable than was the case at present. In this connection Count Berchtold remarked that, of course, one could imagine various eventualities that would make the situation favorable for us. He feared, however, that there was no time for such a development. One must reckon with the fact that from a hostile side a decisive struggle against the monarchy was being prepared and that Rumania was assisting French and Russian diplomacy. It dared not be assumed that the policy with Bulgaria could offer us a complete substitute for the loss of Rumania. But, in his opinion, Rumania was not to be won again so long as the Greater Serbia agitation existed, for this also entailed the Greater Rumania agitation, and Rumania could only proceed against this latter if it were to feel itself isolated in the Balkans by the destruction of Serbia and were to understand that it could only find support in the Triple Alliance. Besides, one must not overlook the fact that not the first step had yet been taken toward the adhesion of Bulgaria to the Triple Alliance. . . . Of course, the attitude of the Radoslavoff ministry (in Bulgaria) afforded no reason to doubt that it was still resolved to lend a willing ear to positive proposals that might be made by us in Sofia along the line indicated. But at present this position could not yet be regarded as a firm foundation for our Balkan policy, especially as the present Bulgarian government rested upon a very shaky base, and, as the adhesion to the Triple Alliance might be disavowed by public opinion, always to a certain degree under Russian influence, and the Radoslavoff ministry be turned out. It must also be remembered that Germany had only previously approved the proposed deal with Bulgaria on condition that it was not to be aimed against Rumania. It would not be easy entirely to fulfil this condition and uncertain situations might develop from it in the future. [At this stage followed a long debate on the question of the proposed war, which resulted in the following conclusions:]

“[1] That all those present desired the quickest possible decision of the controversy with Serbia, either by war or peaceful means.

“[2] That the council of ministers was prepared to accept the view of the Hungarian premier according to which mobilization is to be effected only after concrete demands have been presented to Serbia and after these have been rejected an ultimatum served. On the other hand, all those present except Count Tisza, were of the opinion that a purely diplomatic victory, even if it ended

with a striking humiliation of Serbia, would be worthless, and that, consequently such far-reaching demands must be presented to Serbia as to make their rejection foreseen, so that the way to a radical solution through a military attack would be prepared. Count Tisza remarked that he was anxious to meet the views of all those present, and consequently he would also make a concession by admitting that the demands be sent to Serbia should be very hard, but nevertheless not of such a kind as to expose our intention of making unacceptable demands. Otherwise we would have an impossible legal ground for a declaration of war. The text of the note must be studied very closely, and in any case we would like to see the note before it was sent. He must also emphasize the fact that he, for his part, would be obliged to draw the proper conclusions if his views were not considered. At this point the session was adjourned until the afternoon. [The meeting was resumed in the afternoon.] At the request of the chairman the Minister for War addressed the following questions to the Chief of the General Staff:

“[1] Whether it were possible first to mobilize against Serbia, and only subsequently against Russia also, if it became necessary.

“[2] Whether large bodies of troops could be retained in Transylvania for the purpose of intimidating Rumania.

“[3] Where would the struggle against Russia be begun?

“In response to these questions the Chief of the General Staff gave secret explanations and consequently asked that these answers be not included in the record. On the basis of these answers there developed a long debate over the prevailing conditions of strength and the probable course of a European war: this, because of its secret character, was not adopted for putting down in this report.

“At the conclusion of this debate the Hungarian premier repeated his view regarding the question of war and directed another appeal to those present to examine their decision very carefully. Thereupon were discussed the points which would be embodied in the note as demands upon Serbia. In regard to these points no definite decision was made in the ministerial council; they were merely taken up in order to arrive at an idea of what demands could be made. Then the Chief of the General Staff and the representative of the naval command left the council, which occupied itself with the internal condition in Bosnia and the measures to be taken there. . . .

“In general it was not possible to lay down a definite program for internal administration before the main question—as to whether war was to be waged upon Serbia—had been decided. The Chairman [Berchtold] pointed out that even though there existed a difference of opinion between Count Tisza and all the others present, they had got closer together; in all probability the proposals of the Royal Hungarian Premier would also lead to the military settlement with Serbia thought necessary by himself and the other members of the conference. Count Berchtold informed the Minister that he intended to go to Ischl on the 8th inst. to present a report to his Imperial and Royal Apostolic Majesty. Count Tisza asked the Chairman also to present a most respectful report that he was to make of his view of the situation. After a communique for the press had been prepared, the Chairman ended the session. . . .

“BERCHTOLD,

“Secretary, A. Hoyos.

"I have taken note of the contents of this note.

"FRANZ JOSEF."

"The text of the communiqué to the press referred to is given as follows by the *Arbeiter-Zeitung*:

"The joint Ministerial Council today was called for the purpose of occupying itself with the ordering of measures which are to be applied to the internal administration of Bosnia and Herzegovina. At the same time the Ministerial Council took this opportunity to discuss in advance in a general way the joint budget for next year, for which purpose the Chief of the General Staff and the representative of the naval command were called in to explain some technical questions."—*New York Times Current History, Dec., 1919, pp. 455-460.*

14.—Second Austro-Hungarian ministerial council.—Final details on war scheme.—Tisza's non-aggrandisement resolution.—Dependence of Serbia by deposition of dynasty.—Wiesner's report.—Serbian government not accessory to assassination.—On July 19, 1914, a ministerial council was held in Vienna, at which the demands on Serbia were passed unanimously. The following is the report of the proceedings:

"COUNCIL OF MINISTERS FOR COMMON AFFAIRS,
(JULY 19, 1914). . . .

"Protocol of the Council of Ministers for Common Affairs held in Vienna July 19, 1914, the minister of the Imp. and Roy. House and of Foreign Affairs presiding.

"Present: The Imp. Roy. Premier Count Stürgkh, The Roy. Hung. Premier Count Tisza, the Imp. and Roy. Common Finance-minister, Dr. von Bilinski, the Imp. and Roy. War-Minister F. Z. M. von Krobatin. The Imp. and Roy. Chief of the General Staff G. of I. Baron Conrad von Hötzendorf, the Representative of the Naval Commander Vice-Admiral von Kailer. Secretary: Councillor of Legation: Count Hoyos.

"Subject under discussion: the forthcoming diplomatic action against Serbia. Before the council of common ministers was constituted and the sitting was opened by the minister in the chair, an informal discussion on the text of the note to be presented to the Servian government, took place and the text was definitely settled. The Minister in the Chair then opened the council of ministers and proposed that the note should be presented to the Royal Servian government on the 23rd July at five in the afternoon, so that the term of 48 hours would expire on Saturday, 25th inst. at five in the afternoon and the order for mobilization could be published in the night from Saturday to Sunday. It was Count Berchtold's belief that it is improbable that the news of our step would be publicly known before the President of the French Republic had left Petersburg but even if this were the case, he did not think that it would do any harm since we had fully considered the duties of etiquette and had waited until the visit was over. To a prolongation of the delay he must object on diplomatic grounds. Berlin was beginning to get nervous and news of our intentions had already transpired in Rome, so that untoward incidents could not be guarded against, if action were again postponed. Under the prompting of this declaration, made by the presiding minister, the council voted by common assent that the note should be presented on the 23rd inst. at five in the afternoon. The Roy. Hungarian Premier (Count Tisza) declares that if the

news of the presenting of the ultimatum should reach Budapest from Belgrade on the Thursday, he would speak on the subject in the Hungarian house of deputies. This was taken into account. The Chief of the General Staff (Baron Conrad) remarked that for military reasons he was in favour of a speedy beginning of the impending action. The news he had lately received from Serbia showed that three situations had by degrees been created. First large numbers of troops had been collected along the Bulgarian and Albanian frontiers; next there were reports of great numbers of soldiers having been transported to Old-Servia. Of these he had taken no account, because it was shown that they were merely exchanged for reserves. During the last three days however, he had received more serious news. First he was informed that two regiments, the 6th and the 17th, had been transferred from New-Servia to Old-Servia, and yesterday he heard from a very trustworthy confidential person in Bulgaria, that three divisions had been ordered north. Of course he would have to get these news verified. If they proved true, he must ask to be allowed to take speedy counter-measures. Next the question of proclaiming the state of siege in all the territory of the monarchy inhabited by South-Slavs was discussed and after a long debate, it was unanimously resolved that the state of siege would not be proclaimed before the mobilisation was published, not only to avoid a bad impression in foreign countries, but also among our own population. The same was resolved for Bosnia and Herzegovina, where the state of siege was also to be put in force at the same time as the mobilisation. The Imp. Roy. War-minister (Krobatin) then communicated the diverse measures for the mobilisation, which he had caused to be prepared. His explanations showed that everything necessary could be completed for the Imperial sanction on Wednesday, 22th inst. and that arrangements had been made with both governments with regard to measures to be taken by the administrative authorities in both countries. The Council of Ministers then resolved to send a private letter to the chief commander of Bosnia and Herzegovina through the common finance-minister, informing him of the intentions of the Imp. and Roy. government with regard to Serbia. At the express desire of the Roy. Hungarian Premier (Tisza) the Chief of the General Staff gives private information on the mobilisation, and answers in the affirmative Count Tisza's question whether in the case of a general mobilisation, the garrisons remaining in Transylvania for its safety, were sufficiently strong to ensure order in case of internal disturbances. The garrisons were *Landsturm*-formations, commanded by officers. An experienced general would take the command. These troops would certainly not be sufficiently strong to resist an attack on the part of the Roumanian army. These troops were recruited in such a manner, that there were very few Hungarian Roumanians among them. The Roy. Hungarian Premier was satisfied with this answer and declared that the Roy. Hungarian government would provide reinforcements of the *gendarmes* in Transylvania and he would, if necessary, send a Royal commissioner there, who would act jointly with the commander of the troops, to maintain order in Transylvania, where immediately after the mobilisation, the state of siege will be proclaimed. On the proposition of the Imp. Roy. Premier (Count Stürgkh) the question is discussed in principle, what should be done, if Italy sent an expedition to Valona. The Minister in the

Chair (Berchtold) explains that he did not think such an action on Italy's part at all probable, but that diplomatic measures against such an eventuality were being taken. Should Italy decide otherwise, the Imp. and Roy. government would *pro forma* have to share the undertaking, but it is too early to consider this eventuality seriously just now. The Royal Hungarian Premier (Tisza) then begged the council to vote the resolution, of which he had spoken at their last meeting, and from which the Royal Hungarian government made the whole action depend. The council of ministers must express unanimously that the action against Serbia was not in any way connected with plans of aggrandisement on the part of the monarchy, and that not any portion of Serbia should be annexed, except slight frontier regulations, imposed by military considerations. He must absolutely insist that such a resolution be voted unanimously by the council. The Minister of the Chair (Berchtold) declares that even before this discussion he had the intention of declaring as much in Rome. The Imp. Roy. Premier (Stürgkh) expressed his belief, that even if the annexation of Serbian territory remained out of the question, Serbia might be made dependent upon the monarchy by the deposition of the dynasty by a military convention and by other corresponding measures. Certainly the resolution of the council of ministers must not be voted in such a manner that corrections of the frontier lines, which might become necessary from a strategic point of view would have to be renounced. The Imp. and Roy. War-minister (Krobatin) declared that he would vote the resolution on the condition, that besides corrections of the frontier lines the occupation of a bridgehead on the other side of the river Save, for instance in the Schabatz district, would be allowed. After this the following resolution was unanimously voted: The Common Council of Ministers at the proposition of the Royal Hungarian Premier (Tisza) votes that as soon as the war begins, the monarchy declares to the foreign powers that no war for conquest is intended, nor is the annexation of the kingdom contemplated. Of course the strategically necessary corrections of the frontier lines, or the reduction of Serbia's territory to the advantage of other states or the unavoidable temporary occupation of Serbian territory is not precluded by this resolution. The Minister in the Chair (Berchtold) mentions with gratification that on all points the council is perfectly agreed and closes the conference.

"I have taken cognisance of the contents of the protocol. VIENNA, AUGUST 5, 1914.

"Clerk of the Council, A. HOYOS, m. p.

"BERCHTOLD, m. p."

—A. R. B., pt. 1, June 28 to July 23, 1914, pp. 53-58.

Both the Austro-Hungarian authorities and the press had from the beginning laid the blame for the Serajevo assassinations upon the Serbian government, whose alleged complicity in the crime was eventually taken for granted. Count Berchtold had sent Herr von Wiesner, an official of the foreign office, to Serajevo to investigate the matter. The report of this investigation follows:

"COUNCILLOR VON WIESNER TO THE IMP. AND ROY. DEPARTMENT OF FOREIGN AFFAIRS, SARAJEVO, JULY 13, 1914.

"Cypher. It is the firm belief of all persons in authority here, that Serbia is busily spreading

propaganda for Greater Serbia—not to speak of the press—through societies and other organisations, and that everything is done with the knowledge and sanction of the Servian government. Civil and military authorities have given me the material upon which they base their belief; it may be classified as follows: The material of the time *before the assassination* contains no proofs that the Servian government promoted propaganda. There is not much, but sufficient material to prove that the movement originates in Serbia and is tolerated by the government.

"*Judicial inquiry on assassination.* There is nothing to prove or even to suppose that the Servian government is accessory to the inducement for the crime, its preparation or the furnishing of weapons. On the contrary, there are reasons to believe that this is altogether out of question. From evidence of accused persons, ascertained almost indubitably that the crime was resolved upon in Belgrade and that preparations were made with the coercion of Servian state-officials Ciganovic and Major Tankosic, who jointly provided bombs, Brownings, ammunition and prussic acid. Guilt of Pribicevic not ascertained; reports about him based on regrettable misunderstandings on part of examining police organs. There can be no doubt that bombs came from army stores in Kragujevac, but there is no proof that they were obtained for the crime, as they might have been in the hands of the Komitadschis since the war. Evidence of accused persons leaves scarcely a doubt that Princip, Cabrinovic, Grabez, with bombs and weapons upon them, were secretly smuggled across the frontier to Bosnia by Servian organs, under the direction of Ciganovic. These organised transports were directed by the frontier-captains at Schabatz and Loznica and were contrived by frontier guards. Though it is not ascertained that they knew the purpose of the journey, still they must have accepted secrecy of mission. Other information gives insight into organisation of propaganda carried on by 'Narodna Odbrana.' This is valuable material, which will be useful, but has not yet been sifted; will be delivered without loss of time. . . ."—A. R. B., pt. 1, June 28 to July 23, 1914, pp. 44-45.

This document was in Berchtold's possession before he entered the council chamber on July 19, but he did not impart the information to the assembled ministers, thus leaving them under the impression that the Serbian government was in some way responsible for the murders. Wiesner's report was first printed after the meeting of the preliminary peace conference to decide the responsibility for the outbreak of the war. (See below: 75).

"The crime of Sarajevo' was the spark that lit the magazine which set the world aflame. The fuse apparently lay unlighted for a month and then the explosion came. The magazine had been stored by Austria-Hungary and she had only waited for the match to fire it. It seems unquestionable that the conspiracy that resulted in the Archduke's assassination was wide-spread enough to include among its members a number of Serbians, who were filled with the Pan-Serb Spirit that had grown under Austria's repressive rule, and that several of these participated in the work that led up to the terrible deed. [Among them was Colonel Dragutin Dimitryevitch, chief of the intelligence section of the Servian general staff, who planned the assassination without the knowledge of his government.] But the immediate actors were Serb subjects of the Austrian-Hungarian Emperor, who looked to Serbia as their

Mother Country."—T. N. Page, *Italy and the World War*, pp. 140-141.

15.—Austrian case against Serbia.—Text of ultimatum.—On July 23, 1914, the Austro-Hungarian minister at Belgrade presented the following note to the Serbian government:

"On the 31st March, 1909, the Servian Minister in Vienna, on the instructions of the Servian Government, made the following declaration to the Imperial and Royal Government: 'Serbia recognises that the *fait accompli* regarding Bosnia has not affected her rights, and consequently she will conform to the decisions that the Powers may take in conformity with article 25 of the Treaty of Berlin. In deference to the advice of the Great Powers, Serbia undertakes to announce from now onwards the attitude of protest and opposition which she has adopted with regard to the annexation since last autumn. She undertakes, moreover, to modify the direction of her policy with regard to Austria-Hungary and to live in future on good neighbourly terms with the latter.' The history of recent years, and in particular the painful events of the 28th June last, have shown the existence of a subversive movement with the object of detaching a part of the territories of Austria-Hungary from the Monarchy. The movement, which had its birth under the eye of the Servian Government, has gone so far as to make itself manifest on both sides of the Servian frontier in the shape of acts of terrorism and a series of outrages and murders. Far from carrying out the formal undertakings contained in the declaration of the 31st March, 1909, the Royal Servian Government has done nothing to repress these movements. It has permitted the criminal machinations of various societies and associations directed against the Monarchy, and has tolerated unrestrained language on the part of the press, the glorification of the perpetrators of outrages, and the participation of officers and functionaries in subversive agitation. It has permitted an unwholesome propaganda in public instruction, in short, it has permitted all manifestations of a nature to incite the Servian population to hatred of the Monarchy and contempt of its institutions. This culpable tolerance of the Royal Servian Government had not ceased at the moment when the events of the 28th June last proved its fatal consequences to the whole world. It results from the depositions and confessions of the criminal perpetrators of the outrage of the 28th June that the Serajevo assassinations were planned in Belgrade; that the arms and explosives with which the murderers were provided had been given to them by Servian officers and functionaries belonging to the Narodna Odbrana; and finally, that the passage into Bosnia of the criminals and their arms was organised and effected by the chiefs of the Servian frontier service. The above-mentioned results of the magisterial investigations do not permit the Austro-Hungarian Government to pursue any longer the attitude of expectant forbearance which they have maintained for years in face of the machinations hatched in Belgrade, and thence propagated in the territories of the Monarchy. The results, on the contrary, impose on them the duty of putting an end to the intrigues which form a perpetual menace to the tranquillity of the Monarchy. To achieve this end the Imperial and Royal Government see themselves compelled to demand from the Royal Servian Government a formal assurance that they condemn this dangerous propaganda against the Monarchy; in

other words, the whole series of tendencies, the ultimate aim of which is to detach from the Monarchy territories belonging to it, and that they undertake to suppress by every means this criminal and terrorist propaganda. In order to give a formal character to this undertaking the Royal Servian Government shall publish on the front page of their 'Official Journal' of the 13-26 July the following declaration: 'The Royal Government of Serbia condemn the propaganda directed against Austria-Hungary—*i.e.*, the general tendency of which the final aim is to detach from the Austro-Hungarian Monarchy territories belonging to it, and they sincerely deplore the fatal consequences of these criminal proceedings. The Royal Government regret that Servian officers and functionaries participated in the above-mentioned propaganda and thus compromised the good neighbourly relations to which the Royal Government were solemnly pledged by the declaration of the 31st March, 1909. The Royal Government, who disapprove and repudiate all idea of interfering or attempting to interfere with the destinies of the inhabitants of any part whatsoever of Austria-Hungary, consider it their duty formally to warn officers and functionaries, and the whole population of the kingdom, that henceforward they will proceed with the utmost rigour against persons who may be guilty of such machinations, which they will use all their efforts to anticipate and suppress.' This declaration shall simultaneously be communicated to the Royal army as an order of the day by His Majesty the King and shall be published in the 'Official Bulletin' of the Army.

"The Royal Servian Government further undertake:

"1. To suppress any publication which incites to hatred and contempt of the Austro-Hungarian Monarchy and the general tendency of which is directed against its territorial integrity;

"2. To dissolve immediately the society styled 'Narodna Odbrana,' to confiscate all its means of propaganda, and to proceed in the same manner against other societies and their branches in Servia which engage in propaganda against the Austro-Hungarian Monarchy. The Royal Government shall take the necessary measures to prevent the societies dissolved from continuing their activity under another name and form;

"3. To eliminate without delay from public instruction in Servia, both as regards the teaching body and also as regards the methods of instruction, everything that serves, or might serve, to foment the propaganda against Austria-Hungary;

"4. To remove from the military service, and from the administration in general, all officers and functionaries guilty of propaganda against the Austro-Hungarian monarchy whose names and deeds the Austro-Hungarian Government reserve to themselves the right of communicating to the Royal Government;

"5. To accept the collaboration in Servia of representatives of the Austro-Hungarian Government for the suppression of the subversive movement directed against the territorial integrity of the Monarchy;

"6. To take judicial proceedings against accessories to the plot of the 28th June, who are on Servian territory; delegates of the Austro-Hungarian Government will take part in the investigation relating thereto;

"7. To proceed without delay to the arrest of Major Voija Tankosic and of the individual named Milan Ciganovic, a Servian State em-

ployé, who have been compromised by the results of the magisterial enquiry at Serajevo;

"8. To prevent by effective measures the co-operation of the Servian authorities in the illicit traffic in arms and explosives across the frontier, to dismiss and punish severely the officials of the frontier service at Schabatz and Loznica guilty of having assisted the perpetrators of the Serajevo crime by facilitating their passage across the frontier;

"9. To furnish the Imperial and Royal Government with explanations regarding the unjustifiable utterances of high Servian officials, both in Servia and abroad, who, notwithstanding their official position, have not hesitated since the crime of the 28th June to express themselves in interviews in terms of hostility to the Austro-Hungarian Government; and, finally,

"10. To notify the Imperial and Royal Government without delay of the execution of the measures comprised under the preceding heads.

"The Austro-Hungarian Government expect the reply of the Royal Government at the latest by 6 o'clock on Saturday evening, the 25th July.

"A memorandum dealing with the results of the magisterial enquiry at Serajevo with regard to the officials mentioned under heads (7) and (8) is attached to this note.

"ANNEX

"The criminal enquiry opened by the Court of Serajevo against Gavrilo Princip and his accessories in and before the act of assassination committed by them on the 28th June last, has up to the present led to the following conclusions:

"1. The plot, having as its object the assassination of the Archduke Francis Ferdinand at the time of his visit to Serajevo, was formed at Belgrade by Gavrilo Princip, Nedeljko Cabrinovic, one Milan Ciganovic, and Trifko Grabez, with the assistance of Commander Voijsa Tankosic.

"2. The six bombs and the four Browning pistols and ammunition with which the guilty parties committed the act were delivered to Princip, Cabrinovic, and Grabez, by the man Milan Ciganovic and Commander Voijsa Tankosic at Belgrade.

"3. The bombs are hand-grenades, coming from the arms depot of the Servian Army at Kragujevac.

"4. In order to insure the success of the act, Ciganovic taught Princip, Cabrinovic, and Grabez how to use bombs, and gave lessons in firing Browning pistols to Princip and Grabez in a forest near the shooting ground at Topschider.

"5. To enable Princip, Cabrinovic, and Grabez to cross the frontier of Bosnia-Herzegovina and smuggle in their contraband of arms secretly, a secret system of transport was organized by Ciganovic.

"By this arrangement the introduction into Bosnia-Herzegovina of criminals and their arms was effected by the officials controlling the frontiers at Chabec (Rade Popovic) and Loznica, as well as by the customs officer Rudivoj Grbic of Loznica, with the assistance of various individuals."

Count Berchtold, Austro-Hungarian foreign minister, dispatched copies of the ultimatum to Austrian diplomatic representatives abroad, with the following instructions:

"I have the honour to request your Excellency to bring the contents of this note to the knowledge of the Government to which you are accred-

ited, accompanying your communication with the following observations:

"On the 31st March, 1909, the Royal Servian Government addressed to Austria-Hungary the declaration of which the text is reproduced above. On the very day after this declaration Servia embarked on a policy of instilling revolutionary ideas into the Serb subjects of the Austro-Hungarian Monarchy, and so preparing for the separation of the Austro-Hungarian territory on the Servian frontier. Servia became the centre of a criminal agitation. No time was lost in the formation of societies and groups, whose object either avowed or secret, was the creation of disorders on Austro-Hungarian territory. These societies and groups count among their members generals and diplomatists, Government officials and judges—in short, men at the top of official and unofficial society in the kingdom. Servian journalism is almost entirely at the service of this propaganda, which is directed against Austria-Hungary, and not a day passes without the organs of the Servian press stirring up their readers to hatred or contempt for the neighbouring Monarchy, or to outrages directed more or less openly against its security and integrity. A large number of agents are employed in carrying on by every means the agitation against Austria-Hungary and corrupting the youth in the frontier provinces. Since the recent Balkan crisis there has been a recrudescence of the spirit of conspiracy inherent in Servian politicians, which has left such sanguinary imprints on the history of the kingdom; individuals belonging formerly to bands employed in Macedonia have come to place themselves at the disposal of the terrorist propaganda against Austria-Hungary. In the presence of these doings, to which Austria-Hungary has been exposed for years, the Servian Government have not thought it incumbent on them to take the slightest step. The Servian Government have thus failed in the duty imposed on them by the solemn declaration of the 31st March, 1909, and acted in opposition to the will of Europe and the undertaking given to Austria-Hungary. The patience of the imperial and Royal Government in the face of the provocative attitude of Servia was inspired by the territorial disinterestedness of the Austro-Hungarian Monarchy and the hope that the Servian Government would end in spite of everything by appreciating Austria-Hungary's friendship at its true value. By observing a benevolent attitude towards the political interests of Servia, the Imperial and Royal Government hoped that the kingdom would finally decide to follow an analogous line of conduct on its own side. In particular, Austria-Hungary expected a development of this kind in the political ideas of Servia, when, after the events of 1912, the Imperial and Royal Government, by its disinterested and ungrudging attitude, made such a considerable aggrandisement of Servia possible. The benevolence which Austria-Hungary showed towards the neighbouring State had no restraining effect on the proceedings of the kingdom, which continued to tolerate on its territory a propaganda of which the fatal consequences were demonstrated to the whole world on the 28th June last, when the Heir Presumptive to the Monarchy and his illustrious consort fell victims to a plot hatched at Belgrade. In the presence of this state of things the Imperial and Royal Government have felt compelled to take new and urgent steps at Belgrade with a view to inducing the Servian Government to stop the incendiary movement that is threatening the security and integrity of the Austro-Hun-

garian Monarchy. The Imperial and Royal Government are convinced that in taking this step they will find themselves in full agreement with the sentiments of all civilised nations, who cannot permit regicide to become a weapon that can be employed with impunity in political strife, and the peace of Europe to be continually disturbed by movements emanating from Belgrade. In support of the above the Imperial and Royal Government hold at the disposal of the British [French, German, etc.] Government a *dossier* elucidating the Serbian intrigues, and the connection between these intrigues and the murder of the 28th June. An identical communication has been addressed to the Imperial and Royal representatives accredited to the other signatory Powers. You are authorised to leave a copy of this dispatch in the hands of the Minister for Foreign Affairs.—VIENNA, JULY 24, 1914."

16.—"Dossier" on Austro-Serbian relations.—Austrian comment on ultimatum.—"Two days after the rupture with Serbia, the Vienna Foreign Office sent to its Ambassadors in Berlin, Rome, Paris, London, Petrograd, and Constantinople a very lengthy document, which was called 'the Dossier with reference to the Great Serbian propaganda and its connection with the Serajevo murders.' It was a collection of material of heterogeneous sorts, and of very varying value. A good deal of it was occupied with matters dating back to the year 1908-9, when there had been imminent danger of war with Serbia, over the question of the Austrian annexation of Bosnia. To prove that there had been preparations for raising insurrection in Bosnia at that time, had little value in 1914, since Serbia had made her submission in March 1909, and had dropped all open and official protest against the annexation under the threat of war. Austria did not allege that the Serbian Government had been implicated in any propaganda since the date. But the complaint was that M. Pasitch and his colleagues had not devoted themselves during the last five years to suppressing provocative language in the press of the Serbian opposition, and to dissolving or punishing private clubs and societies which indulged in laudation of the Pan-Slav idea, or spoke with sympathy of the sufferings of Bosnians or Croats under the Austrian or Hungarian yoke. . . . The next section of the *dossier* deals with Serbian clubs and societies, especially the Narodna Odbrana, whose avowed objects were the strengthening of the national consciousness, physical culture, increase of material well-being, educational improvement, &c. 'Strengthening of the national consciousness' was interpreted by many members of the Narodna as meaning 'the maintenance of spiritual union with our brothers across the frontier,' and this implied the extension of the work of the society for Pan-Serbian propaganda [see also PAN-SERBISM] into Bosnia, Croatia, &c. Some of the extracts from the publications of the societies read harmlessly enough, others (no doubt) are definitely anti-Austrian, and speak of the reunion of all the South Slavs as the great aspiration of the future. . . . The second main section of the *dossier* consists of Austrian police reports. Some of these are obviously worthless, and the reader can only wonder that it was thought advisable to print them. The first, and longest, for example, purports to be the confessions of one Trefko Krstanovitch, a journeyman baker, who, on being arrested on suspicion, in July 1914, was released, after giving the police a long account of machinations of the Narodna Odbrana in 1908-10. A great deal of it was hearsay: a certain

amount was alleged adventures on secret service, including some tales about a projected murder of a Serbian refugee in Bosnia, which never came off. That it should be thought possible to compromise important Serbians by the evidence, extracted in prison, of an obscure adventurer who said that he had left the service of the Narodna because he was not paid enough, shows the depths to which the Austrian police could descend. The second document is entirely third-hand stuff about what a certain Jaglitich had been told by a certain Klaritch concerning the activities of the Narodna. The third and most important document purports to sum up the confessions of the five persons who had been participants in the plot for the murder of the Archduke Francis Ferdinand, including Prinzip the actual assassin. This was the evidence which was supposed to implicate Major Tankositch and the probationary railway clerk Tchiganovitch in the organisation of the conspiracy. . . . The last section of the *dossier* consists of a series of extracts from the Serbian press for July 1914, some of them tactless enough considering the atrocity of the Serajevo crime. These screeds repeat in various forms the fact, ever offensive to Austrians and Hungarians because of its essential truth, that 'all murders and outrages up to the present time in Austria have arisen from one and the same source: the oppressed nationalities in the Monarchy were obliged to have recourse to this method of protest because no other was open to them. In the chaos of a reign of terror it is natural and quite intelligible that an era of assassinations should have come into being.' A good many of these effusions were provoked by the outburst in the Austro-Hungarian press of wholesale accusations against 'Serbian murderers' during the days which immediately followed the Serajevo crime. The offensive Serbian paragraphs were by no means more violent than the Austrian leading articles which had preceded them. The *dossier*, in short, is interesting as an exhibition of Austro-Hungarian official mentality, rather than for any light which it brings to bear on the actual facts which preceded the outbreak of the war. It had no effect either on the diplomatists to whom it was delivered or on European public opinion."—Oman, pp. 46-48.

"ANNEX I A. FROM THE AUSTRO-HUNGARIAN MATERIAL:

"VIENNA, JULY 27.—The 'dossier' mentioned in the Austro-Hungarian circular note to the foreign Embassies concerning the Serbian dispute is made public today. In this memorial, attention is called to the fact that the movement originating in Serbia, which has an object to tear away the southern portions of Austria-Hungary from the monarchy and unite them to Serbia, strikes far back into the past. This propaganda, always the same in purpose, changing only in means and intensity, reached its climax at the time of the annexation crisis, and came out openly at that time with its aims. While, on the one side, the entire Serbian press preached for war against the Austro-Hungarian monarchy, associations were formed—to say nothing of other means of propaganda—which prepared such warfare, among which the Narodna Odbrana was the most important. Originating in a revolutionary committee, this association became entirely dependent on the Serbian Foreign Office, under the direction of statesmen and officers, among them Gen. Jankovic and former Minister Ivanovic. Among the founders are also Major

Oja Tankovic and Milan Pribicevic. This association had as an object the formation and equipment of bodies of volunteers for the coming war against Austria-Hungary. In addition to the memorial, a quotation is given from the association's official organ, which bears the same name, Narodna Odbrana, and is issued at the association's headquarters, wherein, in several articles, the activities and aim of this society are set forth. Therein it is stated that part of the main task of the Narodna Odbrana is to effect union between its brothers far and near on the other side of the border, and with all the rest of our friends in the world. Austria is mentioned as the first and greatest enemy. Just as the Narodna Odbrana preaches the necessity of war with Austria, it also preaches a holy truth about our national situation. The closing chapter contains an appeal to the Government and people of Serbia to prepare in every way for the struggle which the annexation foreshadowed. The memorial tells of the Narodna Odbrana's activities at that time, as set forth in a statement of a komitadji raised by the association; it maintained a school under the direction of two of its principal members, of whom one was Tankovic, for the instruction of bands of men—schools which Gen. Jankovic and Capt. Milan Pribicevic inspected regularly. Furthermore, the komitadjis were instructed in shooting, bomb-throwing, laying of mines, blowing up of railway bridges, &c. . . . [Men of trust and missionaries stirred up adults and unthinking youths. Thus] Milan Pribicevic persuaded former Honved officers and a lieutenant of gendarmes to leave army service in the Austro-Hungarian monarchy under serious circumstances. In the schools where teachers were educated an agitation of wide scope was developed. The wished-for fight against the Austro-Hungarian empire was also prepared militarily to the point that Servian emissaries were commissioned to destroy means of transportation, etc., and to kindle revolts and panics, in case of the outbreak of hostilities. . . . Furthermore, it is told how bombs and arms were secretly smuggled into Bosnia, which leaves no doubt that this is a well-prepared and often utilized road for the secret aims of the Narodna. One inclosure contains a quotation from the minutes of the court-martial in Serajevo concerning the investigation of the attack on the Archduke Francis Ferdinand and his wife. According to this, Princip, Crabinovic, Grabez, Crupilovic, and Papovic appear as having confessed that they, in company with the fugitive Mehmed-basic, organized a plot for the murder of the Archduke and that they kept watch on him for this purpose. Crabinovic is said to have confessed that he threw the bomb and that Gabrilo Princip carried out the attempt with the Browning pistol. Both men acknowledged that in doing the deed they premeditated murder. . . .

"ANNEX I B. THE CHANCELLOR OF THE GERMAN EMPIRE TO THE IMPERIAL AMBASSADORS IN PARIS, LONDON, ST. PETERSBURG:

"BERLIN, JULY 23, 1914.—The statements of the Austro-Hungarian Government as to the conditions under which the attempt on the life of the Austrian Crown Prince and his wife occurred make clear the aims of the Pan-Servian propaganda, and the means which it employs to accomplish its ends. . . . The Servian machinations go back many years. Servian Chauvinism showed itself in an especially marked form during the Bosnian crisis. That there was no conflict as a result of Servia's

provocative attitude toward Austria-Hungary at this time was due to the moderation of the Austro-Hungarian Government and the energetic intervention of the great powers. The assurances of future good behavior which the Servian Government then gave have not been kept. Under the very eyes, or, at least, with the silent consent, of official Servia, the Pan-Servian propaganda has continually grown in scope and intensity; the latest crime, the threads which lead to Belgrade, must be placed to its account. It has become unmistakably apparent that it is incompatible both with the dignity and the self-preservation of the Austro-Hungarian Monarchy that it should continue to look on inactively at the plotting across the border, which continually jeopardizes the integrity of its territory. . . . I ask your Excellency to express yourself in the above terms to the representative of (Mr. Viviani) (Sir Edward Grey) (Mr. Sazonof) and to lay particular stress on the view that the above question is one, the settlement of which devolves solely upon Austria-Hungary and Servia, and one which the powers should earnestly strive to confine to the two countries concerned. We strongly desire that the dispute be localized, since any intervention of another power, on account of the various alliance obligations, would bring consequences impossible to measure. I shall await with interest a telegraphic report from you as to the result of your interview. [As presented by the German ambassador in London to Sir E. Grey on July 24, the above note was somewhat differently worded.]

"ANNEX 2. THE [GERMAN] IMPERIAL CHANCELLOR TO THE CONFEDERATED GOVERNMENTS OF GERMANY:

"JULY 23, 1914: Confidential! Kindly make the following announcement to the Government to which you are accredited: In view of the facts which the Austro-Hungarian Government has made known in its note to the Servian Government, the last doubt must disappear that the plot to which the Austro-Hungarian Crown Prince and his wife were victims was hatched in Servia, with the connivance, at least, of officials of the Servian Government. It is a product of the Pan-Servian efforts which, during a number of years, have become a source of lasting disquietude for the Austro-Hungarian Monarchy and for all Europe. . . . The answer of the Servian Government to the demands which the Austro-Hungarian Government made on the 23d of the month through its representative in Belgrade makes clear that those at the head of Servian affairs are not inclined to give up the policy hitherto adopted by them, nor their activity as agitators. Therefore, the Austro-Hungarian Government, if it does not wish to give up forever its position as a great power, has nothing left to it but to back up its demands with strong pressure, and, if necessary, by the adoption of military measures. Certain elements in Russia consider it a natural right and the duty of Russia energetically to take the part of Servia in her dispute with Austria-Hungary. In fact, the *Novoe Vremya* considers itself justified in making Germany responsible for the European conflagration that might result from such a move by Russia, if it does not compel Austria-Hungary to back down. Here the Russian press takes a wrong view. It was not Austria-Hungary that brought on the conflict with Servia, but Servia, which by unscrupulous favoring of Pan-Servian aspirations even in parts of Austria-Hungary's territory, has jeopardized the very existence of the latter, and created

conditions which finally found expression in the dastardly crime of Serajevo. If Russia feels constrained to take sides with Serbia in this conflict, she certainly has a right to do it. But she must bear clearly in mind that in so doing she makes Serbia's aspirations to undermine the conditions necessary for the existence of the Austro-Hungarian Monarchy, identical with her own, and that she alone must bear the responsibility if a European war arises from the Austro-Serbian question, which all the rest of the great European powers wish to localize. . . . The attitude of the Imperial German Government in this matter is clearly outlined. The agitation conducted by the Pan-Slavs against Austria-Hungary has, as its principal aim, the dissolution or weakening of the Triple Alliance by means of the destruction of the Danube Empire, and, as a result, the complete isolation of the German Empire. Our closest interests, therefore, summon us to the side of Austria-Hungary. The duty to save Europe if possible from a general war demands also that we support the efforts to localize the trouble in accordance with the policy which we have successfully followed for the last forty-four years in the interests of the preservation of the peace in Europe. But if, contrary to hope, the trouble should spread owing to the intervention of Russia, then true to our duty as an ally, we should have to support the neighboring monarchy with the entire might of the German Empire. We shall draw our sword only if obliged to do so, and we shall do it then in the firm conviction that we bear no responsibility for the calamity which a war must needs bring to the nations of Europe.

"ANNEX 3. TELEGRAM FROM GERMAN AMBASSADOR IN VIENNA TO IMPERIAL CHANCELLOR:

"JULY 24, 1914: Count Berchtold to-day summoned the Russian Chargé d'Affaires in order to explain to him in detail and in friendly terms the position of Austria regarding Serbia. After going over the historical developments of the last few years, he laid stress on the statement that the monarchy did not wish to appear against Serbia in the rôle of a conqueror. He said that Austria-Hungary would demand no territory, that the step was merely a definitive measure against Serbian machinations, that Austria-Hungary felt herself obliged to exact guarantees for the future friendly behavior of Serbia toward the monarchy, that she had no intention of bringing about a shifting of the balance of power in the Balkans. The Chargé d'Affaires, who as yet had no instructions from St. Petersburg, took the explanations of the Minister ad referendum adding that he would immediately transmit them to Sasonow."—*B. D. C., Annexes nos. 1A, 1B, 2, 3.*

In the Kautsky *Documents* the foregoing (Annex 3), with the comments written by Emperor William, appears as follows:

"THE AMBASSADOR AT VIENNA TO THE FOREIGN OFFICE, VIENNA, JULY 24, 1914.

"Entirely superfluous! Will create an impression of weakness and an impression of apology which is entirely wrong towards Russia and must be avoided. Austria has her

"In order to prove his good will towards Russia, Count Berchtold invited the Russian chargé d'affaires to come and see him in order to explain to him in detail the position of Austria-Hungary toward Serbia. After recapitulating the historical development of the past three years, he empha-

good reasons; has proceeded accordingly; now this cannot be put in a kind of discussion afterwards."

"Jackass! the Sand-schack she must take back, otherwise the Serbs will get to the Adriatic."

"That comes of its own accord and must come. Austria must become preponderant in the Balkans over the other small states at the expense of Russia; otherwise there will be no peace."

"Very weak!"

On July 24, the British ambassador at Vienna reported to Sir Edward Grey as follows:

"No. 7. SIR M. DE BUNSEN TO SIR EDWARD GREY.

"VIENNA, JULY 24: Before departing on leave of absence, I was assured by Russian Ambassador that any action taken by Austria to humiliate Serbia could not leave Russia indifferent. Russian Chargé d'Affaires was received this morning by Minister for Foreign Affairs, and said to him, as his own personal view, that Austrian note was drawn up in a form rendering it impossible of acceptance as it stood, and that it was both unusual and peremptory in its terms. Minister for Foreign Affairs replied that Austrian Minister was under instructions to leave Belgrade unless Austrian demands were accepted integrally by 4 P. M. tomorrow. [The time limit was later set for 6 P. M.] His Excellency added that Dual Monarchy felt that its very existence was at stake; and that the step taken had caused great satisfaction throughout the country. He did not think that objections to what had been done could be raised by any power."—*B. D. C., no. 7.*

Austrian public opinion at this juncture is evidenced by the following extract:

"THE AUSTRO-HUNGARIAN NOTE TO SERBIA. (From *Norddeutsche Allgemeine Zeitung*, July 25, 1914.)

"BERLIN, JULY 24: The Austro-Hungarian Minister at Belgrade at 6 o'clock last night handed to the Servian Government a verbal note with the demands of the Austro-Hungarian Government. In the note the answer is requested by 6 P. M., July 25. . . . The *Fremdenblatt* [Vienna]

writes, among other things, as follows: 'The crime of Serajevo has revealed to the whole world the dangers that threaten us, and has directed our attention to the pressing need of insuring quiet and safety to ourselves at any cost. The Austro-Hungarian Minister at Belgrade today made known to the Servian Government the demands which we must make to it today. It is the result of long, careful consideration and does not go any further than absolutely necessary. We must insist on the demands as they stand; for this is a matter of underground passages extending from Servia directly to the heart of our South Slavic territories. Conditions that we cannot allow to continue have made themselves apparent on the threshold of our house as a result of the encroachment of the Pan-Servian idea. Servia has covered herself with a network of societies which, with the pretext of fostering culture, preach the doctrine of hatred of us throughout the country. Emissaries are sent out to Bosnia, Herzegovina, and Croatia to incite the populace to revolt and to picture to them an imminent union of those territories with the Servian Kingdom. The Servian Government, in spite of its emphatic declaration, has done nothing to stop this movement; its tolerance has had the effect of silent consent. . . . The results of this agitation have frequently been felt in our economic life. Thousands of careers have been blasted as a result of the alarming crises following the constantly recurring Pan-Servian scare. Were we to endure all this without stepping in to take decided action against it, the same agitators who continually, for the sake of rhetorical effect, accuse us of the misuse of power, would call this a sign of weakness, lack of will, and fear. They would state that we do not dare to defend ourselves, and in that way they would find new supporters and would feel encouraged to a doubly strong attack. While we are making our will felt, we are bringing the Servian people themselves to a realization of their position. They will see that they have been deceived, that the movement for a greater Servia will break against an iron wall, that the monarchy is determined to spurn them. The feeling that we have to deal with a condition that has become unbearable, that a stop must be put to it, is so strong among our people that complaints concerning the long delay in dealing with the situation are getting louder.'

—B. D. C.

17.—Effect of ultimatum in Belgrade.—"The Serbs were terror-stricken. They knew that part of the Austrian demands were justifiable; that the Pan-Serbist propaganda had been undeniably unfriendly; and that there had been unseemly rejoicings in Belgrade at the news of the murder of the archduke. Besides, Serbia had been in bad odor in Europe ever since the killing of King Alexander [in 1903]. Russia was not anxious for war, and France very loath to pour out blood and treasure purely over a Balkan squabble. England was still more unwilling. As a result the Serbs almost literally fell on their knees. They did everything but pawn their national independence. For practical purposes they assented to every one of the drastic Austrian demands save only those requiring that Austrian officials should conduct investigations and trials on Serbian soil, and they would accept this so far as it 'agrees with the principle of international law, with criminal procedure, and with good neighborly relations.' If Austria was not satisfied with this reply Serbia would be glad to refer all mooted questions 'to the decision of the international tribunal of The

Hague.'"—W. S. Davis, W. Anderson and M. W. Tyler, *Roots of the war*, p. 498.—"The Austrian note to Serbia will remain a famous document hundreds of years after the millions who first read it have mouldered in their graves. It marks the end of one era in the world's history, the beginning of yet another. The French Revolution is commonly held to fairly begin with the fall of the Bastille. A revolution in the polity and economy of the entire world was undoubtedly to begin with the delivery of that type-written paper by the peaceful-looking Freiherr von Giesl. The document was instantly recognized as charged with dynamite."—*Ibid.*, p. 494.—See also above: 15; SERBIA: 1914.

18.—British government view on ultimatum.—"Between the delivery of this ultimatum and the declaration of war between Great Britain and Germany there was an interval of only twelve days. In the whirl of negotiations which now followed, there was no time to draw breath and ponder. At the outset, therefore, it may be well to explain definitely the British attitude towards the Austrian ultimatum. Austria was under provocation. She had to complain of a dangerous popular movement against her government. What evidence she might have against the Servian Government no one in Europe then knew. Great Britain had no interest in the Balkans, except one. She desired the consolidation and progressive government of the Balkan States; she desired, in the words recently used by the Russian Minister for Foreign Affairs before the Duma, that 'the Balkan Governments should recognise that, in the matter of strengthening a State, the acquisition of territory is insufficient; the devotion and confidence of the new citizens must be enlisted.' The dispute between Austria and Servia did not necessarily affect that interest; it was a dispute between two Governments with which Britain had nothing to do. Sir E. Grey, therefore, consistently stated that he had no concern in that dispute; that he had no title to intervene between Austria and Servia; that he would express no opinion on the merits of the ultimatum. But there was the other side. If the dispute affected the interests of Russia, then the peace of Europe was at stake; and, from the first, Sir E. Grey told the Austrian Government that he did not see how Russia, interested as she was in Servia, could take any but a most serious view of such a formidable document as the ultimatum. The peace of Europe must be maintained, and it could only be maintained, as Mr. Asquith had said to Parliament in March, 1913, in discussing the Balkan crisis, by a 'spirit of forbearance, patience, and self-sacrifice'—by a 'loyal spirit of give and take on the part of the Great Powers directly concerned.' It was as the agent of this spirit of conciliation alone that Great Britain intervened in the European crisis."—*Great Britain and the European crisis (Introductory narrative of events, British Foreign Office, 1914)*.—See also ENGLAND: 1914.

19.—Serbian appeal to Russia.—On July 24, the day after the Austrian ultimatum had been presented at Belgrade, the prince regent of Servia telegraphed to the tsar: "We are prepared to accept those of the Austro-Hungarian conditions which are compatible with the position of an independent State, as well as those to which your Majesty may advise us to agree, and all those persons whose complicity in the crime may be proved will be severely punished by us. Certain of the demands could not be carried out without changes in our legislation, which would need time. We

have been allowed too short a time limit. We may be attacked at the expiration of the time limit by the Austro-Hungarian army which is concentrating upon our frontier. We are unable to defend ourselves and we beg your Majesty to come to our aid as soon as possible. The much appreciated goodwill which your Majesty has so often shown towards us inspires us with the firm belief that once again our appeal to your noble Slav heart will not pass unheeded."—*R. O. B., no. 6.*

20.—*Danger of time limit in ultimatum.*—When a copy of the Austrian note was presented in London to Sir Edward Grey, he complained at the outset of the danger of imposing a time limit, and immediately telegraphed to De Bunsen at Vienna, as follows:

"No. 5. SIR E. GREY TO SIR M. DE BUNSEN, . . . JULY 24:

"Note addressed to Serbia, together with an explanation of the reasons leading up to it, has been communicated to me by Count Mensdorff. In the ensuing conversation with his Excellency I remarked that it seemed to me a matter for great regret that a time limit, and such a short one at that, had been insisted upon at this stage of the proceedings. The murder of the Archduke and some of the circumstances respecting Serbia quoted in the note aroused sympathy with Austria, as was but natural, but at the same time I had never before seen one State address to another independent State a document of so formidable a character. Demand No. 5 would be hardly consistent with the maintenance of Serbia's independent sovereignty if it were to mean, as it seemed that it might, that Austria-Hungary was to be invested with a right to appoint officials who would have authority within the frontiers of Serbia. I added that I felt great apprehension, and that I should concern myself with the matter simply and solely from the point of view of the peace of Europe. The merits of the dispute between Austria and Serbia were not the concern of his Majesty's Government, and such comments as I had made above were not made in order to discuss those merits. I ended by saying that doubtless we should enter into an exchange of views with other powers, and that I must await their views as to what could be done to mitigate the difficulties of the situation. Count Mensdorff replied that the present situation might never have arisen if Serbia had held out a hand after the murder of the Archduke; Serbia had, however, shown no sign of sympathy or help, though some weeks had already elapsed since the murder; a time limit, said his Excellency, was essential, owing to the procrastination on Serbia's part. I said that if Serbia had procrastinated in replying a time limit could have been introduced later; but, as things now stood, the terms of the Serbian reply had been dictated by Austria, who had not been content to limit herself to a demand for a reply within a limit of forty-eight hours from its presentation.

[At the same time the British foreign minister telegraphed the chargé d'affaires at Belgrade to counsel Serbia to act with circumspection. The following documents give some idea of the tension of the situation.]

"No. 8. MR. CRACKANTHORPE, BRITISH CHARGÉ D'AFFAIRES AT BELGRADE, TO SIR EDWARD GREY, . . . JULY 24:

"Austrian demands are considered absolutely unacceptable by Servian Government, who ear-

nestly trust that His Majesty's Government may see their way to induce Austrian Government to moderate them. This request was conveyed to me by Servian Prime Minister, who returned early this morning to Belgrade. His Excellency is dejected, and is clearly very anxious as to developments that may arise.

"No. 12. SIR E. GREY'S REPLY TO MR. CRACKANTHORPE, JULY 24:

"Serbia ought to promise that, if it is proved that Servian officials, however subordinate they may be, were accomplices in the murder of the Archduke at Serajevo, she will give Austria the fullest satisfaction. She certainly ought to express concern and regret. For the rest, Servian Government must reply to Austrian demands as they consider best in Servian interests. It is impossible to say whether military action by Austria when time limit expires can be averted by anything but unconditional acceptance of her demands, but only chance appears to lie in avoiding an absolute refusal and replying favorably to as many points as the time limit allows. Servian Minister here has begged that his Majesty's Government will express their views, but I cannot undertake responsibility of saying more than I have said above, and I do not like to say even that without knowing what is being said at Belgrade by French and Russian Governments. You should therefore consult your French and Russian colleagues as to repeating what my views are, as expressed above, to Servian Government. I have urged upon German Ambassador that Austria should not precipitate military action.

"No. 22. MR. CRACKANTHORPE, BRITISH CHARGÉ D'AFFAIRES AT BELGRADE, TO SIR EDWARD GREY, . . . JULY 25, 1914:

"I have seen the new French Minister, who has just arrived from Constantinople, and my Russian colleague, and informed them of your views. They have not yet received instructions from their Governments, and in view of this and of the proposed conciliatory terms of the Serbian reply, I have up to now abstained from offering advice to the Servian Government. I think it is highly probable that the Russian Government have already urged the utmost moderation on the Servian Government.

"No. 13. NOTE COMMUNICATED BY RUSSIAN AMBASSADOR [IN LONDON] JULY 25:

"M. Sazonof telegraphs to the Russian Chargé d'Affaires at Vienna on the 11th (24th) July, 1914: 'The Communication made by Austria-Hungary to the Powers the day after the presentation of the ultimatum at Belgrade leaves a period to the Powers which is quite insufficient to enable them to take any steps which might help to smooth away the difficulties that have arisen. In order to prevent the consequences, equally incalculable and fatal to all the Powers, which may result from the course of action followed by the Austro-Hungarian Government, it seems to us to be above all essential that the period allowed for the Servian reply should be extended. Austria-Hungary, having declared her readiness to inform the Powers of the results of the inquiry upon which the Imperial and Royal Government base their accusations, should equally allow them sufficient time to study them. In this case, if the Powers were convinced that certain of the Austrian demands were well founded, they would be in a position to offer

advice to the Servian Government. A refusal to prolong the term of the ultimatum would render nugatory the proposals made by the Austro-Hungarian Government to the Powers, and would be in contradiction to the very bases of international relations. Prince Kudachef is instructed to communicate the above to the Cabinet at Vienna. M. Sazonof hopes that his Britannic Majesty's Government will share to the point of view set forth above, and he trusts that Sir E. Grey will see his way to furnish similar instructions to the British Ambassador at Vienna.' [NOTE: The double dates: 11th (24th) July, are those of the Julian and Gregorian calendars, respectively.]

"NO. 14. SIR E. GREY TO SIR F. BERTIE AND TO SIR G. BUCHANAN, JULY 25, 1914:

"Austrian Ambassador has been authorized to explain to me that the step taken at Belgrade was not an ultimatum, but a *démarche* with a time limit, and that if the Austrian demands were not complied with within the time limit the Austro-Hungarian Government would break off diplomatic relations and begin military preparations, not operations. In case Austro-Hungarian Government have not given the same information at Paris, (St. Petersburg,) you should inform Minister for Foreign Affairs as soon as possible; it makes the immediate situation rather less acute."

—*B. D. C.*, nos. 5, 8, 12, 22, 13, 14.

21.—Efforts at mediation.—British proposal.—Departure of Austro-Hungarian minister from Belgrade.—Mobilization ordered by Serbia.—The first task of the British Foreign Minister "was to send for the French Ambassador, whom he informed of his conviction that the only chance of mediation was that Germany, France, Italy and Great Britain, who had no direct interests in Serbia, should act jointly and simultaneously in Vienna and Petrograd. Cambon replied gloomily that nothing could be said in Petrograd till Russia had expressed some opinion or taken some action; that in two days Austria would march into Serbia, since the Serbians could not possibly accept the ultimatum; that Russia would be compelled by public opinion to take action as soon as Austria attacked Serbia, and, therefore, that when the Austrian attack began it would be too late for mediation. The same afternoon the Foreign Secretary saw the German Ambassador, who brought a circular note denouncing Serb intrigues against the integrity of the Dual Monarchy, approving the Austrian procedure, and expressing the opinion that the matter concerned Austria and Serbia alone. Sir Edward declared that if the ultimatum did not lead to trouble with Russia he had no concern with it. But he was very apprehensive of the view Russia would take, and in view of the extraordinary character of the Austrian note, and the short time allowed, he felt quite helpless as far as Russia was concerned. The only chance was that the four other Great Powers should mediate and gain time, and this was only possible if Germany would propose and participate in such advice at Vienna."—G. P. Gooch, *History of modern Europe, 1878-1919*, pp. 536, 537.

"NO. 10. SIR EDWARD GREY TO SIR F. BERTIE [PARIS], JULY 24, 1914:

"After telling M. Cambon today of the Austrian communication to Serbia which I had received this morning, and of the comment I had made to Count Mensdorff upon it yesterday [see

above: 20] I told M. Cambon that this afternoon I was to see the German Ambassador, who some days ago had asked me privately to exercise moderating influence in St. Petersburg. I would say to the Ambassador that, of course, if the presentation of this ultimatum to Serbia did not lead to trouble between Austria and Russia, we need not concern ourselves about it: but if Russia took the view of the Austrian ultimatum, which it seemed to me that any power interested in Serbia would take, I should be quite powerless, in face of the terms of the ultimatum, to exercise any moderating influence. I would say that I thought the only chance of any mediating or moderating influence being exercised was that Germany, France, Italy, and ourselves, who had not direct interests in Serbia, should act together for the sake of peace, simultaneously in Vienna and St. Petersburg. . . . I said that I had not contemplated anything being said in St. Petersburg until after it was clear that there must be trouble between Austria and Russia. I had thought that if Austria did move into Serbia, and Russia then mobilized, it would be possible for the four powers to urge Austria to stop her advance, and Russia also to stop hers, pending mediation. But it would be essential for any chance of success for such a step that Germany should participate in it. M. Cambon said that it would be too late after Austria had once moved against Serbia. The important thing was to gain time by mediation in Vienna. The best chance of this being accepted would be that Germany should propose it to the other powers. I said that by this he meant a mediation between Austria and Serbia. He replied that it was so. I said that I would talk to the German Ambassador this afternoon on the subject.

"NO. 11. SIR E. GREY TO SIR H. RUMBOLD [Counsellor of British embassy at Berlin], JULY 24:

"German Ambassador has communicated to me the view of the German Government about the Austrian demand in Serbia. I understand the German Government is making the same communication to the powers. I said that if the Austrian ultimatum to Serbia did not lead to trouble between Austria and Russia, I had no concern with it; I had heard nothing yet from St. Petersburg, but I was very apprehensive of the view Russia would take of the situation. . . . The only chance I could see of mediating or moderating influence being effective, was that the four powers, Germany, Italy, France, and ourselves, should work together simultaneously at Vienna and St. Petersburg in favor of moderation in the event of the relations between Austria and Russia become threatening. The immediate danger was that in a few hours Austria might march into Serbia and Russian Slav opinion demand that Russia should march to help Serbia; it would be very desirable to get Austria not to precipitate military action and so to gain more time. But none of us could influence Austria in this direction unless Germany would propose and participate in such action at Vienna. Prince Lichnowsky said that Austria might be expected to move when the time limit expired unless Serbia could give unconditional acceptance of Austrian demands in toto. . . ."

—*B. D. C.*, nos. 10, 11.

"At this critical moment everything depended on Germany. As the Russian Minister for Foreign Affairs said a little later, 'the key of the situation was to be found in Berlin.' What was Germany's

attitude? Privately, the German Minister for Foreign Affairs expressed his doubts as to the ultimatum; officially, the German Government called it 'equitable and moderate,' and said that they 'desired urgently the localisation of the conflict.' Everyone desired that; but it was no time for phrases. The same morning the Russian Minister for Foreign Affairs had summoned the French and British Ambassadors in St. Petersburg, had said that Austria's step meant imminent war, and had asked for the support of Great Britain and France. The French Ambassador had pledged the support of France, as was well known to be inevitable under the terms of her alliance. The next morning the Russian Government stated publicly that Russia could not remain indifferent to the Austro-Servian conflict. The next evening troops in Vienna had to be called out to guard the Russian Embassy from hostile crowds. . . . Austria had surprised Europe, and with surprise had come universal alarm."—*B. D. C., Introduction.*

"During these forty-eight hours Great Britain made three attempts at peace. Before all things, the time-limit of the ultimatum had to be extended. Great Britain and Russia urged this at Vienna. Great Britain urged Germany to join in pressing the Austrian Government. All that Berlin consented to do was to 'pass on' the message to Vienna. . . . The Russian, French, and British representatives at Belgrade were instructed to advise Serbia to go as far as possible to meet Austria. But it was too late. The time-limit, which Austria would not extend, had expired; and after all Serbia did not need advice. On the afternoon of Saturday, the 25th, she returned to Austria a reply which amounted to an acceptance of all Austria's demands, subject on certain points to the delays necessary for passing new laws and amending her Constitution, and subject to an explanation by Austria-Hungary of her precise wishes with regard to the participation of Austro-Hungarian officials in Servian judicial proceedings. The reply went far beyond anything which any Power—Germany not excepted—had ever thought probable. But the same day the British Ambassador at Vienna reported that the tone of the Austrian press left the impression that a settlement was not desired, and he later reported that the impression left on his mind was that the Austrian note was so drawn up as to make war inevitable. In spite of the conciliatory nature of Serbia's reply, the Austrian Minister left Belgrade the same evening, and Serbia ordered a general mobilisation. But an outline of the Servian reply had been communicated to Sir E. Grey an hour or two before it was delivered. He immediately expressed to Germany the hope that she would urge Austria to accept it. Berlin again contented itself with 'passing on' the expression of Sir E. Grey's hope to Vienna through the German Ambassador there. The fate of the message so passed on may be guessed from the fact that the German Ambassador told the British Ambassador directly afterwards that Serbia had only made a pretence of giving way, and that her concessions were all a sham."—*Ibid., no. 4.*

On July 26, Sir Edward Grey telegraphed instructions for the proposal for mediation which he had already discussed with the ambassadors in London:

"No. 36. SIR EDWARD GREY TO SIR F. BERTIE, SIR H. RUMBOLD AND SIR R. RODD, LONDON, . . . JULY 26, 1914:

"Would Minister for Foreign Affairs be disposed to instruct Ambassador here to join with representatives of France, Italy, and Germany, and myself to meet here in conference immediately for the purpose of discovering an issue which would prevent complications? You should ask Minister for Foreign Affairs whether he would do this. If so, when bringing the above suggestion to the notice of the Governments to which they are accredited, representatives at Belgrade, Vienna, and St. Petersburg could be authorized to request that all active military operations should be suspended pending results of conference."—*B. D. C., no. 36.*

On July 27, Sir Maurice de Bunsen reported the state of affairs at Vienna:

"No. 41. SIR M. DE BUNSEN TO SIR EDWARD GREY, VIENNA, JULY 27, 1914:

"I have had conversation with all my colleagues representing the Great Powers. The impression left on my mind is that the Austro-Hungarian note was so drawn up as to make war inevitable; that the Austro-Hungarian Government are fully resolved to have war with Serbia; that they consider their position as a Great Power to be at stake, and that until punishment has been administered to Serbia it is unlikely that they will listen to proposals of mediation. This country has gone wild with joy at the prospect of war with Serbia, and its postponement or prevention would undoubtedly be a great disappointment. . . ."—*B. D. C., no. 41.*

To the proposal for mediation the following replies were given:

"No. 42. SIR F. BERTIE TO SIR EDWARD GREY, PARIS, JULY 27, 1914:

"Your proposal as stated in your two telegrams of yesterday, is accepted by the French Government. French Ambassador in London, who returns there this evening, has been instructed accordingly. Instructions have been sent to the French Ambassador at Berlin to concert with his British colleague as to the advisability of their speaking jointly to the German Government. Necessary instructions have also been sent to the French representatives at Belgrade, Vienna, and St. Petersburg, but until it is known that the Germans have spoken at Vienna with some success, it would, in the opinion of the Ministry of Foreign Affairs, be dangerous for the French, Russian, and British Ambassadors to do so."—*B. D. C., no. 42.*

"No. 43. SIR E. GOSCHEN TO SIR EDWARD GREY, BERLIN, JULY 27, 1914:

"Your telegram of 26th July.

"Secretary of State says that conference you suggest would practically amount to a court of arbitration and could not, in his opinion, be called together except at the request of Austria and Russia. He could not, therefore, fall in with your suggestion, desirous though he was to cooperate for the maintenance of peace. I said I was sure that your idea had nothing to do with arbitration, but meant that representatives of the four nations not directly interested should discuss and suggest means for avoiding a dangerous situation. He maintained, however, that such a conference as you proposed was not practicable. He added that news he had just received from St. Petersburg showed that there was no intention on the part

of M. de Sazonof to exchange views with Count Berchtold. He thought that this method of procedure might lead to a satisfactory result, and that it would be best, before doing anything else, to await outcome of the exchange of views between the Austrian and Russian Governments. In the course of a short conversation Secretary of State said that as yet Austria was only partially mobilizing, but that if Russia mobilized against Germany latter would have to follow suit. I asked him what he meant by 'mobilizing against Germany.' He said that if Russia only mobilized in south, Germany would not mobilize, but if she mobilized in north, Germany would have to do so too, and Russian system of mobilization was so complicated that it might be difficult exactly to locate her mobilization. Germany would therefore have to be very careful not to be taken by surprise. Finally, Secretary of State said that news from St. Petersburg had caused him to take more hopeful view of the general situation."—*B. D. C.*, no. 43.

From St. Petersburg, Sir George Buchanan reported:

"No. 44. SIR G. BUCHANAN TO SIR EDWARD GREY, ST. PETERSBURG, JULY 27, 1914:

"Austrian Ambassador tried, in a long conversation which he had yesterday with the Minister for Foreign Affairs, to explain away objectionable features of the recent action taken by the Austro-Hungarian Government. Minister for Foreign Affairs pointed out that . . . to put an end to the present tension, he thought that England and Italy might be willing to collaborate with Austria. . . .

"No. 45. SIR G. BUCHANAN TO SIR EDWARD GREY, ST. PETERSBURG, JULY 27, 1914:

"Since my conversation with the Minister for Foreign Affairs, as reported in my telegram of today [See No. 44], I understand that his Excellency has proposed that the modifications to be introduced into Austrian demands should be the subject of direct conversation between Vienna and St. Petersburg.

[The same day, Goschen reported that Germany had modified her attitude.]

"No. 46. SIR EDWARD GREY TO SIR E. GOSCHEN, LONDON, . . . JULY 27, 1914.

"German Ambassador has informed me that German Government accept in principle mediation between Austria and Russia by the four Powers, reserving, of course, their right as an ally to help Austria if attacked. He has also been instructed to request me to use influence in St. Petersburg to localize the war and to keep up the peace of Europe. . . ."—*B. D. C.*, nos. 44-46.

"France and Italy promptly accepted the proposal; but the Kaiser declared that he would only take part in mediation at Austria's express wish, 'since in vital matters people consult nobody.' The Foreign Secretary rejoined that the Serbian reply, which he had just seen and which went further than could have been expected to meet the Austrian demands, was obviously due to Russian prompting, and it was therefore at Vienna that moderating influence was now required. Serbia's reply should at least be treated as a basis for discussion and pause, and Germany could urge this course at Vienna. Lichnowsky reported that he found the Minister for the first time in bad spirits.

'He spoke very gravely and seemed very definitely to expect us to use our influence to settle the question. Everybody here is convinced that the key is in Berlin, and that, if Berlin wishes peace, it will hold back Austria.' The Chancellor, who earnestly desired peace but had completely lost control of the situation, telegraphed Lichnowsky's dispatch to Vienna, adding that, having already declined the proposal for a conference, it was impossible to reject the new suggestion. 'By rejecting every sort of mediation we should be made responsible before the whole world for the conflagration. Our situation is all the more difficult as Serbia has apparently given way very far. We cannot, therefore, reject the rôle of mediator and must lay before the Vienna Cabinet the English proposal. Ascertain Berchtold's view of the English plan and of Sazonoff's wish to negotiate direct with Vienna.' Unfortunately for the peace of the world Vienna was resolved on a final reckoning with her troublesome neighbour. 'The integral acceptance of the ultimatum,' reported Sir Maurice de Bunsen, 'was neither expected nor desired. When it was rumoured that it had been unconditionally accepted, there was a moment of keen disappointment. The mistake was quickly corrected, and as soon as it was known that it had been rejected and that Baron Giesl had broken off relations with Belgrad, Vienna burst into a frenzy of delight. . . . Count Mensdorff was instructed to inform Sir Edward that Serbia had not accepted the demands, that Austria must proceed to force, and that she counted on British sympathy in the struggle forced on her. The Ambassador explained that the reply might on paper seem satisfactory, but that the co-operation of Austrian officers and police which alone would guarantee the cessation of the subversive campaign against Austria had been refused. Sir Edward retorted that the response of Belgrad involved the greatest humiliation he had ever seen a country undergo, and it was very disappointing that Austria had treated it as a blank negative.'—G. P. Gooch, *History of modern Europe*, pp. 537-540.

22.—Russian attitude on ultimatum.—Arbitration proposal accepted.—"On July 24 the German Government told the Powers that it approved the Austrian note, as being necessitated by the 'Great Servian' propaganda, which aimed at the incorporation in the Servian monarchy of the southern Slav provinces belonging to Austria-Hungary; that Austria, if she wished to remain a Great Power, could not avoid pressing the demands contained in the note, even, if necessary, by military measures; and that the question was one which concerned no Powers except Austria-Hungary and Servia. Russia did not agree that the Austrian note was directed against Servia alone. On July 24 the Russian Minister of Foreign Affairs told the British Ambassador at St. Petersburg that Austria's conduct was provocative and immoral; that some of her demands were impossible of acceptance; that Austria would never have taken such action unless Germany had first been consulted; that if Austria began military measures against Servia, Russia would probably mobilize. . . . To the Austro-Hungarian Government the Russian Minister sent a message, on the same day . . . that the time-limit allowed to Servia for her reply was quite insufficient, if the Powers were to help in smoothing the situation; and he urged that Austria-Hungary should publish the proofs of the charges against Servia. On July 25 Russia told England that Servia would punish those proved to be guilty, but would not accept all the demands

of Austria; that no independent state could do so. If Serbia appealed to arbitration, as seemed possible, Russia was, she said, prepared to leave the arbitration in the hands of England, France, Germany, and Italy—the four Powers whom Sir Edward Grey had suggested as possible mediators.”—Oxford Faculty of Modern History, *Why we are at war* (Prefatory note to Appendix VII, pp. 58-60).

23.—Russian appeal for British solidarity in Triple Entente.—Sazonov's prophecy.—“If Austria was determined at any cost to have the reckoning with Serbia of which she had been baulked in 1913, and which she regarded as essentially defensive, Russia was no less resolved to honour her reiterated promises of support to her Balkan protégé. Moreover, the military party looked forward with confidence to a conflict of which Constantinople might be the prize. In the Central Empires it was hoped and in some quarters sincerely believed that she would stand aside while Serbia was receiving her chastisement; but there was no ground for such a supposition. After reading the Austrian ultimatum . . . Sazonoff described it to Sir George Buchanan as provocative and immoral, and expressed the hope that the British Government would proclaim its solidarity with Russia and France. The Ambassador replied that he did not expect any unconditional engagement of armed support, since direct British interests were nil, and a war for Serbia would never be sanctioned by British opinion. Sazonoff retorted that the general European question was involved, that Great Britain would sooner or later be dragged in if war broke out, and that she would render it more probable if she did not from the outset make common cause with France and Russia. The French Ambassador joined in the appeal; and Sir George concluded his dispatch by expressing his opinion that, even if we declined to join them, France and Russia were determined to make a strong stand.”—G. P. Gooch, *History of modern Europe, 1873-1919*, p. 540.

“No. 9. SIR G. BUCHANAN TO SIR EDWARD GREY,
ST. PETERSBURG, JULY 24, 1914:

“I had a telephone message this morning from M. Sazonof to the effect that the text of the Austrian ultimatum had just reached him. . . . He begged me to meet him at the French Embassy to discuss matters. . . . [At the meeting] he hoped that his Majesty's Government would not fail to proclaim their solidarity with Russia and France. The French Ambassador gave me to understand that France would fulfill all the obligations entailed by her alliance with Russia, if necessity arose, besides supporting Russia strongly in any diplomatic negotiations. I said that I would telegraph a full report to you of what their Excellencies had just said to me. I could not, of course, speak in the name of his Majesty's Government, but personally I saw no reason to expect any declaration of solidarity from his Majesty's Government that would entail an unconditional engagement on their part to support Russia and France by force of arms. Direct British interests in Serbia were nil, and a war on behalf of that country would never be sanctioned by British public opinion. To this M. Sazonof replied that we must not forget that the general European question was involved, the Servian question being but a part of the former, and that Great Britain could not afford to efface herself from the problems now at issue. In reply to these remarks I

observed that I gathered from what he said that his Excellency was suggesting that Great Britain should join in making a communication to Austria to the effect that active intervention by her in the internal affairs of Serbia could not be tolerated. But, supposing Austria nevertheless proceeded to embark on military measures against Serbia in spite of our representations, was it the intention of the Russian Government forthwith to declare war on Austria? M. Sazonof said that he himself thought that Russian mobilization would at any rate have to be carried out; but a council of Ministers was being held this afternoon to consider the whole question. A further council would be held, probably tomorrow, at which the Emperor would preside, when a decision would be come to. I said that it seemed to me that the important point was to induce Austria to extend the time limit, and that the first thing to do was to bring an influence to bear on Austria with that end in view; French Ambassador, however, thought that either Austria had made up her mind to act at once or that she was bluffing. Whichever it might be, our only chance of averting war was for us to adopt a firm and united attitude. He did not think there was time to carry out my suggestion. Thereupon I said that it seemed to me desirable that we should know just how far Serbia was prepared to go to meet the demands formulated by Austria in her note. M. Sazonof replied that he must first consult his colleagues on this point, but that doubtless some of the Austrian demands could be accepted by Serbia. French Ambassador and M. Sazonof both continued to press me for a declaration of complete solidarity of his Majesty's Government with French and Russian Governments, and I therefore said that it seemed to me possible that you might perhaps be willing to make strong representations to both German and Austrian Governments, urging upon them that an attack upon Serbia by Austria would endanger the whole peace of Europe. Perhaps you might see your way to saying to them that such action on the part of Austria would probably mean Russian intervention, which would involve France and Germany, and that it would be difficult for Great Britain to keep out if the war were to become general. M. Sazonof answered that we would sooner or later be dragged into war, if it did break out; we should have rendered war more likely if we did not from the outset make common cause with his country and with France; at any rate, he hoped his Majesty's Government would express strong reprobation of action taken by Austria. President of French Republic and President of the Council cannot reach France, on their return from Russia, for four or five days, and it looks as though Austria purposely chose this moment to present their ultimatum. It seems to me, from the language held by French Ambassador, that, even if we decline to join them, France and Russia are determined to make a strong stand.”—*B. D. C.*, no. 6.

That the British ambassador correctly indicated the policy of his government is shown by Sir Edward Grey's reply to this report, July 25:

“You spoke quite rightly in very difficult circumstances as to the attitude of his Majesty's Government. I entirely approve what you said, as reported in your telegram of yesterday, and I cannot promise more on behalf of the Government. I do not consider that public opinion here would or ought to sanction our going to war over

a Servian quarrel. If, however, war does take place, the development of other issues may draw us into it, and I am therefore anxious to prevent it. The sudden, brusque, and peremptory character of the Austrian demarche makes it almost inevitable that in a very short time both Russia and Austria will have mobilized against each other. In this event, the only chance of peace, in my opinion, is for the other four powers to join in asking the Austrian and Russian Governments not to cross the frontier, and to give time for the four Powers acting at Vienna and St. Petersburg to try and arrange matters. If Germany will adopt this view, I feel strongly that France and ourselves should act upon it. Italy would no doubt gladly co-operate. No diplomatic intervention or mediation would be tolerated by either Russia or Austria unless it was clearly impartial, and included the allies or friends of both. The co-operation of Germany would, therefore, be essential."—*B.D.C., no. 24.*

On the next day Sazonov repeated his plea that Great Britain should take a definite stand with Russia and France. The British ambassador reports to Sir Edward Grey as follows:

"No. 17. SIR G. BUCHANAN, BRITISH AMBASSADOR AT ST. PETERSBURG, TO SIR E. GREY, JULY 25:

"I saw . . . [Sazonov] this morning, and communicated to his Excellency the substance of your telegram of to-day to Paris [see above: 20] and this afternoon I discussed with him the communication which the French Ambassador suggested should be made to the Servian Government, as recorded in your telegram of yesterday to Belgrade. The minister . . . said, as regards the former, that the explanations of the Austrian Ambassador did not quite correspond with the information which had reached him from German quarters. As regards the latter, both his Excellency and the French Ambassador agreed that it is too late to make such a communication, as the time limit expires this evening. . . . [Sazonov] said that Servia was quite ready to do as you had suggested and to punish those proved to be guilty, but that no independent State could be expected to accept the political demands which had been put forward. . . . [Sazonov] thought, from a conversation which he had with the Servian Minister yesterday, that, in the event of the Austrians attacking Servia, the Servian Government would abandon Belgrade, and withdraw their forces into the interior, while they would at the same time appeal to the Powers to help them. His Excellency was in favour of their making this appeal. He would like to see the question placed on an international footing, as the obligations taken by Servia in 1909, to which reference is made in the Austrian ultimatum, were given not to Austria, but to the Powers. If Servia should appeal to the Powers, Russia would be quite ready to stand aside and leave the question in the hands of England, France, Germany, and Italy. It was possible, in his opinion, that Servia might propose to submit the question to arbitration. On my expressing the earnest hope that Russia would not precipitate war by mobilising until you had had time to use your influence in favour of peace, his Excellency assured me that Russia had no aggressive intentions, and she would take no action until it was forced upon her. Austria's action was in reality directed against Russia. She aimed at overthrowing the present *status quo* in the Bal-

kans, and establishing her own hegemony there. He did not believe that Germany really wanted war, but her attitude was decided by ours. If we took our stand firmly with France and Russia there would be no war. If we failed them now, rivers of blood would flow, and we would in the end be dragged into war. I said that England could play the rôle of mediator at Berlin and Vienna to better purpose as friend who, if her counsels of moderation were disregarded, might one day be converted into an ally, than if she were to declare herself Russia's ally at once. His Excellency said that unfortunately Germany was convinced that she could count upon our neutrality. I said all I could to impress prudence on the Minister for Foreign Affairs, and warned him that if Russia mobilised, Germany would not be content with mere mobilisation, or give Russia time to carry out hers, but would probably declare war at once. His Excellency replied that Russia could not allow Austria to crush Servia and become the predominant Power in the Balkans, and, if she feels secure of the support of France, she will face all the risks of war. He assured me once more that he did not wish to precipitate a conflict, but that unless Germany could restrain Austria I could regard the situation as desperate."—*B.D.C., no. 17.*

24.—Belgian anxiety.—Determination to maintain neutrality.—Meanwhile Belgium began to show anxiety. On July 24, the day after the Austro-Hungarian ultimatum had been launched at Belgrade, the Belgian foreign minister, M. Davignon, in sending copies of that ultimatum to the Belgian diplomatic representatives at Berlin, London, Paris, St. Petersburg and Vienna, wrote as follows:

"SIR:—The Belgian Government have had under their consideration whether, in present circumstances, it would not be advisable to address to the Powers who guarantee Belgian independence and neutrality a communication assuring them of Belgium's determination to fulfill the international obligations imposed upon her by treaty in the event of a war breaking out on her frontiers. The Government have come to the conclusion that such a communication would be premature at present, but that events might move rapidly and not leave sufficient time to forward suitable instructions at the desired moment to the Belgian representatives abroad. In these circumstances I have proposed to the King [Albert] and to my colleagues in the Cabinet, who have concurred, to give you now exact instructions as to the steps to be taken by you if the prospect of a Franco-German war became more threatening. I enclose herewith a note, signed but not dated, which you should read to the Minister for Foreign Affairs and of which you should give him a copy, if circumstances render such a communication necessary. I will inform you by telegram when you are to act on these instructions. This telegram will be despatched when the order is given for the mobilisation of the Belgian army, if contrary to our earnest hope and to the apparent prospect of a peaceful settlement, our information leads us to take this extreme measure of precaution.

"ENCLOSURE IN No. 2 [Translation].

"Sir: The international situation is serious, and the possibility of a war between several Powers naturally preoccupies the Belgian Government. Belgium has most scrupulously observed the duties

of a neutral State imposed upon her by the treaties of April 10, 1839; and those duties she will strive unflinchingly to fulfil, whatever the circumstances may be. The friendly feelings of the Powers towards her have been so often reaffirmed that Belgium confidently expects that her territory will remain free from any attack, should hostilities break out upon her frontiers. All necessary steps to ensure respect to Belgian neutrality have nevertheless been taken by the Government. The Belgian army has been mobilised and is taking up such strategic positions as have been chosen to secure the defence of the country and the respect of its neutrality. The forts of Antwerp and on the Meuse have been put in a state of defence. It is scarcely necessary to dwell upon the nature of these measures. They are intended solely to enable Belgium to fulfil her international obligations; and it is obvious that they neither have been nor can have been undertaken with any intention of taking part in an armed struggle between the Powers or from any feeling of distrust of any of those Powers. In accordance with my instructions, I have the honour to communicate to your Excellency a copy of the declaration by the Belgian Government, and to request that you will be good enough to take note of it. A similar communication has been made to the other Powers guaranteeing Belgian neutrality.'—*B. G. B., no. 2.*

—See also BELGIUM: 1914: World War.

25.—Reply of Serbian government to Austro-Hungarian note.—To the Austro-Hungarian ultimatum, Serbia replied as follows:

"The Royal Servian Government have received the communication of the Imperial and Royal Government of the 10th instant [old style—July 23], and are convinced that their reply will remove any misunderstanding which may threaten to impair the good neighbourly relations between the Austro-Hungarian Monarchy and the Kingdom of Servia.

"[a] Conscious of the fact that the protests which were made both from the tribune of the national Skupstina [Serbian parliament] and in the declarations and actions of the responsible representatives of the State—protests which were cut short by the declarations made by the Servian Government on the 18th [old style—March 31] March, 1909—have not been renewed on any occasion as regards the great neighbouring Monarchy, and that no attempt has been made since that time, either by the successive Royal Governments or by their organs, to change the political and legal state of affairs created in Bosnia and Herzegovina, the Royal Government draw attention to the fact that in this connection the Imperial and Royal Government have made no representation except one concerning a school book, and that on that occasion the Imperial and Royal Government received an entirely satisfactory explanation. Servia has several times given proofs of her pacific and moderate policy during the Balkan crisis, and it is thanks to Servia and to the sacrifice that she has made in the exclusive interest of European peace that that peace has been preserved.

"[b] The Royal Government cannot be held responsible for manifestations of a private character, such as articles in the press and the peaceable work of societies—manifestations which take place in nearly all countries in the ordinary course of events, and which, as a general rule, escape official control. The Royal Government are all the less responsible, in view of the fact that at the

time of the solution of a series of questions which arose between Servia and Austria-Hungary they gave proof of a great readiness to oblige, and thus succeeded in settling the majority of these questions to the advantage of the two neighbouring countries.

"[c] For these reasons the Royal Government have been pained and surprised at the statements, according to which members of the Kingdom of Servia are supposed to have participated in the preparations for the crime committed at Serajevo; the Royal Government expected to be invited to collaborate in an investigation of all that concerns this crime, and they were ready, in order to prove the entire correctness of their attitude, to take measures against any persons concerning whom representations were made to them.

"[d] Falling in, therefore, with the desire of the Imperial and Royal Government, they are prepared to hand over for trial any Servian subject, without regard to his situation or rank, of whose complicity in the crime of Serajevo proofs are forthcoming, and more especially they undertake to cause to be published on the first page of the 'Journal officiel,' on the date of the 13th (26th) July, the following declaration: 'The Royal Government of Servia condemn all propaganda which may be directed against Austria-Hungary, that is to say, all such tendencies as aim at ultimately detaching from the Austro-Hungarian Monarchy territories which form part thereof, and they sincerely deplore the baneful consequences of these criminal movements.

"[e] The Royal Government regret that, according to the communication from the Imperial and Royal Government, certain Servian officers and officials should have taken part in the above-mentioned propaganda, and thus compromised the good neighbourly relations to which the Royal Servian Government was solemnly engaged by the declaration of the 31st March, 1909, which declaration disapproves and repudiates all idea or attempt at interference with the destiny of the inhabitants of any part whatsoever of Austria-Hungary, and they consider it their duty formally to warn the officers, officials, and entire population of the kingdom that henceforth they will take the most rigorous steps against all such persons as are guilty of such acts, to prevent and to repress which they will use their utmost endeavour.' This declaration will be brought to the knowledge of the Royal Army in an order of the day, in the name of His Majesty the King, by his Royal Highness the Crown Prince Alexander, and will be published in the next official army bulletin.

"[f] The Royal Government further undertake:—1. To introduce at the first regular convocation of the Skupstina a provision into the press law providing for the most severe punishment of incitement to hatred or contempt of the Austro-Hungarian Monarchy, and for taking action against any publication the general tendency of which is directed against the territorial integrity of Austria-Hungary. The Government engage at the approaching revision of the Constitution to cause an amendment to be introduced into article 22 of the Constitution of such a nature that such publication may be confiscated, a proceeding at present impossible under the categorical terms of article 22 of the Constitution.

"[g] 2. The Government possess no proof, nor does the note of the Imperial and Royal Government furnish them with any, that the 'Narodna Odbrana' and other similar societies have committed up to the present any criminal act of this nature

through the proceedings of any of their members. Nevertheless, the Royal Government will accept the demand of the Imperial and Royal Government, and will dissolve the 'Narodna Odbrana' Society and every other society which may be directing its efforts against Austria-Hungary.

"[h] 3. The Royal Servian Government undertake to remove without delay from their public educational establishments in Servia all that serves or could serve to foment propaganda against Austria-Hungary, whenever the Imperial and Royal Government furnish them with facts and proofs of this propaganda.

"[i] 4. The Royal Government also agree to remove from military service all such persons as the judicial enquiry may have proved to be guilty of acts directed against the integrity of the territory of the Austro-Hungarian Monarchy, and they expect the Imperial and Royal Government to communicate to them at a later date the names and the acts of these officers and officials for the purposes of the proceedings which are to be taken against them.

"[j] 5. The Royal Government must confess that they do not clearly grasp the meaning or the scope of the demand made by the Imperial and Royal Government that Servia shall undertake to accept the collaboration of the organs of the Imperial and Royal Government upon their territory, but they declare that they will admit such collaboration as agrees with the principle of international law, with criminal procedure, and with good neighbourly relations.

"[k] 6. It goes without saying that the Royal Government consider it their duty to open an enquiry against all such persons as are, or eventually may be, implicated in the plot of the 15th June, and who happen to be within the territory of the kingdom. As regards the participation in this enquiry of Austro-Hungarian agents or authorities appointed for this purpose by the Imperial and Royal Government, the Royal Government cannot accept such an arrangement, as it would be a violation of the Constitution and of the law of criminal procedure; nevertheless, in concrete cases communication as to the results of the investigation in question might be given to the Austro-Hungarian agents.

"[l] 7. The Royal Government proceeded, on the very evening of the delivery of the note, to arrest Commandant Voislav Tankossitch. As regards Milan Ziganovitch, who is a subject of the Austro-Hungarian Monarchy and who up to the 15th June [old style—June 28] was employed (on probation) by the directorate of railways, it has not yet been possible to arrest him. The Austro-Hungarian Government are requested to be so good as to supply as soon as possible, in the customary form, the presumptive evidence of guilt, as well as the eventual proofs of guilt which have been collected up to the present, at the enquiry at Serajevo for the purposes of the later enquiry.

"8. The Servian Government will reinforce and extend the measures which have been taken for preventing the illicit traffic of arms and explosives across the frontier. It goes without saying that they will immediately order an enquiry and will severely punish the frontier officials on the Schabatz-Loznitza line who have failed in their duty and allowed the authors of the crime of Serajevo to pass.

"9. The Royal Government will gladly give explanations of the remarks made by their officials, whether in Servia or abroad, in interviews after

the crime which according to the statement of the Imperial and Royal Government were hostile towards the Monarchy, as soon as the Imperial and Royal Government have communicated to them the passages in question in these remarks, and as soon as they have shown that the remarks were actually made by the said officials, although the Royal Government will itself take steps to collect evidence and proofs.

"10. The Royal Government will inform the Imperial and Royal Government of the execution of the measures comprised under the above heads, in so far as this has not already been done by the present note, as soon as each measure has been ordered and carried out. If the Imperial and Royal Government are not satisfied with this reply, the Servian Government, considering that it is not to the common interest to precipitate the solution of this question, are ready, as always, to accept a pacific understanding, either by referring this question to the decision of the International Tribunal of The Hague, or to the Great Powers which took part in the drawing up of the declaration made by the Servian Government on the 18th (31st) March, 1909.

"BELGRADE, JULY 12 (25), 1914."

(The italic letters in brackets [a], [b], etc., do not belong to the original text. They have been inserted above merely as a convenient guide to the Austrian government's criticisms of those sections thus marked. [See below: 26.]

"It was 5.45 P.M. when this formal humiliation of a weak nation before a strong one was placed in the hands of Von Giesl, the Austrian minister. That noble gentleman evidently did not feel required to waste much time studying its clauses, to see whether under their 'evasive' and 'unsatisfactory' phrases (so the Vienna papers soon announced) there might not be terms admitting of accommodation and peace. Also little time was wasted telegraphing the document to Vienna and weighing its terms in Franz Josef's cabinet: for practical purposes the Serbs might just as well have flung back brave defiance. At 6.30 P.M. Freiherr von Giesl handed in a note at Belgrade 'that not having received a satisfactory answer within the time limit set, he was leaving Belgrade with the entire staff of the legation.' . . . Diplomatic relations were broken, and the mobilization of troops opposite the Serbian capital and the approach of Austrian river monitors [on the Danube] indicated that bullets would soon supersede protocols. In Buda-Pesth and Vienna there was parading and huzzaing in the streets. Serbia was weak and very much hated. It was generally felt that Russia would not dare to stir in the face of Germany. The short easy war seemed very popular. The invasion of Serbia would be merely a promenade."—W. S. Davis, W. Anderson and M. W. Tyler, *Roots of the war*, p. 499.

26.—Austrian government's criticisms on Serbian reply.—On July 29 the *Norddeutsche Allgemeine Zeitung* published a long message from Vienna, dated July 27, in which the Serbian reply to the ultimatum was reproduced in sections; at the end of each section there appeared a paragraph headed "Comment of the Austro-Hungarian Government." These comments follow: the letters in brackets indicate the sections to which they refer as marked in the preceding division, 25.

"[a] The Royal Servian Government limits itself to the statement that since it made the declaration of March 18, 1909, no effort has been made

by the Servian Government or its officers to alter the position of Bosnia and Herzegovina. Thereby it consciously and willfully evades the grounds on which we base our course, since we did not make the claim that it and its officials had undertaken anything of an official nature along this line. Our grievance rather is this, that it failed to suppress movements directed against the territorial integrity of the monarchy in spite of the pledges made in the note in question. Its pledge consisted of this, that the entire trend of its policies was to be changed and pleasant, neighborly relations with the Austro-Hungarian Monarchy brought about; not merely to refrain from officially taking up the question of Bosnia's belonging to the Austro-Hungarian Monarchy. . . .

"[b] The contention of the Royal Servian Government that utterances of the press and the activities of societies have a private character and are not under the control of the State is contrary to the practice of modern States, even under the freest interpretation of the rights of the press and societies, which are of public legal character and both subject to State supervision. Moreover, Servian practice is to exercise such control. The charge against the Servian Government is that it has entirely failed to inspect its press and societies whose acts hostile to Austria-Hungary were known to it. . . .

"[c] This contention is incorrect. The Servian Government had been carefully advised as to certain definite persons who were suspected, and it was not only in the position but bound by its internal laws to begin an action spontaneously. It did nothing at all along these lines. . . .

"[d] Our demand read as follows: 'The Royal Servian Government condemns the propaganda that is directed against Austria-Hungary. . . .' The change made by the Royal Servian Government in the declaration demanded by us infers that such a propaganda against Austria-Hungary does not exist or that it is unknown to the Royal Government. This formula is not sincere, and conceals something in order that the Servian Government later may reserve an avenue of escape, saying that in its declaration it did not disavow the existence of the present propaganda, and did not recognize it as inimical to the monarchy, whereupon it could mislead further to the contention that it would not be pledged to suppress a propaganda like the present one. . . .

"[e] The formal declaration demanded by us was as follows: 'The Royal Government regrets that Servian officers and functionaries . . . took part in. . . .' Also in this choice of words and in the additional clause 'in accordance with advices from the Austro-Hungarian Government,' it is shown that the Servian Government is carrying out the object indicated above—to allow itself free rein in the future. . . .

"[f] We had demanded: 'The suppression of all publications that arouse people to hatred and contempt for the Austro-Hungarian monarchy and whose tendency is directed against the territorial integrity of the monarchy.' We thus wished to obligate Servia to take measures for having such attacks in the press cease in future; we wished, therefore, to be sure that we had won certain success in this direction. Instead, Servia offers to make certain laws that may lead to the above result, to wit: (a) A law by which the individuals may be punished for above-mentioned statements of the press hostile to the monarchy. This is nothing to us, especially, as it is well known that the punishment of individuals for press misdemeanors

is possible only in very rare cases, and, under a correspondingly lax handling of such a law, even these few would not be punished. Thus this is a suggestion which in no wise answers our demand, and therefore does not offer us the slightest guarantee of the result desired by us. (b) An addition to Article XXII of the Constitution to the effect that confiscation be allowed—a suggestion that likewise must fail to satisfy us, since the existence of such a law in Servia is of no use to us. What would be of use would be the promise of the Government to enforce it, which promise is not made to us. Therefore these suggestions are thoroughly unsatisfactory, all the more so as they are of an evasive nature, since we are not told within what space of time these laws will be enacted, and since if the enactment of the laws should be refused by the Skupstina—to say nothing of the possible resignation of the Government—all would remain as it was. . . .

"[g] The anti-monarchical propaganda of the Narodna Odbrana and the associations affiliated with it fills all public life in Servia; it is therefore a quite unreliable statement on the part of the Servian Government to maintain that it knows nothing about this society. To say nothing of the fact that the demand made by us is not entirely granted, since we furthermore demanded: That the means of propaganda of these associations should be confiscated. That the reorganization of the dissolved associations under other names and in other forms should be prevented. Concerning these two points the Belgrade Government preserves complete silence, so that we have no assurance, in the partial agreement given us, that an end will be put to the anti-Austrian associations, especially of the 'Narodna Odbrana,' by their dissolution. . . .

"[h] Upon this point also the Servian Government demands proof that, in the public instruction courses of Servia, there is an anti-Austrian propaganda, although it must be aware that the books employed in the Servian schools contain such matter, and that a great part of the Servian teachers are in the Narodna Odbrana and affiliated associations. Moreover, in this case also, the Servian Government has not met a part of our demands, since, in its text, it left out this addition desired by us, 'as well as the body of teachers and the means of teaching are concerned'—an addition which clearly shows where the anti-Austrian propaganda in the Servian schools is to be sought. . . .

"[i] In view of the fact that the Royal Servian Government makes the discharge of the officers and employes in question from military and civil service dependent on whether they are found guilty after trial, its accession to our demand is limited to those cases where such persons have committed acts laying them open to legal penalties. Since, however, we demand the elimination of those officers and employes who are making an anti-Austrian propaganda, which in Servia is not usually punishable by law, it would seem that in this case also our demands have not been met. . . .

"[j] International law has as little to do with this question as criminal procedure. The question is purely one of national policing, to be solved by special agreement. Servia's statement is, therefore, incomprehensible and, on account of its vague form, would give rise to insurmountable difficulties if an endeavor were made to arrange the agreement. . . .

"[k] Our demand was perfectly clear and not to be misunderstood. We wished: (1) The institution of a legal investigation against those impli-

cated in the plot. (2) That Austro-Hungarian representatives should take part in the investigation, ('recherche,' in contradistinction to 'enquête judiciaire.') (3) We did not desire that Austro-Hungarian representatives take part in the Servian legal proceedings; all we wished them to do was to co-operate in the police preliminaries, and help get together and corroborate the evidence for the investigation. If the Servian Government misunderstands us it does so purposely, since the difference between 'enquête judiciaire' and the simple 'recherches' must certainly be plain to it. Since it wished to be free of all control in the proceedings to be instituted, which, if properly conducted, would have results highly undesirable for it, and as it has no loophole for plausibly declining our co-operation in the police proceedings (analogous cases for such police intervention exist in great number) it has taken a ground that gives to its refusal the appearance of right and to our demand the stamp of impossibility. . . .

"[I] This answer is insincere. Ciganovic, according to our investigation, went on a furlough three days after the crime, when it became known that he was concerned in the plot, and repaired to Ribari in the service of the Prefect of Police of Belgrade. So that it is incorrect to say that, between June 15 and 28, Ciganovic was already out of the Servian service. To this must be added that the Prefect of Police of Belgrade, who himself had brought about the departure of Ciganovic, and who knew where the latter was, declared in an interview that there was no man of the name of Milan Ciganovic in Belgrade."—*Norddeutsche Allgemeine Zeitung*, July 29, 1914.—See also AUSTRIA-HUNGARY: 1914-1915.

27.—British protest against Austrian aggressive attitude.—On July 27 both Count Mensdorff, the Austrian ambassador to London, and the German ambassador had interviews with Sir Edward Grey, upon which Sir Edward Grey wrote to the British ambassador at Vienna as follows:

"No. 48. SIR E. GREY TO SIR M. DE BUNSEN, BRITISH AMBASSADOR AT VIENNA . . . JULY 27, 1914:

"Sir: Count Mensdorff told me by instruction to-day that the Servian Government had not accepted the demands which the Austrian Government were obliged to address to them in order to secure permanently the most vital Austrian interests. Servia showed that she did not intend to abandon her subversive aims, tending towards continuous disorder in the Austrian frontier territories and their final disruption from the Austrian Monarchy. Very reluctantly, and against their wish, the Austrian Government were compelled to take more severe measures to enforce a fundamental change in the attitude of enmity pursued up to now by Servia. As the British Government knew, the Austrian Government had for many years endeavoured to find a way to get on with their turbulent neighbour, though this had been made very difficult for them by the continuous provocations of Servia. The Serajevo murder had made clear to everyone what appalling consequences the Servian propaganda had already produced and what a permanent threat to Austria it involved. . . . Finally, the Austrian Government, confiding in their amicable relations with us, felt that they could count on our sympathy in a fight that was forced on them, and on our assistance in localising the fight, if necessary. . . . He reiterated that Austria had no intention of taking Servian territory or aggressive designs

against Servian territory. I said that I could not understand the construction put by the Austrian Government upon the Servian reply, and I told Count Mensdorff the substance of the conversation that I had had with the German Ambassador [see below: 31] this morning about that reply. Count Mensdorff admitted that, on paper, the Servian reply might seem to be satisfactory; but the Servians had refused the one thing—the co-operation of Austrian officials and police—which would be a real guarantee that in practice the Servians would not carry on their subversive campaign against Austria. I said that it seemed to me as if the Austrian Government believed that, even after the Servian reply, they could make war upon Servia anyhow, without risk of bringing Russia into the dispute. If they could make war on Servia and at the same time satisfy Russia, well and good; but, if not, the consequences would be incalculable. . . . It seemed to me that the Servian reply already involved the greatest humiliation to Servia that I had ever seen a country undergo, and it was very disappointing to me that the reply was treated by the Austrian Government as if it were as unsatisfactory as a blank negative."—*B. D. C.*, no. 48.

28.—First declaration of war: Austria-Hungary against Serbia.—Dismissal of Serbian minister from Vienna.—"On Tuesday (July 28) war was at last declared. The declaration was sent in the most contemptuous and discourteous form, by means of an open telegram to the Servian Government."—*Headlam*, p. 173.—The fateful document launched by Count Berchtold read as follows:

"The Royal Government of Serbia, not having replied in a satisfactory manner to the Note which had been delivered to it by the Austro-Hungarian Minister at Belgrade, which Note was dated July 23, 1914, the Imperial and Royal Government finds itself under the necessity of providing for the safeguarding of its own interests and, to that end, to have recourse to the force of arms. Austria-Hungary therefore considers itself from this moment in a state of war with Serbia.

"*The Minister for Foreign Affairs,*
"COUNT BERCHTOLD."

On the same day the Serbian minister in Vienna received his passports with the following note:

"As no satisfactory reply has been given to the note which the Imperial and Royal Minister Extraordinary and Plenipotentiary handed to the Royal [Serbian] Government on the 10/23 instant, I have been compelled to instruct Baron Giesl to leave the Servian capital and to entrust the protection of the subjects of His Imperial and Royal Apostolic Majesty to the German Legation. I regret that the relations which I have had the honor to maintain with you, M. le Ministre, are thus terminated, and I avail myself of this opportunity to place at your disposal the enclosed passports for your return to Servia, as well as for the return of the staff of the Royal Legation. [Signed] BERCHTOLD."—*S. B. B.*, no. 42.

29.—Imperial rescript on Austro-Serbian quarrel.—Austrian version.—On the same day (July 28) the official Austro-Hungarian version of the dispute was set forth in an Imperial Rescript and Manifesto signed by the late Emperor Francis Joseph and addressed to Count Stürgkh, Austrian prime minister:

"ISCHL, JULY 28.

"DEAR COUNT STÜRGKH:

"I have resolved to instruct the Ministers of my Household and Foreign Affairs to notify the Royal Servian Government of the beginning of a state of war between the Monarchy and Servia. In this fateful hour I feel the need of turning to my beloved peoples. I command you, therefore, to publish the inclosed manifesto: 'To my peoples! It was my fervent wish to consecrate the years which, by the grace of God, still remain to me, to the works of peace and to protect my peoples from the heavy sacrifices and burdens of war. Providence, in its wisdom, has otherwise decreed. The intrigues of a malevolent opponent compel me, in the defense of the honor of my Monarchy, for the protection of its dignity and its position as a power, for the security of its possessions, to grasp the sword after long years of peace. With a quickly forgetful ingratitude, the Kingdom of Servia, which, from the first beginnings of its independence as a State until quite recently, had been supported and assisted by my ancestors, has for years trodden the path of open hostility to Austria-Hungary. When, after three decades of fruitful work for peace in Bosnia and Herzegovina, I extended my Sovereign rights to those lands, my decree called forth in the Kingdom of Servia, whose rights were in nowise injured, outbreaks of unrestrained passion and the bitterest hate. My Government at that time employed the handsome privileges of the stronger, and with extreme consideration and leniency only requested Servia to reduce her army to a peace footing and to promise that, for the future, she would tread the path of peace and friendship. Guided by the same spirit of moderation, my Government, when Servia, two years ago, was embroiled in a struggle with the Turkish Empire, restricted its action to the defense of the most serious and vital interests of the Monarchy. It was to this attitude that Servia primarily owed the attainment of the objects of that war. The hope that the Servian Kingdom would appreciate the patience and love of peace of my Government and would keep its word has not been fulfilled. The flame of its hatred for myself and my house has blazed always higher; the design to tear from us by force inseparable portions of Austria-Hungary has been made manifest with less and less disguise. A criminal propaganda has extended over the frontier with the object of destroying the foundations of State order in the southeastern part of the monarchy; of making the people, to whom I, in my paternal affection, extended my full confidence, waver in its loyalty to the ruling house and to the Fatherland; of leading astray its growing youth and inciting it to mischievous deeds of madness and high treason. A series of murderous attacks, an organized, carefully prepared, and well carried-out conspiracy, whose fruitful success wounded me and my loyal peoples to the heart, forms a visible bloody track of those secret machinations which were operated and directed in Servia. A halt must be called to these intolerable proceedings and an end must be put to the incessant provocations of Servia. The honor and dignity of my monarchy must be preserved unimpaired, and its political, economic, and military development must be guarded from these continual shocks. In vain did my Government make a last attempt to accomplish this object by peaceful means and to induce Servia, by means of a serious warning, to desist. Servia has rejected the just and moderate demands of my Government and refused to con-

form to those obligations the fulfillment of which forms the natural and necessary foundation of peace in the life of peoples and States. I must therefore proceed by force of arms to secure those indispensable pledges which alone can insure tranquillity to my States within and lasting peace without. In this solemn hour I am fully conscious of the whole significance of my resolve and my responsibility before the Almighty. I have examined and weighed everything, and with a serene conscience I set out on the path to which my duty points. I trust in my peoples, who, throughout every storm, have always rallied in unity and loyalty around my throne, and have always been prepared for the severest sacrifices for the honor, the greatness, and the might of the Fatherland. I trust in Austria-Hungary's brave and devoted forces, and I trust in the Almighty to give the victory to my arms.

"FRANZ JOSEF."

30.—Austrian emperor and the outbreak of war.—Opposition to ultimatum.—Intimate picture of fateful days.—Nevertheless, it was believed that the aged monarch was opposed to the war. In 1921, the Vienna correspondent of *The Times* (London), contributed to his paper some extracts from Lieutenant-General von Margutti's book, "Vom alten Kaiser," showing the monarch's futile opposition to the Serbian ultimatum. It may be mentioned that the "Frau Schrott" referred in the book was the old emperor's most intimate companion in his later days. "From the very first," says von Margutti (who was attached to the emperor's staff), "the initiated had no doubt whatever that the aged Kaiser was entirely opposed to the war. The whole court was penetrated by this conviction. 'Thus Count Paar, the general aide-de-camp, told me in the critical stage that the Emperor was terrified over the outbreak of war. When I remarked cogently that he ought therefore to have avoided it, Paar could make no other reply than to lay the blame on the Foreign Minister, Count Berchtold. Subsequently Paar sought to exculpate him also from the collective responsibility, and laid it on Berchtold's collaborators at the Foreign Office, Counts Forgach and Hoyos, the Ministers von Musulin and Wiesner, further, the Joint Finance Minister, von Bilinski, and, last but not least, the Chief of the General Staff, Conrad von Hoetzendorf. Frau Schrott frequently expressed herself to me in similar terms on the strength of direct remarks made to her by the Emperor. She laid especial emphasis on the fact that the Kaiser had been absolutely opposed to any war, that he would never have let one loose, and that he would never even have thought of an ultimatum, had not Germany, in the person of Herr von Tschirschky, insisted on it. Kaiser Francis Joseph had, she said, expressly stated that Germany had categorically demanded the sharp form of the ultimatum to Servia, which finally led to war. The German method of procedure, excluding all conciliation, had also found weighty supporters in Vienna, at the head being the all-powerful Lord High Steward, Prince Montenuovo, who with his partisans finally succeeded in breaking down the Kaiser's originally fixed love of peace.' Frau Schrott smiled and shrugged her shoulders when General Margutti reminded her that Count Berchtold had publicly stated that Germany had only been informed of the contents of the ultimatum after it had been dispatched. The Kaiser had, she said, told her, not once, but repeatedly, that he was utterly and en-

tirely opposed to the ultimatum, and had only allowed it to be sent in order to please Germany. General Margutti gives a vivid account of a family dinner at Ischl on the fateful Saturday, July 25, 1914. In order to grasp its importance it must be recalled that after the burial of the murdered Franz Ferdinand, the Kaiser retired to his summer residence at Ischl, near Salzburg. It was there that the Emperor received the news from Vienna that a great Serb conspiracy had been discovered and that on July 7 a Cabinet Council had decided on taking diplomatic steps against Serbia. It was only due to Tisza's warnings that a blow was not struck at once. Three weeks went by, at the end of which Count Paar showed Margutti the proposed ultimatum and asked him what he thought of it. 'It means war,' said the latter. After long discussion Paar came round to Margutti's opinion and endeavoured to have a committee of the Delegations consulted. Berchtold, however,

FRANCIS JOSEPH

overrode all objections and dispatched the ultimatum on Thursday, July 23. Two days were allowed Serbia in which to reply. The two days went by. On the Saturday, the critical day, the Duke of Cumberland and his family were . . . over from Gmünden to lunch with the Kaiser. . . . 'From my seat at table,' writes Margutti, 'I was able to watch the aged monarch closely during the meal. It was not difficult, to see how completely absent were his thoughts and how he had to collect them in order to keep up the necessary conversation with his neighbours and perform his duties as host. As though by arrangement, no allusion was made to the Serbian affair.' Margutti went to the Chancery, where Count Berchtold joined him from 5:30 to 6:45 silently waiting for tidings from Vienna. No sooner had Berchtold gone than the fateful news came. Margutti rushed with it to the villa. The Kaiser's agitation was extreme. His hands trembled so violently that he could hardly put on his spectacles. His voice completely changed. His remark that rupture of diplomatic relations did not necessarily mean war was unhappily not fulfilled. . . . From the very first day

of the war, Francis Joseph was, says General Margutti, pessimistic. Among the congratulatory telegrams on August 18 was one from the Chief of the Rumanian General Staff, wishing success in the war. On reading it the Kaiser mournfully shrugged his shoulders and remarked:—'Will this war have a happy issue for us? Already everything points the other way!'—*The Times* (London), July 5, 1921.

31.—Austrian precipitation of war.—Italian efforts at compromise.—Russia involved.—Bethmann-Hollweg to Tschirschky on British attitude (July 27).—Pledge plan.—Bethmann-Hollweg on peace proposals.—Ministerial council at Vienna (July 31).—'Had Austria accepted the Serbian reply as satisfactory, she would have secured a notable diplomatic victory and would probably have been able to cripple Serb influence so effectively as to nullify the effect of the Treaty of Bukarest [or Bucharest, Aug. 10, 1913 (see BULGARIA: 1913: Second Balkan War)] and reestablish her own influence in the Balkans; she would have punished Serbia for the murder of the Archduke and would have received guarantees for the future. But Austria was apparently determined that her troops should enter Serbia and to all appearances had made up her mind to find the Serb reply unsatisfactory. The Austrian Minister in Belgrade spent only forty minutes in an examination of the document, supposed to be of all-importance, declared it unsatisfactory, and immediately left for Vienna. At the moment, no reason was given for the rejection of Serbia's response, and it was not until July 28, that a brief note explained that the Serb answer made no real concessions, and was entirely evasive in character. Once more Serbia attempted to avert the open hostilities that threatened. On July 28, the Serbian *Chargé d'affaires* at Rome made a proposition to the Italian Foreign Minister which displayed Serbia's eagerness to find any solution, no matter how humiliating for herself: 'If some explanation were given regarding the mode in which Austrian agents would require to intervene . . . Serbia might still accept the whole Austrian note.' And the Italian Minister suggested that if Austria considered that she would compromise her dignity by giving explanations to Serbia, she might communicate them to the Powers, who would pass them on to Serbia. But Austria would not consider this last proposal and . . . [at noon] of July 28, declared war on Serbia. Everything now depended upon the attitude taken by Russia.'—C. Seymour, *Diplomatic background of the War, 1870-1914*, pp. 259-260.—'On Monday night [July 27] Bethmann telegraphed to Tschirschky at Vienna the full text of Lichnowsky's report of his latest conversation with Grey. Grey had pointed out the conciliatory character of Serbia's answer, hoped Austria would not begin hostilities, and said that he was urging moderation at Petrograd, and that Germany ought to do likewise at Vienna. After emphasizing the bad impression which a further refusal of all mediation would make, Bethmann added: 'We cannot reject the rôle of mediator and must place the English proposal before the Vienna Cabinet for its consideration. Request Count Berchtold's opinion on the British proposal, as well as on Sazonov's wish to negotiate directly with Vienna.' [See below: 69.] The basis on which the Kaiser was willing to act the mediatory rôle between Russia and Austria is what may be called the 'pledge plan.' Though he had been greatly impressed with the extremely conciliatory character of Serbia's reply, when it finally came to him on Tuesday morning, he never-

theless thought Austria ought to have some pledge as a guarantee that the Serbs would live up to their conciliatory promises. Tuesday night the mediatory proposal which he sketched was embodied by Bethmann in the following telegram to Vienna: [aside from a declaration to Russia that it intends no territorial acquisition in Serbia] 'the Austro-Hungarian Government, in spite of repeated questions as to its purposes, has left us in the dark. The answer now at hand of the Serbian Government to the Austrian ultimatum makes it evident that Serbia has in fact met the Austrian demands in so wide-reaching a manner that if the Austro-Hungarian Government adopted a wholly intransigent attitude, a gradual revulsion of public opinion against it in all Europe would have to be reckoned with. . . . [Russia will be satisfied] if the Vienna Cabinet repeats in Petrograd the definite declaration that territorial acquisitions in Serbia lie far from its purpose, and that its military measures aim solely at a temporary occupation of Belgrade and other definite points of Serbian territory in order to compel the Serbian Government to a complete fulfilment of the demands and to serve as guarantees for future good behavior to which Austria-Hungary unquestionably has a claim after her experiences with Serbia. The occupation could be regarded like the German occupation in France after the Peace of Frankfort as security for the demand of the war indemnity. As soon as the Austrian demands were fulfilled, a withdrawal would follow. . . . You are immediately to express yourself in this sense to Count Berchtold emphatically and have him take the proper step in Petrograd. You are carefully to avoid giving the impression that we wish to hold Austria back. It is solely a question of finding a method which will make possible the accomplishment of Austria's purpose of cutting the vital nerve of Great Serbian propaganda without at the same time unchaining a world war, and in the end, if this is unavoidable, of improving as far as practicable the conditions under which it is to be waged. Wire reply.' To this telegram Bethmann had received no reply by Wednesday evening at the time of the military council at Potsdam, even though twenty-four hours had elapsed, and telegrams even at this time of crowded wires ordinarily were transmitted between Vienna and Berlin within three or four hours. Therefore he sent on Wednesday evening three more telegrams to secure an immediate answer. In the meantime, however, while he could get no answer from Vienna on the 'pledge plan,' he began to receive reports from the other capitals which seemed to indicate bad faith or stupidity on the part of his ally. . . . On Wednesday afternoon, July 29, while still waiting in vain for a reply from Berchtold as to the 'pledge plan,' Bethmann took up two more peace proposals which had been suggested, and supported both energetically at Vienna. One was the suggestion from Sazonov for a negotiation by 'direct conversations' between Vienna and Petrograd. Bethmann had already handed this suggestion on to Vienna without comment as soon as it had been received by him on July 27. But it had been at once flatly rejected by Berchtold, because Sazonov had intended that the direct conversations should take up modifications of the terms of Austria's ultimatum. Berchtold was determined not to enter into any negotiations which might touch the 'local' issues existing purely between Austria and Serbia. As an additional reason for his refusal to 'converse directly' on Austro-Serbian relations, he pointed out that the time for a peaceful settlement of those relations was passed, since the declaration

of war and the opening of hostilities had already taken place. As a result 'direct conversations' between Vienna and Petrograd had come to a halt on July 28, with the result that Sazonov was much incensed. . . . How far Berchtold . . . was from the slightest intention of really and honestly yielding to mediation and stopping the Austrian advance in Serbia is . . . unmistakably revealed in the protocol of the minutes of the ministerial council held on Friday morning, July 31. After stating Grey's last proposal and Bethmann's strong urging that it be accepted [see below: 38], Berchtold pointed out that experience showed that mediatory powers always tried to reach a compromise by forcing one power to pare down the conditions it had made. It was probable that they would attempt this now also, when in the present conjuncture France, England, and Italy also would represent the Russian standpoint, and we [Austria] should have a very doubtful support in the present German ambassador in London. . . . If the action should end now merely with a gain of prestige, it would in his opinion have been undertaken wholly in vain. From a mere occupation of Belgrade we should gain absolutely nothing, even if Russia should give her consent to it. All this would be mere tinsel [*Flitterwerk*]. Russia would come forward as the savior of Serbia, and especially of the Serbian army. The latter would remain intact, and in two or three years we should again have to look forward to the attack on Serbia under much more unfavorable conditions. He had therefore had an audience with Francis Joseph. His Majesty had at once declared that there could be no check placed upon military operations, but accepted the proposal 'that we should carefully avoid accepting the English proposal in actual substance, but that in the form of our answer, we should pretend to be ready to meet it. . . .' Berchtold's colleagues agreed with him or went even further. Tisza, who had now completely changed his attitude, made no opposition. To Stürgkh 'the very thought of a mediatory conference was so odious that he preferred to avoid even the pretense of accepting one.' Bilinski was equally hostile to a conference, because 'the course of the London Conference was so horrible to recall to memory, that all public opinion would reject the repetition of such a spectacle.'"—*Fay, II, pp. 41-43, 47-48.*

32.—War guilt of Count Berchtold.—His falsification of records.—"Following the publication by the Austrian Foreign Office [in 1919] of the first part of a Red Book giving the official documents found in the Austro-Hungarian archives which recorded the events leading up to the outbreak of the World War, certain Hungarian publicists seized upon the report of the joint ministerial council of July 7, 1914, in Vienna [see above: 13] . . . as evidence that the late Count Stephan Tisza, then Premier of Hungary, through his objections to the procedure of the council, had shown himself a lover of peace. But the second and third parts of the Austrian Red Book, published in December, 1919, showed that, although the Count had been cautious at the first council, at the second, held on July 19, he had been already converted to the doctrine of force and entered heartily into the plans for aggression. The Vienna *Arbeiter-Zeitung*, in its issue of Dec. 27, 1919, devoted a long article to the Red Book, and asserted that its contents also proved that Count Leopold von Berchtold, who, as Austro-Hungarian Foreign Minister, presided over the council of July 7 and constantly urged war upon Serbia, was guilty of wholesale falsifications in his work of 1915, called 'The Diplo-

matic Documents of the Antecedents of the War.' How quickly Count Tisza was converted to the plan to coerce Serbia, regardless of consequences, says this Austrian Socialist newspaper, is shown by the following 'very secret' report sent to Berlin on July 14, 1914, by von Tschirschky, the German Ambassador in Vienna: 'Count Tisza looked me up today after his conversation with Count Berchtold. The Count said that he had always been the one so far who had counseled caution, but that every day strengthened in him the sentiment that the monarchy [Austria] must come to an energetic decision in order to show its vitality and to put an end to the intolerable conditions in South Slavia. 'It was with difficulty that I decided to advise war,' said the Minister, 'but I am now firmly convinced of its necessity and I shall work with all my strength for the greatness of the monarchy. . . . *The note to Serbia will be so worded that an acceptance is as good as excluded.*' . . . At the close Tisza warmly shook my hand and said: 'Now, united, we shall calmly and firmly face the future' On July 24, 1914, the Hungarian Premier telegraphed to Berchtold as follows: 'I ask your Excellency to emphasize, in my name if necessary, that in case of no satisfactory answer from Serbia it would be imperatively necessary immediately to order mobilization. Any hesitation in this matter would be bound up with fateful consequences.' In taking up the case of Count Berchtold's Red Book of 1915, the *Arbeiter-Zeitung* remarks that while the Count only mentioned sixty-four official documents covering the period from May 29 to Aug. 24, 1914, the Foreign Office's publication gives 352 for the period from July 2 to Aug. 27, 1914. Furthermore, it avers that Count Berchtold not only omitted many important documents from his book, but he also 'touched up' the dispatches which he printed so as to make the reader believe that the World War had been willed by the Entente and that the central empires were the innocent victims. Then the Vienna newspaper proceeds to cite some examples of the Count's work, as follows: 'Through the entire course of the negotiations before the outbreak of the war there runs the assertion that Serbia had already ordered general mobilization on July 25, 1914, at 3 o'clock in the afternoon. So Grey's efforts for peace were answered on July 26, [Berchtold to Count Mensdorf, the Austrian Ambassador in London], 'that almost at the same time as he [Grey] had directed his note to Prince Lichnowsky [German Ambassador in London], that is, yesterday at 3 o'clock, Serbia had already ordered general mobilization, which shows that in Belgrade there was no inclination toward a friendly arbitration of the matter.' On July 28 Berchtold again notified Count Mensdorf in London that: 'Your Excellency will lay great emphasis in your conversation with Sir Edward Grey upon the circumstance that the general mobilization of the Serbian Army was ordered for the 25th at 3 P. M.; we had not previously made any military preparations, but were forced by the Serbian mobilization to go into them on a big scale.' But what was the real situation regarding the Serbian order? On July 24, 1914, Baron von Giesl sent a really extremely belligerent report from Belgrade to Berchtold, which nevertheless contained the following: 'Serbia's present military weakness, due to the uncertain and sacrifice-entailing situation in New Serbia, even if not overlooked by far-sighted politicians, is regarded even by them as a *quantité négligéable*, just because the Monarchy, for internal and external reasons, is considerably feeble and incapable of any

energetic action. That the serious words already spoken by our authoritative officials are regarded as a bluff is evident from the fact that no measures for preparing the army—or at least none worth speaking of—are being taken; the reservists are being dismissed without arms in small groups from New Serbia to Old Serbia, and no arrangement has yet been made for the mobilization of the second levy. All reports to the contrary are thus far lacking confirmation.' . . . On July 25, 1914, Berchtold gave instructions to Ambassador Count Szapary in Petrograd. . . . Count Szapary was instructed by Berchtold to tell Sazonov [the Russian foreign minister] 'that we are going to the limit in order to put through our demands and do not even shrink from the possibility of European complications.' These last words, which plainly show that the . . . [Austrian government] knew very well whither they were driving, Berchtold omitted. The world has been told that the Russian policy of those days was absolutely belligerent; the version, as is known, ran that Russia had 'suddenly fallen upon' the innocent Central Powers. But on July 26, 1914, Szapary reported to Berchtold on the sentiment in Petrograd and about his interview with Sazonov, and in this report were the following sentences: 'Had impression of great nervousness and worry. Consider desire for peace sincere, military declarations in so far correct that complete mobilization has, indeed, not been ordered, but preparatory measures very far reaching. They were plainly trying to gain time for fresh negotiations and for continuation of the work of arming. The internal situation also gives undeniable cause for serious worry. Main feature of the sentiment, hope in Germany and mediation by his Majesty. Although the immediate information of the German Military Attaché indicates nervousness on the part of Sazonov, and mobilization only against Austria in case the Serbian border is crossed, rather seems to betray the intention of exercising diplomatic pressure, there must not be left out of the calculation, together with the falsity of promises here, the lack of unity between the diplomatic and the military procedures, as well as the importance of gaining time for the Russian mobilization.' All this left out, falsified away! Berchtold omitted the following parts from Szapary's report of his conversation with Sazonov to Berchtold of July 27. (The report is only a couple of lines in length in the Berchtold Red Book; the correct report occupies, in a true reproduction, more than three pages!): 'M. Sazonov received me, in contrast with his very impatient attitude on Friday, very amiably. He referred to the above-mentioned communications of Count Pourtalès [German ambassador at Petrograd] and said if I had not announced myself he would have asked me to call upon him, so as to talk openly with me once. Friday he had been somewhat surprised and had not controlled himself as well as he could have wished, and then our conversation surely was only a purely official one.' Here follow the declarations of the Ambassador, after which he reports on Sazonov's answer: 'M. Sazonov animatedly agreed with me and showed himself uncommonly pleased over the tendencies of my statements. He made many promises that in Russia, not only he, but the whole Cabinet and, what is of the most weight, the sovereign, were animated with the same feelings toward Austria-Hungary. He could not deny that in Russia old grudges were entertained against the Monarchy; he, too, had them, but still this all belonged to the past and must not play any rôle in practical politics; and so far as the Slavs were concerned, indeed he

ought not to tell this to the Austro-Hungarian Ambassador, but he had no feelings for the Balkan Slavs. They were even a heavy burden for Russia and we could hardly imagine what one had already had to endure for them. Our aim, as I had described it to him, was perfectly legitimate, but he opined that the way in which we were seeking to accomplish it was not the safest. . . . At the close of his interview M. Sazonov again expressed, in the warmest terms, his joy over the explanations that I had given and that had materially calmed him. He will also report this to Emperor Nicholas, whom he will see day after tomorrow on his reception day.' This is, as we have said, the report of the Austro-Hungarian Ambassador and it certainly does not indicate any insuperable desire for war by Russia. Naturally Berchtold couldn't use this, so he falsified it away. And now another example of how everything was twisted around through lying. Berchtold's last crime, as is known, was the rejection of Grey's proposal of mediation, which was sent to him by the German Imperial Chancellor through Tschirschky—because it was made by Grey to the German Ambassador. In his circular telegram to the Ambassadors in Berlin, London and Petrograd Berchtold reproduced the report of Tschirschky, and in it there was also the following: 'To the Italian Ambassador, whom Sir E. Grey received shortly after Prince Lichnowsky, the English Secretary of State said he believed he could procure every possible satisfaction for Austria-Hungary. There would be no question of a meek drawing back by Austria-Hungary, as the Serbs under all circumstances would be chastised and, with the consent of Russia, be compelled to subordinate themselves to the Austro-Hungarian desires. Therefore, Austria-Hungary could obtain guarantees for the future also without unchaining a World War.' Thus the world, even the Austro-Hungarian world, would have recognized, even then, that the rejection of this proposal was a crime and a piece of insanity. Therefore, Berchtold suppressed this entire section, simply falsified it away." —*New York Times Current History*, Apr., 1920, pp. 157-159.

33.—Russian opposition to localization of dispute (July 28-31).—Pressure on England by France and Russia.—Russian crown council (July 26).—Russian mobilization, German "Threatened State of War" (July 31).—German mobilization (August 1).—Report by British ambassador on Russian mobilization.—"Turning point" interview between Sazonov and Pourtalès, German ambassador at St. Petersburg. — Austrian mobilization. — "The short time-limit, the withholding of the *dossier*, and the excessive and humiliating demands on Serbia, all seemed to indicate that Austria was determined on war at once with Serbia. It was particularly deceitful on Austria's part to have pretended for three weeks that the demands would be mild, and such as Serbia could surely accept, and then to face the little kingdom with an ultimatum which seemed to indicate that Austria wanted war and would soon cross the frontier into Serbian territory. Moreover, Poincaré and the French prime minister had only left Russia a few hours before. They were now on the high seas, where it was difficult, if not impossible, for Sazonov to get into touch with them. Furthermore, he shrewdly suspected that much that Szápáry had asserted was not true. But he did not know for certain, as we do now, how perfidiously Berchtold had acted in carefully suppressing the Wiesner report, which wholly exculpated the Serbian govern-

ment, in deliberately framing the ultimatum so that Serbia could not accept it, and in holding back the *dossier*, because an impartial examination of it by Europe would not have borne out Austria's charges. Therefore, Sazonov concluded that his own wisest course was to seek to have the Austro-Serbian question treated as a question in which Europe was interested. He must not allow the 'localization,' which meant the inevitable humiliation or defeat of a small power by a great one. Accordingly, after his interview with Szápáry on Friday morning, Sazonov hurried at once to the French embassy, after telephoning to the British ambassador to join him there. Sazonov, Paléologue, and Buchanan went over the situation carefully. Sazonov said that he regarded 'Austria's conduct as both provocative and immoral; that Austria would never have taken such action unless Germany had first been consulted and he hoped that England would not fail to proclaim her solidarity with Russia and France.' . . . This discussion between the three representatives of the Triple Entente reveals the situation which became clearer as the crisis became more serious: France and Russia pressed England to join them in a statement of solidarity, which could be used as an effective counter-bluff, or even as a threat, to prevent Austria and Germany from acting against Serbia. But to this Buchanan and Grey would not, at first, agree. They did not encourage Russia's strong action by holding out the hope of British armed support, as so many Germans have asserted. On the contrary, Sir Edward Grey was very reserved and cautious as to saying or doing anything which might encourage Russia to mobilize and so precipitate a crisis. All his thoughts and efforts were directed toward finding some peaceful solution for the crisis and avoiding anything which might aggravate it. They are too well known to need repeating here. It was only very gradually, as Germany and Austria deliberately blocked all his earlier peace proposals, that Grey became finally convinced of the *mala fides* of the Central Powers and consequently began to give Lichnowsky the 'friendly warnings.' . . . In a somewhat stormy interview . . . [Sazonov argued that the affair] was a European one and not one to be 'localized'; it was for Europe to examine the *dossier* and investigate whether Serbia had lived up to her promises or not. Austria could not be both prosecutor and judge. These arguments Pourtalès promised to report to Berlin. . . . Finally Sazonov exclaimed, 'If Austria gobbles up Serbia, we shall make war on her.' . . . [On July 25 an important Crown Council was held, at which the czar presided. We have no precise record of what took place at this council but] at least two definite decisions were taken. First, it was agreed that the troops throughout the empire should at once be recalled from their summer training camps to their standing quarters. . . . The second decision taken by the Crown Council was one desired by Sazonov and is probably accurately indicated by the account of it which he gave to the French: At the council of ministers of the twenty-fifth, which was held in the presence of the Tsar, the mobilization of thirteen army corps intended eventually to operate against Austria was considered; this mobilization, however, would only be made effective if Austria were to bring armed pressure to bear upon Serbia and not until after notice had been given by the Minister of Foreign Affairs upon whom falls the duty of fixing the day, liberty being left to him to go on with negotiations, even if Belgrade should be occupied. Russian opinion makes clear that it is both politically

and morally impossible for Russia to allow Serbia to be crushed. . . . In other words, for the Tsar, Sazonov, and all the diplomats, this Crown Council meant that Russia intended to threaten Austria with a 'partial mobilization' in case Austria crossed the Serbian frontier. But even this partial mobilization was to take place only if and when Sazonov should decide it should be done. And even if Belgrade were occupied, he might still continue to negotiate for peace. He did not need to break off diplomatic relations with Austria nor yield to the militarists in his own country. . . . The suggestion of 'direct conversations' between Petrograd and Vienna, as the most hopeful way out of the crisis, was a sincere and well-meant effort of the German ambassador. But, as we now know from Berchtold's intentions, there was not the slightest possibility of Austria's being willing to modify even the phraseology of her demands. As it turned out, his refusal of the 'direct conversations' tended to the embitterment, rather than to the amelioration, of the relations between Russia and Austria. . . . Neither Pourtalès nor Eggeing had been told anything of the decision which Russia had made for 'general mobilization' on July 30. They knew nothing of it until the next morning after the news had already been printed in the Russian newspapers and been posted up in the streets. As soon as Eggeing learned of it, he hastened to Pourtalès, who sent off a despatch at 10:20 A. M.: 'General mobilization of the army and navy ordered. First mobilization day, July 31.' This reached Berlin at 11:40 A. M. Bethmann telephoned it to the Kaiser at Potsdam. The Kaiser motored at once to Berlin and in a meeting with Bethmann and the militarists decided about 1:00 P. M. to order the 'Threatened State of War.' Until the arrival of this official despatch from Pourtalès, confirming the German suspicions that Russia had been secretly mobilizing, Bethmann had been able to restrain the Kaiser and the militarists from taking any irremediable military steps; but with 'Threatened State of War,' the whole German military machine was set in swiftest possible motion, though formal mobilization was not declared until the following day. The militarists were now in complete control. In Berlin, as well as in Petrograd, war was now inevitable. Neither the 'Russian formula' which Sazonov had proposed to Pourtalès, nor the personal appeal which Pourtalès made on his own initiative to the Tsar at Peterhof, nor the Kaiser's efforts at Vienna, nor Sir Edward Grey's efforts, could have any possible chance of success. If the German government, on July 31, had really desired peace, it would have been possible for it simply to answer Russian mobilization by German mobilization, and stand on the defensive. But the German militarists insisted that mobilization meant war and therefore Bethmann despatched the ultimata to Russia and to France, to which but one answer was possible on their part."—*Fay, III, pp. 230-234, 238-239, 251, 254.*—On the 29th we find the British ambassador, Buchanan, summing up the situation as follows in a telegram to Sir Edward Grey:

"Partial mobilisation was ordered to-day. I communicated the substance of your telegram of the 28th instant to Berlin to the Minister for Foreign Affairs in accordance with your instructions, and informed him confidentially of remarks as to mobilisation which the German Secretary of State had made to the British Ambassador at Berlin. This had already reached his Excellency from another source. The mobilisation, he explained, would only be directed against Austria. The Austrian Gov-

ernment has now definitely declined direct conversation between Vienna and St. Petersburg. The Minister for Foreign Affairs said he had proposed such an exchange of views on advice of German Ambassador. He proposed, when informing German Ambassador of this refusal of Austria's, to urge that a return should be made to your [Grey's] proposal for a conference of four Ambassadors, or, at all events, for an exchange of views between the three Ambassadors less directly interested, yourself, and also the Austrian Ambassador, if you thought it advisable. Any arrangement approved by France and England would be acceptable to him [Sazonov], and he did not care what form such conversations took. No time was to be lost, and the only way to avert war was for you to succeed in arriving, by means of conversations with the Ambassadors either collectively or individually, at some formula which Austria could be induced to accept. Throughout the Russian Government had been perfectly frank and conciliatory, and had done all in their power to maintain peace. If their efforts to maintain peace failed, he trusted that it would be realised by the British public that it was not the fault of the Russian Government."—*B. D. C., no. 78.*

"That this was the true sequence of events on the afternoon of 29th July is . . . decisively demonstrated by the subjoined Memorandum, drawn up by Sir George Buchanan on the 15th September, 1917, in response to a definite enquiry from Mr. Balfour as to what had really happened at the fateful meeting of the Russian Ministers. It will be noted that the story as told by him differs somewhat from the chaotic narratives given by the Russian War Minister and Chief of the Staff at the trial of the former in September 1917:

“(Confidential.) SEPTEMBER 15, 1917.

“No official report of the proceedings was published, but after referring to our own archives, and to statements given to me by the Minister of Foreign Affairs [Sazonov], I believe that the following is a correct account of what took place: Up to July 28th, when Austrian general mobilisation and declaration of war on Serbia were published, Russia had only taken preparatory steps for a mobilisation in the military districts of Kiev, Odessa, Kazan, and Moscow. On July 29th orders for partial mobilisation were signed, to be directed solely against Austria, as the Emperor had refused to yield to strong pressure brought to bear upon him by his military advisers who, on technical grounds, and in view of secret preparations made by Germany, had insisted on its being made a general one. The military authorities, however, without his Majesty's knowledge, did make secret preparations for a general mobilisation, though on being questioned by the Emperor on the subject General Sukhomlinoff denied it.”

“It is clear then that both the Czar and M. Sazonoff, who was, of course, the main informant of Sir George Buchanan, were in favour of only partial mobilisation against Austria, and that both of them spoke and acted during the early afternoon hours of the 29th July as if that measure only had been authorised. . . . Meanwhile it must be borne in mind that this action [of Sukhomlinov and Januschkevitch] was unknown except to themselves for the moment, and did not influence the words or actions of the Czar and the Foreign Minister in the early afternoon.”—*Oman, pp. 62-63.*—

"Immediately after the Ukase for the mobilisation of the four south-western army districts had been signed, M. Sazonoff had an interview with Count Pourtalès, which may be styled the turning point of the whole series of negotiations, the fact which finally settled that war was inevitable. Down to September 1917 only a partial account of this interview could be constructed, for want of sufficient first-hand evidence. But since the German Government has permitted Count Pourtalès to communicate to a Swiss newspaper his account of the whole matter, it is possible to compare his version with that of M. Sazonoff. In the German White Book all that appears is the following, evidently fragmentary, extract from the Count's despatch to the German Chancellor: 'The Secretary (Sazonoff) tried to persuade me that I should urge my Government to participate in a quadruple conference to find means to induce Austria-Hungary to give up those demands which touch upon the sovereignty of Serbia. I could merely promise to report the conversation, and took the position that, after Russia had decided upon the baneful step of mobilisation, every exchange of ideas appeared now extremely difficult, if not impossible. Besides, Russia now was demanding from us in regard to Austria-Hungary the same which Austria-Hungary was being blamed for with regard to Serbia, i.e., an infraction of sovereignty. Austria-Hungary having promised to consider the Russian interests by disclaiming any territorial aspiration—a great concession on the part of a State engaged in war—should therefore be permitted to attend to its affairs with Serbia alone. There would be time at the peace conference to return to the matter of forbearance towards the sovereignty of Serbia. I added very solemnly that at this moment the entire Austria-Serbian affair was eclipsed by the danger of a general European conflagration, and I endeavoured to present to the Secretary the magnitude of this danger. It was impossible to dissuade Sazonoff from the idea that Serbia could not now be deserted by Russia.' (*German White Book*, p. 21)."—*Oman*, p. 63.

"The much more enlightening narrative of the German Ambassador in the *Basler Nachrichten* of the 20th September, 1917, runs as follows:

"On July 29th, between 1 and 2 o'clock, Sazonoff told me that Russia had determined to mobilise against Austria, and that the Imperial Ukase proclaiming mobilisation would be published that same afternoon. I answered that the step was, in my opinion, full of consequences in the highest degree, and that it made a peaceful solution of the conflict difficult if not impossible. I reminded him that I had asked him some days back to use his influence in the most urgent way to stop the employment of military pressure. Sazonoff answered that the mobilisation was against Austria and not against us [Germany]. Whereupon I was forced to remind him of our treaty of alliance with Austria, which would cause German mobilisation automatically. . . . About 7, in another interview with Sazonoff, I brought to his knowledge a telegram of our Chancellor, in which it was stated that any further development of Russian military preparations would compel us to take counter-measures, and that meant war [*dies würde aber den Krieg bedeuten*]. By means of this telegram I made it clear to Sazonoff that this was no mere matter of threats, and that I had only friendly intentions in giving him this information. My revelation could be no surprise to him, after what I had told him several days before as to Russian military preparations.'

"The Chancellor's telegram, which the German Government, for its own reasons, did not print in the White Book, and only published in the pages of the *Norddeutsche Allgemeine Zeitung* on the 7th October, 1917, ran as follows:

"I beg you to explain once more to M. Sazonoff, with great earnestness, that we shall be compelled to mobilise if any further measures for Russian mobilisation are taken. And in that case European War can hardly be averted."

"It will be noted that Count Pourtalès, on his own showing, went even a little further than the Chancellor's telegram authorised him to go. He said that Russian mobilisation 'meant war'—while the Chancellor said that 'European war could hardly be averted.' There is a clear shade of meaning between the two phrases, though the intention may have been the same. The weak explanation given in the German communiqué for the suppression of this telegram for three years and three months, is that the Chancellor's words were no more than a repetition of the warning already given to the Russian Government on the 26th July. It cannot be disputed that Count Pourtalès administered to M. Sazonoff at their second interview what practically came to an ultimatum. Russia must not mobilise against Austria, or Germany mobilises too—and that means war.' But Russia had just issued the mobilisation decree for the Austrian front—and therefore German mobilisation must be 'automatic,' and war apparently 'automatic' also as the result of the sequence of events. Perhaps the most interesting part of the grave words used by Count Pourtalès to M. Sazonoff in this momentous interview, is that they seem to have been the direct result of an appeal from Vienna to Berlin on the previous day. The subjoined letter of the 28th July is printed in the *Austrian Red Book*:

"COUNT BERCHTOLD TO COUNT SZÖGYÉNY AT BERLIN, JULY 28, 1914. (Telegraphic.)

"I request your Excellency to go at once to the Chancellor or the Secretary of State and communicate to him the following in my name: According to mutually consistent reports, received from St. Petersburg, Kieff, Warsaw, Moscow, and Odessa, Russia is making extensive military preparations. M. Sazonoff has indeed given an assurance on his word of honour, as has also the Russian Minister of War, that mobilisation has not up to now been ordered; that latter has, however, told the German military attaché that the military districts, which border on Austria-Hungary—Kieff, Odessa, Moscow, and Kazan—will be mobilised, should our troops cross the Serbian frontier. Under these circumstances, I would urgently ask the Cabinet at Berlin to take into immediate consideration the question whether the attention of Russia should not be drawn, in a friendly manner, to the fact that the mobilisation of the above districts amounts to a threat against Austria-Hungary, and that, therefore, should these measures be carried out, they would be answered by the most extensive military counter-measures, not only by the Monarchy but by our Ally, the German Empire. In order to make it more easy for Russia to withdraw, it appears to us appropriate that such a step should, in the first place, be taken by Germany alone; nevertheless we are ready to take this step in conjunction with Germany. Unambiguous language appears to me at the present moment to be the most effective method of making Russia fully conscious of all

that is involved in a threatening attitude.' (*Austrian Red Book*, no. 42).—*Oman*, pp. 63-65.

"Sir Edward Grey's conversation with Lichnowsky on the morning of July 31st took place, and his Instructions to Berlin were despatched, in ignorance of the fact that Russia, who had mobilised fifty-five divisions on July 29th in answer to Austria's twenty-two, had now mobilised her entire forces. According to Sukhomlinoff, the Russian War Minister, the Tsar signed the order for general mobilisation on the afternoon of July 20th; but, after a friendly telegram from the Kaiser, he ordered that mobilisation should only take place against Austria. The War Minister, however, and the Chief of the Staff allowed general mobilisation to continue, while concealing this from the Tsar and denying it to the German Military Attaché. Their disobedience was not discovered at the time; for, in the afternoon of July 30th, Sazonoff, the War Minister and the Minister of Marine, on learning of the bombardment of Belgrade, agreed that general mobilisation was necessary. The Tsar's consent was obtained the same night, and in the early hours of July 31st the capital was placarded with notices. A few hours later Austria also ordered general mobilisation."—A. W. Ward and G. P. Gooch, ed., *Cambridge history of British foreign policy, 1783-1919*, v. 3, pp. 498-499.

34.—Potsdam military council (July 29).—German bid for British neutrality in event of war.—Neutrality of Netherlands to be respected.—Hint of action in Belgium.—British refusal to promise neutrality.—British rejection of German overtures.—"Until the . . . publication (in 1919) of the *Kautsky Documents* and the new *Austrian Red Book* it . . . [was] believed by many that at a famous military council at Potsdam on the evening of Wednesday, July 29 [1914], the German militarists triumphed over the civilian diplomats and that the Kaiser at that time gave the fatal decision for war. The reason for this belief is natural. At the close of the council Bethmann returned to Berlin, sent for the British ambassador [Sir Edward Goschen], and 'proceeded to make the following strong bid for British neutrality. . . . Provided that neutrality of Great Britain were certain, every assurance would be given to the British government that the Imperial government aimed at no territorial acquisition at the expense of France should they prove victorious in any war that might ensue. About the French colonies he was unable to give a similar undertaking.'"—*B. D. C.*, no. 85.—"It has quite naturally been believed that the German Chancellor would never have taken this step, so extraordinary, so apparently self-incriminating, and as it turned out, so infelicitous, unless he knew that Germany had already taken the decision for war. But if one looks more closely at the actions of these men during those frightful sleepless days and nights, one comes to the conviction that the prevailing belief is not wholly correct. Bethmann still had the upper hand over the militarists during the following day. He had been able to persuade the Kaiser that no decision should be taken until an answer had been received from Vienna to a proposal which had been urged by England and Germany in the interests of the peace of Europe. And it was not until two days later, about noon of July 31, after the arrival in Berlin of official news of the Russian mobilization, that is, mobilization against Germany as well as against Austria, that the Kaiser took the final decision to issue the fatal proclamation of 'Imminence of War.' During these three days, July 29 to 31, Germany was mak-

ing a real, though belated, effort to induce Austria to accept a peaceful solution."—*Fay*, II, pp. 37-38.—The ambassador's report to Sir Edward Grey on this remarkable interview deserves to be reproduced in full:

"I was asked to call upon the Chancellor [Bethmann-Hollweg] tonight. His Excellency had just returned from Potsdam. He said that should Austria be attacked by Russia a European conflagration might, he feared, become inevitable, owing to Germany's obligations as Austria's ally, in spite of his continued efforts to maintain peace. He then proceeded to make the following strong bid for British neutrality. He said that it was clear, so far as he was able to judge the main principle which governed British policy, that Great Britain would never stand by and allow France to be crushed in any conflict there might be. That, however, was not the object at which Germany aimed. Provided that neutrality of Great Britain were certain, every assurance would be given to the British Government that the Imperial Government aimed at no territorial acquisitions at the expense of France should they prove victorious in any war that might ensue. I questioned his Excellency about the French colonies, and he said that he was unable to give a similar undertaking in that respect. As regards Holland, however, his Excellency said that, so long as Germany's adversaries respected the integrity and neutrality of the Netherlands, Germany was ready to give his Majesty's Government an assurance that she would do likewise. It depended upon the action of France what operations Germany might be forced to enter upon in Belgium, but when the war was over Belgian integrity would be respected if she had not sided against Germany. His Excellency ended by saying that ever since he had been Chancellor the object of his policy had been, as you were aware, to bring about an understanding with England; he trusted that these assurances might form the basis of that understanding which he so much desired. He had in mind a general neutrality agreement between England and Germany, though it was, of course, at the present moment too early to discuss details, and an assurance of British neutrality in the conflict which the present crisis might possibly produce, would enable him to look forward to realization of his desire. In reply to his Excellency's inquiry how I thought his request would appeal to you, I said that I did not think it probable that at this stage of events you would care to bind yourself to any course of action and that I was of opinion that you would desire to retain full liberty. Our conversation upon this subject having come to an end, I communicated the contents of your telegram of today to his Excellency, who expressed his best thanks to you."—*B. D. C.*, no. 85.

Thus, according to the German chancellor, "it depended upon the action of France what operations Germany might be forced to enter upon in Belgium." "This is the first time that the name of Belgium is mentioned with reference to the Austro-Servian dispute, and it is well to mark this moment. . . . Germany confessed that thereafter the fate of the little nation that she has guaranteed would be at the mercy of military operations."—E. Waxweiler, *Belgium neutral and loyal*, p. 92.—The British reply to the German neutrality proposal was as follows:

"SIR EDWARD GREY TO SIR E. GOSCHEN, BRITISH AMBASSADOR TO BERLIN, FOREIGN OFFICE, JULY 30, 1914:

"His Majesty's Government cannot for a moment entertain the Chancellor's proposal that they should bind themselves to neutrality on such terms. What he asks us in effect is to engage to stand by while French colonies are taken and France is beaten so long as Germany does not take French territory as distinct from the colonies. From the material point of view such a proposal is unacceptable, for France, without further territory in Europe being taken from her, could be so crushed as to lose her position as a Great Power, and become subordinate to German policy. Altogether apart from that, it would be a disgrace, for us to make this bargain with Germany at the expense of France, a disgrace from which the good name of this country would never recover. The Chancellor also in effect asks us to bargain away whatever obligation or interest we have as regards the neutrality of Belgium. We could not entertain that bargain either. Having said so much it is unnecessary to examine whether the prospect of a future general neutrality agreement between England and Germany offered positive advantages sufficient to compensate us for tying our hands now. We must preserve our full freedom to act as circumstances may seem to us to require in any such unfavorable and regrettable development of the present crisis as the Chancellor contemplates. You should speak to the Chancellor in the above sense, and add most earnestly that the one way of maintaining the good relations between England and Germany is that they should continue to work together to preserve the peace of Europe; if we succeed in this object, the mutual relations of Germany and England will, I believe, be *ipso facto* improved and strengthened. For that object His Majesty's Government will work in that way with all sincerity and good-will."—*B. D. C., no. 101.*

35.—Case of Belgium.—Belgian-British military conversations in 1906 and 1912.—Decision by German general staff to advance through Belgium.—Moltke's note of July 25.—"The points of interest in the Belgian Grey Book are not very numerous. But we see how early in the development of the Servian imbroglio the Belgian Minister of Foreign Affairs, M. Davignon, made preparations to meet a possible invasion. [See above: 24.] . . . We see also that France, on July 31, before she was approached by Sir Edward Grey on the subject, gave assurances that she would not violate Belgian neutrality. . . . On the same day M. Davignon wrote to the representatives of Belgium at Berlin, London, and Paris, authorizing them to state that Belgium would do her utmost to defend her neutrality [see also BELGIUM: 1914: World War; Germany and Belgian neutrality]. . . . We are told of the assurances given by Germany, privately in 1911 and publicly in 1913, of her intention to respect Belgian neutrality; and we learn that these assurances were confirmed by the German Minister at Brussels on July 31, 1914. The text of the German ultimatum of August 2 to Belgium, and the interview of Baron van Elst with the German Minister at Brussels in the small hours of August 3, give the excuses alleged by Germany for her invasion of Belgium. . . . The case for Belgian neutrality is stated clearly and with dignity in the reply given on August 3 to the German ultimatum. . . . We are given also the precise terms of the offers of support given by Great Britain to Belgium . . . and of very interesting offers by Great Britain to Holland and Norway."—Oxford Faculty of Modern History, *Why we are at war (Prefatory note to Appendix VII, p. 254)*.—"After Brussels had been captured by the Germans, [August, 1914] certain documents

were found in the Belgian archives, which were published to support the charge of Germany that Belgium had before the war surrendered her neutrality. These documents show the following: (1) In April, 1906, General Ducarne, Chief of the Belgian General Staff, reported to the Belgian minister of war the results of some conversations that he had had with Lieutenant-Colonel Barnardiston, military attaché of the British legation at Brussels. At these interviews plans were discussed for sending British troops to Belgium to aid her against Germany in case war broke out. Colonel Barnardiston 'referred to the anxieties of the general staff of his country with regard to the general political situation, in view of the possibility of war soon breaking out.' The discussion covered details as to the number of British troops to be furnished, places of disembarkation, methods of transportation, etc. It is also stated that Colonel Barnardiston gave General Ducarne much secret information regarding the 'military circumstances and the situation' of Belgium's 'Eastern neighbor.' The term 'allied forces' was used in the documents for the British and Belgian troops. At one of these conferences an agreement was reached as to a plan of combined operations in case Antwerp were attacked by the Germans. Colonel Barnardiston is represented as saying that this plan had the approval of the chief of the British general staff; but he insisted that these conversations were not binding on his Government, and that they were not known by any one except the general staff, the English minister at Brussels, and himself. He 'did not know whether the opinion of his sovereign had been consulted.' On the margin of the document was the following statement: 'The entry of the English into Belgium shall not take place until after the violation of our [Belgian] neutrality by Germany.' On April 23, 1912, a similar conversation was held between the British military attaché in Brussels, who was now Lieutenant-Colonel Bridges, and the Belgian chief of the general staff, who was now General Jungbluth. At this meeting 'Lieutenant-Colonel Bridges told the general that Great Britain had available for dispatch to the Continent, an army composed of six divisions of infantry and eight brigades of cavalry, in all 160,000 men. She had also all that she needed for home defence. Everything was ready. The British Government, at the time of the recent events, would have immediately landed troops on our territory, even if we had not asked for help. The general protested that our consent would be necessary for this. The military attaché answered that he knew that, but that as we were not in a position to prevent the Germans passing through our territory, Great Britain would have landed her troops in any event.' The general added that, 'after all, we were, besides, perfectly able to prevent the Germans from going through.' One of the documents found was a dispatch from Baron Greindl, Belgian minister at Berlin, to the Belgian minister for foreign affairs, dated December 23, 1911. The burden of this dispatch was that the Belgian Government was acting unwisely in making arrangements as if the only danger of attack was from the side of Germany. Belgium's neutrality, he thought, was in as much danger from the French as the German side. He said: 'From the French side the danger threatens not only in the south from Luxemburg; it threatens us along our whole common frontier. For this assertion we are not dependent only on surmises. We have positive facts to go upon.' Another document found was 'a map showing (it is alleged) the method of deployment of the French army.' These

documents were published on October 13, 1914, by the *North German Gazette* and were also afterwards printed in English and commented on by Dr. Bernhard Dernburg, German agent in America. These two advocates for Germany contend that these documents prove that England had intended, in case a Franco-German war broke out, to send troops to Belgium and thus violate the neutrality of Belgium; that Belgium by listening to and keeping secret the 'whisperings' of Great Britain had compromised her neutrality; and that she should have notified the other signatories of the treaty of 1839, especially Germany, of the suggestions of England. They charge that the negotiations prove

COUNT VON MOLTKE

that Belgium had entered into a convention with Great Britain against Germany, and that the French military map, together with other facts mentioned in the documents, go to show that France was a party to this convention."—O. P. Chitwood, *Immediate causes of the Great War*, pp. 150-154.—"At Berlin, Berchtold's failure to heed any of Bethmann's efforts for peace and his delay in replying to Bethmann's telegrams greatly embarrassed the Chancellor's struggle to keep the upper hand over the militarists. In his arguments with them and with the Kaiser, his position was undermined by continually having to say 'No word from Vienna.' By July 29 he was already being pressed strongly by Moltke and by Berlin public sentiment to take a decision. Every additional hour of indecision lessened the advantage of Germany's speedy mo-

bilization through which they hoped, if war should come, to win an overwhelming victory over France before they had to meet a large force on the eastern frontier. Their mobilization plan contemplated going through Belgium, to which Bethmann personally was strongly opposed on moral grounds. But in the preceding months, though he must have known of the existence of this plan, he had not chosen to resign his office as a protest. Perhaps he had been so absorbed in his policy for a better understanding with England, that he had never looked squarely in the face the violation of international law which Moltke contemplated, if his own Bagdad Railway and African colonial agreements with England should fail. Now, when suddenly faced with the imminence of war with Russia, brought on by Austria's action and his own negligence, he was unable to meet Moltke's arguments of strategic military necessity. Aside from the moral objection, he might urge the practical one that it might bring in England against Germany. Moltke admitted that the addition of England to Germany's enemies would be a serious difficulty in the matter of provisioning Germany, particularly if the war should last long. But still he advised against buying England's neutrality at the price of sparing Belgium, even if this would have been possible, which he did not think was the case. An advance into France from Alsace-Lorraine would have cost the German army fully three months, and given Russia such a start that a victory on both fronts would not be possible. Therefore the only way to victory was to Paris *via* Belgium. Accordingly, on July 29, Bethmann was forced into the foolish act of making the bid for British neutrality which instantly roused suspicions abroad as to the German militarist intention. A courier was also dispatched by Jagow to the German ambassador at Brussels, bearing a sealed document. It was not safe to trust this even to a ciphered telegram, nor was it desirable to reveal even to the ambassador himself the crime which after all it might not be necessary to put into practice. On opening it, the ambassador merely found instructions to keep safely another sealed envelope which he would find enclosed, but which he was to open only if subsequently instructed by telegram from Berlin. This inner envelope contained the detailed demands which Moltke had written with his own hand on July 25, for eventual presentation to Belgium, if war should come. It included the absolutely fictitious statement, for which there was never the slightest evidence either on July 29 or later, that 'there lies before the Imperial Government reliable information in regard to the intended advance of French troops in the Meuse district Givet-Namur. They leave no doubt of France's purpose to attack Germany through Belgian territory.' Givet-Namur was the line on which Moltke, months before, had determined to advance if war should come. Moltke also made arrangements for post-dating the document and making it appear that this 'reliable information' had only arrived as hostilities were beginning. Neither in his 'scrap of paper' conversation nor in his book, did Bethmann stultify himself by adopting as his own this fictitious allegation of Moltke's. Nor in his book does he seek, as many Germans have so laboriously attempted to do, to establish any justification for the violation of Belgium from the 'disclosures' revealed subsequently by the German investigation of the Belgian archives. These disclosures, of course, whether there is any incriminating evidence in them or not, being subsequent to the invasion of Belgium, are no more a justification for that act than

Frederick the Great's later revelations from the Dresden archives justified his attack on Saxony at the opening of the Seven Years' War."—*Fay, II*, pp. 48-49.

36.—Belgian neutrality.—Situation since 1911.—“In 1911, during the controversy which was aroused by the announcement of the Dutch plans for the fortification of Flushing [Vlissingen], certain papers had announced that in case of a Franco-German war, Belgian neutrality would be violated by Germany. The Belgian Minister for Foreign Affairs suggested that a declaration made in the German Parliament during the debate on foreign policy would have the effect of quieting public opinion and setting at rest the suspicions which were regrettable from the point of view of the relations between the two countries. Herr von Bethmann-Hollweg replied that he highly appreciated the feelings which had inspired the request made by Belgium. He declared that Germany had no intention of violating the neutrality of Belgium, but he thought that if a public declaration to that effect were made, Germany would weaken her military position *vis-à-vis* of France who, reassured on her northern frontier, would transfer all her troops to the eastern side. [*B. G. B.*, no. 12].”—E. Waxweiler, *Belgium neutral and loyal*, p. 17.—“In 1913 still more precise declarations were made during the sitting of the Reichstag Committee on the Budget of April 29th. The *Norddeutsche Allgemeine Zeitung*, whose semi-official character is well known, reported it in the following terms: ‘A member of the Social Democratic Party said: “In Belgium the approach of a Franco-German war is viewed with apprehension, because it is feared that Germany will not respect Belgian neutrality.” Herr von Jagow, Secretary of State for Foreign Affairs, replied: “The neutrality of Belgium is determined by international conventions, and Germany is resolved to respect these conventions.” This declaration did not satisfy another member of the Social Democratic Party. Herr von Jagow observed that he had nothing to add to the clear statement which he had uttered with reference to the relations between Germany and Belgium. In reply to further interrogations from a member of the Social Democratic Party, Herr von Heeringen, Minister of War, stated: “Belgium does not play any part in the reorganization of the German scheme of military reorganization; the scheme is justified by the position of matters in the East. Germany will not lose sight of the fact that Belgian neutrality is guaranteed by international treaties.” A member of the same party having again referred to Belgium, Herr von Jagow again pointed out that his declaration regarding Belgium was sufficiently clear.’ [*B. G. B.*, no. 12, *Enclosure*.] All these declarations summed up and amplified a statement made by the German Minister in Belgium, Baron von Wallwitz, at a banquet in Antwerp in 1905, the year of the seventy-fifth anniversary of Belgian independence. ‘Respect for Belgian neutrality,’ he said, ‘is a political axiom for Germany and it could never be disregarded without incurring the most serious consequences.’ In spite of these assurances, the course of European politics made a deep impression on those responsible for the Government of Belgium. . . . There was a growing impression in the chancelleries and military circles of certain capitals that a European war was imminent. To complete her uneasiness, in 1912 Belgium received from a Sovereign who belonged neither to the Triple Entente nor to the Triple Alliance, and whose great wisdom and long experience of European politics was well-known in diplomatic circles, King Charles of Rou-

mania, the friendly advice to keep a careful watch on the defence of all her frontiers: ‘The miracle of 1870,’ he said, ‘will not be repeated: Belgium runs a great danger of seeing her neutrality violated by one of her three neighbours.’ At the same time other warnings reached Belgium; plans for a surprise invasion of Belgian territory by German troops were discovered, and the military arrangements made by France on her northern frontier took a definite form. Moreover, these fears received disturbing confirmation from German military writers. For instance, General von Bernhardt, who was widely read in Germany, published at the end of 1911, under the title of *Deutschland und der nächste Krieg*, a book which was full of statements which were very alarming for Belgium. I repeat some of the most characteristic of them: ‘The conception of permanent neutrality is entirely opposed to the essential nature of the State; the State can only attain her high moral ends by competition with other States. . . . No natural obstacle or powerful barriers there [in Belgium and Holland] stand in the way of hostile invasion, and neutrality is only a paper bulwark. To the south also the Rhine barrier could easily be turned by going through Switzerland, although on this side there are serious geographical natural obstacles.’ At last, in 1913, [the Belgian] Parliament passed a measure for a far-reaching reorganization of the army. Before the public discussion of the question, the Minister for War, Monsieur de Broqueville, was careful to furnish to Parliament the confidential communications which, as stated above, the Government had received. This was done during a secret sitting, and these statements exercised a decisive influence on the vote which was taken.”—E. Waxweiler, *Belgium neutral and loyal*, pp. 18-22.

37.—Belgium prepares for the worst.—French declaration on neutrality (July 31).—Frontier closed to trains by Germany.—Belgian mobilization ordered (July 31).—British concern over Belgian neutrality.—“On Monday the 27th (July), the [Belgian] Government received from the Belgian Minister at Berlin alarming information on the course which the Austro-Serbian dispute was taking. ‘War,’ says Baron Beyens in his message, ‘seems inevitable, and we can only expect the worst consequences. Belgium must from now on take thought for all the precautions required by the situation.’ Next day, a telegram from the Belgian Minister at Vienna announced that Austria-Hungary had declared war on Servia. At this moment the Belgian Government did not hesitate. On Wednesday, the 29th July, they decided to place the army on a strengthened peace footing—a measure of simple precaution, as they hastened to explain to the Belgian Ministers abroad. [See also BELGIUM: 1914: World War.] . . . Up to this moment nothing extraordinary had happened in Belgium. But on the 31st July the Minister for Foreign Affairs had two interviews of the greatest importance. The French Minister called to show him a telegram from the *Agence Havas* announcing that *Kriegsgefahr* (a state of danger of war) had been proclaimed in Germany, a step which involved certain measures of precaution caused by a state of tension in the relations of Germany with another country. The French Minister at Brussels on this occasion made the following declaration: ‘I take advantage of this opportunity to declare to you that no incursion of French troops will take place in Belgium, even if large forces were massed upon the frontiers of your country. France does not wish to have the re-

sponsibility of carrying out the first act of hostility toward Belgium. Instructions to this effect will be given to the French authorities."—*B. G. B.*, no. 9.—"The second call made on July 31st was that of the British Minister. He was directed to inform the Belgian Foreign Minister that England expected that Belgium would do her utmost to maintain her neutrality; an early reply was expected. The Minister also announced that England had just asked Germany and France separately if they were each of them ready to respect Belgian neutrality so long as no other Power violated it. England desired and expected that the Powers would maintain and observe that neutrality. . . . Lastly, on the same day, Friday, July 31st, the Belgian railway authorities were informed by the German railway administration that trains could no longer cross the German frontier. Thus the situation suddenly assumed a character of exceptional gravity. On the same day the Government ordered the mobilization of the army, and the Minister for Foreign Affairs informed all the Belgian Legations abroad of this position by telegram [*B. G. B.*, no. 10]: 'The Minister of War informs me that mobilization has been decreed and that Saturday, August 1st, is the first day of mobilization.' At the same time the King, anxious that all the guarantees upon which the country had a right to depend should be fulfilled, and relying on the warmth of his personal relations with the German Emperor, wrote to the latter a personal letter, reminding him of the right which Belgium possessed to inviolability."—E. Waxweiler, *Belgium neutral and loyal*, pp. 26, 31.

38.—Late German attempts to prevent war.—British proposal for mediation.—Serbian willingness to yield.—British warning.—Bethmann's telegrams to Vienna.—Austrian general mobilization.—German warnings to Austria.—"Sazonov had concluded, though mistakenly, that because Berchtold flatly refused to discuss Austro-Serbian relations, he was also unwilling to converse at all with Russia. To re-open 'direct conversations,' and to clear up what seemed to be an unfortunate misunderstanding between Vienna and Petrograd, Bethmann sent now three more telegrams to Vienna very late on Tuesday night. After mentioning hopefully the interchange of telegrams which had begun between the Kaiser and the Tsar, and minimizing the danger of the rumored Russian military preparations, Bethmann added severely: The refusal of every exchange of views with Petrograd would be a serious mistake for it provokes Russia precisely to armed interference, which Austria is primarily interested in avoiding. We are ready, to be sure, to fulfil our obligations as an ally, but must refuse to allow ourselves to be drawn by Vienna into a world conflagration frivolously and in disregard of our advice. Please say this to Count Berchtold at once with all emphasis and with great seriousness. The other plan which Bethmann also cordially took up late Tuesday night was Grey's proposal for mediation between Austria and Russia, either by the four Powers, or by Germany alone, on the basis of Serbia's very conciliatory original answer and the news from Rome that she was now ready for the sake of peace 'on condition of certain interpretations to swallow even articles 5 and 6, that is, the whole of the Austrian ultimatum.' This proposal of Grey's was eagerly welcomed by Bethmann as a possible happy solution. In sending it on to Vienna, he genuinely again 'pressed the button,' by adding: 'Please show this to Berchtold immediately and add that we regard such a yielding

on Serbia's part as a suitable basis for negotiation along with an occupation of a part of Serbian territory as a pledge.' But Berchtold was still deaf to the button; he eventually made the characteristic reply that, though the integral acceptance of Austria's note would have been satisfactory before hostilities had begun, 'now after the state of war has begun, Austria's conditions must naturally take another tone.' Grey's proposal was all the more eagerly welcomed by Bethmann, partly because Grey quickly supplemented it by embodying the two very points which Germany, herself had already been urging at Vienna and Petrograd in her 'pledge plan,' viz., a new statement by Austria of her intentions in Serbia which would satisfy Russia, and a pledge in the shape of the temporary military occupation of Belgrade which would satisfy Austria; and partly because Grey gave his first 'warning.' As Lichnowsky reported his conversation with Grey: to him [Grey] personally a suitable basis for such mediation seemed to be that Austria, after the occupation perhaps of Belgrade or other places, should announce her conditions. Should Your Excellency [Bethmann], however, undertake the mediation as I was able to propose to him early this morning as a possibility, this would, of course, suit him just as well. . . . [At the close of the conversation Grey] said he wanted to make me a friendly and private statement. . . . It would be possible for her [England] to stand aside so long as the conflict is limited to Austria and Russia. But if we and France should be drawn in, then the situation would immediately be a different one, and the British government under the circumstances, would be forced to rapid decisions. In this case it would be impossible to stand aside for long and to wait; 'if war breaks out, it will be the greatest catastrophe that the world has ever seen.' He was far from wishing to utter any kind of threat; he merely wanted to save me from being misled and himself from the reproach of insincerity and, therefore, chose the form of a private explanation. Upon hearing of this alarming possibility that England might not remain neutral. . . . Bethmann immediately transmitted the whole conversation to Vienna and proceeded to 'press the button' very vigorously: 'If Austria refuses all negotiations, we are face to face with a conflagration in which England will be against us, Rumania and Italy according to all indications will not be for us, and we shall stand two against four Powers. Through England's opposition the main blow will fall on Germany. Austria's political prestige, the military honor of her army, as well as her just claims against Serbia, can be adequately satisfied by her occupation of Belgrade or other places. Through her humiliation of Serbia, she will make her position in the Balkans as well as in her relation to Russia strong again. Under these circumstances we must urgently and emphatically urge upon the consideration of the Vienna Cabinet the adoption of mediation in accordance with the above honorable conditions. The responsibility for the consequences which would otherwise follow would be for Austria and for us an uncommonly heavy one.' To this urgent request by Germany for Austria's acceptance of a solution which perhaps even yet might have avoided the conflagration of Europe, Berchtold gave no definite or frank answer. Bethmann's telegram, inclosing Lichnowsky's conversation with Grey, after being deciphered was handed to Tschirschky Thursday, July 30, while he was at lunch with Berchtold. Berchtold listened, pale and silent, while they were read through twice; Count Forgách took notes; finally Berchtold said

ne would at once lay the matter before the Emperor. . . . After Berchtold had departed . . . Tschirschky spent a good part of the afternoon setting forth long and earnestly to Forgách and Hoyos all of Bethmann's arguments. It was useless. Instead he was cynically informed by these two intimate advisers of Berchtold that 'in view of the feeling in the army and in the people any checking of the military operations in progress was out of the question . . . Conrad von Hoetzendorff [Austrian chief-of-staff] would lay before the Emperor this evening the order for general mobilization, as a reply to the measures which have already been taken.' He was also finally told that Berchtold could not give any answer until the following morning, for the reason that Tisza, who would not be in Vienna until then, must be consulted. Later in the evening Tschirschky learned that Austria had decided to order general mobilization, *i.e.*, against Russia as well as against Serbia, and that Berchtold's answer to the 'pledge plan' would 'presumably not be absolutely negative.' What this dubious phrase meant is now clear from Berchtold's double-faced procedure as revealed, on the one hand, in his pretended attitude to the Russian ambassador, and, on the other, in his real attitude as reported in the minutes of the ministerial council of Friday morning. With the Russian ambassador he took up conversations again in a most friendly manner and to all the Powers pretended that Austria was ready to 'consider favorably' Grey's proposal. To the British ambassador in Vienna, he gave the impression, as Bunsen later wrote to Grey, that Austria, in fact, had finally yielded, and that she herself had at this point good hopes of a peaceful issue, is shown by the communication made to you on the 1st of August by Count Mensdorff [the Austrian ambassador in London] to the effect that Austria had neither 'banged the door' on compromise, nor cut off the communications. . . . Unfortunately these conversations were cut short by the transfer of the dispute to the more dangerous ground of a direct conflict between Germany and Russia. . . . For some days the reports of the Russian 'measures preparatory to war' had become very alarming. The statements of the Russian minister of foreign affairs did not harmonize with those of the Russian minister of war, and both were contradicted by the apparently unmistakable evidence of very wide-reaching military activities. On the morning of Thursday, July 30, it was known in Berlin that Russia had officially admitted 'partial mobilization,' and it was suspected, probably with good reason, that she had done much more. Nevertheless, Bethmann appears still to have kept the upper hand during the day. At its close he gave the Prussian cabinet a long and still hopeful summary of the situation; he declared that he was still supported by the Kaiser in the determination that no decision for war should be taken, until an answer had been received from Austria as to her acceptance of the 'pledge plan.' Though the Kaiser by this time was in a very excited state of mind, as indicated by a raving philippic against his Austrian ally as well as against the Entente enemies who had 'encircled' Germany, he was persuaded by Bethmann to make a personal appeal to Francis Joseph. This was followed by another telegram of Bethmann's own, warning Berchtold of the terrible consequences of a refusal to accept the 'pledge plan' which was now being urged by both England and Germany. But the militarists were already getting the upper hand. Early in the evening Moltke had advised the Austrian chief-of-staff to order the general mobilization of the

whole Austrian army. Before 11:20 P.M. Bethmann had been told by the General Staff that Russia's military measures were so alarming that a speedy decision by Germany was necessary, unless Germany was to be taken by surprise.—*Fay, II, pp. 44-47, 50-51.*

39.—*Intervention of United States ambassador.*—At this point the United States ambassador at Berlin, J. W. Gerard, sought to intervene. "Acting on my own responsibility, I sent the following letter [on July 30] to the Chancellor: 'Your Excellency: Is there nothing that my country can do? Nothing that I can do towards stopping this dreadful war? I am sure that the President would approve any act of mine looking towards peace.—YOURS EVER, (Signed) JAMES W. GERARD.' To this letter I never had any reply."—J. W. Gerard, *My four years in Germany, p. 132.*

40.—*Telegrams between Prince Henry, for the Kaiser, and King George.*—"Localization" of conflict desired.—Kaiser's telegram to President Wilson through Ambassador Gerard.—"While the last fatal moments were passing the discussion of the mobilisation-orders at Petrograd [St. Petersburg], Berlin, and Vienna, there were no less than three separate side-issues raised, all of which centred in London. The first of them was a personal correspondence by telegram between the King of England and the German Emperor, dealing with possible mediation at Vienna and Petrograd. With this there was complicated, two days later, a suggestion about the neutrality of France, which arose from a misconception in a telephone-conversation between Prince Lichnowsky and Sir Edward Grey, and was transmitted to Berlin in an erroneous shape. By the time that the error had been discovered, war had already broken out. The third side-issue, if so it may be called, arose from an appeal by the French Ambassador in London to the British Foreign Secretary, requesting an answer from the Cabinet as to the attitude of Great Britain in the event of the outbreak of war, and founding the request on the general principles of the existing *Entente* with France. The correspondence on this point, which was disappointing in its first stage to M. Cambon and the Government which he represented, was destined to take a very different turn two days later, in consequence of the sudden development of the question of Belgian neutrality. To proceed first to the series of Royal telegrams. The earliest of the series which stands on record is one from Prince Henry of Prussia, the Emperor's brother, to his cousin the King of England, to whom he had been paying a visit a week before. The Prince, as the subsequent telegrams show, was acting as the mouthpiece of his brother, who answered in person the reply which King George despatched to Prince Henry:

"HIS ROYAL HIGHNESS PRINCE HENRY OF PRUSSIA TO HIS MAJESTY KING GEORGE, . . . JULY 30, 1914.

"I arrived here [Berlin] yesterday and have communicated what you were so good as to say to me at Buckingham Palace last Sunday to William, who was very thankful to receive your message. William, who is very anxious, is doing his utmost to comply with the request of Nicholas to work for the maintenance of peace. He is in continual telegraphic communication with Nicholas, who has to-day confirmed the news that he has ordered military measures which amount to mobilisation, and that these measures were taken five days ago. We have also received information that France is

making military preparations, while we have not taken measures of any kind, but may be obliged to do so at any moment if our neighbours continue their preparations. This would then mean a European war. If you seriously and earnestly desire to prevent this terrible misfortune, may I propose to you to use your influence on France and also on Russia that they should remain neutral. In my view this would be of the greatest use. I consider that this is a certain and, perhaps, the only possible way of maintaining the peace of Europe. I might add that Germany and England should now more than ever give each other mutual support in order to prevent a terrible disaster which otherwise appears inevitable. Believe me that William is inspired by the greatest sincerity in his efforts for the maintenance of peace. But the military preparations of his two neighbours may end in compelling him to follow their example for the safety of his own country, which otherwise would remain defenceless. I have informed William of my telegram to you, and I hope that you will receive my communication in the same friendly spirit which has inspired it.

"[Signed] 'HENRY.'"

"What was the message which Prince Henry, in the first paragraph of his telegram, says that he has passed on to the Kaiser to the satisfaction of the latter? [According to the telegram sent from London by Prince Henry and] the statements which William II made to President Wilson a few days later, in the famous 'Gerard telegram,' the message was one of a rather startling effect, viz., 'H. R. H. Prince of Prussia was received by his Majesty King George V. in London, who empowered him to transmit to me verbally that England would remain neutral if war broke out on the Continent involving Germany and France, Austria and Russia. This message was telegraphed to me by my brother from London after his conversation with H. M. the King, and was repeated verbally on July 29.'"—*Oman*, pp. 97-99.

The prince's telegram from London is thus given by Kautsky (no. 374):

"MY DEAR WILLIAM,

"Before my departure from London, to be exact, on Sunday morning (July 26th), I had, at my own request, a short conversation with Georgie, who was perfectly clear regarding the seriousness of the present situation, and assured me that he and his Government would leave no plan untried to localize the struggle between Austria and Serbia. His Government had therefore made the proposal that Germany, England, France and Italy—as you, of course, already know—should intervene in the endeavour to keep Russia in check. He hoped that Germany would be able, in spite of her alliance with Austria, to join in this plan to prevent a European war, to which, so he said, we were nearer than ever before. He continued in these exact words: "We shall try all we can to keep out of this and shall remain neutral." (*Wir werden alles aufbieten nicht hineingezogen zu werden und werden neutral bleiben.*) That this utterance was meant seriously I am convinced, as I am of the fact that England will remain neutral. Whether she will be able to do so permanently I cannot say, but have my doubts in view of the relationship with France. Georgie was in a very serious mood, reasoned logically and was most seriously and honestly endeavouring to avert the possible world conflagration, in which endeavour he relied greatly upon

your assistance. I communicated the substance of the conversation to Lichnowsky (as early as July 26th—κ.) with the request that he would transmit it to the Chancellor.

"Your faithful and obedient brother,
'HENRY.'"

[Kautsky questions the trustworthiness of Prince Henry's report of the conversation.] As to the question of neutrality, it is obvious that all that was said was, we shall endeavour to remain neutral so long as we can. Henry himself doubts whether this will be possible permanently. William, however, saw in this a promise binding in all circumstances."—K. Kautsky, *Guilt of William Hohenzollern*, pp. 159-161.—"It must be confessed that this form of the King's message is simply incredible. The King of Great Britain and Ireland is a constitutional Sovereign, acting in high matters of state through his Ministers. He does not make personal assurances binding the policy of the realm, save with the counsel and consent of his Cabinet. But Mr. Asquith, Sir Edward Grey, and their colleagues had certainly not pledged the kingdom to neutrality in the event of the outbreak of that European war which they were endeavouring to stave off. As we have seen in the dealings of Sir Edward Grey with Prince Lichnowsky, and equally in the negotiations at Berlin, a promise of neutrality was the last thing that the British Government had any intention of giving to Germany. To have done so would have left her free to deliver her attack without any fear of British intervention; it would have served to make a declaration of war easy, which was the very reverse of the intention of Great Britain. King George cannot possibly have given any such message to Prince Henry as the Kaiser asserts, and one would have supposed that the latter was sufficiently versed in British constitutional usages to know that the pledge which he reports in the telegram to the American President was one which no King could give in [Great Britain]. . . . We cannot be far out in believing that the message was purely to the effect that the King would be delighted to do what he could to avert war. This is made certain by the measures which King George actually took on receiving his cousin's telegram, asking for the use of his influence on Russia for pacific ends. He sent to the Czar, through Sir Edward Grey, in proper constitutional fashion, a copy of the German *communiqué* complaining of Russian mobilisation, and threatening war unless it was immediately countermanded, with the following comment:

"I cannot help thinking that some misunderstanding has produced this deadlock. I am most anxious not to miss any possibility of avoiding the terrible calamity which at present threatens the whole world. I therefore make a personal appeal to you to remove the misapprehension which I feel must have occurred, and to leave still open grounds for negotiation and possible peace. If you think I can in any way contribute to that all-important purpose, I will do everything in my power to assist in reopening the interrupted conversations between the Powers concerned. I feel confident that you are as anxious as I am that all that is possible should be done to secure the peace of the world."

"On the previous night the King had replied to the telegram of Prince Henry, which invited his pacific mediation at Petrograd, in the following terms, which sufficiently show what his original message to his cousin must have been:

"HIS MAJESTY KING GEORGE TO HIS ROYAL HIGHNESS PRINCE HENRY OF PRUSSIA, . . . JULY 30, 1914.

"Thanks for your telegram. I am very glad to hear of William's efforts to act with Nicholas for the maintenance of peace. I earnestly desire that such a misfortune as a European war—the evil of which could not be remedied—may be prevented. My Government is doing the utmost possible in order to induce Russia and France to postpone further military preparations, provided that Austria declares herself satisfied with the occupation of Belgrade and the neighbouring Serbian territory, as a pledge for a satisfactory settlement of her demands, while at the same time the other countries (note—The 'other countries' must mean Germany, France, and Russia, apparently) suspend their preparations for war. I rely on William applying his great influence in order to induce Austria to accept this proposal. In this way he will prove that Germany and England are working together to prevent what would be an international catastrophe. Please assure William that I am doing all I can, and will continue to do all that lies in my power, to maintain the peace of Europe.

"[Signed] 'GEORGE.'

" . . . This message fits perfectly well into the known sequence of diplomatic happenings, and thereby differs absolutely from the alleged message put into King George's mouth by the Kaiser in the 'Wilson telegram.' It is at this point in the story that we run upon the most surprising points in the Kaiser's interesting if confused narrative given in that document. It may be best to print the paragraphs with which we are concerned in full: 'On the 30th my Ambassador in London reported that Sir Edward Grey in the course of a "private" conversation, told him that if the conflict remained localised between Russia—not Serbia—and Austria, England would not move, but if we mixed in the fray she would take quick decisions and grave measures, *i.e.*, if I left my ally Austria in the lurch, to fight alone, England would not touch me [*B. D. C.*, no. 89]. This communication being directly counter to the King's message to me, I telegraphed to him on the 29th or 30th, thanking him for his kind message through my brother, and begging him to use all his power to keep France and Russia, his allies, from making any warlike preparations calculated to disturb my work of mediation, stating that I was in constant communication with His Majesty the Czar. In the evening the King kindly answered that he had ordered his Government to use every possible influence with his allies to refrain from taking any provocative military measures. At the same time His Majesty asked me if I would transmit to Vienna the British proposal that Austria was to take Belgrade and a few other Serbian towns and a strip of country, as a *mainmise* to make sure that the other Serbian promises on paper should be fulfilled in reality. This proposal was at the same moment telegraphed to me from Vienna for London, quite in conjunction with the British proposal. Besides, I had telegraphed to His Majesty the Czar the same, as an idea of mine, before I received the two communications from Vienna and London, as both were of the same opinion. I immediately transmitted the telegram *vice-versâ* Vienna and London. I felt that I was able to tide the question over, and was happy at the peaceful outlook. While I was preparing a note to His Majesty the Czar the next morning, to inform him that Vienna,

London, and Berlin were agreed about the treatment of affairs, I received the telephones from his Excellency the Chancellor that in the night before the Czar had given the order to mobilise the whole Russian army, which was, of course, also meant against Germany, whereas up till then the southern armies had been mobilised against Austria.' We have already shown that the alleged message from Buckingham Palace sent through Prince Henry cannot have been of the character that the Kaiser declared for the best of reasons. The warning given to Prince Lichnowsky by Sir Edward Grey on the 28th July is, however, not unfairly reproduced in the telegram. But now comes the difficulty. The Kaiser acknowledges that he received the King's telegram of the 30th July offering the solution made by Sir Edward Grey, as to an Austrian occupation of Belgrade as a preliminary for a satisfactory settlement. But he then alleges that he received a similar offer from Vienna, and that he sent it on at once to King George. It was officially denied from London that any such telegram from Vienna was ever received by King George or by the British Secretary for Foreign Affairs."—*Oman*, pp. 98-100.—This telegram, however, is reproduced by *Kautsky*, no. 477.

41.—Appeal of French president to King George.—"Meanwhile the President of the French Republic sent in to King George the letter to which allusion is made in M. Cambon's last quoted despatch [*F. Y. B.*, no. 80]. Its terms were these—

"THE PRESIDENT OF THE FRENCH REPUBLIC TO HIS MAJESTY KING GEORGE.

"PARIS, JULY 31, 1914.

"DEAR AND GREAT FRIEND,

"In the grave events through which Europe is passing, I feel bound to convey to your Majesty the information which the Government of the Republic have received from Germany. The military preparations which are being undertaken by the Imperial Government, especially in the immediate neighbourhood of the French frontier, are being pushed forward every day with fresh vigour and speed. France, resolved to continue to the very end to do all that lies within her power to maintain peace, has, up to the present, confined herself solely to the most indispensable precautionary measures. But it does not appear that her prudence and moderation serve to check Germany's action; indeed, quite the reverse. We are, perhaps, then, in spite of the moderation of the Government of the Republic and the calm of public opinion, on the eve of the most terrible events. From all the information which reaches us it would seem that war would be inevitable if Germany were convinced that the British Government would not intervene in a conflict in which France might be engaged; if, on the other hand, Germany were convinced that the *Entente cordiale* would be affirmed, in case of need, even to the extent of taking the field side by side, there would be the greatest chance that peace would remain unbroken. It is true that our military and naval arrangements leave complete liberty to your Majesty's Government, and that, in the letters exchanged in 1912 between Sir Edward Grey and M. Paul Cambon, Great Britain and France entered into nothing more than a mutual agreement to consult one another in the event of European tension, and to examine in concert whether common action were advisable. But the character of close friendship which public feeling has given in both countries to the *Entente* between

Great Britain and France, the confidence with which our two Governments have never ceased to work for the maintenance of peace, and the signs of sympathy which your Majesty has ever shown to France, justify me in informing you quite frankly of my impressions, which are those of the Government of the Republic and of all France. It is, I consider, on the language and the action of the British Government that henceforward the last chances of a peaceful settlement depend. We, ourselves, from the initial stages of the crisis, have enjoined upon our Allies an attitude of moderation, from which they have not swerved. In concert with your Majesty's Government, and in conformity with Sir E. Grey's latest suggestions, we will continue to act on the same lines. But if all efforts at conciliation emanate from one side, and if Germany and Austria can speculate on the abstention of Great Britain, Austria's demands will remain inflexible, and an agreement between her and Russia will become impossible. I am profoundly convinced that at the present moment the more Great Britain, France and Russia can give a deep impression that they are united in their diplomatic action, the more possible will it be to count upon the preservation of peace. I beg that your Majesty will excuse a step which is only inspired by the hope of seeing the European balance of power definitely reaffirmed. Pray accept the expression of my most cordial sentiments.

“R. POINCARÉ.”

“This impassioned appeal had not the desired effect. On the next morning King George, having consulted his Ministers, made a reply to the effect that he still did not despair of peace, and that it was impossible to give the answer for which the President hoped.

“HIS MAJESTY KING GEORGE TO THE PRESIDENT OF THE FRENCH REPUBLIC.

“BUCKINGHAM PALACE, AUGUST 1, 1914.

“DEAR AND GREAT FRIEND,

“I most highly appreciate the sentiments which moved you to write to me in so cordial and friendly a spirit, and I am grateful to you for having stated your views so fully and frankly. You may be assured that the present situation in Europe has been the cause of much anxiety and pre-occupation to me, and I am glad to think that our two Governments have worked so amicably together in endeavouring to find a peaceful solution of the questions at issue. It would be a source of real satisfaction to me if our united efforts were to meet with success, and I am still not without hope that the terrible events which seem so near may be averted. I admire the restraint which you and your Government are exercising in refraining from taking undue military measures on the frontier and not adopting an attitude which could in any wise be interpreted as a provocative one. I am personally using my best endeavours with the Emperors of Russia and of Germany towards finding some solution by which actual military operations may at any rate be postponed, and time be thus given for calm discussion between the Powers. I intend to prosecute these efforts without intermission so long as any hope remains of an amicable settlement. As to the attitude of my country, events are changing so rapidly that it is difficult to forecast future developments; but you may be assured that my Government will continue to discuss freely and frankly any point which

might arise of interest to our two nations with M. Cambon. Believe me, M. le Président.

“[Signed] ‘GEORGE R. I.’”

—*Oman*, pp. 108-109.

“The reply was the only one which could be sent in the circumstances. But we may feel that it was only with deep regret that nothing more could at this moment be said. [See also ENGLAND: 1914.] They had, in fact, to deal with the precise situation as it stood at that moment, and in particular it would be necessary to consider, as each particular case arose, whether this was action of such a kind as to force Great Britain out of its attitude of neutrality.”—Headlam, p. 327.—Would more decided action by Sir Edward Grey at an early stage have prevented the war? “We must first ask, At what early stage? Suppose after Agadir or on the announcement of the new German Navy Law in 1912 the Foreign Secretary had, in cold blood, proposed a formal alliance with France and Russia, and in execution of military conventions consequential upon the alliance had begun to raise by compulsion an army adequate to . . . [British] responsibilities and to the part . . . [Great Britain was] playing in the world's affairs . . . who shall say whether that would have prevented or precipitated the war? But what chance was there of such action being unitedly taken? The Cabinet of the day would never have agreed to it. . . . But if the Cabinet had been united upon it, the House of Commons would not have accepted their guidance. Therefore the Foreign Minister would have had to resign. The policy which he had advocated would have stood condemned and perhaps violently repudiated; and with that repudiation would have come an absolute veto upon all those informal preparations and non-committal discussions on which the defensive power of the Triple Entente was erected. Therefore, by taking such a course in 1912 Sir Edward Grey would only have paralysed Britain, isolated France and increased the preponderant and growing power of Germany. Suppose again that now after the Austrian ultimatum to Serbia, the Foreign Secretary had proposed to the Cabinet that if matters were so handled that Germany attacked France or violated Belgian territory, Great Britain would declare war upon her. Would the Cabinet have assented to such a communication? I cannot believe it. If Sir Edward Grey could have said on Monday that if Germany attacked France or Belgium, England would declare war upon her, might there not still have been time to ward off the catastrophe? The question is certainly arguable. But the knowledge which we now have of events in Berlin to show that even then the German Government were too deeply committed by their previous action. They had before their eyes the deliberate British announcement that the Fleet was being held together. That at least was a serious if silent warning. Under its impression the German Emperor, as soon as he returned to Berlin, made on this same Monday and succeeding days strong efforts to bring Austria to reason and so to prevent war. But he could never overtake events or withstand the contagion of ideas. However this may be, I am certain that if Sir Edward Grey had sent the kind of ultimatum suggested, the Cabinet would have broken up, and it is also my belief that up till Wednesday or Thursday at least, the House of Commons would have repudiated his action. Nothing less than the deeds of Germany would have converted the British nation to war. To act in advance of those deeds would have led to an exposure of division worse

than the guarded attitude which . . . [was] maintained, which brought . . . [the] country into the war united. After Wednesday or Thursday it was too late."—W. L. S. Churchill, *World crisis*, pp. 215-217.

42.—German ultimatum to Russia.—On Aug. 1 Sazonov sent the following secret telegram to the Russian diplomats abroad:

"At midnight the Ambassador of Germany declared to me, by order of his Government, that if within twelve hours, that is at midnight of Saturday, we did not commence demobilization, not only in regard to Germany but also in regard to Austria, the German Government would be forced to give the order of mobilization. To my question if this was war the Ambassador replied in the negative, but added that we were very near it."—*R. O. B.*, no. 70.

43.—Second declaration of war: Germany against Russia.—No reply to Germany's ultimatum was sent by Russia, and at 7.10 P. M. on the evening of August 1, the following declaration of war was presented by the German ambassador:

"No. 76. NOTE PRESENTED BY THE GERMAN AMBASSADOR AT ST. PETERSBURG, JULY 19 (AUGUST 1), 7:10 P. M.

"The Imperial German Government have used every effort since the beginning of the crisis to bring about a peaceful settlement. In compliance with a wish expressed to him by His Majesty the Emperor of Russia, the German Emperor had undertaken, in concert with Great Britain, the part of mediator between the Cabinets of Vienna and St. Petersburg; but Russia, without waiting for any result, proceeded to a general mobilisation of her forces both on land and sea. In consequence of this threatening step, which was not justified by any military proceedings on the part of Germany, the German Empire was faced by a grave and imminent danger. If the German Government had failed to guard against this peril, they would have compromised the safety and the very existence of Germany. The German Government were, therefore, obliged to make representations to the Government of His Majesty the Emperor of All the Russias and to insist upon a cessation of the aforesaid military acts. Russia having refused to comply with (not having considered it necessary to answer*) this demand, and having shown by this refusal (this attitude*) that her action was directed against Germany, I have the honour, on the instructions of my Government, to inform your Excellency as follows: His Majesty the Emperor, my august Sovereign, in the name of the German Empire, accepts the challenge, and considers himself at war with Russia.—F. POURTALÈS."

* The words in brackets occur in the original. It must be supposed that two variations had been prepared in advance, and that, by mistake, they were both inserted in the note."—*R. O. B.*, no. 76.—See also RUSSIA: 1914 (August): Declaration, etc.

"The German declaration of war on Russia took effect at mid-day on the 1st August, the Ultimatum giving twelve hours notice having been delivered by Count Pourtalès on the preceding night. Two hours after the designated moment had elapsed, a telegram from the Czar reached Berlin; there seems every reason to believe that it had been delayed upon the way. It will be seen that its words presuppose that a settlement was still possible, despite of the fatal document that had been sent in upon the 31st:

"I have received your telegram. I comprehend that You are forced to mobilise, but I should like to have from You the same guarantee which I have given You, viz., that these measures do not mean war, and that we shall continue to negotiate for the welfare of our two countries, and the universal peace which is so dear to our hearts. With the aid of God it must be possible to our long tried friendship to prevent the shedding of blood. I expect with full confidence Your urgent reply."

"To this the Kaiser replied that the time-limit had expired, that he was unable to discuss the subject raised, and that an immediate acquiescence in the preceding German demand for instant demobilisation was the only way in which war might still be averted:

"I thank You for Your telegram. I have shown yesterday to Your Government the way through which alone war could still be averted. Although I asked for a reply by to-day noon, no telegram from my Ambassador has reached me with the reply of Your Government. I therefore have been forced to mobilise my army. An immediate, clear, and unmistakable reply of Your Government is the sole way to avoid endless misery. Until I receive this reply I am unable, to my grief, to enter upon the subject of Your telegram. I must ask most earnestly that You, without delay, order Your troops to commit, under no circumstances, the slightest violation of our frontiers."

"As the German army was now mobilised, this demand that Russia should demobilise without any corresponding promise on the part of the Kaiser was clearly absurd. If it meant anything, it was a final attempt to enforce the Imperial will by a last supplementary threat. But it is improbable that William II had by this moment any expectation that his cousin would yield, or any desire that he should. The projected war had been launched on Europe, and further exchange of telegrams was obviously useless. War, then, between Germany and Russia began at noon on the 1st August. There remained the question of war between Germany and France."—Oman, p. 110.—"Another incident of these crowded days deserves some record, as it has been quoted in Germany as an instance of Great Britain having stood in the way of a localisation of the war. This impression is produced by suppressing a telegram in which it is shown that the whole episode arose from a mistake upon the part of Prince Lichnowsky, the German ambassador. On August 1 Sir Edward Grey, still feeling round for some way in which the evil might be minimised, suggested through the telephone to Prince Lichnowsky that if both Germany and France could see their way to stand out, the conflict would then be limited to Austria and Russia. This practical and possible suggestion was transmitted to Berlin in the absurd form that Britain would hold France out of the war, while Russia would be abandoned to Germany and Austria. The Kaiser lost no time in assenting to so delightful a proposal. It was at once pointed out to Prince Lichnowsky that he had made a mistake, and the Prince telegraphed to Berlin a correction of his previous message. This second telegram was suppressed by the German Government, while, some weeks afterwards, they published the inaccurate dispatch in order to give the world the impression that Britain had actually made a move towards peace which had been withdrawn when it was found that it was eagerly welcomed by Ger-

many. The very idea that Britain could in any way pledge the actions of France is grotesque upon the face of it. Whilst making this false suggestion as to the action of Britain, the German Government carefully concealed the fact that Sir Edward Grey had actually gone the extreme length in the interests of peace, of promising that we should detach ourselves from our Allies if a conference were held and their attitude was an obstacle to an agreement."—A. C. Doyle, *British campaign in France and Flanders, 1914*, pp. 19-21.—See also below: 38.

44.—Attitude of the Kaiser.—The perturbation of the Kaiser's mind at this time is shown by his comments upon the diplomatic documents submitted to him in the days which immediately preceded the declarations of war. "Upon a telegram of July 30th from the German Ambassador at Petersburg to the Foreign Office, in which, among other things, it was reported that Sazonoff had stated that the Russian mobilization could not be stopped, the Emperor penned the following:

"If mobilization can no longer be stopped—which is not true—why then did the Czar call upon my mediation at all three days afterwards without mentioning the issuing of the mobilization orders? That shows clearly enough that the mobilization has seemed too sudden even to him and that afterwards, to quiet his conscience, he made this move here, pro forma, although he knew that it was no longer of any use, since he does not feel strong enough to stop the mobilization. Frivolity and weakness are going to throw the world into the most terrible war, which aims eventually to destroy Germany. For that is clear to me beyond all doubt: England, Russia and France have agreed among themselves—on the ground that we are confronted with our casus foederis towards Austria—to carry on a war of annihilation against us, taking the Austro-Serbian conflict as a pretext. Hence Grey's cynical remark to Lichnowsky, "as long as the war remains confined to Russia and Austria, England will remain quiet and only if we involve ourselves and France in it would he be forced to move actively against us." That is, either we should basely betray our ally and deliver her up to Russia—thereby destroying the Triple Alliance—or, for our loyalty to our ally, be pounced upon and punished by all of the Triple Entente, by which their jealousy will finally receive the satisfaction of totally ruining both of us. This in a nutshell is the true situation which, slowly and surely initiated by Edward VII, promoted by him and, in spite of denials, systematically developed by means of discussions of England with Paris and Petersburg, is being finally completed and put into operation by George V. The stupidity and clumsiness of our ally is thereby turned into a noose for us. Thus the famous "encircling" of Germany has now at last become an accomplished fact, in spite of all the attempts of our politicians and diplomats to prevent it. The net has been suddenly drawn together over our heads and England, smiling scornfully, has scored the most brilliant results from her tenacious, purely anti-German world-policy, against which we have proven ourselves powerless, for while we are struggling isolated in the net, she is making out of our loyalty to Austria a rope for our political and economic destruction. A wonderful accomplishment, which excites admiration even from him who is sent to destruction by it! Edward VII is, after his death, still stronger than I, who am alive! And yet there have been people who have believed that England could be won over or be pacified by means of this or that petty

measure!!! Unceasingly, unyieldingly she has pursued her purpose with notes, proposals for naval holidays, scares, Haldane, etc., until she was ready. And we walked into the trap and even introduced the program of one-ship-a-year, in the pathetic hope of thereby pacifying England!!! All warnings, all entreaties on my part have been in vain. Now we are earning the English so-called gratitude for all this! Out of the dilemma into which our loyalty towards the venerable old Emperor has brought us, a situation is created which gives England the desired pretext for annihilating us with the hypocritical appearance of justice, namely to help France on account of the maintenance of the notorious balance of power in Europe, i.e. the playing off of all European states against us for the benefit of England! Now all of these machinations must be unsparingly uncovered and the mask of Christian peaceableness must be openly and firmly torn from her, and the Pharisaical hypocrisy of pacifism must be exposed on the pillories!! And our consuls in Turkey and India, agents, etc., must incite the whole Mohammedan world to a wild revolt against this detestable, lying and unscrupulous nation of shopkeepers, for if we are to bleed to death then England shall at least lose India.—W."—Kautsky, *no.* 401.

45.—Popularity of the war in Russia.—"Since the conclusion of the war with Japan [in 1905] Russia had been feverishly reorganizing her army and navy, in response to Germany's gigantic increase of military expenditure. The third and fourth Dumas eagerly supported the Government's efforts to improve the army and navy, although the representatives of the House were refused participation in the work of reorganization. [See also RUSSIA: 1914 (August): Status of army.] The clash with Germany seemed inevitable, and the only question was whether Germany would give Russia and France time to get ready. Both Russia and France heartily welcomed, in the meantime, the change in England's traditional policy of 'splendid isolation.' Great Britain and Russia came to an understanding concerning Persia, Afghanistan, and Tibet; the unofficial Triple Entente was growing in pace with the increase of Teutonic influence in the Near East, for the Pan-Germanistic dream about a straight diagonal line—Berlin-Bagdad, threatened the welfare of all the three nations concerned. For Russia in particular, a Germanized Constantinople would mean the end of her ambitions. Since Peter the Great an outlet into an ice-free sea has been the historical need of the Empire; Arkhangelsk [Archangel] in the North is frozen most of the year; Vladivostok is ice-bound three months, and is too remote, especially since Russian interests in the Far East received a serious check; the Baltic Sea is closed half a year, and is, besides, at the mercy of Germany; the Black Sea is of unstable use as long as the 'key' is in the hands of Turkey, or, for that matter, of any power which may block the outlet into the Mediterranean. . . . The grievances of the Russian people against Germany have been not only of an economic and political nature. In the minds of the *intelligentzia* and of the oppressed masses the name of Germany, but particularly of Prussia, has been associated with the crimes of Russian bureaucracy. Since the middle of the eighteenth century—in fact, since Peter the Great—German influence has been preponderant in various fields of Russian life: at the Court, in the army and navy, among the higher bureaucrats, in commerce; German colonists have occupied some of the best land in the West and in the South. Any Russian schoolboy will give you a list of Russian

tyrants and oppressors with such names as Bühren, Pahlen, Benckendorff, Berg, Plehve, Minn, Riman, Kaulbars, or of such distinguished nonentities of the army and navy as Stakelberg, Stark, Stössel, Rennenkampf, Grippenbergr. . . In a word, the war with Germany is [1914] in the eyes of the majority of the people associated, rightly or wrongly, with the struggle against everything pernicious in Russia, against bureaucracy, militarism, and despotism. This explains the wonderful unity of all ranks and classes, of the *intelligentsia* and the masses, of the conservatives, liberals, and revolutionists, of the landowners, manufacturers, peasants, and workingmen—in the common purpose of defeating 'Wilhelmism,' to use the expression of an old revolutionary."—A. Kornilov, *Modern Russian history*, v. 2, pp. 343-346.—See also RUSSIA: 1914 (August): Relations with Germany.

46.—Russian foreign minister Sazanov on crisis.—"20TH JULY, (2D AUG.) 1914. . . The Imperial Government, to which the Ambassador of Austria-Hungary at St. Petersburg had communicated the text of the note seventeen hours after its delivery at Belgrade, having taken note of the demands contained therein, saw that among the number were some that it was entirely impossible to comply with, while others were presented in a form incompatible with the dignity of an independent State. Finding inadmissible the diminution of the dignity of Serbia contained in these demands, as well as the tendency of Austria-Hungary to assure her preponderance in the Balkans, shown by these very exigencies, the Russian Government pointed out in the most friendly fashion to Austria-Hungary that it would be desirable to submit to a new examination the points contained in the Austro-Hungarian note. The Austro-Hungarian Government did not believe it possible to consent to a discussion of the note. The moderating action of the other powers at Vienna was likewise not crowned with success. . . Recognizing the exaggerated character of the demands presented by Austria, Russia had previously declared that it would be impossible for her to remain indifferent, without at the same time refusing to employ all her efforts to obtain a pacific issue which would be acceptable to Austria and would satisfy her *amour-propre* as a great power. At the same time Russia firmly established that she admitted a pacific solution of the question only in a measure which would not imply the diminution of the dignity of Serbia as an independent State. Unfortunately all the efforts made by the Imperial Government in this direction remained without effect. The Austro-Hungarian Government, after evading (*s'être dérobé*) every conciliatory intervention of the Powers in its conflict with Serbia, proceeded to mobilize, officially declared war on Serbia, and the following day bombarded Belgrade. The manifesto which accompanied the declaration of war openly accused Serbia of having prepared and executed the crime of Serajevo. Such an accusation of a crime of the Common Law against a whole people and a whole Government drew to Serbia by its evident inanity the large sympathies of all circles of European society. As a consequence of this method of acting on the part of the Austro-Hungarian Government, despite the declaration of Russia that she could not remain indifferent to the lot of Serbia, the Imperial Government judged it necessary to order the mobilization of the military districts of Kiev, Odessa, Moscow, and Kazan. Such a decision was necessary because after the date of the handing of the Austro-Hungarian note

to the Servian Government and the first steps of Russia five days had passed and meanwhile the Cabinet of Vienna had made no step to meet our pacific efforts—on the contrary the mobilization of half of the Austro-Hungarian Army had been decreed. The German Government was informed of the measures taken by Russia. It was at the same time explained to it that these measures were only the consequence of the Austrian armaments, and in no wise directed against Germany. At the same time the Imperial Government declared that Russia was ready to continue the *pourparlers* in view of a pacific solution of the conflict, either by means of direct negotiations with the Cabinet of Vienna, or, following the proposal of Great Britain, by means of a conference of the four great Powers not directly interested, namely, England, France, Germany, and Italy. However, this attempt of Russia equally failed. Austria-Hungary declined a further exchange of views with us, and the Cabinet at Vienna evaded participation in the projected conference of the Powers. Nevertheless Russia did not discontinue her efforts in favor of peace. Replying to the question of the Ambassador of Germany, under what conditions we would still consent to suspend our armaments, the Minister of Foreign Affairs declared that these conditions would be the recognition by Austria-Hungary that the Austro-Servian question had taken the character of a European question, and the declaration of this same Power that she would consent not to insist on demands incompatible with the sovereign rights of Serbia. The proposal of Russia was judged by Germany to be unacceptable for Austria. Simultaneously there was received at St. Petersburg the news of the proclamation of the general mobilization by Austria-Hungary. At the same time hostilities continued on Servian territory and Belgrade was again bombarded. The failure of our pacific proposals obliged us to increase the military measures of precaution. The Cabinet of Berlin having addressed to us a question on this subject, it was replied that Russia was forced to commence arming to safeguard herself against all eventualities. While taking this measure of precaution, Russia none the less did not discontinue to seek with all her powers an issue from the situation and declared herself ready to accept any method of solution of the conflict which would meet the conditions posed by us. Notwithstanding this conciliatory communication the German Government, 18 (31) July, addressed to the Russian Government a demand for the suspension of her military measures by midday of the 19th July, (1st August,) threatening in the contrary case to proceed to a general mobilization. Next day, 19th July, (1st August,) the Ambassador of Germany transmitted to the Minister for Foreign Affairs in the name of his Government the declaration of war."—*R. O. B.*, no. 77.

47.—German inquiry as to intentions of France.—René Viviani reported on August 1:

"The attitude of Germany proves that she wishes for war. And she wishes for it against France. Yesterday when Herr von Schoen came to the Quai d'Orsay to ask what attitude France proposed to take in case of a Russo-German conflict, the German Ambassador, although there has been no direct dispute between France and Germany, and although from the beginning of the crisis we have used all our efforts for a peaceful solution and are still continuing to do so, added that he asked me to present his respects and thanks to the President of the Republic, and asked that we would be good enough to make arrangements as to him personally

(*des dispositions pour sa propre personne*); we know also that he has already put the archives of the Embassy in safety. This attitude of breaking off diplomatic relations without any direct dispute, and although he has not received any definitely negative answer, is characteristic of the determination of Germany to make war against France. The want of sincerity in her peaceful protestations is shown by the rupture which she is forcing upon Europe at a time when Austria had at last agreed with Russia to begin negotiations."—*F. Y. B.*, no. 120.—See also below: 69.

48.—German ultimatum to France.—Projected demand of French fortresses.—French mobilization.—German invasion of Luxemburg.—Claims of frontier violation.—Belgium invaded.

RENÉ VIVIANI

—Third declaration of war (Aug. 3): Germany against France.—On July 31, the German ultimatum was delivered at the Foreign Office in Paris by von Schoen, the German ambassador. An account of his interview with Viviani, the prime minister, is told with fairness and accuracy. Writing in the spring of 1921, he says: "I was instructed to inform the French premier that Russia's mobilization had compelled us to proclaim a state of 'impending danger of war', which must be followed by mobilisation, unless Russia suspended all her military preparations against us within twelve hours. Mobilisation would inevitably mean war; I was therefore to ask whether France would remain neutral in a Russo-German war. The answer was to be given within eighteen hours. The instructions further state that in case of France promising to remain neutral, which was unlikely, a guarantee was to be given, in the form of conceding us a right to occupy the fortresses of Toul and Verdun for the duration of the war with Russia. In the

conversation which I had with M. Viviani on the evening of July 31st, he professed to my surprise, to have no information of a Russian general mobilisation against us, and said he only knew of a partial mobilisation against Austria-Hungary and general precautionary measures. He would not abandon hope that the worst might yet be avoided. On my pointing out that not only the whole Russian army, but the fleet had also been mobilised, a clear proof that the measure was directed against us, M. Viviani could make no reply. He promised to give an answer to the question of neutrality the next afternoon, after the Cabinet Council. His ignorance of the Russian general mobilisation seems very remarkable, in view of the fact that it had been publicly proclaimed in the early morning of that day in St. Petersburg, had been ordered the evening before, and undoubtedly decided on even earlier. . . . Paris could not be in any doubt that the Russian mobilisation was equivalent to war . . . as this was a principle on which stress had been laid when concluding the alliance. In the course of the night M. Viviani telegraphed to St. Petersburg that he proposed merely answering my enquiry as to neutrality by saying that France would be guided by her own interests. . . . If the French official reports published of the interview represent that my question only extended to 'France's attitude', that is misleading. In reality, what I said was, that after the Russian mobilisation and our ultimatum which would probably not be accepted, our decision now depended mainly on France's attitude, as to which I therefore asked for a statement. . . . Of course, I did not allude in any way to making over the fortresses as a guarantee, as this question could only arise in case of the French answer being in the affirmative. . . . The answer was given the next day, August 1st, before the expiration of the eighteen hours, and was as follows: 'France will do what her interests demand'. M. Viviani . . . said, apparently in order to justify the vagueness of the answer, that he had reason to believe the general situation had changed, and was considerably easier. Russia had accepted in principle a fresh proposal made by Sir Edward Grey as to the suspension of military preparations all round, and negotiations, and Austria-Hungary had again expressly stated that she would not encroach on the Serbian territorial *status* and Serbian sovereignty. This revived the hope of a peaceful settlement which had been abandoned. I had heard nothing from Berlin of this fresh proposal, and was therefore not in a position to say anything definite. I never for a moment doubted that the answer to the question as to neutrality was a refusal, in spite of its being so indefinite; I also told M. Viviani at once, without his contradicting me, that I took it to be in the negative, and that my government would probably do the same. There was consequently no object in raising the question of the fortresses. It is obvious that the idea was not a happy one. . . . From a political point of view it was a mistake. . . . If the French had even for only a passing moment thought of agreeing to the proposal of neutrality, the demand for the surrender . . . would have nipped any understanding in the bud. The *faux pas* can only be accounted for by assuming that the demand . . . must have been urged on those responsible for our foreign policy by parties with no political training, and that the reason for not refusing it was only the certainty that France's attitude would make it useless to raise the question, which was, in fact, the case. After trying for years to decipher the

telegraphic instructions concerning the surrender of the fortresses, the French at last succeeded, and they made capital out of this discovery by professing to regard it as further proof that we wished for war. This interpretation of it seems absolutely arbitrary. The idea of asking that the fortresses should be surrendered was not the result of a desire to bring about a rupture under any circumstances, but of a mistaken calculation."—F. von Schoen, *Memoirs of an ambassador* (tr. by C. Vesey), pp. 192-196.—"Justice to France requires the explicit statement that the conduct of her Government at this awful juncture was faultless. She assented instantly to every proposal that could make for peace. She abstained from every form of provocative action. She even compromised her own safety, holding back her covering troops at a considerable distance behind her frontier, and delaying her mobilisation in the face of continually gathering German forces till the latest moment. Not until she was confronted with the direct demand of Germany to break her Treaty and abandon Russia, did France take up the challenge; and even had she acceded to the German demand, she would only, as we now know, have been faced with a further ultimatum to surrender to German military occupation as a guarantee for her neutrality the fortresses of Toul and Verdun. There never was any chance of France being allowed to escape the ordeal. Even cowardice and dishonour would not have saved her. The Germans had resolved that if war came from any cause, they would take and break France forthwith as its first operation."—W. L. S. Churchill, *World crisis, 1914*, pp. 217-218.—In his "Memoirs," posthumously published in Berlin, Dec., 1922, Count von Moltke says: "I now (Aug., 1914) demanded of the Kaiser and his immediate advisers, as a guaranty of French goodwill, temporary possession of the fortresses of Verdun and Toul. This proposal was rejected on the ground that it indicated lack of confidence in England." The French account of the crucial interview is curious. M. Viviani, in his circular dispatch to all the ambassadors of the republic abroad, says that he opened up the conversation by recapitulating the various efforts made by France for a peaceful settlement, and demonstrating the desperate situation created by the dispatch of the ultimatum to Russia on the preceding day: "The German Ambassador came to see me again at 11 o'clock this morning. After having recalled to his memory all the efforts made by France towards an honorable settlement of the Austro-Serbian conflict and the difficulty between Austria and Russia which has resulted from it, I put him in possession of the facts as to the *pourparlers* which have been carried on since yesterday:

"(1) An English compromise, proposing, besides other suggestions, suspension of military preparations on the part of Russia, on condition that the other Powers should act in the same way; adherence of Russia to this proposal.

"(2) Communications from the Austrian Government declaring that they did not desire any aggrandisement in Serbia, nor even to advance into the Sandjak, and stating that they were ready to discuss *even the basis* of the Austro-Serbian question at London with the other Powers.

"I drew attention to the attitude of Germany who, abandoning all *pourparlers*, presented an ultimatum to Russia at the very moment when this Power had just accepted the English formula (which implies the cessation of military preparations by all the countries which have mobilised) and regarded as imminent a diplomatic rupture with

France. Baron von Schoen answered that he did not know the developments which had taken place in this matter for the last twenty-four hours, that there was perhaps in them a 'glimmer of hope' for some arrangement, that he had not received any fresh communication from his Government, and that he was going to get information. He gave renewed protestations of his sincere desire to unite his efforts to those of France for arriving at a solution of the conflict. I laid stress on the serious responsibility which the Imperial Government would assume if, in circumstances such as these, they took an initiative which was not justified and of a kind which would irremediably compromise peace. Baron von Schoen did not allude to his immediate departure and did not make any fresh request for an answer to his question concerning the attitude of France in case of an Austro-Russian conflict. He confined himself to saying of his own accord that the attitude of France was not doubtful. It would not do to exaggerate the possibilities which may result from my conversation with the German Ambassador for, on their side, the Imperial Government continue the most dangerous preparations on our frontier. However, we must not neglect the possibilities, and we should not cease to work towards an agreement. On her side France is taking all military measures required for protection against too great an advance in German military preparations. She considers that her attempts at solution will only have a chance of success so far as it is felt that she will be ready and resolute if the conflict is forced on her."—*F. Y. B.*, no. 125.—"It will be noted that M. Viviani does not say that he gave any categorical answer such as that reported by the German Ambassador. Indeed, he denies that Baron von Schoen made any fresh request for a reply to his question regarding French neutrality. What surprised him was that the Baron did not ask for his passports, and went no further in suggesting the inevitable rupture than the remark that 'the attitude of France was not doubtful.' But German mobilisation being now declared, France somewhat tardily followed the example. The orders were published from the War Office at 3.40 on this afternoon [August 1]. The President of the Republic sent for the British Ambassador, and gave him an *exposé* of the situation, as follows: 'French general mobilisation will become necessary in self-defence, and France is already forty-eight hours behind Germany as regards German military preparations; the French troops have orders not to go nearer to the German frontier than a distance of ten kilometres so as to avoid any grounds for accusations of provocation to Germany, whereas the German troops, on the other hand, are actually on the French frontier, and have made incursions on it. Notwithstanding mobilisations, the Emperor of Russia has expressed himself ready to continue his conversations with the German Ambassador with a view to preserving the peace. The French Government, whose wishes are markedly pacific, sincerely desire the preservation of peace, and do not quite despair, even now, of its being possible to avoid war.' [*B. D. C.*, no. 134.] It created general surprise that no German declaration of war followed the expiration of Baron von Schoen's eighteen-hour limit. The explanation was that the Germans were intending to get the benefit of their violation of Luxemburg and Belgian neutrality, before opening active operations against France and putting her upon her guard. The situation was explained when, on the early morning of the 2nd August, the Germans rushed from both sides into the neutral territory of Lux-

emburg, and in the afternoon sent in their demand for free passage to the Belgian Government. It can, accordingly, only provoke amazement when we find the German Ambassador appearing at mid-day at the French Foreign Office to make the solemn assurance that the invasion of Luxemburg was not an act of hostility, but only 'for the protection of the railways of the Grand Duchy.' . . . The words used were as follows:

"NOTE HANDED IN BY THE GERMAN AMBASSADOR, PARIS, AUGUST 2, 1914.

"The German Ambassador has just been instructed, and hastens to inform the Minister for Foreign Affairs, that the military measures taken by Germany in the Grand Duchy of Luxemburg do not constitute an act of hostility. They must be considered as purely preventive measures taken for the protection of the railways, which, under the treaties between Germany and the Grand Duchy of Luxemburg, are under German administration.

"[Signed] 'VON SCHOEN.' [F. Y. B., no. 133.]

"Meanwhile, though no declaration of war yet came, a whole sequence of violating of the French frontier by German troops took place on the 2nd August, one of them at least on such a scale and penetrating so deep into the country that it is impossible to regard it as the mere freak of an irresponsible junior officer. The Germans alleged similar acts on the part of the French, but . . . the one series of outrages is amply proved and documented, while the other not only vanishes into vague rumour when investigated, but consists of stories incredible in themselves, which (one would have supposed) no civilised Government would have ventured to put on paper in a serious document. It was only after 6 o'clock on the 3rd August, when the Belgian as well as the Luxemburg frontier had already been violated by the German troops, that the declaration of war which had been expected on the 1st August finally came to hand at Paris. The terms in which the German Ambassador asked for his passports were the following:

"LETTER HANDED BY THE GERMAN AMBASSADOR TO M. RENÉ VIVIANI, MINISTER FOR FOREIGN AFFAIRS, DURING HIS FAREWELL AUDIENCE, AUGUST 3, 1914, AT 6.45 P.M.:

"M. LE PRÉSIDENT,—The German administrative and military authorities have established a certain number of flagrantly hostile acts committed on German territory by French military aviators. Several of these have openly violated the neutrality of Belgium by flying over the territory of that country; one has attempted to destroy buildings near Wesel; others have been seen in the district of the Eifel; one has thrown bombs on the railway near Karlsruhe and Nuremberg. I am instructed, and I have the honour to inform your Excellency, that, in the presence of these acts of aggression, the German Empire considers itself in a state of war with France in consequence of the acts of this latter Power. At the same time, I have the honour to bring to the knowledge of your Excellency that the German authorities will detain French mercantile vessels in German ports, but they will release them if, within forty-eight hours, they are assured of complete reciprocity. My diplomatic mission having thus come to an end, it only remains for me to request your Excellency to be good enough to furnish me with my passports, and to take the steps you consider suitable to assure my return to Germany, with the staff of the Em-

bassy, as well as with the staff of the Bavarian Legation and of the German consulate-general in Paris. Be good enough, M. le Président, to receive the assurances of my deepest respect.

"[Signed] 'VON SCHOEN.'"

—*Oman*, pp. 110-113.—See also below: 69.

49.—Conditional British naval support promised France.—"While Great Britain was still declining to commit herself, the great conflict had begun. Austria and Serbia had been enemies since July 28; and on the afternoon of August 1 Russia and Germany were at war. No reply was sent to the German ultimatum, and Russian troops crossed the frontier into East Prussia before the expiration of the time-limit. . . . The anticipated outbreak of hostilities between Germany and France compelled Great Britain to define her attitude; and on the morning of August 2 the Foreign Secretary was empowered by the Cabinet to promise conditional naval support to France."—G. P. Gooch, *History of modern Europe, 1878-1919*, pp. 549-550. —In the afternoon of the same day, Sir Edward Grey made a statement in Parliament of his notification to the French ambassador as follows:

"After the Cabinet this morning I gave M. Cambon the following memorandum: 'I am authorized to give an assurance that, if the German fleet comes into the Channel or through the North Sea to undertake hostile operations against French coasts or shipping, the British fleet will give all the protection in its power. This assurance is of course subject to the policy of his Majesty's Government receiving the support of Parliament, and must not be taken as binding his Majesty's Government to take any action until the above contingency of action by the German fleet takes place.' I pointed out that we had very large questions and most difficult issues to consider, and that Government felt that they could not bind themselves to declare war upon Germany necessarily if war broke out between France and Germany tomorrow, but it was essential to the French Government, whose fleet had long been concentrated in the Mediterranean, to know how to make their dispositions with their north coast entirely undefended. We therefore thought it necessary to give them this assurance. It did not bind us to go to war with Germany unless the German fleet took the action indicated, but it did give a security to France that would enable her to settle the disposition of her own Mediterranean fleet."—*B. D. C.*, no. 148.

50.—Case of Luxemburg.—Guaranteed neutrality.—German invasion.—In a treaty dated May 11, 1867, the second article ran as follows: "'The Grand Duchy of Luxemburg, within the Limits determined by the Act annexed to the Treaties of the 19th April, 1839, under the Guarantee of the Courts of Great Britain, Austria, France, Prussia, and Russia shall henceforth form a perpetually Neutral State. It shall be bound to observe the same Neutrality towards all other States. The High Contracting Parties engage to respect the principle of Neutrality stipulated by the present Article. That principle is and remains placed under the sanction of the collective Guarantee of the Powers signing as Parties to the present Treaty, with the exception of Belgium, which is itself a Neutral State.' The third article provided for the demolition of the fortifications of Luxemburg and its conversion into an open town, the fourth for its evacuation by the Prussian garrison, and the fifth forbade the restoration of the fortifications. Such then was the treaty guaran-

teeing the neutrality of Luxemburg, which was proposed, it may be observed, by Prussia herself [see also LUXEMBURG: 1780-1914]; but, until the treaty was broken by the very Power which had proposed the neutrality, only one incident need be noted in the history of the country, namely, the part it played in the war of 1870-1. On December 3, 1870, Count Bismarck issued from Versailles a circular to the Prussian Ambassadors, calling attention to the fact that both the French and the Luxemburgers had violated the neutrality of the Grand Duchy mainly by giving facilities for French soldiers to return to France. Precautions were taken by the Prussian Government on the frontier to prevent such abuses occurring in the future, and as no violation of the neutrality of Luxemburg was committed by the Prussians, the neutral co-guarantors were satisfied with the Prussian attitude, and the subject dropped. At the end of the war, M. Thiers vainly attempted to obtain Luxemburg as compensation for the loss of Metz."—Oxford Faculty of Modern History, *Why we are at war (Prefatory note to Appendix VII, p. 23)*.—On Aug. 2, 1914, Sir Edward Grey wrote: "M. Cambon asked me about the violation of Luxemburg. I told him the doctrine on that point laid down by Lord Derby and Lord Clarendon in 1867. He asked me what we should say about the violation of the neutrality of Belgium. I said that was a much more important matter; we were considering what statement we should make in Parliament tomorrow—in effect, whether we should declare violation of Belgian neutrality to be a *casus belli*. I told him what had been said to the German Ambassador on this point."—*B. D. C., no. 148*.—The same day the minister of state of Luxemburg wired to Sir Edward Grey: "The Luxemburg Minister of State has just received through the German Minister in Luxemburg, M. de Buch, a telegram from the Chancellor of the German Empire, Bethmann-Hollweg, to the effect that the military measures taken in Luxemburg do not constitute a hostile act against Luxemburg, but are only intended to insure against a possible attack of a French army. Full compensation will be paid to Luxemburg for any damage caused by using the railways, which are leased to the Empire."—*B. D. C., no. 129*.—Later in the day a second message arrived in London from the same minister: "I have the honor to bring to your Excellency's notice the following facts: On Sunday, the 2d August, very early, the German troops, according to the information which has up to now reached the Grand Ducal Government, penetrated into Luxemburg territory by the bridges of Wasserbillig and Remich, and proceeded particularly toward the south and in the direction of Luxemburg, the capital of the Grand Duchy. A certain number of armored trains with troops and ammunition have been sent along the railway line from Wasserbillig to Luxemburg, where their arrival is expected. These occurrences constitute acts which are manifestly contrary to the neutrality of the Grand Duchy as guaranteed by the Treaty of London of 1867. The Luxemburg Government have not failed to address an energetic protest against this aggression to the representatives of his Majesty the German Emperor at Luxemburg. An identical protest will be sent by telegraph to the Secretary of State for Foreign Affairs at Berlin."—*B. D. C., no. 147*.—See also LUXEMBURG: 1914-1918.

51.—Germany demands free passage through Belgium (Aug. 2).—Contrast between attitude toward Belgian and Swiss neutrality.—At seven o'clock in the evening of August 2, Herr von Below

Saleske, German minister at Brussels, handed to the Belgian foreign minister, M. Davignon, a note written in German, demanding a passage through Belgium for German troops:

"BRUSSELS, AUGUST 2, 1914.

"IMPERIAL GERMAN LEGATION IN BELGIUM.

"(Very Confidential)

"Reliable information has been received by the German Government to the effect that French forces intend to march on the line of the Meuse by Givet and Namur. This information leaves no doubt as to the intention of France to march through Belgian territory against Germany.

"The German Government cannot but fear that Belgium, in spite of the utmost goodwill, will be unable, without assistance, to repel so considerable a French invasion with sufficient prospect of success to afford an adequate guarantee against danger to Germany. It is essential for the self-defense of Germany that she should anticipate any such hostile attack. The German Government would, however, feel the deepest regret if Belgium regarded as an act of hostility against herself the fact that the measures of Germany's opponents force Germany, for her own protection, to enter Belgian territory. In order to exclude any possibility of misunderstanding, the German Government make the following declaration:

"1. Germany has in view no act of hostility against Belgium. In the event of Belgium being prepared in the coming war to maintain an attitude of friendly neutrality towards Germany, the German Government bind themselves, at the conclusion of peace, to guarantee the possessions and independence of the Belgian Kingdom in full.

"2. Germany undertakes, under the above-mentioned condition, to evacuate Belgian territory on the conclusion of peace.

"3. If Belgium adopts a friendly attitude, Germany is prepared, in co-operation with the Belgian authorities, to purchase all necessities for her troops against a cash payment, and to pay an indemnity for any damage that may have been caused by German troops.

"4. Should Belgium oppose the German troops, and in particular should she throw difficulties in the way of their march by a resistance of the fortresses on the Meuse, or by destroying railways, roads, tunnels, or other similar works, Germany will, to her regret, be compelled to consider Belgium as an enemy.

"In this event, Germany can undertake no obligations towards Belgium, but the eventual adjustment of the relations between the two States must be left to the decision of arms.

"The German Government, however, entertain the distinct hope that this eventuality will not occur, and that the Belgian Government will know how to take the necessary measures to prevent the occurrence of incidents such as those mentioned. In this case the friendly ties which bind the two neighboring States will grow stronger and more enduring."—*B. G. B., no. 20*.

"Germany was asking Belgium to open her frontier to German armies. Assuming that Belgium had the desire or considered that it was to her interest to accede to this demand, was it in her power to do so? As a state, Belgium is a diplomatic creation. . . . It was created 'Perpetually Neutral' by the Treaty of 1839 (Article 7). [See also BELGIUM: 1839-1914.] Perpetual Neutrality, or to use a more exact expression, Permanent Neu-

trality, is a curious notion of international law. It has been elaborated entirely for the purpose of meeting certain political necessities. . . . To say that a State is protected by Permanent Neutrality is to say that it is excluded from any war whatsoever. Permanent Neutrality tends essentially . . . to safeguard small States against the encroachments of powerful neighbours in such a way as to maintain equilibrium between the great countries. With a view to this object, Permanent Neutrality binds by reciprocal obligations the neutralized State and the States which have sanctioned its neutrality. . . . Belgium could not open her frontier to the German armies because she had entered into a formal obligation with regard to England, Austria-Hungary, France, and Russia, Powers which were co-contractors with Prussia, not to abandon the neutrality that she had by convention accepted in 1839. To grant a passage to the German armies was clearly to show favour to one of the belligerents, namely Germany, to the detriment of the other, namely France, both of whom moreover were parties to the convention. Again, Germany could not have really expected that Belgium would accept her demand, for the very day on which her armies were crossing the Belgian frontier, namely on the 4th of August, she received from Switzerland—the only nation . . . whose international situation could be compared with that of Belgium—a notification that she would remain neutral during the war. What did Germany reply?

'The Government has had the honour to receive the circular note addressed on the 4th of August of this year to the signatory Powers of the Treaty of 1815 in which the Federal Council declares that in the course of the present war the Swiss Confederation will maintain and defend by all the means at her disposal her neutrality and the inviolability of her territory. The Imperial Government has taken cognizance of this declaration with sincere satisfaction and is convinced that the Confederation, with the support of its strong army and the indomitable will of the entire Swiss people, will repel every attempt to violate its neutrality.'

Thus Germany counted upon Switzerland doing exactly that which she was asking Belgium not to do!"—E. Waxweiler, *Belgium neutral and loyal*, pp. 41-42, 48-49.

52.—Belgian reply.—German demand refused.—The German note had been delivered at 7 P. M. on August 2. Six and a half hours later, at 1.30 A. M., the German minister asked for an interview with Baron van der Elst, secretary-general to the Belgian Foreign Office. The German minister told the latter that "he had been instructed by his Government to inform the Belgian Government that French dirigibles had thrown bombs, and that a French cavalry patrol had crossed the frontier in violation of international law, seeing that war had not been declared. The Secretary-General asked Herr von Below [Saleske] where these incidents had happened, and was told that it was in Germany. Baron van der Elst then observed that in that case he could not understand the object of this communication. Herr von Below stated that these acts, which were contrary to international law, were calculated to lead to the supposition that other acts, contrary to international law, would be committed by France."—*B. G. B.*, no. 21.

The same morning, August 3, at seven o'clock, M. Davignon handed Belgium's reply to the German minister:

"The German Government stated in their note of the 2d August, 1914, that according to reliable information French forces intended to march on the Meuse via Givet and Namur, and that Belgium, in spite of the best intentions, would not be in a position to repulse, without assistance, an advance of French troops. The German Government, therefore, considered themselves compelled to anticipate this attack and to violate Belgian territory. In these circumstances, Germany proposed to the Belgian Government to adopt a friendly attitude towards her, and undertook, on the conclusion of peace, to guarantee the integrity of the Kingdom and its possessions to their full extent. The note added that if Belgium put difficulties in the way of the advance of German troops, Germany would be compelled to consider her as an enemy, and to leave the ultimate adjustment of the relations between the two States to the decision of arms. This note has made a deep and painful impression upon the Belgian Government. The intentions attributed to France by Germany are in contradiction to the formal declarations made to us on August 1, in the name of the French Government. Moreover, if, contrary to our expectation, Belgian neutrality should be violated by France, Belgium intends to fulfil her international obligations and the Belgian army would offer the most vigorous resistance to the invader. The treaties of 1839, confirmed by the treaties of 1870, vouch for the independence and neutrality of Belgium under the guarantee of the Powers, and notably of the Government of His Majesty the King of Prussia. Belgium has always been faithful to her international obligations, she has carried out her duties in a spirit of loyal impartiality, and she has left nothing undone to maintain and enforce respect for her neutrality. The attack upon her independence with which the German Government threaten her, constitutes a flagrant violation of international law. No strategic interest justifies such a violation of law. The Belgian Government, if they were to accept the proposals submitted to them, would sacrifice the honor of the nation and betray their duty towards Europe. Conscious of the part which Belgium has played for more than eighty years in the civilization of the world, they refuse to believe that the independence of Belgium can only be preserved at the price of the violation of her neutrality. If this hope is disappointed, the Belgian Government are firmly resolved to repel, by all the means in their power, every attack upon their rights."—*B. G. B.*, no. 22.

M. Davignon telegraphed to the Belgian diplomatic representatives at Berlin, St. Petersburg, London, Paris, Vienna and The Hague:

"BRUSSELS, AUGUST 3, 1914: At 7 p. m. last night Germany presented a note proposing friendly neutrality. This entailed free passage through Belgian territory, while guaranteeing the maintenance of the independence of Belgium and of her possessions on the conclusion of peace, and threatened, in the event of a refusal, to treat Belgium as an enemy. A time limit of twelve hours was allowed within which to reply. Our answer has been that this infringement of our neutrality would be a flagrant violation of international law. To accept the German proposal would be to sacrifice the honor of the nation. Conscious of her duty, Belgium is firmly resolved to repel any attack by all the means in her power."—*B. G. B.*, no. 23.

At noon on the same day M. Davignon sent the following dispatch to his representatives at the five principal capitals:

"As you are aware, Germany has delivered to Belgium an ultimatum which expires this morning, 3d August, at 7 o'clock. As no act of war has occurred up to the present, the Cabinet has decided that there is, for the moment, no need to appeal to the guaranteeing Powers. The French Minister has made the following statement to me upon the subject: 'Although I have received no instructions to make a declaration from my Government, I feel justified, in view of their well-known intentions, in saying that if the Belgian Government were to appeal to the French Government as one of the Powers guaranteeing their neutrality, the French Government would at once respond to Belgium's appeal; if such an appeal were not made, it is probable that—unless of course exceptional measures were rendered necessary in self-defence—the French Government would not intervene until Belgium had taken some effective measure of resistance.' I thanked Monsieur Klobukowski for the support which the French Government had been good enough to offer us in case of need, and I informed him that the Belgian Government were making no appeal at present to the guarantee of the Powers, and that they would decide later what ought to be done."—*B. G. B., no. 24.*

—See also BELGIUM: 1914: World War.

53.—**King of the Belgians' appeal to King George.—British response.**—On August 3, King Albert of the Belgians addressed the following telegram to King George (in French): "Mindful of the numerous marks of friendship of your Majesty and of your Majesty's predecessors, as well as the friendly attitude of Great Britain in 1870 and of the proofs of sympathy which she has once again shown us, I make the supreme appeal to the diplomatic intervention of your Majesty's Government to safeguard the neutrality of Belgium.—Albert."—*B. G. B., no. 25.*

On the same day the Belgian minister in London replied to M. Davignon's telegram (see above: 52):

"I showed your telegram to the Minister for Foreign Affairs [Sir Edward Grey] who has laid it before the Cabinet. The Minister for Foreign Affairs has informed me that if our neutrality is violated it means war with Germany."—*B. G. B., no. 26.*

54.—**France offers troops to Belgium.**—On August 3, the British minister in Brussels reported: "French Government have offered through their Military Attaché the support of five French Army corps to the Belgian Government. Following reply has been received today: 'We are sincerely grateful to the French Government for offering eventual support. In the actual circumstances, however, we do not propose to appeal to the guarantee of the powers. Belgian Government will decide later on the action which they may think it necessary to take.'"—*B. D. C., no. 151.*

55.—**Position of Italy.—Declaration of neutrality.—Secret treaty with France concluded in 1902.—Terms of Triple Alliance.**—Though a member of the Triple Alliance since 1882, Italy refused to enter the war in 1914 on the side of her allies, Germany and Austria-Hungary, on the grounds that the purely defensive terms of her agreement called for her active coöperation only in the event of one or both of her allies being attacked. "In reply to the German Government's intimation of the fact that ultimatums had been presented to France and Russia, and to the question as to what were the intentions of Italy, the Marquis di San Giuliano replied: 'The war under-

taken by Austria, and the consequences which might result, had, in the words of the German Ambassador himself, an aggressive object. Both were therefore in conflict with the purely defensive character of the Triple Alliance, and in such circumstances Italy would remain neutral.'"—*B. D. C., no. 152.*

Yet there was another reason, which was not revealed to the world until the end of 1918, after the close of the war. Italy and France had formed a secret agreement in 1902 not to fight against each other. "In 1900, a few months after the accession of Victor Emmanuel III, M. Barrère [French ambassador at Rome] drew up together with the Marquis Visconti-Venosta [Italian foreign minister] the Notes in accordance with which France gave up her interest in Tripoli while Italy recognized French rights in Morocco. No subject of contention was left between the two nations. This is what M. Barrère remarked in 1902 to M. Prinetti, that patriotic and courageous minister of whom death was destined to rob Italy too soon. The Rome government was at that time preparing to renew the Triple Alliance. Seeing that all possibility of conflict between Italy and France had disappeared, Italian policy was bound to exclude any thought of an attack on our country [France]. M. Prinetti agreed, and thence arose the agreements dated November, 1902. Italy bound herself not to join in any attack on France. She also undertook not to participate against France in any war which our country might have declared, but which, in reality, was imposed on her by the enemy's will. France, on her side, bound herself by identical obligations to Italy. Such were the agreements the text of which was sent by Count Torielli, the Italian ambassador, to M. Delcassé, by the express, and possibly even the repeated, orders of M. Prinetti. For reasons which can be guessed, this text remained strictly secret. The public did not suspect the importance of the Franco-Italian bond, for it only read a short declaration made in a speech by M. Delcassé. Herr von Bülow, Chancellor of the German Empire, was permitted to jeer at the 'pirouetting' which Italy allowed herself with France. But the mutual promise made by France and Italy contributed decisively to keep the peace of Europe for a dozen years. And when the Central Empires at last succeeded in letting loose war, the pact of 1902 was found to be so completely in harmony with Italian sentiment and national interest, that one might say no diplomatic act was ever more emphatically ratified by peoples and by events."—*Le Temps, Paris, Dec. 22, 1918.*—It was not until October, 1919, that the full terms of the Triple Alliance became public. According to these, "Italy was not expected to come to the aid of Germany in a war with Russia; in 1896 Italy had informed her partners that she would not join them in any war in which France and England were aligned on the same side; and, furthermore, Italy was not to be called upon to fight against Great Britain."—*New York Times, October 24, 1919.*—See also TRIPLE ALLIANCE: Predicament of Italy; Content of the treaties.

56.—**British foreign minister's statement to Parliament.—Anglo-French military consultations between 1912-1914.—Disposition of fleets.—Conditional promise of naval support.**—On the afternoon of August 3, when it had become evident that war was imminent, Sir Edward Grey, the British foreign minister, rose in the House and made a full statement of the obligations into which the government had entered.

"Last week I stated that we were working for peace not only for this country, but to preserve the peace of Europe. To-day events move so rapidly that it is exceedingly difficult to state with technical accuracy the actual state of affairs, but it is clear that the peace of Europe cannot be preserved. Russia and Germany, at any rate, have declared war upon each other. Before I proceed to state the position of His Majesty's Government, I would like to clear the ground so that, before I come to state to the House what our attitude is with regard to the present crisis, the House may know exactly under what obligations the Government is, or the House can be said to be, in coming to a decision on the matter. First of all let me say, very shortly, that we have consistently worked with a single mind, with all the earnestness in our power, to preserve peace. The House may be satisfied on that point. We have always done it. During these last years, as far as His Majesty's Government are concerned, we would have no difficulty in proving that we have done so. Throughout the Balkan crisis, by general admission, we worked for peace. The co-operation of the Great Powers of Europe was successful in working for peace in the Balkan crisis. It is true that some of the Powers had great difficulty in adjusting their points of view. It took much time and labour and discussion before they could settle their differences, but peace was secured, because peace was their main object, and they were willing to give time and trouble rather than accentuate differences rapidly. In the present crisis, it has not been possible to secure the peace of Europe; because there has been little time, and there has been a disposition—at any rate in some quarters on which I will not dwell—to force things rapidly to an issue, at any rate to the great risk of peace, and, as we now know, the result of that is that the policy of peace as far as the Great Powers generally are concerned, is in danger. I do not want to dwell on that, and to comment on it, and to say where the blame seems to us to lie, which Powers were most in favour of peace, which most disposed to risk or endanger peace, because I would like the House to approach this crisis in which we are now from the point of view of British interests, British honour, and British obligations, free from all passion as to why peace has not been preserved. We shall publish papers as soon as we can regarding what took place last week when we were working for peace; and when those papers are published I have no doubt that to every human being they will make it clear how strenuous and genuine and whole-hearted our efforts for peace were, and that they will enable people to form their own judgment as to what forces were at work which operated against peace. I come first, now, to the question of British obligations. I have assured the House—and the Prime Minister has assured the House more than once—that if any crisis such as this arose we should come before the House of Commons and be able to say to the House that it was free to decide what the British attitude should be, that we would have no secret engagement which we should spring upon the House, and tell the House that because we had entered into that engagement there was an obligation of honour upon the country. I will deal with that point to clear the ground first. There have been in Europe two diplomatic groups, the Triple Alliance and what came to be called the Triple *Entente*, for some years past. The Triple *Entente* was not an alliance—it was a

diplomatic group. The House will remember that in 1908 there was a crisis—also a Balkan crisis—originating in the annexation of Bosnia and Herzegovina. The Russian Minister, M. Isvolsky, came to London, or happened to come to London, because his visit was planned before the crisis broke out. I told him definitely then, this being a Balkan crisis, a Balkan affair, I did not consider that public opinion in this country would justify us in promising to give anything more than diplomatic support. More was never asked from us, and more was never promised. In this present crisis, up till yesterday, we have also given no promise of anything more than diplomatic support—up till yesterday no promise of more than diplomatic support. Now I must make this question of obligation clear to the House. I must go back to the first Moroccan crisis of 1906. That was the time of the Algeiras Conference, and it came at a time of very great difficulty to His Majesty's Government when a general election was in progress, and Ministers were scattered over the country, and I—spending three days in my constituency and three days at the Foreign Office—was asked the question whether, if that crisis developed into war between France and Germany, we would give armed support. I said then that I could promise nothing to any foreign Power unless it was subsequently to receive the whole-hearted support of public opinion here if the occasion arose. I said, in my opinion, if war was forced upon France then on the question of Morocco—a question which had just been the subject of agreement between this country and France, an agreement exceedingly popular on both sides—that if out of that agreement war was forced upon France at that time, in my view public opinion in this country would have rallied to the material support of France. I gave no promise, but I expressed that opinion during the crisis, as far as I remember almost in the same words, to the French Ambassador and the German Ambassador at the time. I made no promise, and I used no threats; but I expressed that opinion. [See also ENGLAND: 1912.] That position was accepted by the French Government, but they said to me at the time, and I think very reasonably, 'If you think it possible that the public opinion of Great Britain might, should a sudden crisis arise, justify you in giving to France the armed support which you cannot promise in advance, you will not be able to give that support, even if you wish it, when the time comes, unless some conversations have already taken place between naval and military experts.' There was force in that. I agreed to it, and authorised those conversations to take place, but on the distinct understanding that nothing which passed between military experts should bind either Government or restrict in any way their freedom to make a decision as to whether or not they should give that support when the time arose. As I have told the House, upon that occasion a general election was in prospect; I had to take the responsibility of doing that without the Cabinet. It could not be summoned. An answer had to be given. I consulted Sir Henry Campbell-Bannerman, the Prime Minister; I consulted, I remember, Lord Haldane, who was then Secretary of State for War; and the present Prime Minister [Asquith], who was then Chancellor of the Exchequer. That as the most I could do, and they authorised that, on the distinct understanding that it left the hands of the Government free whenever the crisis arose. The fact that conversations between military and naval experts took place was later on—I think

much later on, because that crisis passed, and the thing ceased to be of importance—but later on it was brought to the knowledge of the Cabinet. The Agadir crisis came—another Morocco crisis—and throughout that I took precisely the same line that had been taken in 1906. But subsequently, in 1912, after discussion and consideration in the Cabinet, it was decided that we ought to have a definite understanding in writing, which was to be only in the form of an unofficial letter, that these conversations which took place were not binding upon the freedom of either Government; and on the 22nd of November, 1912, I wrote to the French Ambassador the letter which I will now read to the House, and I received from him a letter in similar terms in reply. The letter which I have to read to the House is this, and it will be known to the public now as the record that, whatever took place between military and naval experts, they were not binding engagements upon the Governments.

“[SIR EDWARD GREY TO SIR F. BERTIE, BRITISH AMBASSADOR IN PARIS, JULY 30, 1914:]

“SIR,—M. Cambon [French ambassador in London] reminded me to-day of the letter I had written to him two years ago, in which we agreed that, if the peace of Europe was seriously threatened, we would discuss what we were prepared to do. . . . He said that the peace of Europe was never more seriously threatened than it was now. He did not wish to ask me to say directly that we would intervene, but he would like me to say what we should do if certain circumstances arose. The particular hypothesis he had in mind was an aggression by Germany on France. He . . . [shows] that the German military preparations were more advanced and more on the offensive upon the frontier than anything France had yet done. He anticipated that the aggression would take the form of either a demand that France should cease her preparations, or a demand that she should engage to remain neutral if there was war between Germany and Russia. Neither of these things could France admit. I said that the Cabinet was to meet to-morrow morning, and I would see him again to-morrow afternoon.’ [B. D. C., no. 105.]

“[SIR EDWARD GREY TO M. CAMBON, NOV. 22, 1912:]

“FOREIGN OFFICE, NOVEMBER 22, 1912.

“MY DEAR AMBASSADOR,

“From time to time in recent years the French and British naval and military experts have consulted together. It has always been understood that such consultation does not restrict the freedom of either Government to decide at any future time whether or not to assist the other by armed force. We have agreed that consultation between experts is not, and ought not to be regarded as, an engagement that commits either Government to action in a contingency that has not arisen and may never arise. The disposition, for instance, of the French and British fleets respectively at the present moment is not based upon an engagement to cooperate in war. You have, however, pointed out that, if either Government had grave reason to expect an unprovoked attack by a third Power, it might become essential to know whether it could in that event depend upon the armed assistance of the other. I agree that, if either Government had grave reason to expect an unprovoked attack by a third Power, or something that threatened the gen-

eral peace, it should immediately discuss with the other whether both Governments should act together to prevent aggression and to preserve peace, and, if so, what measures they would be prepared to take in common. If these measures involved action, the plans of the General Staffs would at once be taken into consideration, and the Governments would then decide what effect should be given to them.’ [B. D. C., no. 105, Enclosure 1.]

“[M. CAMBON'S REPLY TO SIR EDWARD GREY:]

“FRENCH EMBASSY, LONDON,

“NOV. 23, 1912.

“DEAR SIR EDWARD,

“You reminded me in your letter of yesterday, 22nd November, that during the last few years the military and naval authorities of France and Great Britain had consulted with each other from time to time; that it had always been understood that these consultations should not restrict the liberty of either Government to decide in the future whether they should lend each other the support of their armed forces; that, on either side, these consultations between experts were not and should not be considered as engagements binding our Governments to take action in certain eventualities; that, however, I had remarked to you that, if one or other of the two Governments had grave reasons to fear an unprovoked attack on the part of a third Power, it would become essential to know whether it could count on the armed support of the other. Your letter answers that point, and I am authorised to state that, in the event of one of our two Governments having grave reasons to fear either an act of aggression from a third Power, or some event threatening the general peace, that Government would immediately examine with the other the question whether both Governments should act together in order to prevent the act of aggression or preserve peace. If so, the two Governments would deliberate as to the measures which they would be prepared to take in common; if those measures involved action, the two Governments would take into immediate consideration the plans of their general staffs and would then decide as to the effect to be given to those plans.’ [B. D. C., no. 105, Enclosure 2.]

“Lord Charles Beresford.—What is the date of that?”

“Sir E. Grey.—The 22nd November, 1912. That is the starting point for the Government with regard to the present crisis. I think it makes it clear that what the Prime Minister and I said to the House of Commons was perfectly justified, and that, as regards our freedom to decide in a crisis what our line should be, whether we should intervene or whether we should abstain, the Government remained perfectly free, and *a fortiori*, the House of Commons remains perfectly free. That I say to clear the ground from the point of view of obligation. I think it was due to prove our good faith to the House of Commons that I should give that full information to the House now, and say what I think is obvious from the letter I have just read, that we do not construe that which has previously taken place in our diplomatic relations with other Powers in this matter as restricting the freedom of the Government to decide what attitude they should take now, or restrict the freedom of the House of Commons to decide what their attitude should be. Well, sir, I will go

further, and I will say this: The situation in the present crisis is not precisely the same as it was in the Morocco question. [See MOROCCO: 1911-1914.] In the Morocco question it was primarily a dispute which concerned France—a dispute which concerned France and France primarily—a dispute, as it seemed to us, affecting France out of an agreement subsisting between us and France, and published to the whole world, in which we engaged to give France diplomatic support. No doubt we were pledged to give nothing but diplomatic support; we were, at any rate, pledged by a definite public agreement to stand with France diplomatically in that question. The present crisis has originated differently. It has not originated with regard to Morocco. It has not originated as regards anything with which we had a special agreement with France; it has not originated with anything which primarily concerned France. It has originated in a dispute between Austria and Serbia. I can say this with the most absolute confidence—no Government and no country has less desire to be involved in war over a dispute with Austria and Serbia than the Government and the country of France. They are involved in it because of their obligation of honour under a definite alliance with Russia. Well, it is only fair to say to the House that that obligation of honour cannot apply in the same way to us. We are not parties to the Franco-Russian Alliance. We do not even know the terms of that alliance. So far I have, I think, faithfully and completely cleared the ground with regard to the question of obligation.

"I now come to what we think the situation requires of us. For many years we have had a long-standing friendship with France. I remember well the feeling in the House—and my own feeling—for I spoke on the subject, I think, when the late Government made their agreement with France—the warm and cordial feeling resulting from the fact that these two nations, who had had perpetual differences in the past, had cleared those differences away; I remember saying, I think, that it seemed to me that some benign influence had been at work to produce the cordial atmosphere that had made that possible. But how far that friendship entails obligation—it has been a friendship between the nations and ratified by the nations—how far that entails an obligation, let every man look into his own heart, and his own feelings, and construe the extent of the obligation for himself. I construe it myself as I feel it, but I do not wish to urge upon anyone else more than their feelings dictate as to what they should feel about the obligation. The House, individually and collectively, may judge for itself. I speak my personal view, and I have given the House my own feeling in the matter. The French fleet is now in the Mediterranean, and the northern and western coasts of France are absolutely undefended. The French fleet being concentrated in the Mediterranean, the situation is very different from what it used to be, because the friendship which has grown up between the two countries has given them a sense of security that there was nothing to be feared from us. The French coasts are absolutely undefended. The French fleet is in the Mediterranean, and has for some years been concentrated there because of the feeling of confidence and friendship which has existed between the two countries. My own feeling is that if a foreign fleet, engaged in a war which France had not sought, and in which she had not been the aggressor, came down the English Channel and bombarded and battered the undefended coasts of France, we could not stand aside, and see this

going on practically within sight of our eyes, with our arms folded, looking on dispassionately, doing nothing. I believe that would be the feeling of this country. . . . But I also want to look at the matter without sentiment, and from the point of view of British interests, and it is on that that I am going to base and justify what I am presently going to say to the House. If we say nothing at this moment, what is France to do with her fleet in the Mediterranean? If she leaves it there, with no statement from us as to what we will do, she leaves her northern and western coasts absolutely undefended, at the mercy of a German fleet coming down the Channel to do as it pleases in a war which is a war of life and death between them. If we say nothing, it may be that the French fleet is withdrawn from the Mediterranean. We are in the presence of a European conflagration; can anybody set limits to the consequences that may arise out of it? Let us assume that today we stand aside in an attitude of neutrality, saying, 'No, we cannot undertake and engage to help either party in this conflict.' Let us suppose the French fleet is withdrawn from the Mediterranean; and let us assume that the consequences—which are already tremendous in what has happened in Europe even to countries which are at peace—in fact, equally whether countries are at peace or at war—let us assume that out of that come consequences unforeseen, which make it necessary at a sudden moment that, in defence of vital British interests, we should go to war; and let us assume—which is quite possible—that Italy, who is now neutral—because, as I understand, she considers that this war is an aggressive war, and the Triple Alliance being a defensive alliance, her obligation did not arise—let us assume that consequences which are not yet foreseen and which, perfectly legitimately consulting her own interests make Italy depart from her attitude of neutrality at a time when we are forced in defence of vital British interests ourselves to fight—what then will be the position in the Mediterranean? It might be that at some critical moment those consequences would be forced upon us because our trade routes in the Mediterranean might be vital to this country. Nobody can say that in the course of the next few weeks there is any particular trade route, the keeping open of which may not be vital to this country. What will be our position then? We have not kept a fleet in the Mediterranean which is equal to dealing alone with a combination of other fleets in the Mediterranean. It would be the very moment when we could not detach more ships to the Mediterranean, and we might have exposed this country from our negative attitude at the present moment to the most appalling risk. I say that from the point of view of British interests. We feel strongly that France was entitled to know—and to know at once—whether or not in the event of attack upon her unprotected northern and western coasts she could depend upon British support. In that emergency, and in these compelling circumstances, yesterday afternoon I gave to the French Ambassador . . . [a] statement. [See above: 49.] . . . Things move very hurriedly from hour to hour. Fresh news comes in, and I cannot give this in any very formal way; but I understand that the German Government would be prepared, if we would pledge ourselves to neutrality, to agree that its fleet would not attack the northern coast of France. I have only heard that shortly before I came to the House, but it is far too narrow an engagement for us. And, Sir, there is the more serious consideration—becoming more serious every

hour—there is the question of the neutrality of Belgium. . . . [Here Sir Edward Grey went at some length into the question of Belgium, describing the attitude of former British governments with regard to the imposed neutrality of 1839.] I will read to the House what took place last week on this subject. When mobilisation was beginning, I knew that this question must be a most important element in our policy—a most important subject for the House of Commons. I telegraphed at the same time in similar terms to both Paris and Berlin to say that it was essential for us to know whether the French and German Governments respectively were prepared to undertake an engagement to respect the neutrality of Belgium. These are the replies. I got from the French Government this reply:

“The French Government are resolved to respect the neutrality of Belgium, and it would only be in the event of some other Power violating that neutrality that France might find herself under the necessity, in order to assure the defence of her security, to act otherwise. This assurance has been given several times. The President of the Republic spoke of it to the King of the Belgians, and the French Minister at Brussels has spontaneously renewed the assurance to the Belgian Minister of Foreign Affairs to-day.”

“From the German Government the reply was: ‘The Secretary of State for Foreign Affairs could not possibly give an answer before consulting the Emperor and the Imperial Chancellor.’ Sir Edward Goschen, to whom I had said it was important to have an answer soon, said he hoped the answer would not be too long delayed. The German Minister for Foreign Affairs then gave Sir Edward Goschen to understand that he rather doubted whether they could answer at all, as any reply they might give could not fail, in the event of war, to have the undesirable effect of disclosing, to a certain extent, part of their plan of campaign. I telegraphed at the same time to Brussels to the Belgian Government, and I got the following reply from Sir Francis Villiers: ‘Belgium expects and desires that other Powers will observe and uphold her neutrality, which she intends to maintain to the utmost of her power. In so informing me, Minister for Foreign Affairs said that, in the event of the violation of the neutrality of their territory, they believed that they were in a position to defend themselves against intrusion. The relations between Belgium and her neighbours were excellent, and there was no reason to suspect their intentions; but he thought it well, nevertheless, to be prepared against emergencies.’ It now appears from the news I have received to-day—which has come quite recently, and I am not yet quite sure how far it has reached me in an accurate form—that an ultimatum has been given to Belgium by Germany, the object of which was to offer Belgium friendly relations with Germany on condition that she would facilitate the passage of German troops through Belgium. Well, Sir, until one has these things absolutely definitely, up to the last moment, I do not wish to say all that one would say if one were in a position to give the House full, complete, and absolute information upon the point. We were sounded in the course of last week as to whether, if a guarantee were given that, after the war, Belgian integrity would be preserved, that would content us. We replied that we could not bargain away whatever interests or obligations we had in Belgian neutrality. Shortly before I reached the House I was informed that . . . [a] telegram had been received from the King of the Belgians

by our King—King George [see above: 53, B. G. B., no. 25]. Diplomatic intervention took place last week on our part. What can diplomatic intervention do now? We have great and vital interests in the independence—and integrity is the least part—of Belgium. If Belgium is compelled to submit to allow her neutrality to be violated, of course the situation is clear. Even if by agreement she admitted the violation of her neutrality, it is clear she could only do so under duress. The smaller States in that region of Europe ask but one thing. Their one desire is that they should be left alone and independent. The one thing they fear is, I think, not so much that their integrity but that their independence should be interfered with. If in this war which is before Europe the neutrality of one of those countries is violated, if the troops of one of the combatants violate its neutrality and no action be taken to resent it, at the end of the war, whatever the integrity may be, the independence will be gone. I have one further quotation from Mr. Gladstone as to what he thought about the independence of Belgium. . . . ‘We have an interest in the independence of Belgium which is wider than that which we may have in the literal operation of the guarantee. It is found in the answer to the question whether, under the circumstances of the case, this country, endowed as it is with influence and power, would quietly stand by and witness the perpetration of the direst crime that ever stained the pages of history, and thus become participators in the sin.’

“No, Sir, if it be the case that there has been anything in the nature of an ultimatum to Belgium, asking her to compromise or violate her neutrality, whatever may have been offered to her in return, her independence is gone if that holds. If her independence goes, the independence of Holland will follow. I ask the House from the point of view of British interests to consider what may be at stake. If France is beaten in a struggle of life and death, beaten to her knees, loses her position as a great Power, becomes subordinate to the will and power of one greater than herself—consequences which I do not anticipate, because I am sure that France has the power to defend herself with all the energy and ability and patriotism which she has shown so often—still, if that were to happen, and if Belgium fell under the same dominating influence, and then Holland, and then Denmark, then would not Mr. Gladstone’s words come true, that just opposite to us there would be a common interest against the unmeasured aggrandisement of any Power? It may be said, I suppose, that we might stand aside, husband our strength, and that, whatever happened in the course of this war, at the end of it intervene with effect to put things right, and to adjust them to our own point of view. If, in a crisis like this, we run away from those obligations of honour and interest as regards the Belgian treaty, I doubt whether, whatever material force we might have at the end, it would be of very much value in face of the respect that we should have lost. And do not believe, whether a great Power stands outside this war or not, it is going to be in a position at the end of it to exert its superior strength. For us, with a powerful fleet, which we believe able to protect our commerce, to protect our shores, and to protect our interests, if we are engaged in war, we shall suffer but little more than we shall suffer even if we stand aside. We are going to suffer, I am afraid, terribly in this war, whether we are in it or whether we stand aside. Foreign trade is going to stop, not because the trade routes are

closed, but because there is no trade at the other end. Continental nations engaged in war—all their populations, all their energies, all their wealth, engaged in a desperate struggle—they cannot carry on the trade with us that they are carrying on in times of peace, whether we are parties to the war or whether we are not. I do not believe for a moment that at the end of this war, even if we stood aside and remained aside, we should be in a position, a material position, to use our force decisively to undo what had happened in the course of the war, to prevent the whole of the West of Europe opposite to us—if that had been the result of the war—falling under the domination of a single Power, and I am quite sure that our moral position would be such as to have lost us all respect. I can only say that I have put the question of Belgium somewhat hypothetically, because I am not yet sure of all the facts, but, if the facts turn out to be as they have reached us at present, it is quite clear that there is an obligation on this country to do its utmost to prevent the consequences to which those facts will lead if they are undisputed. I have read to the House the only engagements that we have yet taken definitely with regard to the use of force. I think it is due to the House to say that we have taken no engagement yet with regard to sending an expeditionary armed force out of the country. Mobilisation of the fleet has taken place; mobilisation of the army is taking place; but we have as yet taken no engagement, because I feel that—in the case of a European conflagration such as this, unprecedented, with our enormous responsibilities in India and other parts of the Empire, or in countries in British occupation, with all the unknown factors—we must take very carefully into consideration the use which we make of sending an expeditionary force out of the country until we know how we stand. One thing I would say. The one bright spot in the whole of this terrible situation is Ireland. The general feeling throughout Ireland—and I would like this to be clearly understood abroad—does not make the Irish question a consideration which we feel we have now to take into account. I have told the House how far we have at present gone in commitments and the conditions which influence our policy, and I have put to the House and dwelt at length upon how vital is the condition of the neutrality of Belgium.

“What other policy is there before the House? There is but one way in which the Government could make certain at the present moment of keeping outside this war, and that would be that it should immediately issue a proclamation of unconditional neutrality. We cannot do that. We have made the commitment to France that I have read to the House which prevents us doing that. We have got the consideration of Belgium which prevents us also from any unconditional neutrality, and, without these conditions absolutely satisfied and satisfactory, we are bound not to shrink from proceeding to the use of all the forces in our power. If we did take that line by saying, ‘We will have nothing whatever to do with this matter’ under no conditions—the Belgian treaty obligations, the possible position in the Mediterranean, with damage to British interests, and what may happen to France from our failure to support France—if we were to say that all those things mattered nothing, were as nothing, and to say we would stand aside, we should, I believe, sacrifice our respect and good name and reputation before the world, and should not escape the most serious and grave economic consequences. My object has

been to explain the view of the Government, and to place before the House the issue and the choice. . . . We know, if the facts all be as I have stated them, though I have announced no intending aggressive action on our part, no final decision to resort to force at a moment’s notice, until we know the whole of the case, that the use of it may be forced upon us. As far as the forces of the Crown are concerned, we are ready. . . . The thought is with us always of the suffering and misery entailed, from which no country in Europe will escape by abstention, and from which no neutrality will save us. The amount of harm that can be done by an enemy ship to our trade is infinitesimal, compared with the amount of harm that must be done by the economic condition that is caused on the Continent. The most awful responsibility is resting upon the Government in deciding what to advise the House of Commons to do. We have disclosed our mind to the House of Commons. We have disclosed the issue, the information which we have, and made clear to the House, I trust, that we are prepared to face that situation, and that should it develop, as probably it may develop, we will face it. We worked for peace up to the last moment, and beyond the last moment. How hard, how persistently, and how earnestly we strove for peace last week the House will see from the papers that will be before it. . . . We are now face to face with a situation and all the consequences which it may yet have to unfold. . . . Russia and Germany we know are at war. We do not yet know officially that Austria, the ally whom Germany is to support, is yet at war with Russia. We know that a good deal has been happening on the French frontier. We do not know that the German Ambassador has left Paris. . . . I have now put the vital facts before the House, and if, as seems not improbable, we are forced, and rapidly forced, to take our stand upon those issues, then I believe, when the country realises what is at stake, what the real issues are, the magnitude of the impending dangers in the West of Europe, which I have endeavoured to describe to the House, we shall be supported throughout, not only by the House of Commons, but by the determination, the resolution, the courage, and the endurance of the whole country.”—*Great Britain and the European crisis*, pp. 90-95.—See also ENGLAND: 1914 (August 3).

57.—Virtual declaration of war against Belgium by Germany.—Second ultimatum.—At six in the morning of August 4 the German minister presented the following note to the Belgian foreign minister:

“SIR.—In accordance with my instructions, I have the honor to inform your Excellency that in consequence of the refusal of the Belgian Government to entertain the well-intentioned proposals made to them by the German Government, the latter, to their deep regret, find themselves compelled to take—if necessary by force of arms—those measures of defence already foreshadowed as indispensable, in view of the menace of France.”—*B. G. B.*, no. 27.

58.—British note to Belgium.—Belgium expected to resist violation of neutrality.—England offers to join Russia and France in defense of Belgium.—On August 4, the day of the German invasion of Belgium, the British minister at Brussels presented this note to the Belgian government: “I am instructed to inform the Belgian Government that if Germany brings pressure to bear upon

Belgium with the object of forcing her to abandon her attitude of neutrality, His Britannic Majesty's Government expect Belgium to resist with all the means at her disposal. In that event, His Britannic Majesty's Government are prepared to join Russia and France, should Belgium so desire, in tendering at once joint assistance to the Belgian Government with a view to resisting any forcible measures adopted by Germany against Belgium, and also offering a guarantee for the maintenance of the future independence and integrity of Belgium."—*B. G. B.*, no. 28.

59.—Great Britain and Belgian neutrality.—Warning to Germany.—“On the early morning of the 3rd August the Belgian Government had returned an uncompromising refusal to the German Note of the previous night, which demanded a free passage across Belgium for the armies of the Kaiser. Much at the same hour King Albert made that formal appeal to King George V, demanding diplomatic intervention on the part of Great Britain for the protection of Belgium, which has been already quoted. [See above: 53.] With the news as to the invasion of Luxemburg already to hand, the British Government could have little doubt that a violation of the soil of Belgium was about to take place. It had already been hinted at in the ominous interview between the German Chancellor and the British Ambassador at Berlin on the 29th of July [see above: 34], which had drawn such indignant comment from Sir Edward Grey. It was, no doubt, in consequence of that interview that the British Government had, on the 31st July, addressed the formal demand to France and Germany, requesting them to state definitely that they intended to respect the neutrality of Belgium. To this demand the French Government had made a prompt and satisfactory reply, while the German Secretary of State had made a dilatory answer, refusing any immediate assurances. ‘A reply might disclose a certain amount of the German plan of campaign in the event of war, and he was doubtful if any answer at all would be given. Moreover, it was considered that certain unfriendly acts had already been committed by Belgium, *e.g.*, a consignment of corn for Germany had been placed under embargo.’ The urgent telegrams received in London on the morning of the 3rd August only showed that the worst suspicions that might have been drawn from German utterances of the 29th and 31st of July were about to be fulfilled. On Saturday the 1st August the British Cabinet had met, not only to discuss the consequences of the German Ultimatum to Russia, which ran out on that day, but to consider the very unsatisfactory reply that had been made from Berlin as to the security of Belgian neutrality. . . . It is clear that he [Sir E. Grey] and the Cabinet had, up to the 1st August, retained some hope of succeeding with one of the mediation schemes, believing that Germany would shrink from adding Great Britain to the list of her enemies. For, as Prince Lichnowsky had been warned at the same interview, if Germany was intransigent and unreasonable, and forced war on France, ‘we should be drawn in.’ By the 1st August it was clear that Germany had pushed matters to the breaking-point, though it was yet to be two days before she declared war on France. The French Ambassador had put the definite question to Sir Edward Grey: ‘If Germany attacks France, will you help her?’ The answer was that: ‘So far as things have gone at present, we could not take any engagement.’ Up to the present moment, as M. Cambon was told, the Cabinet did not feel, and public opinion did not

feel, that any treaties or obligations were involved. Further developments might alter the situation, and cause Government and Parliament to take the view that intervention was justified. The preservation of the neutrality of Belgium might be, if not a decisive, yet an important factor in determining their attitude. But no definite engagement could be undertaken at the present moment. These were the words of the 31st July. By the morning of the 1st August the eminently unsatisfactory and dilatory answer of Berlin with regard to Belgian neutrality was to hand. The Cabinet discussed it, and came to the conclusion that Prince Lichnowsky must be warned that here lay a definite cause of rupture, unless some pledge was promptly given. The way in which the information was given him appears in the subjoined despatch of Sir Edward Grey.

“No. 123. SIR EDWARD GREY TO SIR E. GOSCHEN, AUG. 1, 1914:

“I told the German Ambassador today that the reply of the German Government with regard to the neutrality of Belgium was a matter of very great regret, because the neutrality of Belgium affected feeling in this country. If Germany could see her way to give the same assurance as that which had been given by France it would materially contribute to relieve anxiety and tension here. On the other hand, if there were a violation of the neutrality of Belgium by one combatant while the other respected it, it would be extremely difficult to restrain public feeling in this country. I said that we had been discussing this question at a Cabinet meeting, and as I was authorized to tell him this I gave him a memorandum of it. He asked me whether, if Germany gave a promise not to violate Belgian neutrality, we would engage to remain neutral. I replied that I could not say that; our hands were still free, and we were considering what our attitude should be. All I could say was that our attitude would be determined largely by public opinion here, and that the neutrality of Belgium would appeal very strongly to public opinion here. I did not think that we could give a promise of neutrality on that condition alone. The Ambassador pressed me as to whether I could not formulate conditions on which we would remain neutral. He even suggested that the integrity of France and her colonies might be guaranteed. I said I felt obliged to refuse definitely any promise to remain neutral on similar terms, and I could only say that we must keep our hands free.’ [*B. D. C.*, no. 123].”—*Oman*, pp. 137-138.

60.—Great Britain offers with France and Russia to defend also neutrality of Norway and Holland.—On August 4 the Belgian minister in London reported to M. Davignon: “The Minister for Foreign Affairs has informed the British Ministers in Norway, Holland, and Belgium that Great Britain expects that these three kingdoms will resist German pressure and observe neutrality. Should they resist they will have the support of Great Britain, who is ready in that event, should the three above-mentioned Governments desire it, to join France and Russia in offering an alliance to the said Governments for the purpose of resisting the use of force by Germany against them, and a guarantee to maintain the future independence and integrity of the three kingdoms. I observed to him that Belgium was neutral in perpetuity. The Minister for Foreign Affairs answered: This is in case her neutrality is violated.”—*B. G. B.*, no. 37.

61.—German invasion of Belgium (Aug. 4).—Belgian appeal to treaty signatories.—British protest and ultimatum to Germany.—French and Russian response.—Early on August 4 M. Davignon informed his representatives at London, Paris and St. Petersburg that German troops had entered Belgium: "The Belgian Government regrets to have to announce to your Excellency that this morning the armed forces of Germany penetrated into Belgian territory [see BELGIUM: 1914: World War], violating the engagements which they have undertaken by treaty. The Belgian Government are firmly decided to resist by all the means in their power. Belgium appeals to England, to France, and to Russia to co-operate as guarantors in the defense of her territory. There should be a concerted and common action, having as its object to resist the measures of force employed by Germany against Belgium and at the same time to guarantee the maintenance of the independence and integrity of Belgium for the future. Belgium is happy to be able to declare that she will undertake the defense of the fortified places."—*B. G. B., no. 40.*

The same morning Sir Edward Grey telegraphed to Ambassador Goschen in Berlin the text of King Albert's appeal to King George, adding:

"His Majesty's Government are also informed that the German Government has delivered to the Belgian Government a note proposing friendly neutrality entailing free passage through Belgian territory, and promising to maintain the independence and integrity of the kingdom and its possessions at the conclusion of peace, threatening in case of refusal to treat Belgium as an enemy. An answer was requested within twelve hours. We also understand that Belgium has categorically refused this as a flagrant violation of the law of nations. His Majesty's Government are bound to protest against this violation of a treaty to which Germany is a party in common with themselves, and must request an assurance that the demand made upon Belgium will not be proceeded with, and that her neutrality will be respected by Germany. You should ask for an immediate reply."—*B. D. C., no. 153.*

Shortly after, when the report of the second German ultimatum to Belgium reached London, and that Belgian territory had been entered by German troops, Sir Edward Grey wired to Goschen:

"... In these circumstances, and in view of the fact that Germany declined to give the same assurance respecting Belgium as France gave last week in reply to our request made simultaneously at Berlin and Paris, we must repeat that request, and ask that a satisfactory reply to it and to my telegram of this morning be received here by 12 o'clock tonight. If not, you are instructed to ask for your passports, and to say that his Majesty's Government feel bound to take all steps in their power to uphold the neutrality of Belgium and the observance of a treaty to which Germany is as much a party as ourselves."—*B. D. C., no. 159.*

—See also ENGLAND: 1914 (August 4).

The next day M. Davignon telegraphed to the Belgian heads of missions in all countries having diplomatic relations with Belgium the following protest: "By the treaty of April 18th, 1839, Prussia, France, Great Britain, Austria, and Russia declared themselves guarantors of the treaty concluded on the same day between His Majesty the

King of the Belgians and His Majesty the King of the Netherlands. The treaty runs: 'Belgium shall form a State independent and perpetually neutral.' Belgium has fulfilled all her international obligations, she has accomplished her duty in a spirit of loyal impartiality, she has neglected no effort to maintain her neutrality and to cause that neutrality to be respected. In these circumstances the Belgian Government have learnt with deep pain that the armed forces of Germany, a Power guaranteeing Belgian neutrality, have entered Belgian territory in violation of the obligations undertaken by treaty. It is our duty to protest with indignation against an outrage against international law provoked by no act of ours. The Belgian Government are firmly determined to repel by all the means in their power the attack thus made upon their neutrality, and they recall the fact that, in virtue of Article X of The Hague Convention of 1907 respecting the rights and duties of neutral Powers and persons in the case of war by land, if a neutral Power repels, even by force, attacks on her neutrality, such nation cannot be considered as a hostile act. I have to request that you will ask at once for an audience with the Minister for Foreign Affairs and read this despatch to his Excellency, handing him a copy. If the interview cannot be granted at once you should make the communication in question in writing."—*B. G. B., no. 44.*—Meanwhile, also on August 5, Sir F. Villiers, British minister in Brussels, announced: "I am instructed to inform the Belgian Government that His Britannic Majesty's Government consider joint action with a view to resisting Germany to be in force and to be justified by the Treaty of 1839."—*B. G. B., no. 48.*—From London the Belgian minister reports that "Great Britain agrees to take joint action in her capacity of guaranteeing Power for the defence of Belgian territory. The British fleet will ensure the free passage of the Scheldt for the provisioning of Antwerp."—*B. G. B., no. 49.*—On the same day M. Davignon reported from Brussels: "The French and Russian Ministers made a communication to me this morning informing me of the willingness of their Governments to respond to our appeal, and to co-operate with Great Britain in the defence of Belgian territory."—*B. G. B., no. 52.*

62.—British ambassador's final efforts for peace.—"Scrap of paper" incident.—Great Britain issues ultimatum to Germany demanding respect for Belgian neutrality.—Official refusal.—The following report of Sir Edward Goschen was written immediately after his return to London. It is dated August 8, and describes his last interviews with German statesmen and his efforts to secure the neutrality of Belgium in the war which was now inevitable. Particular interest attaches to his parting conversation with the imperial chancellor, in the course of which the latter used the phrase which has become historic, namely, that the treaty guaranteeing the neutrality was but "a scrap of paper." The report is addressed to Sir Edward Grey, and is here reproduced from "Great Britain and the European Crisis," issued by the British government.

"SIR, In accordance with the instructions contained in your telegram of the 4th instant [see above: 61] I called upon the Secretary of State [Herr von Jagow] that afternoon and enquired, in the name of His Majesty's Government, whether the Imperial Government would refrain from violating Belgian neutrality. Herr von Jagow at once replied that he was sorry to say that his answer

must be 'No,' as, in consequence of the German troops having crossed the frontier that morning, Belgian neutrality had been already violated. Herr von Jagow again went into the reasons why the Imperial Government had been obliged to take this step, namely, that they had to advance into France by the quickest and easiest way, so as to be able to get well ahead with their operations and endeavour to strike some decisive blow as early as possible. It was a matter of life and death for them, as if they had gone by the more southern route they could not have hoped, in view of the paucity of roads and the strength of the fortresses, to have got through without formidable opposition entailing great loss of time. This loss of time would have meant time gained by the Russians for bringing up their troops to the German frontier. Rapidity of action was the great German asset, while that of Russia was an inexhaustible supply of troops. I pointed out to Herr von Jagow that this *fait accompli* of the violation of the Belgian frontier rendered, as he would readily understand, the situation exceedingly grave, and I asked him whether there was not still time to draw back and avoid possible consequences which both he and I would deplore. He replied that, for the reasons he had given me, it was now impossible for them to draw back.

"During the afternoon I received your further telegram of the same date [see above: 61], and in compliance with the instructions therein contained, I again proceeded to the Imperial Foreign Office and informed the Secretary of State that unless the Imperial Government could give the assurance by 12 o'clock that night that they would proceed no further with their violation of the Belgian frontier and stop their advance, I had been instructed to demand my passports and inform the Imperial Government that His Majesty's Government would have to take all steps in their power to uphold the neutrality of Belgium and the observance of a treaty to which Germany was as much a party as themselves.

"Herr von Jagow replied that to his great regret he could give no other answer than that which he had given me earlier in the day, namely, that the safety of the Empire rendered it absolutely necessary that the Imperial troops should advance through Belgium. I gave his Excellency a written summary of your telegram and, pointing out that you had mentioned 12 o'clock as the time when His Majesty's Government would expect an answer, asked him whether, in view of the terrible consequences which would necessarily ensue, it were not possible even at the last moment that their answer should be reconsidered. He replied that if the time given were even twenty-four hours or more, his answer must be the same. I said that in that case I should have to demand my passports. This interview took place at about 7 o'clock. In a short conversation which ensued Herr von Jagow expressed his poignant regret at the crumbling of his entire policy and that of the Chancellor, which had been to make friends with Great Britain, and then, through Great Britain, to get closer to France. I said that this sudden end to my work in Berlin was to me also a matter of deep regret and disappointment, but that he must understand that under the circumstances and in view of our engagements, His Majesty's Government could not possibly have acted otherwise than they had done.

"I then said that I should like to go and see the Chancellor, as it might be, perhaps, the last time I should have an opportunity of seeing him. He begged me to do so. I found the Chancellor very

agitated. His Excellency at once began a harangue, which lasted for about twenty minutes. He said that the step taken by His Majesty's Government was terrible to a degree, just for a word—'neutrality,' a word which in war time had so often been disregarded—just for a scrap of paper Great Britain was going to make war on a kindred nation who desired nothing better than to be friends with her. All his efforts in that direction had been rendered useless by this last terrible step, and the policy to which, as I knew, he had devoted himself since his accession to office had tumbled down like a house of cards. What we had done was unthinkable; it was like striking a man from behind while he was fighting for his life against two assailants. He held Great Britain responsible for all the terrible events that might happen. I pro-

GOTTLIEB VON JAGOW

tested strongly against that statement, and said that, in the same way as he and Herr von Jagow wished me to understand that for strategical reasons it was a matter of life and death to Germany to advance through Belgium and violate the latter's neutrality, so I would wish him to understand that it was, so to speak, a matter of 'life and death' for the honour of Great Britain that she should keep solemn engagement to do her utmost to defend Belgium's neutrality if attacked. That solemn compact simply had to be kept, or what confidence could anyone have in engagements given by Great Britain in the future? The Chancellor said, 'But at what price will that compact have been kept. Has the British Government thought of that?' I hinted to his Excellency as plainly as I could that fear of consequences could hardly be regarded as an excuse for breaking solemn engagements, but his Excellency was so excited, so evidently overcome by the news of our action, and so little disposed to hear reason that I refrained from adding

fuel to the flame by further argument. As I was leaving he said that the blow of Great Britain joining Germany's enemies was all the greater that almost up to the last moment he and his Government had been working with us and supporting our efforts to maintain peace between Austria and Russia. I said that this was part of the tragedy which saw the two nations fall apart just at the moment when the relations between them had been more friendly and cordial than they had been for years. Unfortunately, notwithstanding our efforts to maintain peace between Russia and Austria, the war had spread and had brought us face to face with a situation which, if we held to our engagements, we could not possibly avoid, and which unfortunately entailed our separation from our late fellow-workers. He would readily understand that no one regretted this more than I.

"After this somewhat painful interview I returned to the embassy and drew up a telegraphic report of what had passed. This telegram was handed in at the Central Telegraph Office a little before 9 p. m. It was accepted by that office, but apparently never despatched (note.—"This telegram never reached the Foreign Office").

"At about 9.30 p.m. Herr von Zimmermann, the Under Secretary of State, came to see me. After expressing his deep regret that the very friendly official and personal relations between us were about to cease, he asked me casually whether a demand for passports was equivalent to a declaration of war. I said that such an authority on international law as he was known to be must know as well or better than I what was usual in such cases. I added that there were many cases where diplomatic relations had been broken off, and, nevertheless, war had not ensued; but that in this case he would have seen from my instructions, of which I had given Herr von Jagow a written summary that His Majesty's Government expected an answer to a definite question by 12 o'clock that night, and that in default of a satisfactory answer they would be forced to take such steps as their engagements required. Herr Zimmermann said that that was, in fact, a declaration of war, as the Imperial Government could not possibly give the assurance required either that night or any other night.

"In the meantime, after Herr Zimmermann left me, a flying sheet, issued by the *Berliner Tageblatt*, was circulated stating that Great Britain had declared war against Germany. The immediate result of this news was the assemblage of an exceedingly excited and unruly mob before His Majesty's Embassy. The small force of police which had been sent to guard the embassy was soon overpowered, and the attitude of the mob became more threatening. We took no notice of this demonstration as long as it was confined to noise, but when the crash of glass and the landing of cobble stones into the drawing-room, where we were all sitting, warned us that the situation was getting unpleasant, I telephoned to the Foreign Office an account of what was happening. Herr von Jagow at once informed the Chief of Police, and an adequate force of mounted police, sent with great promptness, very soon cleared the street. From that moment on we were well guarded, and no more direct unpleasantness occurred.

"After order had been restored Herr von Jagow came to see me and expressed his most heartfelt regrets at what had occurred. He said that the behaviour of his countrymen had made him feel more ashamed than he had words to express. It was an indelible stain on the reputation of Berlin.

He said that the flying sheet circulated in the streets had not been authorised by the Government; in fact, the Chancellor had asked him by telephone whether he thought that such a statement should be issued, and he had replied, 'Certainly not, until the morning.' It was in consequence of his decision to that effect that only a small force of police had been sent to the neighbourhood of the embassy, as he had thought that the presence of a large force would inevitably attract attention and perhaps lead to disturbances. It was the '*pestilential Tageblatt*,' which had somehow got hold of the news, that had upset his calculations. He had heard rumours that the mob had been excited to violence by gestures made and missiles thrown from the embassy, but he felt sure that that was not true (I was able soon to assure him that the report had no foundation whatever), and even if it was, it was no excuse for the disgraceful scenes which had taken place. He feared that I would take home with me a sorry impression of Berlin manners in moments of excitement. In fact, no apology could have been more full and complete. On the following morning, the 5th August, the Emperor sent one of His Majesty's aides-de-camp to me with the following message: 'The Emperor has charged me to express to your Excellency his regret for the occurrences of last night, but to tell you at the same time that you will gather from those occurrences an idea of the feelings of his people respecting the action of Great Britain in joining with other nations against her old allies of Waterloo. His Majesty also begs that you will tell the King that he has been proud of the titles of British Field-Marshal and British Admiral, but that in consequence of what has occurred he must now at once divest himself of those titles.' I would add that the above message lost none of its acerbity by the manner of its delivery. On the other hand, I should like to state that I received all through this trying time nothing but courtesy at the hands of Herr von Jagow and the officials of the Imperial Foreign Office. At about 11 o'clock on the same morning Count Wedel handed me my passports—which I had earlier in the day demanded in writing—and told me that he had been instructed to confer with me as to the route which I should follow for my return to England. He said that he had understood that I preferred the route via the Hook of Holland to that via Copenhagen; they had therefore arranged that I should go by the former route, only I should have to wait till the following morning. I agreed to this, and he said that I might be quite assured that there would be no repetition of the disgraceful scenes of the preceding night as full precautions would be taken. He added that they were doing all in their power to have a restaurant car attached to the train, but it was rather a difficult matter. He also brought me a charming letter from Herr von Jagow couched in the most friendly terms. The day was passed in packing up such articles as time allowed. The night passed quietly without any incident. In the morning a strong force of police was posted along the usual route to the Lehrter Station, while the embassy was smuggled away in taxi-cabs to the station by side streets. We there suffered no molestation whatever, and avoided the treatment meted out by the crowd to my Russian and French colleagues. Count Wedel met us at the station to say good-bye on behalf of Herr von Jagow and to see that all the arrangements ordered for our comfort had been properly carried out. A retired colonel of the Guards accompanied the train to the Dutch frontier and was exceedingly

kind in his efforts to prevent the great crowds which thronged the platforms at every station where we stopped from insulting us; but beyond the yelling of patriotic songs and a few jeers and insulting gestures we had really nothing to complain of during our tedious journey to the Dutch frontier. Before closing this long account of our last days in Berlin I should like to place on record and bring to your notice the quite admirable behaviour of my staff under the most trying circumstances possible. One and all, they worked night and day with scarcely any rest, and I cannot praise too highly the cheerful zeal with which counselor, naval and military attachés, secretaries, and the two young attachés buckled to their work and kept their nerve with often a yelling mob outside and inside hundreds of British subjects clamouring for advice and assistance. I was proud to have such a staff to work with, and feel most grateful to them all for the invaluable assistance and support, often exposing them to considerable personal risk, which they so readily and cheerfully gave to me. I should also like to mention the great assistance rendered to us all by my American colleague, Mr. Gerard, and his staff. Undeterred by the hooting and hisses with which he was often greeted by the mob on entering and leaving the embassy, his Excellency came repeatedly to see me to ask how he could help us and to make arrangements for the safety of stranded British subjects. He extricated many of these from extremely difficult situations at some personal risk to himself, and his calmness and *savoir-faire* and his firmness in dealing with the Imperial authorities gave full assurance that the protection of British subjects and interests could not have been left in more efficient and able hands."

—See also ENGLAND: 1914 (August 4).

63.—Bethmann-Hollweg's post-bellum explanation of the "scrap of paper" interview.—British declaration of war.—Could England have prevented war?—Views on British policy.—Nearly five years after the historic interview, on June 12, 1919, the *Düsseldorfer Nachrichten* published an extract from Herr von Bethmann-Hollweg's book. "This deals with the conversation he had on August 4, 1914, with Sir Edward Goschen, the British Ambassador in Berlin. [See above: 62.] The ex-Chancellor writes:

"'Enemy propaganda has made capital particularly out of the reports which Sir Edward Goschen made to his Government concerning his last conversation with me in August (Blue-book No. 160). The Ambassador forgets to observe in his report that he began the conversation with the question whether I could not give him another answer than Herr von Jagow to the English ultimatum. On my replying in the negative the Ambassador asked whether if, to his regret, war should finally be decided upon after this we could not have before separating one more private and personal conversation concerning the terrible situation in which the world had been placed. I immediately declared myself ready for this, and asked the Ambassador to take a seat at my table. I then certainly spoke in strong words of the world calamity which I foresaw as the necessary consequence of England's entrance into the war, and, when he later repeatedly alleged Belgian neutrality as a decisive point, I impatiently exclaimed that in comparison with the frightful result of a German-English war the treaty of neutrality was only a scrap of paper. The expression may have been an inadvertence (*Entgleisung*)—my blood boiled at the repeatedly exaggerated emphasizing of Belgian neutrality, which

is just what did not drive England into the war, and at the entire lack of sensibility for the fact that the English declaration of war must destroy world property compared with which even the violation of Belgian neutrality weighed lightly. That private conversations should be officially exploited has appeared to me to be an unusual diplomatic practice. If it were done, however, then in that case Sir Edward Goschen, to whom my excitement seemed so striking, ought at least also to have reported that on taking leave he burst into tears and asked to be allowed to remain a little longer in my ante-chamber, because he could not show himself in such a condition to the *personnel* of the Chancellery in attendance.'"—*The Times* (London) *Weekly Edition*, June 20, 1919.—On June 17, 1919, the German Socialist paper *Vorwärts*, which had been suppressed during the war, made its re-appearance and published a letter from Prince Lichnowsky, who denied the statement of Herr Bernstein made at the Social-Democratic Conference that he had said that Herr von Bethmann-Hollweg had begged the Kaiser, on July 31, 1914, on his knees, to refrain from war. "I know [the prince writes], on the contrary, that the Kaiser did not desire war and was heart-broken at the outbreak, and I believe that one word from the Imperial Chancellor would have been enough to persuade the Kaiser to avert the catastrophe by accepting the British and German mediation advocated by me, or by a mediation proposal of his own. The declaration of war on Russia, which started the world war, took place with Herr von Bethmann-Hollweg's fullest assent."—*Ibid.*

The British ultimatum was dispatched from London early in the afternoon of August 4. At 11 P.M. Greenwich mean time (midnight in Berlin), no satisfactory reply had been received to the ultimatum; an hour and a quarter later (12.15 A.M., August 5), the Foreign Office in London issued the following statement: "Owing to the summary rejection by the German Government for assurances that the neutrality of Belgium will be respected, His Majesty's Ambassador at Berlin has received his passports and His Majesty's Government have declared to the German Government that a state of war exists between Great Britain and Germany as from 11 P.M. on the 4th August."

Of preparations for mobilization Lord Haldane writes: "To say . . . that we were caught unprepared is not accurate. Compulsory service in a period of peace was out of the question for us. . . . At eleven o'clock on Monday morning, August 3, 1914, we mobilised without a hitch the whole of the Expeditionary Force, amounting to six divisions and nearly two cavalry divisions, and began its transport over the Channel when war was declared thirty-six hours later. We also at the same time successfully mobilised the Territorial Force and other units, the whole amounting to over half a million men. The Navy was already in its war stations [see ENGLAND: 1914 (July-August)], and there was no delay at all in putting what we had prepared into operation. . . . [The prime minister, who was acting as war secretary], asked me to go to the War Office and give directions for the mobilization of the machinery with which I was so familiar, and I did this on the morning of Monday, August 3, and a day later handed it over, in working order, to Lord Kitchener."—Viscount Haldane, *Before the war*, pp. 40-50.

"England declared war on Germany on Tuesday, August 4, and on the 5th the mobilization of Regulars, Special Reserves, and Terri-

torials was ordered. On Wednesday, August 5, a Council of War was held at 10, Downing Street, under the Presidency of the Prime Minister. Nearly all the members of the Cabinet were present, whilst Lord Roberts, Lord Kitchener, Sir Charles Douglas, Sir Douglas Haig, the late Sir James Grierson, General (now Sir Henry) Wilson, and myself were directed to attend."—Field Marshal Viscount French, 1914, p. 3.

"Now that the narrative has been told and the documents analysed, it is right to present what seem to be the legitimate inferences and conclusions. 1. The military masters of Germany wanted war from the beginning in order to attack France and Russia, and to carry out their ambitions, but always on the condition that they could count on British neutrality, as in

VISCOUNT HALDANE OF CLOAN

1870. 2. On the formation of the Liberal Government on 12th December 1905, three Ministers, Mr. Asquith, Mr. Haldane, and Sir Edward Grey, laid the foundation for a different policy, namely, a policy of British intervention if Germany should make an unprovoked attack on France. They did this within a month, probably within a few days of taking office, by means of communications with the French Ambassador and of military and naval conversations between the General Staffs of the two countries, who worked out plans for joint action in war if Great Britain should intervene. They did it behind the back of nearly all their Cabinet colleagues, and, what really matters, without Parliament being in any way made aware that a policy of active intervention between France and Germany was being contemplated. 3. As time went on . . . [the British] Entente with France was still further developed . . . and France was encouraged more and more to expect that Great Britain would stand by her in

arms if she were attacked by Germany without giving provocation. [See also ENGLAND: 1912.] By 1913 . . . [the British] Entente with France had become such that, to use Mr. Lloyd George's phrase, we were under an obligation of honour to join her in arms, if so attacked. 4. Under . . . [the] Constitution such obligations, or even formal Treaties, can be undertaken on behalf of the Crown by the advice of Ministers without Parliament being informed. At all events that is so in theory. Parliament can, of course, refuse supplies to support any engagement of which it disapproves when it comes to know of it, but cannot require to be consulted before it is made. 5. Now it may have been perfectly right, in view of the threatening attitude of Germany, that . . . [Great Britain] should have a defensive understanding or even an alliance with France in 1906, or in any subsequent year. Obviously that would be a new departure of tremendous importance, and one which could be reliably and effectively taken only if it were known to and approved by Parliament as a national policy, with its limitations fixed by Parliament and proper provision made by Parliament so that we should not be caught unprepared. For it would expose . . . [the nation] to the risk of war on land against the greatest military Power in the world. 6. Sir E. Grey made it clear in his speech of 3rd August 1914 that in his opinion our honour as well as our interest required that we should support France in arms, though up to the present moment he and his coadjutors have always maintained that they had kept our hands free and that Parliament was quite free to decide for either peace or war. 7. But Parliament was never warned by Ministers of the great danger in which we stood of being drawn suddenly into a war which would threaten our national existence. If it had been warned we might have been better prepared with men and ships and guns and ammunition, or might have adopted a wiser and more open policy. 8. The last chance of maintaining peace was when the crisis came in July 1914. A plain timely statement to Germany that if she attacked France we should be on the side of France and Russia would 'for a certainty,' as President Wilson says, have prevented war. The military masters of Germany would not have faced the fearful risk. That statement was not made. Ministers would not agree to make it, and no wonder. It involved responsibility. They had no firm foothold of Parliamentary support such as would fortify them in giving a warning which, if disregarded, meant a war of unprecedented magnitude. And they had no foothold of Parliamentary support because Parliament had not been either consulted or informed as to the policy. 9. Secret diplomacy has undergone its 'acid test' in . . . [Great Britain]. It had every chance. The voice of party was silent. The Foreign Minister was an English gentleman whom the country trusted and admired, who was wholly free from personal enmities of every kind, and who wanted peace. And secret diplomacy utterly failed. It prevented us from finding some alternative for war, and it prevented us from being prepared for war, because secret diplomacy means diplomacy aloof from Parliament. Let us have done with it for good."—R. T. R. Loreburn, *How the war came*, pp. 216-218.—"England went into the war from three mixed motives: to fulfill her obligations to France, to preserve her honor in upholding her guarantee of Belgian neutrality, and to protect her own safety and material interests against German aggression. That Grey, in his speech in Parliament, very skillfully put forward

very prominently the second of these motives, there is no doubt; and if he believed, as of course he did, that England ought under the circumstances to fight, he did so wisely; for this was the motive which would most clearly and powerfully appeal to Parliament and the British public. On the other hand, it is doubtful if one can agree with Lord Loreburn's further criticism of Grey for not making a plain, timely statement to Germany that, if she attacked France, England would be on the side of France and Russia. It is very doubtful, in view of the strong anti-British feeling in Germany, the blind Pan-Germanism, the power of the militarists, and the Kaiser's sensitiveness to a second rebuff after Agadir, whether such a threat would not have had exactly the opposite effect in Germany. It would have been regarded as the proof and culmination of British 'encirclement.' Even granting that it might have postponed the war over the Austro-Serbian crisis for some months, it would have so increased the Anglo-German embitterment that some other occasion would probably have soon set Europe on fire after Germany had made further frantic naval and military preparations. As Buchanan wisely told Sazonov, on July 27, 'Germany's attitude would merely be stiffened by such a menace. England could only induce her to use her influence at Vienna to avert war by approaching her in the capacity of a friend, who was anxious to preserve peace.' Moreover, such a threat by England might have served as a dangerous encouragement to the Russian militarists in their aggressive aspirations toward Constantinople and the Straits. Grey had to choose a policy; because he chose one which did not turn out successfully, it is not necessarily true to say that he chose the wrong one. If a criticism of Grey is to be made, it is that he, like Bethmann and Sazonov, was too optimistic—too little aware of the monstrous influence which the militarists would acquire in Vienna, Berlin and Petrograd."—*Fay, III, p. 254.*

64.—Effect in Berlin of British declaration of war.—Street scenes: German correspondent's testimony.—"The English declaration of war entered into the very soul of the German people, who stood as a sacrifice to a political miscalculation that had its roots less in a lack of thought and experience than in boundless arrogance. [When the news arrived, a mob swept around from Unter den Linden into the Wilhelmstrasse to attack the British embassy. (See Germany: 1914; also above: 62.)] About the same time I was a witness of those laughable scenes which took place on the Potsdamer Platz in Berlin, where, in complete misjudgment of the whole political situation *Japanese* were carried shoulder high by the enthusiastic and worthy citizens of Berlin under the erroneous impression that these obvious arch-enemies of Russia would naturally be allies of Germany. Every German that was not blind to the trend of true 'world-politics' must surely have shaken his head over this lamentable spectacle. A few days afterwards Japan sent its ultimatum against Kiaotchao! It was the same incapability of thinking in terms of true world-politics that led us . . . to believe that we might find supporters in Mexico and Japan of the piracy we indulged in as a result of America's intervention in the war, the same incapability that blinded us to the effect our methods must have on other neutrals such as China and the South American States. And although one admits the possibility of a miscalculation being made, yet a miscalculation with regard to England's attitude was not only the height of political stupidity, but showed an absence of

moral sense. *The moment England entered the war, Germany lost the war.*"—H. Stuermer, *Two war years in Constantinople* (tr. by E. Allen), pp. 24-25.

65.—President Wilson tenders offer of mediation.—On August 5, the day after Great Britain's declaration of war against Germany, President Wilson addressed to the German and Austrian emperors, the tsar, King George and President Poincaré the following message: "As official head of one of the powers signatory to The Hague Convention, I feel it to be my privilege and my duty, under Article III of that Convention, to say to you in a spirit of most earnest friendship that I should welcome an opportunity to act in the interest of European peace, either now or at any other time that might be thought more suitable, as an occasion to serve you and all concerned in a way that would afford me lasting cause for gratitude and happiness." The message was formally acknowledged by the belligerents, and the war took its tragic course.

66.—Scenes in St. Petersburg.—Reception of England's verdict.—"On the Tuesday [July 28] Count Pourtales, the German ambassador, lunched with us, and I can well remember his hurried, nervous manner, his quick movements of denial when . . . [the British ambassador] warned him that Germany would lead the world into the most terrible war of history if she did not change her attitude. War was the last thing Germany wanted, and war with England was out of the question. His [the German ambassador's] words were emphatic, his voice had an almost hysterical insistence, and there was a very real look of trouble in his pale-blue eyes when at last he said good-bye to my father and went slowly from the room. . . . On Saturday morning [August 1] one still clung desperately to the hope that some miracle might even now, at the last moment, avert the catastrophe. But that afternoon the German ambassador, arriving at the Foreign Office, handed the declaration of war to Monsieur Sazonoff, and then turned away to the window, shaken by a storm of tears. The same evening Monsieur Sazonoff, the French ambassador, the Greek minister and his wife, and one or two other men were dining with us. Ordinary conversation was quite out of the question, there was only one topic, and that nobody yet seemed able to grasp—it seemed so impossible to believe that it was really an accomplished fact. My father had to leave in the middle of dinner to motor down to Czarskoe [Selo] for a special audience with the Emperor [Nicholas II]. Four times during the evening Monsieur Sazonoff was called away; the bell of the telephone pealed incessantly; the square outside was a dense crowd of people singing the national anthem. Till late on in the night crowds besieged the doors of the embassy, cheering for the British fleet, and always asking the same question—Would England help? Would England join with them? My father, returning after midnight, could hardly drive up to the door. The motor was surrounded by a cheering multitude of soldiers, officers, workmen, and well-dressed women; eager hands were held out to him, questions poured in on every side. The next day all the officers of the garrison assembled in the Winter Palace, and after a solemn service in the royal chapel, the Emperor came out onto the balcony and announced to the huge crowd assembled on the square the declaration of war. All during the next two days crowds thronged to the embassy, carrying French, Russian, and English flags, wait-

ing patiently for my father to appear. Every moment the telephone-bell rang and anxious voices inquired whether we had not yet had any definite news. Once the report spread that England had declared war, and almost at once an enormous crowd assembled before the door and would hardly listen to my father's message that, as yet, we had no official confirmation of the news. It was written up in the town, they said; it must be true. And it was said that all the British fleet had been ordered out to sea. They were sure England would not desert them. . . . And all the time, quietly, steadily, unceasingly, the soldiers were leaving for the front. There was no ostentation and show about any of those departures, no flags or blaring military bands, and very little cheering. Only in the early mornings long lines of khaki-clad figures marching away with grim, set faces and unwavering eyes, and sometimes tramping beside them a woman with a shawl over her head and child held in her tired, patient arms, a woman whose eyes had shed so many tears that now, when the final moment had come, they had no tears left to shed, could only stare out in front of them, facing the emptiness of all the future days with the weary, hopeless apathy of despair. And then at last, at five o'clock on the Wednesday morning, one of the secretaries came into my father's room to tell him that the telegram we had been waiting for had come, the telegram that said in so few words such tremendous tidings—'WAR GERMANY ACT.' . . . A little later in the morning I went with another friend to write down my name for a course of first-aid training in one of the big Russian hospitals. The sister who received us looked us over curtly. There was no vacancy at present. We must wait six weeks for the next course. 'Oh, but, please,'—I felt that six weeks of inactivity was not possible—'I am English, and we have just heard that England has declared war on Germany. Can't you make an exception?' Her face changed instantly. 'You are English? I will ask Baroness Wrangel, who is the superior of our hospital, what can be done. Will you give me your name, please?' She disappeared, and the line of other girls waiting their turn glowered at us somewhat resentfully. Within two minutes the sister returned. 'Will you please come?' she said. 'The superior would like to speak with you herself.' She led the way down a narrow passage, and ushered us into a big, dark room where we were received by an old lady with a pale, worn face, made all the more spiritual by her nunlike head-dress and dark-brown robe. 'You are the daughter of the British ambassador?' She held out her thin, white hand, her voice quivering with anxiety. 'Tell me—you have had news? I had heard the question so often before; this time I was able to answer freely that we had had the official telegram, and that England was at war with Germany. 'God be praised!' The white, trembling fingers made the sign of the cross, the tired, faded eyes filled with sudden tears. After that, everything was easy, and we left the hospital with our names written down, having promised to come and begin work the next morning.'—M. Buchanan, *City of trouble*, pp. 14-16, 17-20.—See also RUSSIA: 1914: Relations with Germany.

67.—Austria-Hungary declares war on Russia.—The following note was handed by the ambassador of Austria-Hungary at St. Petersburg to the minister of foreign affairs July 24 (August 6), at 6 o'clock in the evening: "By order of his Government the undersigned Ambassador of Austria-Hungary has the honor to notify his Excellency

the Minister of Foreign Affairs of Russia the following: Seeing the menacing attitude taken by Russia in the conflict between the Austro-Hungarian Monarchy and Serbia and in presence of the fact that following this conflict Russia, according to a communication from the Cabinet of Berlin, has deemed it advisable to open hostilities against Germany, and that this latter consequently finds herself in a state of war with the said power, Austria-Hungary considers herself equally in a state of war with Russia from the present moment."—*R. O. B.*, no. 79.

68.—Final report of British ambassador in Vienna.—The final report written by Sir Maurice de Bunsen, British ambassador to Vienna, is an important contribution to the contemporary history of events. The report which is dated London, Sept. 1, 1914, reads thus: "The rapidity of the march of events during the days which led up to the outbreak of the European war made it difficult, at the time, to do more than record their progress by telegraph. I propose now to add a few comments. The delivery at Belgrade on the 23rd July of the Austrian note to Serbia was preceded by a period of absolute silence at the Ballplatz [Austrian Foreign Office]. Except Herr von Tschirschky, who must have been aware of the tenour, if not of the actual words of the note, none of my colleagues were allowed to see through the veil. On the 22nd and 23rd July, M. Dumaine, French Ambassador, had long interviews with Baron Macchio, one of the under-secretaries of State for Foreign Affairs, by whom he was left under the impression that the words of warning he had been instructed to speak to the Austro-Hungarian government had not been unavailing, and that the note which was being drawn up would be found to contain nothing with which a self-respecting State need hesitate to comply. At the second of these interviews he was not even informed that the note was at that very moment being presented at Belgrade, or that it would be published in Vienna on the following morning. Count Forgach, the other Under-Secretary of State, had indeed been good enough to confide to me on the same day the true character of the note, and the fact of its presentation about the time we were speaking. So little had the Russian Ambassador been made aware of what was preparing that he actually left Vienna on a fortnight's leave of absence about the 20th July. He had only been absent a few days when events compelled him to return. It might have been supposed that Duke Avarna, Ambassador of the allied Italian Kingdom, which was bound to be so closely affected by fresh complications in the Balkans, would have been taken fully into the confidence of Count Berchtold during this critical time. In point of fact his Excellency was left completely in the dark. As for myself, no indication was given me by Count Berchtold of the impending storm, and it was from a private source that I received on the 15th July the forecast of what was about to happen which I telegraphed to you the following day. It is true that during all this time the 'Neue Freie Presse' and other leading Viennese newspapers were using language which pointed unmistakably to war with Serbia. The official 'Fremdenblatt,' however, was more cautious, and till the note was published, the prevailing opinion among my colleagues was that Austria would shrink from courses calculated to involve her in grave European complications. On the 24th July the note was published in the newspapers. By common consent it was at once styled an ultimatum.

Its integral acceptance by Serbia was neither expected nor desired, and when, on the following afternoon, it was at first rumoured in Vienna that it had been unconditionally accepted, there was a moment of keen disappointment. The mistake was quickly corrected, and as soon as it was known later in the evening that the Servian reply had been rejected and that Baron Giesl had broken off relations at Belgrade, Vienna burst into a frenzy of delight, vast crowds parading the streets and singing patriotic songs till the small hours of the morning. The demonstrations were perfectly orderly, consisting for the most part of organised processions through the principal streets ending up at the Ministry of War. One or two attempts to make hostile manifestations against the Russian Embassy were frustrated by the strong guard of police which held the approaches to the principal embassies during those days. The demeanour of the people at Vienna and, as I was informed, in many other principal cities of the Monarchy, showed plainly the popularity of the idea of war with Serbia, and there can be no doubt that the small body of Austrian and Hungarian statesmen by whom this momentous step was adopted gauged rightly the sense, and it may even be said the determination, of the people, except presumably in portions of the provinces inhabited by the Slav races. There had been much disappointment in many quarters at the avoidance of war with Serbia during the annexation crisis in 1908 and again in connection with the recent Balkan war. Count Berchtold's peace policy had met with little sympathy in the Delegation. Now the flood-gates were opened, and the entire people and press clamoured impatiently for immediate and condign punishment of the hated Servian race. The country certainly believed that it had before it only the alternative of subduing Serbia or of submitting sooner or later to mutilation at her hands. But a peaceful solution should first have been attempted. Few seemed to reflect that the forcible intervention of a Great Power in the Balkans must inevitably call other Great Powers into the field. So just was the cause of Austria held to be, that it seemed to her people inconceivable that any country should place itself in her path, or that questions of mere policy or prestige should be regarded anywhere as superseding the necessity which had arisen to exact summary vengeance for the crime of Serajevo. [See also AUSTRIA-HUNGARY: 1914-1915.] The conviction had been expressed to me by the German Ambassador on the 24th July that Russia would stand aside. This feeling, which was also held at the Ballplatz, influenced no doubt the course of events, and it is deplorable that no effort should have been made to secure by means of diplomatic negotiations the acquiescence of Russia and Europe as a whole in some peaceful compromise of the Servian question by which Austrian fears of Servian aggression and intrigue might have been removed for the future. Instead of adopting this course the Austro-Hungarian Government resolved upon war. The inevitable consequence ensued. Russia replied to a partial Austrian mobilisation and declaration of war against Serbia by a partial Russian mobilisation against Austria. Austria met this move by completing her own mobilisation, and Russia again responded with results which have passed into history. The fate of the proposals put forward by His Majesty's Government for the preservation of peace is recorded in the White Paper on the European Crisis. On the 28th July I saw

Count Berchtold and urged as strongly as I could that the scheme of mediation mentioned in your speech in the House of Commons on the previous day should be accepted as offering an honourable and peaceful settlement of the question at issue. His Excellency himself read to me a telegraphic report of the speech, but added that matters had gone too far; Austria was that day declaring war on Serbia, and she could never accept the conference which you had suggested should take place between the less interested Powers on the basis of the Servian reply. This was a matter which must be settled directly between the two parties immediately concerned. I said His Majesty's Government would hear with regret that hostilities could not be arrested, as you feared they would lead to European complications. I disclaimed any British lack of sympathy with Austria in the matter of her legitimate grievances against Serbia, and pointed out that whereas Austria seemed to be making these the starting point of her policy, His Majesty's Government were bound to look at the question primarily from the point of view of the maintenance of the peace of Europe. In this way the two countries might easily drift apart.

"His Excellency said that he too was keeping the European aspect of the question in sight. He thought, however, that Russia would have no right to intervene after receiving his assurance that Austria sought no territorial aggrandisement. His Excellency remarked to me in the course of his conversation that, though he had been glad to co-operate towards bringing about the settlement which had resulted from the ambassadorial conferences in London during the Balkan crisis, he had never had much belief in the permanency of that settlement, which was necessarily of a highly artificial character, inasmuch as the interests which it sought to harmonise were in themselves profoundly divergent. His Excellency maintained a most friendly demeanour throughout the interview, but left no doubt in my mind as to the determination of the Austro-Hungarian Government to proceed with the invasion of Serbia. The German Government claim to have persevered to the end in the endeavour to support at Vienna your successive proposals in the interest of peace. Herr von M. Tschirschky abstained from inviting my co-operation or that of the French and Russian Ambassadors in carrying out his instructions to that effect, and I had no means of knowing what response he was receiving from the Austro-Hungarian Government. I was, however, kept fully informed by M. Schebeko, the Russian Ambassador, of his own direct negotiations with Count Berchtold. M. Schebeko endeavoured on the 28th July to persuade the Austro-Hungarian Government to furnish Count Szapary with full powers to continue at St. Petersburg the hopeful conversations which had there been taking place between the latter and M. Sazonof. Count Berchtold refused at the time, but two days later (30th July), though in the meantime Russia had partially mobilised against Austria, he received M. Schebeko again, in a perfectly friendly manner, and gave his consent to the continuance of the conversations at St. Petersburg. From now onwards the tension between Russia and Germany was much greater than between Russia and Austria. As between the latter an arrangement seemed almost in sight, and on the 1st August I was informed by M. Schebeko that Count Szapary had at last conceded the main point at issue by announcing to M. Sazonof that Austria would consent to sub-

mit to mediation the points in the note to Servia which seemed incompatible with the maintenance of Servian independence. M. Sazonof, M. Schebeko added, had accepted this proposal on condition that Austria would refrain from the actual invasion of Servia. Austria, in fact, had finally yielded, and that she herself had at this point good hopes of a peaceful issue is shown by the communication made to you on the 1st August by Count Mensdorff to the effect that Austria had neither 'banged the door' on compromise nor cut off the conversations. M. Schebeko to the end was working hard for peace. He was holding the most conciliatory language to Count Berchtold, and he informed me that the latter, as well as Count Forgach, had responded in the same spirit. Certainly it was too much for Russia to expect that Austria would hold back her armies, but this matter could probably have been settled by negotiation, and M. Schebeko repeatedly told me he was prepared to accept any reasonable compromise. Unfortunately these conversations at St. Petersburg and Vienna were cut short by the transfer of the dispute to the more dangerous ground of a direct conflict between Germany and Russia. Germany intervened on the 31st July by means of her double ultimatums to St. Petersburg and Paris. The ultimatums were of a kind to which only one answer is possible, and Germany declared war on Russia on the 1st August, and on France on the 3rd August. A few days' delay might in all probability have saved Europe from one of the greatest calamities in history. Russia still abstained from attacking Austria, and M. Schebeko had been instructed to remain at his post till war should actually be declared against her by the Austro-Hungarian Government. This only happened on the 6th August when Count Berchtold informed the foreign missions at Vienna that 'the Austro-Hungarian Ambassador at St. Petersburg had been instructed to notify the Russian Government that, in view of the menacing attitude of Russia in the Austro-Servian conflict and the fact that Russia had commenced hostilities against Germany, Austro-Hungary considered herself also at war with Russia.' M. Schebeko left quietly in a special train provided by the Austro-Hungarian Government on the 7th August. He had urgently requested to be conveyed to the Roumanian frontier, so that he might be able to proceed to his own country, but was taken instead to the Swiss frontier, and ten days later I found him at Berne. M. Dumaine, French Ambassador, stayed on till the 12th August. On the previous day he had been instructed to demand his passport on the ground that Austrian troops were being employed against France. This point was not fully cleared up when I left Vienna. On the 8th August, M. Dumaine had received from Count Berchtold the categorical declaration that no Austrian troops were being moved to Alsace. The next day this statement was supplemented by a further one, in writing, giving Count Berchtold's assurance that not only had no Austrian troops been moved actually to the French frontier, but that none were moving from Austria in a westerly direction into Germany in such a way that they might replace German troops employed at the front. These two statements were made by Count Berchtold in reply to precise questions put to him by M. Dumaine, under instructions from his Government. The French Ambassador's departure was not attended by any hostile demonstration, but his Excellency before leaving had been justly offended by a harangue made by the

Chief Burgomaster of Vienna to the crowd assembled before the steps of the town hall, in which he assured the people that Paris was in the throes of a revolution, and that the President of the Republic had been assassinated.

"The British declaration of war on Germany was made known in Vienna by special editions of the newspapers about midday on the 4th August. An abstract of your speeches in the House of Commons, and also of the German Chancellor's speech in the Reichstag of the 4th August, appeared the same day, as well as the text of the German ultimatum to Belgium. Otherwise few details of the great events of these days transpired. The 'Neue Freie Presse' was violently insulting towards England. The 'Fremdenblatt' was not offensive, but little or nothing was said in the columns of any Vienna paper to explain that the violation of Belgian neutrality had left His Majesty's Government no alternative but to take part in the war.

"The declaration of Italian neutrality was bitterly felt in Vienna, but scarcely mentioned in the newspapers.

"On the 5th August I had the honour to receive your instruction of the previous day preparing me for the immediate outbreak of war with Germany, but adding that, Austria being understood to be not yet at that date at war with Russia and France, you did not desire me to ask for my passport or to make any particular communication to the Austro-Hungarian Government. You stated at the same time that His Majesty's Government of course expected Austria not to commit any act of war against us without the notice required by domestic usage. On Thursday morning, the 13th August, I had the honour to receive your telegram of the 12th, stating that you had been compelled to inform Count Mensdorff, at the request of the French Government, that a complete rupture had occurred between France and Austria, on the ground that Austria had declared war on Russia who was already fighting on the side of France, and that Austria had sent troops to the German frontier under conditions that were a direct menace to France. The rupture having been brought about with France in this way, I was to ask for my passport, and your telegram stated, in conclusion, that you had informed Count Mensdorff that a state of war would exist between the two countries from midnight of the 12th August. After seeing Mr. Penfield, the United States Ambassador, who accepted immediately in the most friendly spirit my request that his Excellency would take charge provisionally of British interests in Austria-Hungary during the unfortunate interruption of relations, I proceeded, with Mr. Theo Russell, Counsellor of His Majesty's Embassy, to the Ballplatz. Count Berchtold received me at midday. I delivered my message, for which his Excellency did not seem to be unprepared, although he told me that a long telegram from Count Mensdorff had just come in but had not yet been brought to him. His Excellency received my communication with the courtesy which never leaves him. He deplored the unhappy complications which were drawing such good friends as Austria and England into war. In point of fact, he added, Austria did not consider herself then at war with France, though diplomatic relations with that country had been broken off. I explained in a few words how circumstances had forced this unwelcome conflict upon us. We both avoided useless argument. Then I ventured to recommend to his Excellency's consideration the case of the numerous stranded British subjects at Carlsbad, Vienna, and other

places throughout the country. I had already had some correspondence with him on the subject, and his Excellency took a note of what I said, and promised to see what could be done to get them away when the stress of mobilisation should be over. Count Berchtold agreed to Mr. Phillpotts, till then British consul at Vienna under Consul-General Sir Frederick Duncan, being left by me at the Embassy in the capacity of *Chargé des Archives*. He presumed a similar privilege would not be refused in England if desired on behalf of the Austro-Hungarian Government. I took leave of Count Berchtold with sincere regret, having received from the day of my arrival in Vienna, not quite nine months before, many marks of friendship and consideration from his Excellency. As I left I begged his Excellency to present my profound respects to the Emperor Francis Joseph, together with an expression of my hope that His Majesty would pass through these sad times with unimpaired health and strength. Count Berchtold was pleased to say he would deliver my message.

"Count Walterskirchen, of the Austro-Hungarian Foreign Office, was deputed the following morning to bring me my passport and to acquaint me with the arrangements made for my departure that evening (14th August). In the course of the day Countess Berchtold and other ladies of Vienna society called to take leave of Lady de Bunsen at the embassy. We left the railway station by special train for the Swiss frontier at 7 P.M. No disagreeable incidents occurred. Count Walterskirchen was present at the station on behalf of Count Berchtold. The journey was necessarily slow, owing to the encumbered state of the line. We reached Buchs, on the Swiss frontier, early in the morning of the 17th August. At the first halting place there had been some hooting and stone throwing on the part of the entraining troops and station officials, but no inconvenience was caused, and at the other large stations on our route, we found that ample measures had been taken to preserve us from molestation as well as to provide us with food. I was left in no doubt that the Austro-Hungarian Government had desired that the journey should be performed under the most comfortable conditions possible, and that I should receive on my departure all the marks of consideration due to His Majesty's representative. I was accompanied by my own family and the entire staff of the embassy, for whose untiring zeal and efficient help in trying times I desire to express my sincere thanks. The Swiss Government also showed courtesy in providing comfortable accommodation during our journey from the frontier to Berne, and, after three days' stay there, on to Geneva, at which place we found that every provision had been made by the French Government, at the request of Sir Francis Bertie, for our speedy conveyance to Paris. We reached England on Saturday morning, the 22nd August."—*Great Britain and the European crisis*.

69.—German official statement.—Foreign Office statement in German White Book.—Kaiser and tsar telegrams.—"On June 28 last the successor to the Austrian throne, Archduke Franz Ferdinand, and his wife, the Duchess of Hohenberg, were assassinated by the revolver shots of a Servian band of conspirators. An investigation of the crime by Austro-Hungarian officials has revealed that the plot to take the life of the Archduke was planned and promoted in Belgrade with the co-operation of official Servian individuals and was carried out with weapons from the Servian Government depot. This crime was bound to

open the eyes of the whole civilized world, not only with regard to the object of Servian politics as relating to the existence and integrity of the Austro-Hungarian monarchy, but also with regard to the criminal means that the Pan-Servian propaganda did not hesitate to employ in order to attain these ends. The ultimate object of these policies was to revolutionize gradually and finally to bring about a separation of the southwestern region of the Austro-Hungarian monarchy from that empire and unite it with Servia. The repeated and formal declarations of Servia to Austria-Hungary to bring about good neighborly relations did not change this trend of Servian politics in the least. For the third time in the course of the last six years Servia has brought Europe to the verge of a world war in this manner. She could only do this because she believed herself supported by Russia in her endeavors. As a result of the developments of the year 1908 growing out of the Turkish revolution, Russian policies had begun to organize a league of the Balkan States directed against the existence of Turkey, under Russian patronage. This alliance of the Balkan States [see BALKAN STATES, 1912; Balkan League; SERBIA; 1909-1913] which was successful in crowding Turkey out of her European possessions in 1911, came to grief over the question of the disposition of the spoils. Russian policy was not, however, frightened by this failure. It was the idea of Russian statesmen that there should be formed a new Balkan League under Russian patronage, whose activities should be directed this time not against Turkey, which had been driven from the Balkans, but against the existence of the Austro-Hungarian monarchy. The idea was that Servia should cede to Bulgaria the section of Macedonia that she had won in the last Balkan war and offset the loss by the acquisition of Bosnia and Herzegovina at the expense of the monarchy of the Danube. For this purpose Bulgaria, by her isolation, was to be made pliable, Rumania, as the result of a propaganda undertaken with the aid of France, was to be chained to Russia, and Servia was to be referred to Bosnia and Herzegovina. In view of these circumstances Austria had to admit that it would not be consistent either with the dignity or self-preservation of the monarchy to look on longer at the operations on the other side of the border without taking action. The Austro-Hungarian Government advised us of this view of the situation and asked our opinion in the matter. We were able to assure our ally most heartily of our agreement with her view of the situation and to assure her that any action that she might consider it necessary to take in order to put an end to the movement in Servia directed against the existence of the Austro-Hungarian Monarchy would receive our approval. We were fully aware in this connection that warlike moves on the part of Austria-Hungary against Servia would bring Russia into the question and might draw us into a war in accordance with our duty as an ally. However, recognizing the vital interests of Austria-Hungary which were at stake, we could neither advise our ally to a compliance that would have been inconsistent with her dignity, nor could we deny her our support in this great hour of need. We were all the more unable to do this inasmuch as our interests also were seriously threatened as a result of the continuous Servian agitation. If Servia, with the help of Russia and France, had been allowed to imperil the existence of the neighboring monarchy any longer, this would lead to the gradual downfall of Austria and would result in submission to Slavic sway under the

Russian sceptre, thus making the position of the Germanic race in Central Europe untenable. A morally weakened Austria breaking down as the result of the advance of Russian Pan-Slavism would no longer be an ally on whom we could count and upon whom we could rely, such as we need in view of the attitude of our eastern and western neighbors, which has constantly grown more threatening. We therefore gave Austria an entirely free hand in her action against Serbia. We have taken no part in the preparations.

"Austria chose the way, laying before the Serbian Government in detail the immediate relation between the murder and the general Servian movement, not only tolerated by the Serbian Government, but supported by it, which an investigation of the murder at Serajevo had established. At the same time Serbia was asked by Austria to put an absolute end to these activities and to allow Austria to punish the guilty parties. Austria demanded as a guarantee for the carrying out of the proceedings participation in the investigation on Serbian territory and the definite dissolution of the various Pan-Servian societies carrying on an agitation against Austria-Hungary. The Imperial and Royal Government set a time limit of forty-eight hours for the unconditional acceptance of her terms. One day after the Austro-Hungarian note had been handed to it the Serbian Government began mobilization. When, after the expiration of the time limit, the Serbian Government made a reply which, while satisfying the demands of Austria-Hungary on certain points, made known emphatically with regard to the essential ones its intention to refuse the just demands of the monarchy by means of temporizing and the introduction of new negotiations, Austria broke off diplomatic relations with Serbia without having recourse to further negotiations or allowing herself to be put off by Servian assurances, the value of which she knows well enough—to her sorrow. From that moment Austria was actually in a state of War with Serbia, which was publicly proclaimed by means of the official declaration of war on the 28th of the month. From the very beginning of the conflict we took the stand that this was an affair of Austria which she alone would have to bring to a decision with Serbia. We have therefore devoted our entire efforts to localizing the war and to convincing the other powers that Austria-Hungary was compelled to take justified defensive methods and appeal to arms. We took the stand emphatically that no civilized nation had the right in this struggle against lack of culture [*Unkultur*] and criminal political morality to prevent Austria from acting and to take away the just punishment from Serbia. We instructed our representatives abroad in that sense. At the same time the Austro-Hungarian Government informed the Russian Government that her (Austria's) move against Serbia was entirely a defensive measure designed to put a stop to Servian agitation, but that Austria-Hungary was compelled by necessity to demand guarantees of a continued friendly attitude on the part of Serbia toward the Austro-Hungarian monarchy. Austria-Hungary, the note to Russia stated, had no intention of bringing about a disturbance of the balance of power in the Balkans. Both the French and the English Governments, replying to our explanation that the German government wished and was trying to localize the conflict, promised to work in the same interest. In the meantime these efforts did not succeed in preventing Russia's interference in the Austro-Servian disagreement.

"The Russian Government issued an official communiqué on July 24, according to which it would be impossible for Russia to remain indifferent in the Servian-Austrian conflict. The Russian Minister for Foreign Affairs, Mr. Sazonof, made this position known to the Imperial [German] Ambassador, Count Pourtalès. On the afternoon of July 26 the Austro-Hungarian Government again explained through its Ambassador in St. Petersburg that Austria-Hungary had no plans of conquest, but only wished to have peace at last on her frontiers. In the course of the same day the first reports of Russian mobilization reached Berlin. On the evening of the 26th the Imperial [German] Ambassadors at London, Paris, and St. Petersburg were directed to call the attention of the English, French, and Russian Governments energetically to the danger of this Russian mobilization. After Austria-Hungary had officially declared to Russia that she did not seek the acquisition of any territory in Serbia, the decision for world peace lay entirely in St. Petersburg. The same day the Imperial [German] Ambassador at St. Petersburg was directed to make the following statement to the Russian Government: 'The military preparatory measures of Russia will compel us to take counter-action which must consist in the mobilization of the army. Mobilization, however, indicates war. Inasmuch as we know France's obligations toward Russia, this mobilization would be directed simultaneously against Russia and France. We cannot assume that Russia wishes to let loose such a European war. Inasmuch as Austria-Hungary will not impair the continuance of the Servian Kingdom, we are of the opinion that Russia can adopt a policy of waiting. We shall be all the more able to support Russia's wish not to allow the integrity of the Servian Kingdom to be called into question, since Austria does not call this integrity into question herself. It will be easy to find a basis of agreement in the further course of the affair.'

"On July 27 the Russian Minister for War, Suchomlinof, gave the German Military Attaché his word of honor that no mobilization order had as yet been issued. He said that for the present preparatory measures were being taken, no horses being levied and no reservists being called in. In case Austria-Hungary were to cross the Servian boundary, the military districts facing Austria, those of Kieff, Odessa, Moscow, and Kazan, would be mobilized. Under no circumstances would there be a mobilization of the districts lying on the German front: St. Petersburg, Vilna, and Warsaw. In answer to the Military Attaché's question as to what was the object of mobilization against Austria-Hungary, the Russian War Minister shrugged his shoulders and referred to the diplomats. Thereupon the Military Attaché indicated that measures to mobilize against Austria-Hungary were also decidedly threatening to Germany. In the following days reports concerning the Russian mobilization followed each other in quick succession. Among these were reports concerning preparations on the German border, such as the declaration of a state of war in Kovno, the departure of the Warsaw garrison, and the strengthening of the Alexandrovo garrison. On July 27 the first reports of preparatory measures by France arrived. The Fourteenth Corps discontinued its manœuvres and returned to garrison duty. In the meantime we continued to exert our most energetic influence on the Cabinets to insure the localization of the conflict. On the 26th Sir Edward Grey had suggested that the differences between Austria-Hungary and Serbia be

laid before a conference of the Ambassadors of Germany, France, and Italy, with himself presiding over the sessions. To this suggestion we replied that, while we approved his tender, we could not take part in such a conference because we could not call upon Austria to appear before a European court in her controversy with Serbia. France agreed to Sir Edward Grey's proposal, but it was finally brought to naught because Austria, as was to be expected, held herself aloof. True to our conviction that an act of mediation could not take into consideration the Austro-Servian conflict, which was purely an Austro-Hungarian affair, but would have to take into consideration only the relations between Austria-Hungary and Russia, we continued our efforts to bring about an understanding between these two powers. We were also willing, after declining the conference idea, to transmit a further proposal by Sir Edward Grey to Vienna, in which he urged that Austria-Hungary either agree to accept the Servian answer as sufficient or to look upon it as a basis for further conversations. The Austro-Hungarian Government, in full appreciation of our mediatory activity, replied to this proposal that, coming as it did after the opening of hostilities, it was too late.

"In spite of this we continued our mediatory efforts to the utmost and advised Vienna to make any possible compromise consistent with the dignity of the Monarchy. Unluckily, all of these mediatory acts were soon overtaken by the military preparations of Russia and France. On July 29 the Russian Government officially announced, in Berlin that it had mobilized four army districts. At the same time additional reports reached us of rapidly progressing military preparations by France on land and sea. On the same day the Imperial Ambassador at St. Petersburg had a conversation with the Russian Minister for Foreign Affairs concerning which he reported as follows by telegraph:

"The Minister tried to persuade me to agree in behalf of my Government to a conversation of four parties to devise means of moving Austria-Hungary to give up those demands touching on the sovereignty of Serbia. While I agreed to a complete transmission of the conversation, I took the stand that, since Russia had decided on the ominous step of mobilization, it was difficult for me to exchange any opinions on this subject, and it almost seemed impossible to do so. I said that what Russia now demanded of us in respect to Austria-Hungary was the same thing of which Austria-Hungary was accused regarding Serbia—a usurpation of the rights of sovereignty; that Austria-Hungary had promised to be considerate of Russian interests by declaring her territorial disinterestedness, a great concession on the part of a nation waging war. For this reason, I said, an opportunity should be given the Dual Monarchy to settle her dispute with Serbia alone. There would be time enough to come back to the subject of safeguarding Servian sovereignty when peace terms were to be concluded. I added very earnestly that at the present moment the Austro-Servian affair was secondary to the danger of a European conflagration, and I made every effort to show the Minister the greatness of this danger. It was impossible to change Sazonof's mind on the point that Russia could not desert Serbia now."

"Similarly the Military Attaché at St. Petersburg reported by telegraph on the 29th as follows,

regarding an interview with the Chief of the General Staff of the Russian Army:

"The Chief of the General Staff asked me to call and informed me that he had just come from His Majesty. He stated that he had been instructed by the Minister for War to assure me again that everything had remained the same as it had been explained to me by the minister two days ago. He offered me a written confirmation and gave me his word of honor in the most formal manner that mobilization had begun nowhere, that is to say, not a single man or horse had been levied up to that hour, three o'clock in the afternoon. He stated that he could not answer for the future, but he could declare most emphatically that no mobilization was desired by His Majesty in the districts touching on our boundary. However, many reports have reached here and also Warsaw and Vilna of the levying of reservists in various parts of the empire. I therefore told the General that I was confronted with a riddle as the result of his announcements to me. On his word as an officer he repeated, however, that such reports were untrue; that a false alarm may have been raised here and there. In view of the positive, numerous reports before me of actual levying, I am compelled to consider the conversation as an attempt to mislead us with regard to the extent of the measures that have already been taken."

"Inasmuch as the Russian Government, in reply to the several inquiries regarding the reasons for its threatening attitude, several times alluded to the circumstance that Austria-Hungary had not yet begun any conversations in St. Petersburg, the Austro-Hungarian Ambassador, at our request, was directed on July 29 to begin the conversations with Mr. Sazonof. Count Szapary was authorized to make known to the Russian Minister the contents of the note to Serbia which had been, as it were, overtaken by the declaration of war, and to receive any suggestions that might still come from the Russian side, as well as to discuss with Sazonof all questions touching directly on the Austro-Russian relations. Shoulder to shoulder with England we continued to work without cessation for mediation, and supported every suggestion in Vienna which we believed showed hope of the possibility of a peaceful settlement of the conflict. As late as the 30th we transmitted an English proposal to Vienna which established this basis of negotiation, that Austria-Hungary, after succeeding in marching into Serbia, should dictate her terms there. We had to assume that Russia would accept this basis. While these efforts of ours for mediation, supported by English diplomacy, were being continued with increasing urgency in the time from July 29 to the 31st, there constantly came new and increasing reports concerning Russian mobilization measures. The assembling of troops on the places on the Russian western boundary no longer left any doubt of the fact that Russian mobilization was actively going on against us, while at the same time all such measures were denied anew on word of honor to our representative at St. Petersburg. Even before the reply to the last English-German mediation proposal, the basis of which must have been known in St. Petersburg, could reach Berlin from Vienna, Russia ordered a general mobilization. On the same day an exchange of telegrams took place between his Majesty the Kaiser and King and Czar Nicholas in which his Majesty called the Czar's attention to the threatening character of

the Russian mobilization and to the continuance of his own activity as mediator.

"On July 31 the Czar directed the following telegram to his Majesty:

"I thank you from my heart for your mediation, which permits a gleam of hope that everything can yet be settled peaceably. It is a technical impossibility for us to halt our military preparations which became necessary through Austria's mobilization. We are far from desirous of war. So long as the negotiations continue with Austria concerning Serbia, my troops will not undertake any challenging action. I solemnly pledge you my word as to that. I am trusting in the grace of God with all my might and hope for the success of your mediation in Vienna, for the welfare of our countries and for the peace of Europe. Your sincerely devoted

"NICHOLAS."

"To this his Majesty the Kaiser replied:

"Upon your appeal to my friendship and your plea for my help, I have undertaken a mediatory action between your Government and the Austro-Hungarian Government. While this negotiation was under way your troops were mobilized against Austria-Hungary, which is allied with me, as a consequence of which my mediation was almost made illusory, as I have already informed you. Notwithstanding this, I continued it. Now I am in receipt of reliable reports of serious preparations for war on my eastern boundary also. Responsibility for the safety of my empire compels me to take counter defensive measures. I have carried my efforts for the maintenance of world peace to the utmost limit. It is not I that bear the responsibility for the calamity that now threatens the entire civilized world. Yet at this moment it lies in your power to stave it off. No one threatens the honor and might of Russia, which might have awaited the result of my mediation. The friendship for you and your empire has always been sacred to me, and I have been faithful to Russia when she was hard pressed, especially in her last war. It is still possible for you to maintain the peace of Europe if Russia will decide to put a stop to the military measures that threaten Germany and Austria-Hungary."

"Even before this telegram reached its destination the mobilization of the entire Russian fighting force, which had been ordered in the forenoon of the same day, openly directed against us, was in full swing. The Czar's telegram, however, was sent at 2 o'clock in the afternoon. After the mobilization became known in Berlin, the Imperial Ambassador at St. Petersburg was ordered on the afternoon of July 31 to advise the Russian Government that Germany had declared a state of war as a counter move to the mobilization of the Russian Army and Navy, which would have to be followed by mobilization unless Russia ceased her military preparations against Germany and Austria-Hungary within twelve hours, and so advise Germany. At the same time the Imperial Ambassador at Paris was directed to request an explanation from the French Government within eighteen hours as to whether, in the case of a Russo-German war, France would remain neutral. The Russian Government destroyed the painstaking mediatory work of the European State Chancelleries, shortly before its successful outcome, by her mobilization, which endangered the

safety of the German Empire. The mobilization measures, concerning the seriousness of which to the Russian Government no doubt was allowed to arise from the beginning, together with her continued denial, show clearly that Russia desired the war. The Imperial Ambassador at St. Petersburg delivered the message that had been given to him for Mr. Sazonof on July 31 at midnight. After the expiration of the time limit set for Russia without the receipt of an answer to our inquiry, his Majesty the Emperor and King ordered the mobilization of the entire German Army and the Imperial Navy at 5 P.M. on Aug. 1. In the meantime the imperial Ambassador at St. Petersburg had been instructed to hand a declaration of war to the Russian Government in case no favorable reply was issued before the expiration of the time limit. However, before a report regarding the execution of this order arrived, Russian troops crossed our border and advanced on German territory, namely, as early as the afternoon of Aug. 1. "By this move Russia began the war against us.

"In the meantime the Imperial Ambassador at Paris put the question that he had been ordered to present before the French Cabinet at 7 P.M. on July 31. To this the French Prime Minister made an ambiguous and unsatisfactory reply at 1 o'clock in the afternoon of Aug. 1. This does not give a clear picture of the French position, since it was limited to the statement that France would do what her interests seemed to warrant. A few hours later, at 5 in the afternoon, the complete mobilization of the entire French Army and Navy was ordered. On the morning of the following day France opened hostilities. Concluded on Aug. 2, noon."—*Denkschrift und Aktenstücke zum Kriegsausbruch* [Memorandum and documents on the outbreak of war.]—Aug. 3, 1914. [See above: 47, 48.]

"On the evening of July 29th that celebrated telegram from the Tsar arrived, which later aroused so much stir, as in the German White Book, issued at the beginning of the war, which contained all the Tsar's telegrams, this particular one was 'forgotten.' It reads:

"Thanks for your conciliatory and friendly telegram. In contrast to it, the official communication made to-day by your Ambassador to my Minister was couched in quite a different tone. I beg you to explain the difference. [Now then! —W.] It would be well to submit the Austro-Serbian problem to the Hague Conference. [!—W.] I rely on your wisdom and friendship.

"Your loving,
"NICKY."

"[Thanks likewise.—W.]"

Thereupon Bethmann-Hollweg at once telegraphed to the Ambassador in St. Petersburg: 'I beg your Excellency to explain the alleged discrepancy between your language and His Majesty's telegrams at once in a conversation with M. Sazonof. The idea of the Hague Conference will of course be quite out of the question in this case.'" —K. Kautsky, *Guilt of William Hohenzollern*, pp. 182-183.—The bracketed remarks with [—W.] were written on the margin by the Kaiser; all these comments are reproduced by Kautsky.

70.—No separate peace.—Declaration of Triple Entente.—The following declaration was signed Sept. 4, 1914, at the Foreign Office in London:

"The undersigned duly authorized thereto by their respective Governments, hereby declare as

follows: The British, French and Russian Governments mutually engage not to conclude peace separately during the present war. The three Governments agree that when terms of peace come to be discussed, no one of the Allies will demand terms of peace without the previous agreement of each of the other Allies.

"(Signed)

"PAUL CAMBON
"COUNT BENCKENDORFF
"EDWARD GREY."

71.—Lichnowsky memorandum.—Prince Lichnowsky, who had been German ambassador to London at the outbreak of the war wrote in 1916 a long memorandum, in which he made various revelations and expressed his opinions, of the events which led up to the great tragedy. Although its author intended this record only for his family archives, it was published in Germany without his authority, and was afterwards translated into Swedish and English. The memorandum, which begins with a statement of the circumstances which surrounded his appointment to the embassy, reads as follows:

"KUCHELNA, 16 AUGUST, 1916.

"Baron Marschall died in September, 1912, having held his post in London for a few months only. His appointment, which was due mainly to his age and the plotting of a younger man to get to London, was one of the many mistakes made by our Foreign Office. In spite of his imposing personality and great reputation, he was too old and tired to be able to adapt himself to a purely foreign and Anglo-Saxon milieu. He was more of a bureaucrat and a lawyer than a diplomat or statesman. He set to work to convince Englishmen of the harmless character of our fleet, and naturally succeeded in strengthening an entirely opposite impression. To my great surprise I was offered the post in October. After many years' work I had withdrawn to the country, as no suitable post had been found for me . . . Thus eight years passed, and thirteen since I had left Vienna as Ambassador. That was actually my last political employment. I do not know to whom my appointment in London was due. At all events, not to his Majesty, as I did not belong to his immediate set, although he was always gracious to me. I know by experience that his candidates were frequently successfully opposed. As a matter of fact, Herr von Kiderlen-Wächter wanted to send Baron von Stumm to London. He met me at once with undisguised ill-will, and tried to frighten me by rudeness. Herr von Bethmann Hollweg was amiable to me, and had visited me shortly before at Grätz. I am, therefore, inclined to think that they settled on me, as no other candidate was available. Had Baron von Marschall not died, it is unlikely that I should have been dug out any more than in previous years. The moment was obviously favorable for an attempt to come to a better understanding with England.

"[(i) MOROCCO QUESTION.] "Our obscure policy in Morocco had repeatedly caused distrust of our peaceful intention, or, at least, had raised doubts as to whether we knew what we wanted or whether our intention was to keep Europe in a state of suspense and, on occasion, to humiliate the French. An Austrian colleague, who was a long time in Paris, said to me: 'The French had begun to forget la revanche. You have regularly reminded

them of it by tramping on their toes.' After we had declined Delcassé's offer to come to an agreement regarding Morocco, and then solemnly declared that we had no political interest there—an attitude which agreed with Bismarckian political conditions—we suddenly discovered in Abdul Aziz a Kruger Number Two. To him also, as to the Boers, we promised the protection of the mighty German Empire, and with the same result. Both manifestations concluded, as they were bound to conclude, with a retraction, if we were not prepared to start a world war. The pitiable conference of Algéiras could alter nothing, and still less cause Delcassé's fall. Our attitude furthered the Russo-Japanese and Russo-British rapprochement. In face of 'the German peril' all other considerations faded into the background. The possibility of another Franco-German war had been patent, and, as had not been the case

PRINCE KARL MAX VON LICHNOWSKY

in 1870, such a war could not leave out Russia or England. The valuelessness of the Triple Alliance had already been demonstrated at Algéiras [see FRANCE: 1904-1906; ITALY: 1906: Part of Italy; MOROCCO: 1905-1906], and, immediately afterward, the equal worthlessness of the agreements made there when the Sultanate fell to pieces, which was, of course, unavoidable. Meanwhile, the belief was spreading among the Russian people that our foreign policy was weak and was breaking down under 'encirclement,' and that cowardly surrender followed on haughty gestures. It is to the credit of von Kiderlen-Wächter, though otherwise overrated as a statesman, that he cleared up the Moroccan situation and adapted himself to circumstances which could not be altered. Whether the world had to be upset by the Agadir coup is a question I do not touch. This event was hailed with joy in Germany, but in England caused all the more uneasiness in that the British Government waited in vain for three weeks for a statement of our intentions. Mr. Lloyd George's Mansion House speech [on July 21, 1911], intended to

warn us, was a consequence. Before Delcassé's fall and before the Algeiras conference we could have obtained harbors and bases on the West Coast, but that was no longer possible.

"[ii] ENGLAND SOUGHT AGREEMENT.] When I came to London in November, 1912, people had become easier about the question of Morocco, especially since an agreement had been reached with France and Berlin. [See also MOROCCO: 1911-1914.] Lord Haldane's mission had failed, it is true, as we demanded promises of neutrality instead of contenting ourselves with a treaty which would insure us against a British attack or any attack with British support. Sir Edward Grey had not, meanwhile, given up the idea of coming to an understanding with us, and made such an attempt first on economic and colonial grounds. Through the agency of that qualified and expert Councilor of Embassy, von Kühlmann, an exchange of opinions had taken place with regard to the renewal of the Portuguese colonial treaty and the Bagdad Railway, which thus carried out the unexpected aim of dividing into spheres of interest both the above-mentioned colonies and Asia Minor. The British statesman, old points in dispute both with France and Russia having been settled, wished to come to a similar agreement with us. His intention was not to isolate us but to make us in so far as possible partners in a working concern. Just as he had succeeded in bridging Franco-British [Lichnowsky is in error here; the Anglo-French Agreement was Lord Lansdowne's work] and Russo-British difficulties, so he wished as far as possible to remove German-British difficulties, and by a network of treaties—which would finally include an agreement on the miserable fleet questions—to secure the peace of the world, as our earlier policy had lent itself to a co-operation with the Entente, which contained a mutual assurance against the danger of war.

"[(iii) GREY'S DESIRES.] This was Sir Edward Grey's program in his own words: "Without infringing on the existing friendly relations with France and Russia, which in themselves contained no aggressive elements, and no binding obligations for England; to seek to achieve a more friendly rapprochement with Germany, and to bring the two groups nearer together. In England, as with us, there were two opinions, that of the optimists, who believed in an understanding, and that of the pessimists, who considered war inevitable sooner or later. Among the former were Mr. Asquith, Sir Edward Grey, Lord Haldane, and most of the Ministers in the Radical Cabinet, as well as leading Liberal organs, such as *The Westminster Gazette*, *The Manchester Guardian*, and *The Daily Chronicle*. To the pessimists belong especially Conservative politicians like Mr. Balfour, who repeatedly made his meaning clear to me; leading soldiers such as Lord Roberts, who insisted on the necessity of conscription, and on 'the writing on the wall,' and, further, the Northcliffe press, and that leading English journalist, Mr. Garvin of *The Observer*. During my term of office they abstained from all attacks and took up, personally and politically, a friendly attitude. Our naval policy and our attitude in the years 1905, 1908, and 1911 had, nevertheless, caused them to think that it might one day come to war. Just as with us, the former are now dubbed shortsighted and simple-minded, while the latter are regarded as the true prophets.

"[(iv) TURKEY AND THE BALKANS.] The first Balkan war led to the collapse of Turkey and with it the defeat of our policy, which had been identi-

fied with Turkey for many years. [See also BALKAN STATES: 1912: First Balkan War; 1912-1913.] Since the salvation of Turkey in Europe was no longer feasible, only two possibilities for settling the question remained. Either we declared we had no longer any interest in the definition of boundaries in the Balkan Peninsula, and left the settlement of the question to the Balkan peoples themselves, or we supported our allies and carried out a triple alliance policy in the east, thereby giving up the rôle of mediator. I urged the former course from the beginning, but the German Foreign Office very much preferred the latter. The chief question was Albania. Our allies desired the establishment of an independent State of Albania, as Austria would not allow Serbia to reach the Adriatic, and Italy did not wish the Greeks to reach Valona or even the territory north of Corfu. On the other hand, Russia, as is known, favored Serbian, and France Greek, desires. My advice was now to consider the question as outside the alliance, and to support neither Austrian nor Italian wishes. Without our support the establishment of Albania, whose incapability of existence might have been foreseen, was an impossibility. Serbia would have pushed forward to the coast; then the present world-war would have been avoided. France and Italy would have remained definitely divided as to Greece, and the Italians, had they not wished to fight France alone, would have been obliged to consent to the expansion of Greece to the district north of Durazzo. The greater part of civilized Albania is Greek. The southern towns are entirely Greek, and, at the time of the Conference of Ambassadors, deputations from the larger towns came to London to carry through the annexation to Greece. In Greece today whole groups are Albanian, and the so-called Greek national dress is of Albanian origin. The amalgamation of the preponderating Orthodox and Islamic Albanians with the Greek State was, therefore, the best solution and the most natural, if one leaves out of account Scutari and the northern part of Serbia and Montenegro. His Majesty [the Kaiser] was also in favor of this solution on dynastic grounds. When I encouraged the monarch by letter to this effect, I received violent reproaches from the Chancellor for supporting Austria's opponents, and he forbade all such interference in the future, and even direct correspondence. We had eventually, however, to abandon the tradition of carrying out the Triple Alliance policy in the East and to acknowledge our mistake, which consisted in identifying ourselves with the Turks in the south and the Austro-Magyars in the north; for the continuance of that policy, which we began at the Congress in Berlin and subsequently carried on zealously, was bound in time, should the necessary skill in conducting it fail, to lead to a collision with Russia and a world war.

"[(v) TURKEY, RUSSIA, AND ITALY.] Instead of uniting with Russia on the basis of the independence of the Sultan, whom the Russians also did not wish to drive out of Constantinople, and confining ourselves to economic interests in the East, whilst at the same time refraining from all military and political interference and being satisfied with a division of Asia Minor into spheres of interest, the goal of our political ambition was to dominate in the Bosphorus. In Russia, therefore, the opinion arose that the way to Constantinople and to the Mediterranean lay through Berlin. Instead of encouraging a powerful development in the Balkan States, which were once free and are very different from the Russians, of which fact we have already

had experience, we placed ourselves on the side of the Turkish and Magyar oppressors. The dire mistake of our Triple Alliance and our Eastern policies, which drove Russia—our natural friend and best neighbor—into the arms of France and England, and kept her from her policy of Asiatic expansion, was the more evident, as a Franco-Russian attack, the only hypothesis justifying a Triple Alliance policy, had to be eliminated from our calculations. As to the value of the alliance with Italy, one word only. Italy needs our money and our tourists after the war, with or without our alliance. That our alliance would go by the board in the event of war was to be foreseen. The alliance consequently was worthless.

"[(vi) AUSTRIA'S POSITION.] Austria, however, needed our protection both in war and peace, and had no other *point d'appui*. This dependence on us is based on political, national, and economic grounds, and is all the greater in proportion to the intimacy of our relations with Russia. This was proved in the Bosnian crisis. Since Count Beust, no Vienna Minister had been so self-conscious with us as Count Aehrenthal was during the last years of his life. Under the influence of a properly conducted German policy which would keep us in touch with Russia, Austria-Hungary is our vassal, and is tied to us even without an alliance and without reciprocal services; under the influence of a misguided policy, however, we are tied to Austria-Hungary. An alliance would therefore be purposeless. I know Austria far too well not to know that a return to the policy of Count Felix Schwarzenberg or to that of Count Moritz Esterhazy was unthinkable. Little as the Slavs living there love us, they wish just as little for a return to the German Kaiserdom, even with a Hapsburg-Lorraine at its head. They are striving for an internal Austrian Federation on a national basis, a condition which is even less likely of realization within the German Empire than under the Double Eagle. Austro-Germans look on Berlin as the centre of German power and Kultur, and they know that Austria can never be a leading power. They desire as close a connection as possible with the empire, but not to the extent of an anti-German policy. Since the seventies the conditions have changed fundamentally in Austria, and also perhaps in Bavaria. Just as here a return to Pangerman particularism and the old Bavarian policy is not to be feared, so there a revival of the policy of Prince Kaunitz and Prince Schwarzenberg is not to be contemplated. But by a constitutional union with Austria, which even without Galicia and Dalmatia is inhabited at least to the extent of one-half by non-Germans, our interests would suffer; whilst, on the other hand, by the subordination of our policy to the point of view of Vienna and Budapest, we should have to '*épouser les querelles de l'Autriche*.'

"[(vii) BALKAN QUARRELS.] We therefore had no need to heed the desires of our allies. They were not only unnecessary but dangerous, inasmuch as they would lead to a collision with Russia if we looked at eastern questions through Austrian eyes. The transformation of our alliance with its single original purpose into a complete alliance, involving a complexity of common interests, was calculated to call forth the very state of things which the constitutional negotiations were designed to prevent, namely, war. Such a policy of alliances would, moreover, entail the loss of the sympathies of the young, strong, and growing communities in the Balkan Peninsula, which were ready to turn to us and open their market to us. The

contrast between dynastic and democratic ideas had to be given clear expression, and, as usual, we stood on the wrong side. King Carol told one of our representatives that he had made an alliance with us on condition that we retained control of affairs, but that if that control passed to Austria it would entirely change the basis of affairs, and under those conditions he could no longer participate. Matters stood in the same position in Serbia, where against our own economic interests we were supporting an Austrian policy of strangulation. We had always backed horses which, it was evident, would lose, such as Kruger, Abdul Aziz, Abdul Hamid, Wilhelm of Wied, and finally—and this was the most miserable mistake of all—Count Berchtold.

"[(viii) BALKAN WARS.] Shortly after my arrival in London, in 1912, Sir Edward Grey proposed an informal exchange of views in order to prevent a European war developing out of the Balkan War, since, at the outbreak of that war, we had unfortunately declined the proposal of the French Government to join in a declaration of disinterestedness and impartiality on the part of the powers. The British statesman maintained from the beginning that England had no interest in Albania, and would, therefore, not go to war on the subject. In his rôle of 'honest broker' he would confine his efforts to mediation and an attempt to smooth away difficulties between the two groups. He, therefore, by no means placed himself on the side of the Entente Powers, and during the negotiations, which lasted about eight months, he lent his good-will and powerful influence toward the establishment of an understanding. Instead of adopting the English point of view, we accepted that dictated to us by Vienna. Count Mensdorff led the Triple Alliance in London and I was his second.

"My duty was to support his proposals. The clever and experienced Count Szögyényi was at the helm in Berlin. His refrain was '*casus foederis*,' and when once I dared to doubt the justice of this phrase I was seriously warned against Austrophobia. Referring to my father, it was even said that I had inherited it. On every point, including Albania, the Serbian harbors in the Adriatic, Scutari, and in the definition of the Albanian frontiers, we were on the side of Austria and Italy, while Sir Edward Grey hardly ever took the French or Russian point of view. On the contrary, he nearly always took our part in order to give no pretext for war—which was afterward brought about by a dead Archduke. It was with his help that King Nicholas was induced to leave Scutari. Otherwise there would have been war over this matter, as we should never have dared to ask 'our allies' to make concessions. Sir Edward Grey conducted the negotiations with care, calm, and tact. When a question threatened to become involved he proposed a formula which met the case and always secured consent. He acquired the full confidence of all the representatives.

"Once again we had successfully withstood one of the many threats against the strength characterizing our policy. Russia had been obliged to give way to us all along the line, as she never got an opportunity to advance Serbian wishes. Albania was set up as an Austrian vassal State, and Serbia was driven away from the sea. The conference was thus a fresh humiliation for Russia. As in 1878 and 1908, we had opposed the Russian program without German interests being brought into play. Bismarck had to minimize the mistake of the Congress by a secret treaty, and his attitude

in the Battenberg question—the downward incline being taken by us in the Bosnian question—was followed up in London, and was not given up, with the result that it led to the abyss. The dissatisfaction then prevalent in Russia was given vent to during the London Conference by an attack in the Russian press on my Russian colleague and on Russian diplomacy. His German origin and Catholic faith, his reputation as a friend of Germany, and the accident that he was related both to Count Mensdorff and to myself were all made use of by dissatisfied parties. Although not a particularly important personality, Count Benckendorff possessed many qualities of a good diplomat—tact, worldly knowledge, experience, an agreeable personality, and a natural eye for men and things. He sought always to avoid provocative attitudes, and was supported by the attitude of England and France. I once said: 'The feeling in Russia is very anti-German.' He replied: 'There are also many strong influential pro-German circles there. But the people generally are anti-Austrian.' It only remains to be added that our exaggerated Austrophilism is not exactly likely to break up the Entente and turn Russia's attention to her Asiatic interests.

"[(ix) PRE-WAR DIPLOMACY.] At the same time (1913) the Balkan Conference met in London, and I had the opportunity of meeting the leading men . . . of the Balkan States. The most important personage among them was M. Venizelos. He was anything but anti-German, and particularly prized the Order of the Red Eagle, which he even wore at the French Embassy. With his winning amiability and *savoir faire* he could always win sympathy. Next to him a great rôle was played by Daneff, the then Bulgarian Prime Minister and Count Berchtold's confidant. He gave the impression of being a capable and energetic man, and even the influence of his friends at Vienna and Budapest, at which he sometimes laughed, was attributable to the fact that he had let himself be drawn into the second Balkan war and had declined Russian intervention.

"M. Take Jonescu was often in London, too, and visited me regularly. I had known him since the time when I was Secretary at Bucharest. He was also one of Herr von Kiderlen-Wächter's friends. His aim in London was to secure concessions for Rumania by negotiations with M. Daneff. In this he was supported by the most capable Rumanian Minister, M. Misu. That these negotiations were stranded by the Bulgarian opposition is known. Count Berchtold—and naturally we with him—was entirely on the side of Bulgaria; otherwise we should have succeeded by pressure on M. Daneff in obtaining the desired satisfaction for the Rumanians and have bound Rumania to us, as she was by Austria's attitude in the second Balkan war, while afterward she was estranged from the Central Powers. Bulgaria's defeat in the second Balkan war and Serbia's victory, as well as the Rumanian advance, naturally constituted a reproach to Austria. [See BALKAN STATES: 1913; 1913-1914.] The idea of equalizing this by military intervention in Serbia seems to have gained ground rapidly in Vienna. This is proved by the Italian disclosure, and it may be presumed that the Marquis di San Giuliano, who described the plan as a 'pericolosissima avventura,' (an extremely risky adventure,) saved us from a European war as far back as the Summer of 1912. Intimate as Russo-Italian relations were, the aspiration of Vienna must have been known in St. Petersburg. In any event, M. Take Jonescu told me that M. Sazonoff had said in Constanza that an attack on

Serbia on the part of Austria meant war with Russia. In the Spring of 1914 one of my Secretaries, on returning from leave in Vienna, said that Herr von Tschirschky (German Ambassador in Vienna) had declared that war must soon come. But as I was always kept in the dark regarding important things, I considered his pessimism unfounded. Ever since the peace of Bucharest [Aug. 10, 1913] it seems to have been the opinion in Vienna that the revision of this treaty should be undertaken independently, and only a favorable opportunity was awaited. The statesmen in Vienna and Bucharest could naturally count upon our support. This they knew, for already they had been reproached several times for their slackness. Berlin even insisted on the 'rehabilitation' of Austria.

"[(x) ANGLO-GERMAN RELATIONS.] When I returned to London in December, 1913, after a long holiday, the Liman von Sanders question had led to our relations with Russia becoming acute. Sir Edward Grey called my attention with some uneasiness to the consequent unrest in St. Petersburg, saying: 'I have never seen them so excited.' Berlin instructed me to beg the Minister to urge calm in St. Petersburg and help to solve the difficulty. Sir Edward was quite willing, and his intervention contributed not inconsiderably to smoothing matters over. My good relations with Sir Edward and his great influence in St. Petersburg served in a like manner on several occasions when it was a question of carrying through something of which our representative there was completely incapable. During the critical days of July, 1914, Sir Edward said to me: 'If ever you want something done in St. Petersburg you come to me regularly, but if ever I appeal for your influence in Vienna you refuse your support.' The good and dependable relations I was fortunate in making not only in society and among influential people, such as Sir Edward Grey and Mr. Asquith, but also with others at public dinners, had brought about a noticeable improvement in our relations with England. Sir Edward devoted himself honestly to further this rapprochement, and his intentions were especially noticeable in two questions—the Colonial Treaty and the treaty regarding the Bagdad Railway.

"[(xi) AFRICAN AGREEMENT.] In the year 1898 a secret treaty had been signed by Count Hatzfeldt (then German Ambassador in London) and Mr. Balfour, which divided the Portuguese colonies in Africa into economic-political spheres of interest between us and England. As the Portuguese Government possessed neither the power nor the means to open up or adequately to administer its extensive possessions, the Portuguese Government had already at an earlier date thought of selling these possessions and thereby putting their finances in order. Between us and England an agreement had been reached which defined the interests of the two parties and which was of, all the greater value because Portugal, as is well known, is completely dependent upon England. This treaty was no doubt to secure outwardly the integrity and independence of the Portuguese Empire, and it only expressed the intention of giving financial and economic assistance to the Portuguese. Consequently it did not, according to the text, conflict with the old Anglo-Portuguese alliance, dating from the fifteenth century, which was last renewed under Charles II. and which guaranteed the territories of the two parties. Nevertheless, at the instance of the Marquis Soveral, who presumably was not ignorant of the Anglo-German agreement, a new treaty—the so-called Windsor treaty—which

confirmed the old agreements, was concluded in 1899 between England and Portugal.

"[(xii) ENGLAND'S GENEROUS ATTITUDE.] The object of the negotiations between us and England, which had begun before my arrival, was to alter and amend our treaty of 1898, which contained many impossible features—for example, with regard to the geographical delimitation. Thanks to the conciliatory attitude of the British Government, I succeeded in giving to the new treaty a form which entirely accorded with our wishes and interests. All Angola, as far as the 20th degree of longitude, was allotted to us, so that we reached the Congo territory from the south. Moreover, the valuable islands of San Thomé and Principe, which lie north of the equator, and therefore really belonged to the French sphere of interest, were allotted to us—a fact which caused my French colleague to make lively, although vain, representations. Further, we obtained the northern part of Mozambique; the frontier was formed by the Likungo. The British Government showed the utmost readiness to meet our interests and wishes. Sir Edward Grey intended to prove his good-will to us, but he also desired to promote our colonial development, because England hoped to divert Germany's development of strength from the North Sea and Western Europe to the world-sea and Africa. 'We don't want to grudge Germany her colonial development,' a member of the Cabinet said to me.

"[(xiii) CONGO STATE.] Originally, at the British suggestion, the Congo State was to be included in the treaty, which would have given us a right of pre-emption and a possibility of economic penetration in the Congo State. But we refused this offer, out of alleged respect for Belgian sensibilities! Perhaps the idea was to economize our successes? With regard also to the practical realization of the real but unexpressed object of the treaty—the actual partition at a later date of the Portuguese colonial possessions—the new formulation showed considerable advantages and progress as compared with the old. Thus the treaty contemplated circumstances which would enable us to enter the territories ascribed to us, for the protection of our interests. These conditional clauses were so wide that it was really left to us to decide when really 'vital interests were concerned, so that, in view of the complete dependence of Portugal upon England, we merely needed to go on cultivating our relations with England in order, later on, with English assent, to realize our mutual intentions. The sincerity of the English Government in its effort to respect our rights was proved by the fact that Sir Edward Grey, before ever the treaty was completed or signed, called our attention to English men of business who were seeking opportunities to invest capital in the territories allotted to us by the new treaty, and who desired British support. In doing so he remarked that the undertakings in question belonged to our sphere of interest.

"[(xiv) WILHELMSTRASSE INTRIGUES.] The treaty was practically complete at the time of the King's visit to Berlin in May, 1913. A conversation then took place in Berlin under the Presidency of the Imperial Chancellor, (Herr von Bethmann Hollweg,) in which I took part, and at which special wishes were laid down. On my return to London I succeeded, with the help of my Counselor of Embassy, von Kühlmann, who was working upon the details of the treaty with Mr. Parker, in putting through our last proposals also. It was possible for the whole treaty to be initiated by Sir Edward Grey and myself in August, 1913, be-

fore I went on leave. Now, however, new difficulties were to arise, which prevented the signature, and it was only a year later, shortly before the outbreak of war, that I was able to obtain authorization for the final settlement. Signature, however, never took place. Sir Edward Grey was willing to sign only if the treaty was published, together with the two treaties of 1898 and 1899; England has no other secret treaties, and it is contrary to her existing principles that she should conceal binding agreements. He said, however, that he was ready to take account of our wishes concerning the time and manner of publication, provided that publication took place within one year, at latest, after the signature. In the [Berlin] Foreign Office, however, where my London successes aroused increasing dissatisfaction, and where an influential personage, [the reference is apparently to Herr von Stumm,] who played the part of Herr von Holstein, was claiming the London Embassy for himself, it was stated that the publication would imperil our interests in the colonies, because the Portuguese would show their gratitude by giving us no more concessions. The accuracy of this excuse is illuminated by the fact that the old treaty was most probably just as much long known to the Portuguese as our new agreements must have been, in view of the intimacy of relations between Portugal and England; it was illuminated also by the fact that, in view of the influence which England possesses at Lisbon, the Portuguese Government is completely powerless in face of an Anglo-German understanding.

"[(xv) DISASTROUS MISTAKE.] Consequently it was necessary to find another excuse for wrecking the treaty. It was said that the publication of the Windsor Treaty, which was concluded in the time of Prince Hohenlohe, and which was merely a renewal of the treaty of Charles II., which had never lapsed, might imperil the position of Herr von Bethmann Hollweg, as being a proof of British hypocrisy and perfidy! On this I pointed out that the preamble to our treaties said exactly the same thing as the Windsor Treaty and other similar treaties—namely, that we desired to protect the sovereign rights of Portugal and the integrity of its possessions! In spite of repeated conversations with Sir Edward Grey, in which the Minister made ever fresh proposals concerning publication, the [Berlin] Foreign Office remained obstinate, and finally agreed with Sir Edward Goschen [British Ambassador in Berlin] that everything should remain as it was before. So the treaty, which gave us extraordinary advantages, the result of more than one year's work, had collapsed because it would have been a public success for me. When in the Spring of 1914 I happened, at a dinner in the embassy, at which Mr. Harcourt [then Colonial Secretary] was present, to mention the matter, the Colonial Secretary said that he was embarrassed and did not know how to behave. He said that the present state of affairs was intolerable, because he [Mr. Harcourt] wanted to respect our rights, but, on the other hand, was in doubt as to whether he should follow the old treaty or the new. He said that it was therefore extremely desirable to clear matters up, and to bring to a conclusion an affair which had been hanging on him for so long.

"When I reported to this effect I received a rude and excited order, telling me to refrain from any further interference in the matter. I now regret that I did not go to Berlin in order to offer his Majesty my resignation, and that I still did not lose my belief in the possibility of an agree-

ment between me and the leading [German] personages. That was a disastrous mistake, which was to be tragically avenged some months later. Slight though was the extent to which I then still possessed the good-will of the Imperial Chancellor—because he feared that I was aiming at his office—I must do him the justice to say that at the end of June, 1914, in our last conversation, before the outbreak of war, he gave his consent to the signature and publication. Nevertheless, it required further repeated suggestions on my part, which were supported by Dr. Solf, [German Colonial Secretary,] in order at last to obtain official consent at the end of July. Then the Serbian crisis was already threatening the peace of Europe, and so the completion of the treaty had to be postponed. The treaty is now one of the victims of the war.

"[(xvi) BAGDAD RAILWAY TREATY.] At the same time, while the African agreement was under discussion, I was negotiating, with the effective co-operation of Herr von Kühlmann, the so-called Bagdad Railway Treaty. This aimed, in fact, at the division of Asia Minor into spheres of interest, although this expression was carefully avoided in consideration of the Sultan's rights [see also BAGDAD RAILWAY: The plan]. Sir Edward Grey declared repeatedly that there was no agreement between England and France aiming at a division of Asia Minor. In the presence of the Turkish representative, Hakki Pasha, all economic questions in connection with the German treaty were settled mainly in accordance with the wishes of the Ottoman Bank. The greatest concession Sir Edward Grey made me personally was the continuation of the line to Basra. We had not insisted on this terminus in order to establish connection with Alexandretta. Hitherto Bagdad had been the terminus of the line. The shipping on the Shatt-el-Arab was to be in the hands of an international commission. We also obtained a share in the harbor works at Basra, and even acquired shipping rights on the Tigris, hitherto the monopoly of the firm of Lynch. By this treaty the whole of Mesopotamia up to Basra became our zone of interest, whereby the whole British rights, the question of shipping on the Tigris, and the Wilcox establishments were left untouched, as well as all the district of Bagdad and the Anatolian railways. The British economic territories included the coasts of the Persian Gulf and the Smyrna-Aidin railway, the French Syria, and the Russian Armenia. Had both treaties been concluded and published, an agreement would have been reached with England which would have finally ended all doubt of the possibility of an Anglo-German co-operation.

"[(xvii) GERMAN NAVAL DEVELOPMENT.] Most difficult of all, there remained the question of the fleet. It was never quite rightly judged. The creation of a mighty fleet on the other shore of the North Sea and the simultaneous development of the Continent's most important military power into its most important naval power [see also GERMANY: 1890-1914: Growth of the army, etc.; 1898-1914] had at least to be recognized by England as uncomfortable. This presumably cannot be doubted. To maintain the necessary lead and not to become dependent, to preserve the supremacy of the sea, which Britain must have in order not to go down, she had to undertake preparations and expenses which weighed heavily on the taxpayer. A threat against the British world position was made in that our policy allowed the possibility of warlike development to appear. This possibility was obviously near during the Morocco crisis and the

Bosnian question. People had become reconciled to our fleet in its definite strength. Obviously it was not welcome to the British and constituted one of the motives, but neither the only nor the most important motive, for England's joining hands with Russia and France. On account of our fleet alone, however, England would have drawn the sword as little as on account of our trade, which it is pretended called forth her jealousy and ultimately brought about war. From the beginning I adopted the standpoint that in spite of the fleet it would be possible to come to a friendly understanding and rapprochement if we did not propose new votes of credit, and, above all, if we carried out an indisputable peace policy. I also avoided all mention of the fleet, and between me and Sir Edward Grey the word was never uttered. Sir Edward Grey declared on one occasion at a Cabinet meeting: 'The present German Ambassador has never mentioned the fleet to me.'

"[(xviii) NAVAL HOLIDAY.] During my term of office the then First Lord, Mr. Churchill, raised the question of a so-called naval holiday, and proposed, for financial reasons as much as on account of the pacifist inclinations of his party a one year's pause in armaments. Officially the suggestion was not supported by Sir Edward Grey. He never spoke of it to me, but Mr. Churchill spoke to me on repeated occasions. I am convinced that his initiative was honest, cunning in general not being part of the Englishman's constitution. It would have been a great success for Mr. Churchill to secure economies for the country and to lighten the burden of armament, which was weighing heavily on the people. I maintain that it would have been difficult to support his intention. How about the workmen employed for this purpose? How about the technical personnel? Our naval program was settled, and it would be difficult to alter it. Nor, on the other hand, did we intend exceeding it. But he pointed out that the means spent on portentous armaments could equally be used for other purposes. I maintain that such expenditure would have benefited home industries.

"[(xix) NO TRADE JEALOUSY.] I also succeeded, in conversation with Sir William Tyrrell, Sir Edward Grey's private secretary, in keeping away from that subject without raising suspicion, although it came up in Parliament, and in preventing the Government's proposal from being made. But it was Mr. Churchill's and the Government's favorite idea that by supporting his initiative in the matter of large ships we should give proof of our good-will and considerably strengthen and increase the tendency on the part of the Government to get in closer contact with us. But, as I have said, it was possible in spite of our fleet and without naval holidays to come to an understanding. In that spirit I had carried out my mission from the beginning, and had even succeeded in realizing my program when the war broke out and destroyed everything. Trade jealousy, so much talked about among us, rests on faulty judgment of circumstances. It is a fact that Germany's progress as a trading country after the war of 1870 and during the following decades threatened the interests of British trade circles, constituting a form of monopoly with its industry and export houses. But the growing interchange of merchandise with Germany, which was first on the list of all European exporting countries, a fact I always referred to in my public speeches, had allowed the desire to mature to preserve good relations with England's best client and business friend, and had

gradually suppressed all other thoughts and motives. The Englishman, as a matter of fact, adapts himself to circumstances and does not tilt against windmills. In commercial circles I found the greatest good-will and desire to further our common economic interests.

"[(xx) DIPLOMACY AND SOCIETY.] In other circles I had a most amiable reception, and enjoyed the cordial good-will of the Court, society, and the Government. No one there interested himself in the Russian, Italian, Austrian, or even the French representative, in spite of the imposing personality and political success of the last named. Only the German and American Ambassadors attracted attention. . . . The King, very amiable and well meaning and possessed of sound understanding and common sense, was invariably well disposed toward me and desired honestly to facilitate my mission. . . . We were received in London with open arms and both parties outdid one another in amiability. It would be a mistake to undervalue social connections in view of the close connection in England between society and politics, even though the majority of the upper ten thousand are in opposition to the Government. Between an Asquith and a Devonshire there is no such deep cleft as between a Briand and a Duc de Doudeauville, for example. In times of political tension they do not foregather. They belong to two separate social groups, but are part of the same society, if on different levels, the centre of which is the Court. They have friends and habits in common, they are often related or connected. A phenomenon like Lloyd George, a man of the people, a small solicitor and a self-made man, is an exception. Even John Burns, a Socialist Labor leader and a self-taught man, seeks society relations. On the ground of a general striving to be considered gentlemen of social weight and position such men must not be undervalued. In no place, consequently, is an envoy's social circle of greater consequence than in England. A hospitable house with friendly guests is worth more than the profoundest scientific knowledge, and a learned man of insignificant appearance and too small means would, in spite of all his learning, acquire no influence. The Briton hates a bore and a pedant. He loves a good fellow.

"[(xxi) GREY AND ASQUITH.] Sir Edward Grey's influence in all questions of foreign policy was almost unlimited. True, he used to say on important occasions: 'I must lay that before the Cabinet,' but it is equally true that the latter invariably took his view. Although he did not know foreign countries and, with the exception of one short visit to Paris, had never left England, he was closely informed on all important questions, owing to many years' Parliamentary experience and natural grasp. He understood French without speaking it. Elected at an early age to Parliament, he began immediately to occupy himself with foreign affairs. Parliamentary Under Secretary of State at the Foreign Office under Lord Rosebery, he became in 1906 [December, 1905] Secretary of State under Sir Henry Campbell-Bannerman [prime minister, 1905-1908], and filled the post for ten years. . . . He can be called a Socialist in the ideal sense, for he applied his theories even in private life, which is characterized by great simplicity and unpretentiousness, although he is possessed of considerable means. . . . His simple, upright manner insured him the esteem even of his opponents, who were more easily to be found in home than in foreign political circles. Lies and intrigue were foreign to his nature. . . . Words-

worth is his favorite poet, and he could quote him by the hour. His British calm did not lack a sense of humor. . . . This is the man who was called 'the Liar Grey' and the 'originator of the world war.' Asquith is a man of quite different mold. . . . He treated all questions with an experienced business man's calm and certainty, and enjoyed good health and excellent nerves, steeled by assiduous golf. . . . He only rarely occupied himself with foreign affairs. When important questions cropped up, with him lay the ultimate decision. During the critical days of July Asquith often came to warn us, and he was ultimately in despair over the tragic turn of events. On Aug. 2, when I saw Asquith in order to make an attempt, he was completely broken, and, although quite calm, tears ran down his face.

"[(xxii) EVE OF WAR.] The rage of certain gentlemen [in Berlin] over my success in London and the position I had achieved was indescribable, Schemes were set on foot to impede my carrying out my duties, and I was left in complete ignorance of most important things, and had to confine myself to sending unimportant and dull reports. Secret reports from agents about things of which I could know nothing without spies and necessary funds were never available for me, and it was only in the last days of July, 1914, that I heard accidentally from the Naval Attaché of the secret Anglo-French agreement for joint action of the two fleets in case of war. Soon after my arrival I became convinced that in no circumstances need we fear a British attack or British support of a foreign attack, but that under all conditions England would protect France. I advanced this opinion in repeated reports with detailed reasoning and insistence, but without gaining credence, although Lord Haldane's refusing the formula of neutrality and England's attitude during the Morocco crisis [see MOROCCO: 1911-1914] were clear indications. In addition, the above-mentioned secret agreements were known to the [German foreign] department. I repeatedly urged that England, as a commercial State, would suffer greatly in any war between the European great powers, and would therefore prevent such a war by all available means; but, on the other hand, in the interest of the European balance of power, and to prevent Germany's overlordship, would never tolerate the weakening or destruction of France. Lord Haldane told me this shortly after my arrival. All influential people [in Great Britain] spoke in the same way. At the end of June I went to Kiel by the royal orders a few weeks after I had received the honorary degree of Doctor at Oxford, an honor no German Ambassador since Herr von Bunsen had received. On board the *Meteor* [the Kaiser's yacht] we received the news of the death of the Archduke, the heir to the [Austrian] throne. His Majesty [the Kaiser] complained that his attempts to win the noble Archduke over to his ideas were thereby rendered fruitless. How far plans for an active policy against Serbia had already been made at Konopischt I am not in a position to judge. As I was not informed about intentions and events in Vienna I attached no further importance to the matter. I could only observe that the feeling of relief outweighed the other feelings of the Austrian aristocrats. One of the guests on board the *Meteor* was the Austrian Count Felix Thun. In spite of glorious weather seasickness had kept him to his cabin. After receiving the news he became well. Shock or joy had cured him. On reaching Berlin I visited the Chancellor, and said I considered the situation of our foreign

policy very satisfactory, as we were on better terms with England than we had been for a long time. In France a pacifist Government was at the helm. Herr von Bethmann-Hollweg did not seem to share my optimism, and complained of the Russian armaments. I tried to calm him, and pointed out especially that Russia had absolutely no interest in attacking us, and that such an attack would not receive Anglo-French support, as both countries, England and France, desired peace. Then I called on Dr Zimmermann, who represented von Jagow, and learned from him that Russia was about to mobilize 900,000 new troops. From his manner of speaking he was evidently annoyed with Russia, who was everywhere in our way. There was also the question of the difficulties of commercial politics. Of course, I was not told that General von Moltke was working eagerly for war. But I learned that Herr von Tschirschky [German Ambassador at Vienna] had received a rebuff for having reported that he had advised moderation in Vienna toward Serbia. On my return journey from Silesia I only remained a few hours in Berlin, but I heard there that Austria intended to take steps against Serbia to put an end to this intolerable situation. Unfortunately I undervalued the importance of this information. I thought nothing would come of it, and that it would be easy to settle the matter if Russia threatened. I now regret that I did not stop in Berlin, and at once declare that I could not agree to such a policy. [the world had heard various reports of a meeting in Potsdam, as early as July 5, between the German and Austrian authorities, at which meeting war was alleged to have been decided on. Here Prince Lichnowsky says:] I learned afterwards that at the decisive discussion at Potsdam on July 5th the Austrian demand had met with the unconditional approval of all the personages in authority; it was even added that no harm would be done if war with Russia did come out of it. It was so stated at least in the Austrian report received at London by Count Mensdorff (the Austrian Ambassador to England). [See above: 9.] Subsequently, I received instructions to work to obtain a friendly attitude on the part of the English press, if Austria dealt Serbia a deathblow, and by my influence to prevent so far as possible public opinion from becoming opposed to Austria. Remembering England's attitude during the annexation crisis [1908], when public opinion sympathized with Serbian rights to Bosnia, and her kindly favoring of national movements in the time of Lord Byron and that of Garibaldi, one thing and another indicated so strongly the improbability of British support of the proposed punitive expedition against the Archduke's murderers, that I felt bound to issue a serious warning. I also sent a warning against the whole project, which I characterized as adventurous and dangerous, and advised moderation being urged on the Austrians, as I did not believe in the localization of the conflict.

"[(xxiii) JAGOW'S MISTAKEN BLUFF.] Herr von Jagow answered that Russia was not ready, that there would be some fuss, but that the more firmly we held to Austria the sooner would Russia give way. Austria, he said, had already accused us of flabbiness, (flaumacherei,) and so we must not get into a mess. Opinion in Russia, he added, was becoming more and more pro-German, so we must take the risks. In view of this attitude, which, as I subsequently found out, was the result of Count Pourtalès's reports that Russia would in no circumstances move, and caused us to urge Count Berchtold to the greatest possible energy,

I hoped for salvation in English intervention, as I knew Sir Edward Grey's influence with St. Petersburg in the direction of peace could prevail. I availed myself, therefore, of my good relations with the British Foreign Minister to beg him confidentially to advise moderation on the part of Russia in case Austria, as appeared probable, should demand satisfaction from the Serbians. In the beginning the attitude of the English press toward the Austrians was quiet and friendly, as the murder was condemned. Little by little, however, voices increased in number insisting that, however necessary the punishment of a crime might be, no elaboration of it for a political purpose could be justified. Austria was urgently called upon to act with moderation. The whole world outside Berlin and Vienna understood that it meant war, and world war. The British fleet, which happened to be assembled for review, was not demobilized. The Serbian answer corresponded with British efforts, for actually M. Pashitch had accepted all but two points, about which he was prepared to negotiate. Had England and Russia wanted war in order to fall upon us, a hint to Belgrade would have been given, and the unspeakable note would have remained unanswered. Sir Edward Grey went through the Serbian answer with me, and pointed out the conciliatory attitude of the Belgrade Government. We even discussed his proposal for intervention, which should insure an interpretation of these two points acceptable to both parties. With Sir Edward Grey presiding, M. Cambon, the Marquis Imperiali, and I were to meet, and it would have been easy to find an acceptable form for the points under discussion, which were mainly concerned with the part to be taken by Austrian officials in the inquiries at Belgrade. With good-will all could have been cleared up in two or three sittings, and a simple acknowledgment of the British proposal would have brought about a *détente* and further improved our relations with England. I therefore urged it forcibly, as otherwise a world war stood at our gates. In vain. It would be, I was told, wounding to Austria's dignity, nor would we mix ourselves up in that Serbian matter. We left it to our allies. I was to work for the localization of the conflict. It naturally only needed a hint from Berlin to induce Count Berchtold to content himself with a diplomatic success and put up with the Serbian reply. But this hint was not given. On the contrary, we pressed for war. What a fine success it would have been!

"[(xxiv) CLAMOR FOR WAR.] After our refusal Sir Edward asked us to come forward with a proposal of our own. We insisted upon war. I could get no other answer [from Berlin] than that it was an enormous 'concession' on the part of Austria to contemplate no annexation of territory. Thereupon Sir Edward justly pointed out that even without annexations of territory a country can be humiliated and subjected, and that Russia would regard this as a humiliation which she would not stand. The impression became ever stronger that we desired war in all circumstances. Otherwise our attitude in a question which, after all, did not directly concern us was unintelligible. The urgent appeals and definite declarations of M. Sazonoff, [Russian Foreign Minister,] later on the positively humble telegrams of the Czar, the repeated proposals of Sir Edward, the warnings of San Giuliano [Italian Foreign Minister] and of Bollati, [Italian Ambassador in Berlin,] my urgent advice—all were of no use, for Berlin went on insisting that Serbia must be massacred. The more

I pressed, the less willing they were to alter their course, if only because I was not to have the success of saving peace in the company of Sir Edward Grey. So Grey on July 29 resolved upon his well-known warning. [See ENGLAND: 1914.] I replied that I had always reported that we should have to reckon upon English hostility if it came to war with France. The Minister said to me repeatedly: 'If war breaks out it will be the greatest catastrophe the world has ever seen.'

"[(xxv) GREY'S PEACE EFFORTS.] After that events moved rapidly. When Count Berchtold, who hitherto had played the strong man on instructions from Berlin, at last decided to change his course, we answered the Russian mobilization—after Russia had for a whole week negotiated and waited in vain—with our ultimatum and declaration of war. Sir Edward Grey still looked for new ways of escape. In the morning of Aug. 1, Sir W. Tyrrell came to me to say that his chief still hoped to find a way out. Should we remain neutral if France did the same? I understood him to mean that we should then be ready to spare France, but his meaning was that we should remain absolutely neutral—neutral therefore even toward Russia. That was the well-known misunderstanding. Sir Edward had given me an appointment for the afternoon, but as he was then at a meeting of the Cabinet, he called me upon the telephone, after Sir W. Tyrrell had hurried straight to him. But in the afternoon he spoke no longer of anything but Belgian neutrality, and of the possibility that we and France should face one another armed, without attacking one another. Thus there was no proposal whatever, but a question without any obligation, because our conversation, as I have already explained, was to take place soon afterward. In Berlin, however—without waiting for the conversation—this news was used as the foundation for a far-reaching act. Then came Poincaré's letter, Bonar Law's letter, and the telegram from the King of the Belgians. The hesitating members of the Cabinet were converted, with the exception of three members, who resigned.

"[(xxvi) PEACE HOPES DESTROYED.] Up to the last moment I had hoped for a waiting attitude on the part of England. My French colleague also felt himself by no means secure, as I learned from a private source. As late as Aug. 1 the King replied evasively to the French President. But in the telegram from Berlin, which announced the threatening danger of war, England was already mentioned as an opponent. In Berlin, therefore, one already reckoned upon war with England. Before my departure Sir Edward Grey received me on Aug. 5 at his house. I had gone there at his desire. He was deeply moved. He said to me that he would always be ready to mediate, and, 'We don't want to crush Germany.' Unfortunately, this confidential conversation was published. Thereby Herr von Bethmann-Hollweg destroyed the last possibility of reaching peace via England. Our departure was thoroughly dignified and calm. Before we left, the King had sent his equerry, Sir E. Ponsoby, to me, to express his regret at my departure and that he could not see me personally. Princess Louise wrote to me that the whole family lamented our going. Mrs. Asquith and her friends came to the embassy to say good-bye. A special train took us to Harwich, where a guard of honor was drawn up for me. I was treated like a departing sovereign. Thus ended my London mission. It was wrecked, not by the perfidy of the British, but by the perfidy of our policy. At the railway station in London Count Mensdorff [Aus-

trian Ambassador] appeared with his staff. He was cheerful, and gave me to understand that perhaps he would remain in London. But to the English he said that it was not Austria, but we, who wanted the war.

"[(xxvii) A BITTER RETROSPECT.] When now, after two years, I realize everything in retrospect, I say to myself that I realized too late that there was no place for me in a system which for years has lived only on tradition and routine, and which tolerates only representatives who report what one wants to read. Absence of prejudice and an independent judgment are combated, want of ability and of character are extolled and esteemed, but successes arouse hostility and uneasiness. I had abandoned opposition to our mad Triple Alliance policy, because I saw that it was useless and that my warnings were represented as Austrophobia and an *idée fixe*. In a policy which is not mere gymnastics, or playing with documents, but the conduct of the business of the firm, there is no such thing as likes and dislikes; there is nothing but the interest of the community; but a policy which is based merely upon Austrians, Magyars, and Turks must end in hostility to Russia, and ultimately lead to a catastrophe. In spite of former aberrations, everything was still possible in July, 1914. Agreement with England had been reached. We should have had to send to Petersburg a representative who, at any rate, reached the average standard of political ability, and we should have had to give Russia the certainty that we desired neither to dominate the Straits nor to throttle the Serbs. M. Sazonoff was saying to us: '*Lâchez l'Autriche et nous lâcherons les Français*,' and M. Cambon [French Ambassador in Berlin] said to Herr von Jagow: '*Vous n'avez [pas] besoin de suivre l'Autriche partout*.' We needed neither alliances nor wars, but merely treaties which would protect us and others, and which would guarantee us an economic development for which there had been no precedent in history. And if Russia had been relieved of trouble in the west, she would have been able to turn again to the east, and then the Anglo-Russian antagonism would have arisen automatically without our interference—and the Russo-Japanese antagonism no less than the Anglo-Russian. We could also have approached the question of limitation of armaments, and should have had no further need to bother about the confusions of Austria. Austria-Hungary would then become the vassal of the German Empire—without an alliance, and, above all, without sentimental services on our part, leading ultimately to war for the liberation of Poland and the destruction of Serbia, although German interests demanded exactly the contrary.

"[(xxviii) ARRIVAL AT BERLIN.] On my arrival in Berlin I saw at once that I was to be made the scapegoat for the catastrophe of which our Government had made itself guilty in opposition to my advice and my warnings. The report was persistently circulated by official quarters that I had let myself be deceived by Sir Edward Grey, because if he had not wanted war Russia would not have mobilized. Count Pourtalès, whose reports could be relied upon, was to be spared, if only because of his family connections. He was said to have behaved 'splendidly,' and he was enthusiastically praised, while I was all the more sharply blamed. 'What has Russia got to do with Serbia?' this statesman said to me after eight years of official activity in Petersburg. It was made out that the whole business was a perfidious British trick which I had not understood. In the Foreign

Office I was told that in 1916 it would in any case come to war. But then Russia would have been 'ready,' and so it was better now. As appears from all official publications, without the facts being controverted by our own White Book, which, owing to its poverty and gaps, constitutes a grave self-accusation: 1. We encouraged Count Berchtold to attack Serbia, although no German interest was involved, and the danger of a world war must have been known to us—whether we knew the text of the ultimatum is a question of complete indifference. 2. In the days between July 23 and July 30, 1914, when M. Sazonoff emphatically declared that Russia could not tolerate an attack upon Serbia, we rejected the British proposals of mediation, although Serbia, under Russian and British pressure, had accepted almost the whole ultimatum, and although an agreement about the two points in question could easily have been reached, and Count Berchtold was even ready to satisfy himself with the Serbian reply. 3. On July 30, when Count Berchtold wanted to give way we without Austria having been attacked replied to Russia's mere mobilization by sending an ultimatum to Petersburg and on July 31 we declared war on the Russians although the Czar had pledged his word that as long as negotiations continued not a man should march—so that we deliberately destroyed the possibility of a peaceful settlement. In view of these indisputable facts it is not surprising that the whole civilized world outside Germany attributes to us the sole guilt for the world war.

“[(XXIX) GERMANY'S WAR SPIRIT.] Is it not intelligible that our enemies declare that they will not rest until a system is destroyed which constitutes a permanent threatening of our neighbors? Must they not otherwise fear that in a few years they will again have to take up arms and again see their provinces overrun and their towns and villages destroyed? Were these people not right who prophesied that the spirit of Treitschke and Bernhardi dominated the German people—the spirit which glorifies war as an aim in itself and does not abhor it as an evil; that among us it is still the feudal knights and Junkers and the caste of warriors who rule and who fix our ideals and our values—not the civilian gentleman; that the love of dueling which inspires our youth at the universities, lives on in those who guide the fortunes of the people? Had not the events at Zabern [see GERMANY: 1913] and the Parliamentary debates on that case shown foreign countries how civil rights and freedoms are valued among us, when questions of military power are on the other side? Cramb, an [English] historian who has since died, an admirer of Germany, put the German point of view into the words of Euphorion:

“Träumt Ihr den Friedenstag?
Träume, wer träumen mag!
Krieg ist das Lösungswort!
Sieg, und so klingt es fort.”

“Militarism, really a school for the nation and an instrument of policy, makes policy into the instrument of military power, if the patriarchal absolutism of a soldier-kingdom renders possible an attitude which would not be permitted by a democracy which had disengaged itself from military-junker influences. That is what our enemies think, and that is what they are bound to think, when they see that, in spite of capitalistic industrialization, and in spite of socialistic organization, the living, as Friedrich Nietzsche says, are still gov-

erned by the dead. The principal war aim of our enemies, the democratization of Germany, will be achieved.—See also above: Causes: Indirect: h, 2.

“[(XXX) JEOPARDIZING THE FUTURE.] Today, after two years of the war, there can be no further doubt that we cannot hope for an unconditional victory over Russians, English, French, Italians, Rumanians, and Americans, and that we cannot reckon upon the overthrow of our enemies. But we can reach a compromised peace only upon the basis of the evacuation of the occupied territories, the possession of which in any case signifies for us a burden and weakness and the peril of new wars. Consequently, everything should be avoided which hinders a change of course on the part of those enemy groups which might perhaps still be won over to the idea of compromise—the British Radicals and the Russian Reactionaries. Even from this point of view our Polish project is just as objectionable as any interference with Belgian rights, or the execution of British citizens—to say nothing of the mad submarine war scheme. Our future lies upon the water. True, but it therefore does not lie in Poland and Belgium, in France and Serbia. That is a reversion to the Holy Roman Empire, to the aberrations of the Hohenstaufens and Hapsburgs. It is the policy of the Plantagenets, not the policy of Drake and Raleigh, Nelson and Rhodes.

“[(XXXI) RUINOUS RESULTS.] Triple Alliance policy is a relapse into the past, a revolt from the future, from imperialism, from world policy. Central Europe is mediaevalism; Berlin-Bagdad is a *cul de sac*, and not a road into the open to unlimited possibilities, and to the world mission of the German people. I am no enemy of Austria, or Hungary, or Italy, or Serbia, or any other State; I am only an enemy of the Triple Alliance policy, which was bound to divert us from our aims, and to bring us on to the sloping plane of Continental policy. It was not German policy, but Austrian dynastic policy. The Austrians had accustomed themselves to regard the alliance as a shield, under whose protection they could make excursions at pleasure into the East. And what result have we to expect from the struggle of peoples? The United States of Africa will be British, like the United States of America, of Australia, and of Oceania, and the Latin States of Europe, as I said years ago, will fall into the same relationship to the United Kingdom as the Latin sisters of America to the United States. They will be dominated by the Anglo-Saxon; France, exhausted by the war, will link herself still more closely to Great Britain. In the long run, Spain also will not resist. In Asia, the Russian and Japanese will expand their borders and their customs, and the south will remain to the British. The world will belong to the Anglo-Saxon, the Russian, and the Japanese and the German will remain alone with Austria and Hungary. His sphere of power will be that of thought and of trade, not that of the bureaucrats and the soldiers. The German appeared too late, and the world war has destroyed the last possibility of catching up the lost ground, of founding a colonial empire. For we shall not supplant the sons of Japheth; the program of the great Rhodes, who saw the salvation of mankind in British expansion and British imperialism, will be realized.

“Tu regere imperio populos Romano, memento. Hae tibi erunt artes: pacisque imponere morem, Parcere subjectis et debellare superbos.”

—*Lichnowsky's memorandum* (*New York Times Current History*, 1918).

On March 15, 1918, *Politiken*, the organ of the Swedish socialists of the extreme left, published this historical document. It was a so-called "memorandum" by Prince Karl Max Lichnowsky, who before and at the time of the commencement of the war was the ambassador for the German empire in London. After quoting at length from the "memorandum," the editor says: "It is to be remembered that these words are not those of an Englishman. They are the words of one of the noblest of the German nation, to which the German Emperor entrusted the most important foreign post and with whom William II in his youth was closely associated." And the editor concludes: "Who bears the blame that the German people were goaded into a furious hate and thereby into a war spirit? Only those in the service of the junker class, who are the ruling military caste in Germany, in control of the government. The pan-Germans in their megalomania are the ones who brought about this calamity upon the German people."

72.—Lord Bryce on Lichnowsky memorandum.

—"The secret memorandum which Prince Lichnowsky wrote as a record and vindication of his conduct while German Ambassador in England is the most important single document which has come before the world since the first days of the war. It was not meant to become known during the war, perhaps not within his own lifetime. It was written, not to justify England but to criticize the policy which tied Germany to Austria, and was published without and indeed against its author's will. It may have been composed partly to relieve the writer's own feelings, an impulse which those will understand who are prevented by considerations of public duty from vindicating their conduct to the world. It may also have been due to a sense, natural to men who have borne a part in great events, that they owe it to posterity to contribute what they can to the truth of history. Anyhow it has exposed him to danger and the persecution of the German Government, and this persecution is evidence of the importance they attach to it as a condemnation of their conduct. The truth of its contents has been confirmed, if indeed it needed confirmation, by the statements of Herr von Jagow, late German Secretary of State for Foreign Affairs, and of Herr Muhlon, one of the Krupp Directors. Prince Lichnowsky appears in this document as a man of clear vision and cool judgment, an acute observer of social as well as political phenomena, a good witness both to what he noted during his residence here and to what he knew of the action of his own Government. . . . [Germany] tried to represent the war as having been forced upon . . . [her] by Great Britain. Germany, it was said, was merely defending herself against an unprovoked attack. She desired to live at peace with her neighbors, developing her own resources, cherishing no aggressive designs. Her enormous army and navy had been created only to protect her against the jealous and malicious enemies by whom she was surrounded, and especially against Great Britain. Britain, it seems, was envious of Germany, being herself a decadent nation. This was the prevailing German view. She feared the commercial competition of Germany and tried to keep the latter out of all foreign markets. British policy, so they said, under the direction of King Edward VII., had formed

alliances with France and Russia in order to hem in Germany, and after trying to block Germany's outlets in Africa and Asia contrived this war to destroy by arms a rival whom she could not face up to in trade and manufacturing industry. . . . A large part of the German press, inspired and controlled by the German Government, had for some time past been holding up England as the persistent foe of Germany. It now . . . represented Sir Edward Grey as having plotted to bring about the war and as having urged Russia to refuse a peaceful solution, and it added the equally groundless charge that England had secretly planned with Belgium to attack Germany through Belgian territory. . . . It was this conviction of the malevolence and grasping ambition of England that created that ferocious hatred of the English. . . . Now what was the truth? The British people bore no hatred whatever toward the German people. King Edward VII. meant no harm to Germany when he showed his liking for the French, neither did his Ministers when they took steps to remove the differences that had been causing trouble between ourselves and France, and again when they came to a friendly understanding with Russia. These arrangements were made in the interests of European peace and good-will, not in order to damage Germany. . . . British men of science and learning adopted the immense contributions Germany had been making to the progress of knowledge, and they had many personal friends in Germany. British statesmen did not desire to add to British possessions abroad, feeling that we had already all we needed and that the greatest interest of the British Empire was universal peace. No section of our people, neither traders, thinkers, writers, nor statesmen, had any idea of the dangers to peace which lay, as we know now, in the mind and purpose of those who ruled Germany. . . . All this every Englishman knows. I repeat it only because it has now received not only confirmation but also valuable further proof in the Lichnowsky memorandum, proof unsolicited and un contemplated, and moreover unimpeachable because it comes from one who bore a leading part in what it records, and who never meant to let it become known.

"First, the memorandum bears witness to the pacific spirit of the British people. . . . Secondly, the memorandum shows that the attitude of the British Government of Sir Edward Grey, then Foreign Minister, was entirely pacific. The admirable characterization of Sir Edward . . . testifies to his perfect straightforwardness and constant wish to maintain good relations with Germany, and after describing how 'the simplicity and honesty of his ways secured him the respect even of his opponents,' it adds: 'This is a true picture of the man who is decried in Germany as a liar and the instigator of the world war. . . . Thirdly, still weightier evidence of the good-will of the British Government is supplied by an account given of the concessions made to the German wishes in Asia and Africa. . . . In pursuance of this policy the British Government went a long way to meet the German wishes in respect to the Bagdad Railway. . . . Not less large were the concessions made in South and Central Africa. . . .

"The memorandum shows how earnestly [Sir Edward Grey] . . . labored for peace at Berlin, at St. Petersburg, at Vienna, and how all his attempts were baffled by the settled purpose of the German Government to force on the war. Great Britain may, like other nations, have in the past sometimes indulged her ambition, sometimes

abused her strength, sometimes embarked in wars that might well have been avoided, but on this occasion at least she is blameless. Never in her long history had she had so perfectly clear a conscience as in the case of this war. Her people neither contemplated it nor desired it. . . . Neither when the war began did Great Britain wish to do more than prevent Germany from destroying Belgium and mortally wounding France. Sir Edward Grey spoke truly for the nation when, as the memorandum records, he said: 'We don't want to crush Germany.'—*New York Times*, May 12, 1918.

73.—Memoranda and letters of Dr. W. Mühlon.—Coincident with the publication in Germany, early in 1918, of the Lichnowsky memorandum, there also appeared in pamphlet form in Germany a letter written by a certain Dr. Mühlon, a former member of the Krupp directorate then residing in Switzerland, corroborating the Lichnowsky memorandum. The *Leipziger Volkszeitung* of Mar. 20,

KARL THEODOR HELFFERICH

1918, reported that the Lichnowsky and Mühlon memoranda were discussed by the Main Committee of the Reichstag on Mar. 16. In the course of the debate Vice Chancellor von Payer tried to minimize the value of Mühlon's statements by asserting that the former Krupp director was a sick, nervous man who no doubt did not intend to injure his country's cause, but who was hardly responsible for his actions because of his many nervous breakdowns. Mar. 21, 1918, the *Berliner Tageblatt* printed the text of Dr. Mühlon's letter which was evidently written before Helfferich's resignation in Nov., 1917. In fact Mühlon states that Helfferich was vice-chancellor at the date the letter was written.

"[(i) TALK WITH HELFFERICH.] In the middle of July, 1914, I had, as I frequently had, a conversation with Dr. Helfferich, then Director of the Deutsche Bank in Berlin, and now Vice Chancellor. The Deutsche Bank had adopted a negative attitude toward certain large transactions in Bulgaria and Turkey, in which the firm of Krupp, for business reasons—delivery of war material—had a lively interest. As one of the reasons to justify the attitude

of the Deutsche Bank, Dr. Helfferich finally gave me the following reason: 'The political situation has become very menacing. The Deutsche Bank must in any case wait before entering into any further engagements abroad. The Austrians have just been with the Kaiser. In a week's time Vienna will send a very severe ultimatum to Serbia, with a very short interval for the answer. The ultimatum will contain demands such as punishment of a number of officers, dissolution of political associations, criminal investigation in Serbia by Austrian officials, and, in fact, a whole series of definite satisfactions will be demanded at once; otherwise Austria-Hungary will declare war on Serbia.' Dr. Helfferich added that the Kaiser had expressed his decided approval of this procedure on the part of Austria-Hungary. He had said that he regarded a conflict with Serbia as an internal affair between these two countries, in which he would permit no other State to interfere. If Russia mobilized, he would mobilize also. But in his case mobilization meant immediate war. This time there would be no oscillation. Helfferich said that the Austrians were extremely well satisfied at this determined attitude on the part of the Kaiser. When I thereupon said to Dr. Helfferich that this uncanny communication converted my fears of a world war, which were already strong, into absolute certainty, he replied that it certainly looked like that. But perhaps France and Russia would reconsider the matter. In any case, the Serbs deserved a lesson which they would remember. This was the first intimation that I had received about the Kaiser's discussions with our allies. I knew Dr. Helfferich's particularly intimate relations with the personages who were sure to be initiated, and I knew that his communication was trustworthy.

"[(ii) KAISER FOR WAR.] After my return from Berlin I informed Herr Krupp von Bohlen and Halbach, one of whose Directors I then was at Essen. Dr. Helfferich had given me permission and at that time the intention was to make him a Director of Krupps. Herr von Bohlen seemed disturbed that Dr. Helfferich was in possession of such information, and he made a remark to the effect that the Government people can never keep their mouths shut. He then told me the following. He said that he had himself been with the Kaiser in the last few days. The Kaiser had spoken to him also of his conversation with the Austrians, and of its result; but he had described the matter as so secret that he [Krupp] would not even have dared to inform his own Directors. As, however, I already knew, he could tell me that Helfferich's statements were accurate. Indeed, Helfferich seemed to know more details than he did. He said that the situation was really very serious. The Kaiser had told him that he would declare war immediately if Russia mobilized, and that this time people would see that he did not turn about. The Kaiser's repeated insistence that this time nobody would be able to accuse him of indecision had, he said, been almost comic in its effect.

"[(iii) GERMAN DUPLICITY.] On the very day indicated to me by Helfferich the Austrian ultimatum to Serbia appeared. At this time I was again in Berlin, and I told Helfferich that I regarded the tone and contents of the ultimatum as simply monstrous. Dr. Helfferich, however, said that the note only had that ring in the German translation. He had seen the ultimatum in French, and in French it really could not be regarded as overdone. On this occasion Helfferich also said

to me that the Kaiser had gone on his northern cruise only as a 'blind'; he had not arranged the cruise on the usual extensive scale, but was remaining close at hand and keeping in constant touch. Now one must simply wait and see what would happen. The Austrians, who, of course, did not expect the ultimatum to be accepted, were really acting rapidly before the other powers could find time to interfere. The Deutsche Bank had already made its arrangements, so as to be prepared for all eventualities. For example, it was no longer paying out the gold which came in. That could easily be done without attracting notice, and the amount day by day reached considerable sums. Immediately after the Vienna ultimatum to Serbia the German Government issued declarations to the effect that Austria-Hungary had acted all alone, without Germany's previous knowledge. When one attempted to reconcile these declarations with the events mentioned above, the only possible explanation was that the Kaiser had tied himself down without inviting the co-operation of his Government, and that, in the conversations with the Austrians, the Germans took care not to agree upon the text of the ultimatum. For I have already shown that the contents of the ultimatum were pretty accurately known in Germany. Herr Krupp von Bohlen, with whom I spoke about these German declarations—which, at any rate in their effect, were lies—was also by no means edified. For, as he said, Germany ought not, in such a tremendous affair, to have given a blank check to a State like Austria; and it was the duty of the leading statesmen to demand, both of the Kaiser and of our allies, that the Austrian claims and the ultimatum to Serbia should be discussed in minute detail and definitely decided upon, and also that we should decide upon the precise program of our further proceedings. He said that, whatever point of view one took, we ought not to give ourselves into the hands of the Austrians and expose ourselves to eventualities which had not been reckoned out in advance. One ought to have connected appropriate conditions with our obligations. In short, Herr von Bohlen regarded the German denial of previous knowledge, if there was any trace of truth in it, as an offense against the elementary principles of diplomacy; and he told me that he intended to speak in this sense to Herr von Jagow, then Foreign Secretary, who was a special friend of his.

"[(iv) GERMAN GOVERNMENT BLAMED.] As a result of this conversation Herr von Bohlen told me that Herr von Jagow stuck firmly to his assertion that he had nothing to do with the text of the Austro-Hungarian ultimatum, and that Germany had never made any such demands. In reply to the objection that this was inconceivable, Herr von Jagow replied that he, as a diplomatist, had naturally thought of making such a demand. When, however, Herr von Jagow was occupying himself with the matter and was called in, the Kaiser had so committed himself that it was too late for any procedure according to diplomatic custom, and there was nothing more to be done. The situation was such that it would have been impossible to intervene with drafting proposals. In the end, he [Jagow] had thought that non-interference would have its advantages—namely, the good impression which could be made in Petersburg and Paris with the German declaration that Germany had not co-operated in the preparation of the Vienna ultimatum."—*Krupp director confirms Prince Lichnowsky's indictment* (*New*

York Times Current History, May, 1918, *Supplement*, pp. xx-xxii).

(v) LETTER TO THE NORDDEUTSCHE ALLGEMEINE ZEITUNG ON THE ULTIMATUM TO SERBIA AND RUSSIA'S MOBILIZATION.—"Long known and not denied by the German government are, I take it, the chief points in my statement, namely: 1. That, as the Germans conceived, Austria-Hungary was to chastise Serbia and no other Power was to interfere in the affair. 2. That Russian mobilization meant immediate declaration of war by Germany. Both these positions were grave political mistakes. The relation of Russia to Serbia was closer than that between ordinary allies. Germany, which explained its attitude of support as regarded Austria-Hungary by pleading its duties as an ally, was bound to recognize that Russia was, at the very least, in the same position as regarded Serbia. The peril involved in Germany's rigid attitude toward Russian mobilization was shown when it sprang upon the world its declarations of war at the moment when Vienna and St. Petersburg had discovered a common basis for peaceful negotiations. What is perhaps new in my statement is that the personal attitude of the Emperor was decidedly in line with these two points of view. No one, however, who knew the conditions obtaining in Germany could have doubted, even in default of positive evidence, the strong stand personally taken by the Emperor. That the alleged ignorance of the ultimatum to Serbia and the claim to have played no part in the shaping of the Austro-Hungarian plans against Serbia were, on Germany's part, only sophistical juggling with words, was proved long ago, apart from other evidence, by the introduction to the German White Book. In reply, at the same time, to an article recently published in the *Norddeutsche Allgemeine Zeitung*, which disputes my assertions, I make the further statement that my memoranda do not indicate that the Emperor had decided, no matter what happened, to bring on the World War. In a narrower sense, however, he was responsible for its outbreak. He had decided on a sanguinary chastisement of Serbia. Why, instead of risking a World War, in which the laurels of victory were not to be bought cheap, should he not rather have decided to win over his friend, the Czar, by argument, in order thus to increase Germany's power? This time, however, his play was over rash. He was obliged to follow it up in earnest when he failed to prevent Russian mobilization. We may well believe that, in those critical days, Berlin went so far as to put a degree of pressure on Vienna, urging that connections with St. Petersburg be not wholly cut off, but that efforts be made to delay the Russian mobilization. Nevertheless, when the mobilization came, it was not Vienna that declared war against Russia. On the contrary, Vienna was on the direct road to an understanding. It was the Emperor in Berlin, maintaining the solemnly assumed but nevertheless insane attitude which, regardless of consequences, he had seen fit to take from the outset. When the *Norddeutsche Allgemeine Zeitung* expressly declares that Berlin expressly and uniformly emphasized the view that Russian mobilization meant war, it concedes the main point: by the threat of a greater wrong and calamity the world was to be frightened out of its effort to avert from Serbia a lesser wrong and calamity, and so not only Serbia but all the world was to be subjected to a brutal, although possibly bloodless duress, which was decisively to establish Germany's future position.

"The other assertions of the *Norddeutsche Allgemeine Zeitung*, which are meant only to throw its readers off the track, are scarcely worth discussing. I said nothing about a Potsdam crown council on July 5 [see above: 9]; I said only that in a conversation with the Austrians the Emperor had committed himself in such and such a manner. I have, moreover, no occasion to deny that the negotiations concerning the difficult situation created by the murder in Serajevo were conducted by the agencies in whose competence the matter lay. I maintain, however, that they were conducted on the lines laid down by the Emperor: no one has any right to interfere in the conflict between Austria-Hungary and Serbia; Russian mobilization means instant war. I do not for a moment dispute, I have indeed already reaffirmed, that efforts were made to preserve the peace. These efforts, however, were not directed towards an understanding; their purpose was to secure an unconditional surrender to the German point of view. In a word, they were efforts to preserve peace by threats of war. Further protest needs to be made only against the assertion of the *Norddeutsche Allgemeine Zeitung* that the Sukhomlinof trial has conclusively shown that the real culprits who set the world on fire are to be found in St. Petersburg. This trial has brought out nothing new, except certain internal occurrences connected with the Russian mobilization. These are of no greater importance than would be, let us say, decisive evidence that the German Emperor also wavered before he decided to proceed to extremes. It is the facts that are of importance. Mobilization did not necessarily mean war. No people knew this better than the Austrians, who were accustomed to long mobilizations without war. Of those who are to blame in the broader sense for the World War there may be a plenty, and their guilt may date far back. Of those to blame in the narrower sense there are but few; and, as regards the occurrences here under discussion, they are to be found in Berlin and in Vienna."—*International Conciliation pamphlet, Sept., 1918.*

(vi) GERMANY AND BELGIUM.—In the same letter, Mühlon went on to state that the occupation of both Belgium and Holland, as a military necessity, in case of war, had often been discussed. In the event of a simultaneous war with France and Russia, the overthrow of France "in the quickest possible way," before Russia could strike, had been decided upon. This decision meant also a demand for passage by the German armies through Belgium in a descent upon northern France. The demand had been made and refused, with the consequent occupation of Belgium by Germany. Charges had been made that Belgium intended to break her neutrality, but this charge, Mühlon contended, was refuted by the relations between the Belgian government and the Krupps before the war. The Krupps, he said, had kept the guns for the fortifications of Antwerp in storage at the request of Belgium. From this fact alone he concluded that it was evident that Belgium herself had every desire to maintain friendly relations with the German Empire. (See BELGIUM: 1914: Germany and Belgian neutrality.) In this respect, a Belgian statement of the orders for guns and ammunition, which had been placed with the Krupps, is of interest. "All Belgium's supply of artillery, both guns and ammunition, as well as part of her other war *matériel*, comes from Germany. At the most the Krupp works allowed some Belgian factories to co-operate in

the manufacture of certain guns and projectiles. At the time of the outbreak of war delivery was awaited of a considerable part of the following orders which had been entrusted to Krupps with the co-operation of Belgian firms: 30,000 universal shells (7.5 cm.). 18,000 fuses with detonators. 70,000 double-acting fuses. 4 eclipse guns (28 cm.). 4 embrasure guns (28 cm.). In addition various orders had been placed with other German firms such as Werner, Siemens & Halske, Siemens & Schücker, Ehrardt, etc. If Belgium had contemplated military co-operation with France, would she not have given her orders to French firms? Moreover, during the course of the war, a highly critical situation arose for the Belgian army. Not having received from Germany all the expected deliveries and, on the other hand, having been obliged to transfer into France its base of operations together with all its elements of production, it found itself amongst ammunition of a quite different type from its own. And it was only after serious study of the matter by Belgian and French engineers that a way was found of solving the complicated problem of supplying the Belgian army, equipped with German *matériel*, with munitions of a somewhat modified French type."—E. Waxweiler, *Belgium neutral and loyal*, pp. 161-163.

(vii) A REMARKABLE LETTER.—Herr Mühlon authorized the *Humanité*, a Paris Socialist paper, to publish the following remarkable letter which he addressed from Bern, on May 7, 1917, to Herr von Bethmann-Holweg, then Imperial Chancellor. It was published Mar. 31, 1918.

"However great the number and weight of the mistakes accumulated on the German side since the beginning of the war, I nevertheless persisted for a long time in the belief that a belated foresight would at last dawn upon the minds of our Directors. It was with this hope that I put myself to a certain extent at your disposal, in order to collaborate with you in Rumania, and that I indicated to you that I was disposed to help in Switzerland, where I am living at present, if the object of our efforts was to be rapprochement of the enemy parties. That I was, and that I remain, hostile to any activity other than reconciliation and restoration I proved soon after the opening of hostilities by the definite resignation of my Directorship of Krupps' works. But since the first days of 1917 I have abandoned all hope as regards the present Directors of Germany. Our offer of peace without indication of our war aims, the accentuation of the submarine war, the deportations of Belgians, the systematic destruction in France, and the torpedoing of English hospital ships have so degraded the Governors of the German Empire that I am profoundly convinced that they are disqualified forever for the elaboration and conclusion of a sincere and just agreement. The personalities may change, but they cannot remain the representatives of the German cause. The German people will not be able to repair the grievous crimes committed against its own present and future, and against that of Europe and the whole human race until it is represented by different men with a different mentality. To tell the truth, it is mere justice that its reputation throughout the whole world is as bad as it is. The triumph of its methods—the methods by which it has hitherto conducted the war both militarily and politically—would constitute a defeat for the ideas and the supreme hopes of mankind. One has only to imagine that a people exhausted, demoralized, or hating violence,

should consent to a peace with a Government which has conducted such a war, in order to understand how the general level and the chances of life of the peoples would remain black and deceptive. As a man and as a German who desires nothing but the welfare of the deceived and tortured German people, I turn away definitely from the present representatives of the German régime. And I have only one wish—that all independent men may do the same and that many Germans may understand and act. In view of the fact that it is impossible for me at present to make any manifestation before German public opinion, I have thought it to be my absolute duty to inform your Excellency of my point of view.”—*Krupp director confirms Prince Lichnowsky's indictment (New York Times Current History, May, 1918, Supplement, xxii-xxiii).*

74.—Origin of the war: American ambassador's version.—Documentary refutation.—“This war is no accident. Neither did it come about through the temporary breakdown of European diplomacy. . . . The spirit and motive behind it were the spirit and motives that brought about the war between Prussia and Denmark (in 1864), the war between Prussia and Austria (1866) and the war between Prussia and France (1870). It was undertaken in the furtherance of a definite programme of Prussian imperialism. . . . On August 18, 1914, as American Ambassador at Constantinople, I called on the Marquis of Pallavicini, the Austro-Hungarian Ambassador, to congratulate him on the Emperor's eighty-fourth birthday. After exchanging the usual diplomatic compliments suitable to such an occasion, he spoke of the condition of the Emperor's health and his great mental and physical activity in spite of the strain to which he was subjected. The conversation then turned to the war, which was in its third week, and His Excellency told me that when he visited the Emperor in May His Imperial Majesty had said that war was inevitable because of conditions in the Balkans. The Austrian Crown Prince was murdered at Sarajevo on June 28; yet weeks before that the Austrian Emperor had confided to his Ambassador to Turkey that war was inevitable. A still more remarkable confirmation came to me from Baron Wangenheim, the German Ambassador at Constantinople. [See above: 9.] In an outburst of enthusiasm after the arrival of the *Goeben* and the *Breslau* in the Dardanelles, he having directed their movements by wireless while they were endeavoring to escape from the British fleet, the German Ambassador informed me that a conference had been held in Berlin in the early part of July at which the date of the war was fixed. This conference was presided over by the Kaiser; the Baron Wangenheim was present to report on conditions in Turkey. Moltke, the Chief of Staff, was there and so was Grand Admiral von Tirpitz. With them were the German leaders of finance, the directors of the railroads and the captains of industry whose aid was essential to the Kaiser in putting his vast military machine into operation. Each was asked if he was ready for war. All replied in the affirmative except the financiers, who insisted that they must have two weeks in which to sell foreign securities and arrange their loans. At the time this conference was held, nobody outside the inner circles of the Berlin and Vienna Governments dreamed of war as a result of the Sarajevo assassinations. They took good care that no suspicions should be aroused. The Kaiser went straightway to Norway on his yacht. The Chancellor left Berlin for a rest. The diplomatic corps had no intimation of

the impending calamity, and the British Ambassador went away, leaving the embassy to the Chargé d'Affaires. The same drug was used in Vienna, and even when the blow fell the Russian Ambassador was absent from his post on vacation. As the British White Book shows, it was not until July 20 that Sir Edward Grey, the British Secretary of State for Foreign Affairs, asked the German Ambassador in London whether he had any news of what was going on in Vienna in regard to Serbia. Many days before the British Foreign Secretary asked this question war had been formally decided upon in Berlin and Vienna and everything was being made ready to raise the curtain upon the most ghastly drama of history. . . . It was not to me alone that Baron Wangenheim told the story of this Berlin conference. Only recently the Marquis Garroni, the Italian Ambassador at Constantinople, announced that Baron Wangenheim said the same thing to him, Italy at that time being a member of the Triple Alliance. My diary shows that the conversation with the German Ambassador took place on August 26. This was about six weeks after the fateful council in Berlin in which the Kaiser gave civilization over to fire and sword, and all the details of the meeting were still fresh in Baron Wangenheim's mind. The decision for war which the Austrian Emperor had confided to his Ambassador to Turkey in May, and which the Kaiser fully revealed to his lieutenants in July, was the culmination of plans that had been under way for twenty-five years. . . . Throughout all his policies for a quarter of a century runs this Weltmacht motif [of the Kaiser], like the motif of a Wagnerian opera. Year in and year out, the Kaiser brooded over this ambition, in which he was the central figure of a stupendous moving picture, directing and controlling the destinies of the world.”—H. Morgenthau, *World* (New York), Oct. 14, 1917.

The following documents seem to throw some light on the origin of the statement that a conference was held at Potsdam:

“MEMORANDUM OF THE UNDER-SECRETARY FOR FOREIGN AFFAIRS, BARON V. D. BUSSCHE,

“BERLIN, AUGUST 30, 1917

“On the day after the Austro-Hungarian Ambassador, in July, 1914 had handed to H. M. the Emperor the letter of the Emperor Francis Joseph, delivered by Count Hoyos, and the Imperial Chancellor von Bethmann Hollweg and the Under Secretary of State Zimmerman had been received in Potsdam, a conference of military personages took place with His Majesty at Potsdam. There were present: His Excellency Capelle for Tirpitz, Captain Zenker for the Admiralty Staff, representatives of the War Department and of the General Staff. It was decided, at all events, to take preparatory measures for a war. Corresponding orders were thereupon issued.—Source absolutely trustworthy. ‘BUSSCHE.’”

Two years afterwards (1919) von dem Bussche on enquiry wrote, “I am sorry I cannot recall the source. Perhaps Mueller. Date of noting this down might perhaps refresh my memory. Also possible that I mistakenly characterized source as trustworthy.” In 1919 also von Capelle denied that a conference was held at Potsdam on July 5, but, in common with the other persons mentioned, stated that he had a private interview with Emperor William on the morning of that day, in the course of which the emperor said that the Czar,

according to his opinion, "would not in this case place himself on the side of the murderers of the Prince. Besides, Russia and France were not prepared.—England the Emperor did not mention.—Upon advice of the Chancellor he would start on his northern trip, in order to allay any disquiet. Nevertheless, he wanted to inform me of the tense situation so that I could be thinking about the future."—*German secret war documents (International Conciliation, no. 150, May, 1920).*

75.—Commission to decide responsibility of authors of the war, 1919.—"The Preliminary Peace Conference at the plenary session on the 25th January, 1919 (Minute No. 2), decided to create, for the purpose of inquiring into the responsibilities relating to the war, a commission composed of fifteen members, two to be named by each of the Great Powers (United States of America, British Empire, France, Italy and Japan) and five elected from among the Powers with special interests. The Commission was charged to inquire into and report upon the following points:

"1. The responsibility of the authors of the war. . . .

"The Commission was constituted as follows: *United States of America:* Hon. Robert Lansing, Major James Brown Scott; *British Empire:* Rt. Hon. Sir Gordon Hewart, K. C., M. P., or Sir Earnest Pollock, K. B. E., K. C., M. P., Rt. Hon. W. F. Massey; *France:* Mr. André Tardieu (alternate: Captain R. Masson), Mr. F. Larnaude; *Italy:* Mr. Scialoja (alternates: Mr. Ricci Busatti, Mr. G. Tosti), Mr. Raimondo, later, Mr. Brambilla (3rd February), Mr. M. d'Amelio; *Japan:* Mr. Adatei, Mr. Nagaoka, later, Mr. S. Tachi (15th February); *Belgium:* Mr. Rolin-Jaequemyns; *Greece:* Mr. N. Politis; *Poland:* Mr. C. Skirmunt, later, Mr. N. Lubienski (14th February); *Roumania:* Mr. S. Rosental; *Serbia:* Professor Slobodan Yovanovitch, (alternates: Mr. Koumanoudi, Mr. Novacovitch). . . . Mr. Lansing was selected as Chairman of the Commission. . . .

"On the question of the responsibility of the authors of the war, the Commission, after having examined a number of official documents relating to the origin of the World War, and to the violations of neutrality and of frontiers which accompanied its inception, has determined that the responsibility for it lies wholly upon the Powers which declared war in pursuance of a policy of aggression, the concealment of which gives to the origin of this war the character of a dark conspiracy against the peace of Europe. The responsibility rests first on Germany and Austria, secondly on Turkey and Bulgaria. The responsibility is made all the graver by reason of the violation by Germany and Austria of the neutrality of Belgium and Luxemburg, which they themselves had guaranteed. It is increased, with regard to both France and Serbia, by the violation of their frontiers before the declaration of war. Many months before the crisis of 1914 the German Emperor had ceased to pose as the champion of peace. Naturally believing in the overwhelming superiority of his army, he openly showed his enmity towards France. General von Moltke said to the King of the Belgians [at Potsdam, in November, 1913]: 'This time the matter must be settled.' In vain the King protested. The Emperor and his Chief of Staff remained no less fixed in their attitude. . . . Austria suddenly sent Serbia an ultimatum that she had carefully prepared in such a way as to make it impossible to accept. Nobody could be deceived; 'the whole world understands that this ultimatum means war' (Lichnowsky

Memoir). According to M. Sazonof, 'Austria wanted to devour Serbia.' M. Sazonof asked Vienna for an extension of the short time limit of forty-eight hours given by Austria to Serbia for the most serious decision in its history. Vienna refused the demand. On the 24th and 25th July England and France multiplied their efforts to persuade Serbia to satisfy the Austro-Hungarian demands. Russia threw in her weight on the side of conciliation. Contrary to the expectation of Austria-Hungary and Germany, Serbia yielded. She agreed to all the requirements of the ultimatum, subject to the single reservation that, in the judicial inquiry which she would commence for the purpose of seeking out the guilty parties, the participation of Austrian officials would be kept within the limits assigned by international law. 'If the Austro-Hungarian Government is not satisfied with this,' Serbia declared she was ready 'to submit to the decision of The Hague Tribunal.'

"A quarter of an hour before the expiration of the time limit, at 5.45 on the 25th, M. Pachich, the Serbian Minister of Foreign Affairs, delivered this reply to Baron Giesl, the Austro-Hungarian Minister. On M. Pachich's return to his own office he found awaiting him a letter from Baron Giesl saying that he was not satisfied with the reply. At 6.30 the latter had left Belgrade, and even before he had arrived at Vienna, the Austro-Hungarian Government had handed his passports to M. Yovanovitch, the Serbian Minister, and had prepared thirty-three mobilization proclamations, which were published on the following morning in the *Budapesti Kozlöni*, the official gazette of the Hungarian Government. On the 27th Sir Maurice de Bunsen telegraphed to Sir Edward Grey: 'This country has gone wild with joy at the prospect of war with Serbia.' At midday on the 28th Austria declared war on Serbia. On the 29th the Austrian Army commenced the bombardment of Belgrade, and made its dispositions to cross the frontier.

"The reiterated suggestions of the *Entente* Powers with a view to finding a peaceful solution of the dispute only produced evasive replies on the part of Berlin or promises of intervention with the Government of Vienna without any effectual steps being taken. On the 24th July Russia and England asked that the Powers should be granted a reasonable delay in which to work in concert for the maintenance of peace. Germany did not join in this request. On the 25th July Sir Edward Grey proposed mediation by four Powers (England, France, Italy and Germany). France and Italy immediately gave their concurrence. Germany refused, alleging that it was not a question of mediation but of arbitration, as the conference of the four Powers was called to make proposals, not to decide. On the 26th July Russia proposed to negotiate directly with Austria. Austria refused. On the 27th July England proposed a European conference. Germany refused. On the 29th July Sir Edward Grey asked the Wilhelmstrasse [German Foreign Office] to be good enough 'to suggest any method by which the influence of the four Powers could be used together to prevent a war between Austria and Russia.' She was asked to say what she required. Her reply was evasive. On the same day, the 29th July, the Czar Nicholas II despatched to the Emperor William II a telegram suggesting that the Austro-Serbian problem should be submitted to The Hague Tribunal. This suggestion received no reply. This important telegram does not appear in the German White Book. It was made

public by the Petrograd *Official Gazette* (January, 1915). The Bavarian Legation, in a report dated the 31st July, declared its conviction that the efforts of Sir Edward Grey to preserve peace would not hinder the march of events. As early as the 21st July German mobilization had commenced by the recall of a certain number of classes of the reserve, then of German officers in Switzerland, and finally of the Metz garrison on the 25th July. On the 26th July the German fleet was called back from Norway.

"The *Entente* did not relax its conciliatory efforts, but the German Government systematically brought all its attempts to nought. When Austria consented for the first time on the 31st July to discuss the contents of the Serbian note with the Russian Government and the Austro-Hungarian Ambassador received orders 'to converse' with the Russian Minister of Foreign Affairs, Germany made any negotiation impossible by sending her ultimatum to Russia. Prince Lichnowsky wrote that 'a hint from Berlin would have been enough to decide Count Berchtold to content himself with a diplomatic success and to declare that he was satisfied with the Serbian reply, but this hint was not given. On the contrary they went forward towards war.' On the 1st August the German Emperor addressed a telegram to the King of England containing the following sentence: 'The troops on my frontier are, at this moment, being kept back by telegraphic orders from crossing the French frontier.' Now, war was not declared till two days after that date, and as the German mobilization orders were issued on that same day, the 1st August, it follows that, as a matter of fact, the German army had been mobilized and concentrated in pursuance of previous orders. The attitude of the *Entente* nevertheless remained still to the very end so conciliatory that, at the very time at which the German fleet was bombarding Libau, Nicholas II gave his word of honor to William II that Russia would not undertake any aggressive action during the *pourparlers*, and that when the German troops commenced their march across the French frontier M. Viviani telegraphed to all the French Ambassadors 'we must not stop working for accommodation.'

"On the 3rd August von Schoen went to the Quai d'Orsay [French Foreign Office] with the declaration of war against France. Lacking a real cause of complaint, Germany alleged, in her declaration of war, that bombs had been dropped by French aeroplanes in various districts in Germany. This statement was entirely false. Moreover, it was either later admitted to be so or no particulars were ever furnished by the German Government. Moreover, in order to be manifestly above reproach, France was careful to withdraw her troops ten kilometers from the German frontier. Notwithstanding this precaution, numerous officially established violations of French territory preceded the declaration of war. The provocation was so flagrant that Italy, herself a member of the Triple Alliance, did not hesitate to declare that in view of the aggressive character of the war the *casus fœderis* ceased to apply."—*English official text of the report presented to the Preliminary Peace Conference, Mar. 29, 1919, ch. 1.*

CONCLUSIONS OF THE COMMISSION'S REPORT.—"1. The war was premeditated by the Central Powers together with their Allies, Turkey and Bulgaria, and was the result of acts deliberately committed in order to make it unavoidable. 2. Germany, in agreement with Austria-Hungary, deliberately worked to defeat all the many conciliatory proposals made by the *Entente* Powers and their re-

peated efforts to avoid war. . . . [With regard to the neutrality of Belgium and Luxemburg, the commission arrived at following conclusion:] The neutrality of Belgium, guaranteed by the treaties of the 19th April, 1839, and that of Luxemburg, guaranteed by the treaty of the 11th May, 1867, were deliberately violated by Germany and Austria-Hungary."—*Ibid.*

Against this report, the German delegation made a vigorous protest, as follows:

"It is impossible, in this place, to fully discuss the remote reasons of the Austro-Serbian conflict, which were on one side the 'Greater-Serbia' agitation threatening the existence of the Austro-Hungarian monarchy, on the other side the commercial oppression of the Serbian people. A categorical denial, however, must be opposed to the allegation that a secret plot was laid between Berlin and Vienna to crush Serbia. In a memorandum presented to the Reichstag on August 3rd, 1914, the German Government openly declared that it had acceded to the opinion held in Vienna concerning the situation created through the attempt of Serajewo and that it had approved of an action which there was considered necessary. In Berlin the aims of this action were not known in their particulars, but they were strictly circumscribed and did not implicate any annexation. It is well known that Count Tisza expressly urged that any such idea should be given up, otherwise he would not consent to the ultimatum. . . . It is true that, Serbia not having kept her promises in the past, Austria was convinced that she could not content herself with diplomatic results, but that she ought to insist on the impression which a military expedition was expected to produce. Germany acceded to this point of view and encouraged Austria. . . . The action against Serbia was not, it is true in contradiction with the methods at the time being employed also by other nations and it was undertaken in good faith in order to eliminate a matter of conflict which for many years had threatened the entire world with the danger of war. Nevertheless, in 1914 the German Government itself thought that the ultimatum had gone too far. . . . The conciliatory character of the Serbian answer has been recognized by the German Government itself in its note of July 28th. . . . Animated by the desire to localise the Austro-Serbian conflict even diplomatically, the Berlin Government had at first adopted a negative attitude as to the proposals of mediation which were especially made by England; they thought that by these methods the danger which was continually threatening the peace of the world, would not be removed. It is, however astonishing that the report of the Commission does not mention that the idea of direct conversations between Vienna and Petersburg had been suggested by Germany and that Sir Edward Grey himself had recognized this method 'as the most preferable of all.' . . . Pressure was exerted by the Government of Berlin upon the Vienna Cabinet ever since the 28th of July. . . . By the mediation proposed in the afternoon of July 29th (Blue Book, no. 88) the way to preserve peace was found. Berlin, readily having complied with the proposition, insisted on obtaining the adhesion of Vienna in such categorical terms as hardly ever have been employed amongst allies in a decisive hour. Most certainly it is not the fault of the German Government if the diplomatic negotiations which were so nearly approaching a happy solution, were suddenly interrupted by military measures of the adverse party. As to the documents

published by the Servian Minister in Paris, the report of von Wiesner of July 13th, 1914 was never brought to the knowledge of Berlin. The telegram of the Austrian Ambassador, Count Szögyeny, of July 25th, 1914, insisting that in case of a declaration of war, military operations ought to be opened at once, corresponds to the point of view mentioned above that the best way of avoiding an extension of the conflagration would be a localisation and consequently a rapid solution of the Servian conflict. As to Count Szögyeny's telegram of July 27th concerning the refusal of the propositions of mediation which England might eventually make, the German Commission having applied for information to the Ex-Chancellor von Bethmann-Hollweg and the Secretary of State von Jagow, got from both sides the identical answer that this report could not be correct. The Commission considers the statement of both gentlemen as trustworthy, all the more as the Austrian Ambassador was old beyond his age. As a matter of fact—and this is the main point—the German Government did not proceed in such a way, but ever since July 28th did its utmost to make Austria accept a mediation. As to taking up of direct negotiations success did not fail (Red Book, no. 50). Nevertheless, the report of the Ambassador of Austro-Hungary is one of the numerous details which prove that an enquiry by a neutral commission is especially urgent. . . . Germany had agreed to the Austrian intention of putting an end to the 'Greater-Servia' agitation, if necessary by force of arms. It would have been of essential importance, if immediately after the arrival of the Servian answer on July 27th the Cabinet of Vienna would have been caused to abstain from any irremediable measures, for the very same day the Berlin Government had got the impression that Servia had shown herself very conciliatory. But from the 28th, after having thoroughly examined the Servian answer, the greatest possible efforts were made to induce Vienna to yield. Berlin particularly and most energetically supported Sir Edward Grey's proposal of the afternoon of the 29th, by which Austria was granted the satisfaction due to her according to the opinion of all the great Powers. It escapes the knowledge of the undersigned why the Cabinet of Vienna did not at once reply to this proposal. This is one of the most essential points which still needs to be cleared up. As to Berlin—according to diplomatic documents—a change of opinion from the 26th to the 28th of July is evident, and in the conviction of the undersigned, it must be attributed to a want of energy that the last consequences were not drawn as early as the 27th. Germany did not want the world war, although this risk had been taken into consideration as a possibility. To quote the words of the Commission's report, for more than forty years the German Government was regarded as the 'champion of peace.' (Yellow Book, No. 6.) Plans of conquest lay far from the thoughts of the leading German statesmen. It was different in Russia. Without war, the intentions of the leading Pan-Slav circles were not to be realised. These anti-peace elements achieved their desire in the last decisive days; for at the very moment when peace seemed assured, Russia adopted measures making it impossible. The undersigned cannot refrain from giving expression to the opinion that if pressure had been put on Petersburg by London and Paris as strong as that exercised by Berlin on Vienna, the fatal step which war-loving military men enforced against the will of the Tsar,

would not have been taken. HANS DELBRÜCK, COUNT MAX MONTGELAS, MAX WEBER, ALBRECHT MENDELSSOHN BARTHOLDY.—*Is Germany guilty? (German White-book concerning the responsibility of the authors of the war, pp. 43-49, 49-50).*

76.—Origin of the war: German chancellor's version.—Dr. Theobald von Bethmann-Hollweg, German imperial chancellor from 1909 to 1917—eight years to a day—and who died on Jan. 1, 1921, was born at Hohenfinow in Brandenburg in 1856, a descendant of one of the oldest patrician families, who were engaged as bankers at Frankfurt-on-Main. In the summer of 1919 the *Berliner Tageblatt* published some advance extracts from his forthcoming volume of reminiscences. The following observations on the origin of the World War were reproduced in that journal:

"A legend has become widely current to the effect that the war started in the Crown Council which the Kaiser is alleged to have held in Potsdam on July 5, 1914. [See above: 9.] Even some Germans believe this fairy tale, although our opponents, who certainly would not have overlooked such a find, have not been able to give us any information concerning such a Crown Council in their official publications, and although even a most superficial investigation would have proved that a majority of the persons alleged to have been present at the Council were neither in Potsdam nor Berlin. The actual facts are as follows: On July 5, 1914, the Austro-Hungarian ambassador, Count Szogyenyi, after breakfast with the Kaiser, handed the latter a personal letter from the emperor Franz Josef, accompanied by a memorandum from his government. The memorandum developed a comprehensive Balkan programme, looking a long way forward, and intended to oppose vigorous diplomatic measures to Russia's plans. In view of the hostility of Serbia and to provide against the unreliability of Roumania, it was proposed to establish closer relations with Bulgaria and Turkey. The purpose was to organize a Balkan league, excluding Serbia, under the patronage of the Central Powers. The tragedy at Serajevo was cited as a proof that the conflict between Austria-Hungary and Serbia had gone too far to be reconciled, and that the former country would have to count upon the obstinate, implacable and aggressive hostility of Serbia. The personal letter from Emperor Franz Josef summarized the ideas presented in the memorandum, and called attention to the fact that the peace policy of the Great Powers would be threatened if the agitation at Belgrade was allowed to continue. The Kaiser received the two documents with the remark that he would not be able to reply to them until he had conferred with the Imperial Chancellor. At noon of the same day, July 5, the Kaiser received me with Secretary Zimmermann, who was acting in place of Secretary von Jagow, who was on a vacation. The place was the park of the new palace in Potsdam. No one else was present. I previously knew the tenor of the Austrian document, a copy of which was communicated to me and Mr. Zimmermann. After I had reported upon its contents, the Kaiser stated that he cherished no illusions as to the real seriousness of the situation created in the Danube monarchy by the Greater Serbia propaganda. It was not our business, however, to advise our ally how to act in respect to the assassination at Serajevo. Austria-Hungary must attend to that herself. We were the more obligated to refrain from direct suggestions and advice because we would have to employ all our influence to pre-

vent the Austro-Serbian conflict from becoming an international controversy. The Emperor Franz Josef must know, however, that we would not fail Austria-Hungary in a serious crisis. Our own vital interests demanded the integrity of Austria. He regarded favorably the plan of bringing Bulgaria into the alliance, but nothing must be done in this connection to alienate Roumania. These views coincided with my own. Returning to Berlin, I gave an audience to Count Szogyenyi, and informed him that the Kaiser was not blind to the danger caused by the Pan-Slav and Greater Serbia propaganda. In view of the attitude of Roumania and the efforts to organize a new Balkan alliance against Austria-Hungary, we would support Austria's endeavors to win Bulgaria for a triple alliance. At Bucharest we would endeavor to steer Roumanian policies into channels friendly for the Entente. The Kaiser could not take a positive attitude regarding the questions in controversy between Austria-Hungary and Serbia, since they were not within his jurisdiction. Emperor Franz Josef, however, could rest assured that the Kaiser would always stand loyally behind Austria-Hungary, as required by his duties as an ally and demanded by their ancient friendship.

"On July 6, the Kaiser left for his Scandinavian tour, and on the 14th of July he replied to the letter of Emperor Franz Josef from Bornholm to the same general effect. The legend of a Crown Council and of certain decisions made at such a council, amounts to nothing more than this. No such council was ever held. France demonstrated its ill will from the beginning by its zealous efforts to throw doubt upon the candor of our efforts in favor of peace, and to foster the impression that we were employing the Serbian incident merely as a pretext for attacking France. Mr. Jules Cambon employed the most skillful arguments in his reports to support his false assumption that the people in Berlin were eager for war. The efforts which we made at Paris to calm the distrust and excitement of her Russian allies, met not only with great distrust, but were immediately distorted in the public press. It was obvious that the people in Paris were doing their best to compromise German diplomacy in the eyes of their allies and to play the part of shrewd colleagues and make their Russian partners skeptical. At the same time the French Ministry considered its principal task to be to arrange for England's entry into the war. The English and French documents give a vivid picture of the pertinacity and tenacity which Mr. Paul Cambon exhibited in his negotiations with Sir Edward Grey. In these conversations Grey sedulously maintained the contention that England's hands were still free, but he did not discourage M. Carbon, and the latter finally got the English statesman compromised. When France obtained an assurance, on August 1, that the British fleet would prevent the German fleet from passing down the Channel and would protect the French coast against German attacks, the bargain was nailed. That was the moment when England finally sacrificed its neutrality and entered a formal engagement. France had obtained her desire. In its intrigues to procure England's aid, the French cabinet employed still another measure which is characteristic of its attitude in this crisis, and that was—I can designate it by no other word—untruthfulness in its account of actual events. Not only M. Viviani, but also M. Poincaré [the French president] have personally asserted throughout that the Russian mobilization followed general

mobilization in Austria. But it has already been proved and become a notorious fact that the Russian mobilization was published in Petrograd early on the morning of July 31, while Austria did not decide to mobilize until several hours later. The French cabinet here bases its case on a false statement. The French political leaders have treated Germany's military attitude in an equally uncandid manner. On July 29 I instructed our ambassador in Paris, Baron von Schoen, to point out to the French government that a continuance of military preparation on the part of France would force us to take protective measures. We would have to proclaim a state of war peril which was not identical with mobilization, but would undoubtedly increase the tension. We hoped, however, nevertheless, that peace would be maintained. M. Viviani distorted this message in the telegram of August 1 to M. Paul Cambon in London that we had threatened to proclaim a state of war peril immediately and had begun a general mobilization under the mask of such a measure. On August 1 M. Viviani told Baron von Schoen, when the latter informed him of Germany's mobilization, that he was astonished that Germany should resort to such a measure at a moment when a friendly exchange of views was occurring between Russia and Austria and the other Powers. M. Viviani, therefore, acknowledged that diplomatic measures still promised success, but charged Germany with arbitrarily disturbing these efforts, although he knew that Germany was largely responsible for the fact that diplomatic negotiations had been started and that it was Russia, through her mobilization, that wrecked this plan. If the Tsar himself, in his telegram of July 29 to the Kaiser stated beforehand that the military measures to which his court would force him would lead to war, and if Sir Edward Grey on July 30 regarded a stoppage of the Russian military measures as affording even a weak prospect of maintaining peace, then there is no justification whatsoever for assuming that M. Viviani did not recognize the significance of Russia's mobilization, to which Germany's mobilization was merely a reply. Finally, it is very striking indeed, that M. Viviani on July 31, at seven in the evening, when Baron von Schoen notified him of our ultimatum to Russia, pretended that he was not informed of the alleged complete Russian mobilization. Such innocent ignorance is simply inexplicable. A cause that hides behind falsehoods cannot be a good cause. No doubt can exist as to the purpose which the French cabinet had in mind in pursuing such a policy. In every way, even in dishonorable ways, an impression must be created that the general mobilization in Russia had been provoked by the Central Powers. Such an impression had to be created in order to back up the political work in England, and, above all, to influence public sentiment at home. . . . When the war fell upon us from the East, Germany was in a critical situation on the West. We foresaw, with certainty, that France would not leave its Russian ally in the lurch. When France replied to our inquiry with the famous statement that it would consult its own interests in the matter, we had no choice but to declare war on France. Thereupon, we appeared the assailants, although we were absolutely certain that we were exposed to an assault by the French army. I do not think we possibly could have avoided being placed in this position. The suddenness of the military measures which Russian mobilization forced upon us,

did not permit us to defer military precautions against France or leave us time for diplomatic intervention to better our political position."

77.—German ex-chancellor's review of European politics leading up to war.—"It is perfectly true that we agreed with Austria when she announced that action against Serbia was necessary, after the Serajevo murder, and that we also expressly stated that we were prepared to carry out the obligations of our alliance, in case further warlike complications should result from the action against Serbia. Therefore, we have never said, or in any way suggested, that Austria's action had taken us by surprise, consequently not by pointing to the Emperor's Scandinavian trip, and the Chief of the General Staff and the War Minister's absence on leave. We were not, indeed, aware of the text of the ultimatum before it was sent. The assertion to the contrary is incorrect; at all events, as far as I am personally concerned. I also considered the ultimatum too strong, when it subsequently came to my knowledge. In the course of events our policy took this view of mine fully into account. More of this later. First, as to the reason for our attitude towards Austria's action against Serbia. What was the general political situation? No one will dispute to-day that, since 1871, France's high policy had been firmly directed to the recovery of Alsace-Lorraine, and that of Russia—with particular intensity since the Japanese war—to supremacy in Constantinople. In pursuing these plans, Russia systematically tried to undermine Austria-Hungary's position in the Balkans, with the help of Serbia. Both Powers were pursuing aims which could only be realized by war. In their joint policy both Powers had England's avowed support. It is obvious that this situation became increasingly perilous for Germany, the more her Austrian ally's position was weakened by Serbia's intrigues, carried on with Russian help. It must be remembered that President Wilson's great programme of a conciliatory League of Nations, which even now still awaits its realization, had no acceptance, at all events at that time, and that national self-limitation, in the interest of the maintenance of peace, was not in any way regarded as a general precept of international morality; that, on the contrary, to many, unrestrained will for power was a virtue, and war a loyal method of putting it into practice. I think the Russo-Japanese war, the Boer war, and the Italian war in Tripoli are classical instances of this. Germany had to reckon with this state of affairs, if she was to appreciate the importance of the Serbian intrigues against Austria rightly. And that was the reason, the only reason, why Germany agreed to the action against Serbia. If Austria-Hungary passively tolerated being further undermined, Germany had to look forward to a state of affairs in which, alone and, as it were, friendless, she would have to face France's *revanche* policy, supported by the Russian alliance and English friendship. How little we intended to let loose a general war is shown by our whole subsequent attitude. I may briefly recapitulate the main points.

"Our efforts to localize the Austro-Hungarian conflict was certainly not a mistaken idea; Sir Edward Grey had himself adopted and supported it most energetically. Our intention was frustrated solely by Russia, who considered herself entitled to bring the dispute before her Forum. We then tried to mediate between Vienna and Petersburg. You will remember that, in the first

instance, England proposed a conference for this purpose, but then expressly associated herself with our proposal of a direct exchange of opinion between Vienna and Petersburg. You will further remember that we strongly urged the Vienna Cabinet to smooth over the misunderstandings which had arisen between it and the Petersburg Cabinet, and gave it to understand in the clearest imaginable way that we were certainly prepared to fulfill our obligations as allies, but must refuse to be drawn into the world conflagration by Austria through disregard of our advice. Do you think that one uses such language to one's ally, one's only ally, and at the same time wants a war which one cannot fight without this ally? Finally, you will remember how, in consequence of our efforts, the conversation between Vienna and Petersburg was started, when, suddenly, contrary to the assurances we had been expressly given, Russia mobilized her whole army. That this general mobilization was war, the war an all-powerful party in Russia wanted—well, I think after the revelations of the Sukhomlinov trial, that no human being can doubt that any longer. Those are facts which nothing can alter. To saddle us with the blame for the war is to pronounce enemies innocent who pursued joint plans for decades, which they could only realize if war broke out, but who object to our rising up in arms against them. That is not fair; it is unfair. How is it that, in spite of these facts, of which I have repeatedly spoken in the Reichstag, almost the whole world has come to believe in Germany's guilt? I will say quite frankly what I think about this too. I long for the day to come when I can contribute to bring about the victory of truth before an impartial court of justice, which ought certainly to have all the material from both sides at its disposal. Whether the Bavarian Government has been right in choosing the present moment for its publications, I cannot judge, for I am not aware of their motive. I am afraid that only confusion can result from one-sided and fragmentary publications, and I doubt whether it is right to rouse passions at this moment when we are to approach peace. For this reason, I will not speak now, for my part, of the astonishing propaganda with which our enemies have understood how to discredit us throughout the world by a mixture of truth and untruth, and to represent themselves, on the other hand, as the exclusive unselfish champions of all great and noble human ideals. I will rather speak quite frankly and soberly of our own share of blame for the world-wide disaster. First of all, a short word about Belgium. It is well known how the unfortunate position of constraint and distress, brought about by our marching into Belgium, gave us the reputation of being barbarians, and led to our being credited with the blame for the war. I spoke frankly and straightforwardly about Belgium on August 4. You know how, later on, what I said then was accounted to me as a crime by a large section of our public opinion. I still abide by every word I said then, and have nothing to add.

"Then Alsace-Lorraine. President Wilson, as is well known, demands, in his Fourteen Points, reparation for the wrong done to France by Prussia, in 1871, in respect of Alsace-Lorraine, which, as the President expressed it, had unsettled the peace of the world for almost fifty years. A discussion of whether Germany acted wrongly in making her annexation of 1871, or whether that annexation is to be judged from the standpoint of international

right and wrong similarly to the innumerable annexations our present enemies have made in the course of history—discussion of this would perhaps hardly be profitable now. The President's words, however, clearly express the recognition that it was in practice France's aspirations to the recovery of Alsace-Lorraine which allowed the world no peace during the last half century. Where I think we were to blame was in not having understood how to treat Alsace-Lorraine in such a way as to make its inhabitants gradually forget the change in their political nationality, and at the same time prevent the feeling from gradually taking form, as it has done, in many parts of the world, that we did a great wrong in 1871, a feeling which was certainly not general in the year 1871, particularly in England and America. In the history of the world England's example has often shown how the violence of conquests is gradually forgotten. Above all, however, we must admit that by failings in our national character, and faults in our general behavior, we contributed to the warlike tension which pervaded the political atmosphere, not in the last decade alone. Words were repeatedly uttered which might be interpreted as provocation. Pan-German agitations did us great harm, both at home and abroad, and, above all, the so-called fleet policy led us into disastrous antagonisms. To this may be added a variety of shortcomings in our domestic policy. Excuse me from finding further fault with our own flesh and blood, at a moment when we stand defenseless after our troops' heroic fight of four and a half years, and when powerful internal convulsions make the national organization tremble. Just as I have outlined only the main points of our enemies' responsibility, so also with regard to our share of the blame. Let history judge. Only those have a right to live who can and do look the truth fearlessly and clearly in the face. We will be frank as regards our own guilt, but, however hard fate may have hit us, it shall not wrest false admissions from us. We are no Pharisees, but neither are we slaves. Precisely in the deepest misfortune we retain the firm will to cooperate even in the very difficult future, in the great tasks of humanity, which the world-wide disaster of this war has written in letters of blood on the firmament. We shall only be able to do it if we hold our own now and in the future, free from the dross of the past."—*Deutsche Allgemeine Zeitung* (quoted in *Littell's Living Age*, Feb. 1, 1910, pp. 261-264).—"Whatever the ex-Chancellor's faults—and the [German] newspapers are exceedingly sparing in praise of his character and statesmanship—he certainly was Wilhelm's loyal servant to the last minute. Neither in his first volume of memoirs, 'Reflections on the World War,' nor before the National Convention's Committee of Investigation of the Causes of the War did he ever betray his master by throwing light upon the fatal conference between William and himself just before the outbreak of the war, although, according to persons who should know something about Bethmann-Hollweg, he never ceased to try to modify the Kaiser's heedless and arrogant course."—*New York Times*, Jan. 4, 1921.—This last paragraph came from Berlin by wireless on January 3, two days after the ex-chancellor's death.

78.—Controversy over war responsibility.—"The Germans generally never believed that the Kaiser's Government had deliberately started the war with the view of controlling the world. Prince Lichnowsky expressed the liberal view when he

asserted that the responsible leaders felt it necessary to have a war before Russia had so improved her railroads and other facilities for rapid mobilization as to overcome the advantage thus far possessed by Germany. The belief in the Pan-Slav threat dominated the minds of the German General Staff, which was convinced that sooner or later Germany must be at grips with Russia in a fight for existence, and that it would be suicidal for Germany to wait until Russia's hordes could be poured down upon her. In the French Yellow Book, issued during the war, there is a report of an interview between von Moltke, head of the German General Staff, and the King of Belgium, an interview at which the Kaiser was present, in which von Moltke said flatly that Germany must fight Russia before the latter improved her military position. Among the Allies, and more especially in England, there has been a disposition on the part of some impartial publicists to accept this theory, with some modifications, as the basis of German action in the events which led up to the war. The war lords, fed upon the casuistries of Machiavelli and the cynicism of Frederick the Great, having conjured up a phantom monster, which they named Pan-Slavism, became the slaves of their own creation. Americans have, with few exceptions, not accepted this explanation, and have felt that the German Government was set upon deliberate provocation of a world war, but it is only fair to recognize a certain shift of opinion in this respect abroad. Be this as it may, it is certain that the Russian bogey was accepted by the great majority of the Germans during the war. They still held to this when the whole German structure tumbled into chaos, but they were now on the defensive as to the Cabinet of 1914. So many of the assertions and promises of that authority had been disproved by events. So many of the blood and iron men had turned out bags of wind. It was not impossible to argue in Berlin itself that the arrogance and conceit bred by commercial and industrial success had turned German heads and lent undue allurements to the Pan-German bait of 'world markets.' Even the monarchists were prepared to admit that some of their supermen had worn asses' heads—and not a few hit pretty hard at the sacred Kaiser.

"The welter of confused argument and recrimination continued up to about six months ago, when there was a sudden wave of passionate protest against all allied accusations, which has since developed into a truculent charge that the Allies themselves were the guilty ones. To what extent this attitude was suggested by the Government to the warriors, statesmen, publicists, politicians and journalists who made the demonstrations can only be surmised. As not a few of the Government leaders participated, it is certain that the Administration was, at least, sympathetic. It has always been the habit of the German Government to guide the friendly editors in foreign politics, at least. . . . The archives of the German Foreign Office had been searched by Kautsky, admittedly a savage critic of the Kaiser and the Junkers. The Socialist, Bauer, while Foreign Minister, had done the same in Austria. Nothing had been found to support the allied charge of a purpose to control Europe or bring on war, said the Germans. But, they added, France and England have not opened their archives. Why haven't they? In a recent discussion of the question Professor Delbrück makes clear the attitude now assumed by the great majority of Germans in the following words: 'One finds frequently in the German literature and

press the contention that Germany was not, as the Entente insisted, the only guilty one. That is insufficient and misleading.' He goes on to say that the question to be answered is limited to the contention of the Entente as expressed in Article 231 of the Peace Treaty, together with the ultimatum of June 16 and the accompanying memorandum, whereby Germany is charged with having deliberately planned and forced the war, with the object of securing the hegemony of the world. Taking note of the assertion by supporters of the Entente that the charge as actually made to Germany did not extend so far, making no reference to world hegemony, but limiting itself to the assertion that Germany had forced the war by its threat to compel acquiescence in a certain solution of the questions at issue, the professor finds that there is no real difference between the two forms, and he declares positively that both are simply and demonstrably false in every particular. This is not the declaration of a mad monarchist. Professor Delbrück has been accepted by so careful a publication as the English Contemporary Review as a responsible spokesman for his people, and Professor Headlam-Morley, who answered his article in that periodical, said of him, 'both during the war and since, all that he has written on this subject shows the qualities with which so serious an international controversy should be conducted.' So Delbrück's challenge bespeaks the conservative view of the Germans today, and when he calls upon the German Government to insist upon a revision of the Peace Treaty and of the agreement as to reparations, because these were based upon a theory of deliberate German guilt since proven unjustified, he issues a call to the German nation which will be heard from again and again. It is not, Delbrück asserts elsewhere, 'the one who declares war who is the breaker of the peace, but he who compels it.' The one who compelled it, of course, according to this theory, was Russia. Again he says, Germany 'acted like a surgeon who operates on a cancer patient to save his life, facing the danger that the operation may kill him. The patient, the world's peace, died under the operation, and now the world calls the surgeon a murderer.' He finds the proof that Germany's intentions were innocent in the latest official papers, which show a state of unpreparedness, and in the writings of von Tirpitz and von Moltke, both of whom allege that they did not wish war at that time, because both were convinced that Germany would be defeated by the Entente. From this it would appear that von Moltke's hindsight was better than his foresight, as this latter was indicated in his interview with King Albert, already referred to. Summed up by Georg Karo in the *Süddeutsche Monatshefte*, the causes of the war were: Russia's determination to secure Constantinople; French revenge; English desire to destroy Germany's commercial rivalry. The German eagle was enveloped in a net where all his struggles were in vain. He paints a picture of simple, naïve Prussia, trusting—too trusting—and incapable of dealing with the cunning Russians, English and French, who not only had long decided upon a war of destruction, but had even arranged to force the issue so that Germany would appear to be the aggressor. Delbrück varies the argument slightly. It was Serbia's determination to take Bosnia, Dalmatia, Istria, Croatia, Krain and Carinthia, which would have finished Austria. In this Serbia was supported by Russia, which found her valuable in the struggle for Constantinople. Russia considered the time ripe for the

conquest of that city and the creation of a Pan-Slav State."—C. J. Rosebault, *Germany's amended plea of not guilty* (*New York Times Book Review*, Aug. 7, 1921).

"Austria and Germany were gradually isolated, and France, Great Britain, Russia and Italy began to draw together. Italy was ostensibly a member of the Triple Alliance until 1914, but we now know that she was not a loyal member at any time during the present century, and that, by 1902, she had an understanding with France that she would not join any other State in a war upon the French Nation. . . . However, it is to be borne in mind that the Italian Foreign Minister from 1910 to 1914, the Marquis of San Giuliano, took a renewed interest in the part of Italy in the Triple Alliance, and that Italy was on better terms with her old allies than at any previous time after 1902. Moltke, in 1914, counted definitely on Italian military aid in the World War. Along with the diplomatic arrangements and entanglements went an ominous and expensive armament race. . . . If possible, there has been an even more mistaken impression on this point than with respect to the view that Germany was solely responsible for the World War. The sober facts indicate that Germany and Austria were together maintaining an armament establishment on land and sea only a little more than half as extensive or expensive as that of England, France and Russia combined. France, usually represented as pacific, unprepared and defenseless, was in 1913-14, planning an army two-thirds larger per capita than that contemplated by Germany in her latest military bill before the World War. Stress has been laid upon the peculiar and unique danger of the linking of autocracy and militarism in Germany and Austria. Such a combination is doubtless dangerous and deplorable, but it was not more noticeable in Germany and Austria than in Russia. . . . The war spirit in the British Navy and in the militaristic group in France was about as virulent and aggressive as that of Potsdam or Vienna from 1912-1914. . . . In addition to . . . [the] menacing general alignments and diplomatic antagonisms, it is essential to understand that there was especially high tension in the Spring of 1914. . . . In 1913 Germany and France provided for great increases in their land armament, and England began what almost might be called war measures in her navy organization and procedure. In the Spring of 1914 Austria could scarcely restrain herself from attacking Serbia, in spite of German opposition in the previous year. Germany was frightened by the cumulative progress of the Franco-Russian rapprochement and the substitution of a more chauvinistic French Ambassador at St. Petersburg, and even more by the Russo-British naval conversation of 1914. German soldiers, statesmen and publicists openly declared that, though pacific in intent, Germany was prepared for a vigorous defense against a wanton attack. Russia was controlled by the militaristic group, who were encouraged by Poincaré and his followers in France. . . . By the middle of June this feverish excitement and mutual suspicion had become alarmingly apparent alike to domestic observers and to foreign visitors. A crisis in such a state of affairs was likely to precipitate a panic and make it difficult to obstruct and control headstrong and arbitrary action. Such was the European situation when Franz Ferdinand, heir to the Austrian throne, was slain in Serajevo on June 28, 1914."—H. E. Barnes, *Assessing the blame for the World War* (*New York Times Current History*, May, 1924).

C. PREPARATION FOR WAR

(a) **Mobilization and concentration.**—As soon as the probability of war loomed darkly over Europe, the complex machinery of mobilization was set in motion. Millions of men exchanged their productive tools of peace for the destructive implements of war. From farm and factory, studio and office, they flocked to barracks, public places and concentration areas. Up to August 4, when Great Britain entered the war, the European situation presented a curious tangle of international complications. Austria was at war with Serbia alone; Belgium was at war with Germany, but not with Austria; Italy, the third partner in the Triple Alliance, had declared her neutrality. France, Great Britain and Russia were at war with Germany, but not with Austria-Hungary. Nor were mobilization activities limited to belligerents alone. Some of the smaller neutral European states, fearing a still further spread of the conflagration, openly or secretly placed themselves in a state of defense. On July 28, the British fleet was sent to its war station. "It must go there at once, and secretly; it must be steaming to the north while every German authority, naval or military, had the greatest possible interest in avoiding a collision with [the British]. If it went thus early it need not go by the Irish Channel and northabout. It could go through the Straits of Dover and through the North Sea, and therefore the island would not be uncovered even for a single day. . . . [It was] decided that the fleet should leave Portland at such an hour on the morning of the 29th as to pass the Straits of Dover during the hours of darkness . . . and with the utmost precaution proceed to Scapa Flow. . . . [The order given to Sir George Callaghan, the commander-in-chief of the home fleets, reads as follows:] 'To-morrow, Wednesday, the First Fleet is to leave Portland for Scapa Flow. Designation is to be kept secret except to flag and commanding officers. As you are required at the Admiralty, Vice-Admiral 2nd Battle Squadron is to take command. Course from Portland is to be shaped to southward, then a middle channel course to the Straits of Dover. The Squadrons are to pass through the Straits without lights during the night and to pass outside the shoals on their way north. *Agamemnon* is to remain at Portland, where the Second Fleet will assemble.' . . . The German ambassador lost no time in complaining of the movement of the Fleet to the Foreign Office. According to the German Official Naval History, he reported to his Government on the evening of the 30th that Sir Edward Grey had answered him in the following words: 'The movements of the Fleet are free from all offensive character, and the Fleet will not approach German waters.' 'But,' adds the German historian, 'the strategic concentration of the Fleet had actually been accomplished with its transfer to Scottish ports.' This was true. We were now in a position, whatever happened, to control events, and it was not easy to see how this advantage could be taken from us. A surprise torpedo attack before or simultaneous with the declaration of war was at any rate one nightmare gone forever."—W. L. S. Churchill, *World crisis*, pp. 224-226.—See also ENGLAND: 1914 (July-August).—"On July 29th, the [British] Government, . . . at 2 P. M., ordered the precautionary measures arranged by the General Staff to meet an immediate prospect of war, to be put in force. These affected the Regular troops only, and in-

cluded the recall of officers and men on leave and furlough, and the manning of the coast defences. The Belgian Government decided to place the Army upon its 'reinforced peace footing.' [See BELGIUM: 1914: World War.] On the same day, the 29th, the British Ambassador at Berlin was asked by the Chancellor to give assurance of England's neutrality if Russia should attack Austria and an European conflagration ensued. [See above: Diplomatic background: 34.] To this significant enquiry Sir Edward Grey, the Minister for Foreign Affairs, responded on the 30th by a refusal to entertain the proposal." J. E. Edmonds, *Military operations, France and Belgium (History of the Great War, p. 24)*.—"Sir Edward's conversation with Lichnowsky on the morning of July 31 took place, and his instructions to Berlin were dispatched in ignorance of the fact that Russia, who had mobilized 25 divisions on July 29 in answer to Austria's 22, had now mobilized her entire forces. According to Sukhomlinoff, the Russian War Minister, the Tsar signed the order for general mobilization on the afternoon of July 29; but, after a friendly telegram from the Kaiser, he ordered that mobilization should only take place against Austria. The War Minister, however, and the Chief of the Staff allowed the general mobilization to continue [see above: 38], while concealing it from the Tsar and denying it to the German Military Attache. Their disobedience was not discovered at the time; for in the afternoon of July 30, Sazanoff, the War Minister and Minister of Marine, on learning of the bombardment of Belgrad, agreed that general mobilization was necessary. The Tsar's consent was obtained the same night, and early next morning the capital was placarded with notices. A few hours later Austria ordered general mobilization, and Germany proclaimed *Drohende Kriegsgefahr*. [See above: 33.] The Tsar appeared to the German Ambassador hardly to realize the significance of what he had done, and in a telegram to King George he described the German ultimatum which followed as quite unexpected; but his Foreign Secretary and War Minister could be under no such delusion. On July 25, Sir George Buchanan had warned the former that if Russia mobilized, Germany would not be content with mere mobilization or give Russia time to carry out hers, but would probably declare war at once. Similar advice had been proffered from Paris, which was not consulted before the irrevocable step was taken. . . . The Austrian ultimatum [to Serbia] was beyond comparison greater than the guilt of the Russian mobilization, because it was first in time and invited the response which it received. The world war was nevertheless precipitated by the action of Russia at a moment when conversations between Vienna and Petrograd were being resumed, when Bethmann-Hollweg was at length endeavoring to restrain his ally, and when the Tsar and the Kaiser were in telegraphic communication. The ultimatum which was dispatched to Petrograd on the afternoon of July 31, demanding the cessation of general mobilization within twelve hours, was hailed throughout Germany as the inevitable reply to the dread menace of invasion. Had the German Government, on the other hand, been as anxious for peace as the British Cabinet, it might, like Austria, have answered the Russian mobilization by counter-mobilization. In the opinion of Falkenhayn, Minister of War, the ultimatum, though justifiable, was

over hasty and unnecessary; but the Chancellor, convinced that Russia meant business, supported the demand of Moltke, Chief of Staff, for the declaration of war in order that she should not have a longer start in gathering her gigantic forces for the onslaught. Moltke added that to negotiate under the pressure of Russian mobilization would be a national humiliation."—G. P. Gooch, *History of modern Europe, 1878-1919*, pp. 546-547.—On the 31st "Germany made a formal proclamation of 'imminent danger of war' (*drohende Kriegsgefahr*), which meant practically the introduction of Martial Law and the suspension of the usual civil rights, and permitted the calling to the colours of six classes of the Reserve; at the same time she presented an ultimatum to the effect that, unless Russia ceased mobilization within twelve hours, she herself would mobilize upon both frontiers. Significantly enough, Turkey also ordered mobilization upon this day. Sir Edward Grey, meanwhile, sent an identic request to Germany and France to enquire whether they would respect Belgian neutrality. On the 31st July

... [It was proposed that orders for the annual training of the Territorial Force should be cancelled.] The Government considered, however, that the countermanding of the orders for Territorial training would be construed as not less, menacing than the order for mobilization itself; and they shrank from any measure which might seem to extinguish the last hope of peace. At 12 noon on the 1st August, the German ultimatum to Russia expired, and a general conflagration became inevitable. The [British] Cabinet at 2 P.M. on the 2nd cancelled the orders for Territorial training and at 6 P.M. those for the manœuvres of the Army, but still issued no orders for mobilization. The Royal Navy was quite ready for active service; and the French Ambassador was assured that, if the German Fleet should enter the North Sea or the Channel with hostile designs against France, the British Fleet would give France its protection. [See also above: Diplomatic background: 49.] Beyond this conditional promise of naval intervention the Cabinet would not go without consulting Par-

RECRUITING NEAR MALMESBURY, ENGLAND

France answered with an unequivocal affirmative. [See also above: Diplomatic background: 36.] Germany, however, sent only an evasive reply; and on the 1st August both France and Germany ordered general mobilization. The beginning of mobilization in France raised a serious question for Great Britain. There was, it is true, no promise of assistance to France, and the British Government was free to decide, untrammelled, for peace or war. But a scheme had been elaborated, in the event of certain contingencies, between the General Staffs of the two countries; and an essential point in this scheme was that the first movement of the British advanced parties, stores and so forth, should begin on the first day of mobilization. Assuming this coincidence of movement and mobilization, it was reckoned that six divisions—or four, if six could not be spared—one cavalry division and one cavalry brigade could be transported from Great Britain to concentration areas between Avesnes and Le Cateau, and would be ready to advance from them on the sixteenth day after the order for mobilization had been issued. That the British mobilization, if it should take place at all, would be later than the French was now obvious.

Parliament. Parliament was consulted on the following day, the 3rd August; but in the meanwhile a most momentous event had occurred. . . . Whilst coming down to the House . . . [Sir Edward Grey] had been informed that King Albert had telegraphed to King George invoking England's diplomatic intervention to safeguard the integrity of Belgium. . . . [On August 3, the British War Office issued the following communique: 'With reference to this afternoon's announcement of the Government of their decision to mobilize, it is officially stated that the Proclamation will be signed to-morrow and the necessary orders for the Reserves to return to the colours and the Territorials to be embodied will then be issued.' (See also ENGLAND: August 3.)] It was now clear that . . . mobilization must take place at least three days later than the French, and that even so movement could not be simultaneous with it. The Government, however, reckoned that by this delay they had gained more than they had lost by securing the unanimity, or approximate unanimity, of the nation and the benevolence of neutrals. On the 3rd August, at 6.45 P.M., Germany declared war on France, making alleged violation of her frontier by patrols and of her terri-

tory by aviators a pretext. Italy, though a member of the Triple Alliance, declared that she would maintain her neutrality in the impending struggle. . . . On the morning of the 4th August . . . [Germany] declared war on Belgium, and two of her cavalry divisions passed the frontier; and in the afternoon the heads of infantry columns also entered Belgium. [See also above: Diplomatic background: 61.] Early in the afternoon of the 4th August Sir Edward Grey telegraphed to the British Ambassador at Berlin instructing him to ask for his passports if no satisfactory answer were given regarding the observation of Belgium's neutrality by 12 midnight (11 P.M. Greenwich mean time). . . . At 4 P.M. on the 4th August . . . the order for mobilization of the Expeditionary and Territorial Forces was issued by the British Government. As a matter of fact, mobilization occurred at an extremely awkward moment, for the 3rd August had been Bank Holiday and, as usually is the case in the middle of summer, Territorial units were in the act of moving to various camps for their annual training when the orders cancelling it arrived. Hence arose the question whether the existing time-tables for concentration should stand, or whether the movements by railway should be postponed. The Cabinet decided for a short postponement, and gave orders . . . that the embarkation of the Expeditionary Force should not begin until the 9th, and for the present to hold back the 4th and 6th Divisions. Meantime the mobilization of the various units proceeded with the smoothness which had been anticipated. In all essentials everything went 'according to plan'; and even the task of collecting 120,000 horses was accomplished within twelve days."—J. E. Edmonds, *Military operations, France and Belgium, 1914 (History of the Great War, pp. 24-28, 30)*.

The following table makes the dates of mobilization clear:

- July 25, 3 P.M. Serbia orders general mobilization.
- July 25, 9.30 P.M. Austria orders mobilization of 8 out of 15 army corps, i.e., partial mobilization in the south against Serbia alone.
- July 28, 5 P.M. England orders the first fleet to Scapa Flow.
- July 29. Russia orders mobilization of the four military districts of Kiev, Odessa, Moscow, and Kazan, i.e., partial mobilization in the south against Austria.
- July 30, 4 P.M. Tsar decides to order general mobilization of all the Russian forces. Mobilization orders dispatched about 7 P.M.
- July 31, 11.30 A.M. Francis Joseph orders general mobilization of the Austria-Hungarian army.
- August 1, 3.40 P.M. General mobilization of the French army and navy.
- August 1, 5 P.M. General mobilization of the German army and navy.
- August 2, 1.25 A.M. English Naval Reserve called up to complete the mobilization of the navy.
- August 3, 11 A.M. Decision to mobilize the British army (six divisions, i.e., the Expeditionary Force).
- August 4, 4 P.M. Proclamation issued for mobilization of the Expeditionary and Territorial Forces.

(b) Plan of campaign.—Routes into France.—German strategy.—French military theories.—

Plan XVII.—The German military plans for a war on two fronts—against France and Russia simultaneously—had undergone considerable revisions and modifications during the forty years preceding the outbreak of war in 1914. The great von Moltke (1800-1891), as well as his successor Count Waldersee leaned to the opinion that such a war could best be conducted by a defensive campaign on the west and an offensive on the east, that the French should be held passive so far as possible while Russia was being defeated, after which France, deprived of her sole ally, could be more easily brought to terms. "The plan of campaign which was inaugurated in August 1914 was conceived by General Count von Schlieffen [1833-1913], one of the greatest soldiers who ever lived. It was planned by him, in the event of France not respecting Belgium's neutrality, or of Belgium joining France. On this assumption the advance of the German main forces through Belgium followed as a matter of course. Any other plan of campaign would have been crippled, owing to the danger from Belgium to the German right flank, and would have precluded a quick and decisive blow at France, which was essential in order to meet in time the great danger of a Russian invasion into the heart of Germany. In the assumed military situation, as countless war-games had abundantly demonstrated, an offensive against Russia, with simultaneous defensive operations in the West, implied, as a matter of course, a long war, and was, therefore, rejected by Count von Schlieffen. When there was no longer any doubt as to the attitude of France and Belgium, Count von Schlieffen's scheme was carried into execution."—E. von Ludendorff, *Ludendorff's own story, pp. 28-29*.—For an offensive campaign against France there were four principal routes of invasion open to Germany: "She could, for example, concentrate her main armies in the valley of the Rhine with bases at Strassburg and Mülhausen, and in the country about Metz to enter by the so-called Lorraine gateway. An advance westward from between Strassburg and Mülhausen would encounter the steep east-facing scarp of the Vosges Mountains, a topographic feature which . . . imposes practically impossible conditions upon a German offensive. On the other hand the main advance from this region might be made by turning either end of the mountain barrier, passing through the Belfort gateway between the Jura Mountains and the southern end of the Vosges; or between the north end of the range and Luxembourg, through the gateway of Lorraine. In the first instance the ring fortifications of Belfort block the way, and since they effectively command every transportation line through the pass their complete reduction would be necessary before an advance would be possible. From the southern foothills of the Vosges to the neutral territory of Switzerland in the Jura foothills the distance is but ten or fifteen miles, and the narrowness of the gap would favor the defense and prevent satisfactory maneuvering of the attacking forces. Firmly entrenched in the gateway, their left flank secure against the difficult Vosges and their right flank protected by the neutral Swiss hills, supported by one of the four strongest fortified camps in France and supplied with adequate rail connections with the rear. The French armies could render an advance into their country by this route a slow and costly undertaking. Rapidity of action was the very essence of the German plan of campaign. German strategists and statesmen frankly asserted that to win the war the German armies must drive swiftly to the heart of France and bring that country to

her knees before Russia had time to mobilize and become a pressing danger in the east. In the German plan no route of invasion was practicable which would impose on the advance any appreciable delay. The Lorraine gateway is broad and since the war of 1870, largely in German territory. Metz is an admirable fortified base and is connected with Strassburg by excellent rail communications. It was by this route that the Prussian armies passed in the former war, whereas at the gate of Belfort they knocked in vain. West of Metz the German border is closer to Paris than at any other point. Here, then, would seem to be an appropriate point from which to launch the main attack upon the French capital. But to reach this conclusion is to forget the surface configuration of the Paris Basin. Just over the French border is the broad, marshy plain of the Woivre. Dominating it on the west is the steep escarpment crowned at short intervals by permanent fortifications from Verdun to Toul, and offering exceptionally advantageous positions for temporary field

first route, the invading armies would encounter the same difficult terrain of the Paris Basin. To a lesser degree the route from Cologne, around the north side of the Ardennes, is open to the same objections. There remains the fourth route, by way of the Belgian plain. Entering, as before, by the Liège gateway, invading armies could spread westward around the northern side of the Ardennes, through Louvain and Brussels, swinging gradually southwest past Mons and Charleroi, Cambrai and Le Cateau, on past St. Quentin, and so down to Paris. The left flank could profit by the Sambre-Oise valley route, while the right flank could swing as far out over the plain as circumstances required. The pathway here is broad and level and no topographic obstacle bars the way. It is a route which enables an invader to take in the flank the entire series of plateau barriers farther east. Roads and railways are excellent and numerous, permitting the rapid simultaneous advance of different columns of troops. The country is fertile and highly productive, providing sus-

RESERVISTS ON THE WAY TO RAILROAD STATION, BERLIN

works commanding the plain below. At the two points mentioned the only practicable gateways through the barrier are heavily fortified. Beyond to the west the same unfavorable topography is repeated again and again; always a steep scarp toward Germany, commanding a plain over which the invading troops must advance; always a gentle back slope down which the defending armies might retreat to the next scarp if too heavily pressed, while rearguards on the formerly occupied crest held the invaders temporarily at bay. If victorious along one plateau scarp, the invading armies would be checked at the next and compelled to fight the battle anew. Delays at the fortified gateways must be expected even if the forts were invested and the main armies pressed on to the barrier next west. Narrow and few in number, the gateways afford insufficient lines of communication for vast armies advancing and fighting. . . . Clearly the route from the middle Rhine country westward into France must be eliminated as the main path of invasion in a campaign demanding rapidity of action as its chief object. A second route of invasions from the northeast following the course of the Moselle trench to Luxemburg and thence into France by way of Longwy or Metz. As in the

tenance for large armies. With the occupation of this route would go the conquest of deposits of coal and iron of immense importance to the invaders. Back of the armies operating in France would be a broad network of first-class lines of communication and supply. . . . There existed, however, some serious objections to an advance on Paris by way of the Belgian plain. The distance from the nearest point on the Franco-German boundary, near Metz, to Paris is about 170 miles as the aeroplane flies. From the German-Belgian border to Paris, via the Belgian plain, the distance is approximately 250 miles. The latter route is, therefore, nearly fifty per cent. longer than the legitimate route directly from German territory into France. Not only this. The longer route involved the violation of Belgian neutrality, and if Belgium and England were faithful to their treaty obligations and true to their national honor, must inevitably bring the Belgian army and the British army and navy into the field against the invader. Yet this was precisely the route over which the great mass of the German armies were hurled."—D. W. Johnson, *Topography and strategy in the war*, pp. 20-25.

"When called upon, the German armies were

mobilized in 1914 with the same perfection of organization and equipment that signalized the mobilization of 1870, but in 1914 the 'prearranged' plan went far beyond the frontier, and instead of the mobile armies of 1870, there was a continuation of the plotted-out schedule. The German plan of 1914 was a repetition of the German plan of 1870, which was directed against the French armies, but always with the ultimate object of the capture of Paris. This goal of his strategy was emphasized by the Moltke of 1870 in no uncertain words. He described his plan as 'fixed from the first upon the enemy's capital, the possession of which is of more importance in France than in other countries.' In 1914 the plan of war of the German Great General Staff also had for its military objective the French armies. It was again the German aim to 'attack the enemy at once' with overwhelming momentum, as in the war of 1870, but again the ultimate goal of the German strategy was the possession of Paris. This must be kept in mind to understand the strategy of the German drive in 1914. Their constant effort was to smash and thrust aside the French armies, in order that they might occupy Paris. It is wrong to say that the Germans were attempting the capture of the French capital as their one military objective. Their plan was first to deal with the French armies, but their firm belief was that to take Paris, with an enormous levy of money upon the city, would again paralyze France, as in 1870. . . . It must be admitted that success in winning this final goal would have justified the strategy of the Germans, but the execution of this plan of war had been committed for years to a new 'opening'—to borrow a term from chess. Instead of making a direct invasion of France, across the border between the two countries, the German Great General Staff had deliberately planned, in defiance of international law and with full intention of breaking all treaties, to invade France through neutral Belgium, with a supporting army in Luxemburg. This had been plotted out for years in advance, and all their machinery of mobilization and invasion had been tied fast to this plan, to avoid the difficult frontier terrain and the theoretical strength of the French frontier fortresses."—T. G. Frothingham, *Guide to the military history of the World War, 1914-1918*, pp. 12-14.—"Obviously if Germany were attacked by France and Russia, her only hope of success lay in destroying each in detail; therefore in a swift conquest of France first, leaving her free to take Russia next. Equally obviously, therefore, Germany *must* take the offensive. Speed was essential—a long-drawn struggle meant starvation, bankruptcy, and inevitable defeat, especially with Britain's sea power against her. . . . She could leave Austria, stiffened by Germans, largely to hold Russia whilst she flung the whole weight of her might against France. Her man-power was seven to four against France and Britain combined, in a short war—her artillery and munitions were vastly more than seven to four. To turn the French fortified zone north of Verdun by a rush through Belgium had indeed been an open secret in German military writings. It has led to its being accepted as a truism, and this has led nearly every writer upon this war to see what he went forth to see—the swift rush of the German hosts through Belgium on to Paris."—H. Macfall, *Germany at bay*, pp. 110-111.

"Germany's declaration of war did not take France by surprise. For more than a generation she had prepared for the struggle. . . . If she was unprepared, it was only in the sense that the

[French] General Staff had staked everything on a plan which was humanly impossible; while it counted so absolutely upon the success of that plan that it neglected to take even ordinary precautions to meet the situation which was bound to arise in the event of a reverse. In 1911 General Michel was Vice-President of the Conseil Supérieur de la Guerre, and also the designated Commander-in-Chief of the French armies in the event of war. In February of that year he submitted to the then Minister of War, Messimy (himself a soldier), a plan of campaign, based upon a theory that the Germans would invade France by the left bank of the Meuse, and would execute a turning movement on such a vast scale as would, from the outset, necessitate putting their reserves in the first line. Michel, therefore, proposed taking strategic safeguards against this movement, and also making a much more extensive use of the French reserves than had been previously contemplated. A month later Michel gave a conference in which he criticised and opposed the idea of an offensive à *Vouvrance* which was then so popular in French military circles. He therefore incurred the hostility of the younger members of the Staff as well as some of his own immediate colleagues; while even Pétain, then a colonel, was heard to say that Michel had lost the confidence of the Army. In July Messimy obliged the latter to place part of his proposal before the Conseil Supérieure de la Guerre. He received no support whatever, and Messimy, therefore, forced him to resign the vice-chairmanship as well as the eventual leadership in time of war. . . . Whatever may be the measure of Michel's ability, later events proved that his vision of the future was correct. He foresaw both what Germany would do and what was necessary for the protection of France. . . . Messimy finally offered the post to Joffre, who was already a member of the Conseil Supérieure de la Guerre, and would not come under the age-limit for several years. . . . The General Staff was dominated by a group of comparatively young and extremely ambitious officers, who were entirely possessed by the conviction that an offensive à *Vouvrance* would win the next war with Germany and that nothing else could; that the conflict would be of short duration and the first battles decisive; which latter opinion was also held by von Schlieffen. . . . In one sense it is true that only an offensive can lead to a decision. But that dictum does not mean that an offensive will always succeed. The time, to some extent the number of the opposing forces, and, in these days, above all, the comparative artillery strength must be taken into account. But while the French General Staff adopted the doctrine with enthusiasm, it entirely lost sight of these considerations. . . . Even Bernhardt, the great apostle of the offensive, has written: 'If we want to count upon military successes, we must not forget that attack is infinitely more difficult than ever, and that the assailant, to obtain the victory, needs to have a very marked superiority. It is the task of strategy to assure it.' It was the greatest fault of the French General Staff, before 1914, that it entirely neglected or ignored that task, apparently believing that material disadvantages could be overcome by engendering, through constant teaching and orders, a spirit of aggression. Nor did all British military authorities share the blind faith of the French General Staff that an offensive à *Vouvrance* was a sure road to a speedy victory. In August, 1914, Lord Kitchener not only warned the French military mission that the war would be a long one, but he also expressed

the opinion that the French plan was dangerous. . . . In 1913 a pamphlet appeared, entitled *La Concentration allemande*, which, to all intents and purposes, gave utterance to the views and plans of the General Staff. Although it was published anonymously, military circles were generally aware of the identity of the author [Lieutenant-Colonel, afterwards General, Buat]. In order to strike the imagination, Buat pretended that, while travelling in Germany, he had found a copy of the German plan of campaign, which had been left in a railway carriage. According to this, the Germans would enter France with twenty-two army corps—that is, one million three hundred thousand men—of whom nine hundred thousand would belong to

the active army and four hundred thousand would be reservists, who would be given only such secondary missions as the occupation of conquered territory. Part of these forces were to come by the right bank of the Meuse. Buat, therefore, concluded that the French forces ought to face north-east on a line extending from Belfort to Mézières. Incidentally, he thus disclosed to the Germans the French plan of concentration. As a matter of fact, the then existing plan XVI *bis* provided for a concentration exactly from Belfort to Mézières, although its successor, the more famous Plan XVII, extended the line to Hirson. [This plan became operative in April, 1914].—L. Lyon, *Pomp of power*, pp. 18-24.

D. FIRST YEAR OF WAR: 1914

I. WESTERN FRONT

(a) Belgium invaded.—Retreat of the Allies.—“When during the night of the 3rd-4th August it became clear that the Germans intended to advance through Belgium, with or without permission, the Belgian Staff at once took the measures necessary for the defence of their country's neutrality against Germany. . . . On the morning of the 4th, when German cavalry crossed the Belgian frontier and moved upon Visé, north of Liège, it found the bridge over the Meuse broken, and the western bank held by Belgian troops. Two regiments were then pushed northward to Lixhe (3 miles north of Visé), where they crossed the river by a ford. The Belgians, finding their left threatened, thereupon fell back on Liège. By evening the heads of six small German columns of all arms which had crossed the frontier were nearly two miles into Belgium. Further concentrations were also reported to the south; and it became evident that a very large army threatened invasion along the lines of advance guarded by the fortress of Liège and by the 3rd Division. . . . For eighteen days the Belgians . . . faced . . . German invasion, delaying the hostile advance during a most critical period, and gaining time which was of priceless value to the Allies. In addition to this great strategic advantage, the fact that the first German operations against fortresses, conducted under the conditions obtaining in modern warfare, were so rapidly successful gave warning to the French to readjust their conceptions of the defensive value of their fortified front, and reorganize it on lines calculated to counter the effect of bombardment by heavy howitzers.”—J. E. Edmonds, *Military operations, France and Belgium, 1914 (History of the Great War, pp. 31-32, 35-36)*.—“It is probably quite true that the defence of Liège lasted longer than the Germans expected, but there seems no foundation for the idea that the delay which it entailed was in any way serious in its results on the plan of campaign. It is true that on the 10th of August von Bülow, who commanded the German Second Army, was ordered to be in position west and south of Liège on the 12th; that he found himself unable to comply with the order, as only one of the forts had fallen; and consequently he was not in the required position until the 17th. This looks at first like a loss of five days. But, as we know, ‘The pace of the wheel of the German Armies was to be regulated by that of the First and Second Armies’ (G. H. Q. Orders to the First Army). The concentration of the First Army east-

north-east of Aix-la-Chapelle was not completed until the 14th of August and it was actually a day earlier than this that its Commander, von Kluck, in accordance with orders from G. H. Q., began his advance, as the way through Liège had by then been cleared, so that it is difficult to see how the start could have been made any earlier. Had the Second Army gone forward to the line beyond Liège on the 12th, as arranged, it would still, it seems, have had to wait for the First Army—which was to play the leading rôle in the forthcoming operations—to come up level with it. But if further proof is necessary of the contention that the resistance of Liège counted for little in the subsequent course of the campaign, it will be found in the fact that from the beginning of the general advance the Germans were actually in front of their time-table. ‘By the 22nd day of mobilisation (23rd of August) the five Armies on the right were to have wheeled forward to the line Ghent-Mons-Sedan-Thionville. They were actually, as we know, slightly in advance of this in 1914. By the 31st day (1st of September) they were to be on a line Amiens-La Fère-Réthel-Thionville. Again, the Germans were slightly in advance of their plan.’ It seems clear, then, that the theory of the delay caused by the resistance of Liège is not borne out by the facts.”—“X,” *Some legends of 1914 (Journal of the Royal United Service Institution, no. 469, Feb., 1923, p. 90)*.—See also BELGIUM: 1914: World War; 1914: Germany and Belgian neutrality.—“The difficulty of the situation was that Belgium could have no settled plan of campaign. She had to face many ways and watch all her neighbours, and in her peace dispositions had one division in Flanders with an eye on England, one at Liège with an eye on Germany, and two near the French frontier to deal with France. After the German ultimatum, and not till then, the whole army faced eastward. On 5th August the Belgian forces were still in process of mobilization on the line of the river Dyle covering Brussels and Antwerp. The church bells were still ringing their summons at midnight, and the dogs were being collected from the milk carts to draw the mitrailleuses. The 1st Division was moved from Ghent to Tirlemont, the 2nd from Antwerp to Louvain, the 5th from Mons to Pervyse, the 6th from Brussels to Wavre. The movements were protected by the cavalry divisions, concentrated at Gembloux and moving on Waremmes, and two detached mixed brigades at Tongres and Huy. The 3rd Division was rushed to Liège, and the civic guard of that city took their stand by the side of the regulars. At full strength the force

should have numbered over 30,000 men; but as the mobilization was incomplete, it was little more than 20,000. The defenders of Liège were in the same position as the attackers—an improvised force, hastily put together and imperfectly equipped. No stranger medley of colour could be found in Europe than such a field army which lacked a field dress—the men of the line in their blue and white; the *chasseurs à pied* with their peaked caps, green and yellow uniforms, and flowing capes; and the Civic Guard, with their high, round hats and red facings. . . . By the afternoon of Tuesday, 4th August, the Belgians held the line of the south-eastern forts from Boncelles to Barchon, and cavalry patrols covered the gap between Pontisse and the Dutch frontier.”—J. Buchan, *History of the*

First Army of Kluck, and the Second Army of Bülow, forming the German right wing, were prepared to move through Belgium against the French left. The three armies in the center were to advance through the Ardennes upon the Central Meuse, and against the sector of Verdun. The German army of General Heeringen on the left was to oppose the expected French offensive in Alsace. The movements of these German armies had been timed to follow the ‘Schlieffen plan’ of a wide enveloping sweep through Belgium against the Allied left. The expected dislocation of the Allied armies on the left was to be followed by a drive of the German armies against the central group of French armies, the whole manœuvre pivoting upon Verdun. . . . Early on the fourth

BELGIANS DEFENDING THE RIVER BANK NEAR HAMME, BELGIUM

The bridge has been blown up to impede the progress of the Germans

Great War, v. 1, p. 128.—“The German forces brought into being for the assault on France were made up and placed as follows: On the extreme right, in the region of Aix-la-Chapelle, northeast of Belgium, was the German First Army, General Kluck; next in line the Second Army, General Bülow, near Limberg. These two armies, operating together, were to form the German right wing. In the center, ranged in order from west to east, were the army of Duke Albrecht of Württemberg; the army of the German Crown Prince; the army of the Crown Prince of Bavaria. (An additional German army under General Hausen was formed soon after, which was placed between the armies of Bülow and Duke Albrecht.) These three armies in the center were grouped upon the Neuchâtel-Metz line, and occupied Luxemburg. The army of General Heeringen was in the vicinity of Strassburg in Alsace, and formed the German left. . . . The

[August] the vanguard of Kluck’s army, commanded by General Emmich, began the fateful invasion of Belgium by occupying Visé. Advancing from Visé, this force was before Liège on the afternoon of August 4. Here an over-confident presumption that there would be no serious resistance by the Belgians was evident. Liège was a modern ring fortification of about thirty-one miles in circumference, with six major and six minor forts. Yet it is known that the Germans planned to take Liège by a *coup de main*, and they attempted an assault supported only by field artillery. This weak attack was repulsed by the Belgians,—and the Germans awoke to the fact that the Belgians intended to make a serious resistance against German invasion.”—T. G. Frothingham, *Guide to the military history of the World War, 1914-1918*, pp. 17-18.

Upon orders for general mobilization, the French

troops "proceeded to move to the places allotted to them by Plan 17. Before they had all reached their positions a modification of the plan became necessary; a modification which had been foreseen as probable and for which provision had been made. On August 4 the Germans attacked Liège, and German cavalry appeared in Belgium west of the Meuse. The 5th Army was thereupon ordered to take ground to its left towards the Sambre and the 4th Army to take its place around Mézières. On August 7 the advanced parties of the British Expeditionary Force landed in France; Sir John French had been asked by Joffre to assemble his little army just south of the fortress of Maubeuge, where it would be on the left of the 5th French Army in its new position. The principles of Plan 17 remained unchanged; there was still to be an advance by the 1st and 2nd Armies into Alsace and Lorraine, to be followed by an advance of the 3rd and 4th Armies into Luxembourg, which had been occupied by the Germans, and into the Ardennes. [See below: h, to k.] The 5th Army and the British Army held a watching brief on the left flank and were to be ready to advance into Belgium, either eastwards across the Meuse or northwards towards Brussels."—F. B. Maurice, *Military operations (Nations of today: France, v. 1, p. 182.)*—The French advance into Alsace-Lorraine was "politically advantageous in that it had strengthened French morale and had stirred up all France to seek the reconquest of the 'lost provinces,' but from a strictly military standpoint it had been unsuccessful if not disastrous. There remained the principal business of giving aid to the hard pressed Belgians and of checking the flood of German invasion before it had rolled quite to the French frontier. On August 20, with the arrival of the British Expeditionary Force under Field Marshal Sir John French and with the posting of a French army south of Namur and of two other French armies in the Ardennes, General Joffre gave orders for an offensive. On the next two days the French offensive in southeastern Belgium broke down completely. . . . The French were soon in precipitate retreat from the Ardennes toward Sedan, Montmedy, and Longwy, across the border. To the west, the Allies still had a chance of success if General Lanrezac's army and the British could obtain a decisive result. This was unfortunately not the case. . . . Obviously General von Kluck intended to overwhelm the two British corps and turn the flank of the allied line. Unwilling to be either outflanked or overwhelmed, General French abandoned his precarious position after a hot contest at Mons, August 23-24, and conducted a hasty retreat."—C. J. H. Hayes, *Brief history of the Great War, pp. 28-30.*—"On August 21 General French's army was in position near Mons in Belgium on the left of the French armies. At this time there were five French armies in line numbered in order from east to west. The French left had been swung forward into Belgium, and it rested near Charleroi in touch with the British at Mons. In this region of Charleroi the first engagement with the advancing Germans took place (August 22) and the British army was also engaged (Mons, August 23). It soon became evident to the French commander that the German thrust was too powerful to be checked by the forces at his command in his advanced positions. . . . It clearly was necessary for the French general not only to abandon all thoughts of an offensive for the time being, but to give up any idea of holding his ground in Belgium. Convinced of this, General Joffre ordered a retreat, and he began to fight a cool, wary, retiring battle, falling

back successively from the lines of the Meuse and Aisne (August 23-28). All this time he was gathering his strength and preparing to take the offensive in turn when the right opportunity came." [See below: o.]—T. G. Frothingham, *Guide to the military history of the World War, 1914-1918, pp. 23-25.*

(b) Defense of Liège.—"Leman, a great [Belgian] soldier, defended the forts built by Brialmont. Both defender and designer were justified of their work. On August 5 the seventh German Corps attempted to rush the gaps between the forts. These gaps were three miles wide, but were filled with entrenched infantry. The attack was boldly pressed home, but it completely failed. The German loss was considerable. Two other corps were called up, and again on August 7 the attack was renewed, but with no better result. . . . There were 25,000 in the town and 120,000 outside, but they were still outside at the end of the assault. Liège, however, had one fatal weakness. Its garrison was far too small to cover the ground. With twelve forts three miles apart it is clear that there were intervals of, roughly, thirty-six miles to be covered, and that a garrison of 25,000 men, when you had deducted the gunners for the forts, hardly left the thinnest skirmish line to cover the ground. The instant that they spread out there were bound to be places where they could march almost unopposed into the town. This was what happened. The town was penetrated, but the forts were intact. General Leman, meanwhile, seeing that the town itself was indefensible, had sent the garrison out before the place was surrounded. Many a Belgian soldier fought upon the Yser and helped to turn the tide of that crowning conflict who would have been a prisoner in Germany had it not been for the foresight and the decision of General Leman. The Germans were, in the town upon the 8th, but the forts still held out and the general advance was grievously impeded. Day followed day, and each beyond price to the Allies. Germany had secretly prepared certain monstrous engines of war. . . . These were huge cannon of a dimension never before cast—42 centimeters in bore (16 in.). More mobile and hardly less effective were some smaller howitzers of 28 centimeter calibre . . . from the Austrian foundries at Skoda. Brialmont, when he erected his concrete and iron cupolas, had not foreseen the Thor's hammer which would be brought to crush them. One after another they were smashed like eggs. . . . But already the second week of August was at an end—the British were crowding into France, the French line was thickening along the frontier."—A. C. Doyle, *British campaign in France and Flanders, 1914, pp. 45-47.*—"On August 6, while the Germans were in force before [Fort] Barchon in a night attack, an attempt was made on General Leman, who occupied temporary headquarters with the General Staff in the Rue Sainte Foy. Towards half-past four in the morning a body of about one hundred men with two officers . . . represented themselves to the advanced posts of the fort of Pontisse as being Englishmen who had come to the aid of Liège and asked to be conducted to the General Staff. They were soldiers of a Hanoverian regiment and bore on their sleeves a blue band with the word 'Gibraltar' which caused them to be taken for British sharpshooters. . . . A German officer asked of the sentinel on the door an interview with General Leman. The officers of the latter, who now appeared, understood the ruse at once, and drew their revolvers. Shots were exchanged. . . . The Germans attempted to enter the offices, of which the doors had been closed. They fired through the

windows, and even attempted to attack the house by scaling the neighbouring walls. General Leman, who was working, ran out on hearing the first shots. He was unarmed. He demanded a revolver. Captain Lebbe, his aide-de-camp, refused to allow him to expose himself uselessly. . . . With the help of another officer, the captain placed his general in safety. [After the Germans had been beaten off] the general retired . . . to the fort of Loncin. . . . Every place swarmed with Germans, 40,000 at least, an army corps which had spent a day and a night in fortifying themselves. . . . Fighting took place well into the night, the enemy being repulsed at Boncelles twice. . . . General Leman considered that he had obtained from his troops the maximum effort of which they were capable and ordered a retreat. It was executed in good order, and the enemy had suffered so severely that they did not dream of pursuit. . . . Although

would be a cruel massacre, but that the higher interests of Belgium compelled him to impose this sacrifice on the town of Liège. At 9 p.m. fresh shells fell on different parts of the city. . . . This bombardment lasted till 2 a.m. . . . On Friday, August 7th, at 3 a.m., the bombardment of Liège began again, chiefly directed against the citadel, where only a few soldiers now remained. These evacuated the place after setting fire to some provisions they were unable to carry off. The population . . . took refuge in the cellars. . . . On this Friday the Germans penetrated into the town at five o'clock in the morning by the different bridges which had remained intact. . . . Count Lammsdorf, Chief of the Staff of the 10th Corps, Commander of the Army of the Meuse, arrested Burgomaster Kleyer at the Town Hall, and conducted him to the citadel. . . . He was simply authorized to pass through the German lines with a safe conduct, to

MOUNTING A 12-INCH AUSTRIAN HOWITZER

The type of gun used by the Germans in the operation against Liège and Namur

this retreat left behind a few men with several guns, it may be said to have been effected in good order. . . . The terrified population from Bressoux began to arrive. There were people half dressed, but who carried some object which to them seemed the most precious. . . . The men carried children, while women followed painfully loaded with household goods. . . . The cannon thundered all night. The second bombardment lasted till two o'clock. Several projectiles now fell upon the citadel, where everything was in readiness to set fire to the provisions and ammunitions. . . . By ten a.m. the citadel had been evacuated, only very few persons remaining, among them a major, who hastily hoisted a white flag. Burgomaster Kleyer awaited developments at the Town Hall. At half-past three, he received envoys, who demanded the surrender of the town and forts. Put into communication with General Leman, who was all the time at Loncin with his staff, they informed him that if the forts persisted in their resistance, the town would be bombarded a third time. General Leman replied that the threat was an idle one, that it

discuss the matter with General Leman, or even with the King himself. . . . It was finally decided to approach General Leman with a message which was entrusted to the burgomaster, the Bishop of Liège, and M. Gaston Grégoire, permanent deputy. These gentlemen repaired to the citadel in search of the promised safe conduct. They were met there, according to the demand of Count Lammsdorf, by some prominent Liège citizens, to whom he had expressed his desire to explain the situation. At the moment the three delegates were about to depart on their mission, with a good faith upon which it would be foolish to insist, the German commander declared that all the persons present were detained as hostages. . . . The same day at 9 a.m. the last train left Liège for Brussels with numbers of fugitives . . . about five thousand. From this moment and for several days Liège was absolutely cut off from the rest of the world. On Saturday, August 8, while the Germans were methodically organizing the occupation of Liège, Burgomaster Kleyer was authorized to wait upon the King, in order to discuss the surrender of the

forts. . . . The King was consulted, and the reply brought back to Liège was the one the mayor had foreseen.

"The same day saw the appearance of the following order of the day addressed to the soldiers of the army of Liège:

"Our comrades of the 3rd Army Division and of the 15th mixed brigade are about to re-enter our lines, after having defended, like heroes, the fortified position of Liège. Attacked by forces four times as numerous they have repulsed all assaults. None of the forts have been taken; the town of Liège is always in our power. Standards and a number of prisoners are the trophies of these combats. In the name of the Nation I salute you, officers and soldiers of the 3rd Army Division and the 15th mixed brigade. You have done your duty, done honour to our arms, shown the enemy what it costs to attack unjustly a peaceable people, but one which yields in its just cause an invincible weapon. The Fatherland has the right to be proud of you. Soldiers of the Belgian Army, do not forget that you are in the van of immense armies in this gigantic struggle, and that you await but the arrival of our brothers-in-arms in order to march to victory. The whole world has its eyes fixed upon you. Show it by the vigour of your blows that you mean to live free and independent. France, that noble country which has throughout history been associated with just and generous causes, is hurrying to our aid and her armies will enter our territory. In your name I address them a fraternal salute.—ALBERT."

"General Leman was shut up in Loncin, one of the chief forts, which commanded the road towards Wareme and Brussels. . . . The enemy was anxious to cut all the communications between the forts, but soldiers volunteered for carrying messages to the different commanders. Several succeeded, but many were killed, for the investment became steadily tightened. Indeed, certain gaps, where the ground was most broken, could not be swept by the guns from the forts, and, under cover of the night, troops ensconced themselves there comfortably. Moreover, the Germans, having received reinforcements and heavy artillery, undertook the siege systematically, first of Barchon, which it was unable to take by storm any more than Boncelles, but which it subjected to a formidable deluge of shells. Barchon could only reply haphazard to heavy guns the position of which it could not tell. It was, indeed, deprived of its observation posts, and was in the position of a blind man desperately parrying the blows of an adversary who could see where to strike. The struggle was not for long, and the fort, reduced to impotence, left a wide breach through which the invader scrambled. Through there he could also introduce his heavy siege guns, howitzers of 28, and even pieces of 42 cms. The enemy then followed a tactic which was to succeed rapidly. He attacked the different fortifications in a reverse way. Thus Loncin, Lantin, Liers, and Pontisse were bombarded by batteries placed in the citadel itself and to which the Belgians could not reply without shelling the town and doing frightful damage. . . . Forts Boncelles and Embourg were attacked by guns placed on the hill at Tilff, a pretty village, which would have been completely destroyed had the firing been responded to. Finally, along the line of the plateau of Herve, no longer dominated by Barchon and Fléron, now destroyed, the enemy was able to bring into the very centre of the town four of

those howitzers of 42 cms. which were later to bombard Namur, Maubeuge, and Antwerp. The following are the dates on which the different forts succumbed: Barchon and Evegnée fell on August 9th. . . . Pontisse, which had so usefully barred the passage of the enemy below Visé, did not give way till the 12th. On the 13th Embourg surrendered after a twenty-six hours' bombardment. The same day saw the fall of Chaudfontaine and Namèche, where two accidents happened worthy of being related. A shell burst on a cupola gun as it was finishing its movement after being loaded. The whole gun was shattered and ten men were wounded. A little while later, a shell entered the fort through the embrasure and set fire to the powder magazine. The 14th saw the fall of Boncelles, Liers, and Fléron. Boncelles was bombarded unceasingly for a whole day and the following morning. It was nearly destroyed, and may be considered as the fort which was the centre of the worst carnage of German soldiers. To get the better of the obstinate resistance of Fléron (Commandant Mozin), the Germans united twenty guns by an electric battery and fired them all off at the same time upon the fort, which trembled in its massive foundations. On the 15th, Loncin and Lantin fell, the defenders firing until they were overcome by asphyxia. On the 16th, it was the turn of Flemalle, and on the 18th, of Hollogne. General Leman in Fort Loncin continued to maintain the defense until he fell unconscious from asphyxiating gas and in this condition was captured by the Germans."—C. Browne, *Defence of Liège* (*English Review*, Apr., 1915).—See also below: Miscellaneous auxiliary services: X. Alleged atrocities: a, 2.

(c) Movements in Belgium during siege of Liège.—I. GERMAN ADVANCE.—On August 9 the Germans made overtures to King Albert through the Dutch government to cease from hostile opposition and allow the German armies free passage through his kingdom, solemnly asserting that they had no intention of appropriating Belgian territory. The Belgian government replied that it would remain faithful to its international obligations. German troops which had crossed the left bank of the Meuse, north of Liège, tried to outflank the left wing of the Belgian army in the field, but failed. On August 12, 4,000 German cavalry, 2,000 infantry and 18 guns attempted to force the passage of the Gette at Haelen. To oppose them the Belgians had 2,400 cavalry, 410 cyclists and 12 guns with which they sustained the attack until the arrival of the 4th Combined Brigade at 3 p.m. enabled them to take the offensive. By 6 p.m. the Germans were forced to retire, abandoning dead and wounded. But the pressure of enemy forces compelled the Belgians to fall back step by step. Only at Enghezee on August 16, where heavy fighting took place, were the Germans forced to withdraw, the Belgians pursuing them for two days. On the 18th the 6th division drawn up on the plain of Walhain-Saint-Paul effected its junction with a division of French cavalry. On this date the Germans after a night attack drove the Belgians out of Tirlemont. Owing to the German strength, the right wing and center of the Belgian army fell back upon Antwerp, while the French cavalry withdrew towards Charleroi. The retreat on Antwerp was protected by the Belgian left wing and a portion of the center, which became involved in hard fighting near Louvain and at Aerschot. The Germans in vast numbers moved towards the southwest and the west, and it became obvious that they intended to enter Brussels, which,

being unfortified, could not be defended. On August 16, therefore, the government, most of the ministers of state, the queen and royal children, and some representatives of foreign powers left for Antwerp. The wounded from the hospitals of the capital were also moved, as well as the funds of the National Bank, with the plates for printing bank notes.—Based on *Belgian official reports*.

2. **GERMANS OCCUPY BRUSSELS.**—At 2 p.m. on August 20 about 40,000 German troops of all arms under General Sixt von Arnim entered Brussels. The occupation in force was only for a day. Von Kluck's right was wheeling northward and several divisions of cavalry were sweeping westwards towards Bruges and Ghent. "The occupation of Brussels was for the German armies an obvious and necessary move. It was to the outside world a signal consecration of their triumph. There was an urgent necessity to retrieve the check received at Liège, and to produce a moral effect on the Belgian population. Moreover Brussels was the headquarters of the Government, and its occupation by the enemy meant the dislocation of the whole administrative machinery. Brussels was also the centre of the Belgian railway system, on the cross-roads of the Antwerp, Ghent, Liège, and Charleroi lines. It was highly important, even for 'strategic reasons,' that Brussels should be in German hands. Nor was Brussels less important as a centre of supplies and provisions. Brussels could be held with a few troops, and the maximum of military advantage could be secured at the minimum of cost. The German army entered Brussels on a glorious August afternoon to the rhythm of their famous goose-step. . . . The actual corps of occupation was only about 30,000, but for days a continuous stream of soldiers, over 600,000, was poured into the city on the way to the shambles of the battlefield. . . . That no excesses should have been committed was due no doubt to the restraint of public opinion, but not least to the firmness of Burgomaster Max. . . . Through diplomatic skill, firmness and dignity, he ensured the safety of Brussels. The slightest mistake on the part of the civic authorities might have spelt disaster to the city. The slightest popular disturbance in the Quartier des Marolles might have brought down on the city the vengeance of the conqueror. Although no outrages were perpetrated, Brussels was made to feel heavily the yoke of the invader. The Germans continued in the city their methods of predatory warfare. Huge quantities of foodstuffs were commandeered for the 600,000 German troops that were continually passing through. Payment was made in grim mockery in bills on the National Bank of Belgium. A war indemnity of 200,000,000 francs was imposed on the city of Brussels, and one of 450,000,000 francs on the province of Brabant. In order to ensure the payment of this huge indemnity by a ruined city and by a stricken province, the Germans revived the abominable practice of hostages. Baron Lambert de Rothschild was mulcted to the extent of 10,000,000 francs. The venerable M. Solvay, the leader of Belgian industry, was subjected to a fine of 30,000,000 francs."—C. Sarolea, *How Belgium saved Europe*, pp. 138-139.

(d) **Sack of Louvain.**—"The Germans entered Louvain on August 19th. The Belgian troops did not attempt to hold the town, and the civil authorities had prepared for the Germans' arrival. They had called in all arms in private possession and deposited them in the Hôtel-de-Ville. This had been done a fortnight before the German

occupation, and was repeated, for security, on the morning of the 19th itself. . . . The German entry on the 19th took place without disturbance. Large requisitions were at once made on the town by the German command. The troops were billeted on the inhabitants. . . . It was vacation time, and the lodgings of the University students were empty. Many houses were shut up altogether, and these were broken open and pillaged by the German soldiers. They pillaged enormous quantities of wine, without interference on the part of their officers. . . . On August 20th the German military authorities covered the walls with proclamations: 'Atrocities have been committed by (Belgian) franc-tireurs.'—'If anything happens to the German troops, *le total sera responsable*' (an attempt to render in French the Prussian doctrine of collective responsibility). Doors must be left open at night.

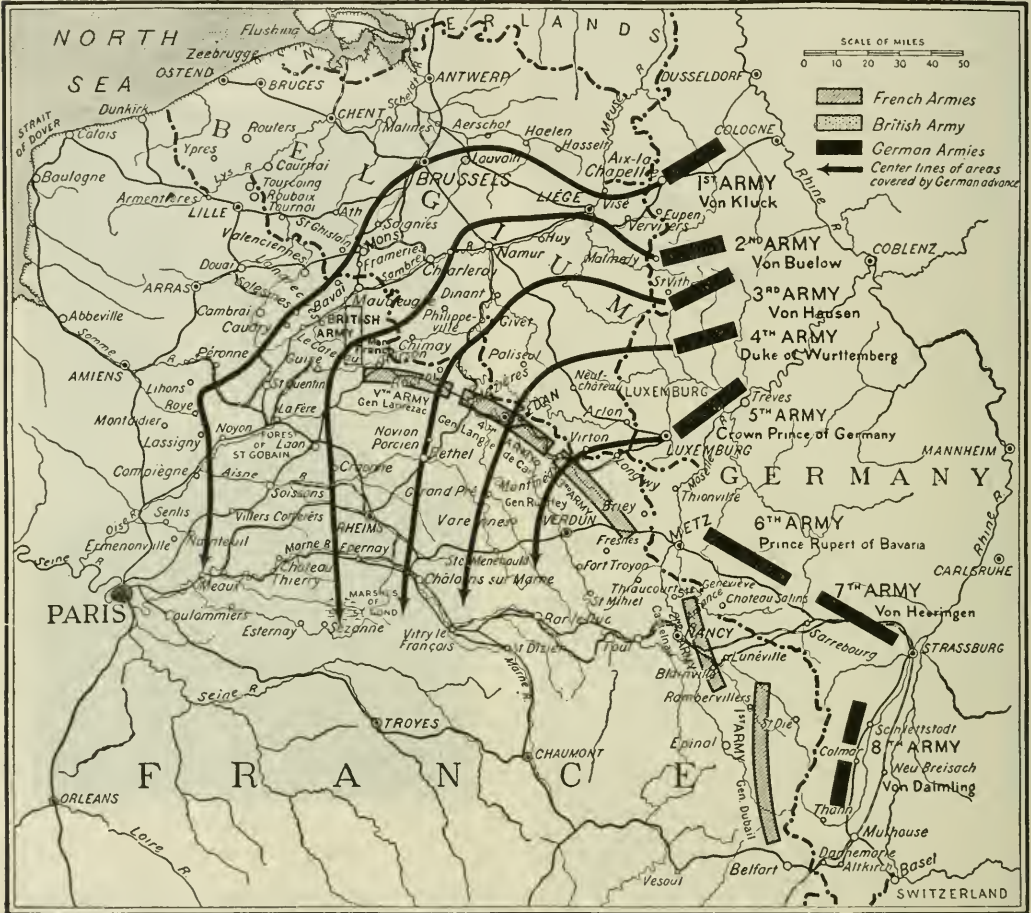

ALBERT I
King of the Belgians

Windows fronting the street must be lighted up. Inhabitants must be within doors between 8.0 p.m. and 7.0 a.m. Most of these placards were ready-made in German, French and Russian. There were no placards in Flemish till after the events of August 25th. Yet Flemish was the only language spoken and understood by at least half of the population of Louvain. Hostages were also taken by the German authorities. . . . On the morning of August 25th there were few German troops in Louvain. The greater part of those that had entered the town since the 19th had passed on to the front in the direction of Malines, and were now engaged in resisting the Belgian sortie from Antwerp, which was made this day. As the Belgian offensive made progress, the sound of the cannon became louder and louder in Louvain, and the German garrison grew increasingly uneasy."—A. J. Toynbee, *German terror in Belgium*, pp. 89-93.—About 8.0 p.m. when everyone in obedience to

the rules of the occupying army had to be at home, a shot rang out, followed rapidly by two more, and then by a terrible fusillade. This was heard at several points in the town. With the crackling of rifles was mingled the rattling of machine guns. The windows of the houses splintered under a hail of bullets. At the first shots the inhabitants sought shelter in cellars and other hiding-places. Those who ventured up to the attics saw the sky reddened with light. The Germans had set fire to several quarters of the town and the university with its celebrated library . . . [was] ablaze, systematically set on fire with faggots and chemicals. Under orders

were herded down to the Place de la Station. The Germans selected haphazard from the men the victims destined to be executed. On Wednesday morning the shooting ceased and quiet temporarily returned. The Germans announced that all able-bodied citizens were needed to fight the flames. All who obeyed the summons were made prisoners and taken to the station to be deported to Germany. Later in the day of August 26, the German soldiers started again to fire at intervals, to plunder, and to burn. On Thursday, August 27, German soldiers went through the town announcing to the people that Louvain was to be bombarded at noon

GENERAL PLAN OF THE GERMAN INVASION OF BELGIUM AND FRANCE

of their officers the German soldiers smashed in the doors of the houses dragging the inmates from their hiding-places, with the cries, "There has been firing! Civilians have fired!" Hand grenades and incendiary pastilles were hurled into the rooms. Several of the inmates were haled out and instantly shot. The Germans pretended that a plot had been hatched by civilians, that there had been firing on the troops and the whole responsibility for what had happened was thrown on the citizens of Louvain. During the night many persons had been shot without inquiry. The Germans had become panic stricken and obsessed by the thought that franc-tireurs had fired on every group which they met in the darkness. As the houses burned and the soldiers continued to loot the townspeople

and everyone must leave at once. Then a pitiful flood of fugitives began to pour out of the city. By 11 o'clock Louvain was dead, but for the crackle of houses on fire. Then the regular sack began. There was no longer any talk of bombardment. Systematically the houses were stripped of their contents by the Germans and whatever could not be carried off was destroyed. The burning continued, simultaneously with the sack down to September. The following explanation is offered: On the night of August 25, when German soldiers were coming back from Malines, shots rang out. The German soldiers in the town imagined that the enemy was coming, others that the civilians were beginning to attack. The former fired on their own comrades, taking them for

Belgian or French soldiers; the latter riddled the fronts of the houses with bullets. The supposition is that there was a mistake, then a panic.—Based on L. van der Essen, *Invasion and war in Belgium*, pp. 184-198.—See also below: Miscellaneous auxiliary services: X. Alleged atrocities: a, 9.

(e) **Fall of Namur.—Retreat on Antwerp.**—"Beyond Liège the invading forces spread out like a fan. On the extreme right a force advanced north-west to outflank the Belgian army covering Brussels and to mask the fortress of Antwerp, and this right wing, again, was the first to move. . . . The main column . . . took Aerschot and Louvain on August 10th. During the next few days it pushed on to Malines, was driven out again by a Belgian sortie from Antwerp on Aug. 25th, but retook Malines before the end of the month, and contained the Antwerp garrison along the line of the Dyle and the Démer. This was all that the German right flank column was intended to do, for it was only a subsidiary part of the two armies concentrated at Liège. As soon as Antwerp was covered, the mass of these armies was launched westward from Liège into the gap between the fortresses of Antwerp and Namur—von Kluck's army on the right and von Bülow's on the left. By August 21st von Bülow was west of Namur, and attacking the French on the Sambre. . . . These armies had all crossed the Meuse south of the fortress of Namur, and, to retain connexion with them, von Bülow had had to detach a force on his left to seize the line of the Meuse from Liège to Namur and to capture Namur itself. The best German heavy artillery was assigned to this force for the purpose."—A. J. Toynbee, *German terror in Belgium*, pp. 17-19.—The bombardment of Namur began 10 A.M. on August 21. "Before long the forts Marchevette and Maizeret were silenced. Maizeret had received shells at the rate of twenty a minute, and had only been able to fire ten shots in reply. Marchevette held out till it was blown up on the next day. About the same time—that is, early on the morning of Friday, the 21st,—the III. Army on the right bank of the Meuse directed a terrific bombardment against Forts Andoy, Dave, St. Héribert, and Malonne, and a German force was pushed across the Meuse into the southern part of the angle between it and the Sambre. All that day an infantry battle continued, for the Belgians hoped for a French advance from Dinant to their relief. But . . . the French at Dinant had their hands full with their own affairs. On the Saturday morning part of the French 8th Brigade under General Mangin arrived, but they were too late to give much assistance. That day, when the skies were darkened by an eclipse of the sun, panic reigned in Namur. Incendiary bombs were dropped by German airplanes, and stray shells crashed into the outlying buildings. The weather was heavy with thunder, and Nature and man combined to create pandemonium. Some time on that Saturday Michel [Belgian commander of Namur], seeing that resistance was futile, like Leman at Liège, to save his force for the field army, drew off many of his troops by the western route, which was still open. . . . The Belgians in the river angle were compelled to escape as best they could, and their only outlet was to the south-west. The enemy had shut the gate at Bois de Villers, but two Belgian regiments hacked a road through and managed to reach Philippeville. On their way they found themselves entangled with a French army coming south from the Charleroi direction, and had their first news of the retreat of the whole Allied

line. Eventually . . . they came in seven days to Rouen, whence they took ship to Ostend, and joined the main Belgian forces. On Saturday afternoon, the 23rd, the Germans entered Namur."—J. Buchan, *History of the Great War*, v. 1, p. 148.—See also Miscellaneous auxiliary services: X. Alleged atrocities: a, 4.—The Belgian main army under General Seilliers de Moranville which defeated but unbroken had retired to the protection of the Antwerp forts, numbered with new volunteers about 120,000 men. On August 23 they marched south and drove the enemy out of Malines, an operation of considerable strategic importance, for Malines commanded the shortest railway communication between Germany and West Flanders. At this time von Boehn's 9th Corps *en route* to reinforce von Kluck was marching towards Bruges and Ghent. Uhlans had attacked Ostend and were repulsed by the Civic Guards, and on the 24th 2,000 British marines occupied the town. The Belgian offensive deprived von Kluck of his reinforcements and brought von Boehn hurrying eastward. Antwerp on the 24th was bombed by Zeppelins and a number of civilians were killed. The Belgian army on a forty-mile front, its right on Termonde, its left at Aerschot, pushed on. German communications with Brussels were threatened. But although the Belgians maintained a stubborn resistance they were slowly forced back on Antwerp.—Based on *Belgian official reports*.

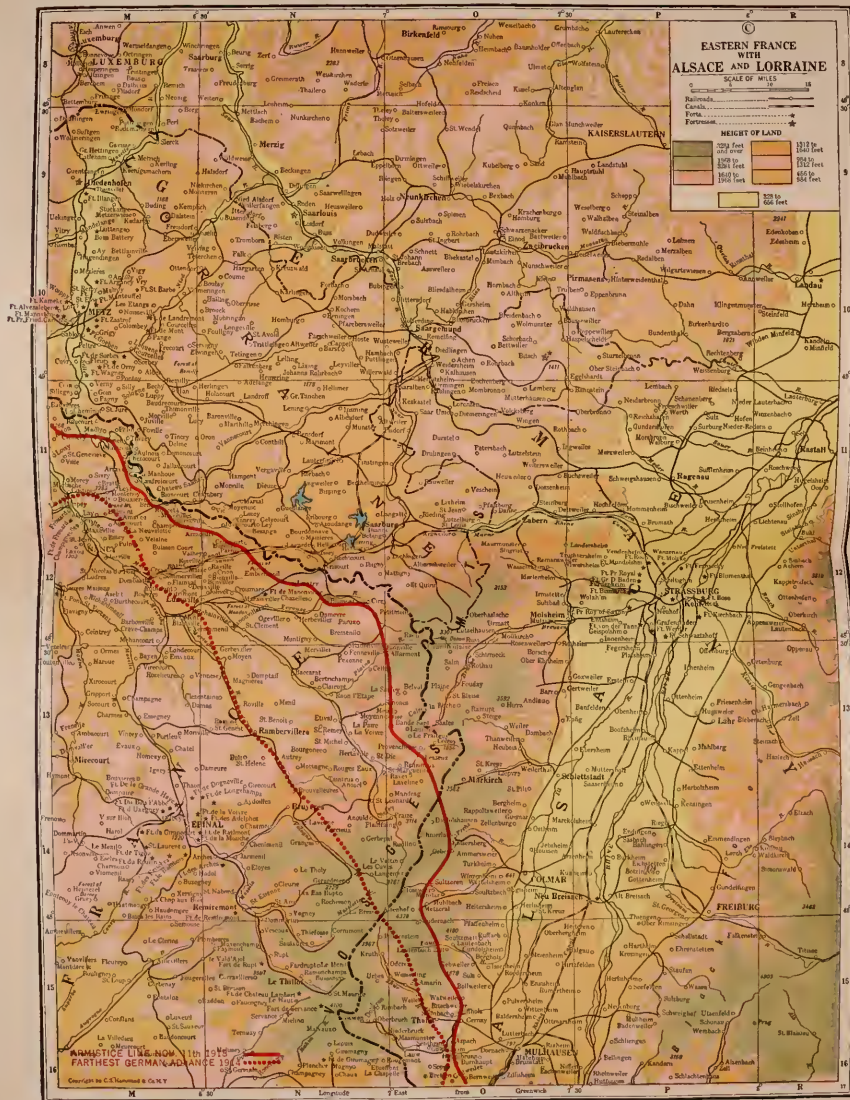

(f) **Siege of Antwerp.**—Although the siege and subsequent fall of Antwerp occurred during September and early October, after the battles of the Marne and the Aisne, the sequence of events may be narrated here in continuation of the preceding section. "During the first fortnight of September the Belgian army had made several gallant sallies against the German troops of occupation. The main object of these efforts was to relieve the pressure on the Allies in France, but another motive was in the minds of the Belgian Staff. Sooner or later it was certain that the Germans would make an attempt upon the city, and the lessons of Liège and Namur were beginning to be understood. The great howitzers must not be allowed to come within range of the forts, and the Belgian lines of defense must be far to the south, beyond the Nethe, and along the roads from Malines to Louvain and Brussels. By 17th September they had been driven back from the line of the Malines-Louvain railway. By 25th September, after two days' hard fighting, they were on the railway line between Malines and Termonde. Here, on the 26th, there was a moment of success. The enemy was driven from the village of Audeghem and pressed back on Alost, while at Lebbeke next day there was also a German repulse. The day after the Germans regained most of the ground they had lost; but their left seems to have given up the idea of forcing an immediate crossing of the Scheldt, owing to the strength of the forces which the Belgians had massed on the northern bank. Meanwhile the main attack was beginning to develop against the first line of the Antwerp defences. Malines—what was left of it—had been subjected to a new cannonade on Sunday the 27th, and on the Monday the great siege howitzers were so far advanced to the north that they were within range of the southern forts, and the bombardment of Antwerp began."—J. Buchan, *History of the Great War*, v. 1, p. 290.

I. **BOMBARDMENT OF ANTWERP.—SURRENDER OF CITY.**—"Antwerp was not only the sole stronghold of the Belgian nation: it was also the true left flank of the Allied front in the west. It guarded

the whole line of the Channel Ports. It threatened the flanks and rear of the German armies in France. It was the gateway from which a British army might emerge at any moment upon their sensitive and even vital communications. No German advance to the sea-coast, upon Ostend, upon Dunkirk, upon Calais and Boulogne, seemed possible while Antwerp was unconquered. My own feeling at the outbreak of the war had been that if the right things were done, Antwerp ought to hold out for two or even three months, that is to say, until we knew the result of the main collision of the armies on all the fronts—French, Russian, Austrian. . . . I thought that Antwerp should be made to play its part in the first phase of the war by keeping as many German troops as possible out of the great battle.”—W. L. S. Churchill, *World crisis*, pp. 359-360.—The German bombardment opened on September 28. At the same time the enemy endeavored to force the Scheldt between Termonde and Ghent, with the idea of cutting off the retreat of the Belgian army. The river was defended by the 4th Army Division, which was posted chiefly in the vicinity of Termonde. The Wavre-Ste. Catherine Fort was first to suffer and was silenced by the afternoon. Fort Lierre was bombarded on the following day, shells of all kinds falling at the rate of twenty to twenty-five a minute. The Germans on October 1-2 made three assaults on the fort but were repulsed. They entered unopposed on the 3rd when the fort was in ruins. Wavre was destroyed, Wallhem silenced, and to the south Fort Koningshoeyck also. To the west the Germans cleared Termonde and the Belgians were forced across the Scheldt. The fortresses were now abandoned, the Belgians falling back to the north bank of the Nethe to previously prepared entrenchments.—Based on *Belgian official reports*.—“Late in the evening of October 2, came the startling information that the Belgian Government had suddenly decided to retire to Ostend and to withdraw the Field-Army from Antwerp, leaving the fortress troops to hold it as long as they could. It was a position that for naval reasons alone could not be accepted without an effort to prevent the breakdown of our [*i.e.*, the British] plans that it meant—particularly since the measure seemed from our reports to have been dictated not so much by immediate military necessity as by a sense of being abandoned by the Allies. The French, moreover, had now promised two Territorial Divisions, with a full complement of cavalry and artillery. . . . The great difficulty was time. . . . The main point was to enhearten the Belgians to hold on for a few days, and for this some prompt and practical evidence that they were not forgotten was necessary. It was decided, therefore, that the [British] First Lord of the Admiralty [Winston S. Churchill] should proceed forthwith to Antwerp . . . and see what could be done. At the same time, as an earnest of what was to come, the Royal Marine Brigade was ordered to proceed at once to Antwerp to assist in holding the place. . . . The effect of these preliminary steps was immediate. As soon as the Belgian Government were informed of them they agreed to make no move until Mr. Churchill arrived. . . . He reached Antwerp . . . [after 3 P.M. on] October 3, and it was quickly apparent that the Belgians were as ready as ever to play a bold game so long as there was a shadow of hope. By the afternoon a provisional agreement had been come to which promised at least a substantial gain of time for General Joffre’s plans to develop without any undue risk to the Belgian Field Army.”—S. Corbett, *Naval operations* (*His-*

tory of the Great War based on official documents, v. 1, pp. 189-190).—The well-to-do citizens departed for Holland and England. Late in the night of October 4 a brigade of British Royal Marines, 2,000 strong, arrived from Ostend and took position to the left of the Belgians on the Nethe. Two British naval brigades (6,000 men) under General Paris of the Royal Marines, arrived on October 5. An armored train and six naval guns followed. The arrival of the British created an electrical effect on the Belgians, who got the impression that an army corps was on its way to help them. The Germans had between 300 and 400 guns in operation and villages to the rear of the Belgians were destroyed. Attempts were made October 3-5 to cross the Nethe, but the Germans did not succeed until the 6th. All hope of holding the city was given up by October 8 and a general exodus began. Frantic crowds sought to escape. They fled across the Scheldt to Ghent, but the majority made for the Dutch frontier. Many fell exhausted by the wayside. Bergen-op-Zoom received 200,000 refugees and the Dutch people found food and shelter for all. On the evening of the 6th the Belgian army began to retreat; the 3rd Division which covered the most exposed flank had the hardest task, for it was forced to make night marches without any rest. From Antwerp to Ghent difficulties were increased by combats with the enemy at Lokeren and at Oostacker. The Belgians arrived at Tronchiennes on October 9, thoroughly exhausted. The 12th Line Regiment and the greater part of the 3rd Division were sent by train to Nieuport on the following day, where they were allowed three days’ rest. On the 14th the Belgians took up positions on the Yser. The troops were informed that they were to hold the Yser to the uttermost for the next forty-eight hours; the fate of the Allies depended upon it.—Based on *Belgian official reports*.—The bombardment ceased on October 9; the forts had been silenced. Shortly after noon German officers entered the city, and the German army swept through the streets and beyond in pursuit of the retreating Belgians.

2. BRITISH AT ANTWERP.—“One night . . . [Lord Kitchener] was in bed asleep, when Mr. Churchill, then First Lord of the Admiralty, bursting into the room, pleaded for the War Minister’s permission to leave at once for Antwerp. In spite of the late hour, Sir Edward Grey arrived in the middle of the discussion, and while he was engaging Lord Kitchener’s attention Mr. Churchill slipped away. He was next heard of when a telegram was put into Lord K.’s hands in which his impetuous colleague asked bravely to be allowed to resign his great office, to be given the command of a Naval Brigade, and pleading that reinforcements should be hurried out to those ‘forlorn and lonely men,’ as he called them, who were vainly trying to hold on to the Antwerp lines. . . . Upon the issue whether it was better to have tried and failed at the instance of this whimsical genius, whose pride could not endure the desertion of the little Belgian Army, fair judgment is unlikely to be delivered by his contemporaries. . . . Winston Churchill’s attempt was given a poor chance.”—Viscount Reginald Escher, *Tragedy of Lord Kitchener*, pp. 67-68.—“After the departure of the Belgian Field Army the further defence of the remaining lines of Antwerp was left to the fortress troops, the 2nd Belgian Division, and the three British Naval Brigades, who held on their front the equivalent of more than five complete German divisions. . . . At midnight on the 7th the Germans, having

Maps prepared specially for the NEW LARNED
under direction of the editors and publishers.

advanced their artillery, began to bombard the city and the forts of the inner line. The forts melted under the fire, and a great proportion of the civil population fled through the night, lighted by conflagrations. . . . The enemy's attack was pressed continuously, and the enceinte of the city was considered to be untenable by the evening of the 8th. The Belgian Division and the British Naval Brigades evacuated Antwerp that night, crossed the Scheldt safely, and began their retreat by road and rail on Ghent and Ostend. . . . German patrols, after many precautions, entered Antwerp towards evening on the 9th, and on the 10th the stouthearted Governor, who had retired to one of the surviving forts, capitulated."—W. L. S. Churchill, *World crisis*, pp. 389-390.

(g) **First French operations.**—1. **DEPLOYMENT OF FRENCH ARMIES.**—On August 2, and before a declaration of war, German troops invaded French soil near Longwy and near Sirey-sur-Vezouze. Owing to the Germans passing through Belgium, French concentration was subsequently modified by the commander-in-chief in order that the principal French effort might be directed to the north. From the first week in August it was evident that the length of time required for the British army to move would delay French action in connection with it. This delay is one of the reasons that explains the French failure at the end of August—Based on *French official reports*.—The French army, inclusive of the Territorial Army and its reserves, numbered rather more than 4,000,000 men, of whom 1,500,000 formed the active first-line army, behind which stood a reserve army of about 600,000 while the remaining 2,000,000 consisted of the Territorial Force with its reserve divided into three bodies of about equal strength. "The French forces were divided into five armies: each army comprising three or four army corps and several groups of three or four reserve divisions. General Joffre was in command with the title of Commander of the Armies of the East and North-east. The First Army, General Dubail, was stationed on the frontier of Alsace; the Second Army, General Castelnau, Lorraine; Third Army, General Ruffey, north of Verdun; Fourth Army, General de Langle de Cary, at first in the second line, was soon placed at the frontier of the Ardennes; Fifth Army, General Lanrezac, at Mézières; a corps of cavalry, General Sordet, at the extreme left; Group of reserve division, General Valabrègue, at Hirson; group of reserve division, General Léon Durand, at Nancy, re-attached to the Second Army; group of reserve division, General Pol Durand, north of Verdun, re-attached to the Third Army. Reserve divisions were temporarily left on the Alpine frontier; others were attached to the fortresses of Maubeuge, Verdun, Toul, Épinal; reserve corps and territorials, commanded by General d'Amade were in positions of surveillance close to the northern frontier, while troops from Algiers and Morocco were kept in readiness to reinforce the armies as circumstances demanded. The strong points and isolated forts of the northern frontier which were not equal to the necessities of defence were left undefended with the exception of Maubeuge. Lille, the great depot for military stores and supplies, was declared an open town. The maritime ports, Calais, Dunkirk and Boulogne, were maintained as British naval and military bases."—General G. L. Niox, *La Grande Guerre, 1914-1918*, pp. 17-18.

2. **GERMAN ARMIES.**—The formation of the German armies and their starting points are given above. (See (a) Belgium invaded.) Von Kluck

commanded the 1st Army; von Bülow the 2nd and von Hausen the 3rd; the 4th was under the duke of Württemberg and the 5th under the crown prince of Prussia; the 6th was commanded by the crown prince of Bavaria, the 7th by von Heeringen, and the 8th by von Deimling. In addition, there was a group of Landwehr under von Gaede in Upper Alsace. To the extreme right of the German advance large bodies of cavalry operated under the command of von Marwitz. Each army was composed of three or four army corps. The effectives were estimated at from 1,200,000 to 1,400,000. "The French commander-in-chief had considered the possibility that the Germans would violate Belgian neutrality, but he did not count on anything more than a diversion. He believed that the main attack would be made on the Lorraine front, and that an energetic offensive on that front would result in menacing the communications of the German army with their base on the Rhine and consequently paralyze their efforts in Belgium."—*Ibid.*, p. 20.—"Now the opening moves of the Germans put two alternative problems of their intentions to the French Staff. The chief fear of the French Staff was lest Belgium, being overawed by the Germans, should let the German hosts sweep through Belgium unopposed before the French and British armies had completed their concentration. On the other hand, the threat in Belgium might simply be a blind to take the French mind from the German frontier, north of which enormous massing of German armies was taking place. . . . The German was massing in enormous force for an attack on Nancy, on what is called by the French Staff the 'Grand Couronné'—and, if victorious, they could smash through the French fortified zone at the 'Trouée de Mirecourt' (Gap of Mirecourt) and, besieging Toul to the north of it, and Épinal to the south of it, thus masking them, pour easily into France on a fifty-mile front. As Germany invaded Belgium her Staff noted with keen satisfaction that the ring-forts of Liège were as paper defences against her heavy artillery, since as the French fortress barrier was also relying largely on ring-forts, they would have crumpled in like fashion. But France also noted it, and at once mended the error. However, before the effects of heavy German artillery on Liège were apparent, Joffre had decided that the German concentration above Verdun and near Nancy meant the taking of French armies in rear if the German broke through the Grand Couronné . . . and the likelihood of it was at once assumed by the French Staff, and taken for granted fortunately, and acted upon accordingly, or the communication of the French armies north of Toul would have been lost."—H. Macfall, *Germany at bay*, pp. 112-113.—"The German general staff . . . for many years before the war had been secretly increasing the number and efficiency of their reserve troops. This work had been initiated in 1904 by v. Ludendorff when he was a colonel in the Great General Staff in Berlin, and when war came the Germans were able to add not one division but one army corps of reserve troops to each regular army corps. True, these reserve corps were not fully equipped with artillery, but they were none the less able to take their places in the battle line."—F. B. Maurice, *Military operations (Nations of today: France, v. 1, 180-181)*.

(h) **French offensive in Alsace-Lorraine.**—"The French Staff had not overlooked so obvious a probability as the invasion of Belgium in force by Germany. The doubtful points in the problem were however how far north the German movement would extend and in what strength it would

be made. The answers to these questions depended upon the strength of the armies which Germany deployed on the frontier of France and Belgium. This strength actually amounted to 10 cavalry, 44 active and 28 reserve infantry divisions; and of these no less than 5 cavalry, 20 active and 14 reserve divisions were destined to fall upon the French left flank. At French G.H.Q. however it was not anticipated that this latter force would exceed 3 or 4 cavalry and 22 infantry divisions. Therefore the indications of a German movement into Belgium west of the Meuse were received with equanimity, for it was considered that if the enemy were strong in that direction he would be weak in the centre, which the 3rd and 4th Armies would then break through, thus menacing the retreat of the Germans marching on Brussels; or, alternatively, it was held that if the Germans were strong in their centre they would be weak west of the Meuse and their right flank would be destroyed by the 5th Army, with the Belgian and the British armies acting in co-operation. The invasion of Alsace began then in accordance with Plan 17, on August 8, by an Alsace group which had been formed in the neighbourhood of Belfort under the command of General Pau. This group occupied Mülhausen on August 8, but was forced to evacuate that place two days later under German pressure. On August 14 the main invasion of Alsace-Lorraine was begun by General Pau's group, together with the 1st Army under General Dubail and the 2nd Army under General de Castelnau, a force altogether of more than 500,000 men. The French armies made steady if somewhat slow progress, and occupied Saarburg on August 18. The Germans awaited them in a carefully-selected and strongly-entrenched position, which was attacked on August 20 in the battle of Morhange-Saarburg. The French infantry of the 2nd Army attacked with splendid courage and dash, but being unsupported by any heavy artillery were unable to make a real impression on the German defences, and after the failure of this attack de Castelnau's right was counter-attacked and driven back. On the left of the 2nd Army the magnificent 20th Corps commanded by General Foch more than held its own at Morhange and secured the retreat of the Army which the defeat of the right had made inevitable. On Castelnau's right Dubail's 1st Army had been equally heavily engaged round Saarburg, which it had been forced to evacuate; but the success of the Germans was sensibly less than that which they had gained against the 2nd Army, and Dubail was prepared to renew the battle on the 21st when he received the news of Castelnau's retreat and was compelled to conform, carrying back with him Pau's group. The Germans, following up with more zeal than discretion and seeking to break through to Nancy, were met along the frontier, where a series of attacks delivered by them between August 25 and 27 were all repulsed. So ended the first French offensive.—F. B. Maurice, *Military operations (Nations of today: France, v. 1, pp. 182-183)*.

"On the 20th we held the approaches to Colmar both by the plain and the Vosges. The enemy had undergone heavy losses and abandoned great stores of shells and forage, but from this moment what was happening in Lorraine, on our left, prevented us from further carrying out our success, for our troops in Alsace were needed elsewhere. On August 28 the Alsace army was broken up, only a small part remaining to hold the region of Thann and the Vosges. The purpose of the operations in Alsace was, namely, to retain a

large part of the enemy forces far from the northern theatre of operations. It was for our offensive in Lorraine to pursue still more directly by holding before it the German army corps operating to the south of Metz. This offensive began brilliantly on August 14. On the 19th we had reached the Saarburg region and held Dieuze, Morhange, Déline and Château-Salins. On the 20th our success was stopped. The cause is to be found in the strong organization of the region, in the power of the enemy's artillery operating over ground that had been minutely surveyed, and finally owing to the failure of certain units. On the 22nd, in spite of the splendid behavior of several of our army corps (notably the 20th, under General Foch) we were back on the Grand Couronné of Nancy (and on Mortagne), while on the 23rd and 24th the Germans concentrated reinforcements—three army corps at least—in the region of Lunéville and forced us to retire to the south. The retreat was only temporary. On the 25th after two vigorous counter-attacks, one from south to north and the other from west to east, the enemy had to fall back. From that time a sort of balance was established in this terrain between the Germans and ourselves. Maintained for fifteen days it was afterwards modified to our advantage."—*French official reports*.—On the morning of August 21, "the I, II, and III. German armies were bearing down on the angle of the Sambre and the Meuse in an arc 70 miles long—Kluck with four corps, Bülow with the better part of five, and Hausen with four—a total of at least 25 divisions, supported by a great force of cavalry. Before them lay Lanrezac's Fifth Army, as yet only of four corps, now getting into position on the Sambre, the fortress of Namur, garrisoned by the Belgian fourth Division, and on Lanrezac's left the British army of two corps, the concentration of which was expected to be completed on that day. On the 20th Joffre, from his headquarters far away at Vitry-le-François in Champagne, had given orders for an advance across the Sambre. The British were to move north-east in the direction of Nivelles, between Brussels and Charleroi, while Lanrezac marched against Bülow. The idea of the French Commander-in-Chief was a blow at the flank of the advance through Belgium. He considered the advance of Langle and Ruffey, which began on the 20th, as his main operation, and the attack of Lanrezac and the British as a supporting movement. It was a plan foredoomed to disaster, for, while it took into account Bülow, it ignored Kluck, and knew nothing of Hausen."—J. Buchan, *History of the Great War, v. 1, pp. 145-146*.

(i) *Battle of Charleroi*.—This was the title given to a series of sanguinary attacks delivered by the 5th French Army (General Lanrezac) from August 22 to the 29th, on the Sambre and between the Sambre and the Meuse. Charleroi is the most important town in this region, but it was never the center of a battle. When the great turning movement of the German armies from Belgium was in full swing Lanrezac's Fifth Army, which was at the left of the deployment of the French armies, was ordered to move farther to the left and occupy the crossings of the Meuse and the Sambre, co-operating with the 4th group of divisions of reserve (Valabrègue) which stood near Hirson. The high command believed that this army operating in connection with the Belgian and British armies which were assembling at Maubuge and around Mons, could not only hinder the German advance, but carry out an offensive movement towards the north, while the 4th Army (de Langle de Cary)

and the 3rd Army (Ruffey) penetrated the Ardennes to menace their lines of communication from the rear. On August 15 a division of the 5th Army occupied the crossing of the Meuse at Dinant; a detachment was sent to Namur and positions were taken on the Sambre. But the 3rd German Army (von Hausen) took Dinant, and the forts of Namur were bombarded August 21-23. The 4th Belgian Army at Namur was repulsed. The 2nd German Army (von Bülow) attacked the Sambre on both banks.—Based on *French official reports*.—"Namur had been the pivot of the French position. Lanrezac held an angle, and the loss of the apex of that angle meant that each of the two sides was outflanked. . . . Lanrezac, who had pressed for an earlier advance into Belgium, only received Joffre's orders to cross the Sambre on the 20th. . . . On Friday, the 21st, part of his army was still concentrating, for the advance had been fixed for the 23rd, by which time the British would have been well started on their flank wheel. . . . Most of his reserve divisions were not yet in their place. Through no fault of his own, he had to accept battle on ground not of his choosing and at a time appointed by the enemy. For, on the morning of the 21st, Bülow had reached the left bank of the river, wheeling by his left, and by midday the action had begun. . . . Saturday, the 22nd, saw the main battle of Charleroi. . . . By darkening, Bülow had shaken himself free of the mining district, and was in position four miles south of the Sambre. . . . Thinking that he had only Bülow to deal with. . . . [Lanrezac] sent word to the British Commander-in-Chief at Mons that evening asking him to strike north-eastward at Bülow's flank. Sir John French rightly declined. He had already had news of Kluck [who attacked him next day]. On Sunday, the 23rd, Lanrezac attacked with his right. . . . But his centre was already in straits, and the cavalry in front of the 18th corps on his left was giving ground before Bülow's envelopment. . . . Early in the evening came a deluge of ill tidings. Namur, the pivot, was falling—had already fallen. Langle and Ruffey had failed utterly and were back on the Meuse. . . . A new German army, the Saxon III, [von Hausen] had appeared on his right and had taken Dinant. Last, and not least, Kluck had revealed himself against the British—not a matter of two corps as had been supposed, but at least four corps and several cavalry divisions. Lanrezac acted promptly. He dispatched his first corps to Dinant, where it brilliantly disputed the passage of the river with the Saxons. It could not stay the invader, but it delayed him, and saved the communications of the Fifth Army. But he clearly could not stay. The British were in straits, and he was instructed by Joffre to send Sordet's cavalry to their support. That evening he ordered a general retirement, and the first battle in the north was lost to the Allies."—J. Buchan, *History of the Great War*, v. 1, pp. 149-151.—Bülow's army meanwhile did not halt at Maubeuge, where there was no force in the field (August 27) and whose means for defense were inadequate, but detached a body of troops for siege operations. The place capitulated September 7 with 40,000 men, having held there an important number of forces which the enemy afterwards needed in the battle of the Marne. After the fight at Guise the 5th French Army continued the retreat and passed the Marne at Château-Thierry.—Based on *French official reports*.—The Allied failure at Charleroi aroused much controversy. "The battle of Charleroi completed the demolition of the strategy of the General Staff,

and forced Joffre to abandon Plan XVII. . . . The General Staff subsequently blamed Lanrezac for ordering the retreat (as he did on his own responsibility) and breaking off the conflict of Charleroi. . . . While the report of the Commission sur la Métallurgie says, without qualification, that 'the battle of Charleroi was lost before it was begun; the great merit of the Commander of the 5th Army was to have dared to prevent it from turning to a disaster and to have taken upon himself to break the battle before the whole left wing of the Allies was enveloped.' . . . On September 3rd Lanrezac was relieved of his command."—L. Lyon, *Pomp of power*, pp. 34-36.

(j) Battles of the Ardennes.—"Meanwhile the attack of the 3rd and 4th French armies into the Ardennes had begun, and on August 21 the 4th Army under General Langle de Cary, advancing on the front Sedan-Montmédy, crossed the Semoy and with Ruffey's 3rd Army on its right opened the battle of the Ardennes. The French troops at once found themselves involved in very difficult, hilly and wooded country in which their artillery could give them little assistance, a country in fact, as the Germans had foreseen, admirably adapted for defence. Langle de Cary's centre was roughly handled owing to the Germans discovering a gap between two of his corps, and Ruffey could make no real progress. Such was the situation on the 23rd, when events further north at length opened the eyes of Joffre to the true situation. The Germans had entered Liège on August 7, though, as the forts still held out, that fact was not known at French headquarters; but on the 18th the Belgian army was attacked on the River Gette and driven back towards Antwerp, so that it was clear that the Germans had crossed the Meuse in considerable strength."—F. B. Maurice, *Military operations (Nations of to-day, France: v. 1, pp. 183-184)*.—When the 5th Army (Lanrezac was ordered to extend on the left the strategic deployment, relying on the Belgian and British armies, the 4th (de Langle de Cary), which should have concentrated on the second line to form the mass of reserve, was advanced to the front line, between the 5th and 3rd armies. On the 4th and 3rd Armies devolved the task of penetrating the Ardennes, operating on the German lines of communication and cutting them off from their Rhine base. The German 4th Army (Duke of Württemberg) had fortified strong positions there since the outbreak of the war. The French Intelligence Department failed to learn of the enemy's dispositions before the attacks were made. The columns of the 4th Army advanced, isolated from each other; without knowledge of what was before them, or on their flanks. On August 22-23 they hurled themselves against defenses that they could not conquer, and at Paliseul, Bertrix, Bouillon, Straitmont and Neufchâteau they lost heavily. At Rossignol the French colonials lost all their cannon and a considerable part of their effectives. The 4th Army was forced to fall back on the Semoy, then to the Meuse. Ruffey's 3rd Army's principal objective was Virton. Attacking on August 22 he was himself attacked on the right flank by the 16th Corps and other German troops out of Metz. His flank should have been protected by a group of the divisions of reserve (Pol-Durand) but it had been withdrawn to form the new 6th Army of Maunoury. The 3rd Army was faced by the left wing of the 4th German Army and right wing of the 5th Army. The attack on Virton consequently failed and a retreat was made after heavy losses had been incurred. The enemy bombarded Longwy

and captured it August 26. Montmédy was occupied on August 30. The 6th Army or Army of Lorraine (Maunoury) had been formed with the Group of divisions of reserve (Pol-Durand), divisions brought from the Alpine frontier and from Toul, Verdun and Meuse forts. General Maunoury took command in the evening of August 21. Some of his divisions were already heavily engaged. They had taken Étain and were advancing on l'Othain (August 23) when the order came (August 26) to dissolve the Army of Lorraine and at once transport the units to the region of Paris. The new army (Maunoury) retained the number 6 and reformed in the environs of Amiens, but after the fighting (August 29) at Proyart, Framerville, and Chaulnes the enemy not having changed his line of march, the 6th Army was brought back, following the British retreating movement, and took

which had previously been reconnoitered, resting on the left on the fortress of Maubeuge and extending on the right to Janlein southeast of Valenciennes. The English had opposed to them the 4th and 9th German army corps, while the 2nd was executing a turning movement on the left from the direction of Tournai, but they never took contact with this corps. Consequently they fought at about equal numbers."—A. Arnoux, *European War*, v. 1, p. 79.—"The forces which . . . awaited the German attack numbered about 86,000 men, who may be roughly divided into 76,000 infantry, 10,000 cavalry, and 312 guns. . . . Close to Mons, where the attack was expected to break, since the town is a point of considerable strategic importance, there was a thickening of the line of defence. . . . The front of the army covered nearly twenty miles, an excessive strain upon so small a force in the

SURRENDER OF LONGWY

(From drawing by Hans W. Schmidt)

a position on the heights above the right bank of the Ourcq in readiness to assist eventually in the defense of Paris, while the offensive of the 3rd Army in the Ardennes and that of the 2nd Army at Morhange took place at the same date, east and west of Metz, but they were not combined actions. The generals who commanded had no advance information of their respective actions, so they could not decide together how to oppose the forces that would come from Metz.—Based on General G. L. Niox, *La Grande Guerre, 1914-1918*, pp. 27-29.

(k) Battle of Mons.—"On the 23rd [August] Sunday, towards three in the afternoon, a strong force of Germans attacked the British along the line of the Condé-Mons Canal, forcing the second corps to retreat to Bray and the cavalry to evacuate Binche, which the Germans promptly occupied. The British were to a certain extent surprised, and the powerful German artillery played havoc among them, with the result that that night the British forces were compelled to fall back to a position

presence of a compact enemy. If one looks at the general dispositions, it becomes clear that Sir John French was preparing for an attack upon his right flank. From all his information the enemy was to the north and to the east of him, so that if they set about turning his position it must be from the Charleroi direction. Hence, his right wing was laid back at an angle to the rest of his line, and the only cavalry which he kept in advance was thrown out to Binche in front of this flank."—A. C. Doyle, *British campaign in France and Flanders, 1914*, pp. 60-61.—"It was evident from the outset that the canal loop had been singled out as the object of the enemy's special attentions. . . . It was also fairly obvious to both sides that, if the enemy succeeded in crossing the canal in the neighbourhood of the salient, the line of defense along the straight reach to Condé would have to be abandoned. . . . The bombardment increased in volume as the morning advanced and as fresh German batteries arrived on the scene, and at 8 a.m. came the first infantry attack. This first

attack was launched against the north-west corner of the canal loop. . . . The attack, however, soon became more general and the pressure quickly extended for a good mile and a half to either side of the Nimy bridge. . . . About nine o'clock the German infantry attack, which had been threatening for some time past, took definite shape and four battalions were suddenly launched upon the head of the Nimy bridge. The bridge was defended by a single company of the [Royal] Fusiliers under Captain Ashburner and a machine gun in charge of Lieut. Dease. The Germans attacked in close column, an experiment which, in this case proved a conspicuous failure, the leading sections going down as one man before the concentrated machine-gun and rifle fire from the bridge. The survivors retreated with some haste behind the shelter of one of the plantations, where they remained for half an hour. Then the attack was renewed, this time in extended order. The altera-

Gordons, on the right of the Middlesex, also suffered severely, but the Royal Scots beyond them were just outside of the zone of pressure, and their casualties were few. The attack along the straight reach of the canal towards Condé was less violent, and was not pressed till much later in the day."—E. W. Hamilton, *First seven divisions*, pp. 20-24.

(1) Attack on the canal.—British retreat.—“Towards midday the attack against the straight reach of the canal became general. The whole line was shelled, and the German infantry, taking advantage of the cover afforded by the numerous fir plantations . . . worked up to within a few hundred yards of the water, and from the cover of the trees maintained a constant rifle and machine-gun fire on the defenders.”—*Ibid.*, p. 25.—“The attack now spread along the whole line of the canal; but except at the loop the enemy could make no impression. There, however, numbers told at last, and about the middle of the afternoon

FLEET FROM THE BELGIAN COAST

(From drawing by George Hänel)

tion in the formation at once made itself felt on the defenders. This time the attack was checked but not stopped. . . . The position on the Nimy bridge was growing very desperate . . . To the right of the Nimy bridge the 4th Middlesex were in the meanwhile putting up a no less stubborn defence, and against equally desperate odds. Major Davey, whose company was on the left, in touch with the right of the Fusiliers, had fallen wounded early in the day, and the position at that point finally became so serious that Major Abell's company was rushed up from reserve to its support. During this advance Major Abell . . . and a third of the rank and file fell, but the balance succeeded in reaching the firing-line trenches and—with this stiffening added—the position was successfully held for the time being. Captain Oliver's company, in the centre of the Middlesex line, was also very hard pressed, and Col. Cox sent up two companies of the [Royal] Irish Regiment to its support, another half company of the same regiment being at the same time sent to strengthen the right of the Middlesex line at the Obourg bridge. . . . The

Third Division was ordered to retire from the salient, and the Fifth Division on its left directed to conform. Bridges were blown up . . . and by the night of the 23rd, after various vicissitudes, the Second Army Corps had fallen back as far as the line Montreuil-Wasmes-Paturages-Frameries. That the retirement, though successful, was expensive, is not to be wondered at, when it is remembered that throughout this action, as we now know, the Second Army Corps was outnumbered by three to one.”—*Retreat from Mons*, pp. 33-34.—“About 5 p.m. I received a most unexpected message from General Joffre, by telegraph, telling me that at least three German Corps . . . were moving on my position in front, and that the 2nd (German) Corps was engaged in a turning movement from the direction of Tournay. He also informed me that the two reserve French divisions and the 5th French Army [General Lanrezac] on my right were retiring, the Germans having on the previous day gained possession of the passages of the Sambre between Charleroi and Namur.”—Field Marshal Sir John French, *Dispatch*, Sept. 7, 1914.

I. GERMAN BRIDGE COMPLETED.—“By night the Germans had completed their pontoon bridges across the canal, and it became evident that they were advancing in great force in the direction of Frameries, Paturages and Wasmes. Sir Horace [Smith-Dorrien] realized that the 3rd Division had been too severely knocked about during the day to hold the position unaided for long against the weight of troops known to be advancing. He accordingly motored over to the . . . [commander-in-chief] to ask for the loan of the 5th Brigade which was at Bougnies, four miles off. . . . This was readily granted him, and without delay the 5th Brigade set out, half of it remaining in Frameries, and the other half passing on to Paturages. In the meanwhile, however, came a most unwelcome change of programme. The first line in the Mons salient had been obviously untenable for long, and had been recognized as such by our commanders, but the line now held was a different matter altogether, and there was every reasonable expectation that it could be successfully defended, at any rate for a very considerable time. At 2 a.m., however, Sir Horace received the order to abandon it and retire without delay to the Valenciennes to Maubeuge road, as the French on our right were retreating. . . . This unexpected order . . . involved difficulties of a grave nature with regard to the clearance of the transport and impedimenta generally, and severe and costly rear-guard actions seemed inevitable.”—E. W. Hamilton, *First seven divisions*, pp. 30-31.—“Lanrezac's defeat [at Charleroi] put the British troops on the left flank at once in the most deadly peril. . . . Lanrezac's loss of the crossing of the Sambre on the 22nd of August to Bülow, brought Bülow's right swinging down on Haig's (1st) army corps at Binche at noon on the next day, the 23rd. The German corps which struck Haig was making for Maubeuge in rear of the 1st British corps. It was, however, badly mauled on its Sambre flank by the French from Thuin on the Sambre. The mauling it got from Haig soon afterwards would have annihilated it if Charleroi had held; but Charleroi was gone. The 2nd British corps (Smith-Dorrien) had loose fighting with advanced bodies. . . . French must have been astounded at [the message from Joffre], . . . as he was expecting to advance to Joffre's trapping of the German right wing. He did not break off action, but made ready to do so if necessary; and sent up his airmen to report. About what had happened in general he must have been utterly in the dark. And on came the Germans. . . . Joffre must now have been in the greatest anxiety for his bastion of British steel on his flank—for, if it went, he was turned. He brought every effort to bear to stave off the peril. [Joffre then ordered the great retreat.]”—H. Macfall, *Germany at bay*, pp. 126-128.

(m) Explanation of fall of Belgian fortresses.—“Military critics have wondered at the fall of Namur, and certainly at first sight the immediate collapse of Namur was only less surprising than the persistence of the defence of Liège. The Namur forts were apparently quite sufficiently manned and equipped. They had ample ammunition. The town had a superabundance of provisions. Yet the formidable stronghold fell to the enemy almost at the first attack, as soon as the Germans brought their heavy artillery. Several explanations have been given. It has been said that the little Belgian Army was not sufficient to defend and garrison three such forts as Liège, Namur, and Antwerp, and at the same time keep in reserve a field force. It has been said that the desertion of the Allies utterly

demoralized the besieged. Neither explanation seems to me adequate. The Belgian garrison amounted to 26,000 well-trained troops. They were sufficiently prepared for any sacrifice. As a matter of fact, out of that gallant division of 26,000 only 12,000 survived. But from the beginning there was a misunderstanding as to the relative parts to be played by the Belgians and by the Allies, and it is that misunderstanding which ultimately proved fatal. The Belgians depended on the Allies to oppose the approach of the enemy. They made no sorties, trusting to outside co-operation. They kept to the defensive, whereas a vigorous offensive alone could have saved the situation. It is true that, the German heavy siege guns once placed in position, nothing could save the Namur forts. But it would have been possible to prevent the Germans from bringing out their heavy artillery. It is the inaction of General Michel which lost the stronghold to the Belgian Army, and that inaction was entirely the result of the misunderstanding referred to. If the Allies had clearly intimated that they were not going to co-operate with the Belgians, the Belgians would have exchanged their defensive for offensive tactics, Namur would have been saved, a joint Belgian and French army would have harassed the Germans in the rear, and the advance of the enemy into France would have been checked.”—C. Sarolea, *How Belgium saved Europe*, pp. 130-132.

(n) The great retreat.—General French's first report.—Battles of Landrecies and Le Cateau.—Battle of Guise.—Fighting in Lorraine.—Joffre's new plan.—“The Germans had proved strong enough to check the two great French attacks on either side of Metz, and to march through Belgium, west of the Meuse, in great force. So the whole structure of Plan 17 came tumbling down, and the Allied left flank was suddenly and unexpectedly exposed to envelopment and destruction. Joffre at once formed a new plan to meet this danger. He decided to swing back his centre and left pivoting on Verdun, and to constitute on his left a mass capable not only of checking the German advance but of outflanking and enveloping the enemy's right. On the 25th he announced his intention of constituting this mass of his 3rd, 4th and 5th Armies, the British Army, and a new 6th Army to be formed in the neighbourhood of Amiens under General Maunoury of troops drawn from the French right flank and from the garrison of Paris. On the 26th however the British 2nd Corps was forced by Kluck to stand and fight at Le Cateau, where it was attacked by very superior numbers, and Sir John French, fearful of being caught in a trap, ordered a precipitate retreat across the Somme and behind the Oise.”—F. B. Maurice, *Military operations (Nations of today, France: v. 1, pp. 184-185)*.—“Concentration of the British Expeditionary Force was practically complete on the evening of Friday, the 21st ultimo [August], and I was able to make dispositions to move the force during Saturday, the 22nd, to positions I considered most favourable from which to commence operations which the French Commander-in-Chief, General Joffre, requested me to undertake in pursuance of his plans in prosecution of the campaign. . . . The forward reconnoissance was intrusted to Brig. Gen. Sir Philip Chetwode with the Fifth Cavalry Brigade, but I directed General Allenby to send forward a few squadrons to assist in this work. . . . From information I received from French Headquarters I understood that little more than one, or at most two, of the enemy's army corps, with perhaps one cavalry division, were

in front of my position; and I was aware of no attempted outflanking movement by the enemy. I was confirmed in this opinion by the fact that my patrols encountered no undue opposition in their reconnoitering operations. The observations of my aeroplanes seemed also to bear out this estimate. . . . The right of the Third Division, under Gen. Hamilton, was at Mons, which formed a somewhat dangerous salient; and I directed the commander of the Second Corps to be careful not to keep the troops on this salient too long, but, if threatened seriously, to draw back the centre behind Mons. This was done before dark. In the meantime, about 5 P. M. I received a most unexpected message from Gen. Joffre, by telegraph, telling me that at least three German corps, viz., a reserve corps, the Fourth Corps and the Ninth Corps, were moving on my position in front, and that the Second Corps was engaged in a turning movement from the direction of Tournay. He also informed me that the two reserve French divisions and the Fifth French Army on my right were retiring, the Germans having on the previous day gained possession of the passages of the Sambre between Charleroi and Namur. . . . In view of the possibility of my being driven from the Mons position, I had previously ordered a position in the rear to be reconnoitred. . . . When the news of the retirement of the French and the heavy German threatening on my front reached me. . . . I determined to effect a retirement to the Maubeuge position at daybreak on the 24th. A certain amount of fighting continued along the whole line throughout the night, and at daybreak on the 24th the 2nd Division from the neighbourhood of Harmignies made a powerful demonstration as if to retake Binche. . . . Under cover of this demonstration the Second Corps retired on the line Dour-Quarouble-Frameries. . . . The Second Corps halted on this line, where they partially entrenched themselves, enabling Sir Douglas Haig with the First Corps gradually to withdraw to the new position; and he effected this without much further loss, reaching the line Bavai-Maubeuge about 7 p.m. Towards midday the enemy appeared to be directing his principal effort against our left. . . . With the assistance of the Cavalry Sir Horace Smith-Dorrien was enabled to effect his retreat to a new position; although, having two corps of the enemy on his front and one threatening his flank, he suffered great losses in doing so. At nightfall the position was occupied by the Second Corps to the west of Bavai, the First Corps to the right. The right was protected by the Fortress of Maubeuge, the left by the 10th Brigade in position between Jenlain and Bry, and the Cavalry on the outer flank. The French were still retiring, and I had no support except such as was afforded by the Fortress of Maubeuge; and the determined attempts of the enemy to get round my left flank assured me that it was his intention to hem me against that place and surround me. I felt that not a moment must be lost in retiring to another position. . . . The operation, however, was full of danger and difficulty, not only owing to the very superior force in my front, but also to the exhaustion of the troops. The retirement was recommenced in the early morning of the 25th to a position in the neighbourhood of Le Cateau and rearguards were ordered to be clear of the Maubeuge-Bavai-Eth Road by 5.30 a.m. The Fourth Division commenced its detrainment at Le Cateau on Sunday, the 23d, and by the morning of the 25th eleven battalions and a brigade of artillery with divisional staff were available for service. I

ordered Gen. Snow to move out to take up a position with his right south of Solesmes, his left resting on the Cambrai-Le Cateau Road south of La Chaprie. In this position the division rendered great help to the effective retirement of the Second and First Corps to the new position. . . . Having regard to the continued retirement of the French on my right, my exposed flank, the tendency of the enemy's western corps (II.) to envelop me, and, more than all, the exhausted condition of the troops, I determined to make a great effort to continue the retreat till I could put some substantial obstacle, such as the Somme or the Oise, between my troops and the enemy, and afford the former some opportunity of rest and reorganization. Orders were, therefore, sent to the Corps Commanders to continue their retreat as soon as they possibly could towards the general line Vermand-St. Quentin-Ribemont. The Cavalry, under General Allenby, were ordered to cover the retirement. Throughout the 25th and far into the evening the First Corps continued its march on Landrecies, following the road along the eastern border of the Forêt de Mormal, and arrived at Landrecies about 10 o'clock. I had intended that the Corps should come further west so as to fill up the gap between Le Cateau and Landrecies, but the men were exhausted and could not get further in without rest. The enemy, however, would not allow them this rest, and about 9.30 p.m. a report was received that the 4th Guards Brigade in Landrecies was heavily attacked by troops of the 9th German Army Corps who were coming through the forest on the north of the town. This brigade fought most gallantly and caused the enemy to suffer tremendous loss in issuing from the forest into the narrow streets of the town. This loss has been estimated from reliable sources at from 700 to 1,000. At the same time information reached me from Sir Douglas Haig that his 1st Division was also heavily engaged south and east of Maroilles. I sent urgent messages to the Commander of the two French Reserve Divisions on my right to come up to the assistance of the First Corps, which they eventually did. Partly owing to this assistance, but mainly to the skilful manner in which Sir Douglas Haig extricated his Corps from an exceptionally difficult position in the darkness of the night, they were able at dawn to resume their march south towards Wassigny on Guise. At daybreak [on the 24th] it became apparent that the enemy was throwing the bulk of his strength against the left of the position occupied by the Second Corps and the 4th Division [at Le Cateau]. At this time the guns of four German Army Corps were in position against them, and Sir Horace Smith-Dorrien reported to me that he judged it impossible to continue his retirement at daybreak (as ordered) in face of such an attack. I sent him orders to use his utmost endeavours to break off the action and retire at the earliest possible moment, as it was impossible for me to send him any support, the First Corps being at the moment incapable of movement. The French Cavalry Corps, under General Sordêt, was coming up on our left rear early in the morning, and I sent an urgent message to him to do his utmost to come up and support the retirement of my left flank; but owing to the fatigue of his horses he found himself unable to intervene in any way. There had been no time to entrench the position properly, but the troops showed a magnificent front to the terrible fire which confronted them. . . . At length it became apparent that, if complete annihilation was to be avoided, a retirement must be attempted;

and the order was given to commence it about 3.30 p.m. The movement was covered with the most devoted intrepidity and determination by the Artillery, which had itself suffered heavily. . . . Fortunately the enemy had himself suffered too heavily to engage in an energetic pursuit. . . . The retreat (to the Oise) was continued far into the night of the 26th and through the 27th and 28th, on which date the troops halted on the line Noyon-Chauny-La Fère, having then thrown off the weight of the enemy's pursuit. On the 27th and 28th I was much indebted to General Sordêt and the French Cavalry Division which he commands for materially assisting my retirement and successfully driving back some of the enemy on Cambrai. General d'Amade also, with the 61st and 62nd French Reserve Divisions, moved down from the neighbourhood of Arras on the enemy's right flank and took much pressure off the rear of the British forces. This closes the period covering the heavy fighting which commenced at Mons on Sunday afternoon, 23rd August, and which really constituted a four days' battle."—Field Marshal Sir John French, *Dispatch*, Sept. 7, 1914.—"By August 28-29 the whole Army was in touch once more on the line Noyon-LaFère, and on Sunday the 29th, for the first time for eight days, the Army actually rested. . . . While the men rested, their commanders took stock."—*Retreat from Mons*, pp. 81-82.—"Joffre, at his headquarters in Champagne, awoke on the morning of Monday, the 24th, to confront a falling world. The battles of the frontier had one and all ignominiously failed. His three offensives had been met and broken, and the main armies of France hurled back inside their borders. He had used up his only general reserve. In almost every detail of war he had been outwitted by the Germans. He had to face the tragic fact that this first round had been won by the enemy, not by superior numbers, but by superior skill. Moreover, the fighting had shown the French inferior in many important details—the use of airplanes, heavy artillery, and wired entrenchments—all matters vital to a war of defence. The Germans were pouring through Lorraine against Castelnau and Dubail, already weakened by defeat, who stood precariously in front of Nancy and the Gap of Charmes. If the eastern fortress line fell, there might be a second Sedan, and who could guarantee its security after Liège, Namur, and Morhange? Great armies were flooding over the Ardennes to the Meuse, and the German right wing, far stronger than his wildest imagining, was swinging round the weak Allied left, brushing aside the feeble Territorial divisions. The northern forts had been neglected, as had those of the Falaises de Champagne, and there was no defence to bar the road to Paris. . . . It was the strength of Joffre in adversity that he had the courage to face the most unwelcome facts. He must break off contact with the enemy right and centre, now sweeping down more than a million strong from the north and north-east, must retreat and continue to retreat till the time came to resume the attack. . . . It is clear from his 'General Instruction No. 2,' of 25th August [see below: o], that he had not envisaged the full results of the frontier débâcle. He hoped for a resumption of the offensive somewhere on the Somme or the Falaises de Champagne. But this false calculation did not vitiate the soundness of his general policy. Its essentials were—first, a stand at all costs in the east by Dubail and Castelnau, holding Nancy if possible, but in any case the line Toul-Epinal-Belfort; a short retreat by the Third and Fourth Armies pivoting on Verdun;

a withdrawal of the Fifth and British Armies till such time as they could be reorganized and strengthened; and the provision of two new armies as a 'mass of manoeuvre' to aid his left and centre in the ultimate reaction. . . . We have seen that after Morhange the First and Second Armies ranged themselves in rectangular formation across the Gap of Charmes, Castelnau from the Grand Couronne of Nancy southward to Rozelieures, and Dubail thence eastward to the line of the Vosges. There was an open space in the angle of their junction, and thither the enemy pressed after the fall of Lunéville on the 24th. Dubail brought up two corps into the angle with three divisions of Conneau's cavalry, and when on the morning of the 25th the Germans entered Rozelieures they were almost at once driven out of it. That afternoon Castelnau struck at one flank with Foch's 20th Corps, and on the other wing Dubail reached the Meurthe and Mortagne at Lamath and Blainville. The Germans could only escape by a hasty retreat, and by the 26th the French had closed the Gap of Charmes and held a line from the east side of the Grand Couronne to St. Dié in the south. It was a brilliantly conceived and perfectly executed action, a forehint of the great battle which was to open a fortnight later, and for the moment it secured the eastern front. The Imperial Crown Prince also suffered a check. Maunoury with three reserve divisions formed at the time a group in Ruffey's Third Army, and had been entrusted with the task of watching movements from Metz. On the 24th he obtained intelligence that the Crown Prince, believing that the whole Fourth Army had been disastrously engaged at Virton, had resolved forthwith to turn Ruffey's right on the Othain. On the 25th Maunoury anticipated him by driving in his left flank. Had the attack been forced home, the whole German V. Army might have been imperilled. But that night Maunoury and his divisions were recalled, for Joffre had urgent need of them in the north. The retreat of the Allied armies of the right and centre was by the left, pivoting on Verdun."—J. Buchan, *History of the Great War*, v. 1, pp. 160, 162-163.—The British retreat on the 25th "caused a big gap in the Allied front between the 5th Army and Maunoury's Army forming east of Amiens, a gap which became wider when on the 26th the 5th Army [Lanrezac] turned about and made a fine attack in the direction of St. Quentin, administering in the battle of Guise a severe check to Bülow's 2nd Army. On the 26th also Kluck, swerving away from the British front, attacked and drove Maunoury's troops back from the Avre. The 5th Army was now in a very critical position; its right was endangered by the advance of v. Hausen's 3rd Army, its front was engaged with Bülow's 2nd Army, and its left, no longer covered by the British, was threatened by Kluck. An appeal to England from Joffre and from the French Government brought Lord Kitchener to Paris to modify the rate of the British retreat, and at a conference there on September 1 an agreement was happily reached, while on the same day the British forces succeeded in arresting the progress of Kluck's march against the left of the 5th Army. To protect the right of that Army Joffre had formed a new 9th Army, composed in the first instance of the left wing of the 4th Army placed under the command of General Foch. Despite these remedial measures it was clear that a prolonged retreat would be necessary to extricate the 5th Army sufficiently to enable it to take part in the great counter-offensive against the German right which Joffre had planned. On September 2

therefore the French Commander-in-Chief ordered a general retreat of his left towards the Seine and advised the Government to leave Paris, where General Gallieni had been installed in command. On the evening of the 2nd captured documents disclosed to Joffre that Kluck was marching not on Paris but against the left of the 5th Army, and the next day Gallieni, making the same discovery, proposed an attack by Maunoury's Army, by this time considerably strengthened and under his direction, and by the British Army, against Kluck's right. Joffre however desired not a local but a mass attack by the 4th, 9th, 5th, British and 6th Armies, and for this he had to wait until the 5th Army had been extricated from danger. Not until the evening of September 4 did he decide that the moment had come. Then, on hearing both that Kluck had continued to plunge southwards, exposing his right flank and rear to Maunoury, and that the 5th Army had freed its flanks from danger, he turned to his staff and said, 'Very well, gentlemen, we will fight on the Marne.' . . . Ere the great retreat was ended Joffre had taken drastic action to improve the efficiency of his armies. Ruffey was removed from the command of the 3rd Army to be replaced by Sarrail, while Franchet d'Esperey succeeded Lanrezac in charge of the 5th, and a large number of corps and divisional commanders, who had not proved equal to the first severe test of war, were replaced by more energetic leaders."—F. B. Maurice, *Military operations (Nations of today, France: v. 1, pp. 185-186)*.—See also below: o; p.)

(o) *Battle of the Marne*.—Strategic controversy.—South-eastward deflection of the German armies.—Joffre's instructions of August 25.—General Allied retirement to the Marne (August 29).—The gigantic series of conflicts conveniently lumped together under the title of "the first battle of the Marne" have given rise to much mystery and controversy. Who or what circumstance was responsible for its strategic inception? Some claim the credit for the French generalissimo, General Joffre; others attribute it to General French, while yet a third school of thought asserts that the battle was the result of a fortuitous course of circumstances. Certain it is that the first great German rush was halted on the banks of the Marne; here, what had been an almost unbroken and victorious advance came to an abrupt end and was converted into a retreat. In order to grasp the significance of this historic event it is necessary to understand in outline something of the chain of strategic developments which, according to not a few authorities, prevented a decisive victory for German arms. "The strategical conception dominating the initial deployment of the German Armies on the Western front and the invasion of Belgium and France . . . [was in 1919-1920] disclosed by the publications of several German General Staff officers, and their statements are confirmed by the order issued on 5th September [1914] by the German Supreme Command. The strategic objective was to outflank the French by the west and drive them eastwards against the Swiss frontier. On completion of the deployment, the Sixth and Seventh Armies, under the senior army commander, Crown Prince Rupprecht of Bavaria, were to advance against the Moselle, below Frouard (5 miles north-north-west of Nancy), and the Meurthe; they were to hold fast the French forces (the First and Second Armies) assembled there, and prevent any of them from being transferred to the left wing to oppose the main German advance. If attacked seriously, Prince Rupprecht

was to retire to a prepared position flanked by Strasbourg and Metz. Meanwhile, the great wheel on Thionville was to be continued. By the 22nd day of mobilization (23rd August) it was expected that the first Armies on the right would have reached the line Ghent-Mons-Sedan-Thionville; by the 31st day (1st September) the line Amiens-La Fère-Rethel-Thionville. Whilst the other Armies held their ground—the Second Army digging in on the line of the Oise or Oise-Aisne and thus covering Paris on the north side—the First Army, with all its original fourteen divisions, was to sweep over the lower Seine, past the west of Paris and round the south. It was to be followed by Ersatz divisions, detailed to complete the investment of the fortress. When they were in position, the First Army, reinforced by the Sixth Army and by every division that could be spared from the other Armies, was to advance eastwards and drive the French against their Moselle fortresses, the Jura and Switzerland. The same plan was to be pursued if the enemy abandoned the Oise, and withdrew behind the Marne and the Seine. To give sufficient weight to the blow which was to crush the Allies' left, roll up the line from the westward and, in conjunction with the advance of the Third, Fourth and Fifth Armies, push the entire line of battle south-east towards neutral territory, five of the ten cavalry divisions and twenty-six out of the total of the whole seventy-two divisions on the western front were allotted to the two Armies under General von Bülow. In order that the merits of the plan may be judged it may be added here in anticipation of the narrative, that the part of it which involved swinging round the west of Paris was abandoned on the evening of the 30th August. On that date the First Army turned south-east to exploit the supposed success of the Second Army at Guise. The Supreme Command on the morning of the 31st gave its approval of this movement. It was already beginning to find that it had not sufficient troops to carry out the original plan. . . . The plan was strategically bad, for it was out of proportion to the means available. . . . Thus von Moltke no doubt gladly accepted, for tactical purposes, the solution offered by the inward wheel of the First Army, and evolved a reduced plan in which the outer flank should pass east instead of west of Paris. On the 3rd September an order was accordingly issued to the First and Second Armies to force the whole French Army away from Paris in a south-easterly direction towards the Swiss frontier. . . . It may be noted that in the original plan, dated 1905, drawn up by Graf Schlieffen, von Moltke's predecessor, fifty-three divisions were allotted to the five Armies, First to Fifth, for the great wheel; in 1914 there were fifty-five. Of the nine new divisions which became available in the interval, eight were allotted to the Sixth and Seventh Armies to ensure the inviolability of the Reichsland, whilst only one was added to the right wing, which however also received one division originally allotted to the Russian frontier. Comparing now the initial plans of the two belligerents, we see what had happened as regards the main French attacks: that made by the Armies of Dubail and Castelnau on the 14th August south of Metz found the German Sixth and Seventh Armies on the defensive, in strong positions. The general strategic advantage remained with the Germans: their 345,000 men, including the detachments in Upper Alsace, contained about 456,000 French. The offensive of the Armies of Ruffey and de Langle de Cary north of Thionville, commencing on the 21st August, encountered the German Fourth and Fifth

Armies, which he begun on the 17th to wheel forward to the line Thionville-Givet. Thus two Armies met two Armies of about equal strength. The result of the above operations was, practically, equilibrium, but it left three German Armies, von Hausen's, von Bülow's and von Kluck's, comprising in all thirty-four divisions, free to deal with Lanrezac's Army, the tiny British Army of four divisions, and the almost equally small Belgian Army of six divisions—thirty-four divisions against twenty, with a frontier destitute of natural obstacles, guarded only by obsolete fortresses, and the shortest and most direct road to Paris in front of them. The first step in the German plan had therefore been successful, as regards its objectives; the line laid down for the first stage of the wheel on Thionville had been reached, and Liège and Namur had been taken; it was unsuccessful only in that the Belgian Army had not been forced away from Antwerp, which it entered, after rear-guard fighting on the 20th. Surprise has sometimes been expressed that the Germans did not push at least detachments to the Channel ports in August, 1914, when there was no force available to oppose them except some [British] Territorial units. It would appear that they did intend to do so, but the necessity of investing the Belgian Army in Antwerp absorbed the two corps, III. Reserve and IX. Reserve, which had been selected for this purpose; and when the opening phase of the campaign was going so nearly according to plan, and there seemed a certainty of winning the war in a few days by a defeat of the French in a super-Sedan in the open field, it would have been strategically unjustifiable to divert a single man to seize a section of the coast."—J. E. Edmonds, *Military operations, France and Belgium, 1914 (History of the Great War, pp. 43-46)*.

"The rapid onrush of the Germans seemed irresistible, and, in the first days of September, when General Joffre withdrew still farther to the region of the Marne, and the French Government left Paris for Bordeaux, many thought that the German drive was sure of success. But it must be remembered that, as the German armies advanced, it became increasingly difficult for them to maintain their momentum. The German Staff, in its eagerness to hurl the massed German forces against the French, had failed to hold an army reserve. In addition to the exhaustion due to their continued rapid movements, the Germans were getting farther away from their bases all the time, and the task of supplying the armies as well as keeping the ranks filled grew harder day by day. On the other hand, the French were being correspondingly helped, as they drew back into their own territory. They were nearer their bases, and General Joffre, with these advantages, was also gathering new forces. These movements were not merely the acts of a general forced to retreat. This fact is proved by General Joffre's instructions to his army commanders in the order dated the night of August 25. This general order gave explicit directions to his subordinates for the manœuvres which were to follow. The first paragraph is very remarkable: 'It being impossible to execute the offensive movement which had been projected, the subsequent operations will be carried out in a manner to constitute on our left by the united strength of the 4th and 5th armies, the British army, and new troops gathered in the eastern region, a massed force capable of taking the offensive, while the other armies will for the necessary time hold in check the efforts of the enemy.' This order effectually disposes of any idea that General Joffre's later change to the offen-

sive came only from mistakes of his enemy and from lucky chances. . . . The paragraph noted is as good an account of what afterwards actually happened as if it had been written after the event."—T. G. Frothingham, *Guide to the military history of the World War, pp. 24-25*.—"The majority of French military critics admit, more or less openly, the vital defects in Plan XVII. . . . In giving evidence before the Commission sur la Métallurgie Joffre asserted that the battle of the Marne was the outcome of a plan which he had conceived on August 25. The report of the evidence shows that the President of the Commission was not disposed to agree with that statement. Nor does it seem to accord with the facts as known. It is on record that after Charleroi, after Joffre had admitted the compulsory abandonment of his offensive, Sir John French tried, and tried in vain, to find out from him what was his new plan. . . . It was, indeed, French himself who was the first to propose that a stand should be made on the Marne. On September 1st he submitted a memorandum embodying this plan which Joffre rejected on the following day as being impracticable under existing conditions. In any event, the necessary precedent of the Marne was the Battle of the Ourcq, which was engaged by Gallieni and the troops which were defending Paris."—L. Lyon, *Pomp of power, pp. 38-39*.—"There is no evidence that at any time . . . [the Germans] regarded Paris as the main object of attack, though all their armies were cheered by the promise of a speedy entry into the French capital. . . . They were not blind to the peculiar importance of Paris; Bernhardt had classed it with Vienna as one of the two capitals the capture of which had a decisive military importance; but the taking of it, while Joffre's armies remained intact, might well prove a doubtful blessing. . . . For investment they simply had not the men. By the end of August, when the resolution of the French Government and of Gallieni was apparent, they may well have been convinced that even the capture of Paris would not mean the demoralization of France. . . . On the night of 2nd September Kluck was informed that the intention was to drive the French in a south-easterly direction away from the capital, and was ordered to follow in echelon behind Bülow and make himself responsible for the flank protection of the German front. That he chose to disregard this order was not the fault of Great Headquarters. But in a sense he was justified in his disobedience. Great Headquarters wished to have both success and security, and the two were incompatible."—J. Buchan, *History of the Great War, v. 1, p. 203*.

The British commander-in-chief reported that in the evening of August 28 his force was followed closely by two German cavalry columns, moving southeast from St. Quentin. "The retreat in this part of the field was being covered by the Third and Fifth Cavalry Brigades. South of the Somme General Gough, with the Third Cavalry Brigade, threw back the Uhlands of the Guard with considerable loss. General Chetwode, with the Fifth Cavalry Brigade, encountered the eastern column near Cérizy, moving south. The Brigade attacked and routed the column, the leading German regiment suffering severe casualties and being almost broken up. The 7th French Army Corps was now in course of being railed up from the south to the east of Amiens. On the 29th . . . the French 6th Army got into position on my left, its right resting on Roye. The 5th French Army was behind the line of the Oise between La Fère and Guise. The pursuit of the enemy was very vigorous; some five

or six German corps were on the Somme, facing the 5th Army on the Oise. At least two corps were advancing towards my front, and were crossing the Somme east and west of Ham. Three or four more German corps were opposing the 6th French Army on my left. This was the situation at 1 o'clock on the 20th, when I received a visit from General Joffre at my headquarters. I strongly presented my position to the French Commander-in-Chief. . . . He told me that he had directed the 5th French Army on the Oise to move forward and attack the Germans on the Somme, with a view to checking pursuit. He also told me of the formation of the 6th French Army on my left flank, composed of the 7th Army Corps, four Reserve Divisions, and Sordêt's Corps of Cavalry. I finally arranged with General Joffre to effect a further short retirement towards the line Compiègne-Soissons, promising him, however, to do my utmost to keep always within a day's march of him. . . . Orders were given to change the base to St. Nazaire, and establish an advance base at Le Mans. In spite of a severe defeat inflicted upon the Guard Xth and Guard Reserve Corps of the German Army by the 1st and 3rd French Corps on the right of the 5th Army, it was not part of General Joffre's plan to pursue this advantage; and a general retirement on the line of the Marne was ordered, to which the French Forces in the more eastern theatre were directed to conform."—Field Marshal Sir John French, *Second report, Sept. 17, 1914.*

1. BRITISH RETIREMENT TO THE SEINE.—ADVANCE ON SEPTEMBER 6.—"A new Army (the 9th) had been formed from three corps in the south by General Joffre, and moved into the space between the right of the 5th and left of the 4th Armies. Whilst closely adhering to his strategic conception to draw the enemy on at all points until a favourable situation was created from which to assume the offensive, General Joffre found it necessary to modify from day to day the methods by which he sought to attain this object, owing to the development of the enemy's plans and changes in the general situation. In conformity with the movements of the French Forces, my retirement continued practically from day to day. Although we were not severely pressed by the enemy, rearguard actions took place continually. On the 1st September, when retiring from the thickly wooded country to the south of Compiègne, the First Cavalry Brigade was overtaken by some German cavalry. They momentarily lost a horse artillery battery, and several officers and men were killed and wounded. With the help, however, of some detachments from the Third Corps operating on their left, they not only recovered their own guns, but succeeded in capturing twelve of the enemy's. Similarly, to the eastward, the First Corps, retiring south, also got into some very difficult forest country, and a somewhat severe rearguard action ensued at Villers-Cotterets, in which the Fourth Guards Brigade suffered considerably. On Sept. 3 the British forces were in position south of the Marne between Lagny and Signy-Signets. Up to this time I had been requested by Gen. Joffre to defend the passages of the river as long as possible, and to blow up the bridges in my front. After I had made the necessary dispositions, and the destruction of the bridges had been effected, I was asked by the French Commander-in-Chief to continue my retirement to a point some twelve miles in rear of the position I then occupied, with a view to taking up a second position behind the Seine. This retirement was duly carried out. In

the meantime the enemy had thrown bridges and crossed the Marne in considerable force, and was threatening the Allies all along the line of the British forces and the Fifth and Ninth French Armies. Consequently several small outpost actions took place. On Saturday, Sept. 5, I met the French Commander-in-Chief. . . . [He] announced to me his intention of wheeling up the left flank of the Sixth Army, pivoting on the Marne and directing it to move on the Ourcq; cross and attack the flank of the First German Army, which was then moving in a southeasterly direction east of that river. He requested me to effect a change of front to my right—my left resting on the Marne and my right on the Fifth Army—to fill the gap between that army and the Sixth. I was then to advance against the enemy in my front and join in the general offensive movement. These combined movements practically commenced on Sunday, Sept. 6, at sunrise; and on that day it may be said that a great battle opened on a front extending from Ermenonville, which was just in front of the left flank of the 6th French Army, through Lizy on the Marne, Maupertuis, which was about the British centre, Courtaçon, which was on the left of the 5th French Army, to Esternay and Charleville, the left of the 9th Army under General Foch, and so along the front of the 9th, 4th and 3rd French Armies to a point north of the fortress of Verdun. . . . About Sept. 3 the enemy appears to have changed his plans and to have determined to stop his advance south direct upon Paris, for on Sept. 4 air reconnaissances showed that . . . [the enemy's] main columns were moving in a southeasterly direction generally east of a line drawn through Nanteuil and Lizy on the Ourcq. On Sept. 5 several of these columns were observed to have crossed the Marne, while German troops, which were observed moving southeast up the left bank of the Ourcq on the 4th, were now reported to be halted and facing that river. . . . Considerable German columns of all arms were seen to be converging on Montmirail, while before sunset large bivouacs of the enemy were located in the neighbourhood of Coulommiers, south of Rebais, La Ferté-Gaucher, and Lagny."—*Ibid.*

2. POSITION OF OPPOSING FORCES.—"About noon on Sept. 6, after . . . the advance of the 6th French Army north of the Marne toward the Ourcq became apparent, the enemy realized the powerful threat that was being made against the flank of his columns moving southeast, and began the great retreat which opened the battle. . . . On the evening of the 6th September, therefore, the fronts and positions of the opposing armies were roughly as follows: (i) Allies.—6th French Army: Right on the Marne at Meaux, left towards Betz. British Forces: On the line Dagny-Coulommiers-Maison. 5th French Army: At Courtaçon, right on Esternay. Conneau's Cavalry Corps: Between the right of the British and the left of the French 5th Army. (ii) Germans.—4th Reserve and 2nd Corps: East of the Ourcq and facing that river. 9th Cavalry Division: West of Crécy. 2nd Cavalry Division: North of Coulommiers. 4th Corps: Rebais. 3rd and 7th Corps: South-west of Montmirail. All these troops constituted the first German Army, which was directed against the French 6th Army on the Ourcq, and the British Forces, on the left of the 5th French Army south of the Marne. The second German Army . . . was moving against the centre and right of the 5th French Army and the 9th French Army."—*Ibid.*—"In telling the tale of the Marne to-day chronicle will not suffice. It is simplest to group the action

under three heads: the fight of the Allied left—Maunoury, the British, and Franchet d'Esperey—in their effort to envelop the enveloper; the resistance of the Allied centre and right centre—Foch, Langle [de Cary], and Sarrail—against the German attempt to pierce their front; and the stand of the Allied right—Castelnau and Dubail—against the Bavarians at Nancy. . . . Both sides recognized the gravity of the coming battle. On the morning of 6th September the French Generalissimo issued from the old château of Marshal Marmont at Châtillon-sur-Seine the following order to his men: 'At the moment when a battle is about to begin on which the salvation of the country depends, it is my duty to remind you that the time has gone for looking back. We have but one business on hand—to attack and repel the enemy. Any troops which can no longer advance will at all costs hold the ground they have won, and allow themselves to be slain where they stand rather than give way. This is no time for faltering, and it will not be tolerated.' We possess an order issued to the German 8th Corps at Vitry: 'The object of our long and arduous marches has been achieved. The principal French troops have been forced to accept battle after having been continually driven back. The great decision is without doubt at hand. For the welfare and honour of Germany I expect every officer and man, notwithstanding the hard and heroic fighting of the last few days, to do his duty unswervingly and to his last breath. Everything depends on the result of to-morrow.'—J. Buchan, *History of the Great War*, v. 1, pp. 215-216.—'On September 7 both the 5th and 6th French Armies were heavily engaged on our flank. The 2nd and 4th Reserve German Corps on the Ourcq vigorously opposed the advance of the French toward that river, but did not prevent the 6th Army from gaining some headway, the Germans themselves suffering serious losses. The French 5th Army threw the enemy back to the line of the Petit Morin River after inflicting severe losses upon them, especially about Montceaux, which was carried at the point of the bayonet. The enemy retreated before our advance, covered by his Second and Ninth and Guard Cavalry Divisions, which suffered severely. Our cavalry acted with great vigor, especially General De Lisle's brigade, with the Ninth Lancers and Eighteenth Hussars. On Sept. 8 the enemy continued his retreat northward, and our army was successfully engaged during the day with strong rearguards of all arms on the Petit Morin River, thereby materially assisting the progress of the French armies on our right and left, against whom the enemy was making his greatest efforts. On both sides the enemy was thrown back with very heavy loss. The First Army Corps encountered stubborn resistance at La Trétoire (north of Rebas). The enemy occupied a strong position with infantry and guns on the northern bank of the Petit Morin River; they were dislodged with considerable loss. . . . Later in the day a counter-attack by the enemy was well repulsed by the First Army Corps, a great many prisoners and some guns again falling into our hands. On this day (Sept. 8) the Second Army Corps encountered considerable opposition, but drove back the enemy at all points with great loss, making considerable captures. The Third Army Corps also drove back considerable bodies of the enemy's infantry and made some captures. On Sept. 9 the First and Second Army Corps forced the passage of the Marne and advanced some miles to the north of it. The Third Corps encountered considerable opposition, as the

bridge at La Ferté was destroyed and the enemy held the town on the opposite bank in some strength, and thence persistently obstructed the construction of a bridge; so the passage was not effected until after nightfall. During the day's pursuit the enemy suffered heavy loss in killed and wounded, some hundreds of prisoners fell into our hands and a battery of eight machine guns was captured. . . . On this day the Sixth French Army was heavily engaged west of the River Ourcq. The enemy had largely increased his force opposing them; and very heavy fighting ensued, in which the French were successful throughout. The left of the Fifth French Army reached the neighborhood of Château Thierry after the most severe fighting, having driven the enemy completely north of the river with great loss. . . . The advance was resumed at daybreak on the 10th up to the line of the Ourcq, opposed by strong rearguards of all arms. The First and Second Corps, assisted by the cavalry divisions on the right, the Third and Fifth Cavalry Brigades on the left, drove the enemy . . . [northward]. Thirteen guns, seven machine guns, about 2,000 prisoners, and quantities of transport fell into our hands. On this day the French Fifth and Sixth Armies had little opposition. As the First and Second German Armies were now in full retreat, this evening marks the end of the battle which practically commenced on the morning of the 6th inst.'—Field Marshal Sir John French, *Second dispatch*, Sept. 17, 1914.

"Much has been written to recount the story of this great battle, and doubtless for the next century controversy will rage over the event and its results. . . . Between September 6 and 12 the German Army was driven back pell-mell from the Seine to the Marne, a distance of sixty-five miles, whilst the front extended from Paris to Verdun. Their losses in officers, men, prisoners, guns, machine guns, and war material were enormous. Most desperate battles were fought all along the line. . . . Whatever the original conception may have been, I claim for the Allies that its fulfilment was crushed forever and a day at the Battle of the Marne. Splendidly, however, as the Allied armies fought, skilfully as each of the various corps and armies which were engaged supported one another, it was the Germans themselves who deliberately threw away whatever chance they ever had of securing a decisive victory. We have seen that so late as the morning of September 6, Joffre and I were still so certain that the German thrust was in full career that an advance by the British Army in an almost easterly direction was ordered and partially undertaken. Yet at that time von Kluck's great 'advance' had for some hours become a counter-march in hurried 'retreat.' Why this sudden change? Because he then discovered that his communications were about to be threatened on the Ourcq. Surely the most inexperienced of generals might have anticipated some such threat, and, further, might have realized that the line of the river Ourcq afforded him the most convenient and efficient means of securing flank protection. . . . When the Allied armies look back to this great battle and realize what was accomplished, they cannot fail to remember with a thrill of pride that they fought and badly defeated an army not only flushed with the knowledge that it had effected a tremendous inroad into the enemy's territory, but which also enjoyed one other incalculable advantage; it was commanded and led by a sovereign who possessed absolute authority—military and civil. . . . As regards the tactical aspect of the Battle of the Marne, I believe that the name of

Marshal Joffre will descend to posterity with that battle as one of the greatest military commanders in history; I believe that the battles fought and won throughout the great length of the line over which they took place by the armies of France under their splendid leaders, will outshine for valour and skill even those glorious deeds of the past, the memorials of which deck their colours with imperishable laurels. For the British Army I claim that we carried out the rôle assigned to us, and that our rapid passages of the various river lines in face of great opposition, and our unexpected appearance on the lines of retreat of the forces opposing the Fifth and Sixth Armies were practically decisive of the great result."—Field Marshal Viscount French, 1914, pp. 140-143.

(p) *Battle of the Marne.—French account.*—"The 1st German Army (von Kluck) which forced the retreat of the British Army appeared to have Paris for its objective, but after leaving Senlis the line of march inclined towards the east. This army was not strong enough to attempt alone the operation against Paris and by allowing the distance that separated it from the other German armies to be increased there was risk of being cut off. The Governor of Paris (Galliéni), who had followed with close attention the movements of the 1st German Army, saw the advantages to be derived by attacking it before it could establish contact with the nearest German Army (2nd Army, Gen. Bülow). The French Commander-in-chief also shared this opinion and on September 4 issued General Orders for the French Armies to form a front. . . . The Battle of the Marne fought on a front of 200 kilometers was in reality a series of related battles. The 6th Army (Maunoury) and the British Army against the 1st German Army; the 5th and the 9th French Armies against the 2nd and 3rd German Armies; the 4th and the 3rd French against the 4th and the 5th German Armies. Von Kluck in pursuit of the British had passed the Marne, his army extending to Ferté-sous-Jouarre and Ferté-Gaucher. The 4th German Corps of Reserve served as flank guard to protect this movement against the 6th French Army (Maunoury). In the evening of September 5 Maunoury clashed with the enemy on the heights which border the right bank of the Marne and the Ourcq. Fighting ensued at Chambry on the right, Barcy, Marcilly, Puisieux, Etavigny on the left. Von Kluck hurried to recross the Marne, also the Ourcq, and pushed forward towards Acy-en-Multien and Nanteuil-le-Haudoin to disengage his right flank (September 7 and 8). Reinforcements were sent to Maunoury, whose left held ground with difficulty. The 4th French Corps arrived by train from the Meuse and one division was sent to the support of the British Army. General Galliéni, in order to move the other division to the front as soon as possible, requisitioned 1,100 Paris auto-taxis carrying five men each, and quickly transported the troops to Nanteuil (September 8). The fighting became intense. The Germans captured Nanteuil, while heads of columns pushed on to the extreme left towards Baron. The situation was serious for the French until 9 at night, but the enemy having disengaged his rear lines did not press the advantage. At twilight on September 10 the Germans everywhere were retiring in the direction of Soissons. This ended the Battle of the Ourcq. The recoil of the 1st German Army arrested the advance of the 2nd Army (Bülow) on the left, and successively the other armies. The straightening of the line of the British Army, between the 6th

and 5th French Army, brought it to the Marne, which was crossed downstream from Château-Thierry. On September 10 the 5th French Army crossed the Marne at Château-Thierry driving back the 2nd German Army (Bülow) and reaching Rheims, but did not occupy the heights. The Germans having obtained strong reinforcements in a reserve corps left after the siege of Maubeuge, checked the French drive, and counter-attacked and held the 55th French Army on the Aisne."—General G. L. Niox, *La Grande Guerre 1914-1918*, pp. 33-36.

1. *FOCH AND THE 9TH FRENCH ARMY.*—"The 9th French Army of General Foch comprised the 9th and 11th Corps, the Morocco division and the 42nd Division. This army was ordered to cover the right of the 5th Army by establishing a connection with the 4th Army and hold the southern outlets of the marshes of Saint Gond. The 9th Army had placed the advance-posts at the outlet of the roads which crossed the marsh of Saint Gond, that is at Château de Saint-Prix, etc. This army had to combat a powerful effort made by the 3rd German Army. The advance-posts at the southern outlets of the marsh were withdrawn; the Morocco division held the Château de Mondement on a height which dominated the plain, the 9th and 11th Corps prolonged the French right to Fère-Champenoise. The 6th, 7th, and 8th of September were days of fierce conflicts. The Germans occupied the Château de Mondement and fortified it. The situation was critical, but in the evening after failing in two counter-attacks the French regained the position in a third assault. But the right wing of the 9th Army lost Fère-Champenoise and General Foch called on the 5th Army, whose forward movement had not been checked, to cover his left by occupying the Château de Saint-Prix, then by a daring movement he brought over from his left to his right the 42nd Division (Grossetti). This division did not arrive until late in the evening of September 10, but it was in time to force the 3rd German Army (von Hausen) to follow the retiring movement of the 2nd Army (Bülow). Foch's 9th Army occupied Fère-Champenoise in the night of September 10-11. Continuing his movement he passed the Marne downstream from Chalons, at 11 in the morning. The 9th Army faced the Prussian Guards belonging to the 2nd Army, and the Saxon Corps of the 3rd Army who were energetic fighters. The 4th French Army (Langle de Cary) had resisted a powerful drive made by the 4th German Army (Duke of Württemberg) and had lost and then regained Sermaize. Reinforced by the 21st Corps which arrived from the Vosges, Langle de Cary was enabled to resume the offensive and crossed the Marne at Vitry on the 10th. The right of the 4th Army formed the connection between the 4th Army and the 3rd (Sarrail) at Revigny-sur-Saulx. The German 5th Army (Crown Prince) had Revigny for its objective, and owing to superior numbers could have pierced the French line, but the powerful resistance displayed by the 5th Corps of the 3rd Army at Revigny-Wassin-court and the arrival in the midst of the battle of the 15th Corps from Lorraine, defeated the German effort. The situation of the 3rd Army (Sarrail) which formed the right wing of the great battle line of the French Armies was precarious. It devolved upon this army to maintain connection with the 4th Army on the left and with the right to protect Verdun. It was in a position to be attacked from the rear by an offensive from Metz. The fort of Troyon had in fact been bombarded

and destroyed. The enemy occupied Saint-Mihiel and had established a bridgehead on the left bank of the Meuse. But the 5th German Army had to conform to the order for a general retreat. It fell back in the Argonne as far as the route of Vienna-le-Château, le Four-de-Paris, Varennes, by which communications were maintained between the Champagne and Lorraine. In the general retreat the German armies retired from left to right beginning with the 1st Army (von Kluck) at the extreme right which retired September 10, to the 5th Army (Crown Prince) which followed on September 12. But when the German Armies halted their retreat the French were unable to pursue them as they lacked masses of manœuvre, and cavalry and munitions. That was all there was to the battle; neither on one side, nor on the other were there manœuvres. But it was General Gallieni, Governor of Paris, who had the intuition to see when the time had come to stand and strike and he was able to inspire Joffre with the same sentiment. The orders were given. He attacked first, and the other armies followed. On a front of 200 kilometers from the Ourcq to the Meuse the general direction of the fighting got out of the hand of the Commander-in-Chief, but during the six days' fighting, he was ready with suggestive advice at critical moments and the words were often on his lips 'Hold fast! The enemy is weakening,' and in bringing up opportunely reinforcements to strengthen feeble points in the lines."—*Ibid.*, pp. 37-40.

2. VICTORY OF THE MARNE.—On September 6 General von Kluck by his inflection towards Meaux and Coulommiers exposed his right to the offensive action of the French left. This was the starting point of the victory of the Marne. "On the evening of Sept. 5 our left army had reached the front Penchard-Saint-Soufflet-Ver. On the 6th and 7th it continued its attacks vigorously with the Ourcq as objective. On the evening of the 7th it was some kilometers from the Ourcq, on the front. Chambry-Marcilly-Lisieux-Acy-en-Multien. On the 8th the Germans . . . in great haste . . . reinforced their right . . . [and] obtained some successes by attacks of extreme violence. They occupied Betz, Thury-en-Valois, and Nanteuil-le-Haudouin. But in spite of this pressure our troops held their ground well. In a brilliant action they took three standards, and, being reinforced, prepared a new attack for the 10th. At the moment that this attack was about to begin the enemy was already in retreat toward the north. The attack became a pursuit, and on the 12th we established ourselves on the Aisne."—*French official sources*.

3. LEFT OF VON KLUCK'S ARMY THREATENED.—"Why did the German forces which were confronting us and on the evening before attacking so furiously retreat on the morning of the 10th? Because in bringing back on the 6th several army corps from the south to the north to face our left the enemy had exposed his left to the attacks of the British Army, which had immediately faced around toward the north, and to those of our armies which were prolonging the English lines to the right. This is what the French command had sought to bring about. This is what happened on Sept. 8 and allowed the development and rehabilitation which it was to effect. On the 6th the British Army had set out from the line of Rozcy-Lagny and had that evening reached the southward bank of the Grand Morin. On the 7th and 8th it continued its

march, and on the 9th had debouched to the north of the Marne below Château-Thierry, taking in flank the German forces which on that day were opposing, on the Ourcq, our left army. Then it was that these forces began to retreat, while the British Army, going in pursuit and capturing seven guns and many prisoners, reached the Aisne between Soissons and Longueval. The rôle of the French Army, which was operating to the right of the British Army, was threefold. It had to support the British attacking on its left. It had on its right to support our centre, which from Sept. 7 had been subjected to a German attack of great violence. Finally, its mission was to throw back the three active army corps and the reserve corps which faced it. On the 7th it made a leap forward, and on the following days reached and crossed the Marne, seizing, after desperate fighting, guns, howitzers, mitrailleuses, and 1,300,000 cartridges. On the 12th it established itself on the north edge of the Montagne-de-Reime in contact with our centre, which for its part had just forced the enemy to retreat in haste.

"Our centre consisted of a new army created on Aug. 29, and of one of those which at the beginning of the campaign had been engaged in Belgian Luxemburg. . . . The enemy, in view of his right being arrested and the defeat of his enveloping movement, made a desperate effort from the 7th to the 10th to pierce our centre to the west and to the east of Fère-Champenoise. On the 8th he succeeded in forcing back the right of our new army, which retired as far as Gouragançon. On the 9th, at 6 o'clock in the morning, there was a further retreat to the south of that village, while on the left the other army corps also had to go back to the line Allemant-Connantre. Despite this retreat the General commanding the army ordered a general offensive for the same day. With the Morocco Division, whose behavior was heroic, he met a furious assault of the Germans on his left toward the marshes of Saint Gond. Then with the division which had just victoriously overcome the attacks of the enemy to the north of Sézanne, and with the whole of his left army corps, he made a flanking attack in the evening of the 9th upon the German forces, and notably the guard, which had thrown back his right army corps. The enemy, taken by surprise by this bold manœuvre, did not resist, and beat a hasty retreat. On the 11th we crossed the Marne between Tours-sur-Marne and Sarry, driving the Germans in front of us in disorder. On the 12th we were in contact with the enemy to the north of the Camp de Chalons. Our other army of the centre, acting on the right of the one just referred to, had been intrusted with the mission during the 7th, 8th, and 9th of disengaging its neighbor, and it was only on the 10th that, being reinforced by an army corps from the east, it was able to make its action effectively felt. On the 11th the Germans retired. But, perceiving their danger, they fought desperately, with enormous expenditure of projectiles, behind strong intrenchments. On the 12th the result had none the less been attained, and our two centre armies were solidly established on the ground gained. To the right of these two armies were three others. They had orders to cover themselves to the north and to debouch toward the west on the flank of the enemy, which was operating to the west of the Argonne. But a wide interval in which the Ger-

mans were in force separated them from our centre. The attack took place, nevertheless, with very brilliant success for our artillery, which destroyed eleven batteries of the Sixteenth German Army Corps. . . . The withdrawal of the mass of the German force involved also that of the left. From the 12th onward the forces of the enemy operating between Nancy and the Vosges retreated in a hurry before our two armies of the East, which immediately occupied the positions that the enemy had evacuated. The offensive of our right had thus prepared and consolidated in the most useful way the result secured by our left and centre. Such was the seven days' battle in which more than two million men were engaged. To give this victory all its meaning it is necessary to add that it was gained by troops which for two weeks had been retreating. Under their pressure the German retreat at times had the appearance of a rout. In spite of the fatigue of our men, in spite of the power of the German heavy artillery we took colors, guns, shells, more than a million cartridges and thousands of prisoners. A German corps lost almost the whole of its artillery, destroyed by our guns."—*Ibid.*

"The situation with which the Allies were now confronted was by no means clear. If the retreat of the German Armies from the Marne had been followed by disorganization and loss of *morale*, as appeared probable from the numerous stragglers and the mix-up of units evident from the prisoners captured, the operation of converting confusion into disaster must be of the nature of a pursuit. If, on the other hand, their power of resistance, though diminished by heavy loss, was unbroken, as had been the case of the Allies in the retreat to the Seine, the problem of completing their discomfiture would involve bringing them to action again, and winning a fresh battle before pursuit, properly so called, could be resumed. Orders quite appropriate to the pursuit of a broken and disorganized enemy can be wholly unsuited to the very different problem of beating an unbroken foe. They may well lead to the defeat of one's own army, for the latter situation clearly demands that battle should be delivered with all one's forces united. The enemy certainly appeared to be disorganized, and there were undoubtedly very weak spots in his front. In any case, it was of vital importance that no time should be lost, and no opportunity given to the Germans to reorganize and to reinforce these vulnerable places. Unfortunately for the Allies, there was heavy rain both on the 11th and 12th September, and only two reconnaissance flights were made on the one day and very few on the other. . . . G. H. Q. orders for the 12th were that the pursuit should be continued, and that the crossing-places of the Aisne should be seized and the high ground on the northern side of the river secured. The day was dark, with torrents of rain which turned the roads into seas of mud, so that observation and movement were both equally difficult."—J. E. Edmonds, *Military operations, France and Belgium, 1914 (History of the Great War, pp. 314-315)*.

4. POSITION OF THE GERMAN ARMIES.—"The situation in which the German First Army stood on the 9th September made its withdrawal northwards a comparatively easy task, for it fitted in with the tactical exigencies of the moment. Part of its right, in its endeavour to envelop the French, was already facing south, and its left (von Linsin-

gen), owing to the British advance, had already been ordered back, part over the Ourcq, to the line May en Multien—Crouy—Coulombs. Consequently all that had to be arranged further was that the centre should conform and then all divisions of the Army could retire northwards together. The movement of von Linsingen's wing was completed early enough for the retirement to be begun before the B. E. F. could come up with him. Von der Marwitz with the 2nd and 9th Cavalry Divisions, 5th Division and Kraewel's Brigade formed the general rear guard. By the night of the 10th September, the German rear guards were on an east and west line beyond the upper Ourcq, opposite the front of both the B. E. F.—just approaching that river—and the French Sixth Army, from about eight miles east of Fère en Tardenois to Crépy en Valois. Next day von Kluck made a short march to the Aisne; and on the 12th he began sorting out his divisions into their proper corps, and occupied a line on the heights north of the Aisne."—*Ibid.*, pp. 319-320.—Von Kluck knew that the English were coming, but did not know, apparently, from what point. . . . When he discovered that they were coming from Havre and even from Nantes he swung about, and thereafter, until the German retreat, there remained in northern France only cavalry and some reserve troops to serve as a screen for the flank. Von Kluck then swept southwest against Paris, creating great uneasiness there. . . . Then for the reasons already given von Kluck turned south, leaving Paris on the right (west). Von Bülow from Charleroi came south to Guise, and, after Von Kluck had flanked the French out of their positions there, continued by way of Rheims. Von Hausen advanced by way of Rocroi and Châlons. The Duke of Wurtemberg advanced by way of Sedan through the forest of the Argonne and along the Marne Valley. The Crown Prince came through the Argonne against Verdun, Clermont, and Ste. Menehould."—E. V. Stoddard, *How Joffre and Foch saved the French army (World's Work, June, 1915, pp. 187-193)*.

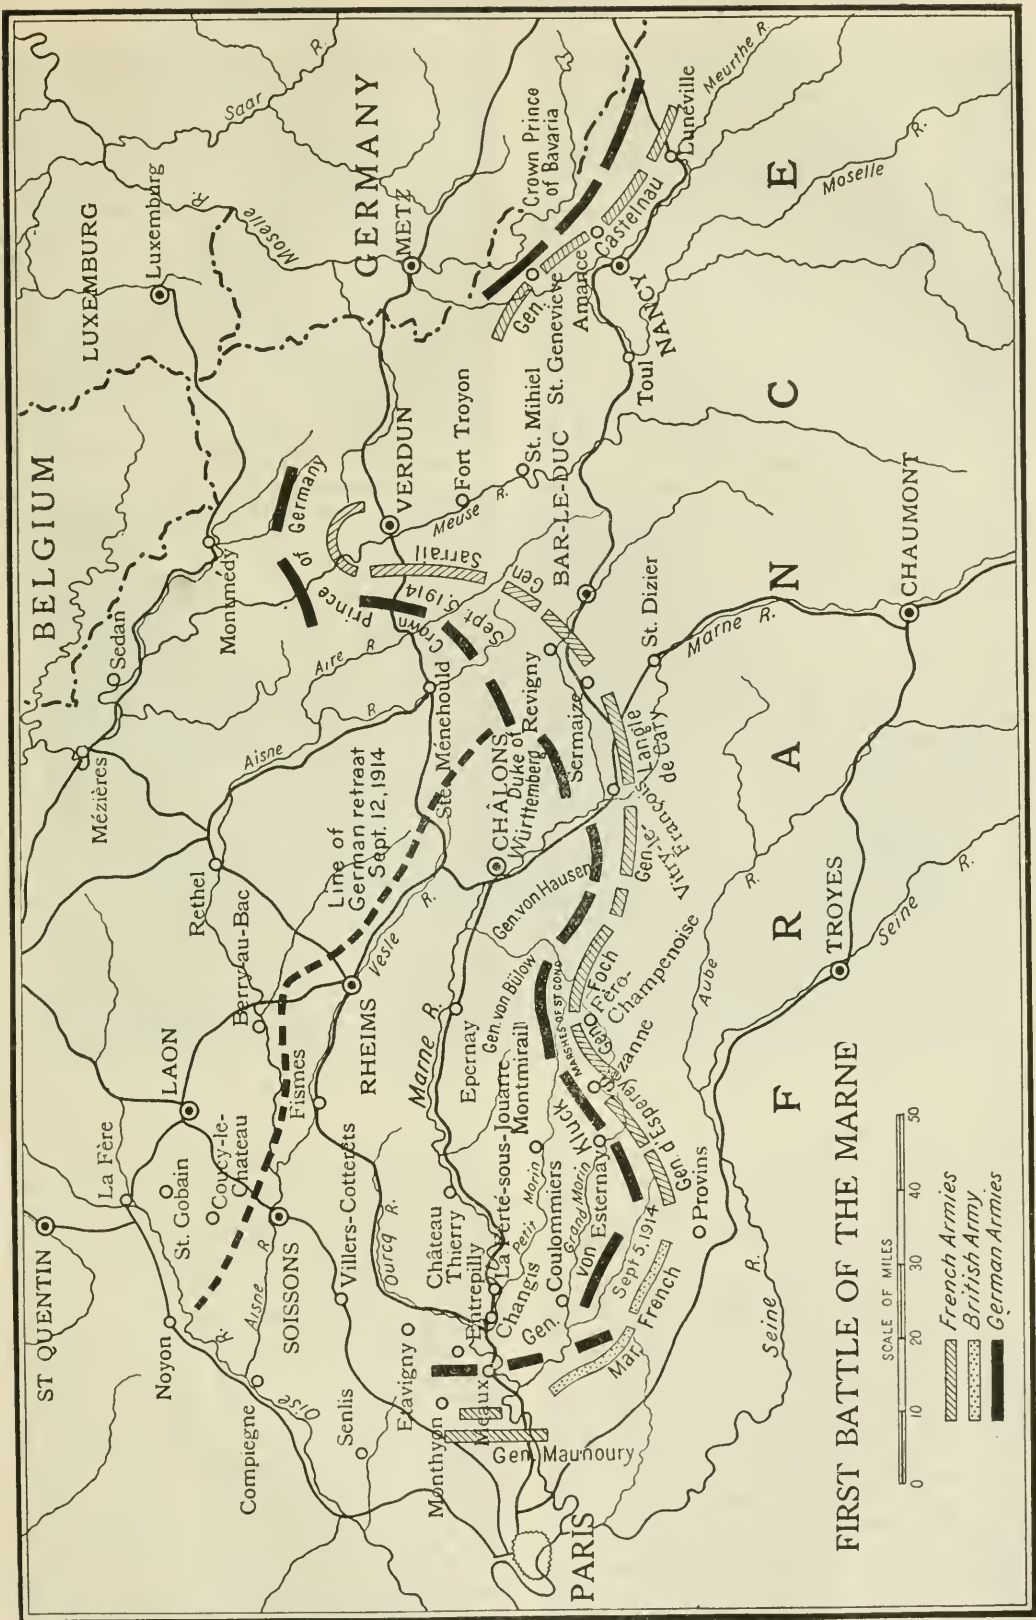

5. FRENCH POSITION.—"When the Allies' retreat started, the English, newly arrived, were on the extreme left (west). They went back as best they could, their 80,000 men helpless before von Kluck, until at La Fère their battered regiments, with the help of a French corps, turned against two of von Kluck's and defeated them, while at Montépilloy they roughly handled the German's cavalry. Thereafter they were able to move back in better order. Before that their retreat had been a nightmare. Lanrezac's army, of four corps, was on the left (west) of the French line next to the English. A rear guard had been left at Charleroi, sacrificed so that the rest of the army might escape. Their losses were great but von Bülow was checked. . . . The centre army, the four corps of De Langle, retreated on Châlons by way of Vouziers under continual pressure from von Hausen and the Duke of Wurtemberg. On the right (east) Ruffey's army, now commanded by Sarrail, consisting of three corps, retreated from the region of Longwy at their leisure. Its offensive had been effective before the retreat began, and when, on September 1st, two corps of the Crown Prince's army advanced against it, the 5th and 6th corps attacked them and threw them back in a brisk action at Cierges. . . . When the order to stop the retreat was given the Allies' left was at Crécy, about fifteen miles east of Paris,

and from this point the English, three small corps under [General] French, stretched in a southeasterly direction, a dozen miles from Vauquois. The nearest French army was that of D'Espérey—who had succeeded Lanrezac—its left ten miles away at Courchamps, while the gap between it and the English was filled by three divisions of cavalry. The right was twenty miles away at Sézanne where the new army of Foch, composed of Africans and reserve troops, three corps in all, stretched twenty miles to Sommesous. Then came another gap of ten miles with artillery and cavalry until the left of De Langle's army was reached at Sompuis, whence it stretched twenty-five miles to Sermaize. Then another gap, and Sarrail's army lying in a northeasterly direction from Revigny to Souilly. Then a gap and the fortress of Verdun. Troops from the garrison of Paris and Maunoury were placed between French and Paris. A division under Maunoury was near Meaux. Coutanceau, commander of Verdun, sent a division to connect the right of the French army with this point. The French armies lay in the form of a bow about 150 miles long with its right near Verdun and its left near Paris but separate from both. Into the hollow of this bow the Germans poured their troops and all but succeeded in breaking it. The German armies were opposed to the Allies as follows: that of Von Kluck against the English, the cavalry-filled gap, and D'Espérey's left; Von Bülow against D'Espérey's right and Foch's left; Von Hausen against Foch's right, the cavalry between that and De Langle, and against De Langle's left; the Duke of Wurtemberg against De Langle and the Crown Prince against Sarrail."—*Ibid.*

6. HOW THE GERMANS BLUNDERED.—"This was the great tactical blunder of the Germans. They threw all their forces against the French positions as if in pursuit of the enemy, holding nothing in reserve to overcome some weakness should it develop. When the French counter offensive began they had nothing to call up to meet it. Another blunder was that of Von Kluck in placing too low an estimate on the French and English on the west. A third was perhaps unavoidable; the German movement to succeed must needs be speedy but it was so fast that the army got ahead of its supplies. . . . But the great blunder was the tactical one of the weak, unsupported centre. . . . In the first phase each general fought his army as best he could: on the west Von Kluck apparently paid no attention to the English troops, believing that they had been so thoroughly mauled as to have lost their organization and be worthless, or to the French garrison of Paris. He held in reserve one corps on his right (west) to hold off any possible offensive of the Allies on that flank, and with the rest of his army moved forward toward Troyes as if there were nothing in the way. Orders of his given on September 5th with regard to the position of his troops well south of where the fighting took place make amusing reading in the light of after events. He attacked on the 5th late and gained some ground. Galliéni sent Maunoury from Paris with a division which took its position about Meaux on Von Kluck's flank, and other troops from Paris were held in reserve between that and the capital. Among these were the troops which went to war in taxicabs."—*Ibid.*

7. VON KLUCK ROUTED.—"On the morning of the 6th the German advance was counter-at-

tacked by the English, and this unexpected episode halted it absolutely. Then the French under Maunoury began to exert pressure on Von Kluck's right and by moving north threatened to turn it. One corps was drawn from the centre, where it had opposed the English, and with great rapidity was thrown against the French near Meaux and extended until it threatened to outflank them. The corps which were held in reserve between this point and Paris were not brought into action and Von Kluck's manœuvre was therefore successful in temporarily checking the movement on his flank. But at the same time it allowed the English to advance and threaten to cut off his right from his left (September 7th), while late in the day the French began to move around his flank again. Against D'Espérey and the cavalry between him and the English, Von Kluck's offensive had met with some success and he was able to withdraw another corps from his centre and throw it on his right, actually succeeding in outflanking the French flanking movement (September 8th). But this allowed D'Espérey to advance against the weakened centre and left, and on the night of the 8th there was nothing for Von Kluck to do but get his troops out of what threatened to become a bag for the whole army. . . . By eliminating the German right the numerical preponderance of the Germans over the French was overcome, and D'Espérey was, by his advance, able to threaten the right of the German armies which still held the field. Foch's left was forced to give a little ground, but his centre held fairly well. It was posted on a series of slight elevations back of the marshes of St. Gond, and here, particularly about the group of connected buildings known as the Château de Mondemont, some of the most desperate fighting of the whole battle took place. For three days the French succeeded in holding this position; on the fourth they were driven out, but when the Germans occupied the buildings the French artillery made the place a perfect hell. . . . The right of Foch's army was forced to give ground almost constantly before the assaults of the Guard (Von Bülow), half of the 12th Saxon corps, and all the 13th Saxon corps of reserve (Von Hausen). Foch's right was bent back to Herbisse, and on the 9th the 12th Saxon reserve corps had begun to enter Maily. De Langle was in somewhat better condition than Foch. His centre, well posted on high ground back of the Saulx River and the Marne-Rhine canal, held well enough, beating off almost easily the attacks of the Duke of Wurtemberg. The Germans forced their way across the canal but were unable to dislodge their opponents. But De Langle's left (west) was attacked by the other half of the 12th Saxon corps, the 10th Saxon corps (Von Hausen), the 8th corps (Wurtemberg), while the 12th corps of reserve had broken through the cavalry screen between him and Foch and was advancing on Maily. To meet this he had to reserve the 17th corps on his left. His right was forced to give some ground and a German corps (the 18th of reserve) had broken through beyond it toward Sermaize and Vassincourt and reached Robert Espagne (September 8th). Sarrail had lost less ground than any of the others (except on the west where Von Kluck had been thrown back). The Crown Prince had attacked him and the fighting had been very severe, but the difficult nature of the country made defense more easy. This was the situation of the various battles—

FIRST BATTLE OF THE MARNE

as I have said, it is better to consider them as yet as disconnected engagements—on the night of the 8th and morning of the 9th before the beginning of the general French offensive: On the west Von Kluck routed and D'Esperey beginning to advance and able to help Foch, who was in a precarious position, his left weakened, his centre unsteady, and his right all but demolished; the other army of the centre, that of De Langle, though it had not been forced to give quite so much ground as Foch's, under heavy pressure on all its positions and cut off from the armies on either flank by heavy forces of German troops; on the east Sarrail, though holding stronger positions than the other armies, was threatened on the flank by the Germans at Robert Espagne. It seemed that the French centre was smashed and that in spite of the success on the right the battle had gone against them. It seemed so, for Joffre's answer to the German attack had not yet been made. It was under these conditions that Foch sent his superb message to his commander-in-chief. 'My left has been forced back, my right is routed. I shall attack with the centre.' There was sound sense back of the seeming braggadocio of this remark, for the Germans had weakened their centre, never too strong owing to the positions of Von Bülow and Von Hausen, and there was a good chance that Foch, unaided, might break it. But at this time the battle lost its character of separate engagements and Joffre unified it. On the 8th and 9th two corps had arrived from Lorraine with the confidence of a recent victory, and with them Joffre proceeded to plug the holes in his line. The 15th corps had reached the neighborhood of Bar-le-Duc on the 8th. The inhabitants tell how during the first days the sound of battle grew nearer until the very houses shook under the concussion of the guns and the German advance seemed irresistible. Then the French artillery began to pass through the streets going toward the front, and after a short time the roar increased in volume and began to grow more distant. . . . How complete the French victory was is shown by the fact that the Germans were unable to hold the extremely strong line of the Marne, though the necessity of repairing the bridges across this river which the Germans had destroyed delayed the French [considerably]. . . . The advance of the French was so rapid in the centre that not only were brigades and regiments mixed in the hurry of the retreat but portions of corps and even of armies became confused with each other. Though the French did not annihilate or cripple the German army, the battle miscalled of the Marne was a decisive one.—*Ibid.*

"Marshall Joffre stated that toward the end of August, 1914, the Allies had on the Western Front 83 infantry and 12 cavalry divisions opposed to a German force of 85 infantry and 10 cavalry divisions. Reginald Kann, in the *Revue de Paris* of July 15, 1919, counting only active and reserve divisions, estimates the strength of the Germany concentration in the west at 70 divisions, and this estimate agrees with the number of enemy units shown on the French official maps for August and September, 1914. It is certain that the Allies were at least equal in strength, and it is altogether probable that the Allied armies had a considerable superiority in numbers over the Germans throughout the first Marne campaign. . . . Certain French writers give Foch credit for dealing the left wing of the II and right wing of the III German Armies

the knockout blow at Fère Champenoise, that started the retreat to the Aisne. As a matter of fact, Foch's IX Army had been driven back all along the line, particularly on the right, when the German Army Command No. 3 was informed of the withdrawal of the II German Army, and was compelled, thereby, to fall back itself. When Foch countered with the 42d Division, the German retreat was already under way, so all the 42d Division did, at the most, was to speed up the Germans. . . . Answering the Joffre-Galliéni dispute as to who is entitled to the credit for the Maunoury envelopment, all one can say is that Joffre conceived the idea and Galliéni saw the opportunity. Finally, as to the Hentsch incident, facts and investigation show that Hentsch did not exceed his authority and order the retreat of von Bülow's II Army—he did not have to do so, since von Bülow did it himself and admits it in his own report. . . . The German failure was not due to the defective plan so much as it was due to defective command and execution. As Napoleon and Foch have said, everything is in the execution; so, had the Germans had a von Schlieffen in command in 1914, they would have won, von Moltke plan or no von Moltke plan."—W. K. Naylor, *Marne miracle*, pp. 15-17.

(q) German versions.—"According to Princess Blücher ('An English Wife in Berlin'), it was not until the 23rd of September, 1914, that it began to leak out in Germany that there had been a disaster on the Marne. All that the official bulletin of the 10th of September, 1914, had to tell about the battle had been: 'The portions of the Army which had pursued up to and over the Marne east of Paris were attacked between Meaux and Montmirail by superior forces. They have held the enemy during the two days' heavy fighting and have even made progress. As the approach of strong enemy columns was reported, the right wing was drawn back. The enemy nowhere followed. As victory-booty in these actions, fifty guns and several thousand prisoners have up to now been taken.' No further news about the Western front was given to the German public until the 13th of September. . . . It was then told: 'The operations in the Western theatre of war, with regard to which details cannot yet be published, have led to a new battle that stands favourably for us. The unfavourable information with regard to our Armies that the enemy is spreading by all possible means is false.' . . . Gradually, however, the magnitude of the disaster became public property. . . . [although] it was not until June, 1919, when the Saxon Major-General Baumgarten-Crusius published his book 'Die Marneschlacht, 1914,' 'compiled from War records' . . . that some of the facts began to be known. . . . Since then other books on the Marne have appeared, among them those of the commanders of the German First and Second Armies, and there have been numerous magazine articles and letters on the subject of Colonel Hentsch. Finally, the result of the Court of Enquiry on him in 1917 . . . [was published in 1920] in the *Militär Wochenblatt*, and we have practically the whole story. Lieut.-Colonel Hentsch actually did have a great say in the orders for the retreat from the Marne, and his name will doubtless be connected with the battle for all time. . . . On mobilization he . . . accompanied Supreme Headquarters into the Field. He appears, however, to have been principally employed in liaison work in August-September, 1914, and was therefore well known to the Army

Staffs."—J. E. Edmonds, *Scapegoat of battle of the Marne, 1914, Lieutenant-Colonel Hentsch and the order for the German retreat (Army Quarterly, Jan., 1921)*.—"Without knowledge of what happened on the German side, the end of the battle of the Marne is something of an enigma. Although the information available is not quite complete, and two of the officers principally concerned in the decision to retreat—Generaloberst von Moltke and Oberst Hentsch—are dead, the three Army commanders of the right wing—von Kluck, von Bülow and von Hausen—and von Kuhl (von Kluck's Chief of the Staff) have written their versions; and Generalmajor von Baumgarten-Crusius has compiled a lengthy account from official sources, containing operation orders and extracts from the war diaries, and more recently has published extracts from a statement written by Hentsch, which practically tell the whole story. The lengthy German *apologia must*

loop south of the Marne, north-east of Meaux. On receipt during the night of the information that the IV. Reserve Corps had been in action with strong French forces, instructions were sent to General von Linsingen, commanding the II. Corps, to start as soon as possible to its assistance, and his two divisions crossed the Marne at Vareddes and the Ourcq at Lizy, respectively, and cooperated with the IV. Reserve Corps on the 6th. During the day, the IV. Corps also, instead of halting at Doue, was moved back over the Marne north of La Ferté-sous-Jouarre, and at 10:30 P. M. was ordered to make a night march to the assistance of the right wing. Thus by the morning of the 7th, the II., IV. [Corps] and IV. Reserve Corps were engaged against Maunoury, but the III. and IX. Corps were still south of the Marne. During the 6th September the rear guards of the II. and IV. Corps, and the 2nd and 9th Cavalry Divisions were in action against the British. The

COMPANY OF THE FAMOUS GERMAN UHLANS

necessarily be given here in a very condensed form. On the evening of the 5th September, the German First Army had four corps and two cavalry divisions south of the Marne, along the Grand Morin, and a flank guard of one corps and one cavalry division north of the Marne near Meaux, facing west. Part of the latter force, advancing to clear up the situation, had come in contact with General Maunoury's troops during the afternoon. At 10 P. M. von Kluck gave the following orders preparatory to getting into position between the Marne and Oise to face Paris. They were to take effect at 5 A. M. next day. Whilst his left corps, the IX., and the flank guard stood fast, the other three corps were to face about, and begin wheeling to the right on the IX. Corps. Very full directions were given as regards transport, which was to be got clear at once; and the withdrawal was to be covered by the 2nd and 9th Cavalry Divisions and weak rear guards of the II. and IV. Corps on the Grand Morin. In detail, the III. Corps was to march to La Ferté Gaucher, the IV. to Doue and the II. in two columns to Isle les Meldeuses and Germigny, in the

III. and IX. Corps were attacked by the French Fifth Army and the IX. was only extricated from envelopment by the intervention of the Second Army, under whose orders von Kluck had temporarily placed these two corps. Meanwhile, the Second Army, in accordance with O. H. L. [*Oberste Heeres-Leitung*] instructions, was wheeling gradually to the right, so as to face Paris on the line Montmirail—Marigny le Grand; its left thus came into collision with General Foch's Ninth Army. By the morning of the 7th von Kluck seems to have become thoroughly alarmed. According to von Bülow, he sent him the following messages, which von Kluck does not give or allude to in his own book: 10:10 A. M. 'II., IV. and IV. Reserve Corps heavily engaged west of the Lower Ourcq. Where are the III. and IX.? What is the situation there? Reply urgent.' 11:15 A. M. 'Assistance of III. and IX. Corps on Ourcq is very urgent. Enemy considerably reinforced. Send corps in direction La Ferté Milon and Crouy.' At 1:15 P. M. von Kluck issued orders to these corps also to press forward to Ourcq battlefield as fast as possible and by the shortest route. He

states that, 'owing to the increasing gravity of the situation, divisions had to be thrown in simply as they became available, and thus became separated from the corps.' He therefore formed four groups under the four corps commanders. Sixt von Arnim, von Quast, von Lochow and von Linsingen. The effect of the change of front of the whole First Army, which from facing south beyond the Marne now faced west beyond the Ourcq, and of the simultaneous wheel back of the Second Army to the right to face south-west towards Paris, was to create a gap in the German front from west of Montmirail to Lizy on the Ourcq—some twenty miles. To fill the gap there were available only the Guard and 5th Cavalry Divisions of von Richthofen's Corps and the 2nd and 9th Cavalry Divisions of von der Marwitz's Corps. To support them von Kluck on the 8th September sent the 5th Division, Kraewel's Composite Brigade formed of units of the IX. Corps, and part of the 3rd Division. As his divisions came up von Kluck endeavoured to outflank Maunoury from the north, and, in view of the British advance, ordered the destruction of the Marne bridges. He was nearly captured, as he himself tells us, on the evening of the 8th near La Ferté Milon by a raid of General Cornulier-Lucinière's Provisional Cavalry Division. Of the Second Army von Bülow says: 'Although the fight on the 8th September made further progress in the centre and on the left wing, no decisive result was achieved. The unsupported right wing, —13th Division and X. Reserve Corps—on the other hand, in order not to be enveloped, had to be withdrawn in the evening to the line Margny—Le Thout.' Von Bülow now, on the evening of the 8th, seems to have lost heart. Aeroplanes had reported the advance of the British columns 'northwards via Rebas and Doue (3rd and 5th Divisions); a third column (4th Division) advancing north-eastwards from La Haute Maison'; and Franchet d'Espérey was continuing the attack on his right, with one column wide on the west moving to outflank him. He says, 'in these circumstances the probability of a break-through of strong enemy forces between the First and Second Armies had to be reckoned with, unless the First Army decided to retire in an easterly direction and regain touch with the Second Army.' Far from doing so, it was attacking westwards. Von Bülow's map shows the French Fifth Army and the British Expeditionary Force breaking in between him and von Kluck and enveloping his right, and the latter's left wing, on either side of the gap,—a sufficiently alarming situation to face. This situation would become even more critical on the 9th September, if the pressure developed. Von Kluck, however, had a piece of luck, as one of his brigades (Lapel's, belonging to the IV. Reserve Corps) which had been left behind in Brussels came up and appeared almost behind Maunoury's left flank. He, as reported by General von Kuhl, his Chief of the Staff, took a totally different view of the situation from von Bülow. 'On the right wing of the First Army a successful decision was certain. The Army had been so disposed that the enemy's (Maunoury's) northern flank was enveloped and a brigade was to be sent to interrupt his line of retreat. On the 9th the fight was making favourable progress and the enemy had begun to give way. A decision was certain to be obtained by next morning: we were convinced of it. . . . Generaloberst von Kluck had not underestimated the danger of an

advance of the British into the gap between the First and Second Armies. He did not, however, consider that much could be expected from the British troops. After their long retreat and many defeats, they could, he thought, be effectually held up on the Marne [which they were not]. Even if they succeeded in advancing, the victory over Maunoury on the 10th would compel them to make a hasty retreat. Further, the British would not dare to make an unsupported advance whilst the French were being defeated on their left, and their communications with the sea threatened. Even if the right wing of the Second Army were forced back, it would not affect the final issue: rather, if the victory of the First Army were decisive, it would make the enemy's position more precarious.' Von Kuhl himself, writing later, takes a somewhat different view. He says: 'After it was established that the Second Army had decided in the morning to retire and at midday the troops were already in retreat, as there was no means of reversing this decision, the First Army Command had to conform. Even a victory over Maunoury could not prevent us from having our left flank enveloped by superior force, and from being driven away from the main army. The First Army stood isolated.' All this time, from the 5th to the 9th September, no orders came from the Supreme Command, which was established more than 130 miles away at Luxembourg, in no better communication with the Armies than was possible by wireless and by liaison officers in motor cars. Much of its attention seems to have been directed towards the Russian front. Tannenberg had been fought (26th-29th August) and Samsonov's Army annihilated, but the battle of the Masurian Lakes against Rennenkampf was beginning only on the 8th September. On the south-east front, though the Austrians had some small initial successes on the left at Krasnik (25th August), and Komarow (26th August to 2nd September), the Russians had steadily pressed on, and had routed the Austrians at the first battle of Lemberg (31st August to 2nd September), and on the 6th, the very day of the commencement of the battle of the Marne, continuing their offensive, they began the battle of Grodek (6th to 12th September) and drove the Austrians headlong across the San. From the evidence of the German operation orders, it would appear that up to the 4th September the Supreme Command assumed that in France all was going well and according to plan. On the right, the First and Second Armies were forcing the French away from Paris southeastwards; on the left the Sixth and Seventh were pressing on to the Moselle. In the centre the Third, Fourth and Fifth Armies were 'heavily engaged against superior forces'; but strategically their slow progress was of advantage, because it gave time for the wing Armies to move forward and envelop the enemy. It looked as if the French would either be surrounded in the open field, or if by withdrawal they evaded the 'pincers' preparing for them, would be driven up against the Swiss frontier. In the orders of the 4th September, 7.45 P. M., the failure to enclose all the French Armies and the B. E. F. was recognized. 'The enemy has evaded the envelopment of the First and Second Armies, and part of his force has joined up with those about Paris.' The First and Second Armies were therefore detailed to face Paris and act against any attack from that direction, whilst the Fourth and Fifth Armies were to press south-

east and the Sixth and Seventh take the offensive westwards against the Trouée des Charmes between Toul and Épinal, so as to drive together, enclose and capture the French Armies of the right that were opposing them. Thus von Moltke seems to have conceived two separate battles, one near Paris, and the other near Verdun. The Third Army was to be prepared to take part in either, as required. So important did he consider the attack in Lorraine, that when the threat from Paris began to materialize, he still persevered there, instead of sending every man who could be spared from the left to the vital right wing in accordance with the original plan. For this purpose there were trains actually waiting on the sidings. It was not until the 9th September that orders were given for the transfer of the XV. corps from the Seventh Army to the west. So confident was Great Headquarters of success, that arrangements were actually made on the 7th for the visit of the Kaiser to his victorious Armies, and he was due to be at Second Army headquarters on the evening of the 8th, when a meeting of a very different kind took place there, as will be seen. No orders were sent to the First and Second Armies from O. H. L. on the 5th, 6th, 7th or 8th—it seems to have still assumed that all was going well near Paris; the critical aspect of the situation there and the imperative necessity of co-ordinating the operations of the Armies forming the German right wing escaped its attention until the 8th September, when after a five days' battle the attempt of the Sixth and Seventh Armies to break through in Lorraine and cross the Moselle had to be abandoned. In its dilemma, the Supreme Command on the morning of the 8th September despatched Lieut.-Colonel Hentsch of the Intelligence Section of the General Staff to visit the Fifth, Fourth, Third, Second and First Armies—a round trip of some 400 miles—to bring back a clear idea of the situation. . . . Hentsch's report of what occurred at Second Army headquarters is as follows: 'I discussed the situation thoroughly with Generaloberst v. Bülow, General von Lauenstein (his Chief of Staff) and Oberstleutnant Matthes (Operations) on the evening of the 8th September in the Château of Montmort. We weighed every possibility for avoiding a retreat; the tone of the Army Staff was calm and confident. At 5:30 A. M. on the 9th September I examined the situation once again with General von Lauenstein, on the basis of the reports that had come in during the night. After the First Army had withdrawn the III. and IX. Corps from the Marne to its right wing, there was no other possibility but to go back across the Marne at once.' Von Bülow gives more definitely the reasons that forced the retreat upon him. He adds to what he had already said on the evening of the 8th: 'When early on the 9th September numerous enemy columns crossed the Marne between La Ferté-sous-Jouarre and Château-Thierry, there remained no doubt that the retreat of the First Army was, for both tactical and strategical reasons, unavoidable, and that the Second Army must also go back, in order not to have its right flank completely enveloped.' From this statement of von Bülow, it seems clear that it was the advance of the B. E. F. [British Expeditionary Force] which had influenced him in making the decision to retreat. This view is confirmed by a statement of an officer of the German Great General Staff, as follows: 'At Second Army headquarters

the order for retreat was given without consultation with the two neighbouring Armies, and only after an aeroplane report had come in of the advance of five long columns against the Marne between La Ferté-sous-Jouarre and Château-Thierry. Generaloberst von Bülow now sent a wireless message to the First Army that he was beginning the retreat behind the Marne between Damery and Épernay. Lieut.-Colonel Hentsch had left before this happened, to order the retirement of the First Army to the north-east.' General von Kuhl urged that the attack of the First Army was at that moment in full swing and that retreat would be a difficult matter, as formations were much mixed and the troops were very tired. Lieut.-Colonel Hentsch replied that, nevertheless, no other course was open but to retire, at any rate, as far as Soissons, with the left wing behind the Aisne, and emphasized that his instructions were to be operative in spite of any further information which might be received, as he had 'full full-powers (*volle Vollmacht*).' General von Kuhl states that, 'in spite of lively protests, the headquarters of the First Army had to obey and, with heavy hearts [at 2 P. M., German time], issued orders for the retreat.' Hentsch's account is somewhat different. It is: 'The situation of the First Army about midday [when the conference took place] was such that the left wing had *already* received the order to go back to the line Crouy-Coulombs. The possibility of the Second Army holding the line of the Marne was therefore out of the question; it must go further back, if its flank and rear were not to be enveloped by the British on the 10th at latest.'—J. E. Edmonds, *Military operations, France and Belgium, 1914 (History of the Great War, pp. 296-305)*.—"Von Kluck's hints that, but for the orders given him to retreat, he would have been able 'to exploit the success already commenced against Maunoury' and then turn against the British Army, 'if, after the fight at Montbertoin, it ventured to push forward,' seem to have little to justify them. . . . No one can say with certainty what would have happened in a battle of 1914 if something that was not done had been done; but it would appear that the decision made by von Bülow and acted on by Lieut.-Colonel Hentsch, saved the German Army from a greater disaster than it actually suffered. Fighting with both flanks enveloped, its front broken, enemy cavalry in its rear, its supply of ammunition nearly exhausted, without organized lines of communications, in a hostile country, and with no reinforcements in sight, it was, to say the least of it, in such an unfavourable strategical situation that there was only one course: retreat."—J. E. Edmonds, *Scapegoat of the battle of the Marne, 1914, Lieutenant-Colonel Hentsch, and the order for the German retreat (Army Quarterly, Jan., 1921, pp. 357-358)*.

(r) End of the German retreat (September 12).—German positions.—"At dawn on the 11th [September] the British Army broke up from its billets and bivouacs and the further pursuit of the enemy began. The three corps crossed the Ourcq practically unopposed, and during the day the cavalry reached the line of the Aisne, the First, Second, and Fourth Cavalry Brigades passing the night on the high ground about Couvrelles and Cerseuil, while the Third and Fifth Cavalry Brigades bivouacked south of Soissons. As regards the main body, the First Corps, on the right, reached the line Bruyères—Oulchy-le-Château. In the centre the Second Corps was about St. Remy. On the

left the Third Corps lay slightly in advance, about Louatre. Orders were issued during the night for the British Army to deploy along the south bank of the Aisne between Bucy and Bourg, and on the following day—Saturday, the 12th September—the first real check to the British advance was experienced. Reconnaissances by the cavalry ascertained that strong hostile detachments, supported by artillery and machine-guns, were holding the town and bridge of Braine and the heights beyond. It was becoming clear that the Germans had retired in accordance with a prearranged plan. From the opposition encountered by the French 6th Army to the west of Soissons, by the British Third Corps south-east of that place, by the Second Corps south of Missy and Vailly, and from other indications all along the line, Sir John French found himself, during the afternoon, faced with a new situation. The field-marshal came to the conclusion that the enemy had, for the moment at any rate, arrested the retreat and was preparing to dispute the passage of the Aisne with some vigour. South of Soissons, as has already been narrated, the Germans were holding an advanced post against the French 6th Army. To its aid came the Fourth Division of the British Third Corps, which had arrived at Buzancy during the morning. . . . As regards the French 5th Army, covered as it was by the 2nd Cavalry Corps, its advance seems to have been absolutely uninterrupted. On the 12th it prolonged the line of the British with its right thrown back and facing generally north-east, so that it lay on the line Fismes-Epernay. The French 9th Army likewise had no difficulty to contend with during the day and reached the Marne between Epernay and Châlons. On the following day a move was apparently made towards Rheims, Châlons remaining as the headquarters of the army commander, General Foch. On the side of the Germans, General von Bülow held the ground from the left of the 1st Army about Berry-au-Bac, eastwards and south-eastwards along the Suippe and towards Rheims. . . . The first object on which the commander of the French 4th Army concentrated his attention [on Sept. 11] was the capture of Vitry-le-François. . . . [which] was evacuated by the Germans before noon, the French 12th Corps passing through the town and halting for the night astride of the Marne a few miles further north. . . . The German IVth Army and such Saxon troops of the IIIrd Army as had been pinned against the Marne offered but little resistance, falling back to their allotted sector of the new German position on the left of General von Bülow. The German Vth Army, however, gave more trouble. For the rôle of the Crown Prince [at Verdun] was to mark time as the pivot of the great German wheel, and he appears to have carried out the task with some skill. His attitude on the morning of the 11th was almost entirely passive, for his mission was to gain time, and he probably realized that time could be gained equally well and with less risk by awaiting attack than by initiating it, especially if the troops awaiting the attack were set to work to strengthen their positions, as the German Vth Army was. An impressive calm, therefore, heralded in the 11th September between Revigny and Verdun. It was, however, soon broken by General Sarrail, for whom a policy of attack was obviously prescribed. The left corps of his 3rd Army—the 15th—was still working in close connexion with the right of the 4th Army, and during the day this co-operation bore fruit. For late in the afternoon the 15th Corps crossed the Marne Canal, occupied Revigny and deployed

south-west with its right upon that town, while later still a movement was made towards Brabant-le-Roi. Opposed to this corps during the day had been the German XVIIIth Reserve Corps, which was rather roughly handled by the French and had to acknowledge the loss of four guns, five machine-guns, and other spoil. This success of the 15th Corps reacted on the 5th Corps immediately to its right, for the guns of the former aided the latter to retake Laimont and Villotte-devant-Louppy; while still further to the right the 6th Corps and the two Reserve Divisions had been feeling for the enemy and discovering that a retrograde movement was taking place, until they were checked by an entrenched position which the Germans had constructed south of Souilly. The day therefore closed with a slight gain for the left flank of the French 3rd Army, while the Crown Prince's left maintained its ground. There is some disagreement as to the dates of the further stages of the retirement of the German Vth Army after the 11th September, but it would appear that on the 12th the French 3rd Army again attacked and found the German trenches more formidable than ever. These, however, were almost certainly occupied merely by rear-guards, which enabled the main body to fall back upon a line running north-east and south-west through Triaucourt. From there the retrograde movement was continued, pressed by General Sarrail, who saw the importance of recovering for Verdun the St. Ménehould-Clermont-Verdun line of railway. The Crown Prince finally brought his army to rest across the Forest of Argonne, his right about Vienne-la-Ville, his centre at Varennes and his left at Montfaucon."—F. E. Whitton, *Marne campaign*, pp. 236-237, 239-240.—After the retreat of the German armies from the Marne to prepared positions on the Aisne, their front lines were reformed as follows: 1st and 2nd Armies on the right bank of the Aisne; 3rd Army (formerly von Hausen's, who was succeeded by von Einem) on the heights dominating Rheims from the north and east; 4th Army on the Aisne between Rethel and Vouziers (this army was later moved to Flanders); 5th Army in the Argonne joined with Metz by the road of Four-de-Paris and Varennes. The 6th, 7th and 8th Armies were in Lorraine and Alsace; the 6th (Crown Prince Rupprecht) was soon afterwards moved to Flanders.

(s) **Battle of the Aisne.—Allied attack.—German counter-offensive.**—"General Joffre, when stopped at the Aisne, decided to assume the offensive at once. Although he issued new instructions, the only change in previous plans for the strategical pursuit was that the Fifth Army (General d'Esperey) should operate with the Sixth Army, the British Army, and the XIII Corps as a group; while the Ninth, Fourth and Third Armies should operate as a group and penetrate the German line by rupture near Verdun. In the left group, the attack of the right of the British Army (General French) and the left of the French Fifth Army (General d'Esperey) reached the Chemin des Dames. The right group was not able to dislocate the German line near Verdun. No progress was made in enveloping the German right. The Germans used the methods of position warfare successfully in defending in these operations. The new chief of the German General Staff, von Falkenhayn, estimated that the sensitive German right flank should be protected by extension to the sea, and that the extension should be on the line of the Somme. This would be the shortest line to the sea and would also cut the British line of com-

munications via Calais. Von Falkenhayn's plan of operations was to seize the initiative at once by a counter-attack on the Aisne, to divert the attention of General Joffre from the German right by an attack in Lorraine, and to gain sufficient troops by withdrawals from the Eastern front, from reserves in Germany, and by the adoption of siege methods (position warfare) from the Oise to Switzerland, with which to extend the German line along the Somme River to the sea, and, later, to resume the envelopment of the western flank of the Allies' armies. The plan of maneuver called for the capture of the Chemin des Dames with the view of securing the initiative, and also, that commanding position. The attack was launched September 17 on a ninety mile front along the Aisne. The battle reached its height of violence September 19 and 20, in an effort to capture the Chemin des Dames. The Allies, using the method of position warfare in defense, repulsed the German attacks, September 21. The plan of maneuver for the offensive in Lorraine called for a converging attack on the Verdun salient. That offensive had several objects. They were: To divert attention from the exposed German right flank; to secure better protection, for the German line of communications through Carignan and for the Briey mining area; to shorten the line and gain troops with which to extend the line to the sea. The attack was launched September 19. The northern attack by two corps of the German Fifth Army progressed in the direction Varennes-Clermont and threatened the Paris-Verdun railroad, but was stopped, September 24, by General Sarrail's Third Army. The southern attack by an army detachment (von Strantz) was more successful, and, capturing St. Mihiel, crossed the Meuse on a foot bridge whose destruction had been overlooked. It was stopped, September 22, by a coördinated converging attack by the First Army (General Dubail), the Third Army (General Sarrail) and the 3d group of division reserves, before it had cut the Paris-Nancy railroad, but it did cut the Commercy-Verdun railroad. The line thus gained made the St. Mihiel salient which was held by the Germans for the next four years.—C. R. Howland, *Military history of the World War, v. 1, pp. 65-68*.—"Germany in retreat had lost the offensive, but had again snatched the initiative; she was about to dictate to her enemies the form of the struggle—to compel them to accept a trench battle, well suited to her own stubborn and mechanical genius. . . . When the Allied troops on the 13th and 14th of September first became dimly cognizant of the nature of the German position they did not realize its full meaning. They could not know that they were on the glacis of the new type of fortress which Germany had built for herself, and which was presently to embrace about a fifth part of Europe. On the 11th and 12th they had believed the enemy to be in full retreat, and when they felt his strength their generals were puzzled to decide whether he meant to take a serious stand, or was only fighting delaying actions preparatory to a further retirement to the Sambre or beyond. Had Joffre known the strength of the Aisne positions, he would probably from the beginning have endeavoured to turn them on the west—or what would give far more decisive results—to break through the Crown Prince's army in the east, and so get between them and their own country. As it was, he decided to make a frontal attack, which would be the natural course against an enemy in retreat who had merely halted to show his fangs. The fighting on the Aisne was to continue for

many weary months, and to show a slow and confusing series of trench attacks sandwiched between long periods of stagnant cannonades. But the First Battle of the Aisne in the strict sense of the word—the battle during which the Allied plan was a frontal assault—lasted for six days only, and on the widest interpretation not more than a fortnight. It represented a delaying action, while Germany changed from her first to her second plan of campaign. The first action was one of advanced Allied cavalry and strong German rearguards. On Saturday, 12th September, Maunoury's Sixth Army was in the forest of Compiègne, with its right fronting the enemy in the town of Soissons. It had secured several good artillery positions on the south bank, and spent the day in a long-range duel with the German guns across the river, in the endeavour to 'prepare' a crossing. Practically all the bridges were down, and since the Aisne is fully fifteen feet deep, the only transport must be by pontoons. It took some time to capture a German post on the Mont de Paris, south of Soissons. On Maunoury's right the British 3rd Corps was busy at the same task just to the east of Soissons. East of it, again, the two other British corps were advancing in echelon, while the cavalry was driving the enemy from the ground around the lower Vesle. . . . On the 12th Allenby discovered that the Germans were holding Braisne and the surrounding heights in some force, and drove them out, and cleared the stream. Shortly after midday the rain began, and . . . [the British] advance in the afternoon was handicapped by transport difficulties in the heavy soil. . . . East of the British, Franchet d'Esperey brought his army up to the Vesle, and Langle was moving down the upper Suippe. . . . Sunday, the 13th, was the beginning of the passage of the Aisne. The French Sixth Army constructed pontoons at various places under a heavy fire, and several divisions were got over. Vic and Fontenoy were the chief crossings, for a pontoon bridge at Soissons itself was made impossible by the guns on the northern heights. A number of French Infantry did succeed in making a passage by means of the single girder which was all that was now left of the narrow-gauge railway bridge. To the east the British operations during the day were full of interest. The 3rd Corps attempted the section between Soissons and Venizel. The Aisne was in high flood, and the heavy rain made every movement difficult. . . . On the evening of that difficult Sunday we may summarize the situation by saying that, on the fifteen miles of front allotted to the British, they had crossed the river at most points, and had entrenched themselves well up the farther slopes. . . . During the night of the 13th, while the German searchlights played upon the sodden riverside fields Joffre decided that the following day must be made to reveal the nature of the German plans. Accordingly on the 14th, while the engineers were busy strengthening the new bridges and repairing some of the old for heavy traffic, a general advance was begun along the whole western section of the front. Maunoury carried the line of the river between Compiègne and Soissons, and attacked vigorously right up to the edges of the plateau. From Vic his Zouaves advanced up the deep cleft of Morsain through St. Christophe, and seized the villages of Autrèches and Nouvron on the containing spurs. By the evening, or early the next morning, he had won his way far up the heights, and was suddenly brought up against the main German position on the plateau itself. There he found himself held, and of all the Allied commanders was the first to

realize the nature of the defensive trenches which the enemy had prepared. The fate of the British 3rd and 2nd Corps was much the same. . . . The chief offensive was entrusted to Sir Douglas Haig's 1st Corps, which, . . . was mostly on the northern bank between Chavonne and Moulins, where to the east begins the first lift of the Craonne plateau. It was directed to cross the line Moulins-Moussy by 7 a.m., a section where the northern heights are more withdrawn from the Aisne. . . . About four in the afternoon the commander of the 1st Corps [British] ordered a general advance. From then till daylight departed there was a heavy engagement, which resulted in a clear British success. [See below: 5.] At nightfall they held, not indeed the Chemin des Dames, but a position which ran from a point on the northeast of Troyon, through Troyon and Chivy to La Cour de Soupir, while the cavalry carried it down to the Soissons road west of Chavonne. The whole day's work was well conceived and brilliantly executed, and gave the Allies for the first time an entrenched position on the plateau itself. On the day before Franchet d'Esperey's Fifth Army had in large part crossed the Aisne east of Bourg, and on the 14th the first assault began on the Craonne plateau. On the evening of that day the eastern flank of the British 1st Corps was safeguarded by French Moroccan battalions, which entrenched themselves in echelon on its right rear. [See below: 3.] The Germans held the river crossing at Berry-au-Bac, an important point, for there the highroad runs from Rheims to Laon. Along the Suippe the Ninth Army was feeling the German strength in the impregnable trenches on the northern slopes, and finding it so great that the advance checked. Farther east in north Champagne, Langle's Fourth Army had occupied Souain, and, like its colleague to the west, was becoming aware of the fortress in which the enemy had found shelter. At the moment, however, the German High Command was greatly perturbed. No intelligible orders came from Great Headquarters, and Bülow, who had the direction of the main battle, was preparing to fall back on La Fère; it was his habit to see defeat before he was beaten. But in the night the first reserves arrived and on the 15th came the news that the 9th Reserve Corps had come to strengthen Kluck's endangered right. That day, Tuesday the 15th, saw an enemy reaction, a series of violent counter-attacks along the western front. Maunoury's Sixth Army was the chief sufferer. From their main position at Nampcel the Germans drove the French out of their posts on the crests of the spurs, recaptured Autrèches, and forced the French right out of the Morsain ravine and off the spurs of Nouvron. By the Wednesday morning the French were back on a line close to the Aisne, and only a few hundred yards north of their original crossing-places at Vic and Fontenoy. Soissons was heavily shelled, and all the northern part of the town was gutted by fire. The French left, however, continued its flanking movement up the Oise on the west side of the forest of Laigue, and on this day made considerable progress in the direction of Noyon, where, however, it was suddenly checked by the arrival of the 9th Reserve Corps. On the British left the 4th Division of the 3rd Corps was severely handled, but stood stoutly to the ground it had won south of Vregny. The 5th Division felt the weight of the same onslaught. . . . In the evening it was forced back almost to the line of the stream, and held the ground between Missy and Ste. Marguerite—a line dominated everywhere by the guns on the

heights. . . . Haig on the right had a long day of counter-attacks, which he succeeded in repulsing, and the 4th (Guards) Brigade in particular gave the enemy much punishment. By the evening the British line was fairly comfortable, except for the precarious situation of the 4th and 5th Divisions. Next day, the 16th, there was a sudden lull on the British front. Sir John French had contemplated a second attack on the Chemin des Dames, which would give relief to the hard-pressed 4th and 5th Divisions; but the news from Franchet d'Esperey convinced him that it would be highly dangerous. For the French Fifth Army had found the enemy on the Craonne plateau too strong for them, and the Moroccan battalions, echeloned on the British right, had fallen back, and so left that flank in the air. [See below: 3.] Accordingly the 6th Division, which had arrived that morning from England, was kept in reserve on the south bank of the Aisne, instead of being sent to support the 1st Corps in a forward movement. But on the 17th events moved more swiftly. Maunoury had received reinforcements, and the right of the French Sixth Army checked the German attack, and won back all the ground they had lost. They drove the Germans right back from the edge of the plateau to their main position behind Nampcel, and in particular cleared them out of the quarries of Autrèches, which had given them deadly gun positions. This French success eased the situation of the British 4th and 5th Divisions, and the centre of . . . [the British] line was left in peace. Not so . . . [the British 1st Division] perched high up on the plateau at Troyon, and looking towards the Chemin des Dames, which spent an unceasing day of attacks and counter-attacks. Farther to the east the French Fifth Army was still assaulting in vain the Craonne plateau, and the Ninth Army had fallen back from the Suippe to just outside Rheims. The Germans were now on the hills north of that city, and were able to pour shells into it. The heights of Brimont were won by them, and though the French made desperate efforts to retake them, and for a moment looked like succeeding, they continued to hold the ground. These heights were only 9,000 yards from the city. More important still, they had worked round the French position on the east, and had won the hill of Nogent-l'Abbesse, though the French remained in possession of Pompelle, the southern spur. Here the German advance stopped, for west of Rheims lay the high wooded ground of Pouillon, and south the heights known as the Montagne de Rheims, both old prepared positions for the defence of the Marne. The battle here resolved itself into the artillery duel which was to last for months, and which played havoc with that noblest monument of French Gothic, the cathedral of Rheims. Farther east, Langle's army held its own, but made little progress. It was still some three miles short of the Bazancourt-Grand-Pré railway, and had cause for anxiety about its communications with Foch. One last event of the 17th must be recounted. Bridoux' 1st Cavalry Corps, operating from Roye, made a brilliant raid as far east as Ham and St. Quentin, during which its commander fell. On the next day there was little doing in the daytime, but at night there was a general attack on the 1st and 2nd British Divisions. Elsewhere Maunoury was striving fruitlessly against Kluck's position, and his left was pressed back by the German 9th Reserve Corps; Franchet d'Esperey was beating in vain on the Craonne escarpment; Foch's army was hard pressed at Rheims; and Langle found the Wurtembergers in Champagne a

barrier which he could not break. This Friday, 18th September, may be taken as the end of the Battle of the Aisne in its strict sense, for it marked the conclusion of the attempt of the Allies to break down the German positions by a frontal attack. Five days' fighting had convinced them that here was no halting-place for a rearguard action, but the long-thought-out defences of an army ready and willing for battle. The forces were too evenly matched to produce anything better than stalemate, and continued assaults upon those hidden batteries would only lead to a useless waste of life. . . . The general situation was strategically bad. The enemy, from whom they hoped that they had wrested the offensive at the Marne, was beginning to recover it. Bülow's attack on Rheims was a dangerous blow at their centre, and if Langle failed in Champagne the Allied front might be pierced in a vital spot. The determined assault upon Verdun . . . was also a ground for uneasiness. Fortress was now an anxious word in French ears. Sarrail had none too many men, and if the Imperial Crown Prince, aided by the Bavarians, could break through the Heights of the Meuse the Allied right would be turned, and a clear road laid open for the invaders from Metz and the Rhine. The situation demanded a counter-offensive which should promise more speedy results than a frontal assault upon the Aisne plateau. Accordingly, as early as 16th September, Joffre changed his strategy. He resolved to play the German game, fling out his line to the west, and attempt to envelop Kluck's right. Such a movement, if successful, would threaten the chief German communications by the great trunk line of the Oise valley, and if it could be pushed as far as La Fère, or even as far as the junction of Tergnier, would compel the retreat of the whole German right. Accordingly, orders were given for two new armies to form on Maunoury's left, aligning themselves in an angle to the northwest. The first was the reconstructed Second Army, under Castelnau, who for the purpose surrendered his command in Lorraine to Dubail. On its left was to be formed the Tenth Army, under General Louis Maud'huy. . . . For the three weeks on from Friday, 18th September, the Battle of the Aisne, so far as Maunoury and French were concerned, degenerated into a sullen trench warfare, with no possibility of any great movement. Both sides were in position and under cover. Sporadic attacks had to be faced, especially by the British 1st Division at Troyon, and there were many counter-attacks, by which more than once the advanced German trenches were won. But, generally speaking, these weeks showed few incidents. The worst fighting was over by the 18th, and we had now acquired the trick of this strange burrowing. But if the gravest peril had gone, the discomfort remained. . . . During these weeks the French armies of the centre and left had a difficult task, and the hardest was that of Sarrail's army around Verdun. That great fortress, as we have seen, had been menaced by the Imperial Crown Prince during the Battle of the Marne, and his left wing had bombarded Fort Troyon from the high ground to the west of the Meuse. In the general German retreat on 10th-12th September he had retired north of Verdun, and his right no longer lay at Ste. Menchould, commanding the pass of Les Islettes and the main railway from Verdun, but had fallen back two days' march almost as far north as the pass of Grand-Pré, which was the terminus of the branch line from Bazancourt. Verdun was promptly cleared by the French general of most of the

bouches inutiles, its civilian inhabitants. Seven thousand were ordered out of the town, a tariff for foodstuffs was drawn up, and everything was made ready for a prolonged siege. But Sarrail was determined that it should be no siege in the ordinary sense, and that the German howitzers should never be permitted within range. By earthworks and entrenchments the fortified zone was largely extended. The lines of the Crown Prince found themselves brought to a halt in a semicircle, with their right on the Argonne at Varennes, passing northward by Montfaucon and Consenvoye, and joining up with the German army in the Woëvre."—J. Buchan, *History of the Great War*, v. 1, pp. 269-281.

1. TOPOGRAPHY OF BATTLE AREA.—"The Aisne Valley runs generally east and west, and consists of a flat-bottomed depression of width varying from half a mile to two miles down which the river follows a winding course to the west, at some points near the southern slopes of the valley and at others near the northern. The high ground both on the north and south of the river is approximately 400 feet above the bottom of the valley, and is very similar in character, as are both slopes of the valley itself, which are broken into numerous rounded spurs and re-entrants. . . . The slopes of the plateau overlooking the Aisne on the north and south are of varying steepness, and are covered with numerous patches of wood, which also stretch upward and backward over the edge on to the top of the high ground. There are several villages and small towns dotted about in the valley itself and along its sides, the chief of which is the town of Soissons. The Aisne is a sluggish stream of some 170 feet in breadth, but, being 15 feet deep in the centre, is unfordable. Between Soissons on the west and Villiers on the east (the part of the river attacked and secured by the British forces) there are eleven road bridges across it. On the north bank a narrow-gauge railway runs from Soissons to Vailly, here it crosses the river and continues eastward along the south bank. . . . The position held by the enemy is a very strong one, either for delaying action or for a defensive battle. One of its chief military characteristics is that from the high ground on neither side can the top of the plateau on the other side be seen, except for small stretches. . . . Another important point is that all the bridges are under direct or high-angle artillery fire. The tract of country above described, which lies north of the Aisne, is well adapted to concealment, and was so skillfully turned to account by the enemy as to render it impossible to judge the real nature of his opposition to our passage of the river or accurately to gauge his strength."—*Ibid.*

2. GENERAL BRITISH ADVANCE.—On the morning of the 13th "I ordered the British forces to advance and make good the Aisne. The First Corps and the cavalry advanced on the river. The First Division was directed on Chamouille via the canal bridge at Bourg, and the Second Division on Courtacon and Presles via Pont-Arcy, and on the canal to the north of Braye via Chavonne. On the right the cavalry and First Division met with slight opposition and found a passage by means of the canal, which crosses the river by an aqueduct. The division was therefore able to press on, supported by the cavalry division on its outer flank, driving back the enemy in front of it. On the left the leading troops of the Second Division reached the river by 9 o'clock. The Fifth Infantry Brigade were only enabled to cross, in

single file and under considerable shell fire, by means of the broken girder of the bridge, which was not entirely submerged in the river. The construction of a pontoon bridge was at once undertaken, and was completed by 5 o'clock in the afternoon. On the extreme left the Fourth Guards Brigade met with severe opposition at Chavonne, and it was only late in the afternoon that it was able to establish a foothold on the northern bank of the river by ferrying one battalion across in boats. By nightfall the First Division occupied the area of Moulins-Paissy-Geny, with posts at the village of Vendresse. The second Division bivouacked as a whole on the southern bank of the river, leaving only the Fifth Brigade on the north bank to establish a bridgehead. The Second Corps found all the bridges in front of them destroyed except that of Condé, which was in possession of the enemy and remained so until the end of the battle. In the approach

in the direction of Chivres and Vregny with the object of securing the high ground east of Chivres, as a necessary preliminary to a further advance northward. This attack made good progress, but at 5:30 P. M. the enemy's artillery and machine gun fire from the direction of Vregny became so severe that no further advance could be made. The positions reached were held till dark. The pontoon bridge at Venizel was completed at 5:30 P. M., when the Tenth Infantry Brigade crossed the river and moved to Bucy-le-Long. The Nineteenth Infantry Brigade moved to Billy-sur-Aisne, and before dark all the artillery of the division had crossed the river, with the exception of the heavy battery and one brigade of field artillery. During the night the positions gained by the Twelfth Infantry Brigade to the east of the stream running through Chivres were handed over to the Fifth Division. . . . In the evening the enemy retired at all points and in-

GERMANS IN THE TRENCHES DURING THE BATTLE OF THE AISNE, SEPTEMBER, 1914

to Missy, where the Fifth Division eventually crossed, there is some open ground which was swept by a heavy fire from the opposite bank. The Thirteenth Brigade was therefore unable to advance; but the Fourteenth, which was directed to the east of Venizel at a less exposed point, was rafted across, and by night established itself with its left at St. Marguërite. They were followed by the Fifteenth Brigade; and later on both the Fourteenth and Fifteenth supported the Fourth Division on their left in repelling a heavy counter-attack on the Third Corps. On the morning of the 13th the Third Corps found the enemy had established himself in strength on the Vregny plateau. The road bridge at Venizel was repaired during the morning, and a reconnoissance was made with a view to throwing a pontoon bridge at Soissons. The Twelfth Infantry Brigade crossed at Venizel, and was assembled at Bucy-le-Long by 1 P. M., but the bridge was so far damaged that artillery could only be man-handled across it. Meanwhile the construction of a bridge was commenced close to the road bridge at Venizel. At 2 P. M. the Twelfth Infantry Brigade attacked

trenched himself on the high ground about two miles north of the river, along which runs the Chemin-des-Dames. Detachments of infantry, however, strongly intrenched in commanding points down slopes of the various spurs, were left in front of all three corps with powerful artillery in support of them. During the night of the 13th and on the 14th and following days the field companies were incessantly at work night and day. Eight pontoon bridges and one foot bridge were thrown across the river under generally very heavy artillery fire, which was incessantly kept up to most of the crossings after completion. . . . Preparations were also made for the repair of the Missy, Vailly and Bourg bridges so as to take mechanical transport. The weather was very wet and added to the difficulties. . . . On the evening of the 14th it was still impossible to decide whether the enemy was only making a temporary halt, covered by rearguards, or whether he intended to stand and defend the position. With a view to clearing up the situation I ordered a general advance. The action of the First Corps on this day under the

direction and command of Sir Douglas Haig was of so skillful, bold and decisive a character that he gained positions which alone have enabled me to maintain my position for more than three weeks of very severe fighting on the north bank of the river. The corps was directed to cross the line Moulins-Moussy by 7 A. M. On the right the General Officer commanding the First Division directed the Second Infantry Brigade (which was in billets and bivouacked about Moulins), and the Twenty-Fifth Artillery Brigade (less one battery), under Gen. Bulfin, to move forward before daybreak, in order to protect the advance of the division sent up the valley to Vendresse. An officer's patrol sent out by this brigade reported a considerable force of the enemy near the factory north of Troyon, and the Brigadier accordingly directed two regiments (the King's Royal Rifles and the Royal Sussex Regiment) to move at 3 A. M. The Northamptonshire Regiment was ordered to move at 4 A. M. to occupy the spur east of Troyon. The remaining regiment of the brigade (the Loyal North Lancashire Regiment) moved at 5:30 A. M. to the village of Vendresse. The factory was found to be held in considerable strength by the enemy, and the Brigadier ordered the Loyal North Lancashire Regiment to support the King's Royal Rifles and the Sussex Regiment. Even with this support the force was unable to make headway, and on the arrival of the First Brigade the Coldstream Guards were moved up to support the right of the leading brigade (the Second), while the remainder of the First Brigade supported its left. About noon the situation was, roughly, that the whole of these two brigades were extended along a line running east and west, north of the line Troyon and south of the Chemin-des-Dames. . . . The enemy had a line of intrenchments north and east of the factory [north of Troyon] in considerable strength, and every effort to advance against this line was driven back by heavy shell and machine-gun fire. . . . By 10 o'clock the Third Infantry Brigade had reached a point one mile south of Vendresse, and from there it was ordered to continue the line of the First Brigade and to connect with and help the right of the Second Division. . . . From this period until late in the afternoon the fighting consisted of a series of attacks and counter-attacks. The counter-strokes by the enemy were delivered at first with great vigor, but later on they decreased in strength, and all were driven off with heavy loss. . . . The enemy [later] obtained a footing between the First and Second Corps, and threatened to cut the communications of the latter. Sir Douglas Haig was very hardly pressed and had no reserve in hand. I placed the cavalry division at his disposal, part of which he skillfully used to prolong and secure the left flank of the Guards Brigade. Some heavy fighting ensued, which resulted in the enemy being driven back with heavy loss."—*Ibid.*

3. GERMAN STAND ON SEPTEMBER 15.—"About 4 o'clock the weakening of the counter-attacks by the enemy and other indications tended to show that his resistance was decreasing, and a general advance was ordered by the army corps commander. Although meeting with considerable opposition and coming under very heavy artillery and rifle fire, the position of the corps at the end of the day's operations extended from Chemin-des-Dames on the right, through Chivy, to Le Cour de Sopir, with the First Cavalry Brigade extending to the Chavonne-Soissons road. On

the right the corps was in close touch with the French Moroccan troops of the Eighteenth Corps, which were intrenched in echelon to its right rear. During the night they intrenched this position. . . . On the morning of the 15th, after close examination of the position, it became clear to me that the enemy was making a determined stand; and this view was confirmed by reports which reached me from the French armies fighting on my right and left, which clearly showed that a strongly intrenched line of defense was being taken up from the north of Compiègne, eastward and southeastward, along the whole Valley of the Aisne up to and beyond Rheims. A few days previously the Fortress of Maubeuge fell, and a considerable quantity of siege artillery was brought down from that place to strengthen the enemy's position in front of us. During the 15th shells fell in our position which have been judged by experts to be thrown by eight-inch siege guns with a range of 10,000 yards. Throughout the whole course of the battle our troops have suffered very heavily from this fire, although its effect latterly was largely mitigated by more efficient and thorough intrenching, the necessity for which I impressed strongly upon army corps commanders. . . . On the 16th the Sixth Division came up into line. It had been my intention to direct the First Corps to attack and seize the enemy's position on the Chemin-des-Dames, supporting it with this new reinforcement. I hoped, from the position thus gained, to bring effective fire to bear across the front of the Third Division, which, by securing the advance of the latter, would also take the pressure off the Fifth Division and the Third Corps. But any further advance of the First Corps would have dangerously exposed my right flank. And, further, I learned from the French Commander in Chief that he was strongly reinforcing the Sixth French Army on my left, with the intention of bringing up the allied left to attack the enemy's flank, and thus compel his retirement. I therefore sent the Sixth Division to join the Third Corps, with orders to keep it on the south side of the river as it might be available in general reserve. On the 17th, 18th, and 19th the whole of our line was heavily bombarded, and the First Corps was constantly and heavily engaged. On the afternoon of the 17th the right flank of the First Division was seriously threatened. . . . The Northamptonshire Regiment, under cover of mist, crept up to within a hundred yards of the enemy's trenches and charged with bayonet, driving them out of the trenches and up the hill. A very strong force of hostile infantry was then disclosed on the crest line. . . . The enemy's attack was ultimately driven back with heavy loss. . . . On the 18th I discussed with the General Officer commanding the Second Army Corps and his divisional commanders the possibility of driving the enemy out of Condé, which lay between his two divisions, and seizing the bridge, which has remained throughout in his possession. [But] . . . I decided that it was not necessary to incur the losses which an attack would entail, as, in view of the position of the Second and Third Corps, the enemy could make no use of Condé, and would be automatically forced out of it by any advance which might become possible for us. On this day information reached me from Gen. Joffre that he had found it necessary to make a new plan and to attack and envelop the German right flank. It was now evident to me that the battle in which we had been engaged since the 12th inst. must

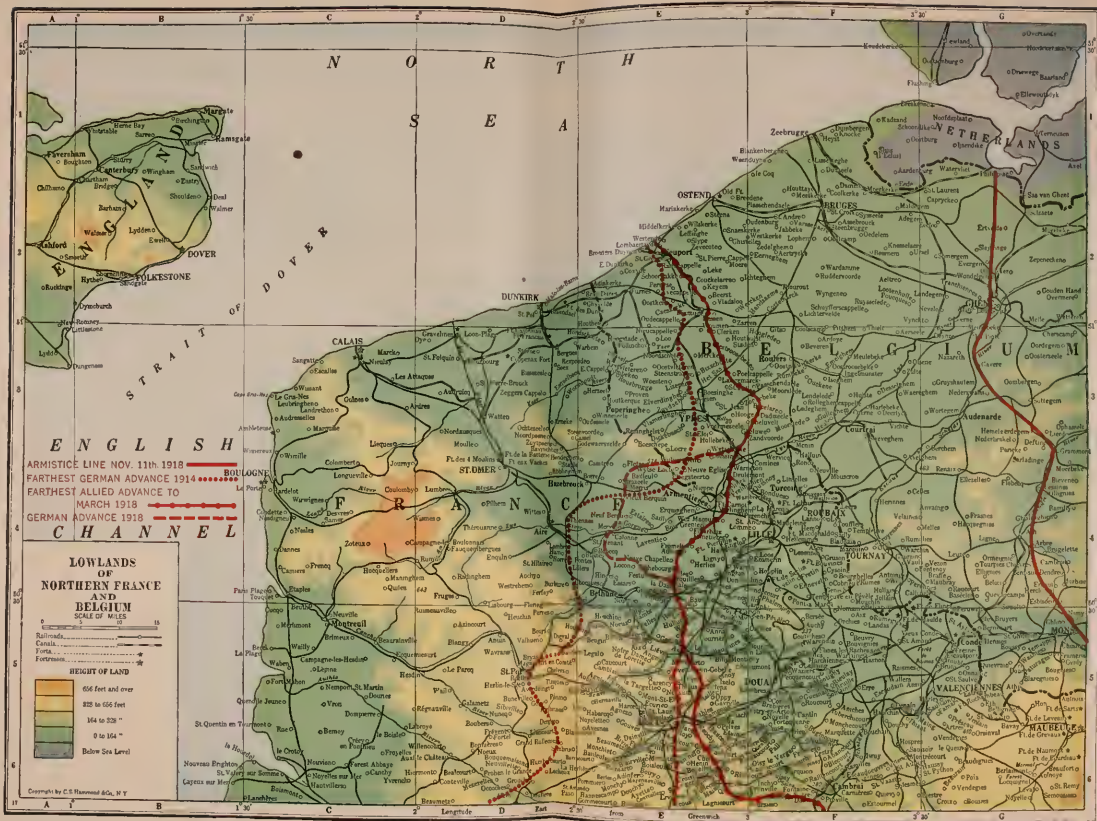

last some days longer, until the effect of this new flank movement could be felt and a way opened to drive the enemy from his positions."—*Ibid.*

4. GERMAN COUNTER-OFFENSIVE.—"On the evening of the 19th and throughout the 20th the enemy again commenced to show considerable activity. On the former night a severe counter-attack on the Third Division was repulsed with considerable loss, and from early on Sunday morning various hostile attempts were made on the trenches of the First Division. During the day the enemy suffered another severe repulse in front of the Second Division, losing heavily in the attempt. In the course of the afternoon the enemy made desperate attempts against the trenches all along the front of the First Corps, but with similar results. After dark the enemy again attacked the Second Division, only to be again driven back. Our losses on these two days were considerable, but the number, as obtained, of the enemy's killed and wounded vastly exceeded them. . . . On the night of the 21st another violent counter-attack was repulsed by the Third Division, the enemy losing heavily. On the 23d the four 6-inch howitzer batteries, which I had asked to be sent from home, arrived. Two batteries were handed over to the Second Corps and two to the First Corps. They were brought into action on the 24th with very good results. Our experiences in this campaign seem to point to the employment of more heavy guns of a larger calibre in great battles which last for several days, during which time powerful intrenching work on both sides can be carried out. These batteries were used with considerable effect on the 24th and the following days. On the 23d the action of Gen. de Castelnau's army on the allied left developed considerably, and apparently withdrew considerable forces of the enemy away from the centre and east. I am not aware whether it was due to this cause or not, but until the 26th it appeared as though the enemy's opposition in our front was weakening. On that day, however, a very marked renewal of activity commenced. A constant and vigorous artillery bombardment was maintained all day, and the Germans in front of the First Division were observed to be 'sapping' up to our lines and trying to establish new trenches. Renewed counter-attacks were delivered and beaten off during the course of the day, and in the afternoon a well-timed attack by the First Division stopped the enemy's intrenching work. During the night of the 27th-28th the enemy again made the most determined attempts to capture the trenches of the First Division, but without the slightest success. Similar attacks were reported during these three days all along the line of the allied front, and it is certain that the enemy then made one last great effort to establish ascendancy. He was, however, unsuccessful everywhere. . . . The same futile attempts were made all along our front up to the evening of the 28th, when they died away. . . . The fact that between Sept. 12 to the date of this dispatch [Oct. 8] the total numbers of killed, wounded, and missing reached the figures amounting to 561 officers, 12,080 men, proves the severity of the struggle."—*Ibid.*—On September 23 the Germans captured St. Mihiel and established the troublesome salient of that name, which they held for four years.

5. EXTENT OF BATTLE OF THE AISNE.—CONFLICT AROUND TROYON.—Few conflicts in history exceed "in magnitude or importance the battle which commenced on the banks of the Aisne on September 13,

1914. The numbers engaged were upwards of two millions. The area involved stretched on September 13 from Verdun to Noyon, a distance of about one hundred and thirty miles, and included Laon and Soissons, Rheims and Compiègne. The immense battle-line lengthened from day to day. On September 28, its western extremity was Peronne. On October 2, gun defied gun from Verdun to Laon, from Laon to Arras. The Battle of the Aisne . . . became itself part of one gigantic conflict which raged from the bounds of England to the confines of Switzerland. The thunder of the guns reverberated from the cliffs of Dover to the gorges of the Swiss Jura. But of the whole battle-line of the Aisne no section was more strategically important than that occupied by the British. Not one of the separate engagements of the British or of the French, which together comprised the battle, was more strategically important or more stubbornly contested than that fought in the woods and on the hill-sides around Troyon. . . . Shortly after midnight on September 14, the 2nd [British] Infantry Brigade, billeted in Moulins, began to muster. The conditions, indeed, were favourable to a night attack. Rain fell at intervals. Heavy mist intensified the darkness. Nevertheless, Brigadier-General Bulfin could not but feel anxiety as to his prospects of success. The force under his command . . . only numbered some 4,000 men. . . . There was ground for believing, and it was afterwards clearly established, that in the previous week the Germans had carefully selected their position, had taken all ranges, had dug gun-pits and trenches, with the object of making a determined stand here, rather than upon the banks of the Aisne between Cœuilly and the Pont-Arcy. Only a few hours before, on the morning of the 13th, the whole 1st British Division had met with little opposition in crossing the river. But the formidable position in which the enemy had retired, south of the line of the Chemin des Dames, looked down at the wooded slopes around Troyon across a wide valley almost destitute of cover. . . . The Germans might well be expected to offer considerable resistance. Signs, moreover, were not wanting of the constant watchfulness and activity of both the opposing armies. Desultory firing and the occasional screech of a shell broke the silence at intervals. . . . Great searchlights swept ceaselessly the death-ridden valley of the Aisne. . . . Bulfin awaited somewhat anxiously the return of the officers' patrol he had sent out to reconnoitre. . . . Shortly before three o'clock [Bulfin's reconnaissance party] . . . reported to the General a considerable force of the enemy near a factory north of Troyon. Troyon lies on the Laon road, about half-way between Cerny and Vendresse. . . . At three o'clock Bulfin ordered the King's Royal Rifles and the Royal Sussex Regiment to move forward from Moulins. The advance was made as noiselessly as possible. Everything depended upon the enemy being surprised. At length the British drew near. The apprehensions of some of the officers were at one point alarmed by hearing a sudden sharp cry. A stray shot, an effect of the general desultory firing, had shattered the arm of one of the men. . . . Soon the British came into touch with the German outposts. To conceal their approach now was hardly possible, and they pushed on rapidly till they gained the ground to the north of Troyon. A large factory, occupied by an expectant foe, now impeded further advance. The Germans opened fire. The alarm given, the German batteries in the entrenchments near the fac-

Maps prepared specially for the **NEW LARNED**
under direction of the editors and publishers.

tory also opened fire. Meanwhile, the British had formed a firing line, and had begun to creep forward. . . . All efforts to advance, however, were soon checked by the continuous fusillade. . . . Light rain and soaking mist aggravated the discomforts but lessened the dangers of the men. Reinforcements were at hand. At four o'clock the Northamptonshire Regiment had left Moulines and advanced to occupy the hills east of Troyon. A considerable time passed with the line, thus extended, keeping up a hot fire and advancing where possible. All efforts to dislodge the enemy from the factory proved futile. It was held in considerable force. The darkness, the mist, the rain-sodden ground, hampered the advance of the artillery. . . . Dawn would soon break. It was not unlikely that the Rifles and the Sussex Regiment would be unable to maintain their position when revealed by daylight. About six o'clock, therefore, Bulfin directed the Loyal North Lancashires, who had proceeded from Moulines to Vendresse, to support their comrades at Troyon in a determined effort to make headway. The effort proved unavailing. Shortly afterwards, however, the 1st Infantry Brigade arrived. The Coldstream Guards were hurried to the right, the Grenadier, the Irish, and the Scots Guards to the left, of the 2nd Brigade. These reinforcements soon made themselves felt. . . . A vigorous attack was now made upon the German lines. The position was rushed at the point of the bayonet. Unsupported by artillery, the British met with a heavy rifle and shell fire before they reached the enemy's trenches. Tremendous hand-to-hand fighting followed. . . . The Germans had so far shown a partiality for artillery duels, for steady advance in packed masses, for the weight of numbers. They were not accustomed to calculate, nor inclined to rely, upon the dash and the *élan*, as the French say, of a charge with the cold steel. Unable to withstand the furious British assault, they abandoned five guns in a hurried retreat. . . . The capture of the factory could only be effected after a desperate struggle and with considerable loss. The Loyal North Lancashires lay opposite the position. . . . [They] could not hesitate while other regiments on their right and left were striking vigorously at the foe. A party of them forced a passage over shattered doors and barricades, over ruined furniture, over the piled corpses of the slain. Some prisoners and several machine guns fell into their hands. The position thus won was held . . . throughout the day. The morning, which had dawned amid the roar of action, was cold and windy, and showed the British how formidable was their task. The line to which the Germans had retreated was strong. Concealed artillery strengthened their entrenchments, which covered a long stretch of rising open ground. The fusillade recommenced and continued with renewed violence. At about nine o'clock the screech of shells coming from the British lines announced that at last the British artillery was able to render the infantry effective support. . . . It is necessary to mention the position of the Allies on either flank of the brigades engaged, which belonged to the 1st Division. To the right of the line of the 1st and 2nd Brigades, on the further side of the spur of hills to the east of Troyon, the troops from French Morocco were entrenched in echelon. . . . On the left of the 1st Division the 2nd Division had been advancing since an early hour towards Ostel and Braye. The 6th Infantry Brigade, the right wing of the 2nd Division, at nine o'clock reached Tilleul. Here its progress was checked by that artillery and rifle

fire which had checked effectually the progress of the brigades north of Troyon. A dangerous interval of ground disconnected the firing lines of these two forces. Sir Douglas Haig . . . immediately ordered [the 3rd Infantry Brigade] to continue the line of the 1st Brigade and to connect with and aid the right of the 2nd Division. This disposition was speedily justified. No sooner had the 3rd Brigade covered the interval, than a heavy shrapnel fire was opened upon them, and a strong hostile column was found to be advancing. . . . The commanding officer of the 3rd Brigade, Brigadier-General James Landon, took prompt and decisive action. Two of his battalions made a vigorous counter-attack. A battery of field-guns was rushed into action, and opened fire at short range with deadly effect. The German artillery, hurling a continuous shower of shells during the whole day upon and around Vendresse, could not inflict on the British such slaughter as one deadly hail of shell and bullet could inflict upon the close masses of German infantry. The advancing column, menaced on either flank, hastily recoiled. Both British and German lines were now strongly held. . . . British and Germans advanced and retired in turn, surging and receding like breakers on a sea-coast. . . . Artillery boomed continually from the hill-sides. . . . The aeroplanes, despite rain and wind, were continually upon the alert. . . . Many instances are recorded of the successes and checks of that strenuous day. At one point the enemy were shelled out of their trenches and abandoned two machine guns. . . . At another point a battalion of the Guards, the Camerons, and the Black Watch delivered in turn a fierce assault upon the German lines. It was necessary to traverse about half a mile of open ground. They went off with a cheer. The air was full of the scream of shrapnel and the whistle of bullets. So hot and so concentrated was the fusillade that the British were compelled to retire with severe loss. Equally unsuccessful but not less heroic was a charge of the Welsh Regiment. . . . It was about four o'clock in the afternoon before a perceptible weakening of the German counter-attacks and resistance indicated that a general advance might safely be undertaken. Sir Douglas Haig ordered his whole corps to push forward. The enemy still offered considerable opposition, and maintained very heavy artillery and rifle fire. It was not found possible to advance far. Cerny was in possession of the Germans. The day had been long and strenuous. The enemy had been forced back a considerable distance. The troops were very weary. Nevertheless, most of the contested ground from the Chemin des Dames on the right to Chivy onward was occupied by the British before night fell. . . . They had gained a very considerable stretch of difficult and dangerous ground, covered with woods that harboured the infantry and concealed the artillery of the enemy. They had had to contest every yard, to dig trenches continually, to creep forward slowly, and occasionally to retire. They had captured 600 prisoners and twelve guns. They had repulsed repeated and prolonged attacks. The Commander-in-Chief asserted in a dispatch that the advanced and commanding position they had won alone enabled him to maintain his ground for more than three weeks of very severe fighting on the northern bank of the Aisne. The casualties had indeed been severe. One brigade alone had lost three of its four colonels. But the captured trenches showed that the Germans had suffered far more heavily."—A. N. Hildreth, *Troyon: An engagement in the battle of the Aisne*, pp. 3-14.

(t) Transfer of British troops.—Foch at Noyon.—Battle of the Lys.—Even before the commencement of the German counter-attack on the Aisne, Sir John French had become uneasy about his communications. For, there was practically nothing to bar the way to the sea in Flanders but the small Belgian army. If the Belgians could be overcome before aid could reach them, and if the French and British could be induced to overstay their limit of time on the Aisne, nothing could stop the German hosts from reaching the coast of Belgium and the Channel ports. Possibly they might overrun the north-west of France; perhaps take Paris in the rear. Certainly, if they reached the Channel ports, they would control the Channel, and threaten the southern coast of England. Already von Falkenhayn, who had succeeded von Moltke as Chief of Staff, had moved his headquarters to Charleville on the Meuse, and by the end of September he had begun to move the flower of his troops to the north. "Heeringen's VII Army replaced Bülow on the heights of the Aisne, and Kluck held the angle of the front on the Oise. North of him Bülow's II Army was moved to face Castelnau and Maud'huy's right, while the VI Army of Bavaria was sent to the country around Arras and Lille. Most significant of all, the Duke of Wurtemberg was marching to the extreme right with his IV Army, heavily reinforced, to open the one gate that remained. These changes, which were partially known to the Allied Staff, reinforced Sir John French's case. On 29th September he formally approached Joffre, and on 1st October the French Commander-in-Chief accepted [the plan of moving the British army from near the centre of the Allied line to the extreme left where it had originally been. Joffre] brought up reserves to take the place of the British, and arranged for the creation of a new Eighth Army, under General d'Urbal to support the left of the line. He also took Foch whose reputation was now the most brilliant of all army commanders, and put him in general charge of the operations north of Noyon. The French and British Staffs worked in perfect concord, and the result was a brilliant piece of transport. The whole thing was done without noise or friction. Gough's 2nd Cavalry Division was the first to go on 3rd October, and the three infantry corps followed from left to right, till on the 10th the 1st Corps detrained at St. Omer. Some of our soldiers passed near enough to the Channel to see the vessels of the senior service out on the grey waters. We won the race to the sea, but only by the narrowest margin. The Germans' sally was stronger than we had dreamed, and a host of new corps, of which the investing force from Antwerp [which fell on October 10] was only a small part, was about to pour westward over the Flanders flats. . . . [On October 8, Foch met Sir John French at Doullens and arranged a plan of operations by which] the road between Béthune and Lille was fixed as the dividing line between the British command and Maud'huy. . . . To the north it was arranged that the British 2nd Corps should take its place at Maud'huy's left. . . . By the close of September Castelnau's position was fixed west of Roye and Lihons [see below] while Maud'huy had taken up ground from the north end of the Somme plateau to Lens. A Territorial division was in Lille as an advance guard of the outflanking movement. . . . [By Oct. 1, Arras, a railway centre of great strategic importance, was occupied by Maud'huy] who was pushing eastward on the road to Douai. But presently he found himself in difficulties as the German VII Army

came into line, and for the first week of October was heavily engaged in the flats east of Arras between the Scarpe and the town of Lens. He was aware that the enemy was outflanking him, and he had only nine divisions and a cavalry corps wherewith to hold all north-eastern France till the British should arrive. He was forced back upon Arras. . . . [Lille was lost on the 12th, but Maud'huy and Castelnau held on until the British began to come up.] We turn to the task of the British army, which during the first three weeks of October was coming into line north of Maud'huy. . . . On 11th October Smith-Dorrien, with the British 2nd Corps, had marched from Abbeville to the line of the canal between Aire and Béthune. On his right was . . . Conneau [2nd Cavalry Corps] connecting him with Maud'huy, and on his left Hubert Gough's 2nd Cavalry Division, which was busily engaged in driving German cavalry out of the forest of Neippe. Sir John French's plan at this time for the 2nd Corps was a rapid dash upon La Bassée and Lille. Smith-Dorrien was directed . . . [to move against the line Laventie-Lorgies to threaten the flank of the Germans in La Bassée. Smith-Dorrien, however, found on Oct. 12 that a frontal attack was impossible, and he resolved to try to isolate La Bassée]. His object was to wheel to his right, pivoting on Givenchy . . . so as to threaten the right flank and rear of the enemy's position on the high ground of La Bassée.—J. Buchan, *History of the Great War*, v. 1, pp. 287, 330-332.—This movement resulted in a struggle for La Bassée, and brought on the action known as the battle of the Lys. "The arrival of reinforcements enabled the British troops to assist in the extension of the Allies' line where the Germans advanced from the northeast and east, holding a front extending from Mont Descats, about ten miles northeast of Hazebrouck, through Meteren, five miles south of that point, and thence to Estaires, thirteen miles west of Lille, on the River Lys. South of the Lys the German lines extended to three miles east of Bethune to Vermelles. The Allies encountered resistance all along the line on the 12th and 13th [Oct.], when the enemy's right fell back hastily. Bailleul, seventeen miles northwest by west of Lille, which had been occupied by the foe for eight days, was abandoned without a shot being fired. . . . [On October 14] our left wing advanced, driving the enemy back, and on the night of the 15th we were in possession of all the country on the left bank of the Lys to a point five miles below Armentières. The enemy retired from that town on the 16th, and the river line, to within a short distance of Frelinghien, fell into our hands. The state of the crossings over the Lys indicated that no organized scheme of defense had been executed, some of the bridges being in a state of repair, others merely barricaded, while one was not even defended or broken."—*British official reports.*

1. CROSSING OF THE LYS.—"The resistance offered to our advance on the 15th was of a most determined character. The fighting consisted of fiercely contested encounters, infantry attacks on the villages being unavailing until our howitzers reduced the houses to ruins. Other villages were taken and retaken three times before they were finally secured. The French cavalry here gave welcome support, and on the evening of the 16th the resistance was overcome, the enemy retiring five miles to the eastward. Describing an incident of the fighting on this night, the narrative says that the important crossing of the Lys at Warneton was strongly held by the Germans with a barricade

loopholed at the bottom to enable the men to fire while lying down. Our cavalry, with the artillery, blew the barricade to pieces and scattered the defenders. . . . During the 17th, 18th, and 19th of October our right encountered strong opposition from the enemy about La Bassée, where they had established themselves behind embankments. On the centre and the left we made better progress, although the Germans were everywhere entrenched, and, in spite of the bombardment, held some villages on the Lys. At the close of each day a night counter stroke was delivered against one or another part of our line, but they were all repulsed. Tuesday, Oct. 20, a determined but unsuccessful attack was made against virtually the whole of our line. At one point where one of our brigades made a counter attack 1,100 German dead were found in a trench and forty prisoners were taken. Meanwhile a body of British troops was moved from its former line facing north, on the east of Paris, to a position facing east, in the northwest corner of France, by which a portion of the British Army was enabled to join with the incoming stream of reinforcements. . . .

"On Wednesday, the 21st, the new German formation again pressed forward in force vigorously all along our line. On our right, south of the Lys, an attack on Violaines was repulsed with loss to the assailants. On the other hand, we were driven from some ground close by, to the north, but regained it by a counter attack. Still further north the Germans gained and retained some points. Their total casualties to the south-east of Armentières are estimated at over 6,000. On the north of the Lys, in our centre, a fiercely contested action took place near La Gheir, which village was captured in the morning by the enemy and then retaken by us. . . . On our left our troops advanced against the German 26th Reserve Corps near Passchendaele, and were met by a determined counter offensive, which was driven back with great loss. At night the Germans renewed their efforts unsuccessfully in this quarter. . . . Thursday, the 22d, saw a renewal of the pressure against us. We succeeded, however, in holding our ground in nearly every quarter. South of the Lys the enemy attacked from La Bassée, and gained Violaines and another point, but their effort against a third village was repulsed by artillery fire alone, the French and British guns working together very effectively. On the north of the river it was a day of minor attacks against us, which were all beaten back. The Germans advanced in the evening against our centre and left, and were again hurled back, though they gained some of our trenches in the latter quarter. By this time the enemy had succeeded in bringing up several heavy howitzers, and our casualties were considerable. On Friday, the 23d, all action south of the Lys on our right was confined to that of the artillery, several of the hostile batteries being silenced by our fire. In the centre their infantry again endeavoured to force their way forward, and were only repulsed after determined fighting, leaving many dead on the ground and several prisoners in our hands. North of the Lys attacks at different points were repulsed. On our left the 22d was a bad day for the Germans. Advancing in our turn, we drove them from some of the trenches out of which they had turned us on the previous evening, captured 150 prisoners, and released some of our men whom they had taken. As the Germans retreated our guns did great execution among them. They afterwards made five desperate assaults on our trenches, advancing in mass and

singing 'Die Wacht am Rhein' as they came on. . . . During the fighting in this quarter on the night of the 22d and on the 23d the German losses were again extremely heavy. . . . The spectacle of these devoted men chanting a national song as they marched on to certain death was inspiring. It was at the same time pitiable. . . . On Saturday, the 24th, action on our right was once more confined to that of artillery, except at night, when the Germans pressed on, only to be repulsed. . . . On Sunday, the 25th, it was our turn to take the offensive. This was carried out by a portion of our left wing, which advanced, gained some ground, and took two guns and eighty prisoners. . . . In the centre the fighting was severe, though generally indecisive in result, and the troops in some places were engaged in hand-to-hand combat. . . . Up to the night of the 25th, therefore, . . . we maintained our position against the great effort on the part of the enemy to break through the west, or to force us back, which started on the 20th."—*Ibid.*

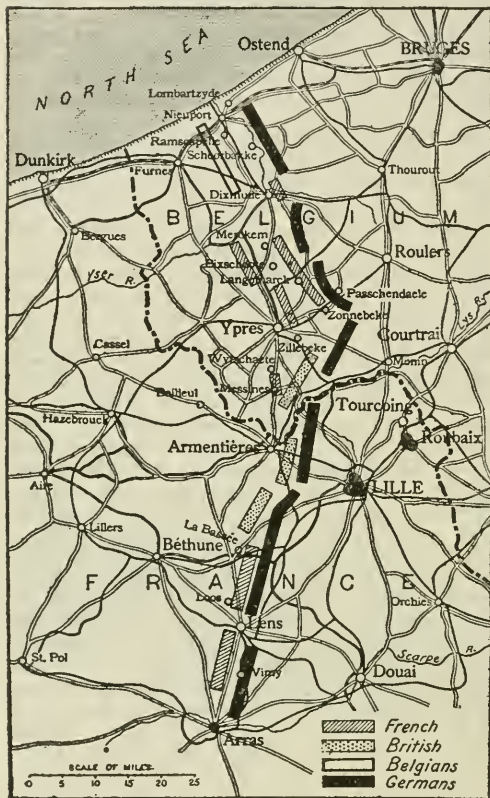

(u) Battle of Flanders.—I. DRIVE FOR CHANNEL PORTS.—"Having been balked in the first drive for Paris, the German High Command conceived the idea of compensating itself by a drive for the Channel ports. The conquest of Belgium had given new value to those ports as German sea bases. Antwerp now furnished a headquarters for German submarine activities within easy range of the English Channel. . . . From the day, late in September, 1914, when . . . the U-9 sank the British warships *Hogue*, *Cressy*, and *Aboukir* within the space of half an hour, the possibility of some offensive action against England had begun to stir the German imagination. . . . The protection of the British lines of communication across the Channel to Boulogne and Havre was left to light vessels. [The Grand Fleet was stationed at Scapa Flow, in the Orkneys.] To destroy those communications, both by submarine attack and by pushing along the coast to Dunkirk, Calais, and Boulogne, would not only produce consternation in England, but would gravely compromise the Allied position in Northern France. The Germans also intended to use the submarine as a commerce destroyer and blockader. Possession of Bruges, with its canals to Zeebrugge and Ostend, gave them, with Antwerp, an admirable operating base, close to the main lines of English commerce. If they could also seize the French coast opposite Dover they might hope practically to seal Dover Strait. A slight delay in organizing the new contingents lost Germany her best chance to reach Dunkirk and Calais. Early in October the Allied left wing rested on Béthune. German cavalry occupied the valley of the Lys River, north of Béthune, with advance guards beyond Bailleul. The British Expeditionary Army left the Aisne on October 5th and began to detrain a few days later at St. Omer. From that point it marched north-east to form a junction with the Belgian army, which was retreating from Antwerp, covered by British cavalry under General Rawlinson. The German cavalry in the Lys Valley could not hold their ground and retired east of Ypres to Roulers, the British gaining the line from Armentières north through Ypres to Dixmude. Before the German concentration in the north was completed all the gaps in the Allied line to the sea had closed. The German attempt to break through began on October 17th and lasted until November 17th. It was made by probably six hundred thousand troops, most of them new divisions, although they were supported by Rupprecht's Bavarian army, and the Prussian Guard

was hurried up from the south eventually to take part in the five-day assault on Ypres. German tactics had not yet changed. Heavy mass formations were used in attack, and the casualties corresponded with the ardour and courage of the troops, which all observers admitted to be high."—W. L. McPherson, *Strategy of the Great War*, pp. 147, 149-150.

2. DIXMUDE.—"The first blow fell on the Belgians and French who held the lines from Dixmude to the sea. Here Generals Foch and Grossetti performed wonders. They were greatly outnumbered, but held on by utilizing all the advantages of a terrain strikingly adapted to defence. In this flat, soggy region artillery was handicapped and the

fully characterized as 'contemptible.'"—*Ibid.*, pp. 150-151.

3. GERMAN TACTICAL BLUNDERS.—"The battle of Flanders cost the Germans vastly greater losses than the first battle of the Marne did. It was the death-blow to the old German system of battle tactics. It proved that dense masses of infantry could not of their own strength break through trench lines held by much inferior forces. Modern weapons had too greatly augmented the power of the defensive to beat down frontal infantry attacks. Henceforth—at least on the West Front, where the quality of the opposing troops was fairly equal—frontal attacks would prove futile until some new devices had been found for restoring superiority to the offensive. The new problems of trench deadlock had to be faced and solved. . . . Lieutenant-General Baron Freytag-Loringhoven intimates, in his *Deductions from the World War*, that the Germans lost the battles of the Yser and Ypres because they used too many new formations. 'These new troops,' he holds, 'could not be equal to coping with the difficult conditions which prevailed at Ypres.' He says further: 'In their case the period of training was not really adequate to transform them into thoroughly efficient battle-troops. The experience of the officers, very few of whom were on the active list at the time, with all their good will, was not really adequate and the same was true of their physical fitness. This applies equally to a large proportion of the men in the ranks, that is to say, of the young war volunteers.' . . . A curious apology! Opposed to the Germans in Flanders was a motley force of very uneven quality—of many races, tongues, and degrees of military experience. It fought day in and day out, with only the scantiest reserves. The Germans had ample reserves. They also sent to Belgium Crown Prince Rupprecht's first-line Bavarian army and the Prussian Guard. If the Channel ports were worth taking sound leadership would have forbidden an attempt to take them with second-class troops, while better troops were holding the line from Arras down to Belfort, on which the fighting had died down. Here again, as at the Marne, the German High Command undervalued the enemy. Freytag-Loringhoven criticizes Joffre for not extending his line north more rapidly. But Joffre had relatively small reserves on hand in October, 1914. He was forced to do the best he could with what he had. The German High Command, on the contrary, had a choice. It cannot excuse itself for failure on the ground that it preferred to employ new formations instead of seasoned ones. The Flanders campaign ended, as the Marne campaign did, in a big German reverse. The second German bid for a decisive success on the West Front failed. The Allies, rallying in the nick of time, saved the Channel ports, as they had saved Paris two months before."—W. L. McPherson, *Strategy of the Great War*, pp. 151-154.

STRUGGLE FOR THE CHANNEL PORTS

German infantry was cut to pieces advancing in masses across the open. By sheer weight the Germans finally took Dixmude and passed the Yser River. But they were stopped when the Belgians dammed the river near its mouth, where British warships covered their positions, and flooded the lowlands. The overflow barrier proved effective for the rest of the war. Further south the Germans tried, early in November, to crush the famous Ypres salient. They drove the British back from the neighbourhood of Roulers and took the heights east and south-east of Ypres. But they were never able to reach the city itself—a mass of ruins—which held out then just as it held out later. . . . Apparently indefensible, commanded on two sides by the Passchendaele and Messines ridges, it was nevertheless defended by the sheer grit of that army which in the early days of the war William II . . . [was alleged to have] scorn-

4. SIEGE WARFARE.—Siege warfare from the Oise to the Vosges lasted from September 13 to November 30. The operations were of secondary importance conducted on both sides with the same idea of wearing down troops and artillery with the view to influencing the decisive result in the struggle in the north. As early as September 1 the commander-in-chief had directed our left army to have as important forces as possible on the right bank of the Oise. Precise orders were issued on September 17. The Germans had an advantage over us—the concentric form of their front which shortened the length of their transports. In spite

of this inferiority we arrived in time. From the middle of September to the last week in October fighting went on continually to the north of the Oise, but all the time we were fighting we were slipping northwards. On the German side this movement brought into line eighteen new army corps. On our side it ended in the formation of three fresh armies on our left, and the transport into the same district of the British army and the Belgian army from Antwerp. "The movement began on our side only with the resources of the army which had held the left of our front during the battle of the Marne, reinforced on Sept. 15 by one army corps. This reinforcement, not being sufficient to hold the enemy's offensive, . . . a fresh army was transported more to the left, with the task 'of acting against the German right wing in order to disengage its neighbor . . . while preserving a flanking direction in its march in relation to the fresh units that the enemy might be able to put into line.' To cover the detrainments of this fresh army in the district Clermont-Beauvais-Boix a cavalry corps and four territorial divisions were ordered to establish themselves on both banks of the Somme. In the wooded hills, however, which extend between the Oise and Lassigny the enemy displayed increasing activity. Nevertheless, the order still further to broaden the movement toward the left was maintained, while the territorial divisions were to move toward Bethune and Aubigny."—*French official report.*

5. OPERATIONS IN NORTHERN FRANCE.—"The march to the sea went on. From the 21st to the 26th all our forces were engaged in the district Lassigny-Roye-Péronne, with alterations of reverse and success. It was the first act of the great struggle which was to spread as it went on. On the 26th the whole of the Sixth German Army was deployed against us. We retained all our positions, but we could do no more; consequently there was still the risk that the enemy, by means of a fresh afflux of forces, might succeed in turning us. Once more reinforcements, two army corps, were directed no longer on Beauvais, but toward Amiens. The front was then again to extend. A fresh army was constituted more to the north. From Sept. 30 onward we could not but observe that the enemy, already strongly posted on the plateau of Thiepval, was continually slipping his forces from south to north, and everywhere confronting us with remarkable energy. Accordingly, on Oct. 1 two cavalry corps were directed to make a leap forward and, operating on both banks of the Scarpe, to put themselves in touch with the garrison of Dunkirk, which, on its side, had pushed forward as far as Douai. But on Oct. 2 and 3 the bulk of our fresh army was very strongly attacked in the district of Arras and Lens. Confronting it were two corps of cavalry, the guards, four active army corps, and two reserve corps. A fresh French army corps was immediately transported and detrained in the Lille district. But once more the attacks became more pressing, and on Oct. 4 it was a question whether, in view of the enemy's activity both west of the Oise and south of the Somme, and also further to the north, a retreat would not have to be made. General Joffre resolutely put this hypothesis aside and ordered the offensive to be resumed with the reinforcements that had arrived. It was, however, clear that, despite the efforts of all, our front, extended to the sea as it was by a mere ribbon of troops, did not possess the solidity to enable it to resist a German attack. . . . Finally, to the north, on the Lille-Estaires-Merville-Hazebrouck-Cassel

front, our cavalry and our territorials had their work cut out against eight divisions of German cavalry, with very strong infantry supports. It was at this moment that the transport of the British Army to the northern theatre of operations began."—*French official report.*

6. ARRIVAL OF THE BELGIAN ARMY.—"There remained the Belgian Army. On leaving Antwerp on Oct. 9 the Belgian Army, which was covered by 8,000 British bluejackets and 6,000 French bluejackets, at first intended to retire as far as to the north of Calais, but afterwards determined to make a stand in Belgian territory. Unfortunately, the condition of the Belgian troops, exhausted by a struggle of more than three months, did not allow any immediate hopes to be based upon them. . . . On the 16th we made progress to the east of Ypres. On the 18th our cavalry even reached Roulers and Cortemark. But it was now evident that, in view of the continual reinforcing of the German right, our left was not capable of maintaining the advantages obtained during the previous few days. To attain our end and make our front inviolable a fresh effort was necessary. That effort was immediately made by the dispatch to the north of the Lys of considerable French forces, which formed the French Army of Belgium. . . . These reinforcements were equivalent altogether in value to five army corps, a division of cavalry, a territorial division, and sixteen regiments of cavalry, plus sixty pieces of heavy artillery. Thus was completed the strategic manoeuvre defined by the instructions of the General in Chief on Sept. 11 and developed during the five following weeks. . . . The movements of troops carried out during this period were methodically combined with the pursuit of operations, both defensive and offensive, from the Oise to the North Sea. On Oct. 22 our left, bounded six weeks earlier by the Noyon district, rested on Nieuport, thanks to the successive deployment of five fresh armies—three French armies, the British Army, and the Belgian Army. Thus the co-ordination decided upon by the General in Chief attained its end. The barrier was established. It remained to maintain it against the enemy's offensive. That was the object and the result of the battle of Flanders, Oct. 22 to Nov. 15."—*Ibid.*

7. OPERATIONS IN FLANDERS.—"The German attack in Flanders was conducted strategically and tactically with remarkable energy. . . . On Oct. 30, General von Deimling . . . issued an order declaring that 'the thrust against Ypres will be of decisive importance.' It should be noted also that the Emperor proceeded in person to Thielt and Courtrai to exalt by his presence the ardor of his troops. Finally, at the close of October, the entire German press incessantly proclaimed the importance of the 'Battle of Calais.' . . . This decision would be obtained if our left were pierced or driven in. To reach Calais, that is, to break our left; to carry Ypres, that is, to cut it in half; through both points to menace the communications and supplies of the British expeditionary corps, perhaps even to threaten Britain in her island—such was the German plan in the Battle of Flanders. It was a plan that could not be executed. The enemy, who had at his disposal a considerable quantity of heavy artillery, directed his efforts at first upon the coast and the country to the north of Dixmude. His objective was manifestly the capture of Dunkirk, then of Calais and Boulogne, and this objective he pursued until Nov. 1. On Oct. 23 the Belgians along the railway line from Nieuport to Dixmude were strengthened by a French division. Dixmude was occupied by our marines (fusiliers marins).

... On the 29th the inundations effected between the canal and the railway line spread along our front. On the 30th we recaptured Ramscapelle, the only point on the railway which Belgians had lost. On the 1st and 2d of November the enemy bombarded Furnes, but began to show signs of weariness. On the 2d he evacuated the ground between the Yser and the railway, abandoning cannon, dead and wounded. On the 3d our troops were able to re-enter the Dixmude district. The success achieved by the enemy at Dixmude at this juncture was without fruit. They succeeded in taking the town. They could not debouch from it. The coastal attack had thus proved a total failure."—*Ibid.*

8. GERMAN DEFEAT AT YPRES.—"The enemy had now begun an attack more important than its predecessor, in view of the numbers engaged in it. This attack was intended as a renewal to the south of the effort which had just been shattered in the north. Instead of turning our flank on the coast, it was now sought to drive in the right of our northern army under the shock of powerful masses. This was the Battle of Ypres. . . . Ypres was solidly covered, and the connections of all the allied forces were established. Against the line thus formed the German attack was hurled from Oct. 25 to Nov. 13, to the north, the east, and the south of Ypres. From Oct. 26 on the attacks were renewed daily with extraordinary violence, obliging us to employ our reinforcements at the most threatened points as soon as they came up. Thus, on Oct. 31, we were obliged to send supports to the British cavalry, then to the two British corps between which the cavalry formed the connecting link, and finally to intercalate between these two corps a force equivalent to two army corps. Between Oct. 30 and Nov. 6 Ypres was several times in danger. The British lost Zandvorde, Gheluvelt, Messines, and Wyttschaete. The front of the Allies, thus contracted, was all the more difficult to defend; but defended it was without a recoil. The arrival of three French divisions in our line enabled us to resume from the 4th to the 8th a vigorous offensive. On the 10th and 11th this offensive, brought up against fresh and sharper German attacks, was checked. Before it could be renewed the arrival of fresh reinforcements had to be awaited, which were dispatched to the north on Nov. 12. . . . By the 14th our troops had again begun to progress, barring the road to Ypres against the German attacks, and inflicting on the enemy, who advanced in massed formation, losses which were especially terrible in consequence of the fact that the French and British artillery had crowded nearly 300 guns on to these few kilometers of front. Thus the main mass of the Germans sustained the same defeat as the detachments operating further to the north along the coast. The support which, according to the idea of the German General Staff, the attack on Ypres was to render to the coastal attack, was as futile as that attack itself had been. During the second half of November the enemy, exhausted and having lost in the Battle of Ypres alone more than 150,000 men, did not attempt to renew his effort, but confined himself to an intermittent cannonade. We, on the contrary, achieved appreciable progress to the north and south of Ypres, and insured definitely by a powerful defensive organization of the position the inviolability of our front."—*Ibid.*—At this stage of the campaign France had more than 2,500,000 men at the front; every unit of the force was stated to be at full war strength.

(v) Battle of the Yser.—I. BELGIAN VERSION.—After the retreat from Antwerp the Belgian field army when it established itself in the Yser was reduced to 80,000 men including only 48,000 rifles. Of cannon there were 350 of 75 millimeter caliber. The mortars numbered 24 of 150 millimeter size. The field army had recently escaped from Antwerp across the Flanders plains and their supply of ammunition was small, and it was impossible at the time to replenish it. "Deprived of a great part of their equipment, clad in uniforms covered with clay and mud, the men appeared to have reached the limit of human endurance and to be incapable of making another effort, however brief. It was at this crisis that the King addressed to the army his admirable Order of the Day. Appealing to the tenacity and courage of his soldiers he stated that it was necessary to continue the struggle until they had joined the armies of the Allies, with which connections had just been established. . . . The King did not disguise the fact that a supreme struggle was at hand. What he demanded of his troops was that they should fight to the death. A mass of 150,000 Germans, formed of new troops, and supported by at least 500 cannon of all calibres, including the heavy pieces that had just smashed the defenses of Antwerp, was about to break itself against this Belgian Army, which was clinging to the last shred of its native soil, physically overmatched, but animated by the purest spirit of sacrifice and devotion. Only on Oct. 15 had this army succeeded in reassembling on the Yser. The next day, the 16th, the battle began. From the 16th to the 20th of October the German effort steadily increases, the conflict goes on developing. On the 20th Nieuport and Dixmude are in flames. The enemy succeeds in penetrating into Lombaertzyde, but cannot get through. He wishes at any cost to break the line of the Yser before reinforcements can arrive. He redoubles his blows. It is at this juncture, in the night of Oct. 21-22, that an event of extreme gravity takes place. Under cover of the darkness the enemy has made a dash across the bridge of Tervaete into the dangerous loop which the Yser throws out toward the east at that place. The hour is agonizing in the extreme, for if the enemy extends his advantage it means that the piercing of the front is inevitable. The Belgian troops, worn out as they are, succeed in holding him; but the next day they have to abandon the bridgehead at Schoorbakke. On the 24th the Germans attempt a supreme effort against Dixmude. Fifteen successive assaults rage about the bridgehead, fifteen assaults which become hand-to-hand combats in the black night, and which break themselves against the courage of the French marines and of the Belgians, certain units of which count seventy-two consecutive hours of fighting! On the 25th the Belgian command, seeing no other means of prolonging the resistance, plans to inundate the ground between the Yser and the railway. The flood is to serve as a last rampart. The preparatory work is begun. . . . Imperceptibly the water has begun its work. The enemy, who does not yet suspect the intervention of this new adversary, is preparing for a last effort. He takes Ramscapelle, from which he is driven out on the 31st, and his retreat is transformed into a rout when he suddenly perceives the flood mounting everywhere around him, cunning and invincible. . . . The battle of the Yser is ended. During these 360 hours of desperate combat the Belgian Army has constantly given all its power, without rest or

pause. . . . In their ragged uniforms they no longer look like human beings. The number wounded in the last thirteen days of October exceeds 9,000; the killed or missing are more than 11,000. . . . But thanks to its stoical, voluntary sacrifices, the Belgian Army has barred the way to Dunkerque and Calais; the left wing of the Allies has not been turned; the enemy has not gained possession of the coast from which he expected to menace the very heart of England."—*Account of Commandant W. Breton, Belgian General Staff.*

2. FRENCH ACCOUNT.—"The line of the Yser which the Belgian Army had to defend was 36 kilometers long, between Nieuport on the sea and Dixmude. The Yser canalised by dikes was not a serious obstacle. The brigade of French Marine Fusiliers attached to the Belgian Army and a brigade of two Belgian regiments (General Mesner) held the position at Dixmude. They were supported on the right by two French territorial divisions . . . and . . . a Corps of Cavalry. . . . The Belgian divisions were distributed along the line of the Yser with advance posts on the northern bank. Two divisions and the cavalry were in reserve at Lamperwyse. The German brought against the Yser line the siege corps from Antwerp and the 4th Army (Württemberg) brought from Champagne. From the beginning of the fight their attacks were vigorously pressed. The Belgians were about to abandon Nieuport when the timely arrival of an Anglo-French flotilla consisting of four monitors and other boats opened on the enemy an enfilading fire that checked his advance. During October 20, 21, and 22 the German attacks increased in violence and . . . in the night of October 23-24 the marine fusiliers at Dixmude were heavily bombarded. They repulsed fifteen assaults. . . . The situation became critical. It was known that the Germans were being heavily reinforced. The Belgian Army was compelled to fall back to the railway line which ran from Nieuport to Dixmude whose embankment offered a rampart from three to six feet high. A call was sent out for help. Fortunately on October 23 the French 42nd Division (Grossetti) composed of seasoned troops arrived and occupied Nieuport and recaptured [Lombertzyde]. . . . The sea-dykes were opened on October 27 and the country was flooded from the Yser to the railway. When the Germans became aware of their danger, they tried to take advantage of the crossing of the Yser which they had won, by making a furious attack on Ramschapelle . . . [which they took] on October 30. . . . The Kaiser wished to express to his troops by his presence the importance he attached to their success, but the 42nd French Division hurried from Nieuport and fell upon Ramschapelle and in a short time, such was the dashing spirit displayed in the attack, recaptured the lost village. The Belgians returning to the firing line responded to the hurrahs of the French troops with their angry war cry 'Louvain! Louvain!' The conflict at Ramschapelle marked the close of the operations of the Belgian Army and of the series of fights to which was given the name of the Battle of Yser. Dixmude was now only a heap of ruins, but the defenders did not abandon it until November 10, having defended foot by foot every pile of crumbling stone. The remnants of valiant troops, composed of 200 Belgians, 200 Senegalese, and 500 marines got away by the right bank, the Germans, being only in possession of some small islets in the midst of the flood where they had established listening posts. Until the close of the year 1914 in this part of the front there were only some un-

important offensives among the dunes of Lombartzyde. The Belgian Army was now reduced to 32,000 rifles; it had broken the offensives of seven divisions of Germany's best troops; most of its guns were worn out. The brigade of marine fusiliers had lost the greater part of their effectiveness and eight out of ten of their officers."—General G. L. Niox, *La Grande Guerre, 1914-1918*, pp. 51-53.

(w) Battle of Ypres-Armentières.—1. NEW PLAN OF OPERATIONS.—"As General Foch was appointed by the Commander-in-Chief to supervise the operations of all the French troops north of Noyon, I visited his headquarters at Doullens on Oct. 8 and arranged joint plans of operations as follows: The Second Corps to arrive on the line Aire-Bethune on the 11th of October, to connect with the right of the French 10th Army and, pivoting on its left, to attack in flank the enemy who were opposing the 10th French Corps in front. The Cavalry to move on the northern flank of the Second Corps and support its attack until the Third Corps, which was to detrain at St. Omer on the 12th, should come up. They were then to clear the front and act on the northern flank of the Third Corps in a similar manner, pending the arrival of the First Corps from the Aisne. The 3rd Cavalry Division and 7th Division, under Sir Henry Rawlinson, which were then operating in support of the Belgian Army and assisting its withdrawal from Antwerp, to be ordered to co-operate as soon as circumstances would allow. In the event of these movements so far overcoming the resistance of the enemy as to enable a forward movement to be made, all the Allied Forces to march in an easterly direction. The road running from Bethune to Lille was to be the dividing line between the British and French Forces, the right of the British Army being directed on Lille."—Field Marshal Sir John French, *Dispatch*, Nov. 29, 1914.

2. OPERATIONS OF SECOND ARMY CORPS (OCTOBER 11-31).—"The great battle . . . may be said to have commenced on October 11th, on which date the 2nd Cavalry Division, under General Gough, first came into contact with the enemy's cavalry who were holding some woods to the north of the Bethune-Aire Canal. These were cleared of the enemy by our cavalry, which then joined hands with the Divisional Cavalry of the 6th Division in the neighbourhood of Hazebrouck. On the same day the right of the 2nd Cavalry Division connected with the left of the Second Corps, which was moving in a north-easterly direction after crossing the above-mentioned canal. By the 11th October Sir Horace Smith-Dorrien had reached the line of the canal between Aire and Bethune. I directed him to continue his march on the 12th, bringing up his left in the direction of Merville. Then he was to move East to the line Laventie-Lorgies, which would bring him on the immediate left of the French Army and threaten the German flank. On the 12th this movement was commenced. The 5th Division connected up with the left of the French Army north of Annequin. They moved to the attack of the Germans who were engaged at this point with the French; but the enemy once more extended his right in some strength to meet the threat against his flank. The 3rd Division, having crossed the canal, deployed on the left of the 5th; and the whole Second Corps again advanced to the attack, but were unable to make much headway owing to the difficult character of the ground upon which they were operat-

ing, which was similar to that usually found in manufacturing districts and was covered with mining works, factories, buildings, etc. . . . Before nightfall . . . they had made some advance and had successfully driven back hostile counter-attacks with great loss to the enemy and destruction of some of his machine guns. On and after the 13th October the object of the General Officer Commanding the Second Corps was to wheel to his right, pivoting on Givenchy to get astride the La Bassée-Lille road in the neighbourhood of Fournes, so as to threaten the right flank and rear of the enemy's position on the high ground south of La Bassée. This position of La Bassée has throughout the battle defied all attempts at capture, either by the French or the British. On this day Sir Horace Smith-Dorrien could make but little progress. . . . The fighting of the Second Corps continued throughout the 14th in the same direction. . . . On the 15th the 3rd Division fought splendidly, crossing the dykes, with which this country is intersected, with planks; and driving the enemy from one entrenched position to another in loop-holed villages, till at night they pushed the Germans off the Estaires-La Bassée road, and establishing themselves on the line Pont de Ham-Croix Barbée. On the 16th the move was continued until the left flank of the Corps was in front of the village of Aubers, which was strongly held. This village was captured on the 17th . . . and at dark on the same day the Lincolns and Royal Fusiliers carried the village of Herlies at the point of the bayonet after a fine attack. . . . On the 18th powerful counter-attacks were made by the enemy all along the front of the Second Corps, and were most gallantly repulsed; but only slight progress could be made. From the 19th to the 31st October the Second Corps carried on a most gallant fight in defence of their position against very superior numbers, the enemy having been reinforced during that time. . . . On the 19th the Royal Irish Regiment stormed and carried the village of Le Pilly, which they held and entrenched. On the 20th, however, they were cut off and surrounded, suffering heavy losses. On the morning of the 22nd the enemy made a very determined attack on the 5th Division, who were driven out of the village of Violaines, but they were sharply counter-attacked . . . and prevented from coming on. The left of the Second Corps being now somewhat exposed, Sir Horace Smith-Dorrien withdrew the line during the night to a position he had previously prepared, running generally from the eastern side of Givenchy, east of Neuve Chapelle to Fauquissart. On the 24th October the Lahore Division of the Indian Army Corps . . . having arrived, I sent them to the neighbourhood of Lacon to support the Second Corps. Very early on this morning the enemy commenced a heavy attack, but, owing to the skilful manner in which the artillery was handled and the targets presented by the enemy's infantry as it approached, they were unable to come to close quarters. Towards the evening a heavy attack developed against the 7th Brigade, which was repulsed, with very heavy loss to the enemy. . . . Later, a determined attack on the 18th Infantry Brigade drove the Gordon Highlanders out of their trenches, which were retaken by the Middlesex Regiment. . . . The 8th Infantry Brigade (which had come into line on the left of the Second Corps) was also heavily attacked, but the enemy was driven off. In both these cases the Germans lost very heavily, and

left large numbers of dead and prisoners behind them."—*Ibid.*

3. OPERATIONS OF THIRD ARMY CORPS (OCTOBER 13-18).—"By the evening of the 11th October the Third Corps had practically completed its detrainment at St. Omer, and was moved east to Hazebrouck, where the Corps remained throughout the 12th. On the morning of the 13th the advanced guard of the Corps . . . occupied the position of the line Strazeele Station-Caestre-St. Sylvestre. . . . A French Cavalry Corps under General Conneau was operating between the Second and Third Corps. The Fourth German Cavalry Corps . . . was known to be occupying the position in the neighbourhood of Meteren; and they were believed to be further supported by the advanced guard of another German Army Corps. In pursuance of his orders, General Pulteney proceeded to attack the enemy in his front. The rain and fog which prevailed prevented full advantage being derived from our much superior artillery. The country was very much enclosed and rendered difficult by heavy rain. The enemy were, however, routed; and the position taken at dark, several prisoners being captured. . . . As Bailleul was known to be occupied by the enemy, arrangements were made during the night to attack it; but reconnaissances sent out on the morning of the 14th showed that they had withdrawn, and the town was taken by our troops at 10 a.m. on that day. . . . On the morning of the 15th the Third Corps were ordered to make good the line of the Lys from Armentières to Saily, which, in the face of considerable opposition and very foggy weather, they succeeded in doing, the 6th Division at Saily-Bac St. Maur and the 4th Division at Nieppe. The enemy in its front having retired, the Third Corps on the night of the 17th occupied the line Bois Grenier-Le Gheir. On the 18th the enemy . . . occupied the east bank of the river as far as Wervick. On this day I directed the Third Corps to move down the valley of the Lys and endeavour to assist the Cavalry Corps in making good its position on the right bank. To do this it was necessary first to drive the enemy eastward towards Lille. A vigorous offensive in the direction of Lille was assumed, but the enemy was found to have been considerably reinforced, and but little progress was made. . . . Since the advance from Bailleul the enemy's forces in front of the Cavalry and Third Corps had been strongly reinforced, and on the night of the 17th they were opposed by three or four divisions of the enemy's cavalry, the 19th Saxon Corps, and at least one division of the 7th Corps. Reinforcements for the enemy were known to be coming up from the direction of Lille."—Field Marshal Sir John French, *Dispatch*, Nov. 29, 1914.

4. OPERATIONS OF CAVALRY CORPS (OCTOBER 11-19).—"Following the movements completed on the 11th October, the 2nd Cavalry Division pushed the enemy back through Flêtre and Le Coq de Paille, and took Mont des Cats, just before dark, after stiff fighting. On the 14th the 1st Cavalry Division joined up, and the whole Cavalry Corps under General Allenby, moving north, secured the high ground above Berthen, overcoming considerable opposition. With a view to a further advance east, I ordered General Allenby, on the 15th, to reconnoitre the line of the River Lys, and endeavour to secure the passages on the opposite bank, pending the arrival of the Third and Fourth Corps. During the 15th and 16th this reconnaissance was most skilfully and energetically

carried out in the face of great opposition, especially along the lower line of the river. These operations were continued throughout the 17th, 18th, and 19th; but, although . . . strong forces of the enemy [were] . . . held in check, the Cavalry Corps was unable to secure passages or to establish a permanent footing on the eastern bank of the river."—*Ibid.*

5. OPERATIONS OF FOURTH ARMY CORPS (OCTOBER 16-20).—"At this point in the history of the operations under report it is necessary that I should return to the co-operation of the forces operating in the neighbourhood of Ghent and Antwerp under Lieutenant-General Sir H. Rawlinson, as the action of his force about this period exercised, in my opinion, a great influence on the course of the subsequent operations. This force, consisting of the 3rd Cavalry Division, under Major-General the Hon. Julian Byng, and the 7th Division, under Major-General Capper, was placed under my orders. . . . I directed Sir Henry Rawlinson to continue his operations in covering and protecting the withdrawal of the Belgian Army, and subsequently to form the left column in the eastward advance of the British Forces. These withdrawal operations were concluded about the 16th October, on which date the 7th Division was posted to the east of Ypres on a line extending from Zandvoorde through Gheluvelt to Zonnebeke. The 3rd Cavalry Division was on its left towards Langemarck and Poelcappelle. In this position Sir Henry Rawlinson was supported by the 87th French Territorial Division in Ypres and Vlamertinghe, and by the 89th French Territorial Division at Poperinghe. . . . A very difficult task was allotted to Sir Henry Rawlinson and his command. Owing to the importance of keeping possession of all the ground towards the north which we already held, it was necessary for him to operate on a very wide front, and, until the arrival of the First Corps in the northern theatre—which I expected about the 20th—I had no troops available with which to support or reinforce him. Although on this extended front he had eventually to encounter very superior forces, his troops, both Cavalry and Infantry, fought with the utmost gallantry, and rendered very signal service."—*Ibid.*

6. FAILURE TO OCCUPY MENIN.—"I considered . . . that the possession of Menin constituted a very important point of passage, and would much facilitate the advance of the rest of the Army. So I directed the . . . Fourth Corps to advance the 7th Division upon Menin, and endeavour to seize that crossing on the morning of the 18th. The left of the 7th Division was to be supported by the 3rd Cavalry Brigade, and further north by the French Cavalry in the neighbourhood of Roulers. Sir Henry Rawlinson represented to me that large hostile forces were advancing upon him from the east and north-east, and that his left flank was severely threatened. I was aware of the threats from that direction, but hoped that at this particular time there was no greater force coming from the north-east than could be held off by the combined efforts of the French and British Cavalry, and the Territorial troops supporting them, until the passage at Menin could be seized and the First Corps brought up in support. . . . Rawlinson probably exercised a wise judgment in not committing his troops to this attack in their somewhat weakened condition; but the result was that the enemy's continued possession of the passage at Menin certainly facilitated his rapid reinforcement of his troops and

thus rendered any further advance impracticable. . . . On the 19th October the First Corps, coming from the Aisne, had completed its detrainment and was concentrated between St. Omer and Hazebrouck. A question of vital importance now arose for decision. I knew that the enemy were by this time in greatly superior strength on the Lys, and that the Second, Third, Cavalry and Fourth Corps were holding a much wider front than their numbers and strength warranted. . . . I was also aware that the enemy was bringing large reinforcements up from the east which could only be opposed for several days by two or three French Cavalry Divisions, some French Territorial troops, and the Belgian Army. After the hard fighting it had undergone the Belgian Army was in no condition to withstand, unsupported such an attack; and unless some substantial resistance could be offered to this threatened turning movement, the Allied flank must be turned and the Channel Ports laid bare to the enemy."—*Ibid.*

7. FIRST ARMY CORPS ORDERED TO ADVANCE BEYOND YPRES (OCTOBER 19).—"I judged that a successful movement of this kind would be fraught with such disastrous consequences that the risk of operating on so extended a front must be undertaken; and I directed Sir Douglas Haig to move with the First Corps to the north of Ypres. From the best information at my disposal I judged at this time that the considerable reinforcements which the enemy had undoubtedly brought up during the 16th, 17th, and 18th had been directed principally on the line of the Lys and against the Second Corps at La Bassée; and that Sir Douglas Haig would probably not be opposed north of Ypres by much more than the 3rd Reserve Corps, which I knew to have suffered considerably in its previous operations, and perhaps one or two Landwehr Divisions. At a personal interview with Sir Douglas Haig . . . I communicated the above information to him, and instructed him to advance with the First Corps through Ypres to Thourout. The object he was to have in view was to be the capture of Bruges and subsequently, if possible, to drive the enemy towards Ghent. . . . The Belgian Army were rendering what assistance they could by entrenching themselves on the Ypres Canal and the Yser River; and the troops, although in the last stage of exhaustion, gallantly maintained their positions, buoyed up with the hope of substantial British and French support. . . . Having given these orders to Sir Douglas Haig, I enjoined a defensive rôle upon the Second and Third and Cavalry Corps, in view of the superiority of force which had accumulated in their front. As regards the Fourth Corps, I directed Sir Henry Rawlinson to endeavour to conform generally to the movements of the First Corps."—Field Marshal Sir John French, *Dispatch*, Nov. 29, 1914.

8. ADVANCE OF FIRST CORPS (OCTOBER 20-21).—"On the 20th October they reached the line from Elverdinghe to the cross-roads one and a half miles north-west of Zonnebeke. On the 21st the Corps was ordered to attack and take the line Poelcappelle-Passchendaele. Sir Henry Rawlinson's Command was moving on the right of the First Corps, and French troops, consisting of Cavalry and Territorials, moved on their left under . . . General Bidon. The advance was somewhat delayed owing to the roads being blocked; but the attack progressed favourably in face of severe opposition, often necessitating the use of the bayonet. Hearing of heavy attacks being made upon the 7th Division and the 2nd Cavalry Division on his

right, Sir Douglas Haig ordered his reserve to be halted on the north-eastern outskirts of Ypres. Although threatened by a hostile movement from the Forêt d'Houthulst, our advance was successful until about 2 o'clock in the afternoon, when the French Cavalry Corps received orders to retire west of the canal. Owing to this and the demands made on him by the Fourth Corps, Sir Douglas Haig was unable to advance beyond the line Zonnebeke-St. Julien-Langemarck-Bixschoote. As there was reported to be congestion with French troops at Ypres, I went there on the evening of the 21st and . . . [with Haig and Rawlinson] I interviewed General De Mitry, Commanding the French Cavalry, and General Bidon, Commanding the French Territorial Divisions. They promised me that the town would at once be cleared of the troops, and that the French Territorials would immediately move out and cover the left of the flank of the First Corps. I discussed the situation with the General Officers Commanding the First and Fourth Army Corps, and told them that, in view of the unexpected reinforcements coming up of the enemy, it would probably be impossible to carry out the original rôle assigned to them. But I informed them that I had that day interviewed . . . General Joffre, who told me that he was bringing up the 9th French Army Corps to Ypres, that more French troops would follow later, and that he intended—in conjunction with the Belgian troops—to drive the Germans east. . . . I directed the General Officers Commanding the First and Fourth Corps to strengthen their positions as much as possible and be prepared to hold their ground for two or three days, until the French offensive movement on the north could develop. It now became clear to me that the utmost we could do to ward off any attempts of the enemy to turn our flank to the north, or to break in from the eastward was to maintain our present very extended front, and to hold fast our positions until French reinforcements could arrive from the south. During the 22nd the necessity of sending support to the Fourth Corps on his right somewhat hampered the . . . First Corps; but a series of attacks all along . . . [its] front had been driven back during the day with heavy loss to the enemy. . . . At 6 a.m. on the morning of the 23rd a counter attack to recover the lost trenches was made . . . under Major-General Bulfin. The attack was very strongly opposed and the bayonet had to be used. After severe fighting during most of the day the attack was brilliantly successful, and over six hundred prisoners were taken. On the same day an attack was made on the 3rd Infantry Brigade. The enemy advanced with great determination, but with little skill, and consequently the loss inflicted on him was exceedingly heavy; some fifteen hundred dead were seen in the neighbourhood of Langemarck.”—*Ibid.*

9. ARRIVAL OF FRENCH 9TH ARMY CORPS.—“In the evening of this day a division of the French 9th Army Corps came up into line and took over the portion of the line held by the 2nd Division, which, on the 24th, took up the ground occupied by the 7th Division from Poelzelhoek to the Becelaere-Passchendaele road. On the 24th and 25th October repeated attacks by the enemy were . . . repulsed. On the night of the 24th-25th the 1st Division was relieved by French Territorial troops and concentrated about Zillebeke. During the 25th the 2nd Division, with the 7th on its right and the French 9th Corps on its left, made good progress towards the north-east. . . . Owing

to constant marching and fighting, ever since its hasty disembarkation in aid of the Antwerp Garrison . . . [the 7th] division had suffered great losses, and were becoming very weak. I therefore decided temporarily to break up the Fourth Corps and place the 7th Division with the First Corps under the command of Sir Douglas Haig. The 3rd Cavalry Division was similarly detailed for service with the First Corps. . . . On receipt of orders, in accordance with the above arrangement, Sir Douglas Haig redistributed the line held by the First Corps as follows: (a) 7th Division from the Chateau east of Zandvoorde to the Menin road. (b) 1st Division from the Menin road to a point immediately west of Reytel village. (c) 2nd Division to near Moorslede-Zonnebeke road.”—Field Marshal Sir John French, *Dispatch, Nov. 29, 1914.*

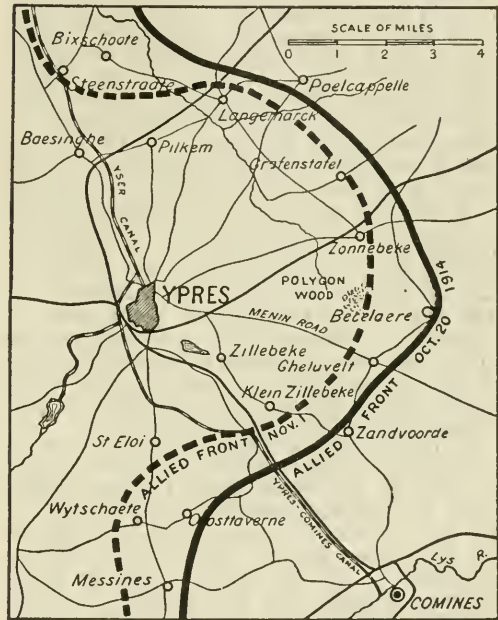

10. CRISIS OF THE BATTLE OF YPRES (OCTOBER 29-31).—“On the 29th of October the first of the three Great Days began. . . . The action opened at dawn with a terrific bombardment by the massed German artillery, and was succeeded by an attack straight down the great Menin road by the vast mass of the German column. Simultaneously the Germans advanced minor columns to the attack along the roads to Reutel and Zandvoorde and such intermediate by-roads and spaces that converged upon the British line. The main attack had as its objective the seizing of Kruseik Hill, and despite the ghastly slaughter of Germans that took place along the fire-swept Menin road, the surviving masses, pressing forward literally over mounds of their dead and dying comrades, succeeded in seizing the hill at about two o'clock in the afternoon, having endured that merciless blizzard of death for some eight hours. Everywhere else along the front they had been repulsed and had not succeeded in reaching our trenches. Braving the most appalling losses they attacked again and again, but each time the merciless British fire consumed them. Then came Sir Douglas Haig's order for a general British counter attack. Our men swept forward, cheering as they flashed their gleaming bayonets, and the German attack was everywhere hurled back broken upon its lines. Kruseik Hill was stormed and regained with a vast slaughter of the resisting Germans and the fortunes of the day were again favourable to the Allies. In the night the Germans received a very strong reinforcement of no less than three corps. . . . The attack next morning came not along the Menin road, but south at Zandvoorde and Hollebeke. No less than five Army Corps, some 300,000 men attacked the low hills held by the 7th Division and the Cavalry Division. . . . The German troops had received the Imperial Order, they had been told that upon them depended the vital issue of the campaign, and in truth this was so, for their failure was no less our lasting victory. The field grey masses swarmed the lower slopes under a blaze of crackling, unerring rifle fire from the trenches, while the vault above them was thrashed by shrapnel from the guns. Wave after wave of men surged on to meet with annihilation. The dead men hampered the living, and when at last the inestimable mass of survivors reached the trenches held by the Cavalry Division, the British, who had suffered few casualties, simply melted away in the woods behind and withdrew to another position in the rear. The Germans did not dare face those deadly woods from which the incessant ripple of skirmishers' musketry still flayed them. They halted on the Zandvoorde ridge to reform, and during the pause Sir Douglas

Haig was able to withdraw the whole southern line and reform it along the Klein Zillebeke ridge from Gheluvelt to the canal. The French, ever ready in coöperation, were able to send over to the right flank three infantry battalions and a cavalry brigade from the 9th Corps. Meanwhile the thrust at Hollebeke had been held by the Cavalry of the 2nd Division, and they had inflicted terrible losses upon the attacking columns whose hopeless task it was to turn Hollebeke to ease the attack upon Zandvoorde. The situation was critical, but there were still some small reserves in hand for emergency, and the position was still tenable. The failure of the Zandvoorde-Hollebeke turning movement was manifest, so on the following day, the memorable 31st of October, 1914, the German assault was renewed on the original line down the Menin road, while at the same time a simultaneous attack was delivered from Zandvoorde. At daybreak a French reinforcement that had come over from the 9th Corps counter-attacked southeast of Gheluvelt, but the masses of enemy were impenetrable and the attack was halted. The fortunes of the day centred upon Gheluvelt, and despite all efforts the 1st Division was at last driven in and its flank forced to retreat down the road toward Ypres. The attack from Zandvoorde had also been pressed home so that the 7th Division had not only their left flank enfiladed at Gheluvelt but their right flank on the Klein-Zillebeke ridge turned. They too had to retreat through the woods toward Ypres. At this critical juncture Sir John French was at Hooze and in personal touch with the march of events. As the Germans drove their huge column along the Menin road into the British Salient they exposed an ever-growing vulnerable flank. Sir John French seized his opportunity. This flank was promptly attacked from the North by all troops that could be mustered from the 1st Army Corps and 27,000 men—the 1st Division and part of the 2nd Division—were hurled against this weak point. It was a master stroke. The enemy were held, the retiring British troops rallied, and the great mass of the German thrust attacked from front and flank was mown down wholesale. For a brief moment they held together, then the rout commenced and the broken masses streamed back through the deadly woods toward their own lines. Despite the incessant three days' fighting the victorious British pursued with rifle and bayonet, while the 6th Cavalry Brigade cleared the woods of little isolated bodies and stragglers. It was a grim bit of work, that rout of the German masses, when the débris of the vast broken fighting machine tried to escape back to their own lines. That belt of woodland and hills round Ypres proved the last resting place of many thousands of Germans. The battle was destined to drag on another fifteen days, but the great effort was over. The Germans had suffered a hammer blow from which they could never recover. The crisis was past, for Sir John French's master stroke had brought victory. The pressure on the Allied line slackened and the road to Calais was still closed."—H. B. C. Pollard, *Story of Ypres*, pp. 29-36.

II. GERMAN ATTACK OF OCTOBER 31.—"General Moussy . . . moved to the attack early in the morning, but was brought to a complete standstill, and could make no further progress. After several attacks and counter-attacks during the course of the morning along the Menin-Ypres road, south-east of Gheluvelt, an attack against that place developed in great force, and the line

of the 1st Division was broken. . . . The retirement of the 1st Division exposed the left of the 7th Division, and owing to this the Royal Scots Fusiliers, who remained in their trenches, were cut off and surrounded. . . . Shortly after this the Headquarters of the 1st and 2nd Divisions were shelled. The General Officer Commanding 1st Division was wounded, three Staff Officers of the 1st Division and three of the 2nd Division were killed."—Field Marshal Sir John French, *Dispatch*, Nov. 29, 1914.

12. RECOVERY OF GHELUVELT.—"Meantime, on the Menin road, a counter-attack delivered by the left of the 1st Division and the right of the 2nd Division against the right flank of the German line was completely successful, and by 2.30 p.m. Gheluvelt had been retaken with the bayonet. . . . The left of the 7th Division, profiting by their capture of Gheluvelt, advanced almost to its original line; and connection between the 1st

FIRST BATTLE OF YPRES

and 7th Divisions was re-established. The recapture of Gheluvelt released the 6th Cavalry Brigade, till then held in support of the 1st Division. Two regiments of this brigade were sent at once to clear the woods to the south-east, and close the gap in the line between the 7th Division and 2nd Brigade. They advanced with much dash, partly mounted and partly dismounted; and, surprising the enemy in the woods, succeeded in killing large numbers and materially helped to restore the line. About 5 p.m. the French Cavalry Brigade also came up to the cross-roads just east of Hooze, and at once sent forward a dismounted detachment to support our 7th Cavalry Brigade. Throughout the day the extreme right and left of the First Corps' line held fast, the left being only slightly engaged, while the right was heavily shelled and subjected to slight infantry attacks. In the evening the enemy were steadily driven back from the woods on the front of the 7th Division and 2nd Brigade; and by 10 p.m. the line as held in the morning had practically been

reoccupied. . . . The rally of the 1st Division and the recapture of the village of Gheluvelt at such a time was fraught with momentous consequences."—*Ibid.*

13. STAUNCH DEFENSE BY THE THIRD ARMY CORPS (OCTOBER 20-31).—"In the meantime the centre of my line, occupied by the Third and Cavalry Corps, was being heavily pressed by the enemy in ever-increasing force. On the 20th October advanced posts were forced to retire, and at dusk it was evident that the Germans were likely to make a determined attack. This ended in the occupation of Le Gheir by the enemy. As the position of the Cavalry at St. Yves was thus endangered, a counter-attack was decided upon and planned by General Hunter-Weston and Lieutenant-Colonel Anley. This proved entirely successful, the Germans being driven back with great loss and the abandoned trenches reoccupied. . . . Besides the very undue length of front which the [Third] Corps was called upon to cover (some 12 or 13 miles), the position presented many weak spots, and was also astride of the River Lys, the right bank of which from Frelinghein downwards was strongly held by the enemy. It was impossible to provide adequate reserves, and the constant work in the trenches tried the endurance of officers and men to the utmost. . . . On the evening of the 20th October the enemy made a sharp attack on Le Gheir, and on the line to the north of it, but were repulsed. About midnight a very heavy attack developed against the 10th Infantry Brigade south of Croix Maréchal. A portion of the trenches . . . was gained by the enemy and held by him for some hours till recaptured. . . . The enemy in the trenches were all bayoneted or captured. . . . On the evening of the 30th the line of the 11th Infantry Brigade in the neighbourhood of St. Yves was broken. A counter-attack carried out by Major Prowse with the Somerset Light Infantry restored the situation."—*Ibid.*

14. CAVALRY IN THE TRENCHES (OCTOBER 22-31).—"On October 20th, while engaged in the attempt to force the line of the River Lys, the Cavalry Corps was attacked from the south and east. . . . On the 21st October a heavy attack was made on the 2nd Cavalry Division, which was compelled to fall back. . . . On the 22nd . . . the 7th Indian Infantry Brigade, less one battalion . . . [proceeded] to Wulverghem in support of the Cavalry Corps. . . . On the 23rd, 24th and 25th several attacks were directed against the Cavalry Corps and repulsed with loss to the enemy. On the 26th October . . . General Allenby . . . [endeavoured] to regain a more forward line, moving in conjunction with the 7th Division. But the latter being apparently quite unable to take the offensive, the attempt had to be abandoned. . . . The 1st Cavalry Division in the neighbourhood of Messines was also threatened by a heavy infantry column. General Allenby still retained the two Indian Battalions of the 7th Indian Brigade, although they were in a somewhat exhausted condition. After a close survey of the positions and consultations with the General Officer . . . [of] the Cavalry Corps, I directed four battalions of the Second Corps, which had lately been relieved from the trenches by the Indian Corps, to move to Neuve Eglise under General Shaw, in support of General Allenby. . . . It now fell to the lot of the Cavalry Corps, which had been much weakened by constant fighting, to oppose the advance of two nearly fresh German Army Corps for a period of over forty-eight hours, pending the arrival of a French reinforcement. Their action was com-

pletely successful. . . . After the critical situation in front of the Cavalry Corps, which was ended by the arrival of the head of the French 16th Army Corps, the 2nd Cavalry Division was relieved by General Conneau's French Cavalry Corps and concentrated in the neighbourhood of Bail-leul."—*Ibid.*

15. THIRD CORPS HOLDS ITS GROUND.—"The Third Corps in its position on the right of the Cavalry Corps continued throughout the same period to repel constant attacks against its front, and suffered severely from the enemy's heavy artillery fire. The artillery of the 4th Division constantly assisted the French in their attacks. . . . The Lahore Division arrived in its concentration area in rear of the Second Corps on the 19th and 20th October. . . . [Part of] the Division from the 25th October onwards were heavily engaged in assisting the 7th Brigade of the Second Corps in fighting round Neuve Chapelle. Another brigade took over some ground previously held by the French 1st Cavalry Corps. . . . On the 28th October especially the 47th Sikhs and the 20th and 21st Companies of the 3rd Sappers and Miners distinguished themselves by their gallant conduct in the attack on Neuve Chapelle, losing heavily in officers and men."—*Ibid.*

16. INDIAN TROOPS.—"After the arrival of the Meerut Division at Corps Headquarters the Indian Army Corps took over the line previously held by the Second Corps, which was then partially drawn back into reserve. Two and a half brigades of British Infantry and a large part of the artillery of the Second Corps still remained to assist the Indian Corps in defence of this line. Two and a half battalions of these brigades were returned to the Second Corps when the Ferozepore Brigade joined the Indian Corps after its support of the Cavalry further north. The Secunderabad Cavalry Brigade arrived in the area during the 1st and 2nd November, and the Jodhpur Lancers came about the same time. These were all temporarily attached to the Indian Corps. Up to . . . [Nov. 29, 1914] the line held by the Indian Corps has been subjected to constant bombardment by the enemy's heavy artillery, followed up by infantry attacks. . . . On the 13th October the 8th Gurkha Rifles of the Bareilly Brigade were driven from their trenches, and on the 2nd November a serious attack was developed against a portion of the line west of Neuve Chapelle. On this occasion the line was to some extent pierced, and was consequently slightly bent back. The situation was prevented from becoming serious by . . . the 2nd Gurkha Rifles."—Field Marshal Sir John French, *Dispatch*, Nov. 29, 1914.

17. RENEWED GERMAN ATTACKS ON THE FIRST ARMY CORPS (NOVEMBER 2-12).—"Whilst the whole of the line has continued to be heavily pressed, the enemy's principal efforts since the 1st November have been concentrated upon breaking through the line held by the First British and 9th French Corps, and thus gaining possession of the town of Ypres. From the 2nd November onwards the 27th, the 15th and parts of the Bavarian 13th and 2nd German Corps, besides other troops, were all directed against this northern line. About the 10th instant, after several units of these Corps had been completely shattered in futile attacks, a division of the Prussian Guard, which had been operating in the neighbourhood of Arras, was moved up to this area with great speed and secrecy. Documents found on dead officers prove that the Guard had received the Emperor's special commands to break through and

succeed where their comrades of the line had failed. They took a leading part in the vigorous attacks made against the centre on the 11th and 12th; but, like their comrades, were repulsed with enormous loss. . . . The First Corps was brilliantly supported by the 3rd Cavalry Division under General Byng. Sir Douglas Haig has constantly brought this officer's eminent services to my notice. His troops were repeatedly called upon to restore the situation at critical points, and to fill gaps in the line caused by the tremendous losses which occurred. Both Corps and Cavalry Division Commanders particularly bring to my notice the name of Brigadier-General Kavanagh, Commanding the 7th Cavalry Brigade, not only for his skill but his personal bravery and dash. . . . On the 5th November I despatched eleven battalions of the Second Corps, all considerably reduced in strength, to relieve the infantry of the 7th Division, which was then brought back into general reserve. Three more battalions of the same Corps . . . were subsequently sent to reinforce the troops fighting to the east of Ypres. . . . The battalions of the Second Corps took a conspicuous part in repulsing the heavy attacks delivered against this part of the line. I was obliged to despatch them immediately after their trying experiences in the southern part of the line and when they had had a very insufficient period of rest; and, although they gallantly maintained these northern positions until relieved by the French, they were reduced to a condition of extreme exhaustion. . . . In remarking upon the general military situation of the Allies as it appears to me at the present moment, it does not seem to be clearly understood that the operations in which we have been engaged embrace nearly all the Continent of Central Europe from East to West. The combined French, Belgian, and British Armies in the West and the Russian Army in the East are opposed to the united forces of Germany and Austria acting as a combined army between us. Our enemies elected at the commencement of the war to throw the weight of their forces against the armies in the West, and to detach only a comparatively weak force, composed of very few first-line troops and several corps of the second and third lines, to stem the Russian advance till the Western Forces could be completely defeated and overwhelmed. Their strength enabled them from the outset to throw greatly superior forces against us in the West. This precluded the possibility of our taking a vigorous offensive, except when the miscalculations and mistakes made by their commanders opened up special opportunities for a successful attack and pursuit."—*Ibid.*

18. SUMMARY OF BATTLE.—“In this great fight [the British losses] were little short of 50,000. The fact that the enemy did not recoil and that there was no sensational capture of prisoners and guns has obscured the completeness of the victory. . . . One judges victory or defeat by the question whether an army has or has not reached its objective. In this particular case, taking a broad view of the whole action, a German force of at least 600,000 men set forth to reach the coast, and was opposed by a force of less than half its numbers who barred its way. The Germans did not advance five miles in a month of fighting, and they lost not less than 150,000 men without any military advantage whatever, for the possession of such villages as Gheluvelt, Wytshaete, or Messines availed them not at all. . . . Ypres was a Plevna—but a Plevna which

remained for ever untaken.”—A. C. Doyle, *British campaign in France and Flanders, 1914*, p. 311.—“Within hearing of the guns of Ypres, roaring their last challenge, the greatest British soldier passed away. Lord Roberts landed at Boulogne on 11th November on a visit to his beloved Indian troops. On the 12th he was at the headquarters of the corps, and went about among his friends, speaking their own tongue, and greeting many of them who had fought with him during the frontier wars. The strain proved too great for the veteran; he caught a chill in the bitter weather; and . . . on the night of Saturday, the 14th the end came. It was fitting that the master-gunner should die within sound of his guns, that the most adored of British soldiers should have his passing amid the army he had loved so well.”—J. Buchan, *History of the Great War*, v. 1, p. 369.

19. BRITISH DEFENSE AT YPRES.—ALLIED PLANS.—“The Allies carried out the evacuation of Antwerp, which was no longer tenable, and the Belgian Army retreated through Ghent, covered by the British 7th Division and the Naval Division, and preceded by the 3rd Cavalry Division. By October 15, 1914, the retreat had been safely accomplished, and much of the Belgian Army, very weary and disorganized, lay in the forest of Houlthoult near Ypres. The remainder lay round Ostend. The city of Ypres itself was full of wounded, and four miles away towards Armentières the English cavalry patrols were in touch with the enemy, and with the remainder of the British forces that had been fighting round Armentières, checking the westward expansion of the German line while the retreat from Antwerp was in progress. This, then, was the position when the British first entered Ypres. The Belgian Army, exhausted but safe, had gained the line of the Yser Canal. The British force that had been separated—part at Antwerp, the other at Lille—had joined again, and both French and British were straining every nerve to pour up more reserves of troops to hold the line of the Yser from Nieuport to Ypres. It had been a race against time, and the Allies had won. . . . On the evening of the 20th [October] the Allied forces were in the position . . . and the stage was set for the first battle of Ypres. It is difficult to set a period to a modern battle, but authorities agree that this battle lasted from the 20th of October to the 17th of November, a period of twenty-seven days. Field-Marshal Viscount French himself specifies Saturday the 31st as the most critical of all.”—H. B. C. Pollard, *Story of Ypres*, pp. 16-18.—The section of the front to the north of our forces was the first to meet the recrudescence of violence in the shape of an attack in the neighborhood of Dixmude and Bixchoote. Early on October 30, “hearing heavy firing towards Ypres, I went to Haig's Headquarters at Hooze. Whilst I was with Haig, Allenby came in. . . . By the evening the Second and Third Cavalry Divisions had fallen back to the Canal, and the enemy was in possession of Hollebeke. Shortly after dawn on . . . 31st of October, we had news that a serious infantry attack was developing on the left of the Fourth Division in the valley of the river Douve. . . . But the great events of the day took place between Gheluvelt on the north and Messines on the south. . . . About noon . . . I left Allenby in order to join Haig at Hooze, east of Ypres. A battalion of French arrived to support the troops fighting at Messines just as I was leaving. . . . On reaching the eastern exit of the town, on my way to Hooze, I was stopped by a guard specially posted. . . . Shells

were screaming overhead and bursting with reverberating explosions in the adjacent fields. This spectacle filled me with misgiving and alarm. . . . The Château of Hooge, where First Army Headquarters were situated, has long since been erased from the face of the earth in the severe fighting which has raged about it. But as I found it on that October afternoon, it was a typical modern red-brick château, approached by a gate and a short avenue from the road. Shells were falling about the place, and the château was already beginning to show the effects of artillery fire. I found Haig and John Gough, his Chief of Staff, in one of the rooms on the ground floor, poring over some maps and evidently much disconcerted. But, though much perturbed in mind and very tired in body and brain, Haig was as cool and alert as ever."—Field Marshal Viscount French, 1914, pp. 247, 249, 252-254.—"In spite of the immense losses suffered by the enemy during the five day attack against Ypres (Oct. 29-Nov. 2), the cessation of their more violent efforts on the latter day did not signalize the abandonment of the whole project, but merely the temporary relinquishment of the main offensive until fresh troops had been massed to carry on what was proving to be a costly and difficult operation. Meanwhile the interval was employed in endeavoring to wear out the Allies by repeated local attacks of varying force and to shatter them by a prolonged and concentrated bombardment. After eight days of comparative relaxation we were under constant pressure from Nov. 3 to Nov. 10. The next day saw a repetition of the great attempt of the Germans to break through our lines to the French coast. As day broke on the 11th the Germans opened fire on our trenches to the north and south of the road from Menin to Ypres. A few hours later they followed this by an infantry assault in force. This attack was carried out by the First and Fourth brigades of the Guard Corps, which have been sent for to make a supreme effort to capture Ypres, since that task had proved too heavy for the infantry of the line. As the attackers surged forward they were met by our frontal fire, and since they were moving diagonally across part of our front they were also attacked on the flank by artillery, rifles, and machine guns. Though their casualties before they reached our line must have been enormous, such was their resolution and the momentum of the mass that . . . they succeeded in breaking through our line in three places near the road. They penetrated some distance into the woods behind our trenches, but were counter-attacked again, enfiladed by machine guns and driven back to their line of trenches, a certain portion of which they succeeded in holding, in spite of our efforts to expel them. November 12 was marked by a partial lull in the fighting all along our line. To the north a German force which had crossed the Yser and entrenched on the left bank was annihilated by a night attack with the bayonet, executed by the French. . . . Immediately on our left the French were strongly attacked and driven back a short distance, our extreme left having to conform to this movement. Our allies soon recovered the ground they had lost; however, and this enabled us to advance also. . . . The fact that on this day the advance against our line in front of Ypres was not pushed home after such an effort as that of Wednesday tends to show that for the moment the attacking troops had had enough. Although the failure of this great attack by the Guard Corps to accomplish their object cannot

be described as a decisive event, . . . it [has] . . . a dramatic interest of its own. Having once definitely failed to achieve this object by means of the sheer weight of numbers, and having done their best to wear us down, the Germans brought in fresh picked troops to carry the Ypres salient by an assault from the north, the south and the east. That the Guard Corps should have been selected to act against the eastern edge of the salient may be taken as proof of the necessity felt by the Germans to gain this point in the line. Their dogged perseverance in pursuance of their objective claims whole-hearted admiration. The failure of one great attack, heralded as it was by an impassioned appeal to the troops made in the presence of the Emperor himself, but carried out by partially trained men, has been only the signal for another desperate effort in which the place of honor was assigned to the corps d'élite of the German Army."—British official report (*New York Times Current History*, Jan., 1915, pp. 672-674).—"At this time all our ideas in regard to the framing of plans in the West were evolved and guided almost entirely by the progress of the campaign in Poland and Galicia. After the Battle of the Marne, when we were at the Aisne, we were still hopeful of effecting a great flanking movement which should lead to more or less decisive results, or at least clear Northern France and Belgium of the enemy's troops. It has been shown how the development of events obliged us to modify our hopes and anticipations until, at the close of the first battle of Ypres, we certainly felt at our own General Headquarters that the Allied forces of Great Britain, France, and Belgium could effect nothing of importance unless and until one of two things happened. Either there must be a considerable augmentation of our forces, including a vastly increased supply of heavy artillery, machine guns, trench artillery, and ammunition, or, the enemy's forces on the Western Front must be so weakened by the necessity of sending troops to stem the Russian advance in the East as to enable the Allies with their available forces to assume the offensive with success."—Field Marshal Viscount French, 1914, p. 307.—"It is estimated that the Allies lost 100,000 men between Oct. 15 and Nov. 15, 40,000 of these were British casualties, the remainder French and Belgian. German losses are put at 250,000. About 1,200,000 German troops were employed. These statistics must be accepted with extreme reserve."—General G. L. Niox, *La Grande Guerre*, 1914-1918, p. 55.—A British estimate of German losses in the encounters collectively named the battle of the Yser places the number at 120,000.

20. SUMMARY OF OPERATIONS.—WINTER CAMPAIGN.—"After the check on the Marne the Germans fell back to the line of the Aisne and made their stand in previously prepared trenches on the northern bank of the river, about two miles from the water's edge. When the Allies caught up they forced the passage of the Aisne and made a desperate attempt, which lasted nearly a week, to drive the Germans from their positions. The successful defensive battle of the Aisne was the German answer to the successful offensive battle of the Marne. In the middle of September General Joffre had planned to shift his attack by extending his left wing and outflanking the Germans in the direction of the English Channel and the North Sea. This movement developed into a great series of battles which also had taken the name of a river, the Yser. So far as this plan included the hope of freeing Flanders

from the invader, it broke down when, on October 9, Antwerp surrendered. A remnant of the Belgian Army marched out of the city to the west and reached the Allied lines, of which they held the extreme end resting upon the sea. The German line swung round its right wing behind them and conquered nearly all of Belgium. It was now the Allies' turn, having failed in an attempt to outflank the German line and so compel its retirement, to stand and resist an assault which the Germans made with great masses of troops in an attempt to break through the extreme left flank of the Allied line. The menaced portion of the line extended almost due north and south from the banks of the river Somme, near Albert, to Nieuport at the mouth of the river Yser on the North Sea. The Germans could not hope to outflank this line, for it rested on the sea! Apparently their object was to force it back far enough to capture Calais, which is only twenty miles from the English coast, bring up batteries of great guns and establish there an armed harbor defended by minefields from which they could the more easily attack and harass England. Although they several times indented the Allied line and drove back the troops defending it, they were never able to break through in such numbers as to hold their gain; still less to attack the broken line on the flanks and so compel a general retirement."—P. Van Dyke, *Western front (New York Times Current History, Jan., 1915, p. ii)*.—The battle of Flanders died away on November 11. Arras had been reduced to ruins by the Germans in a fifteen days' bombardment; Rheims had suffered severely, and the whole country south of Arras and around Bapaume, Albert, Chaulnes and Péronne had been laid waste. Having secured the necessary gun-positions, the Germans began a violent bombardment of Ypres on November 1, creating terrible panic and destruction. By the 5th the surging tide of war had flowed back south from the sea-coast into France. German reinforcements poured into the country. The Belgian coast line from Ostend to Holland was in German hands; also the port of Zeebrugge, soon to become a base for German submarines; arteries of inland communication fell to the invaders—the ship-canal from Zeebrugge to Bruges, the Canal de Ghent, the Scheldt from Ghent to Antwerp, and the railroad lines from Antwerp to the coast. From Emden, Bremerhaven, Wilhelmshaven, Cuxhaven, Kiel and Heligoland it had hitherto been impracticable to strike at the British fleet or to attempt raids on British territory; but with Ostend and Zeebrugge at their disposal, the Germans could now hope to make such attempts, as indeed they successfully carried out when the submarine campaign developed during the later stages of the war. From the coast to the Swiss frontier the long drawn-out struggle of wear and tear continued with unimportant results to either side. During the early days of December certain indications along the whole front of the allied line led the French and British commanders to believe that the enemy had withdrawn considerable forces from the western theatre. Arrangements were made with the Eighth French Army for an attack to be commenced on the morning of December 14. Operations began at 7 a. m. by a combined heavy artillery bombardment by the French and British. The British objectives were the Petit Bois and the Maedelsteed Spur, lying respectively to the west and the southwest of the village of Wyttschaete. The Royal Scots, in face of a terrible machine-gun and rifle fire, carried the Ger-

man trench on the west edge of the Petit Bois, while the Gordon Highlanders advanced up the Maedelsteed Spur, forcing the enemy to evacuate their front trench. As the 32nd French Division on the left had been unable to make any progress, further British advance into the Wyttschaete Wood was impracticable. The ground was devoid of cover and so water-logged that a rapid advance was impossible, the men sinking deep in the mud at every step. From Dec. 15 to 17 the offensive operations were continued, but were confined chiefly to artillery bombardment. On the 18th and 19th the Indian Corps attempted to take advantage of what seemed a favorable opportunity to launch attacks against the advanced trenches on its front. Two lines of the enemy's trenches were captured with little loss, but at daybreak it was found that the position was practically untenable. Both flanks were in the air, and a supporting attack, which was late in starting, failed of success. By the night of Dec. 19 nearly all the ground gained had been lost. From Dec. 20 the enemy commenced a heavy artillery fire on the whole front of the Indian Corps, followed by infantry attacks, which were in especial force against Givenchy, and between that place and La Quinque Rue. One Indian brigade (Sirhind) was driven back, and the 47th Sikhs with another Indian brigade were sent in support. Two British regiments and two battalions of French Territorials under General Carnegie were ordered to launch a counter-attack to retake by a flank movement the trenches lost by the Sirhind Brigade. Givenchy was captured and the Germans driven out of two lines of trenches. During the night reinforcements arrived from Haig's Corps, of which three brigades were employed the following morning, and by the 22nd a considerable gain of ground had been achieved. On the same day Sir Douglas Haig took over command from General Willcocks.—Based on Field Marshal John French, *Dispatch, Feb. 2, 1915*.—"The scrambling and unsatisfactory Battle of Givenchy [was] a violent interlude in the drab records of trench warfare. It began with a considerable inroad of Germans into our territory and heavy losses of our Indian Contingent. It ended by a general return of the Germans to their former lines, and the resumption by the veteran troops of the First Division of the main positions which we had lost. Neither side had gained any ground of material value, but the balance of profits in captures was upon the side of the Germans, who may fairly claim that the action was a minor success for their arms, since they assert that they captured some hundreds of prisoners and several machine guns. The Anglo-Indian Corps had 2,600 casualties, and the First Corps 1,400, or 4,000 in all. . . . About the same date as the Battle of Givenchy there was some fighting farther north at Rouge Banc . . . where some German trenches were taken. . . . Henceforward peace reigned along the lines for several weeks—indeed Christmas brought about something like fraternisation between British and Germans, who found a sudden and extraordinary link in that ancient tree-worship, long anterior to Christianity, which Saxon tribes had practised in the depths of Germanic forests and still commemorated by their candle-lit firs. For a single day the opposing forces mingled in friendly conversation and even in games."—A. Conan Doyle, *British campaign in France and Flanders, 1914, pp. 337-338*.—Early in the month King George V paid a visit to the British troops at the front.

(x) Belgian mission to the United States.—“In order to inform neutral countries—and America in particular, where the statements of German agencies were designed to mislead the public—what was our actual rôle in the great European conflict, the Belgian Government decided to send an official mission to the United States. This mission was composed of M. Carton de Wiart, Minister of Justice—who was president of the mission, . . . Envoy Extraordinary of the King of the Belgians to the President of the United States—and of three Ministers of State, representing the three great Belgian political parties; MM. de Sadeleer, Hymans, and Emile Vandervelde. The mission left Antwerp on the 30th of August, and on the 1st of September was received in special audience by the King of England, to whom it bore the expression of the gratitude of the Belgian nation for the fidelity and alacrity with which England had fulfilled her obligations as

CARDINAL MERCIER

a guarantor of Belgian neutrality. The day before the mission landed in New York, with a view to discounting the impression it should have produced, the Emperor of Germany sent to President Wilson . . . [a] telegram in which he denounced the pretended acts of violence committed by the Belgians, and notably by women, upon the German wounded. He added that such violence had necessitated acts of repression which pained him extremely. . . . The Belgian mission was received at the White House on the 16th of September. Replying to the speech of M. Carton de Wiart, the President . . . expressed, in significant terms, his keen admiration for the Belgian people and his respect for their King. . . . After he had received the Belgian mission and conferred with it . . . President Wilson replied to the Emperor's message. . . . The . . . mission was then received by the principal Universities of the United States: New York, Harvard, and Chicago. Then, having received in Canada a truly triumphant welcome from the authorities and the population of the Dominion, it had opportunities of conferring with

a number of American notabilities—and with Mr. Roosevelt in particular—enlightening them as to the situation in Belgium, . . . and thereby contributing to create throughout the United States that potent and wonderful current of sympathy and solidarity which presently found expression in the organisation of relief for the population of the occupied provinces.”—A. V. J. Gerlache de Gomery, *Belgium in war time*, pp. 104-105.—See also BELGIUM: 1914: Belgian mission.

(y) Cardinal Mercier and the Germans.—From the day the Germans occupied Brussels, Cardinal Mercier, primate of Belgium, continued at his post and, speaking through his clergy, inspired his people with courage and fortitude; urging them to be patient, to do nothing to invite persecution from the invader while awaiting the day of deliverance. The German governors, first von der Goltz and his successor von Bissing, tried to silence Cardinal Mercier, but never succeeded. The Cardinal's famous Pastoral Letter sent to all the churches to be read on January 3, 1915, recalled the present sufferings of the country and adjured Belgians to “remain faithful to their King and their laws.” Informed of this letter the Germans withdrew the cardinal's permission to visit the other bishops in his motor car. At the same time they forbade the priests to make the letter known to their parishoners; they even proceeded to seize the pamphlet in the presbyteries. The priests refused to obey the injunction and the beginning of the *mandamus* was read from the pulpits on Jan. 3, 1915. To compel the priests to discontinue reading the letter, a declaration signed by von Bissing was shown them in which it was stated that after Cardinal Mercier had been informed by the governor that his Pastoral might have an exciting effect on the people that he no longer insisted that it should be read by his clergy from the pulpit. This declaration Cardinal Mercier pronounced to be false. “They have done everything to make me sign mitigations of my letter: I have not signed them. Now they seek to separate my clergy from me, by forbidding them to read it.” The German governor published a declaration that “The Cardinal Archbishop of Malines has in no manner been prevented in the free performance of his ecclesiastical office.” The cardinal in rebuttal described the invasion of the presbyteries by German soldiers throughout the night of January 1, 1915, when they seized, or endeavored to seize, the Pastoral Letter sent to the priests. Threats of severe punishment were made to the clergy if they attempted to read the letter. Even the cardinal's dignity had not been respected. Before sunrise on January 2 he was ordered to present himself that day before the governor-general to justify his letter to the clergy. On the following day he was forbidden to preside at the benediction in the cathedral of Antwerp. He was also forbidden to visit the other Belgian bishops. Despite the seizure of many thousands of copies of the Pastoral Letter by the Germans and the arrest of the printer it continued to circulate among the people. There were more than a dozen different editions in French, two in Flemish and several typewritten editions. Throughout the war the indomitable prelate was a thorn in the side of the German rulers, while his attitude towards them was always correct and diplomatic. To him belongs much of the credit for having kept patriotism alive in the hearts of his countrymen through the darkest hours when it seemed that they must resign all hope of deliverance and ac-

cept the yoke of the invaders.—Based on J. Mas-sart, *Belgians under the German eagle* (tr. by B. Miall), pp. 239-245.

II. EASTERN FRONT

(a) Russian plan of campaign.—“Let us consider briefly the general plan of the Russian campaign against the Teutonic allies. At the beginning of the war one was tempted to measure the distance from the western border of Poland to Berlin and consider this as the distance Russian armies had to move in order to threaten the German capital. This, however, was to ignore the absolute dependence of armies under thoroughly safeguarded lines of communication. It would manifestly be impossible for a large Russian army to concentrate in western Poland and move on Berlin so long as an unbeaten German army occupied the morainic country of East Prussia, and a similar Austrian army existed in the rugged plateau upland of Galicia; for as soon as the advance on Berlin was started, the line of communication running from Russia through Poland to the army at the front would be in peril from a southward advance of the Germans debouching from the morainic hills, or a northward advance of the Austrians descending from the Podolian Plateau. If either advance succeeded in severing, even for a short period, those arteries which alone enabled an army in the field to live, disaster to the Russians would speedily follow. It would be more accurate, therefore, to draw a line from the eastern point of the Prussian border southeastward to the eastern border of Galicia, and consider this as the line from which the Russian advance on Berlin must be measured. This, roughly, doubles the length of the advance. Already in possession of the territory immediately in front of the center of this line, the Russians had to concern themselves with the hostile territory at the north and south. On the north the task was the more serious. Here were combined the most highly perfected military machine and the most difficult topography. In order to make an advance on Berlin from western Poland feasible, Russian armies must drive the Germans out of all that part of Prussia projecting east of the west Poland border. This would involve not only the traversing of the morainic hill and lake country, but in addition the passing of a very serious obstacle, the broad, shallow trench of the lower Vistula which cuts across the neck of the peninsula of eastern Prussia. The strength of this defensive line lies in the fact that the invaders would have to cross the broad, flat floor of the valley under fire from artillery posted on the crest of the western valley wall, and would also have to negotiate an unfordable river of great breadth and volume; and in the further fact that each end of this line is guarded by a powerful fortress, Thorn at the south and Danzig at the north. In several respects the topography in the south favored the Russian plans. No topographic barrier along the boundaries between Russia and Galicia prevents an easy invasion of the latter, whereas the formidable barrier of the Carpathians does separate Galicia from the rest of Austria-Hungary. Galicia is, therefore, a peripheral province, which is for topographic reasons peculiarly isolated from the rest of its country and there-

fore more easily subject to conquest by a neighboring power. During the invasion the deep gorge of the lower Dniester, and farther west the marshy flood-plain of the upper Dniester, would serve as admirable protections for the left flank of the invading army. Once the Austrian armies were pushed westward toward Cracow or southward over the Carpathians, the few passes over the latter could be held by small detachments of troops, and the left flank of the westward-moving Russian army would then have the effective protection of a mountain barrier; for while several roads and railways cross through the passes, they are so readily controlled that the strategic importance of the barrier is not greatly diminished. Austrian reinforcements would have to defile through the passes and along the few narrow mountain roads in greatly extended columns, a formation which would render them vulnerable to attacks by inferior numbers. No sudden assault of serious magnitude upon an army flank which is protected by a mountain barrier is feasible so long as the defending troops properly perform their functions. With these favorable topographic elements was combined the further favorable fact that the Austrian armies were less formidable than the Prussian military machine. Political conditions in Austria-Hungary also dictated a vigorous Russian offensive in Galicia, since a nation composed of heterogeneous elements, some of them held in subjection against their will, can be more easily driven to seek peace after military reverses than can a nation which is better unified. Topographic, military, and political considerations combined, therefore, to induce the Russian General Staff to subordinate the East Prussian campaign to far greater movements in Galicia.”—D. W. Johnson, *Topography and strategy in the war*, pp. 59-61.—“The configuration of Russia made invasion in the ordinary sense a hopeless task. The strongest army would be apt to melt away before it reached Moscow or Petrograd. But with the Russian field forces stationed in Western Poland an opportunity was given to Germany and Austria of striking a blow without the handicap of insuperable natural obstacles. A glance at the map will show that Russian Poland . . . [projected] into the territory of the Teutonic League in a great salient, which is roughly 200 miles from north to south and 250 from east to west. This land is a monotonous wind-swept plain, through which from south to north flows the river Vistula. About the center stood the capital, Warsaw, reputed one of the strongest citadels in Europe, and around Warsaw lay the group of fortresses called the Polish Triangle. The southern apex was Ivan-gorod, on the Vistula; the eastern, Brest Litovsk; the northern, Warsaw itself, while to the north-west lay the advanced fort of Novo Georgievsk. This triangle was a fortified region with three fronts—two towards Germany, and one towards Austria; and the various fortresses were fully linked up with railways. The southern frontier of Russian Poland was purely artificial, for there was no continuous barrier till from fifty to one hundred miles south of it, where the range of the Carpathians protects the plains of Hungary against attacks from the north. Galicia is simply a flattened terrace at the base of this range, watered by the upper Vistula and its tributaries, the Wisloka, the San, and the upper streams of the Bug. But in the north of Russian Poland, between the river Narev and the sea, is a country where campaigning is difficult. It is mainly swampy forest, but as it nears the Baltic coast

it becomes a chain of lakes and ponds with woodland of birch and pine between them. On the very edge of the sea, along the river Pregel and the large Lagoon called the Frisches Haff, there is a belt of firmer land which of old was the main highway between Prussia and Muscovy. This was the German province of East Prussia, a district unfriendly to the invader, as Napoleon found in his campaign of Friedland and Eylau. East of the Polish salient, and dividing it from Russia proper, lies a curious piece of country around the river Pripet. It is a vast tangle of streams, ponds, and marshes, covering some 30,000 square miles, and is called the Marshes of Pinsk, from the chief town of the neighbourhood. This district barred the march of armies, and a way must be taken to the north or south. On the north the road lay along the valleys of the Narev and the Niemen, where was a chain of fortified crossings. South, on the side toward Galicia, there were the three fortified towns of Lutsk, Dubno, and Rovno. The salient of Russian Poland was, therefore, defended on its western side by the Polish Triangle, on the north by the chain of forts along the Narev and Niemen, on the south by the forts south of Pinsk, and on the east by the great marshes of the Pripet. Its communications with Russia passed north and south of these marshes. Only on the Galician side and the front towards Posen did the nature of the land offer facilities for offensive campaigning. The German frontier defences consisted of the Silesian fortresses of Breslau and Glogau, guarding the line of the Oder; the strong city of Posen on the Warta, opposite the point of the Russian salient; and a powerful line of forts on the lower Vistula, guarding the road from East to West Prussia. Thorn on the Vistula and Danzig at its mouth, held the river valley; while Graudenz, much strengthened of late years, formed a link between them. Dirschau and Marienburg guarded the road and railway crossings of the Vistula delta. The northern entrance to the Frisches Haff lagoon was guarded by Pillau, and at its eastern end, at the mouth of the Pregel, stood Königsberg, the second strongest of German fortresses, barring the coast road and railway to Russia. In Galicia the true Austrian line of defence was the Carpathians, but north of it were the fortified city of Cracow, the old capital of Poland, and the great entrenched camp of Przemysl. It is important to grasp the configuration of this frontier district, for it determined the initial strategy of the campaign. Russia was bound to assume the offensive, in order to relieve her allies who were bearing the brunt of the German onslaught in the West. Her natural line of attack was through Posen, for that angle of her frontier was only 180 miles from Berlin. There was another reason: the salient of Poland went racially much farther west than the Warta, and included the bulk of the province of Posen and a considerable part of West Prussia. Germany had never been successful with her resident aliens, and she had been peculiarly unsuccessful with her Poles, all her schemes of Prussianization and land settlement having ended in something very like a fiasco. In moving westwards by the Posen route, Russia would be moving among a race who, in spite of all they had suffered from the Empire of the Tsars, still preferred a Slav to a Teuton. [See POLAND: 1914-1917.] But this direct western advance obviously could not be made and its flanks had been safeguarded by the conquest of East Prussia and Galicia—until the Russian armies, that is to say, could be deployed safely

on a front which we may define by the lower Vistula, the Warta, and the upper Oder. Russia's first task, therefore, was to defeat the Germans in East Prussia and the Austrians in Galicia, and so find a straight line of deployment for her main advance. Her centre, till her long mobilization was completed, must be her weakest point, and the Polish fortresses had not been kept at a strength which would allow her to trust in them. She could not concentrate on her Posen frontier, scarcely even on the Vistula; the Bug was the nearest line up to which she might hope to clear her flanks. These flanks were not less important to the Teutonic League. Austria, alone of the two allies able to put great forces into the field at once, lay not west but south-west, while Germany had long realized that Warsaw would most readily fall to an attack by flank and rear. For both combatants, and for purposes of both offence and defence, the vital areas were East Prussia and Galicia, and the snout of western Poland might for the moment be disregarded.—J. Buchan, *History of the Great War*, v. 1, pp. 180-182.

(b) Distribution of opposing armies.—The mobilization of the Russian armies was carried out more rapidly than the German General Staff had counted on, and in the third week of August they had reached their positions behind the Bug, the Narev and the Niemen. Under the supreme command of the Grand Duke Nicholas, uncle of the Tsar, the five separate armies were concentrated as follows: Army of the Niemen, General Rennenkampf, Kovno-Grodno. Army of the Narev, General Samsonov, echeloned along the Warsaw-Mlawa railway. Army of Poland, General Ivanoff, Brest Litovski-Cholm. 1st Galician Army, General Brusilov, opposite Tarnopol. The armies of the Niemen and the Narev had been partly mobilized for some time prior to the German declaration of war, and were ready to take the field by the end of the first week in August. From the first the Russians suffered from inferior railway communications. On the German side there was a network of railways converging in Poland and all were connected by a strategical line running along the frontier. Troops could be moved from point to point with ease, an impossibility for the Russians whose railways were not connected by lateral lines. On the Russian side of the frontier along the whole length of the 500-mile front from Memel to Cracow there were only seven railway lines leading from the interior of Poland to the German frontier. The German forces were thus concentrated. General von François commanded five or six corps distributed along the East Prussian frontier, having opposed to him the armies of Rennenkampf and Samsonov. In Galicia two Austro-German armies of 300,000 each were concentrated. The First Army was commanded by General Dankl, its position being in the salient formed by the Vistula and San rivers with its left resting on Cracow and its right on the fortress of Przemysl. The Second Army under General Auffenberg was in position at right angles to the first Army, covering the approaches to Lemberg from the East. By the end of August there were altogether about a million men in Galicia north of the Carpathian mountains.

(c) Invasion of East Prussia.—Beginning of Galician campaign.—1. INITIAL RUSSIAN SUCCESSSES.—Already the day after the German declaration of war. Rennenkampf's cavalry crossed the

frontier, cut the strategical railway at Lyck and drove the German outposts in the direction of the lakes. The main body of his army crossed the frontier at Suwalki and Wirballen on August 7, and attacked von François near Insterburg on the 16th. Von François retired to Königsberg. General Samsonov during this time had advanced from the southwest of the Masurian lakes and falling upon the German 20th Corps at Frankenau defeated it with severe losses. "As soon as it became evident that Germany's efforts were being concentrated on the campaign in France and that few troops had been left to guard East Prussia, the two northern Russian armies began an invasion of East Prussia, in agreement with the French. The frontier was crossed [in force] on August 17. General Rennenkampf's army aimed for Königsberg, while General Samsonoff moved in the direction of Danzig [by way of Mlava and Soldau]. . . . August 20 General Rennenkampf defeated the Germans at Gumbinnen, occupying Insterburg August 23 and threatening to besiege Königsberg. General Samsonoff's army also penetrated far into the province [and entered Allenstein on the 25th]. The advance of these Russian armies caused a great panic in East Prussia. People fled before the dreaded Cossacks, and refugees began to appear in Berlin. The whole province was said to be in the hands of the Russians as far as the River Vistula. It was at once necessary for the German Staff to correct this situation. Outside of any military results, the fact that the Russians were overrunning East Prussia would have had a bad moral effect upon the Germans, who were united in their belief in a victorious war. In this emergency, by one of the strange chances that have occurred so often in history, the man was at hand suited to the occasion. In Hanover there was living in retirement General von Hindenburg, an old German general who had made a special study of strategic and tactical conditions in East Prussia. He knew the country in which the Russian armies were operating as well as if it had been his own garden. In fact, he had prevented the East Prussian lakes and their surrounding country from being improved for commercial purposes, so convinced was he of the strategic value of this lake region as a defense against invasion. He had studied and rehearsed every tactical use of the difficulties of the country as an aid to defending armies. Hindenburg had been out of favor with the German Emperor and the General Staff, but he was so evidently the right man for the emergency that the German General Staff appointed him to the command in East Prussia. A French historian states that the old general was in a café in Hanover, on August 22, when he received telegrams telling him that he had been given the command in East Prussia, that reinforcements were being hastened to his aid, and that General Ludendorff would report to him, to act as his Chief of Staff, with a special train to take him to East Prussia." —T. G. Frothingham, *Guide to the military history of the World War, 1914-1918*, pp. 31-32.—In Galicia the Austrians were first to move. On August 10 General Dankl crossed the frontier, captured Krasnik and forced General Ivanov across the Bug river. Retiring before Dankl the Russians assailed Auffenberg's army with powerful forces. General Ruský's 1st Galician Army crossed the northeastern boundary of Galicia and captured Sokol on August 14. In six days' march he was within thirty miles of Lemberg. General Brusilov's was meanwhile advancing westward from Kiev against Auf-

fenberg's right flank. He took Tarnopol on August 27 and then Halicz, and turning north moved against Lemberg.

2. GERMAN RECONQUEST OF EAST PRUSSIA.—"On reviewing the situation General von Hindenburg could not but see that the Russian position was one of great strategic peril. The invading columns were separated by about a hundred miles, and had the extremely difficult Masurian Lake country between them. He decided, therefore, to throw a striking force with the utmost rapidity against General Samsonov's southern column, while containing the Russian northern column with the garrison of Königsberg. His first step was to concentrate his striking force east of the Vistula between the fortresses of Graudenz and Thorn. For this there were available the troops which had retired southwestwards before the Russians, the 1st Corps brought by sea from Königsberg to

NIKOLAI RUSKY

Dantzig, and various reserve divisions from the Posen frontier—in all some three to four army corps. Advancing rapidly into East Prussia, where he was well served by an admirable network of strategic railways, he had taken up a position with his left between Osterode and Allenstein and his right about Soldau on the 26th August. Right opposite the centre of his line, which was slightly concave, was the hamlet of Tannenberg, from which the battle takes its name. The XXth Corps had been left in Königsberg to contain the Russians in the north. Fate now played into the hands of the German commander, for General Samsonov, elated by his easy triumph at Frankenau, had conceived the daring resolution of pushing westward to make himself master of the crossings of the Vistula, his chief objective apparently being the second-class fortress of Graudenz. The nature of the country added greatly to the risk, for the innumerable lakes compelled him to advance upon a broad front with but little communication between the many columns into which his force was

necessarily subdivided; and further, the thick woods with which the land was covered rendered all reconnaissance, whether by cavalry or by aircraft, a matter of considerable difficulty. On the 26th the Russian advanced guards came in contact with the German troops, but for a time General Samsonov seems to have been under the delusion that he had to do merely with unenterprising rear-guards. He was soon, however, to be undeceived, for the following day . . . von Hindenburg retorted with a vigorous counter-attack. This was at first directed against the Russian left in the neighborhood of Soldau, and though it was in reality but a feint, it succeeded in cutting off the Russians from the main road and railway leading to Mława. The main attack was against the Russian right, and to that quarter of the field the German commander hurried thousands of troops in taxicabs, motor-omnibuses, and lorries, swinging forward his left as these reinforcements arrived. Samsonov now found that his five corps were in serious danger of being hemmed in within a region where the avenues for escape were but few. One exit alone remained open, a defile of solid ground between the marshes near Ortelsburg. For two days the Russians made heroic efforts to gain time for the withdrawal of their trains, but Hindenburg's left flank was too strong and too well handled."—F. E. Whitton, *Marne campaign*, pp. 107-108.

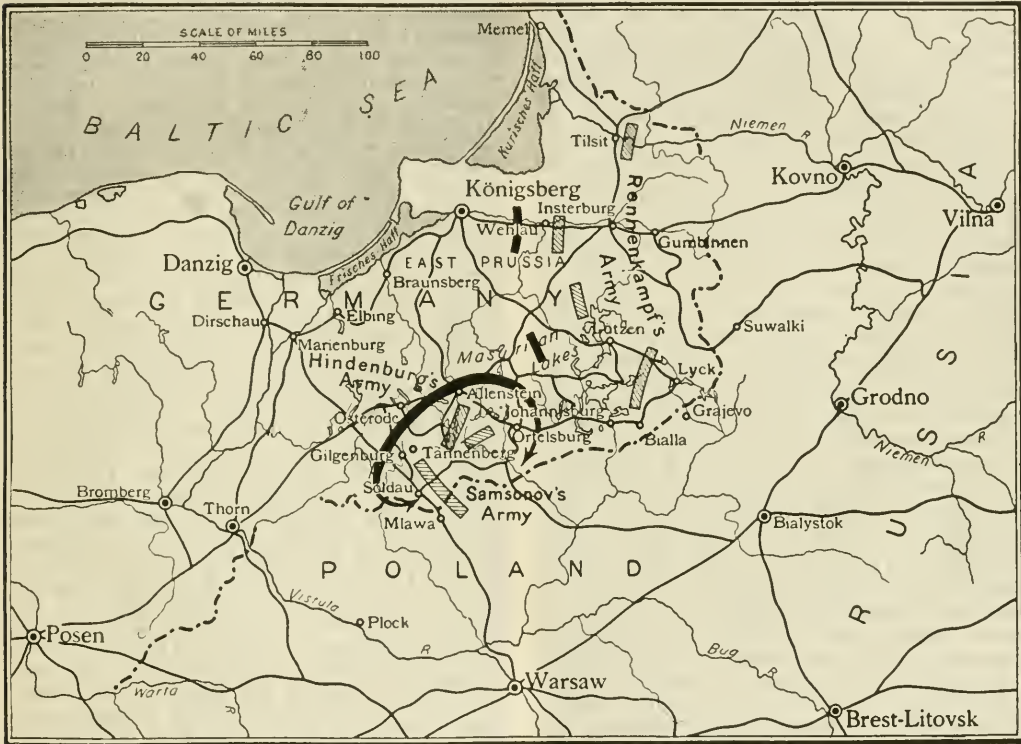

3. BATTLE OF TANNENBERG.—"Gradually, during the period of August 24-26, the battle plan took shape in all its details. . . . It depended solely on Rennenkampf himself, for if he knew how to make the most of his success at Gumbinnen, and advance quickly, my plan would be unworkable. . . . We discovered by degrees that Rennenkampf was advancing only slowly. . . . From August 27 onward, only two cavalry brigades stood between Lake Mauer and the river Pregel, facing twenty-four very strong infantry and several cavalry divisions of Rennenkampf's. The defensive chain of lakes was thus open, on the west; and in any case it would have been quite easy to turn it and completely isolate Königsberg. Our decision to give battle arose out of the slowness of the Russian leadership and was conditioned by the necessity of winning in spite of inferiority in numbers, yet I found it immensely difficult to take this momentous step. The corps came up here in the rear of the Narew Army, which was advancing from Neidenburg to Allenstein. In this way they exposed their rear, without adequate protection to Rennenkampf's army, which was only two or three days' march away. When the battle began in real earnest on the 27th and, in contrast to previous wars, was not finished in one day, but continued until the 30th, Rennenkampf's formidable host hung like a threatening thunder-cloud to the northeast. He need only have closed with us and we should have been beaten. But Rennenkampf brought his army forward over the Allenburg-Gerdauen-Neidenburg line so slowly that we had time to win a brilliant victory. Few knew the anxiety with which I watched the Niemen Army during those long days. . . . The reinforced 20th Army Corps had passed through difficult and exhausting days. On the 23d it stood facing south, on the heights northeast of Gilgenburg, while the enemy was approaching from Neidenburg—that is, from the southeast. The 3d Reserve Division was still assembling. The 1st Army Corps had just begun to detrain near Deutsch-Eylau. General von Scholtz was successful in beating off superior enemy forces, but

while holding the heights east of Gilgenburg he was obliged to withdraw his left flank sharply west of Hohenstein, about as far as Mühlen. Although uncomfortable for the troops, this movement had its good points, for the Russians thought they had won. They did not believe in any further German resistance, still less in a German attack. They saw the road open into German territory east of the Vistula. On the 24th we got into touch with General von Scholtz and actually met him at Tannenberg. He . . . gave us a lucid account of the great achievements of the troops under his command since the beginning of the campaign, and the great difficulties encountered in the last battles. . . . On the journey from Marienburg to Tannenberg, an intercepted enemy wireless message was sent us which gave a clear idea of our opponents' dispositions for the next few days. The Narew Army was advancing, its left wing in echelon, its 6th Corps directed *via* Ortelsburg, on Bischofsburg, which was reached or passed by the 26th, and its 13th Corps directed from Neidenburg through Passenheim to Allenstein. The 15th and 18th Corps, with which General von Scholtz had been engaged during these days, was following. On the 26th, the most southerly echelon was to be found somewhere near Wapłitz. Still farther back to the left, and pushed west, the 1st Corps, covered by several cavalry divisions, was moving through Mława and Soldau, against Lautenberg and Strasburg [on the Drewenz.] It was a question of breaking up this movement of the enemy by an attack from the west with the southern group of the Eighth Army. . . . I proposed to General von Hindenburg that an attack be made in the direction of Usdau by the 1st Army Corps on the line Deutsch-Eylau-Montowo, and by the right wing of the reinforced 20th Army Corps from the direction of Gilgenburg, so as to throw back the Russian 1st Corps to the south, beyond Soldau. Then, our 1st Army Corps was to break through in the direction of Neidenburg, in conjunction with the 1st and 17th Army Corps and 1st Reserve Corps, in order to surround at least the main body of the Narew Army. We had to confine ourselves to this plan if we wished to succeed. . . . But matters did not develop as smoothly as would appear from this short sketch. All the troops were exceedingly exhausted, and their vitality had been reduced by continual fighting. . . . It was doubtful whether the enemy would give us time to carry out our plans. But the greatest difficulties were due to the refugees, numbering many thousands, some on foot and some in vehicles, who blocked the roads behind Von Scholtz's force. . . . On August 24 and 25 our headquarters were at Rosenberg, and on the 26th at Löbau. We took advantage of these last two days to get into touch with commanders and men in various parts. . . . The attack on Usdau was to begin at 4 A. M. on the 27th. . . . Just as we left Löbau for Gilgenburg the joyous news reached us that Usdau had fallen. I considered the battle won. However, this was somewhat premature. Soon after it transpired that Usdau had not yet been taken, and it fell only late in the afternoon. From a tactical point of view the Narew Army was now broken through. The 1st Army Corps threw the enemy back beyond Soldau and marched upon Neidenburg. The 20th Army Corps, greatly exhausted as it was, was not so successful, and the 41st Infantry Division, near Cross Gardienen, made no progress. Nor was any ground won farther north. . . . We returned to Löbau in the afternoon not altogether satisfied. On 000

arrival, news came through that the 1st Army Corps had been routed and that the remnants of this corps were arriving in Montowo. . . . A telephone inquiry to the railway commandant there brought out the fact that troops of the 1st Army Corps were collecting at that point, but later on it appeared that it was a question of only one battalion that had found itself in a very tight corner and given way. Another rather alarming discovery was that a number of supply columns were hurriedly retreating through Löbau. . . .

"Late that night we received news in Löbau that the 1st Army Corps had reached Wartenburg. The Russian 6th Corps was in full retreat before the 17th Army Corps beyond Ortelsburg, and was again defeated south of Bischofsburg. Smaller

Division had attacked Waplitz in a fog and had been driven back. This division, which had suffered heavy casualties, was now holding positions west of Waplitz and anticipating a hostile counter-attack with the greatest anxiety. . . . If the enemy attacked the right wing of the 20th Army Corps in great force, a grave crisis might result, and, at the best, the battle would be prolonged. Now there was Rennenkampf's chance to intervene. But the enemy made no attack upon the 41st Infantry Division and the Niemen Army did not advance. . . . The enemy front appeared to be wavering. . . . We ran right into a momentary panic, created by Russian prisoners who were being taken to the rear in great numbers. This incident created an unfavorable impression, as

BATTLES OF TANNENBERG AND THE MAZURIAN LAKES

forces were sent in pursuit, while the main body of the 17th Army Corps bivouacked at and to the north of Mensguth, on the evening of the 27th. Nothing remained to be done on the 28th but to give orders for the 1st Army Corps to occupy Neidenburg. In the mean time the corps had already made a turning movement in that direction. The 20th Army Corps was to carry out the attack which had been fixed for the 27th, and more especially to push forward the 41st Infantry Division. Von der Goltz's Landwehr Division was to attack Hohenstein. The 1st Reserve Corps and the 17th Army Corps were moved up west, covered against attack from Ortelsburg, to positions on a line running from Allenstein to Passenheim. Early on the 28th we went to Frögenau and established ourselves in the open at the eastern end of the village. . . . Our first impressions were by no means favorable. Neidenburg had certainly been taken, but the 41st Infantry

the disorder spread far to the rear. . . . We were not at all clear as to how things stood with the individual units; but there was no doubt that the battle was won. Whether or not it would prove a real Cannae was uncertain. . . . The retreat of the Russians was to be cut off. During the night we learned further details. The Russian 13th Corps had advanced from Allenstein on Hohenstein, and had pressed the Landwehr severely. The 1st Reserve Corps had come down southwest of Allenstein—its further advance would close the ring round the Russian 13th Corps and thus conclude the whole operation, while the 1st and 17th Army Corps cut off the retreat of the other divisions. On the morning of the 29th I decided to go to Hohenstein to try to disentangle the congestion caused by the troops getting mixed up. Operations against Rennenkampf's army had to be initiated, whether he advanced or stood where he was. Still another incident occurred before we

were certain of victory. Early on the 29th we received a message by aeroplane that a hostile army corps was marching on Neidenburg from the south and was nearing the town. It was therefore coming up in the rear of the 1st Army Corps, which, with its front facing north, was fighting the retreating Russians. Almost at the same moment we were called up from Neidenburg and informed that hostile shrapnel was falling on the town. Then we were cut off. All available troops were set marching in the direction of Neidenburg, to support the 1st Army Corps in the engagement we anticipated. But General von François had saved himself already by his own energy, and the enemy displayed more hesitation than the situation justified. . . . East of Hohenstein our own columns were getting entangled with masses of Russian prisoners, and it was no easy task to restore order. . . . The battle was drawing to a conclusion. The 3d Reserve Division had broken through the enemy lines and reached Muschaken, east of Neidenburg. The Russians, retiring through the thick woods, tried to break through the German ring at several points. At Muschaken, in particular, very heavy fighting took place on the 30th, but without in any way influencing the issue of the battle. General Samsonow shot himself and was buried near Willenberg without being recognized. His widow, who was in Germany in connection with matters concerning prisoners of war, was able to trace his grave by a locket which had been taken for identification purposes from the body of the fallen general when he was buried. The Russian generals who were taken prisoner arrived at Osterode and reported to General von Hindenburg. . . . The widely circulated report that thousands of Russians were driven into the marshes and there perished is a myth; no marsh was to be found anywhere near."—General E. von Ludendorff, *Ludendorff's own story*, pp. 56-68.—"The Russian defence broke and before long the retirement degenerated into a rout. Hundreds of guns were abandoned in the mud which reached to the axle trees. . . Little more than one corps reached Ortelsburg, in full flight towards the frontier. In killed and wounded the Russians had suffered over 20,000 casualties, while between 80,000 and 90,000 prisoners are said to have fallen into German hands. The invasion of East Prussia had therefore failed. It had led to the hurried retreat of one column and had involved the other in overwhelming disaster. Nevertheless it would be idle to judge the Russian effort by the mere touchstone of victory or defeat. The invasion had come at a moment when the fortunes of the Allies were at the lowest ebb, and its initial success had exercised a profound influence on the general situation. The fact that it had taken place at all, had proved the unsoundness of the calculations of the German General Staff as to the speed with which Russia could mobilize. . . . After nearly a month's fighting the Russians had been forced to yield up the terrain they had won at the expense of some 100,000 casualties. But the sacrifice had not been in vain, for from the end of August large German reinforcements, earmarked for the Western Front, had been diverted to the east, and whole corps had apparently been withdrawn even from France and Belgium at the very moment when the great issue was about to be engaged on the Marne. . . . Hindenburg was acclaimed as the greatest soldiers of the day and saluted as the Arminius of the twentieth century."—F. E. Whitton, *Marne campaign*, pp. 110-112.

(d) Invasion of Galicia.—I. RUSSIAN OCCUPATION OF LEMBERG.—RETREAT OF RENNENKAMPF IN THE NORTH.—"Lemberg was of considerable importance to the Austrians, for besides being the administrative capital of Galicia it was also a strategic point, owing to its being situated at the junction of the railways leading to Cracow, Vienna, and Transylvania. Further, it was the advanced base of the Austrian IInd Army, and immense quantities of ammunition and supplies had in consequence accumulated in the place. Strictly speaking, Lemberg was not a fortress, but it was surrounded by semi-permanent works, though these were quite inadequate against modern artillery. On the 31st August the Russian 2nd and 3rd Armies on their fifty-mile front made a further step forward. The Austrian right wing was turned [by Brussilov] and almost destroyed, several thousand prisoners being made. On the other flank the right of the Russian 2nd Army [under Russky] swept round north of the city, and threatened the communication of the Austrian IInd Army, in spite of an advance by forced marches on the part of German troops operating in Western Poland. On the following day the Russians gained possession of the advanced works which lay some twelve miles from the city, the defenders flying in complete disorder, and a further success was secured by a force acting beyond their extreme left wing, Czernowitz, the chief town of the Bukovina, falling into Russian hands. The 3rd of September witnessed the retirement of the Austrians towards Przemysl, during which operation the Cossacks did such execution that the retirement degenerated into a rout, and the same day saw the entrance of the Russian troops into Lemberg. An immense quantity of supplies and ammunition fell into the victors' hands, and the total number of prisoners taken during the attacks of the town and in the retreat of the defenders has been estimated at 100,000. The Austrian Government now began feverishly to strengthen the defences at Vienna, and plans were made to transfer the administration to Prague or Innsbruck. . . . The Russian 2nd and 3rd Armies had before them the demoralized remainder of the Austrian IInd Army of General Auffenberg in Galicia. The bulk of this army was in position about Grodek, on the railway between Przemysl and Lemberg, but portion of it had been driven northwards to Rawaruska; there it united with the main body of the IIIrd Army which had hitherto been in second line. In Southern Poland General Dankl with his 1st Army had made successful progress towards the line Lublin-Cholm in spite of the resistance of the 1st Army of the Russians. To take the latter sector of this portion of the theatre of war first. At the moment of the fall of Lemberg the advance of General Dankl had reached its high-water mark, for on the 3rd September his line stretched from Opole on the left to the north-west of Krasnostav, whence it curved towards Zamosc and Hrubieszow. The fall of Lemberg of course materially altered the situation not only in Galicia but also in Southern Poland, and General Dankl was obviously in a position of some peril with two victorious Russian armies pressing on towards his base at Przemysl. Two courses lay open to him, one—the more obvious and commonplace—being to fall back at once and unite his army with that of General Auffenberg on the San, the other, and bolder, being to ease the situation in Galicia by a resolute continuance of the offensive and to attack the Russian 1st Army before it could be reinforced. General Dankl had just received con-

siderable reinforcements, for portion of the Austrian IIIrd Army of the Archduke Joseph Ferdinand had come into line upon his left, and German troops from Breslau had also been sent to him. This circumstance emboldened him to decide on continuing his offensive. Unfortunately for General Dankl, the Russian higher command had only been awaiting a favourable issue at Lemberg to reinforce the right wing in Southern Poland, and that city once taken, reinforcements were hurried to the 1st Army. Large bodies of troops had been concentrated at Radom, west of the Vistula, two military bridges had been thrown across that river to facilitate the rapid reinforcement of the Russian right wing, and the Russian railways had been working at high pressure in this region of the war. Consequently, when the Austrian 1st Army advanced to the attack on the 4th September it experienced a resistance greater than had been expected. The attack collapsed, although the centre of the Russian 1st Army had to give way slightly. This withdrawal, however, placed the Russian 1st Army in a more favourable situation for effecting an envelopment. After waiting a couple of days for the arrival of all his reinforcements, General Ivanov, who now commanded the 1st Army, on the 6th September retook with a counter-stroke which proved a complete success. The Austrian left, commanded by the Archduke Joseph, was expelled from its position between Opole and Turobin on the 9th and was driven south-west in disorderly retreat towards Sandomir. The position of General Dankl now became distinctly precarious, and though he held on stubbornly on the line Turobin-Tomasov he was forced off this on the 10th September and was driven across the frontier. His defeat had been accelerated by pressure on his right rear, for the Russian 2nd Army, leaving Lemberg, took Rawaruska in reverse, while the 3rd Army pinned the broken remnant of General Auffenberg's IIrd Army to Grodek. Severe fighting developed, and on the 12th September terminated in complete disaster for the Austrian arms. The portions of the Austrian IIrd and IIIrd Armies which were holding on to Rawaruska were attacked on three sides and gave way, leaving General Dankl completely in the air. The vanquished troops fled behind the San and took refuge under the guns of Przemysl. Nor did this complete the tale of Austrian misfortune. General Brusilov, the commander of the Russian 3rd Army, had split up his force into three columns, and it was his centre and right which had been operating against Grodek. His left wing seized Mikolaiev [Mikalajov] on the 4th September, taking forty guns, and within the next ten days occupied Stryj and Czernowitz, the capital of Bukowina. By the 12th September the Austrian armies had paid the penalty for incorrect conclusions and for faulty strategy. The Austrian General Staff had gambled on the slowness of the Russian mobilization and had advanced on a rather hazardous campaign, the danger of which had not been realized owing to the ease with which the 1st Army had advanced towards Lublin and Cholm. The strategy was open to criticism, for the 1st and IIrd Armies had been moving on divergent lines, with the result that the success tended to separate them still further and to make mutual support impossible. Meantime "after the crushing defeat at Tannenberg [in East Prussia], the fugitives of General Samsonov's southern column retired by Johannsburg and Lyck towards the frontier to seek shelter behind the fortresses of Ostrolenka, Lomzha, and Osowiec. Detaching the 1st

Corps to deal with the remainder of General Samsonov's army, General von Hindenburg moved the bulk of his forces by the Allenstein-Insterburg railway to deal with the northern column under General Rennenkampf. That commander, however, had received early news of the disaster at Tannenberg, and immediately renouncing all idea of laying siege to Königsberg, he retreated as rapidly as possible towards the Niemen. He had got clear of Interburg before the leading columns of General von Hindenburg were within striking distance, but on the former battlefield of Gumbinnen he was compelled to fight a rear-guard action with the left wing of the Germans. Successfully beating off the attack he continued his retirement towards the east, followed by the enemy who advanced towards the line Lyck-Wirballen. The exact chronology of the next few days is somewhat obscure, but, by the 15th, the German commander had possessed himself of the towns of Suwalki and Augustowo. It will be sufficient to record that by the 12th September . . . General Rennenkampf, avoiding disaster, had regained Russian territory and was in full retreat towards the Niemen." —F. E. Whitton, *Marne campaign*, pp. 107-112.

2. RUSSIAN VICTORY AT RAWA-RUSSKA.—HINDENBURG'S CAMPAIGN FOR RELIEF OF GALICIA.—AUSTRO-GERMAN DEFEAT.—NEW AUSTRO-GERMAN OFFENSIVE.—CAMPAIGN IN RUSSIAN POLAND.—The Austrian commander, General Dankl, evacuated Lemberg on September 3 and fell back on the Grodek position west of the town. On the same day General Ruskay entered Lemberg and appointed General Bobrinsky governor. "By this time General Ivanoff's concentration having been completed, he attacked General Dankl on the 6th, and after a six-day battle finally defeated him near Rawa Ruska, taking 100,000 prisoners and an immense quantity of war material. Both Austrian Armies then fell back behind the San, and the Russians invested Przemysl. By the 15th September the whole of Eastern Galicia was in Russian occupation and [Jaroslav was captured and Przemysl invested September 23], and Russian Armies were threatening Cracow both north and south of the Vistula. When the news of the Austrian defeat in Poland reached the Kaiser he ordered a large German Army of eighteen corps to concentrate on the line Thorn-Czestochowa-Cracow, with the intention of opposing the Russians, who had begun to move westwards across the Vistula and San rivers. German officers were meanwhile sent to Cracow to rally the beaten Austrian Army, which was to act on the right of the German Army, throw the Russians in Galicia back across the San river, and relieve Przemysl. By the first week in October an Austro-German Army, reported to be 1,000,000 strong, was concentrated on the above-mentioned front, under the command of General Hindenburg, whose headquarters were shifted from East Prussia to Czestochowa. The army advanced very rapidly through Poland and Galicia, the Germans moving in two columns, one north of the Pilitza river, the other south of it, the Austrian Army, under General Dankl, prolonging the line to the right of the Germans down to the Carpathian mountains. Warsaw was the objective of the northern German column, Ivangorod of the southern column, the rôle of the Austrians being to clear Galicia. Falling back according to traditional custom before the German advance, the Russians awaited the enemy behind the Vistula, and then attacked the advancing columns with great energy, defeating the northern column outside Warsaw on October

20th, and the southern column at Kozenice on October 27th. The Germans thereupon fell back on Kalisz and Czeszochowa, destroying the railways behind them, and delaying the Russian pursuit. When the German Army was disposed of, the Grand Duke Nicholas turned his attention to the Austrians, who held the line of the Vistula from Rozehof down to Sandomier, as well as the line of the San river down to the Carpathian mountains. The Austrian Army was badly defeated at Sandomier on November 5th, and retreated towards Cracow. This necessitated the retirement of the Austrians from the San river, the bulk of the troops retreating over the Carpathian passes, as their direct line of retreat through Galicia was intercepted by the Russians, who [had] . . . again invested Przemysl. Hindenburg meanwhile hastened back to Thorn, where he immediately set himself the task of organising a new army out of the beaten one, reinforced with all available troops taken out of the Oder and Vistula fortresses. . . . [He summoned General Mackensen to his aid from Danzig and forthwith] formulated another plan of campaign, by means of which he intended to turn the tables on his antagonist, and carry the war back to Poland. The German commander in East Prussia was first of all reinforced, and ordered to remain strictly on the defensive in the entrenched positions which he had taken up guarding the eastern approaches to the Masurian lakes. A large central army was ordered to concentrate at Thorn, partly composed of troops falling back from Poland, partly of new formations brought rapidly up to the rendezvous . . . The exact strength of this army is not known, but the *Army Messenger*, the official organ of the Russian War Office estimated it to be composed of twelve corps, which would give it an approximate strength of 500,000 men. This force was intended to move rapidly up the left bank of the Vistula, and by threatening Warsaw force the Russians to concentrate between the Vistula and the Warta, by this means taking pressure off the Silesian frontier. After placing General Mackensen in executive command of the Thorn Army, Hindenburg went down to Kalisz, and there with equal promptitude he collected another army, which was destined to operate against the left flank of the Russian Army opposing Mackensen's advance. The German commander holding the defensive position on the line Czeszochowa-Cracow, covering the approaches into Silesia meanwhile received similar orders to those given to the General on the frontier of East Prussia. He was under no circumstances to attempt an offensive movement, but was to hold on to his entrenched position with as few men as might be found necessary for the purpose. The Marshal, who had been appointed in November Generalissimo of both Austrian and German troops in the eastern theatre of war, then went on to Cracow, where in consultation with the Austro-Hungarian General Staff he organised a new offensive movement to be undertaken by Austro-Hungarian troops with the object of re-conquering Galicia, and safeguarding Cracow [the key to both Austria and Germany] from the attack with which it was being threatened by the Russians advancing up both banks of the upper Vistula. Hindenburg's plan of campaign covered the whole of the eastern theatre of war, and was so conceived as to neutralise the initial strategical advantage which the Poland salient conferred on Russia. The success of offensive operations on the big scale required by modern war conditions depends primarily on railway communications, and

these are as perfect in the eastern provinces of Prussia as they are imperfect in Poland. . . . There are two practically parallel strategical railways running all round Poland with branch lines leading from all the important junctions to the frontier. . . . North and west of the Vistula there is not a single lateral railway line in Poland connecting the main trunk lines which lead down to the German frontier. Admirable as the Russian organisation . . . proved to be, the movements of the Russian armies . . . [were] paralysed throughout the war by the inferiority of the Russian railway communications as compared with those of the Germans on the other side of the frontier. Though the Grand Duke [was] . . . manœuvring on interior, and his adversary on exterior, lines, there . . . [was] no occasion when his movements . . . [were] not forestalled by the German commander owing to the facilities he . . . possessed for the rapid concentration of troops at any given strategical point. . . . Mackensen opened the new campaign on the 10th November, deploying his army on a fifty-mile front between the Vistula and Warta rivers, and making use of both rivers for bringing up supplies of food and ammunition. Pushing the Russian advanced guards back, Mackensen reached the line Wlochowek-Kolo on the 13th, when the Russians, taken wholly by surprise, fell back behind Kutno. Mackensen then advanced to the line Plock-Leczycza-Uniejow, where a three days' battle took place, ending with the further retirement of the Russians . . . on the 18th. Then began a series of violently contested battles . . . without any positive decisions being obtained on either side. On the 20th, two German corps, including some battalions of the Prussian Guard, succeeded in breaking through the Russian line at Strykow, and reaching Koljuschki, an important railway junction on the Warsaw-Czeszochowa line. There they were pulled up by Russian reinforcements arriving from the East, and were driven south to Rzgow and Tushin. They were surrounded on three fronts by Russian troops, but owing to the non-arrival of a certain Russian General at the rendezvous fixed, they succeeded on the 23rd, but not till after they had suffered heavy loss, in cutting their way through to the north, and re-joining the main German Army at Strykow. Finding his further advance eastwards blocked, General Mackensen took up an entrenched position extending from Schadek through Zgierz to Ilayo, on the Vistula. The Russian right wing, which had meanwhile been clinging to the Vistula in the neighbourhood of Gombin, then fell back to the lower Bzura river in order to defend the approaches to Warsaw. At this time there were twelve German corps deployed between Schadek and the Vistula. The fighting during the operations . . . [was] very severe, and the Germans were much shaken by the enormous losses which they . . . suffered, and by the knowledge of their failure to reach Warsaw. By the end of November, Mackensen's position was very precarious, and unofficial news from Petrograd led many to think that his retreat was imminent. On the 1st December, however, Hindenburg's flank movement against the Russian left wing began to take effect, large bodies of Austro-German troops crossing the Warta river in the neighbourhood of Sieradz, and moving towards the line Zdunskawola-Lask. This was another surprise attack for the Russians, and the Grand Duke had to meet it by withdrawing troops from the Silesian frontier till reinforcements could be hurried up from the Bug river. The movement came just in time to save Mackensen

from retreating, and gave that General a fresh lease of life in Poland. Finding the flank attack was developing on a considerable scale, the Grand Duke Nicholas decided to withdraw his left wing from its position west of Lodz in order to preserve his communications with Warsaw. Lodz was evacuated by the Russians on the 5th December, and occupied by the Germans on the 6th. On this date the Russian line of defence extended from the Warta river to the Vistula through Novoradomsk-Petrokof-Lowicz-Ilayo. About this time another movement of German troops was made from the direction of Soldau and Mlawa with the intention of reaching the Narew river, and getting in rear of Warsaw. . . . On the 6th December, 'this force reached the line Ctechanow-Przasnysz, but it never got nearer than this to the Narew river, for it was attacked on the following day by the Russian Army, which had been watching this part of the frontier, and was driven back into East Prussia.' . . . Meanwhile, during the second week in December, General Mackensen, with his eye always on Warsaw, began to concentrate effort against the Russian positions west of the lower Bzura river, a specially vigorous offensive being directed against Sochaczew with a view to securing the passage over the river at that point. The German attack met with no appreciable success. The Russians gave up some ground west of the Bzura, but held on to all the passages over that river from Lowicz to Ilayo."—A. M. Murray, *Fortnightly history of the war*, pp. 41-42, 81-84.

3. RUSSIAN ADVANCE IN WESTERN GALICIA.—AUSTRIAN PASSAGE OF THE CARPATHIANS, AND RETREAT.—ADVANCE ON CRACOW.—STORMING OF CARPATHIAN PASSES.—WAR IN NORTHERN POLAND.—FIGHTING IN GALICIA.—SITUATION IN JANUARY, 1915.—"While events were progressing as described in Poland, the Russian Army of Galicia, under General Ivanoff, after detaching a force to invest the fortress of Przemysl, was steadily pushing its way through Western Galicia, and securing possession of the passes into Hungary over the Carpathian mountains. On his way west, General Ivanoff met with continuous opposition from the Austrians, who disputed the passages over each of the tributary rivers, the Wistoka and the Dunajec, which, rising in the Carpathians, flow north across the [former] province of Galicia into the Vistula. General Ivanoff succeeded, however, in driving the Austrians before his advance, and during his three weeks' progress through the province he captured as many as 50,000 prisoners of war. The Russian advanced guard reached Wieliczka, some five miles south of Cracow, on the 1st December, while the main Russian Army was deployed on both banks of the Vistula along the line Proszowice-Niepolowice-Bochnia. The investment of Cracow seemed imminent. The situation, however, again became modified, owing to a new offensive movement of the Austrians—another of Hindenburg's surprises—who crossed the Carpathians in considerable force at the beginning of the second week in December, capturing Neu Sandec on the 12th, and concentrating on a line east and west of the Dunajec valley, thus compelling the Russians to fall back from Cracow to oppose this new attempt to re-conquer Galicia. At this time there were said to be nearly 200,000 Austrian troops north of the Carpathians, but the Grand Duke met this concentration with a counter concentration of Russian troops, who brought the Austrian advance to a standstill, and prevented the enemy from getting possession of the important strategical railway which connects Cracow with Przemysl. During the next month

continuous attempts were made by General Mackensen to cross the Bzura and Rawka rivers at various points, but they only resulted in failure. Attacks in mass formation were first of all tried, and when these tactics failed resort was had to sapping with the same result. . . . Up to the middle of January 1915 not a single German had succeeded in reaching the east bank of either of the two rivers mentioned above, and Warsaw seemed as far off as ever. Lower down in South Poland the Russians continued to hold the line of the Nida against repeated attacks by General Dankl's troops, who remained pinned to their positions on the right bank. The Russians at this time held a nearly continuous line of entrenched positions ex-

GENERAL IVANOV

tending across the centre of Poland along a 150-mile front from the lower Vistula west of Warsaw, to the upper, east of Cracow. They on their side made no attempt to advance westwards, being content to stand on the defensive, while the Germans wasted their strength in their efforts to get to Warsaw. All this time continuous fighting took place in Galicia, resulting in the Austro-Hungarian Army which had come across the Carpathian Mountains being driven back into Hungary with heavy loss of men and *matériel*. . . . East of the Dunajec river Galicia was now clear of the enemy. The Dukla Pass was occupied by Russian troops on December 27th, and the Uszok Pass on January 4th. Two considerable sorties from Przemysl were repulsed, and the investing cordon was drawn closer round the fortress. Austro-German troops still held the line of the Dunajec from Tarnow, which was in Russian possession, down to Neu

Sandec, which was held by the enemy. Hindenburg fully realised the value of the Dunajec position, which was the last line of defence against a Russian Army advancing on Cracow, and he knew that if Cracow was lost Silesia would be lost too. Having cleared Galicia, the Russians then started to clear the Bukovina with the object of securing their left strategical flank, and getting possession of the passes into Transylvania. Sturmetz and Radautz were occupied on December 31st, Suczawa on January 2nd, Gura Humora on the 4th, and Kimpolung on the 6th. . . . On the 16th the Russian advanced guards stormed the Kirlibaba pass, and were then in command of the two main routes into Hungary, the one leading to Maramaros-Sziget on the Visso river, and the other to Dees on the Szamos river. These movements opened up the prospect of a new theatre of war, with a new battle-front extending from the Bukovina to the Servian frontier, Roumanian intervention being at that time expected to take place in the early spring. On his right strategical flank the Grand Duke Nicholas showed the same offensive activity as on his left. A new Russian movement was in process of development north of the lower Vistula in Poland. . . . The whole of the right bank of the lower Vistula from Warsaw down to its junction with the Skrawa was in Russian possession. The commander of the Russian Army, advancing in this direction, if he was supplied with bridging material, might at any point throw a force on to the left bank of the river, and intercept Mackensen's communication with Thorn. The situation in the middle of January was highly interesting, and presented an abundance of possibilities which might at any moment have become realities. The general position in the eastern theatre of war at this period of the campaign may be summed up by saying that in the centre of their 500-mile battle-line, extending from East Prussia to the Bukovina, the Russians were standing on the defensive, while on both strategical flanks they were developing offensive movements."—A. M. Murray, *Fortnightly history of the war*, pp. 84-86.

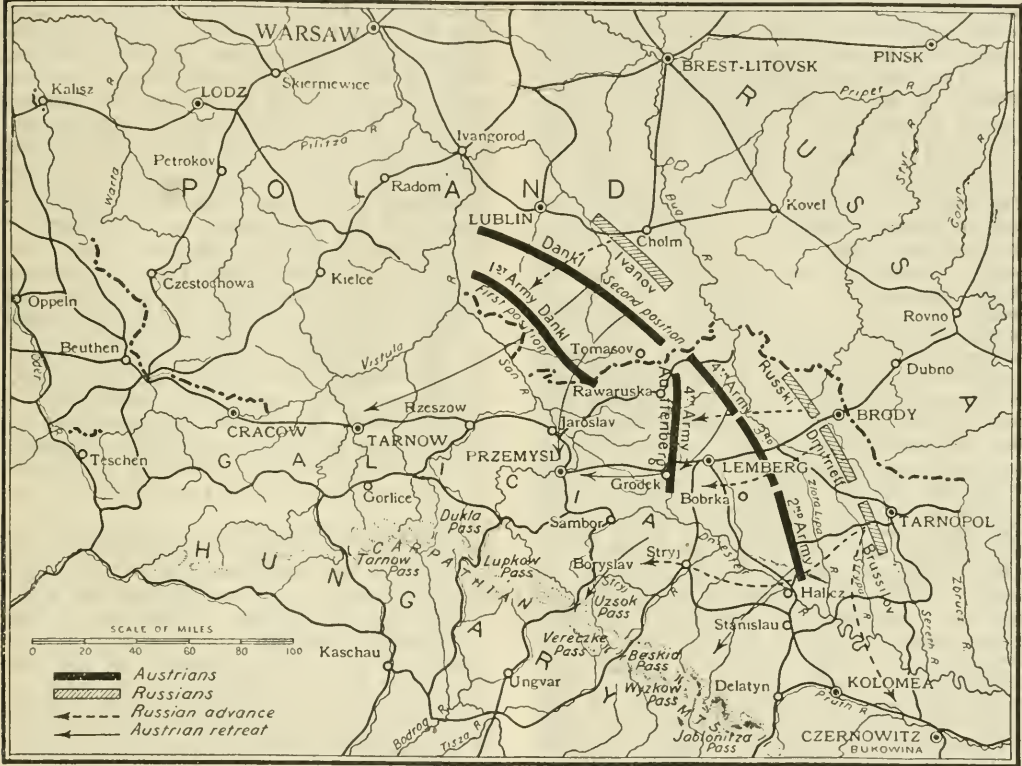

4. INVESTITURE OF PRZEMYSL.—Przemysl was not only a strongly fortified place but a beautiful city as well, surrounded with flower gardens and orchards. In September, 1914, when the Russians made their whirlwind advance, there was, according to official reports from Vienna, an army of 80,000 based on that city. With a large part of this army, General Boveerig was reported to have moved to the line of the Wisloka to give aid to Dankl's hard-pushed troops as they made their stand on that river. It was understood that many of von Auffenberg's soldiers, as they fell back, were employed as a garrison for the fortress. At the time of its investment it was said to contain about 100,000 men, with its defense in charge of General Kusmanek. Afterward the strength of the garrison was increased. The isolation of the fortress of Przemysl was completed by the fall of Jaroslav and the occupation of Radymno, a town on the main Cracow railway on the left bank of the San, about eight miles east of Jaroslav and fifteen miles north of the fortress. And so it remained isolated, save for a short period when the tide of invasion was driven back. During this time it was again in communication with Cracow. The Russians took it as a matter of course that the fortress would soon fall to them. Its fate was predicted in the newspapers of the Allies; but, in preparation for defense, stores of all kinds had been hurried into it, and plans had been laid for stout resistance. It had a determined commander

in General Kusmanek. The first shots were fired on Sept. 18, 1914. The city was surrounded on September 20, and an unbroken bombardment with many desperate sorties ensued until October 2, when the Russians sent out a white flag to the city and demanded its surrender. General Kusmanek's reply was that he would not discuss surrender until he had exhausted all powers of resistance. The attack reached its height on Oct. 5, 1914. The Russians stormed again and again, hills of corpses outside the works testifying to furious attacks they made. They succeeded in carrying temporarily one of the outer works, eleven battalions having succeeded in approaching these defenses undetected, because of damage to an Austrian searchlight. Suddenly they stormed the walls. The garrison retreated to the casemates, from which they defended themselves with rifles and machine guns. The Russians forced their way to the casemates and a hand-to-hand struggle with bayonets, gun butts, and hand-grenades followed. When Austrian reinforcements, hastily telephoned for, arrived, the attacking party was already retiring, leaving their dead and wounded in the casemates and on the wall. Rockets and light shells illuminated their retreat. Food supplies within the fortress were constantly growing less, and desperate sorties were made by the garrison in an effort to break through the besieging line during November and December, 1914. The Russian position at this time was so critical that the relief of the fortress was hourly expected.—Based on *Austrian official report*.

5. SUMMARY OF RUSSIAN OPERATIONS IN GALICIA.—The operations against Austria involved the movement of more than a million Russian troops against about a million of Austrians and Hungarians. "At the commencement of the war the invasion began from three different directions, and the Russian troops were formed into three great groups, each composing many army corps, the total aggregating twenty. These movements started from three bases. Brussilov [moved] from the extreme east, with his base on Odessa. . . . Simultaneously Ruskys's army started with its innumerable army corps and auxiliary troops, having Kiev for its base. . . . The last great group of army corps, commanded by Ewertz, had its base on Brest-Litowsk, and moved south via Lublin to drive out the opposing Austrians in their front, and take the whole in the flank. This, in a very broad and general way, was the movement planned and the general scheme of strategy, which, it may be said, was carried out to the letter. The greatest weakness of Russia at the start of the hostilities was in her lack of strategic lines of railroad. . . . Had Russia had more railheads at the frontier, she would no doubt have swept Eastern Galicia before the Austrians could have concentrated in any great force. But the lack of such facilities enabled the enemy to prepare defences hurriedly at many points, and to contest the Russian advance at every step. . . . The army of Brussilov was the most distant from strategic centre aimed at (Lemberg), and hence had the farthest to go, and perhaps in the early days the hardest fighting. The Austrians, with their superior railway facilities, were able to prepare a preliminary line of resistance to this army, along the bluffs and high ground between the forks of the stream known on local maps as Zlota Lipa, and here they made their first stand, a battle which in any other war would have taken columns to describe, but which in this struggle falls into the class of a mere skirmish. From this point the Austrians fell back

on a second line of defence, and one which was, in fact, an extremely strong one. This was the hills and ridges east of the river called Gnila Lipa. By the time this position was reached by the Russians, Brussilov's left was in touch with Russky's right that had crossed the boundary around Radziwitow. The position now defended by the Austrians extended from the town of Halicz on the Dniester river, which was the Russian southern flank, in a practically unbroken line through and north of Krasne. The battle which was engaged over this extended line lasted for periods, in different parts of the position, of eight to ten days in the south, to nearly two weeks on the Krasne position itself. The Austrian line was a very strong one and was defended with an intelligence

big Austrian stand on their main line of defences. Heavy masses of them fled via Halicz, blowing up a fine steel bridge in their retreat. But the Russians, in spite of their days of incessant marching and heavy fighting, were not to be denied, and, throwing a pontoon bridge over the river, followed up their victory. This movement threatened to envelop the whole Austrian right, as a glance at the map will show, and rendered the defence still going on around Krasne no longer tenable. Orders were therefore hurriedly given for the abandonment of that hard-fought field. It must be understood however, in justice to the Austrians, that, even after thirteen days of resisting the Russians, their line in this part of the field was not broken, nor even severely shaken; and their retirement was

GALICIA AND THE CARPATHIAN REGION

and vigour which for days on end promised to thwart utterly the Russian efforts to break through. Trenches by the mile, with bombproofs, barbed-wire entanglements, and all the other devices of modern field fortifications had been erected to block the advance of the invading troops. Modern field guns, machine guns and field howitzers were all turned against the Russians, and their losses were undoubtedly very heavy. Some of the details of the general line were contested for eight and nine days, being now taken by one side and now by the other, with each assault and counter-assault leaving the piled-up heaps of the dead and wounded in its wake. All this time Ewert's numerous army corps were slowly pressing down from their base on Brest Litowsk, driving back heavy forces of the Austrians. But these columns were not determining factors in the first big fight before Lemberg. It was the collapse of the Austrian defence towards the south of the line that broke down the first

due to the strategical exigencies created by Brussilov's enveloping movement on the south. The Austrians then evacuated their base at Lwow (Lemberg), and without offering any further resistance in the city, retired to their newly-created and even stronger position extending through Grodek and north to Rawa Ruska. Here, for the first time, all the Russian armies were in touch, as all the Austrians were also. Ewerts and his numerous corps had forced back his antagonists to the line between Rawa Ruska and Bitgoraj. This then presented an enormous front, with all the armies of both sides in touch with each other, and all engaged practically at the same time. It is difficult to form more than the merest approximate estimate of numbers engaged, but it is safe to put the total on both sides as above 2,500,000. . . . [This battle] was without doubt the hardest fought struggle, and on the most gigantic scale that the war had seen up to the time when it took place. Ewerts on

the north would not be denied his advance, and his repeated assaults on the Austrians resulted in bending in their left day by day until their line was bent into a right angle, with Rawa Ruska on the north-eastern corner. Here for eight days a battle raged which the annals of history certainly cannot up to this time duplicate, for the ferocity and bitterness of attack, and the stubbornness and courage of the defence. The Austrians, let it be said, were in an extremely strong position round this quaint little town, and were prepared to defend themselves to the last ditch, which in fact they did to the letter. At the extreme corner of the defence . . . they fought for six days with an endurance which was almost incredible. Here there are no less than eight lines of defence in little more than a mile. Each of these was held to the last minute, and some of them changed hands several times before the Russians came finally over them. Each trench tells its own story of defence. . . . This, then, was the first great phase of the invasion of Galicia. The Russians at the conclusion of this part of the campaign held Galicia up to the river San and Yaroslav, and had swept everything in this zone before them with the exception of the fortified position of Przemyśl. . . . The Russians, after six weeks of campaigning, were left in absolute control of the whole of Galicia, up to a line running from the Carpathians on the south, through Przemyśl and along the river San to the important town of Yaroslav. If one goes back over this campaign and studies out the movements from the start of the war, one cannot but be enormously impressed with the remarkable achievement accomplished by the Russian Army in a comparatively short campaign. Starting from widely separated bases, with meagre railway facilities, they manœuvred three giant armies, each composed of many corps and all working in general union, and achieved, without one effective setback, a series of victories of enormous magnitude. They did this in the face of an enemy whom history will show to have been by no means weak. . . . After the terrible fighting that had gone on for weeks, there followed a period of recuperation and refilling of the wastage of both armies. The Russians engaged the forts of Przemyśl and took the town of Sambor, and rested for a little. In the meantime the Austrians, encouraged by their German allies, were making frantic efforts to pull themselves together. The fragments of the army that had escaped through the passes of the Carpathians were taken by rail to Cracow, while the army that went that way was reinforced and stiffened up, and the whole reorganized and whipped into shape for further operations. . . . The Austrians began . . . [the second phase of the Galician war] by a terrific attack on Sambor, which was held by the Russians. Their impetus was so great that for several days it seemed possible that the Russians might be dislodged permanently from their hard-won position on their left flank. Indeed at Lemberg, where the guns could plainly be heard, there were constant rumours of Austrian victories. But their offensive ultimately failed, and the tide of battle gradually ebbed from round Sambor, and the interest shifted to a point which is between Sambor and Przemyśl. Here the Austrians concentrated a number of army corps, less than four, and made a heroic effort to break the Russian line, with the idea of taking Lemberg, which was a practicable scheme, entirely dependent on the success of their attack. For a day or so their efforts seemed to be showing results, and a number of the hospitals in Lemberg were ordered

to be readiness for an instant removal. But this also failed, and also the Sambor movement, with a dreadful loss to the Austrians in dead and wounded, besides more than 5,000 prisoners taken by the Russians."—S. Washburn, *Field notes from the Russian front*, pp. 111-116, 118-119, 121-122.

III. BALKANS

(a) Serbia.—Beginning of the war.—"Austria had not been more successful in her operations in Serbia. Her two first line corps had been withdrawn from Bosnia and sent north, and she attempted to conquer the country with second line troops. For some weeks there was much desultory and unrelated fighting, such as Balkan wars have often shown. The most serious engagements were along the line of the lower Save, more especially the struggle for Shabatz and the railway which connected with Losnitza on the Drina. On 12th August Shabatz fell, but on the 16th the Serbians checked the Austrian advance in that neighborhood. On the same day a strong Austrian force from Bosnia, under General Potiorek, crossed the Drina and took the towns of Lesnitza and Losnitza, its object being to co-operate with the Shabatz contingent and pen the Serbians in the triangle of land between the Save and Drina and Jadar. But on the 19th the Serbian Crown Prince attacked the Bosnian army on both banks of the Jadar, and after four days' hard fighting completely defeated it. The fire of their Creusot guns began what the rifle and the bayonet completed, and the troops, which had learned their trade at Kumanovo, Uskub, and Monastir, drove the Austrians with great loss across the Drina. By the 24th August Shabatz was evacuated, and the Serbians could claim with truth that they had cleared their country of the enemy."—J. Buchan, *History of the Great War*, v. 1, pp. 194-195.

1. INVASION OF SERBIA.—AUSTRIAN DEFEAT.—"The first plan for the Teutonic conquest of Serbia was based on the natural disposition of the Austrian forces north of the Danube and the Save, and in Bosnia-Herzegovina . . . and also by the emplacement of the Serb capital, within easy and immediate reach of the aggressors. All this left them the choice of alternatives in the mode of progression, as they could execute the main thrust or the covering move on either side. By attacking Belgrade and pushing on from there; or by crossing the Drina under cover of a demonstration on the Danube, the Austrians were in a position to force strategic developments on their adversaries. . . . The plan . . . to outflank the Serbian forces from the west was quite above his [General Potiorek's] powers. . . . [The Serbian commander-in-chief], General Putnik, was no doubt led by the demonstration on the Danube. The Austrian bombardment of Belgrade started as early as July 30. . . . The early concentration of the Austrians opposite Shabatz, to the north of the Save, was a powerful one. . . . The first plan of concentration of the Serbian forces was carried out on the assumption that the Austrians would strike on, and from the Danube. Belgrade in consequence was almost completely evacuated and groups of Serbian divisions which formed the three armies under General Putnik were concentrated between the rivers Kolubara and Morava facing north. . . . When, however, the real direction of the Austrian thrust was known, General Putnik . . . executed a rapid change of front, occupying the very heights [which line the Jadar valley on both sides] from

where the Austrians intended to strike. . . . When the invading hordes from Bosnia issued across the frontier into the Jadar valley they found . . . the Serbs . . . in possession of the passes, and Putnik's main body was within reach of the key positions. The Austrians were gradually involved in a set of disconnected actions which spread confusion amongst them, and which resulted in their discomfiture and complete rout. Their rear columns which were still on the march when the action began got hopelessly entangled with the advanced forces, and supports in all parts were only brought up piecemeal to the scene of action. Such were the effects of Putnik's masterly counter-manceuvre . . . which, it must be noted, enabled him to score a first-rate victory with worn out troops against a superior army of fresher and better equipped units; for the Austrians were no less than five complete army corps, and had executed no forced marches. Not five days after the opening operations, the western Austrian divisions were dispersed, and sent flying in all directions (Aug. 20) and, soon after, the northern force lost its pivot at Shabatz and retreated across the Save, the victory yielding to the Serbs over 4,000 prisoners, some 70 cannon, and an immense amount of material and munitions, the total casualties of the foe being computed at 30,000, whilst the victors only lost, all told, 18,000 men. After the battle [August 25] the Serbians, . . . anxious to put an end to the bombardment of the capital which had been proceeding almost without intermission since July 30, performed a deconcentration of their forces and gathered them up along the Save, which they crossed . . . September 5-6 to . . . Obrenavatz. . . . The movement . . . carried the divisions of the Serbian 1st Army (General Boyovitch) almost as far, as Semlin and beyond Mitrovitz."—C. de Souza, *Germany in defeat*, pp. 6-II, 15, 17.

2. SECOND AUSTRIAN ATTACK.—SERBIAN RETREAT.—On September 10-11 when the Serbians were on the point of entering Semlin fresh Austrian forces crossed the Drina once again. "The Austrians, in better order this time and also in larger numbers than before, reached their battle positions in fairly good time; they could not occupy them all, for the Serbs were swift again and succeeded in getting hold of the key to the region, the wooded and hilly district between Krupani and the Drina. This and their employment of siege tactics on rapidly organised ground, enabled them to put up a successful fight for near six weeks. But the conditions which had made them victorious in the former instance were now non-existent; nor were their hastily-erected fortifications solid enough to withstand the battering of the foe. . . . Besides this, a new menace was developing for the Serbs in the north, strong hostile columns having forced the crossings of the Save between Obrenavatz and Belgrade. In such conditions General Putnik's decision to abandon his positions and to retreat was, therefore, inevitable. . . . The elated Austrians pursued him closely and endeavored . . . to envelop his forces. These forces reached their original line of concentration between the Kolubara and the Morava on November 12, the Austrian pressure in that line starting November 15. The Serbian positions were strong. In spite of the fact that the 1st Army on the left was driven back by the foe near Uzitsa and that thus the Serbian communications were threatened in the south, General Putnik would nevertheless have held his ground with success on the Lazarevatz-Valievo-Uzitsa front. The objection against this, however, was

that in her isolated situation Serbia could little afford to establish a siege front inside her territory—and then there was the possibility of a strategic success such as General Putnik had thought of and planned. The Lazarevatz-Valievo line, therefore, was only held temporarily by restricted portions of the Serbian forces, whilst behind this effective screen thus cunningly spread out, the bulk of the troops continued their retrograde movement to positions further in the rear. When, on November 28th, the latter were securely occupied, the rear elements who were engaged in delaying the enemy, retired, and fell back in good order on their supports. The Austrians were thus left in undisputed possession of the more advanced line, which gave them the impression that they had won a victory, and that they had nothing more to do now than to pursue a defeated and demoralised adversary. Their western columns joined the northern ones which advanced from Belgrade on December 2nd, and with no further misgivings as to their ultimate prospects they pushed confidently southwards with the intention of crossing the Lower Morava, and of entering Kragujevatz in a day or two."—*Ibid.*, pp. 17-20.

3. SECOND AUSTRIAN DEFEAT.—"As General Putnik had rightly surmised, they soon found themselves in a similar situation to that which had brought disaster upon them in the first encounter on the Jadar. Their front was too widely extended and they were not prepared to meet with resolute opposition. Ere they became aware of the true state of affairs, they were fiercely attacked by the Serbs, who were in a position now to deal at ease with their surprised adversary. The Austrian columns once more became entangled, the generals had no time to prepare and combine movements, nor to organise the defence of the ground they had just occupied. All this had been foreseen by Marshal Putnik. On the Suvabor heights, the 1st Serbian Army, now under . . . General Mischitch, broke the Austrian right; then the 3rd Army, under General Sturm, drove in the enemy's centre near Vlaska. Again, like at Shabatz, the northern hostile forces tried to retrieve the day by intense and hurried action on the Serbian right, but the success of the 1st Serbian Army in the south was decisive; it sealed the fate of the foe. The credit of the victory . . . [was] given to General Mischitch, who was created a marshal. . . . On December 10 the . . . Austrians were in headlong flight along the whole front, and on December 15 they were driven in confusion across the Drina and the Save, leaving in the hands of the victors 40,000 prisoners, 133 field-guns, 71 machine guns . . . [while their slain was] computed at 60,000."—*Ibid.*, pp. 21-22.—See also SERBIA: 1914-1918.

(b) Greece.—Attitude toward war.—The second Balkan "war had proved . . . that Greece, Serbia and Montenegro, acting in concert, formed a formidable Power, and it was evident that if the Serbo-Greek alliance was by effluxion of time allowed to solidify, a heavy bar would be placed, not merely in the way of the expansion of the Central Empires to the south-east, but in the way of that maritime control of the Levant to which they aspired. On the other hand, since if Greece could be detached from this combination the balance would be entirely altered, it was of manifest importance that the Hellenic kingdom should become subservient to German-Austrian aims."—E. Danc, *British campaigns in the Nearer East*, v. 1, ch. 2.—At a council of ministers held at Athens, Aug. 3, 1914, in the royal palace under the presidency of the king, His Majesty agreed on all points

as to the attitude of Greece in the Austro-Serbian conflict, which attitude would be one of absolute neutrality as long as Bulgaria and Turkey remained neutral. General Dousmanis, chief-of-staff of the army stated that the army was in excellent condition and that all preparations for a mobilization had been taken.—Based on *Greek official statement*.—"In September, 1914, Venizelos informed the Entente that if Turkey joined the Central Powers Greece would assist them in the war against the Turks on condition that she was guaranteed against a Bulgarian attack. Great Britain responded by promising that the Turkish fleet should not be permitted to leave the Dardanelles; and the Entente permitted a Greek occupation of North Epirus without prejudice to its future. Constantine, however, telegraphed to the Kaiser that he would not attack Germany's allies unless they attacked him. Early in December the Entente offered South Albania, with the exception of Valona, if Greece would at once join their ranks. Venizelos demanded a guarantee from Roumania that Bulgaria would not attack, but Roumania refused, and Venizelos was forced to remain neutral."—G. P. Gooch, *History of modern Europe, 1878-1920*, p. 581.—See also GREECE: 1914.

(c) Bulgaria.—Neutrality.—When Austria-Hungary declared war on July 28, 1914, Bulgaria announced its decision to maintain strict neutrality. On October 15 of the same year at the opening of the Bulgarian Parliament the Prime Minister Radoslavov read a speech by Tsar Ferdinand in which it was stated that "no matter what political combinations are formed around us the Government is resolved to maintain absolute neutrality until the end." In conclusion he said, "If we are ever led by force of circumstances to enter some arrangement whereby Bulgaria will obtain something more in the way of territory, this will come from the will of the entire Bulgarian Concert." Later in the year a strong movement began in favor of a more aggressive policy. "Bulgaria," said the Bulgarian General Savov in December, "will keep neutral as long as she can. We must insist on the correction of the mistakes made by the Treaty of Bucharest. We are resolved in case this should prove necessary, to take back by force of arms the territory that belongs to us and that has been snatched from us. The Bulgarian Army is ready and will do its duty up to the end when the interests of the country demand it."—Based on *Bulgarian official statement*.—See also BULGARIA: 1914.

(d) Rumania.—Policy in 1914.—Death of King Carol.—In August, 1914, the Council of the Crown of Rumania decided on maintaining neutrality in the war. During the month there were public manifestations in favor of the Entente powers, especially France. General Pilot and other military officers who fought on the side of France in 1870 carried on a violent campaign against Austria. The government endeavored to suppress such demonstrations and regiments were kept in readiness in parks and public buildings prepared to take severe measures against anti-Austrian outbreaks. King Carol, who belonged to a branch of the Hohenzollern family, was bound to the Emperor Francis Joseph by an old friendship. He had not ceased to feel coldly towards Russia, having never admitted that the diminution of his kingdom after Plevna was the right thing. Rumanian aspirations could be summed up in the word Transylvania, which comprised all the Austro-Hungarian territories occupied by Rumanians, with the understanding that Transylvania was the

most important as regards Rumanian popularity. Actually the Rumanian claims on the Austro-Hungarian territories were the following: Transylvania—57,250 square kilometers, 2,850,000 inhabitants, of whom 1,750,000 are Rumanians. The Banat—28,510 square kilometers area, and 1,730,000 inhabitants, of whom 700,000 are Rumanians. Chrishana—Area, 41,338 square kilometers, and 2,920,000 inhabitants, of whom 1,100,000 are Rumanians. Mamoresh—Area, 9,270 square kilometers, and 360,000 inhabitants, of whom 120,000 are Rumanians. Bukovina—Area, 10,471 square kilometers, and 900,000 inhabitants, of whom 300,000 are Rumanians. Total area, 147,280 square kilometers, and 8,760,000 inhabitants, of whom 3,970,000 are Rumanian claims on Bessarabia must be mentioned, tants of trans-Carpathian Rumania, nearly 4,000,000 are Rumanians, 2,200,000 Hungarians, 1,000,000 Serbo-Croatians, 730,000 Germans, and so on. Rumanian claims on Bessarabia must be mentioned, as they involved hostility to Russia. The efforts made by Germany and Austria-Hungary to win over Rumania, or at least to induce her to refrain from prosecuting her claims to Transylvania were pursued with indefatigable energy and perseverance. The same methods were employed in Bucharest as at Sofia, on an even larger scale. King Carol died in the first week of October, 1914, and was succeeded to the throne by his nephew Ferdinand, like his predecessors a Hohenzollern and a Roman Catholic, and numbering among his near relatives the king of the Belgians and his namesake Tsar Ferdinand of Bulgaria. His Majesty is first cousin to King George and the late tsar of Russia and the Princess Nicholas of Greece. The Entente Powers were encouraged to hope that under the new ruler Rumania would at the opportune moment join sides with them. In the Rumanian Parliament in December, Independent deputies voiced their admiration for Serbia's and Belgium's brave struggle against overwhelming odds and demonstrated that Rumania should enter in the war on the side of the Entente Powers. The passage through Rumania of guns and ammunition from Germany to Turkey, and the taking over of medical supplies by Germany, intended for the Rumanian army were sternly reprehended.—Based on *Rumanian official statement*.—See also RUMANIA: 1914-1918.

(e) Albania.—Revolution.—Internal conditions.—In July, 1914, a revolution broke out in Albania and at the end of August the insurgents threatened Durazzo. Then Prince William of Wied who had accepted the crown of Albania decided to leave the country. In his address to the Albanians he stated that his absence would only be temporary, but everyone was convinced that he would never come back. The Prince, Princess Sophie, Tourkhan Pasha (the Albanian premier) and members of the court on September 3 embarked on the Italian yacht *Misurata* and proceeded to Venice. The International Commission took charge of the government. The Albanian Senate elected Essad Pasha president and expressed to him the congratulations for the confidence the nation had in him. (See also ALBANIA: 1908-1914.) But peace did not smile on Albania and soon her troubles increased. By the last week of October 1914 there were six Italian warships at Avlona and a sanitary station was established for the relief of Albanian refugees driven from Epirus by Greek bands. Italy carried out the decision of the London conference as she was the only neutral power among the signatories to the Albanian settlement. By the end of October 1914 Albania was under six different régimes. Scutari and

its neighborhood was governed by a local commission composed of Moslems and Christians. Avlona was also administered by a commission. The Mirdites formed a separate state under Prenk Bib Doda. The Malissors remain isolated under their patriarchal institutions. The southern districts were appropriated by the Greek invaders. Durazzo and the central regions obeyed Essad Pasha, who enjoyed the title of prime minister and was recognized by the International Commission. That shadowy body, now reduced to four members, personated the ghost of the European concert. Except in the south the country was remarkably tranquil under its indigenous institutions. After he had left Albania Prince William of Wied received a telegram from the king of Italy assuring him of support in the future. The prospects of the prince as sovereign of Albania were seriously compromised by his inclusion in the German General Staff. The Italian government announced that her purpose was solely humanitarian in landing marines to protect the sanitary mission at Avlona. The British and French governments notified Italy that there was a strong movement among young Turks of Smyrna who planned a raid on Albania with the intention of reannexing the country to Turkey. Italy occupied Saseno, one of the Ionian Isles which completely dominates Avlona, so that it could never be made a military base. On Jan. 3, 1915, insurgents calling themselves "The Musliman Committee" addressed a letter to the government at Durazzo demanding that the ministers of Serbia and France should be consigned to them. An attack on the city began that day. After the Italian ships had fired a few cannon shots the insurgents' musket fire ceased. On January 4, the Italian colony and legations of Italy, France and Serbia embarked on Italian ships.

IV. TURKEY

(a) Why Turkey entered the war.—"Many people entirely misunderstood the significance of the declaration of war by Turkey against Russia, France, and England. Why these despairing gasps of the dying? they ask. . . . For several years Turkey has been in extreme peril. It was condemned to death by the Triple Entente some time ago, and the prediction of the British Prime Minister in a . . . public speech that this war would end the existence of Turkey as an independent power was only the publication of the sentence of death long since decided upon. . . . But for the protection of Germany the political existence of Turkey would be already a thing of the past. . . . The entrance of Turkey into the war has long been foreseen, and its vast significance has long been clear to students. Some trained observers go much further: Sir Harry Johnstone, a traveler, statesman, and diplomat of repute, has declared: 'Constantinople is really the core of the war.' In diplomatic circles in Vienna . . . there was a general agreement that the loss of Salonika, which the Turk was forced to hand over to Greece at the end of the Balkan wars, was a vital blow to the Triple Alliance, and its recovery would be of sufficient importance to justify the risk of a European war to accomplish it. . . . At the beginning of the twentieth century keen observers saw clearly that the old order of things, which had preserved the Turk so long in the face of many enemies, had passed away beyond a peradventure and

had left the Turk in great peril. Ever since the decay of the strength of the Ottoman Empire the Turk had been hardly pressed in Europe by Russia and by Austria, both of whom coveted sections of his dominions, and both of whom would have been glad to obtain Constantinople, the gateway between Europe and Asia. Of the two, Russia was more insistent because her interests made the control of the exit from the Black Sea imperative for her. The Turk, however, until very recently, was himself strong enough to throw considerable obstacles in the face of the invader; he was probably in 1900, more efficient than in 1850; but his enemies had grown by leaps and bounds. He was confronted by a new Austria and a new Russia. What was worse, the Balkan nations, who had long been subject peoples, ill-organized, poverty stricken, had grown with the help of the Turk's enemies into sturdy, self-reliant, independent communities with good-sized armies and something approaching national wealth. The long years of subjection had left behind a consuming hatred of the Turk in their breasts; as Christians, they hated the Turk as the Infidel; and they promised themselves some day the control of Constantinople in the interest of Christianity. The neighbors of the Turk had grown formidable and would be able to make short work of him unless help arrived. There was none to be had from his past friends; so much was only too clear. . . . The old order had changed: the Turk's friends were now his enemies bent on his destruction. Yet there had never been a time when the Sick Man was more desperately determined to get well, when life had seemed to him so entirely desirable. The passing of the old order caused no grief among the Turks—outside of those few henchmen who had long drawn a fat revenue from foreign nations. The Turks had become fired with ambition, with democratic conceptions, highly inconsistent with the state of things which the old order had so long sanctioned. The new democrats declared indignantly that Turkey had been for years conducted for the benefit of foreign nations; it should be conducted in the future solely in the interests of Turkey. They were roused to enthusiasm by the past history of the Ottoman empire and burned to reconquer its old provinces, to establish a closer relationship between the provinces which remained. An imperialistic movement, a nationalistic revival, if you will, was preached in Turkey by ardent enthusiasts whose words fell on willing ears. . . . And now appeared an ally, unfortunately a Christian, in fact a peculiarly devout Christian, but one able to save the Turk from his foes, glad to foster his ambitions. The plans of Germany for her future involved the creation of a great confederation of states stretching from the North Sea to the Persian Gulf. . . . Of this Confederation, Turkey would be an integral and essential part. Adrianople, the key to the Balkans; Salonika, key to the Ægean; Constantinople, controlling the outlet to the Black Sea and the crossing to Asia Minor; the land approaches of the Tigris and Euphrates valleys—all these the Turk had, all these an alliance with him would give Germany. The stronger the Turkish State, the better organized, the larger its army and fleet, the greater its resources, the more useful it would be to Germany and the more thoroughly it would insure the success of Pan-Germanism. It had been for the interests of England and France to keep Turkey weak. . . . Germany, on the contrary, wished an active agent to pursue an aggressive policy in her favor. If the Sick Man could get out of bed only

with assistance, Germany was anxious to help him; and the Turk vastly preferred an alliance with a Power which was eager to make him well to one with Powers almost afraid to keep him alive. The Turks wished a capable government, a good army, a State deserving of independence, and were overjoyed to find Germany ready and desirous to foster this ambition."—R. G. Usher, *Why Turkey entered the war* (*World's Work*, Jan., 1915, pp. 125-130).

1. PAN-ISLAM.—EFFECT OF STRATEGICAL POSITION OF CONSTANTINOPLE.—"Germany was equally ready to have the Turk gratify his imperialist and religious ambitions. Pan-Islam would destroy the political control of England and France in northern Africa and in Egypt. It might even overturn the British Empire in India. This would be the greatest possible service any one could render Germany, and it might be one which Germany could accomplish in no other way. If the Triple Entente was the greatest foe of Pan-Islamism, Pan-Germanism should be its greatest friend. Where ambition and interest coincide, coöperation is simple. In complete accord, therefore, the Germans and the Turks undertook the reorganization of Turkey. . . . Turkey, they saw, was not a nation in the European sense of the word; it was not even a single race. . . . Far from being an economic unit with a single interest vital to all its inhabitants, it produced nothing essential to the outside world which its inhabitants could depend upon exchanging for European manufactured goods. . . . Normally and naturally the Turk should be a middleman, a distributor rather than a producer. . . . Constantinople itself, controlling the narrow passage which formed the exit of the Black Sea, was in a position to foster or hinder the entire trade of southern Russia with the rest of the world. . . . In this important strategic position, economically valuable to others but not to its inhabitants, had been collected a peculiar and extraordinary conglomeration of races, creeds, and interests; few of which had much in common, and all of which cherished for each other antipathies and jealousies almost as old as history. The Turk has governed this vast territory and this conglomeration of races and religions by a peculiarly weak political fabric which seemed in the nineteenth century to combine in one structure all the disadvantages of centralization, and all those of decentralization. . . . A series of so-called statesmen had taken European bribes in Constantinople; numerous incompetent and venal officials had robbed the populace with the help of the soldiers in the provinces, and this Government plus the army was Turkey. Turkey had, indeed, been sick, but that particular kind of illness, the Turks thought, could be cured; and the Germans agreed with them."—*Ibid.*, pp. 130-132.—See also PAN-ISLAMISM.

2. REORGANIZATION OF TURKEY: EFFECT ON POWERS.—"The reorganization of Turkey was duly observed by the Triple Entente and its purpose thoroughly well understood. Their opposition to it was prompt, and Italy attempted by the Tripolitan War to rob the Turk of one of his distant provinces. Having seized Tripoli with the consent of the Triple Entente, Italy then changed sides, returned to the Triple Alliance and took Tripoli with her. The result was a prompt reversal of the strategic situation in the Eastern Mediterranean and placed England and France in such danger that they saw the moment had probably come when it would be positively to their advantage to gratify Russia's ambition and allow her to seize Constantinople. The Tripolitan War suspended the sword of Damocles over the Turk's head. The

Balkan War threatened for a time to annihilate him. The prompt aid of Austria and Germany as stout representatives in the international conclave, the mobilization of the Austrian army, the knowledge that Germany was ready to mobilize, saved the Turk. [But] . . . Macedonia . . . was lost entirely, and much of Thrace, with Salonika, the key of the Ægean, was also lost and fell into the hands of the Turk's enemy, Greece. The reorganized state was now undeniably in great peril; and the probability of an outbreak of a European war in the near future, the knowledge that the Turk must himself defend Constantinople and the Bagdad Railway, urged the Germans and the Turks to great efforts in reorganizing the army and providing equipment. The fleet also received attention; two battleships were building in England and another was purchased from one of the South American states. There would this time be no escape. The death sentence had been passed upon the Turk, and if he waited for his enemies to gather and descend upon him defense would be problematical. . . . England, on the outbreak of the war, seized the two battleships building in England, and, therefore, weakened the Turkish strength in the Black Sea. The deficiency was supplied by sending two German cruisers to Constantinople and selling them to the Turkish Government. [The Germans judged that the] time had come when the Turk must openly join in the war, send his troops to the frontier in order to hold the invader as far as possible from Constantinople. Indeed, action at this time might allow the Turk to accomplish results of the utmost importance."—*Ibid.*, pp. 133-135.—"Enver Pasha, Minister of War, the strong man of Turkey, had long resolved to side with the Central Powers in the event of a world war, and the majority of his countrymen shared his ambitions. British sympathies with the malcontent Christian races were as unconcealed as Russia's age-long desire to occupy Constantinople, and promises to guarantee the integrity of the empire were regarded as worthless. The Entente, it was believed, stood for partition, the Central Powers at most for economic exploitation, and the lesser evil was naturally preferred. On August 1 [1914] Germany and Turkey signed a treaty, in which the *casus fœderis* would arise when Russia entered the war. The condition was fulfilled on the same afternoon, and Austria adhered to the pact. Turkey was promised military support, and her territorial integrity was guaranteed against Russia. The decision remained a secret to most of the Turkish Ministers, and neutrality was maintained till Turkey was ready to strike. [See also TURKEY: 1914: Turkey at outbreak of World War.] . . . The entry of Turkey into the war was the first resounding diplomatic success scored by either side, and its results were far-reaching. The scope of the struggle was immensely enlarged, and both the dangers and the prizes were increased. As rulers of tens of millions of Mohammedans who looked to the Sultan of Turkey as their Caliph, the British Empire and France were confronted with the problem of Pan-Islamic solidarity and discontent. Great Britain had now to defend the Eastern Mediterranean, the Suez Canal, Egypt and the Persian Gulf, and was forced to rely in far greater measure on the aid of India, who had already sent troops to the western front. The formula 'Berlin-Bagdad' seemed to assume concrete shape. . . . Russia, unlike Great Britain, hailed the belligerence of Turkey with delight, since it provided the opportunity of realizing her secular ambition. Victory over the Central Powers could

give her little beyond an unwelcome increase of Polish malcontents, while victory over Turkey would turn the Black Sea into a Russian lake, substitute the Cross for the Crescent on the dome of St. Sophia, and secure the coveted control of the Straits. On November 14 Sir George Buchanan informed Sazonoff that Russia might have Constantinople and the Straits, and the Foreign Minister's face lit up with joy. On March 4, 1915, Sazonoff handed to the French and British Ambassadors a Memorandum claiming the following territories as the result of a victorious war—Constantinople, the western coast of the Bosphorus, the Marmora and the Dardanelles; Thrace to the Enos-Midia line; the coast of Asia Minor between the Bosphorus and the river Sakaria; the islands in the Sea of Marmora, with Imbros and Tenedos. This arrangement assigned to Russia the whole of Turkey in Europe except a patch around Adrianople and Kirk-Kilisse, reserved as a bait for Bulgaria; the Asiatic shores of the Bosphorus; and about eighty miles of the Black Sea coast of Asia Minor. The French and British Governments expressed their readiness to agree to Russian wishes, provided that their own claims, both in the Ottoman Empire and elsewhere, should be satisfied. Constantinople was to be recognized as a free port for the transit of goods to Russia, with a free passage through the Straits for merchant ships; British and French rights in Asiatic Turkey, to be defined later, were to be recognized, the Sacred Places were to be protected and Arabia to be placed under an independent Mohammedan ruler; and the neutral zone in Persia was to be added to the British sphere. While accepting these demands in principle, Russia made a few reservations. It should be made clear, she suggested, whether the Sacred Places were to remain under Turkish sovereignty or whether independent States were to be created. The caliphate should be separated from the Ottoman dynasty; freedom of pilgrimage should be guaranteed; and the inclusion of the larger part of the neutral zone of Persia in the English sphere was conceded. On March 12 [1915] accordingly Great Britain and France announced their assent to the annexation of Constantinople and the Straits. 'A sincere recognition of mutual interests,' telegraphed Sazonoff in delight to Benckendorff, 'will secure for ever firm friendship between Russia and Great Britain.' The wheel had indeed come full circle when the old antagonists of the Crimean war were leagued together to drive the Turks, bag and baggage, across the Bosphorus."—G. P. Gooch, *History of modern Europe, 1878-1919*, pp. 567-570.

(b) Turkey and the war.—"The appearance of a German General, Liman von Sanders, in Constantinople shortly after the second Balkan War in 1913, if it did not make the Great War inevitable, drove the Turkish Alliance in case of war inevitably to the German side. He succeeded to more than the position of General Colmar von der Goltz, appointed to reorganize the Turkish army in 1882. Accompanied by a German staff, the Kaiser's delegate began at once to act as a kind of Inspector-General of the Turkish forces, and when war broke out they fell naturally under his control or command. The Turkish Government appeared to hesitate nearly three months before definitely adopting a side. The uneasy Sultan, decrepit with forty years of palatial imprisonment under a brother who, upon those terms only, had borne his existence near the throne, still retained the Turk's traditional respect for England and so did his Grand Vizier, Said Halim. So

did a large number of his subjects. With tact and a reasonable expenditure of financial persuasion the ancient sympathy might have been revived. . . . Most disastrously for our cause, the tact and financial persuasion were all on the other side. The Allies, it is true, gave the Porte 'definite assurances that, if Turkey remained neutral her independence and integrity would be respected during the war and in the terms of peace.' Unfortunately for our peace, Turkey had discovered that at the Powers' perjuries Time laughs. . . . The Allies had refused loans which Berlin hastened to advance, and the very day before war was declared had seized two dreadnought battleships, *Sultan Osman* and *Reshadie*, then building for Turkish service in British dockyards. Upon these two battleships the Turks had set high, perhaps exaggerated hopes, . . . for they regarded them as insurance against further Greek aggression among the islands of the Asiatic coast. Coming on the top of the Egyptian occupation, the philanthropic interference with sovereign atrocity, the Russian alliance, and the refusal of loans, their seizure overthrew the shaken credit of England's honesty, and one might almost say that for a couple of Dreadnoughts we lost Constantinople and the Straits. With lightning rapidity, Germany seized the advantage of our blunder. At the declaration of war, the *Goeben*, . . . accompanied by the fast light cruiser *Breslau*, [was stationed off Algeria]. . . . After bombarding two Algerian towns, they coaled at Messina, and, escaping thence with melodramatic success, eluded the Allied Mediterranean command, and reached Constantinople through the Dardanelles. . . . When Sir Louis Mallet and the other Allied Ambassadors demanded their dismantlement, the Kaiser, with constrained but calculated charity, nominally sold or presented them to Turkey as a gift, crews, guns, and all."—H. W. Nevins, *Dardanelles campaign*, pp. 6-8.

(c) Decision to join Central Powers.—"On the receipt of the news of the outbreak of hostilities [in August, 1914] a Council of Ministers was called together at Constantinople. As Secretary of War, Enver Pasha proposed that Turkey should declare forthwith on the side of Germany and Austria. He found himself in a minority. Next he urged the necessity of a partial mobilization of reserves. That was agreed to. The Sultan personally was opposed to hostilities and the majority of the Divan shared his opinion. Negotiations were accordingly set on foot for concluding with the Ambassadors of the Entente Powers a formal agreement of neutrality. . . . Tidings came of sweeping German successes in France. . . . Enver at every meeting of the Council showed himself more urgent and aggressive. The Council, however, was already divided when *Goeben* and *Breslau* steamed up the Dardanelles and dropped anchor before Constantinople. . . . [The] spectacle of two German warships lying off the Golden Horn at once stimulated the Turkish war party and depressed the opposition. . . . In the circumstances, Enver Pasha and the German Government realised that they must force the pace. Either on secret instructions or their own initiative they [*the Goeben* and *Breslau*] attacked Odessa and the Russian Black Sea port of Theodosia. On learning this the Turkish Government was profuse in its apologies. A deputation of Ministers waited on the French Ambassador with the offer of an apology to Russia, and of an indemnity to defray damages. The reply of the Entente Powers was to demand that all German naval and military instructors in the Turkish service must leave Con-

stantinople. The demand was met by evasion. Time was sought to be gained by a counter-proposal that the matter should be referred to the mediation of Italy and the United States. This, considered a subterfuge, was rejected and the original demand insisted upon. The Divan was now in a difficulty. To accede meant war with Germany and Austria; to refuse, war with the Entente. After a prolonged and stormy meeting the Council, swayed by Enver and Talaat, decided by a majority for refusal. Four of the Ministers, Djavid Bey, the most influential advocate of a peace policy, Mahmud Pasha, Oskam Effendi, and Boustan Effendi, forthwith resigned. The Ambassadors of the Entente Powers applied for their passports, and on November 1 they left Constantinople. . . . To involve Turkey in the War meant a menace at once to the Anglo-Persian oil-fields at the head of the Persian Gulf, and to the oil fields of the Caucasus. It meant, of course, also the closing of the Dardanelles, and the cutting of the shortest route to Russia to and from the West, seeing that the Baltic route was now barred. As an inducement, Germany could offer two apparently rich prizes—Egypt and the oil-fields of the Caucasus, once also in Turkish hands and now lost, and the source, like Egypt, of tempting wealth. Since, further, notwithstanding the Balkan War, there was a conviction among many Turks that, with the aid of German military science, these dazzling prospects would infallibly be realised, it is hardly surprising that, stimulated by cupidity, dreams of a great revival of Turkish power swept away considerations of prudence. . . . The advantages immediately derived by Germany from the diversion were first the closing of the Black Sea route; secondly, the obligation thrown upon Russia of dispatching a strong force into the Caucasus, and, thirdly, the necessity imposed upon Great Britain of taking steps for the effectual defence of Egypt. To that extent Germany added to the embarrassments of her antagonists. And she obtained the command of a force of first-class fighting men which might be raised to a strength of 750,000. In the fifteen divisions of the Turkish regular army filled up to establishment strength there were 300,000 of all arms. Steps were taken at once to embody a further ten divisions. Later the number of divisions was raised to fifty, but on a reduced footing, giving a nominal total of three-quarters of a million men. At no time, however, in the course of the War was a force of that strength simultaneously in the field. . . . It is doubtful if the figure at any time exceeded half a million.”—E. Dane, *British campaigns in the Nearer East*, v. 1, ch. 2.—See also TURKEY: 1914: Turkey at outbreak of World War.

(d) Turkish version of Black sea engagement.—The official Turkish version of the events that led to the severance of diplomatic relations between Turkey and the Entente was published Oct. 31, 1914. “While on the 27th of October a small part of the Turkish fleet was manœuvring in the Black Sea, the Russian fleet, which at first confined its activities to following and hindering every one of our movements, finally, on the 29th, unexpectedly began hostilities by attacking the Ottoman fleet. During the naval battle which ensued the Turkish fleet, with the help of the Almighty, sank the mine-layer Pruth, . . . inflicted severe damage on one of the Russian torpedo boats, and captured a collier. A torpedo from the Turkish torpedo boat Gairat-i-Millet sank the Russian destroyer Koubanietz, and another from the Turkish torpedo boat Mouavenet-i-Millet inflicted serious dam-

age on a Russian coastguard ship. Three officers and seventy-two sailors, rescued by our men and belonging to the crews of the damaged and sunken vessels of the Russian fleet, have been made prisoners. The Ottoman imperial fleet, glory be given to the Almighty, escaped injury, and the battle is progressing favorably for us. The Imperial Government will no doubt protest most energetically against this hostile action of the Russian fleet against a small part of our fleet. Information received from our fleet now in the Black Sea is as follows: From accounts of Russian sailors taken prisoners and from the presence of a mine-layer among the Russian fleet, evidence is gathered that the Russian fleet intended closing the entrance to the Bosphorus with mines and destroying entirely the imperial Ottoman fleet after having split it in two. Our fleet, believing that it had to face an unexpected attack, and supposing that the Russians had begun hostilities without a formal declaration of war, pursued the scattered Russian fleet, bombarded the port of Sebastopol, destroyed in the city of Novorosiysk fifty petroleum depots, fourteen military transports, some granaries, and the wireless telegraph station. In addition to the above, our fleet sunk in Odessa a Russian cruiser and damaged severely another. . . . Five other steamers full of cargoes lying in the same port were seriously damaged. A steamship belonging to the Russian volunteer fleet was also sunk, and five petroleum depots were destroyed. In Odessa and Sebastopol, the Russians from the shore opened fire against our fleet. The officers and crews of the mine-layer Pruth were subjected to a rigid examination. Eight or ten days ago the Pruth, lying in the roadstead of Sebastopol, received a cargo of mines and was put under the command of officers who for a number of years past had been training on board the Russian depot ship in Constantinople and therefore had become familiar with the ins and outs of the Bosphorus. As soon as it became known that a small part of the Turkish fleet went out to the Black Sea, the Russian fleet sailed from Sebastopol, leaving only an adequate squadron for the protection of the city, and on Oct. 27 put to sea, taking a southerly direction with the rest of its forces. On the next day the mine-layer Pruth left Sebastopol and steamed southward. The Russian fleet, acting in different ways, intended to fill with mines the entrance of the Bosphorus, attack the weak squadron of the Ottoman fleet, at that time on the high seas, and cause the destruction of the rest of the Turkish fleet, which, being left in the Bosphorus, would rush to the assistance of the light flotilla, and, encountering the mines, would be destroyed. Our warships manœuvring on the high seas met the mine-layer Pruth as well as the torpedo boats accompanying her, and thus took place the events already known from previous communications. . . . This successful action on the part of our squadron, which only by chance came to be on the high seas at the time of the naval battle, is itself one of the utmost importance for us, as it assures the future of our fleet.” These events were followed on October 30 by Russia’s declaration of war, and on November 5 by the British and French declaration of a state of war with Turkey. The British declaration was accompanied by an order in council formally annexing the island of Cyprus.

(e) Turkish official note.—“The embassy of Turkey communicates the official note issued by the Turkish Government in reply to the circular addressed by Sir Edward Grey to the powers. This

reply, which bears the date of the 14th of November, says:

'England complains that Turkey, without any preliminary notice, bought two warships from Germany. It should be borne in mind, however, that before war was declared, the English Government ordered the seizure of two dreadnoughts that were being built for Turkey in British yards, and that one of these dreadnoughts, the "Sultan Osman," was seized half an hour before the appointed time when the Turkish flag was to have been raised over the ship; and that finally no indemnity was paid for these confiscations. It is natural, therefore, that Turkey, finding itself deprived of the two warships that were considered indispensable for the defense of the Empire, hastened to remedy the loss by acquiring the two ships offered in a friendly spirit by the German government. England complains of the closing of the Dardanelles. But the responsibility for this act falls on the British Government, as will appear from the following reasons, which determined the Turkish Government to take the final decision: In spite of the neutrality of Turkey, England, under the pretext that German officers were serving on Turkish ships, declared officially that Turkish war vessels would be considered as hostile craft, and would be attacked by the British fleet anchored at the entrance of the Straits. In view of this hostile declaration Turkey found itself compelled to close the Dardanelles in order to ensure the safety of the capital. And as to the claims of England, it is evident that the presence of German officers on the Turkish warships was a question of internal politics and should not, therefore, have given rise to any protest on the part of a foreign power.' The note goes on to say that England, though asked to intervene in behalf of Turkey during the Balkan war, did everything that was in its power to bring about the downfall of the Turkish Empire. And when Adrianople was recaptured by the Turkish Army, the British Prime Minister did not hesitate to threaten Turkey with collective punishment on the part of the great Powers if the city were not evacuated by the Turkish forces. The note continues as follows: 'The designs of the British are not limited to the countries of Europe; they extend to the Gulf of Persia. England has carried out its plan of impairing the sovereign rights of Turkey and of opening up a way of access into Arabia, for a long time coveted by the English. Faithful to its policy of hostility, England has ever opposed the attempts at reforms in Turkey. It exerted all its influence to prevent the Powers from furnishing expert technical help to the Turkish Government. The Kaiser alone, disregarding the intrigues of Great Britain, authorized S. E. Liman von Sanders, Pasha, to reorganize the Turkish Army; that army which is today challenging the British forces.' After having recalled the Franco-British convention of 1904 which 'passed a sentence of death on Morocco and on Egypt,' and the agreement with Russia in reference to Persia, the note concludes: 'England for more than a century has been striving to destroy the freedom of the Moslem so as to open up their countries to the greedy exploitation of the British merchants. The English Government, pursuing its program of hatred against the Moslem states, has succeeded in giving to its policy a religious color which ensures to it the support and the adhesion of the English people, puritanic and fanatical. Let us be grateful to God who has given us the opportunity of vic-

toriously defending the welfare of Islam against its three ruthless enemies, England, Russia, and France.'—Tr. from the *Corriere della Sera* (Rome), Nov. 16, 1914.

(f) **Attempt to foment a "Holy War."**—Shortly after Turkey's declaration of war the Sultan issued a Fetva, or proclamation announcing a "Holy War" (Arab, Djihad or Jihad). All Mussulmans capable of bearing arms, and even Mussulman women were called upon to fight against the sultan's enemies against whom he had declared war. "The so-called 'Holy War,' if it had succeeded, would have been one of the greatest crimes against human civilisation that even Germany has on her conscience, remembering as we do her recent ruthless 'frightfulness' at sea, and her attempt to set Mexico and the Japanese against the land of most modern civilisation and of greatest liberty. A successful 'Djihad' spreading to all the lands of Islam would have set back by years all that civilisation so patiently and so painfully won. The Holy War would have been a case of letting the wildest fanaticism loose against the armies of law and order and civilisation. . . . But the attempt against colonial civilisation did not succeed. The 'Djihad,' proclaimed as it was by the Turanian pseudo-Chaliph . . . was doomed to failure from the very start from its obvious artificiality. It was a miserable farce or rather a tragi-comedy, the ending of which was the defection of the Arabian Caliphate."—H. Stuermer, *Two war years in Constantinople* (tr by E. Allen), pp. 127-128.

(g) **Turkish army.**—At the beginning of the war against the Entente, Turkey is believed to have mobilized fifty-two divisions of 15,000 men. The number constituting a division greatly varies. All Turks capable of bearing arms can be called to the colors. Since 1908 Christians and Jews have been conscripted but many escape fighting by paying a fine. Those actually enrolled do menial work and non-combatant duties. "Turkey's military strength depends wholly on the Moslem population. Before the war liability to service extended over twenty-five years. About 100,000 young Moslems reach the age of twenty every year, 70,000 of whom were taken for the conscription. Service in the Nizam, or active army, was for three years, after which the conscript passed into the Ihtiat or Reserve, or active army, for six years. Then he was transferred to the 1st Class Redif for nine years, and finally passed into the Mustafiz, or Landsturm, for the remainder of his obligatory period of military service; but in Asia service in the Mustafiz only lasted for two years. Young men not accepted for the colours after a few weeks' drill were placed in the 2nd Class Redif, and remained with it for eighteen years, after which they were transferred to the Mustafiz. Until the war broke out the Mustafiz register was irregularly kept, and no Mustafiz men were mobilised for the Balkan War of 1912. For some months before the outbreak of the World War . . . German officers had been occupied in revising the mobilisation registers, and the following estimate of strength, as worked out by them, may be taken as approximately correct—

Nizam and Ihtiat	
Troops	380,000
1st Class Redif	270,000
2nd Class Redif	360,000
Mustafiz	90,000
<hr/>	
Total	1,100,000

... Large additions ... were made to these numbers by calling up all Mustafiz men, and enrolling the classes of 1916, 1917, 1918. On the 1st June, 1916, Turkey cannot have had less than 600,000 men in the field, with an equal number of men training at the depots."—A. M. Murray, *Fortnightly history of the war*, pp. 9-10.

(h) Egypt.—British protectorate.—Turkish advance through Sinai.—"From the outbreak of the war, the head of the intrigue against British authority was the Khedive, Abbas Hilmi. He had been in regular correspondence with Constantinople and Berlin, and it seemingly was not doubted either by the Germans or by the Turks that his influence would render the so-called National movement formidable. A plot had been set on foot for undermining the fidelity of the Egyptian army, and assurances given that on the first appearance of a Turkish force on the frontier the Egyptian troops might be depended upon to rise against the British occupation. [See also EGYPT: 1914: World War.] In November, 1914, on the declaration of war with Turkey, Abbas fled to Italy, then neutral. Later, he made his way to Vienna, where he was received with every outward mark of respect, and from Vienna travelled through Rumania to Constantinople. In Egypt, however, it speedily became apparent that thirty-eight years of British administration had wrought a profound change. Abbas was deposed, the country declared a British protectorate, the Prince Hussein Kamel, second and favourite son of Ismail Pasha, was raised to the throne with the title of Sultan. . . . Without sea-power, a Turkish attack on Egypt must be carried out across Sinai, a hundred and more miles of stony waterless desert, divided from an equally arid mass of mountains on the south, by a tract of waterless sand. The region is rainless. Yet it was across this tract that the Germans had persuaded the Turks that their military science would enable them without command of the coast to transport a modern army with all the machinery of modern war. In part the feat was to be facilitated by the laying down of a light railway. Sober-minded men might well have had their misgivings, and for that reason probably Djemal Pasha had been picked out for the Damascus command. More than any other of the Young Turk party he was noted for his Anglophobia. . . . The preparations had been in train before war was declared, and the force that set out, early in November, consisted of the 8th Corps, part of the 4th, a body of skirmishers who had been employed during the Italian War in Tripoli, and were inured to desert fighting, and as a vanguard some 2,000 Bedouin irregulars. . . . The British had a small force at El Arish on the coast, but that post had been withdrawn, and the only troops east of the canal were a battalion of Gurkhas, and the Bikanir Camel Corps at Katiyeh, the western end of the El Arish route. Advancing without opposition to El Arish and finding that place evacuated, the enemy reconnoitred the track to the west, and on November 21 his irregulars appeared before Katiyeh and engaged in a skirmish with the Camel Corps. Nothing more was seen of him until January 28, [1915] when there was another attack or demonstration at Katiyeh, driven off with loss by the Gurkhas. This attack was a ruse. In the interval the expedition, leaving part of the 8th Corps in garrison, had been making its way south from there along the Wady-el-Arish, a stony valley extending inland from the coast to the sandy tract of the interior. From

that point, by following the Pilgrims' Route from Mecca, the Suez Canal may be reached near Toussoum, where the general flatness on the eastern side of the canal is broken by sand dunes."—*British official report.*

(i) Mesopotamia.—British operations.—In "September, 1914, Sir Edmund Barrow, military secretary at the India Office, had drawn up a memorandum urging the occupation of Basra [Mesopotamia] on the three grounds that it would tend to safeguard Egypt, to impress the Arabs and to protect the Anglo-Persian Oil Installation. Upon that recommendation the 6th Division out of the troops intended for service in Europe was reserved for an expedition to the Persian Gulf. For many years the British authorities in India had had political relations with the semi-independent Arab sheiks who ruled the territories at the head of the Gulf or adjoining its western shores, and Sir Percy Cox, selected to accompany the expedition as political officer, received instructions to get into touch with the Sheiks of Koweit, Murrannah, and Najd [Nejd]. In view of the call for prompt action the Poona brigade, part of the 6th Division, in the middle of October embarked under the command of Brigadier-General W. S. Delamain, as an advance force. It was to occupy Abadan, the island in the Shatt-el-Arab on which were situated the Anglo-Persian Oil Company's refineries. Consisting of the 2nd Dorsets, the 20th Punjab Infantry, the 10th (Wellesley) Rifles, the 117th Mahrattas and two batteries of light guns, the advance force reached Bahrein, at the head of the Gulf, on October 23. The first operation was to capture the Turkish fort of Fao, at the mouth of the Shatt-el-Arab. Following a bombardment by the gunboat *Odin*, the garrison of the fort were overpowered. Having secured this post, General Delamain sailed with his flotilla up the estuary, and disembarking his troops at Saniyeh, on the Turkish shore opposite Abadan, proceeded, on November 7, to form an entrenched camp. . . . News of the British landing must have reached the Turks at Basra immediately on their arrival. No time was lost, therefore, in pushing down to Saniyeh a strong force. . . . On November 11 the reconnaissance came within a short day's march of the British camp. The Mahrattas and Punjabis were sent out to deal with it. In the skirmish the Turks were defeated. . . . Reinforcements were sent from Basra, and proceeded to entrench at Sahain, four miles north of Saniyeh, thus cutting the route to Basra by land. Two days later, however, on November 13, Lieut.-General Sir A. A. Barrett sailed up the Shatt-el-Arab from India and reached Saniyeh with the remaining troops of the 6th Division—the Ahmednagar Brigade, and the Belgaum Brigade. The first (Brigadier-General D. H. Dobbie) was formed of the 1st Oxford L.I., and the 103rd and 119th Mahrattas; the second (Brigadier-General C. I. Fry) of the 2nd Norfolks, the 110th Mahrattas, the 7th Rajputs and the 114th Rajputanas. With the force were the 48th Pioneers, the 3rd Sappers and Miners, and the 33rd Cavalry. As soon as practicable after the disembarkation the Turks at Sahain were (November 15) attacked by the Poona brigade and dislodged. But on the 17th word was brought in that the main Turkish force from Basra was advancing. A general British attack was accordingly decided upon, and the whole force moved out. At Sahil, nine miles north of the British camp, the Turkish army was discovered posted with its left on the estuary,

and its right, where its artillery was chiefly in position, covered by groves of date palm. In front was a bare and level plain. As it seemed advisable to throw the weight of the British attack towards the enemy's left, where our gunboats were able to assist by enfilading the hostile trenches, while holding his right, and thus to turn him off the river, and by forcing him at the same time off the Basra route imperil his retreat, the British infantry had to advance in open order across this exposed tract. They carried out the manœuvre, however, with dash and coolness, and this intrepidity so impressed the Turks that they broke before the British could close. The Turkish casualties chiefly suffered in the pursuit, and were reckoned at 1,500 men. Those of the British force were 353, but the killed only numbered 38. Not only was the road to Basra cleared by this action: the Turks had been disorganised. To follow up the blow, part of the British force was embarked on two river steamers, and preceded by the gunboats made for Basra by water. The rest of the troops meanwhile pressed the retreating enemy by land. Some distance below Basra an attempt had been made to block the fairway by sinking three steamers across it. A battery of Turkish guns posted to cover the barrier was rapidly put out of action and some hours' work sufficed to blow up the obstruction. On November 22, that having been done, the flotilla and advanced troops pushed on at full speed. They reached Basra early on the same day. Rumour had affirmed that the Turks had evacuated the place, and the report was found to be true. . . . Part of the Turkish forces having retired upon Kurna, Lieut.-Colonel Frazer was on December 3 sent up the estuary with a detachment of the Norfolks and Indian troops, accompanied by three gunboats, two armed launches, and an armed yacht. Going on ahead while Frazer put his men ashore four miles below Kurna, on the western bank of the Tigris, the gunboats found the enemy strongly posted at Mezera, on the east bank, where Turkish batteries covered the navigable channel. In this part of its course, though the Tigris is 300 yards wide, it is on the whole shallow. . . . On approaching Kurna, Lieut.-Colonel Frazer soon learned that the place was held in a strength quite beyond his small force to confront. He accordingly withdrew and sent for reinforcements. These, . . . under the command of General Fry, arrived on December 7. An attack upon Mezera was then resolved upon, and the Turks were driven out. The capture of Mezera enabled the British, if they chose, to cross the river six miles above Kurna, and the plan of crossing at that point was adopted. Though it was a dangerous service, men of the Sappers and Miners Corps gallantly swam the stream, carrying a line attached to a hempen cable which was then hauled across, and with a flat-bottomed dhow which had been towed up, formed a ferry. In the meanwhile, the Turks in Kurna had sat tight, evidently uncertain as to the direction of the main attack, and probably thinking the crossing of the river higher up a ruse. Since the town is close to the point where the Tigris and Euphrates join, the appearance of the main British force to the north and west completely cut them off. The British troops at once began to throw up entrenchments. Seeing this, a party of Turkish officers came out under a white flag to parley. General Fry insisted on unconditional surrender, and there was nothing for it but to comply. Next day (December 9) the garrison of

1,200 men laid down their arms. The equipment taken included nine guns. So far the British blows had proved to be swift. The hold on the estuary and the course of the Tigris as far as Kurna, 120 miles from the sea, was secure. But the organisation difficulties with which the British commander found himself confronted at Basra in establishing a basis for future operations gave the enemy an opening. Notwithstanding the loss of Kurna and Mezera, a Turkish force advanced to the Karun, the river which flows into the Shatt-el-Arab from the east. The pipe line from the oil-fields is carried along the southern bank of this stream. Evidently these enemy troops were the reinforcements whose destination had been Kurna. Finding that place already lost they had struck east towards Ahwaz, where, as part of the plan for patrolling the pipe line, the British had established a post. In the face of overwhelming numbers the post had to withdraw, and a small expeditionary force sent up to recover the position found the Turks too strong to be dislodged. As the Turks were also at Nazariyeh on the Euphrates, 68 miles west of Kurna, General Barrett found that to meet all the demands upon his division forthwith would have involved its dispersal over a wide extent of country. Already the force had been reduced by the placing of garrisons at Koweit, Mezera and Kurna, and by the pipe line patrol. Further dispersal would, in the circumstances, have been highly imprudent. . . . The Turks were on both sides of him—on the east at Ahwaz, threatening the oil-fields, and on the west at Nazariyeh on the Euphrates. It was by no means an easy situation, and the less easy because, notwithstanding his repulse, the enemy was known to be preparing to renew the attack. . . . That this renewed offensive would take the form of a converging movement [seemed probable] and it was plain that the way to meet it was by anticipatory blows which would defeat the several enemy forces in detail."—E. Dane, *British campaigns in the Nearer East*, v. 1, pp. 34-41.

(j) Dardanelles project.—"The question of a possible attack upon the Dardanelles, as a preliminary to securing mastery over the maritime route from the Mediterranean to the Black Sea and to dealing Turkey simultaneously a staggering blow, had not escaped the British Admiralty and War Office. The objects to be achieved by the successful execution of such an enterprise were so manifest, the consequences of a military triumph in this quarter were bound to be so far-reaching, that no special knowledge of the factors was indeed required to enable the importance of the matter to be realised. . . . By those responsible for setting the campaign in motion, the conquest of the Hellespont was rightly regarded as merely a preliminary to further combinations of war. The real objective that they had in view was Constantinople and the Bosphorus—especially the latter. For they realised that the acquisition of this remarkable maritime defile by British, French, and Russian naval and military forces would assure to Russia the means both of exporting the agricultural produce which she possessed in abundance and of importing the war material of which she stood sorely in need, would effect a cleavage of the Sultan's dominions into two parts, and would set up an insuperable barrier against that Teutonic pressure towards the east of which signs had been apparent even before the dramatic events of August, 1914, provided Germany with an opportunity for gratifying her Oriental ambi-

tions. The fall of Constantinople would exercise a tremendous moral effect throughout Turkey and the whole Mohammedan world. So daring and decisive a stroke delivered by the forces of the Entente could, moreover, hardly fail to secure an attitude of benevolent neutrality towards the Allies on the part of the Balkan States, and it might well induce all those kingdoms definitely to make common cause with belligerents who had given a demonstration so convincing of their fighting potentialities and of their capacity for conducting war. As it turned out, the project in reality never got beyond its introductory stage. The attempt to win the Dardanelles, first by naval effort and afterwards by the superposition of a military expedition on a great scale upon the original operation, came to naught. . . . The problem had, as it happened, been carefully examined by the British Admiralty and War Office some years earlier. A memorandum had been drawn up in 1906 by the General Staff, in which there occurred a passage that clearly indicates the conclusion which expert sailors and soldiers had then come to as to the expediency of attempting to force the Dardanelles by ships alone. 'Military opinion,' runs this passage, 'looking at the question from the point of view of coast defence, will be in entire agreement with the naval view that unaided action by the fleet, bearing in mind the risk involved, is much to be deprecated.' The memorandum, moreover, took a discouraging view of the prospects of conjunct naval and military operations for securing possession of the Straits. The position taken up in the document was that a purely naval attack would not be justifiable under any circumstances, while an amphibious undertaking was bound to prove a most difficult and dangerous operation of war. . . . A combined British and French squadron bombarded the batteries at the mouth of the Dardanelles on the 3rd of November, the ships firing at long range for a few minutes. The works replied, and from their feeble performance it was possible to deduce the capabilities of the Turkish guns. Nothing further worthy of note happened after this affair till the 13th of December, when a British submarine (commanded by Lieutenant Holbrook) proceeded up the Straits and succeeded in sinking an old Turkish battleship—[the *Messudieh*]—a very fine feat of arms in view of the rows of minefields under which the vessel had to pass. There was, however, no intention of undertaking serious operations in this quarter until the early days of January."—C. E. Callwell, *Dardanelles*, pp. 2, 4-5, 7.—See also BALKAN STATES: 1914-1916.

(k) Assyro-Chaldeans join Allies. See ASSYRO-CHALDEANS: In World War.

(l) War in Transcaucasia.—"A glance at the map will show that the Russian Caucasian border has on the south Persia for two-thirds of its length and Turkey for one-third. Since Persia was a negligible military Power, this meant that her north-western territory gave each of the belligerents a chance of turning the flank of the other. . . . South of Lake Urmia the Turks took the offensive. . . . [(See below: 1915: VI. Turkey: d.) The struggle in Transcaucasia, upon which Germany built high hopes and Enver expended all his energy was, however, the more vital part of the Eastern campaign]. . . . Enver's strategy was ambitious to the point of madness, but it was skilful after a fashion. He resolved to entice the Russians from Sarikamish across the frontier, and to hold them at some point as far distant as possible from the railhead. Then, while thus engaged, he would

swing his left centre in a wide enveloping movement against Sarikamish, and with his left push round by Ardahan and take Kars in the rear."—J. Buchan, *History of the Great War*, v. 1, pp. 506-508.—"The Russian province of Transcaucasia is mainly a great trough extending nearly across the isthmus from the Black Sea to the Caspian, confined on the north by the Caucasus range, with the loftiest peaks in Europe, and on the south by the vast mountainous mass of Armenia. The Turks were eager to recover the fortress of Kars and the port of Batum, which had been taken from them by the Russians in 1878; the Germans hoped that an invasion of Transcaucasia would distract the Russians from operations on their European front; and Germans and Turks alike were lured by the prospect of controlling the natural resources of this province, particularly the rich oil-wells of Baku. Kars guarded the route from Erzerum, the Turkish advanced base, to the heart of Transcaucasia. A main railway line traverses the province from the Black Sea to the Caspian, sending off branches on both sides, one of which runs southwestward from Tiflis and forks at Alexandropol, one arm extending through Kars to Sari Kamish, fifteen miles from the Turkish frontier, the other bearing off to the southeast through Erivan and running for a considerable distance along the border of Persia. Erzerum, on the other hand, the Turkish fortress facing Kars, was about 500 miles from the railhead on the most direct land route to Constantinople. Late in 1914 the Turks had concentrated the Ninth, Tenth, and Eleventh Corps, with three other divisions, on the Russian border, an army of about 150,000 men in all, under the command of Hassan Izzet Pasha, when Enver Pasha, who was also present with a large German staff, conceived the bold project of seizing Kars and cutting off the Russian army by a series of rapid maneuvers in defiance of the rigorous winter climate of these lofty regions. His plan was to recede before the Russians on his right, drawing them as far as possible from their railhead, while with his left he executed an enveloping movement against Sari Kamish, Kars, and the connecting railway. The Russians crossed the frontier and occupied Keupriköj on November 20, 1914, when the execution of the Turkish plan began. While the Eleventh Turkish Corps occupied the attention of the Russians in front, the Ninth and Tenth on the left advanced against Sari Kamish and Kars, and the First, which had landed at Trebizond, marched on Ardahan with the view eventually of cutting the railway back of Kars. The Eleventh Corps withstood and even drove back their opponents until by December 25th the Ninth and Tenth Corps had made their way over the storm-swept ridges and were descending on Sari Kamish and the railway and the First Corps had reached the vicinity of Ardahan. But the problems of supplying the Turkish armies and maintaining communication by primitive routes, rendered almost impassable by snow, presented enormous difficulties. The more concentrated position of the Russian forces enabled them to deal with their adversaries' columns in detail. They defeated the Tenth Corps in a fierce struggle at the end of December. The retreat of the Tenth Corps exposed the left flank of the Ninth, which was surrounded and captured near Sari Kamish. The Turkish First Corps was defeated and put to flight with heavy losses on the 17th. Enver's plan resulted in a complete failure and Transcaucasia was freed from the danger of invasion. The campaign subsided into desultory operations while the Russians cleared the whole

frontier region of the enemy."—G. H. Allen et al., *Great War*, v. 4, pp. 321-323.

V. JAPAN

(a) **Ultimatum to Germany.**—Declaration of war.—Japan's military power.—On Aug. 15, 1914 the Japanese government presented an ultimatum to Berlin, demanding the delivery of the leased territory of Kiao-chau into Japanese custody before September 15. Eight days were allowed for a reply, and when none was forthcoming, Japan declared war on Germany on August 23. (See also JAPAN: 1914-1918: In the World War). Her treaty arrangements with Great Britain pledged Japan to police the East and protect British Asiatic interests if her ally became engaged in war elsewhere. The presence of German troops and warships in the Far East constituted a menace to the peace of that region. The military power of Japan was confined to operations in Asia. She sent no troops to Europe, and only a few of her smaller units to the Mediterranean. Later in the war, Japanese warships scoured the Pacific and convoyed Australian troopships to the European theater of war. The war strength of the Japanese army of the first line at the outbreak of the war was about 600,000 combatant troops organized in nineteen divisions, but behind these were a second line of Kobi troops, while the Kokumin, or Land-sturm, formed a third line for home defense. The expediency of sending men to Europe was debated by the Allied and Japanese governments, but it was believed by the latter that they could best serve the cause by placing their arsenals and workshops at the disposal of Russia.

(b) **Imperial rescript issued at Tokio, Aug. 23, 1914.**—"We, by the grace of Heaven, Emperor of Japan . . . declare war against Germany and We command Our Army and Navy to carry on hostilities against that Empire with all their strength, and We also command all Our competent authorities to make every effort, in pursuance of their respective duties to attain the national aim by all means within the limits of the law of nations. Since the outbreak of the present war in Europe, the calamitous effect of which We view with grave concern, We on our part have entertained hopes of preserving the peace of the Far East by the maintenance of strict neutrality, but the action of Germany has at length compelled Great Britain, Our Ally, to open hostilities against that country, and Germany is at Kiao-chau, its leased territory in China, busy with warlike preparations, while its armed vessels cruising seas of Eastern Asia are threatening Our commerce and that of our Ally. Peace of the Far East is thus in jeopardy. Accordingly, Our Government and that of His Britannic Majesty, after full and frank communication with each other, agreed to take such measures as may be necessary for the protection of the general interests, contemplated in the Agreement of Alliance [see ANGLO-JAPANESE ALLIANCE], and We on Our part being desirous to attain that object by peaceful means commended Our Government to offer with sincerity an advice to the Imperial German Government. By the last day appointed for the purpose, however, Our Government failed to receive an answer accepting their advice. It is with profound regret that We in spite of our ardent devotion to peace, are thus compelled to declare war, especially at this early period of Our reign and while We are still in mourning for Our lamented Mother. It is Our

earnest wish that by the loyalty and valor of Our faithful subjects, peace may soon be restored and the glory of the Empire be enhanced."

(c) **Address of the Japanese foreign minister, Baron Kato, to the Imperial Diet.**—Following is the text of Baron Kato's speech, delivered before the Imperial Diet Sept. 5, 1914:

"As you all are aware the Agreement of Alliance between Japan and Great Britain [see JAPAN: 1895-1902; ANGLO-JAPANESE ALLIANCE] has for its object, the consolidation and maintenance of the general peace in Eastern Asia, insuring the independence and integrity of China as well as the principle of equal opportunities for the commerce and industry of all nations in that country, and the maintenance and defence respectively of the territorial rights and of the special interests of the contracting parties in Eastern Asia. Therefore inasmuch as she is asked by her Ally for assistance

BARON TOMOSABURO KATO

at the time when the commerce in Eastern Asia, which Japan and Great Britain regard alike as one of their special interests, is subjected to constant menace, Japan, which regards that alliance as the guiding principle of her foreign policy, cannot but comply with such request and do her part. Besides in the opinion of the Government the possession by Germany, whose interests are opposed to those of the Anglo-Japanese Alliance, of a base of her powerful activities in one corner of the Far East is not only a serious obstacle to the maintenance of permanent peace of Eastern Asia, but is also in conflict with the more immediate interests of our own Empire. The Government, therefore, resolved to comply with the British request and if necessary in doing so to open hostilities against Germany and after the imperial sanction was obtained, they communicated this resolution to the British Government. Full and frank exchange of views between the two Governments followed and it was finally agreed between them to take such measures as may be necessary to

protect the general interest contemplated by the Agreement of Alliance. Japan had no desire or inclination to get herself involved in the present conflict. She only believed that she owed it to herself to be faithful to the Alliance and strengthen its foundation by ensuring the permanent peace of the East and by protecting the special interests of our two allied Powers. Desiring, however, to solve the situation by pacific means, the Imperial Government gave on August 15th the following advice to the German Government: 'Considering it highly important and necessary, in the present situation, to take measures to remove all causes of disturbance to the peace of the Far East and to safeguard the general interests contemplated by the Agreement of Alliance between Japan and Great Britain, in order to secure a firm and enduring peace in Eastern Asia, establishment of which is the aim of the said Agreement, the Imperial Japanese Government sincerely believe it their duty to give advice to the Imperial German Government to carry out the following two propositions: First. To withdraw immediately from the Japanese and Chinese waters German men-of-war and armed vessels of all kinds, and to disarm at once those which cannot be so withdrawn. Second. To deliver on a date not later than September 15, 1914, to the Imperial Japanese Authorities, without condition or compensation, the entire leased territory of Kiaochow with a view to eventual restoration of same to China. The Imperial Japanese Government announce, at the same time, that, in the event of their not receiving by noon August 23, 1914, the answer of the Imperial German Government signifying an unconditional acceptance of the above advice offered by the Imperial Japanese Government, they will be compelled to take such action as they may deem necessary to meet the situation.' But until the last moment of the time allowed for the purpose, namely, noon August 23rd, the Imperial Government received no answer from the German Government. Thus the two countries having unfortunately entered upon a state of war, the Imperial Rescript declaring war on Germany was issued the same day. . . . While regretting that Japan was compelled to take up arms against Germany, I am happy to believe that the army and navy of our illustrious Sovereign will not fail to show the same loyalty and valor with which they distinguished themselves in the past, so that we all may be blessed with an early restoration of peace."

(d) Capture of Tsing-tao.—"August 1914 found British interests and the vast trade that centred at Hong-kong in danger: German armed vessels prowled the seas, and the German naval base of Tsing-tao was busy with warlike preparations. Great Britain appealed to Japan to free their joint commerce from the menace. The Japanese Prime Minister, Count Okuma, might well hesitate, however, before recommending intervention. Was he the right minister to direct a war? He was nearer eighty than seventy years old, and recently had been for seven years in retirement; his Government had a minority in the Diet, and to the Genro his name was anathema; he claimed the allegiance of no party, and the powerful military and naval clans, Choshu and Satsuma, were openly hostile. . . . To temporize while events revealed themselves in Europe would be safer than immediate action; while to remain neutral might lead to the transference to the Japanese of much trade with China now in British hands, inevitably hampered by the menace of German commerce-

destroyers. Nevertheless, Count Okuma's Cabinet came to a bold and loyal decision. Baron Kato, the Foreign Minister, reassured Great Britain of active Japanese aid, and on August 15 sent an ultimatum to Germany. . . . The ultimatum was timed to expire at noon on August 23. That day arrived without satisfaction having been given to Japan. Within a few hours the 2nd Japanese squadron steamed off towards Tsing-tao. Before the outbreak of hostilities with Great Britain, Vice-Admiral the Graf von Spee, who commanded the German Pacific squadron, had steamed away from Tsing-tao with most of his ships. To use Tsing-tao as a naval base while engaging in commerce-raiding seemed a sound and practicable plan, since the British and Australian naval forces, though superior, were hardly strong enough simultaneously to blockade the harbour and to search the seas. The plan was, however, rendered impossible by the Japanese ultimatum, and the Admiral, after having lingered for some weeks in the Western Pacific, departed for other seas and other adventures. Such was the result of Japan's action, and thus dangerous were the tactics that Japan's action had frustrated. For Tsing-tao, situated upon one of the two peninsulas, divided by two miles of waterway, enclosing the bay of Kiaochau, with its safe and spacious anchorage for vessels of any size, constituted one of the most important naval bases on the Chinese coast. It had, indeed, been described as the key to Northern China. Dominating the eastern coast of the Shantung peninsula, the port formed the centre of the semicircular area known as Kiaochau, extending on a radius of 32 miles around the shores of the bay, with a population of 60,000. This area was, under the Chinese-German agreement as to Tsing-tao, influenced and controlled by Germany, though not strictly subject to her, and regarded as neutral territory. Its surface was mainly mountainous and bare, though the lowlands were well cultivated, but in parts it was rich in mineral wealth, large but undeveloped supplies of coal being present. . . . The heights which surrounded the bay offered admirable sites for fortification, while the land-approaches to Tsing-tao were guarded by formidable defences stretched across its peninsula. In many quarters the stronghold was regarded as a second Port Arthur."—A. N. Hilditch, *Battle sketches, 1914-1915*, pp. 83-85.

I. STRENGTH OF FORTIFICATIONS.—"The Germans had paid particular attention to defence, so much so, indeed, that over five-sixths of the white inhabitants were engaged in military occupations. Five thousand German marines constituted the normal garrison, though the outbreak of war in August called about a thousand more men—volunteers, reservists, and sailors—to the colours. The complement of the *Kaiserin Elisabeth*, an Austrian cruiser sheltering in the harbour, left for Tientsin, having received orders to disarm their ship, but returned in time to join the defenders. The garrison was amply provided with weapons, stores, and munitions. Most of the German ships off the Chinese coast at the outbreak of war, indeed, had made immediately for Tsing-tao, and discharged upon its wharves many thousand tons of cargo. When war with Japan became inevitable, therefore, the defenders could anticipate a successful resistance, provided the expected instantaneous victories in Europe materialized. Elaborate preparations were made for the defence. The harbour mouth was blocked by three sunken vessels, enabling only small craft to enter. Chinese

villages within the leased territory, and the bridge where the railway crossed the boundary, were destroyed, partial compensation being paid to the inhabitants. Native labourers were engaged to throw up earthworks to strengthen the town fortifications. Many foreigners, women, children, and non-combatants, meanwhile, had left the town. On Friday evening, August 21, at roll-call, the Governor, Captain Meyer-Waldeck, read out a message from the German Emperor exhorting the garrison to defend the town to their utmost, and to do their 'duty to the last.' . . . The following day a diversion occurred which opened hostilities propitiously for the Germans. The British destroyer *Kennet*, encountering the German destroyer *S. 90* off the coast, gave chase. The *S. 90* immediately made for port, and the *Kennet*, in the ardour of pursuit, closed in unawares within range of the German land batteries. The latter opened fire, and before she could draw off the *Kennet* sustained ten casualties, though little material damage. Next day the term of the Japanese ultimatum expired. It was doubtful at what point the Japanese would begin operations, or what tactics they would adopt. The fear was prevalent among Germans that the enemy would enter Chinese territory to reach the town from the land: newspapers under German influence, indeed, circulating in Chinese coast towns, started a press campaign with the object of stirring the Chinese Government to oppose by force any Japanese landing in her territory. Outposts were placed by the Germans along the shores of the neutral zone to watch for developments: they desisted, on August 24, the approach of Japanese warships. Vice-Admiral Sadakichi Kato, who commanded the approaching squadron, immediately upon arrival took measures to protect himself against danger from mines. Seven islets clustering round the mouth of Kiao-chau Bay were occupied, to form a convenient local naval base, while mine-sweepers swept the surrounding seas. No less than a thousand mines were taken from the water. A blockade of the whole Kiao-chau coast was declared, as commencing from 9 a.m., August 27, and war vessels patrolled the shores, some seventy miles long. Action soon began, and continued during ensuing days, with shells that at intervals screamed towards the town. The position was, however, reconnoitred carefully. Japanese airmen went up frequently to scan the fortifications and to drop bombs. All protruding structures, spires and factory-chimneys, had been levelled to the ground by the Germans so as to afford no mark for fire. Bombs were dropped on the railway station and on one of the numerous barrack buildings. The operations continued spasmodically into September, while Kato was awaiting the approach by land of a co-operating army which had now disembarked on the northern coast of the Shantung peninsula, about 150 miles due north of Tsing-tao." —*Ibid.*, pp. 86-88.

2. ATTACK BY LAND.—"The landing was effected on September 2, without hindrance or opposition on the part of the Chinese. The Government, following the precedent of the Russo-Japanese War, immediately published a declaration refusing to hold itself responsible for the obligations of strict neutrality in areas that formed, within Lung-kow, Lai-chau, and the neighbourhood of Kiao-chau Bay, passage-ways essential to the belligerent troops. It was, of course, incumbent upon the Powers involved to respect Chinese property and administrative rights. Japan, therefore, was permitted to make use of the main roads to trans-

port an army to the rear of Tsing-tao. The forces landed composed a division numbering 23,000, and commanded by Lieutenant-General Mitsuomi Kamio. An advance-guard was sent forward without delay, but soon found its way rendered impassable by torrential floods which at this time swept down upon and devastated the province of Shantung, bridges, roads, and even villages being submerged and destroyed, with great loss of life, largely owing to Chinese official incompetence. The Japanese, after covering 20 kilometres in two days, reached a stream so swollen that crossing was impossible. The artillery had to return to Jung-kow. German diplomacy, meanwhile, exasperated at its inability to prevent a Japanese landing, had not been inactive. The German and Austrian ministers at Peking, on hearing of the Japanese landing, protested strongly. China, it was claimed, ought to have forestalled and resisted the landing, but instead had deliberately extended the war-zone in order to facilitate Japanese movements. She would be held responsible for any injury to the German cause or property. To this China replied that, if it was incumbent upon her to prevent by force Japan operating in her territory, it was equally her duty to prevent by force Germany fortifying and defending Tsing-tao. China had endeavoured, indeed, but unsuccessfully, to preclude belligerent operations in her territory: only after the Japanese landing, when she was powerless to do otherwise, had she extended the zone of war. As to the responsibility, she reiterated her previous declaration. The baffled Germans fell back on threats: the right was reserved to visit upon China dire consequences for her alleged breach of neutrality. . . . An anomaly of the situation was that British local interests had long conflicted with Japanese national interests. Japan's activities had, at every stage of her recent history, reduced British opportunities. Japanese trader competed with British trader for the markets of China, and Japan's share of the annual trade expansion was increasing, that of Great Britain decreasing. High tariffs and preferential rates had closed Corea and Manchuria to British enterprise. It is easy to estimate in what commercial jealousy and rivalry such circumstances had resulted. While the expediency of the British-Japanese alliance was fully recognized, and its consequences admitted to be the freedom of the China seas from menace of commerce-destroyers, nevertheless the fact remained that the hostilities against Tsing-tao would constitute a fresh impulse to Japanese expansion. . . . On September 12 Japanese cavalry reached Tsimo, ten miles outside the Kiao-chau zone. No trace of the enemy north of the Pai-sha River had been seen, beyond a German aeroplane that occasionally passed overhead on reconnoitring flights. On the following day a number of sharp skirmishes with outposts occurred, and one Japanese patrol found its way to the small town of Kiao-chau, situated at the head of the bay, some 22 miles from Tsing-tao itself. The brushes with the Germans became of daily occurrence, and in one of them a high official of the German Legation at Peking, who had volunteered for service, was killed. On September 17 the Japanese attacked Wang-ko-huang, 13 miles from Tsimo, the enemy being in a fortified position and provided with machine-guns. At sunset, however, they abandoned the village and withdrew under cover of darkness, leaving behind quantities of equipment and supplies. . . . About September 18, after hostile patrols had been driven away

from the shore by the fire of destroyers, Japanese artillery and troops were landed at Laoshan Bay, north of Tsing-tao, just within the leased territory. . . . [This move was considered necessary in order to clear the hinterland before troops could be landed in safety nearer to the objective fortress.] On September 19 . . . 1,000 of the 2nd South Wales Borderers, a force so small as to be nominal, under Brigadier-General Barnardiston, left Tientsin and proceeded to Wei-hei-wei. Transport mules having here been taken on board, the expedition on September 22 coasted down the eastern shore of Shantung, and next day landed at Laoshan Bay. . . . Meanwhile, it was probably about this time, or shortly after, that the *Triumph*, a British battleship of nearly 12,000 tons displacement, 19½ knots speed, and four 10-inch guns primary armament, joined the Japanese squadron off Tsing-tao. A spasmodic bombardment had been maintained during the preceding weeks, and seaplanes had been busy, bombing and range-finding. The wireless station, the electric-power station, and several ships in harbour were damaged by explosive missiles. Little could be done, however, from the sea alone, and the attack by land, owing largely to transport difficulties, had still to develop. But the weather was now improving considerably. Another set-back to Japanese military ardour was, indeed, constituted by the marked reluctance of the Germans to form a line of resistance. German outposts, upon encountering hostile patrols, invariably retired after offering faint opposition. When the British troops, after a circuitous march of 40 miles, much hampered by bad roads, came up in the rear of the Japanese, then preparing to assault the enemy's advanced positions on high ground between the rivers Pai-sha and Li-tsun, the part that it had been arranged they should take in the Japanese attack, on September 26, fell through owing to a disinclination of the Germans to fight. Their resistance was so meagre that the Allies were hardly engaged, and next day gained without difficulty the easterly banks of the Li-tsun and Chang-tsun rivers, only seven miles north-east of Tsing-tao. The enemy at all points fell back, and the advance upon the town continued. The Japanese had now drawn their lines across the neck of the narrow peninsula upon which Tsing-tao stands. There were indications that the main forces were now in contact. The only obstacle, but a formidable one, between the invaders and the forts themselves was constituted by the dominating height of Prince Heinrich Hill, from whose crest, rising some five miles from the town, all the forts could be bombarded. General Kamio estimated that three days of fighting would be required for its capture: it was as all-important to the defence as to the attack, and was sure to be strongly held. The forts themselves, of the latest type, were elaborately constructed, and equipped with concrete and steel cupolas, mounting high calibre pieces. They commanded both landward and seaward approaches to the town, those nearest the invading Japanese being situated upon, and named Moltke Berg, Bismarck Berg, and Iltis Berg. Earth redoubts and trenches between formed the German line of defence. Plans for the most considerable engagement, the assault of Prince Heinrich Hill, that had so far taken place, to begin on Sunday, September 27th, were made by the Japanese General. It developed more speedily than had been expected. German artillery opened a terrific cannonade upon the Japanese lines, while three warships shelled the attacking right wing from the bay. The German fire

was heavy and accurate. Japanese warships and aeroplanes, and also the British battleship *Triumph*, however, created a diversion that relieved the assaulting forces. . . . For many hours the great guns, thundering their challenges from sea and land and estuary, maintained continual uproar. Fighting continued into the night, and early next morning was renewed. But the defenders seemed to lack enthusiasm. It is doubtful, indeed, whether their forces were sufficiently numerous to hold with strength their advanced positions, and at the same time to man adequately their main fortified positions. During the morning of the 28th the Germans withdrew from Prince Heinrich Hill, leaving fifty of their number and four machine-guns in Japanese hands, and many dead upon the slopes. The Japanese casualties numbered 150. By noon the whole position was in the attackers' hands, and the beleaguered town, visible from the height, was now face to face with siege. German officers who knew all the points, weak and strong, of the defences, could not but realize their inability to withstand the siege guns which Japan would sooner or later bring to the attack. But the heavy artillery was yet far away. A month was to elapse before the pieces could be dragged across the difficult country, and emplaced in prepared positions on Prince Heinrich Hill. This month, which covered the whole of October, saw many interesting incidents, and betrayed no signs of idleness on the part of besiegers or besieged. The Germans, indeed, proved extraordinarily prodigal in ammunition, firing on an average 1,000 to 1,500 shells daily, a fact which lent support to the current view that, while undesirous of incurring their emperor's displeasure, they realized the hopelessness, so far as Tsing-tao was concerned, of their emperor's cause. Warships in the bay assisted the cannonade from the forts, and Lieutenant von Pluschow, the airman of the single aeroplane the town possessed, ventured forth at intervals to reconnoitre or to bomb. Life in the town itself continued to be quite normal."—A. N. Hilditch, *Battle sketches, 1914-1915*, pp. 88-94.

3. CLOSING IN ON THE FORT.—"Japanese and British, meanwhile, drew their lines closer and closer to the fortress by sap and mine, though hindered greatly by terrible weather, and occasionally having slight encounters with the enemy. . . . At sea the operations were also spasmodic. At the end of September a landing force occupied Lao-she harbour, in the vicinity of Tsing-tao. . . . Mine-sweeping had constantly to be maintained, under fire from the shore, and proved a dangerous task. . . . Some German gunboats, however, among them the *Cormoran* and the *Iltis*, were apparently sunk about this time, either deliberately by the Germans, or from the fire of the Japanese guns. A torpedo flotilla bombarded one of the barracks, moreover, to some effect, while Japanese aeroplanes were also active. . . . [A railroad] line ran from Tsing-tao and Kiaochau to the junction of Tsi-nan, a distance of about 250 miles, passing through the towns of Wei-hsien and Tsing-chau. It was German built and almost wholly German owned. From some points of view it might reasonably be said to constitute an adjunct, if not a part, of the leased territory itself. In any case the Japanese claimed that, since the outbreak of war, the line had been consistently utilized to bring reservists, supplies, and ammunition to the town. . . . The railway, being still under German control, constituted a menace in the Japanese rear, which the latter, upon consolidating their position towards the end

of September, took measures to remove. After occupying Wei-hsien, they began to arrange for the seizure of the whole line as far as Tsi-nan itself. Hints of such action drew forth protests from China, whose Government, however, adopted too compromising an attitude. The Japanese Government was firm. China's right to formal protest was admitted, but the occupation was stated to be an urgent military necessity, and without any prejudice to Chinese claims after the war. Since China was unable to enforce the neutrality of the line, flagrantly violated by the Germans, the Japanese had no alternative but to bring it under their own control. . . . Its fate, since China did not admit the contention that it was purely German, was to be decided after the war. A bellicose attitude noticeable in Chinese military circles became very marked when, three days later, on October 6, unquestionably in breach of the arrangement, Japanese soldiers arrived at Tsi-nan, and took over the control of the rolling stock on the Shantung line. . . . But the Chinese Government submitted under further strong protest, and with a request that the troops should be withdrawn. The Japanese action occasioned, however, further distrust among British residents in the Orient. Meanwhile, a second British force, consisting of 500 Sikhs, was being prepared to reinforce General Barnardiston."—A. N. Hilditch, *Battle sketches, 1914-1915, pp. 94-97.*

4. BOMBARDMENT OF TSING-TAO.—"At one o'clock on October 12, Captain Meyer-Waldeck, the Governor of Tsing-tao, received a joint wireless message from the commanders of the besieging troops and the blockading squadron, offering a safe escort out of the town to Tientsin of neutrals and non-combatants. He at once assented. Delegates met next day at ten o'clock to discuss details, and on the 15th the American consul, accompanied by German women and children and Chinese subjects, left the town. On the previous day there had been a combined sea and air attack upon forts Iltis and Kaiser, in which the *Triumph* participated and suffered the only Allied casualties. It is recorded that, before reopening bombardment after the departure of the non-combatants, the Japanese, ever polite, signalled 'Are you now quite ready, gentlemen?' . . . Two days later, days notable for torrential rains, which intensified the discomforts of the troops ashore, the Japanese suffered a severe naval loss, [when] the *Takachiho*, an old cruiser of some 3,000 tons, . . . fouled a mine, released by and adrift in the rough seas. . . . Two hundred and seventy-one officers and seamen lost their lives. The rough weather . . . hindered operations till the end of the month. The landing of the Sikh contingent at Laoshan Bay on October 21 was, indeed, attended by great difficulties and some loss of life. A strong southerly gale had raised high seas, and enormous lighters and sampans, employed for disembarkation, were thrown high and dry upon the beach. . . . Trouble ahead threatened in connection with transport arrangements. . . . The column, however, at length set off, and made a march memorable for hardship and difficulty. . . . During eleven hours 6 miles were covered, by which time the Sikhs were completely exhausted with digging carts or mules out of the mud, hauling them out with drag-ropes, reloading overturned carts, or unloading those immovable. Next day the column was on the road at seven o'clock, and covered 13 miles. . . . A few days later, on October 30, after the Sikhs had rested and recovered, the whole British force, now some 1,500 strong, moved up to the

front in readiness for the bombardment of Tsing-tao, which had been arranged to begin next morning in celebration of the birthday of the Mikado. . . . The Japanese shooting . . . displayed remarkable accuracy, some of the first projectiles bursting upon the enormous oil-tanks of the Standard Oil Company and the Asiatic Petroleum Company, . . . and for many hours the heavens were darkened by an immense cloud of black petroleum smoke which hung like a pall over the town. . . . Fires broke out also on the wharves of the outer harbour, in which during the day a gun-boat, apparently damaged fatally by a shot which carried away her funnel, disappeared. The redoubts and infantry works particularly were heavily bombarded. . . . The Germans did not on this first day of general bombardment reply strongly, two only of the forts persistently firing. . . . The bombardment continued for a week. . . . The German shelling, though severe, was far less heavy, because, it is said, the men in the forts, sheltering most of the time in bomb-proof caverns, issued forth only at night and during pauses of the Japanese to return the fire. . . . Officers on board the *Triumph* observed that the largest German guns, of 12-inch calibre, were consistently directed upon their vessel. . . . The *Triumph* singled out for attack Fort Bismarck especially, and two of the German 6-inch guns were early put out of action. . . . On November 2 the Austrian cruiser *Kaiserin Elizabeth*, which had, with the German gunboats still afloat, been engaging vigorously in the fighting, sank, having probably been blown up deliberately, and the floating dock also disappeared. . . . The wireless and electric power stations were wrecked, and large attacking forces crept further forward, despite severe fire, and entrenched closer to the enemy's lines. . . . [On the 4th and] the two following days, the Allied trenches were pushed forward until they were right up to and almost half round the nearest German forts. Many casualties were suffered, but the German fire was kept down by the Japanese guns, whose accuracy was remarkable. . . . So effective was the bombardment that during November 5 and 6 plans were prepared for the final assault."—*Ibid, pp. 97-103.*

5. FINAL ASSAULT.—"It was arranged that a general infantry attack should be made as soon as practicable. The garrisons in the forts, meanwhile, were beginning to exhaust their ammunition, of which they had been, during the preliminary operations, strangely prodigal. Guns lay silent for other reasons than structural injury, though the latter cause, indeed, was frequent, a single shot, in one case, from the *Suwo*, the Japanese flagship, having destroyed a 24-cm. gun and killed eight men on Fort Hui-tchien-huk. In the town itself the streets, not immune from falling projectiles, were deserted; . . . it was realized that the end was not far distant. Early in the morning of November 6 the airman von Pluschow flew away across Kiao-chau Bay, and did not return. He escaped with the Governor's last dispatches into Chinese territory, where his machine was interned. That day and night saw no cessation of the firing, the guns of the defenders still roaring at intervals. About an hour after midnight the first impulse of the general attack took effect. While a particularly heavy artillery fire kept the Germans in their bomb-proof shelters, the central redoubt of the first line of defence, which had been badly shattered by the bombardment, was rushed by a storming party headed by General Hoshimi Yamada. Engineers had in the

darkness sapped right up to the barbed-wire entanglements, which being cut provided way for the infantry, who, while part held the enemy in front, rushed the redoubt on both flanks. Two hundred prisoners were taken, and the Japanese flag was hoisted. The besiegers were through the German line, but the position had to be consolidated, or disaster would follow. Danger from the flank was, however, soon obviated by advances in other parts of the line. Just after five o'clock a battery on Shao-tan Hill was captured; half an hour later another battery in Tao-tung-chien redoubt was taken, and Fort Chung-shan-wa, the base of the German right wing, fell. The shadows were still dense, and the final phase of the siege, viewed from Prince Heinrich Hill, presented a sight brilliant with many flashes and flaming fire-works, and a sound dominated by the thunder of the batteries. But dawn, as the besiegers began in mass to close in upon the main line of forts Itis, Moltke, and Bismarck, was breaking. It was decided to storm these positions forthwith, since the German fire, owing to exhaustion of the ammunition, was dying away. Governor Meyer-Waldeck, who had been wounded, realized now that further resistance was futile. Shortly before six o'clock he sent Major von Kayser, his adjutant, accompanied by another officer and a trumpeter, from the staff headquarters bearing the white flag: at the same time a signal of surrender was made from the Observatory. This was not, however, observed, while von Kayser's party, coming under fire, was dispersed by a shell which killed the trumpeter and the adjutant's horse. Meanwhile, Japanese and British were closing in, and were tensely awaiting the final assault. It was never made. Soon after seven o'clock a welcome sight relaxed the tension of the troops, torn, dirty, and weary, calling forth cheers from the British, and shouts of 'Banzai!' from the Japanese. The campaign was over: Tsing-tao had fallen. White flags were fluttering from the forts. That evening delegates from the two armies met and signed the terms of capitulation, which were unconditional. Honours of war were accorded the defenders, the Governor and his officers being permitted to retain their swords. The Allies marched into the town, and on November 10 the garrison was formally transferred. Over 4,000 Germans were sent to Japan as prisoners, and large quantities of war material were confiscated. The captures included 30 field-guns, 100 machine-guns, 2,500 rifles, 40 motor-cars, £1,200 in bullion, and 15,000 tons of coal. All ships in harbour, and also the floating dock, had been destroyed, but it seemed probable that the *Kaiserin Elizabeth* could be successfully raised. Sufficient provisions were found to feed 5,000 persons for three months, and the victors were able to regale their appetites with luxuries such as butter, crab, or salmon, which were plentiful. Looting, however, was strictly forbidden. . . . Measures, meanwhile, were at once taken to restore the town to its normal condition. . . . The Japanese casualties numbered 236 killed and 1,282 wounded; the British, 12 killed and 53 wounded. On November 16 the Allies formally took possession of Tsing-tao; and a memorial service was held for the dead."—A. N. Hilditch, *Battle sketches, 1914-1915*, pp. 103-105.

VI. AFRICA

(a) German colonies.—Capture of Togoland and Cameroons.—In 1914, Germany possessed

four colonies in Africa. Beginning from the west, the first colony, Togoland, is about the size of Ireland, and is bounded on one side by French Dahomey and on the other by the British Gold Coast. About a million natives inhabit it and about 400 whites. Farther south the German Cameroons lay between British Nigeria and French Congo and extended from Lake Chad on the north to the Ubangi and Congo rivers. Its area was about one third larger than the German empire in Europe. Its population is about 3,500,000 containing 2,000 whites. Following the western coast-line past the Congo mouth and Angola the important colony of German Southwest Africa (now the Protectorate of Southwest Africa) is reached. The area is some 320,000 square miles and it stretches from the Angola border to its march with Cape Colony on the Orange river. Its native population used to be 300,000 but owing to the Herero campaign at the beginning of the war it was under 100,000, while the whites numbered 15,000. The last and greatest of the German colonies was German East Africa, about twice the size of European Germany. The population in 1914 was about 8,000,000 including 5,000 whites. The first blow in the colonial war was struck in Togoland. That small colony was in an impossible strategic position, with French and British territory enveloping it on three sides, and a coast-line open to the attack of British warships. Its military forces were at the outside 250 whites and 3,000 natives. In the early days of August a British cruiser summoned Lome, and the town surrendered without a blow. The German forces fell back one hundred miles inland to Atakpame, where was situated Kamina, one of the chief German overseas wireless stations. Meantime Captain Bryant of the Royal Artillery had led part of the Gold Coast Regiment across the western frontier in motor cars, while the French in Dahomey had entered on the east. By Monday, August 10, the whole of southern Togoland was in the hands of the Allies, and Captain Bryant, with a small French contingent, advanced against the government station of Atakpame. On August 25, he crossed the river Monu, and by August 27, with very few casualties, he occupied Atakpame, destroyed the wireless station, and secured the unconditional surrender of the German troops. Togoland had become a colony of the Allies, normal trade was resumed, and in two months' time there was nothing to distinguish it from Dahomey and the Gold Coast.—Based on J. Buchan, *Nelson's history of the war, v. 4, ch. 23*.—The Cameroons campaign began with the invasion of German territory by three British columns, one of which was commanded by Lieutenant Colonel P. Maclear, who crossed the frontier near Yola a few days after the declaration of war with a detachment of the Nigeria regiment, his object being to seize Garua, the northern capital of the Cameroons, by a *coup de main*. The force reached Garua on August 29, 1914, and captured one of the forts defending the town, but a heavy counter-attack by superior enemy forces compelled it to beat a hasty retreat across the frontier. It suffered severely on the way, losing five officers killed, of whom one was the commander of the column. Another column started at the same time from Ikon and occupied Nsanakang, five miles over the frontier, on August 29, but being surprised by the Germans on the night of September 6 it fell back on Ikon, while a third force which had come from Calabar was held up in front of Rio del Rey. Meanwhile Major General C. M. Dobell, inspector-

general of the West African Frontier Force, organized an Anglo-French force at Lagos and on September 22 appeared off Duala, his transports being convoyed by H. M. S. *Cumberland* and *Dwarf*. After a short bombardment by the ships the town surrendered on the 27th.—Based on *British official reports*.—The conquest of the Cameroons is thus summarized by Major General Sir Charles Dobell commanding the Allied forces, after the capitulation of Duala: "The number of troops of both nations at my immediate disposal at the commencement of the campaign amounted to 4,300 West African native soldiers; on the 21st November, 1915, this number had been increased to 9,700, including Indian troops. In these numbers the British and French forces were approximately equal. I fully realized, that the conquest of a country which is some 306,000 square miles in area, . . . defended by a well-led and well-trained native force, plentifully supplied with machine guns, was no light task. . . . I entertained no doubts as to the ability of the Royal Navy to overcome the difficulties and make a landing at Duala feasible, and my best hopes were realized when I was informed that H. M. S. *Challenger* could force a passage through the sunken wrecks and other obstructions in the Cameroon River, and reach a point 7,000 yards from the town. This was made possible owing to the mine sweeping and other preparatory work which had been carried out. . . . On my summons for the surrender of the Colony being refused, and after duly notifying the German Commandant of my intention, I ordered a bombardment of the town to commence early on 26th September [1914]; this in combination with a land demonstration, made by way of one of the neighbouring creeks, was sufficient to induce the Commandant, on 27th September, to surrender the towns of Duala and Bonaberi, with a small strip of land in their environs. The surrender of Duala secured us a safe and convenient base for the future absorption of German territory; further, the capture of stores, supplies, field guns, and the removal of over 400 German Europeans was a great loss to the German Field Force, whilst the seizure of the large amount of shipping and numerous small craft in the harbour was an inestimable advantage to us. My first object was to consolidate the position already won, and with this object in view an Allied force was allotted the task of clearing the country up to and including the Japoma Bridge, Midland Railway, whilst a British force commenced to make headway toward Maka on the Northern Railway line. . . . By the first week in October we had made good the country as far as Maka and the left bank of the Dibamba creek. The Japoma railway bridge, 900 yards in length, was broken in two places, but a fine feat was performed by the French tirailleurs in forcing this passage under a galling rifle and machine gun fire. . . . I now judged that I could move a force by the Wuri River on Jabassi, so as to secure Duala from any attack from the north-east; a mixed Naval and Military force, supported by armed craft, was organized and an attack was delivered on 8th October. It is regrettable that this operation was not at first successful, difficult country, novel conditions, and the fact that our native troops encountered machine-gun fire for the first time are contributory causes to failure; nevertheless it became necessary completely to reorganize the force and repeat the operation, with the result that Jabassi was taken on 14th October. From this place a force was pushed out to Njamtan,

and the country around Jabassi was cleared of the enemy. My next objective was Edea, on which place I determined an advance should be made from three directions, two by land and one by river. Strong forces were moved from Japoma and by the Njong River to Dehane, thence by a track towards Edea. . . . The combined movement was entirely successful and Edea was occupied on the morning of 26th October. This result had not been achieved without hard fighting, particularly on the part of the force operating by the line of the railway. . . . During the latter half of October the small force under Lieut.-Colonel Haywood was continuously engaged with the enemy on the line of the Northern Railway, but had made such good progress that I was in a position to arrange for an attack on Victoria, Soppo, and Buea. . . . The opposition met with cannot be described as serious, but the country was very trying to troops; the energy with which our advantage was pushed appeared to demoralize the Germans, and by the 15th November we had secured Buea, with Soppo and Victoria. . . . With the double object of striking an effective blow at the enemy and at the same time relieving the pressure on the southern frontier of Nigeria I decided to clear the whole of the Northern Railway of the enemy, and for this purpose concentrated a force at Mujuka, under command of Colonel Gorges, on 30th November. This force gradually fought its way to the North and reached Nkongsamba (railhead), which was surrendered to us on 10th December. . . . The advance was continued to Dschang, which was occupied on 3rd January, and the fort destroyed; most of the hostile resistance was met with at the Nkam River, but our columns rarely remained unmolested and experienced difficulties in operating in a class of country totally different from that to which they had by then become accustomed. I decided, as soon as the fort at Dschang had been destroyed, that the place should be evacuated and Nkongsamba, with its outpost at Bare, should be our most advanced position. It was unfortunate that we could not continue to hold Dschang, as our withdrawal gave a false impression to the natives and emboldened the enemy. However, with the troops at my disposal I did not feel strong enough to maintain and supply a post 55 miles north of railhead, in a difficult and mountainous country."—Major-General Sir Charles Dobell, *Official report, Mar. 1, 1916*.

(b) Southwest Africa.—In 1914 the white population of German Southwest Africa, and all save a small percentage were Germans, numbered less than 15,000 all told. But of that total one-third were garrison and another third reservists. Administratively the colony involved a heavy annual loss. An expensive system of railways had been laid down. Business to justify this outlay there was not. The railways were military and strategic. In addition there were great stores of military equipment and supplies and arsenals at Tsumeb and Kalkfontein on a larger scale than the largest demand of mere defense. When war broke out opinion in the Union (of South Africa) was of three shades. Settlers of British descent were eager for hostilities, a feeling shared by those of Dutch descent who liked the idea of engaging in active service. The great majority of the National party, true to the British imperial connection, were ready to follow the lead of General Botha. A minority, not very considerable, thought the opportunity favourable for severing the tie with Great Britain. Swayed by that feeling, they were disposed to take a favorable view of German

chances. The number who were actively pro-German, favorable, that is, to German predominance within and over the Union, were, however, a mere fraction even of this minority. General Botha held the decision in his own hands, and unfortunately for their projects the Germans had reckoned without him. Not only were General Botha and General J. C. Smuts men of military experience who could not fail to see the meaning and intention of German measures in Southwest Africa; they were statesmen capable of taking and of acting upon long views. The Cape statesmen knew that German professions regarding the independence of the Union were hollow. The nominally independent Union was meant to be a German dependency, and between a German dependency and a British dependency the choice was between military and commercial constraint and

had thought out a sound plan of campaign. According to all the available indications the Germans, in the event of hostilities, expected the main attack from across the Orange river. On the face of things, indeed, it did not seem probable that an inroad would be attempted with large forces from the coast across the desert belt. Such operations were not, it was apparently thought, likely to be more than a diversion. The water and transport problems were deterrent. Besides, even assuming that the coast desert could be crossed in force, there were the boundary mountains to penetrate. On their slopes facing towards the coast these are totally bare of vegetation, masses of rock worn and broken by time into the wildest and most fantastic outlines. A German force, when hostilities were declared, took possession of the port and buildings at Walfisch Bay. During June and July, 1914, some thousands of men who had served with the German forces in the colony and passed into the reserve had been sent out again to bring up the garrison to war strength. The main body of the troops were now concentrated to the south, less, however, with the intention of standing upon the defensive than of launching, when the moment came, a counter-offensive in association with disaffected elements in the Union, whose numbers and influence the German government had been led greatly to exaggerate. This proposed counter movement was the substance of the German plan. Safe on the side of the coast, they had apparently little doubt in any event of being able to obstruct an advance from south to north across Great Namaqualand. Whether or not he surmised the nature of the German plan, and the probability is that he did, General Botha's scheme was calculated most effectively to circumvent it. The first of the Union forces, five regiments of the South African Mounted Rifles, the Witwatersrand Rifles, and three batteries of the Transvaal Horse Artillery, under the command of Brigadier General Lukin, sailed from Cape Town on September 2. They landed at Port Nolloth in Little Namaqualand. From Port Nolloth through the hills, which here south of the Orange river come close to the coast, there is a light railway. It runs inland some fifty miles or so to Steinkopf, and then turns south to O'okiep, a copper mining center. At Steinkopf, Lukin was to establish his base, since he was then within striking distance, a matter of forty-five miles, from Raman's Drift, one of the main crossings of the Orange river. The country between is difficult, very hilly and rough, and almost wholly devoid of water. On its face this move was intended to check any German incursion into Union territory from Nababis. But it served incidentally to divert attention from the next step—the seizure of Lüderitzbucht, and the more so because at Upington, 100 miles east of Nababis, preparations were afoot for an advance by a column of Union Mounted Infantry to cooperate with Lukin. A fortnight after Lukin's force had embarked there sailed from Cape Town in four transports an expedition of Union regulars, two regiments of infantry, a section of the Cape Garrison Artillery, a battery of the Citizen Artillery, and a squadron of the Imperial Light Horse. The destination of these troops, who were commanded by Colonel Beves, was Lüderitzbucht, and the flotilla, escorted by H. M. S. *Astraea*, arrived off that place on September 18. Knowing that retention of the town, even were it possible, was less important than control of the railway, with the power to destroy it, the German commandant had ordered

GENERAL BOTHA'S CAMPAIGN IN GERMAN
SOUTHWEST AFRICA

freedom. Looking towards Southwest Africa and the cloud there gathered; knowing that it was at once a menace to freedom and the common welfare; and having now the control of their own affairs and the power to undo past mistakes of British imperial policy, the Union government speedily made up their minds that it was alike their duty and their interest to rid the sub-continent of this threatening portent. Having so decided they lost no time in passing to acts. The formal requisition to move came from the British government at home. The reply of the South African government to the requisition from London was prompt and affirmative. There was some difference of view in the Federal Parliament, but the overwhelming weight of opinion both in the House and outside proved to be with General Botha, and when the necessary proportion of the Reservists were called up they responded unhesitatingly. (See also SOUTH AFRICA, UNION OF: 1914.) The South African government, however, did more than decide promptly. General Botha

an immediate evacuation, and had retired along the railway to Kolmanskuppe, some ten miles inland.—Based on E. Dane, *British campaigns in Africa and the Pacific*, ch. 1, and pp. 29-34.

1. SOUTH AFRICAN REBELLION.—On September 26 at Sandfontein, a small force of South African Mounted Rifles and Transvaal Horse Artillery were forced to surrender to the Germans. About two weeks later the cause for this and other failures revealed an ugly state of things in the northwest of the Cape province. Colonel S. G. Maritz, who had fought on the Dutch side in the South African War, commanded the British forces. General Botha suspected his loyalty and dispatched Colonel Brits to take over his command. Maritz refused to come in and delivered an ultimatum. This declared that unless the government guaranteed that before a certain date Generals Hertzog, De Wet, Beyers, Kemp, and Muller should be allowed to come and meet him and give him their instructions, he would invade the Union. To quote a dispatch of the governor general: "Maritz was in possession of some guns belonging to the Germans, and held the rank of general commanding the German troops. He had a force of Germans under him, in addition to his own rebel commando. He had arrested all those of his officers and men who were unwilling to join the Germans, and had then sent them forward as prisoners to German South-West Africa. Major Bouwer saw an agreement between Maritz and the Governor of German South-West Africa [Dr. Seitz], guaranteeing the independence of the Union as a republic, ceding Walfisch Bay and certain other portions of the Union to the Germans, and undertaking that the Germans would only invade the Union on the invitation of Maritz. Major Bouwer was shown numerous telegrams and helio messages dating back to the beginning of September. Maritz boasted that he had ample guns, rifles, ammunition, and money from the Germans, and that he would over-run the whole of South Africa." The immediate result of this discovery was the proclamation of martial law throughout the Union and a general strengthening of the Union forces. Meantime Maritz proved a broken reed to his new allies. His one asset was an intimate local knowledge of the waterless northwest. He fixed his base near Upington, on the Orange, and dispatched a portion of his command of 2,000 to march southward up the Great Fish river against Kenhart and Calvinia. Colonel Brits lost no time in harrying the Upington commando, and on October 15 captured a part of it at Ratedrai, many of the men voluntarily surrendering. Maritz then moved west down the Orange to Kakamas, where Colonel Brits fell upon him so fiercely that he lost all his tents and stores, and was compelled to withdraw, wounded, over the German frontier. He made another sally on the 30th, but was conclusively beaten by Brits at Schuit Drift, and driven finally out of the colony. The South African rebellion which had been fomented by General Hertzog (whom Botha dismissed from the ministry), Delarey, Beyers, De Wet and old Boer leaders was not long in revealing itself. On October 24 De Wet seized Heilbron in the north Free State and Beyers' commando threatened Pretoria. General Botha summoned the burghers to put down the revolt—and 30,000 responded. De Wet, Beyers and Kemp were soon on the run. De Wet on November 7 at Doornberg defeated a Union force under General Cronje. His army numbered about 2,000 men. Botha having pretty well cleared the Transvaal on November 11 got

in touch with De Wet east of Winburg. General Botha's plan was to surround the whole rebel force, two Union armies, under Colonels Brits and Lukin, working round its flanks. De Wet was completely defeated. He at first fled south, but presently doubled back, and on the 16th was at Virginia, on the main line. Presently some of the rebel commandants began to come in, and many who had taken up arms, attracted by the clemency of General Botha's proclamation, laid them down again. De Wet was aiming at a junction with Beyers, who was in the Hoopstad district at the time. On the 15th, Colonel Celliers had fallen upon Beyers at Bultfontein, and had beaten him thoroughly. Accordingly De Wet fleeing from Virginia down the Sand and Vet rivers, found Celliers ahead of him, and heard of Beyers' disaster. He saw that the game was up, and halted his force near Boshof. There seems to have been considerable disaffection in its ranks, and in a final address to them he advised all who were tired of fighting to hide their rifles and go home. Many took the advice, including two of his sons, many yielded themselves to the Union forces, but De Wet himself, with twenty-five men, made one last dash for liberty. On November 21 he tried to cross the Vaal, and was driven back by Commandant Dutoit. In the evening, however, with a following now reduced to six, he managed to slip over the river about Bloemhof, and took the road for Vryburg and the northwest. The end came finally on December 1, when, at a farm called Waterburg, about a hundred miles west of Mafeking, De Wet and his handful surrendered to Colonel Jordaan. He was taken to Vryburg, and two days later entered Johannesburg a prisoner.—Based on J. Buchan, *Nelson's history of the war*, v. 3, ch. 23.—See also SOUTH AFRICA, UNION OF: 1914.

2. END OF THE REBELLION.—With the capture of De Wet the rebellion was virtually at an end. Kemp fled west. He had some fighting at Kuruman, from which he headed south-west across the Southern Kalahari. He was engaged again north of Upington, and it was a very battered remnant which ultimately crossed the border of German Southwest Africa. Early in December, General Botha organized a great sweeping movement from Reitz, which ended in the surrender of Wessels with the only large body of rebels still in the field. Beyers, with a small commando, after his defeat at Bultfontein had haunted the southern shore of the Vaal between Hoopstad and Kroonstad. On the morning of December 8 he fell in with a body of Union troops under Captain Uys, and was driven towards the river. He and some companions endeavored to cross the Vaal, which was in high flood, and, midway in the stream, he found his horse failing, and slipped from its back to swim. His body was found two days later.—Based on J. Buchan, *Nelson's history of the war*, v. 4, ch. 32.—Maritz and Kemp with about 1,200 men were defeated by Colonel Van der Venter at Upington on January 23, and Kemp, surrendered unconditionally a few days later. Maritz fled back to German territory.—See also SOUTH AFRICA, UNION OF: 1914.

(c) East Africa.—German plans.—Bombardment of Zanzibar.—When war was declared in August, 1914, the Germans in East Africa were ready. The thousand miles of central railway from Dar-es-Salem to Ujiji had just been completed for traffic. The German planters, some 3,000 in number, were of course called out. Of guns, machine-guns, rifles and military tools of all

charge of this post, held out against all the efforts to rush the position. He was relieved eventually by a column made up of the Jind Infantry and the King's African Rifles. The enemy was compelled to retreat, and it proved to be the end of his Mombasa project. With the door at Mombasa open the British held the means of, in time, turning the balance. Meanwhile, on the British side the decision had been formed to pass to the offensive, and a plan had been adopted for squeezing the Germans out of their positions along the frontier by on the one flank attacking them at Longido, and on the other turning them by a landing in their right rear at Tanga. If successful, this latter operation would enable a move to be made inland along the railway to Wilhelmstal, and force evacuation of the Usambara plateau, a dominating rise it was desirable to seize. In accordance with the decision, there was sent from India a further reinforcement of 6,000 troops under the command of Major General Aitken. Tanga was their destination, and the transports arrived off that port on November 2. The British information was that the town was not defended. Likely enough, when that intelligence was gleaned the town was not, but either the enemy had got wind of the intended descent, or suspected it. At any rate, he had thrown a strong garrison into the place. Further, he had very carefully barricaded the streets and loopholed the houses, and the woods and cane bush by which Tanga was surrounded had been elaborately set with traps and entanglements. On the arrival of the ships, General Aitken sent ashore a summons to the German commandant to surrender. The demand was refused. As it soon became evident that the place was held in strength, the direct attempt to land was not persisted in. In face of the enemy's guns the attempt would have been impracticable. Not willing to give the project up, however, General Aitken two days later threw part of his force ashore at the South end of the bay. To reach the town the troops had to struggle through the bush. The infantry resistance met with was not serious, but the enemy batteries were turned upon the advance, their fire guided by a variety of ingenious devices. The cane bush grows to a height of eight feet or more, so that to detect movement through it by direct observation was not easy. But the enemy had set traps which, when disturbed, signalled the range to his gunners. In spite of this, the attacking troops fought their way forward to and into Tanga. There the fighting became a succession of furious street combats, and the storming of barricades and houses. Possibly enough, if at this point the rest of the Expeditionary Force had been thrown ashore at the port, the place might have been won, but on the transports the situation seems to have been thought less favorable than it was. Hence the attacking column, instead of the support they had looked for, received the order to withdraw. Their losses, of course, were further increased during the retirement and they were sufficiently serious—nearly 800 officers and men. Though it did not in any way shake the morale of the force, this was an unpleasant check, rendered none the less unpleasant by the lack of success which had also attended the Longido enterprise. The cause in that instance was a breakdown in the water transport. The troops fought well, but after hours of hard fighting in the tropics men parched with thirst which no means are found of relieving are in almost the most intolerable position it is possible to imagine. The defenses won had to be evacuated. There was

little use in retaining conquered positions when they could only be held at the risk of perishing from lack of water. But though the grand scheme for a converging offensive had fallen through, another effort was made to relieve Mombasa from menace, for until that was done no important advance towards the interior could be undertaken. Accordingly, the enemy was attacked at Vanga and driven out, and the town garrisoned by a force of Indian infantry under the command of Colonel Ragbir Singh. Unwilling to sit down under this reverse, the Germans attempted a recapture, and with a powerful column. The defense was brilliant. The garrison fought until they had fired their last shot. Their gallant commander had fallen beating off an assault. Happily, just at this critical juncture, the distant boom of guns and roll of rifle fire announced that relief had arrived. The German forces were pressed back over the frontier. Substantially this was the situation when, in April, 1915, the command was transferred to Brigadier General Tighe. The Germans still held Taveta. Beyond that, however, their plan had come to nothing. It is here advisable to glance at operations in other parts of this vast theater of hostilities. They include some of the most romantic episodes and adventures of the war.—Based on E. Dane, *British campaigns in Africa and the Pacific*, ch. 5.

2. CAPTURE OF KARUNGU.—ATTEMPT TO INVADE UGANDA.—In September, 1914, part of the force under the command of Major General von Wehle had seized Karungu, a small port on the Victoria Nyanza just across the British East Africa boundary. The purpose of von Wehle's advance was occupation of the port and railway terminus at Kisumu, and the isolation of Uganda. Apparently it had been assumed, first, that the British, concerned for the defense of Mombasa, would have few troops at this inland end of the railway, and, secondly, that a German invasion and occupation of Uganda would prove fairly easy. Both assumptions turned out to be wrong. With the arrival of reinforcements from India the British, instead of weakening their force at Kisumu, had strengthened it, and they reacted promptly. Two squadrons of the East African Mounted Rifles were sent from Kisumu to Karungu on the steamer *Winifred*. But the German attack on the latter place was supported by the German armed steamer *Mwanza*, and *Winifred*, chased off by her, was compelled to return. A mounted column, however, was sent south to Karungu overland, and the Germans fell back. The real reason for withdrawal was the resistance met with on the Uganda boundary from the native troops of the protectorate. The resistance was stiff, so stiff that von Wehle could make no headway. In January, in fact, he found himself placed on the defensive. Not only had his invasion of Uganda been beaten off with a considerable loss on his side, but *Mwanza* had been attacked and disabled, and east of the Victoria Nyanza the British column from Karungu had crossed the German frontier and captured Shirati. That, however, was by no means the worst. Sent up country with his brigade, General Stewart had made Karungu his headquarters, and in order once for all to cripple the German operations against Uganda, lost no time in organizing an expedition across the lake to Bukoba. Stewart's force, which included British as well as Indian troops and a detachment of Driscoll's Frontiersmen, who had joined as mounted scouts, was to cooperate with a Uganda column moving down the Kagera river. The enterprise

proved entirely successful. While a demonstration was made from the water front a battalion of Lancashires, previously thrown ashore at day-break some miles to the south, attacked from inland, entered the town and speedily mastered it. The munitions and military stores found were large. So far as time allowed these were seized and shipped. The remainder were destroyed, and to the Germans the loss was more serious than that of men. The destruction of their base at Bukoba meant that Uganda was henceforth safe from their attentions.—Based on E. Dane, *British campaigns in Africa and the Pacific*, ch. 5.

3. OPERATIONS IN NYASSALAND.—CAPTURE OF GERMAN POSSESSIONS IN THE PACIFIC.—In the south at the outbreak of the war the King's Rifles reserves had been called out, volunteers enrolled and the mobilization was completed at Livingston, capital of Nyassaland, in a little over a week. Captain Barton, D. S. O., Northampton Regiment, had command of the force which was divided into double companies. The troops were embarked in the Lake Nyassa flotilla and were concentrated at Karungu by August 22. The Germans had placed an armed steamer *Hermann von Wissmann* in the lake and Commander E. L. Rhodes in the British armed steamer *Gwendolin* found the boat in the German port of Sphinkhaven, destroyed it and made prisoners of the crew. This was on August 13. On land the Germans were out first. On August 20 they crossed the Songwe river—the boundary—and seized Kapora which they had laid out as an advanced post. Barton leaving a detachment at Karungu marched on Rufira where the Germans were concentrated. They were held up by the enemy at the crossing of the Lufira river but scattered their opponents and moved on. This effort was to hold Barton while the German main body attacked Karungu, but here the British put up a stout defense for four hours—when Captain Griffith arrived with a double company and forced the enemy to retire. Barton with the remainder of his force fell upon them crossing the Kassa river and they were completely routed. The Nyassaland adventure was never renewed.—*Ibid.*

VII. GERMAN PACIFIC ISLANDS

In August and September, 1914, joint Australian and New Zealand expeditions took possession of the German island colonies and the great semi-continental area of New Guinea. German Samoa was captured by the British without opposition on August 29. German New Guinea, which with the Bismarck Archipelago off the coast has an area of 90,000 square miles, was attacked by an Australian expeditionary force (Admiral Patey) early in September. After eighteen hours of bush fighting Herbertshöhe and Rabaul, the seat of the government, were garrisoned by a naval force under Commander Beresford, September 12-14. On Sept. 13, 1914, the British flag was hoisted over Rabaul and Admiral Patey read a proclamation formally setting out the occupation. The Caroline islands, first occupied by Japan, were turned over to New Zealand. The Marshall and Solomon islands were likewise occupied on Dec. 9, 1914, thus completing the tale of Germany's colonial possessions in the Pacific.—See also PACIFIC OCEAN: 1914-1918.

VIII. CANADA AND OTHER BRITISH DOMINIONS

(a) Canada.—First contingent of Canadians dispatched to England.—“Nothing could dem-

onstrate the vitality and energy of the Canadian people more convincingly than the manner in which they met the news of the outbreak of the war. They were hardly in a condition, one would think, to bear any additional burdens. [See also CANADA: 1914 (July).] The news of the declaration of war came suddenly, and with a spontaneity that has astonished the world, Canada recognized that this was her war quite as much as it was the Old Country's. . . . With the announcement that British troops were to cross the Channel to take their place alongside the French and Belgian armies, came the realization that Canada's manhood would also have to take its place in the firing line. . . . All over Canada there was the same enthusiasm. Financial depression was forgotten, and even party feeling—politics play a large part in Canadian life—was laid aside, and the people of Canada stood united like one man, animated with one sole object, to 'see the thing through.' . . . The Opposition no less than the Government flung themselves wholeheartedly into the work of speedily putting to some practical purpose the sentiments that had stirred the people of Canada to the very depths. Quickly a contingent of 33,000 men was raised, and the village of Valcartier, about eighteen miles from Quebec, was in a few weeks turned into a military camp. Crops were gathered in, and farmsteads disappeared to make way for rows of white tents. The peaceful village was replaced by a martial city complete with streets, sewers, and water mains, electric lights, and telephone. The troops began to roll in from every quarter of Canada. There was no lack of men to volunteer for service. Recruiting went on briskly, and men had to be turned away in scores and await formation of further contingents. In a few weeks the contingent of 33,000 men were dispatched to . . . [England] to undergo training on Salisbury Plain. [See CANADA: 1914 (September-October).] The transports were convoyed over by British warships and landed . . . without being interfered with by the enemy . . . In the meantime the Royal Canadian Regiment, a Regular regiment, had been dispatched to garrison Bermuda, and further contingents for service at the front . . . were . . . recruited.”—A. B. Tucker, *Canada and the Great War (Oxford pamphlets, pp. 4-7)*.—See also CANADA: 1914-1918: Canadian Military and Naval Activities.

(b) India.—Immediately upon the outbreak of the war “the Maharaja of Nepal, with its population of 5,000,000, its 30,000 soldiers and 250 modern guns, placed the entire resources of his state at the disposal of the King-Emperor; the Maharaja of Bikaner, who afterwards fought in France, telegraphed the Viceroy that: ‘I and my troops are ready and prepared to go at once to any place, whether in Europe or India, or wherever our services might be usefully employed, in interest of the safety, honour, and welfare of our Sovereign and his dominions’; the Nizam of Hyderabad sent word that ‘my sword and the whole resources of my State are His Majesty's to command, for England and the Empire’; the ruler of the ancient state of Rewa asked the Viceroy: ‘What orders from His Majesty for me or my troops’; the Rajah of Pudukota offered ‘all I possess’ and asked permission to raise and lead a regiment of his subjects; the Gaekwar of Baroda proffered all his troops and resources. . . . On Sept. 8th the British Secretary of State for India received a dispatch from the Viceroy (Lord Hardinge) stating that: ‘The Rulers of the Native States in India, who number nearly seven hundred in all, have with one accord rallied to the defense

of the Empire and offered their personal services and resources of their states to the war. . . . Twenty-seven of the larger states in India maintain Imperial Service Troops, and the services of every corps were immediately placed at the disposal of the Government of India on the outbreak of war. The Viceroy has accepted from twelve states contingents of cavalry, infantry, sappers and transport, besides a camel corps from Bikaner, and most of them have already embarked. . . . The Indian Expeditionary Force was the first contingent from the Empire, outside of Great Britain, to see active service. Two other contingents were also despatched from India and one of them operated from the Persian Gulf up to the Tigris and included British regiments as well as Mahratta Light Infantry battalions; another acted in East Africa with the Lancshires, the 101st Grenadiers, etc., and was composed of the 13th Rajputs, the 38th Dogras, and other regiments. British troops formed a portion of the Force which went to France and all its Artillery batteries were composite in character. There was plenty of material to draw upon. The Indian Army in peace time consisted of about 75,000 British troops, 160,000 Indian troops, 100,000 troops maintained by Native States, 212,000 Imperial Service troops (Native) 22,000 Burma Military Police and 35,000 Native reservists, with 37,000 men in Volunteer Corps. In the contingent there were ten Gurkha regiments and others made up of Rajputs, Jats, Mahrattas, Madrasis, Dogras, Brahmans; amongst the Mohammedans there were Pathens, Punjabis and Baluchis; there were, of course, Sikhs and a few Christians. On Sept. 25th the first Indian Force, numbering about 70,000, landed at Marseilles, France."—J. C. Hopkins, *Canadian Annual Review of Public Affairs*, 1914, pp. 120, 121, 123.

(c) *Australia*.—"Australia was able to take an active part in the War during its first five months through the possession of a fleet of battleships. The Commonwealth had available in its own waters the battle-cruiser *Australia* of 19,000 tons, carrying eight 12-inch guns and running 25 knots; two second-class cruisers of the Bristol type, 4,800 tons (the *Melbourne* and the *Sydney*) with 6-inch guns and a speed of 25 knots; one second-class cruiser, the *Encounter*, lent by the Admiralty, with three destroyers and two submarines. Action was taken by the Government before the outbreak of War. On Aug. 3rd, when the issue trembled in the balance, H. E. Sir R. C. Munro-Ferguson (who had been appointed Governor-General on Feb. 7th) cabled the Colonial Secretary as follows: 'In the event of war Commonwealth of Australia prepared to place vessels of Australian Navy under control of British Admiralty when desired. Further prepared to despatch Expeditionary Force of 20,000 men, of any suggested composition, to any destination desired by the Home Government. Force to be at complete disposal of Home Government. Cost of despatch and maintenance would be borne by this Government.' . . . [The offer was gratefully accepted and] on Aug. 10 the Commonwealth Navy was formally handed over to Admiralty control until the end of the war. . . . The 1st Australian Imperial Force, as eventually despatched from Melbourne on Oct. 17th, was composed of 798 officers and 19,545 men, 1,884 horse and 6 18-pounder, 9-inch firing guns and 24 machine guns. The troops required 23 large passenger ships for conveyance and were conveyed to Egypt with great secrecy and in ultimate safety (Dec. 3rd) by a Fleet of British, Australian, French and Japanese war-ships."—J. C. Hopkins, *Canadian Annual Review of Public Affairs*, 1914, pp. 97, 98, 101.

(d) *New Zealand*.—On Aug. 3rd, proclamations were issued placing the New Zealand Naval forces under Admiralty control and calling out the Royal Naval Reserves. New Zealand also proposed to raise a contingent immediately and in response to suggestions from London this took the form of a mounted Rifle Brigade, a Field Artillery Brigade and an Infantry Brigade. The New Zealand government assumed all financial responsibility for these troops and for a force of 200 Maoris which were sent to Egypt. "Within three weeks' time the New Zealand Force was complete and its Citizen Army . . . had supplied 8,000 men and also a small contingent for service in Samoa. . . . About the middle of October the Force, including Batteries and field ambulances and signal corps and some 4,000 horses, was on board transports in Wellington Harbor with a convoy of battleships in attendance which included one of Japan's first-class battle-cruisers and various British and Australian ships."—J. C. Hopkins, *Canadian Annual Review of Public Affairs*, 1914, p. 105.

(e) *Union of South Africa*.—"When war broke out the Botha Government [in the Union of South Africa] acted at once and a cable from the Chief Justice and acting Governor-General, Lord de Villiers, was sent on Aug. 4th to the Colonial Secretary as follows: 'The Government fully recognizing the obligations of the Union in the event of hostilities, wishes to assure you of its preparedness to take all such measures as may be necessary for the defence of the Union. Should His Majesty's Government require the Imperial troops now stationed in South Africa, and who are not connected with garrison artillery in any other part of the world, Ministers would gladly employ the Defence Force of the Union for the performance of the duties entrusted to the Imperial troops in South Africa.' Mr. Harcourt, on the 6th, gratefully accepted the offer, and announced the immediate recall of all troops not absolutely required for special duties. [The Union Defence Force was at once mobilized and the premier announced that] in accordance with the wishes of the Imperial Government it was their intention to undertake offensive operations against German South West Africa. . . . An amendment in the Assembly, moved by General Hertzog, had deprecated offensive action against the German territories and was defeated by 92 to 12; a similar motion in the Senate was beaten by 24 to 5. In his speech the Premier stated that the Defence Force had been mobilized and that in accordance with the wishes of the Imperial Government it was their intention to undertake offensive operations. . . . It was announced a little later that General Botha would take command of the Forces himself and to his rank of Honorary General in the British Army was added that of General."—J. C. Hopkins, *Canadian Annual Review of Public Affairs*, 1914, pp. 109-110.

(f) *Newfoundland*.—"When War commenced . . . [Newfoundland] was anxious to help in every possible way. It had immediately available Naval Reserves numbering 600 trained sailors and fishermen. The population was only 240,000 with revenues of about \$4,000,000, but Sir W. E. Davidson, the Governor, on Aug. 8th, cabled the Colonial Secretary that: 'Authority is desired by my Ministers to enlist special men for service abroad by land and by sea. Ministers undertake to raise force of Naval Reserve by the 31st October to thousand efficient, available for naval service abroad for one year, and are willing to meet all local expenses. Several hundred efficient, local brigade training officers for enlistment for land service abroad. Five hundred

could, I believe, be enlisted within one month. Propose to induce serviceable men between 18 and 36 years enlist; training home defence wherever corps' instruction available. Material for further draft would be formed by these.' . . . [This offer was accepted, and the Government also undertook] to raise at once a Newfoundland Regiment of 500 men for land service abroad and to recruit a force for later despatch. The first Newfoundland Contingent embarked with the first Canadian Contingent and reached England in due course where they trained with the Canadians on Salisbury Plain."—J. C. Hopkins, *Canadian Annual Review of Public Affairs*, 1914, pp. 126-127.

(g) **British Crown Colonies.**—"When the immediate danger of invasion had been removed [by the wreck of the *Karlsruhe*] the British West Indies' claim to participate actively in the war could no longer be refused. In Jamaica a body entitled the Jamaica War Contingent Committee, of which Mr. William Wilson, O.B.E., was the moving spirit, had been formed to raise voluntary subscriptions for sending a war contingent overseas. The Governor of the colony, Sir William Manning, then took the matter up with the Imperial Government, and to the intense joy of the people it was announced in May 1915 that contingents for active service could be accepted from Barbados, Jamaica, British Guiana, and Trinidad. Recruiting committees were immediately set up and West Indians flocked to the colours. But the movement was not confined to the larger islands and British Guiana. The smaller colonies and British Honduras could not be denied the privilege of serving their King and Empire, and, following upon their urgent representations, recruiting was opened throughout the West Indies. [In 1916 Bermuda sent a battery of artillery.]"—C. Lucas, *Empire at war*, v. 2, p. 334.

IX. NAVAL OPERATIONS

(a) **Control of the sea.**—British navy: Ships, harbors and personnel.—Navies of France, Germany, Austria and Russia.—Plans of sea campaign.—"When hostilities opened, the naval fleets of the countries involved were concentrated in well-defined theatres of operations. Disregarding the small detachments on independent or foreign service, the bulk of Great Britain's fleet faced the German high seas fleet in North Europe [see above: Preparation for war: a], while the French navy was opposed to the Austrian navy in the Mediterranean and Adriatic. Russia's navy had not been rehabilitated since the Russo-Japanese war, but the few ships she had guarded Russian Baltic and Black Sea coasts. . . . At the beginning of the war the Allies had superior sea power and consequent potential control in the Atlantic, Pacific, Indian Ocean, Mediterranean Sea, Black Sea, North Sea—in short, in all sea areas excepting those adjacent to the ports and naval bases of the Central Powers, namely, the Adriatic near Austria's ports, the North Sea and the Baltic adjacent to Germany's ports, and the Sea of Marmora, the Dardanelles, and the Bosphorus, under the control of Turkey. . . . When nations of maritime importance are at war, relative control of the sea, or certain parts of the sea, belongs to the belligerent whose sea power has practically driven the sea power of the other from the areas in question, so that the maritime operations of the former, both naval and commercial, are practically unhindered, while the maritime operations of the latter are for the time being practically non-existent."—C. C. Gill, *Naval power in*

the war, 1914-1917, pp. 19, 13, 11.—The British naval "organisation in Home Waters was based on three fleets, in progressive states of readiness for war. In the First were a fleet flagship and four battle squadrons, the 1st, 2nd and 4th consisting of 'Dreadnoughts,' and the 3rd of eight 'King Edwards,' the last development of the 'Majestic' type. In July 1914 the 'Dreadnought' battleships in commission numbered twenty against the German thirteen, and ship for ship the German, though better protected, were inferior in gun power to our own, while against the *Agamemnon* and the eight 'King Edwards' they had five 'Deutschlands' and five 'Braunschweigs' of inferior armament. The First Fleet had also a squadron of four battle-cruisers, all except one being of the latest type, with eight 13.5-inch guns, against which the Germans could show on the North Sea three of an earlier type armed with 11-inch guns. In cruisers our First Fleet entirely over-weighted the [German] High Seas Fleet. Besides the cruisers attached to the battle squadrons, it had four squadrons, the 2nd, 3rd, and 4th (of which, however, the 4th was actually in the West Indies), and a light cruiser squadron. It had also attached to it the first four flotillas of destroyers, each comprising a cruiser leader and twenty units. This was in effect the 'Grand Fleet,' which was intended to be in position to occupy the North Sea at the outbreak of war, and it was always kept in full commission ready for immediate action. The Second Fleet consisted of the *Lord Nelson* (four 12-inch, ten 9.2-inch) as Fleet flagship with the 5th and 6th Battle Squadrons, that is, five 'Duncans,' eight 'Formidables,' and the *Vengeance*, each armed with four 12-inch and twelve 6-inch, to which the Germans could oppose only five 'Wittelsbachs' and five 'Kaiser Friedrichs,' armed with four 9.4-inch and fourteen to eighteen 5.9-inch. These obsolescent German ships also formed [a second fleet, designed, with the older armored and protected cruisers], . . . to operate in the Baltic and keep the Russian Fleet in check. Assigned to our own Second Fleet were two cruiser squadrons, the 5th and 6th, but this was for administrative purposes only. They formed no part of its war organisation, but . . . were allotted other duties of immediate importance. In the same way there was nominally attached to it the bulk of the Home Defence Patrol Flotillas. They comprised seven flotilla cruisers, four patrol flotillas and seven flotillas of submarines. Except for the submarines this fleet was not on a war footing, but was manned by what were called 'Active Service Crews,' consisting of all the specialist officers and about three-fifths of the full complement of men."—J. Corbett, *Naval operations (History of the Great War based on official documents)*, v. 1, pp. 11-12.

Admiral Sir John Jellicoe was placed in supreme command of the home fleets. "The great bulk of the navy was concentrated in home waters, although imperial requirements necessitated the presence of a few squadrons in foreign waters. In the Mediterranean were three battle-cruisers, seven cruisers of different types, and a complement of torpedo craft and submarines. In Asia, on the East Indian and China stations, were a couple of battleships, some half-dozen cruisers, and other smaller vessels. In Australasian waters there were two small but powerful squadrons. Various cruisers and gunboats were stationed on the African and American coasts, while five cruisers were in the Western Atlantic. . . . As regards home bases for the support of the British Navy, the Napoleonic wars had resulted in the chief of them

being sited on the south coast of England. The new menace across the North Sea had, however, the effect of bringing the east coast of Great Britain into greater prominence, and the growth of the German Navy was followed by the construction of additional bases on what had now come to be the strategic coast line. . . . The dockyard at Chatham [was] for building and repairing all but the largest types of warships, and of recent years an artificial harbour had been constructed at Dover which was chiefly used as a headquarters for British torpedo craft. On the Firth of Forth, at Rosyth, a British repairing dockyard with three large docks had been commenced, but . . . was not complete when war broke out; while further north at Cromarty was a commodious harbour . . . defended by batteries manned by Royal Marines. In addition to Dover, torpedo bases existed at Sheerness (where there was a dockyard for their repair), Harwich, the Humber, Rosyth, and Scapa Flow in the Orkneys; while naval air stations had been organized at the Isle of Grain, Felixstowe, Great Yarmouth, Dundee, Montrose, and Fort George near Cromarty. The number of men actually serving when war broke out was, in round numbers, 151,000. To reinforce these there were three reserves available. The Royal Fleet Reserve, formed in 1900, consisted of seamen, stokers, and marines who had served in the Royal Navy and who, for a retainer, accepted the liability of recall. On the 1st January, 1914, the total strength of this reserve was just under 28,000. Next came the Royal Naval Reserve, consisting of officers and men of the mercantile marine and fishing industry, who received short terms of training in peace. Its strength on the above date was between 17,000 and 18,000. In 1910 the formation of a Trawler Section of the Royal Naval Reserve had been decided on—a far-seeing and most valuable decision in view of the important work which 'mine-sweeping' was found to demand. Lastly there came the Royal Naval Volunteer Reserve consisting of men chiefly in civil life whose taste for the sea led them to undergo naval instruction in their leisure time."—F. E. Whitten, *Marne campaign*, pp. 50-52.—"The French navy comprised twenty-two battleships, nineteen armoured cruisers, twelve light cruisers, eighty-four destroyers, one hundred and thirty-five torpedo boats, and seventy-eight submarines. As early as 1912, the Entente Cordiale between Great Britain and France resulted in the general scheme that France would look out for British naval interests in southern Europe, while Great Britain would protect French naval interests in northern Europe. France had only four cruisers engaged in distant service. Germany's navy consisted of thirty-five battleships, five battle cruisers, nine armoured cruisers, forty-five light cruisers, one hundred and forty-three destroyers, and about thirty-five submarines. This fighting strength was concentrated in home waters except for one battle cruiser, two armoured cruisers, eight light cruisers, and one destroyer on duty abroad. Austria's navy numbered twelve battleships, ten cruisers, eighteen destroyers, sixty-three torpedo boats, and ten submarines. All of these, with the exception of one armoured cruiser on the China station, were in home waters."—C. C. Gill, *Naval power in the war, 1914-1917*, p. 20.—With regard to Russia's naval power, "her Black Sea Fleet for the purpose was off the board, and in the Baltic she had only four battleships in commission. . . . She had also there four of her new fleet of eight 'Dreadnoughts' which had been launched in 1911, but only two of them were approaching comple-

tion. Besides these she had the *Ryurik*, in which the Commander-in-Chief, Admiral von Essen, flew his flag, and four cruisers. . . . A force relatively so weak could only be regarded by the Military Authority, under whose supreme direction it was, as part of the defence of the capital. Their policy was one of concentration in the Gulf of Finland. . . . Except, therefore, for such influence as the Russian Fleet could exert by forcing the Germans to watch it with a superior force, it could have no effect upon our own disposition."—J. S. Corbett, *Naval operations (History of the Great War based on official documents, v. 1, p. 9)*.—On the outbreak of war the French armoured cruisers *Dupleix* and *Monicarm* and the Russian light cruisers *Askold* and *Zemchug*, in the Far East, were placed under British command. "Broadly speaking, Great Britain's plan of naval campaign at the outbreak of hostilities aimed: first, to destroy the enemy fleets with superior forces, or, failing in this, to confine the enemy fleets and restrict his trade by a system of distant blockades; second, to convert potential control of the high seas into active control by destroying, capturing, or bottling up enemy men-of-war operating on foreign stations. On the other hand, the weaker German and Austrian navies instituted a different kind of campaign. The Teutonic powers planned: first, to operate the home fleets so as to protect their coast lines and control as wide as possible sea areas beyond, thereby preventing a close blockade and permitting commercial intercourse with neighbouring neutral countries; second, to use their naval vessels abroad so as to inflict the greatest possible damage on their enemies before being cornered and destroyed by superior Allied sea power or escaping to the shelter of home or friendly ports, as was the case when the *Goeben* and *Breslau* eluded numerous enemy ships in the Mediterranean and steamed safely through the Dardanelles to Constantinople; third, to interfere with and damage enemy commerce by means of submarines and commerce destroyers, such as the *Moewe*; and fourth, the Teutonic powers planned to lessen the disparity of force between their navies and the superior navies of their enemies by so-called attrition warfare, harassing and menacing the enemy in all possible ways, instituting raids with fast air and sea squadrons, attacking with mines and torpedoes, and watchfully seeking opportunity to fall upon a detached portion of the enemy fleet with a superior force."—C. C. Gill, *Naval power in the war, 1914-1917*, pp. 14-16.

(b) Opening of hostilities.—First encounters at sea.—Four British warships sunk.—The day after Great Britain had declared war on Germany, August 5, a British destroyer flotilla, shepherded by H. M. S. *Amphion*, was patrolling the approaches to the Channel when it surprised a small Hamburg-American liner, the *Königin Luise*, sowing mines off the estuary of the Thames. A destroyer gave chase and torpedoed the German craft; of its crew of 130, fifty were saved by the British. The *Amphion* herself next morning struck a mine and sank, with a loss of one officer and 130 men. British cruisers patrolling the North sea were attacked by German submarines. On August 10 it was announced that the German submarine *U-15* had been sunk by the cruiser *Birmingham*. On the 7th the *Suffolk* encountered the German cruiser *Karlsruhe* some 200 miles south of Bermuda in the act of coaling from the Hamburg-American liner *Kronprinz Wilhelm*, the last German liner to run out of New York before war was declared. The *Karlsruhe* escaped by superior speed and was sub-

sequently wrecked in the West Indies. A Franco-British squadron entered the Adriatic sea on August 16, sank an Austrian cruiser the next day, and on the 24th bombarded Cattaro. On the 27th *Kaiser Wilhelm der Grosse* was sunk by H. M. S. *Highflyer*, and the German cruiser *Magdeburg* was destroyed in the Gulf of Finland. The naval battle in the Bight of Heligoland was fought on the 28th, and on September 3, the British warship *Speedy* was sunk by a mine. The *Oceanic* was wrecked on the north coast of Scotland on September 8, and on the 10th the *Emden* first appeared in the Bay of Bengal. On the 13th the German cruiser *Hela* was sunk by a British submarine, and on the following day the British *Carmania* sank the German vessel *Cap Trafalgar* on the east coast of

OTTO WEDDIGEN

South America. The British gunboat *Pegasus* was disabled by the *Königsberg* at Zanzibar. "At sea the prospect appeared satisfactory, but few could have foreseen the lessons which the Navy was to give and take in this and the following months. The German Admiralty, in place of the fleet action to which they felt hopelessly unequal, now began to develop their submarine offensive, and on September 3 achieved their first success. The *Pathfinder* (Captain Martin Leake) the flotilla leader of the Forth Destroyer Patrol, was torpedoed by the U 21 and sank in four minutes with nearly all hands. This gain was more than balanced by the loss of the German light cruiser *Hela*. . . . But it could not be expected that the submarine account between the two navies could be kept even for long, since the power in control of the sea was offering daily an immensely greater number of targets than the enemy. On September 20 the three cruisers *Cressy*, *Hogue*, and *Aboukir*, which had

previously been employed on the Dogger Bank Patrol, were ordered to watch the area known as the Broad Fourteens, moving to the south at night and north again at daylight. At 6.30 a. m. on the 22nd the squadron was slowly steaming abreast, two miles apart, when the *Aboukir* felt an explosion on her starboard side and began to sink. Captain Drummond, supposing that he had struck a mine, signalled to the other ships. The *Hogue* (Captain Wilmoſ Nicholson) closed him at once and hoisted out her boats, but was herself struck immediately by two torpedoes. The *Cressy* (Captain R. W. Johnson) also had her boats out when at 7.17 she too was torpedoed twice. All three ships sank within three-quarters of an hour. The boats, with the help of two Lowestoft trawlers and two Dutch steamers, saved 777 men and 60 officers; 60 more officers and 1,300 men went down. The ships were obsolete, but the men were a serious and lamentable loss. We suffered here from a lack of precaution due to inexperience of submarine war: the German success, by their own account, was the work of a single boat, U-29 (Commander Weddigen), which was ordered to the Straits of Dover and accidentally fell in with our cruisers on the way. Three weeks later, on October 15, the Tenth Cruiser Squadron were cruising between Peterhead and the Naze in line abreast at ten-mile intervals, when at 10.30 p. m. the *Hawke* was torpedoed and out of her company of 500 only 3 officers and 46 men were picked up. . . . On October 27, while the Second Battle Squadron was putting to sea from the Mull anchorage for battle practice, the dreadnought *Audacious* struck a mine laid a few days before by the Norddeutscher liner *Berlin*, armed and fitted as a mine-layer. She struggled on in a heavy sea, and the White Star liner *Olympic* took off her crew and tried to tow her, but she steadily settled down, and at the end of twelve hours suddenly blew up and sank. In spite of the fact that her condition had been visible to a number of ships and several thousand people, some of whom had even photographed her from the deck of the *Olympic*, the Cabinet, at Admiral Jellicoe's request, decided to suppress the news of the disaster. Of all the concealments of the war this was the one most keenly resented and ridiculed."—H. J. Newbolt, *Naval history of the war, 1914-1918*, pp. 41-42, 50-51.

(c) British attack in the Bight of Heligoland. —Commerce raiders.—"Towards the end of August, 1914, the submarines under Commodore Roger Keyes discovered a rôle of quite unexpected utility. Their immediate function had been to watch the approaches to the Channel, so as to stop any attempt by the German Fleet to interfere with the transport of the Expeditionary Force into France. In doing this, they found that they had exceptional opportunities for observing the enemy's destroyers and light craft, and, as soon as the safety of the transports seemed assured, they constituted themselves the most efficient scouts possible. They soon found themselves in possession of an extensive knowledge of the habits of the Germans. It was this knowledge that led to the decision to sweep the North Sea up to Heligoland and cut off as many of the enemy's light craft, destroyers, and submarines as possible. The expedition included almost every form of fast ship at the Commander-in-Chief's disposal. First the submarines were told off to certain stations, presumably to be in a position to attack any reinforcements which might be sent out from Wilhelmshaven or Cuxhaven. Then, in the very earliest

hours of the morning, the two light cruisers *Arethusa* and *Fearless* led a couple of flotillas of destroyers into the field of operations. . . . The two flotillas, with their cruiser leaders, swept round towards Heligoland in an attempt to cut off the German cruisers and destroyers and drive them, if possible, to the westward. Some miles out to the west, Rear-Admiral Christian had the squadron of six cruisers of the *Euryalus* and *Bacchante* classes ready to intercept the chase. Commodore Goodenough, with a squadron of light cruisers, attended Vice-Admiral Beatty, with the battle-cruisers, at a prearranged rendezvous, ready to cut in to the rescue if there was any chance of *Arethusa* and *Fearless* being overpowered. The expedition obviously involved very great risks. It took place within a very few miles of bases in which the whole German Fleet of battleships and battle-cruisers was lying. It was plainly possible that the attempt to cut the German light cruisers off might end in luring out the whole Fleet, and one of the conditions contemplated was that Admiral Beatty, instead of administering the quietus to such German cruisers as survived the attentions of the two Commodores, might find himself condemned to a rearguard action with a squadron of German battleships. . . . *Arethusa*, *Fearless*, and the destroyers found themselves in action soon after seven o'clock with destroyers and torpedo-boats. Just before eight o'clock two German cruisers were drawn into the affray, and *Arethusa* had to fight both of them till 8.15, when one of them was drawn off into a separate action by *Fearless*, which in the ensuing fight became separated from the flagship. By 8.25 *Arethusa* had wrecked the fore-bridge of one opponent with a 6-inch projectile, and *Fearless* had driven off the other. Both were in full flight for Heligoland, which was now in sight. Commodore Tyrwhitt drew off his flotillas westward. He had suffered heavily in the fight. Of his whole battery only one 6-inch gun remained in action, while all the torpedo tubes were temporarily disabled. . . . The ship had caught fire, and injuries had been received in the engines. *Fearless* seems now to have rejoined, and reported that the German destroyer Commodore's flagship had been sunk. By ten o'clock Commodore Roger Keyes, in the *Lurcher*, had got into action with the German light cruisers and signalled to the *Arethusa* for help. Both British cruisers then went to his assistance, but did not succeed in finding him. All *Arethusa's* guns except two had meantime been got back to working order. At eleven o'clock *Arethusa* and *Fearless* engaged their third enemy, this time a four-funnelled cruiser. *Arethusa*, it must be remembered, still had two guns out of action. The Commodore therefore ordered a torpedo attack, whereupon the enemy at once retreated, but ten minutes later he reappeared, when he was engaged once more with guns and torpedoes, but no torpedo hit. . . . Salvo after salvo was falling between twenty and thirty yards short, but not a single shell struck. . . . At this point the position was reported to Admiral Beatty. This cruiser was finally driven off by *Fearless* and *Arethusa*, and retreated badly damaged to Heligoland. Four minutes after, the *Mainz* was encountered. *Arethusa*, *Fearless*, and the destroyers engaged her for five-and-twenty minutes, and when she was in a sinking condition Commodore Goodenough's squadron came on the scene and finished her off. *Arethusa* then got into action with a large four-funnelled cruiser at long range, but received no hits herself, and was not able to see that she made any. It was now 12.15. *Fearless* and the

first flotilla had already been ordered home by the Commodore. The intervention of the battle-cruisers was very rapid and decisive. The four-funnelled cruiser that had been the last to engage *Arethusa* was soon cut off and attacked, and within twenty minutes a second cruiser crossed the *Lion's* path. She was going full speed, probably twenty-five knots, and at right angles to *Lion*, who was steaming twenty-eight. But both *Lion's* salvos took effect. . . . *Lion's* course was now taking her towards known mine-fields, and the Vice-Admiral very properly judged that the time had come to withdraw. He proceeded to dispose of the cruiser he first attacked—which turned out to be *Köln*—before doing so. The expedition had been a complete success. Three German cruisers had been sunk and one destroyer. Three other cruisers had been gravely damaged, and many of the German destroyers had been hit also. Our losses in men were small, and we lost no ships at all. *Arethusa* had perhaps suffered most, though some of the destroyers had been pretty roughly handled. But all got safely home, and none were so injured but that in a very few days or weeks they were fit again for service."—A. J. H. Pollen, *British navy in battle*, pp. 232-234, 236-237.—The *Berliner Tageblatt* reported: "The small craft fought heroically to the bitter end against overwhelming odds. Quite unexpectedly the *V-187* was attacked by a flotilla of English destroyers coming from the north. Hardly had the first shot been fired when more hostile destroyers, also submarines, arrived and surrounded the German craft. The *V-187*, on which, in addition to the commander, was the flotilla chief, Captain Wallis, defended itself to the utmost, but the steering gear was put out of business by several shots, and thus it was impossible to withdraw from the enemy. When the commander saw there was no further hope, the vessel was blown up so as not to fall into the enemy's hands. But even while she sank the guns, not put out of action, continued to be worked by the crew till the ship was swallowed up in the waves. . . . The enemy deserves the greatest credit for their splendid rescue work. The English sailors, unmindful of their own safety, went about it in heroic fashion. Boats were put out from the destroyers to save the survivors. While this rescue work was still under way stronger German forces approached, causing the English torpedo boats to withdraw, abandoning the small rescue boats which they had put out, and those who had been saved were now taken from the English boats aboard our ships. When the thunder of the guns showed the enemy was near and engaged with our torpedo boats, the small armored cruiser *Ariadne* steamed out to take part in the scrap. As the *Ariadne* neared the outpost vessels it was observed that various of our lighter units were fighting with the English, which later, however, appeared to be escaping toward the west. The long-suppressed keenness for fighting could not be gainsaid and the *Ariadne* pursued, although the fog made it impossible to estimate the strength of the enemy. Presently, not far from the *Ariadne*, two hostile cruisers loomed out of the mist—two dreadnought battle cruisers of 30,000 tons displacement, armed with eight 13.5-inch guns. What could the *Ariadne*, of 2,650 tons and armed with ten 4-inch guns, do against those two Goliath ships? At the start of this unequal contest a shot struck the forward boiler room of the *Ariadne* and put half of her boilers out of business, lowering her speed by fifteen miles. Nevertheless, and despite the overwhelming superiority of the English, the fight lasted half an hour. The stern of the

Ariadne was in flames, but the guns on her fore-deck continued to be worked. But the fight was over. The enemy disappeared to the westward. The crew of the *Ariadne*, now gathered on the fore-deck, true to the navy's traditions, broke into three hurrahs for the War Lord, Kaiser Wilhelm. Then, to the singing of 'Deutschland Ueber Alles,' the sinking, burning ship was abandoned in good order. Two of our ships near by picked up the *Ariadne's* crew. Presently the *Ariadne* disappeared under the waves after the stern powder magazine had exploded. The first officer, surgeon, chief engineer, and seventy men were lost. In addition, many were wounded.—*German story of the Heligoland fight (New York Times Current History, Jan., 1915).*

(d) German attack on British coast.—“On November 3 a German squadron of three battle-cruisers, *Seydlitz*, *Moltke*, and *Von der Tann*, the large cruiser *Blücher*, and three light cruisers appeared off Yarmouth in the haze of early morning and opened fire on the town without effect. They also fired upon the *Halcyon* gunboat . . . and the destroyer *Lively*, the former of [which] gave the alarm to Commodore Tyrwhitt. The fleets and flotillas from Scapa to the Channel were immediately set in motion, but by three o'clock when the different concentrations had taken effect, the enemy had fled home again. Incredible as it seemed at the moment, his raid, which looked like a belated attempt to disturb our operations on the Belgian coast, was a mere 'run-away ring,' a demonstration intended to cause 'fear and panic' in the east of England. It cost us one submarine, D5, which unfortunately struck a mine: it cost the Germans an armoured cruiser, the *Yorck*, which was lost in returning through their own mine-fields.—H. J. Newbolt, *Naval history of the war, 1914-1918*, pp. 56-57.—In December a second and much more successful raid was made. Scarborough, the Hartlepoons, and Whitby were bombarded by a squadron, whose composition was never officially announced. The garrison artillery dealt with *Von der Tann*, and her disappearance was credibly attributed to injuries sustained in a collision, which damage to her steering gear, effected by the north country gunners, had prevented her evading. At Scarborough, 18 were killed and 70 wounded; in Whitby, three killed. Casualties were heaviest at Old Hartlepool, where 600 houses were damaged, 119 persons killed and 300 wounded.

(e) Movements of German Pacific squadron.—*Naval battle off Coronel*.—“Admiral von Spee, the German Commander-in-Chief in the Far East, sailed from Tsingtau (Kiauchau), in the last week of June [1914], with the *Scharnhorst* and *Gneisenau*, and on August 5, immediately after the British declaration of war, these two powerful ships were reported as being near the Solomon Islands. They were subsequently reported at New Guinea on the 7th August, and coaling at the Caroline Islands on the 9th. After this they vanished into the immense Pacific with its innumerable islands, and no one could tell where they would re-appear. As the days succeeded one another and grew into weeks, our concern on their account extended and multiplied. . . . The mystery of their whereabouts affected the movements of the New Zealand and Australian convoys, and . . . very anxious decisions were forced upon us. . . . When at length more than five weeks had passed without any sign of their presence, we took a complete review of the whole situation. All probabilities now pointed to their going to the Magellan Straits or to the West Coast of South America. . . . There was nowhere where they could do so much harm

as in the Straits of Magellan. . . . Accordingly, on the 14th September, the Admiralty sent the following telegram to Rear-Admiral Cradock, who commanded on the South American station. 'The Germans are resuming trade on West Coast of South America, and *Scharnhorst* and *Gneisenau* may very probably arrive on that coast or in Magellan Straits. Concentrate a squadron strong enough to meet *Scharnhorst* and *Gneisenau*, making Falkland Islands your coaling base, and leaving sufficient force to deal with *Dresden* and *Karlsruhe*. . . . When you have superior force, you should at once search Magellan Straits with squadron. . . . Two days later all uncertainties, and with them our anxieties, vanished, and news was received that both *Scharnhorst* and *Gneisenau* had appeared off Samoa on the 14th September. There was nothing for them to hurt there. . . . A week later, the 22nd, they were at Papeete, which they bombarded, destroying half the town and sinking the little French gunboat *Zélée* which was in harbour. They left the same morning, steering on a northerly course. . . . Then once again silence descended on the vast recesses of the Pacific. . . . Nothing more happened for a fortnight. On October 4, wireless signals from the *Scharnhorst* were heard by Suva wireless station, and also at Wellington, New Zealand. From this it appeared that the two vessels were on the way between the Marquesas Islands and Easter Island. We passed our information to Admiral Cradock (Oct. 5) with the following telegram: 'It appears from information received that *Gneisenau* and *Scharnhorst* are working across to South America. A *Dresden* may be scouting for them. You must be prepared to meet them in company. *Canopus* should accompany *Glasgow*, *Monmouth* and *Otranto*, and should search and protect trade in combination.' . . . [On the 8th Cradock reported.] 'There are indications that *Scharnhorst* and *Gneisenau* may be joined by *Nürnberg*, *Dresden* and *Leipzig*. I intend to concentrate at Falkland Islands and avoid division of forces. I have ordered *Canopus* to proceed there, and *Monmouth*, *Glasgow* and *Otranto* not to go farther north than Valparaiso until German cruisers are located again.' . . . This was an important telegram. It showed a strong probability that the enemy was concentrating with the intention to fight. In these circumstances we must clearly concentrate too. . . . In order that there should be no mistake, I wrote . . . [to the First Sea Lord Prince Louis of Battenberg]: 'In these circumstances it would be best for the British ships to keep within supporting distance of one another, whether in the Straits or near the Falklands, and to postpone the cruise along the West Coast until the present uncertainty about *Scharnhorst-Gneisenau* is cleared up. They and not the trade are our quarry for the moment. Above all, we must not miss them. W. S. C.' The First Sea Lord the same evening added the word 'Settled.'—W. L. S. Churchill, *World crisis*, pp. 442-446.—“To the German naval authorities, commerce raiding offered a field for rendering valuable service. The *Emden* was dispatched to the southern seas. The *Leipzig* and the *Nürnberg* proceeded across the Pacific, and began to prey upon the western coast of South America. Half the maritime trade of Chile was carried in English ships. Many of them might be seized and destroyed at little risk. The Admiral, with his two remaining vessels, the *Scharnhorst* and the *Gneisenau*, successfully evaded the hostile fleets for some time. . . . He got into touch with friendly vessels. By skilful manœuvring he finally brought five warships, with colliers, together near

Valparaiso. The German ships were all of recent construction. . . . Each ship carried torpedo tubes, and the speed of each was about twenty-two or twenty-three knots an hour. The *Dresden*, however, could go twenty-seven knots. The squadron possessed all-important allies. Several German merchant-marine companies, notably the Kosmos, plied along the Chilian coast. . . . Von Spee's great stumbling-block was coal. The laws of war prevented him from sending more than three of his warships into a neutral port at the same time, from staying there more than twenty-four hours, from taking more coal than was necessary to reach the nearest German harbour, from coaling again for three months at a port of the same nationality. But if German merchantmen, hampered by no such restrictions could constantly renew his supplies, the difficulty of fuel could be to some extent met. Provisions and secret information as to British movements could also be obtained through the same source. . . . If they preyed ruthlessly upon English merchantmen, laden with the wealth of the West, if they made a descent upon the Falkland Islands, if then they were to disappear into the wide Pacific, a career of splendid adventure and of unbounded usefulness would earn for them both the respect and the plaudits of the world. Australian and Japanese warships were sweeping the eastern Pacific for them. . . . But so vast was the area that they might elude their enemies for months. British ships were already cruising near the Horn, possibly unaware that a concentration of the Germans had been effected. It was not unlikely that von Spee might be able to cut off and to destroy stray units of the patrolling squadrons."—A. N. Hilditch, *Battle sketches, 1914-1915*, pp. 148-150.—"The existence of Admiral von Spee's squadron left our overseas possessions and our great trade routes at the mercy of enemy raids. Till it was hunted down no overseas port could feel security, and the Australian and New Zealand Governments, busy with sending contingents to the fighting fronts, demanded not unnaturally that this should be made the first duty of the British Navy. Whether the squadron kept together or split into raiding units it was no light task to bring it to book when it had the oceans of the world for its hunting ground. Sooner or later it was doomed, and von Spee, hampered with difficulties of coaling and supplies, could only hope for a brief career. But during that career a bold man might do incalculable damage to the Allies and deflect and cripple all their strategic plans, and the German admiral was a most bold and gallant commander. . . . His squadron now comprised two armoured cruisers—the *Gneisenau* and the *Scharnhorst*; and three light cruisers—the *Dresden*, *Leipzig*, and *Nürnberg*. . . . This squadron set itself to prey upon our commerce routes, remembering that the British navy was short in cruisers of the class best fitted to patrol and guard the great trade highways. . . . So soon as definite news came of von Spee's whereabouts, Cradock sailed [from the West Indies] south to the Horn. He had in his squadron, when formed, the twelve-year-old battleship, the *Canopus*, two armoured cruisers, the *Good Hope* and the *Monmouth*, the light cruiser *Glasgow*, and an armed liner, the *Otranto*, belonging to the Orient Steam Navigation Company. None of his vessels was strong either in speed or armament. [Admiral Cradock] had no illusions about the dangers of his task, for he knew that if he met von Spee he would meet an enemy more than his match. During these weeks weather conditions made communication with the Admiralty exceptionally difficult:

he was not aware that an Anglo-Japanese squadron was operating in the North Pacific; and he seems to have regarded the charge of all the western coasts as resting on himself alone. In this spirit of devotion to a desperate duty he left the slow *Canopus* behind him, and with his two chief ships but newly commissioned and poor in gunnery, set out on a task which might engage him with two of the best cruisers in the German fleet. . . . The opponents, Cradock from the south and von Spee from the north were moving towards a conflict like one of the historic naval battles, a fight without mines, submarines, or destroyers, where the two squadrons were to draw into line ahead and each ship select its antagonist as in the ancient days. The *Glasgow*, which had been sent forward to scout, a little after 4 o'clock in the afternoon of 1st November sighted the enemy."—J. Buchan, *History of the Great War*, v. 1, pp. 443-446.—"The *Glasgow* swept round to northward, calling to the flagship with her wireless. Von Spee, anticipating this move, at once set his wireless in operation, in order to jamb the British signals. Captain Luce soon picked up the *Monmouth* and the *Otranto*, and the three ships raced northwards towards the flagship, the *Glasgow* leading. At about five o'clock the *Good Hope* was seen approaching. The three ships wheeled into line behind her, and the whole squadron now proceeded south. Von Spee, coming up from that direction in line ahead, about twelve miles off, changed his course and also proceeded south, keeping nearer to the coast. . . . Firing had not opened. The washing of the seas and the roaring of the wind deafened the ear to other sounds. . . . The two squadrons, drawing level, the Germans nearer to the coast, raced in the teeth of the gale, in two parallel lines, to the south. Sir Christopher Cradock could not but realize that the situation was hazardous. He had three vessels capable of fighting men-of-war. The *Otranto* was only an armed liner, and must withdraw when the battle developed. . . . His protective armour was weaker than that of the enemy. Nor did his speed give him any superiority. Though the *Glasgow* was capable of twenty-six knots, the flagship and the *Monmouth* could only go to twenty-three. But there was another consideration which the Admiral might weigh. Coming slowly up from the south, but probably still a considerable distance off, was the battleship *Canopus*. Her presence would give the British a decided preponderance. She was a vessel of some 13,000 tons, and her armament included four 12-inch and twelve 6-inch pieces. How far was she away? How soon could she arrive upon the scene? Evening was closing in. Cradock was steering hard in her direction. If the British, engaging the enemy immediately, could keep them in play throughout the night, when firing must necessarily be desultory, perhaps morning would bring the *Canopus* hastening into the action. It was possible that the Germans did not know of her proximity. They might, accepting the contest, and expecting to cripple the British next morning at their leisure, find themselves trapped. But in any case they should not be allowed to proceed without some such attempt being made to destroy them. It must not be said that, because the enemy was in greater force, a British squadron had taken to flight. Perhaps it would be better, since darkness would afford little opportunity of manœuvring for action, to draw nearer and to engage fairly soon. It was about a quarter past six. The Germans were about 15,000 yards distant. Cradock ordered the speed of his squadron to seventeen knots. He then signalled by wireless to the *Canopus*, 'I am going

to attack enemy now'. The sun was setting. . . . Von Spee's manoeuvre in closing in nearer to the shore had placed him in an advantageous position as regards the light. The British ships, when the sun had set, were sharply outlined against the glowing sky. The Germans were partly hidden in the failing light and by the mountainous coast. The island of Santa Maria, off Coronel, lay in the distance. Von Spee had been gradually closing to within 12,000 yards. . . . A few minutes after sunset, about seven o'clock the leading German cruiser opened fire with her largest guns. Shells shrieked over and short of the *Good Hope*, some falling within five hundred yards. As battle was now imminent, the *Otranto* began to haul out of line, and to edge away to the south-west. The squadrons were converging rapidly, but the smaller cruisers were as yet out of range. The British replied in quick succession to the German fire. As the distance lessened, each ship engaged that oppo-

REAR-ADMIRAL SIR CHRISTOPHER CRADOCK

site in the line. The *Good Hope* and the *Monmouth* had to bear the brunt of the broadsides of the *Scharnhorst* and the *Gneisenau*. The *Glasgow*, in the rear, exchanged shots with the light cruisers, the *Leipzig* and the *Dresden*. The shooting was deadly. The third of the rapid salvos of the enemy armoured cruisers set the *Good Hope* and the *Monmouth* afire. Shells began to find their mark, some exploding overhead and bursting in all directions. In about ten minutes the *Monmouth* sheered off the line to westward about one hundred yards. She was being hit heavily. Her foremost turret, shielding one of her 6-inch guns, was in flames. She seemed to be reeling and shaking. She fell back into line, however, and then out again to eastward, her 6-inch guns roaring intermittently. Darkness was now gathering fast. The range had narrowed to about 5,000 yards. The seven ships were all in action. . . . The British could fire only at the flashes of the enemy's guns. Often the heavy head seas hid even the flashes from the gunlayers. It was impossible to gauge the effect of their shells. The fore-turret of the *Good Hope* burst into flames, and she began to fall away out of line towards

the enemy. The *Glasgow* kept up a continual fire upon the German light cruisers with one of her 6-inch guns and her port batteries. A shell struck her below deck, and men waited for the planks to rise. No explosion nor fire, however, occurred. But the British flagship was now burning brightly forward, and was falling more and more out of line to eastward. It was about a quarter to eight. Suddenly there was the roar of an explosion. The part about the *Good Hope's* after-funnel split asunder, and a column of flame, sparks, and debris was blown up to a height of about two hundred feet. She never fired her guns again. Total destruction must have followed. Sir Christopher Cradock and nine hundred brave sailors went down in the stormy deep. The other ships raced past her in the darkness. The *Monmouth* was in great distress. She left the line after a while, and turned back, steaming with difficulty to north-west. She had ceased firing. The vessels had been travelling at a rate which varied from seven to seventeen knots. The *Glasgow*, now left alone, eased her speed in order to avoid shells intended for the *Monmouth*. The Germans dropped slowly back. The *Scharnhorst* and the *Gneisenau* now concentrated their salvos upon the *Glasgow*. The range was about 4,500 yards. A shell struck the second funnel: five others hit her side at the waterline, but fortunately not in dangerous places. Luce, her captain, since the flagship was no more, was senior officer. He brought his vessel round and moved rapidly back. The *Monmouth* had now fallen away to a north-easterly course. Luce stood by signalling, Could she steer north-west? She was making water badly forward, Captain Brandt answered, and he wanted to get stern to sea. The enemy were following, Luce signalled again. There was no reply. The *Glasgow* steamed nearer. The *Monmouth* was in a sinking condition. Her bows were under water, and the men were assembled at the stern. The sea was running very high. Rain and mist had come on, though a moon was now rising. The enemy had altered course, and were approaching in line abreast about 6,000 yards away. A light kept twinkling at regular intervals from one of the ships. They were signalling in Morse, and evidently were forming plans of action. Firing was still proceeding intermittently. It was about half-past eight. Captain Luce could see nothing for it but to abandon the *Monmouth* to her fate. To rescue her crew, under such conditions, was impossible, while to stand by and endeavour to defend her would be folly. The *Glasgow* was not armoured, and could not contend with armoured vessels. Of the two guns she possessed capable of piercing the enemy's armour, one had been put out of action ten minutes after the start. If she stayed and fought to the end, 370 good lives, in addition to the sufficiently heavy toll of 1,600 in the *Good Hope* and the *Monmouth*, would be needlessly sacrificed. The *Canopus*, moreover, must be warned. She was coming up from the south to sure destruction. She could hardly be expected successfully to combat the whole German squadron. Nevertheless, it must have been with heavy hearts that the men of the *Glasgow* turned away to seek safety in flight. . . . At about a quarter past nine the *Nürnberg*, which had not been engaged in the main action, came across the *Monmouth*. It is said that, though in a sinking condition, the British ship attempted to ram her enemy. But the *Nürnberg* began to bombard her, and she capsized. The *Glasgow* steamed off in a north-westerly direction. A few minutes before nine the enemy became lost to sight. Half an hour later many distant flashes of gunfire, the

death-struggle of the *Monmouth*, were seen. The play of a searchlight, which lasted a few seconds and then disappeared, was also observed. The vessel bore round gradually to the south. Her wireless was put into operation, and she made efforts to get through to the *Canopus*. But the Germans had again set their apparatus in motion, and the messages were jammed. Only after some hours was the *Glasgow* successful. Steaming hard at twenty-four knots through the heavy seas, her engines and boilers fortunately being intact she at length joined the battleship. The two ships made straight for the Falkland Islands."—A. N. Hilditch, *Battle sketches, 1914-1915*, pp. 153-158.

(f) Falkland islands prepare for defense.—**Movements of *Canopus* and *Glasgow*.**—"The news of the disaster aroused great alarm in the colony. Before the day on which the two ships arrived was over the dismay was further increased. The *Canopus* at first expected to stay ten days. Her presence inspired a feeling of security. If the enemy put in an appearance, this battleship and even the damaged *Glasgow* could give good account of themselves. But now Captain Grant of the *Canopus* received a wireless message from the Admiralty, instructing him to proceed immediately to Rio de Janeiro with the *Glasgow*, the Brazilian government having granted permission for the latter to enter the dry dock there for urgent repairs. But seven days only were allowed for this purpose. In the evening the warships cast off and steamed away to northward. Stanley [the chief town] was now in an unenviable situation. A powerful German squadron, flushed with victory, was probably making for the Islands. The colony was almost defenceless. . . . The Governor at once called a council of war. There could be little doubt that a descent would be made upon the colony. The position was full of peril. But resistance must certainly be offered. The few women, children, and old men who still remained at Stanley must be sent away immediately. . . . In order to add to the mobility of the defending force, it would be well to bring in another hundred horses from the 'camp.' Every man should be mounted. These measures were duly carried out. Every preparation was made and every precaution taken. . . . Books, papers, and money were removed from the Government offices, and from the headquarters of the Falkland Islands Company. What was not sent away was buried. The official papers and code-books were buried every night, and dug up and dried every morning. . . . All offices were closed and business was suspended. This state of tension lasted several days. At length, from the look-out post above the town, a warship, apparently a cruiser, was seen making straight for the wireless station. When she got within range she turned broadside on. Her decks were cleared for action. There was a call to arms. Church and dockyard bells pealed out the alarm. Non-combatants streamed out of the town into the 'camp.' The volunteers paraded, and lined up with their horses. It would soon become a question whether to resist a landing or to retire. In any event the men were ready and provided with emergency rations. But no firing sounded. Signals were exchanged between the vessel and the shore. It was a false alarm. The newcomer was H. M. S. *Canopus*."—A. N. Hilditch, *Battle sketches, 1914-1915*, pp. 158-159.

I. RETURN OF "CANOPUS."—"She had proceeded, in accordance with her orders, towards Rio de Janeiro with the *Glasgow*. When two days' journey off her destination, however, she received

another message. She was directed to return and to defend the Falklands in case of attack. These instructions were received with mingled feelings. To fight alone a powerful squadron was by no means an attractive prospect. Duty, however, was duty. The *Canopus* turned about, and retraced her passage. She set her wireless in operation, and tried to get through to Stanley. But for some reason she was unable to do so. It was concluded that the Germans had made a raid and had destroyed the wireless station. Probably they had occupied the town. The outlook seemed serious. The *Canopus* had her instructions, however, and there was no drawing back. The decks were cleared for action. Ammunition was served out. Guns were loaded and trained. With every man at his post the ship steamed at full speed into the harbour. Great was the relief when it was found that all was well. The inhabitants were not less relieved. . . . Nevertheless, it was almost certain that some raid upon the Islands would be attempted. Guns were landed from the ship, and measures were taken to make the defence as effective as possible. Perhaps if the enemy blockaded Stanley, the British would be able to hold out until other warships, certain to be sent to avenge the defeat, arrived. Relief could hardly be expected for two or three weeks. . . . Meanwhile, November passed into December without any appearance of the Germans off the Falklands. The tension became very much relieved. Women and children were brought back to Stanley, after being away a month or six weeks. Messages emanating from the hostile squadron, registered by the wireless station, indicated that the enemy were still in the vicinity. But the condition of the colony became again almost normal."—*Ibid.*, pp. 159-161.

2. VON SPEE AND CHILEAN NEUTRALITY.—BRITISH ADMIRALTY PLANS.—ARRIVAL OF STURDEE'S SQUADRON IN FALKLAND ISLANDS.—"But completely as he had the situation in hand, von Spee was experiencing increasing problems and difficulties with regard to supplies of coal and provisions. Without these he was impotent. He had been employing German merchantmen to great advantage for refueling. But trouble was brewing with the Chilean authorities. Many signs were leading the latter to suspect that, contrary to international law, German traders were loading at Chilean ports cargoes of coal and provisions, contraband of war, and were transferring them at sea to the German warships. There were other causes of complaint. Juan Fernandez, the isle of romance and of mystery,¹ the home of the original of Robinson Crusoe, was said to have been degraded into use as a base for apportioning the booty, coals and victuals, among the belligerent vessels. The island was a Chilean possession. It was practically certain that von Spee's squadron had stayed there beyond the legal limit of time. A French merchantman had, contrary to rule, also been sunk there by the *Dresden*, within Chilean territorial waters. Inquiries in other quarters were being made, moreover, as to the friendly wireless stations which the Germans had been utilizing secretly in Colombia and Ecuador; while a rumour was current in the United States that neutral vessels had been seized and pillaged on the high seas. Von Spee soon found that he was nearing the end even of his illegitimate resources. He had tried the patience of the Chilean authorities too far. About the middle of November they suddenly prohibited, as a provisional measure, the vessels of the Kosmos Company from leaving any Chilean port. On

November 24 a Government ship was sent to Juan Fernandez to investigate, and to see that Chilian neutrality was upheld. Many such signs seemed to warn von Spee that the time was appropriate to a sudden disappearance. He gathered his squadron for a descent at last upon the Falklands."—*Ibid.*, pp. 164-165.—See also CHILE: 1914.—"Our plans for the second clutch at von Spee were now conceived as follows: (1) Should he break across the Pacific; he would be dealt with by the very superior Japanese 1st Southern Squadron, based on Suva to cover Australia and New Zealand. . . . At Suva also were the *Montcalm* [French] and *Encounter*. Another strong Japanese squadron (four ships) was based on the Caroline Islands. (2) To meet him, should he proceed up the West Coast of South America, an

REAR-ADMIRAL VON SPEE

Anglo-Japanese Squadron, comprising *Australia* (from Fiji), *Hizen*, *Idzumo*, *Newcastle*, was to be formed off the North American Coast. (3) Should he come round on to the East Coast, *Defence*, *Carnarvon*, *Cornwall*, *Kent* were ordered to concentrate off Montevideo, together with *Canopus*, *Glasgow* and *Bristol*, and not seek action till joined by *Invincible* and *Inflexible*, thereafter sending the *Defence* to South Africa. (4) Should he approach the Cape station, he would be awaited by *Defence* and also *Minotaur* . . . together with the old battleship *Albion*, and *Weymouth*, *Dartmouth*, *Astræa* and *Hyacinth*, light cruisers; the Union Expedition being postponed for 14 days. (5) Should he come through the Panama Canal, he would meet the *Princess Royal*, as well as the *Berwick* and *Lancaster*, of the West Indian Squadron, and the French *Condé*. (6) Cameroons were warned to be ready to take their shipping up the river beyond his reach. (7)

Should he endeavour to work homewards across the South Atlantic, he would come into the area of a new squadron under Admiral de Robeck to be formed near the Cape de Verde Islands, comprising the old battleship *Vengeance*, the strong armoured cruisers *Warrior* and *Black Prince* and the *Donegal*, *Highflyer*, and later *Cumberland*. Thus to compass the destruction of five warships, only two of which were armoured, it was necessary to employ nearly thirty, including twenty-one armoured ships, the most part of superior metal, and this took no account of the powerful Japanese Squadrons, and of French ships or of armed merchant cruisers, the last-named effective for scouting."—W. L. S. Churchill, *World crisis*, pp. 466-467.—"When the news of Coronel arrived the new Board of Admiralty, in which Lord Fisher was First Lord, decided to carry out a suggestion already made by their predecessors, and detach two battle cruisers to deal with Admiral von Spee. Admiral Sturdee, who had been Chief of the Staff, was appointed on November 9 to be Commander-in-Chief in the South Atlantic and South Pacific and to take out with him a squadron consisting of *Invincible* and *Inflexible*, with the armoured cruiser *Carnarvon* and the cruisers *Kent* and *Cornwall*. He put to sea on November 11, and the expedition was so successfully kept secret that not only the British public, but also the German Admiralty, was in complete ignorance of it. The squadron rendezvoused at Abrolhos Rocks, a remote islet in the South Atlantic, and proceeded on its southward sweep with the seven ships spread out to extreme visual signalling distance, so as to avoid the use of wireless messages which might have betrayed their movements. Admiral Sturdee was making for the Falkland Islands, where Port Stanley, defended only by the *Canopus*, lay open to attack by Admiral von Spee. To attack the islands was, in fact, the latter's intention, and as we look at the map of South America it is easy to imagine the converging course of the two squadrons making for what now appears to be an irresistibly pre-ordained meeting. On the west side the five German cruisers with their colliers are running in close formation down the coast of Patagonia, with victory astern and expectation ahead of them. On the other side of the ever-narrowing continent the British squadron, flung out in wide line, is netting the Atlantic from the coast-line to a distance of two hundred miles out to sea. On the morning of December 7 the outlook at the Falklands saw smoke streamers on the horizon. An hour later the *Invincibles* were off Port Stanley and the islands were saved."—H. J. Newbolt, *Naval history of the war, 1914-1918*, pp. 61-63.

3. COMPOSITION OF THE BRITISH SQUADRON.—SECRET DISPATCH.—SURPRISE OF VON SPEE.—FLIGHT AND PURSUIT.—The strategic movements leading up to the Falkland islands sea fight will long be memorable in naval history as an example of complete, overwhelming surprise and a remarkable coincidence of circumstances—favorable to the British—which led an unsuspecting foe into a trap set by a superior force. Neither of the opposing squadrons knew the whereabouts of the other; on the German side, indeed, the very existence of Sturdee's armada was even unsuspected. A most fortunate accident for the latter was his arrival at Port Stanley, after so long a voyage, just a few short hours before the appearance of the Germans. Only a narrow margin of luck and judgment saved the British squadron from being a day too late. On November 9, while the two

principal ships, *Invincible* and *Inflexible*, were being fitted out at Devonport, England, for the purpose of hunting down von Spee, the dock-yard superintendent reported that the earliest possible date for completing necessary arrangements would be midnight, November 13. First Lord of the Admiralty Churchill at once issued the order: "Ships are to sail Wednesday 11th. They are needed for war service and dockyard arrangements must be made to conform. If necessary dockyard men should be sent away on the ships to return as opportunity may offer. You are held responsible for the speedy despatch of these ships in a thoroughly efficient condition. Acknowledge." The ships duly sailed on November 11th, "and in the nick of time. They coaled on November 26 at Abrolhos [off Brazil], where they joined and absorbed Admiral Stoddart's squadron (*Carnarvon*, *Cornwall*, *Kent*, *Glasgow*, *Bristol* and *Orama*) . . . and without ever coming in sight of land or using their wireless they reached Port Stanley . . . on the night of [Monday] Dec. 7. . . . They immediately began to coal."—W. L. S. Churchill, *World crisis*, pp. 473-474.—It was Sturdee's intention, after coaling and engine repairs, to sail again on Wednesday, the 9th, to get around Cape Horn before the enemy came east. On Tuesday morning, the 8th, however, the signal station reported two strange warships from the south. "Coaling operations had recommenced at 6.30 that morning. The colliers were hurriedly cast off, and the decks were cleared for action. Officers and men were delighted at the prospect of an early fight. The Germans had saved them a long cold search around the Horn by calling for them. There was going to be no mistake this time. The enemy could not escape. Sturdee's squadron was superior both in weight and speed to the German. . . . The speed of the battle cruisers was twenty-eight knots; of the three middle-class cruisers, twenty-two to twenty-four knots; and of the light cruisers, twenty-five to twenty-six knots. In size, in armament, in speed, the British squadron would decidedly preponderate. Admiral Sturdee, however, was determined to take no risks, and to minimize loss in men and material by making full use of his superior long-range gunfire, and of his superior speed. He would wait, screened by the land, until the Germans had drawn nearer. . . . Meanwhile he watched the enemy closely. At about a quarter to nine, Captain Grant of the *Canopus* reported that the first two ships sighted were now about eight miles away: the other two were still at a distance of some twenty miles. The *Kent* passed down the harbour and took up a position at the entrance. Five minutes later the smoke of a fifth German vessel was observed. When, in about half an hour's time, the two leading enemy ships made a threatening move in the direction of the wireless station, the Admiral ordered a swift counterstroke. Officers upon the hills above the town signalled the range, 11,000 yards, to the *Canopus*. She opened fire with her 12-inch guns. The Germans hoisted their colours and drew back. Their masts and smoke were now visible from the upper bridge of the *Invincible* across the low land bounding Port William on the south. Within a few minutes the two cruisers altered course and made for the harbour-mouth. Here the *Kent* lay stationed. It seemed that the Germans were about to engage her. As, however, they approached, the masts and funnels of two large ships at anchor within the port became visible to them. The *Gneisenau* and the

Nürnberg could hardly expect to contend alone with this force. They at once changed their direction, and moved back at increased speed to join their consorts."—A. N. Hilditch, *Battle sketches, 1914-1915*, pp. 166-168.—When von Spee's leading ship, the *Gneisenau*, came in sight of the main harbor, "a terrible apparition broke upon German eyes. Rising from behind the promontory, sharply visible in the clear air, were a pair of tripod masts. They meant certain death (only *dreadnoughts* carried tripods). . . . There was no hope for victory. There was no chance of escape. A month before, another Admiral and his sailors had suffered a similar experience. . . . [The *Gneisenau*] immediately turned round and, followed by one of her light cruisers, made off

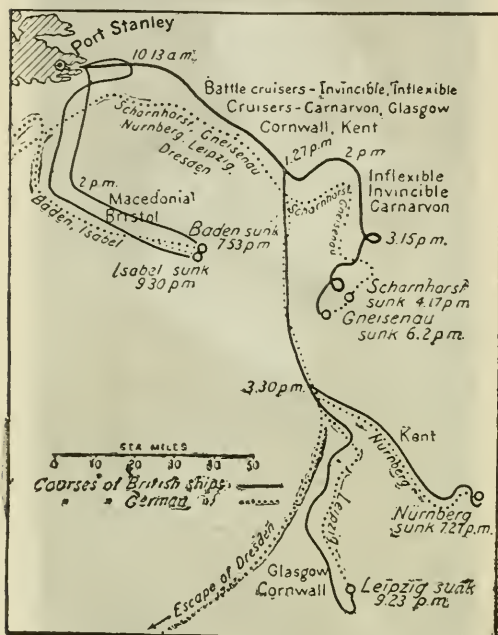

REAR-ADMIRAL STURDEE

at full speed to join her main body. In a few moments the whole of the German squadron was steaming off in a westerly direction with all possible speed. At 10 o'clock, the *Kent*, *Carnarvon* and *Glasgow* having already sailed, Admiral Sturdee came out of the harbour in the *Invincible*, followed by the *Inflexible* and *Cornwall*; while the light cruisers, one of whom (the *Bristol*) had her engines actually opened up, hurried on after as fast as possible. The whole five ships of the German squadron were now visible, hull down on the horizon about fifteen miles away. The order was given for general chase, but later on, having the day before him, the Admiral regulated the speeds, the battle-cruisers maintaining only about 20 knots. This, however, was quite sufficient to overhaul the Germans, who after their long sojourn in the Pacific without docking were not able to steam more than 18 knots in company.

Even so, the *Leipzig* began to lag behind, and shortly before 1 o'clock, the *Inflexible* opened fire upon her at 16,000 yards."—W. L. S. Churchill, *World crisis*, pp. 474-476.

4. NAVAL BATTLE.—DESTRUCTION OF VON SPEE'S SQUADRON.—"At about a quarter past eleven it was reported from a point in the south of East Falkland that three other German ships were in sight. They were probably colliers or transports. The *Bristol* signalled the information to Admiral Sturdee. He at once ordered her, with the armed liner *Macedonia*, to hasten in their direction and destroy them. The newcomers made off to southwest, and the British followed. Meanwhile the rest of the squadron, now travelling at twenty-three knots, were slowly closing upon the enemy. The distance had narrowed to 15—16,000 yards. The British were within striking range. Nevertheless, Sturdee decided to wait till after dinner

attempt, veering off to the south, to scatter and escape. Flame and smoke issued from the *Leipzig*, before she drew clear, where a shell had struck. Sir Doveton Sturdee directed the *Glasgow*, *Kent*, and *Cornwall* to pursue the German light cruisers. With his remaining vessels, the *Invincible*, the *Inflexible*, and the slower *Carnarvon*, he turned upon the *Scharnhorst* and the *Gneisenau*, and began operations in earnest. The interval of sunlight which had opened the day with such promise was of short duration. The sky became overcast. Soon after four o'clock the air was thick with rain-mist. From 1.15 onwards for three hours a fierce duel was maintained between the two British battle-cruisers and the two German armoured cruisers. The enemy made every effort to get away. They replied to the British fire for some time having dropped back to within 13,500 yards. But shortly after two o'clock they changed their course, and began to haul out to south-east. The *Invincible* and the *Inflexible* had eased their speed, and the range now widened by about 3,000 yards. A second chase ensued. A full-rigged sailing-ship appeared in the distance at about a quarter to three. Her crew must have beheld an awe-inspiring scene. Shortly before the hour firing recommenced. The action began to develop. Great coolness and efficiency were shown on board the British vessels. Every man was at his battle-station, behind armour. Fire-control parties were at their instruments. Water from numerous hoses was flooding the decks as a precaution against fire. The roaring of the discharges, the screaming of the shells, the clangour of metal upon metal, the crashes of the explosions, made up a tumult that was painful in its intensity. During intervals in the firing came the rushing of the waves and of the breeze, and the grinding and grunting of the hydraulic engines in the turrets, where swung, training constantly upon the enemy, the greater guns. The Germans soon began to show signs of distress. The *Scharnhorst* particularly suffered. Dense clouds of smoke, making it difficult for the British accurately to gauge the damage, rose from her decks. Shells rending her side disclosed momentarily the dull red glow of flame. She was burning fiercely. The firing on both sides was deadly, though the German had slackened considerably. But the British vessels, through their preponderance in gunfire, suffered little damage. Their 12-inch guns hit their marks constantly, while 8.2-inch guns of the *Scharnhorst* were accurate, but ineffective. She veered to starboard at about 3.30, to bring into play her starboard batteries. Both her masts and three of her four funnels were shot away. At length the German flagship began to settle down rapidly in the waters. It was about a quarter past four. There was a swirl of the seas and a rush of steam and smoke. The *Scharnhorst* disappeared. She went down with her flag flying to an ocean grave, bearing 760 brave men and a gallant admiral, whose name will deservedly rank high in the annals of German naval history. The *Gneisenau* passed on the far side of her sunken flagship. With the guns of both battle-cruisers now bearing upon her alone, the German was soon in sore straits. But she fought on gallantly for a considerable time. At half-past five she had ceased firing, and appeared to be sinking. She had suffered severe damage. Smoke and steam were rising everywhere. Her bridge had been shot away. Her foremost funnel was resting against her second. Her upper deck was so shattered that it could not be crossed and every man upon

BATTLE OF THE FALKLAND ISLANDS

before engaging. His guns could outdistance those of the enemy. It would be advisable for him to keep at long range. The Germans, on the other hand, would be forced, when firing commenced, to alter course and draw in, in order to bring their own guns into play. The men had their midday meal at twelve o'clock as usual. It is said that comfortable time was allowed afterwards for a smoke. The *Invincible*, *Inflexible*, and *Glasgow* at about 12.30 increased their speed to between twenty-five and twenty-eight knots, and went on ahead. Just after a quarter to one there was a signal from the Admiral: 'Open fire and engage the enemy.' A few minutes later there were sharp commands. The ranges were signalled, and the bigger guns were laid. Fiery glares and dense clouds of smoke burst suddenly from their muzzles. The air quivered with their thunder. Shells went screaming in the direction of the nearest light cruiser, the *Leipzig*, which was dropping rapidly astern. The firing was uncomfortably accurate. The three smaller German cruisers very soon left the line, and made an

it had been killed. An exploding shell had hurled one of the gun-turrets bodily overboard. Fire was raging aft. Her colours had been shot away several times, and hoisted as often. One of the flags was hauled down at about twenty to six, though that at the peak was still flying. She began to fire again with a single gun. The *Invincible*, the *Inflexible*, and the *Carnarvon*, which had now come up, closed in upon the doomed vessel. Firing was recommenced. The *Gneisenau* was not moving. Both her engines were smashed. Shells striking the water near her sent up colossal columns of water, which, falling upon the ship, put out some of the fires. She soon began to settle down in the waves. All her guns were now out of action, and Sturdee ordered the 'Cease fire.' There could be little doubt that her stubborn resistance was nearing its end. The German commander lined up his men on the decks. The ammunition was exhausted. The ship would soon go down. Some six hundred men had already been killed. . . . At six o'clock the *Gneisenau* heeled over suddenly. Clouds of steam sprang forth. Her stem swung up into the air, and she sank. Large numbers of her crew could be seen floating in the icy waves, hanging on to pieces of wreckage, and uttering terribly uncanny cries. The sea was choppy. Drizzling rain was falling. The British steamed up immediately. All undamaged boats were got out. Ropes were lowered. Life-boys and spars were thrown to the drowning men. But many of them, numbed by the freezing water, let go their hold and sank. About 180, among them the captain of the *Gneisenau*, were saved. . . . Meanwhile, battle had been in progress elsewhere. The *Bristol* and the *Macedonia* had overtaken the transports *Baden* and *Santa Isabel*, had captured their crews, and had sunk the ships. The armed liner accompanying them, the *Eitel Friedrich*, had, however, made off and got away by means of her superior speed."—A. N. Hilditch, *Battle sketches, 1914-1915*, pp. 169-173.—"In the meantime *Glasgow*, by clever fighting, had delayed the German light cruisers and enabled *Kent* and *Cornwall* to come up. The *Dresden*, instead of turning back to the help of her consorts, used her superior speed to run out of sight in the gathering rain-mist. *Glasgow* and *Cornwall* sank the *Leipzig* in a running fight of four hours. The *Nürnberg* broke away in the hope of outrunning *Kent*, whose nominal speed was a knot less than hers, but *Kent's* engineers were equal to the emergency, and, by feeding the furnaces with all kinds of wood, they brought her in four hours within range of her enemy. An hour and a half afterwards the *Nürnberg* was a beaten ship, and at half-past seven she too sank. She had hit *Kent* some twenty times, killing four men and wounding twelve. The losses in the other ships were almost *nil*—two killed and four wounded in all. The enemy, on the other hand, lost two thousand men, of whom by far the greater number were killed by gunfire. Admiral Sturdee's ships and ships' companies were therefore practically unimpaired, and this immense difference between his loss and the enemy's is the most decisive proof which could be asked of his ability as a fighting commander. A still more striking aspect of his victory, which was completed not long afterwards by the destruction of the *Dresden*, is that by this one blow the cruiser-net completed the clearance of the Seven Seas within four months of the outbreak of war."—H. J. Newbolt, *Naval history of the war, 1914-1918*, pp. 64-65.—The two vessels which escaped

destruction turned back into the Pacific, where they were lost sight of for some weeks.

(g) Japanese navy in the war.—"At the outbreak of the terrible hostilities between the great powers of Europe the action of Germany had compelled our ally, Great Britain, to declare war against that country. . . . First, the Japanese Government approached the German Government with moderate advice. On the refusal of the latter Japan found herself unavoidably involved in the present war under the terms of her treaty of alliance with Great Britain. The sole ground of Japan's participation in this terrific war being that already mentioned, the plan of operations of the Japanese Navy was arrived at in consultation with the chief of the British Navy. Consequently, the general movements of our fleet were . . . [when] necessary, carried out in conjunction with the British Navy."—*Official Japanese report (New York Times Current History, Dec., 1916)*.

I. BATTLE AT KIAO-CHAU.—"Directly after the declaration of war by Japan the main force of the First Japanese Fleet was dispatched to the region extending from the Yellow Sea to the northern part of the Eastern Sea for the purpose of searching for and warding off any attack by the hostile squadron. Meanwhile, the Second Japanese Fleet hastened simultaneously to the open sea outside Tsing-tao and began the attack on that German stronghold. The British battleship *Triumph* and the destroyer *Usk* were both placed under the command of the Second Japanese Fleet, and thus took part in the operation. At this time the main body of the enemy's Eastern Fleet was playing hide-and-seek among the South Sea Islands, while the rest of their vessels sought safety under the guns of the Tsing-tao fortress—not daring to steam out of port. In presence of this situation the Japanese Navy steadily and watchfully awaited the further development of the chances of war. At the end of August, 1914, the first transport of the Japanese besieging army started for Tsing-tao, the First Japanese Fleet securely convoying it in conjunction with a portion of the Second Fleet, which took upon itself the duty of safeguarding navigation in the direction of the Yellow Sea. Either directly or indirectly the navy assisted the army transports to reach their destination without any hitch. Subsequently a part of the Second Fleet assisted the landing of the besieging army at a certain point in the vicinity of Tsing-tao. Meanwhile the Second Japanese Fleet, accompanied by another force, and strengthened by torpedo and destroyer flotillas, as well as a specially commissioned flotilla, were all concentrated in the direction of Kiao-Chau, and kept the strictest watch over the enemy by day and night. Having forced the main body of the German fleet deep within the port, a force was dispatched to sea, notwithstanding the greatest risk of terrific storms, to clear the way for the transport of the second part of the besieging army by clearing the seas of mines, &c. Furthermore, the Japanese aeronautical squadron was sent up repeatedly and hovered above the danger zone of the hostile fortifications. The *Takachibo*, the specially commissioned boat, had succeeded in cutting the enemy's maritime cables which connected them with the outside world. In the middle of September, 1914, when the second transportation of the Japanese troops took place, the first fleet had again resumed the task of convoying it. The main force of the second fleet had, from Sept. 28 onward, together with its mine-sweeping work, co-operated with the besieging

army in the repeated bombardments of the German forts. At the same time it assisted in rendering the blockade more and more effective. The naval heavy guns section, which had already joined the besieging army in the neighborhood of Tsing-tao, had successfully commenced the bombardment of the hostile squadron, bottled up inside the port since Oct. 14—a bombardment which seriously handicapped the preconceived plans of the German warships. Subsequently it gave substantial help, in co-operation with the army, in the tremendous attacks against the very strong German positions. On the completion of the preparations about the end of October, 1914, for the attack on the Tsing-tao fortresses the Second Japanese Fleet began a severe cannonade from the 20th against the German forts and camps and joined in the general assault of the besieging army which commenced on Oct. 31. Upon the surrender of the enemy on Nov. 7, 1914, *en bloc*, the blockade was raised by a proclamation of Nov. 10, thereby bringing to a conclusion the Japanese operations in this direction. In these operations the Japanese Navy lost the following vessels: The cruiser *Takachibo*, *Sirataye*, a destroyer, torpedo boat No. 33, the specially commissioned steamers the *Chokmon-Maru III.* and *VI.*, as well as the *Kohyoh-Maru*. [The following enemy warships were sunk or damaged: the cruiser *Kaiserin Elisabeth*, 5 gunboats, 2 destroyers.]—*Ibid.*

2. EASTERN AND CHINA SEAS.—“Directly after the outbreak of the war the Third Japanese Squadron was intrusted with the protection of sea-borne commerce in the region extending from the southern part of the Eastern Sea to the China Sea. As the war developed it extended its vigil as far as the east of the Philippine Islands, and at the same time it undertook the maintenance of communications between the different operating squadrons. But, as the enemy warships were completely driven from the Eastern Seas by the beginning of November, 1914, the Third Japanese Squadron was after that date given the task of keeping watch over the German vessels.”—*Ibid.*

3. INDIAN OCEAN.—“A division of the Japanese squadron dispatched to the South Seas, led by Captain Kwanji Kato, commander of the *Ibuki*, had proceeded to Singapore on Aug. 26, 1914, and joined the British Eastern Squadron. At that time the allied squadrons assumed a waiting attitude while exercising a strict watch over the adjacent seas. On Sept. 10, 1914, one of the enemy warships, the *Emden*, appeared in the Indian Ocean and the Eastern Seas. The Japanese division, largely increased in numbers, exerted the best of its power to hunt down such enemy warships, while another part of the Japanese fleet convoyed the transports carrying the Australian and New Zealand contingents. The enemy warships continued their activities, thereby rendering navigation in the Indian Ocean dangerous. The result was that on Oct. 15, 1914, another Japanese division was dispatched to co-operate with the British squadron. On Nov. 9 the *Emden* attacked the Cocos Island, when she was destroyed by the Sydney, thus putting an end to the operations in those waters. Subsequently the *Ibuki* had, either independently or in conjunction with the British warships, convoyed the great fleet of transports from the British oversea dominions, and thus carried the footprints of Japan as far as Aden.”—*Official Japanese report (New York Times Current History, Dec., 1916).*

4. PACIFIC OCEAN.—“At the beginning of the war a division of the German fleet was operating

off the North American coast and in the vicinity of the Hawaii. There was much uncertainty as to the whereabouts of the main body of the German fleet previously cruising around the South Sea Islands, together with those German and Austrian warships which escaped from their eastern bases in Tsing-tao before the Japanese declaration of war. Consequently, the moment war was declared by the Mikado the Japanese Navy dispatched a fighting division of its First Fleet to the Pacific, with a view to safeguarding the international trade routes as well as searching for these German and Austrian vessels. Soon afterward another body of the First Japanese Fleet was dispatched to the South Seas. Its object was to protect the Australian trade routes and to search for German vessels. The two naval divisions were able in co-operation to do splendid work. The enemy, however, tried strenuously to evade our ships, so that the Japanese vessels occupied all his important strategical positions scattered throughout the South Seas and thereby deprived him of all his naval bases. At the same time, all the natives of the possessions thus occupied were treated with the greatest consideration by the Japanese Navy, being allowed to continue their daily life perfectly unmolested and undisturbed. . . . Meanwhile these Japanese squadrons in the South Seas exercised enormous pressure, either directly or from afar, upon the remnant of the enemy warships scattered all over the high seas, as well as upon the main body of the German fleet cruising off the Chilean coasts.”—*Ibid.*

5. WEST COAST OF AMERICA.—“Before this the Japanese Government had been compelled, in consequence of the disturbances in Mexico, to send out at the end of the year 1913 a man-of-war, the *Izumo* (commanded by Captain Keijiroh Moriyama), in order to protect their own people in that country. Then followed the great European war in 1914. Thereupon the Japanese Navy commissioned the *Izumo* to insure the safety of the trade routes along the western coasts of America. Simultaneously two other warships were dispatched from Japan to join Captain Moriyama's vessel for the purpose of engaging in the warlike operations against any hostile vessels in those waters. This has come to be known as ‘The division dispatched to America’ which consisted of the *Izumo*, *Hizen*, and *Asama*. Subsequently Captain Moriyama was promoted to the rank of Rear Admiral and was made the Commander in Chief of this division. The British warship the *Newcastle*, and the *Rainbow* of the Canadian Navy, were also attached to the command of Rear Admiral Moriyama in those waters. Events developed very favorably for the Japanese Navy, and on Oct. 15, 1914, one of the German warships, the *Gaël*, while entering Honolulu Harbor, Hawaii, escorting some transport steamers, was discovered by a portion of the Japanese division which was cruising in that vicinity. Thereupon the Japanese vessels put on speed to get outside the harbor and kept a close watch on the German ships in order to prevent their escape. On Nov. 7, 1914, these enemy vessels were at length interned by the American authorities in Hawaii. Later, the main body of the German fleet appeared off the coast of Chile, and it became fairly plain that nearly all of the enemy vessels, which had thus far been scattered on all seas, had succeeded in reuniting. This reunion of the hostile ships constituted an entirely new phase of the operations of the Japanese Navy in the Pacific. At this time the British Australian squadron

happened to be cruising along the western coast of America. The Moriyama squadron acted in concert with this British force, both bringing pressure to bear upon the German fleet by cruising down to the south. In taking this course they supplemented the vigorous action of another British squadron from a different direction. The joint plan of operations was continued for some time, until at length, on Dec. 9, 1914, a severe defeat was inflicted upon the German fleet by the British squadron off the Falkland Islands, when the great majority of the enemy ships were destroyed. Apart from the Japanese division already mentioned dispatched to the American coast, the Japanese Navy sent a further division to those waters with a view to dealing with the remnant of the German warships as well as to protecting the trade of Japan and other friendly countries. On March 10, 1915, however, one of the hostile warships, the *Prince Eitel Friedrich*, escaped into a United States port and was there disarmed. Four days later another enemy warship, the *Dresden*, was also successfully destroyed off Juan Fernandez by some British men-of-war. Thus the operations in these waters were brought to a satisfactory close.—*Ibid.*—See also JAPAN: 1914-1918: In the World War.

(h) Romance of the *Emden*.—End of a long chase.—The story of the German commerce raider *Emden* here presented is partially based on articles by Commander L. A. Cotton, U.S.N., and Lieutenant H. von Mücke (Executive officer of the *Emden*), the latter translated by Lieutenant Commander J. H. Klein, Jr., U.S.N. "The *Emden* was a small German cruiser of 3600 tons displacement, having two masts and three funnels and armed with ten 4.1-inch and eight 5-pounder guns and two submerged torpedo tubes. Her speed was about 25 knots and her maximum coal capacity 900 tons. In the early days of August, 1914, the little *Emden* was in the harbour of Tsingtao in the German leased territory of Kiaochow in the province of Shantung, China. She did not remain there for many days, however, for on August 6 she inaugurated her war career by capturing a Russian volunteer-fleet vessel near Quelpart Island. The *Emden* accompanied her prize into Tsingtao, filled her bunkers and got out at sunrise the next morning. Of the *Emden's* subsequent movements her Executive officer writes: 'During the evening of August 12, we came in the neighbourhood of the island where we expected to meet the cruiser squadron and found the outpost vessels. In the middle lay the powerful cruisers *Scharnhorst* and *Gneisenau*, with colliers alongside busy coaling. Farther to the left the slender *Nürnberg*, also engaged in coaling. . . . The *Emden* was ordered to anchor . . . close to the flagship. . . . The captain reported aboard the flagship for orders from the squadron commander, and made the proposal to him to detach the *Emden* from the squadron and to send her to the Indian Ocean to carry on a cruise of "commerce destruction." The next day saw the squadron in column, followed by the colliers, on an easterly course. . . . Along toward midday several signals were hoisted high on the flagship: "*Emden* detached, wish you much success," read the signal. In an elegant turn our ship sheered out of column, a "thank-you" signal for the squadron commander's wishes at the mast head, then a semaphore to the *Markomannia*, "Remain with *Emden*," and soon, on an opposite course, we lost sight of the other ships of the squadron. All knew that we had seen each other for the last

time. We had now reached the point where, in order to reach the open ocean, we had to pass through the narrow straits. These straits swarmed with fishing craft and such other small ships. The nights being bright moonlight, the *Emden* was visible for a considerable distance. The captain did not relish the idea of meeting so many sailing vessels. He spoke to me about it, saying that he wished to avoid meeting any sort of ship for fear our presence and course in those waters would become known to everybody. All the English men-of-war had either two or four smokepipes; none had three like the *Emden*. Then I conceived the idea of a building up a fourth smokepipe. . . . Soon we had built, by means of wooden laths and sail cloth, an elegant smokepipe, and when this was in place we resembled the English cruiser *Yarmouth*. . . . And so we arrived in the Bay of Bengal at the end of the first week in September. For about five days an English warship, probably the *Minotaur*, steamed parallel to and close by us, as we knew by the strength of her radio signals. By and by her signals became weaker until they ceased entirely. We did not sight her.' The next time the *Emden* was heard from she was in the Bay of Bengal, a matter of 4000 miles from Tsingtao even by direct route and in what may be termed the heart of the enemy's sea area. On September 14 the Italian S.S. *Loredoro* arrived off Calcutta and reported that she had on the previous day been held up by the *Emden*, and on September 16 the British S.S. *Kabinga* arrived with the crews of five other British steamers that had been sunk by the *Emden* in the Bay of Bengal between September 10 and 14. Since there was no German prize court available, the *Emden* proceeded with her captures as follows: The first ship captured was manned with a prize crew and forced to accompany the *Emden*. Then when the second capture was made the more valuable of the two captured ships was sunk by a mine or by gun fire, after the crew had been removed to the other vessel or to the *Emden*. This procedure was followed with each subsequent capture until the captured personnel became too numerous to be accommodated when they were all placed upon the one remaining ship and she was released. On September 16 it was learned that the *Emden* had coaled on the previous day in False Bay (British) about 120 miles from Calcutta. Three British cruisers and three French destroyers were sent in pursuit, a pursuit that proved to be long if not merry. On September 18 the quarry was located—but not by a man-of-war—about 20 miles off the mouth of Rangoon River, she having sunk the day before the British S.S. *Clan Matheson*. One Japanese cruiser now joined in the chase, which proceeded apace. Doubling back across the Bay of Bengal the *Emden* appeared next about a mile off the harbour of Madras at nine o'clock at night on September 22. The Madras light was lighted and working, and the lights of the city were all ablaze. The first intimation to those on shore that an enemy was near was the turning on of the searchlights of the *Emden*. Quickly picking up the large oil tanks of the Burma Oil Company she opened fire upon them. A few salvos and they were burning briskly. Firing ceased, search-lights were extinguished and the *Emden* disappeared into the darkness whence she had come. She had in these few minutes inflicted a damage of more than \$100,000. From Madras she steamed slowly down the coast, appearing off Pondicherry on September 24, having captured and sunk five more British steamers

in the meantime. At this stage a British cruiser seems to have been within 50 miles of the *Emden*, but the latter appeared to be able to determine with fatalistic accuracy alike where enemy merchantmen were and men-of-war were not. About this time, a Russian cruiser joined in the 'Emden hunt,' but unrestrained the *Emden* passed out of the Bay of Bengal, around Ceylon, and lay athwart the Aden-Colombo trade route. To the westward of Ceylon up to September 27 she sank five more British steamers and captured a collier with 7000 tons of Welsh coal. During the first two weeks of October the *Emden* was rumoured to be in the Makassar Strait, east of Borneo, at Padang on the Straits of Malakka and southeast

himself what followed on board the Russian cruiser *Jemtchug* peacefully lying at anchor in the harbour. Suddenly the quartermaster on watch sings out 'Man-of-war standing in from the eastward, sir!' . . . Of course, the ship slowly standing in around the point must be the British cruiser *Yarmouth*, thought he, or one of the *Chikuma* class of Japanese cruisers, all known to be in near-by waters. Slowly and with outward calm the stranger stood in for the usual anchorage of the *Yarmouth*, next to the berth of the *Jemtchug*. Now she has reached a point on the *Jemtchug's* beam and only about 300 yards away. On the stranger all are tense and alert, while on the *Jemtchug* sleep still holds the crew and officers—

CRUISER "EMDEN" BESIEGING MADRAS

(From a drawing by Hans Bohrdt)

of Sumatra, but in reality she seems to have been far away at Diego Garcia in the Chagos Archipelago. There she cleaned her boilers, was heeled over and had her bottom scraped and painted as far as practicable. Then she steamed north again to near the Laccadive Islands. Here from October 15 to 19 she sank five more steamers and a large Tasmanian dredger and captured another large collier. Meanwhile two more Japanese cruisers and one more Russian cruiser joined the searching force. All trace of the *Emden* was lost for ten days, and she made her next appearance 1700 miles from where she had been last reported. At early dawn on October 29 the quiet of a sultry summer night still hung over the harbour of Penang (British). . . . Slowly from around the point to the eastward a steamer appeared, indistinct as to details and vague as to characteristics, but to the trained eye clearly a man-of-war. Any naval officer can picture to

the last sleep for many, the next few moments proved. Suddenly the German ensign fluttered from the stranger's truck, a flash of light rippled along her broadside and a salvo hurled death and destruction into the inert *Jemtchug*. . . . Torn by shell and sundered by torpedo and listing badly, the *Jemtchug* began to sink at once, but a few more salvos in rapid succession and a second torpedo made assurance doubly sure. . . . Disappearing out the western entrance of the harbour was the instrument of destruction, the *Emden*, for the stranger was none other than she. With the aid of a dummy funnel and the artistic use of paint and canvas she had succeeded in her disguise as the *Yarmouth* in the early morning light, and now was rapidly disappearing from view unscathed and undaunted. . . . Two French destroyers at anchor in Penang harbour quickly raised steam and gave chase, but in vain, for the *Emden* was not seen again for more than 10 days.

After the Penang raid, two more cruisers, two gunboats, three destroyers and an armed merchant cruiser were added to those exclusively engaged in searching for the *Emden*. This brought the number so engaged up to 19 all told, and in addition a large force was being used in convoy duty in the Far East, almost entirely on account of the *Emden's* activities. The next exploit of the *Emden* brought to an end her eventful career. At daylight on November 9 she ran in for the harbour on South Keeling Island in the Cocos or Keeling group. She still had her dummy funnel rigged, but its effectiveness as a disguise had vanished with the Penang exploit. The harbour on South Keeling is an important British submarine cable and radio station. As soon as the *Emden* was sighted, the word was cabled to London, Adelaide, Perth and Singapore, but what was more important, it was flashed into the air by radio that all who could might hear. Passing near the Cocos Islands was an army expedition from Australia, bound for the Suez Canal and with it, thanks largely to the *Emden* menace, was a strong naval convoy. The *Emden* used her radio outfit to the best of her ability to interfere with the message being sent, but the keen ear of the radio operator on the British cruiser *Minotaur* caught it just the same. One of the units of the convoy was the Australian cruiser *Sydney*. Faster, larger and more powerful than the *Emden*, she was just the ship for the job at hand, and away she steamed full speed for South Keeling and the *Emden*. Meanwhile the *Emden* had entered the harbour and immediately landed a party of five officers, seven petty officers and 35 men, who proceeded to destroy the radio and cable-stations. The *Emden* stood back to the harbour entrance to keep watch. . . . The party did not respond promptly enough, and at 9.30 the *Emden*, leaving her landing party behind, headed out at full speed as the *Sydney* came charging up. The action began, at the harbour entrance at a range of only about 4000 yards. Before she turned to head away, the *Emden* fired a broadside salvo that injured both fire control stations on the *Sydney* and destroyed one of her range finders. Then she turned and the chase began, and the fight continued bow to stern. The *Sydney* had 2 knots superiority in speed, and 6-inch guns against the *Emden's* 4.1-pounders. Slowly the *Sydney* hauled out and up, and brought her broadside to bear, almost out of range of the *Emden's* battery. Soon the *Emden* lost a funnel, and almost immediately thereafter a mast. Then another funnel went by the board, and fire broke out aft. . . . Outraged and outstripped by her larger adversary, the *Emden* ran on the reef at North Keeling. With flag still flying, and burning fiercely, she still continued firing her one available gun, and not until the *Sydney* had reluctantly fired three more salvos into her, was the flag hauled down on the mass of blackened and twisted steel that had been the *Emden*. She made a game fight against heavy odds, as is freely admitted by her vanquishers. The casualties on the *Emden*, as is usual with the vanquished in a naval action, were enormous, only four officers and about 75 men being saved, and a number of these were wounded. The *Sydney* was but little damaged, and her casualties amounted only to three killed and 15 wounded."—C. C. Gill, *Naval power in the war, 1914-1917*, pp. 195-205.

(i) Operations against occupied Belgium.—Patrols.—Blockading squadron.—Apart from the general warfare in the North sea, a completely

separate series of operations were undertaken by the navy. "It will be remembered that during September and October, after the failure of the German arms on the Marne, desperate efforts were made by their troops to force an advance along the coast and secure Calais for a base for their torpedo craft and for their projected invasion of England. In consequence the Allied Army Commanders made requests to the Admiralty for assistance in support of the flank of the hard-pressed little Belgian Army to prevent this objective from materialising. Valuable ships could not be spared in these early days, but on October 17 a fleet of heterogeneous warships, under the command of the late Rear-Admiral Hood, left these shores to partake in a bombardment of the enemy's troops and positions along the Belgian coast. The operations were commenced on the next morning, by the three monitors *Humber*, *Severn* and *Mersey*, and the scouts *Attentive* and *Foresight*, with several destroyers. The batteries at Westende and Middlekirke were engaged, and machine guns were landed from *Severn* to assist in the defence of Nieuport, one officer being killed whilst leading the men. During the first few days shrapnel caused many casualties on the ships, but no ships were lost, although *Amazon* was badly holed. On the 23rd great assistance was given to the Belgian Army near Nieuport, and the batteries at Ostend were also engaged. Submarines were seen, but they were unsuccessful in their attacks; and it will be remembered that on the next day *Badger* rammed one of these craft, and it is possible that it was one of the submarines which had ineffectually attacked the destroyer *Myrmidon* and the sloop *Wildfire*. Of course the enemy at once took counter-measures, and by the 28th they had brought up heavy guns which replied very vigorously to our ships. Larger warships were then sent for, including the battleship *Venerable* and the cruisers *Brilliant* and *Sirius*, to engage the bigger pieces. This day the enemy's fire was particularly accurate, and several casualties occurred. . . . Although no losses in ships were sustained, the sloops *Vestal* and *Wildfire* were somewhat damaged. On November 9 the first bombardment ceased, as the country around Nieuport was inundated, and the warfare had been reduced exclusively to trench work. Indeed hardly any troops were to be seen, and the rush for Calais had thus been prevented with great success and at very little cost. Admiral Hood's force comprised the battleship *Venerable*, the cruisers *Attentive*, *Foresight*, *Brilliant* and *Sirius*, the three monitors *Humber*, *Mersey*, *Severn*, the gunboats *Hazard*, *Bustard*, *Excellent*, the sloops, *Rinaldo*, *Vestal*, *Wildfire*, the submarines C 32 and C 34, and the destroyers *Amazon*, *Cossack*, *Crusader*, *Maori*, *Mohawk*, *Nubian*, *Viking*, *Crane*, *Falcon*, *Flirt*, *Mermaid*, *Myrmidon*, *Racehorse*, *Syren*. In addition there were placed under his command the five French destroyers *Aventurier*, *Capitaine Mehl*, *Dunois*, *François Garnier* and *Intrépide*. Considering that this collection of ships was constantly operating within a few hours' steaming from the enemy's ports, it speaks volumes for the supremacy, moral as well as material, which we had then attained over the enemy. No interference beyond unfruitful submarine attacks was attempted during the three weeks in which this fleet was at work."—R. H. Gibson, *Three years of naval warfare*, pp. 67-69.—"To meet the increasing submarine menace the Admiralty was engaged in reorganising the whole system of patrols. For some time the increasing

numbers of anti-submarine craft had outgrown the original organisation, and the conflicting calls for further protection which kept coming in from all quarters could only be met by a comprehensive system which would embrace the whole of our coasts. On December 8 [1914] . . . a 'Submarine Attack Committee' [was set up] with Captain L. A. B. Donaldson at its head. Its function was to develop and organise the various methods of attack, which at this time were ramming gunfire, explosive sweeps and indicator nets, the latter as yet in an early experimental stage. At the same time a scheme was being worked out for apportioning all the Home waters into twenty-three Patrol areas, each with its base close to the local Naval Centre, so as to ensure the rapid transmission of intelligence gained by the patrols. The duties of the Patrol would be not only to act against submarines, but also to prevent mine-laying and spying. The actual sweeping of mines remained a separate organisation. To provide what was necessary it was calculated that seventy-four yachts and 462 trawlers and drifters would be required, besides motor boats for inshore work wherever suitable waters were found. . . . [The most disturbing effect of the raid on the east coast in December, 1914] was the minefield which the German light cruiser had laid. Whether or not the enemy's chief object in laying it was to entrap ships acting against them and to cover the retirement of the raiding force, what they actually achieved was a serious interference with our coastwise traffic and an increased pressure on our hard-worked North Sea minesweepers. Hitherto these flotillas had only had to keep clear a swept channel from the Downs to Flam-borough Head—that is, inside the minefields which the Germans had laid off the Eastern counties and the Humber, and which we had purposely left intact. Now the channel had to be continued northwards past Scarborough, and until it was swept all navigation between the Tyne and Flam-borough Head had to be stopped. The minefield was particularly difficult to locate. It was only known by the loss of passing coasters, and the work of clearing a channel past it is typical of the unceasing drudgery by which the devoted minesweepers contributed so much and so obscurely to the war. . . . By Christmas eve the swept channel was complete as far as Scarborough, but there was still more to do. On Christmas morning the mine sweeping trawler *Night Hawk* was blown up off Whitby and foundered with a loss of six men. Further south two merchant steamers were struck, one the Norwegian s.s. *Gallier*, and in assisting her the drifter and trawler skippers gave a fine example of their devotion. In spite of heavy weather two drifters, the *Hilda* and *Ernest* and the *Eager*, stood by her till she sank, and the trawler *Solon*, though it was dark and low water and the injured vessel showed no lights, proceeded to search for her in the mine-field. From now onward the channel was declared safe in daylight, and some fifty steamers that had accumulated in the Humber were allowed to proceed."—J. S. Corbett, *Naval operations (History of the Great War based on official documents, v. 2, pp. 17-18, 46-48)*.—The blockade was exercised by the 10th Cruiser Squadron, which, "from 1914 to 1917, held the 800 miles stretch of grey sea from the Orkneys to Iceland. In those waters they intercepted thousands of ships taking succour to our enemies, and they did that under Arctic conditions and mainly in the teeth of storm and blizzard, and out of that 10,000

they missed just four per cent., a most remarkable achievement under the conditions. . . . The Straits of Dover was one locality where this blockade was exercised, owing to the narrow waters, and the numerous vessels of the Royal Navy stationed there, and the minefields, no surface vessel could evade being searched in the Downs. The other locality was . . . the 800 miles of sea between Iceland and the Orkneys which was patrolled by the 10th Cruiser Squadron. . . . [The ships of the squadron were commanded by captains from the navy, and officered and manned by men drawn from the naval reserve and the mercantile marine. At the outbreak of the war, the 10th Cruiser Squadron was composed of cruisers of the *Edgar* class, a gunboat and four armed merchant cruisers. The storms of the first winter, however, proved that the obsolescent cruisers were not fitted for this work. After the *Crescent* and *Edgar* were nearly lost in the terrific gale off the Shetlands mail steamers and other suitable vessels were taken from the merchant service and were found to be generally more suited to meet the conditions.] Accordingly, towards the end of November, 1914, the 'Edgar' class were paid off, and their departure marks the end of the first phase of operations of 10th Cruiser Squadron, during which period 319 vessels had been intercepted and dealt with by the Squadron. The submarine menace had begun to make itself felt, the 'Hawk' had been torpedoed and sunk with a loss of 525 officers and men, and 'Theseus' fired at and missed on the same day."—R. G. O. Tupper, *Blockade of Germany (Journal of the Royal United Service Institution, Feb., 1923)*.

X. WAR IN THE AIR

(a) Air craft strength of the belligerents.—**Aerial operations.**—At the outbreak of hostilities the belligerent nations had the following number of effective air craft available: Great Britain: Aeroplanes 120; pilots 80; Airships, first class 4; second class 2. France: Aeroplanes 500-600; pilots 700; Airships, first class 4; second class 10. Russia: Aeroplanes 500; pilots 600; Airships, first class 4; second class 3. Belgium: Aeroplanes 30; pilots 50; no airships. Germany: Aeroplanes 700; pilots 1,000; Airships, first class 18; second class 6. Austria: Aeroplanes 120; pilots 200; Airships, first class 1; second class 1. Not one of the Allied nations had devoted so much attention to the development of an effective aerial service as Germany before the war. Aviators of all nationalities were invited to Germany to instruct hundreds of army officers who were learning how to fly. Aeroplane factories and engineering works were built all over the empire. Russia at the outbreak of the war surprised even Germany by the extent of her aerial powers. The Grand Duke Nicholas, commander-in-chief of the Russian armies, had determined that Russia should become a first class air power and aided by the famous Sikorsky and a Scotchman, Mackenzie-Kennedy, a score of different aircraft were designed, ranging from the Sikorsky giant biplanes to the baby monoplane. France had great numbers of aeroplanes available when the war began, but she had no facilities for their construction in quantity. This was quickly remedied after the government took over the work of supply and the French air service soon ranked with the best. The British Flying Corps did not come into existence until 1912. In August, 1914, and for some months afterward Britain was entirely dependent on

France for her supply of aeroplane engines. For the most part the machines were biplanes. There were a few monoplanes soon adapted for military purposes. They included Martynsyde monoplanes, 60 h.p. Antoinette motors; Flanders 70 h.p. with Renault engines; Deperdussin, Nieuport and Blériots fitted with 80 h.p. Gnome engines. The biplanes were Shorts (60 h.p.), Gnoms, Caldrons, B. E.'s, Renaults, and Farmans. Germany possessed some 34 different types of aeroplanes mostly fitted with the Mercedes engine that gave from 100 to 125 h.p. and an average speed of seventy-five miles an hour. At Mons the R. F. C. which had accompanied the British troops to France proved their value. At a critical moment in the great German enveloping movement an aerial report disclosed to General Smith-Dorrien the fact that his advanced division was faced by three German army corps supported by strong reserves in place of the three divisions which he had been led to think were opposing him. During the German advance on Paris the French flying service, vastly inferior in numbers to the German, accomplished wonders through reckless daring in attack. A few of their achievements at this time may be mentioned. At the Marne an ammunition column was blown up. Friburg station filled with troops was demolished and there were heavy casualties; food trains were destroyed; artillery emplacements wiped out; and an entire transport park at La Fère was reduced to ashes. On the eastern front, where the Russian drive led to a succession of victories, the Germans found their air service more than outmatched by their opponents. The greater number of the German aeroplanes were dispatched to the western front and Zeppelins of the latest type were substituted in their place, but such was the accuracy of Russian anti-aircraft gunners that four airships were wrecked, or brought down within a short time. On the west the Belgian-German seaboard had become a basic position for German air raids, torpedo boat sorties and submarine attacks. Three months after the outbreak of hostilities Nieuport, Ostend, and Zeebrugge were only accessible from the air. Thence began that long grim struggle between the British naval air craft at Dunkirk and the whole array of Germany's armed might. British seaplanes were active during the winter of 1914-1915, patrolling, not only the British but many miles of the German sea coast as well. They bombed German ammunition dumps, concentrations, stations, docks, harbors, submarines and their bases. On Christmas day seven sea-planes, a fleet of light cruisers and several submarines attacked German warships off Cuxhaven. Two Zeppelins, four sea planes, and some submarines appeared on the scene and engaged. The Zeppelins were driven off. The German warships in Cuxhaven harbor were bombed and a Zeppelin shed outside the town was destroyed. Only one British machine failed to return. This one fell into the sea and the pilot was rescued by a Dutch trawler. He was not interned in Holland but as a "shipwrecked sailor" was allowed to return to England.—Based on E. Middleton, *Great War in the air*, v. 1, ch. 3-4.—See also AVIATION: Development of airplanes and air service: 1914-1918.

XI. POLITICAL SITUATION IN BELLIGERENT COUNTRIES

(a) Great Britain.—After the outbreak of the war Great Britain was forced to change her mili-

tary policy to meet the crisis. The Expeditionary Force had to be largely reinforced as quickly as possible. The Territorial Force purely for home defense became in a short time an army of volunteers for foreign service. The people were slow to awaken to the seriousness of the war as they were not threatened by invasion. After the first feverish days of excitement things quieted down and in the commercial world the motto was "business as usual." The Government, acting with the great financial houses, devised measures to restore confidence and safeguard the national credit. The moratorium and the new note issues were easily put through, but courage was required to guarantee outstanding bills of exchange for two billion dollars and to find means to save the Stock Exchange from bankruptcy. Among industries the cotton trade suffered the most. There was a feeling of security among the people, and when the government announced a plan of new taxation and the raising of a war loan of \$1,750,000,000 there was little opposition. Large sums were subscribed to war charities. The Briton expressed his indignation with Germany because of Belgium in the public press and in books and pamphlets but had not yet realised the gravity of the crisis, or the danger that threatened his country and civilization. This detached attitude hindered recruiting. A clumsy censorship which kept the news of British army achievements from the public was also to blame for the lack of public enthusiasm. As soon as the people were made to understand the situation through public meetings the volunteers flocked to the colors. Thousands of Durham miners enlisted when they were told of the German destruction of Belgian coal pits. By Christmas, 1914, there were about 2,000,000 inhabitants of the British Isles under arms.—See also ENGLAND: 1914-1918: Defense of the Realm Acts, 1914-1918: Taxation policy.

(b) France.—From the first France recognized the seriousness of her position, for the enemy was on her frontiers. The attitude of the people was calm, but grimly determined to crush the invader. In wars of the past waged by France the soldier was dominated by the politician, but from the August outbreak of war the politicians had little to do with making military appointments. General Joffre had his own way, at least for a long time, and dismissed generals and promoted lesser grades with startling suddenness, when judged by precedents in French warfare.—See also FRANCE: 1914.

(c) Russia.—In a vast country made up of many races and nationalities it would be impossible to describe in a general way the attitude of the people towards the war. There was a great deal of apparently sincere enthusiasm displayed at the outbreak of the war alike by the intelligentsia and the mujiks. Even among the unlettered classes, and that means about 80 per cent of the population, the war had a popular appeal to many because the soil of "Holy Russia" was threatened by the invader. The student class, the nursery of revolutionists, accepted cheerfully the repeal of the law that gave it freedom from conscription. The revolutionary groups did not offer any serious opposition to the war from which they hoped in good time to reap substantial benefits. That the populace in general accepted loyally the ban on alcohol, which cost the government many millions of revenue, was a hopeful sign in time of war. The constitution and conduct of the General Staff inspired confidence. The Grand Duke Nicholas, and the Generals Ivanov, Russky and

Brussilov were popular.—See also RUSSIA: 1914 (August); Relations with Germany; 1914-1915.

(d) Germany.—There was no lack of war enthusiasm in Germany. The whole empire was aflame with martial spirit and there were few who doubted that the war would not be a short one and conclude with the triumph of the German armies. In the Socialist groups there were many opponents to the war, but the majority caught the fever of the hour, and the Russian invasion of East Prussia caused a general rally to the ranks of the imperialists. Only Liebknecht and a few others stoutly opposed the war from the first day. The German government, controlling the press and every avenue of publicity, never ceased to belittle the military power of the enemy while magnifying even the slightest successes of the German armies in the field. Unlike London and Paris, the German cities were brightly lit at night and there was no war-gloom visible on the surface of public life, whatever anxiety as to the outcome of the war might be felt underneath. It was a wise move on the part of the government to create this cheerful atmosphere of hope and enthusiasm and to hide from the people the threatening dangers as far as possible. For Germany's communications with the outer world were severed except through Scandinavia and Holland, Italy and Rumania. The pinch must soon be felt but meanwhile every effort was made to keep the spirit of the people at war heat. This was easier to accomplish with the docile Germans than with almost any other people, accustomed as they were to accept Government dictation.—See also GERMANY: 1914.

(e) Turkey.—The Ottoman empire, as the Allied Powers well knew, was committed to fight with Germany long before she openly declared war. General Liman von Sanders had become a sort of inspector-general of the Turkish army and a large German element was introduced into the Turkish fleet. German gold, arms, and men were introduced through Bulgaria. When an attempt was made to preach a Holy War or *Jehad* it was represented in Turkey that the Kaiser had become a convert to Islam. Stories were circulated that the Mohammedan subjects of Britain, Russia and France had revolted. The Turkish people were voiceless in opposing the war and the government was controlled by the army which in turn was ruled by the Committee of Union and Progress, Enver Pasha, and his German paymasters. In September the bulk of Mohammedan India and the leaders of Mohammedan opinion in British Africa were on the side of the Allies and were already moving to the assistance of Great Britain. Thousands of Arab Moslems were fighting with the French on the western front.—Based on *British reports*.—See also TURKEY: 1914: Turkey at the outbreak of the war.

(f) Belgium.—In internal politics, Belgium before the war seemed divided between Flemings and Walloons, between a more than conservative attitude and a liberalistic tendency. The language question had become acute; Socialism had become strong enough to compete with the Catholic party, and to force the passage of the Compulsory Education Act. The new Army Act had just gone into force, and consequently the army was in course of reorganization. In her foreign relations, she was determined to stand on her guaranteed neutrality. Of Germany she was nervous, not to say suspicious. As an anxious student of foreign affairs, she saw cause for great disquiet in the Austrian ultimatum to Serbia. In common with every other nation in Europe, she feared that a

war between these two nations would occasion a general conflagration. She saw clearly, if France did not, that her level country was the easiest road by which an invading army could enter French territory, and had a prevision that the Prussian guarantee of her neutrality would not prove to be a very strong defense.—See also BELGIUM: 1914: World War, to 1914-1918: African campaigns.

(g) Austria-Hungary.—“In modern Europe Austria Hungary stood over as a relic from the Middle Ages, a remnant of the old Germanic Empire left behind in the movement towards self-conscious nationality. . . . The Empire was a union of two states, each ruled by a minority and in the interest of that minority, and it may fairly be said that the majority of the population was anti-Austrian and anti-Hungarian. The thing was an anomaly unique in Europe, and could only maintain its existence by setting one part of the people against the other. Every year it became harder for the statesmen of Vienna to keep the inorganic mass from dissolution. . . . Though universal suffrage existed, it was not combined with responsible government; for the Emperor appointed the administration, and if he desired, he could, under paragraph 14 of the constitution, govern without parliamentary sanction. . . . Hungary was the home of every kind of electoral corruption. Public funds were spent brazenly on gerrymandering elections; returns were falsified; troops were turned out to ‘preserve order’ in doubtful districts, which meant that a reign of terror kept the Slav and Rumanian voters from the polls; and any politician who ventured to protest was likely to find himself in prison on a charge of treason. The oligarchy throughout the Empire used a form of popular government to establish a tyranny as complete as the most naked mediaeval absolutism. This oligarchy had none of the world-ambition of their German neighbours; they were too weak to desire more than to hold what they had. The Austrian German was an agreeable pleasure-loving type, easily swayed from Berlin. The Magyer represented one of the toughest race stocks in Europe, proud, courageous, a lover of liberty for himself, but a despot for others. Both Vienna and Budapest sought above all things to be maintained in their privileges. They suffered from a haunting dread of the new Slav states beyond the Danube, of the great Slav power of Russia, and of their own malcontent Slav peoples. They hated the fashionable cant of democracy as much as any Junker, and were very ready to accept a helping hand from Germany, whose constitution was not unlike their own, who likewise hated democracy, and who shared their fear of Slaventum. This alliance was made easy in the case of the Magyer, who was in temperament if not in manners, akin to the Prussian. For Germany, too, the Dual Monarchy was a sheer necessity. Without the control of Austria-Hungary she could not realise her dreams of a *Drang nach Osten*, which would provide a continuous block of territory, economically self-sufficient and strategically invulnerable, to counterbalance the sea-united British Empire. Without her friendship her flank would be turned in a European war. Hence for years in policy, in economics, and in military preparation the strong gauntlet of the Hohenzollern had guided the fumbling hand of the Hapsburg. Austria could not in the nature of things be a very docile or cordial ally, but there was no doubt about the loyalty of her governing classes. Only by the help of Germany could they defend their privileges, and it was

very certain that they would never cast down their glove for war without Germany's instigation and assent."—J. Buchan, *History of the Great War*, v. 1, pp. 31-33.—See also AUSTRIA-HUNGARY: 1914-1915.

(h) Serbia.—Serbia was in a state of ferment. She had just come through two ruinous wars, in which indeed she had gained some territory, but with it had acquired an alien population, which she could not hope to assimilate for many years. She had not succeeded in obtaining an outlet to the sea, one of the things which she had sought, and which, if not a vital matter, was an object of the highest importance to her national welfare. Her people were for the most part peasant agriculturists, tenacious of liberty, brave and hardy, who within a century had fought against Turkey five times and Bulgaria twice. Her culture was primitive on the whole, but she had begun to look toward the West rather than the East for her ideals, and desired to settle down under a fairly representative government, headed by a native dynasty, and guided by Pashitch "a sane and politic statesman." It is true that fear of Turkey had been succeeded by a fear of Austrian encroachment, which had become little less than an obsession, and was the most powerful motive in her desire to head a Balkan league. But from almost every point of view it was undoubtedly to her interest to keep the peace, and for this reason she had swallowed her national pride and acceded to all but two of the Austrian demands, and these she was prepared to discuss.—See also SERBIA: 1914-1918.

XII. NEUTRAL NATIONS

The action that Italy would take in the war was of vital importance to France and Austria, for she held a strategical position on the flank of both countries. If she cast her lot with her colleagues of the Triple Alliance, the French wing was menaced; if she joined the Allies she could turn the Austrian left while her fleet was superior to Austria's in the Mediterranean. She had reasons for disliking Austria for holding that coveted part of the peninsula popularly known as Unredeemed Italy, and for suspecting France whose assistance, under Napoleon III, to establish a kingdom had been paid for at an extravagant price. French colonization of the North African littoral had also alarmed her. She wanted Trieste, the hinterland of Istria and the Trentino, to rule in the Adriatic and hold the Albanian port of Valona. German statesmen knew Italy's ambitions and that she would readily break from the Triple Alliance when a chance came to achieve them. Her relations with France were so good when the war broke out, and she declared her neutrality, that France only kept a small body of troops on the Italian frontier. With Great Britain, Italy's relations were friendly. The majority of the Italian people were in favor of joining the Allied Powers, but the treasury was not in a prosperous condition, the national debt was heavy, and the well-trained army lacked guns and equipment. Then began the diplomatic struggle between the Allies and the Central Powers to gain the support of Italy which culminated ten months later in Italy entering the war on the side of the Allies. (See also ITALY: 1914: Preparation for war). Rumania's action depended on Italy and also on Bulgaria. Her king was a German of the Catholic branch of the Hohenzollerns. Russia she suspected since the Peace of Berlin had deprived

her of Bessarabia, and Austria possessed Transylvania. Neutrality could only benefit her, for she remained the one important granary for the Teutons and the only source of oil for them after Russia had seized Galicia. The sympathies of her people were largely with the Allies and with the death of King Carol on October 10, 1914, the chief dynastic bond with Germany was severed. In the case of Holland, Denmark, and Sweden there could be no question of intervention. (See SCANDINAVIAN LEAGUE.) Denmark sympathized with the Allied Powers, but public opinion in Holland rather inclined to the side of Germany, and Sweden had an old dislike and fear of Russia. Holland suffered the most, for she was compelled by the Rhine Acts to forward to Germany any consignments arriving on a through bill of lading, and Britain was forced to take stringent measures including the absolute prohibition of export of certain foodstuffs to Dutch territory. But materials for making war munitions reached Germany through Holland and Scandinavia in spite of all.—Based on J. Buchan, *Nelson's history of the war*, v. 3, ch. 22.—The real character of the German invasion of Belgium was brought home to the Dutch by the flood of refugees seeking refuge in Holland. It began August 4, 1914, when the frontier town of Visé was attacked and set on fire. The capture of Liège, the occupation of Brussels, the fall of Antwerp increased the multitudes flying for refuge. "No barrier on the Holland border could have kept the flood of Belgian refugees out. . . . But Holland did not want a barrier. She stood with open doors and arms, offering an asylum to the distressed and persecuted. [See also NETHERLANDS: 1914-1918.] . . . Belgium and Great Britain bore by far the largest part of the financial burden of caring for the refugees, but Holland gave freely and generously what was more important: a prompt and sufficient welcome and shelter from the storm; abundant supplies of money for immediate needs, food and clothing, personal aid and care, nursing and medical attendance, all of which was needed at once. The number of refugees thus cared for was about a million. From the outbreak of the war there was a rush of Americans to get home by way of Holland. Incredible multitudes scattered about Russia, Germany, Austria and parts of Switzerland poured into the country and many were unable to get cheques cashed. The American Minister to the Netherlands (Henry Van Dyke) arranged with the Dutch Foreign Minister to get American checks and drafts cashed by personally endorsing them in his official capacity." There was never a day that an American fugitive from the war homeward bound could not obtain what cash he needed to live on and get to the United States. In the later part of August the U. S. S. *Tennessee* arrived with \$2,500,000 in gold to help the Americans and the first use of the money was to take up checks and drafts on which the Bank of Netherlands had advanced money. The loss in these transactions was less than five per cent of the amount handled. "And we banked for some very poor people, too."—Based on H. Van Dyke, *Fighting for peace*, pp. 15-30.

(a) United States.—The attitude of the people of the United States during the first months of the war could not be defined in general terms. The suddenness of the catastrophe which plunged the great nations of Europe into war produced varied opinions owing to the mixture of races in the country. But despite the German and certain Irish elements which applauded German victories and even condoned the invasion of Belgium, the

nucleus of a great movement of sympathizers in the Allies and their cause was formed by some of the most prominent statesmen and publicists. The German Ambassador Bernstorff, who had married an American lady, cultivated the press and was assisted in this work by Herr Dernburg, a former German colonial minister, in America ostensibly for the Red Cross, but in reality to spread German propaganda and "explain" German war methods. His mission failed; he was never taken seriously, and in a few months left the country. Britain's campaign at sea injured some American industries, but others benefited by the war. Britain's uncertain attitude towards the Declaration of London made it hard for neutrals, but the American and British governments were disposed to put a friendly construction on their differences and there was never any real danger of a breach in their relations, though the pro-German element in the United States strove desperately to create one.—Based on *American official records*.—See also MONROE DOCTRINE: Relation to World War.

(b) **Contraband and restraint of trade.**—At the outbreak of the war, the belligerent nations, especially Great Britain and Germany, formulated rules in relation to contraband. (See CONTRABAND: In the World War.) The United States had an active interest in these rules and on Aug. 6, 1914, the American ambassador in London was instructed to inquire whether the British government was willing to agree that the laws of naval warfare as laid down by the Declaration of London in 1909 should be applicable to naval warfare during the conflict in Europe, provided that the governments with whom Great Britain was, or might be, at war also agreed to this application. The British foreign minister replied on August 22 that it had been decided to adopt generally the rules of the declaration, subject to certain modifications and additions which were deemed indispensable to the efficient conduct of their naval operations. On Aug. 20, 1914, an Order in Council was issued directing the adoption and enforcement of the Declaration of London, subject to additions and modifications. On October 22 the following note was sent by the American State Department:

"Your No. 864, October 19, Declaration of London.

"Inasmuch as the British Government consider that the conditions of the present European conflict make it impossible for them to accept without modification the Declaration of London, you are requested to inform His Majesty's Government that in the circumstances the Government of the United States feels obliged to withdraw its suggestion that the Declaration of London be adopted as a temporary code of naval warfare to be observed by belligerents and neutrals during the present war; that therefore this Government will insist that the rights and duties of the United States and its citizens in the present war be defined by the existing rules of international law and the treaties of the United States irrespective of the provisions of the Declaration of London; and that this Government reserves to itself the right to enter a protest or demand in each case in which those rights and duties so defined are violated or their free exercise interfered with by the authorities of His Britannic Majesty's Government.

"[LANSING,
"Acting secretary of state.]"

On December 23 a proclamation was issued by the British government revising the list of articles

to be treated as contraband of war. The following articles were thus designated. This list was added to from time to time as the war continued.

SCHEDULE I:

1. Arms of all kinds, including arms for sporting purposes, and their distinctive, component parts.
2. Projectiles, charges, and cartridges of all kinds and their distinctive component parts.
3. Powder and explosives specially prepared for use in war.
4. Ingredients of explosives, viz., nitric acid, sulphuric acid, glycerine, acetone, calcium acetate and all other metallic acetates, sulphur, potassium nitrate, the fractions of the distillation products of coal tar between benzol and cresol, inclusive, aniline, methylaniline, dimethylaniline, ammonium perchlorate, sodium perchlorate, sodium chlorate, barium chlorate, ammonium nitrate, cyanamide, potassium chlorate, calcium nitrate, mercury.
5. Resinous products, camphor, and turpentine (oil and spirit).
6. Gun mountings, limber boxes, limbers, military wagons, field forges, and their distinctive component parts.
7. Range-finders and their distinctive component parts.
8. Clothing and equipment of a distinctively military character.
9. Saddle, draught, and pack animals suitable for use in war.
10. All kinds of harness of a distinctively military character.
11. Articles of camp equipment and their distinctive component parts.
12. Armour plates.
13. Ferro alloys, including ferro-tungsten, ferromolybdenum, ferro-manganese, ferro-vanadium, ferro-chrome.
14. The following metals: Tungsten, molybdenum, vanadium, nickel, selenium, colbalt, hæmatite pig-iron, manganese.
15. The following ores: Wolframite, scheelite, molybdenite, manganese ore, nickel ore, chrome ore, hæmatite iron ore, zinc ore, lead ore, bauxite.
16. Aluminum, alumina, and salts of aluminium.
17. Antimony, together with the sulphides and oxides of antimony.
18. Copper, unwrought and part wrought, and copper wire.
19. Lead, pig, sheet, or pipe.
20. Barbed wire, and implements for fixing and cutting the same.
21. Warships, including boats and their distinctive component parts of such a nature that they can only be used on a vessel of war.
22. Submarine sound signaling apparatus.
23. Aeroplanes, airships, balloons, and aircraft of all kinds, and their component parts, together with accessories and articles recognizable as intended for use in connection with balloons and aircraft.
24. Motor vehicles of all kinds and their component parts.
25. Tires for motor vehicles and for cycles, together with articles or materials especially adapted for use in the manufacture or repair of tires.
26. Rubber (including raw, waste, and reclaimed rubber) and goods made wholly of rubber.
27. Iron pyrites.
28. Mineral oils and motor spirit, except lubricating oils.
29. Implements and apparatus designed exclusively for the manufacture, of munitions of war,

for the manufacture or repair of arms, or war material for use on land and sea.

SCHEDULE II:

1. Foodstuffs.
2. Forage and feeding stuffs for animals.
3. Clothing, fabrics for clothing, and boots and shoes suitable for use in war.
4. Gold and silver in coin or bullion; paper money.
5. Vehicles of all kinds, other than motor vehicles, available for use in war, and their component parts.
6. Vessels, craft, and boats of all kinds; floating docks, parts of docks, and their component parts.
7. Railway materials, both fixed and rolling stock, and materials for telegraphs, wireless telegraphs, and telephones.
8. Fuel, other than mineral oils. Lubricants.
9. Powder and explosives not specially prepared for use in war.
10. Horseshoes and shoeing materials.
11. Harness and saddlery.
12. Hides of all kinds, dry or wet; pigskins, raw or dressed; leather, undressed or dressed, suitable for saddlery, harness, or military boots.
13. Field glasses, telescopes, chronometers, and all kinds of nautical instruments.

Given at our court at Buckingham Palace, this Twenty-third day of December, in the year of our Lord one thousand nine hundred and fourteen, etc., etc.

The continued seizure and detention of neutral vessels destined to neutral ports become so frequent that on Dec. 26, 1914, Secretary Bryan sent the following note to be handed to the British Foreign Office:

"The present condition of American foreign trade resulting from the frequent seizures and detentions of American cargoes destined to neutral European ports has become so serious as to require a candid statement of the views of this Government in order that the British Government may be fully informed as to the attitude of the United States toward the policy which has been pursued by the British authorities during the present war. . . . The Government of the United States has viewed with growing concern the large number of vessels laden with American goods destined to neutral ports in Europe, which have been seized on the high seas, taken into British ports and detained sometimes for weeks by the British authorities. During the early days of the war this Government assumed that the policy adopted by the British Government was due to the unexpected outbreak of hostilities and the necessity of immediate action to prevent contraband from reaching the enemy. For this reason it was not disposed to judge this policy harshly or protest it vigorously, although it was manifestly very injurious to American trade with the neutral countries of Europe. This Government, relying confidently upon the high regard which Great Britain has so often exhibited in the past for the rights of other nations, confidently awaited amendment of a course of action which denied to neutral commerce the freedom to which it was entitled by the law of nations. . . . It is a . . . matter of deep regret that, though nearly five months have passed since the war began, the British Government have not materially changed their policy and do not treat less rigorously ships and cargoes passing between neutral ports in the peace-

ful pursuit of lawful commerce, which belligerents should protect rather than interrupt. The greater freedom from detention and seizure which was confidently expected to result from consigning shipments to definite consignees, rather than 'to order,' is still awaited. It is needless to point out to His Majesty's Government, usually the champion of the freedom of the seas and the rights of trade, that peace, not war, is the normal relation between nations and that the commerce between countries which are not belligerents should not be interfered with by those at war unless such interference is manifestly an imperative necessity to protect their national safety, and then only to the extent that it is a necessity. It is with no lack of appreciation of the momentous nature of the present struggle in which Great Britain is engaged and with no selfish desire to gain undue commercial advantage that this Government is reluctantly forced to the conclusion that the present policy of His Majesty's Government toward neutral ships and cargoes exceeds the manifest necessity of a belligerent and constitutes restrictions upon the rights of American citizens on the high seas which are not justified by the rules of international law or required under the principle of self-preservation. . . . Articles listed as absolute contraband, shipped from the United States and consigned to neutral countries, have been seized and detained on the ground that the countries to which they were destined have not prohibited the exportation of such articles. Unwarranted as such detentions are, in the opinion of this Government, American exporters are further perplexed by the apparent indecision of the British authorities in applying their own rules to neutral cargoes. . . . In a word, a legitimate trade is being greatly impaired through uncertainty as to the treatment which it may expect at the hands of the British authorities. We feel that we are abundantly justified in asking for information as to the manner in which the British Government propose to carry out the policy which they have adopted, in order that we may determine the steps necessary to protect our citizens, engaged in foreign trade, in their rights and from the serious losses to which they are liable through ignorance of the hazards to which their cargoes are exposed. In the case of conditional contraband the policy of Great Britain appears to this Government to be equally unjustified by the established rules of international conduct. As evidence of this, attention is directed to the fact that a number of the American cargoes which have been seized consist of foodstuffs and other articles of common use in all countries which are admittedly relative contraband. In spite of the presumption of innocent use because destined to neutral territory, the British authorities made these seizures and detentions without, so far as we are informed, being in possession of facts which warranted a reasonable belief that the shipments had in reality a belligerent destination, as that term is used in international law. . . . That a consignment 'to order' of articles listed as conditional contraband and shipped to a neutral port raises a legal presumption of enemy destination appears to be directly contrary to the doctrines previously held by Great Britain and thus stated by Lord Salisbury during the South African War: 'Foodstuffs, though having a hostile destination, can be considered as contraband of war only if they are for the enemy's forces; it is not sufficient that they are capable of being so used, it must be shown that this was in fact their destination at the time of their seizure.' . . . The Government of the United States readily admits the full right of a belligerent

to visit and search on the high seas the vessels of American citizens or other neutral vessels carrying American goods and to detain them *when there is sufficient evidence to justify a belief that contraband articles are in their cargoes*; but His Majesty's Government, judging by their own experience in the past, must realize that this Government can not without protest permit American ships or American cargoes to be taken into British ports and there detained for the purpose of searching generally for evidence of contraband, or upon presumptions created by special municipal enactments which are clearly at variance with international law and practice. . . . The Government of the United States, still relying upon the deep sense of justice of the British nation, which has been so often manifested in the intercourse between the two countries during so many years of uninterrupted friendship, expresses confidently the hope that his Majesty's Government will realize the obstacles and difficulties which their present policy has placed in the way of commerce between the United States and the neutral countries of Europe, and will instruct its officials to refrain from all unnecessary interference with the freedom of trade between nations which are sufferers, though

not participants, in the present conflict; and will in their treatment of neutral ships and cargoes conform more closely to those rules governing the maritime relations between belligerents and neutrals, which have received the sanction of the civilized world, and which Great Britain has, in other wars, so strongly and successfully advocated.

"BRYAN."

The German government was also asked whether it purposed to abide by the terms of the Declaration of London, and the response was made that it was intended to do so, provided the provisions of the declaration were not disregarded by other belligerents. The German government also published a list of articles to be considered as contraband and this agreed with the articles designated in the Declaration of London. In October, 1914, copper and lead were declared to be conditionally contraband by the German government, and in November all wrought and unworked lumber was also declared contraband, as was sulphur, crude or refined, and sulphuric acid. Aluminum and nickel were declared contraband in December, 1914.—See also FOOD REGULATION: 1914-1915; U.S.A.: 1922: Economic situation.
